Preference to sophomores. Anatomy, physiology, pathology, and clinical aspects that comprise the discipline of cardiovascular medicine. Anatomy and physiology of the heart and blood vessels as an introduction to pathologic states such as heart attack, stroke, congestive heart failure, rhythm disturbances of the heart, and sudden cardiac death. Underlying principles of diagnosis and treatment of the disease.

MED 130. YES+Empowerment Course. 1 Unit.

YESplus provides us with tools to manage our stress and energy levels, leading us to experience a more happy, fulfilled and meaningful life. This workshop has been taught in 75 universities around the country (including Harvard and Cornell) in addition to progressive and service-oriented institutions such as Google and the World Bank. Learn how to succeed with less stress, more energy, and a state of mind that is both focused and relaxed. Make some of the most meaningful connections you've made on campus and understand how making a difference impacts your wellbeing. Important: In addition to weekly classes, there is a weekend session on campus. Visit yesplus.stanford.edu for more details and dates. Note this course requires an application and all sessions are mandatory. Priority to residents of Castano Hall.

MED 135. Community Leadership. 2 Units.

Offered through Residential Education to residents of Castano House, Manzanita Park. Topics include: emotional intelligence, leadership styles, listening, facilitating meetings, group dynamics and motivation, finding purpose, fostering resilience. Students will lead discussions on personal development, relationships, risky behaviors, race, ethnicity, spirituality, integrity.

MED 143A. Patient Health Education in Community Clinics. 2 Units.

Open to undergraduate, graduate, and medical students. Principles of health education, theories of behavior change, methods for risk reduction. Presentations of health education modules, focusing on topics prevalent among underserved populations. Students apply theoretical frameworks to health education activities in the Cardinal Free Clinics. Application required. Contact evelynh@stanford.edu
Same as: MED 243A.

MED 143B. Patient Health Education in Community Clinics - Practicum. 2 Units.

Open to undergraduate, graduate, and medical students. For students who have completed MED 143A/243A and currently volunteer in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Includes readings and online reflections. Prerequisite: successful completion of MED 143A/243A.

Same as: MED 243B.

MED 143C. Patient Health Education in Community Clinics - Practicum. 2 Units.

Open to undergraduate, graduate, and medical students. For students currently volunteering in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Includes readings and online reflections. Pre-requisites: MED 143A/243A, Med 143B/243B.

Same as: MED 243C.

MED 145. Alternative Spring Break: Confronting HIV/AIDS in San Francisco. 2 Units.

Preparation for the Alternative Spring Break trip. Current issues regarding HIV/AIDS worldwide and in the United States, with a specific focus on San Francisco. Topics include biology, transmission, prevention, pharmaceutical development, discrimination, stigma, access to health care, and perspectives of affected communities. See asb.stanford.edu for more information.

MED 147. Methods in Community Assessment, Evaluation, and Research. 3 Units.

Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.

Same as: MED 247.

MED 149. Medical Interpreting at the Cardinal Free Clinics. 2 Units.

The quality of healthcare often depends as much on the interpreter as the provider. This foundation course prepares bilingual students to work as medical interpreters in hospital and clinic settings. Students learn basic interpreting skills; ethics; communication techniques; medical vocabulary; key healthcare information; communication skills for advocacy; how to draft practical, working solutions, and professional development. By application only; must be an accepted Cardinal Free Clinic (CFC) interpreter volunteer. Students registering for this 2-unit course are required to interpret at the clinic a minimum of 2 weekend sessions; upon completion of this course, students can continue to volunteer at CFC for academic credit by enrolling in MED 182.

MED 149B. Medical Interpreting at the Cardinal Free Clinics. 1 Unit.

For students who have completed MED 149A and currently volunteer in one of the course-affiliated clinic sites. The quality of health care often depends as much on the interpreter as the provider. This practicum prepares bilingual individuals to work as medical interpreters in hospital and clinic settings. Students apply medical interpreting skills at the Cardinal Free Clinics, discuss more complex topics, and reflect upon experiences in the clinic. Includes language labs and shadowing at Stanford Hospital. Limited enrollment; must be an accepted Cardinal Free Clinic interpreter volunteer. Contact evelynh@stanford.edu. Students registering for one unit complete 2 CFC shifts; three shifts for two units. Students must confirm with CFC managers the unit value for which they should enroll.

MED 149C. Medical Interpreting at the Cardinal Free Clinics. 1 Unit.
For students who have completed MED 149A and currently volunteer in one of the course-affiliated clinic sites. The quality of health care often depends as much on the interpreter as the provider. This practicum course prepares bilingual individuals to work as medical interpreters in hospital and clinic settings. Students apply medical interpreting skills at the Cardinal Free Clinics, discuss more complex topics, and reflect upon experiences in the clinic. Includes readings and online reflection. Limited enrollment; must be an accepted Cardinal Free Clinic interpreter volunteer. Contact evelynh@stanford.edu.

MED 150SI. Clinical Foundations for Patient Navigators at Arbor Free Clinic. 1 Unit.

Addresses key areas of learning for patient navigator volunteers at Arbor Free Clinic. Prepares patient navigators for their clinical role. Enrollment limited to current, active patient navigator volunteers.

MED 157. Foundations for Community Health Engagement. 3 Units.

Open to undergraduate, graduate, and MD students. Examination and exploration of community health principles and their application at the local level. Designed to prepare students to make substantive contributions in a variety of community health settings (e.g. clinics, government agencies, non-profit organization, advocacy groups). Topics include community health assessment; health disparities; health promotion and disease prevention; strategies for working with diverse, low-income, and underserved populations; and principles of ethical and effective community engagement.

MED 158. Hunger and Nutrition in the Bay Area. 2 Units.

Service-learning class. Focus is on understanding and engaging in addressing hunger in the Bay Area. In partnership with Second Harvest Food Bank of Santa Clara and San Mateo Counties, students serve as Health Ambassadors, offering nutrition education to the Food Bank's diverse, largely immigrant client population. Online training (10 hours) and an in-person skill-building workshop emphasize: principles and practice of nutrition education; adult learning; working with low-literacy and culturally-diverse populations; food safety and healthy cooking. Students required to provide 10-15 hours of service per month at the Food Bank distribution sites. Pre-requisites: full fluency in a second language (Spanish, Vietnamese, Tagalog, Chinese and/or Russian) and consent of instructors. Brief application required.

MED 159A. Service-Learning in Migrant Health. 2 Units.

Examines the intersection of migration, poverty and health; provides opportunities for engagement directly with community partners working with Bay Area Mexican migrant populations. Weekly knowledge and skills-building sessions covering the process of migration; the demographic characteristics of the local migrant population; the health and socioeconomic status of local migrant populations; current initiatives to improve their quality of life and well-being. Service opportunities include participation in community organizing; health education seminars; and health screening activities. Prerequisite: intermediate/advanced level of Spanish language proficiency.

MED 159B. Service-Learning in Migrant Health. 2 Units.

Second quarter of two-quarter series. Examines the intersection of migration, poverty and health; provides opportunities for engagement directly with community partners working with Bay Area Mexican migrant populations. Weekly knowledge and skills-building sessions covering the process of migration; the demographic characteristics of the local migrant population; the health and socioeconomic status of local migrant populations; current initiatives to improve their quality of life and well-being. Service opportunities include participation in community organizing; health education seminars; and health screening activities. Prerequisites: intermediate/advanced level of Spanish language proficiency, MED 159A.

MED 160. Physician Shadowing: Stanford Immersion in Medicine Series. 1 Unit.

Undergraduates are paired with a physician mentor at Stanford Hospital and Clinics, Lucile Packard Children's Hospital, or the Veteran's Administration Hospital. May be repeated for credit. Prerequisite: Application and acceptance to the SIMS program. Same as: SIMS.

MED 176. Impact of Infectious Diseases on Human History. 3 Units.

Impact of infectious diseases on human society. Some topics include: Plague of Justinian and 14th century; impact on exploration, trade and conquest; how slavery, malaria and yellow fever conspired to alter the New World; Microbes and war; diseases of poverty, tuberculosis and others; Cholera and public health; pandemic influenza; diseases of human progress. Students give a 30 minute presentation on a topic of their choosing that exemplifies an aspect of the impact of politics, societal influences, religion or other forces on infectious diseases.

Same as: HUMBIO 176.

MED 182. Early Clinical Experience at the Cardinal Free Clinics. 1-2 Unit.

Students provide health care in a student-run clinic for the homeless and uninsured. Student volunteers are guided in the practice of medical interviews, history-taking and physical examinations as appropriate. Clinical students and attending physicians provide support and guidance as the team arrives at a diagnosis and management plan. One unit of credit for students who volunteer a minimum of twice per month. Two units of credit for students whose volunteer commitment is greater than twice per month. By application only. Visit <http://cfc.stanford.edu> for more information. Same as: MED 282.

MED 184. Leadership in the Cardinal Free Clinics. 1 Unit.

Open to Steering Committee and Managers of Cardinal Free Clinics. Introduction to skills for effective leadership, including: conflict resolution, team dynamics, leadership styles, personality types, giving and receiving feedback, and group decision-making. Utilizes hands-on-activities and real-life clinic scenarios. Applied learning through shifts at the Cardinal Free Clinics and related project work.

Same as: MED 284.

MED 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

MED 200A. Practical Applications for Qualitative Data Analysis. 2 Units.

First quarter of a two-quarter course. Gain experience analyzing qualitative data using qualitative analysis software (i.e. Nvivo, Dedoose). Conduct analysis using your own or existing data sources. Explore multiple qualitative data analysis topics through class lectures, foundational readings and hands-on learning. Core topics include: grounded theory, qualitative data analysis approaches, software-based analysis, cleaning and coding of data, and interpreting data. Note: Preference will be given to medical students and undergraduate students that have successfully completed an introductory qualitative methods course. Enrollment in subsequent MED 202B required.

MED 200B. Practical Applications for Qualitative Data Analysis. 2 Units.

Second quarter of a two-quarter course provides hands-on experience summarizing qualitative data and describing findings for dissemination. Final course product will be a draft manuscript for submission with students listed as co-authors. Core topics include: identifying themes and representative quotes, community-engaged dissemination, abstract submission, posters, oral presentations, manuscript writing, and journal selection. Prerequisite: Successful completion of MED 202A.

MED 201. Internal Medicine: Body as Text. 1 Unit.

Body as Text refers to the idea that every patient's body tells a story. The narrative includes the past and present of a person's social and medical condition; it is a demonstration of the phenotype. The art of reading the body as text was at its peak in the first half of the 20th century, but as technology has become ascendant, bedside skills and the ability to read the text have faded. Beyond scientific knowledge and medical facts, it is this often forgotten craft which is at the heart of the excitement of being an internist. This course introduces students to the art of the clinical exam, to developing a clinical eye, and learning to see the body in a completely different way.

MED 202. Alternative Spring Break: Rural and American Indian Health Disparities. 3 Units.

Open to MD, graduate, and undergraduate students. Classroom preparation followed by a one week spring break service learning experience on a reservation in South Dakota. Introduces students to the challenges and promise of Native American and rural health care, and the role of communities as leaders and problem solvers. Includes lectures, discussion and readings pertaining to Native American culture, current research in Native American health, and the methods and practice of community based participatory research. Culminates in formulation of a plan for communicating with and engaging community partners in South Dakota: Indian Health Services, Habitat for Humanity, Porcupine Clinic, Teach for America, and Sinte Gleska University.

MED 204. Access and Delivery of Essential Medicines to Poor and Underserved Communities. 1 Unit.

Student initiated lecture series. Guest speakers. Topics include: neglected diseases, underserved and impoverished markets, disease profiles of lower and middle income countries, pricing and distribution of biomedical end products, intellectual property in medicine and its effect on delivery of healthcare.

MED 205. Health and Human Rights Speaker Series. 1 Unit.

Focuses on the relationship between global health and human rights. The course will feature leading human rights scholars and practitioners from around the world. Examines conceptual linkages between global health and human rights and explores both the promise of the field and challenges inherent in implementing its norms on the ground. Topics include: the interrelation of health and human rights; how health policies can enhance or hinder human rights; the relationship between health outcomes and fulfilling the full range of human rights.

MED 206. Meta-research: Appraising Research Findings, Bias, and Meta-analysis. 3 Units.

Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics.

Same as: HRP 206, STATS 211.

MED 207. History of Medicine. 1 Unit.

Begins with studying Shamanistic medicine, practiced by humans throughout the globe, for millennia. Covers magico-religious medicine developed in ancient Egypt, Mesopotamia and Greece; the 4th Century BC with Hippocrates beginning to separate medicine from religion and magic; the slow progress in ancient Rome, the medieval period, and during the Renaissance; and the acceleration in the pace of discoveries in the last few hundred years as medicine became more scientific, complex, and specialized (Pasteur developed the germ theory of disease, Darwin and Mendel publications begin the development of Genetics, Watson and Crick solved the mystery of DNA structure, organ transplants began, and imaging procedures such as CT and MRI came into being). Lectures are profusely illustrated, and, for the sake of comparison, two equally ancient systems of medicine, the traditional Chinese and the Vedic, are briefly reviewed.

MED 208. The Future of Primary Care. 1 Unit.

Introduces the latest thinking and innovations in Primary Care, both at Stanford and nationally. Topics include the role of primary care in patient-centered care, team-based care, care coordination, patient tracking and monitoring, preventive care, and payment reform. Speakers include leading local and national figures in primary care innovation representing the private sector, academia, safety net systems, think tanks, and individuals working on the ground to implement change. Preference to medical students. May be repeated for credit.

MED 213. Compassion Cultivation for the Physician-in-Training. 1 Unit.

Provides mentored practice and growth in students' knowledge, skills and attitudes in compassion cultivation for one's self and others. Integrates traditional contemplative practices with contemporary psychology and scientific research on compassion.

MED 223. Cardiovascular and Pulmonary Sciences Seminar. 2 Units.

Weekly modified journal club primarily for CVP Scholarly Application students, Cardiovascular Institute graduate students, clinical and research fellows, and faculty. Open to other graduate students and medical students (Advanced undergraduate students with permission of instructor). Each meeting begins with an overview of a particular area by a faculty member, followed by presentation of a seminal paper in that area by a postdoctoral fellow or a graduate student. Discussion follows the presentation, after which the faculty moderator meets separately with the students for further questions and discussion.

MED 227. Bedside Ultrasound. 1-2 Unit.

For preclinical or clinical medical students, and others with permission. Introduces students to diagnostic ultrasound at the bedside. The normal anatomy of the heart, abdomen, and pelvis pertinent to ultrasound is taught. Some pathology involving these areas is also introduced. As the students' proficiency increases, those electing to can visit the Pacific Free Clinic to be introduced to scanning patients. 1 unit for class attendance only 2 units for class attendance and participation in the Pacific Free Clinic.

MED 228. Physicians and Social Responsibility. 1 Unit.

Social and political context of the roles of physicians and health professionals in social change; policy, advocacy, and shaping public attitudes. How physicians have influenced governmental policy on nuclear arms proliferation; environmental health concerns; physicians in government; activism through research; the effects of poverty on health; homelessness; and gun violence. Guest speakers from national and international NGOs.

MED 229. Introduction to Global Health. 1 Unit.

Provides an overview of global health and how it is similar to and different from public health and tropical medicine. Topics include the evolution, economics, politics of global health, major players in global health, and issues of geography, politics, humanitarianism, human rights, science, research, culture and disease.

MED 231. Measuring Global Health. 4 Units.

Open to MD, graduate, and undergraduate students. Assessing the global burden of disease, its distribution among and within countries, its causes, and appropriate interventions requires rigorous quantitative approaches. This course develops skills in these areas by critically examining questions like: How do we know who is sick and where? How are risk factors incorporated into our projections of future disease trends? How do we combine mortality and morbidity in a meaningful way? What works for improving health efficiently? Workshops build familiarity with relevant data and their analysis. Prerequisite: coursework in statistics, biostatistics, quantitative epidemiology, econometrics, or equivalent. Same as: HRP 241, HUMBIO 129M.

MED 232. Discussions in Global Health. 2 Units.

The goal of this interactive series is to encourage students to think broadly about the variety of activities encompassed within global health and the roles of various entities, including NGOs, governments, and healthcare providers, in responding to large-scale health crises, building health systems, and caring for patients in developing countries. Examines challenges in global health such as organizing medical responses to natural disasters, providing healthcare to societies in conflict, and integrating traditional and modern approaches to healing. Case studies are used to critique strategies employed by organizations that work to improve medical care in poor settings.

MED 233. Global Health: Beyond Diseases and International Organizations. 3 Units.

Enrollment limited to clinical MD students. Provides multidisciplinary trainees insight into over-arching themes of global health. Topics include systemic issues affecting healthcare progress globally, ethical and thoughtful approaches to solving these issues, as well as economics, public health, organizations in global health, human rights, involvement in NGOs, ethics of overseas work, and other non-medical aspects of this subject. Includes significant clinical, laboratory and diagnostic components.

MED 235. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students the necessary tools for understanding how to effectively design and evaluate education-based social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 74 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Students enrolling for 4 units complete additional assignments. Same as: AFRICAST 135, AFRICAST 235, EDUC 135X, EDUC 335X.

MED 240. Sex and Gender Differences in Human Physiology and Disease. 2-3 Units.

Chromosomal and hormonal influences on cells, tissues, and organs that underlie the development of reproductive organs and sexual dimorphism of the neuroendocrine system. Effects of endogenous and exogenous sex hormones and environmental factors that differ between men and women on the musculoskeletal, neurological, cardiovascular, and immunological systems over the lifecycle, from conception to puberty, through reproductive phases (including changes during the menstrual cycle up to and beyond menopause in women and with aging in men). Transgender health issues. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor. Same as: HUMBIO 140.

MED 241. Context and Practice of Health Care in Free Clinics. 1 Unit.

Preparation for working in free clinics, awareness of health care context and health disparities among underinsured patients, and introduction to key skills for patient care. Topics include: patient history, screening tests, health insurance, cultural sensitivity, role of interpreters, and tuberculosis testing. Meets at either Arbor or Pacific free clinic to increase familiarity with free clinic operations and environment. Integrates with concurrent Practice of Medicine course.

MED 242. Physicians and Human Rights. 1 Unit.

Weekly lectures on how human rights violations affect health. Topics include: regional conflict and health, the health status of refugees and internally displaced persons; child labor; trafficking in women and children; HIV/AIDS; torture; poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva.

MED 243A. Patient Health Education in Community Clinics. 2 Units.

Open to undergraduate, graduate, and medical students. Principles of health education, theories of behavior change, methods for risk reduction. Presentations of health education modules, focusing on topics prevalent among underserved populations. Students apply theoretical frameworks to health education activities in the Cardinal Free Clinics. Application required. Contact evelynh@stanford.edu. Same as: MED 143A.

MED 243B. Patient Health Education in Community Clinics - Practicum. 2 Units.

Open to undergraduate, graduate, and medical students. For students who have completed MED 143A/243A and currently volunteer in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Includes readings and online reflections. Prerequisite: successful completion of MED 143A/243A.

Same as: MED 143B.

MED 243C. Patient Health Education in Community Clinics - Practicum. 2 Units.

Open to undergraduate, graduate, and medical students. For students currently volunteering in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Includes readings and online reflections. Pre-requisites: MED 143A/243A, Med 143B/243B.

Same as: MED 143C.

MED 246. The Medical Interview for Spanish Speakers. 1 Unit.

Student led forum for practicing and learning medical Spanish related specifically to the medical interview. Prepares clinical students to interact more effectively with Spanish speaking patients in clinics. Classes are topical; each class includes a demonstration, medical vocabulary practice, and conversational practice on the topic of the day.

MED 247. Methods in Community Assessment, Evaluation, and Research. 3 Units.

Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.

Same as: MED 147.

MED 248. Student Rounds. 1 Unit.

Teams of preclinical students meet weekly with a clinical student to hear the history and physical of a recent case the clinical student encountered on the wards. Following the presentation, the preclinical students work together under the guidance of the clinical student to develop a problem list and plan, which are then compared with the problem list, plan, and orders made by the actual admitting team. In the course of presenting the cases, the clinical student describes personal experiences and practical components of ward work and daily clinical routine.

MED 253. Applied Grant-Writing Skills for Community and Clinical Research. 2 Units.

Skill-building in writing scientific research proposals. Topics include: grant proposal preparation; scientific literature review; developing research aims; decision-making on study design & methodology; planning statistical analyses; determining research compliances, timelines and resources. Students develop drafts of potential projects, peer-review and critique writing samples, and receive detailed feedback from instructor on all aspects of research projects.

MED 255. The Responsible Conduct of Research. 1 Unit.

Forum. How to identify and approach ethical dilemmas that commonly arise in biomedical research. Issues in the practice of research such as in publication and interpretation of data, and issues raised by academic/industry ties. Contemporary debates at the interface of biomedical science and society regarding research on stem cells, bioweapons, genetic testing, human subjects, and vertebrate animals. Completion fulfills NIH/ADAMHA requirement for instruction in the ethical conduct of research. Prerequisite: research experience recommended.

MED 255C. The Responsible Conduct of Research for Clinical Researchers. 1 Unit.

Engages clinical researchers in discussions about ethical issues commonly encountered during their clinical research careers and addresses contemporary debates at the interface of biomedical science and society. Graduate students required to take RCR who are or will be conducting clinical research are encouraged to enroll in this version of the course. Prerequisite: research experience recommended.

MED 256. Global HIV/AIDS. 3 Units.

Public health, policy, and research issues. Identify resources at Stanford, and from government, NGOs, and pharmaceutical, advocacy, and international organizations. Sources include biomedical, social, and behavioral sciences. Emphasis on student projects which feature methodologies in the development and design of Operational Research and Implementation Science in AIDS/TB and Malaria in response to PEPFAR and Global Fund programs. Guest lectures. Prerequisite: Human Biology core or equivalent, or consent of instructor. Same as: HUMBIO 156.

MED 257A. Community Health Advocacy. 2 Units.

First of a three-quarter course series providing students with knowledge and concrete skills for working with and advocating for underserved populations. Through coursework and placements in community health clinics and social service organizations, students broaden and deepen their understanding of the social and economic determinants of health, how they impact underserved populations, and the various levels at which these challenges can be addressed. Fellows engage in structured activities centered around supporting the mission of placement organizations. Students must apply and be accepted into the program the winter preceding enrollment; application information at och.stanford.edu. Additional prerequisites: Med 157 or equivalent coursework. Spanish language proficiency required for most placements.

MED 257B. Community Health Advocacy. 2 Units.

Second of a three-quarter course series that provides students with knowledge and concrete skills for working with and advocating for underserved populations. Through coursework and placements in community health clinics and social service organizations, student will broaden and deepen their understanding of the social and economic determinants of health, how they impact underserved populations, and the various levels at which these challenges can be addressed. Student will engage in structured activities that center around supporting the mission of their placement organization: direct service with clients and design and implementation of a capacity-building project. Weekly Monday evening classroom meetings serve as a forum for teaching and training, discussion of class readings and placement experiences, project development, and troubleshooting and support. Prerequisites: MED 257A.

MED 257C. Community Health Advocacy. 2 Units.

Third of a three-quarter course series that provides students with knowledge and concrete skills for working with and advocating for underserved populations. Through coursework and placements in community health clinics and social service organizations, students broaden and deepen their understanding of the social and economic determinants of health, how they impact underserved populations, and the various levels at which these challenges can be addressed. Student engage in structured activities that center around supporting the mission of their placement organization: direct service with clients and design and implementation of a capacity-building project. Weekly evening classroom meetings serve as a forum for teaching and training, discussion of class readings and placement experiences, project development, and troubleshooting and support. Prerequisites: MED 257A/B.

MED 258A. Policy Advocacy in Community Health. 2 Units.

In order to affect broad-based change in the health of populations, advocates must look upstream to the social and economic factors that impact health. Most powerful among these factors are the policies that shape our lives and the context in which we make individual and collective decisions. This course gives students the skills and tools to influence the policy process through various avenues, including legislative and media advocacy. Students select a current community health issue of interest and track relevant policy initiatives and media coverage of the issue to serve as the foundation for the application of real-time advocacy strategies. Prerequisites: MED 257A or consent of instructor.

MED 259. Oaxacan Health on Both Sides of the Border. 2 Units.

Required for students participating in the Community Health in Oaxaca summer program. Introduction to the health literacy and health-seeking behaviors of Oaxacan and other Mexican migrants; the health challenges these groups face. Through discussion and reflection, students prepare for clinical work and community engagement in Oaxaca, while also gaining knowledge and insight to make connections between their experiences in Mexico and their health-related work with Mexican immigrants in the Bay Area. Service Learning Course (certified by Haas Center). Prerequisite: application and acceptance into the Community Health in Oaxaca Summer Program (<http://och.stanford.edu/oaxaca.html>).

MED 260. HIV: The Virus, the Disease, the Research. 3-4 Units.

Open to medical students, graduate students in biological sciences, undergraduates with strong biological background. Topics: immunopathogenesis immune deficits, opportunistic infections including TB, and malignancies; genomics viral genetic analyses that have traced the origin of HIV-1 and HIV-2 to primates, dated the spread of infection in humans, and characterized the evolution of the virus within infected individuals; antiretroviral drug development identification of drug targets, structure-based drug design, overcoming drug resistance, pivotal clinical trials, and role of community activism; clinical management solutions in high- and low-income countries; vaccine development learning from past failures and the future of engineering the human immune response. 4 units includes a final project assigned in consultation with the instructor to fit the individual student's background and area of HIV interest. Same as: IMMUNOL 260.

MED 263. Advanced Decision Science Methods and Modeling in Health. 3 Units.

Advanced methods currently used in published model-based cost-effectiveness analyses in medicine and public health, both theory and technical applications. Topics include: Markov and microsimulation models, model calibration and evaluation, and probabilistic sensitivity analyses. Prerequisites: a course in probability, a course in statistics or biostatistics, a course on cost-effectiveness such as HRP 392, a course in economics, and familiarity with decision modeling software such as TreeAge. Same as: HRP 263.

MED 271. Global Biodesign: Medical Technology in an International Context. 1 Unit.

(Same as OIT 587) Seminar examines the development and commercialization of medical technologies in the global setting focusing primarily on Europe, India and China. Faculty and guest speakers from industry and government discuss the status of the industry, as well as opportunities in and challenges to medical technology innovation unique to each geography. Topics related to development of technologies for bottom of the pyramid markets are also addressed. Students enrolling for 2 units are required to write and deliver a final paper. Students enrolling in 2 units are also eligible to apply for the Global Exchange Program: <http://biodesign.stanford.edu/bdn/global/studentexchange2013.jsp>
Same as: BIOE 371.

MED 272A. Biodesign Innovation: Needs Finding and Concept Creation. 4 Units.

This is the first quarter of a two-quarter course series (OIT 384/OIT 385). In this course, students learn how to develop comprehensive solutions (most commonly medical devices) to some of the most significant medical problems. The first quarter includes an introduction to needs finding methods, brainstorming and concept creation. Students learn strategies for understanding and interpreting clinical needs, researching literature and searching patents. Working in small entrepreneurial multidisciplinary teams, students gain exposure to clinical and scientific literature review, techniques of intellectual property analysis and feasibility, basic prototyping and market assessment. Students create, analyze and screen medical technology ideas, and select projects for future development. Final presentations at the end of the winter quarter to a panel of prominent inventors and investors in medical technology provide the impetus for further work in the spring quarter. Course format includes expert guest lecturers (Thu: 4:15 to 6:05 pm), faculty-led practical demonstrations and coaching sessions and interactive team meetings under the mentorship of Biodesign fellows (Tues: 4:15 to 6:05 pm). Projects from previous years included: prevention of hip fractures in the elderly; methods to accelerate healing after surgery; less invasive techniques for bariatric surgery; point of care diagnostics to improve emergency room efficiency; novel devices to bring specialty-type of care to primary care community doctors. More than 4,000 patients have been treated to date with technologies developed as part of this program and more than ten venture-backed companies were started by alums of the program. Students must apply and be accepted into the course. The application is available online at <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp>.
Same as: BIOE 374A, ME 368A.

MED 272B. Biodesign Innovation: Concept Development and Implementation. 4 Units.

Two quarter sequence (continuation of OIT385 - see OIT384 for complete description of the sequence). The second quarter focuses on how to take a conceptual solution to an important medical need forward from early concept to technology translation, development and possible commercialization. Students expand on the topics they learned in OIT384 to learn about prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation and commercialization route (licensing vs. start-up); marketing, sales and distribution strategies; ethical issues including conflict of interest; fundraising approaches and cash requirements; financial modeling; essentials of writing a business or research plan; strategies for assembling a development team. Students continue to work in multidisciplinary teams to select a final concept and develop a business plan. Final presentations are made to a panel of prominent venture investors and serve the role of a VC pitch. New students (i.e. students who did not take OIT384 in the winter quarter) will need to submit an application at <http://www.stanford.edu/group/biodesign/courseapplication11.html>. Students who took OIT384 in the winter quarter are automatically accepted into the spring quarter.
Same as: BIOE 374B, ME 368B.

MED 273. BIODESIGN FOR MOBILE HEALTH. 1-2 Unit.

This seminar examines the emerging Mobile Health industry. Mobile Health is the provision of health services and information via mobile technologies such as mobile phones and wearable sensors. Faculty from Stanford University and other Academic Institutions and guest lecturers from the Mobile Health industry discuss the driving needs, opportunities and challenges that characterize the emerging Mobile Health innovation landscape, and present an overview of the technologies, initiatives and companies that are transforming the way we access health care today.
Same as: BIOE 273.

MED 274. Design for Service Innovation. 4 Units.

(Same as OIT 343/01) Open to graduate students from all schools and departments. An experiential project course in which students work in multidisciplinary teams to design new services to address the needs of medically patients. Project teams partner with "safety net" hospitals and clinics to find better ways to deliver care to the low income and uninsured patients these institutions serve. Students learn proven innovation processes from experienced GSB, d. school, and SoM faculty, interface with students from across the university, and have the opportunity to see their ideas translated into improvements in the quality and efficiency of healthcare in the real world. Prerequisite: admission to the course is by application only. Applications available at <http://DesignForService.stanford.edu>. Applications must be submitted by November 16, 2011.
Same as: BIOE 372, HRP 274.

MED 275. Introduction to Biopharmaceutical Innovation. 2-3 Units.

Open to all students. Biotechnology and the pharmaceutical industry. Topics include the biopharmaceutical industry, historical trends and experiences; research and development; intellectual property; drug approval: regulatory issues and agencies; business development; marketing; manufacturing; capital structure and financing; careers in biopharmaceutical industry. 2-unit option, lectures and weekly assignments, MED or S/NC grading only. 3-unit option, including a group project and final presentation, may be taken for a letter grade. May be repeated for credit.

MED 276. Careers in Medical Technology. 2-3 Units.

Career tracks in biomedical technology for medical, life science, engineering, business, and law students of all levels. Industry professionals describe career tracks, current roles, and industry perspectives. 2-unit option, lectures and weekly assignments, MED or S/NC grading only. 3-unit option, including a group project and final presentation, may be taken for a letter grade. May be repeated for credit.

MED 282. Early Clinical Experience at the Cardinal Free Clinics. 1-2 Unit.

Students provide health care in a student-run clinic for the homeless and uninsured. Student volunteers are guided in the practice of medical interviews, history-taking and physical examinations as appropriate. Clinical students and attending physicians provide support and guidance as the team arrives at a diagnosis and management plan. One unit of credit for students who volunteer a minimum of twice per month. Two units of credit for students whose volunteer commitment is greater than twice per month. By application only. Visit <http://cfc.stanford.edu> for more information.
Same as: MED 182.

MED 284. Leadership in the Cardinal Free Clinics. 1 Unit.

Open to Steering Committee and Managers of Cardinal Free Clinics. Introduction to skills for effective leadership, including: conflict resolution, team dynamics, leadership styles, personality types, giving and receiving feedback, and group decision-making. Utilizes hands-on-activities and real-life clinic scenarios. Applied learning through shifts at the Cardinal Free Clinics and related project work.
Same as: MED 184.

MED 289. Introduction to Bioengineering Research. 1-2 Unit.

Preference to medical and bioengineering graduate students with first preference given to Bioengineering Scholarly Concentration medical students. Bioengineering is an interdisciplinary field that leverages the disciplines of biology, medicine, and engineering to understand living systems, and engineer biological systems and improve engineering designs and human and environmental health. Students and faculty make presentations during the course. Students expected to make presentations, complete a short paper, read selected articles, and take quizzes on the material.

Same as: BIOE 390.

MED 295. Advanced Cardiac Life Support. 2 Units.

(For clinical MD students only) Prepares students to manage the victim of a cardiac arrest. Knowledge and skills necessary for resuscitation of critically ill patients. Clinical scenarios and small group discussions address cardiovascular pharmacology, arrhythmia recognition and therapy, acute coronary syndrome including myocardial infarction, ventricular dysrhythmias and defibrillation, and acute ischemic stroke. Requires pre-course preparation and an intensive two-day session on a Friday and Saturday. Students should get the approval of their Clerkship Coordinator before registering for the course. Recommended prerequisites: Medicine 300A, Pediatrics 300A, or Surgery 300A.

MED 297A. MD Capstone Experience: Preparation for Residency. 3 Units.

For senior medical students. Review of wide variety of skills essential to working effectively as interns. Curricular topics fall into three larger themes: communication, clinical skills and knowledge. Includes significant amount of time in Immersive Learning Center with simulation exercises as a key component.

MED 299. Directed Reading in Medicine. 1-18 Unit.

Prerequisite: consent of instructor.

MED 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

MED 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Medicine Interdisciplinary Courses

INDE 200. The Future of Academic Medicine. 1 Unit.

Required for and limited to first-year MSTP students. Presentations of research directions and opportunities by chairs of basic science, clinical departments, and PhD programs. Prerequisite: instructor consent.

INDE 201. Practice of Medicine I. 11 Units.

Six quarter series extending throughout the first two years of the MD program, interweaving core skills training in medical interviewing and the physical examination with other major threads addressing the context of medical practice: information literacy, nutrition principles, clinical epidemiology and biostatistics, evidence-based practice, psychiatry, biomedical ethics, health policy, population health. Core clinical skills are acquired through hands-on practice, and evaluated through an extensive program of simulated medical encounters, in which students interview, examine, and manage patients in a mock clinic. The information literacy thread introduces students to informatics and knowledge management, biomedical informatics, and evidence-based medicine searching. Nutrition principles are acquired through interactive, web-based instruction, and reinforced through problem-based learning cases, which run in parallel to the basic science components over the first year. In epidemiology students learn the taxonomy of epidemiological studies, how to critically read a journal article, and how to recognize and understand the concepts behind different clinical study designs. Topics include bias, confounding, diagnostic testing and screening, and "how statistics can lie." Psychiatry introduces students to the unique role of medical students in talking with patients, the difference between process and content in patient communication, how to respond to breaks in the patient-physician relationship, and the relationship between the quality of the patient-physician interaction and health outcomes. Health care policy covers such topics as health insurance, physician payment, health care costs, access, measurement and improvement of quality, regulation and health care reform. Biomedical ethics includes important ethical issues in medical practice, such as confidentiality, privacy, and ethical issues relating to medical students. The population health curriculum exposes students to concepts of public health, community action, and advocacy, and includes a year-long, community-based project. At the end of this quarter students participate in a performance-based assessment of the medical interview skills.

INDE 202. Practice of Medicine II. 8 Units.

Medical interview and physical examination skills, information literacy, nutrition principles, evidence-based practice, health policy, and population health are covered. At the end of this quarter, students participate in a performance-based assessment of their medical interview and physical examination skills. See INDE 201 for a complete description of the Practice of Medicine course series.

INDE 203. Practice of Medicine III. 8 Units.

Medical interview and physical examination skills, biomedical literature retrieval and appraisal, nutrition principles, evidence-based practice, biomedical ethics, and population health are covered. Students begin clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students begin transition from comprehensive to problem-focused patient encounters. Students also gain exposure to geriatrics, pediatrics, and interprofessional healthcare teams, and practice mental health interview skills. At the end of this quarter, students participate in a performance-based assessment of their medical interview and physical examination skills. See INDE 201 for a complete description of the Practice of Medicine course series.

INDE 204. Practice of Medicine IV. 10 Units.

The second year of the Practice of Medicine series (INDE 204 and 205) emphasizes clinical reasoning, clinical practicum, and clinical procedures. Students continue clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students spend one-half day per week in a clinical setting, practicing medical interview, physical examination skills, oral presentations, and clinical note-writing under the mentorship of a clinical tutor. In the practicum, students also gain experience with other practical aspects of patient care. The Clinical Procedures segment introduces common and important procedures in clinical practice, including phlebotomy, intravenous line insertion, and electrocardiography.

INDE 205. Practice of Medicine V. 8 Units.

Continued emphasis on clinical reasoning, clinical practicum, and clinical procedures. Students continue clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students spend one-half day per week in a clinical setting, practicing medical interview, physical examination skills, oral presentations, and clinical note-writing under the mentorship of a clinical tutor. In the practicum, students also gain experience with other practical aspects of patient care. For the Clinical Procedures segment, students will have an opportunity in the Emergency Department to practice performing procedures learned in the previous quarter. At the end of this quarter, students participate in a comprehensive four-station objective structured clinical examination (OSCE) performance-based assessment of their medical interview, physical examination, and clinical problem-solving skills.

INDE 206. Practice of Medicine VI. 9 Units.

This last segment of the Practice of Medicine series is an intensive, four-week learning experience to consolidate clinical skills from prior quarters, and a final preparation for transition to clerkships. An extensive series of workshops covers topics such as dermatology, ophthalmology, advanced clinical reasoning, advanced presentations, bedside skills, ethics, palliative medicine, advanced sexual history, electronic medical record, ekg interpretation, intravenous fluid and electrolyte management. Students practice clinical procedures with task trainers and on a cadaver. This quarter also includes a professionalism series to prepare students for entry into clinical practice. Special clinical practice sessions are held as a capstone to clinical skills preparation.

INDE 207A. Medical Mandarin I: Beginning. 2-3 Units.

Develops conversational communication skills and essential medical vocabularies. Teaches in pinyin pronunciation system, which provides an accessible method of learning basic phrases. The foundations of taking a comprehensive patient history in Mandarin and doing medical interviews at individual hospital divisions, including making introductions, soliciting symptoms, explaining health concepts (e.g. diseases and prescriptions) as well as daily survival conversations. Main goals are to improve rapport with Chinese patients through Mandarin fluency in the medical setting and to promote understanding of Chinese culture in the context of health care as well as daily life. Students registering for 3 units participate in clinic visits and field activities.

INDE 207B. Medical Mandarin II: Intermediate. 2-3 Units.

For students who already have a basic command of spoken Chinese. Conversational communication skills practiced in a more advanced setting, including more sophisticated assessment of patient history and different tasks such as giving medical instructions and doing labs and tests. Builds working vocabulary for organ system, disease assessment to conduct a full physical exam, and to describe treatment modalities for Chinese-speaking patients (diagnostic and therapeutic). Students registering for 3 units participate in clinic visits and field activities. Prerequisite: one year of college-level Chinese or instructor assessment of fluency.

INDE 207C. Medical Mandarin III: Advanced. 2-3 Units.

Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. Students registering for 3 units participate in clinic visits, field activities or projects. Prerequisite: completion of Medical Mandarin II, or advanced Chinese proficiency.

INDE 207D. Professional Mandarin I. 2-3 Units.

Designed for students who seek professional development via Mandarin. Coursework includes lectures, online classes, language partnerships, selected topics, projects and field activities. Goal is to enhance students' language abilities as professionals and facilitate a career. Students choose to enroll for 2 units or 3 units depending upon an agreed-upon workload approved by the instructor. Prerequisite: sound preparation in Mandarin as assessed by the instructor.

INDE 208A. Medical Mandarin I: Beginning. 2-3 Units.

Continuation of 207A. See description for 207A. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

INDE 208B. Medical Mandarin II: Intermediate. 2-3 Units.

Continuation of 207B. See description for 207B. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

INDE 208C. Medical Mandarin III: Advanced. 2-3 Units.

Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. 3 units Includes clinic visits and field activities. Prerequisite: completion of 207C, or advanced Chinese proficiency.

INDE 208D. Professional Mandarin II. 2-3 Units.

Continuation of INDE 207D. Designed for students who seek professional development via Mandarin. Coursework includes lectures, online classes, language partnerships, selected topics, projects and field activities. Goal is to enhance students' language abilities as professionals and facilitate a career. Students choose to enroll for 2 units or 3 units depending upon an agreed-upon workload approved by the instructor. Prerequisite: INDE 207D.

INDE 209A. Medical Mandarin III: Beginning. 2-3 Units.

Continuation of 207A/208A. See description for 207A. Students participating only in classroom and online instruction register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

INDE 209B. Medical Mandarin III: Intermediate. 2-3 Units.

Continuation of 207B/208B. See description for 207B. Students participating only in classroom and online instruction register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

INDE 209C. Medical Mandarin III: Advanced. 2-3 Units.

Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. 3 units Includes clinic visits and field activities. Prerequisite: completion of 208C or advanced Chinese proficiency.

INDE 209D. Professional Mandarin III. 2-3 Units.

Continuation of INDE 208D. Designed for students who seek professional development via Mandarin. Coursework includes lectures, online classes, language partnerships, selected topics, projects and field activities. Goal is to enhance students' language abilities as professionals and facilitate a career. Students choose to enroll for 2 units or 3 units depending upon an agreed-upon workload approved by the instructor. Prerequisite: INDE 208D.

INDE 211. Creative Writing. 1 Unit.

For medical students - all levels of writing skill. Examines uses of creative writing, including understanding the experience of medical training. May be repeated for credit.

INDE 212. The Human Condition: Medicine, Arts, and Humanities. 2 Units.

The interdisciplinary field of medical humanities: the use of the arts and humanities to examine medicine in personal, social, and cultural contexts. Topics include the doctor/patient relationship, the patient perspective, the meaning of doctoring, and the meaning of illness. Sources include visual and performing arts, film, and literary genres such as poetry, fiction, and scholarly writing. Designed for medical students in the Biomedical Ethics and Medical Humanities Scholarly Concentration, but all students are welcome.

INDE 214. Stanford Medical Student Journal. 1 Unit.

Provides an opportunity for editors of all levels to cultivate their skills and assist in preparing pieces submitted by colleagues for publication in the Stanford Medical Student Journal. Students enrolled in the course work closely with student authors as well as other editors. Editors examine multiple categories of writing, including opinion pieces, poetry, memoirs, book reviews, case reports and investigative reports. The Journal is published two to three times per year and highlights the diverse talents of Stanford medical students in both scientific writing and the humanities.

INDE 215. Queer Health and Medicine. 1 Unit.

Explores specific, pertinent, and timely issues impacting the health of the lesbian, gay, bisexual, and transgender community; examines the role of the primary care physician in addressing the health care needs of this community. Guest lecturers provide a gender-sensitive approach to the medical care of the LGBT patient, breaking down homophobic barriers and reaffirming patient diversity. May be repeated for credit.

INDE 216. Cells to Tissues. 3 Units.

Focuses on the cell biology and structural organization of human tissues as self-renewing systems. Topics include identification and differentiation of stem cells, regulation of the cell cycle and apoptosis in normal and cancerous cells, cell adhesion and polarity in epithelial tissues, intracellular transport, and cell migration. Histology laboratory sessions examine normal and abnormal samples of blood, epithelia, connective tissue, muscle, bone and cartilage. Patient presentations and small group discussions of current medical literature illustrate how cell biology influences medical practice.

INDE 217. Physician Scientist Hour. 1 Unit.

Enrollment limited to MD-PhD students. Focus is on current biomedical research: understanding, critiquing, and planning experiments and applications. Weekly biomedical journal article or student research presentation with group feedback. May be repeated for credit.

INDE 220. Human Health and Disease I. 3 Units.

Establishes the foundation for the Human Health and Disease block which spans Q3 (Spring quarter Year One) through Q5 (Winter quarter Year Two). The Human Health and Disease block presents organ system-based histology, pathology, physiology, pharmacology, and infectious disease in a sequence of interdisciplinary courses. Each organ-specific integrated course includes a review of the anatomy and related histology, normal function of that organ system, how the organ system is affected by and responds to disease including infection, and how diseases of that organ system are treated (therapeutics).

INDE 221. Human Health and Disease II. 12 Units.

Structure, function, disease, and therapeutics of the respiratory system and the cardiovascular system. See INDE 220 for a description of the Human Health and Disease block .

INDE 222. Human Health and Disease III. 15 Units.

Structure, function, disease, and therapeutics of the renal/genito-urinary system, the gastrointestinal system, the endocrine system, male and female reproductive systems, and women's health. See INDE 220 for a description of the Human Health and Disease block .

INDE 223. Human Health and Disease IV. 11 Units.

Structure, function, disease, and therapeutics of the central nervous system, hematologic system and multi-systemic diseases. See INDE 220 for a description of the Human Health and Disease block .

INDE 225. Popular and Clinical Nutrition: Food Facts, Fads, and Pharmacology. 1 Unit.

Designed for medical students and other health care professionals. Lunchtime lectures review the epidemiological and clinical research related to eating patterns and misconceptions of the public, the mechanisms of pharmacological effects of food, and related topics common to patient nutritional concerns. Topics include fad diets, the impact of dietary addiction, longevity associated with caloric restriction, toxins in foods and the action of phytonutrients. Epidemiological, clinical, and biochemical studies are reviewed in the discussion of these and other topics.

INDE 226. History of Medicine Online. 1 Unit.

Via Internet. Topics include: ancient medicine, Egypt and Babylonia, ancient Greece and Rome, Europe in the Middle Ages and the Renaissance, 18th-century schools of thought, and technological medicine. Sources include Kleinman's core clinical functions, and text, pictures, hypertext links, and sound clips. For assistance accessing the course, email: cwpsupport@lists.stanford.edu. Enroll in Axess, then ask cwpsupport to be added to the course site as a student.

INDE 227. Careers in Medicine: Pathways in the Medical Sciences. 1 Unit.

Open to medical students, graduate and undergraduate students. Interactive, seminar-style sessions expose students to diverse career opportunities and the challenges of developing work-life balance in medicine. Recognized experts in clinical medicine and biomedical research who have been innovators in their careers discuss their work, decision-points in their career pathways, and lifestyle aspects of their choices.

INDE 228. Career Transition Planning: Taking Action Today for a Successful Tomorrow. 1 Unit.

Open to School of Medicine MD and graduate students; post-docs and clinical fellows may audit by consent of instructor. How to prioritize career goals and develop an effective job search campaign. Topics: translating scientific and clinical training into a variety of workplace environments, professional network development, professional interest assessment, recruiters' perspectives, credentials development, and creating a marketing plan. Guest speakers from myriad career fields. May be repeated for credit.

INDE 229. Managing Difficult Conversations. 2 Units.

(Same as GSBGEN 568) Dealing effectively with difficult interpersonal situations in medical contexts. Focus is on improving students' judgment as to how to prepare for and confront difficult discussions in medical situations. Relevant principles of professionalism, leadership, and psychology underlie the course pedagogy. Case-based; student-to-student and student-to-instructor role-playing in actual medical situations. Patient and physician-expert participation as class guests. Enrollment limited to 20 medical students (2nd year and beyond) and 15 2nd year MBA students.

INDE 231. Future Faculty Seminar. 1 Unit.

For graduate students from all disciplines who are considering faculty careers. Postdoctoral fellows, TGR students, and research/clinical trainees may audit by consent of instructor. Explores the broad spectrum of duties and opportunities presented through faculty positions beyond the research-related aspects. Develops awareness of resources and skills that lead to faculty success; answers field-specific and related faculty job questions through discussions with representatives of a variety of academic institutions and fellow course participants. Topics include: finding and obtaining faculty positions, negotiating and navigating the first year, and working toward tenure. May be repeated for credit. Same as: CTL 231.

INDE 232. Introduction to Academic Medicine for Physician-Scientists. 3 Units.

Open only to accepted MSTP students. Presentations by Stanford faculty on professional development topics, including: choosing a dissertation advisor, giving oral presentations, writing a grant proposal, attending scientific meetings, developing a research career. Substantial writing component.

INDE 233. Medical Education Seminar Series. 1 Unit.

For pre-clinical and clinical medical students. A series of sessions rotating among the following formats: Medical Education journal club; education works-in-progress; topics in medical education design, implementation, and evaluation; teaching M&M; hot topics and controversies in medical education. May be repeated for credit.

INDE 234. Introduction to Writing Research Proposals. 3 Units.

Practical instruction in research proposal writing. Suitable for advanced graduate students. Substantial writing component. Enrollment by instructor approval only.

INDE 235. Wilderness Leadership and Mentorship Skills for Medical Students. 2 Units.

