	CHNA Report includes a definition of the community served and a description of how the community was determined	<a href="#">Notice 3.05</a>	<a href="#">Section 3</a>
	Demographics and other descriptors of the hospital service area	<a href="#">IRS 990 - Schedule H Part V 1.b</a>	<a href="#">Section 3</a>
<b>B. Data Collection</b>			
<b>Secondary Data</b>			
	CHNA includes the following documentation of secondary data used for the assessment:	<a href="#">Notice 3.03</a>	
	Sources and dates of data and other information used		<a href="#">Attachment 1 &amp; 2</a>
	Information gaps that impact the ability to assess health needs		<a href="#">Section 5</a>
	CHNA includes the individuals consulted who have special knowledge of or expertise in public health:	<a href="#">Notice 3.03</a>	
	Name		<a href="#">Section 5</a>
	Title		<a href="#">Attachment 6</a>
	Affiliation		
	Brief description of individual's special knowledge or expertise		

CHNA includes input from persons who represent the broad interests of the community: [Notice 3.06](#)

[Section 5](#)  
[Attachment 6](#)

- Persons with special knowledge of or expertise in public health
- Federal, tribal, regional, State, or local health or other departments or agencies with current data or other relevant information
- Leaders, representatives, or members of medically underserved populations
- Leaders, representatives, or members of low-income populations
- Leaders, representatives, or members of minority populations
- Leaders, representatives, or members of populations with chronic disease needs
- Report describes when the organization consulted with these persons
- Report describes how mode of consultation (focus groups, key informant interviews, other)
- Leader/representatives' names
- Leader/representatives' leadership or representative roles

#### C. CHNA Methodology

CHNA Report includes the following information related to community health needs [Notice 3.03](#)

- Criteria and analytical methods applied to identify the community health needs
- Prioritized description of all health needs identified
- A description of process and criteria used to prioritize the health needs

[Section 5](#)

#### D. Community Assets

CHNA Report includes description of the existing health care facilities and resources within the community that are available to respond to the health needs of the community [Notice 3.03](#)

- Existing health care facilities
- Other available resources

[Section 6](#)  
[Attachment 11](#)

#### E. Making the CHNA Publicly Available

CHNA reports have been made widely available to the public in 2013 according to requirements [Notice 3.07](#)

[Section 7](#)

- Instructions for accessing CHNA report are clear
- Posted reports exactly reproduce an image of each report
- Individuals with Internet access can access and print reports without special software and without payment of a fee
- Individuals requesting a copy of the report(s) are provided the URL
- Reports remain widely available until a subsequent CHNA is made widely available to the public

Professional Research Consultants

Interviewed by \_\_\_\_\_ Date \_\_\_\_\_ ID# \_\_\_\_\_

**THE HOSPITAL CONSORTIUM OF SAN MATEO COUNTY  
2012 PRC Health & Quality of Life Survey  
San Mateo County, CA**

Hello, this is \_\_\_\_\_ with Professional Research Consultants. The Hospital Consortium of San Mateo County has asked us to conduct a survey as part of a project studying ways to improve the health of communities in your area.

**(IF NECESSARY, READ:)** Your number was chosen at random and your answers will be kept completely confidential. **(IF Respondent seems suspicious, READ:)** Some people we call want to know more about us before they answer the survey. If you would like more information regarding this research study, you can call Dr. Scott Morrow at (650) [REDACTED] during regular business hours.

**SCRIPTING NOTE: Merge ZIP Code and Service Area from Phone File.**

**SCRIPTING NOTE: Use CHA Cell Option Screeners.**

lang. Interviewing Language.

(SKIP to NOTE before 1)

English  
Spanish

If PHTYPE is "Traditional Phone Order" OR "Land Line Labeled as Cell Phone", CONTINUE with Q1. IF PHTYPE is "Cell Phone Order" OR "Cell Phone Labeled as Land Line", SKIP to 2.

**SCRIPTING NOTE: Set Q1 Based on SQ1, CMBOX1, SQ2 OR CMBOX2 in the Screeners.**

1. In order to randomly select the person I need to talk to, I need to know how many adults 18 and over live in this household?

- One
- Two
- Three
- Four
- Five
- Six or More

NOTE: If "logtype" is "young", ASK SQ3. All Others, SKIP to SQ4.

SQ3. In order to make sure that we have all age groups represented, would you please tell me if you are UNDER or OVER 40 years of age?

(SKIP to SCRIPTING NOTE before 2)  
(SKIP to TERM)

- Under 40
- 40/Over
- [REF To Do Survey]
- [REF/Remove From List]
- [Terminate Interview]

SQ4. In order to make sure that we have all age groups represented, would you please tell me if you are UNDER or OVER 65 years of age?

(SKIP to SCRIPTING NOTE before 2)

- Under 65
- 65/Over
- [REF To Do Survey]
- [REF/Remove From List]
- [Terminate Interview]

NOTE: If CMWITH is "Yes, Have CM with Female 65/Older" CONTINUE with TERM If CMWITH is "Male Only" OR "No, Have Not CM with Female 65/Older", SKIP to SCRIPTING NOTE before 2.

TERM. Would you please tell me which county you live in?

- All Counties
- [Terminate Interview]

NOTE: THANK & TERMINATE.

**Thank you. I'm sorry, but at this time we are not interviewing people who live in that county. Thank you for your time. GOODBYE!**

**SCRIPTING NOTE: If PHTYPE is "Traditional Phone Order", Merge Q2 & Q3 from the Phone File and SKIP to RECORD BOX. (IF PHTYPE is 'Cell Phone Order', "Cell Phone Labeled as Land Line", OR "Land Line Labeled as Cell Phone", ZIP Code Will Be Asked and Service Area Will Be Forced.)**

2. ZIP Codes for San Mateo County.

94002  
94005  
94010  
94014  
94015  
94018/94019  
94020  
94021  
94025  
94027  
94028  
94030  
94037/94038  
94044  
94060

(SKIP to READ BOX before 169)

[Terminate Interview]

165. What type of school does this child attend? Is it a:

- Public School
- Parochial or Private School
- Charter School
- or Home School
- [Not In School]
- [Don't Know/Not Sure]
- [Refused]

(SKIP to READ BOX before 169)

[Terminate Interview]

166. How would you rate the education this child receives? Would you say:

- Excellent
- Very Good
- Good
- Fair
- or Poor
- [Don't Know/Not Sure]
- [Refused]
- [Terminate Interview]

(SKIP to READ BOX before 169)

167. During the past 12 months, has this child been in a physical fight?

- Yes
- No
- [Don't Know/Not Sure]
- [Refused]
- [Terminate Interview]

168. In the past year, what percent of the time has this child either biked or walked to school?

**That's my last question. Everyone's answers will be combined to give us information about the health practices of residents in this community. Thank you very much for your time and cooperation. GOOD BYE!**

169. Body Mass Index.

Merged

170. Overweight/Sex-Specific.

- Yes
- No

171. Overweight.

- Underweight
- Normal Weight
- Overweight
- Moderately Obese
- Severely Obese
- Very Severely Obese

172. Using Both Diet & Exercise to Lose Weight.

- Yes
- No

173. Cardiovascular Risk Factor.

1+ Cardiovascular Risk Factors  
No Risk Factors  
At Least One Risk Factor

174. Smoking.

Current Smoker – Regular (Every Day)  
Current Smoker – Occasional (Some Days)  
Former Smoker  
Never Smoked  
Current Smoker

175. Sedentary (Exercise Less Than 3 Times Per Week for at Least 20 Minutes Per Occasion).

Yes  
No

176. Current Drinker (1 or More Drinks in Past Month).

Yes  
No

177. Chronic Drinker (60 or More Drinks in Past Month).

Yes  
No

178. Binge Drinker (5 or More Drinks on an Occasion).

Yes  
No

## ATTACHMENT 5: Prioritized Health Needs San Mateo County

SANTA CLARA COUNTY AND SAN MATEO COUNTY  
2013 Community Health Needs Assessment (CHNA)

Health Need/ Condition	Overall Average Score	Scores of Prioritization Criteria Used			
		Disparities Exist	Prevention/ Intervention Opportunity	Quality of Life Impact	Community Priority
Diabetes	2.69	2.78	2.85	2.75	2.38
Obesity	2.60	2.58	2.85	2.62	2.36
Poor mental health, suicide	2.59	2.45	2.31	2.91	2.69
Poor oral health	2.57	2.73	2.70	2.38	2.46
Cardiovascular disease, heart attack, stroke (cerebrovascular disease)	2.56	2.67	2.75	2.83	2.00
Substance abuse (ATOD)	2.56	2.40	2.91	2.71	2.23
Violence*	2.56	2.54	2.50	2.82	2.38
Cancer	2.44	2.29	2.33	2.91	2.23
Births	2.42	2.21	2.60	2.73	2.14
Cognitive issues (Alzheimer's, autistic spectrum)	2.30	2.38	1.90	2.83	2.08
STDs/HIV-AIDS	2.29	2.17	2.82	2.38	1.80
Asthma & Respiratory Conditions	2.21	2.29	2.33	2.42	1.81
Infectious disease**	2.10	2.50	2.14	2.23	1.53

\* Includes child abuse, domestic violence, elder abuse, gangs, and bullying.

\*\* Includes TB, Hepatitis B/C, pertussis, influenza, etc.

## Attachment 6: Persons Representing the Broad Interests of the Community

The following leaders were consulted for their expertise in the community. They were identified based on their professional expertise and knowledge of target groups including children, youth, older adults, low-income populations, minorities, the medically underserved, and those living with chronic conditions. The coalition included leaders from health systems including the Santa Clara County Health & Hospital System including the Department of Public Health, non-profit hospital representatives, local government employees, healthcare consumer advocate organizations, and nonprofit organizations.

NAME	TITLE	AFFILIATION	EXPERTISE	TARGET GROUP(S)	TARGET GROUP ROLE	CONSULTATION METHOD	DATE CONSULTED
Aimee Reedy	Santa Clara County (SCC) Division Director	SCC Public Health Dept	Public Health		Leader	Focus Group	11/7/12
Bonnie Broderick	Director, Chronic Disease and Injury Prevention	SCC Public Health Dept	Public Health	Chronic Conditions	Leader	Focus Group	11/7/12
Dan Peddycord	Director	SCC Public Health Dept	Public Health		Leader	Interview	10/3/12
Dr. Marty Fenstersheib	Health Officer	Santa Clara County Health & Hospital	Public Health		Leader	Interview	10/3/12
Eileen Obata	District Nurse	Gilroy Unified School District School Nurse	Public Health	Underserved & Low Income, South County	Leader	Focus Group	11/1/12
Lillian Castillo	Nutritionist	SCC Public Health Dept	Public Health		Leader	Focus Group	11/1/12
René Santiago	Deputy County Executive	Santa Clara County Health & Hospital	Public Health		Leader	Interview	10/2/12
Susan Silveira	Program Director	SCC Public Health Dept	Public Health		Leader	Focus Group	11/9/12
Dr. Dorothy Furgerson	Chief Medical Officer	Planned Parenthood	Community Health	Youth	Leader	Focus Group	11/9/12
Fred Ferrer	Executive Director	The Health Trust	Community Health	Chronic Conditions, Low Income	Leader	Focus Group	11/7/12

**Attachment 7: Health Needs Prioritization Scores: Breakdown by Criteria**

Health need/ condition	Overall average score	Average Scores of Prioritization Criteria Used by Group			Community Priority Score Based on Primary Data
		Disparities Exist	Prevention/ Intervention Opportunity	Solution Has Multiplier Effect	
Diabetes	3.0	3.0	3.0	2.9	3.0
Obesity	2.9	2.9	2.8	2.9	3.0
Violence	2.6	2.9	2.6	2.9	2.0
Poor mental health	2.6	2.3	2.6	2.4	3.0
Poor oral/dental health	2.5	2.7	2.8	2.3	2.0
Cardiovascular disease, heart attack, stroke	2.4	2.3	2.8	2.4	2.0
Substance use (ATOD)	2.4	2.4	2.8	2.3	2.0
Cancers	2.2	2.1	2.8	1.8	2.0
Respiratory conditions	2.0	2.4	2.6	1.9	1.0
STDs/HIV-AIDS	2.0	2.3	2.5	2.0	1.0
Birth outcomes	1.6	2.0	1.6	1.6	1.0
Alzheimer's	1.4	1.8	1.6	1.3	1.0

*Notes: Access to Health Care not scored during prioritization process.*

**Coding of "Community Priority Score Based on Primary Data":** Coded 3 if issue was identified as a top need/condition by more than 10 key informant interviews/focus groups (KIIs/FGs); coded 2 if by 1-9 KIIs/FGs; coded 1 if mentioned but not as a top need/condition.

## Attachment 8:

### CHNA-All Conditions Named During Primary Data Gathering SCC and SMC (66)

1. Access to health care
2. Accidents (motor vehicles)
3. Acute/episodic issues
4. ADD/ADHD
5. Arthritis
6. Autism/Asperger's
7. Brain injury
8. Cancer
9. Cardiovascular disease (heart disease, stroke, congestive heart failure, hypertension)
10. Chronic disease
11. Cirrhosis/liver failure
12. Deformities
13. Dementia/Alzheimer's
14. Dental health
15. Developmental/behavioral disorders
16. Diabetes
17. Drowning
18. Early male mortality
19. Eating disorders (anemia)
20. Emphysema
21. Fatigue
22. Falls/injury
23. Gout
24. Health disparities among subpopulations
25. Health of older adults
26. Hearing
27. High cholesterol
28. Homicide
29. Hospital readmissions
30. Infant mortality
31. Infections/diseases
32. Jaundice
33. Kidney, renal issues, kidney stones
34. Low birth weight
35. Learning disabilities
36. Mental health (including trauma, suicide, depression, cutting, anxiety, stress)
37. Mobility
38. MS
39. Neuropathy
40. Nutrition, poor nutrition, malnutrition

## Attachment 8:

### CHNA-All Conditions Named During Primary Data Gathering SCC and SMC (66)

41. Obesity, overweight
42. Occupational injuries (RSI)
43. Organ failure/transplants
44. Osteoporosis
45. Parkinson's
46. Pregnancy-related conditions
47. Premature births
48. Prevention
49. Psychosocial issues
50. Respiratory problems, COPD, asthma, allergies, bronchitis
51. Sciatica
52. Sexual abuse
53. Side effects of medication
54. Skin problems (e.g., ulcers and skin disease)
55. Sleep apnea, sleep disorders, insomnia
56. Social/emotional development
57. STDs, HIV/AIDS
58. Substance abuse (alcohol, tobacco, and other drugs including prescription medication)
59. Tuberculosis, Hepatitis B and C
60. Teen pregnancy
61. Thyroid
62. Trauma
63. Unhealthy sexual behavior
64. Violence (abuse, bullying, domestic violence)
65. Viruses
66. Vision problems (e.g., glaucoma and cataracts)

## Attachment 9: List of Indicators on Which Data Were Gathered (88)

Indicator	Data Source
Absence of Dental Insurance Coverage	California Health Interview Survey (CHIS), 2007
Access to Primary Care	U.S. Health Resources and Services Administration Area Resource File, 2009 (as reported in the 2012 County Health Rankings)
Adequate Fruit/Vegetable Consumption (Youth)	California Health Interview Survey (CHIS), 2009
Adequate Social or Emotional Support	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2006-2010
Alcohol Expenditures	Nielsen Claritas SiteReports, Consumer Buying Power, 2011
Asthma Hospitalizations (Adult)	California Office of Statewide Health, Planning and Development (OSHPD), Patient Discharge Data, 2010
Asthma Hospitalizations (Youth)	California Office of Statewide Health, Planning and Development (OSHPD), Patient Discharge Data, 2010
Asthma Prevalence	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2006-2010
Breast Cancer Incidence	The Centers for Disease Control and Prevention, and the National Cancer Institute: State Cancer Profiles, 2005-2009
Breast Cancer Screening (Mammogram)	Dartmouth Atlas of Healthcare, Selected Measures of Primary Care Access and Quality, 2003-2007
Breastfeeding (Any)	CA only: California Department of Public Health, In-Hospital Breastfeeding Initiation Data, 2011; Outside CA: National Survey of Children's Health, 2007

Indicator	Data Source
Breastfeeding (Exclusive)	CA only: California Department of Public Health, In-Hospital Breastfeeding Initiation Data, 2011; Outside CA: National Survey of Children's Health, 2007
Cancer Mortality	CA only: California Department of Public Health, Death Statistical Master File, 2008-2010; Outside CA: Centers for Disease Control and Prevention, National Center for Health Statistics, Underlying Cause of Death, 2005-2009. . Accessed through CDC WONDER
Cervical Cancer Incidence	The Centers for Disease Control and Prevention, and the National Cancer Institute: State Cancer Profiles, 2005-2009
Cervical Cancer Screening (Pap Test)	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2004-2010
Change in Total Population (from 2000 to 2010)	U.S. Census Bureau, 2010 Census of Population and Housing, Summary File 1; U.S. Census Bureau, 2010 Census of Population and Housing, Summary File 1
Children in Poverty	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates
Chlamydia Incidence	Centers for Disease Control and Prevention and the National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, 2009
Colon and Rectum Cancer Incidence	The Centers for Disease Control and Prevention, and the National Cancer Institute: State Cancer Profiles, 2004-2008
Colon Cancer Screening (Sigmoid/Colonoscopy)	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2004-2010

Indicator	Data Source
Dental Care Affordability	California Health Interview Survey (CHIS), 2007
Dental Care Utilization (Adult)	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2006-2010
Dental Care Utilization [Youth]	California Health Interview Survey (CHIS), 2009
Diabetes Hospitalizations (Adult)	California Office of Statewide Health, Planning and Development (OSHPD), Patient Discharge Data, 2010
Diabetes Hospitalizations (Youth)	California Office of Statewide Health, Planning and Development (OSHPD), Patient Discharge Data, 2010
Diabetes Management (Hemoglobin A1c Test)	Dartmouth Atlas of Healthcare, Selected Measures of Primary Care Access and Quality, 2003-2007
Diabetes Prevalence	Centers for Disease Control and Prevention, National Diabetes Surveillance System, 2009
Facilities Designated as Health Professional Shortage Areas (HPSA)	U.S. Health Resources and Services Administration, Health Professional Shortage Area File, 2012
Fast Food Restaurant Access	CA only: U.S. Census Bureau, ZIP Code Business Patterns, 2009; Outside CA: U.S. Census Bureau, County Business Patterns, 2010
Federally Qualified Health Centers	U.S. Health Resources and Services Administration, Centers for Medicare & Medicaid Services, Provider of Service File, 2011
Free and Reduced Price School Lunch Eligibility	U.S. Department of Education, National Center for Education Statistics (NCES), Common Core of Data, Public School Universe File, 2009-2010
Fruit/Vegetable Expenditures	Nielsen Claritas SiteReports, Consumer Buying Power, 2011

Indicator	Data Source
Grocery Store Access	U.S. Census Bureau, County Business Patterns, 2010
Heart Disease Mortality	CA only: California Department of Public Health, Death Statistical Master File, 2008-2010; outside CA Centers for Disease Control and Prevention, National Center for Health Statistics, Underlying Cause of Death, 2005-2009. . Accessed through CDC WONDER
Heart Disease Prevalence	CA only: California Health Interview Survey (CHIS), 2009; Outside CA: Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2006-2010
Heavy Alcohol Consumption	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2004-2010
High Blood Pressure Management	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2006-2010
High School Graduation Rate	U.S. Department of Education, National Center for Education Statistics (NCES), Common Core of Data, Local Education Agency (School District) Universe Survey Dropout and Completion Data, 2008-2009
HIV Hospitalizations	California Office of Statewide Health, Planning and Development (OSHPD), Patient Discharge Data, 2010
HIV Prevalence	Centers for Disease Control and Prevention and the National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, 2008
HIV Screenings	CA only: California Health Interview Survey (CHIS), 2005; Outside CA: Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2006-2010

Indicator	Data Source
Homicide	CA only: California Department of Public Health, Death Statistical Master File, 2008-2010; Outside CA: Centers for Disease Control and Prevention, National Center for Health Statistics, Underlying Cause of Death, 2005-2009. . Accessed through CDC WONDER
Inadequate Fruit/Vegetable Consumption (Adult)	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2003-2009
Infant Mortality	Centers for Disease Control and Prevention, National Vital Statistics System, 2003-2009
Lack of a Consistent Source of Primary Care	CA only: California Health Interview Survey (CHIS), 2009; Outside CA: Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2006-2010
Lack of Prenatal Care	CA only: California Department of Public Health, Birth Profiles by ZIP Code, 2010; Outside CA: Centers for Disease Control and Prevention, National Vital Statistics Systems, 2007-2009. Accessed through CDC WONDER
Linguistically Isolated Population	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates
Liquor Store Access	CA only: California Department of Alcoholic Beverage Control, Active License File, April 2012; Outside CA: U.S. Census Bureau, County Business Patterns, 2010
Low Birthweight	CA only: California Department of Public Health, Birth Profiles by ZIP Code, 2010; Outside CA: Centers for Disease Control and Prevention, National Vital Statistics Systems, 2003-2009. Accessed through the Health Indicators Warehouse

Indicator	Data Source
Lung Cancer Incidence	The Centers for Disease Control and Prevention, and the National Cancer Institute: State Cancer Profiles, 2004-2008
Median Age	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates
Motor Vehicle Crash Death	CA only: California Department of Public Health, Death Statistical Master File, 2008-2010; Outside CA: National Highway Traffic Safety Administration, Fatality Analysis Reporting System, 2008-2010
Obesity (Adult)	Centers for Disease Control and Prevention, National Diabetes Surveillance System, 2009
Obesity (Youth)	CA only: California Department of Education, Fitnessgram Physical Fitness Testing Results, 2011; Outside CA: National Survey of Children's Health, 2007
Overweight (Adult)	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2006-2010
Overweight (Youth)	CA only: California Department of Education, Fitnessgram Physical Fitness Testing Results, 2011; Outside CA: National Survey of Children's Health, 2007
Park Access	U.S. Census Bureau, 2010 Census of Population and Housing, Summary File 1; Esri's USA Parks layer (compilation of Esri, National Park Service, and TomTom source data), 2012.
Pedestrian Motor Vehicle Death	CA only: California Department of Public Health, Death Statistical Master File, 2008-2010; Outside CA: National Highway Traffic Safety Administration, Fatality Analysis Reporting System, 2008-2010

Indicator	Data Source
Physical Inactivity (Adult)	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2004-2010
Physical Inactivity (Youth)	California Department of Education, Fitnessgram Physical Fitness Testing Results, 2011
Pneumonia Vaccinations (Age 65+)	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2004-2010
Poor Air Quality (Ozone)	Centers for Disease Control and Prevention, National Environmental Public Health Tracking Network, 2008
Poor Air Quality (Particulate Matter 2.5)	Centers for Disease Control and Prevention, National Environmental Public Health Tracking Network, 2008
Poor Dental Health	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2006-2010
Poor General Health	Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System, 2004-2010
Poor Mental Health	California Health Interview Survey (CHIS), 2009
Population Below 200% of Poverty Level	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates
Population Living in a Health Professional Shortage Areas (HPSA)	U.S. Health Resources and Services Administration, Health Professional Shortage Area File, 2012
Population Living in Food Deserts	U.S. Department of Agriculture, Food Desert Locator, 2009
Population Receiving Medicaid	U.S. Census Bureau, 2008-2010 American Community Survey 3-Year Estimates
Population with Any Disability	U.S. Census Bureau, 2008-2010 American Community Survey 3-Year Estimates
Population with No High School Diploma	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates

Indicator	Data Source
Poverty Rate (< 100% FPL)	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates
Premature Death	Centers for Disease Control and Prevention, National Vital Statistics System, 2008-2010 (As Reported in the 2012 County Health Rankings)
Preventable Hospital Events	CA only: California Office of Statewide Health, Planning and Development (OSHPD), Patient Discharge Data, 2010; outside CA: Dartmouth Atlas of Healthcare, Selected Measures of Primary Care Access and Quality, 2003-2007
Prostate Cancer Incidence	The Centers for Disease Control and Prevention, and the National Cancer Institute: State Cancer Profiles, 2004-2008
Recreation and Fitness Facility Access	CA only: U.S. Census Bureau, ZIP Code Business Patterns, 2009; Outside CA: U.S. Census Bureau, County Business Patterns, 2010
Soft Drink Expenditures	Nielsen Claritas SiteReports, Consumer Buying Power, 2011
Stroke Mortality	CA only: California Department of Public Health, Death Statistical Master File, 2008-2010; Outside CA: Centers for Disease Control and Prevention, National Center for Health Statistics, Underlying Cause of Death, 2005-2009. . Accessed through CDC WONDER
Student Reading Proficiency (4th Grade)	States' Department of Education, Student Testing Reports, 2011

Indicator	Data Source
Suicide	CA only: California Department of Public Health, Death Statistical Master File, 2008-2010; Outside CA: Centers for Disease Control and Prevention, National Center for Health Statistics, Underlying Cause of Death, 2005-2009. . Accessed through CDC WONDER

# Santa Clara County Health Need Profile

## Access to Health Care

In 2012, Stanford Hospital & Clinics conducted a county-wide assessment of health needs. Based on this scan of quantitative and qualitative data, **Access to Health Care** was prioritized as one of the top health needs in the county. This category included insurance, education, and poverty.

The status of health access is described in this profile, in terms of:

- Key indicators
- Key drivers or factors affecting the condition
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	Santa Clara County	CA	US	HP 2020 Benchmark	Data Source
<b>Linguistically Isolated Population</b> % of households that are linguistically isolated (all members of the household age 14+ have at least some difficulty with English)	12.2%	10.6%	4.8%	--	U.S. Census Bureau, 2007-2009 American Community Survey 3-Year Estimates
<b>Unemployment</b> Smoothed, seasonally-adjusted non-farm payroll unemployment rate	8.5%	10.7%	8.3%	--	U.S. Bureau of Labor Statistics, July, 2012 Local Area Unemployment Statistics
<b>Educational Attainment</b> % of the population aged 25 and older <u>without</u> a high school diploma (or equivalency) or higher	13.5%	19.3%	14.9%	--	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates
<b>Insurance</b>					
<b>Uninsured</b> % of the total civilian non-institutionalized population without health insurance coverage	11.5%	18.2%	15.2%	0%	U.S. Census Bureau, 2011 American Community Survey 3-Year Estimates
<b>Medicaid Recipients</b> % of the civilian non-institutionalized population that is enrolled in Medicaid	7.9%	5.0%	7.7%	--	
<b>Clinical Care</b>					
<b>Access to Primary Care</b> number of primary care physicians per 100,000 population	98.8	74.7	73.1	--	U.S. Health Resources and Services Administration Area Resource File, 2011
<b>Lack a Consistent Source of Primary Care</b> % of children, teenagers, and adults who self-report that they <u>do not</u> have a usual place to go when sick or needing health advice	9.0%	14.2%	--	16.1%	California Health Interview Survey (CHIS), 2009

## Santa Clara County Health Need Profile

# Access to Health Care

Indicator	Santa Clara County	CA	US	HP 2020 Benchmark	Data Source
<b>Preventable Hospital Events</b> Preventable Hospital Admission (ACSC) rate (per 1,000 Medicare enrollees)	44.8	58.0	71.8	--	Dartmouth Atlas of Healthcare, Selected Measures of Primary Care Access and Quality 2007
<b>Poverty</b>					
<b>Population Below 100% FPL</b> % of the population living below 100% of the Federal Poverty Level (FPL)	8.9%	13.7%	13.8%	--	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates
<b>Children Below 100% FPL</b> % of children aged 0-17 living below 100% of the Federal Poverty Level (FPL)	11.0%	19.1%	19.2%	--	
<b>Population Below 200% FPL</b> % of the population living below 200% of the Federal Poverty Level (FPL)	21.3%	30.3%	32.0%	--	
<b>Free/Reduced Lunch</b> % of public school students eligible for free or reduced price lunches	31.7%	48.6%	--	--	California Department of Education, Free/Reduced Price Meals Program & CalWORKS Data Files, 2012.
<b>SNAP Recipients</b> % of households receiving the Supplemental Nutrition Assistance Program (SNAP) benefits	1.1%	1.1%	1.5%	--	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates

Note: \* Indicates statistic is unstable. Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

### Additional data:

- Disparities in health insurance coverage in the county were seen among the Latino population, among those in households with less than \$20,000 annual income and among those who had attained a high school education or less.
- The highest percentage of inability to see a doctor when needed was reported by county African-American adults and adults with less than a high school education.
- In 2009, 9.7% of adults in the county reported that in the past year they delayed getting or did not get a medicine that a doctor prescribed. This figure exceeds the Healthy People 2020 (HP2020) target of 2.8% or less. No subpopulation in the county met the HP 2020 target for this indicator.
- During 2007-08, 57.5% of county middle and high school students reported that they had a regular checkup with a doctor in the past 12 months, which did not meet the HP 2020 target of 75.6%.
- In 2009, only 49.9% of county adults who needed mental health care received it, compared to 55.5% of adults in the state overall.
- The percentage of Santa Clara County's uninsured, ages 18-64, increased from 9 to 21 percent from 2000-2009, higher than both state and national figures. A higher percentage of Whites (90 percent) reported having health insurance than Asian/Pacific Islanders (86 percent), African-Americans (68 percent) and Hispanics (60 percent).<sup>1</sup> Even with implementation of ACA, estimates for the number of uninsured people countywide are 130,000-150,000 (2014) and 120,000-140,000 (2019).<sup>2</sup>

<sup>1</sup> Santa Clara County Department of Public Health, 2000-2009 Behavioral Risk Factor Survey

<sup>2</sup> UC Berkeley Center for Labor Research & Education, Ken Jacobs; November 13, 2012

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Poverty has a negative impact on health (cannot afford the cost of clinical care, copays and medication, and afford healthy foods and activities).
- Lack of oral health and mental health insurance coverage, and health insurance for the undocumented, all impact the ability of individuals to access needed health care.
- Similarly, being underinsured has an impact on access (not all services are covered, including preventative care or screening, certain medications and treatments).
- Health care leaders expressed a concern regarding the lack of general and specialty care practitioners. Wait times for doctor appointments (even for severe conditions) and lack of follow-up by clinicians result in overuse of urgent care/emergency room when conditions worsen.
- Lack of transportation impacts the community, especially when it comes to preventative care (such as frequent visits for diabetes check-ups). It also impacts the ability to get to grocery stores for fresh food.
- Linguistic isolation: Patients who do not understand the medical conditions or directions for compliance may experience negative health outcomes. Also, those who do not speak English may perceive that practitioners do not understand them or their culture and therefore may trust them less.
- Poverty and unemployment are causing stress for youth and adults, and thus are major drivers of poor health overall, and poor mental health in particular.
- Lack of knowledge/awareness of health conditions, their causes, symptoms, and treatments, can keep individuals from accessing needed care.
- Stigma, which is experienced across all populations, prevents people from seeking treatment due to embarrassment, shame, or fear, and causes stress. Stigma can result in lessened social support and increased social isolation.

<b>Free/Reduced Lunch</b> % of public school students eligible for free or reduced price lunches	29.7%	48.6%	--	--	California Department of Education, Free/Reduced Price Meals Program & CalWORKS Data Files, 2012.
<b>SNAP Recipients</b> % of households receiving the Supplemental Nutrition Assistance Program (SNAP) benefits	0.8%	1.1%	1.5%	--	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates

Note: \* Statistic is unstable and should be interpreted with caution.  
 Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

### Additional data:

- Limitations in access have a discernible impact on the health status of county residents and in the way that health care is delivered in the community.
- Respondents living below the 200% poverty threshold more often report “fair” or “poor” health status than do those at higher income levels.
  - ◆ 30.7% of those below twice the poverty level report “fair/poor” health (versus 5.2% of those living on more than four times the federal poverty threshold).
  - ◆ Higher “fair/poor” health status is also noted among Hispanics and African-Americans (23%) in particular, compared to Whites (11.0%) and Asians/Pacific Islanders (7.7%).
- Uninsured respondents rate access to local health care services as “fair” or “poor” much more often (50.4%) than do privately or publicly insured respondents (8.5% and 27.0%, respectively).
- While the numbers of insured will increase as health care reform is fully implemented, there will be a significant number that will remain uninsured. In addition, the same barriers to accessing care that existed before health care reform will still exist: lack of health care providers, inability to pay, language or cultural barriers, lack of adequate transportation, inadequate child care options and limited hours of service.

# San Mateo County Health Need Profile

## Access to Health Care

---

- In San Mateo County, there are currently 80,000 uninsured individuals. Estimates for post-Affordable Care Act implementation place the number of those remaining uninsured at over 34,000.<sup>1</sup>

### Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Factors that impact individuals' ability to access needed health, particularly preventive care, include lack of oral health and mental health insurance coverage, or if covered, lack of treatment options, as well as health insurance for the undocumented.
- Health care leaders expressed a lack of primary care practitioner was of particular concern. Wait times for doctor appointments (even for severe conditions) result in overuse of urgent care/ emergency room when conditions worsen.
- Problems with transitions from one provider to another (e.g., PCP to specialist); paperwork can get lost or take a long time to arrive at the new provider; poor communication among PCPs, specialists, nurses, etc.
- Lack of transportation impacts the community, especially those who are homeless and/or who also have mobility issues. Public transportation can be difficult for those with disabilities and those who live in remote parts of the county.
- Social/cultural norms can have an impact on health care access, for example, not seeing mental health issues as treatable conditions and thus not seeking help and considering chubby babies to be "healthy" and thus not seeing the early warning signs of childhood obesity.
- Linguistic isolation: Families in which parents are monolingual can foreclose opportunities to get needed health information. Additional concerns among the undocumented in accessing care included fear of deportation.
- Lack of knowledge/awareness of health conditions, their causes, symptoms, treatments, and the community resources available can keep individuals from accessing needed care.

# Santa Clara County Health Need Profile

## Alzheimer's Disease

In 2012, the Santa Clara County Community Benefits Coalition conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, Alzheimer's disease was prioritized as one of the top health needs in the county.