For MD/Master of Medicine wilderness pre-orientation trip (SWEAT) leaders. Training to engage with and prepare incoming first-year medical students for the rigors of medical school. Topics include: fundamentals of wilderness survival, wilderness equipment use, wilderness first aid, camping, outdoor leadership, mentorship, team building, improvisation, risk management, cultural competency, professionalism as a physician, reflection and resiliency, first-year curriculum, stress management and coping. Guest lectures from Stanford faculty, emergency medicine physicians, National Outdoor Leadership School wilderness instructors, learning strategy specialists, and mentorship development specialists.

INDE 236. Introduction to Teaching and Mentoring. 1 Unit.

Enrollment limited to medical students. An introduction to medical education teaching principles and skills. Topics include assessment of current teaching skills, reviews of performance, giving appropriate learner feedback, and best practices for interactive teaching. Also introduces the literature around the value of peer mentoring in the medical setting and how to apply this information. Recommended for medical students interested in or currently serving as teaching assistants or interested in future academic positions.

INDE 239. Preparation and Practice for Biotechnology Business and Finance. 2 Units.

Open to School of Medicine graduate students, medical students, residents and fellows. Focus on the process of new company development and skills for success in biotechnology business, entrepreneurship and finance, including management/leadership skill development, awareness of business terminology and theory. Topics include: financial analysis, feasibility, IP, case practice.

INDE 255A. Health Policy, Finance and Economics I. 1 Unit.

Open to medical students and resident physicians. Introduction to basic concepts and current issues in health policy, health finance, and health economics. Goals are to promote understanding of the forces that shape healthcare; to integrate medical students with graduate medical education (residents); to motivate participants to pursue further scholarly activity in these subjects through coursework, graduate programs or research. Team taught by world-renowned experts in their respective fields. Prerequisite: instructor consent.

INDE 255B. Health Policy, Finance and Economics II. 1 Unit.

Continuation of INDE 255A. Open to medical students and resident physicians. Introduction to basic concepts and current issues in health policy, health finance, and health economics. Goals are to promote understanding of the forces that shape healthcare; to integrate medical students with graduate medical education (residents); to motivate participants to pursue further scholarly activity in these subjects through coursework, graduate programs or research. Team taught by world-renowned experts in their respective fields. For medical students 255A is not prerequisite to 255B. Prerequisite: instructor consent.

INDE 260. Journeys in Women's Health and Sex and Gender in Medicine. 1 Unit.

Sponsored by the Stanford WSDM Center. Course focuses on health research on women and sex differences in medicine, acknowledges the "wisdom" of research and education on sex (e.g. chromosomes, gonads, gonadal hormones) and gender (sociocultural) factors influencing health. Brings alumni to share their professional journeys in the world of Women and Sex Differences in Medicine. Meets Women's Health Scholarly Concentration Requirement. Same as: FEMGEN 260X.

INDE 295. Bioethics and Anthropology Interdisciplinary Directed Individual Study. 3-5 Units.

Supervised individualized study in bioethics and anthropology for a qualifying paper, research proposal, or project with an individual faculty member. May be repeated for credit.

INDE 297. Reflections, Research, and Advances in Patient Care. 4 Units.

Required for all MD students enrolled in clerkships at Stanford affiliated sites. Two-year curriculum designed to provide structured time for students to step back from clerkships, in order to promote reflection on and reinforcement for their learning in the clinical environment. Goals are: to discuss and reflect upon critical experiences in clerkships; to provide continuity of instruction in translational science topics across the curriculum; to reinforce and extend the study of behavioral, cultural, ethical, social and socioeconomic topics introduced in the Practice of Medicine course sequence; to expose students to recent advances in medical discoveries, emphasizing their application to clinical practice (translational medicine); and to develop research and critical thinking skills, acquiring new information in areas related to the Scholarly Concentrations. Components of this curriculum include Doctoring with CARE small groups, the Advances and Reflections in Medicine lecture/seminar series, and Scholarly Concentration breakout groups. The Friday afternoon lecture/seminars explore advances in biomedical sciences with applications to medical practice (translational medicine) as well as faculty career pathways, reflections on doctoring, and the context of medicine in society. All students in clinical clerkships must participate in all aspects of RRAP Days. Prerequisite: Concurrent enrollment in clinical clerkships.

INDE 298. Women's Health Independent Project. 1 Unit.

Required for Women's Health Scholarly Concentration. Students pursue individual projects under the supervision of a faculty member. Prerequisite: consent of instructor.

Medieval Studies Courses

Microbiology & Immunology Courses

MI 19SC. Measles and Sneezles and Things That Go Mumps in the Night. 2 Units.

A study of measles (until recently one of the leading causes of death in the world and the most contagious disease agent ever studied) and its relatives in the paramyxovirus family, including mumps, respiratory syncytial virus, hendra, and nipah, as well as a number of important animal pathogens. Investigates the nature of viruses using the paramyxoviruses as a paradigm. Topics include: the history of this devastating group of pathogens; basic aspects of paramyxovirus taxonomy and molecular virology; viral epidemiology, emergence, and eradication, including the pioneering studies of Peter Panum; the use, misuse, and abuse of science; the interactions between pathogen and host and how this interplay leads to disease, including the appearance of a bizarre brain complication with 100% mortality; the politics and economics of infection; how a putative link between the measles vaccine and autism entered the public eye, and how it refuses to disappear despite overwhelming evidence to the contrary. Field trips, guest speakers, student presentations. No science background necessary.

MI 70Q. Photographing Nature. 3 Units.

Utilizes the idiom of photography to learn about nature, enhance observation, and explore scientific concepts. Builds upon the pioneering photographic work of Eadweard J. Muybridge on human and animal locomotion. A secondary goal is to learn the grammar, syntax, composition, and style of nature photography to enhance the use of this medium as a form of scientific communication and also to explore the themes of change across time and space. Scientific themes to be explored include: taxonomy, habitat preservation, climate change; species diversity; survival and reproductive strategies; ecological niches and coevolution, carrying capacity and sustainability, population densities, predation, and predator-prey relationships, open-space management, the physics of photography. Extensive use of field trips and class critique.

MI 104. Innate Immunology. 3 Units.

Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants. Same as: IMMUNOL 204, MI 204.

MI 115B. The Vaccine Revolution. 6 Units.

Advanced seminar. Human aspects of viral disease, focusing on recent discoveries in vaccine development and emerging infections. Journal club format: students choose articles from primary scientific literature, write formal summaries, and synthesize them into a literature review. Emphasis is on analysis, experimental design, and interpretation of data. Oral presentations. Enrollment limited to 8. Prerequisite: prior enrollment in HumBio 155H Humans and Viruses or MI 116, The Human Virosphere Same as: HUMBIO 155B.

MI 116. The Human Virophere. 5 Units.

Focus on interaction of humans and viruses from a number of perspectives: historical, cultural, political, and demographic. Organismal, molecular biological, biochemical, human and viral interactions; clinical aspects of viral disease, epidemiology and risk factors, public and international health, aspects of virology including emerging viruses and biological weapons. Case studies involving particular viruses: human herpes viruses, retroviruses, oncogenic viruses; vaccination and disease eradication, evolution of viruses as tools for research and therapy. Emphasis on general principles of biology and matters of decision making policy. Prerequisite: Biology core, Human Biology core, or consent of instructor. Same as: MI 216.

MI 120. Bacteria in Health and Disease. 3 Units.

Enrollment limited to junior and senior undergraduates, graduate students and medical students. Introduces students to the bacteria that live in and on humans and, in some cases, can cause disease and sometimes death. Topics include the biology of the interaction of the simple microbe with complex human biology and the factors that determine whether or not we coexist relatively peacefully, suffer from overt disease, or succumb to the bacterial onslaught.

Same as: BIO 120.

MI 155H. Humans and Viruses I. 6 Units.

Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis is on host pathogen interactions and policy issues. Topics: polio and vaccination, smallpox and eradication, yellow fever and history, influenza and genomic diversity, rubella and childhood infections, adenovirus and viral morphology, ebola and emerging infection, lassa fever and immune response.

Same as: HUMBIO 155H.

MI 155V. Humans and Viruses II. 6 Units.

Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis on host pathogen interactions and policy issues. Topics: measles and viral epidemiology, rotavirus and world health, rabies and infections of the brain, HPV and cancer -causing viruses, herpes simplex and viral latency, CMV and viral teratogenesis, retrovirology and endogenous viral sequences, HIV and viral treatment, viral hepatitis and chronic infections, prions and diseases of life style. Prerequisite: MI155H.

MI 185. Topics in Microbiology. 3 Units.

For advanced undergraduates and graduate students. 1/3rd of the course consists of lectures by the instructor/colleagues. These cover, at an advanced level, with emphasis on bacteria, topics not covered elsewhere, e.g., phylogeny, molecular regulation, and bioenergetics. The remainder of the course involves interactive discussion of a topic of current interest in microbiology, chosen with student participation, and includes student presentations. (The topic last year was: Gene therapy.) Satisfies Central Menu Area 3 for BIO majors. Prerequisites: CHEM 31X, Biology core. Same as: MI 285.

MI 198. Directed Reading in Microbiology and Immunology. 1-15 Unit.

Fields of study are decided in consultation with sponsoring professor. Prerequisite: consent of instructor.

MI 199. Undergraduate Research. 1-18 Unit.

Investigations sponsored by individual faculty members. Possible fields: microbial molecular biology and physiology, microbial pathogenicity, immunology, virology, and molecular parasitology. Prerequisite: consent of instructor.

MI 204. Innate Immunology. 3 Units.

Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants. Same as: IMMUNOL 204, MI 104.

MI 209. Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites: Part I. 4 Units.

For graduate students and advanced undergraduates; required of first-year graduate students in Microbiology and Immunology. Emphasis is on mechanisms to establish infection in the host and responses of the host to infection. Current literature. Prerequisite: background in biochemistry and molecular biology.

MI 210. Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites. 4 Units.

For graduate and medical students, and advanced undergraduates; required of first-year graduate students in Microbiology and Immunology. The molecular mechanisms by which microorganisms invade animal and human hosts, express their genomes, interact with macromolecular pathways in the infected host, and induce disease. Current literature. Undergraduate students interested in taking this class must meet with the instructor to obtain approval before enrolling.

MI 211. Advanced Immunology I. 3 Units.

For graduate students, medical students and advanced undergraduates. Topics include the innate and adaptive immune systems; genetics, structure, and function of immune molecules; lymphocyte activation and regulation of immune responses. Prerequisites: undergraduate course in Immunology and familiarity with experimental approaches in biochemistry, molecular biology, and cell biology.

Same as: IMMUNOL 201.

MI 215. Principles of Biological Technologies. 3 Units.

The principles underlying novel as well as commonly utilized techniques to answer biological questions. Lectures and primary literature critiques on topics such as fluorescence microscopy, including applications such as FRET and single-cell analysis; human and murine genetic analysis; FACS; proteomics and analysis of noncoding RNAs. Class participation is emphasized. Prerequisite: biochemistry. Required of first-year graduate students in Microbiology and Immunology and the Immunology program. Same as: IMMUNOL 215.

MI 216. The Human Virophere. 5 Units.

Focus on interaction of humans and viruses from a number of perspectives: historical, cultural, political, and demographic. Organismal, molecular biological, biochemical, human and viral interactions; clinical aspects of viral disease, epidemiology and risk factors, public and international health, aspects of virology including emerging viruses and biological weapons. Case studies involving particular viruses: human herpes viruses, retroviruses, oncogenic viruses; vaccination and disease eradication, evolution of viruses as tools for research and therapy. Emphasis on general principles of biology and matters of decision making policy. Prerequisite: Biology core, Human Biology core, or consent of instructor. Same as: MI 116.

MI 218. Computational Analysis of Biological Information: Introduction to Python for Biologists. 2 Units.

Computational tools for processing, interpretation, communication, and archiving of biological information. Emphasis is on sequence and digital microscopy/image analysis. Intended for biological and clinical trainees without substantial programming experience.

Same as: GENE 218, PATH 218.

MI 233. The Biology of Small Modulatory RNAs. 2 Units.

Open to graduate and medical students. Explores recent progress and unsolved questions in the field of RNA interference and microRNA biology. Students are required to read assigned primary literature before each class and actively participate in guided discussions on related technical and conceptual issues during class meetings. Assignments include critiques of assigned papers and developing a novel research proposal.

Same as: GENE 233, PATH 233.

MI 234. Fundamentals of RNA Biology. 2 Units.

For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students.

Same as: GENE 234, PATH 234.

MI 245. Computational Modeling of Microbial Communities. 4 Units.

Provides biologists with basic computational tools and knowledge to confront large datasets in a quantitative manner. Students learn basic programming skills focused on Matlab, but also are introduced to Perl and Python. Topics include: image analysis, bioinformatics algorithms, reaction diffusion modeling, Monte Carlo algorithms, and population dynamics. Students apply computational skills to a miniature research project studying the human gut microbiota.

Same as: BIOE 115.

MI 250. Frontiers in Microbiology and Immunology. 1 Unit.

Required of first- and second-year students in Microbiology and Immunology. How to evaluate biological research. Held in conjunction with the Microbiology and Immunology Friday noon seminar series. Before the seminar, students and faculty discuss one or more papers from the speaker's primary research literature on a related topic. After the seminar, students meet informally with the speaker to discuss their research.

MI 285. Topics in Microbiology. 3 Units.

For advanced undergraduates and graduate students. 1/3rd of the course consists of lectures by the instructor/colleagues. These cover, at an advanced level, with emphasis on bacteria, topics not covered elsewhere, e.g., phylogeny, molecular regulation, and bioenergetics. The remainder of the course involves interactive discussion of a topic of current interest in microbiology, chosen with student participation, and includes student presentations. (The topic last year was: Gene therapy.) Satisfies Central Menu Area 3 for BIO majors. Prerequisites: CHEM 31X, Biology core. Same as: MI 185.

MI 299. Directed Reading in Microbiology and Immunology. 1-18 Unit.

Prerequisite: consent of instructor.

MI 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

MI 399. Graduate Research. 1-18 Unit.

Students who have completed the necessary foundation courses undertake investigations in general bacteriology, bacterial physiology and ecology, bacterial genetics, microbial pathogenicity, immunology, parasitology, or virology sponsored by individual faculty members. Prerequisite: consent of instructor.

MI 801. TGR Master's Project. 0 Units.**MI 802. TGR PhD Dissertation. 0 Units.**

Modern Thought & Literature Courses

MTL 299. Edgework: New Directions in the Study of Culture. 1-3 Unit.

Workshop. Required of first-year students in the doctoral program. Methodologies of different disciplines, the possibility and difficulty of interdisciplinary work within these disciplines, and their connection with the individual projects of students in Modern Thought and Literature. May be repeated for credit.

MTL 334A. Concepts of Modernity I: Philosophical Foundations. 5 Units.

In the late eighteenth century Immanuel Kant proclaimed his age to be "the genuine age of criticism." He went on to develop the critique of reason, which set the stage for many of the themes and problems that have preoccupied Western thinkers for the last two centuries. This fall quarter course is intended as an introduction to these themes and problems. We begin this course with an examination of Kant's philosophy before approaching a number of texts that extend and further interrogate the critique of reason. In addition to Kant, we will read texts by Hegel, Marx, Nietzsche, Weber, Freud, Lukács, and Heidegger. This course is the first of a two-course sequence. Priority to graduate students in MTL and English. The course will be capped at 12 students.
Same as: ENGLISH 334A.

MTL 334B. Concepts of Modernity II: The Study of Culture in the Age of Globalization. 5 Units.

A survey of 20th-century theory with focus on the concept of culture and methods of studying it from diverse disciplines including, anthropology, historical sociology, literary and cultural studies. Discussions will emphasize modernization, transmodernization and globalization processes in their relations to culture broadly understood, cultures in their regional, national and diasporic manifestations, and cultures as internally differentiated (high and low culture, subcultures, media cultures).
Same as: COMPLIT 334B, ENGLISH 334B.

MTL 390. Qualifying Paper. 1-5 Unit.

Preparation and writing of the qualifying paper for the Ph.D. in Modern Thought and Literature. nn (Staff).

MTL 398. Graduate Independent Study. 1-15 Unit.

Students pursue a special subject of investigation under supervision of a member of the committee or another faculty member. May be repeated for credit.

MTL 399. Reading for Orals. 1-15 Unit.

Reading in preparation for the University Oral Examination. May be repeated for credit.

MTL 802. TGR Dissertation. 0 Units.

Molecular & Cellular Physiology Courses

MCP 126. Neurons and Disease. 4 Units.

Diseases of the nervous system. First lecture of each week focuses on the clinical, epidemiological and behavioral aspects of a selected disease or syndrome. Second lecture exposes the cell biological, electrophysiological, biochemical and/or molecular biological processes that underlie each disease presented. Instructors maintain some flexibility in the diseases chosen for elucidation, but students can expect those covered to range from the relatively straightforward, for example Multiple Sclerosis (MS) or Amyotrophic Lateral Sclerosis (ALS), to the more complex, for example, Schizophrenia or Obsessive Compulsive Disorder (OCD). Prerequisite: Biology or Human Biology core.

MCP 156. How Cells Work: Energetics, Compartments, and Coupling in Cell Biology. 4 Units.

Open to graduate and medical students, and advanced undergraduates. Dynamic aspects of cell behavior and function, including cellular energetics, homeostasis, heterogeneity of membranes, structure and function of organelles, solute and water transport, signaling and motility. Emphasis is on the principles of how coupling of molecular processes gives rise to essential functions at the cellular level. Mathematical models of cell function. Student presentations.
Same as: MCP 256.

MCP 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

MCP 200. Cardiovascular Physiology. 5 Units.

Offered jointly with the Department of Medicine. Lectures, small group instruction, clinical presentations, and lab demonstrations of normal and disordered human cardiovascular physiology. Prerequisite: understanding of general biochemistry.

MCP 202. Advanced Immunology II. 3 Units.

Readings of immunological literature. Classic problems and emerging areas based on primary literature. Student and faculty presentations. Prerequisite: IMMUNOL 201/MI 211.
Same as: IMMUNOL 202.

MCP 216. Genetic Analysis of Behavior. 3 Units.

Advanced seminar. Findings and implications of behavioral genetics as applied to invertebrate and vertebrate model systems. Topics include biological clocks, and sensation and central pattern generators. Relevant genetic techniques and historical perspective. Student presentation.
Same as: NBJO 216.

MCP 221. Advanced Cell Biology. 4 Units.

For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, differentiation, and multicellularity. Current papers from the primary literature. Prerequisite for advanced undergraduates: BIO 129A,B, and consent of instructor.
Same as: BIO 214, BIOC 224.

MCP 222. Imaging: Biological Light Microscopy. 3 Units.

Survey of instruments which use light and other radiation for analysis of cells in biological and medical research. Topics: basic light microscopy through confocal fluorescence and video/digital image processing. Lectures on physical principles; involves partial assembly and extensive use of lab instruments. Lab. Prerequisites: some college physics, Biology core.
Same as: BIO 152.

MCP 232. Advanced Imaging Lab in Biophysics. 4 Units.

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.
Same as: APPPHYS 232, BIO 132, BIO 232, BIOPHYS 232.

MCP 256. How Cells Work: Energetics, Compartments, and Coupling in Cell Biology. 4 Units.

Open to graduate and medical students, and advanced undergraduates. Dynamic aspects of cell behavior and function, including cellular energetics, homeostasis, heterogeneity of membranes, structure and function of organelles, solute and water transport, signaling and motility. Emphasis is on the principles of how coupling of molecular processes gives rise to essential functions at the cellular level. Mathematical models of cell function. Student presentations.
Same as: MCP 156.

MCP 287. Connectomes. 1-3 Unit.

(Same as PSYCH 287) Neural circuitry can be measured over a huge range of spatial scales, from sub-synaptic to whole brain connectomes. The methods used to measure these scales differ enormously, and scientists working at one scale should be able to understand and communicate with those measuring at other scales. Reviews methods, principal results, and ideas for integrating findings across scales by large-scale computation modeling.

MCP 299. Directed Reading in Molecular and Cellular Physiology. 1-18 Unit.

Prerequisite: consent of instructor.

MCP 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

MCP 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Research fields include endocrinology, neuroendocrinology, and topics in molecular and cellular physiology. Prerequisite: consent of instructor. (Staff).

MCP 801. TGR Project. 0 Units.**MCP 802. TGR Dissertation. 0 Units.**

Music Courses

MUSIC 1A. Music, Mind, and Human Behavior. 3 Units.

An introductory exploration of the question of why music is a pervasive and fundamental aspect of human existence. The class will introduce aspects of music perception and cognition as well as anthropological and cultural considerations.

MUSIC 1SI. Introduction to Indian Classical Music. 1 Unit.**MUSIC 2C. An Introduction to Opera. 3 Units.**

The lasting appeal of opera as a lavishly hybrid genre from the 1600s to the present. How and why does opera set its stories to music? What is operatic singing? Who is the audience? How do words, music, voices, movement, and staging collaborate in different operatic eras and cultures? Principal works by Monteverdi, Handel, Mozart, Verdi, Wagner, Strauss, Britten, and Adams. Class studies and attends two works performed by the San Francisco Opera.

MUSIC 4SI. Interactive Introduction to North American Taiko. 1 Unit.

Taught by Stanford Taiko members. Techniques and history. No experience necessary. May be repeated for credit. This course was initiated by Mitchell Fukumoto and Stanford Taiko.

MUSIC 5G. Introduction to Gu-Zheng. 1 Unit.

Introduction to Chinese music through learning how to play Gu-Zheng, a 21-stringed traditional Chinese instrument. The cultural, social, and historical significance of Gu-Zheng. 15 Gu-Zheng techniques, how to read Chinese music and Gu-Zheng notation, and two simple classic Gu-Zheng pieces. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information.(AU).

MUSIC 6P. Art is My Occupation: Professional Development for Creatives. 1 Unit.

This course is designed to empower arts students to explore their personal and artistic identity, asking: How do I define success and fulfillment? What role will my art play in my professional and personal life? How can I shape the educational experience and career that will serve my long-term goals? Students will also be exposed to various methods and skills from other fields that will be helpful tools in an arts-related career, or any other profession, ranging from branding and promotion, design thinking, and mission-vision strategy. Students will also prepare resumes and an artist biography or cover letter, and create other materials that will assist in the process of job or graduate school applications.

Same as: ARTSINST 5, ARTSTUDI 6P, TAPS 6P.

MUSIC 6SI. Professional Development for Music Students. 1 Unit.

Many people struggle to connect their authentic, heart-felt dreams with a tangible action plan, regardless of how much clarity they have on their career goals. This is especially true for college-level musicians as they decide on graduate programs and career choices, evaluating whether music will be the focus of their professional lives, a valued hobby on the side, or something in between. This course is designed to empower students to ask themselves the questions "how do I define success and fulfillment?" "what role will music play in my professional and personal life?", and "how can I shape the educational experience and career that will serve my long-term goals?" This course was initiated by student Jennifer Chernick.

MUSIC 7B. Musical Cultures of the World. 3 Units.

An overview of selected musical cultures from Africa, Asia, Europe, and the Americas. Course objectives: cultivate an appreciation for the diversity of human musical expression; discover how music is used to shape social interactions and systems of meaning; develop active listening skills that can be used when encountering any music; gain a preliminary understanding of ethnomusicological concepts and vocabulary. No musical experience is necessary. Class format: Lecture, discussion, listening, guest performances, musical participation, and a concert analysis.

MUSIC 8A. Rock, Sex, and Rebellion. 3 Units.

Development of critical listening skills and musical parameters through genres in the history of rock music. Focus is on competing aesthetic tendencies and subcultural forces that shaped the music. Rock's significance in American culture, and the minority communities that have enriched rock's legacy as an expressively diverse form. Lectures, readings, listening, and video screenings. Attendance at all lectures is required.

MUSIC 10AX. Science of Sound. 2 Units.

Science of Sound will explore sound and sound-related technology from the perspectives of mathematics, physics, and acoustics. Scientists and engineers will have a chance to apply their technical knowledge to the field of music while musicians will learn how sound behaves physically and how it can be recorded, processed, and reproduced. Using the newly opened Bing Concert Hall as a focal point, we will study the science of sound recording, room acoustics, and multi-channel mixing and playback. Students will use what they learn to create short multi-channel compositions using special techniques to place sounds spatially. These pieces will be performed during the annual outdoor Summer CCRMA Transitions concert and again during the Fall 2013 CCRMA concert at Bing Concert Hall. We will use the recently published textbook by Jay Kadis entitled Science of Sound Recording as our primary text and incorporate plenty of hands-on experience with sound equipment and electronics.

MUSIC 11AX. An Operatic Play: Mozart's 7 Deadly Sins. 2 Units.

This course is centered on the operatic repertoire of W.A. Mozart (1756-1791). Students of singing and acting will learn scenes from some of the world's most loved operas. Simultaneously they will develop their own play to be performed at the end of the course. This play will be linked to the Mozart operatic scenes studied, and the finished product will be a continuous narrative. Similarly, the instrumentalists will prepare an "overture" by Mozart appropriate to the enrolled ensemble (i.e. duo/trio/quartet etc.). They will then put their arrangement skills to the test as they adapt the music of the opera scenes to their particular ensemble.

MUSIC 11N. A View from the Podium: The Art of Conducting. 3 Units.

How a conductor interprets music, realizes a personal vision through the rehearsal process, and communicates with orchestra and audience. Conducting as based on human communication skills. How to apply these lessons to other fields of endeavor.

MUSIC 11Q. Art in the Metropolis. 3 Units.

This seminar is offered in conjunction with the annual "Arts Immersion" trip to New York that takes place over the spring break and is organized by the Stanford Arts Institute (SAI). Participation in the trip is a requirement for taking part in the seminar (and vice versa). The trip is designed to provide a group of students with the opportunity to immerse themselves in the cultural life of New York City guided by faculty and the SAI programming director. Students will experience a broad range and variety of art forms (visual arts, theater, opera, dance, etc.) and will meet with prominent arts administrators and practitioners, some of whom are Stanford alumni. For further details and updates about the trip, see <http://artsinstitute.stanford.edu>. Same as: ARTSINST 11.

MUSIC 12A. Introductory Piano Class. 1 Unit.

"(A=level 1; B=level 2; C=level 3) There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Preference to department majors".

MUSIC 12B. Introductory Piano Class. 1 Unit.

This class is closed by design. To enroll, please sign up on the Axess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3) Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information.

MUSIC 12C. Introductory Piano Class. 1 Unit.

This class is closed by design. To enroll, please sign up on the Axess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3.) May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information.

MUSIC 12SC. Musical Collisions and Radical Creativity. 2 Units.

The margins of musical culture; nonconformist, maverick, and eccentric creative impulses that expand the definition of art. Laboratory atmosphere and daily rehearsals in which students create collaborative works with a final public concert involving collaborations with local musicians and presentations of student-composed works created during the course.

MUSIC 13Q. Classical Music and Politics: Western Music in Modern China. 3 Units.

Preference to sophomores. Social history, cultural studies, China studies, international relations, and music. From the Italian Jesuit, Matteo Ricci who presented a clavichord to the Chinese emperor to the emergence of a modern generation of Chinese musicians.

MUSIC 13SC. Performing America: The Broadway Musical. 2 Units.

This seminar explores how the themes, characters, stories, and, above all, the songs of the Broadway musical have played a key role in forming ideas of American identity from the early 20th century to the present. Musical theater is a perennial site for negotiating social themes of race, class, gender roles, and sexual identity. The American musical has been in constant dialogue with vernacular song and dance idioms, from ragtime and early jazz to rock, pop, disco, hip-hop, and electronic dance music. Jazz musicians have regularly looked to musical theater for their standards, as have talent shows from the vaudeville era to American Idol. Disney musicals, the television series *Glee* and *Smash*, and the High School Musical franchise all illustrate how musicals serve as a medium for negotiating personal identity from childhood through early adulthood, staging the conflicts and attachments that define our everyday lives while connecting these with the culture we live in through the collective medium of song. We will look at a variety of influential historical musicals (Oklahoma, Guys and Dolls, Gypsy, The Music Man, West Side Story) and a few recent shows such as *Wicked*, *Hairspray*, *Bloody Bloody Andrew Jackson*, *American Idiot*, and *The Book of Mormon*, asking what the relation is between individual numbers and the overall themes and structures of the shows. How do lyrics and music combine in a successful song, and how does a song contribute to shape of the show? How do the dynamics of live theater relate to the presentation of musicals in the mediums of film and television? In addition to working on selected songs and scenes with the help of Stanford voice and drama faculty, students will attend, discuss, and review Bay area productions (San Jose, San Francisco), including the Broadway by the Bay (Redwood City) production of *Cabaret* opening on September 13, 2013. Grading will be based on class discussion, production analysis and reviews, and a choice between a final creative project and a short research paper.

MUSIC 14N. Women Making Music. 3 Units.

Preference to freshmen. Women's musical activities across times and cultures; how ideas about gender influence the creation, performance, and perception of music.

MUSIC 15N. The Aesthetics of Data. 3 Units.

Focus on visual and auditory display of data, specifically, the importance of aesthetic principles in effective data display, and the creative potential of scientific, biological, environmental and other data as inspiration for artistic expression.

MUSIC 17N. The Operas of Mozart. 3 Units.

Preference to freshmen. Four of Mozart's mature operas, the earliest works in the operatic repertoire never to go out of fashion. What accounts for this extraordinary staying power? Focus on the history of their composition, performance, and reception, and their changing significance from Mozart's time to the present.

MUSIC 17Q. Perspectives in North American Taiko. 4 Units.

Preference to sophomores. Taiko, or Japanese drum, is a newcomer to the American music scene. Emergence of the first N. American taiko groups coincided with increased Japanese American activism, and to some it is symbolic of Japanese American identity. N. American taiko is associated with Japanese American Buddhism. Musical, cultural, historical, and political perspectives of taiko. Hands-on drumming. Japanese music and Japanese American history, and relations among performance, cultural expression, community, and identity.

MUSIC 18A. Jazz History: Ragtime to Bebop, 1900-1940. 3 Units.

From the beginning of jazz to the war years.
Same as: AFRICAAM 18A.

MUSIC 18B. Jazz History: Bebop to Present, 1940-Present. 3 Units.

Modern jazz styles from Bebop to the current scene. Emphasis is on the significant artists of each style.
Same as: AFRICAAM 18B.

MUSIC 19A. Introduction to Music Theory. 3 Units.

For non-music majors and Music majors or minors unable to pass the proficiency test for entry to MUSIC 21. The fundamentals of music theory and notation, basic sight reading, sight singing, ear training, keyboard harmony; melodic, rhythmic, and harmonic dictation. Skill oriented, using piano and voice as basic tools to develop listening and reading skills.

MUSIC 19B. Intermediate Music Theory. 3 Units.

This course is an introduction to music theory geared toward students who have basic literacy skills (i.e. fundamental notation, identifying major and minor scales, keys, etc). Using musical materials from repertoire selected from campus and area concerts, and incorporating the opportunity to attend these concerts, the course will introduce elements of harmony, melody, form, orchestration and arrangement. The course is an appropriate successor to Music 19A. Students who successfully complete Music 19B can go on directly to Music 21.

MUSIC 20A. Jazz Theory. 3 Units.

Introduces the language and sounds of jazz through listening, analysis, and compositional exercises. Students apply the fundamentals of music theory to the study of jazz. Prerequisite: 19 or consent of instructor.

MUSIC 20B. Advanced Jazz Theory. 3 Units.

Approaches to improvisation through listening and transcribing, and developing familiarity with important contributors to this music. Topics: scale theory, altered dominants, and substitute harmony. Prerequisite: 20A or consent of instructor.

MUSIC 20C. Jazz Arranging and Composition. 3 Units.

Jazz arranging and composition for small ensembles. Foundation for writing for big band. Prerequisite: 20A or consent of instructor.

MUSIC 21. Elements of Music I. 3 Units.

Preference to majors. Introduction to tonal theory. Practice and analysis. Diatonic harmony focusing on melodic and harmonic organization, functional relationships, voice-leading, and tonal structures. Students must concurrently enroll in an Ear-training and musicianship lab (MUSIC 24a, 24b, or 24c as appropriate). Music majors must take 4 courses in ear training, and pass an ear training exit exam in their Junior year. Enrollment limited to 40. Prerequisites: (1) Piano Proficiency Exam (must be passed within the first two weeks of the term) or MUSIC 12A (may be taken concurrently); (2) Passing grade on a basic musical skills proficiency examination on the first day of class or MUSIC 19.

MUSIC 22. Elements of Music II. 3 Units.

Preference to majors. Introduction to chromatic harmony focusing on secondary functions, modulations, harmonic sequences, mode mixture, and the Neapolitan, and augmented sixth chords. Analysis of musical forms and harmonizations complemented by harmonic and melodic dictation, sight singing, and other practical skills. Students must concurrently enroll in an Ear-training and musicianship lab (MUSIC 24a, 24b, or 24c as appropriate). Music majors must take 4 courses in ear training, and pass an ear training exit exam in their Junior year. Prerequisites: (1) MUSIC 21; (2) Piano Proficiency Exam or MUSIC 12B (may be taken concurrently).

MUSIC 23. Elements of Music III. 3 Units.

Preference to majors. Continuation of chromatic harmony and complex forms of late Romantic period. Satisfactory passage of ear-training proficiency exam, part of the course's final, is a requirement for course completion and for continuation in the major sequence. Students must concurrently enroll in an Ear-training and musicianship lab (MUSIC 24a, 24b, or 24c as appropriate). Music majors must take 4 courses in ear training, and pass an ear training exit exam in their Junior year. Prerequisites: (1) MUSIC 22; (2) Piano Proficiency Exam or MUSIC 12C (may be taken concurrently).

MUSIC 24A. Ear Training I. 1 Unit.**MUSIC 24B. Ear Training II. 1 Unit.****MUSIC 24C. Ear Training III. 1 Unit.****MUSIC 30N. A Stranger in a Strange Land: Jewish Musics in Translation. 3 Units.**

What does it mean to be a stranger in a strange land? For centuries Jewish people have struggled to shape their identities in unfamiliar surroundings, using music to remember the past and generate new, hybrid identities. In this class we adopt the metaphor of translation to think about how minority Jewish communities bridge distinct languages, musical idioms, and cultural practices. Our theme will take us on a journey across time and space; from Italy to India, New York, Syria, Russia, and Israel. We consider the case of Salamone Rossi, a 17th-century Italian Jewish composer who moved uneasily between dual careers in the synagogue and a secular/Christian court. We also explore a group of Indian Jews (Bene Israel) who combine idioms learned from Jewish and Christian missionaries with local Hindu musical traditions. In all our examples musicians translate languages, musical styles, and cultures to unite memories of a Jewish past with the realities of minority status in the present. The class format includes listening, discussion, some singing, student presentations, and guest lectures.

MUSIC 32N. Sculpting with Sounds, Images, and Words. 3 Units.

Preference to freshmen. Contemporary culture abounds in multimedia forms, in which sounds, images and words are interwoven in unique ways. What are their individual and combined powers? How would you harness them? Participants face these questions in creative projects as well as through in-class viewing, analysis and debates, readings, guest lectures and student presentations. The seminar is taught at the Center for Computer Research in Music and Acoustics where students have access to new media technologies.

MUSIC 34N. Performing America: The Broadway Musical. 3 Units.

Musical theater as a site for the construction of American identity in the twentieth century to the present. Issues of class, race, gender, and sexuality; intersections with jazz, rock, and pop; roles of lyricist, composer, director, choreographer, producer, performers. Individual shows (Showboat, Oklahoma, South Pacific, Guys and Dolls, West Side Story, Wicked, Bloody Bloody Andrew Jackson, Book of Mormon), show tunes in jazz performance, film musicals, and television. Opportunities for performance and attendance at local productions.

MUSIC 36N. Humor in Music. 3 Units.

Through theoretical readings the course will touch on psychological and neurological bases of humor, explore contingent, tactical, modal, and ontological difficulties in the apprehension of humor, and address ethical issues surrounding humor in music. In addition to in-class listening and screening sessions, analytic discussions will be led by students who will find and present examples of humor in music. Students will also be invited to compose original humorous song lyrics and to create collaborative works of musical humor.

MUSIC 38N. Singing Early Music. 3 Units.

Preference to freshmen. 15th- and 16th-century musical repertoires and their contexts; performance practice.

MUSIC 39A. Music, Health, and Medicine. 3 Units.

Explore how music relates to health and medicine surveying recent medical literature. Review different techniques in music therapy, music-related health problems, and issues related to educational and medical applications. Course materials are chosen to clearly identify music as a component of health related activity or occupation, to describe responses to music in our mind and body, and to think about the roles of music in our health. The seminars also discuss related basics in psychology and neurology. Students learn how to do literature search and write essays about relevant topics.

MUSIC 40. Music History to 1600. 4 Units.

Pre- or corequisite: 21.

MUSIC 41. Music History 1600-1830. 4 Units.

Pre- or corequisite: 22.

MUSIC 42. Music History Since 1830. 4 Units.

Pre- or corequisite: 23.

MUSIC 65A. Voice Class I. 1 Unit.

Group (7 students to a section) beginning voice (A = level 1; B = level 2). May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment.

MUSIC 65B. Voice Class II. 1 Unit.

Group (7 students to a section) beginning voice for the non-major (A = level 1; B = level 2). May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment.

MUSIC 72A. Intermediate Piano Class. 1 Unit.

For intermediate students. May be repeated for credit a total of 14 times. Prerequisites: 12C or equivalent, audition. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment.

MUSIC 72C. Harpsichord Class. 1 Unit.

For beginning harpsichord students who have keyboard skills. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Admission based on instructor consent. Contact instructor prior to enrolling to discuss availability. Class meets in Braun 201.

MUSIC 72D. Jazz Piano Class. 1 Unit.

By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information.

MUSIC 73. Intermediate Voice Class. 1 Unit.

For intermediate students. Admission by audition. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the Axess waitlist and show up on the first day of class to receive a permission number for enrollment.

MUSIC 74C. Classical Guitar Class. 1 Unit.

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information.

MUSIC 74D. Harp Class. 1 Unit.

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information.

MUSIC 75B. Renaissance Wind Instruments Class. 1 Unit.

May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information.

MUSIC 76. Brass Instruments Class. 1 Unit.

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information.

MUSIC 77. Percussion Class. 1 Unit.

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information.

MUSIC 112. Creative Expression: Musical Theater. 4 Units.

Students begin to create pieces that are fresh and innovative forms of musical theater that do not necessarily appeal to specifically popular audiences but perhaps to audiences more associated with high art, opera, or even contemporary independent music. Musical theater is an untapped resource of potential artistic innovation and has unfortunately become stuck in an ideal of universal accessibility. In present popular culture and the culture of contemporary art forms, musical theater almost exclusively refers to popular productions such as *Phantom of the Opera*, *Rent*, *Wicked*, *Jesus Christ Superstar*. Although excellent pieces of art in their own way, both dramaturgically and in their ability to evoke emotion through catchy melodies, for the most part each of them have their basis in popular and traditional musical idioms and theatrical forms, seldom exploring more advanced or avant-garde and experimental compositional and theatrical techniques.

Same as: TAPS 112.

MUSIC 122A. Counterpoint. 4 Units.

Analysis and composition of contrapuntal styles from the Renaissance and Baroque periods. Use of keyboard, ear training, and sight singing underlies all written work. Prerequisites: 23 and piano-proficiency examinations.

MUSIC 122B. Analysis of Tonal Music. 4 Units.

Complete movements, or entire shorter works of the 18th and 19th centuries, are analyzed in a variety of theoretical approaches. Prerequisites: 23 or consent of instructor; and pass the ear-training and piano-proficiency examinations.

MUSIC 122C. Introduction to 20th-Century Composition. 4 Units.

Contemporary works, with emphasis on music since 1945. Projects in free composition based on 20th-century models. Prerequisites: 23 or consent of instructor; and successful completion of the piano-proficiency examination.

MUSIC 123. Undergraduate Seminar in Composition. 3 Units.

Current trends in composition. May be repeated for credit a total of 7 times. Prerequisites: Music major; 23 or consent of instructor.

MUSIC 125. Individual Undergraduate Projects in Composition. 1-3 Unit.

May be repeated for credit a total of 14 times. Prerequisites: music major, and one quarter of 123.

MUSIC 126. Introduction to Thoroughbass. 1-3 Unit.

The development of continuo techniques and skills for figured-bass realization. Performance and analysis of selected repertoire, using thoroughbass principles and exercises based on historical theoretical treatises. Prerequisite: 21.

MUSIC 127. Instrumentation and Orchestration. 3 Units.

Individual instruments, instrumental groups within the orchestra, and combinations of groups. Arrangements from piano to orchestral music. Score analysis with respect to orchestration. Practical exercises using chamber ensembles and school orchestra. Prerequisite: 23.

MUSIC 128. Stanford Laptop Orchestra: Composition, Coding, and Performance. 1-5 Unit.

Classroom instantiation of the Stanford Laptop Orchestra (SLOrk) which includes public performances. An ensemble of more than 20 humans, laptops, controllers, and special speaker arrays designed to provide each computer-mediated instrument with its sonic identity and presence. Topics and activities include issues of composing for laptop orchestras, instrument design, sound synthesis, programming, and live performance. May be repeated four times for credit.

Same as: CS 170.

MUSIC 130A. Introduction to Conducting. 3 Units.

Baton techniques and rehearsal procedures. The development of coordination of the members of the body involved in conducting; fluency in beat patterns and meters; dynamics, tempi, cueing, and use of the left hand in conducting. Prerequisites: 121 and diagnostic musicianship exam given first day of class; preference to students who have completed 122B.

MUSIC 130B. Elementary Orchestral Conducting. 3 Units.

Prerequisites: 127 or previous orchestral performance experience, 130A.

MUSIC 130C. Elementary Choral Conducting. 3 Units.

Techniques specific to the conducting of choral ensembles: warm-ups, breathing, balance, blend, choral tone, isolation principles, recitative conducting, preparation, and conducting of choral/orchestral works.

Prerequisite: 130A.

MUSIC 132. Topics in Choral Music. 2 Units.

This course seeks to combine score analysis/interpretation with rehearsing and conducting. Preference to advanced musicians (music majors or not) interested in the Choral Process: stylistic/structural analysis; interpretation: developing the mind's ear of the score; rehearsing: how to hear & how to fix; conducting. Choral literature will be drawn from western repertoire of the Renaissance to the present. Open to students who have a background in harmony with analytical aptitudes, choral or instrumental ensemble experience; background and experience in choral or orchestral conducting preferred but not required. Private instruction sessions scheduled with instructor.

MUSIC 140. Studies in Medieval Music. 3-4 Units.

Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.)

Same as: MUSIC 240.

MUSIC 140G. Identity and Popular Music. 3-5 Units.

Major political issues of our time are played out in popular music. How do we come to identify with it and how does it influence our sense of self? This course investigates the intersection of identifications such as gender, sexuality, nationality, race, ethnicity, age, class, and ability in a variety of popular music from mid-century to the present. No special knowledge of music is required.

Same as: CSRE 140G, FEMGEN 140G.

MUSIC 141. Studies in Renaissance Music. 2-4 Units.

Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.)

Same as: MUSIC 241.

MUSIC 143. Studies in Classic Music. 3-4 Units.

Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.)

Same as: MUSIC 243.

MUSIC 144. Studies in Romantic Music. 3-4 Units.

Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.)

Same as: MUSIC 244.

MUSIC 146. Music and Urban Film. 3-4 Units.

How music and sound work in urban cinema. What happens when music's capacity to transform everyday reality combines with the realism of urban films? Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, realistic cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.)

Same as: MUSIC 246.

MUSIC 147A. Listening to the Local: Music Ethnography of the Bay Area. 3-5 Units.

An introduction to music ethnography through student research on musical life in the Bay Area. Focus is on the intersections of music, social life, and cultural practice by engaging with people as they perform music and culture in situ. Techniques taught include participant-observation, interviewing and oral history, writing fieldnotes, recording, transcription, analysis, and ethnographic writing. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.)

Same as: MUSIC 247A.

MUSIC 147C. Latin American Music and Globalization. 3-4 Units.

Focuses on vernacular music of Latin America and the Caribbean, including Mexico, Cuba, Dominican Republic, Peru, Brazil, Colombia, and Argentina. Musical examples discussed in relation to: globalization, migration, colonialism, nationalism, diaspora, indigeneity, politics, religion, dance, ethnicity, and gender. How music reflects and shapes cultures, identities, and social structures. Genres addressed: bachata, bossa nova, cumbia, forro, ranchero, reggaeton, rock, salsa, tango, and others. Seminar, guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.)

Same as: MUSIC 247C.

MUSIC 148. Musical Shakespeare: Theater, Song, Opera, and Film. 3-5 Units.

The role of music in productions, adaptations, and interpretations of Shakespeare's plays as theater, opera, and film from the Elizabethan era through the present. Emphasis is on the role of songs, stage music, and music in operatic and film adaptations. Incidental music, orchestral tone poems, and art-song settings of lyrics from the plays. Plays include *Romeo and Juliet*, *Othello*, *Macbeth*, *Hamlet*, *The Tempest*, *Midsummer Night's Dream*, and *Twelfth Night*. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4- or 5-unit level only.)

Same as: MUSIC 248.

MUSIC 149. Reactions to the Record: Early Recordings, Lost Styles, and Music's Future. 3-4 Units.

This is a seminar on the transformation of musical style in the era of recordings in light of their roots in cultural trends, including shifting hierarchies between composer and performer, work and notation, text and act. Early recordings will be studied as documents of musical values and conceptions different from those around us today. Methodologies of performance analysis will be explored and used to contextualize sources, which include historic recordings from Stanford's Archive of Recorded Sound, performance documents, and field research with performers, composers, critics, and listeners. Repertoire includes works for orchestra, piano, strings, chamber ensemble and voice. Outstanding contributions from seminar members may be featured in the Music Department's May 2014 Reactions to the Record symposium. May be repeated for credit. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4-unit level only.)

Same as: MUSIC 249.

MUSIC 150. Musical Acoustics. 3 Units.

The physics of vibrating systems, waves, and wave motion. Time- and frequency-domain analysis of sound. Room acoustics, reverberation, and spatialization. The acoustics of musical instruments: voice, strings, and winds. Emphasis is on the practical aspects of acoustics in making music. Hands-on and computer-based lab. See <http://ccrma.stanford.edu/courses/150/>.

MUSIC 151F. Studying Popular Music. 3-5 Units.

What is "popular" music? How do the tools we use to think about the popular shape our understanding of what it contains? What can popular music tell us about a time period, a community, an artist, an industry, or a country? This course teaches the methodologies utilized in popular music studies, including analysis of sonic, visual, and social media, listener and performance ethnography, critical theory, and engagement with journalism. No musical experience required.

Same as: FEMGEN 151.

MUSIC 154. History of Electronic Music. 1-5 Unit.

What is electronic music? Acousmatic, computer music, algorithmic composition, tape music, glitch, electronic, musique concrète, noise, laptop music, DJ'ing, organized sound...what do these labels mean? This course will provide a brief historical survey of electroacoustic music and discuss some of the most salient questions associated with it, from both a compositional and musicological point of view. Topics to be covered include: definitions of musical sounds; Schaefferian theory and musique concrète; serialism and elektronische Musik; tape music and computer music in the USA; analysis of electroacoustic music; sampling and intellectual property; algorithmic and computer-assisted composition; live-electronics and improvisation. The course does not require previous experience in the field. Classes will be based on discussion of selected listening and reading materials, as well as hands-on digital experimentation with sounds.

MUSIC 154A. Sound Art I. 4 Units.

Acoustic, digital and analog approaches to sound art. Familiarization with techniques of listening, recording, digital processing and production. Required listening and readings in the history and contemporary practice of sound art. (lower level)
Same as: ARTSTUDI 131.

MUSIC 155. Intermedia Workshop. 3-4 Units.

Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. May be repeated for credit
Same as: ARTSTUDI 239, MUSIC 255.

MUSIC 156. "sic": Improvisation Collective. 1 Unit.

Small ensemble devoted to learning trans-idiomatic improvisation techniques and composing indeterminate pieces in a workshop setting. One major concert. Prerequisite: access to an instrument. Improvisational experience and conventional instrumental virtuosity not required. May be repeated for credit for a total of 3 times.

MUSIC 159. Early Music Singers. 1 Unit.

Small choir specializing in Medieval, Renaissance, and early Baroque vocal music. One major concert per quarter. May be repeated for credit for a total of 14 times.

MUSIC 160. Stanford Symphony Orchestra. 1 Unit.

70- to 100-member ensemble performing major orchestral works; minimum one concert per quarter. May be repeated for credit a total of 14 times.

MUSIC 160A. Stanford Philharmonia Orchestra. 1 Unit.

Prerequisite: audition, one year of 160, or consent of instructor. May be repeated for credit.

MUSIC 160B. Stanford New Ensemble. 1 Unit.

Performing compositions of the 20th century, recent works of this century, and new works by Stanford faculty and student composers. Musicians collaborate with composers and artists visiting and performing at Stanford. One concert per quarter. May be repeated for credit.

MUSIC 160C. Stanford Baroque Soloists. 1 Unit.

Elite string group focusing on concerti by Corelli, Vivaldi and other Italians, Bach, Handel and other Germans, as well as theater music by Purcell and Lully. Each member expected to solo as well as play backup. Performances each quarter, played standing, student-led without conductor. Coaching will emphasize leadership and ensemble techniques, intonation and blend, particulars of eighteenth century notation and performance practice. Modern instruments, modern pitch, baroque bows as available. Limited to six violins, three violas, three cellos, bass, admission by audition. Contact instructor for audition and enrollment information: <mailto:1martinagel@earthlink.net>.

MUSIC 160D. Stanford Chinese Music Ensemble. 1 Unit.

A performing ensemble presenting traditional Chinese music on a variety of traditional Chinese instruments. Promotes awareness of Chinese culture by introducing the greater Stanford community to a unique style of music. Anyone with an interest in learning and playing Chinese music on Chinese instruments is welcome to join .

MUSIC 160S. Summer Orchestra. 1 Unit.

50- to 100-member ensemble performing major orchestral works. May be repeated for credit.

MUSIC 161A. Stanford Wind Ensemble. 1 Unit.

40- to 50-member ensemble performing transcriptions of symphonic music, brass band music, and repertoire composed specifically for symphonic band. One concert per quarter. May be repeated for credit a total of 14 times.

MUSIC 161B. Jazz Orchestra. 1 Unit.

Jazz Orchestra is an undergraduate large ensemble performance class. Admission is by audition and/or permission of instructor. The class meets three times per week and presents a minimum of one formal concert per quarter with a major jazz artist. The class endeavors to provide students with the opportunity to perform, at the highest level, jazz compositions and arrangements of a serious nature, and provide opportunities for challenging and creative improvisational situations. Emphasis is placed on the understanding of the structural, psychological, and emotional components of the materials studied and performed.

MUSIC 161C. Red Vest Band. 1 Unit.

A small ensemble of the Leland Stanford Junior University Marching Band open to members of the LSJUMB by audition and consent of instructor. Members perform at all men's and women's home basketball games and travel to some away and post-season games. Twice-weekly rehearsals focus on introduction of new student arrangements and the LSJUMB's repertoire of rock, funk, and traditional styles. May be repeated for credit a total of 7 times.

MUSIC 161D. Stanford Brass Ensemble. 1 Unit.

Performance of works for full brass choir and for smaller ensembles of brass instruments. Once weekly rehearsals. May be repeated for credit. Prerequisite: audition and consent of instructor.

MUSIC 162. Symphonic Chorus. 1 Unit.

180- to 200-voice choral ensemble, performing major choral masterworks with orchestra. One concert per quarter. May be repeated for credit a total of 14 times.

MUSIC 163. Memorial Church Choir. 1 Unit.

Official choir of Memorial Church, furnishing music for Sunday services and special occasions in the church calendar. May be repeated for credit a total of 14 times.

MUSIC 165. Chamber Chorale. 1 Unit.

Select 24-voice choral ensemble, specializing in virtuoso choral repertoire from all periods of Western art music. Annual touring commitment required. May be repeated for credit a total of 14 times.

MUSIC 167. University Singers. 1 Unit.

Select, 50-voice choral ensemble, performing choral repertoire from all periods of Western art music. May be repeated for credit a total of 14 times.

MUSIC 167S. Summer Chorus. 1 Unit.

80- to 100-voice non-auditioned ensemble, performing major choral masterworks and choral repertoire from all periods of Western art music.

MUSIC 169. Stanford Taiko. 1 Unit.

Select 15- to 18-member North American taiko ensemble, performing all-original repertoire for Japanese drums. Multiple performances in Winter and Spring quarters, also touring; instrument construction and maintenance. Admission by audition in Autumn Quarter only. May be repeated for credit a total of 14 times.

MUSIC 170. Collaborative Piano. 1 Unit.

Performance class in a workshop setting. Techniques of collaboration with vocalists and instrumentalists in repertoire ranging from songs and arias to sonatas and concertos. Prerequisite: private-lesson proficiency level in piano, or consent of instructor.

MUSIC 171. Chamber Music. 1 Unit.

Audition required. Weekly one-hour coachings from Music department faculty. Classical string quartets and piano/string groups are supervised by the St. Lawrence String Quartet. Two masterclasses and one performance per quarter are required. May be repeated for credit.

MUSIC 172A. Piano. 1-3 Unit.

Private lessons and group master class weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 172B. Organ. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 172C. Harpsichord. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 172D. Jazz Piano. 1-3 Unit.

By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 172E. Fortepiano. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 172F. Carillon. 1-3 Unit.

May be repeated for credit a total of 14 times.

MUSIC 173. Voice. 1-3 Unit.

Private lessons and group master classes weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 174A. Violin. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 174B. Viola. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 174C. Violoncello. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 174D. Contrabass. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 174E. Viola Da Gamba. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 174F. Classical Guitar. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 174G. Harp. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 174H. Baroque Violin. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 174I. Jazz Bass. 1-3 Unit.

Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 174J. Jazz Guitar. 1-3 Unit.

Individual lessons in jazz guitar.

MUSIC 175A. Flute. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 175B. Oboe. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 175C. Clarinet. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 175D. Bassoon. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 175E. Recorder/Early Winds. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 175F. Saxophone. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 175G. Baroque Flute. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 176A. French Horn. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 176B. Trumpet. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 176C. Trombone. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 176D. Tuba. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 177. Percussion. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 182. Diction for Singers. 1 Unit.

The international phonetic alphabet and its application to German, French, and Italian vocal literature. Open also to pianists interested in vocal coaching and choral conducting.

MUSIC 183A. German Art Song Interpretation. 1 Unit.

By audition only. For advanced singers and pianists as partners. Performance class in a workshop setting. Composers include Beethoven, Schubert, Wolf and Strauss. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists) or 182 (singers).

MUSIC 183B. French Art Song Interpretation. 1 Unit.

By audition only. For advanced singers and pianists as partners. Performance class in a workshop setting. Composers include Fauré, Debussy, Ravel and Poulenc. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists) or 182 (singers).

MUSIC 184A. Editing and Performing Early Music. 1-3 Unit.

This course is a practical workshop in early music vocal repertoire. The main focus of this course is to use original source material to explore editorial practice. Having prepared the score, students learn to perform the piece from an historically informed performance practice point of view. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists.

MUSIC 184B. Topics in Opera Stagecraft. 1-3 Unit.

This course is a practical workshop in vocal repertoire for the stage. Each quarter's offering emphasizes a specific genre or period, therefore the course can be repeated with permission of the instructor. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal etiquette for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists.

MUSIC 185. Music Across Media: Music Video to Postclassical Cinema. 4 Units.

What makes music videos, YouTube clips and musical numbers in today's films engaging? What makes them tick? Emphasis is on aesthetics and close reading. How music videos and its related forms work. Uses of the body, how visual iconography operates, what lyrics and dialogue can do, how and what music can say, and how it can work with other media. Questions of representation such as how class, ethnicity, gender, race, and nationality function. Viewership and industry practices. Same as: FILMSTUD 141, FILMSTUD 341, MUSIC 385.

MUSIC 186. Religion and Music in South Asia. 4-5 Units.

How music and other arts in South Asia are intertwined with religion. Classical, devotional, folk, and popular examples introduce Gods as musicians, sound as God, music as yoga, singing as devotion, music as ecstasy-inducing, music as site for doctrinal argument, music and religion as vehicles for nationalism. Co-taught by professors of Music and Religious Studies, focusing Hinduism and Islam in India, Pakistan, and the diaspora. Music practice along with academic study; guest artists and films; no background required.

Same as: MUSIC 286, RELIGST 259.

MUSIC 186A. Music and Religious Experience in the Contemporary World. 3-5 Units.

Explores the central role of music in the performance and experience of religion, positioning music not as an adjunct to silent rituals and liturgy, but as the catalyst and carrier of religious experience, indeed as religious experience itself. Topics include: trance, spirit possession, heightened religious experience, sacred sound and chant, shamanism, politics, and identity. Musical traditions include: Zimbabwean mbira music, African-American church music, Southeast Asian Buddhist ritual music, South Asian Hindu and Islamic devotional music, shamanistic music of Southeast Asia.

Same as: MUSIC 286A, RELIGST 156, RELIGST 256.

MUSIC 192A. Foundations of Sound-Recording Technology. 3 Units.

For upper division undergraduates and graduate students; preference given to Music majors with MST specialization. Topics: elementary electronics; the physics of sound transduction and microphone operation, selection, and placement; mixing consoles; connectors and device interconnection; grounding and shielding; principles of analog magnetic recording; operation maintenance of recording equipment; and principles of recording engineering. Enrollment limited. Prerequisites: MUSIC 150, algebra, physics basics, and consent of instructor.

MUSIC 192B. Advanced Sound Recording Technology. 3 Units.

Topics: noise reduction techniques; dynamics and time-delay audio effects; the principles of digital audio; disk- and tape-based digital recorders; digital audio workstations and editing; advanced multitrack techniques; SMPTE and MIDI time code and device synchronization; MIDI sequencing and synchronization. See <http://ccrma.stanford.edu/courses/>. Prerequisite: 192A.

MUSIC 192C. Session Recording. 1-2 Unit.

Independent engineering of recording sessions. May be repeated for credit a total of 14 times. Prerequisites: 192A,B.

MUSIC 197. Undergraduate Teaching Apprenticeship. 1-2 Unit.

Work in an apprentice-like relationship with faculty teaching a student-initiated course. Prerequisite: consent of instructor. (Staff).

MUSIC 198. Concentrations Project. 4 Units.

For concentration program participants only. Must be taken in senior year. Multiple concentrators may enroll in one section of 198 per concentration.

MUSIC 199. Independent Study. 1-5 Unit.

For advanced undergraduates and graduate students who wish to do work outside the regular curriculum. Before registering, student must present specific project and enlist a faculty sponsor. May be repeated for credit a total of 14 times.

MUSIC 200A. Proseminar in Musicology and Music Bibliography. 3-4 Units.

Introduction to research in music, bibliographical materials, major issues in the field, philosophy, and methods in music history. Guest lecturers and individual research topics.

MUSIC 200B. Proseminar in Ethnomusicology. 3-5 Units.

A graduate-level introduction to the field of ethnomusicology. Issues and debates are traced through the history of the discipline, with emphasis on influences from anthropology, performance studies, linguistics, and cultural studies. Topics include music and: social organization, "culture," structure, practice, comparison, representation, globalization, identity, transcription, and embodiment.

MUSIC 201. CCRMA Colloquium. 1 Unit.

Weekly review of work being done in the field, research taking place at CCRMA, and tools to make the most of the CCRMA technical facilities.

MUSIC 208C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSART 108, CLASSART 208, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C.

MUSIC 220A. Fundamentals of Computer-Generated Sound. 2-4 Units.

Techniques for digital sound synthesis, effects, and reverberation. Topics: summary of digital synthesis techniques (additive, subtractive, nonlinear, wavetable, spectral-modeling, and physical-modeling); digital effects algorithms (phasing, flanging, chorus, pitch-shifting, and vocoding); and techniques for digital reverberation. Majors (undergraduate or graduate) must take for 4 units. See <http://ccrma.stanford.edu/>.

MUSIC 220B. Compositional Algorithms, Psychoacoustics, and Computational Music. 2-4 Units.

The use of high-level programming language as a compositional aid in creating musical structures. Advanced study of sound synthesis techniques. Simulation of a reverberant space and control of the position of sound within the space. See <http://ccrma.stanford.edu/>. Prerequisite: 220A.

MUSIC 220C. Research Seminar in Computer-Generated Music. 2-4 Units.

Individual projects in composition, psychoacoustics, or signal processing. See <http://ccrma.stanford.edu/>. May be repeated for credit. Prerequisite: 220B.

MUSIC 220D. Research in Computer-Generated Music. 1-10 Unit.

Independent research projects in composition, psychoacoustics, or signal processing. See <http://ccrma.stanford.edu/>. May be repeated for credit. Prerequisite: 220C.

MUSIC 221. Topics in the History of Theory. 3-5 Units.

The intersection of music theory and compositional practice in different eras of Western music history. Primary sources in music theory and issues such as notation, rhythm, mode, dissonance treatment, counterpoint, tonality, form, rhetoric, affect and imitation, expression, linear analysis, 12-tone and set theory, in light of relevant repertoire and modern scholarship. May be repeated for credit a total of 5 times.

MUSIC 222. Sound in Space. 1-4 Unit.

Historical background, techniques and theory on the use of space in music composition and diffusion. Listening and analysis of relevant pieces. Experimental work in spatialization techniques leading to short studies to be diffused in concert at the end of the quarter.

MUSIC 223. Composition for Electronic Musicians. 1-4 Unit.

Composition for any combination of acoustic and electroacoustic instrumentation, computer-generated sound, invented instruments, sound-sculptures, and multi-disciplinary elements including theater and visual media. Project-based laboratory to advance original student works, supported by lectures on the fundamentals of composition. Concert performance of final works. Taught at CCRMA with a focus on engendering deliberate conversation on the enrichment of a cultural context for new media. Open to undergraduates and graduates.

MUSIC 223T. Computer Music Improvisation and Algorithmic Performance. 2-4 Units.

This seminar will investigate how to approach configuring a set of composition tools for real time composition. Composition programming, ensemble rehearsal, and performance. Determining algorithmic composition beginning by imagining a process or a structure, applying a mapping process to transform that structure (which resides in the conceptual domain), into sound (which may reveal the original conception). Investigation of gestural mapping that occurs when a sonic result is achieved by an act of interpretation, whether it be reading a score and/or improvising.

MUSIC 230. Advanced Orchestral Conducting. 2-4 Units.

May be repeated for credit a total of 8 times. Prerequisite: 130B.

MUSIC 231. Advanced Choral Conducting. 2-4 Units.

Individual instruction continuing trajectory of Music 130C. Focus on gestural technique and analysis of works by genre and historical period. May be repeated for credit a total of 8 times. Prerequisite: 130C.

MUSIC 236. Future Media, Media Archaeologies. 3-4 Units.

Hand-on. Media technologies from origins to the recent past. Students create artworks based on Victorian era discoveries and inventions, early developments in electronic media, and orphaned technologies. Research, rediscover, invent, and create devices of wonder and impossible objects. Readings in history and theory. How and what media technologies mediate. Same as: ARTSTUDI 236.

MUSIC 240. Studies in Medieval Music. 3-4 Units.

Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.) Same as: MUSIC 140.

MUSIC 241. Studies in Renaissance Music. 2-4 Units.

Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.) Same as: MUSIC 141.

MUSIC 243. Studies in Classic Music. 3-4 Units.

Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.) Same as: MUSIC 143.

MUSIC 244. Studies in Romantic Music. 3-4 Units.

Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.) Same as: MUSIC 144.

MUSIC 246. Music and Urban Film. 3-4 Units.

How music and sound work in urban cinema. What happens when music's capacity to transform everyday reality combines with the realism of urban films? Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, realistic cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.) Same as: MUSIC 146.

MUSIC 247A. Listening to the Local: Music Ethnography of the Bay Area. 3-5 Units.

An introduction to music ethnography through student research on musical life in the Bay Area. Focus is on the intersections of music, social life, and cultural practice by engaging with people as they perform music and culture in situ. Techniques taught include participant-observation, interviewing and oral history, writing fieldnotes, recording, transcription, analysis, and ethnographic writing. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.) Same as: MUSIC 147A.

MUSIC 247C. Latin American Music and Globalization. 3-4 Units.

Focuses on vernacular music of Latin America and the Caribbean, including Mexico, Cuba, Dominican Republic, Peru, Brazil, Colombia, and Argentina. Musical examples discussed in relation to: globalization, migration, colonialism, nationalism, diaspora, indigeneity, politics, religion, dance, ethnicity, and gender. How music reflects and shapes cultures, identities, and social structures. Genres addressed: bachata, bossa nova, cumbia, forro, ranchero, reggaeton, rock, salsa, tango, and others. Seminar, guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.)

Same as: MUSIC 147C.

MUSIC 248. Musical Shakespeare: Theater, Song, Opera, and Film. 3-5 Units.

The role of music in productions, adaptations, and interpretations of Shakespeare's plays as theater, opera, and film from the Elizabethan era through the present. Emphasis is on the role of songs, stage music, and music in operatic and film adaptations. Incidental music, orchestral tone poems, and art-song settings of lyrics from the plays. Plays include *Romeo and Juliet*, *Othello*, *Macbeth*, *Hamlet*, *The Tempest*, *Midsummer Night's Dream*, and *Twelfth Night*. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4- or 5-unit level only.)

Same as: MUSIC 148.

MUSIC 249. Reactions to the Record: Early Recordings, Lost Styles, and Music's Future. 3-4 Units.

This is a seminar on the transformation of musical style in the era of recordings in light of their roots in cultural trends, including shifting hierarchies between composer and performer, work and notation, text and act. Early recordings will be studied as documents of musical values and conceptions different from those around us today. Methodologies of performance analysis will be explored and used to contextualize sources, which include historic recordings from Stanford's Archive of Recorded Sound, performance documents, and field research with performers, composers, critics, and listeners. Repertoire includes works for orchestra, piano, strings, chamber ensemble and voice. Outstanding contributions from seminar members may be featured in the Music Department's May 2014 Reactions to the Record symposium. May be repeated for credit. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4-unit level only.)

Same as: MUSIC 149.

MUSIC 250A. Physical Interaction Design for Music. 3-4 Units.

This lab and project-based course explores how we can physically interact with real-time electronic sound. Students learn to use and design sensors, circuits, embedded computers, communication protocols and sound synthesis. Advanced topics include real-time media, haptics, sound synthesis using physical model analogs, and human-computer interaction theory and practice. Course culminates in musical performance with or exhibition of completed design projects. See <http://ccrma.stanford.edu/>.

MUSIC 250B. Interactive Sound Art. 1-4 Unit.

A project based course where students will create Interactive Sound Art Installations focusing on the acoustical properties of reverberation. See <http://ccrma.stanford.edu/courses/250b/>.

MUSIC 251. Psychophysics and Music Cognition. 1-5 Unit.

Lecture, lab and experiment-based course in perception, psychoacoustics, cognition, and neuroscience of music. (WIM at 4 or 5 units only.)

MUSIC 252. Introduction to Music Notation Software. 1-2 Unit.

Learn to use music notation programs Finale®, Sibelius® and open-source alternatives.

MUSIC 253. Symbolic Musical Information. 2-4 Units.

Focus on symbolic data for music applications including advanced notation systems, optical music recognition, musical data conversion, and internal structure of MIDI files.

Same as: CS 275A.

MUSIC 254. Music Query, Analysis, and Style Simulation. 2-4 Units.

Leveraging off three synchronized sets of symbolic data resources for notation and analysis, the lab portion introduces students to the open-source Humdrum Toolkit for music representation and analysis. Issues of data content and quality as well as methods of information retrieval, visualization, and summarization are considered in class. Grading based primarily on student projects. Prerequisite: 253 or consent of instructor. Same as: CS 275B.

MUSIC 255. Intermedia Workshop. 3-4 Units.

Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. May be repeated for credit

Same as: ARTSTUDI 239, MUSIC 155.

MUSIC 256A. Music, Computing, and Design I: Software Paradigms for Computer Music. 1-4 Unit.

Software design and implementation for computer audio. Strategies, best practices, and tradeoffs in building audio software systems of various sizes (S, M, L, XL), with a focus on interactive (real-time) systems. Lectures examine high-level designs as well as dissect code in a hands-on manner. Course work includes small programming assignments and a final software project. This course is the prerequisite for MUSIC 256B. Prerequisite: experience in C/C++ and/or Java.

Same as: CS 476A.

MUSIC 256B. Music, Computing, Design II: Mobile Music. 1-4 Unit.

Aesthetic, design, and implementation of mobile music, centered around the modern super smartphones such as the iPhone). Similarities and intrinsic differences between mobile and traditional computing and design for music. Topics include mobile software design, social and cloud computing, mobile interface design, and programming phones, in the service of music. Prerequisite: MUSIC 256A.

Same as: CS 476B.

MUSIC 257. Neuroplasticity and Musical Gaming. 3-5 Units.

What changes in a musician's brain after hours and years of daily practice? How do skills that make a great violinist transfer to other abilities? Can directed neuroplasticity be used to target skill learning? This course will include fundamentals of psychoacoustics and auditory neuroscience. Focus will be development of video games that use perceptually motivated tasks to drive neural change. Emphasis will be on music, linguistic, and acoustic based skills. Programming experience is highly recommended, but not required.

MUSIC 260. Music of South Asia. 3-4 Units.

Focuses on the history, theory, and practice of South Asian music with particular emphasis on the classical traditions of North and South India. Also addresses regional folk, popular, and devotional musical styles of India, Pakistan, and Afghanistan. Topics include: raga, tala, vocal and instrumental genres, improvisation, aesthetics, music transmission, musical nationalism, social organization of musicians, music and ritual, music and gender, and technology. Lecture with discussion, some singing (no experience necessary), guest performances, reading, listening, and analysis.

MUSIC 269. Research in Performance Practices. 1-5 Unit.

Directed reading and research. May be repeated for credit a total of 5 times.

MUSIC 272A. Advanced Piano. 1-3 Unit.

Private lessons and group masterclass weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 280. TA Training Course. 1 Unit.

Required for doctoral students serving as teaching assistants. Orientation to resources at Stanford, guest presentations on the principles of common teaching activities, supervised teaching experience. Students who entered in the Autumn should take 280 in the Spring prior to the Autumn they begin teaching.

MUSIC 286. Religion and Music in South Asia. 4-5 Units.

How music and other arts in South Asia are intertwined with religion. Classical, devotional, folk, and popular examples introduce Gods as musicians, sound as God, music as yoga, singing as devotion, music as *ecstasy*-inducing, music as site for doctrinal argument, music and religion as vehicles for nationalism. Co-taught by professors of Music and Religious Studies, focusing Hinduism and Islam in India, Pakistan, and the diaspora. Music practice along with academic study; guest artists and films; no background required.

Same as: MUSIC 186, RELIGST 259.

MUSIC 286A. Music and Religious Experience in the Contemporary World. 3-5 Units.

Explores the central role of music in the performance and experience of religion, positioning music not as an adjunct to silent rituals and liturgy, but as the catalyst and carrier of religious experience, indeed as religious experience itself. Topics include: trance, spirit possession, heightened religious experience, sacred sound and chant, shamanism, politics, and identity. Musical traditions include: Zimbabwean mbira music, African-American church music, Southeast Asian Buddhist ritual music, South Asian Hindu and Islamic devotional music, shamanistic music of Southeast Asia.

Same as: MUSIC 186A, RELIGST 156, RELIGST 256.

MUSIC 300A. Medieval Notation. 4 Units.

Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.

MUSIC 300B. Renaissance Notation. 4 Units.

Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.

MUSIC 300C. Medieval Methodologies. 3 Units.

An introduction to the essential tool-kit for medievalists, this course will give all medievalists a great head start in knowing how to access and interpret major works and topics in the field. Stanford's medieval faculty will explain the key sources and methods in the major disciplines from History to Religion, French to Arabic, English to Chinese, and Art History to German and Music. In so doing, students will be introduced to the breadth and interdisciplinary potential of Medieval Studies. A workshop devoted to Digital Technologies and Codicology/Palaeography will offer elementary training in these fundamental skills.

Same as: DLCL 300, ENGLISH 300.

MUSIC 302. Research in Musicology. 1-5 Unit.

Directed reading and research. May be repeated for credit a total of 14 times.

MUSIC 305A. Analysis and Repertoire: Medieval and Renaissance. 4 Units.

Analytical approaches to genres, styles, forms, and techniques of Western music from [chant and early polyphony through the sixteenth century]. Issues of aesthetics, history, and interpretation viewed through representative repertoire, readings, and analytical methods.

MUSIC 305B. Analysis and Repertoire: Baroque to Early Romantic. 4 Units.

Analytical approaches to genres, styles, forms, and techniques of Western music from the seventeenth through the mid-nineteenth centuries. Issues of aesthetics, history, and interpretation viewed through representative repertoire, readings, and analytical methods.

MUSIC 305C. Analysis and Repertoire: Late-Romantic to Contemporary. 4 Units.

Analytical approaches to genres, styles, materials and techniques of Western music from the mid-nineteenth century through the present. Questions of aesthetics, history and performance explored through musical analysis. Representative repertoire and readings, and a range of analytical methods.

MUSIC 310. Research Seminar in Musicology. 3-5 Units.

For graduate students. Topics vary each quarter. May be repeated for credit a total of 8 times.

MUSIC 310A. Music and Critical Theory. 3-5 Units.

The seminar provides an opportunity to study some of the seminal texts of Critical Theory dealing with music. Concentrating on Theodor Adorno's writings on music, we will also include key philosophers who informed Adorno's thinking (in particular Kant, Hegel and Nietzsche), influential nineteenth-century aesthetics of music (Hoffmann, Schopenhauer and Hanslick), other contemporaries of Adorno (for example, Ernst Bloch), and some later authors whose work was influenced by the Frankfurt School (such as Carl Dahlhaus). We will also consider the impact of Critical Theory on recent scholarship. Weekly meetings will be organized around various topics, ranging from central concepts such as "Enlightenment" and "musical material" to individual composers. Music by Wagner, Mahler, Schoenberg, Stravinsky and Weill will feature prominently on the syllabus. Same as: GERMAN 310A.

MUSIC 312A. Aesthetics and Criticism of Music, Ancients and Moderns: Plato to Nietzsche. 4 Units.

For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.

MUSIC 312B. Aesthetics and Criticism of Music, Contemporaries: Heidegger to Today. 4 Units.

For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.

MUSIC 318. Advanced Acoustics. 1-5 Unit.

Current topics. May be repeated for credit.

MUSIC 319. Research Seminar on Computational Models of Sound Perception. 1-3 Unit.

All aspects of auditory perception, often with emphasis on computational models. Topics: music perception, signal processing, auditory models, pitch perception, speech, binaural hearing, auditory scene analysis, basic psychoacoustics, and neurophysiology. See <http://ccrma.stanford.edu/courses/>. May be repeated for credit a total of 14 times.

MUSIC 320. Introduction to Digital Audio Signal Processing. 3-4 Units.

Digital signal processing for music and audio research. Topics: complex numbers, sinusoids, spectrum representation, sampling and aliasing, digital filters, frequency response, z transforms, transfer-function analysis, and associated Matlab software. See <http://ccrma.stanford.edu/courses/320/>.

MUSIC 321. Readings in Music Theory. 1-5 Unit.

Directed reading and research. May be repeated for credit a total of 15 times.

MUSIC 323. Doctoral Seminar in Composition. 3-4 Units.

Illustrated discussions of compositional issues and techniques. Presentation of relevant topics, including students' own compositional practice. May be repeated for credit a total of 14 times.

MUSIC 324. Graduate Composition Forum. 1 Unit.

Community forum for all graduate student composers. Discussion of completed and in-progress work by students, faculty, and visiting composers. Repertoire listening sessions. Planning of upcoming Department events. Special area exam topic presentations, final doctoral project presentations, and review of portfolios. Many sessions are open to the public. May be repeated for credit.

MUSIC 325. Individual Graduate Projects in Composition. 1-5 Unit.

May be repeated for credit.

MUSIC 330. Musicology Dissertation Colloquium. 1-4 Unit.

Weekly meetings for all musicology students 4th year and beyond to discuss research and writing strategies, share and critique work in progress, and discuss issues in professional development (preparing abstracts, conference papers, C.V. and job interviews, book reviews, submitting articles for publication). Open to 3rd-year students.

MUSIC 341. Ph.D Dissertation. 1-10 Unit.

May be repeated for credit a total of 5 times.

MUSIC 351. Seminar in Music Perception and Cognition. 1-3 Unit.

A seminar on topics in music perception and cognition. Students will study and discuss recent research as well as design and implement experiments.

MUSIC 385. Music Across Media: Music Video to Postclassical Cinema. 4 Units.

What makes music videos, YouTube clips and musical numbers in today's films engaging? What makes them tick? Emphasis is on aesthetics and close reading. How music videos and its related forms work. Uses of the body, how visual iconography operates, what lyrics and dialogue can do, how and what music can say, and how it can work with other media. Questions of representation such as how class, ethnicity, gender, race, and nationality function. Viewership and industry practices.

Same as: FILMSTUD 141, FILMSTUD 341, MUSIC 185.

MUSIC 390. Practicum Internship. 1 Unit.

On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.

MUSIC 399. D.M.A. Final Project. 1-10 Unit.

May be repeated for credit a total of 5 times.

MUSIC 408C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSART 108, CLASSART 208, MUSIC 208C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C.

MUSIC 420A. Signal Processing Models in Musical Acoustics. 3-4 Units.

Computational methods in musical sound synthesis and digital audio effects based on acoustic physical models. Topics: acoustic simulation with delay lines, digital filters, and nonlinear elements; comb filters; allpass filters; artificial reverberation; delay-line interpolation and sampling-rate conversion; phasing, flanging, and chorus effects; efficient computational models of strings, woodwinds, brasses, and other musical instruments. See <http://ccrma.stanford.edu/courses/420/>. Prerequisites: 320 or equivalent; PHYSICS 21 or equivalent course applying Newton's laws of motion; and CS 106B or equivalent programming in C and C++.

MUSIC 420B. Software for Sound Synthesis and Audio Effects. 1-10 Unit.

Preferred software embodiments for digital sound synthesis and audio effects. Topics: The Faust language for audio signal processing, effects programming, plugin generation for various platforms, software components for stringed and wind musical instruments, delay effects, variable filters, and nonlinear effects such as compression and distortion. The principal activity is a software project due at the end of the quarter. Prerequisite: Music 420A or equivalent experience with audio signal processing in C++. Recommended Corequisite: Music 424.

MUSIC 421A. Audio Applications of the Fast Fourier Transform. 3-4 Units.

Spectrum analysis and signal processing using Fast Fourier Transforms (FFTs) with emphasis on audio applications. Topics: Fourier theorems; FFT windows; spectrum analysis; spectrograms; sinusoidal modeling; spectral modeling synthesis; FFT convolution; FIR filter design and system identification; overlap-add and filter-bank-summation methods for short-time Fourier analysis, modification, and resynthesis. See <http://ccrma.stanford.edu/courses/421/>. Prerequisite: Music 320 or equivalent background in spectrum analysis and linear systems. Same as: FFT.

MUSIC 421B. Projects in Spectral Audio Signal Processing. 1-10 Unit.

Frequency-domain methods for analysis and/or synthesis of sound. The principal activity is a software project. Continuing 421A, additional frequency-domain techniques for analysis, modification, and/or synthesis of audio signals will be discussed.

MUSIC 422. Perceptual Audio Coding. 3 Units.

History and basic principles: development of psychoacoustics-based data-compression techniques; perceptual-audio-coder applications (radio, television, film, multimedia/internet audio, DVD, EMD). In-class demonstrations: state-of-the-art audio coder implementations (such as AC-3, MPEG) at varying data rates; programming simple coders. Topics: audio signals representation; quantization; time to frequency mapping; introduction to psychoacoustics; bit allocation and basic building blocks of an audio codec; perceptual audio codecs evaluation; overview of MPEG-1, 2, 4 audio coding and other coding standards (such as AC-3). Prerequisites: knowledge of digital audio principles, familiarity with C programming. Recommended: 320, EE 261. See <http://ccrma.stanford.edu/>.

MUSIC 423. Graduate Research in Music Technology. 1-4 Unit.

Research discussion, development, and presentation by graduate students, visiting scholars, and CCRMA faculty in the areas of music and/or audio technology. See <http://ccrma.stanford.edu/courses/423/> for latest information. May be repeated for credit a total of 11 times.

MUSIC 424. Signal Processing Techniques for Digital Audio Effects. 3-4 Units.

Techniques for dynamic range compression, reverberation, equalization and filtering, panning and spatialization, digital emulation of analog processors, and implementation of time-varying effects. Single-band and multiband compressors, limiters, noise gates, de-essers, convolutional reverberators, parametric and linear-phase equalizers, wah-wah and envelope-following filters, and the Leslie. Students develop effects algorithms of their own design in labs. Prerequisites: digital signal processing, sampling theorem, digital filtering, and the Fourier transform at the level of 320 or EE 261; Matlab and modest C programming experience. Recommended: 420 or EE 264; audio effects in mixing and mastering at the level of 192.

MUSIC 451. Neuroscience of Auditory Perception and Music Cognition. 2-5 Units.

Understand concepts and techniques in cognitive neuroscience specific to auditory perception and music cognition via seminar and laboratory work. Acquire/practice skills in experimental design, data analysis, interpretation, writing for scientific reports and research proposals, and giving a critical review of others' scientific work. Seminar discusses related literature in neuroanatomy, neurophysiology, neuropsychology, and brain-computer interface. Laboratory focuses on electroencephalography (EEG) techniques, classic paradigms for recording evoked response, and associated data analysis methods.

Native American Studies Courses

NATIVEAM 103S. Native American Women, Gender Roles, and Status. 5 Units.

Historical and cultural forces at work in traditional and contemporary Native American women's lives through life stories and literature. How women are fashioning gendered indigenous selves. Focus is on the diversity of Native American communities and cultures.

Same as: CSRE 103S.

NATIVEAM 108S. American Indian Religious Freedom. 5 Units.

The persistence of tribal spiritual beliefs and practices in light of legal challenges (sacred geography and the 1st Amendment), treatment of the dead and sacred objects (repatriation), consumerism (New Age commodification), and cultural intellectual property protection (trademark, copyright, patent law). Focus is on contemporary issues and cases, analyzed through interdisciplinary scholarship and practical strategies to protect the fundamental liberty of American Indian religious freedom.

Same as: CSRE 108S.

NATIVEAM 115. Introduction to Native American History. 5 Units.

This course surveys Native American history from the time of the earliest records to current social and political issues. We will explore Native perspectives on United States histories through readings, images, films, and other sources. Our primary focus will be on tribal experiences -- examined through the words, music, and visual expressions of Native American people -- of origins and migrations, colonialism, resistance, adaptation, survival, self-determination, and transformation.

NATIVEAM 121. Discourse of the Colonized: Native American and Indigenous Voices. 5 Units.

Using the assigned texts covering the protest movements in the 20th century to the texts written from the perspective of the colonized at the end of the 20th century, students will engage in discussions on decolonization. Students will be encouraged to critically explore issues of interest through two short papers and a 15-20 minute presentation on the topic of interest relating to decolonization for Native Americans in one longer paper. Approaching research from an Indigenous perspective will be encouraged throughout.

NATIVEAM 138. American Indians in Comparative Historical Perspective. 4 Units.

(Graduate students register for 238.) Demographic, political, and economic processes and events that shaped relations between Euro-Americans and American Indians, 1600-1890. How the intersection of these processes affected the outcome of conflicts between these two groups, and how this conflict was decisive in determining the social position of American Indians in the late 19th century and the evolution of the doctrine of tribal sovereignty.

Same as: SOC 138, SOC 238.

NATIVEAM 139. American Indians in Contemporary Society. 5 Units.

(Graduate students register for 239.) The social position of American Indians in contemporary American society, 1890 to the present. The demographic resurgence of American Indians, changes in social and economic status, ethnic identification and political mobilization, and institutions such as tribal governments and the Bureau of Indian Affairs. Recommended: 138 or a course in American history.

Same as: SOC 139, SOC 239.

NATIVEAM 143A. American Indian Mythology, Legend, and Lore. 3-5 Units.

(English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, "Black Elk Speaks."

NATIVEAM 167. Performing Indigeneity on Global Stage. 4 Units.

Explores how indigeneity is expressed and embodied through performance on the global stage.

Same as: DANCE 167.

NATIVEAM 200R. Directed Research. 1-5 Unit.

NATIVEAM 200W. Directed Reading. 1-5 Unit.

NATIVEAM 240. Psychology and American Indian Mental Health. 3-5 Units.

Western medicine's definition of health as the absence of sickness, disease, or pathology; Native American cultures' definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities.

Same as: EDUC 340.

Neurobiology Courses

NBIO 101. Social and Ethical Issues in the Neurosciences. 2-4 Units.

Influences on public debate and policy of scientific advances in the study of the brain and behavior: theories of brain function; philosophical and scientific approaches; advances in the neurosciences, possible uses in medical therapy, and interventions involving genetic screening, genetic selection, enhancement of neurological functioning, and manipulation of behavior; questions related to medical therapy, social policy, and broader considerations of human nature such as consciousness, free will, personal identity, and moral responsibility. May be taken for 2 units without a research paper. Prerequisite: Neuroscience, Biology, or Symbolic Systems major; or Human Biology core; or consent of instructor.

Same as: NBIO 201.

NBIO 198. Directed Reading in Neurobiology. 1-18 Unit.

Prerequisite: consent of instructor. (Staff).

NBIO 199. Undergraduate Research. 1-18 Unit.

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

NBIO 201. Social and Ethical Issues in the Neurosciences. 2-4 Units.

Influences on public debate and policy of scientific advances in the study of the brain and behavior: theories of brain function; philosophical and scientific approaches; advances in the neurosciences, possible uses in medical therapy, and interventions involving genetic screening, genetic selection, enhancement of neurological functioning, and manipulation of behavior; questions related to medical therapy, social policy, and broader considerations of human nature such as consciousness, free will, personal identity, and moral responsibility. May be taken for 2 units without a research paper. Prerequisite: Neuroscience, Biology, or Symbolic Systems major; or Human Biology core; or consent of instructor.

Same as: NBIO 101.

NBIO 206. The Nervous System. 7-8 Units.

Structure and function of the nervous system, including neuroanatomy, neurophysiology, and systems neurobiology. Topics include the properties of neurons and the mechanisms and organization underlying higher functions. Framework for general work in neurology, neuropathology, clinical medicine, and for more advanced work in neurobiology. Lecture and lab components must be taken together.

NBIO 216. Genetic Analysis of Behavior. 3 Units.

Advanced seminar. Findings and implications of behavioral genetics as applied to invertebrate and vertebrate model systems. Topics include biological clocks, and sensation and central pattern generators. Relevant genetic techniques and historical perspective. Student presentation.

Same as: MCP 216.

NBIO 218. Neural Basis of Behavior. 5 Units.

Advanced seminar. The principles of information processing in the nervous system and the relationship of functional properties of neural systems with perception, behavior, and learning. Original papers; student presentations. Prerequisite: NBIO 206 or consent of instructor.

NBIO 220. Central Mechanisms in Vision-based Cognition. 2-4 Units.

Contemporary cognitive neuroscience, emphasizing the use of the primate visual and oculomotor systems to explore neural mechanisms underlying perception, attention, learning, and decision-making. Eight foundational topics in cognitive neuroscience; intensive study and critical discussion of selected papers from the contemporary literature. Student presentations, seminar-style discussions. Class enrollment is limited to 12 students. First priority will be given to students from the neurosciences graduate program.

NBIO 221. Frontiers in Translational Medicine. 1 Unit.

Small group course for first year MSTP and Master's in Medicine students only. Focus is on pathways for combining science and medicine during graduate and postdoctoral training and in one's career, and practical aspects of translational medicine. Guest lecturers are physician-scientists who have advanced the frontiers of translational medicine. Previous lecturers have included Drs. Gilbert Chu, Jamie Topper, Irv Weissman, Beverly Mitchell, Geoff Duyk, William Mobley, Judy Shizuru, Carla Shatz, Linda Boxer and David Cox. Prerequisite: consent of instructor.

NBIO 227. Understanding Techniques in Neuroscience. 2 Units.

Topics include molecular, genetic, behavioral, electrophysiological, imaging, and computational approaches used in the field of neuroscience. Presentations and discussions led by senior graduate students, assigned readings from the primary neuroscience literature, and optional laboratory demonstrations. Intended for graduate students from any discipline and for advanced undergraduates in the biosciences, engineering, or medicine.

NBIO 228. Mathematical Tools for Neuroscience. 1-3 Unit.

Student-instructed. For students with no math background beyond basic calculus, or as a review for more advanced students. Techniques useful for analysis of neural data including linear algebra, Fourier transforms, probability and statistics, signal detection, Bayesian inference, and information theory.

NBIO 254. Molecular and Cellular Neurobiology. 5 Units.

For graduate students. Includes lectures for BIO 154. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Same as: BIO 254.

NBIO 258. Information and Signaling Mechanisms in Neurons and Circuits. 4 Units.

How synapses, cells, and neural circuits process information relevant to a behaving organism. How phenomena of information processing emerge at several levels of complexity in the nervous system, including sensory transduction in molecular cascades, information transmission through axons and synapses, plasticity and feedback in recurrent circuits, and encoding of sensory stimuli in neural circuits.

NBIO 299. Directed Reading in Neurobiology. 1-18 Unit.

Prerequisite: consent of instructor.

NBIO 300. Professional Development and Integrity in Neuroscience. 1-2 Unit.

Required of Neurosciences Ph.D. students every quarter. Develops professional skills in critical assessment and oral presentation of findings from current neuroscience literature in the visual presentation of quantitative data and writing research grants. The role of animals in lab research, fraud in science, the responsibility of authors and reviewers, science in a multicultural environment, and the relationship between student and mentor. Student and faculty presentations and discussions.

NBIO 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

NBIO 399. Graduate Research. 1-18 Unit.

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Neurology & Neurological Sciences Courses

NENS 67N. Intracellular Trafficking and Neurodegeneration. 3 Units.

Preference to freshmen. Cell structures and functions, the intracellular trafficking system that maintains exchanges of materials and information inside cells, and clinical features and pathologies of neurodegenerative diseases. Techniques for examining cellular and subcellular structures, especially cytoskeletons; functional insights generated from structural explorations. Prerequisite: high school biology.

NENS 199. Undergraduate Research. 1-18 Unit.

Students undertake research sponsored by an individual faculty member. Prerequisite: consent of instructor.

NENS 202. Longevity. 4 Units.

Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists.

Same as: HUMBIO 149L, PSYCH 102.

NENS 204. Stroke Seminar. 1 Unit.

Standing at the intersection of many fields of medicine, including neurology, internal medicine, cerebrovascular surgery, diagnostic and interventional radiology, and emergency medicine, as the third leading cause of death and the leading cause of disability, stroke is a critical topic for all practitioners of medicine. This seminar draws upon Stanford's leaders in stroke research to present and discuss the causes, presentation, treatment, and imaging characteristics of the disease.

NENS 205. Neurobiology of Disease Seminar. 3 Units.

Case demonstrations of selected disorders, discussion of the pathophysiological basis of the disorder, presentation of the basic principles underlying modern diagnostic and therapeutic management, and a discussion of recent research advances for each disease entity. Prerequisite: Neurobiology 206 or consent of instructor.

NENS 206. Introduction to Neurology Seminar. 1 Unit.

Exploration of aspects of neurology, including subspecialties. Current issues, clinical cases, and opportunities in the field.

NENS 220. Computational Neuroscience. 4 Units.

Computational approaches to neuroscience applied at levels ranging from neurons to networks. Addresses two central questions of neural computation: How do neurons compute; and how do networks of neurons encode/decode and store information? Focus is on biophysical (Hodgkin-Huxley) models of neurons and circuits, with emphasis on application of commonly available modeling tools (NEURON, MATLAB) to issues of neuronal and network excitability. Issues relevant to neural encoding and decoding, information theory, plasticity, and learning. Fundamental concepts of neuronal computation; discussion focus is on relevant literature examples of proper application of these techniques. Final project. Recommended for Neuroscience Program graduate students; open to graduate, medical, and advanced undergraduate students with consent of instructor. Prerequisite: NBIO 206. Recommended: facility with linear algebra and calculus.

NENS 230. Analysis Techniques for the Biosciences Using MATLAB. 2 Units.

Data analysis and visualization techniques commonly encountered in biosciences research. Fundamentals of the MATLAB computing environment, programming and debugging, data import/export, data structures, plotting, image analysis, introduction to statistical tools. Examples and assignments draw from a range of topics applicable to bioscience research: frequency analysis, genetic data mining, ion channel kinetics, neural spike rasters and spike-triggered averages, cell counting in fluorescence images, regression, PCA, and stochastic simulation. Assignments are practical in nature and demonstrate how to implement specific analyses that a biosciences student is likely to encounter.

NENS 267. Molecular Mechanisms of Neurodegenerative Disease. 4 Units.

The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.

Same as: BIO 267.

NENS 299. Directed Reading in Neurology and Neurological Science. 1-18 Unit.

Prerequisite: consent of instructor.

NENS 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

NENS 399. Graduate Research. 1-18 Unit.

Students undertake research sponsored by individual faculty members. Includes laboratory work in neurophysiology and neurochemistry.

Neurosciences Program Courses**NEPR 299. Directed Reading in Neurosciences. 1-18 Unit.**

Prerequisite: consent of instructor.

NEPR 399. Graduate Research. 1-18 Unit.

Student Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

NEPR 801. TGR Project. 0 Units.**NEPR 802. TGR Dissertation. 0 Units.****Neurosurgery Courses****NSUR 70Q. Experimental Stroke. 2 Units.**

Preference to sophomores. How stroke is studied in the laboratory; advances in stroke research over the last two decades; and future directions. Topics include: cellular and molecular mechanisms of neuronal death and survival in the brain after stroke, including necrosis, apoptosis, inflammation, and cell signaling pathways; experimental tools for stroke treatment, such as gene therapy, cell therapy, hypothermia, preconditioning, postconditioning, and other pharmacological treatments; the gap and barrier between laboratory research and clinical translation.

NSUR 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

NSUR 261. Principles and Practice of Stem Cell Engineering. 3 Units.

Quantitative models used to characterize incorporation of new cells into existing tissues emphasizing pluripotent cells such as embryonic and neural stem cells. Molecular methods to control stem cell decisions to self-renew, differentiate, die, or become quiescent. Practical, industrial, and ethical aspects of stem cell technology application. Final projects: team-reviewed grants and business proposals.

Same as: BIOE 261.

NSUR 280. Early Clinical Experience in Neurosurgery. 1-2 Unit.

Provides an observational experience as formulated by the instructor and student. Prerequisite: consent of instructor.

NSUR 299. Directed Reading in Neurosurgery. 1-18 Unit.

Prerequisite: consent of instructor.

NSUR 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

NSUR 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Obstetrics & Gynecology Courses**OBYN 81Q. Perspectives on the Abortion Experience in Western Fiction. 3 Units.**

Explores the role of media in delivering abortion-related messages as well as the broader questions of how abortion and related issues are fundamentally integrated into the social fabric of US and global societies. Abortion remains one of the most controversial and polarizing challenges of our time. Yet, it has been a clinical, social, political, and cultural fact in a broad swath of societies for centuries. As is common for such lightning rod issues, the topic of abortion has featured prominently in a number of novels and films. Each treatment provides a unique perspective on at least one aspect of abortion, whether it be clinical, social, political or cultural. Examination of how abortion is portrayed in novels and films provides the student of history, anthropology, and biology not only with insights into the author's or director's perspectives, but also into societal attitudes and mores.

OBYN 199. Undergraduate Research in Reproductive Biology. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

OBYN 202. Assisted Reproductive Technologies. 1-3 Unit.

Primary and current literature in basic and clinical science aspects of assisted reproductive technologies (ART), and demonstrations of current ART techniques including in vitro fertilization and embryo culture, and micromanipulation procedures such as intracytoplasmic sperm injection and embryo biopsy and cryopreservation. Class only may be taken for 1 unit. 2 units includes papers and attendance at clinical demonstrations. 3 units includes a term paper. Recommended: DBIO 201, or consent of instructors. Same as: DBIO 202, HUMBIO 150A.

OBYN 216. Current Issues in Reproductive Health. 1 Unit.

Reproductive Health is a broad subject encompassing many concepts and practices. Issues and services within the context of reproductive health include such diverse topics as fertility, pregnancy, contraception, abortion, sexuality, menopause and parenting. Course focuses on topics related to abortion services, fertility and contraception; current research and practices in family planning; legislation and issues of access.

OBYN 230. Women's Health Medical Forum. 1 Unit.

Required for the Women's Health Scholarly Concentration. Ten seminars featuring a Women's Health research presentation (by faculty or student), followed by discussion. Emphasis is on topics related to the five Stanford Institutes of Medicine (cardiovascular; cancer; stem cell; neurosciences; and immunity), and the subspecialties of Obstetrics & Gynecology. Assigned readings and related papers.