The status of Alzheimer's disease is described in this profile, in terms of:

- Key indicators
- Key drivers or factors affecting the condition
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	Santa Clara County	CA	US	HP 2020 Benchmark	Data Source	
<b>Estimated Alzheimer's Prevalence</b>					"Alzheimer's Disease; Facts and Figures in California: Current Status and Future Projections", Alzheimer's Assoc., CA; 2009  Based on published prevalence rates (2003 and 2006) and CA Department of Finance Race/Ethnic Population with Age and Sex Detail, 2000-2050; 2007.  Alzheimer's Disease; Facts and Figures in California: Current Status and Future Projections, Alzheimer's Assoc., CA (2003-05 data)	
Estimated number of adults 55+ with Alzheimer's						
<b>2008 Estimate</b>	27,658	588,208				
<b>2015 Estimate</b>	32,988	678,446				
<b>Increase in Alzheimer's Prevalence</b>						
Estimated % increase in people 55+ living with Alzheimer's 2008-2015						
	19%	15%				
<b>Alzheimer's Mortality</b>						
Age-adjusted death rate per 100,000 population						
	20.8	23.4				

Note: ‡ Statistics from CARES Platform.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

#### Additional Data:

- In 2010, Alzheimer's disease was the third leading cause of death in Santa Clara County and the fifth leading cause in California.<sup>1</sup>

<sup>1</sup> Ten Leading Causes of Death; California Counties and Selected City Health Departments, California Department of Public Health, 2010

## Santa Clara County Health Need Profile

# Alzheimer's Disease

- The Alzheimer's Association estimates that the number of those diagnosed with Alzheimer's disease in California will double to over 1.1 million by the year 2030.<sup>2</sup>
- By 2030, Santa Clara County will see a 112% increase in Alzheimer's disease.<sup>3</sup>

### SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:

- The 2005 age-adjusted Alzheimer's disease mortality rates for African-Americans and Caucasians were the worst (27.3 and 27.8 respectively) when compared with other ethnic groups and worse than the overall California rate of 23.4 deaths per 100,000.

## Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals' behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	Santa Clara County‡	CA ‡	Data Source
<b>Demographics</b>	<b>Median Age of Population</b> median age according to the 2010 Census population estimate	35.8	34.9	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates.
	<b>Estimated Older Adult Proportion of Population</b> % of estimated 2020 population that will be 65+ years old	14.4%	14.9%	CA Dept. of Finance, State and County Population Projections by Major Age Groups, 2010-2060, 2013
	Young retirees (65-74 years)	8.5%	8.9%	
	Mature retirees (75-84 years)	4.2%	4.2%	
	Seniors (85+ years)	1.8%	1.8%	

Note: ‡ Statistics from CARES Platform.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

See data regarding additional cross-cutting drivers influencing this health need (such as poverty and lack of health insurance coverage) in the **Access to Health Care** profile report.

<sup>2</sup> Alzheimer's Disease; Facts and Figures in California: Current Status and Future Projections, Alzheimer's Association of Northern California

<sup>3</sup> Council on Aging Silicon Valley Area Plan 2012-2016; 2012

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Alzheimer's disease or dementia was mentioned in 4 out of 25 groups/interviews.
- The lack of gerontologists and related specialists was mentioned several times.
- Issues of location (isolation) and related lack of transportation were described as combining to exacerbate the impact of Alzheimer's disease.
- Concerns about caregivers (burnout, lack of knowledge/health education, and lack of supportive services such as respite) surfaced several times.
- Lack of coordination of care and concerns about care transitions were of particular concern for patients with Alzheimer's disease.
- Issues with medication management were also mentioned.
- Relative lack of services and the need for programs to partner for more effective/efficient provision of services was noted.
- Relative lack of governmental support/funding was also noted.

# San Mateo County Health Need Profile

## Alzheimer's Disease

In 2012, Stanford Hospital and Clinics conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **Alzheimer's disease** was considered to be an important health need in the county.

The status of Alzheimer's disease is described in this profile, in terms of:

- Key indicators
- Key drivers or factors affecting the condition
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	San Mateo County	CA	US	HP 2020 Benchmark	Data Source
<b>Estimated Alzheimer's Prevalence</b> Estimated number of adults 55+ with Alzheimer's					"Alzheimer's Disease; Facts and Figures in California: Current Status and Future Projections", Alzheimer's Assoc., CA; 2009
<b>2008 Estimate</b>	13,684	588,208			
<b>2015 Estimate</b>	14,610	678,446			
<b>Increase in Alzheimer's Prevalence</b> Estimated % increase in people 55+ living with Alzheimer's 2008-2015	7%	15%			Based on published prevalence rates (2003 and 2006) and CA Department of Finance Race/Ethnic Population with Age and Sex Detail, 2000-2050; 2007.
<b>Alzheimer's Mortality</b> Age-adjusted death rate per 100,000 population	18.9	23.4			Alzheimer's Disease; Facts and Figures in California: Current Status and Future Projections, Alzheimer's Assoc., CA (2003-05 data)

**Additional Data:**

- A significant problem, Alzheimer's disease was the fifth leading cause of death in the county in 2010.<sup>1</sup>
- Seniors need additional help: 6 % of San Mateo County residents need help with routine needs, such as shopping, cooking, or managing household finances, because of an impairment or health problem. The prevalence is higher (9.2%) among adults ages 65 years and older<sup>2</sup>

<sup>1</sup> California Department of Public Health, Death Statistical Data Tables 2010

## San Mateo County Health Need Profile

# Alzheimer's Disease

- Seniors and social isolation: In the 2013 San Mateo County Health & Quality of Life Survey, 36.6% of responding seniors (ages 65 years and older) lived alone. Note that greater shares of the following seniors live alone: women, adults with postsecondary education and White seniors. Responses did not vary significantly by geographical area.
- Seniors and emotional support: 11.5% of seniors have someone for emotional support “little” or “none” of the time, slightly higher than the overall figure for the county (11%).<sup>3</sup>
- There will be a 70 percent increase in older adults with Alzheimer's disease by 2030.<sup>4</sup>
- The Alzheimer's Association estimates that the number of those diagnosed with Alzheimer's disease in California will double to over 1.1 million by the year 2030.<sup>5</sup>

### Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals' behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	South SF Area‡	Redwood City Area‡	San Mateo County	CA‡	Data Source
Demographics	<b>Median Age of Population</b> median age according to the 2010 Census population estimate	--	--	39.0‡	34.9	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates.
	<b>Estimated Older Adult Proportion of Population</b> % of estimated 2020 population that will be 65+ years old	--	--	17.1%	14.9%	CA Dept. of Finance, State and County Population Projections by Major Age Groups, 2010-2060, 2013
	Young retirees (65-74 years)	--	--	10.2%	8.9%	
	Mature retirees (75-84 years)	--	--	4.8%	4.2%	
	Seniors (85+ years)	--	--	2.1%	1.8%	

Note: ‡ Statistics from CARES Platform.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Alzheimer's disease or dementia was mentioned in 3 out of 13 groups/interviews.
- Older adults identified overarching drivers related to Alzheimer's disease including denial of the problem.
- Older adults also mentioned having a lack of information about resources that could help them.
- Issues of location (isolation) and related lack of transportation were described as combining to exacerbate the impact of Alzheimer's disease.
- A concern about family caregivers surfaced, especially as it related to lack of transportation.
- Cost (health care, activities, fresh food) make a larger dent in the budgets of older individuals who are on a fixed income.
- Issues with medication management were mentioned.

In 2012, Stanford Hospital and Clinics conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **arthritis** was considered to be an important health need in the county.

The status of unintentional injuries is described in this profile, in terms of:

- Key indicators
- Key drivers or factors affecting the condition
- Community input

## Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	Santa Clara County	CA	HP 2020 Benchmark	Data Source
<b>Arthritis &amp; Related Conditions Prevalence</b> % of people ever diagnosed with arthritis, gout, lupus or fibromyalgia	14.7%	19.0%	--	California Health Interview Survey (CHIS) <a href="#">2005</a>
Adults age 18-44	5.9%			
Adults age 45-64	19.5%			
Adults age 65-84	38.8%			
Adults age 85+	49.2%			
<b>Arthritis-only Prevalence</b> % of adults age 18+ who have been told they have arthritis	16.4%	20.3%	--	CDC BRFSS <a href="#">2009</a>

Note: \* Statistic is unstable.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

### Additional data:

- Obesity can contribute to the onset of osteoarthritis.
- In 2009, 9% of Santa Clara County seniors reported arthritis as one of the common health problems they experienced. Arthritis was the most frequently mentioned of all problems.<sup>1</sup>

## Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals' behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

<sup>1</sup> Santa Clara County Public Health Department, 2009 Behavioral Risk Factor Survey

	Seniors (85+ years)	1.8%	1.8%	
Health Behaviors	<b>Physical inactivity (adult)</b> % adults who self-report <u>not</u> participating in moderate physical activity for ≥30 minutes ≥5 times/week or vigorous physical activity for ≥20 minutes ≥3 times/week	52.5%	48.7%	CDC BRFSS 2009
Health Conditions	<b>Overweight adults</b> % who self-report a BMI between 25-30	36%	36.2%	CDC BRFSS 2006-2010
	<b>Obese adults</b> % who self-report a BMI over 30	21%	23.3%	CDC BRFSS 2006-2010

Note: Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

### Additional data:

In California, of adults with arthritis, 32% are obese and another 37% are overweight. Fully 35% of adults with arthritis were told by their doctor to lose weight and over half (56%) were told by their doctor to exercise.<sup>2</sup>

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Arthritis was mentioned in 2 of 25 groups/interviews.
- Older adults focused on mobility concerns (which can be brought on by arthritis), especially as they pertain to access.

<sup>2</sup> Centers for Disease Control and Prevention Behavioral Risk Factor Surveillance System, 2007

# San Mateo County Health Need Profile

## Arthritis

In 2012, Stanford Hospital and Clinics conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **arthritis** was considered to be an important health need in the county.

The status of unintentional injuries is described in this profile, in terms of:

- Key indicators
- Key drivers or factors affecting the condition
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	San Mateo County	CA	HP 2020 Benchmark	Data Source
<b>Arthritis &amp; Related Conditions Prevalence</b> % of people ever diagnosed with arthritis, gout, lupus or fibromyalgia	17.5%	19.0%	--	California Health Interview Survey (CHIS) <a href="#">2005</a>
Adults age 18-44	4.3%*			
Adults age 45-64	25.2%			
Adults age 65-84	47.7%			
Adults age 85+	32.9%*			
<b>Arthritis-only Prevalence</b> % of adults age 18+ who have been told they have arthritis	20.7%	20.3%	--	CDC BRFSS <a href="#">2009</a>

Note: \* Statistic is unstable.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

### Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals' behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	San Mateo County	CA	Data Source
<b>Demographics</b>	<b>Median Age of Population</b> median age according to the 2010 Census population estimate	39.0	34.9	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates.

Category	Driver/indicator	San Mateo County	CA	Data Source
Demographics	<b>Estimated Older Adult Proportion of Population</b> % of estimated 2020 population that will be 65+ years old	17.1%	14.9%	CA Dept. of Finance, State and County Population Projections by Major Age Groups, 2010-2060, 2013
	Young retirees (65-74 years)	10.2%	8.9%	
	Mature retirees (75-84 years)	4.8%	4.2%	
	Seniors (85+ years)	2.1%	1.8%	
Health Behaviors	<b>Physical inactivity (adult)</b> % adults who self-report <u>not</u> participating in moderate physical activity for ≥30 minutes ≥5 times/week or vigorous physical activity for ≥20 minutes ≥3 times/week	41.9%	48.7%	CDC BRFSS 2009
Health Conditions	<b>Overweight adults</b> % who self-report a BMI between 25-30	37.3%	36.2%	CDC BRFSS 2006-2010
	<b>Obese adults</b> % who self-report a BMI over 30	19.8%	23.3%	CDC BRFSS 2006-2010

Note: Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

#### Additional data:

In California, of adults with arthritis, 32% are obese and another 37% are overweight. Fully 35% of adults with arthritis were told by their doctor to lose weight and over half (56%) were told by their doctor to exercise.<sup>1</sup>

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Arthritis was mentioned in 2 of 14 groups/interviews, one group prioritizing it as a major health concern.
- Older adults identified the need for more education about how to prevent and treat arthritis.
- Spanish speakers felt there could be more information about arthritis available to them in their language.
- Focus group participants suggested that certain types of work and/or overwork can cause arthritis.
- There were some concerns among focus group participants that some doctors did not know the most modern therapies available to treat arthritis.
- Older adults identified lack of exercise (such as yoga and walking) as contributing to arthritis.
- Older adults focused on mobility concerns (which can be brought on by arthritis), especially as they pertain to access.

<sup>1</sup> Centers for Disease Control and Prevention Behavioral Risk Factor Surveillance System, 2007

# Santa Clara County Health Need Profile

## Cancer

In 2012, the Santa Clara County Community Benefits Coalition conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **cancers** were prioritized as one of the top health needs in the county. This category included breast cancer, cervical cancer, colorectal cancer, liver cancer, lung cancer, prostate cancer and all cancers.

The status of cancer needs is described in this profile, in terms of:

- Key indicators
- Key drivers or factors affecting the condition
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Data in red indicates that it fails to meet a benchmark or is worse than the state average.

# Santa Clara County Health Need Profile

## Cancer

In Santa Clara County, the following indicators are failing to meet overall benchmarks:

- Breast cancer incidence rate
- Cervical cancer incidence rate
- Liver cancer incidence rate
- Liver cancer mortality rate
- Prostate cancer incidence rate

### Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals' behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	San Jose Service Area‡	Santa Clara Service Area‡	Santa Clara County‡	CA	HP 2020 Benchmark	Data Source
Behaviors	<b>Colorectal, Liver, Lung &amp; Prostate Cancers</b>						
	<b>Inadequate fruit/vegetable consumption (adults)</b> % of adults aged 18 and older who self-report consuming less than 5 servings of fruits and vegetables each day	70%	70%	70%	70%	—	CDC BRFSS 2003-2009
	<b>Adequate fruit/vegetable consumption (youth)</b> % of children aged 2 and older who are reported to consume 5 or more servings of fruits and vegetables each day	47%	47%	—	48%	—	California Health Interview Survey (CHIS), 2009
	<b>Fruit/vegetable expenditures</b> estimated expenditures for fruits and vegetables purchased for in-home consumption, as a % of total household expenditures	2%	2%	—	2%	—	Nielsen Claritas SiteReports, Consumer Buying Power, 2011

# Santa Clara County Health Need Profile

## Cancer

Category	Driver/indicator	San Jose Service Area‡	Santa Clara Service Area‡	Santa Clara County‡	CA	HP 2020 Benchmark	Data Source
Clinical Care	<b>Breast Cancer Screening</b> % of females ages 50-74 who had a mammogram in the past 2 years	62%	62%	62%	59%	81%	Dartmouth Atlas of Healthcare, Selected Measures of Primary Care Access and Quality, 2003-2007
	<b>Cervical Cancer Screening</b> % of females ages 21 - 65 who had Pap test in past 3 years	66%	66%	91%	90%	93%	CDC BRFS 2004-2010
	<b>Colorectal Cancer Screening</b> % of adults age 50+ who ever had sigmoidoscopy or colonoscopy exam	62%	62%	62%	52%	71%	CDC BRFS 2004-2010
	<b>Prostate Cancer Screening</b> % of men age 50+ who ever had a prostate-specific antigen test	--	--	72%	--	--	SCC PHD BRFS 2009

Note: \* Statistic is unstable and should be used with caution. ‡ Statistics from Kaiser Permanente (SCC CBC partner) CARES data platform. Data in red indicates that it fails to meet a benchmark or is worse than the state average.

### Additional Data:

- Countywide, the percentage of adults consuming inadequate servings of fruits/vegetables (a contributing factor in colorectal, liver, lung, and prostate cancers) is no better than the state average. See data regarding additional cross-cutting drivers such as lack of health insurance in the **Access to Health Care** profile report.
- The top cause of death in Santa Clara County was cancer.<sup>1</sup>

### SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:

- Overall, Santa Clara County mortality rates due to cancer are lower than that of the state and meet benchmarks. However, the rate for African-Americans is highest among any ethnicity and misses the benchmark.

---

<sup>1</sup> California Department of Public Health, Death Statistical Data Tables 2010

# Santa Clara County Health Need Profile

## Cancer

---

- **Breast cancer:**
  - White women have the highest incidence and mortality rates compared with other ethnic groups and their rate is higher than the statewide average for this indicator.
- **Cervical cancer:**
  - Latina and Asian/Pacific-Islander women have the highest incidence rates compared with other ethnic groups and their rates are too high when compared to the benchmark for this indicator.
- **Colorectal cancer:**
  - Latinos have the highest mortality rate compared with other ethnic groups and their rate is too high when compared to the benchmark for this indicator.
- **Liver cancer:**
  - Latinos and Asian/Pacific-Islanders have the highest incidence and mortality rates compared with other ethnic groups and their rates are higher than the state average for these indicators. Note that incidence is highest among Latinos, while mortality is highest among Asian/Pacific-Islanders.
- **Lung cancer**
  - African-Americans have the highest incidence rates compared with other ethnic groups and their rate is higher than the state average for this indicator.
- **Prostate cancer:**
  - White and African-American men have the highest incidence rates compared with other ethnic groups, with African-Americans by far the highest. The rates for Whites and African-Americans are higher than the state average for this indicator.

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Cancer was of high concern in 3 out of 25 groups/interviews and was mentioned in many others.
- Costs of health care and cancer treatments were of concern, particularly for un/underinsured, low-income persons, the unemployed and those living in poverty.
- Fear of cancer and/or of the treatments can lead people to denial and/or to avoidance of check-ups.
- Relative lack of alternative treatments rather than radiation and chemotherapy was noted.
- Lack of knowledge and lack of education about prevention was mentioned.
- Concern was expressed about environmental toxins (PCBs, pesticides, etc.).
- Tobacco use (related to lung & oral cancers) not dropping among youth, social environment (ads, TV/movies, easy access, peer pressure) pushing minors to smoke, and the need for better prevention efforts (e.g., increase tobacco taxes, restrict smoking in public places, support policy changes, law enforcement) were mentioned.

# San Mateo County Health Need Profile

## Cancer

In 2012, Stanford Hospital & Clinics conducted a county-wide assessment of health needs. Based on this scan of quantitative and qualitative data, **cancer** was prioritized as one of the top health needs in the county. This category included breast cancer, cervical cancer, colorectal cancer, liver cancer, lung cancer, prostate cancer and all cancers.