OBGYN 256. Current Controversies in Women's Health. 2-3 Units.

Interdisciplinary. Focus is on the U.S. Topics include: health research; bioethical, legal, and policy issues; scientific and cultural perspectives; social influences; environmental and lifestyle effects on health; and issues related to special populations. Guest lecturers; student debates. Prerequisite: Human Biology core or equivalent, or consent of instructor. Only students who can attend both Mon and Wed classes can register for 3 units; students who can attend only Wed, register for 2 units.

Same as: HUMBIO 125.

OBGYN 280. Early Clinical Experience in Obstetrics and Gynecology. 1-2 Unit.

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

OBGYN 282. Pregnancy, Birth, and Infancy. 3 Units.

Comprehensive clinical experience where pre-clinical medical students follow pregnant women receiving care at Stanford hospitals to attend prenatal visits, delivery, and postnatal visits. Continuity clinic format, combined with didactic lessons and discussion seminars. Students are exposed to clinical activities in a meaningful context, bolstering classroom studies in anatomy, physiology, embryology and human development, and emphasizing social, economic, and personal issues related to medicine. This program spans one quarter, covering topics related to pregnancy, labor and delivery and newborn care. In addition to clinic experiences, students are expected to spend 1-2 hours/week in lectures and to complete a reflection of their experiences in the course. Prerequisite: pre-clinical medical student. Same as: PEDS 282.

OBGYN 299. Directed Reading in Obstetrics and Gynecology. 1-18 Unit.

Prerequisite: consent of instructor.

OBGYN 305W. Family Planning Clerkship. 3 Units.

Same as: Away.

OBGYN 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

OBGYN 399. Graduate Research in Reproductive Biology. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Operations Information & Technology Courses

OIT 245. Optimization and Simulation Modeling. 2 Units.

This course provides basic skills in quantitative modeling. The objective is to familiarize students with the main steps in an analytical approach to business decision making: constructing an abstract model for a relevant business problem, formulating it in a spreadsheet environment such as Microsoft Excel, and using the tools of optimization, Monte Carlo simulation and sensitivity analysis to generate and interpret recommendations. The class will be taught in a lab style, with short in-class exercises done in small teams, focusing on a variety of applications drawn from advertising, healthcare, finance, supply chain management, revenue and yield optimization.

OIT 247. Optimization and Simulation Modeling - Accelerated. 2 Units.

The course is similar in content and emphasis to OIT 245, but is aimed at students who already have background or demonstrated aptitude for quantitative analysis, and thus are comfortable with a more rapid coverage of the topics, in more depth and breadth.

OIT 249. MSx: Data and Decisions. 2 Units.

Data and Decisions an introductory course in probability, statistics and decision analysis. Our goal is to teach you how to evaluate quantitative information and to make sound decisions in complex situations. D&D combines two areas of management science: The first area, probability, provides a foundation for modeling uncertainties, such as the uncertainties faced by financial investors or insurers. We will study the mechanics of probability (manipulating some probabilities to get others) and the use of probability to make judgments about uncertain events. The second area, statistics, provides techniques for interpreting data, such as the data a marketing department might have on consumer purchases. Statistical methods permit managers to use small amounts of information (such as the number of people switching from Verizon to AT&T in an iPhone test marketing program) to answer larger questions (what would AT&T's new market share be if the iPhone is launched nationally?).

OIT 256. Electronic Business. 3 Units.

This course focuses on the intersection of strategy and information technology. It considers how you can take advantage of new technology opportunities and how they change the structure of firms, industries and value chains, with an emphasis on business issues. Classes combine lecture and case study discussions and the workload is above the GSB average. Same as: Accelerated.

OIT 258. Incentive Mechanisms for Societal Networks. 2 Units.

In many of the challenges faced by the modern world, from overcrowded road networks to overstretched healthcare systems, large benefits for society come about from small changes by very many individuals. This course survey the problems and the cost they impose on society. It describes a series of pilot projects which aim to develop principles for inducing small changes in behavior in Societal Networks--transportation networks, wellness programs, recycling systems and, if time permits, energy grids. Students will learn how low-cost sensing and networking technology can be used for sensing individual behavior, and how incentives and social norming can be used to influence the behavior. The effectiveness of this approach in pilots conducted in Bangalore (commuting), Singapore (public transit system), Stanford (congestion and parking), and a wellness program at Accenture-USA will be discussed. Students may experience the incentive platform as participants.

OIT 262. Operations. 3 Units.

This course focuses on basic managerial issues arising in the operations of both manufacturing and service industries. The objectives of the course are to familiarize students with the problems and issues confronting operations managers and to introduce language, conceptual models, and analytical techniques that are broadly applicable in confronting such problems. The spectrum of different process types used to provide goods and services is developed and then examined through methods of process analysis and design.

OIT 265. Data and Decisions. 4 Units.

This is the base version of D&D. This course introduces the fundamental concepts and techniques for analyzing risk and formulating sound decisions in uncertain environments. Approximately half of the course focuses on probability and its application. The remainder of the course examines statistical methods for interpreting and analyzing data including sampling concepts, regression analysis, and hypothesis testing. Applications include inventory management, demand analysis, portfolio analysis, surveys and opinion polls, A/B testing, environmental contamination, online advertising and the role of analytics in business settings more generally. The course emphasizes analytical techniques and concepts that are broadly applicable to business problems.

OIT 267. Data and Decisions - Accelerated. 4 Units.

Data and Decisions - Accelerated is a first-year MBA course in probability, statistics, multiple regression analysis, and decision trees for students with strong quantitative backgrounds. Probability provides the foundation for modeling uncertainties. Statistics provides techniques for interpreting data, permitting managers to use small amounts of information to answer larger questions. Regression analysis provides a method for determining the relationship between a dependent variable and predictor variables. Decision tree analysis consists of quantitative approaches to decision making under uncertainty. Students taking this course need to be comfortable with mathematical notation, algebra, and some calculus. If you are not confident with your quantitative abilities, then you should enroll in OIT 265. Accelerated D&D will cover material covered in OIT 265 faster and in more depth. One main difference is that Accelerated D&D will cover the additional topics of advanced multiple regression analysis (e.g., correction for autocorrelation), discrete dependent variable models, and panel data. A multiple regression group project is required.

OIT 268. Making Data Relevant. 4 Units.

Data is everywhere. Firms collect it. Data on customers' preferences are collected through websites or loyalty programs or cash registers. Data on employees' traits are collected through in-house databanks or social networking sites. All of us are used to thinking about data. How can you make data relevant to doing your job? How can data analysis serve to increase your competitive advantage over that of others? This class goes beyond graphing data in bar charts or time trends. It makes you think about causal relationships. The examples we use are primarily taken from talent management, because it's easy to think about our own careers or those of our employees. But the tools covered extend to all contexts, and your project is on an idea of your choosing. The class focuses on the use of regressions to think experimentally. To take the class, you should have covered regression analysis in a former class (such as an econometrics course for economics majors) or be comfortable with learning basic math concepts quickly. You also should understand distributions of data (such as the Bell curve, or normal distribution), but this topic is not covered. There are no required proofs or derivations; you've done that as undergraduates. This is about using data: we use cases, examples, Notes written for the class, and a quiz, final exam, and several assignments in which you play with data sets to answer questions. Note that this 4-unit course, if successfully completed, counts for the Data Analysis foundations requirement.

OIT 269. MSx: Operations. 3 Units.

This course focuses on basic managerial issues arising in the operations of both manufacturing and service industries. The objectives of the course are to familiarize students with the problems and issues confronting operations managers and to introduce language, conceptual models, and analytical techniques that are broadly applicable in confronting such problems. The spectrum of different process types used to provide goods and services is developed and then examined through methods of process analysis and design.

OIT 333. Design for Extreme Affordability. 4 Units.

This course is a Bass Seminar. Project course jointly offered by School of Engineering and Graduate School of Business. Students apply engineering and business skills to design product or service prototypes, distribution systems, and business plans for entrepreneurial ventures that meet that challenges faced by the world's poor. Topics include user empathy, appropriate technology design, rapid prototype engineering and testing, social technology entrepreneurship, business modeling, and project management. Weekly design reviews; final course presentation. Industry and adviser interaction. Limited enrollment via application; see <http://extreme.stanford.edu/index.html> for details.

OIT 334. Design for Extreme Affordability. 4 Units.

This course is a Bass Seminar. Project course jointly offered by School of Engineering and Graduate School of Business. Students apply engineering and business skills to design product or service prototypes, distribution systems, and business plans for entrepreneurial ventures that meet that challenges faced by the world's poor. Topics include user empathy, appropriate technology design, rapid prototype engineering and testing, social technology entrepreneurship, business modeling, and project management. Weekly design reviews; final course presentation. Industry and adviser interaction. Limited enrollment via application; see <http://extreme.stanford.edu/index.html> for details.

OIT 343. D-Lab: Design for Service Innovation. 4 Units.

Students in multidisciplinary teams work with a partner organization to design new services that address the needs of an underserved population of users. Teams identify an unmet customer needs, develop and prototype new service designs (e.g. web services, services with a product component, educational campaigns), test these services with real customers and develop an implementation plan. Fundraising strategies are also explored and tested. We will offer two sections: financial services (MW: 1:15 pm - 3:00 pm); health services (MW: 4:15 pm - 6:00 pm). The specific domains for the two sections will be announced in the fall based on the needs of partner organizations. Possible domains for financial services: financial literacy for young adults, planning for major expenses at retirement, financial services for the underserved. For health services: transition to adulthood of pediatric patients with chronic conditions, transitions to nursing care for elderly patients. See <http://designforservice.stanford.edu/>.

OIT 344. Design for Service Innovation. 4 Units.

Design for service innovation is an experiential course in which students work in multidisciplinary teams to design new services (including but not limited to web services) that will address the needs of an underserved population of users. Through a small number of lectures and guided exercises, but mostly in the context of specific team projects, students will learn to identify the key needs of the target population and to design services that address these needs. Our projects this year will focus on services for young adult survivors of severe childhood diseases. For the first time ever, children who have cystic fibrosis, rheumatoid arthritis, major cardiac repairs, organ transplants, genetic metabolic disorders, and several forms of cancer are surviving. The first wave of these survivors is reaching young adulthood (ages 18-25). Many aspects of the young adult world are not yet user-friendly for them: applying to and then entering college, adherence to required medication and diet, prospects for marriage and parenthood, participation in high school or college sports, driving, drinking, drugs, and more. Our aspiration is to develop services to improve these young adults' options for a fulfilling and satisfying life. The course is open to graduate students from all schools and departments: business (MBA1, MBA2, PhD, Sloan), Medicine (medical students, residents, fellows and postdocs), engineering (MS and PhD), humanities, sociology, psychology, education, and law. Students can find out more about this course at: <http://DesignForService.stanford.edu>; GSB Winter Elective BBL Jan 10th, 12 noon - 1 pm; D-School Course Exposition Feb 3rd, time TBA. Admission into the course by application only. Applications will be available at <http://DesignForService.stanford.edu> on Jan 13th. Applications must be submitted by Feb 4th midnight. Students will be notified about acceptance to the course by Feb 7th. Accepted students will need to reserve their slot in the course by completing an online privacy training course. Details about online training will be provide to accepted students. The training is related to the protection of our partners' privacy. Application Deadline: Noon, Feb 4th.

OIT 356. Electronic Business. 3 Units.

This course focuses on the intersection of strategy and information technology. It considers how you can take advantage of new technology opportunities and how they change the structure of firms, industries and value chains, with an emphasis on business issues. Case studies include Salesforce.com, Apple, Netflix, Evernote, Linden Lab (Second Life), Amazon.com and Zappos. Classes combine lecture and case study discussions and the workload is above the GSB average. While the advanced course will generally cover the same topics as OIT 256, it will go into more advanced techniques in a number of areas.

OIT 361. Technology Concepts for Managers. 4 Units.

Electronics, computing, networks and software applications have become an integral part of business. The course is aimed at the student who wishes to learn those electronic and computer science concepts needed to understand how computers, networks, and the software that runs them operate, but who lacks background in engineering or computer science. The premise of the course is that adequate knowledge of technology is now a prerequisite for a successful manager, but that knowledge does not have to be at the level of rigor required in the practice of engineering or computer science. This course is intended to provide a basic literacy in these areas, with an emphasis on implications for managers and organizations. A meaningful course that focuses on particular technologies is difficult because rapid changes in any technology can quickly render today's lessons obsolete. Therefore, this course will stress fundamentals and trends, rather than a snapshot of the current status of different technologies. As a result, classroom coverage of current "hot" topics in technology is subordinate to giving the technology concepts necessary for one to learn such current (and future) topics on their own. Investigation of technology will be facilitated by lectures readings and homework assignments. Students will have an opportunity to investigate and learn more about a particular technology in more depth as part of a term project. The general flow of the course will focus upon four areas approximately as follows: Part I Electronic Systems: Fundamental Electronics (2 sessions), Digital and Microelectronics (2 sessions), Computer Hardware and Systems (2 sessions), Technology Trends (1 session), Communications including wireless (2 sessions); Part II Networks: Networked Computing (1 session), the Internet (2 sessions); Part III Software: Software and software development (3 sessions), Data Base Technology (1 session); and Part IV The Web: Clients and Servers (1 session), Case study of a web site (1 session), Video/Multimedia (1 session). The course is specifically designed for students with liberal arts or soft science backgrounds who have career ambitions in high-tech or who wish to be more technically aware as managers. Students with hard science, engineering or computer science backgrounds are welcome but must avoid redirecting the class discussion into narrow or advanced material that causes dysfunction to less technical colleagues. Students may elect either to take a final exam or do a term project. Students electing to do a term project will create it as a Web page. Separate training for building a Web page will be offered.

OIT 364. Global Operations. 3 Units.

Globalization of businesses has resulted in companies having to manage global networks of suppliers, integrators, contract manufacturers, logistics service providers, distributors, and service support operators in geographically dispersed locations. The customer network is also globally distributed. This course will focus on (1) how global and international companies can overcome the geographical, cultural, and organizational barriers, and leverage the strengths of the network to create values, and (2) how these companies may use different ways to manage operations in different regions to take full advantage of the local strengths and limitations. The course will be based on cases on innovative strategies and tactics used by global and international companies.

OIT 367. Analytics from Big Data. 4 Units.

The objective of this course is to analyze real-world situations where significant competitive advantage can be obtained through large-scale data analysis, with special attention to what can be done with the data and where the potential pitfalls lie. Students will be challenged to develop business-relevant questions and then solve for them by manipulating large data sets. Problems from advertising, eCommerce, finance, healthcare, marketing, and revenue management are presented. Students learn to apply software (such as R and SQL) to data sets to create knowledge that will inform decisions. The course covers fundamentals of statistical modeling, machine learning, and data-driven decision making. Students are expected to layer these topics over an existing facility with mathematical notation, algebra, calculus, probability, and basic statistics.

OIT 384. Biodesign Innovation: Needs Finding and Concept Creation. 4 Units.

This is the first quarter of a two-quarter course series (OIT 384/OIT 385). In this course, students learn how to develop comprehensive solutions (most commonly medical devices) to some of the most significant medical problems. The first quarter includes an introduction to needs finding methods, brainstorming and concept creation. Students learn strategies for understanding and interpreting clinical needs, researching literature and searching patents. Working in small entrepreneurial multidisciplinary teams, students gain exposure to clinical and scientific literature review, techniques of intellectual property analysis and feasibility, basic prototyping and market assessment. Students create, analyze and screen medical technology ideas, and select projects for future development. Final presentations at the end of the winter quarter to a panel of prominent inventors and investors in medical technology provide the impetus for further work in the spring quarter. Course format includes expert guest lecturers (Thu: 4:15 to 6:05 pm), faculty-led practical demonstrations and coaching sessions and interactive team meetings under the mentorship of Biodesign fellows (Tues: 4:15 to 6:05 pm). Projects from previous years included: prevention of hip fractures in the elderly; methods to accelerate healing after surgery; less invasive techniques for bariatric surgery; point of care diagnostics to improve emergency room efficiency; novel devices to bring specialty-type of care to primary care community doctors. More than 4,000 patients have been treated to date with technologies developed as part of this program and more than ten venture-backed companies were started by alums of the program. Students must apply and be accepted into the course. The application is available online at <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp>.

OIT 385. Biodesign Innovation: Concept Development and Implementation. 4 Units.

Two quarter sequence (continuation of OIT385 - see OIT384 for complete description of the sequence). The second quarter focuses on how to take a conceptual solution to an important medical need forward from early concept to technology translation, development and possible commercialization. Students expand on the topics they learned in OIT384 to learn about prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation and commercialization route (licensing vs. start-up); marketing, sales and distribution strategies; ethical issues including conflict of interest; fundraising approaches and cash requirements; financial modeling; essentials of writing a business or research plan; strategies for assembling a development team. Students continue to work in multidisciplinary teams to select a final concept and develop a business plan. Final presentations are made to a panel of prominent venture investors and serve the role of a VC pitch. New students (i.e. students who did not take OIT384 in the winter quarter) will need to submit an application at <http://www.stanford.edu/group/biodesign/courseapplication11.html> by March 16, 2012. Students who took OIT384 in the winter quarter are automatically accepted into the spring quarter.

OIT 522. Field Trips to Grassroots Innovators in Health Care: Improving Access & Outcomes for the Underserved. 2 Units.

Some of the most impressive innovations in health care are developed at hospitals and other non-profit organizations by dedicated health care professionals (drs, nurses, administrators) who are not afraid to roll up their sleeves and work hard to solve an important health care problem they face in their everyday patient encounters. Because of limited financial resources and because they often target underserved market segments, these innovations lack a validated business model and commercialization pathway. In this seminar we will gain hands-on experience of some of these grassroots innovations through field trips to a local public hospital (a candidate hospital is San Francisco General Hospital) and a non-profit product incubator (hopelab.org). We will then work in teams to identify and address the main barriers to commercialization for two specific innovations presented in these field trips: An electronic referral system to promote access to specialist care in underserved communities; A video game to promote healthy lifestyles in at-risk youth. We will learn and apply the brainstorming approach to come up with innovative solutions to overcome these barriers. On the last day we will meet key executives in both organizations to present our recommendations.

OIT 530. Advanced Modeling Seminar. 2 Units.

Modern spreadsheet and simulation software now makes it possible for general managers themselves to model complex and uncertain business situations on their personal computers. This seminar will consist of hands-on experience with advanced applications for modeling situations that include both uncertainty and discontinuous change. These situations often are called "ill-behaved" because they defeat the traditional tools of analysis covered in the Foundations Modeling courses. For example, financial spreadsheet models involving discontinuous change, such as winning an auction or unexpectedly altering a production process or marketing campaign (so-called "black swan" events), may arise in business projections, but actual models of such events are rarely, if ever, considered for optimization under uncertainty. As another example, the Operations formulas used to estimate throughput times in models involving congestion and delay often cannot be applied to systems that include unexpected service interruptions or complex routing of items (e.g., modern hospitals). The mission of this seminar is to utilize recent advances in software and the speed of modern multi-core PC's that have produced easy-to-use tools for interactively building and analyzing such models. Each day, students will build models of these more-realistic situations, using the software tools "hands-on" and working with the instructors as coaches in a laboratory setting. We will use a more advanced version of the Excel Solver add-in, called Risk Solver, which combines optimization with Monte Carlo simulation, as well as ExtendSim, a graphical tool for constructing and analyzing discrete event simulation models. Exercises will include optimization under uncertainty such as Value at Risk in financial statement projections, capacity expansion plans involving Real Options, customer service and manufacturing workflow systems, courtroom scheduling, and airport security policies. The first 2.5 sessions of the course will focus on learning and using Risk Solver to analyze risk-based spreadsheet models with an emphasis on interpreting Value at Risk and Conditional Value at Risk constraints in such models. The second 2.5 sessions will focus on learning and using ExtendSim to model operational situations in services and manufacturing, with an emphasis on dealing with congestion and delay in complex settings. Who should take this seminar? Our intended audience consists of students who: want to develop a deeper appreciation for how discontinuous change, risk, and uncertainty affect decision-making in financial and operational settings, and want to learn how advanced optimization and simulation software allows you to examine easily the effects of such events directly, rather than through complex and unwieldy mathematical approximations. How much computer background is necessary? We want the seminar to be illuminating, fun, and easy to master. The seminar is designed specifically for both non-technical ("poet") and technical ("quant") students who have completed the introductory concepts of optimization with Excel Solver, as covered in Foundations Modeling (either basic or advanced), and are comfortable building Excel spreadsheets. We will assume that students have no prior experience with optimization of risk-based models or with discrete event simulation software, and would like to gain that experience now in a hands-on, build-your-own-model setting. Students will use the software both for individual preparation via tutorial documents and for classroom exercises. Each session will be team-taught by Professors Moore and Patell and will be a combination of lectures, demonstration, and coaching to help you experiment with the tools.

OIT 538. Environmental Science for Managers - Accelerated. 3 Units.

This course satisfies the MBA distribution requirement in Optimization and Simulation Modeling (OSM). It is challenging but doable for students without an undergraduate degree in science or engineering; it does not assume experience in environmental science or quantitative analysis beyond admission requirements for the MBA program. Students will learn fundamental science of ecosystems, climate and energy systems, by building decision-support models for managing these systems. In so doing, students will develop widely-applicable skills in model representation in a spreadsheet, optimization, and Monte Carlo simulation. nnnStudents are strongly encouraged to take the follow-on course on renewable energy, OIT 540 Environmental Science for Managers II. nnnFor the joint MBA-MS in Environment and Resources degree, students are required to take OIT 540, and either OIT 538 or OIT 539.

OIT 539. Environmental Science for Managers - Advanced. 3 Units.

Fundamental science of ecosystems, climate and energy. Spreadsheet modeling, optimization, and Monte Carlo simulation applied to resource management and environmental policy. Similar to OIT 338, but allocates more class time to environmental/energy science and implications for management and policy, and less class time to fundamentals of modeling/optimization/simulation.

OIT 540. Environmental Science for Managers II. 1 Unit.

This course provides an introduction to renewable sources of electricity and fuel, and is required for the joint MBA-MS in Environment and Resources degree. nnnStudents are strongly encouraged, but not required, to take OIT 538 or OIT 539 prior to taking this course.

OIT 542. Price and Revenue Optimization. 2 Units.

This is the Advanced Application option in the menu of courses that satisfy the Management Foundations requirement in Optimization and Simulation Modeling(OSM). Three core modeling topics are covered in rapid-review fashion - model representation in a spreadsheet environment, optimization theory, and stochastic models - but primary emphasis is on the application domain described immediately below. OIT 542 is a two-unit course, with nine class sessions plus a final exam. nnnSystems for price and revenue optimization - also called yield management, dynamic pricing, or revenue management - combine the use of information technology, statistical forecasting, and mathematical optimization to make tactical decisions about pricing and product availability. A familiar example is the passenger airline industry, where a carrier may sell seats on the same flight at many different fares, with fare availability changing as time advances and uncommitted capacity declines. Over the last 30-35 years, revenue optimization practices have transformed the transportation and hospitality industries, where fixed capacity and advance reservations by customers are important structural factors. But model-based, data-driven pricing systems are increasingly common in other industries that have different structures, such as financial services and retail clothing.nnnIn this course students learn about the model structures and modelling techniques that underlie systems for price and revenue optimization. Two topics are given roughly equal emphasis: model-based tactical pricing, including customized pricing and retail markdown management; and classical revenue management, where automated logic is used for booking control (that is, to make yes-or-no decisions in response to booking requests from customers), rather than to set prices explicitly.nnnOIT 542 is tailored to students who already have command of basic modelling techniques and wish to learn about their application in an important business context. To be specific, a prior college course on optimization modelling is assumed as background. (Typically, such courses focus on linear programming, or linear optimization, with secondary coverage of non-linear programming and discrete optimization.) Various aspects of optimization theory will be covered in quick-review format, along with the basics of spreadsheet model representation and stochastic modelling, in order to standardize terminology and establish certain conventions that facilitate grading. In exceptional cases, for students who have strong math background and high mathematical aptitude but no prior coursework on optimization, the background knowledge assumed in OIT 542 may be acquired through self-study; appropriate study materials will be suggested by the instructor upon request. The course is entirely appropriate for second-year MBA students who have completed either base or accelerated MODS in their first year.nnnOIT 542 draws on knowledge acquired and skills developed in two other Management Foundations courses that are taken simultaneously: Data and Decisions (OIT 265) and Microeconomics (MGTECON 200 or 203). Students are required to construct and analyze at least one model for every class session.

OIT 556. Electronic Business and Commerce. 2 Units.

Beyond the hype surrounding the rise and fall of "dot-com" businesses, Information Technology has fundamentally changed the costs of transactions and communications, affecting the ways firms are internally managed and the ways they deal with customers and business partners. This course focuses on approaches to value creation using Information Technology and their application to a variety of business settings. It explores ways in which firms can use electronic business to create value, and strategies for capturing a portion of that value. The course will examine such issues as: how Information Technology affects information flows within the firm; electronic commerce ? applications and pitfalls; how electronic business is likely to change traditional supply chains, logistics and payment systems; and the impact of electronic business on established industries and companies.

OIT 558. Designing Large-Scale Nudge Engines. 1 Unit.

In many of the challenges faced by the modern world, from overcrowded road networks to overstretched healthcare systems, large benefits for society come about from small changes by very many individuals. This course survey the problems and the cost they impose on society. It describes a series of pilot projects which aim to develop principles for inducing small changes in behavior in Societal Networks--transportation networks, wellness programs, recycling systems and, if time permits, energy grids. Students will learn how low-cost sensing and networking technology can be used for sensing individual behavior, and how incentives and social norming can be used to influence the behavior. The effectiveness of this approach in pilots conducted in Bangalore (commuting), Singapore (public transit system), Stanford (congestion and parking), and a wellness program at Accenture-USA will be discussed. Students may experience the incentive platform as participants. This course significantly overlaps with OIT 258 - Incentive Mechanisms for Societal Networks. If you took this class last year, you may not take OIT 558.

OIT 562. Supply Chain Management & Technology. 2 Units.

This course offers an overview of eight technologies for enterprise computing. They are: ERP (Enterprise Resource Planning), EAI (Enterprise Application Interface), data mining, cloud computing, eCommerce, RFID/NFC, mobile technologies, and social network data analytics. On each topic, we discuss underlying technologies and applications using a variety of business cases.

OIT 565. The Role of Information Technology in the New Energy Economy. 2 Units.

One of the most interesting and underexplored areas in modern technology is, as Dan Reicher at Stanford has put it, "where energy technology (ET) meets information technology (IT)". The main driver of widespread use of computing in the modern age is the rapid reduction in the cost of computing services caused by Moore's law. At the same time, a substantial increase in the energy efficiency of computing (doubling every year and a half for more than six decades) has led to a proliferation of mobile computers, sensors, and controls, with implications that have only recently begun to be understood. This class will explore the direct and indirect implications of applying information technology to the production, delivery, and use of energy and associated services. It will first review current knowledge about the direct energy use associated with information technology, including data centers, personal computers, cellular telephones, mobile sensors, and other IT equipment. It will also summarize the state of knowledge about the types, amount, and growth rates of energy services delivered in the US and globally. Finally, it will explore the applications to which information technologies have been put in the energy industry, ranging from the use of visualization and analysis techniques to improve the results of oil and gas exploration, to the computer-aided design of wind turbines and automobiles, to the implications of wireless sensors and controls for the more efficient and effective use of energy. The class will culminate in student projects, typically business plans for new ventures using IT to radically transform how we understand and respond to the world around us.

OIT 571. Homeland Security: Operations, Strategy and Implementation. 2 Units.

This course is a Bass Seminar. This course covers a variety of topics in homeland security: bioterrorism (attacks with contagious agents such as smallpox or non-contagious agents such as anthrax, and attacks on the food supply), pandemic influenza, nuclear security at ports and around cities, the biometric aspects of the US-VISIT Program, the intersection of homeland security and immigration, and suicide bombings. For each of these topics, students will typically read one academic paper that focuses on the operations aspects of the problem, and one reading about the strategic aspects of the problem. For each topic, the professor will spend part of the class lecturing on the problem (including how the results of the academic paper were implemented), and a student will be assigned as a discussant (in addition to a classwide discussion).

OIT 581. Biodesign Innovation: Needs Finding and Concept Creation. 2 Units.

OIT581 is a two-unit version of the Biodesign Innovation course (OIT384). In this course, students learn how to develop comprehensive solutions (most commonly medical devices) to some of the most significant medical problems. In OIT581, students learn the basic principles of biodesign innovation: methods of validating medical needs; techniques for analyzing intellectual property; basics of regulatory (FDA) and reimbursement planning; early market analysis; design principles; brainstorming and early prototyping; university licensing. Course format includes expert guest lecturers and faculty-led practical demonstrations. Students apply the concepts learned by serving as "commercialization and marketing consultants" to multidisciplinary teams of students in the four-unit course (OIT 384). Consultants interact with their teams on a regular basis and provide a consulting report on market analysis and competitive dynamics. Projects from previous years included: prevention of hip fractures in the elderly; methods to accelerate healing after surgery; less invasive procedures to perform bariatric surgery; low cost healing devices for diabetic ulcers; point of care diagnostics to improve emergency room efficiency; novel devices to bring specialty-type of care to primary care community doctors. More than 40,000 patients have been treated to date with technologies developed as part of this program and more than ten venture-backed companies were started by alums of the program. Students must apply and be accepted into the course. The application is available online at <http://www.stanford.edu/group/biodesign/courseapplication.html>, and the application deadline is November 20, 2010. Students must indicate whether they are applying for the four-unit version (OIT384) or two-unit version (OIT581).

OIT 582. Biodesign Innovation, Project A. 2 Units.

Students work in multidisciplinary teams at the intersection of medicine, engineering and business to develop a comprehensive solution to an important medical need of their choice. With coaching from faculty and real-world experts, the teams identify an important medical need and through brainstorming they develop several potential conceptual approaches to solving the need and pursue initial prototyping, along with planning for regulatory and reimbursement pathways. The project culminates with a presentation to a panel of venture investors and entrepreneurs. In previous years, student teams examine needs in emergency and acute care, orthopedics, cardiovascular, wound closure etc. Concurrent registration at OIT581 is required. An application needs to be submitted online.

OIT 583. Biodesign Innovation Core, Spring. 2 Units.

Two quarter sequence (continuation of OIT581 -- see OIT 581 for a general description of the Biodesign Innovation course and OIT384/385 for a description of the four unit option). The second quarter focuses on how to take a conceptual solution to an important medical need forward from early concept to technology translation, development and possible commercialization. Students expand on the topics they learned in OIT581 to learn about prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation and commercialization route (licensing vs. start-up); marketing, sales and distribution strategies; ethical issues including conflict of interest; fundraising approaches and cash requirements; financial modeling; essentials of writing a business or research plan; strategies for assembling a development team. Students serve as "commercialization consultants" to a multidisciplinary team in OIT385. Students interact regularly with their team and prepare a consulting report that outlines a funding strategy and validates the financial model developed by the team. (OIT581 or OIT384 are a pre-requisite). New students (i.e. students who did not take OIT581/OIT384) in the winter quarter will need to submit an application at <http://www.stanford.edu/group/biodesign/courseapplication.html> by February 19, 2011. In the application they should indicate whether they are applying for the 2-unit or 4-unit version. Students who took OIT581/OIT384 in the winter quarter are automatically accepted into the spring quarter and they can choose the version they want: 2 unit or 4 unit.

OIT 584. Biodesign Innovation Project, Spring. 2 Units.

Students work in multidisciplinary teams at the intersection of medicine, engineering and business to further develop and refine the solutions they identified in OIT 582. The focus this quarter is on implementation. The teams select the most promising solution from the concepts of the first term and move forward into prototyping and project planning. Teams develop specific strategies for patenting, FDA submission, commercialization and third-party reimbursement, along with funding strategies (e.g. licensing agreement or launching a start-up). The project culminates with a presentation to a panel of venture investors. OIT 583 should be taken concurrently. Permission of instructor needed if student has not taken OIT 582.

OIT 587. Global Biodesign. 1 Unit.

Seminar examines the development and commercialization of medical technologies in the global setting focusing primarily on Europe, India and China. Faculty and guest speakers from industry and government discuss the status of the industry, as well as opportunities in and challenges to medical technology innovation unique to each geography. Topics related to development of technologies for bottom of the pyramid markets will also be addressed.

OIT 601. Fundamentals of OIT. 3 Units.

The goal of this course is to provide first-year Ph.D. students in OIT with sufficient fundamentals to subsequently take advanced research seminars. The course covers the very basics of six topics: queueing theory, inventory theory, multi-echelon inventory theory, game theory, stochastic dynamic programming and econometrics. Lectures will be given by advanced Ph.D. students in OIT.

OIT 602. Dynamic Pricing and Revenue Management I. 2 Units.

In tandem with OIT 603, this course explores the application of stochastic modeling and optimization to two closely related problem areas: (a) dynamic price selection, and (b) dynamic allocation of limited capacity to competing demands. As background, students are assumed to know stochastic process theory at the level of Statistics 217-218, microeconomics at the level of Economics 202N, and optimization theory at the level of MS&E 211, and to have some familiarity with the basic ideas of dynamic programming. Additional dynamic programming theory will be developed as needed for the applications covered. Emphasis will be on current research topics, especially in the realm of airline revenue management.

OIT 603. Dynamic Pricing and Revenue Management II. 2 Units.

In tandem with OIT 602, this course explores the application of stochastic modeling and optimization to two closely related problem areas: (a) dynamic price selection, and (b) dynamic allocation of limited capacity to competing demands. As background, students are assumed to know stochastic process theory at the level of Statistics 217-218, microeconomics at the level of Economics 202N, and optimization theory at the level of MS&E 211, and to have some familiarity with the basic ideas of dynamic programming. Additional dynamic programming theory will be developed as needed for the applications covered. Emphasis will be on current research topics, especially involving customized pricing of financial services. OIT 602 is not a prerequisite for OIT 603 but is highly recommended.

OIT 624. Theory of Inventory Management. 3 Units.

The course provides students a strong theoretical background in several fundamental aspects underlying inventory theory. Topics include deterministic inventory models (EOQ, Power-of-two policies, ELS, serial and assembly networks), the Newsvendor model, multi-period stochastic inventory theory, serial and multi-echelon models, approximation algorithms, batch ordering and lost-sales models, infinitesimal perturbation analysis, distribution-free inventory theory, models for joint pricing and inventory decisions. The course also provides an overview of relevant mathematical concepts used in inventory theory, including convexity, duality, probability theory, finite and infinite state Markov decision processes, and comparative statics.

OIT 643. Special Topics in Supply Chain Management. 3 Units.

To compete successfully in today's market place, companies need to manage effectively the efficiency of activities to design, manufacture, distribute, service and recycle their products or services to their customers. Supply chain management deals with the management of materials, information and financial flows in a network consisting of suppliers, manufacturers, distributors, and customers. The coordination and integration of these flows within and across companies are critical in effective supply chain management. In parallel to the development of new practices and concepts in industry, there have been emerging research that are based on (1) structuring new processes and supply chain networks with the new technologies; (2) exploring ways to do planning and make decisions consequently; (3) quantifying the benefits as a result; and (4) aligning the incentives of multiple players in a supply chain when the costs and benefits to these players are different. This course will examine evolutionary research that focuses on the above themes. We will explore how such problems can be formulated, models can be structured, and analysis can be performed to address information-based supply chain management issues. You are all challenged to think, discuss, share, and debate on the issues brought up. The end result of this course is, hopefully, that we can start defining new, interesting and exciting research paths, and maybe even beginning to pursue some of the research ideas generated.

OIT 655. Foundations of Supply Chain Management. 3 Units.

This course provides an overview of research in supply chain management (SCM). It has three parts. The first part reviews basic tools of SCM research through selected readings in economics, IT and operations research. The second part reviews the literature in SCM, covering topics such as inventory models, information sharing, information distortion, contract design, value of integration, performance measurement, risk management, and the use of markets for procurement. The last part is devoted to recent advances in SCM research.

OIT 660. Applied OIT. 4 Units.

Description is currently unavailable because of ongoing review of the OIT PhD program by OIT faculty. Description will become available when the review is completed at the end of the Summer.

OIT 663. Methods of Operations/Information Systems. 4 Units.

This course covers basic analytical tools and methods that can be used in research in operations and information systems. The emphasis is on foundations of stochastic inventory theory. Basic topics include convexity, duality, induced preference theory, and structured probability distributions. Much of the course is devoted to Markov decision processes, covering finite and infinite horizon models, proving the optimality of simple policies, bounds and computations, and myopic policies.

OIT 664. Stochastic Networks. 3 Units.

Processing network models may be used to represent service delivery systems, multi-stage manufacturing processes, or data processing networks. The first half of this two-unit course consists of lectures on performance analysis (e.g., estimating congestion and delay) for classical product-form networks and for Brownian networks. The second half consists of student presentations of recent papers on managing processing networks, typically with game-theoretic aspects. Prerequisites: Statistics 217 and 218, or consent of instructor; some prior exposure to stochastic models in general, and queueing theory in particular, is useful but not essential.

OIT 665. Seminar on Information-Based Supply Chain Management. 4 Units.

This seminar will highlight the research evolution and advances on the smart use of information in supply chain management. Such usage has helped companies sharing information to coordinate their supply chain and to realign their incentives. It has also helped reduce the so-called bullwhip effect. Latest information technology like RFID (radio-frequency identification) has also enabled visibility and structural changes that result in significant supply chain performance enhancements. This seminar will focus on the modeling approaches used by researchers that tried to capture the values and potentials of such applications.

OIT 668. Dynamic Pricing and Revenue Management. 3 Units.

The goal of this course is to provide a comprehensive introduction to the theory and practice of revenue management. It will comprise of a set of lectures that will cover the theoretical fundamentals of the area as well as an overview of current research developments through the presentation and discussion of recent papers. Topics include capacity control (single-resource and network), consumer behavior and market response models, dynamic pricing, procurement auctions, price experimentation, supply chain management and pricing.

OIT 672. Stochastic Control in Operations and Economics. 4 Units.

The first half of this course covers (a) the basic theory of Brownian motion, (b) Ito stochastic calculus, and (c) the rudiments of continuous-time stochastic control, all undertaken at a brisk pace, aimed at students who already know the basics or else have a strong enough math background to learn them quickly. The text for this part of the course will be *Brownian Motion and Stochastic Flow Systems*, by J. Michael Harrison, John Wiley and Sons, 1985. (The book is available as a scanned PDF file at <http://faculty-gsb.stanford.edu/harrison/HarrisonBook.pdf>.) The second half of the course will explore in depth several models arising in operations research and economic theory. MS&E 322 (Stochastic Calculus and Control) provides ideal preparation, but this course is also suitable for students who have taken Statistics 310 A, B (measure theoretic probability) and have no previous exposure to stochastic calculus or stochastic control.

OIT 673. Data-driven Decision Making in Healthcare. 4 Units.

This course aims to introduce students to research topics in evidence-based healthcare. The course covers topics: clinical decision support, predictions and risk adjustments, high dimensional statistical models, computational methods for large-scale statistics, decision making under uncertainty, causality and counterfactuals.

OIT 691. PhD Directed Reading. 1-15 Unit.

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, POLECON 691, STRAMGT 691.

OIT 692. PhD Dissertation Research. 1-15 Unit.

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, POLECON 692, STRAMGT 692.

OIT 802. TGR Dissertation. 0 Units.

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, POLECON 802, STRAMGT 802.

Ophthalmology Courses

OPHT 199. Undergraduate Research. 1-18 Unit.

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

OPHT 201. Clinical Topics in Ophthalmology. 1 Unit.

Introduction to the professional opportunities available to the ophthalmologist in the areas of clinical research, community health, biotech and pharmaceutical development, international blindness prevention, graduate and post-graduate education.

OPHT 202. Clinical Topics in Ophthalmology. 1 Unit.

(Continuation of 201) Professional opportunities available to the ophthalmologist in the areas of clinical research, community health, biotech and pharmaceutical development, international blindness prevention, graduate and post-graduate education.

OPHT 203. Introduction to Ophthalmology. 1 Unit.

(Continuation of 202) Introduction to the practical skills used within the field of ophthalmology. Diagnostic tools and instruments; applications of these tools; practice using instruments under the guidance of faculty and residents; practice in microsurgical techniques with one-on-one guidance.

OPHT 280. Early Clinical Experience in Ophthalmology. 1-2 Unit.

Provides an observational experience as formulated by the instructor and student. Prerequisite: consent of instructor.

OPHT 299. Directed Reading in Ophthalmology. 1-18 Unit.

Prerequisite: consent of instructor.

OPHT 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

OPHT 399. Graduate Research. 1-18 Unit.

Students to undertake investigations sponsored by individual faculty members. Opportunities are available at both predoctoral and postdoctoral levels. Prerequisite: consent of instructor.

Oral Communications Courses

ORALCOMM 10C. Debate Club. 1 Unit.

Enrollment in this course is limited to students selected as members of Stanford Debate Club. All enrollees must complete at least 30 hours of participation evidenced by traveling to at least one competition during the quarter and attending regular practices. Participation must be verified by the Debate Club leadership in order to receive credit.

ORALCOMM 91. The Mythic Life. 3 Units.

Why in the twenty-first century do many of our most acclaimed and popular stories carry narrative forms that are thousands of years old? Star Wars, The Lord of the Rings, Titanic, Batman, all are deeply informed by ancient myth, folklore, and oral traditions. One reason is that the deep stories of myth and folklore act as a bridge between our personal lives and the profoundest aspects of the human condition; they offer a way to understand our lives and how to live them. This course offers an in-depth study and experience of myth and folklore, the roots of modern story and the roots of our own stories. You will hear these myths live, as people have for thousands of years; from Trickster folk tales to the medieval Arthurian grail epic Parzival. You will also draw from these epics to create and tell a mythic story of your own. This will give you an appreciation for myth as a living principle, not just something from a long time ago. It will also help you become a good storyteller by developing your memory, improvisation, and image-based thinking. This ability to tell a story well is at the root of authentic leadership and helps us bring a powerful, embodied perspective to championing a cause or just debating over coffee.

ORALCOMM 105. Voice and Articulation Intensive for Non-Native English Speakers. 1-2 Unit.

Workshop focusing on exercises designed to help foreign students improve their articulation and delivery in English. Work includes breath, sound, enunciation, melody, and colloquialism. Course was previously offered as CTL 105.

ORALCOMM 115. Voice Workshop. 1-2 Unit.

Focus is on breath, voice production, expansion of vocal range and stamina, and clarity of articulation. Geared toward public speaking including presentations, lectures, and job talks. May be taken in conjunction with ORALCOMM 117. ORALCOMM 115/215 was previously listed as CTL 115/215.

Same as: ORALCOMM 215.

ORALCOMM 117. The Art of Effective Speaking. 3 Units.

The principles and practice of effective oral communication. Through formal and informal speaking activities, students develop skills framing and articulating ideas through speech. Strategies for speaking extemporaneously, preparing and delivering multimedia presentations, formulating persuasive arguments, refining critical clarity of thought, and enhancing general facility and confidence in oral self-expression. ORALCOMM 117/217 was previously listed as CTL 117/217. Same as: ORALCOMM 217.

ORALCOMM 118. Public Speaking: Romancing the Room. 3 Units.

A practical approach to the art of public speaking. Emphasis is on developing skills in speech types including impromptu, personal experience, interviewing, demonstration, persuasive, and special occasion. Materials include videotape, texts of famous speeches, and a final dinner program of speeches. Students evaluate presentations by others. \$55 materials fee. Course was previously offered as CTL 118.

ORALCOMM 119. Oral Communication Tutor Teaching Practicum. 2 Units.

Seminar. For students with a strong background in public speaking who wish to train as public speaking tutors for the Oral Communication Program. Readings, exercises, and supervised teaching refine speaking skills. Preparation to serve as a peer tutor in a variety of academic disciplines. Prerequisite: application and consent of instructor. Course was previously offered as CTL 119.

ORALCOMM 122. "The TED Commandments": The Art and Heart of Effective Public Speaking. 3 Units.

Designed around the presentation principles of TED talks, this course approaches public speaking as an art of engagement and possibility. Students will learn a range of strategies -- both traditional and innovative -- for crafting a compelling message and delivering it with clarity, authenticity, and power. Limited enrollment. Course was previously offered as CTL 122/222. Same as: ORALCOMM 222.

ORALCOMM 177. Performance of Power: Oratory and Authority from the Ancient World to the Postmodern. 4 Units.

Speech as action has long been seen as essential to leadership. Theories and examples of oratory, from Aristotle to Barack Obama, assessing each as model of voice-activated authority. The impact of mass media technologies as they transform the public space of oratory. Course was previously offered as CTL 177.

ORALCOMM 215. Voice Workshop. 1-2 Unit.

Focus is on breath, voice production, expansion of vocal range and stamina, and clarity of articulation. Geared toward public speaking including presentations, lectures, and job talks. May be taken in conjunction with ORALCOMM 117. ORALCOMM 115/215 was previously listed as CTL 115/215. Same as: ORALCOMM 115.

ORALCOMM 217. The Art of Effective Speaking. 3 Units.

The principles and practice of effective oral communication. Through formal and informal speaking activities, students develop skills framing and articulating ideas through speech. Strategies for speaking extemporaneously, preparing and delivering multimedia presentations, formulating persuasive arguments, refining critical clarity of thought, and enhancing general facility and confidence in oral self-expression. ORALCOMM 117/217 was previously listed as CTL 117/217. Same as: ORALCOMM 117.

ORALCOMM 219. Oral Communication for Graduate Students. 1-3 Unit.

Graduate student speaking activities such as teaching (delivering lectures, guiding discussion, and facilitating small groups), professional presentations and conference papers, and preparing for oral exams and defenses. In-class projects, discussion, and individual evaluation assist students in developing effective techniques for improving oral communication skills. Course was previously offered as CTL 219.

ORALCOMM 222. "The TED Commandments": The Art and Heart of Effective Public Speaking. 3 Units.

Designed around the presentation principles of TED talks, this course approaches public speaking as an art of engagement and possibility. Students will learn a range of strategies -- both traditional and innovative -- for crafting a compelling message and delivering it with clarity, authenticity, and power. Limited enrollment. Course was previously offered as CTL 122/222. Same as: ORALCOMM 122.

Organizational Behavior Courses

OB 205. Managing Groups and Teams. 1 Unit.

This course introduces you to the structures and processes that affect group performance and highlights some of the common pitfalls associated with working in teams. Topics include team culture, fostering creativity and coordination, making group decisions, and dealing with a variety of personalities. You will participate in a number of group exercises to illustrate principles of teamwork and to give you practice not only diagnosing team problems but also taking action to improve total team performance.

OB 206. Organizational Behavior. 2 Units.

Building on the discipline of social psychology, this course helps you cultivate mindsets and build skills to understand the ways in which organizations and their members affect one another. You will learn frameworks for diagnosing and resolving problems in organizational settings. The course relates theory and research to organizational problems by reviewing basic concepts such as individual motivation and behavior; decision making; interpersonal communication and influence; small group behavior; and dyadic, individual, and inter-group conflict and cooperation.

OB 209. Leadership Laboratory. 2 Units.

In the Leadership Labs class we ask you to consider the question, "Why would someone follow YOU?" This is a course in which you consider what kind of leader you want to be, what kind of leader you are, and how to align your leadership behavior with your leadership goals. In this class you will have an opportunity to lead your squad and in doing so to discover your strengths and challenges as a leader. You will receive feedback about your approach to leadership and you will have the opportunity to try out new skills and tools. Students will be placed into 5-6 person "squads" and the majority of class time will be spent in these squads. Your squad will meet to work on basic leadership challenges (e.g. managing conflict, assessing a team's progress). There will be the opportunity for a lot of feedback so you can achieve a deeper understanding of the impact of your behavior on others. The squads will do role-play cases and group exercises designed to help you think more deeply about the dynamics in your workgroup and to allow you to practice and experiment with new ways of leading. Each session will be divided into two segments, and one squad member will be the leader for each segment. MBA1 squad members will rotate through the segment leader position. Your squad will have an MBA2 Leadership Fellow assigned to it and he or she will also be present for these meetings in order to provide coaching to the leader and to the squad as whole. Over the course of the quarter your squad will also produce an outside of class project oriented toward changing lives, changing organizations, and changing the world. The project is intended to further challenge your leadership skills and lead to greater reflection about the nature of effective leadership. In addition to being graded as part of your Lab grade, your squad's project will be shared with the entire GSB Community and evaluated by a panel of alumni judges. Finally, the quarter culminates with the Executive Challenge. The Executive Challenge will be an opportunity for you to further refine your leadership skills by engaging with alumni judges in role plays that test your ability to lead effectively. The alumni will provide you feedback and evaluate your performance.

OB 219. MSx: Organizational Design. 2 Units.

This course examines fundamental issues of general management and leadership within an organization. You will learn about setting an organization's strategic direction, aligning structure to implement strategy, and leading individuals within the firm. You will study the interplay among formal structure, routines, informal networks, and culture in shaping organizational performance.

OB 259. Sloan: High Performance Leadership. 4 Units.

This course asks the question: What does it take to build a high-performance unit? The focus is on middle and upper-middle management in contemporary complex organizations. These are organizations that have complex tasks, exist in a rapidly changing environment, and have highly skilled subordinates. The premise of the course is that traditional methods of management may produce adequate levels of performance but prevent excellence from developing. New approaches to leadership will be presented that are more likely to lead to a truly high-performing system. Time will be spent discussing the components of effective leadership, what a manager can do to build a high-performing department, and what members can do to support the leader who wants to initiate such changes. The first two classes are required. In addition to class, students will meet for 2 1/2 hours each week in a Skill Development Group to apply the course material to their own personal development. (While there is minimal overlap in content between OB 259 and OB 374 and these two classes are highly complimentary, both require Journals and an evening group. We therefore recommend against taking both classes in the same quarter for workload reasons.).

OB 278. MSx: Organizational Behavior. 2 Units.

Building on the discipline of social psychology, this course helps you cultivate mindsets and build skills to understand the ways in which organizations and their members affect one another. You will learn frameworks for diagnosing and resolving problems in organizational settings. The course relates theory and research to organizational problems by reviewing basic concepts such as individual motivation and behavior; decision making; interpersonal communication and influence; small group behavior; and dyadic, individual, and inter-group conflict and cooperation.

OB 289. MSx: Negotiations. 2 Units.

This course is designed to improve students' skills in all phases of a negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multi-party settings, buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy and the management of integrative and distributive aspects of the negotiation process. This course is based on a series of simulated negotiations in a variety of contexts, including one-on-one, multiparty, and team negotiations. When playing a role in a simulated conflict, you will be free to try out tactics that might feel uncomfortable in a real negotiation. You will get feedback from your classmates about how you come across. In sum, you can use this course to expand your repertoire of conflict management and negotiation skills, to hone those skills, and to become more adept in choosing strategies and tactics that are appropriate for a particular negotiation situation. This course is an intense, more compact version to the elective OB381 and is almost identical to the OB581 immersion course. Thus, students should not take either of these courses as there is considerable overlap among the three. Attendance and participation in the negotiation exercises are mandatory.

OB 322. Networks. 4 Units.

This course is designed to improve your effectiveness as a manager by introducing you to both the concepts and tools that are part of the "new science of social networks" as they apply to organizations. In this course, you will develop the skills to understand social networks and recognize social capital, both offline and online, as well as be able to identify key elements of your own and others' social networks that enhance competitive capabilities. Topics to be covered include how social networks affect power and influence, leadership, innovation and the generation of novel ideas, careers, organizational change and competitive advantage. Additional topics to be covered include the increasing importance of online social networks in organizational life and the importance of social cognition and how it can be used to enhance social capital. At the conclusion of this course you will have the skills to map out social networks, diagnose features of the networks that either help or hinder the performance of individuals, groups and companies, and be able to manage important features of social networks in organizations.

OB 330. Leadership Fellows I. 4 Units.

The Arbuckle Leadership Fellows Program plays an integral role in the GSB leadership curriculum by bringing together a group of talented second years to support the leadership development of the first-year class. OB330, an 8 unit two-quarter MBA2 elective course, is the academic component of this program and runs the entirety of both Autumn and Winter Quarters. Both quarters must be completed to receive any units of credit. The course is open only to those students who have applied and been accepted into the Fellows Program. Interested students apply during at the start of Winter Quarter of their first year and undergo a competitive application process, after which successful applicants are invited to take part in the program. Informational meetings are held late in Autumn Quarter and in early Winter Quarter and Fellows are selected from the first year class in mid- Winter Quarter. nn nnKnowing how to develop others is a crucial leadership competency. In this class, Fellows develop the advanced leadership skills of leading leaders and developing others through coaching and mentoring. Among the competencies developed in this class are: 1) Team Coaching Skills (e.g. facilitating a group, diagnosing group dynamics, debriefing, coaching without undermining the leader), 2) Individual Coaching Skills (e.g. effective inquiry, asking powerful questions, balancing support and challenge, providing effective feedback, holding others accountable, utilizing, valuing and connecting across differences and power differentials, using oneself in service of another's development) and 3) Personal Development Skills (e.g. self-reflection and self-awareness, leveraging strengths, stretching outside one's comfort zone.)nn nnIn the Autumn Quarter Fellows are assigned to a squad of six MBA1s in Leadership Labs. Fellows guide their MBA1 squad through the learning process in the Labs and provide both individual and team coaching to their MBA1 squad members. In addition to the work with their MBA 1 squad, Fellows provide in-depth 1:1 coaching to three additional MBA1 students who are not members of their squad. This 1:1 coaching begins after Autumn midterms and continues through the end of Winter Quarter. nn nnFellows classes meet twice a week for 105 minutes. There will be a reading list of conceptual material which will be supplemented during class with lectures and discussions. Students will have the opportunity to apply those concepts through role-playing and experiential exercises during class time as well as in their coaching and mentoring of their MBA1 coachees. Additionally, Fellows will attend weekly Leadership Labs with the first year squad to which they have been assigned and meet 1:1 with MBA1 coachees. Fellows meet regularly with five of their peers in "clinics," standing groups led by a GSB Leadership Coaches, professional executive coaches who are a staff members of the school's Center for Leadership Development and Research (CLDR). Fellows meet with their Leadership Coach and clinic approximately every other week during regular class time to discuss specific strategies for working with their first year students. Fellows also periodically meet with their Leadership Coach one-on-one to hone their skills and explore their areas for specific improvement.nn nnNote: OB374, Interpersonal Dynamics, is a PRE/CO-REQUISITE for this course; students who want to be Fellows are advised to assess whether that is a class they want to take in the spring quarter of their first year. Additionally, signing up for 1:1 coaching by a Fellow as an admit strengthens a MBA1 student's application to the Arbuckle Leadership Fellows program.

OB 331. Leadership Fellows II. 4 Units.

This course is the continuation of Leadership Fellows I, an 8-unit course that begins in Autumn Quarter. During this quarter Fellows will continue to deepen their coaching and mentoring skills, and will focus exclusively on in-depth 1:1 coaching with three MBA1 coachees (who were not members of their MBA1 squad.) Classes and clinics continue as in Autumn Quarter.

OB 333. Acting with Power. 3 Units.

The ability to function effectively within a hierarchy is a crucial determinant of managerial success, yet many people struggle with "authority issues" that make certain hierarchical roles and positions difficult for them. This course draws on the craft of acting and the science of psychology to help students learn to use themselves to develop the characters that can play these roles effectively. nnnThis class is designed specifically for students who have trouble "playing" authoritative roles: those who find it difficult to act with power, status, and authority. It will also be useful for students who find it difficult to share power and authority, which involves accepting and deferring to the power and authority of others. Participants will be asked to read, think deeply about, and share some of their own feelings about power and authority, and the origins of those feelings. They will also be asked to prepare for and present a series of in-class performances that involve playing characters with and without power, in scenes that highlight the interactions and relationships between high and low power characters. These performances will take up much of our time during class. Out-of-class assignments will include reading important works on psychology, and on the theory and practice of acting, as well as writing short essays analyzing their own and others' performances.

OB 336. Insight to Outcome. 4 Units.

Getting from "strategic insight" to "desired outcome" (achieving the right result) continues to be a core challenge for many organizations and leaders. In this course, we develop a framework and approach for the "insight to outcome" sequence, study some of the key levers available to managers, and learn from some common pitfalls. The bulk of the course will be devoted to the practical application of the approach to a number of important business processes, such as merger integration, corporate and business unit transformation, and strategy development. Some class sessions will involve class visits by topical experts in these applications. nnnThe course is designed for second-year MBAs. It will appeal to students interested in an exploratory courseâ??more of a "how to think about it" course than a "toolkit" course. Grades will be based on class participation, a group project, and a final exam.nnnClass size is limited to 40.

OB 343. Scaling up Excellence in Organizations. 4 Units.

A problem for every manager is to make 'good' behaviors spread quickly and to shrink 'undesirable' behaviors quickly. This course provides you practical frameworks to accomplish these managerial goals. We will examine issues such as scaling Idea generation, scaling knowledge sharing, scaling the adoption of ideas across firms, scaling change in global firms. We will be using a newly written series of cases for this course and also draw on guest speakers. We will be require a project that may involve design thinking - so we encourage those who have not had exposure to design thinking to apply.

OB 362. Leadership Coaching and Mentoring. 3 Units.

This two-quarter course is offered for 6 units and runs for the Winter and Spring Quarters. Both quarters must be completed to receive any units of credit. THERE IS BOTH A PREQUALIFICATION AND A PRE/CO-REQUISITE for this course. It is open to a maximum of 24 MBA2s who have passed an assessment of their potential to coach effectively, though they need not have been coached as first years. (The number of students may be increased to 36 if sufficient first-year coachees are identified.) The pre/co-requisite is OB 374-Interpersonal Dynamics. (If taken as a co-requisite, OB 374 must be taken in the winter quarter.) There will be a reading list of conceptual material which will be supplemented during class with lectures and discussions. Students will have the opportunity to apply those concepts through role-playing and exercises during class time. Each MBA2 will be assigned three MBA1s to coach. The MBA2 coaches will meet with their MBA1s five times each quarter (i.e. a total of 10 coaching sessions) in a series of semi-structured coaching activities. In addition, the MBA2 students will meet, in groups of 6, with a Master Coach for a two-hour clinic approximately every other Friday during the Winter Quarter during class time. During Spring Quarter, students will meet every Monday (only) from 3:15 to 5:00 pm (alternating between class and clinics) with two additional Friday classes to be held on Friday, April 1, and Friday, April, 15 from 3:15 to 5:00 pm. Note: Students MUST attend the first class (including waitlisted) or they will be dropped. The drop deadline for this course is Friday, January 7, at 11:59 p.m. (i.e. earlier than standard GSB add/drop deadline).

OB 363. Leadership Perspectives. 4 Units.

What does it mean to be a principled leader? What role do values play in an organization, and how do successful leaders apply their values in their daily business lives? This course examines the concept of principled leadership and the various ways that leaders try to institutionalize particular values within the organizations they lead. Equally important, it explores the difficult challenges that leaders sometimes face when trying to apply their principles in a tough, fast-paced business environment, where others may not share the same expectations. Through assigned readings, interactive lectures with visiting executives, and weekly small group discussions, students will learn how practicing leaders implement their principles, while reflecting the realities of different cultural expectations and meeting business demands. The course will provide a forum for students to learn directly from practicing leaders and to think introspectively about their own personal values, leadership styles, and long-term aspirations.

OB 368. How to Make Ideas Stick. 4 Units.

Having a good idea is not enough, we must also be able to convey our ideas in a way that people can understand and act on them. But often our messages don't persuade or persist. This course assumes that we can craft more effective messages by understanding the principles that make certain ideas stick in the natural social environment: Urban legends survive in the social marketplace without advertising dollars to support them or PR professionals to spin them. How could we make true or useful information survive as well as bogus rumors? We will use research in sociology, folklore, and psychology to analyze what kinds of ideas survive the selection process in the marketplace of ideas and to develop a set of strategic tools to craft ideas that are more likely to survive. Topics covered include crafting messages for complex information that don't exceed the capacity of human attention and memory, using emotional appeals that inspire people and motivate action, acquiring attention in a crowded environment, and gaining legitimacy for new ideas, approaches, and technologies.

OB 372. High-Performance Leadership. 4 Units.

This course asks the question: "What does it take to build high-performance?" The focus is on middle and upper-middle management in contemporary organizations that have complex tasks, exist in a rapidly changing environment, and have highly skilled subordinates. The premise of the course is that traditional methods of management may produce adequate levels of performance but prevent excellence from developing. New approaches to leadership will be presented that are more likely to lead to a truly high-performing system. Time will be spent discussing the components of effective leadership, what a manager can do to build a compelling vision, strong teams, and mutual influence sideways and upwards as well as with direct reports. Also, what members can do to support the leader who wants to initiate such changes. In addition to class, students will meet for 2 1/2 hours each week in a Skill Development Group to apply the course material to their own personal development. (While there is minimal overlap in content between OB 372 and OB 374 and these two classes are highly complementary, both require Journals and an evening group. We recommend against taking both classes in the same quarter for workload reasons.)

OB 374. Interpersonal Dynamics. 5 Units.

PRE-QUALIFICATION IS REQUIRED BY THE DEADLINE (APPROXIMATELY TWO WEEKS BEFORE THE QUARTER BEGINS). The focus of this course is to increase one's competencies in building more effective relationships. Learning is primarily through feedback from other group members. This course is very involving and, at times, can be quite emotional. However, this course is not a substitute for therapy; we deal more with inter-personal issues than with intra-personal ones. If you are in therapy, please talk this over with your therapist and get their advice before enrolling in this course. The students are divided into three 12-person T-groups that meet the same evening of the class. It is very important to note that when you decide to take this course, you make an explicit contract to be actively involved. Attendance to the first class is required for the 1-day/week section of this class. Attendance to the first three classes is required for the 2-day/week sections of this class. Failure to attend the first class will result in an automatic drop. Students who are waitlisted must attend either a 1-day/week class or the first two classes of a 2-day/week section to secure a place in the course should space open up. It is the student's responsibility to notify respective OB 374 faculty if your attendance is aimed at fulfilling your waitlist requirement. You also need to inform the faculty member for which specific section you are waitlisted. T-group meetings for all sections will meet for 3 hours the same evening as 1-day/week class and the same evening of the first day of the 2-day/week section. The class has a weekend retreat the seventh or eighth week (check your specific section) of the course. Because of the highly interactive nature of this course, it is very important that all students attend all sessions. Missing class, class-t-group, evening T-group, or portions of the weekend will negatively influence your grade and may result in a student's grade being dropped one grade level (for each absence). Arriving late on Friday to the weekend will negatively influence your grade level- missing any more of the weekend beyond that will result in a U. Students must pre-qualify before taking this course. Qualification essays are due 10 days before the first day of the class. More information about the qualification process can be found at <https://sites.google.com/a/stanford.edu/ob374-prequalification/>.

OB 377. The Paths to Power. 4 Units.

Power and influence processes are ubiquitous and important in organizations, so leaders need to be able both to understand power and to act on that knowledge. This course has three objectives: 1) increasing students' ability to diagnose and analyze power and politics in organizational situations; 2) increase students' skills in exercising power effectively; and 3) helping students come to terms with the inherent dilemmas and choices, and their own ambivalence, involved in developing and exercising influence. Topics covered include: the sources of power, including individual attributes and structural position; dealing with resistance and conflict; obtaining allies and supporters; maintaining power; how and why power is lost; living in the limelight--the price of having power; preparing oneself to obtain power; and the use of language and symbolism in exercising power. The class involves a reasonably large number of written, self-reflective assignments as well as a group project (doing a power diagnosis on an external subject) and an individual project (using the class material during the quarter to gain power in some group or organization or develop a plan for doing so). The emphasis is on both learning the material and incorporating it into one's own actions and plans.

OB 381. Conflict Management and Negotiation. 3 Units.

Conflict is unavoidable in every organization. The key question is how it will be handled: will it escalate to dysfunctional levels or will it be effectively managed? Hence, a first aim of the course is to develop your ability to analyze conflicts, to look beneath the surface rhetoric of a conflict, to isolate the important underlying interests, and to determine what sort of agreement (if any) is feasible. We'll analyze which negotiation strategies are effective in different conflicts. We'll also examine psychological and structural factors that create conflict and often pose a barrier to its resolution. But understanding how to analyze a conflict is not enough. To manage conflict effectively, you need a broad repertoire of behavioral skills. Developing these is the second aim of the course. To achieve this, negotiation exercises are used in every session. When playing a role in a simulated conflict, you will be free to try out tactics that might feel uncomfortable in a real one. You will get feedback from your classmates about how you come across. In sum, you can use this course to expand your repertoire of skills, to hone your skills, and to become more adept in choosing when to apply each skill.

OB 383. Lives of Consequence: How Individuals Discover Paths to Meaningful Engagement. 3 Units.

This Bass Seminar will examine the lives of extra-ordinary individuals who have made exceptional contributions to society, either through their impact on business, politics, science, social activism, or the arts. We will take a close look, for example, at creative individuals such as Steve Jobs, George Lucas, and Pixar's Brad Bird; political achievers such as Robert F. Kennedy, Martin Luther King and Margaret Thatcher; business leaders such as Bill and Melinda Gates, Whole Foods CEO John Mackey, and Starbuck's Howard Schultz (to name just a few). We will use these examples to develop useful ideas about the narrative unfolding of creative and extra-ordinary lives. In addition, using theories and evidence from the social and behavioral sciences, we will develop a conceptual framework for thinking about individuals' "paths to extra-ordinary achievement." Drawing on psychological and philosophical theory and research, we will also examine how human achievement relates to happiness and the perception of meaning in one's life. You will have a chance to work in small groups to study individuals or domains of special interest. Students will also have an opportunity to apply the framework to their own lives using a series of enjoyable reflective exercises, including writing and public speaking exercises. The seminar will be very discussion oriented and quite lively. The goal of the seminar is to change how you think about your self and your life!.

OB 385. Leading Social Change: Educational and Social Entrepreneurship. 4 Units.

(Same as OB 385) The course provides an overview of different approaches to leading change in the social sector, drawing primarily, but not exclusively, on case examples in education. While there is a substantial need for innovation and visionary leadership in sectors such as education, social entrepreneurs who want to drive change must appreciate the significant barriers and unique opportunities presented by non-market forces in these sectors. The course will equip students with an appreciation for different mechanisms of change and theories of action as well as some of the challenges of initiating and sustaining meaningful change in social sectors such as education. The course will draw on readings and case studies, and we will benefit from the wisdom of an inspirational group of guest lecturers. While the course will benefit any student concerned with making a positive impact in the world, it is particularly (although not exclusively) appropriate for students in the joint MA/MBA program as well as those who will lead social change through nonprofit consulting or entrepreneurship. Same as: EDUC 321X.

OB 387. Redesigning Work for 21st Century Men and Women. 4 Units.

Research on the Millennial Generation (i.e., those born between 1980-2000) shows that millennials, as compared to earlier generations, have quite different values and priorities when it comes to work. For instance, millennials report that they place a high value on autonomy and creativity at work, and prefer to self-manage their personal productivity. They also report that they value being a good parent and having a good marriage over having a high-paying career. Despite this research, our organizations have been slow to respond to a new generation of workers. This has led to high levels of disengagement, and lower levels of productivity in many organizations. This class will explore the gap between how our organizations are designed, and what a new generation of workers desire in terms of work. Students will work in teams to design a new workplace that is reflective of what workers want in terms of their work. The first part of the course will focus on what the issues and problems are in how organizations are designed for an earlier generation of workers, while the second part of the course will be set aside for team-based project work and presentations.

OB 388. Leadership in the Entertainment Industry. 3 Units.

The entertainment industry is one of the largest and most important industries in the world. It is an industry characterized by tremendous opportunities and great uncertainties. The industry is currently undergoing tremendous change as new technologies transform the way entertainment is produced and disseminated throughout the world. For all of these reasons, the dynamic industry creates tremendous challenges for entrepreneurial students interested in leaving an artistic or creative imprint on the world. This course is designed to help prepare students for careers in the media industries, and to explore leadership within them. The industry is truly an intersection of art and commerce, and a major portion of the course will involve bringing to the class leaders who represent key areas of the entertainment industry, both on the business and creative sides. As with any business, the entertainment industry is driven by the vision of its leaders. These leaders daily make financial and artistic decisions, and manage staff and productions with the goal of producing entertainment product meant to be seen as widely as possible, and meant to make a profit. It is hoped that through interaction with these speakers, students taking this course will gain a greater understanding of the industry and what it takes to succeed in it. Further, the students will see the potential of strong leadership and how it works to advance entertainment companies and the films and TV programming they produce. Topics to be examined include the process of project development, production, and marketing; emerging technologies and their impact on the industry; the roles studio and network executives, directors, film and television producers, writers, actors, agents, and others play in the making and distribution of film and television productions.

OB 392. Leadership Coaching and Mentoring II. 3 Units.

This course is the continuation of a 6 unit course that runs for the Winter and Spring Quarters. Classes/clinics meet 10 times in the spring. It is open to up to 24 MBA2 students who have been selected on the basis of their having passed a screening to assess their potential to coach effectively. They also need to have taken OB 374 - Interpersonal Dynamics or will take OB 374 in the Autumn or Winter. There will be a reading list. That conceptual material will be supplemented during class time with lectures and discussions. Students will have the opportunity to apply those concepts through role-plays and exercises during class time. Each second-year student will be assigned three first-year students. The second-year coaches will meet with their coaches 5 times each quarter in a series of semi-structured coaching activities. In the spring there will be two mandatory Friday sessions, on April 1 and April 15 in addition to Monday afternoon classes.

OB 393. Leadership in Diverse Organizations. 4 Units.

How improve capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. Premise is that diversity presents challenges and opportunities that push students to develop leadership skills relevant across a variety of situations. What social and psychological obstacles limit people's ability to work effectively across identity-based differences? What can people do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations? Focus is on dynamics of race and gender; attention to other dimensions of identity and difference in organizations, including sexual orientation, nationality, class, and religion.

OB 503. Games and Decisions. 1 Unit.

This course is intended for individuals who are interested in how decisions happen in organizations, and wish to expand their knowledge about the interactive processes involved in strategic decision-making. The course will draw on behavioral game theory to analyze and make sense of individual and group decision-making. To understand how decisions happen, we will use analyses of in-class exercises and in-depth discussions of new and exciting research findings on cognitive and emotional aspects of decision making (e.g., what does "bounded-rationality" really mean? how do our emotions influence our decisions? What is unconscious thought and how can it be used to improve decisions? What drives erroneous market-entry decisions?). We will play strategic games in all our meetings to understand how various conditions (e.g., time pressure, uncertainty, information complexity, accountability) influence our decisions, but we will also read and discuss theory and research on bargaining and interdependent decision-making. So, if you enjoy in-class exercises, you will enjoy our simulations. At the same time, if you enjoy analyzing human behavior and social interactions, you will like the reading and our discussions. After taking this course, you will: (a) be better able to identify and avoid common traps in strategic decision making; (b) be able to draw on a diverse "tool-box" of skills and techniques to make you a more effective decision maker; and (c) have a deeper understanding of other people's thinking and decision making processes.

OB 504. Culture & Organizations. 1 Unit.

This course is designed for individuals who are interested in learning about the multitude of ways by which culture influences core organizational processes, including leader emergence and effectiveness, communication and social influence, decision making and negotiation. The course will also address the challenges associated with cross-cultural business interactions. To dig deep into culture's consequences, we will use analyses of real-world cases, in-class exercises, and in-depth discussions of new and exciting research findings. For example, we will discuss why some cross-cultural joint ventures succeed while others fail; engage in exercises that illustrate the challenges of working across cultural boundaries; review common pitfalls in cross-cultural interactions; and discuss when cultural variation within the organization can be an advantage, as well as how leaders can effectively manage it. Thus, class experience will include a balanced mix of hands-on exercises aimed at illustrating what culture is, and discussions aimed at analyzing its implications. After taking this course, you will: (a) be better able to identify, understand, and avoid common traps in cross-cultural business interactions; (b) learn how culture can affect and be used to enhance organizational performance; (c) possess a larger repertoire of behavioral skills to apply in various cross- and intra-cultural interactions; and (d) understand why culture can be sticky, and how to leverage it for the purpose of organizational change.

OB 522. Managing Social Networks in Organizations. 2 Units.

This course is designed to improve your effectiveness as a manager by introducing you to both the concepts and tools that are part of the "new science of social networks" as they apply to organizations. In this course, you will develop the skills to understand social networks and recognize social capital, both offline and online, as well as be able to identify key elements of your own and others' social networks that enhance competitive capabilities. Topics to be covered include how social networks affect power and influence, leadership, innovation and the generation of novel ideas, careers, organizational change and competitive advantage. Additional topics to be covered include the increasing importance of online social networks in organizational life and the importance of social cognition and how it can be used to enhance social capital. At the conclusion of this course you will have the skills to map out social networks, diagnose features of the networks that either help or hinder the performance of individuals, groups and companies, and be able to manage important features of social networks in organizations.

OB 537. Advanced Topics in Teams. 2 Units.

This course offers a deeper examination of team dynamics than was provided in Groups and Teams. The course goal is to provide you with tips and tools to maximize the performance of your teams at work. Topics include forming start-up teams, capitalizing on diversity in teams, managing virtual teamwork, facilitating effective discussion and debate in creative teams, and navigating informal leadership processes within top management teams. Group exercises and cases will help you learn how to create and maintain highly effective teams.

OB 541. How to Change Things When Change is Hard. 2 Units.

This course will explore case studies and research about how to create behavior change from a position without much formal authority or power: e.g., a middle manager trying to change a failing unit of a big firm or a social entrepreneur trying to influence the behavior of a community. We'll use principles from social psychology, clinical psychology, and behavioral economics to analyze cases like the following: How a new head of the equities research department at Lehman Brothers changed his group's ranking in the Institutional Investor polls from #15 to #1 over a four year period. How Teach for America teachers take unmotivated kids in neglected schools and manage on standardized tests to gain more than two year's progress in one year of schooling. How a clever application of behavioral economics managed to triple employee savings rates.

OB 543. Scaling Change. 2 Units.

A problem for every manager is to make 'good' behaviors spread quickly and to shrink 'undesirable' behaviors quickly. This course provides you practical frameworks to accomplish these managerial goals. We will examine issues such as scaling Idea generation, scaling knowledge sharing, scaling the adoption of ideas across firms, scaling change in global firms. We will be using a newly written series of cases for this course and also draw on guest speakers.

OB 552. The Quest for Happiness: Exploring the Psychology of Human Fulfillment. 2 Units.

In this seminar, we will explore the nature of human happiness. We will examine recent theories and new evidence from psychological research indicating who among us is likely to achieve deep and enduring happiness and why. We also will review what we know about the determinants of happiness throughout the lifespan. We will discuss how happiness is created and sustained, even in the face of adversity and tragedy. We will describe the "geography" of happiness, examining different cultural conceptions of happiness and variations in the distribution of happiness around the globe. We will also discuss some prevalent misconceptions regarding the antecedents of human happiness-why so many people, in short, stumble in their quest for happiness. We will explore how leaders can use happiness research to create more satisfying work places. To illustrate these ideas, we will examine in detail a number of fascinating individuals, including Bill Gates, Warren Buffet, Oprah Winfrey, venture capitalist Tom Perkins, Steven Spielberg, Martha Stewart, and the Nobel physicist Richard Feynman. Students will also work, either individually or in small self-selected teams, on a case study of an individual or organization they find interesting. There will also be several reflective exercises designed to probe students' self-conceptions regarding their own happiness. This seminar will be very discussion-oriented and our time will be spent engaging in lively, provocative debate of controversial ideas and evidence about happiness.

OB 555. Mastering Life's Moments: The Challenge of Optimizing your Experience. 1 Unit.

Our personal and professional lives are made up of a series of moments. Some of these moments present great opportunity, with the prospect of personal change and even transformative growth. Other moments contain the seeds of setback and even derailment of our most coveted plans. Some of life's moments are planned, while others catch us completely by surprise. Whatever moments we are afforded, we must make the most of them. This new seminar will explore what we know about the psychology of "optimal experience." We will examine how and why some individuals harvest so much joy, zest and sense of attainment from their moments, while others squander their moments or dig themselves into deeper holes when trying to respond to them. We will also examine how and why some people respond brilliantly to adversity, mastering even the most tragic moments that life presents, while others flounder and fold. To inform our thinking on this vital topic, the seminar will include a series of rich and provocative readings from psychology, behavioral economics, organizational theory and philosophy. Additionally, the seminar will include a series of compelling video cases illustrating both optimal and suboptimal responses to experience. To make the seminar more personally involving and useful to you, you will also engage in a series of reflective writing and experiential exercises. Whenever I offer a new course, I make a promise to the students who take it. For this course I promise you an intellectually deep and personally meaningful exploration of what it means to "use up" your life well. Put another way, I promise you some great educational moments in your GSB life!

OB 568. How to Make Ideas Stick. 2 Units.

This class will explore the properties shared by ideas that stick with people and change the way they think and act. The course is based on the framework in the book *Made to Stick* and focuses on hands-on exercises that will teach you how to transform your messages to make them stick: How do you get attention for your idea in a crowded marketplace of ideas? How can you convey complex information quickly? How do you make a broad, abstract idea concrete and tangible enough for people to understand? How do you provide credibility for your idea without resorting to dry statistics? Although the exercises in this course are fun and generally short, students in the past have said that they do require a lot of thinking time outside of class in order to apply the course principles to a specific message. This is particularly true of the final project which involves improving the message of a specific live client (e.g., a friend with a start-up business, the recruiting materials of a former employer). This course will be especially useful for entrepreneurs who must pitch their ideas to customers, investors, and potential employees and for students in the nonprofit sector where resources for spreading ideas are often thin.

OB 569. Strategy and Management in Developing Economies. 2 Units.

This course will explore the strategic and managerial challenges involved in running for-profit companies in developing economies. Particular emphasis will be given to understanding the challenges of running enterprises that touch the lives of the poor or the extreme poor, either by employing them or producing goods and services that improve their lives. A central theme will be the ways in which features of these economies shape the ability of firms to thrive and grow. Among the issues that may be considered are how the economic and social context affects the ability of firms to formulate successful strategies for creating and capturing value and how the context impacts the process of management within the organization.

OB 571. Diversity, Dynamics, and Influence. 2 Units.

The course is based on the premise that diversity can present unique challenges and opportunities thereby compelling students to expand their sensitivity and develop a wider repertoire of skills, many of which are relevant across a variety of situations. The course is intended for students who plan to work in culturally diverse groups or organizations and will be equally relevant to those who work in the not-for-profit, public, and for-profit sectors. Through the presentation of new concepts, participation in experiential group activities, and faculty facilitated debriefing, students are expect to improve their ability to better assess group level diversity dynamics and in turn both intentionally influence and to be influenced inclusive of three fundamental differences presented by peers - values, gender, and group identity. Students will be taught how to practice 'authentic discourse' during regular faculty facilitated small task group debriefings. 'Authentic discourse' is a skill stressed in Interpersonal Dynamics (OB374).

OB 572. High Performance Leadership for Family Business Leaders. 2 Units.

This course examines the unique leadership problems faced in family businesses. What is unique is that there are two over-lapping systems; the family system and the business system. These can be congruent or at cross-purposes. For example, the latter might stress promotion on merit while the other values family ties. There also can be difference in purpose. Is the organization to maximize shareholder value or to provide employment for family members? These and other related issues impact the communication process, how decisions are made and how power is distributed. The course will be case based. The content will overlap that of OB372 so it is not advised to take both courses. Because of the shortened nature of 572, there would be minimal overlap with OB374 Interpersonal Dynamics. In addition to class, students will meet for 1 1/2 hours each week in a Skill Development Group to apply the course material to their own personal development.

OB 574. Interpersonal Dynamics at Work. 2 Units.

This course is open to students who have taken OB 374 Interpersonal Dynamics or GSBGEN 374 Interpersonal Influence and Leadership. The objectives of OB 574 is to take what was learned in the introductory Interpersonal Dynamics course further with a specific emphasis on how those approaches are applicable in a work setting. Specifically how issues of fuller self-expression/disclosure, feedback, resolution of interpersonal difficulties and building effective relationships can apply to working with peers and one's manager as well as in a team setting. The course will meet Thursdays 3:15-5:00 for five sessions starting April 2nd and running until April 30th. The T-groups will meet that evening, 7:00-9:30. In addition, there will be one all-day meeting (instead of a weekend), Saturday, April 4th running from 9:00 a.m. to 9:30 p.m. Attendance in all class sessions, evening meetings, and the Saturday retreat is required. Any absence will result in lowering of the grade. In addition to a modest amount of reading, students will keep an on-going self-diagnostic log. One-third of the grade will be on the log and the remaining 2/3 on the extent of participation in class, risk-taking in the group, and helping building learning conditions for self and others.

OB 581. Negotiations. 2 Units.

This course is designed to improve students' skills in all phases of a negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multiparty negotiations, to buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy and to the management of integrative and distributive aspects of the negotiation process. The course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multi-party, and team negotiations. When playing a role in a simulated conflict, you will be free to try out tactics that might feel uncomfortable in a real one. You will get feedback from your classmates about how you come across. You will have an opportunity to reflect on your experience in your negotiation paper. In sum, you can use this course to expand your repertoire of conflict management and negotiation skills, to hone your skills, and to become more adept in choosing when to apply each skill. This course represents a shorter, more intense version of OB 381-Conflict Management and Negotiations. Students should not take both courses, as there is considerable overlap in course content. Attendance and participation in the negotiation exercises is mandatory.

OB 582. Leading Social Change: Educational and Social Entrepreneurship. 2 Units.

The course provides an overview of different approaches to change, drawing primarily on entrepreneurial initiatives in education. The course will equip students with an appreciation for different mechanisms of change as well as some of the challenges of initiating and sustaining change in social sectors such as education. The course will draw on readings and case studies, and we will benefit from the wisdom of an inspirational group of guest lecturers. While the course will benefit any student concerned with making a positive impact, it is particularly appropriate for students in the joint MA/MBA program as well as those who will lead social change through nonprofit consulting or entrepreneurship.

OB 586. Organizational Learning. 2 Units.

This is a course about how firms learn from their experiences and the opportunities created by flawed learning. It will explore common mistakes in learning and barriers to the adoption of effective practices. Understanding learning problems will help future managers avoid common mistakes and build organizations that learn more effectively; learning is particularly important for entrepreneurs who are trying out new ideas and so must adapt correctly to feedback from the environment. But understanding common mistakes is also useful for identifying possible opportunities in markets; opportunities exist when firms make mistakes and when they fail to learn effective practices. The course will introduce concepts and findings from organization theory, psychology, decision theory, and statistics. A variety of exercises, cases, and readings will be used to illustrate barriers to learning and the opportunities they create, including the book "Moneyball" by Michael Lewis which discusses market-level mistakes in professional baseball.

OB 591. Advanced Negotiation. 1 Unit.

This course is designed for individuals who have taken one of the basic negotiation courses (OB 381 or OB 581) and are interested in honing their negotiation and conflict management skills and expanding their knowledge about bargaining and dispute resolution. To dig deeper into the minds of negotiators, we will use analyses of in-class exercises and in-depth discussions of new and exciting research findings. Thus, we will play strategic games and negotiate in all our meetings, but we will also read and discuss theory and research on bargaining. So, if you enjoy negotiating, you will enjoy the classes. At the same time, if you enjoy analyzing human behavior and social interactions, you will like the reading and our discussions. We will start off the class by launching a week-long entrepreneurial negotiation assignment that will allow you to test your bargaining skills outside of class. Our in-class exercises and in-depth discussions will subsequently tackle critical issues in negotiation, including the role of power and norms in negotiation; cross-cultural negotiations; accountability, emotions, and information processing in negotiation; and creativity in negotiation. After taking this course, you will: (a) be better able to identify and avoid common traps in negotiation; (b) have a larger repertoire of behavioral skills to apply in various negotiations; and (c) have a deeper understanding of other people's behavior in negotiation.

OB 593. Leadership in Diverse Organizations. 2 Units.

This course is designed to help students improve their capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. The course is based on the premise that diversity can present unique challenges and opportunities and thereby pushes students to develop crucial leadership skills, many of which are relevant across a variety of situations. The class will address two primary questions: 1) What social and psychological obstacles limit people's ability to work effectively across identity-based differences? 2) What can you do to create contexts that enable differences to be used as a resource for learning and effectiveness within teams and organizations? Students should be prepared to experiment with various conceptual and analytic skills inside and outside of the classroom. While the course focuses on dynamics of race and gender, there will be opportunities for students to explore a variety of other dimensions of identity and difference in organizations, including (but not limited to) sexual orientation, nationality, class, and religion. The course is intended for students who expect to work in culturally diverse groups or organizations and will be equally relevant to those who plan to work in the not-for-profit, public, and for-profit sectors. The course is cross listed in the School of Education.

OB 601. Organizational Ecology. 4 Units.

This seminar examines theoretical and methodological issues in the study of the ecology of organizations. Particular attention is given to the dynamics that characterize the interface between organizational populations and their audiences.

Same as: SOC 366A.

OB 622. Topics in Social Network Analysis: Structure and Dynamics. 2 Units.

This course provides coverage of both introductory and intermediate topics in social network analysis with a primary focus on recent developments in theory, methods and substantive applications. We will begin the course with a brief overview of introductory themes and concepts from various disciplines that have contributed to social network theory, including sociology, anthropology, social psychology, and organizations. Introductory topics to be included: centrality, cliques, structural and regular equivalence and cognitive social structures. The primary topics to be covered in this course include the application of network theory to the study of careers, competition, innovation, inequality/stratification, and recent research on IT mediated networks, as well as an examination of network formation and dynamics. The course will also provide hands-on experience applying social network methods in empirical research. Students will have an opportunity to learn some modern network analysis methods and apply them to network data using the R programming language. No prior experience with social network analysis or software is required.

OB 625. Economic Development and Economic Sociology. 4 Units.

As a field, economic sociology has had little to say about economic development. Much of this quietude stems from the latter's identification with "backward," "poor" or "developing" economies, and the former's interest in many of the advanced features of the richer economies. This state of affairs not only sets up a false dichotomy but also makes it difficult by construction to theorize or research the issue of economic decline, seemingly a necessary piece of any coherent theory of development. The (admittedly ambitious) goal of this seminar is to move toward a better theory of economic development. We will review several of the more common strands of thought on development in related literatures and then consider some alternative perspectives that might bridge this research and contemporary sociology. No guarantees are made that we will have a full-fledged theory by the end of the quarter, but with luck we will have breathed some new life into an often marginalized but critically important strain of social thought and research. The class will be a seminar based around the readings. Grading will be a combination of class participation, a take-home midterm and a final paper.

OB 630. Social Norms. 3 Units.

This course covers research and theory on the origins and function of social norms. Topics include the estimation of public opinion, the function of norms as ideals and standards of judgment, and the impact of norms on collective and individual behavior. In addition to acquainting students with the various forms and functions of social norms the course will provide students with experience in identifying and formulating tractable research questions.

Same as: PSYCH 223.

OB 635. Social Movements and Organizations. 4 Units.

This research seminar is intended for students seeking to learn more about how collective action underpins institutional change in organizations and industries, and how the success of collective action, in turn, hinges on organizational structures and processes to recruit and mobilize individuals. The purpose of this course is to provide you a roadmap for you to roam the terrain of movements and organizations, and be prepared to generate original research ideas that extend inquiry in your chosen area of research.

OB 652. Statistical Methods for Behavioral and Social Sciences. 5 Units.

For students who seek experience and advanced training in empirical research methods. Analysis of experimental data with methods ranging from simple chi-square to multiple regression models, including an introduction to mixed models. Uses the free statistical computing package R. Prerequisite: An intro stats class (Same as Psych 252 -- Co-taught with Ewart Thomas).

OB 653. Categories in Markets. 4 Units.

This seminar investigates the ways in which categories emerge in markets and shape market behavior. It covers recent theoretical and empirical work on the sociology of categories and its foundations in cognitive science. Particular attention is given to formalization.

OB 670. Designing Social Research. 3 Units.

This is a course in the design of social research, with a particular emphasis on research field (i.e., non-laboratory) settings. As such, the course is a forum for discussing and developing an understanding of the different strategies social theorists employ to explain social processes, develop theories, and make these theories as believable as possible. In general, these issues will be discussed in the context of sociological research on organizations, but this will not be the exclusive focus of the course. A range of topics will be covered, for example: formulating and motivating research questions; varieties of explanation; experimental and quasi-experimental methods, including natural experiments; counterfactual models; conceptualization and measurement; sampling and case selection; qualitative and quantitative approaches. This course is particularly oriented toward developing an appreciation of the tradeoffs of different approaches. It is well suited to Ph.D. students working on qualifying papers and dissertation proposals.

OB 671. Social Psychology of Organizations. 3 Units.

This seminar focuses on social psychological theories and research relevant to organizational behavior. It reviews the current research topics in micro-organizational behavior, linking these to foundations in cognitive and social psychology and sociology. Topics include models of attribution, decision making, emotion, coordination, influence and persuasion, and the psychology of power and culture. Prerequisites: Enrollment in a PhD program, and a graduate-level social psychology course. Also listed as Sociology 361.

OB 672. Organization and Environment. 3 Units.

This seminar considers the leading sociological approaches to analyzing relations of organizations and environments, with a special emphasis on dynamics. Attention is given to theoretical formulations, research designs, and results of empirical studies. Prerequisite: Enrollment in a PhD program. Also listed as Sociology 362.

OB 673. Perspectives on the Social Psychology of Organizations. 3 Units.

This seminar focuses on topics relevant to organizational behavior, drawing primarily on social psychological and some sociological research. Topics vary from year to year. In Fall 2014 the seminar will focus on group and team dynamics. Topics will include diversity, power and status dynamics in teams, expertise and knowledge utilization, information processing, trust and respect in teams, team leadership, and multi-level perspectives on team and group dynamics, among others. Prerequisites: Enrollment in a PhD Program. Cannot be audited or taken pass/fail.

OB 674. Perspectives on Organization and Environment: Social Movement Organizations and Environments. 3 Units.

This course examines the interaction between organizations and their environments. It is given every year by a different faculty member. What follows is the description of the course for the academic year 2012-13. This research seminar explores recent theory and research on social movement organizations and their environments. We'll consider the way in which organizational theories help us to explain social movement phenomena, and the way in which social movement theories help us to explain organizational phenomena.

OB 675. Micro Research Methods. 3 Units.

The purpose of this course is to develop students' skill at designing, executing, interpreting, and describing micro-organizational and social psychological research. The course will have a practical focus and will focus on questions such as how to identify and formulate a tractable research question, how to decide on an appropriate research design and strategy; how to operationalize independent and dependent variables, and how to build a research paper.

OB 676. Social and Political Processes in Organizations. 4 Units.

Social psychological and sociological research at the meso, or intermediate between micro and macro, level of analysis. Topics vary from year to year, but usually include organizational routines and learning; mobility and attainment processes; gender and race inequality and discrimination; social networks; cultural perspectives on organizations, and related topics. Prerequisite: Ph.D. student.

OB 678. The Design and Process of Experimental Research. 2 Units.

This year-long course takes a hands-on approach to learning about experimental research. It will cover the entire process of experimental research from idea and hypothesis generation to study design, analysis, and publication. The topical content will be customized to the specific interests of the enrolled students, but generally will be concerned with questions about behavioral phenomena in organizational contexts.

OB 683. Models of Social Dynamics. 4 Units.

This seminar provides an introduction to several important theoretical and formal models in sociology, psychology, and organization theory. The purpose is, in part, to provide an overview of commonly used models. More important, participants will learn to read, criticize, and formulate models for their own research questions. The focus is on model development, deriving implications from models, comparing models, but also on how models can be and have been tested. Topics include models of size distributions, network evolution, contagion, group formation, conceptual structures, decision making, and learning.

OB 690. Organizations in Competition. 3 Units.

When organizations compete, why do some fail while others succeed? This is one of the defining questions of the interdisciplinary research field known as "strategic management." In this seminar, we will address this question from a sociological perspective. Seen from this vantage point, the field of strategic management can be understood as the study of organizations in competition. Over the past 30 years, a considerable amount of research in organizational sociology has addressed this topic, only some of which has been explicitly framed as being aimed at the field of strategic management. This course studies the central themes that have emerged from this sociological research on organizations in competition.

OB 691. PhD Directed Reading. 1-15 Unit.

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OIT 691, POLECON 691, STRAMGT 691.

OB 692. PhD Dissertation Research. 1-15 Unit.

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OIT 692, POLECON 692, STRAMGT 692.

OB 802. TGR Dissertation. 0 Units.

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OIT 802, POLECON 802, STRAMGT 802.

Orthopedic Surgery Courses

ORTHO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine. 3 Units.

Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.

Same as: HUMBIO 97Q.

ORTHO 102. Orthopaedic Surgical Anatomy. 2 Units.

Open to medical, graduate and undergraduate students. Opportunity to enhance knowledge of anatomy as it pertains to the practice of Orthopaedic Surgery and to improve dissection skills. Follows the surgical anatomy syllabus used by the Stanford Orthopaedic Surgery Residency Program. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic sessions, prosection review, dissection.

Same as: ORTHO 202.

ORTHO 110. Practical Sports Medicine and Orthopaedic Exam. 2 Units.

Designed for students considering a career in sports medicine, orthopaedics, physical medicine and rehabilitation, emergency medicine, internal medicine, family practice, or physical therapy. Focus is on diagnosis and treatment of the most common injuries encountered in sports medicine, from head to toe and from acute trauma to chronic overuse. Students gain competence performing an efficient sports medicine exam, developing a differential diagnosis, and a treatment plan on how to safely return athletes back to their sport. Focused physical exam skills are taught for the neck, shoulder, elbow, wrist and hand, low back, hip, knee, leg, ankle and foot. Most sessions consist of anatomy review, case discussion, and hands-on exam practice in small groups. A few sessions cover specific hot topics in sports medicine such as concussion, athletic heart syndrome, and advanced performance techniques. Course requires an in-class presentation or short review paper.

Same as: ORTHO 210.

ORTHO 120. Introduction to Lifestyle Medicine. 1 Unit.

Lifestyle medicine is an exciting new movement to empower practicing clinicians and aspiring physicians to facilitate behavioral change and promote a culture of health and wellness in patients. Focus is on both concrete, evidence-based findings and tangible, practical tools to readily translate into everyday clinical practice. A series of leading experts and guest lectures guide students through interactive, patient-focused activities in topics including, but not limited to: nutrition, exercise, sleep, motivational interviewing, meditation, and acupuncture.

Same as: ORTHO 220.

ORTHO 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

ORTHO 201. Musculoskeletal Exam Practicum. 1 Unit.

Student initiated course. Opportunity to enhance knowledge and skills for conducting musculoskeletal exams. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic introductions followed by hands-on practice of specific aspects of the musculoskeletal exam.

ORTHO 202. Orthopaedic Surgical Anatomy. 2 Units.

Open to medical, graduate and undergraduate students. Opportunity to enhance knowledge of anatomy as it pertains to the practice of Orthopaedic Surgery and to improve dissection skills. Follows the surgical anatomy syllabus used by the Stanford Orthopaedic Surgery Residency Program. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic sessions, prosection review, dissection.

Same as: ORTHO 102.

ORTHO 210. Practical Sports Medicine and Orthopaedic Exam. 2 Units.

Designed for students considering a career in sports medicine, orthopaedics, physical medicine and rehabilitation, emergency medicine, internal medicine, family practice, or physical therapy. Focus is on diagnosis and treatment of the most common injuries encountered in sports medicine, from head to toe and from acute trauma to chronic overuse. Students gain competence performing an efficient sports medicine exam, developing a differential diagnosis, and a treatment plan on how to safely return athletes back to their sport. Focused physical exam skills are taught for the neck, shoulder, elbow, wrist and hand, low back, hip, knee, leg, ankle and foot. Most sessions consist of anatomy review, case discussion, and hands-on exam practice in small groups. A few sessions cover specific hot topics in sports medicine such as concussion, athletic heart syndrome, and advanced performance techniques. Course requires an in-class presentation or short review paper.

Same as: ORTHO 110.

ORTHO 220. Introduction to Lifestyle Medicine. 1 Unit.

Lifestyle medicine is an exciting new movement to empower practicing clinicians and aspiring physicians to facilitate behavioral change and promote a culture of health and wellness in patients. Focus is on both concrete, evidence-based findings and tangible, practical tools to readily translate into everyday clinical practice. A series of leading experts and guest lectures guide students through interactive, patient-focused activities in topics including, but not limited to: nutrition, exercise, sleep, motivational interviewing, meditation, and acupuncture.

Same as: ORTHO 120.

ORTHO 260. Tissue Engineering. 3 Units.

Principles of tissue engineering and design strategies for practical applications for tissue repair. Topics include tissue components and dynamics, morphogenesis, stem cells, cellular fate processes, cell and tissue characterization, controlled drug and gene delivery, bioreactors, cell-materials interactions, and host integration. Present research proposal to solve a real life tissue engineering problem.

Same as: BIOE 260.

ORTHO 270. Orthopaedic Tissue Engineering. 3 Units.