African-American	48.5			
Asian	13.6			
Latino	14.2			

Note: Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

**Additional data:**

- Cancer is the leading cause of death in the county.<sup>1</sup>
- According to Dirk Baumann, MD, chair of San Mateo Hep B Free Campaign, “One in 10 Asian Americans and Pacific Islanders have chronic hepatitis B and are four times more likely to die from liver cancer

<sup>1</sup> California Department of Public Health, Death Statistical Data Tables 2010

# San Mateo County Health Need Profile

## Cancer

---

compared to the general population, making it the greatest health disparity affecting the Asian and Pacific Islander populations both locally and worldwide”<sup>2</sup>

- Latinos in San Mateo County also have a higher incidence of liver cancer (13.1/100,000) than the incidence for “all races” in the county (10/100,000). Asian/Pacific Islanders have the highest rate, at 17.4/100,000, and whites the lowest rate, at 6.7/100,000.<sup>3</sup> African-Americans, although only 3.34 percent of the county’s population, have a relatively high incidence of liver cancer at 11.3/100,000.<sup>4</sup>
- Only 5.4% of San Mateo County survey respondents report each of four basic health behaviors, a combination which limits cardiovascular and cancer risk.<sup>5</sup>

### SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:

- Incidence (overall): Whites have the highest incidence rate of all types of cancer; followed by African-Americans (both groups’ rates exceed the state average).
- Mortality (overall): The mortality rate due to all types of cancer is higher for African-Americans than for those of any other ethnicity, followed by Whites (both groups’ rates fail against the national benchmark).
- With regard to **breast** cancer:
  - White women have the highest incidence and mortality rates compared with other ethnic groups. Their rates are higher than the statewide average and national benchmark, respectively, for these indicators.
- With regard to **cervical** cancer:
  - Latinas have the highest incidence rates compared with other ethnic groups. Their rate is too high when compared to the national benchmark for this indicator.
- With regard to **colorectal, lung, and prostate** cancers:
  - African-Americans have the highest incidence and mortality rates for these cancers compared with other ethnic groups. Their rates are too high compared to the benchmarks for these indicators.

# San Mateo County Health Need Profile

## Cancer

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals' behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	San Mateo County	CA	HP 2020 Benchmark	Data Source
Health Behaviors	<b>Adequate fruit/vegetable consumption (youth)</b> % of kids 2+ who consume five or more servings of fruits and vegetables daily	53.8%	48.4%	—	California Health Interview Survey (CHIS), 2009
	<b>Adequate fruit/vegetable consumption (adult)</b> % of adults who consume five or more servings of fruits and vegetables daily	31.0%	27.7%	—	State: CDC BRFSS 2009; county: PRC Community Health & Quality of Life Surveys, Professional Research Consultants, Inc. 2013
	<b>Smoking (Adult)</b> % of adults who currently smoke	10.1%	13.7%	12%	State: CDC BRFSS 2011; County: PRC Community Health & Quality of Life Surveys, Professional Research Consultants, Inc. 2013
	<b>Smoking (Youth)</b> % of 11th graders who smoked cigarettes past 30 days	13.1%	13.2%	16%	CA Healthy Kids (CHKS), 2008-10
Clinical Care	<b>Breast Cancer Screening</b> % of females age 50+ who had a mammogram in the past 2 years	81.5%	81.4%	81%	State: CDC BRFSS 2010; county: CDC BRFSS 2008
	<b>Cervical Cancer Screening</b> % of females age 18+ who had Pap test in past 3 years	84.2%	80.8%	93%	
	<b>Colorectal Cancer Screening</b> % of adults age 50+ who ever had sigmoidoscopy or colonoscopy exam	85.5%	61.5%	71%	State: CDC BRFSS 2010; county: CA Health Interview Survey (CHIS) 2009

Note: Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

See data regarding additional cross-cutting drivers such as lack of health insurance in the **Access to Health Care** profile report.

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Cancer was mentioned in 5 out of 14 groups/interviews
- Tobacco use (related to lung & oral cancers) was of concern; it was felt this could be better addressed at the policy level than on an individual, health-behaviors level
- Inadequate consumption of fresh fruits/vegetables was mentioned by several as a driver for a variety of diseases (related, among other things, to colorectal cancer)
- One key informant mentioned factors that play into patients' decisions about accepting counseling for smoking cessation, including environmental (where to smoke, availability of tobacco in stores, level of tax)

# Cardiovascular Disease, Heart Disease, Stroke

In 2012, the Santa Clara County Community Benefits Coalition conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, cardiovascular disease, heart attack, and stroke were prioritized as one of the 13 top health needs in the county. This category included cerebrovascular disease.

The status of cardiovascular needs is described in this profile, in terms of:

- Key indicators
- Geographic regions or subpopulations in which the need is greatest
- Key drivers or factors affecting the condition
- Community input

## Status of Key Indicators, 2013

Stroke					
<b>Prevalence of stroke</b> % of adults who have ever had a stroke	2%	2%	--	--	Santa Clara County Public Health Department, BRFSS 2009
<b>Stroke mortality</b> Age-adjusted death rate due to cerebrovascular disease per 100,000 adults	27.4	48.4	41.8	33.8	CDPH, Death Statistical Master File, 2010
White	25.7				(Provided by Santa Clara County Public Health Department)
African-American	41.3				
Latino	27.0				
Asian/Pacific-Islander	30.6				
Multiracial	37.1				

Note: ‡ Statistics from CARES Platform.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

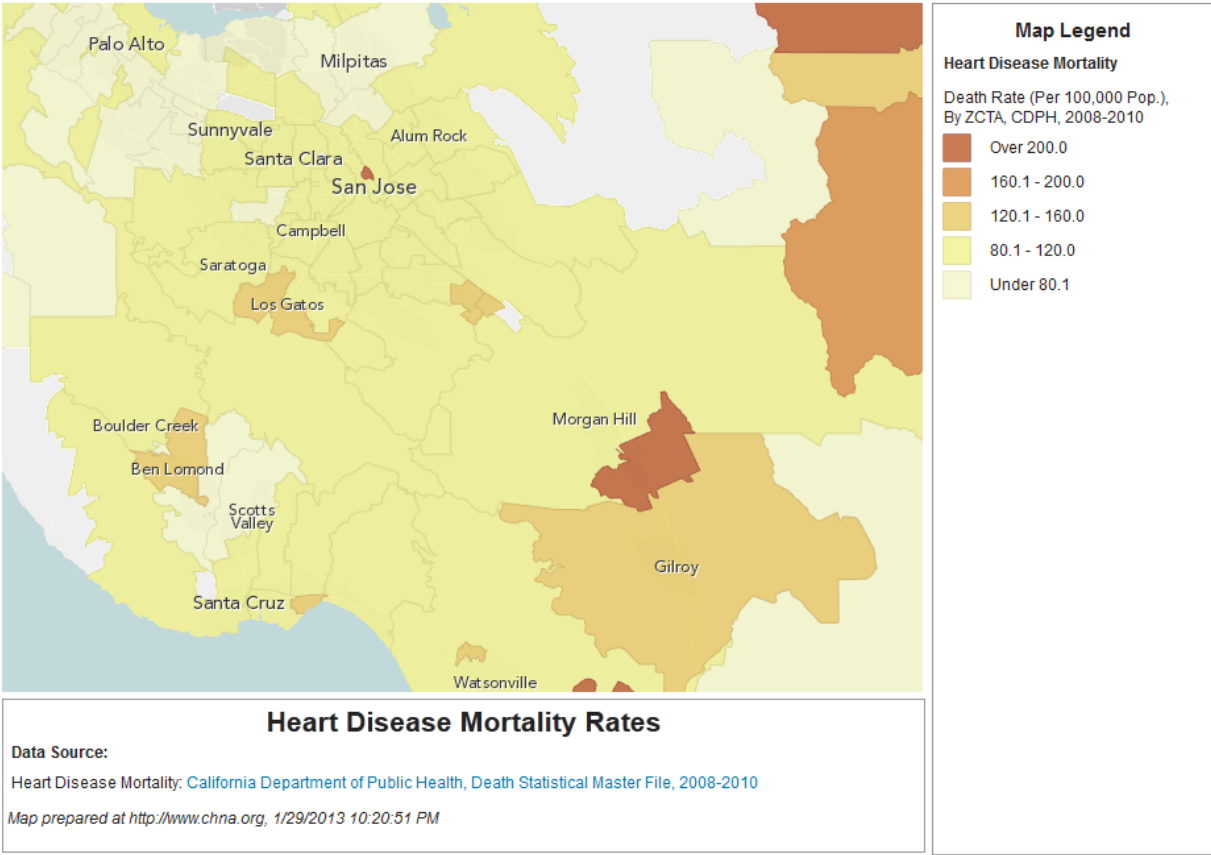

## SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:

- African-Americans experience the highest percentage of hypertension compared with other ethnic groups, followed by Whites.
- African-Americans had the highest rates of stroke mortality compared with other ethnic groups, followed by those who identify as multiracial.
- Whites experience the highest percentage of high cholesterol compared with other ethnic groups, followed by African-Americans and Asian/Pacific-Islanders.

# Cardiovascular Disease, Heart Disease, Stroke

## Geographic Areas of Greatest Need

The San Martin zip code of 95046 has the highest mortality rate due to heart disease, with a death rate of 227.1 per 100,000 people. This translates to 10.3 average deaths per year in 2008-2010. Residents in East San Jose, in the 95113 zip code, have the second highest rate (200.6). There is concern about Gilroy residents, and residents of the neighboring 95119 and 95139 zip codes whose rates are between 120 – 160 per 100,000.

# Cardiovascular Disease, Heart Disease, Stroke

## Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals’ behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	Santa Clara County‡	CA‡	Data Source
Health Behaviors	<b>High blood pressure management</b> % of adults aged 18 and older who self-report that they are taking medication for their high blood pressure	73%	70%	CDC BRFSS 2006-10
	<b>Alcohol expenditures</b> estimated expenditures for alcoholic beverages purchased at home, as a percentage of total household expenditures	—	2%	Nielsen Claritas SiteReports, Consumer Buying Power, 2011
	<b>Alcohol Consumption (Adult)</b> % of adults reporting heavy alcohol consumption	13%‡	17%	CDC BRFSS 2004-10
	<b>Tobacco expenditures</b> estimated expenditures for cigarettes, as a percentage of total household expenditures	—	1.1%	Nielsen Claritas SiteReports, Consumer Buying Power, 2011
	<b>Smoking (Adult)</b> % of adults who currently smoke	10%	14%	CDC BRFSS 2004-10
	<b>Smoking (Youth)</b> % of 11th graders who smoked cigarettes past 30 days	13%	—	CA Healthy Kids (CHKS), 2009-10
	<b>Fruit/vegetable expenditures</b> % of total household expenditures	—	1.6%	Nielsen Claritas SiteReports, Consumer Buying Power, 2011
	<b>Inadequate fruit/vegetable consumption (adult)</b> % of adults who consume less than five servings of fruits and vegetables daily	70%	70%	CDC BRFSS 2003-2009
	<b>Adequate fruit/vegetable consumption (youth)</b> % of kids 2+ who consume five or more servings of fruits and vegetables daily	47%	48%	California Health Interview Survey (CHIS), 2009

# Cardiovascular Disease, Heart Disease, Stroke

Category	Driver/indicator	Santa Clara County‡	CA‡	Data Source
Health Behaviors	<b>Physical inactivity (adult)</b> % of adults 18+ reporting no leisure time for physical activity	18%	22%	CDC BRFSS 2004-10
	<b>Physical inactivity (youth)</b> % of 5 <sup>th</sup> , 7 <sup>th</sup> & 9 <sup>th</sup> graders ranking within the "High Risk" or "Needs Improvement" zones for aerobic capacity on the Fitnessgram physical fitness test	28%	37%	CA Dept of Education, Fitnessgram Physical Fitness Testing Results, 2011
Physical Environment	<b>Walkability</b> % of population in "Somewhat Walkable" or "Very Walkable" Cities*	—	54%	WalkScore.Com, 2012
	<b>Fast food restaurant access</b> Establishments per 100,000 pop	72.0	69.5	U.S. Census Bureau, ZIP Code Business Patterns, 2009
	<b>Grocery store access</b> Establishments per 100,000 pop	20.4	22.2	U.S. Census Bureau, County Business Patterns, 2010
	<b>WIC-Authorized food store access</b> Establishments per 100,000 pop	9.45	15.8	U.S.D.A. Food Environment Atlas, 2012
	<b>Recreation and fitness facility access</b> Establishments per 100,000 pop	12.7	8.9	U.S. Census Bureau, ZIP Code Business Patterns, 2009
	<b>Liquor store access</b> number of active beer, wine, and liquor retailer licenses per 100,000 population	—	72.3	CA Dept of Alcoholic Beverage Control, Active License File, April 2012

‡ Statistics from CARES Platform.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

See data regarding additional cross-cutting drivers influencing this health need (such as poverty and lack of health insurance coverage) in the **Access to Health Care** profile report.

# Cardiovascular Disease, Heart Disease, Stroke

---

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Heart disease was mentioned in at least half of the groups/interviews.
- High blood pressure and hypertension were the most common conditions/drivers named by residents related to cardiovascular disease.
- See the related health need of obesity for drivers related to poor nutrition and lack of exercise
- Lack of education about the signs of heart disease and high blood pressure was noted.
- Lack of recognition because it is an “invisible disease”.
- Can be caused/exacerbated by stress, smoking and drinking alcohol.

# Cardiovascular Disease, Heart Disease, Stroke

In 2012, Stanford Hospital & Clinics conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, cardiovascular disease, heart disease, and stroke were prioritized as one of the top health needs in the county. This category included cerebrovascular disease.

The status of cardiovascular needs is described in this profile, in terms of:

- Key indicators
- Key drivers or factors affecting the condition
- Community input

## Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	San Mateo County	CA	HP 2020 Benchmark	Data Source
<b>High cholesterol</b> % adults ever been told by a health professional that they have high cholesterol	20.7%	22.1%	13.5%	California Health Interview Survey (CHIS) 2005
White	19.6%			
African-American	--			
Latino	--			
Asian/Pacific-Islander	23.0%			
<b>High blood pressure</b> % adults told they have high blood pressure	24.8%	24.8%	26.9%	California Health Interview Survey (CHIS) 2009
White	28.2%			
African-American	--			
Latino	--			
Asian/Pacific-Islander	23.8%			
<b>Heart disease</b>				
<b>Prevalence of heart disease</b> % of adults ever told they have any kind of heart disease	5.1%	6.2%	--	California Health Interview Survey (CHIS) 2009
<b>Heart disease mortality</b> Age-adjusted death rate due to heart disease per 100,000 adults, 5-year moving average	147.8	121.6	100.8	State: CDPH, County Health Profiles, 2012; County: CA Dept. of Health Services, Center for Health Statistics, Death Records 2006-2010
White	156.2			
African-American	191.2			
Latino	118.8			
Asian	106.8			

# Cardiovascular Disease, Heart Disease, Stroke

Indicator	San Mateo County	CA	HP 2020 Benchmark	Data Source
<b>Stroke</b>				
<b>Prevalence of stroke</b> % of adults who have ever had a stroke	0.9%*	2.3%	--	California Health Interview Survey (CHIS) 2005
<b>Cerebrovascular disease (stroke) mortality</b> Age-adjusted death rate due to cerebrovascular disease per 100,000 adults, 5-year moving average	35.9	37.4	33.8	State: CDPH, County Health Profiles, 2012; County: CA Dept. of Health Services, Center for Health Statistics, Death Records 2006-2010
White	36.8			
African-American	56.4			
Latino	28.5			
Asian	34.5			

Note: \* Statistic is unstable.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

## Additional data:

- Heart disease is the second leading cause of death in the county, accounting for 1,178 deaths in 2010. The fourth leading cause of death was cerebrovascular disease.
- A total of 85.4% of San Mateo County adults exhibit at least one cardiovascular risk factor (i.e., smoking, no regular physical activity, high blood pressure, high cholesterol or being overweight), as revealed in the 2013 San Mateo County Health & Quality of Life Survey.
- Persons more likely to exhibit cardiovascular risk factors include men, adults ages 40 years and older, those living below the 200% poverty threshold, African-American respondents, and residents who live in North County.
- Though high blood pressure prevalence is statistically similar to the national prevalence and meets the Healthy People 2020 target, it has increased significantly in San Mateo County since the 1998 survey.
- Only 5.4% of San Mateo County survey respondents reported engaged in each of four basic health behaviors.

## SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:

- African-Americans had the highest rates of heart disease mortality and stroke mortality compared with other ethnic groups, followed by those Whites.

## Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals' behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

# Cardiovascular Disease, Heart Disease, Stroke

Category	Driver/indicator	San Mateo County	CA	HP 2020 Benchmark	Data Source
Health Behaviors	<b>Adult Heavy Use</b> % of adults reporting heavy alcohol consumption	5.0%	6.2%	—	State: CDC BRFSS 2011; County: PRC Community Health & Quality of Life Surveys, Professional Research Consultants, Inc. 2013
	<b>Smoking (Adult)</b> % of adults who currently smoke	10.1%	13.7%	12%	
	<b>Smoking (Youth)</b> % of 11th graders who smoked cigarettes past 30 days	13.1%	13.2%	16%	CA Healthy Kids (CHKS), 2008-10
	<b>Adequate fruit/vegetable consumption (youth)</b> % of kids 2+ who consume five or more servings of fruits and vegetables daily	53.8%	48.4%	—	California Health Interview Survey (CHIS), 2009
	<b>Adequate fruit/vegetable consumption (adult)</b> % of adults who consume five or more servings of fruits and vegetables daily	31.0%	27.7%	—	State: CDC BRFSS 2009; County: PRC Community Health & Quality of Life Surveys, Professional Research Consultants, Inc. 2013
	<b>Physical inactivity (adult)</b> % adults who self-report not participating in moderate physical activity for ≥30 minutes ≥5 times/week or vigorous physical activity for ≥20 minutes ≥3 times/week	53.9%	48.7%	32.6%	State: CDC BRFSS 2011; County: PRC Community Health & Quality of Life Surveys, Professional Research Consultants, Inc. 2013
Physical Environment	<b>Recreation &amp; fitness facility access</b> Establishments per 100,000 pop	14	9	—	U.S. Census Bureau, ZIP Code Business Patterns, 2009
	<b>Fast food restaurant access</b> Establishments per 100,000 pop	67	69	—	
	<b>Grocery store access</b> Establishments per 100,000 pop	24	22	—	U.S. Census Bureau, County Business Patterns, 2010
	<b>WIC-Authorized food store access</b> Establishments per 100,000 pop	10	16	—	U.S.D.A. Food Environment Atlas, 2012
	<b>Population Living in Food Deserts</b> % of the population living in census tracts designated as food deserts	5.9%	5.3%	—	U.S. Department of Agriculture, Food Desert Locator, 2009.

Note: Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

See data regarding additional cross-cutting drivers influencing this health need (such as poverty and lack of health insurance coverage) in the **Access to Health Care** profile report.

# Cardiovascular Disease, Heart Disease, Stroke

---

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Heart disease was mentioned in at least half of the 14 groups/interviews.
- High blood pressure/hypertension was commonly mentioned.
- Key informants noted that because there are too few primary care physicians or patients are uninsured and don't see doctors regularly, patients have to go to hospital to treat issues that get out of hand resulting in unnecessary hospitalizations.
- Several key informants pointed to the stress of being in poverty as exacerbating a variety of conditions, including heart disease.

## Chronic Disease

---

In 2012, Stanford Hospital & Clinics conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **chronic disease** was prioritized as one of the top health needs in both San Mateo and Santa Clara Counties.

In lieu of a health need profile for chronic disease, there are separate health need profiles on the major diseases that constitute chronic disease (Alzheimer's disease, arthritis, cancer, cardiovascular, heart disease, stroke, diabetes, mental health and respiratory conditions).

# Santa Clara County Health Need Profile

## Diabetes

In 2012, the Santa Clara County Community Benefits Coalition conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **diabetes** was prioritized as one of the top health needs in the county.

The status of needs associated with diabetes is described in this profile, in terms of:

- Key indicators
- Geographic regions or subpopulations in which the need is greatest
- Key drivers or factors affecting the condition
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	Santa Clara County <sup>‡</sup>	CA State <sup>‡</sup>	HP 2020 Benchmark	Data Source
<b>Diabetes Prevalence (Adults)</b> % adults 20+ who have ever been told by a doctor that they have diabetes	7%	8%	8%	CDC National Diabetes Surveillance System 2009
<b>Diabetes Prevalence (Adults)</b> % adults who have ever been told by a doctor that they have diabetes	8%	—	8%	Santa Clara County Public Health Department, BRFSS 2009
White	7%			
Latino	11%			
African-American	14%			
Asian/Pacific-Islander	5%			

# Santa Clara County Health Need Profile

## Diabetes

Indicator	Santa Clara County‡	CA State‡	HP 2020 Benchmark	Data Source
<b>Diabetic Hospitalization</b> Rate of discharge per 10,000 hospitalizations	7.9			CA Office of Statewide Health Planning & Development (OSHPD) 2010-11
White	0.7%	0.8%		CA Office of Statewide Health Planning & Development (OSHPD) 2010-11
Latino				
African-American	1.5%	1.6%		
Asian/Pacific-Islander	0.4%	0.6%		
Other	0.8%	.09%		

Note: ‡ Statistics from CARES Platform.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

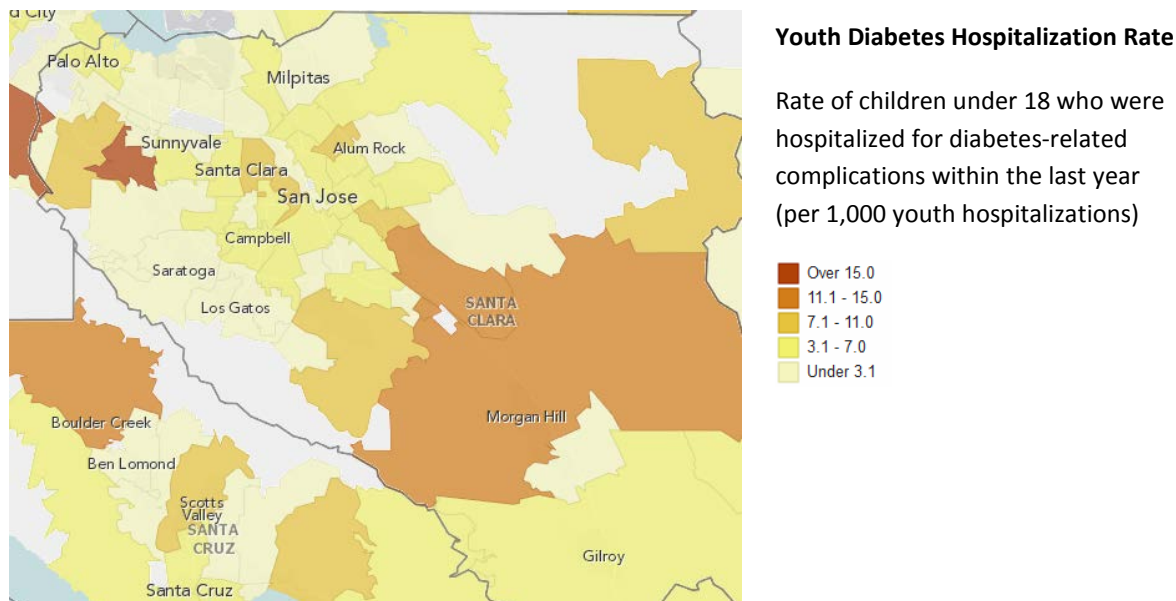

Key indicators for diabetes indicate that Santa Clara County rates are very similar to California overall, and very near the Healthy People 2020 benchmark of 8% prevalence. However, some ethnic subgroups are disproportionately diagnosed with, and hospitalized for, diabetes.

### SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:

- Latinos experience the highest rates of diabetes compared with other ethnic groups.
- African-Americans represent a higher percentage of those hospitalized for diabetes than any other ethnic group.

## Geographic Areas of Greatest Need

Diabetes is worse in some areas of the county than in others, as displayed in the map of youth diabetes hospitalization rates below. Los Altos was the worst off with a rate of 20.13 per 1,000. Areas of southeast San Jose and Morgan Hill had over 11 per 1,000.

The health drivers of diabetes are worse in some communities than in others.

- Fruit/vegetable expenditures: Worst in Morgan Hill, South San Jose, and the Mountain View/Sunnyvale area
- Youth obesity: Worst in Gilroy and Southwest San Jose

## Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals’ behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	Santa Clara County	CA State	Data Source
Behaviors	<b>Soft drink expenditures</b> % of total household expenditures	.37%	.46%	Nielsen Claritas SiteReports, Consumer Buying Power, 2011
	<b>Fruit/vegetable expenditures</b> % of total household expenditures	—	1.6%	

# Santa Clara County Health Need Profile

## Diabetes

Category	Driver/indicator	Santa Clara County	CA State	Data Source
Behaviors	<b>Adequate fruit/vegetable consumption (youth)</b> % of kids 2+ who consume five or more servings of fruits and vegetables daily	47%	48%	California Health Interview Survey (CHIS), 2009
	<b>Inadequate fruit/vegetable consumption (adult)</b> % of adults who consume less than five servings of fruits and vegetables daily	70%	70%	CDC BRFSS 2003-2009
	<b>Physical inactivity (youth)</b> % of 5 <sup>th</sup> , 7 <sup>th</sup> & 9 <sup>th</sup> graders ranking within the "High Risk" or "Needs Improvement" zones for aerobic capacity on the Fitnessgram physical fitness test	28%	38%	CA Dept of Education, Fitnessgram Physical Fitness Testing Results, 2011
	<b>Physical inactivity (adult)</b> % adults who self-report not participating in any physical activities or exercises	18%	22%	CDC BRFSS 2004-2010
Physical Environment	<b>Walkability</b> % of population in "Somewhat Walkable" or "Very Walkable" Cities*	—	54%	WalkScore.Com (2012)
	<b>Fast food restaurant access</b> Establishments per 100,000 pop	72.0	69.4	U.S. Census Bureau, ZIP Code Business Patterns, 2009
	<b>Grocery store access</b> Establishments per 100,000 pop	20.4	22.2	U.S. Census Bureau, County Business Patterns, 2010
	<b>WIC-Authorized food store access</b> Establishments per 100,000 pop	9.5	15.8	U.S.D.A. Food Environment Atlas, 2012
	<b>Recreation and fitness facility access</b> Establishments per 100,000 pop	12.7	8.9	U.S. Census Bureau, ZIP Code Business Patterns, 2009
Delivery	<b>Older Adult Diabetes Management</b> % of diabetic Medicare patients who had a hemoglobin A1c (hA1c) test in past year	77%	76%	Dartmouth Atlas of Healthcare, Selected Measures of Primary Care Access and Quality, 2003-07

‡ Statistics from CARES Platform.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

See data regarding additional cross-cutting drivers influencing this health need (such as poverty and lack of health insurance coverage) in the **Access to Health Care** profile report.

In addition, overweight and obesity are seen as drivers of diabetes. See the **Obesity Health Profile** for details on obesity as a health need and its associated drivers.

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Diabetes was of high concern in 8 out of 17 groups and in 6 of 9 key informant interviews, and was mentioned in almost all of them.
- Lack of grocery stores or farmers' markets was mentioned as a driver for diabetes or poor nutrition in seven separate groups/interviews. It was noted that food stamps were not accepted at farmers' markets and that poor neighborhoods were disproportionately lacking stores that sold fresh produce and other healthy food ("more liquor stores than grocery stores in some neighborhoods"). It was also mentioned that lack of transportation affected access to grocery stores. It was suggested that policies/ordinances be supported that increased the quality of the food that "corner stores" carry and that would increase the number of farmers' markets.
- One group mentioned that grocery stores decide how WIC benefits can be used.
- Six groups/interviews mentioned the cost of healthy food. Many groups/interviews discussed the need for more healthy/good quality food, but only one group specifically mentioned fruits and vegetables, saying that "children and parents need...to understand the benefits of eating fruits and vegetables". They also discussed access issues related to this (i.e. distribution channels not established to enable farmers to get their produce to stores, schools and families.)
- Fast food was mentioned as a driver for diabetes or poor nutrition in eight groups/interviews (belief that fast food is cheaper, more accessible, faster and provides more calories per dollar than healthy food, but is healthier).
- Lack of healthy eating:
  - Lack of education about healthy eating
  - Decrease in families preparing meals at home
  - Large portion size (restaurant trends having an influence on home cooking)
- Lack of exercise:
  - Busy lifestyles
  - Unsafe neighborhoods
  - High cost of physical fitness programs

# San Mateo County Health Need Profile

## Diabetes

In 2012, Stanford Hospital & Clinics conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **diabetes** was prioritized as one of the top health needs in the county.

The status of needs associated with diabetes is described in this profile, in terms of:

- Key indicators
- Geographic regions or subpopulations in which the need is greatest
- Key drivers or factors affecting the condition
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	San Mateo County	CA State‡	HP 2020 Benchmark	Data Source
<b>Diabetes Prevalence (Adults)</b> % adults 20+ who have ever been told by a doctor that they have diabetes	6.5%	7.6%	8%	CDC National Diabetes Surveillance System 2009
<b>Diabetes Prevalence (Adults)</b> % adults 20+ who have ever been told by a doctor that they have diabetes	4.8%*	—	8%	CA Health Interview Survey (CHIS) 2009
White	4.1%			
Latino	3.2%*			
African-American	4.8%*			
Asian/Pacific-Islander	5.7%*			

# San Mateo County Health Need Profile

## Diabetes

Indicator	San Mateo County	CA State‡	HP 2020 Benchmark	Data Source
<b>Diabetic Hospitalizations</b> Rate of discharge per 10,000 hospitalizations	--	10.4	--	CA Office of Statewide Health Planning & Development (OSHPD) 2010-11
White	--	0.8%		CA Office of Statewide Health Planning & Development (OSHPD) 2010-11
African-American	--	1.6%		
American Indian/Alaskan Native	--	0.9%		
Asian/Pacific-Islander	--	0.6%		
Other/Multi-Race	--	0.9%		
Latino	--	0.9%		

Note: ‡ Statistics from CARES Platform. \* Statistic is unstable.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

#### Additional data:

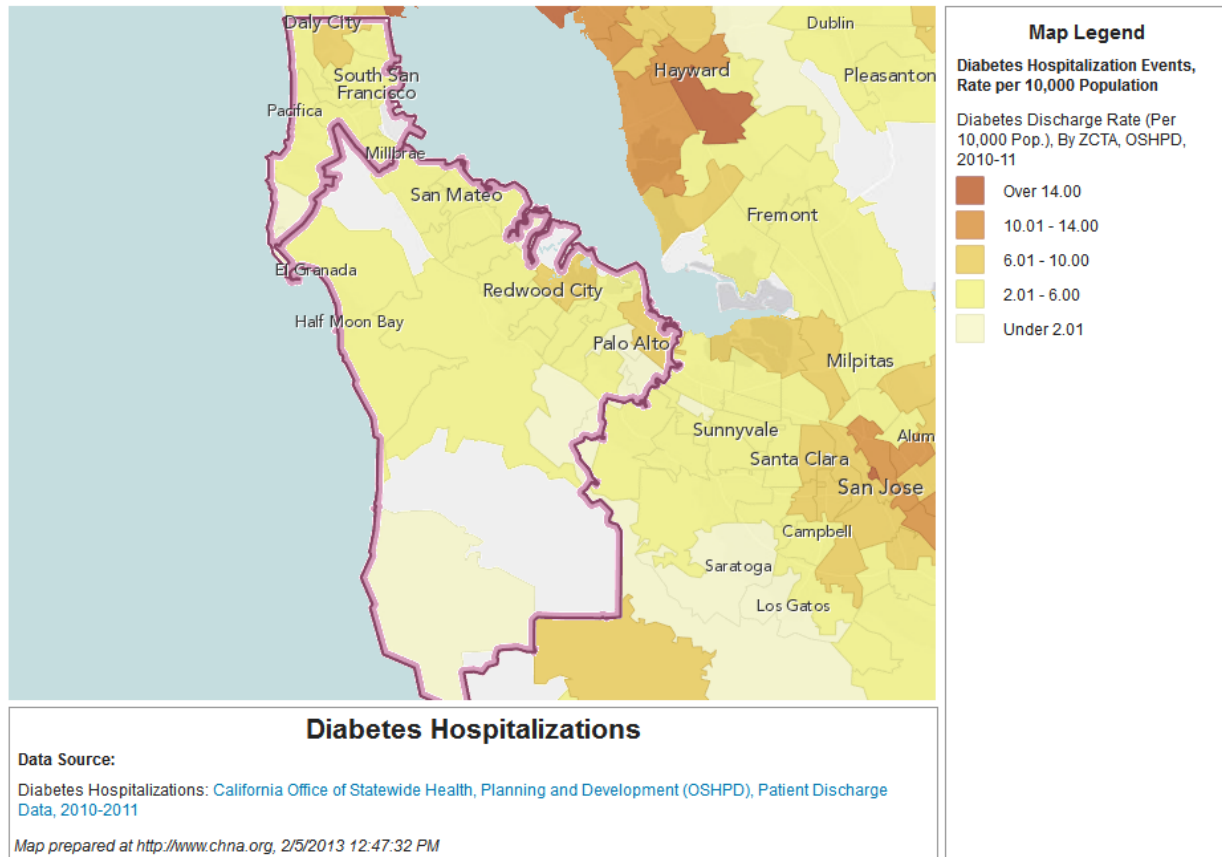

- Statistically significant increases in prevalence were found for diabetes, especially among San Mateo County seniors.
- The 2013 San Mateo County Health & Quality of Life Survey findings show that diabetes prevalence increases considerably with age, ranging from 2.4% among young adults to 23.1% among those aged 65 and older. African-American respondents report a particularly high prevalence (14.9%). Diabetes is also more often reported among persons living under 200% of the poverty threshold (17.9%). Reports of diabetes are most common in the North County area. Low reporting among Hispanic respondents may be related to a higher degree of under-diagnosis in this population.

#### SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:

- Asian/Pacific Islanders experience the highest rates of diabetes prevalence compared with other ethnic groups, followed by African -Americans.
- African-Americans represent a higher percentage of those hospitalized for diabetes than any other ethnic group.

## Geographic Areas of Greatest Need

Diabetes is worse in some areas of the county than in others, as displayed in the map of diabetes hospitalization rates below. Part of Redwood City was the worst off with a rate of 8.66 per 10,000 population. Areas of southern Daly City and East Palo Alto had rates of over 6 per 10,000.

Households in these areas also spent the least on fruits and vegetables, one of the health drivers of diabetes, compared to households in other parts of the county.

## Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals' behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

## Diabetes

# San Mateo County Health Need Profile

## Diabetes

Category	Driver/indicator	San Mateo County‡	CA State‡	Data Source
Delivery	<b>Older Adult Diabetes Management</b> % of diabetic Medicare patients who had a hemoglobin A1c (hA1c) test in past year	78.4%	76%	Dartmouth Atlas of Healthcare, Selected Measures of Primary Care Access and Quality, 2003-07

‡ Statistics from CARES Platform.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

See data regarding additional cross-cutting drivers influencing this health need (such as poverty and lack of health insurance coverage) in the **Access to Health Care** profile report.

In addition, overweight and obesity are seen as drivers of diabetes. See the **Obesity Health Profile** for details on obesity as a health need and its associated drivers.

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Diabetes was of high concern in 8 out of 14 groups/interviews and was mentioned in almost all of them.
- The community identified the subpopulations they felt were most affected: Latinos, seniors, those with low income, and the homeless. Some health experts thought that non-Latinos (and speakers of languages other than English/Spanish) might be underserved due to sharp focus on Latinos; others focused on providing more culturally-sensitive materials to Latinos/Spanish-speakers.
- The community identified a variety of access to care issues (e.g., lack of insurance, preventable hospitalizations, supply of and access to primary care providers). Providers/experts additionally noted that the undocumented have special access issues (fear of deportation).
- Experts were concerned about how well or poorly those with chronic diseases manage their care and unnecessary hospitalizations.
- Many felt that stress and anxiety exacerbated diabetes, and experts in particular pointed to economic/financial stressors that differentially impact the working poor and the unemployed who are in poverty.
- Health care providers emphasized poor nutrition and lack of exercise as prime factors for diabetes. Community members agreed that both nutrition and exercise are focal areas, and also specified issues relating diet, including too much sugar and eating prepared foods.
- Drivers of poor diets included cost of fresh food, lack of control over food when you must eat what others cook (either relatives or the community center), cultural customs and fear of genetically modified foods.
- Providers mentioned factors that can lead to poor patient compliance, including denial of illness, lack of knowledge/understanding of condition, cost of testing, and feeling overwhelmed.
- Providers also noted a lack of specialty care for diabetics (e.g., glasses, surgeries).
- There was general agreement that the community needed improved health education/literacy, especially with regard to diabetes.

## Diabetes

---

- Experts noted concerns about neighborhoods/environments that had poor access to resources (grocery stores, safe areas to walk/play, etc.).
- Community members expressed frustration about wait times to get an appointment regardless of urgency.
- Residents felt that the “red tape” involved in transitioning among different providers, particularly with respect to medical records and poor communication between providers, was a problem that needed to be addressed.
- Access to transportation was a concern among many, particularly those whose diabetic conditions were well-advanced and who had mobility issues as a result.
- There were multiple requests for additional dedicated medical transportation.

# Santa Clara County Health Need Profile

## Mental Health

In 2012, the Santa Clara County Community Benefits Coalition conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **mental health** was prioritized as one of the top health needs in the county.

The status of mental health needs is described in this profile, in terms of:

- Key indicators
- Key drivers or factors affecting the condition
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	Santa Clara County	CA State Ave	HP 2020 Benchmark	Data Source
<b>Poor Mental Health (Adults 18+)</b> % who felt they might need to see a professional because of problems with their mental health, emotions, nerves, or use of alcohol or drugs in last 12 months	17%‡	14%‡	--	California Health Interview Survey (CHIS) 2009
<b>Depression (youth)</b> % of middle/HS students with depressive symptoms in past 12 months	28%	28%		CA Healthy Kids Survey (CHKS) 2009-10
White	24%			
African-American	30%			
Latino	31%			
Asian/Pacific-Islander	26%			
<b>Suicidal ideation (youth)</b> % of middle/HS students who seriously considered suicide in past 12 months	16%	19%	--	
White	15%			
African-American	22%			
Latino	17%			
Asian/Pacific-Islander	17%			

Santa Clara County Health Need Profile

# Mental Health

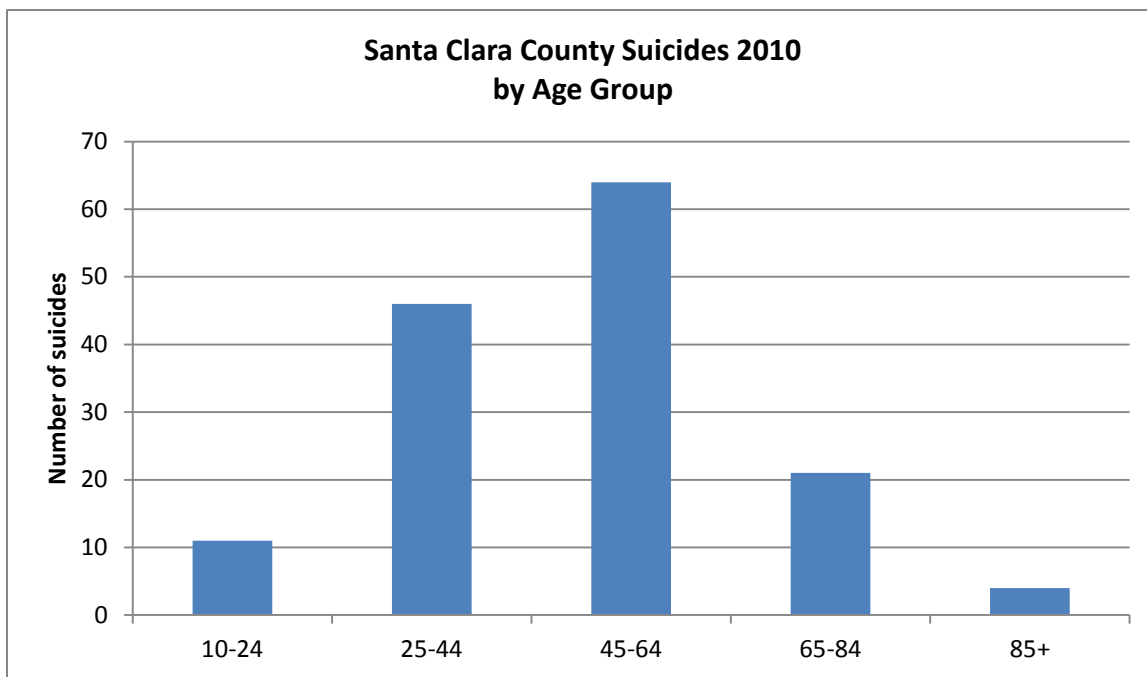

Indicator	Santa Clara County	CA State Ave	HP 2020 Benchmark	Data Source
<b>Suicide rate</b> Age-adjusted suicide rate per 100,000 pop	7.9	9.8	10.2	CDC 2005-09

Note: ‡ Statistics from CARES Platform.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

**Additional Data:**

The overall suicide rate does not fail Healthy People 2020 benchmark. Although the low number of suicides (146 total in the county) makes it difficult to calculate reliable rates, it is worth noting the number of suicides by age group. While there seems to be a perception that teen suicide is the most common, the raw numbers show us that most suicides are committed by middle-aged adults ages 45-64.

**SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:**

- Latino and African-American youth exhibit depression in higher proportions than the state average.
- The percentage of African-American youth who experience suicidal ideation is higher than both the county and the state-wide averages.

**Factors Influencing the Health Need**

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals’ behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	San Jose Service Area‡	Santa Clara Service Area‡	Santa Clara County‡	CA State Ave‡	US Ave‡	Data Source
Behaviors	<b>Adequate social or emotional support (adults)</b> % adults who report receiving sufficient social / emotional support all /most of the time	78%	78%	78%	75%	80%	CDC BRFSS, 2006-2010

Note: ‡ Statistics from CARES Platform.

See data regarding additional cross-cutting drivers influencing this health need (such as poverty, linguistic isolation, and lack of health insurance coverage) in the **Access to Health Care** profile report.

**Community Input**

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Mental Health was of high concern in 16 out of 22 groups/interviews and was mentioned in almost all of them. Residents identified specific conditions of stress, depression, suicide, and abuse (trauma).
- Social and emotional support as a driver of mental health was mentioned in at least half of the groups/interviews that identified mental health as a priority.
- Bullying, abuse and overwork can cause stress and mental health issues.
- Lack of knowledge about the effects of stress and how to cope was mentioned.
- Poor mental health (stress) can cause physical problems such as heart issues, insomnia and poor diet.
- Stigma prevents people from identifying poor mental health in themselves and getting treatment.
- Lack of mental health insurance benefits was noted as was lack of affordable treatment resources.
- Lack of treatment for episodic mental health issues such as depression and stress was also mentioned.

# San Mateo County Health Need Profile

## Mental Health

In 2012, Stanford Hospital & Clinics conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **mental health** was prioritized as one of the top health needs in the county.

The status of mental health needs is described in this profile, in terms of:

- Key indicators
- Key drivers or factors affecting the condition
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	South SF Area	Redwood City Area	San Mateo County	CA State Ave	HP 2020 Benchmark	Data Source

<b>Alzheimer's Mortality</b> Age-adjusted death rate per 100,000 population	--	--	18.9	23.4	--	Alzheimer's Disease; Facts and Figures in California: Current Status and Future Projections, Alzheimer's Assoc., CA ( <a href="#">2003-05</a> data)

Note: \* Statistic is unstable.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

### Additional Data:

- San Mateo County respondents were most critical of access to mental health services (36.3% rate this as fair/poor).
- Utilization of mental health services is particularly low among men, younger and older populations, persons without education beyond high school, non-Whites, and South County residents.
- A total of 7.3% of survey respondents report experiencing high stress on a daily basis. Perceptions of high stress are highest among African-Americans (10.5%).
- A total of 24.1% of surveyed adults reported having had a period lasting two years or longer during which he or she was sad or depressed on most days.
  - ◆ The proportion of those who have experienced two or more years of depression increases to 27% among women, 28% among adults 40-64, 33% among adults without postsecondary education, 41% among persons living below the 200% poverty threshold, 34% among Hispanic respondents, 28% among South County adults and 27% among residents on the Coastside.

**SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:**

- Pacific Islander and Latino youth exhibit depression in equal or higher proportions than the state average.
- The percentages of Latino and Asian/Pacific Islander adults who experience poor mental health appear to be equal to or higher than the state average.
- Asians commit suicide at rates much higher than the national benchmark.

**Factors Influencing the Health Need**

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals’ behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	San Mateo County	CA State Ave	US Ave	Data Source
Behaviors	<b>Adequate social or emotional support (adults)</b> % adults who report receiving sufficient social / emotional support all /most of the time	76.4%	75%	80.3%	CDC BRFSS, 2006-2010

See data regarding additional cross-cutting drivers influencing this health need (such as poverty, linguistic isolation, and lack of health insurance coverage) in the **Access to Health Care** profile report.

**Community Input**

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Mental health was of high concern in 9 out of 14 groups/interviews and was mentioned in almost all of them. Residents identified specific conditions of stress, depression, suicide, and abuse (trauma).
- Bullying, abuse, financial stress, overwork, homelessness, and family dysfunction can cause stress and mental health issues.
- Lack of knowledge about the effects of stress and how to cope surfaced as an issue.
- Health experts noted that poor mental health (stress) can cause physical problems and can exacerbate existing conditions.
- Both stigma and the lack of education about mental health conditions and treatments prevent people from identifying poor mental health in themselves and getting treatment.
- The community indicated that there were not enough trained mental health providers or treatment centers/resources to meet demand.

## Mental Health

---

- Teens felt they could not talk about their problems with adults (for a variety of reasons: don't want to bother them; feel their problems are misunderstood or dismissed by them; don't trust them; don't think they can help).
- Teens expressed the need for education and interventions at the middle school level. Many felt that by the time they learned about alcohol, drug use and stress in high school, they had already encountered these issues.
- Providers felt some cultures did not recognize mental health as an issue and noted that undocumented residents are particularly unlikely to seek help due to fears about deportation.
- Adults, particularly men, mentioned feeling increasing stress, but felt it was hard to open up and talk about their concerns stating that they did not want to appear weak.
- Older adults talked about overarching drivers that related to both mental health and Alzheimer's, including being in denial of the problem, the condition being exacerbated by social isolation and having a limited information about resources.
- Providers noted that returning veterans have specific mental health issues (e.g., post traumatic shock syndrome).
- Providers mentioned lack of mental health insurance benefits and lack of affordable treatment, especially for episodic mental health issues such as depression and stress.

In 2012, the Santa Clara County Community Benefits Coalition conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **obesity** was prioritized as one of the top health needs in the county.

The status of needs associated with obesity is described in this profile, in terms of:

- Key indicators
- Geographic regions or subpopulations in which the need is greatest
- Key drivers or factors affecting the condition
- Community input

## Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	Santa Clara County	CA	US	HP 2020 Benchmark	Data Source
<b>Overweight adults</b> % who self-report a BMI between 25-30	36%	36%	36%	--	CDC BRFSS 2006-2010
<b>Obese adults</b> % who self-report a BMI over 30	21%	23%	27%	31%	CDC BRFSS 2006-2010
<b>Overweight or Obese Adults</b> % with BMI over 25	55%				SCC PHD BRFS 2009
White	55%				
Latino	68%				
African-American	63%				
Asian/Pacific-Islander	39%

<b>Overweight youth</b> % of youth in grade 5, 7, and 9 ranking within the "Needs Improvement" BMI range for their gender	--	14%	--	--	CA Dept of Education, Fitnessgram Physical Fitness Testing Results, 2011
White		13%			
Latino		--			
African-American		15%			
Asian/Pacific-Islander		12%			
<b>Obese youth</b> % of youth in grade 5, 7, and 9 ranking within the "High Risk" BMI range for their gender	--	30%	--	16% for youth ages 12-19	
White		20%			
Latino		37%			
African-American		30%			
Asian/Pacific-Islander		17%			

Note: ‡ Statistics from CARES Platform. Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

### Additional data:

- Low-income children have high proportions of overweight and obesity, as demonstrated by the table below.

Source: Dept. Health Care Services, Child Health & Disability Prevention Program, Pediatric Nutrition Surveillance System, 2009

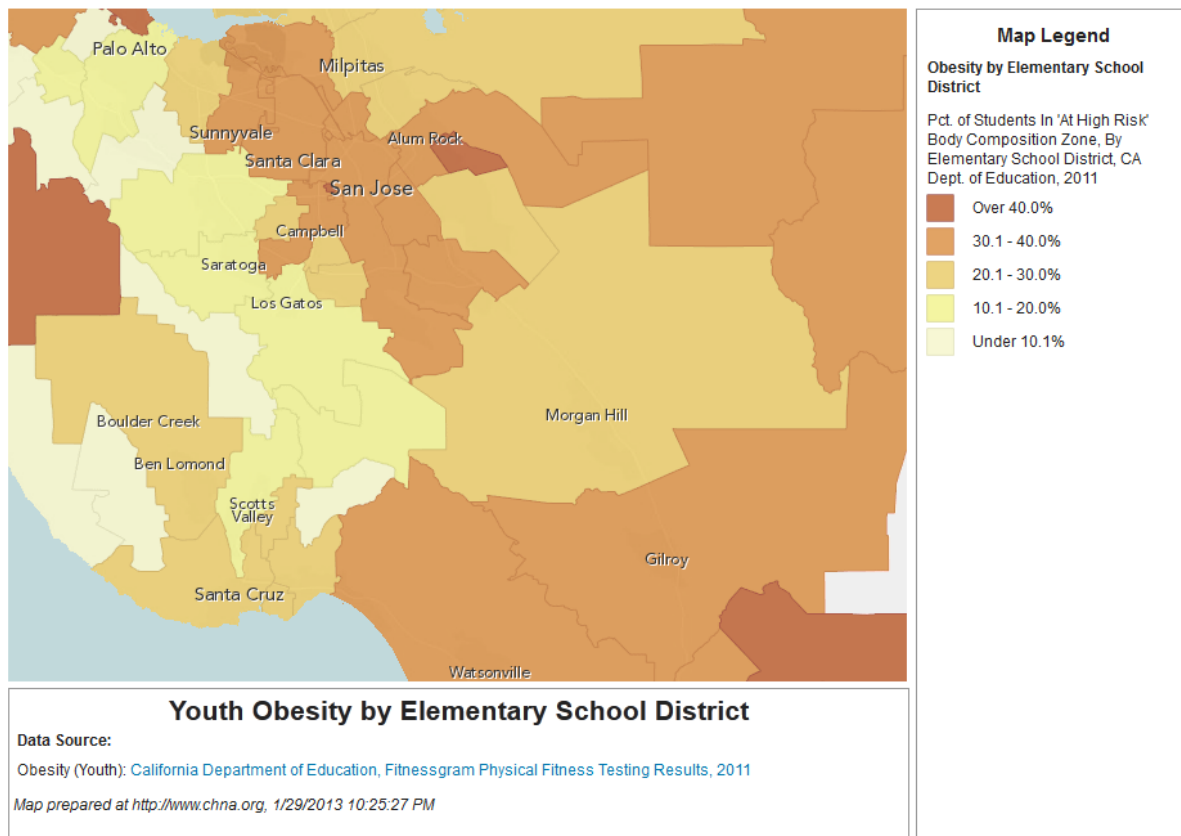

**SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:**

- Latinos and African-Americans have higher proportions of overweight or obese adults compared with other ethnic groups.

**Geographic Areas of Greatest Need**

Obesity among elementary school children is worse in some areas of the county, as displayed in the map of elementary school districts below. Mount Pleasant Elementary School District in East San Jose is the worst off, with 41.65% of students testing in the high risk zone for body composition.

Gilroy Unified, San Jose Unified, Oak Grove Elementary, Santa Clara Unified, and Campbell Union Elementary School Districts reported 30%-40% of its students outside of the healthy zone.