Biological principles underlying the use of engineering strategies and biocompatible materials for tissue repair and regeneration. Structure, physiology, and mechanics of articular cartilage, bone, and dense soft connective tissues. Current ideas, approaches, and applications being implemented as therapeutic regimens for arthritis, spinal deformities, and limb salvage. Multidisciplinary constraints on the design and creation of tissue constructs. Prerequisite: familiarity with basic cell and molecular mechanisms underlying tissue differentiation.

ORTHO 280. Early Clinical Experience in Orthopedic Surgery. 1-2 Unit.

Provides an observational experience in a surgical specialty. Prerequisite: consent of instructor.

ORTHO 299. Directed Reading in Orthopedic Surgery. 1-18 Unit.

Consists of studies in progress including circulatory problems; hemostatic disorders; homotransplantation; orthopedic pathology; bone growth; radiation injury; immunology; bacteriology; nasal function; muscular and nerve disorders and their effect on function, hand kinetics and hand function. Prerequisite: consent of instructor.

ORTHO 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

ORTHO 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Otolaryngology Courses

OTOHNS 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

OTOHNS 200. Introduction to Otolaryngology-Head and Neck Surgery. 1 Unit.

Seminar series designed to expose students to the field, including its subspecialties and commonly performed procedures. Goals: supplement anatomical knowledge with clinical correlates; understand basic diagnosis, pathophysiology, and management of ENT problems commonly seen in primary care practice; how to perform a thorough head and neck examination. Seminars, given by faculty experts, cover major topics relating to each of the subdivisions within ENT. May be repeated for credit.

OTOHNS 299. Directed Reading in Otolaryngology. 1-18 Unit.

Prerequisite: consent of instructor.

OTOHNS 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

OTOHNS 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Overseas Studies General Courses

OSPGEN 259. Community Health in Oaxaca. 2 Units.

Continuation of MED 259. Close observation of clinicians at work in community health settings in Oaxaca and service with local community health organizations. Combination of classroom study and discussion with cultural immersion, language training, clinical shadowing, and community service. Topics include: Mexican healthcare system; cultural, socioeconomic and educational factors impacting health of Mexicans and Mexican immigrants to U.S.; Mexican cultural and health beliefs. Prerequisite: Acceptance into program and successful completion of MED 259.

Overseas Studies in Australia Courses

OSPAUSTL 10. Coral Reef Ecosystems. 3 Units.

Key organisms and processes, and the complexity of coral reef ecosystems. Students explore the Great Barrier Reef from the southern end which demonstrates the physical factors that limit coral reefs, to the northern reef systems which demonstrate key aspects of these high biodiversity ecosystems. Human-related changes. Emphasis is on research experiences and development of analytical skills. Two units only counted for the Biology major.

OSPAUSTL 25. Freshwater Systems. 3 Units.

Integrated water resource management and how this applies across the globe, comparing strategies and results in the developing and more developing world. Ethics, values and politics of water and the management of extremes such as drought and flood. Ecology and hydrology in an urban context, along with important current issues such as stormwater and water sensitive urban design. Construction of a well, a water tank, and a pit latrine. Community service working with a local catchment management group on riparian and wetland restoration work. Field work complements lectures.

OSPAUSTL 30. Coastal Forest Ecosystems. 3 Units.

Prehistory of Australian rainforest and how rainforest structure and biodiversity change with altitude, latitude, and geology. Tropical coastal marine wetlands, mangrove forests, and the relationship between land- and sea-based biota. Biology and ecology of marine plants, mangroves, and tropical salt marsh. Introduction to specialized fields of marine plant biology and ecology including biogeography and evolution, aquatic plant ecophysiology, water quality and bioindicator techniques, pollution and eutrophication, and environmental control of marine plant distribution and productivity. Two units only counted for the Biology major.

OSPAUSTL 40. Australian Studies. 3 Units.

Introduction to Australian society, history, culture, politics, and identity. Social and cultural framework and working understanding of Australia in relationship to the focus on coastal environment in other program courses. Field trips.

OSPAUSTL 50. Targeted Research Project. 4 Units.

Prior to arriving in Australia, students establish a link with University of Queensland faculty to develop project ideas that combine personal interests and career goals with opportunities presented by the Australian Coastal Studies program, such as how mangrove roots find sediment rich zones of the shore, or the dynamics of ecotourism in southern and northern coastal Queensland. Project report and presentation in Australia.

Overseas Studies in Barcelona Courses

OSPBARCL 101. Language and Culture in Catalonia. 4 Units.

Preparation for students to function in the academic and social environment of Barcelona. Basic listening, reading, and comprehension in Catalan; review of Spanish with focus on writing academic papers and listening to lectures. Introduction to Barcelona with emphasis on contemporary history, culture, and politics. Bilingualism; multiculturalism; varieties of nationalism and globalization in context of Barcelona.

OSPBARCL 114. The Spanish Civil War and Historical Memory. 5 Units.

The Spanish Civil War's memory and legacy as seen in today's society, culture and politics in the context of Western Europe. Current reality of Spain and Catalonia and the value of history and its construction in the formation of the political culture of a country. Two thematic blocks: historical evolution of Spain from the Second Republic until the end of Franco and the transition to democracy; relationship between history and memory focusing on the Catalan-Spanish case.

OSPBARCL 123. European Barcelona: 1714. 5 Units.

The fall of Barcelona in 1714 as focus for the study of European politics in the early eighteenth century, and on Barcelona's urban, economic, and cultural renewal.

OSPBARCL 124. Travel Literature in Catalunya. 5 Units.

Comparative exploration of travel literature focused on Catalan authors of the nineteenth and twentieth centuries. Analysis of issues related to autobiographical and journalist writing, the literature of exile, and Catalan literary geographies of the world (Europe, Africa, Asia, North and South America, with special attention to cities such as Paris, New York and Berlin).

OSPBARCL 140A. Universitat de Barcelona: Humanities 1. 5 Units.

Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 140B. Universitat de Barcelona: Humanities 2. 5 Units.

Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 140C. Universitat de Barcelona: Humanities 3. 5 Units.

Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 142A. Universitat de Barcelona: Social Science 1. 5 Units.

Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 142B. Universitat de Barcelona: Social Science 2. 5 Units.
Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 142C. Universitat de Barcelona: Social Science 3. 5 Units.
Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 144A. Universitat de Barcelona: Natural Science 1. 5 Units.

Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 144B. Universitat de Barcelona: Natural Science 2. 5 Units.

Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 144C. Universitat de Barcelona: Natural Science 3. 5 Units.

Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 146A. Universitat de Barcelona: Engineering 1. 5 Units.
Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 146B. Universitat de Barcelona: Engineering 2. 5 Units.
Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 146C. Universitat de Barcelona: Engineering 3. 5 Units.
Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 150A. Universitat Autònoma de Barcelona: Humanities 1. 5 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 150B. Universitat Autònoma de Barcelona: Humanities 2. 5 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 150C. Universitat Autònoma de Barcelona: Humanities 3. 5 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 150D. Universitat Autònoma de Barcelona: Humanities 4. 10 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 152A. Universitat Autònoma de Barcelona: Social Science 1. 5 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 152B. Universitat Autònoma de Barcelona: Social Science 2. 5 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 152C. Universitat Autònoma de Barcelona: Social Science 3. 5 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 154A. Universitat Autònoma de Barcelona: Natural Science 1. 5 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 154B. Universitat Autònoma de Barcelona: Natural Science 2. 5 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 154C. Universitat Autònoma de Barcelona: Natural Science 3. 5 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 156A. Universitat Autònoma de Barcelona: Engineering 1. 5 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 156B. Universitat Autònoma de Barcelona: Engineering 2. 5 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 156C. Universitat Autònoma de Barcelona: Engineering 3. 5 Units.

Student selection from course catalog of Universitat Autònoma de Barcelona.

OSPBARCL 160A. Universitat Pompeu Fabra: Humanities 1. 5 Units.

Student selection from catalog of Universitat Pompeu Fabra.

OSPBARCL 160B. Universitat Pompeu Fabra: Humanities 2. 5 Units.

Student selection from catalog of Universitat Pompeu Fabra.

OSPBARCL 160C. Universitat Pompeu Fabra: Humanities 3. 5 Units.

Student selection from catalog of Universitat Pompeu Fabra.

OSPBARCL 162A. Universitat Pompeu Fabra: Social Science 1. 5 Units.

Student selection from catalog of Universitat Pompeu Fabra.

OSPBARCL 162B. Universitat Pompeu Fabra: Social Science 2. 5 Units.

Student selection from catalog of Universitat Pompeu Fabra.

OSPBARCL 162C. Universitat Pompeu Fabra: Social Science 3. 5 Units.

Student selection from catalog of Universitat Pompeu Fabra.

OSPBARCL 164A. Universitat Pompeu Fabra: Natural Science 1. 5 Units.

Student selection from catalog of Universitat Pompeu Fabra.

OSPBARCL 164B. Universitat Pompeu Fabra: Natural Science 2. 5 Units.

Student selection from catalog of Universitat Pompeu Fabra.

OSPBARCL 164C. Universitat Pompeu Fabra: Natural Science 3. 5 Units.

Student selection from catalog of Universitat Pompeu Fabra.

OSPBARCL 166A. Universitat Pompeu Fabra: Engineering 1. 5 Units.

Student selection from catalog of Universitat Pompeu Fabra.

OSPBARCL 166B. Universitat Pompeu Fabra: Engineering 2. 5 Units.

Student selection from catalog of Universitat Pompeu Fabra.

OSPBARCL 166C. Universitat Pompeu Fabra: Engineering 3. 5 Units.

Student selection from catalog of Universitat Pompeu Fabra.

OSPBARCL 170A. Universitat Politècnica de Catalunya: Engineering 1. 5 Units.

Student selection from course catalog of Universitat Politècnica de Catalunya.

OSPBARCL 170B. Universitat Politècnica de Catalunya: Engineering 2. 5 Units.

Student selection from course catalog of Universitat Politècnica de Catalunya.

OSPBARCL 170C. Universitat Politècnica de Catalunya: Engineering 3. 5 Units.

Student selection from course catalog of Universitat Politècnica de Catalunya.

Overseas Studies in Beijing Courses

OSPBEIJ 1C. First-Year Modern Chinese, First Quarter. 5 Units. Conversation, grammar, reading, elementary composition.

OSPBEIJ 3C. First-Year Modern Chinese, Third Quarter. 5 Units.

OSPBEIJ 6C. Beginning Conversational Chinese, First Quarter. 2 Units.

Three quarter sequence. Basic language skills in Mandarin to function abroad.

OSPBEIJ 7. Sex, Gender, and Power in Modern China. 3-5 Units.

How sex, gender, and power are entwined in the Chinese experience of modernity. Interdisciplinary approach to how gender and sexuality have emerged as a privileged modality of modern identity and an important site of social and political struggles in 20th-century China and beyond. Topics include: cross-dressing, marriage resistance, free love, women's mobilization in revolution and war, state feminism, postsocialist celebrations of the body, and the emergent queer movement. Readings range from feminist theory to historiography, ethnography, memoir, biography, short story, play, essay, and film. Prior coursework in Chinese history or literature is recommended but not necessary. In English.

OSPBEIJ 8. Marvelous Creatures: Animals and Humans in Chinese Literature and Society. 3-4 Units.

What do pervasive animal imageries and metaphors tell us about the Chinese and how they relate to the world, be it natural or supernatural, and to their neighbors, be they ethnic minorities or foreigners? How do animals define the frontiers of humanity and mediate notions of civilization and Chineseness? How do culture, institution, and political economy shape concepts of human rights and animal rights? What does it mean to be human in the pluralistic and planetary 21st century? Course materials include scholarly treatises, novels, short stories, and films that feature an array of animalkind from late imperial times to the contemporary era.

OSPBEIJ 8C. Beginning Conversational Chinese, Third Quarter. 2 Units.

Continuation of CHINLANG 7. Basic language skill in Mandarin to function abroad. Prerequisite: CHINLANG 7 or consent of instructor.

OSPBEIJ 9. Chinese Language Tutorial. 2 Units.

OSPBEIJ 17. Chinese Film Studies. 4 Units.

Stages of Chinese cinema from the establishment of P.R. China in 1949 to the present. State policies, filmmaking trends, representative filmmakers and films, and the state of the industry in the different periods, with close readings of some important films. Historical perspective and broad knowledge of Chinese cinema; academic approaches to film studies.

OSPBEIJ 20. Communication, Culture, and Society: The Chinese Way. 4 Units.

How people communicate, what they achieve through their communications, and the social and cultural consequences of these communicative behaviors. Focus on the interactive relationship between communication, culture and society in China. How communication habits are influenced by the individual's culture and how communication acts help to change and transform the society in which we live.

OSPBEIJ 21C. Second-Year Modern Chinese. 5 Units.

OSPBEIJ 23C. Second-Year Modern Chinese. 5 Units.

OSPBEIJ 42. Chinese Media Studies. 4 Units.

Fundamental changes in Chinese media. Issues such as: how Chinese media emerge and evolve against the background of modern Chinese history; how they interact with government, sponsors, receivers, and other social institutions; and implications for Chinese social development.

OSPBEIJ 51. Arts and Society in Contemporary China. 3 Units.

China's burgeoning arts world and the bonds that link the nation's arts development, the Communist Party's political goals, and the aspirations of individual artists. Attend concerts, operas or plays at such venues as the National Grand Theater and the People's Theater; visit museums, galleries, and architectural monuments, including the National Art Museum, the 798 Contemporary Art District, and the Museum of Chinese Literature; exchange ideas with students at conservatories, art academies and Peking opera schools; and meet with artists, writers and critics. In addition, visit the Shanghai Art Museum, the Shanghai Grand Theater, the Shanghai Symphony and the Jin Xing Dance Theater.

OSPBEIJ 55. Chinese Economy in Transition. 5 Units.

From planned regime to market economy: political economy and institutional aspects of China's economic transition and open-door policy. How can China achieve economic success given disadvantages in natural resources, human capital stock, and institutional arrangements? Theoretical economic analysis, empirical data, and case studies. Emergence of China as an economic superpower; major challenges ahead.

OSPBEIJ 58. China in the World Economy: Han Dynasty to the Present. 5 Units.**OSPBEIJ 60. Modern Chinese Philosophy. 4 Units.****OSPBEIJ 67. China-Africa and Middle East Relations. 4 Units.**

China's relations with the outside world, with a focus on Africa and the Middle East. Historically contextualized relations; evolution of relations within the international climate during different periods, especially in the present; impact of geopolitical and geoeconomic relations on the existing international order.

OSPBEIJ 101C. Third-Year Modern Chinese. 5 Units.**OSPBEIJ 103C. Third-Year Modern Chinese. 5 Units.****OSPBEIJ 199A. Directed Reading A. 1-4 Unit.**

Course may be repeated for credit.

OSPBEIJ 199B. Directed Reading B. 1-4 Unit.

Course may be repeated for credit.

OSPBEIJ 211C. Fourth-Year Modern Chinese. 5 Units.**OSPBEIJ 213C. Fourth-Year Modern Chinese. 5 Units.**

Discussions based on short stories, essays and newspaper articles, and academic journal articles. Emphasis on social and cultural issues in contemporary China. Speed-reading techniques and subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language.

Overseas Studies in Berlin Courses

OSPBER 1Z. Accelerated German: First and Second Quarters. 8 Units.

A jump start to the German language, enabling students with no prior German to study at the Berlin Center. Covers GERLANG 1 and 2 in one quarter.

OSPBER 2Z. Accelerated German, Second and Third Quarters. 8 Units.

Qualifies students for participation in an internship following the study quarter. Emphasis is on communicative patterns in everyday life and in the German work environment, including preparation for interviews.

OSPBER 4. The Role of Technology in Modern Life: A Comparison between the U.S. and Germany. 3 Units.

Technology as a part of our everyday lives and differences between experiences in the U.S. and those in modern Europe, as exemplified by Germans in Berlin. Ways in which technology is intertwined with our lives to the point of not recognizing it. Introductory lectures bring some of these technologies to the fore so students can explore manifestations in modern European life. Topics include transportation, housing and the home, finance, entertainment, and urban/suburban infrastructure. Lectures and group meetings combined with field work.

OSPBER 5. What is Engineering? A look at engineers and their work. 3 Units.

Nature of the work that is needed to create the engineered products and services around us. Using a set of bridges in Berlin and the surrounding area as case studies, students engage in substantive exercises in three major activities of engineering: engineering design, engineering analysis, and product manufacturing/construction. Field trips, complemented by problem sets, in-class labs, readings and discussions expose students to these engineering activities in a hands-on manner.

OSPBER 6. Prussia: Literature and Culture. 3-5 Units.

History and culture of Prussia, which ceased to exist in 1947. Focus on its flourishing cultural life, its novelists, painters, architects, composers, philosophers, economists, satirists, military and political theorists. In tracing the kingdom's history and its culture, draw on a number of texts ranging from the 1750s to the early 1920s. Different ways to reflect on these texts in writing.

OSPBER 7. A History of German Film. 3-5 Units.

History of German film, and film's complicated relationship with the metropolis which in Germany almost always meant film's relationship to Berlin. German film history grounded in the specific context of Berlin. Frequent class trips, drawing on the unique resources of the Berlin film-scene, including the annual Berlinale film festival. Students will also interact with film professionals, ranging from an accompanist of silent movies to film historians and filmmakers.

OSPBER 12. The Politics of Memory. 3 Units.

Why is the urban landscape of Berlin so crowded with memorials of WW II, its victims, perpetrators, and the resistance? Exploration of the politics surrounding the memorialization of WW II, with a focus on the city of Berlin: the nature of collective memory and its representation; the function of the memorial in public consciousness; the importance of memory of WW II in German political culture; the changing political landscape of WWII in the context of European politics; comparison of American and European memorialization of war. Material: Films and literary texts; field trips to memorials and museums, including the concentration camp Sachsenhausen; historical accounts and political analyses.

OSPBER 13. Jewish and Muslim Berlin. 3 Units.

Politics of religion and religious minorities in contemporary German/Berlin culture, with a focus on Jews and Muslims. Consideration of political, historical, social and cultural perspectives: differences between American and German separation of religion and political structures; the historical establishment of Jewish culture in comparison to the contemporary rise of Islam to second-largest religious community in Germany; antisemitism and Islamophobia in Germany and Europe; recent religious controversies (mosques, circumcision, the veil, etc.) Material: Literature, site visits in Berlin, meetings with representatives of the Jewish and Muslim communities.

OSPBER 15. Shifting Alliances? The European Union and the U.S.. 4-5 Units.

The development of European integration, a model for global security and peace, and a possible replacement for the U.S. position as unilateral superpower. Competing arguments about the state of transatlantic relations.

OSPBER 21B. Intermediate German. 5 Units.

Grammar review, vocabulary building, writing, and discussion of German culture, literature, and film. Corequisite: OSPBER 100B.

OSPBER 30. Berlin vor Ort: A Field Trip Module. 1 Unit.

The cultures of Berlin as preserved in museums, monuments, and architecture. Berlin's cityscape as a narrative of its history from baroque palaces to vestiges of E. German communism, from 19th-century industrialism to grim edifices of the Sachsenhausen concentration camp.

OSPBER 37. Leading from Behind? Germany in the International Arena since 1945. 4-5 Units.

Germany's changing role in European and world politics. Have old principles based on lessons from World War II become obsolete? Can Germany be a leading power in global affairs?.

OSPBER 40B. Introductory Electronics. 5 Units.

Electrical quantities and their measurement, including operation of the oscilloscope. Function of electronic components including resistor, capacitor, and inductor. Analog circuits including the operational amplifier and tuned circuits. Digital logic circuits and their functions. Lab assignments. Prerequisite: PHYSICS 43.

OSPBER 50M. Introductory Science of Materials. 4 Units.

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

OSPBER 60. Cityscape as History: Architecture and Urban Design in Berlin. 5 Units.

Diversity of Berlin's architecture and urban design resulting from its historical background. Architect Ludwig Mies van der Rohe and his artistic ancestors. Role of the cultural exchange between Germany and the U.S. Changing nature of the city from the 19th century to the present.

OSPBER 66. Theory from the Bleachers: Reading German Sports and Culture. 3 Units.

German culture past and present through the lens of sports. Intellectual, societal, and historical-political contexts. Comparisons to Britain, France, and the U.S. The concepts of *Körperkultur*, *Leistung*, *Show*, *Verein*, and *Haltung*. Fair play, the relation of team and individual, production and deconstruction of sports heroes and heroines, and sports nationalism. Sources include sports narrations and images, attendance at sports events, and English and German texts. Taught in German.

OSPBER 68. Protestant Reformation. 4 Units.

New forms of Christian religious thought and practice that emerged in Western Europe in the early to mid-sixteenth century and decisively shaped the course of Western history. Religious status quo and other forms of religious dissent that challenged late medieval Christendom; proposals for reform exemplified by Martin Luther, Andreas Karlstadt, Thomas Müntzer; impact of the changes in religion and the conflicts over religion for society more broadly.

OSPBER 70. The Long Way to the West: German History from the 18th Century to the Present. 4-5 Units.

Battles still current within Germany's collective memory. Sources include the narrative resources of museums, and experts on the German history in Berlin and Potsdam. Field trips.

OSPBER 100B. Berlin Heute. 2 Units.

Required for students enrolled in OSPBER 21B; open to students in other German language classes. Active use of German, including vocabulary from a variety of fields and disciplines, and discussion of current issues.

OSPBER 101A. Contemporary Theater. 5 Units.

Texts of plays supplemented by theoretical texts or reviews. Weekly theater visits, a tour of backstage facilities, and discussions with actors, directors, or other theater professionals. In German. Prerequisite: completion of GERLANG 3 or equivalent.

OSPBER 101B. Advanced German. 5 Units.

For intermediate and advanced students. Focus is on Berlin through film, literature, music, live performance, news media, and field trips. Essay writing, vocabulary building, and in-class presentations. Reading literature and news stories, essay writing, vocabulary building, and in-class presentations.

OSPBER 115X. The German Economy: Past and Present. 4-5 Units.

The unsteady history of the German economy in the Wilhelmine Empire, the Weimar Republic, the Third Reich, the post WWII divided and united Germany. Special attention on the economic policy of the Third Reich and the present role of Germany in the world economy.

OSPBER 126X. A People's Union? Money, Markets, and Identity in the EU. 4-5 Units.

The institutional architecture of the EU and its current agenda. Weaknesses, strengths, and relations with partners and neighbors. Discussions with European students. Field trips; guest speakers.

OSPBER 161X. The German Economy in the Age of Globalization. 4-5 Units.

Germany's role in the world economy: trade, international financial markets, position within the European Union; economic relations with Eastern Europe, Russia, the Third World, and the U.S. International aspects of German economic and environmental policies. The globalization of the world's economy and Germany's competitiveness as a location for production, services, and R&D, focusing on the German car industry.

OSPBER 174. Sports, Culture, and Gender in Comparative Perspective. 5 Units.

Theory and history of mass spectator sports and their role in modern societies. Comparisons with U.S., Britain, and France; the peculiarities of sports in German culture. Body and competition cultures, with emphasis on the entry of women into sports, the modification of body ideals, and the formation and negotiation of gender identities in and through sports. The relationship between sports and politics, including the 1936 Berlin Olympic Games.

OSPBER 198D. Humboldt Universität: Humanities 2. 1-3 Unit.

Course may be repeated for credit.

OSPBER 198F. Humboldt Universität: Social Sciences 2. 1-3 Unit.

Course may be repeated for credit.

OSPBER 198H. Freie Universität: Humanities 3. 1-5 Unit.

Course may be repeated for credit.

OSPBER 198K. Weissensee Art University 1. 1-4 Unit.

Course may be repeated for credit.

OSPBER 198L. Weissensee Art University 2. 1-4 Unit.

Course may be repeated for credit.

OSPBER 198M. Weissensee Art University 3. 1-4 Unit.

Course may be repeated for credit.

OSPBER 199A. Directed Reading A. 2-4 Units.

Course may be repeated for credit.

OSPBER 199B. Directed Reading B. 2-3 Units.

Course may be repeated for credit.

OSPBER 199D. Humboldt Universität: Humanities. 1-3 Unit.

Course may be repeated for credit.

OSPBER 199F. Humboldt Universität: Social Sciences. 1-3 Unit.

Course may be repeated for credit.

OSPBER 199G. Freie Universität: Social Sciences 1. 1-3 Unit.

Course may be repeated for credit.

OSPBER 199H. Freie Universität: Humanities 1. 1-3 Unit.

Course may be repeated for credit.

OSPBER 199J. Freie Universität: Natural Sciences 1. 1-3 Unit.

Course may be repeated for credit.

OSPBER 199K. Freie Universitat: Social Sciences 2. 1-3 Unit.
Course may be repeated for credit.

OSPBER 199L. Freie Universitat: Humanities 2. 1-3 Unit.
Course may be repeated for credit.

OSPBER 199M. Freie Universitat: Natural Sciences 2. 1-3 Unit.
Course may be repeated for credit.

Overseas Studies in Cape Town Courses

OSPCPTWN 15. Segregation and Social Distance: The Politics of Social Separation. 4 Units.

Compare and contrast apartheid practices of “separate development” with policies of reservation and ghettoization used in other countries and in different historical periods. Case studies range from Blacks and American Indians in the United States, to the Jews and Roma in Europe, and the Burakumin in Japan. Key question include: Which groups (or what characteristics) were targeted for policies of segregation? Do these vary over time and across countries? What role does “race” play in justifying these practices, and how do the policies, in turn, help to reproduce ideas about race and racial difference?.

OSPCPTWN 16. South Africa Sites of Memory. 2 Units.

Required Course. Relation between conventional histories and different kinds of individual and collective memory that are focused on places and spaces, testing the relation between grand narratives and more particularized pasts. Questions of cultural heritage, in particular its contestations among individual, familial, local, national, and international interests.

OSPCPTWN 17. Western Cape Sites of Memory. 1 Unit.

Required Course. Relation between conventional histories and different kinds of individual and collective memory that are focused on places and spaces, testing the relation between grand narratives and more particularized pasts. Questions of cultural heritage, in particular its contestations among individual, familial, local, national, and international interests.

OSPCPTWN 18. Xhosa Language and Culture. 2 Units.

History of the Xhosa language; understanding Xhosa culture and way of life. Listening, speaking, reading and writing, combined with the social uses of the language in everyday conversations and interactions. Intercultural communication. Content drawn from the students’ experiences in local communities through their service learning/volunteer activities to support the building of the relationships in these communities. How language shapes communication and interaction strategies. Course may be repeated for credit.

OSPCPTWN 19. Hip Hop Africa: Hip Hop Art, Culture, and Education in Africa. 3-4 Units.

How youth on the African continent and in the diaspora are creating and consuming Hip Hop cultural texts in order to make sense of their place in a globalizing world. Against this broader backdrop, explore Hip Hop in the lives of South African youth in Cape Town and engage in service learning with one of Stanford’s partner organizations. Opportunity to collaborate with South African youth and learn about the cultural, political, and educational implications of the Hip Hop arts in South Africa.

OSPCPTWN 22. Preparation for Community-Based Research in Community Health and Development. 3 Units.

For students intending to engage in community-based research in South Africa in the summer following spring study quarter in Cape Town. Approaches and methods of collaborative, community-based research; qualitative data gathering and analysis methods in community-based research; effective collaboration with community partners and data sources; race and privilege in community-based research. Identifying research partners and sponsors; articulating potential research questions; and planning research projects.

OSPCPTWN 24A. Targeted Research Project in Community Health and Development. 3 Units.

Two-quarter sequence for students engaging in Cape Town-sponsored community based research. Introduction to approaches, methods and critical issues of partnership-based, community-engaged research and to the community-based research partners. Qualitative data gathering and analysis methods in community-based research; effective collaboration with community partners and data sources; race and privilege in community-based research. Preparation of research proposals and plans for research carried out during spring quarter through OSPCPTWN 24B.

OSPCPTWN 24B. Targeted Research Project in Community Health and Development. 5 Units.

Two-quarter sequence for students engaging in Cape Town-sponsored community-based research. Substantive community health or development investigations in collaboration with the Stanford Centre’s community partners: Western Cape NGOs or government agencies, or community-based organizations or groups. Students’ research supported through methods workshops, sharing of progress and problems, and data and findings presentations. Prerequisite: OSPCPTWN 24A.

OSPCPTWN 31. Political Economy of Foreign Aid. 3 Units.

Political economy approach to foreign aid. Context of debate on development: differences between developed and less developed countries, concept of poverty, how to measure development. History of foreign aid; main actors and characteristics of official development assistance. Theoretical and empirical impact of aid with regard to economic growth and governance. Benefits and problems associated with aid.

OSPCPTWN 32. Service, Citizenship and Social Change: Service Learning in the Contemporary South African Context-. 5 Units.

Adult learning and its role in community social action; development; service learning. Micro contexts of people’s daily lives and experiences in the context of an emergent democracy; understanding possibilities of community action and mobilisation for social change. Service in a historically marginalised community near Cape Town to understand realities of everyday life in informal settlements, to engage with education in a developmental context, and to gain insight into sociopolitical factors that shape social action and learning.

OSPCPTWN 33. Southern Africa: from Liberation Struggles to Region-Building. 4 Units.

Process by which the region moved from colonialism/apartheid to majority rule through a series of liberation struggles, and the outcomes of those struggles. Cases of Angola and Mozambique, Zimbabwe, Namibia and South Africa. Transitions from apartheid to democracy in Namibia and South Africa through negotiated settlements. Topics include: Truth and Reconciliation Commission; role of the Southern African Development Community; challenges in region today; influence of violent past and legacies of struggle against colonialism and apartheid on present situation.

OSPCPTWN 36. The Archaeology of Southern African Hunter Gatherers. 4 Units.

Archaeology, history and ethnography of the aboriginal hunter gatherers of southern Africa, the San people. Formative development of early modern humans and prehistory of hunters in southern Africa before the advent of herding societies; rock paintings and engravings of the subcontinent as situated in this history. Spread of pastoralism throughout Africa. Problems facing the descendants of recent hunter gatherers and herders in southern Africa, the Khoisan people.

OSPCPTWN 38. Genocide: The African Experience. 3-5 Units.

Genocide as a major social and historical phenomenon, contextualized within African history. Time frame ranging from the extermination of indigenous Canary Islanders in the fourteenth and fifteenth centuries to more recent mass killings in Rwanda and Darfur. Emphasis on southern African case studies such as Cape San communities and the Herero people in Namibia. Themes include: roles of racism, colonialism and nationalism in the making of African genocides. Relevance of other social phenomena such as modernity, Social Darwinism, ethnicity, warfare and revolution. Comparative perspective to elucidate global dimensions.

OSPCPTWN 43. Public and Community Health in Sub-Saharan Africa. 4 Units.

Introduction to concept of public health as compared with clinical medicine. Within a public health context, the broad distribution of health problems in sub-Saharan Africa as compared with U.S. and Europe. In light of South Africa's status as a new democracy, changes that have occurred in health legislation, policy, and service arenas in past 16 years. Topics include: sector health care delivery, current distribution of infectious and chronic diseases, and issues related to sexual and reproductive health in South Africa. Site visits to public sector health services and health related NGOs.

OSPCPTWN 68. Cities in the 21st Century: Urbanization, Globalization and Security. 4 Units.

Cities in a globalizing world. Themes: challenges posed by globalization; general and specific responses of cities to these challenges; security issues created by globalization and urbanization. Concerns related to food security, resource availability, and threat of political instability. Policies recommended by World Bank. Case study method.

OSPCPTWN 199A. Directed Reading A. 2-4 Units.

Course may be repeated for credit.

OSPCPTWN 199B. Directed Reading B. 1-5 Unit.

Course may be repeated for credit.

Overseas Studies in Florence Courses

OSPFLOR 1A. Accelerated First-Year Italian, Part 1. 5 Units.

Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. Prerequisite: advanced-level proficiency in another Romance language Prerequisite: Placement .

OSPFLOR 1F. First-Year Italian, First Quarter. 5 Units.

All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities.

OSPFLOR 2A. Accelerated First-Year Italian, Part 2. 5 Units.

Continuation of ITALLANG 1A. Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. Prerequisite: Placement Test, ITALLANG 1A or consent of instructor. Fulfills the University language requirement.

OSPFLOR 2F. First-Year Italian, Second Quarter. 5 Units.

Continuation of ITALLANG 1. All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. Prerequisite: Placement Test, ITALLANG 2.

OSPFLOR 3F. First-Year Italian, Third Quarter. 5 Units.

Continuation of ITALLANG 2. All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. Prerequisite: Placement Test, ITALLANG 2 or consent of instructor. Fulfills the University language requirement.

OSPFLOR 21F. Accelerated Second-Year Italian, Part A. 5 Units.

Review of grammatical structures; grammar in its communicative context. Listening, speaking, reading, and writing skills practiced and developed through authentic material such as songs, newspaper articles, video clips, and literature. Insight into the Italian culture and crosscultural understanding. Prerequisite: one year of college Italian if completed within two quarters of arriving in Florence, or ITALLANG 21.

OSPFLOR 22F. Accelerated Second-Year Italian Part B. 5 Units.

Grammatical structures, listening, reading, writing, speaking skills, and insight into the Italian culture through authentic materials. Intermediate to advanced grammar. Content-based course, using songs, video, and literature, to provide cultural background for academic courses. Prerequisite: ITALLANG 21 within two quarters of arriving in Florence or ITALLANG 21A or OSPFLOR 21F.

OSPFLOR 31F. Advanced Oral Communication: Italian. 3 Units.

Refine language skills and develop insight into Italian culture using authentic materials. Group work and individual meetings with instructor. Minimum enrollment required. Prerequisite: ITALLANG 22A, 23 or placement.

OSPFLOR 33. Under the Tuscan Sun: A Model for Agriculture and Sustainability. 5 Units.

Soil as a complex biological system where harvesting is possible. Analysis of the different typologies of soil in Tuscany, their role in affecting the landscape, and the current and potential risks of their degradation phenomena, including anthropic pollution events. Present situation and future perspectives of agriculture in Tuscany with particular reference to oil and wine. Fruit culture, greenhouses and nurseries, as well as animal rearing, each representing a critical component of Tuscan agriculture. Sustainable management of natural resources in Tuscany as a model.

OSPFLOR 34. The Virgin Mother, Goddess of Beauty, Grand Duchess, and the Lady: Women in Florentine Art. 4 Units.

Influence and position of women in the history of Florence as revealed in its art. Sculptural, pictorial, and architectural sources from a social, historical, and art historical point of view. Themes: the virgin mother (middle ages); the goddess of beauty (Botticelli to mannerism); the grand duchess (late Renaissance, Baroque); the lady, the woman (19th-20th centuries).

OSPFLOR 41. The Florentine Sketchbook: A Visual Arts Practicum. 3-5 Units.

The ever-changing and multifaceted scene of contemporary art through visual and sensorial stimulation. How art is thought of and produced in Italy today. Hands-on experience. Sketching and exercises on-site at museums and exhibits, plus workshops on techniques. Limited enrollment.

OSPFLOR 42. Academic Internship. 1-5 Unit.

Mentored internships in banking, education, the fine arts, health, media, not-for-profit organizations, publishing, and retail. May be repeated for credit.

OSPFLOR 44. Galileo: Genius, Innovation and the Scientific Revolution. 5 Units.

Galileo's life and scientific progress starting from his student years at the University of Pisa. Departure from traditional natural philosophy leading to radical reformation of cosmology and physics, emphasizing the science of motion. His innovative use of observation and measurement instruments, emphasizing the telescope. Cultural and social context.

OSPFLOR 46. Images of Evil in Criminal Law: Icons and the Visual Representation on Wrongdoing. 5 Units.

Iconographic component of criminal law; reasons and functions of the visual representation of criminal wrongdoing. Historical roots of "evil typecasting;" consideration of its variations with respect to common law and civil law systems. Fundamental features of the two legal systems. Sources, actors, enforcement mechanisms of the criminal law compared; study of cases in the area of murder, sex offences, organized crime and terrorism. Different techniques of image typecasting highlighted and discussed. International criminal law, which takes the burden to describe, typecast and punish forms of "enormous, disproportionate evil," such as genocide and other mass atrocities.

OSPFLOR 48. Sharing Beauty in Florence: Collectors, Collections and the Shaping of the Western Museum Tradition. 4 Units.

The city's art and theories of how art should be presented. The history and typology of world-class collections. Social, economic, political, and aesthetic issues in museum planning and management. Collections include the Medici, English and American collectors of the Victorian era, and modern corporate and public patrons.

OSPFLOR 49. On-Screen Battles: Filmic Portrayals of Fascism and World War II. 5 Units.

Structural and ideological attributes of narrative cinema, and theories of visual and cinematic representation. How film directors have translated history into stories, and war journals into visual images. Topics: the role of fascism in the development of Italian cinema and its phenomenology in film texts; cinema as a way of producing and reproducing constructions of history; film narratives as fictive metaphors of Italian cultural identity; film image, ideology, and politics of style.

OSPFLOR 50M. Introductory Science of Materials. 4 Units.

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

OSPFLOR 54. High Renaissance and Maniera. 5 Units.

The development of 15th- and early 16th-century art in Florence and Rome. Epochal changes in the art of Michelangelo and Raphael in the service of Pope Julius II. The impact of Roman High Renaissance art on masters such as Fra' Bartolomeo and Andrea del Sarto. The tragic circumstances surrounding the early *maniera*: Pontorno and Rosso Fiorentino and the transformation of early Mannerism into the elegant style of the Medicean court. Contemporary developments in Venice.

OSPFLOR 55. Academy of Fine Arts: Studio Art. 1-5 Unit.

Courses through the *Accademia delle Belle Arti*. Details upon arrival. Minimum Autumn and Winter Quarter enrollment required; 1-3 units in Autumn. May be repeated for credit.

OSPFLOR 56. University of Florence Courses. 1-5 Unit.

May be repeated for credit.

OSPFLOR 58. Space as History: Urban Change and Social Vision in Florence 1059 to the Present. 4 Units.

A thousand years of intentional change in Florence. Phases include programmatic enlargement of ecclesiastical structures begun in the 11th century; aggressive expansion of religious and civic space in the 13th and 14th centuries; aggrandizement of private and public buildings in the 15th century; transformation of Florence into a princely capital from the 16th through the 18th centuries; traumatic remaking of the city's historic core in the 19th century; and development of new residential areas on the outskirts and in neighboring towns in the 20th and 21st centuries.

OSPFLOR 67. Women in Italian Cinema: Maternity, Sexuality, and the Image. 4 Units.

Film in the social construction of gender through the representation of the feminine, the female, and women. Female subjects, gaze, and identity through a historical, technical, and narrative frame. Emphasis is on gender, identity, and sexuality with references to feminist film theory from the early 70s to current methodologies based on semiotics, psychoanalysis, and cultural studies. Advantages and limitations of methods for textual analysis and the theories which inform them. Primarily in Italian.

OSPFLOR 69. Abstract Art: Creativity, Self-Expression and Depicting the Unimaginable. 4 Units.

Overview of the birth and evolution of abstract art with visual background necessary to produce works of art free of a realistic representation. Movements and trends in abstract art; experimentation with different media and techniques.

OSPFLOR 71. A Studio with a View: Drawing, Painting and Informing your Aesthetic in Florence. 3-5 Units.

Recent trends in art, current Italian artistic production, differences and the dialogue among visual arts. Events, schools, and movements of the 20th century. Theoretical background and practical training in various media. Work at the Stanford Center and on site at museums, exhibits, and out in the city armed with a sketchbook and camera. Emphasis is on drawing as the key to the visual arts. Workshops to master the techniques introduced. Limited enrollment.

OSPFLOR 74. Ethics and Politics of Climate Change. 5 Units.

Holistic view of anthropogenic climate change, addressing the several points of view from which this phenomenon is usually discussed: climatological, economic, political and ethical, with a focus on the latter two. Climate change as a collective action problem: how to bring individual actors (states, regional unions, business associations, trade unions) to take a collective course of action whose benefits will be felt primarily by future generations. Notion of global governance, as well as the difficulties for democracy to come to terms with an unprecedented challenge. Ethical debate on climate change: how we can find rules that re-establish what is now called climate justice; why we should accept having obligations to future generations.

OSPFLOR 75. Florence in the Renaissance. 5 Units.

Using a series of texts written by 14th and 15th century Florentines, look at the urban values of the city's citizens. Topics include: thinking about urban space; social relations; the values attached to politics, money, family, religion. How meanings of words such as "state", "government", and "family" might have changed over time.

OSPFLOR 78. The Impossible Experiment: Politics and Policies of the New European Union. 5 Units.

Institutional design of EU, forthcoming changes, and comparison of the old and new designs. Interactions between the EU, member states, organized interests, and public opinion. Major policies of the EU that affect economics such as competition or cohesion policies, market deregulation, and single currency. Consequences of the expansion eastwards. The role of institutions as a set of constraints and opportunities for the economic actors; relationships between political developments and economic change in the context of regional integration; lessons for other parts of the world.

OSPFLOR 85. Bioethics: Between Human Rights, Responsibility, and Care Ethics. 4 Units.

Birth and development of the philosophical field of bioethics based on advances in several fundamental fields of science and technology, including molecular and cell biology, information technology, neurosciences and converging technologies. Challenges for society and ethical and political issues created by new advances and opportunities for individuals and populations. Philosophical approaches developed in the Italian as well as in the European debate; special attention to controversy about the freedom of scientific research, new conditions of procreation, birth, cures, and death. Complexity of the challenges posed by the "biotechnological revolution".

OSPFLOR 86. Stem Cells in Human Development and Regenerative Medicine. 4-5 Units.

Principles and practice of regenerative medicine. Molecular and developmental biology relevant to the understanding of differentiation and development at the molecular, cellular and organismal levels. Production of lines of multipotent and pluripotent stem cells, the conditions necessary to induce their differentiation into specific lineages and cell types, and their clinical applications. State of the art on the development of regenerative therapies for cartilage injury. Aspects of inherited or acquired diseases that could be potentially treated by stem cell therapies. Quality control and quality assurance necessary for the adequate delivery of stem cell based therapies within current legislative frameworks.

OSPFLOR 87. The Future of Healthcare: Italy, Europe and the U.S.. 4 Units.

Definition of a health care system and fundamental components such as service delivery system, financing, government control and patients' rights. Performance of health systems in terms of effectiveness, equity and efficiency; recent work of the World Health Organization and Organization for Economic Co-operation and Development with respect to the performance, measurement, and management of European health systems. Underlying similarities and differences of Italian System, compared to the U.S. Organization of typical Italian University medical center.

OSPFLOR 90. Stem Cells in Human Development and Regenerative Medicine. 3 Units.

Role of stem cells in development from the fertilized egg to embryo, tissue formation and regeneration. Focus begins with preimplantation development and moves to a different tissue or organ system each week with lecture, case study of a disease/pathology of that tissue or organ system, and possible solutions and future directions based on research and recent advances. Relevance of Leonardo Da Vinci's work in today's field of regenerative medicine.

OSPFLOR 91. Social, Cultural and Ethical Issues Surrounding Stem Cell Biology and Regenerative Medicine. 2 Units.

Ethical, social and cultural issues surrounding embryology, stem cell biology and regenerative medicine. Current science, controversies, and discussion of potential resolutions. Cultural context for the beginning of life and the science of embryology and reproductive biology. Challenges of understanding pathology and disease and criteria for clinical trials. Reprogramming, stem cell transplantation and potential complications. Field trip to the Basilica di Santa Maria del Fiore.

OSPFLOR 93. Virtual Reality: People, Art and Culture. 5 Units.

How virtual reality is going to change society. Representations of virtual reality (VR) historically in fiction, film, and other artistic forms. How VR functions from a technical standpoint. How VR is used for social science, focusing on the psychological implications of spending time on line. Pros and cons of visiting a virtual statue instead of physically visiting the museum. Students design a proposal for a virtual museum exhibit.

OSPFLOR 96. Food and Politics. 3-5 Units.

Production, distribution, and consumption of food and the ways in which politics are implicated throughout the entire food system, beginning from the presumption that eating is a political and ethical activity. Topics include: evaluation and potential reform of policies that structure the food system; history of agriculture and food distribution; evaluation of agricultural and free trade policies, especially in the context of the United States as compared to Italy and European Union; the Slow Food Movement, and its implications for agricultural policy.

OSPFLOR 111Y. From Giotto to Michelangelo: The Birth and Flowering of Renaissance Art in Florence. 4 Units.

Lectures, site visits, and readings reconstruct the circumstances that favored the flowering of architecture, sculpture, and painting in Florence and Italy, late 13th to early 16th century. Emphasis is on the classical roots; the particular relationship with nature; the commitment to human expressiveness; and rootedness in the real-world experience, translated in sculpture and painting as powerful plasticity, perspective space, and interest in movement and emotion.

OSPFLOR 115Y. Building the Cathedral and the Town Hall: Constructing and Deconstructing Symbols of a Civilization. 4 Units.

The history, history of art, and symbolism of the two principal monuments of Florence: the cathedral and the town hall. Common meaning and ideological differences between the religious and civic symbols of Florence's history from the time of Giotto and the first Guelf republic to Bronzino and Giovanni da Bologna and the Grand Duchy.

OSPFLOR 134F. Italian Cinema and the Aesthetics of Modernism. 5 Units.

As the embodiment of modernity, cinema develops in the wake of modernism proper, but can be understood as one of its technological and aesthetic expressions. Topics: cinema's archaeology in futurist texts and theories with their nationalistic political flavor and their iconoclastic, radical, and interdisciplinary rethinking of the language and form of all the arts (Marinetti, Pirandello, D'Annunzio).

OSPFLOR 199A. Directed Reading A. 1-4 Unit.

Course may be repeated for credit.

OSPFLOR 199B. Directed Reading B. 1-4 Unit.

Course may be repeated for credit.

Overseas Studies in KCJS Kyoto Courses

OSPKEYOCT 103A. Third-Year Japanese I. 12 Units.

Preparation for function beyond basic level in a Japanese-speaking environment by developing and enhancing communicative competence through: review of basic grammar; new grammar; reading short essays and articles with help of dictionary; short writing and speaking assignments using formal style to describe, explain, and discuss sociocultural topics; enhancing listening comprehension.

OSPKEYOCT 103B. Third-Year Japanese II. 12 Units.

Preparation for function beyond basic level in a Japanese-speaking environment by developing and enhancing communicative competence through: review of basic grammar; new grammar; reading short essays and articles with help of dictionary; short writing and speaking assignments using formal style to describe, explain, and discuss sociocultural topics; enhancing listening comprehension.

OSPKEYOCT 104A. Fourth-Year Japanese I. 12 Units.

Emphasis on applications of correct grammar and strengthening academic communication skills through: reading longer essays, articles, and novels with some dictionary work; reading and writing assignments in paragraph format using formal style to describe, explain and discuss sociocultural topics; developing listening comprehension.

OSPKEYOCT 104B. Fourth-Year Japanese II. 12 Units.

Emphasis on applications of correct grammar and strengthening academic communication skills through: reading longer essays, articles, and novels with some dictionary work; reading and writing assignments in paragraph format using formal style to describe, explain and discuss sociocultural topics; developing listening comprehension.

OSPKEYOCT 105A. Fifth-Year Japanese I. 12 Units.

For students with advanced proficiency. Goals include advanced command of grammar, composition, and stylistics. Emphasis is on academic Japanese preparing students to audit classes at a Japanese university.

OSPKYOCT 105B. Fifth-Year Japanese II. 12 Units.

For students with advanced proficiency. Goals include advanced command of grammar, composition, and stylistics. Emphasis is on academic Japanese preparing students to audit classes at a Japanese university.

OSPKYOCT 107. Language Use in the Anime of Miyazaki Hayao. 6 Units.

Japanese language in action. How language usage can vary by situation such as relative social distance between participants, type of interaction or event, in/out group membership, and attitudinal stance on discussion topic. How linguistic behavior of a character contributes to overall portrayal and identity in a film. Film dubbings and subtitles. Multimedia projects.

OSPKYOCT 108. Lost in Translation. 6 Units.

The art and practice of translating literary texts from a variety of periods and genres. Strategies for translation and essays on translation by literary translators and theorists. Notable translations of Japanese literature in connection with the original texts. Students develop individual translation projects.

OSPKYOCT 109. Exploring Language and Food in Kyoto. 6 Units.

How local Kyoto food purveyors use language to market and present their wares and how they communicate with customers. Readings on Japanese food culture from anthropology, history and literature as well as topics in linguistics. Students will also take notes on spoken language use by staff and customers and gather samples of written language from selected shops and restaurants.

OSPKYOCT 120. Power, Culture, and Transformation in Pre-Modern Japan. 6 Units.

History of various peoples living in Japanese archipelago from 1200 to 1800. Different ways that people identified themselves and how multiple identifications engendered conflict and dynamic power relations in society.

OSPKYOCT 121. History and Memory in the Nanking Massacre and Comfort Women Discourses. 6 Units.

Critical discussion of ethical, political, and epistemological problems in the historical representation of the Nanjing Massacre and the "comfort-women" system of military sexual slavery. Issues of historical interpretation and paradox of attempting to speak for people whose experiences have been erased from the realm of the representable.

OSPKYOCT 122. The Rise of Modern Japan: Politics of Space and Time. 6 Units.

Japan's transformation into a modern nation-state from the late Tokugawa period (1800) into the 1980's.

OSPKYOCT 128. Families and Work in Post-war Japan. 6 Units.

Factors that promoted both change and continuity in the social division of labor between the interdependent spheres of work and family. How cultural strategies for organizing contemporary Japanese social life were conditioned 1) by rapid industrialization and growth and 2) by later economic stasis. Class, gender, and regional variations; role of social psychology in Japanese responses to work-family conflicts.

OSPKYOCT 164. Kansai Area Arts. 6 Units.

Kansai area, in particular the golden triangle formed by cities of Kyoto, Osaka, and Nara, as the center of Japanese art production from 4th century until the 17th century when patronage shifted to Tokyo. Focus is on painting and sculpture through readings, classroom discussion, and field trips.

OSPKYOCT 179. Kyoto Artisans and their Worlds. 6 Units.**OSPKYOCT 185. Noh and Kyogen. 6 Units.**

Noh drama as a mirror of Muromachi period culture. Broad literary heritage and Buddhist precepts reflected in plays. Performance traditions such as Shinto ritual, court dance, harvest festivals, exorcism rites, and narrative entertainment. Wider context of world drama and dramatic theories of the creators of Noh. Close reading of representative plays and first hand experience of performance.

OSPKYOCT 197. Independent Studies. 6 Units.

Focused research using the Japanese language and taking advantage of local Kyoto resources. Directed reading and research, weekly meetings with professor, and final research paper. For full-year students with language skills adequate for the proposed research.

OSPKYOCT 198. Gender Issues in Japan. 6 Units.

Women's issues as related to men's issues in Japan. The house system and the legalized prostitution system in modern Japan. Topics include marriage, gender division of labor, child bearing, contraception, and domestic violence. How the private sphere is influenced by the public sphere including politics, economy, and culture. In Japanese.

Overseas Studies in Kyoto Courses

OSPKYOTO 2K. First-Year Japanese Language, Culture, and Communication, Second Quarter. 5 Units.

Continuation of JAPANLNG 1. First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. Prerequisite: JAPANLNG 1 if taken 2012-13 or later (JAPANLNG 7 if taken 2011-12 or earlier).

OSPKYOTO 3K. First-Year Japanese Language, Culture, and Communication, Third Quarter. 5 Units.

(Formerly OSPKYOTO 9K). Continuation of 2K. First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. Fulfills University Foreign Language Requirement. Prerequisite: JAPANLNG 2 or OSPKYOTO 2K if taken 2012-13 or later (JAPANLNG 8 if taken 2011-13 or earlier).

OSPKYOTO 13. Contemporary Japanese Religion. 4-5 Units.

Japanese attitudes to religion and popular forms of religiosity. Syncretic nature of beliefs and practices drawn on a variety of interwoven concepts, beliefs, customs and religious activities of native Japanese, Korean, Chinese, and Indian origins as background. Topics include: pursuit of worldly benefits, religion and healing, fortune-telling, ascetic practices, pilgrimage, festivals (matsuri), new religions and their image, impact of the internet, response of religion in times of crisis.

OSPKYOTO 17R. Religion and Japanese Culture. 4-5 Units.

Major religious traditions of Japan. Topics include: relation between religion and culture; ancient Japanese religion and Shinto; Buddhist schools of Heian Japan; Zen Buddhism as it flourished in the Kamakura period; Confucianism, as originally conceived in ancient China and as transmitted to Japan in the Edo period in its neo-Confucian form; characteristic modern practices. Field trips to religious centers to observe current religious practices.

OSPKYOTO 21K. Second-Year Japanese Language, Culture, and Communication, First Quarter. 5 Units.

(Formerly OSPKYOTO 17K.) Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: JAPANLNG 3 if taken 2012-13 or later (JAPANLNG 7 if taken 2011-12 or earlier).

OSPKYOTO 22K. Second-Year Japanese Language, Culture, and Communication, Second Quarter. 5 Units.

(Formerly OSPKYOTO 18K). Continuation of JAPANLNG 21. Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: JAPANLNG 21 if taken 2012-13 or later (JAPANLNG 17 if taken 2011-12 or earlier).

OSPKYOTO 23K. Second-Year Japanese Language, Culture, and Communication, Third Quarter. 5 Units.

Formerly OSPKYOTO 19K). Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: JAPANLNG 22 or OSPKYOTO 22K if taken 2012-13 or later (JAPANLNG 18 if taken 2011-12 or earlier).

OSPKYOTO 40K. Introductory Electronics. 5 Units.

Electrical quantities and their measurement, including operation of the oscilloscope. Function of electronic components including resistor, capacitor, and inductor. Analog circuits including the operational amplifier and tuned circuits. Digital logic circuits and their functions. Lab assignments. Prerequisite: PHYSICS 43.

OSPKYOTO 48. City and Sounds in Kyoto. 4-5 Units.

City of Kyoto as a listening experience and the ways this experience conveys the physical sense of the City. How can sound represent a particular place? How do people experience Kyoto through auditory channels, and how does and did sound mediate and constitute Kyoto as cultural space? Mini sound-ethnographic projects employing digital recording of everyday sound in a rage of sites in Kyoto.

OSPKYOTO 49. Contemporary Japanese Popular Culture. 4-5 Units.

Theories of popular culture; contemporary anthropological studies on Japanese popular culture. Topics include: Otaku culture, aesthetics of cuteness, J-Pop, and mobile technology. Individual or group research project with hands-on experience of empirical research: finding a topic, formulating research questions, designing research, gathering and analyzing data, and writing a research paper.

OSPKYOTO 61. The Fourier Transform and its Applications. 3 Units.

The Fourier transform as a tool for solving physical problems. Fourier series, the Fourier transform of continuous and discrete signals and its properties. The Dirac delta, distributions, and generalized transforms. Convolutions and correlations and applications; probability distributions, sampling theory, filters, and analysis of linear systems. The discrete Fourier transform and the FFT algorithm. Multidimensional Fourier transform and use in imaging. Further applications to optics, crystallography. Emphasis on relating the theoretical principles to solving practical engineering and science problems. Prerequisites: Math through ODEs, Fourier series at the level of 102A, and linear algebra. Same as EE 261.

OSPKYOTO 64. Japanese Popular Culture. 4-5 Units.

Origin, history and production of genres of Japanese popular culture such as manga, anime, popular music, television drama, film and new media, and their link to current phenomena. Themed units: disaster anime; politics of shojo; otakuology; keitai studies. Analysis of media texts and how age, gender, race, ethnicity and socio-economic class are represented. Social context in which popular culture is produced and consumed. Local field trips.

OSPKYOTO 65. Postwar Japan in Film. 4-5 Units.

Film as a cultural medium sensitive to changes in Japanese society after World War II. How both feature and commercial films commented on, and critiqued, the dramatic transformations Japan was undergoing during the early postwar decades. Issues include the psychology of defeat, political corruption, the changing family, the rise of consumerism, environmental pollution, the economic bubble, and the urban underworld.

OSPKYOTO 102K. Third-Year Japanese Language, Culture, and Communication, Second Quarter. 5 Units.

Continuation of JAPANLNG 101. Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: JAPANLNG 101 if taken 2012-13 or later (JAPANLNG 117 if taken 2011-12 or earlier).

OSPKYOTO 103K. Third-Year Japanese Language, Culture, and Communication, Third Quarter. 5 Units.

(Formerly OSPKYOTO 119K). Continuation of 118K. Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: JAPANLNG 102 or OSPKYOTO 102K if taken 2012-13 or later (JAPANLNG 118 if taken 2011-12 or earlier).

OSPKYOTO 199. Directed Reading. 1-4 Unit.

Course may be repeated for credit.

OSPKYOTO 210K. Advanced Japanese. 5 Units.**OSPKYOTO 215X. The Political Economy of Japan. 4-5 Units.**

Institutions and processes in the political organization of economic activity in modern Japan. The interaction of public and private sector institutions in the growth of Japan's postwar economy. The organization and workings of key economic ministries and agencies of the government, private sector business groupings, government interaction, and public policy making. The transformation of Japanese industrial policy from the rapid growth of heavy and chemical industries to the promotion of high technology and communications industries. The international, political, and economic ramifications of the structure and importance of Japanese capitalism.

Overseas Studies in Madrid Courses

OSPMADRD 8A. Architecture, Culture and Nature in Madrid: Towards a Sustainable City. 2 Units.

Architecture and the city, with a focus on recent currents in the progress of both, such as sustainability, environmentalism and the relationship with nature. Topics underpinned by discussion of theory, and illustrated by a study of the city of Madrid: an example of a hybrid architectural/planning experiential environment that looks to the future with an ambition for modernization.

OSPMADRD 8B. Debating Design: Spanish and International Fashion. 2 Units.

Culture and society in Spain as viewed through the lens of the fashion industry. Social changes, trends, and the evolution of life styles. Industrial, commercial and media involvement in the internationalization of the industry.

OSPMADRD 8C. Appreciating Spanish Music. 2 Units.

Unique aspects of Spanish art music. Participation in concert outings and field trips for live performances of studied repertoire. No previous knowledge of music required.

OSPMADRD 10. The Mobile Methodologist. 1-4 Unit.

Stages of the empirical research process in social psychology. Concrete experience in hypothesis generation, experimental design, and scientific writing. Devise research study to explore how social psychological and motivational concepts map onto a culture or social or educational problem. Key objective: formalize students' curiosity about a culture or problem through translation into scientifically testable research hypotheses. Provides opportunity to supplement OSPMADRD 23, Social Psychology, Social Change and Culture.

OSPMADRD 12M. Accelerated Second-Year Spanish I. 5 Units.

Intensive sequence integrating language, culture, and geo/sociopolitics of Spain. Emphasis is on achieving advanced proficiency in oral and written discourse, including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: one year of college Spanish or 11 or 21B more than two quarters (six months) prior to arriving in Madrid.

OSPMADRD 13M. Accelerated Second-Year Spanish II. 5 Units.

Intensive sequence integrating language, culture, and geo/sociopolitics of Spain. Emphasis is on achieving advanced proficiency in oral and written discourse, including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: 11 or 21B within two quarters (six months) of arriving in Madrid or 12 or 22B.

OSPMADRD 14. Introduction to Spanish Culture. 1 Unit.

Required for Madrid students. Spain's historical, physical, and sociocultural diversity. Includes a weekend study trip and other cultural encounters. Linguistic skills and cultural knowledge through museum visits, readings, and writing a paper in Spanish. Study trips: Autumn Quarter to Cantabria-Léon and Basque country; Winter Quarter to Andalusia and Extremadura; Spring Quarter to Catalonia and Galicia.

OSPMADRD 15. Flamenco Dance. 1 Unit.

Practical instruction. The rhythms and styles of flamenco and the expression of feelings proper to this art form which synthesizes song, music, and dance. *Zapateado* (footwork), *braceo* (arm positions and movement technique), and choreographies, including Rumba flamenca and Sevillanas. Enrollment limited. May be repeated for credit.

OSPMADRD 23. Social Psychology, Intervention, and Culture. 3-4 Units.

Major ideas, theories, and findings of social psychology and their relevance to social problems, ethnicity, and culture. Special attention to historical issues, classic studies, seminal theories, and the methodological traditions of experimental social psychology. Contemporary research also discussed. Focus on the three major intellectual contributions of social psychology; emphasis on situational rather than dispositional causes of behavior; recognition of the role of subjective construal in human affairs; appreciation of the complexity in social systems; and their importance in understanding human behavior, groups, culture, and inequality.

OSPMADRD 33. Spanish Language Tutorial. 2 Units.

May be repeated for credit. Prerequisite: three years of Spanish at Stanford or placement.

OSPMADRD 41. Dissidence and Continuity: Spanish Theater, 1907 to the Present. 4-5 Units.

Tradition, transformation, experimentation, rupture, renovation, and innovation in the theater in Spain as a reflection of the artistic, social and historical commotion that led to the Spanish Civil War, Franco, and the present democratic monarchy. Ortega y Gasset, Benavente, Grau, Valle-Inclán, García Lorca, Buero Vallejo, Sastre, Arrabal, Fernán Gómez, Paloma Pedrero, Yolanda Pallín or other playwrights who may be staged in Madrid theaters.

OSPMADRD 42. A European Model of Democracy: The Case of Spain. 5 Units.

Current Spanish political system, its main judicial and political institutions, outstanding actors' and the political process of the last decade. Historic antecedents; immediate precedents; and the current political system and life. Relation between the elements that constitute a political system; results of the process of democratization; integration to the EU.

OSPMADRD 43. The Jacobean Star Way and Europe: Society, Politics and Culture. 5 Units.

The Saint James' Way as a tool to understand historic dynamics from a global perspective. Its effect on the structures that form a political and institutional system, and its society, economy, and ideology.

OSPMADRD 45. Women in Art: Case Study in the Madrid Museums. 4 Units.

Viewing the collections at the Prado Museum through study and analysis of the representations of women. Contemporary literary texts and images that situate paintings in the historical, social, and political conditions that produced the works.

OSPMADRD 46. Drawing with Four Spanish Masters: Goya, Velázquez, Picasso and Dalí. 3 Units.

Approaches, techniques, and processes in drawing. Visits to Madrid museums to study paintings and drawings by Goya, Velázquez, Picasso, and Dalí and to explore the experience of drawing. Subject matter: the figure, still life, interiors, landscape, and non-representational drawing. No previous experience required. Enrollment limited.

OSPMADRD 48. Spain: From Emigration to Immigration or Vice Versa?. 5 Units.

Dimensions of recent migratory phenomena in Spain. Changes in past decades from a country of emigration to one of immigration, and vice versa. North Africa, Latin America, and Eastern Europe on the one side and the rest of Europe on the other. Social concern and public debate resulting from these changes.

OSPMADRD 50. Flirting with Spanish Metafiction: Cervantes, Velázquez, Fuentes, Almodóvar. 4-5 Units.

Literary theory and critical analysis of peninsular and Latin American texts. Emphasis is on the origins and development of self-conscious fiction (metafiction). Works by Cervantes, Velázquez, Unamuno, Borges, Fuentes, Torrente Ballester, and Almodóvar. Attendance at music, art, cinema, and Spanish novelist events. In Spanish.

OSPMADRD 53. Of Dice and Men: Chance, Evidence and Data in an uncertain world. 3-4 Units.

Introduction to statistical ideas and thinking through examples. Heuristics and biases that can lead to inaccurate conclusions. Examples (drawn from Kahneman's *Thinking Fast and Slow*): the law of small numbers, availability biases, representativeness, base rates and Bayes's rule, regression to the mean. Also, a not-too-technical treatment of some important statistical ideas in medicine, public health and social statistics such as: trials of life (randomization), Simpson's paradox and hidden confounders. Some examples taken from the Spanish media as appropriate.

OSPMADRD 54. Contemporary Spanish Economy and the European Union. 5 Units.

Concepts and methods for analysis of a country's economy with focus on Spain and the EU. Spain's growth and structural change; evolution of Spain's production sectors, agriculture, industry, and services; institutional factors such as the labor market and public sector; Spain's economic international relations, in particular, development of the EU, institutional framework, economic and monetary union, policies related to the European economic integration process, and U.S.-EU relationship.

OSPMADRD 57. Health Care: A Contrastive Analysis between Spain and the U.S.. 5 Units.

History of health care and evolution of the concept of universal health care based on need not wealth. Contrast with system in U.S. Is there a right to health care and if so, what does it encompass? The Spanish health care system; its major successes and shortcomings. Issues and challenges from an interdisciplinary perspective combining scientific facts with moral, political, and legal philosophy.

OSPMADRD 59. Goya and Picasso. 5 Units.

In-depth exploration of two towering figures of modern art, Francisco José de Goya y Lucientes (1746-1828) and Pablo Picasso (1881-1973), considering their work in relation to Spanish politics and history from the rise of *Los Ilustrados* (associates of the Spanish Enlightenment) and the Napoleonic Wars to the Spanish Civil War and the dictatorship of Francisco Franco. Close and repeated examination of major works by both artists in the collections of the Museo Nacional del Prado, Museo Reina Sofia, and Museo Thyssen-Bornemisza. Comparison of the relationship between art and war in their respective practices.

OSPMADR 60. Integration into Spanish Society: Service Learning and Professional Opportunities. 5 Units.

Engagement with the real world of Madrid through public service work with NGOs and public service professions such as teaching. Depending on availability, topics relevant to present-day Spain may include: the national health plan, educational system, immigration, prostitution, refugees, youth, and fair trade. Fieldwork, lectures, and research paper. Limited enrollment. May be repeated for credit. Prerequisite: two years of college level Spanish or equivalent.

OSPMADR 61. Society and Cultural Change: The Case of Spain. 5 Units.

Complexity of socio-cultural change in Spain during the last three decades. Topics include: cultural diversity in Iberian world; social structure; family in Mediterranean cultures; ages and generations; political parties and ideologies; communication and consumption; religion; and leisure activities.

OSPMADR 62. Spanish California: Historical Issues. 5 Units.

Spanish exploration and colonization of California from the 16th century to the end of the Spanish colonial period in 1821. Themes include: geographical explorations in the context of European colonial expansion; demographic evolution of Native American inhabitants and immigrant population; general social and economic development of the colony; controversies surrounding the mission system; role of the Pacific coasts of North America in the Spanish enlightenment and in strategies for imperial defense and development in the revolutionary era of the late 18th and early 19th centuries.

OSPMADR 69. Introduction to Postwar and Contemporary Art. 4 Units.

Pivotal figures and movements of artistic production in Europe and the United States from 1945 to the present organized around the major socio-political themes of the period, from the artistic response to the catastrophe of WWII; the Cold War; the emergence of the European Union; to recent debates on "austerity" measures in the wake of the global recession. Political and aesthetic status of the avant-garde in the present with emphasis on contemporary Europe. Topics: rise of mass media after the war; ethics of historical memory and commemoration; debate over engaged or committed art; art and the "Culture Industry"; art of 1968; reactions to American hegemony; globalization and contemporary art.

OSPMADR 71. Sociology of Communication. 5 Units.

Understanding the sociocultural diversity of communication in Spain with the help of theoretical and practical tools. How communication happens through language and other means; significance of images in today's world; vision of the world produced by media; problems of social communication from perspective of reception. Offered at the Universidad Complutense with an additional tutorial for Stanford students.

OSPMADR 72. Issues in Bioethics Across Cultures. 5 Units.

Ethical dilemmas concerning the autonomy and dignity of human beings and other living creatures; principles of justice that rule different realms of private and public life. Interdisciplinary approach to assessing these challenges, combining scientific facts, health care issues, and moral philosophy. Sources include landmark bioethics papers.

OSPMADR 74. Islam in Spain and Europe: 1300 Years of Contact. 5 Units.

Primary problems and conflicts in the contemporary Islamic world and its relations with the West, as well as the relationship between Spain and Islam throughout history. Special attention to the history of al-Andalus, an Islamic state in the Iberian Peninsula during the Middle Ages, evaluating the importance of its legacy in Europe and in contemporary Spain. Spain's leading role in relations between Europe and the Mediterranean Islamic states from the Modern Era to the present day.

OSPMADR 102M. Composition and Writing Workshop for Students in Madrid. 3-5 Units.

Advanced. Writing as craft and process, emphasizing brainstorming, planning, outlining, drafting, revising, style, diction, and editing. Students choose topics related to their studies. Prerequisite: 13, 23B, or equivalent placement.

OSPMADR 199A. Directed Reading. 1-5 Unit.**Overseas Studies in Moscow Courses****OSPMOSC 10M. Intensive First-Year Russian. 8 Units.****OSPMOSC 15. Academic Internship. 2-3 Units.**

Placements in areas such as banking, finances, consulting, journalism, language teaching, and technology. Introduction to Russian society and work experience. Evaluation and analysis of experience in final academic paper.

OSPMOSC 44. Economic Reform and Economic Policy in Modern Russia. 5 Units.**OSPMOSC 45. Russia in the Changing World. 5 Units.**

Russia's vision of the international environment to its West and to its East, constructed around specific issues of political and economic nature. Topics include: the challenge of Russian modernization, Russia's Eurasian project, the energy factor in Eurasia, and Russia in the Islamic world.

OSPMOSC 46. Cultural Diversity in Contemporary World: Normative, Political, and Socio-Anthropological Dimensions. 5 Units.

Dimensions of cultural diversity generated by globalization. Issues include: sources of cultural diversity (cultural, subsumes ethnic, linguistic, religious as well as diversity in life styles) and how the issue of diversity is presented in contemporary scholarship, in both humanities and social sciences; make-up of the specificity of the Russian case in terms of cultural diversity and in terms of its political accommodation; societal and cultural impact of transnational migration on national states in general and on the FSU countries in particular.

OSPMOSC 51M. Second-Year Russian. 5 Units.**OSPMOSC 68. From Science to Market: Technical Innovation Policy in Post-Soviet Russia. 5 Units.**

Evolution and nature of government science and innovation policy beginning after the breakup of the Soviet Union and its impact, aiming to understand why science did not turn into business. Among topics explored are: what has been inherited from the Soviet times and why the legacy is so strong; what was Russian government trying to reform in science; birth of innovation policy and its relation to science policy in Russia; results that have been achieved; what could be done; and what may be learned about Russia from the science and innovation perspective.

OSPMOSC 72. Space, Politics, and Modernity in Russia. 5 Units.

The idea of space as a key to understanding Russian politics and governance, economy, society, and culture. Phenomenology of Russian space: structure, topology, and features, including notions of enormity. Space in its relation to state power; how geography shaped Russian history and politics. Reification of space-state relationship on levels such as economy, politics and administration, security and social mobility, nationalism and imperialism, culture and language, and habits and ways.

OSPMOSC 111M. Third-Year Russian. 5 Units.**OSPMOSC 177M. Fourth-Year Russian. 5 Units.****OSPMOSC 199A. Directed Reading. 2-5 Units.**

Overseas Studies in Oxford Courses

OSPOXFRD 17. Novels of Sensation: Gothic, Detective Story, Prohibition, and Transgression in Victorian Fiction. 5 Units.

Literary and moral value of transgressive sub-genres of the novel; what they reveal about Victorian society's anxiety over prohibited elements in the domestic and public spheres. Sources include gothic and detective novels.

OSPOXFRD 18. Making Public Policy: An Introduction to Political Philosophy, Politics, and Economics. 4-5 Units.

UK and U.S. What should society look like? How should incomes be distributed? How should it be taxed? How much inequality is acceptable? The overlap of economics with practical politics through political philosophy behind the government decisions; how public policy ought to be formulated. Issues include poverty, environmental policy, trade and globalization, and transport.

OSPOXFRD 24. British and American Constitutional Systems in Comparative Perspective. 4-5 Units.

Introduction to the study of constitutions and constitutional systems of government. The workings of the British and American systems of government. Comparative study of the most important constitutional issues facing Britain and the U.S. such as how suspected terrorists should be treated in a time of war. How to think about fundamental constitutional questions.

OSPOXFRD 35. Modern UK and European Government and Politics. 4-5 Units.

Background of main political systems in Europe and recent developments in European politics. Topics: Blair's constitutional reforms; the consequences of the German reunification; Berlusconi's rise to power in Italy; the extreme right in France and elsewhere; the single currency; the enlargement of the EU; and proposals for a constitution and their recent rejection by the French and Dutch electorates.

OSPOXFRD 45. British Economic Policy since World War II. 5 Units.

Development of British economic policy making from 1945, focusing on political economy including: ideological motives of governments; political business cycle; and the influence of changing intellectual fashions. Policy areas: attitude to the pound; control of the business cycle; and the role of the state in the economy. Prerequisite: ECON 50.

OSPOXFRD 57. The Rise of the Woman Writer 1660-1860. 5 Units.

Emergence and rise of the professional woman writer from playwright and Royalist spy Aphra Behn (1640-89) to novelist and proto-feminist Charlotte Bronte (1816-55). How women writers dealt with criticism for writing publicly, placing each author and text in its historical and literary context. Range of poets, playwrights, and novelists including Eliza Haywood, Frances Burney, and Mary Elizabeth Braddon. Topics: gender roles and proto-feminism, the public versus the private sphere, sexuality, courtship and marriage.

OSPOXFRD 60. Shakespeare and his Contemporaries. 5 Units.

Study of Shakespeare's work alongside that of his contemporaries. Characteristics of his art as well as insight into this period of British history. Visits to performances of plays.

OSPOXFRD 74. History and Architecture of Oxford. 4-5 Units.

History of the city and university of Oxford through its physical fabric. Oxford's buildings within the context of British and European architectural history; growth and development of Oxford. Lectures paired with visits to buildings with additional discussion on site.

OSPOXFRD 76. The Meaning of Life. 4 Units.

Close study and guided discussion of classic works of art, literature, religion and philosophy as a means of exploring existential questions about one's life. Texts include Shakespeare's Hamlet, Plato's The Republic, and Heidegger's What is Philosophy; works of art by Van Gogh, Monet, and Manet; Seventh Seal by Ingmar Bergman. Visit to London museums for works of art.

OSPOXFRD 77. Solo Performance. 5 Units.

Create original solo performance and theatre work. Skills to draw from the specificity of unique individual experiences, connecting with ideas, issues and questions that resonate with race, class, gender, environmental and global issues. Creative and critical tools to connect the personal with the political and see the solo voice as a powerful and potent form of artistic expression. Focus on and hone individual creative talents in writing, devising, composing, producing and creating work. Examine the work of a range of solo artists practicing in the UK; attend live performances and if possible, meet and interview some of the artists. 15-minute solo performance culminates quarter.

OSPOXFRD 78. Comparative Health Care Systems, and the Ethics of Health Care Rationing. 3 Units.

The British health care system and the values and tradeoffs involved; policies underlying the system; relevance of the core principles of the British system to the system in the U.S. How do the U.S. and the U.K. balance providing access to health care with constraining the overall cost of care? At the level of the individual patient, how do the two systems approach the issue of rationing health care?.

OSPOXFRD 79. The Social Determinants of Health in the U.K. and the U.S.. 3 Units.

Concept of social class as viewed in England in the 1960s. Association between socioeconomic status and health in England and the UK and three related reports: The Whitehall Study, the Black Report and the Fair Society Healthy Lives report. How the political system in the U.K has addressed the issue of social inequality and related health disparities.

OSPOXFRD 81. British Theatre: Now, Then. 5 Units.

Case studies of four or five current productions in British theatre. Syllabus will be designed around productions of contemporary and canonical British works in London, Stratford upon Avon, and Oxford playing at the time of study. Analysis of the works in the context of 'the now and then' of British theatre history. Close readings of scripts, contextualization of the work in its sociopolitical context, and critiques of the live productions.

OSPOXFRD 83. Heidegger and the Philosophy of Religion. 4 Units.

Exploration of the end of the metaphysical quest for God in nineteenth and twentieth century thought. Seminal works of German philosopher Martin Heidegger, including Being and Time, What Is Metaphysics? Nietzsche's Saying "God is Dead." Phenomenological method and its application to traditional and contemporary philosophy of religion, including works by John D. Caputo and Gianni Vattimo.

OSPOXFRD 93. Collecting the World. 4 Units.

The art, science, and culture of the creation, transmission and collection of valuable, useful and informative objects and texts before the twentieth century, and the associated theories, purposes, and methods for collecting 'worldly' goods and other valuables. Means by which local academic practices engaged with global developments in the arts and sciences through examination of primarily early modern material and intellectual culture in and around Oxfordshire. Assessments of quality, meaning, usage, cultural significance and the reception of material 'treasures' in the storage rooms, vaults, and on display in museums, galleries, and libraries.

OSPOXFRD 117W. Gender and Social Change in Modern Britain. 4-5 Units.

Changes in the social institutions, attitudes, and values in Britain over the past 20 years with specific reference to shifts in gender relations. Demographic, economic and social factors; review of theoretical ideas. Men's and women's shifting roles in a fast-moving society.

OSPOXFRD 195A. Tutorial in Anthropology. 6-7 Units.

OSPOXFRD 198M. Tutorial in Public Policy. 6-7 Units.
May be repeated for credit.

OSPOXFRD 198N. Tutorial in Mathematics. 6-7 Units.
May be repeated for credit.

OSPOXFRD 199A. Directed Reading A. 2-4 Units.
Course may be repeated for credit.

OSPOXFRD 199B. Directed Reading B. 2-5 Units.
Course may be repeated for credit.

OSPOXFRD 199D. Directed Reading. 1-3 Unit.
Course may be repeated for credit.

OSPOXFRD 221Y. Art and Society in Britain. 4-5 Units.
Themes in 18th-, 19th-, and 20th-century British art. Painting, sculpture, and design. Comparisons between the British experience and that of continental Europe and the U.S. Readings address questions related to the role of art in modern society. Limited Enrollment.

Overseas Studies in Paris Courses

OSPPARIS 4. Directed Reading on Franco-Arab Topics. 1-4 Unit.
Examples of possible topics include: Franco-Arab music, literature, or cinema, North African Jews in France in the Post-Colonial Era (1956-); conterminousness and torture in the Algerian War of Independence; France and the Middle East in the 20th century (Lebanon and Syria). Weekly meetings to discuss readings and review progress.

OSPPARIS 5. Advanced Intensive French. 1 Unit.
For students placed in advanced levels of French. Preparation for immersion in complex French environment with emphasis on oral communication.

OSPPARIS 6. Franco-Arab Encounters. 3-5 Units.
Examination of the engagement of France with the Middle East and North Africa since the Napoleonic expedition to Egypt in 1798 using primary documents, historical readings, novels, films, and field trips. Egyptian expedition and colonial occupation of Algeria; Morocco, Tunisia and the Levant also addressed. Persistence of French cultural model as the standard of modernity and culture in much of North Africa and the Levant. In France, contemporary political debate regarding Muslim's struggles over identity, social status and rights.

OSPPARIS 7. From Disenchantment to Re-Enchantment: The Literature of Modern Paris. 4 Units.

Modernity as a gradual move from enchantment to disenchantment and then to re-enchantment: from the loss of wonder, order, purpose, unity, and depth to their triumphant rediscovery in new domains. Novels by Balzac and Claire de Duras; philosophical writings by Camus and Sartre; short selections from prose works by Aragon and Proust; poems by Baudelaire, Mallarmé, Apollinaire, Césaire, Eluard; a play by Beckett; field trip to the Musée d'Orsay.

OSPPARIS 8. Bon Appétit, Marie Curie! The Science behind French Cooking. 3 Units.

Science and biology behind the techniques and the tastes of French cuisine. Weekly meetings include lecture and either a lab demonstration or some field work, sampling food or learning about a particular cooking technique from Parisian artisans on-site. Representative topics include: chocolate, as a food and as a drug; emulsions, from ice cream to salad dressing; meat cookery, what heat does to muscle; confectionery and the crystallization of sugar; fermentations, to make cheese, bread or wine; plants, their composition and qualities; chemistry of taste, at the molecular level; molecular gastronomy, la cuisine moderne.

OSPPARIS 10. Engineering Research Internship. 6 Units.

For Paris Program students with academic experience in electronics, telecommunications or signal and image processing. Under direct guidance of researchers at Institut Supérieur de l'Électronique de Paris (ISEP), and where applicable, in collaboration with other French and international graduate students, contribute to the ISEP's ongoing research projects.

OSPPARIS 10C. International Relations and Public Policy Research Internship. 6 Units.

Opportunity for Stanford-in-Paris students to participate in ongoing research at the world-renowned Institut Français des Relations Internationales (IFRI). For students with interests in academic issues such as Economic and Energy Policies, European Affairs, and Foreign Policy and who have prior research experience in Economics, Public Policy, Statistics, Political Science, Energy/Earth Sciences, or International Relations. Requires Winter and Spring quarter enrollment in program plus Summer extension and placement into OSPPARIS 23P at minimum. See BOSP Course Search <https://undergrad.stanford.edu/programs/bosp/explore/search-courses> for additional information.

OSPPARIS 11. Special Internship. 1-6 Unit.

Often initiated by special contacts between students and professionals in France. Involvement may be based more on field work, and activity, rather than on fulfilling traditional academic requirements. Prerequisites: Written permission from the program director.

OSPPARIS 12. Paris Photography Workshop. 3 Units.

Exploration of Paris through camera and lab techniques. Both theoretical and practical aspects of creative photography. Extensive field work. Enrollment limited.

OSPPARIS 12B. Music Workshop: Singing in French. 3 Units.

French culture through group singing. Collaborative project provides practice in pronunciation, exposure to subtleties of the language, and an introduction to French culture. French songs from the past one hundred years. Possible performance at the end.

OSPPARIS 13. Biology Research Internship. 6 Units.

Laboratory of the National Museum of Natural History. Work with international research team on project elucidating the origin of the diversity of animal form. Modern techniques in functional genomics. Applied questions on human development in an environment where embryology, paleontology and medicine converge. Two days a week commitment required.

OSPPARIS 14. Media Internship. 3 Units.

Case studies and independent research as groundwork for comparative analysis of media on both sides of the Atlantic. Nature of media in the U.S and in France. Media as a means for understanding culture.

OSPPARIS 15. Hospital Internship. 3 Units.

Observation of medical services in Paris hospitals. How hospital teams work in France; how medical decisions are made; how patients are treated by nurses and doctors.

OSPPARIS 16A. French Schooling Internship. 2-3 Units.

Working with French schoolchildren in one of three settings: a neighborhood support association in the outskirts of Paris; or two after-school support association in the city. Commitment for a minimum of three hours a week on site plus meetings with internship instructor and a final paper. Number of placements depends on the needs of the sponsoring institutions. Previous work with children advised.

OSPPARIS 19. Arranged Internship 1. 3-6 Units.

Two-quarter stay required. Internships can be arranged in a number of areas including the arts, architecture, politics, engineering, marketing and PR, media and journalism, health and psychological services, IT, NGO's, research, and hospitality administration.

OSPPARIS 22P. Intermediate French I. 5 Units.

Prerequisite: one year of college French if completed within two quarters of arriving in Paris, or FRENLANG 21C.

OSPPARIS 23P. Intermediate French II. 5 Units.

Prerequisite: FRENLANG 21C within two quarters of arriving in Paris, or FRENLANG 22C or OSPPARIS 22P.

OSPPARIS 24. Introduction to French Society. 1 Unit.

Required of Paris program participants. Engagement with French society through language immersion, lectures, projects with French students, encounters with prominent figures, and visits to French political and cultural institutions. May be repeated for credit.

OSPPARIS 30. The Avant Garde in France through Literature, Art, and Theater. 4 Units.

Multiple artistic trends and esthetic theories from Baudelaire to the Nouveau Roman, from the Surrealists to Oulipo, from the theater of cruelty to the theater of the absurd, from the Impressionists to Yves Klein. Interdisciplinary approach to reflect on the meaning of avant garde and modernity in general, and on the question of why revolutionary artists in France remained in search of institutional recognition, nonetheless.

OSPPARIS 32. Understanding French Politics. 4-5 Units.

Key aspects of French politics including the constitutional framework, institutions, political parties and ideology, elections, political cultures, religion and politics, political elites and public policy-making, grass-root citizen participation, decentralization and local politics, and the major issues that structure and inform public debate, including attitudes and policies vis-à-vis the US.

OSPPARIS 34. Franco-American Encounters: Paris-New York in the 20th Century. 4 Units.

Double vision of American artists and intellectuals of Paris, as well as their French counterparts of New York, throughout the 20th century. Exploration of Franco-American relations through two very problematic itineraries. Superposing the two will create a rich and complex image of the interaction between the two cultures. Migration of American artists and intellectuals to Paris in the 1920s and of French artists and intellectuals to New York during the Second World War. Through study of films, texts and images, view the two cities through eyes of immigrants, both temporary and permanent. Major figures such as Hemingway, Josephine Baker, and Louis-Ferdinand Céline.

OSPPARIS 36. French Writing Workshop. 3 Units.

Offered upon request for students who have completed an Advanced French course. Focus on French writing style, enabling students to understand and master the subtleties of French writing.

OSPPARIS 40P. Introductory Electronics. 5 Units.

Electrical quantities and their measurement, including operation of the oscilloscope. Function of electronic components including resistor, capacitor, and inductor. Analog circuits including the operational amplifier and tuned circuits. Digital logic circuits and their functions. Lab assignments. Prerequisite: PHYSICS 43.

OSPPARIS 41. EAP: Perspective, Volume, and Design. 2 Units.

Mastering the techniques of spatial representation and developing a good visualization of volume. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

OSPPARIS 41E. EAP: Sculpture. 2 Units.

Control of volume through use of materials such as clay or plaster in order to master three dimensional representations. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

OSPPARIS 42. EAP: Drawing with Live Models. 2 Units.

Solid foundation in drawing; concepts of proportions, composition and analysis through observation. Perception of space, movement and forms. Techniques include: graphite, charcoal, chalk, pastel, watercolor, monotype, markers. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

OSPPARIS 43. EAP: Painting and Use of Color. 2 Units.

Different painting techniques for pictorial representation through various themes supporting the development of creativity. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

OSPPARIS 44. EAP: Analytical Drawing and Graphic Art. 2 Units.

Focus on observation of a model to be copied. Analysis of one aspect of a general structure while using various materials and techniques in a limited amount of time. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

OSPPARIS 44E. EAP: Computer Art. 2 Units.

Learn and develop efficient technique of modern graphic design. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

OSPPARIS 50M. Introductory Science of Materials. 4 Units.

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

OSPPARIS 54. The Artist's World: The Workshop, Patronage and Public in 19th and 20th Century France. 4 Units.

Synergy between artists, their workshops, patrons, models and the public in 19th and 20th century France. Weekly sessions in museums, artists' studios, and special venues within and around Paris, attempting to understand the world of the artist, and how, in many cases, this world became not only a place of refuge, but a metaphor of the artistic creation itself.

OSPPARIS 60. Representations of Women in Christian Art: Boldness and Virtue. 4 Units.

Representation of women as biblical heroes and saints in Christian art. Codes of iconography and the attributes of women saints from the Renaissance to the 19th century; underlying social and moral force of these women figures throughout history. Class sessions in Paris museums.

OSPPARIS 61A. SAP: Overview of Modern French Art. 1 Unit.

One-week intensive course for Stanford Paris Program students who want to explore or enhance their knowledge of French art, including art of the 19th-20th century and the contemporary art scene. Held during the last week of June, in-class sessions offered each morning with special visits and case studies each afternoon, including private visits to the Centre Pompidou and other major art galleries in Paris.

OSPPARIS 61B. SAP: Overview of Studio Art. 1 Unit.

One-week intensive course intended for Stanford in Paris students who want to explore or enhance their knowledge of studio art. Each day of the week is devoted to a different aspect of artistic expression including painting, drawing with live model, perspective, graphic and computer art. Held during the first week of July. French and International Art students enrolled as well in this course.

OSPPARIS 61C. SAP: Overview of Computer Art. 1 Unit.

One-week intensive course intended for Stanford in Paris students who want to explore or enhance their knowledge of computer art. Each day of the week is devoted to a different aspect of artistic expression, using software such as Photoshop and Blender, to explore techniques of colorisation, 3D animation, shading, lighting, etc. Held during the first week of July.

OSPPARIS 61D. SAP: Overview of Product and Architectural Design. 2 Units.

Two-week intensive course intended for Stanford in Paris students who want to explore or enhance their knowledge in the area of product or architectural design. Depth and volume will be addressed through personal projects focusing on modeling, lighting, representation of textures, rendering, and animation. Held during the second and third week of July.

OSPPARIS 72. The Ceilings of Paris. 4 Units.

Seventeenth century transformation of the ceilings of Paris, religious, private and public. Itinerary of this transformation from artists' initial drawings to their finished work. In conjunction with an exhibition in the Louvre on this topic, study the original drawings as well as the venues in and around Paris. Sites vary from the most illustrious (Versailles) to the lesser known (Hôtel Lauzun). Reflection on the changing religious, social and political aspirations as represented in these new artistic forms.

OSPPARIS 74. Climate Change Challenges in France and Europe: from Project to Policy. 4 Units.

Challenge of Climate Change policy-making in conceiving of a project that must be understood and accepted by politicians, and applied on site by the decision makers and managers in today's industrial world. All stages from conception to case studies on the ground. Hands-on class with an engineering perspective focuses on three issues: scientific aspects of tackling climate change; climate change policies, with a strong focus on Europe and France; and low-carbon projects, with a focus on their technical and financial challenges. Operational aspects and tools: climate modeling; monitoring, reporting and verification of greenhouse gases emissions; low-carbon projects at work and their financial closure. Visits to factories.

OSPPARIS 75. Filming France. 3 Units.

Documentary HD video production. Study excerpts of documentary films shot in France to understand techniques and directorial choices made at every step of film production (writing, filming, sound recording, editing), while exploring different facets of French culture. Class culminates in the production of a 3-5 minute portrait-film, for which all students will be assigned precise roles in the production of the film. Critique of creative work at different steps of the production process emphasizing technical, aesthetic, and ethical aspects of documentary production.

OSPPARIS 81. France During the Second World War: Between History and Memory. 5 Units.

French politics and society from the causes of the collapse of the French Third Republic and the emergence of the French State at Vichy. The political and cultural measures of this regime in the shadow of Nazi Germany. Anti-Jewish laws and action; deportations by Vichy, the Germans, the French Fascists, and reactions to the fate of the Jews. Visions of the Resistance, the combat for liberation, and WW II in the collective memory of France.

OSPPARIS 91. Globalization and Its Effect on France and the European Union. 5 Units.

Economic and political impact of globalization on France and the EU and influence of France and the EU on the process of globalization. Issues of sovereignty and national identity for France; protection from versus integration into the network of globalization.

OSPPARIS 92. Building Paris: Its History, Architecture, and Urban Design. 4 Units.

The development of Parisian building and architecture from the 17th century to the present. Interaction of tradition and innovation in its transformation and its historical, political, and cultural underpinnings. Visits and case studies throughout Paris illustrate the formation of the city landscape and its culture.

OSPPARIS 103A. French Lecture Series 1. 1 Unit.

May be repeated for credit.

OSPPARIS 104A. French Lecture Series 2. 1 Unit.

May be repeated for credit.

OSPPARIS 105A. French Lecture Series 3. 1 Unit.

May be repeated for credit.

OSPPARIS 122X. Challenges of Integration in the European Union. 4-5 Units.

European integration is now an economic, social, and political reality. This integration has a history of mutation and a transformation of its very foundation. Topics: the evolution of welfare states, elites, political parties, and systems in Europe; lobbies, trade unions, voluntary associations, social movements, popular protest, citizenship, democracy.

OSPPARIS 124P. Advanced French I. 5 Units.

Complexities of French grammar and precise use of syntactic structures. Introduction to French essay-writing. Intensive Language course is included. Intensive component required of all Paris students; Advanced French I is optional. Prerequisite: FRENLANG 23C or OSPPARIS 23P or equivalent placement.

OSPPARIS 124X. Building the European Economy: Economic Policies and Challenges Ahead. 5 Units.

Issues and challenges of European economic construction. The European Economic Union at the end of the 50s; European industrial, agricultural, social, and monetary economic policies. Topics: wider definitions of Europe, its relations with industrial and developing countries, and its challenges in confronting global economic crises.

OSPPARIS 125P. Advanced French II. 5 Units.

Prerequisite: FRENLANG 23C, or OSPPARIS 23P or equivalent placement.

OSPPARIS 153X. Health Systems and Health Insurance: France and the U.S., a Comparison across Space and Time. 5 Units.

Should health systems be organized or left to the free market? What is the role of the state in the delivery of health care? The evolution of the health profession, health policy, and reform in France and the U.S.; measures restraining professional autonomy such as prescription guidelines in the French Medical Convention. Is the solution to the increase of health expenditures and reduced access to health care the end of autonomy for the medical profession?.

OSPPARIS 180. Paris Special Topics. 1-6 Unit.

May be repeated for credit.

OSPPARIS 186F. Contemporary African Literature in French. 4 Units.

Focus is on African writers and those of the diaspora, bound together by a common history of slave trade, bondage, colonization, and racism. Their works belong to the past, seeking to save an oral heritage of proverbs, story tales, and epics, but they are also contemporary.

OSPPARIS 192A. Independent Study: Germs and Genes in the City of Lights. 2-4 Units.

Three examples of romantic stories centered on microbiology in Paris: (1) In the early 1800's, Paris was the unrivaled center of medical education in the world; (2) Towards the end of that century, Pasteur's bold science opened the doors to a more rigorous scientific study of infectious disease; and (3) During World War II, Jacques Monod performed Nobel Prize-winning research by day and led the French Resistance by night. Readings and visits in Paris will be recommended to appreciate this fascinating history.

OSPPARIS 195C. Paris University: Health and Science 1. 1-6 Unit.

May be repeated for credit.

OSPPARIS 195D. Paris University: Health and Science 2. 1-6 Unit.

May be repeated for credit.

OSPPARIS 196C. Paris University: Humanities 1. 1-6 Unit.

May be repeated for credit.

OSPPARIS 196D. Paris University: Humanities 2. 1-6 Unit.

May be repeated for credit.

OSPPARIS 196E. Paris University: Humanities 3. 1-6 Unit.

May be repeated for credit.

OSPPARIS 197C. Paris University: Social Science 1. 1-6 Unit.**OSPPARIS 197D. Paris University: Social Science 2. 1-6 Unit.****OSPPARIS 198A. International Design and Construction Project. 1-6 Unit.**

Working as part of a French team of designers and engineers, invent a new product and present it to a jury of professors from French Institutes. While engineers insure the product functions and designers insure ease of use, Stanford students additionally help assess whether product will be used locally or globally. Winter and Spring enrollment required.

OSPPARIS 198C. Paris University: Engineering 1. 1-6 Unit.**OSPPARIS 198D. Paris University: Engineering 2. 1-6 Unit.****OSPPARIS 199A. Directed Reading A. 1-6 Unit.****OSPPARIS 199B. Directed Reading B. 1-6 Unit.****OSPPARIS 199C. Directed Reading: C. 1-6 Unit.**

Overseas Studies in Santiago Courses

OSPSANTG 12S. Accelerated Second-Year Spanish, Part I: Chilean Emphasis. 5 Units.

Intensive sequence integrating language, culture, and sociopolitics of Chile. Emphasis is on achieving advanced proficiency in oral and written discourse including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: one year of college Spanish, or 11 or 21B if taken more than two quarters prior to arriving in Santiago.

OSPSANTG 13S. Accelerated Second-Year Spanish, Part II: Chilean Emphasis. 5 Units.

Intensive sequence integrating language, culture, and sociopolitics of Chile. Emphasis is on achieving advanced proficiency in oral and written discourse including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: 11 or 21B within two quarters of arriving in Santiago, or 12 or 22B.

OSPSANTG 14. Women Writers of Latin America in the 20th Century. 4-5 Units.

Key figures in poetry, narrative fiction, theater, and testimonio, such as Mistral, Garro, Lispector, Poniatowska, Valenzuela, Eltit and Menchú. Close reading technique. Issues raised in literary texts that reflect the evolution of the condition of women in Latin America during the period. Topics include gender differences and relationships, tradition versus transgression, relationship between changes in the status of women and other egalitarian transformations, and women writers and the configuration of literary canons.

OSPSANTG 29. Sustainable Cities: Comparative Transportation Systems in Latin America. 4-5 Units.

Energy and environmental challenges resulting from the growing size and complexity in Latin American cities. Key issues: way in which public authorities deal with the dynamics of urban growth and complexity; related environmental and energy issues, particularly related to different public transportation models. Systemic approach as seen in Curitiba, Bogota, Santiago, and Medellin. Analysis centering on different approaches used to tackle these related issues; different institutional strategies.

OSPSANTG 30. Short Latin American Fiction of the 20th Century. 4-5 Units.

Introduction to short narrative fiction produced in Latin America during the 20th Century. Key features of the short story genre, as defined by Chekhov in the 19th Century and redefined by Kafka and Borges in the 20th Century. Main literary movements of the period in Latin America, including Regionalism, Social Realism, the Avant-Garde, the Boom of the 1960s and Magical Realism, the Post-Boom, etc. Close reading course with strong emphasis on analysis and discussion of the required texts. Readings placed in the context of the main developments in Latin American history and culture in the period.

OSPSANTG 31. The Chilean Energy System: 30 Years of Market Reforms. 5 Units.