Certain health drivers of obesity are also worse in some communities than in others.

- Fruit/vegetable expenditures: Worst in Morgan Hill, south San Jose, Saratoga, Los Gatos, and the western parts of Sunnyvale.
- Youth obesity: Worst in Gilroy and southwest San Jose

## Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals' behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	Santa Clara County	CA	Data Source
Behaviors	<b>Soft drink expenditures</b> % of total household expenditures	0.4%	0.5%	Nielsen Claritas SiteReports, Consumer Buying Power, 2011
	<b>Fruit/vegetable expenditures</b> % of total household expenditures	—	1.6%	
	<b>Adequate fruit/vegetable consumption (youth)</b> % of kids 2+ who consume five or more servings of fruits and vegetables daily	47%	48%	California Health Interview Survey (CHIS), 2009
	<b>Inadequate fruit/vegetable consumption (adult)</b> % of adults who consume less than five servings of fruits and vegetables daily	70%	70%	CDC BRFSS 2003-2009
	<b>Physical inactivity (youth)</b> % of 5 <sup>th</sup> , 7 <sup>th</sup> & 9 <sup>th</sup> graders ranking within the "High Risk" or "Needs Improvement" zones for aerobic capacity	28%	37%	CA Dept of Education, Fitnessgram Physical Fitness Testing Results, 2011
	<b>Physical inactivity (adult)</b> % adults who self-report not participating in any physical activities or exercises	18%	22%	CDC BRFSS 2004-2010
Physical Environment	<b>Walkability</b> % of population in "Somewhat Walkable" or "Very Walkable" Cities*	—	54%	WalkScore.Com (2012)
	<b>Fast food restaurant access</b> Establishments per 100,000 pop	72	69	U.S. Census Bureau, Business Patterns, 2009
	<b>Grocery store access</b> Establishments per 100,000 pop	20	22	U.S. Census Bureau, County Business Patterns, 2010
	<b>WIC-Authorized food Access</b> Establishments per 100,000 pop	9.5	15.8	U.S.D.A. Food Envir. Atlas, 2012
Physical Environment	<b>Recreation/Fitness Access</b> Establishments per 100,000 pop	12.7	8.9	U.S. Census Bureau, ZIP Code Business Patterns, 2009

Note: ‡ Statistics from CARES Platform

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

See data regarding additional cross-cutting drivers influencing this health need (such as poverty and insurance coverage) in the **Access to Health Care** profile report.

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Obesity/overweight was of high concern in 13 out of 22 groups/interviews
- Lack of grocery stores or farmers' markets was mentioned as a driver for obesity or poor nutrition in seven separate groups/interviews. It was noted that food stamps were not accepted at farmers' markets; that poor neighborhoods were disproportionately lacking stores that sold fresh produce and other healthy food ("more liquor stores than grocery stores in some neighborhoods") and that lack of transportation affected access to grocery stores; that Asian & Latino families are more likely to choose fresh over processed food. It was suggested that policies/ordinances be supported that increased the quality of the food that "corner stores" carry and support an increase in the number of farmers' markets
- One group mentioned that grocery stores decide how WIC benefits can be used. One WIC beneficiary noted that consumers can't buy low-sugar options because they have artificial sweetener (Federal WIC regulations do not prohibit foods that contain artificial sweeteners. However, WIC state agencies are responsible for determining the brands and types of foods to authorize on their state WIC food lists. Some state agencies may allow foods sweetened with artificial sweeteners on their foods lists but this will vary by state.)
- Six groups/interviews mentioned the cost of healthy food. Many groups/interviews discussed the need for more healthy/good quality food, but only one group specifically mentioned fruits and vegetables, saying that "children and parents need...to understand the benefits of eating fruits and vegetables". They also discussed access issues related to this matter (i.e., distribution channels not established to enable farmers to get their produce to stores, schools and families.)
- Fast food was mentioned as a driver for obesity or poor nutrition in eight groups/interviews (belief that fast food is cheaper, more accessible, faster and provides more calories per dollar than healthy food)
- Lack of healthy eating:
  - Lack of education about healthy eating
  - Decrease in families preparing meals at home
  - Large portion size (restaurant trends having an influence on home cooking)
- Lack of exercise:
  - Busy lifestyles
  - Unsafe neighborhoods
  - High cost of physical fitness programs
- Social factors:
  - Parents may be poor models for children
  - Families are used to overeating, eating unhealthy foods

# San Mateo County Health Need Profile

## Obesity

In 2012, Stanford Hospital & Clinics conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **obesity** was prioritized as one of the top health needs in the county.

The status of needs associated with obesity is described in this profile, in terms of:

- Key indicators
- Geographic regions or subpopulations in which the need is greatest
- Key drivers or factors affecting the condition
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	San Mateo County	CA	US	HP 2020 Benchmark	Data Source
<b>Overweight adults</b> % who self-report a BMI between 25-30	37.3%	36.2%	36.3%	--	CDC BRFSS 2006-2010
<b>Obese adults</b> % who self-report a BMI over 30	19.8%	23.3%	27.4%	31%	CDC BRFSS 2006-2010
<b>Overweight youth</b> % of 5 <sup>th</sup> /7 <sup>th</sup> /9 <sup>th</sup> graders ranking within the "Needs Improvement" BMI range for their gender	--	14.3%	--	--	CA Dept of Education, Fitnessgram Physical Fitness Testing Results, 2011
White					
African-American					
Asian/Pacific-Islander					
Latino					
<b>Obese youth</b> % of 5 <sup>th</sup> /7 <sup>th</sup> /9 <sup>th</sup> graders ranking within the "High Risk" BMI range for their gender	--	29.8%	--	16% for youth ages 12-19	CA Dept of Education, Fitnessgram Physical Fitness Testing Results, 2011
White					
African-American					
Asian/Pacific-Islander					
Latino					

Note: Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

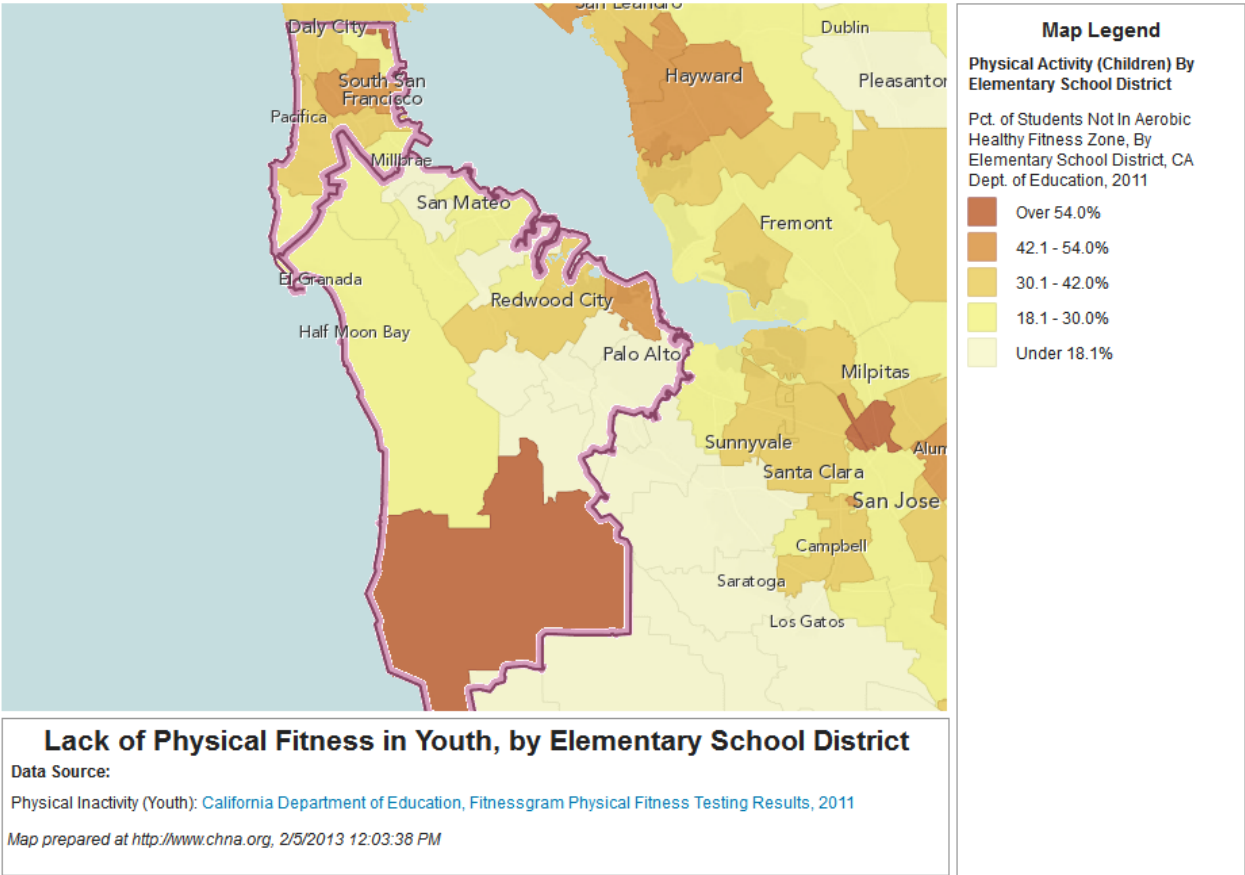

**SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:**

- Latinos have the highest percentage of overweight youth compared with other ethnic groups, which surpasses the state average.
- Latinos, followed by African-Americans, have the highest percentages of obese youth compared with other ethnic groups and their numbers are higher than the national benchmark for youth obesity.

**Geographic Areas of Greatest Need**

Obesity among elementary school children is worse in some areas of the county, as displayed in the map of elementary school districts below. Bayshore Elementary School District in Daly City is the worst off, with 69.6% of students testing outside the “healthy fitness” zone for body composition.

La Honda-Pescadero Unified School District in the southwestern part of the county reported 66.2% of students outside the healthy zone, and the Ravenswood City Elementary School District in East Palo Alto reported 46.8% of students outside of the healthy zone.

## Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals’ behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	San Mateo County	CA	Data Source
Behaviors	<b>Soft drink expenditures</b> % of total household expenditures	--	0.5%	Nielsen Claritas SiteReports, Consumer Buying Power, 2011
	<b>Fruit/vegetable expenditures</b> % of total household expenditures	—	1.6%	
	<b>Adequate fruit/vegetable consumption (youth)</b> % of kids 2+ who consume five or more servings of fruits and vegetables daily	--	48.4%	California Health Interview Survey (CHIS), 2009
	<b>Inadequate fruit/vegetable consumption (adult)</b> % of adults who consume less than five servings of fruits and vegetables daily	68.6%	70.3%	CDC BRFSS 2003-2009
	<b>Physical inactivity (youth)</b> % of 5 <sup>th</sup> /7 <sup>th</sup> /9 <sup>th</sup> graders ranking within the "High Risk" or "Needs Improvement" zones for aerobic capacity	--	37.5%	CA Dept of Ed, Fitnessgram Physical Fitness Testing Results, 2011
	<b>Physical inactivity (adult)</b> % adults who self-report not participating in any physical activities or exercises	19.0%	22.1%	CDC BRFSS 2004-2010

	<b>Population Living in Food Deserts</b> % of the population living in census tracts designated as food deserts	6.0%	5.7%	U.S. Department of Agriculture, Food Desert Locator, 2009.
	<b>Recreation/Fitness Access</b> Establishments per 100,000 pop	14	9	U.S. Census Bureau, ZIP Code Business Patterns, 2009

Note: Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

See data regarding additional cross-cutting drivers influencing this health need (such as poverty and insurance coverage) in the **Access to Health Care** profile report.

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Obesity/overweight was of high concern in 8 out of 14 groups/interviews.
- Many participants spoke about the lack of physical fitness. Drivers of low physical fitness were often mentioned: the perception that neighborhoods are unsafe (gangs, shootings, poor lighting, relative lack of sidewalks or bike lanes, fear of ICE raids among undocumented), the lack of affordable/ accessible fitness facilities or after-school activities for youth, increased screen time, lack of time to exercise due to long commutes and overwork and related stress. Particular conditions (e.g., limited mobility or depression) make exercise even harder. Community members wanted more information on what resources were available for free/low cost.
- Drivers of poor diets were also frequently identified: lack of time to prepare food at home (long commutes, overcommitted/busy), “supersized” restaurant meals (that can also have an impact on portion size at home), the perceived higher cost of healthy food, easy access to fast food, stress-based eating and the relative lack of grocery stores or farmers' markets. It was noted that lower-income neighborhoods were disproportionately lacking both grocery stores and farmers' markets and that poor access to transportation made access to grocery stores even more challenging.
- Schools were thought to have an impact on childhood obesity (e.g., lack of physical education or organized physical activities, no bike racks at school, not enough time/cafeteria staff to get lunch to all students in time for them to eat before next class).
- Some participants identified limited access to primary care providers as an issue that impacts obtaining needed care.
- Culture was identified as impacting obesity (e.g., cultural views of “chubby” baby as healthy/cute, poor family/cultural models for eating, traditional foods can be unhealthy).
- Health experts noted the need for more providers whose backgrounds reflect that of the community they serve.
- One health expert indicated that poor, older adults were much more likely to be obese. The expert noted that among this population, obesity is normalized because they are around so many others who are also obese. The expert found that older adults have a harder time changing their habits than do younger adults. They also experience other conditions that exacerbate obesity (e.g., arthritis, which makes it hard to exercise, and slowed metabolism).
- A health expert mentioned that the Latino, African American and Samoan/Tongan populations are more at risk for obesity than other ethnic groups and that the former may experience disparities in care and outcomes.
- Parenting issues may encourage childhood obesity (e.g., lack of supervision means children may overeat or eat unhealthy foods, children do not receive breakfast at home, children who receive lunch money rather than a packed lunch may use it for junk food; parents may not be aware of low-cost or free fitness options for children).
- Peer pressure/youth culture may impact children’s health (e.g., energy drinks and junk food as symbols of status, choosing technology/social media over outside play, media promotes unrealistic body image).

- It was noted that community gardens are few and far between.
- Seniors indicated that ingredients, portion control and timing of meals are problems when they cannot cook for themselves and must eat food others make for them (either because they have no access to a kitchen or because they are limited in mobility).
- Seniors also mentioned issues with shopping for and keeping food (packaging sizes are too large for one person, hard to read small-print nutrition labels, fresh fruit does not have a long shelf life).

# Respiratory Conditions

In 2012, the Santa Clara County Community Benefits Coalition conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **respiratory conditions** were prioritized as one of the top health needs in the county.

The status of respiratory health needs is described in this profile, in terms of:

- Key indicators
- Geographic regions or subpopulations in which the need is greatest
- Key drivers or factors affecting the condition
- Community input

## Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	San Jose Area ‡	Santa Clara Area ‡	Santa Clara County	CA	HP 2020	Data Source
<b>Asthma</b>						
<b>Lifetime Prevalence (Youth)</b> % of children ages 0-17 ever diagnosed (parent report)	--	--	12%	14%	--	CHIS 2009; cited by Breathe CA
<b>Lifetime Prevalence (Adult)</b> % of adults 18+ ever diagnosed	--	--	11%	14%	--	
<b>Hospitalizations (Children)</b> rate of asthma hospitalizations for children age 0-4	--	--	24.5	22.3	18.1	OSPHD 2010; cited by Breathe CA
<b>Hospitalizations (Youth)</b> rate of hospitalizations per 10,000 children age 0-17	18.0	13.8	9.7	11.0	--	
<b>Hospitalizations (Adult)</b> rate of hospitalizations per 10,000 adult 18+	8.2	6.7	6.0	8.3	8.6 for 5-64 yrs	

Note: ‡ Statistics from CARES Platform.

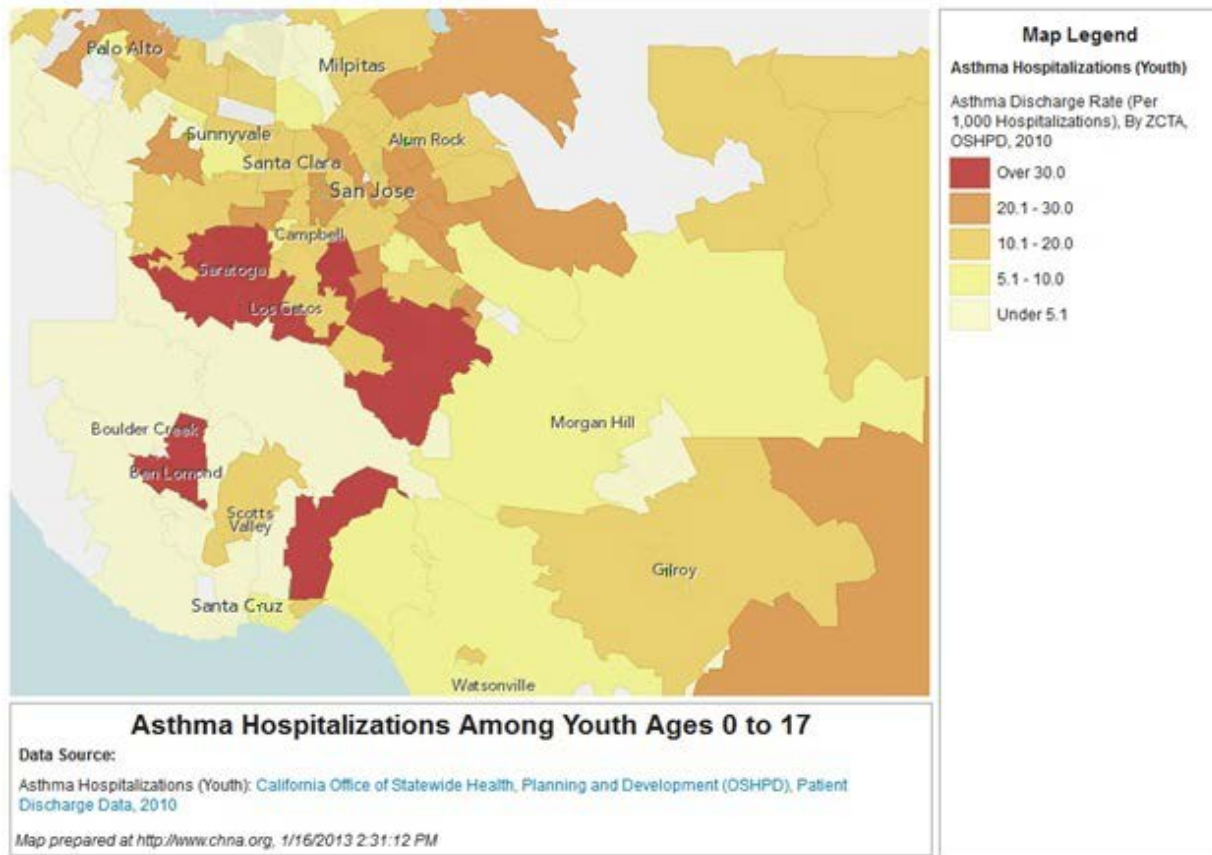

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

# Respiratory Conditions

## Geographic Areas of Greatest Need

Asthma hospitalizations among youth ages 0-17 is worse in some areas of the county than in others, as displayed in the map of zip code tabulation areas. The outlying area of Saratoga/Los Gatos is the worst off, with a youth asthma hospitalization rate of 71.4.

Saratoga itself, as well as parts of south San Jose and Campbell all reported asthma hospitalization rates of 30 or higher among youth.

# Respiratory Conditions

## Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals’ behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	Santa Clara County‡	CA ‡	US ‡	Data Source
Behaviors	<b>Tobacco expenditures</b> Estimated expenditures for cigarettes, as a percentage of total household expenditures	--	1.1%	1.6%	Nielsen Claritas SiteReports, Consumer Buying Power, 2011
	<b>Smoking (Adult)</b> % of adults who currently smoke	10%	14%‡	18%	CDC BRFSS 2004-2010
	<b>Smoking (Youth)</b> % of middle- and high-school youth who smoked cigarettes in past 30 days	8%	--	--	CA Healthy Kids (CHKS), 2009-10
Physical Environment	<b>Poor air quality</b> % of days with particulate matter 2.5 levels above the National Ambient Air Quality Standard	3.7%	4.2%	1.2%	CDC National Environmental Public Health Tracking Network, 2008

Note: ‡ Statistics from CARES Platform.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

See data regarding additional cross-cutting drivers influencing this health need (such as poverty and lack of health insurance coverage) in the **Access to Health Care** profile report.

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Respiratory conditions, including asthma, COPD and allergies were mentioned in 6 out of 25 groups/interviews.
- There was concern about lack of insurance and underinsurance generally for those dealing with chronic respiratory conditions.
- Environmental causes, such as pollution, were also mentioned.
- The cost of prescription medication and equipment for the un/underinsured and those who are low-income, unemployed or living in poverty were noted.

# San Mateo County Health Need Profile

## Respiratory Conditions

In 2012, Stanford Hospital & Clinics conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **respiratory conditions** were prioritized as one of the top health needs in the county.

The status of respiratory health needs is described in this profile, in terms of:

- Key indicators
- Geographic regions or subpopulations in which the need is greatest
- Key drivers or factors affecting the condition
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	San Mateo County	CA	HP 2020	Data Source
<b>Asthma Lifetime Prevalence (Adult)</b> % of adults 18+ ever diagnosed	12.6%	13.1%	--	CDC BRFSS 2006-10
<b>Asthma Lifetime Prevalence (Youth)</b> % of children ages 0-17 ever diagnosed (parent report)	18.4%	14.2%	--	CA Health Interview Survey 2009
<b>Asthma Hospitalizations</b> rate of hospitalizations per 10,000 population	--	8.9	8.6	California Office of Statewide Health, Planning and Development (OSHPD), Patient Discharge Data, 2010-2011.

Note: Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

#### Additional data:

- Note that, versus 1998 levels, statistically significant increases in prevalence were found for asthma and chronic lung disease.
- We see a statistically significant trend in higher prevalence of asthma among San Mateo County seniors since 1998.

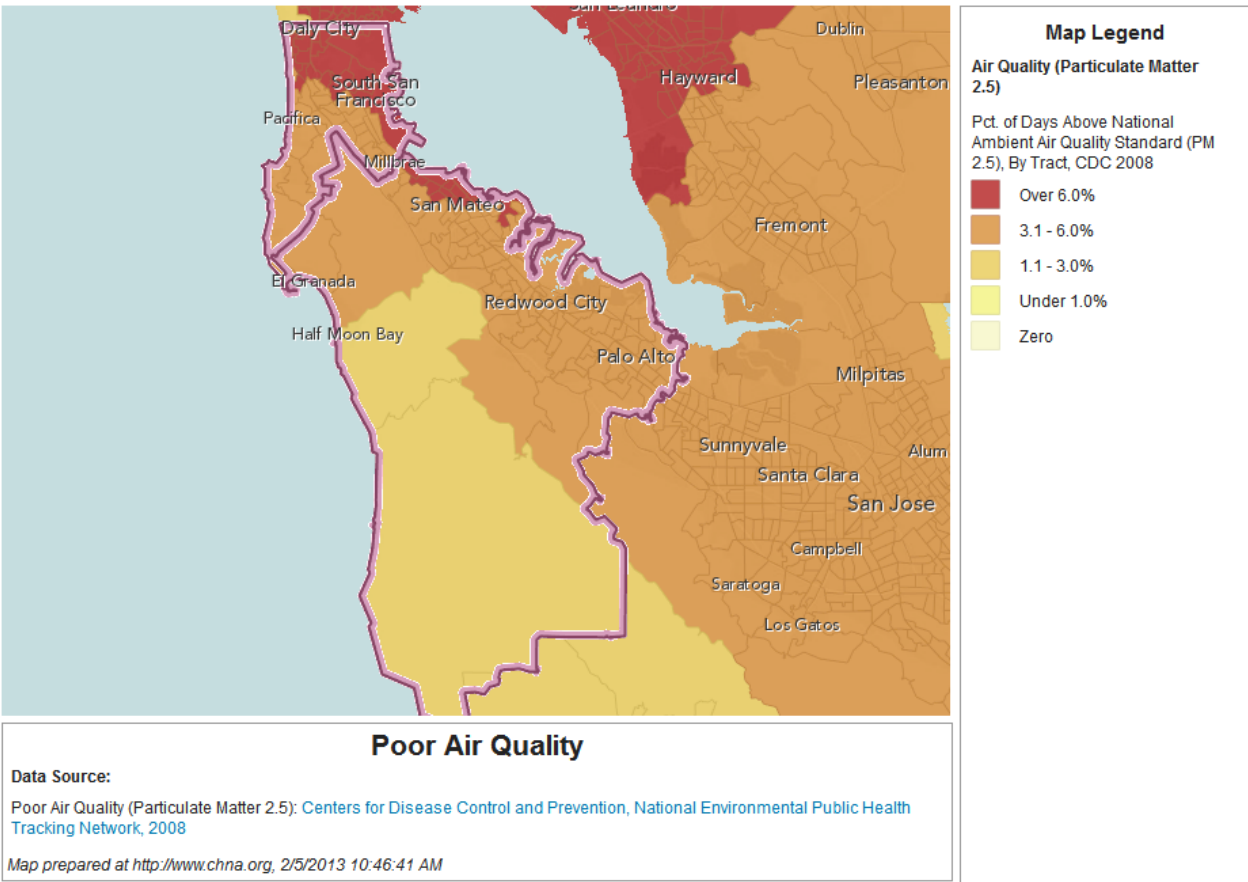

# San Mateo County Health Need Profile

## Respiratory Conditions

### Geographic Areas of Greatest Need

Poor air quality, a driver of asthma and other respiratory concerns, is worse in some areas of the county than in others, as displayed in the map below. The northern part of the county is the worst off, with areas around South San Francisco and Brisbane (near San Francisco International Airport) experiencing poor air quality up to 8.2% of the year.

The eastern edges of San Bruno, Millbrae, Burlingame, San Mateo, and Foster City all reported poor air quality for 6% to 7% of the year.

# San Mateo County Health Need Profile

## Respiratory Conditions

### Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals' behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	San Mateo County	CA	US	Data Source
Behaviors	<b>Tobacco expenditures</b> Estimated expenditures for cigarettes, as a percentage of total household expenditures	--	1.1%	1.6%	Nielsen Claritas SiteReports, Consumer Buying Power, 2011
	<b>Smoking (Adult)</b> % of adults who currently smoke	13.5%	13.6%	18.2%	CDC BRFS 2004-2010
	<b>Smoking (Youth)</b> % of 11th graders who smoked cigarettes past 30 days	13.1%	13.2%	--	CA Healthy Kids (CHKS), 2009-10
Physical Environment	<b>Poor air quality</b> % of days with particulate matter 2.5 levels above the National Ambient Air Quality Standard	5.5%	4.2%	1.2%	CDC National Environmental Public Health Tracking Network, 2008

Note: Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

See data regarding additional cross-cutting drivers influencing this health need (such as poverty and lack of health insurance coverage) in the **Access to Health Care** profile report.

### Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Respiratory conditions, including asthma, COPD and allergies were mentioned in 6 out of 14 groups/interviews.
- Lack of transportation and/or poor access to transportation was an issue affecting those with respiratory conditions.
- Concerns were raised about lack of access to primary care, particularly among those with asthma.
- Linguistic isolation and/or the lack of culturally/linguistically appropriate services were mentioned.
- Access concerns were mentioned, especially with respect to care and services, including lack of knowledge and information about what services are available and the cost of services.
- Some felt it was hard to navigate the health care bureaucracy.
- Environmental causes, such as pollution, were mentioned.

## Respiratory Conditions

---

- Providers mentioned seeing allergies, asthma and overall poor health among residents who had problems with mold in their environment/housing or poor living conditions generally.
- The community agreed that poverty exacerbates respiratory conditions.
- Some residents mentioned cultural reasons for not going to a doctor, believing that a doctor cannot help or that the issue can be fixed at home.
- Access concerns were mentioned, especially with respect to lack of insurance for those dealing with chronic respiratory conditions, and issues with getting prescription refills.

# Santa Clara County Health Need Profile

## Unintentional Injuries (falls)

In 2012, Stanford Hospital and Clinics conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **unintentional injuries (falls)** were considered to be an important health need in the county. According to the Centers for Disease Control and Prevention, the most common unintentional injuries result from motor vehicle crashes, falls and poisonings. For purposes of this report, the focus will be on falls.

The status of unintentional injuries is described in this profile, in terms of:

- Key indicators
- Key drivers or factors affecting the condition
- Geographic regions or subpopulations in which the need is greatest
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	Santa Clara County	CA	HP2020 Benchmark	Data Source
<b>Hospitalizations Due to Falls</b>				
rate of adults age 18+ hospitalized due to unintentional falls per 100,000 population	292.4	370.4	--	California Department of Public Health EPIcenter, 2011
Adults age 65-84	1015	1167	--	
Adults age 85+	4526	5087	--	
<b>Falls Deaths</b>				
rate of fatal, unintentional falls per 100,000 population, age-adjusted	6.8	5.6	7.0	California Department of Public Health, Vital Statistics, 2009
White	7.9	--		
African American	8.8	--		
Latino	3.3	--		
Asian	5.8	--		
<b>Falls Deaths</b>				
rate of fatal, unintentional falls per 100,000 population, age-adjusted				
Adults age 65-84	26.6	21.7		
Adults age 85+	268.8	148.5		

Note: ‡ Statistics from CARES Platform.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

# Santa Clara County Health Need Profile

## Unintentional Injuries (falls)

### Additional data:

Falls were by far the leading cause of fatal and non-fatal hospitalization among seniors in 2009.<sup>1</sup>

### SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:

- The oldest adults experience the highest rates of death from falls. The rate of falls deaths in Santa Clara County among the oldest demographic (adults 85+ years of age) is over ten times as high as the rate for the next-oldest demographic (adults 65-84 years of age), while the comparable rate for California overall is only seven times as high.

### Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals' behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

Category	Driver/indicator	San Jose Service Area‡	Santa Clara Service Area‡	Santa Clara County‡	CA ‡	Data Source
Demographics	<b>Median Age of Population</b> median age according to the 2010 Census population estimate	--	--	35.8	34.9	U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates.
	<b>Estimated Older Adult Proportion of Population</b> % of estimated 2020 population that will be 65+ years old	--	--	14.4%	14.9%	CA Dept. of Finance, State and County Population Projections by Major Age Groups, 2010-2060, 2013
	Young retirees (65-74 years)	--	--	8.5%	8.9%	
	Mature retirees (75-84 years)	--	--	4.2%	4.2%	
	Seniors (85+ years)	--	--	1.8%	1.8%	

Note: ‡ Statistics from CARES Platform.

Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

Given that the oldest adults have higher rates of falls deaths than those who are younger, having an older population in Santa Clara County could impact the county's rates of hospitalization and death due to falls.

See data regarding additional cross-cutting drivers influencing this health need (such as poverty) in the **Access to Health Care** profile report.

## Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Unintentional injuries were mentioned in 2 out of 25 groups/interviews.
- There was concern particularly about falls among older adults.
- It was suggested that older adults who are socially isolated, especially those who live alone, are at greatest risk for falls.
- Adults with chronic conditions were also felt to be more at risk for falls.

# San Mateo Area Health Need Profile

## Unintentional Injuries (falls)

In 2012, Stanford Hospital and Clinics conducted a countywide assessment of health needs. Based on this scan of quantitative and qualitative data, **unintentional injuries** were considered to be an important health need in the county. According to the Centers for Disease Control and Prevention, the most common unintentional injuries result from motor vehicle crashes, falls, and poisonings. For purposes of this report, the focus will be on falls.

The status of unintentional injuries is described in this profile, in terms of:

- Key indicators,
- Key drivers or factors affecting the condition
- Community input

### Status of Key Indicators, 2013

The table of indicators below includes local data that can be compared to statewide (CA) data and Healthy People 2020 (HP 2020) indicators where available.

Indicator	San Mateo County	CA	HP 2020 Benchmark	Data Source
<b>Hospitalizations Due to Falls</b> rate of adults age 18+ hospitalized due to unintentional falls per 100,000 population	279.4	370.4	--	CA Dept. of Public Health EPIcenter, 2011
Adults age 65-84	1060	1167		
Adults age 85+	4512	5087		
<b>Falls Deaths</b> rate of fatal, unintentional falls per 100,000 population, age-adjusted	7.3	5.6	7.0	CA Dept. of Public Health, Vital Statistics, 2009
<b>Falls Deaths</b> rate of fatal, unintentional falls per 100,000 population				CA Dept. of Public Health EPIcenter, 2010
Adults age 65-84	16.8	21.7		
Adults age 85+	135.2	148.5		

Note: Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

### SUBPOPULATIONS EXPERIENCING THE GREATEST IMPACT:

- The oldest adults experience the highest rates of death from falls. The rate of falls deaths in San Mateo County among the oldest demographic (adults ages 85 years and older) is about eight times as high as the rate for the next-oldest demographic (adults 65-84 years of age), while the comparable rate for California overall is seven times as high.

### Factors Influencing the Health Need

Full understanding of the health need requires a review of other elements that can have an impact on it, such as individuals' behaviors, socioeconomic factors, the physical environment, or the provision of preventative care or early intervention. Such factors relevant to this health need are identified in the table below.

# San Mateo Area Health Need Profile

## Unintentional Injuries (falls)

Category	Driver/indicator	San Mateo County	CA	Data Source
Demographics	<b>Median Age of Population</b> median age according to the 2010 Census population estimate	39.3	35.2	U.S. Census Bureau, 2010
	<b>Estimated Older Adult Proportion of Population</b> % of estimated 2020 population that will be 65+ years old	17.1%	14.9%	CA Dept. of Finance, State and County Population Projections by Major Age Groups, 2010-2060, 2013
	Young retirees (65-74 years)	10.2%	8.9%	
	Mature retirees (75-84 years)	4.8%	4.2%	
	Seniors (85+ years)	2.1%	1.8%	

Note: Red font indicates that an indicator fails to meet a benchmark or is worse than the state average.

### Additional Data

- Given that the oldest adults have higher rates of falls deaths than those who are younger, having an older population in San Mateo County could impact the county's rates of hospitalization and death due to falls.
- Falls are a key issue leading to hospitalization, loss of independence and death among seniors.<sup>1</sup>

See data regarding additional cross-cutting drivers influencing this health need (such as poverty) in the **Access to Health Care** profile report.

### Community Input

The health needs assessment process would be incomplete without community input about the health need. Key informant interviews were conducted with local health experts, as well as focus groups with community leaders, representatives, and residents. Themes from discussions regarding the health need are identified below.

- Unintentional injuries were mentioned in 2 out of 14 groups/interviews.
- There was particular concern about falls among older adults.
- It was suggested that older adults who are socially isolated, especially those who live alone, would be at greatest risk for falls.
- It was also suggested that obesity is a risk factor for falls.
- Older adults focused on mobility concerns, especially as it pertains to access. They mentioned that sometimes denial of mobility problems can exacerbate the issue.
- Older adults themselves expressed concern that injuries from falls would further limit their mobility.