Design and evaluation of energy policies in Chile, a developing country facing a growing public concern for energy and environmental issues. Market reforms pioneered by Chile in the 1980s and subsequently followed in other Latin American countries. Analysis of reforms in three parts: 1) through questions on how to develop and power system, 2) by looking at the reforms themselves and their implementation, and 3) by reviewing the local and global environmental costs associated with electric power generation.

OSPSANTG 33. Spanish Language Tutorial. 2 Units.

Prerequisite: two years of college Spanish or equivalent placement. May be repeated for credit.

OSPSANTG 40. Academic Internship. 2-3 Units.

May be repeated for credit.

OSPSANTG 55. Environment, Economy and Society in Latin America, 1800's-Present. 3-5 Units.

The role of environmental, economic and social factors in the course of history. Key episodes in the history of Latin America with a focus on the way society mediates human-environment interaction and how this contributes to patterns in economic development.

OSPSANTG 58. Living Chile: A Land of Extremes. 5 Units.

Physical, ecological, and human geography of Chile. Perceptions of the Chilean territory and technologies of study. Flora, fauna, and human adaptations to regional environments. Guest lectures; field trips; workshops.

OSPSANTG 62. Topics in Chilean History. 4-5 Units.

Independent study topics concerning any aspect of Chilean history such as independence and nation building, social and economic development, ideas and culture, dictatorship and democracy. Research paper based on primary and secondary sources.

OSPSANTG 68. The Emergence of Nations in Latin America. 4-5 Units.

Major themes of 19th-century Latin American history, including independence from Spain, the emergence of nation states, and the development of a new social, political, and economic order.

OSPSANTG 71. Santiago: Urban Planning, Public Policy, and the Built Environment. 4-5 Units.

Santiago's growth and development over time and in comparison to other mega cities in the world; impact of urban highways on the built environment; shopping malls and the development of new urban sub-centers. Topics: brief history of the city, from 1541 to 1940; urban development since 1940; the 1960 Inter-communal Urban Plan; planning and the configuration of modern Santiago; housing policy as an instrument to combat poverty; social housing policy and Santiago's built environment.

OSPSANTG 78. Chile and South America's Response to Climate Change. 5 Units.

Climate and energy policy in the context of Chile and its neighbors. Current status of international climate negotiations; specific roles and responsibilities of Chile and South American nations in negotiations. Review and analysis of the projected impacts of climate change. Analysis of climate action plans, such as Chile's Plan of Action for Climate Change. Current status and development of local, sub-national climate action plans. Evolution and role of environment ministries and departments, including that recently created in Chile.

OSPSANTG 85. Marine Ecology of Chile and the South Pacific. 5 Units.

Relationships among physical processes in the ocean, biological productivity, and the exploitation of resources by high-trophic-level predators including human beings. Characterization of ecological patterns; identification of processes operating on marine systems. Open ocean ecosystems, intertidal and benthic regions of the world's oceans, and ecological research developed along coastal regions, focusing on Chile's 4,000 km coastline.

OSPSANTG 102S. Composition and Writing Workshop for Students in Santiago. 3-5 Units.

Advanced. Writing as craft and process: brainstorming, planning, outlining, drafting, revising, style, diction, and editing. Non-Spanish majors or minors may choose topics related to their studies. Prerequisite: SPANLANG 13C, 13R, 13S, 23B, or equivalent.

OSPSANTG 116X. Modernization and its Discontents: Chilean Politics at the Turn of the Century. 5 Units.

Chile's strides towards becoming a developed country have engendered high levels of alienation and disaffection among significant sectors of the population. The roots of this apparent paradox of modernization, focusing on newly emerging actors in the Chilean political scene: Mapuche organizations, women's groups, the environmental movement, and new features of the established ones like trade unions and human rights activists.

OSPSANTG 118X. Artistic Expression in Latin America. 5 Units.

Elite, mass-media, and popular cultural changes in Chile under conditions of economic and political liberalization. The reception of cultural meanings from the center of the world social system (U.S., EU, and Japan), reformulation to respond to local conditions, and export in the shape of cultural artifacts. Innovative elements rooted in the regional and local culture.

OSPSANTG 119X. The Chilean Economy: History, International Relations, and Development Strategies. 5 Units.

The Chilean economy in five stages, taking into account: the international economic position of Chile; internal economic structures closely related to the inherited historical conditions and to the changing international economic position of the country; and the economic strategies prevalent during the period and the concrete development policies conducted by government authorities.

OSPSANTG 129X. Latin America in the International System. 4-5 Units.

Latin America's role in world politics, with emphasis on the history of and models for explaining U.S.-Latin American relations. Latin America's evolving relationship in the international system.

OSPSANTG 130X. The Chilean Economy in Comparative Perspective. 5 Units.

Introduction to the main debates and approaches developed to understand and analyze the economies of Latin America. Recent processes of transition to market economies. Common characteristics among countries of the region; the differences and special traits of individual countries. Historical, analytical, and empirical perspectives on topics at the center of controversies and specific policy problems over several decades. Recommended: ECON 1, 51, and 52.

OSPSANTG 198A. Climate Change Policy and Negotiations. 3-5 Units.

Focus on impact of climate change on Latin American countries and appropriate policy responses. Identify key issues relating to climate change, develop national and/or sub-national policy responses, and evaluate these responses in light of political, economic, and other constraints facing Latin American countries. Requirements include initial memorandum outlining issue(s), final memorandum with policy recommendations, and a 15-minute presentation. Work closely with instructor at each step.

OSPSANTG 198B. Independent Project in Salmon Farming Data Analysis. 2-4 Units.

Analyzing the survey of salmon farming workers and their communities in Chiloé, an island in southern Chile. Opportunities include statistical analysis, GIS mapping, and the writing and production of data visualizations using Gephi, Tableau, and other software packages. Ties to CESTA (Center for Spatial and Textual Analysis) lab and offers the possibility, if resources allow, to continue working on the project in fall of 2014.

Pathology Courses

PATH 101. Cancer Biology. 4 Units.

Experimental approaches to understanding the origins, diagnosis, and treatment of cancer. Focus on key experiments and discoveries with emphasis on genetics, molecular biology, and cell biology. Topics include carcinogens, tumor virology, oncogenes, tumor suppressor genes, cell cycle regulation, angiogenesis, invasion and metastasis, cancer genomics, cancer epidemiology, and cancer therapies. Discussion sections based on primary research articles that describe key experiments in the field. Satisfies Central Menu Areas 1 or 2 for Bio majors. Prerequisite: Biology or Human Biology core or equivalent, or consent of instructor. Same as: CBIO 101.

PATH 103Q. Lymphocyte Migration. 1 Unit.

Preference to sophomores. Lymphocytes migrate from blood vessels into tissues to participate in immune surveillance and the development of inflammation. The lymphocyte and blood vessel endothelia molecules that control lymphocyte migration, and are implicated in the development of human diseases such as asthma, type 1 diabetes, and multiple sclerosis are discussed.

PATH 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

PATH 206. Epigenetics. 2 Units.

For graduate students in the Biosciences and upper level Biology undergraduates. Mechanisms by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. From the discovery of position-effect variegation in *Drosophila* in the 1920s to present-day studies of covalent modifications of histones and DNA methylation. Topics include: position effect, gene silencing, heterochromatin, centromere identity, genomic imprinting, histone code, variant histones, and the role of epigenetics in cancer. Prerequisite: BIO41 and BIO42, or GENE 203 or GENE 205, or consent of instructor. Same as: BIO 156, BIO 256, GENE 206.

PATH 210. Stem Cells in Development and Disease. 1-2 Unit.

Molecular and cellular mechanisms underlying the basic self-renewal and differentiation properties of stem cells in multiple tissues and organisms. How abnormal stem cell behavior may contribute to diseases such as cancer. How to manipulate stem cell behavior *in vitro* or *in vivo* for therapeutic purposes. Classical papers and recent literatures in the field of stem cell biology. Open to graduate, medical, and advanced undergraduate students. Prerequisite: consent of instructor.

PATH 213. Gross Autopsy Pathology Laboratory. 2-3 Units.

Examine/discuss unfixated dissected organs from current autopsies and correlate morphologic findings with the clinical history. Students view postmortem examinations and may participate (in a small group) in one postmortem examination with the assistance of residents and staff, and present the case to the class. Class scheduling is flexible. Additional unit for participation in a postmortem examination. Class may not be repeated. Prerequisite: HHD221.

PATH 218. Computational Analysis of Biological Information:

Introduction to Python for Biologists. 2 Units.

Computational tools for processing, interpretation, communication, and archiving of biological information. Emphasis is on sequence and digital microscopy/image analysis. Intended for biological and clinical trainees without substantial programming experience. Same as: GENE 218, MI 218.

PATH 233. The Biology of Small Modulatory RNAs. 2 Units.

Open to graduate and medical students. Explores recent progress and unsolved questions in the field of RNA interference and microRNA biology. Students are required to read assigned primary literature before each class and actively participate in guided discussions on related technical and conceptual issues during class meetings. Assignments include critiques of assigned papers and developing a novel research proposal. Same as: GENE 233, MI 233.

PATH 234. Fundamentals of RNA Biology. 2 Units.

For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students. Same as: GENE 234, MI 234.

PATH 240. Clinical Studies in Pathology I. 3-9 Units.

A broad exposure to the practice of pathology in an academic medical center. Students are assigned a faculty mentor and work closely with pathology residents, fellows and faculty. Two months are spent in surgical pathology where students help examine surgical resection specimens and biopsies and participate in making a final diagnosis. One month is spent in autopsy pathology where students perform autopsy prosections and formulate final anatomic diagnoses under the supervision of faculty. This course must be combined with Clinical Studies in Pathology II, and two additional quarters of PATH 399, Directed Research, to fulfill a 12 month Post-Sophomore year Fellowship in Pathology. Prerequisite: MD candidate; instructor consent.

PATH 241. Clinical Studies in Pathology II. 3-9 Units.

An in-depth exposure to the practice of pathology for students who have completed Clinical Studies in Pathology I. Students are assigned a faculty mentor and work closely with pathology residents, fellows and faculty. Two months are spent in surgical pathology where students help examine surgical resection specimens and biopsies and participate in making a final diagnosis. One month is spent in sub-specialty areas of pathology that include dermatopathology, neuropathology, renal pathology, lymph node pathology or cytology. This course must be combined with Clinical Studies in Pathology I and two additional quarters of PATH 399, Directed Research, to fulfill a 12-month Post-Sophomore year Fellowship in Pathology. Prerequisite: consent of instructor and successful completion of Clinical Studies in Pathology I (PATH 240).

PATH 280. Early Clinical Experience in Pathology. 1-2 Unit.

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

PATH 290. Pediatric Nonmalignant Hematology and Stem Cell Biology. 2 Units.

Pediatric hematologic disorders provide an important paradigm to study other developmental systems. Subjects covered include hematopoiesis, basic stem cell biology, endothelial cell development, alternative models to study nonmalignant hematology and stem cell biology (zebrafish and drosophila), defects in white cell function, basic research in stem cell transplantation, state of the art methods in nonmalignant hematology and stem cell biology (genomics, proteomics, and gene therapy), and bioinformatics.

PATH 299. Directed Reading in Pathology. 1-18 Unit.

Prerequisite: consent of instructor.

PATH 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

PATH 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Opportunities at the molecular, cellular, and clinicopathologic levels. Prerequisite: consent of instructor.

Pediatrics Courses

PEDS 50N. Translating Science to Disease Treatment. 3 Units.

Investigates how scientific research informs how physicians take care of patients and how clinical research informs how scientific experiments are conducted. Topics include how these two processes have improved health and have resulted in innovation and scientific progress; specific human disease areas in allergy and immunology that affect all ages of patients globally, including food allergy; scientific concepts of research that helped in discovery of novel diagnostics and treatment of disease; ethical roles of physicians and scientists in conducting translational research in human disease.

PEDS 60Q. Famine in the Modern World. 3 Units.

This seminar is devoted to an investigation of famine & mass starvation & which throughout recorded history has been more lethal than war. Students will assess the relative weight of natural, economic, and political factors as causes of famine over the past two centuries. Students will acquire a background into the central facts about and controversies surrounding the major famines of modern history. Case studies include the Great Irish Famine of the 1840s, the Bengal famine of 1943-44, the Soviet famines of 1921-22 and 1932-33, the Great Famine in China in 1959-61, and the famines in Ethiopia and Somalia since the 1970s.

PEDS 65N. Understanding Children's Health Disparities. 3 Units.

The social and economic factors that affect children and their health status. The principal sources of disparities in the health of children in the U.S. are not biologic, but social and economic. Topics include ethnic, cultural, and behavioral factors that affect children's health, both directly and indirectly; lack of health insurance; and current proposals for health care reform, focusing specifically on how they will impact existing health disparities among children.

PEDS 65Q. Understanding Children's Health Disparities. 3 Units.

The social and economic factors that affect children and their health status. The principal sources of disparities in the health of children in the U.S. are not biologic, but social and economic. Topics include ethnic, cultural, and behavioral factors that affect children's health, both directly and indirectly; lack of health insurance; and current proposals for health care reform, focusing specifically on how they will impact existing health disparities among children. Includes instruction addressing written assignments and required oral presentations.

PEDS 105. Health Promotion and the Campus Culture. 4 Units.

Multidisciplinary perspectives of public health and health psychology. The prevalence of health risk behaviors on the contemporary college campus and the challenges of risk reduction. Students apply theoretical frameworks to peer health promotion campus projects. Limited enrollment. Prerequisite: consent of instructor following first meeting. Same as: PEDS 215.

PEDS 106. Pursuit of Happiness and Health. 3 Units.

Evidence-based research findings, theoretical concepts and applied experiences related to emotional well-being, and physical and mental health. Topics include basic cognitive neuroscience and psychological research in pro-social emotions, such as gratitude, compassion, forgiveness and mindfulness practice. Course offers lecture, readings, and applied practices that enhance mental health, resiliency and well-being. Emphasis on issues relevant to high-achieving young adults. Same as: PEDS 206.

PEDS 116. Alcohol Issues and the Campus Culture. 4 Units.

Multidisciplinary perspectives of public health, health psychology, and sociology. The prevalence and scope of alcohol-related problems; challenges of risk reduction and intervention strategies. Students apply theoretical frameworks to alcohol-related research topics and projects. Limited enrollment. Prerequisite: consent of instructor following first meeting.

PEDS 130. Pediatrics Journal Club. 1 Unit.

Open to MD, graduate, and undergraduate students. Each session focuses on a current article in pediatric medicine. Discussions led by faculty experts in the area covered that session. Topics may range widely, depending on the available literature and students' interests. Students are expected to review the chosen article before class and participate in discussion. Discussion includes methodology and statistical analysis of each study and its relevance to pediatric practice. Same as: PEDS 230.

PEDS 150. Social and Environmental Determinants of Health. 3 Units.

How race/ethnicity and SES contribute to health disparities, how vulnerable populations are uniquely at health risk, and how the built environment relates to health and wellness. Topics include: gender, age, race/ethnicity, language, education, individual SES and neighborhood SES as related to health; individual and structural race bias; health needs of vulnerable populations (e.g., the homeless, the incarcerated, immigrant populations, children, and uninsured/underinsured); and environmental forces (e.g., urban design/planning, traffic/car culture, green space, housing, food access/culture, law enforcement, and media). Same as: PEDS 250.

PEDS 159A. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.

First quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Application required.

Same as: PEDS 259A.

PEDS 159B. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.

Second quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Prerequisite: PEDS 159A/259A.

Same as: PEDS 259B.

PEDS 159C. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.

Third quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Prerequisite: PEDS 159B/259B.

Same as: PEDS 259C.

PEDS 199. Undergraduate Directed Reading/Research. 1-18 Unit.

Prerequisite: consent of instructor.

PEDS 202A. Practical Applications for Qualitative Data Analysis. 2 Units.

First quarter of a two-quarter course. Gain experience analyzing qualitative data using qualitative analysis software (i.e. Nvivo, Dedoose). Conduct analysis using your own or existing data sources. Explore multiple qualitative data analysis topics through class lectures, foundational readings and hands-on learning. Core topics include: grounded theory, qualitative data analysis approaches, software-based analysis, cleaning and coding of data, and interpreting data. Note: Preference will be given to medical students and undergraduate students that have successfully completed an introductory qualitative methods course. Enrollment in subsequent PEDS 202B required.

PEDS 202B. Practical Applications for Qualitative Data Analysis. 2 Units.

Second quarter of a two-quarter course provides hands-on experience summarizing qualitative data and describing findings for dissemination. Final course product will be a draft manuscript for submission with students listed as co-authors. Core topics include: identifying themes and representative quotes, community-engaged dissemination, abstract submission, posters, oral presentations, manuscript writing, and journal selection. Prerequisite: Successful completion of PEDS 202A.

PEDS 206. Pursuit of Happiness and Health. 3 Units.

Evidence-based research findings, theoretical concepts and applied experiences related to emotional well-being, and physical and mental health. Topics include basic cognitive neuroscience and psychological research in pro-social emotions, such as gratitude, compassion, forgiveness and mindfulness practice. Course offers lecture, readings, and applied practices that enhance mental health, resiliency and well-being. Emphasis on issues relevant to high-achieving young adults.

Same as: PEDS 106.

PEDS 211. Medical-Legal Issues in Children's Health. 2-4 Units.

(Same as LAW 643) Explores the link between poverty and children's health and how the medical and legal fields can work together to improve health outcomes for low income children. Weekly class meetings covering medical legal issues such as asthma immigration, health insurance; intake interviews with patient families and analysis of their medical legal issues; group project focused on a medical legal policy issue; final paper cowritten by law and medical students. May be taken for 2 units (weekly 2.5 hour seminar meetings only), 3 units (participation in either intake interviews or policy work) or 4 units (full participation in all course components). Prerequisite: instructor consent. Preference to students committed to full participation.

PEDS 212. Challenges of Human Migration: Health and Health Care of Migrants and Autochthonous Populations. 3 Units.

An emerging area of inquiry. Topics include: global migration trends, health Issues/aspects of migration, healthcare and the needs of immigrants in the US, and migrants as healthcare providers: a new area of inquiry in the US. Class is structured to include: lectures lead by the instructor and possible guest speakers; seminar, discussion and case study sessions led by students.

Same as: HUMBIO 122M.

PEDS 213. Critical Issues in Child Health. 2 Units.

Develop an integrated understanding of the physical and psychosocial health factors from birth through adolescence that result in a healthy child. Uses a multidisciplinary perspective to review the basic physiology and pathophysiology associated with common childhood illnesses and integratenthis with socio-environmental factors that influence child health. Students gain perspective on child health challenges around the world and develop a broad understanding of how the cultural context influences and defines the individual living therein.

PEDS 214. Introduction to Pediatrics Lecture Series. 1 Unit.

Introduction to the various aspects of pediatrics, directed at pre-clinical MD students, undergraduates, or graduate students. Course composed of interactive lectures conducted by pediatric faculty on subjects ranging from normal development to topics in different pediatric subspecialties. current issues in the field, and opportunities for students considering this specialty. Speakers also touch on their career paths and choices and are available to answer questions about their areas of interest. By special arrangement students may have the opportunity to shadow general pediatricians or pediatric specialists. Intended to stimulate interest in pediatrics and to inform students about the breadth of the field.

PEDS 215. Health Promotion and the Campus Culture. 4 Units.

Multidisciplinary perspectives of public health and health psychology. The prevalence of health risk behaviors on the contemporary college campus and the challenges of risk reduction. Students apply theoretical frameworks to peer health promotion campus projects. Limited enrollment. Prerequisite: consent of instructor following first meeting.

Same as: PEDS 105.

PEDS 222. Beyond Health Care: Seeking Health in Society. 3 Units.

Available evidence at the national and cross-country level linking social welfare interventions and health outcomes. If and how non-health programs and policies could have an impact on positive health outcomes. Evaluation of social programs and policies that buffer the negative health impact of economic instability and unemployment among adult workers and their children. Examination of safety nets, including public health insurance, income maintenance programs, and disability insurance. Prerequisites: HUMBIO 4B or equivalent, and background in research methods and statistics.

Same as: HUMBIO 122.

PEDS 223. Human Rights and Global Health. 3 Units.

Open to medical students, graduate students, and advanced undergraduates. Examines the newly emerging field of human rights and global health, beginning with the essential background into the field of human rights, and the recent emergence of health as a human right. Emphasis is on the pioneering work of Dr. Paul Farmer and Partners in Health and the challenge he and his organization have posed to the conventional wisdom about approaches to combating poor health and disease worldwide. Topics include the "big three" infectious diseases -- tuberculosis, malaria, and HIV/AIDS -- as well as emerging infectious diseases, clean water and sanitation, and malnutrition and famine.

PEDS 224. Genocide and Humanitarian Intervention. 3 Units.

Open to medical students, graduate students, and undergraduate students. Traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo and Sudan. Same as: HISTORY 224C, HISTORY 324C.

PEDS 225. Humanitarian Aid and Politics. 3 Units.

Open to medical students, graduate students, and undergraduate students. Examines the moral dilemmas and political realities that complicate the delivery of humanitarian aid, especially when undertaken by the United Nations and non-governmental organizations (NGOs). Emphasis is on what humanitarians call "complex humanitarian emergencies": crises often characterized by famine and/or epidemic disease and typically the result of war and/or civil war. Provides background into the history of humanitarian aid, though focus is on the post-Cold War era, up to the recent crises in Libya and Syria.

PEDS 226. Famine in the Modern World. 3 Units.

Open to medical students, graduate students, and undergraduate students. Examines the major famines of modern history, the controversies surrounding them, and the reasons that famine persists in our increasingly globalized world. Focus is on the relative importance of natural, economic, and political factors as causes of famine in the modern world. Case studies include the Great Irish Famine of the 1840s; the Bengal famine of 1943-44; the Soviet famines of 1921-22 and 1932-33; China's Great Famine of 1959-61; the Ethiopian famines of the 1970s and 80s, and the Somalia famines of the 1990s and of 2011.

Same as: HISTORY 226E, HISTORY 326E.

PEDS 230. Pediatrics Journal Club. 1 Unit.

Open to MD, graduate, and undergraduate students. Each session focuses on a current article in pediatric medicine. Discussions led by faculty experts in the area covered that session. Topics may range widely, depending on the available literature and students' interests. Students are expected to review the chosen article before class and participate in discussion. Discussion includes methodology and statistical analysis of each study and its relevance to pediatric practice.

Same as: PEDS 130.

PEDS 231. Medicine for Innovators and Entrepreneurs. 3-4 Units.

Interdisciplinary, project-based course in which bioscience, bioinformatics, biodesign, bioengineering students learn concepts and principles to understand human disease and work together to propose solutions to medical problems. Diabetes mellitus is used as a paradigm for understanding human disease. Guest medical school and outside faculty. Field trips to Stanford clinics and biotechnology companies. Prerequisite: college level biology.

Same as: IMMUNOL 231.

PEDS 246. Developmental Disabilities: From Biology to Policy. 3 Units.

Fifteen percent of US children have disabilities. While advances in medicine and technology have increased life expectancy for these children, health care delivery, education, and public attitudes have not kept pace. Students in this course will learn the possibilities and limitations of new biomedical treatments of Down syndrome, cerebral palsy, and autism. Students will also evaluate the impact of public policy initiatives, such as the Individuals with Disabilities Education Act and Americans with Disabilities Act on inclusion and participation in society.

Same as: HUMBIO 146D.

PEDS 250. Social and Environmental Determinants of Health. 3 Units.

How race/ethnicity and SES contribute to health disparities, how vulnerable populations are uniquely at health risk, and how the built environment relates to health and wellness. Topics include: gender, age, race/ethnicity, language, education, individual SES and neighborhood SES as related to health; individual and structural race bias; health needs of vulnerable populations (e.g., the homeless, the incarcerated, immigrant populations, children, and uninsured/underinsured); and environmental forces (e.g., urban design/planning, traffic/car culture, green space, housing, food access/culture, law enforcement, and media).

Same as: PEDS 150.

PEDS 251A. Medical Ethics I. 2 Units.

Required for Scholarly Concentration in Biomedical Ethics and Medical Humanities. The field of bioethics, including theoretical approaches to bioethical problems. Contemporary controversies and clinical cases. Values that arise in different situations and clinical encounters. Issues include: genetics and stem cell research, rationing, ethical issues in care at the end of life, organ transplantation issues.

PEDS 251B. Medical Ethics II. 2 Units.

The integration of ethical theory with applications of theory or conceptual issues in medicine, health care, and the life and social sciences. Topic varies by year. Possible topics include: ethical issues in stem cell research; death and dying; genetics and ethics; concepts of health and disease; the ethics of international research; and ethical implications of new reproductive technology.

PEDS 254. Pediatric Physical Findings Rounds. 1 Unit.

Pediatric patients with specific physical findings and hospitalized at LPCH are identified and introduced to students. Students in small groups examine patients at the bedside to note the physical finding and discuss it within the context of the patient's clinical problem. Emphasis is on basic science discussion to understand the cause of the finding.

PEDS 258. Developing and Defining Strong Community-Academic Partnerships. 2 Units.

Applying the principles of community-based participatory research to medical scholars research projects. Strategies for developing strong, equitable and sustainable community-academic partnerships. Identify and assess proposed faculty mentors and community partners, and establish proposed goals and objectives for med scholars research.

PEDS 259A. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.

First quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Application required.

Same as: PEDS 159A.

PEDS 259B. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.

Second quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Prerequisite: PEDS 159A/259A.

Same as: PEDS 159B.

PEDS 259C. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.

Third quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Prerequisite: PEDS 159B/259B.

Same as: PEDS 159C.

PEDS 280. Early Clinical Experience. 2-4 Units.

Provides students an opportunity to see patients and correlate clinical findings with preclinical coursework. Students spend a half day or a full day in a pediatric subspecialty clinic (e.g., infectious diseases, endocrine, gastroenterology), participate in conferences and accompany attending physicians. Students have directed reading and meet with faculty for one hour per week to discuss their reading.

PEDS 281. Childhood Chronic Illness: Impact on Family Development. 1 Unit.

The Pals Program is a volunteer activity serving Lucile Packard Children's Hospital chronically ill patients and their siblings. Modeled after the Big Brother/Big Sister Program, Pals matches first- and second-year medical students with pediatric patients or their siblings. The patients and/or their siblings enjoy the support and companionship of their Pals, and the medical students learn firsthand about the emotional and social aspects of chronic illness during childhood. Pals meet regularly throughout the year to participate in fun activities such as movies, ball games, museums, and picnics. The activities and personal relationships are overseen by the LPCH Pals social worker. Bimonthly class meetings introduce the students to pediatric chronic diseases such as leukemia, cystic fibrosis and pulmonary hypertension. The class brings in physicians to give the medical perspective as well as patients and families to get their perspective. Prerequisite: approval of the LPCH social worker for Pals.

PEDS 282. Pregnancy, Birth, and Infancy. 3 Units.

Comprehensive clinical experience where pre-clinical medical students follow pregnant women receiving care at Stanford hospitals to attend prenatal visits, delivery, and postnatal visits. Continuity clinic format, combined with didactic lessons and discussion seminars. Students are exposed to clinical activities in a meaningful context, bolstering classroom studies in anatomy, physiology, embryology and human development, and emphasizing social, economic, and personal issues related to medicine. This program spans one quarter, covering topics related to pregnancy, labor and delivery and newborn care. In addition to clinic experiences, students are expected to spend 1-2 hours/week in lectures and to complete a reflection of their experiences in the course. Prerequisite: pre-clinical medical student. Same as: OBGYN 282.

PEDS 299. Directed Reading in Pediatrics. 1-18 Unit.

Prerequisite: consent of instructor.

PEDS 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

PEDS 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members.

Philosophy Courses

PHIL 1. Introduction to Philosophy. 5 Units.

Is there one truth or many? Does science tell us everything there is to know? Can our minds be purely physical? Do we have free will? Is faith rational? Should we always be rational? What is the meaning of life? Are there moral truths? What are truth, reality, rationality, and knowledge? How can such questions be answered? Intensive introduction to theories and techniques in philosophy from various contemporary traditions.

PHIL 2. Introduction to Moral Philosophy. 5 Units.

A survey of moral philosophy in the Western tradition. What makes right actions right and wrong actions wrong? What is it to have a virtuous rather than a vicious character? What is the basis of these distinctions? Why should we care about morality at all? Our aim is to understand how some of the most influential philosophers (including Aristotle, Kant, and Mill) have addressed these questions, and by so doing, to better formulate our own views. No prior familiarity with philosophy required. Same as: ETHICSOC 20.

PHIL 5N. The Art of Living. 4 Units.

Whether we realize it or not, all of us are forced to make a fundamental choice: by deciding what is most valuable to us, we decide how we are going to live our life. We may opt for a life of reason and knowledge; one of faith and discipline; one of nature and freedom; one of community and altruism; or one of originality and style. We may even choose to live our lives as though they were works of art. In every case, hard work is required: our lives are not just given to us, but need to be made. To live well is, in fact, to practice an art of living. Where, however, do such ideals come from? How do we adopt and defend them? What is required to put them into practice? What do we do when they come into conflict with one another? And what role do great works of art play in all this? "The Art of Living" will explore the various ways in which it is possible to live well and beautifully, what it takes to implement them, and what happens when they come under pressure from inside and out.

PHIL 6N. Pictures and the Imagination. 3 Units.

Paintings, drawings, and photographs often function as pictures or images of the preexisting things they take as subjects. They represent these subjects from specific spatial vantage points in ways that may be more or less definite, more or less detailed, and more or less faithful to what the subjects are actually like. One longs to know how this works: how vision, imagination, and background knowledge come together when we experience a picture as a picture. Certain forms of imagining and remembering involve mental picturing, mental imagery. Sometimes we imagine or remember things in visual terms from a specific spatial vantage point, with the result that we feel brought face to face with the things imagined or remembered, however far away they may actually be. How is the physical picturing that goes on in paintings, drawings, and photographs both like and unlike the mental picturing that goes on when things swim before the mind's eye? What role does mental picturing play in physical picturing? What kinds of artistic value and interest attach to paintings, drawings, and photographs in virtue of what they picture and how they picture it?.

PHIL 7Q. What is Truth. 3 Units.

This question can be answered precisely in some important cases. We begin with the language of propositional logic where truth is defined by simple tables. This is already sufficient for description of many important problems and leads to a famous (\$1 000 000) problem $P=NP$. We use Sudoku puzzles for illustration. Close connection between propositional truth and proof is established by the resolution method forming a basis of most automated theorem provers. The language of predicate logic covers much more and illustrates the notion of completeness. Register machines provide connection with computations and lead to a fundamental classification of problems of truth with respect to decidability. The language of arithmetic exhibits a new phenomenon of incompleteness that changed significant part of philosophy in 20-th century.

PHIL 8N. Free Will and Responsibility. 4 Units.

In what sense are we, or might we be free agents? Is our freedom compatible with our being fully a part of the same natural, causal order that includes other physical and biological systems? What assumptions about freedom do we make when we hold people accountable morally and/or legally? When we hold people accountable, and so responsible, can we also see them as part of the natural, causal order? Or is there a deep incompatibility between these two ways of understanding ourselves? What assumptions about our freedom do we make when we deliberate about what to do? Are these assumptions in conflict with seeing ourselves as part of the natural, causal order? We will explore these and related questions primarily by way of careful study of recent and contemporary philosophical research on these matters.

PHIL 9N. Philosophical Classics of the 20th Century. 4 Units.

Last century's best and most influential philosophical writings. Topics include ethics (what is the nature of right and wrong?), language (how do meaning, reference, and truth arise in the natural world?), science (can science claim objectively accurate descriptions of reality?), existence (are there things that don't exist?), and the mind (could robots ever be conscious?). Authors include Bertrand Russell, Ludwig Wittgenstein, Rudolf Carnap, Willard Quine, Thomas Kuhn, John Rawls, and Saul Kripke. The lay of the land in contemporary philosophy.

PHIL 10N. Bounded Rationality. 3 Units.

This course takes a philosophical approach to a cutting edge debate in psychology. Readings include texts in contemporary cognitive science as well as in philosophy of mind.

PHIL 11N. Skepticism. 3 Units.

Preference to freshmen. Historical and contemporary philosophical perspectives on the limits of human knowledge of a mind-independent world and causal laws of nature. The nature and possibility of a priori knowledge. Skepticism regarding religious beliefs.

PHIL 15N. Freedom, Community, and Morality. 3 Units.

Preference to freshmen. Does the freedom of the individual conflict with the demands of human community and morality? Or, as some philosophers have maintained, does the freedom of the individual find its highest expression in a moral community of other human beings? Readings include Camus, Mill, Rousseau, and Kant.

PHIL 20S. Introduction to Moral Philosophy. 3 Units.

What makes right actions right and wrong actions wrong? Must right actions promote some further good? What is the role of consequences in the evaluation of actions as right or good? Focus is on traditional attempts to account for what determines which actions are right, what is worth promoting, and what kind of person one ought to be. Readings from primarily historical figures such as Aristotle, Hume, Kant, Mill, and others.

PHIL 23A. The Cognitive Science of Mathematics. 2 Units.

Mathematics has two features which, taken together, are quite puzzling: (i) its objects (numbers, functions, derivatives, manifolds, and the like) are very unlike everyday concrete material objects, yet (ii) it seems to be the source of our most certain knowledge. In this course, we will examine the role in which findings from empirical theories of mathematical cognition can help address and possibly dissolve this puzzle. The course will be broken up into three units: Philosophical Foundations, Numerical Cognition, and Metaphor and Higher Mathematical Thought.

PHIL 23B. Truth and Paradox. 2 Units.

Philosophical investigation of the concept of truth is often divided along two dimensions: investigation of the nature of truth and investigation of the semantics of truth claims. This tutorial will focus on the second kind of concern. One key impetus for a philosophical interest in the semantics and definability of truth is the challenge posed by semantic paradoxes such as the Liar paradox and Curry's paradox. Despite each having the initial appearance of a parlor trick, philosophers and logicians have come to appreciate the deep implications of these paradoxes. The main goal of this tutorial is to gain an appreciation of the philosophical issues - both with respect to formal and natural languages \mathcal{L} which arise from consideration of the paradoxes. To this end, we will study some of the classic contributions to this area including Tarski's famous result that, in an important sense, the semantic paradoxes render truth undefinable, and Kripke's much later attempt to provide a definition of truth in the face of Tarski's limitative result. Further topics include the debate between paracomplete and paraconsistent solutions to the semantic paradoxes (notably defended by, respectively, Field and Priest); the relationship between deflationism about truth and the paradoxes; and the notion of \mathcal{L} revenge problems (roughly, the claim that any solution to the paradoxes can be used to construct a further paradox). The tutorial will avoid excessive technical discussions, but will aim to engender appreciation for some philosophical interesting technical points and will assume a logic background of PHIL150 level.

PHIL 23C. Counterfactuals. 2 Units.

Reasoning about counterfactual conditionals plays an important role in contemporary philosophy. Not only have counterfactual analyses been proposed for central philosophical notions, including causation, laws of nature, free will, and knowledge, but also counterfactuals have become objects of interest in their own right, both in the philosophy of language and in logic. This tutorial will introduce the standard approaches to the semantics of counterfactuals, focusing on the work of David Lewis and Robert Stalnaker. Prerequisite: one logic course (e.g., 50, 150, or 151) or consent of instructor.

PHIL 23E. Embodied Cognition. 2 Units.

Where does the mind stop and the world begin? A standard assumption is that thinking is somehow local to the central nervous system; that is, cognition just amounts to brain activity. A wave of recent work in philosophy and cognitive science has questioned this assumption, insisting that the mind cannot be understood outside the context of a living body interacting dynamically with an environment. To put it more dramatically, the mind extends out into the world. We shall read some of the main proponents of this move toward embodied and embedded cognition, and try to assess the extent to which it seriously calls into question more traditional views about how mind, brain, body, and world fit together.

PHIL 23F. Forgive and Punish. 2 Units.

Are we ever justified in forgiving those who wrong us? Do we have more reason to seek revenge and/or punishment than we do to forgive? Does it matter if wrongdoers apologize and repent for their offenses? Are there some acts and/or persons that shouldn't be forgiven? This tutorial will take up these questions by examining (mostly recent) philosophical writings about: forgiveness, retribution, the reactive attitudes (such as resentment and hatred), and, more generally, how humans should (and shouldn't) respond to wrongdoing.

PHIL 23G. Pessimism, Philosophy, and Human Nature. 2 Units.

In different ways, Thucydides, Hobbes, Rousseau, Kant, and Schopenhauer all emphasize a just so, descriptive account of humankind that, on the surface at least, reveals a profound pessimism with respect to their views about human nature. But for these thinkers pessimism represents a sort of intellectual honesty about human nature, and these insights invariably underscore a profound optimism, in spite of their pessimism, with respect to what they view as the more pressing question concerning what humankind can make itself to be. Our guiding question will be to explore whether and how each of these thinkers reconciles their philosophical optimism with their psychological pessimism about human nature.

PHIL 23H. Perfectionism: The Idea of the Perfect in Nature, Ethics, and Politics. 2 Units.

Perfection is the full realization of what is best or most excellent. In this tutorial course we will explore philosophical thought on perfection in three different contexts: natural teleology, individual ethical life, and utopian and anti-utopian social thought. Throughout the course, we will ask the following questions: What is a perfect being? Why is perfection per se good or desirable? Do evaluative comparisons presuppose some absolute standard of perfection? Does it make sense to aim at perfection in ethical and political life? What are the virtues of imperfection? What are the hazards of pursuing perfection in the political realm? Is perfectionism compatible with pluralism about values? Is perfectionism compatible with government based on popular will? The primary emphasis is on close reading and discussion of classic texts in ethical theory, including selections from Plato, Aristotle, Aquinas, Rousseau, Kant, and Tocqueville, accompanied by contemporary selections.

PHIL 23J. On the Notion of Respect: Politics, Deliberation and Disagreements. 2 Units.

The notion of respect plays a crucial role in a variety of human contexts. We respect many different things and we respect them in many different ways: from parents and elders, to public institutions and the law, and other people's dignity, feelings and rights. Many, in fact, claim that all people deserve respect, some way or another. Public conversations lately have been plagued with calls to respect the environment, life in all of its forms, citizens' sexual orientation, etc. Additionally, it is also urged that public debates should take place under conditions of mutual respect: that above and beyond our differences and our interests, we should respect each other as persons. In particular, philosophers working in moral and political theory focus on what respect for persons might mean, including oneself and possibly other entities. Such a notion is frequently issued *inter alia* in discussions about justice and legitimacy, equality and exploitation, multiculturalism and pluralism, toleration and recognition. The main concern here centers on the ways in which citizens should respect one another in plural democracies. Explore whether or not the assumption that in order to properly respect each other as free and equal citizens we are obligated to satisfy certain requirements of justification (*viz.*, public reason) by seeking appropriate political justifications and sometimes exercising restraint in appealing to individual points of views (*viz.*, comprehensive doctrines) in political discourse.

PHIL 23K. Gender, Sexuality, and Equality. 2 Units.

We will focus on if/how social norms concerning gender and sexuality shape practical deliberation -- what options we take ourselves to have, what options we find desirable, and how we view ourselves as agents. It is from this angle that we will explore the notion of gender equality. Among the topics to be covered in the course are social and political equality, gender expectations, expression and commodification of sexuality, and adaptive preference. Readings will include: Ann Cudd, Alison Jagger, Rae Langton, Debra Satz, Susan Okin, Martha Nussbaum, John Rawls, John Stuart Mill, Catharine MacKinnon.

PHIL 23L. Love and Friendship. 2 Units.

People as different as Jesus Christ and Justin Timberlake think that love is crucial to living the good life. But what is love? What part should it play in our lives? Is it just one value among many? This course will consider questions about the nature of love, the role it plays in moral philosophy, and its effect on individual autonomy. Readings will be from both contemporary and historical sources.

PHIL 23M. Justice and Climate Change. 2 Units.

This tutorial will focus on the question of how the burdens and benefits of climate change and its prevention should be distributed internationally and intergenerationally. The literature on this question ranges over several different debates in economics, global justice, environmental ethics, intergenerational ethics, and population ethics. The course will start off by considering the dispute over how quickly and to what extent climate change should be prevented by the current generation for the sake of future generations. Next, we'll consider the debate among philosophers over what global justice requires with respect to distributing the burdens of climate change mitigation among countries in the near future. In the final weeks of the class, we will explore a set of criticisms against climate change justice, which argue that justice arguments serve only to interfere with, distract from, or obscure the best solutions to the climate change problem. Throughout the quarter, I will provide students with examples of proposed policy schemes to ground our philosophical discussions in ongoing debates among policymakers.

PHIL 23N. Neuroscience and the Self. 2 Units.

The Self: Fiction or reality? Bundle of perceptions? Pragmatic role-concept? Fleeting moment of consciousness? Social invention? Narrative construct? Various philosophical conceptions of the self will be explored with a particular focus on the notion of the 'narrative self.' Literature from neuroscience, psychology and philosophy will be considered.

PHIL 23P. Personal Responsibility: Moral and Civic. 2 Units.

What do we as individuals owe to other people? Should we be spending our free time toiling in local politics and volunteering in soup kitchens? Should we be sending every extra penny (goodbye new shoes) to people who barely eek out a living on less than a dollar a day? Maybe we ought to spend tons of our time fighting to protect future generations from the predicted devastating effects of climate change. In this course we will explore how local, distant, and future circumstances affect our responsibilities as individuals. We'll discuss questions about what and how much we owe to others, and whether our responsibilities are part and parcel of being a morally good person, or whether they are things we owe others as good citizens of the community (and for that matter, which community do we owe them to--local, national, or global?).

PHIL 23T. Intellectual trust in oneself and others. 2 Units.

Most people have many false beliefs. Yet, one routinely relies on one's own beliefs and on the views of others. Does that mean that one takes oneself to be exceptionally good at forming true beliefs, and exceptionally good at detecting false beliefs in others? When is it justified to place intellectual trust in oneself and in others?.

PHIL 25SI. The Animal-Human Relationship: Interdisciplinary Perspectives. 1 Unit.

The ethical, scientific, and spiritual problems that arise from the interaction between humans and other animals. Can animals have empathy? What does it mean for an animal to feel pain? How did humans come to dominate other animals? What moral obligations do humans have towards animals? Where do animals fit in religious thought? Is animal research ethical, and is it effective? What role does meat consumption play in modern society? How can the environmental impacts of livestock production be mitigated? Guest lecturers from philosophy, literature, biology, neurology, religious studies, psychology, anthropology, and environmental science.

PHIL 27S. Human Nature and its Discontents. 3 Units.

In different ways, Thucydides, Hobbes, Rousseau, Kant, and Schopenhauer all emphasize a just so, descriptive account of human beings that, on the surface at least, reveals a profound pessimism with respect to their views about human nature. One of the themes running throughout Thucydides' History of the Peloponnesian War, for example, is the suggestion that human nature is motivated solely by passions of fear, envy, greed, and ambition. Thucydides highlights the ways in which he sees Athens as appealing to these passions while attempting to justify its unspeakable crimes against humanity in the name of "democracy." The aim of this course will be to work through some of the more salient examples of what I will call psychological or anthropological pessimism as outlined in the works of these thinkers, asking about the role their pessimism about human nature plays in their positive philosophical project. Our guiding question will be to explore whether and how each of these thinkers reconciles their philosophical optimism with their psychological pessimism about human nature.

PHIL 30S. Justifying justice at home and abroad. 3 Units.

It is difficult to read the news today without getting enmeshed in discussions about justice both at home and abroad. Whether it be sequestration, Wall Street regulations, health care reform, the use of drones in war, or humanitarian aid abroad that grabs your attention, there is no doubt that we are living in tumultuous times. What do you think when you read about the new restrictions on abortion in Arkansas? Or about the deregulation of marijuana in Colorado? Or about the abolition of capital punishment in Connecticut? To figure out how to frame answers to these kinds of questions, we shall look at some of the main topics in social and political philosophy: rights, property, justice, criminal punishment, humanitarian intervention and just war theory.

PHIL 34S. Good, Bad, and Rotten: The Philosophical Study of Moral Character. 3 Units.

We ordinarily think there's a sense in which someone can be a good person, over and above doing well at her particular occupation (e.g., being a good firefighter), familial role (e.g., being a good sister), or political function (e.g., being a good citizen). But what does it take to be a good person, in this very general sense? And what about the opposite -- what does it take to be a bad person? We also tend to feel strongly about whether others, or ourselves, are good or bad people. In particular, we blame people for being bad and praise them for being good. But only sometimes -- if someone is bad only because, say, he had a traumatic childhood, then we tend to hold back from blaming him. So, what must be true if someone really is deserving of blame for being bad (or, of praise for being good)? And, finally, there seems to be an important difference between being bad and being completely depraved, or evil. But what underlies this difference? What distinguishes everyday badness from extraordinary evil? This course is dedicated to learning how to look for and evaluate answers to these questions. Readings will be pulled from historical and contemporary sources, including Aristotle, Augustine, Immanuel Kant, Hannah Arendt, Philippa Foot, Bernard Williams, Susan Wolf, Gary Watson, and Nomy Arpaly..

PHIL 41Q. Truth. 3 Units.

Preference to sophomores. Central issues animating current work in the philosophy of truth. What is truth? What is it about a statement or judgment that makes it true rather than false? Are there any propositions that are neither true nor false? Could truth be relative to individuals or communities? Do people have different notions of truth for different enterprises such as mathematics and ethics? Might truth be a matter of degree? Sources include the instructor's book manuscript and other contemporary writers.

PHIL 42. Philosophy through Theater: Choice and Chance. 4 Units.

Dramatic literature as a window into philosophical work on freedom of the will and indeterminism. Students participate in the production of original one-act plays.

PHIL 43S. Happiness: Positive Psychology and Philosophy. 3 Units.

The connection between research in positive psychology to determine what happiness is and the conditions under which human beings are happy with issues in moral philosophy regarding whether we should aim at happiness or think of it as a good. The assumptions about happiness made by positive psychologists. The philosophical insight into the question of how people should live that is gained by looking at the empirical results provide by psychologists.

PHIL 45S. Is it always good to 'be yourself'? ' Issues in Ethics and Moral Psychology. 3 Units.

It may seem obvious that it is good to 'be yourself, ' to be 'who you really are, ' or to do what you 'really' want to do ' but is it? Some believe that we are our true, or real, selves when we act on our values, what we love, or what we care most about. But if that is true, then is it still good to be yourself when what you value and care most about involves a commitment to acts of terrorism, torturing others, or a life of pain and boredom?nnnWe will look at contemporary philosophical attempts to make sense of the idea of 'being yourself, 'and what the nature of the value of this authenticity is."nnnAuthors include Bratman, Frankfurt, Korsgaard, Millgram and Williams.

PHIL 50. Introductory Logic. 4 Units.

Propositional and predicate logic; emphasis is on translating English sentences into logical symbols and constructing derivations of valid arguments.

PHIL 50S. Introductory Logic. 3 Units.

Propositional and predicate logic. Themes include: translations of English sentences into logical symbols; semantics of and proof rules for propositional and predicate logic. Emphasis is on evaluating arguments with the syntax and semantics of contemporary logic. Special attention to the properties of the languages studied.

PHIL 60. Introduction to Philosophy of Science. 5 Units.

The nature of scientific knowledge: evidence and confirmation; scientific explanation; models and theories; objectivity; science, society, and values. Same as: HPS 60.

PHIL 61. Science, Religion, and the Birth of Modern Philosophy. 5 Units.

Galileo's defense of the Copernican world-system that initiated the scientific revolution of the 17th century, led to conflict between science and religion, and influenced the development of modern philosophy. Readings focus on Galileo and Descartes.

Same as: HPS 61.

PHIL 61S. A Meaningful Life in a Physical World. 3 Units.

Questions about the meaning of life have occupied a central place in philosophical thought throughout its history. However, the scientific view of human beings as essentially complex, evolutionarily-designed biological systems in a purely material world (one governed by fundamental physical laws) seemingly puts pressure on the idea that humans can live a life of genuine meaningfulness. The guiding questions of this course will be: Is there the prospect of our living truly meaningful lives even if we are just complex biological systems? If so, what kind(s) of meaning can we hope to achieve? If not, how should we live our lives? In exploring these questions, we will read works by philosophers (and psychologists) approaching these questions from many different traditions and perspectives. Possible authors will include Plato, Hobbes, Rousseau, Nietzsche, Sartre, Camus, Sigmund Freud, Viktor Frankl, Bertrand Russell, John Searle, Owen Flanagan, Daniel Dennett, and Ruth Millikan.

PHIL 63S. Introduction to Bioethics. 3 Units.

In this course we will explore ethical questions that arise in health care and the biological sciences. We will consider the following issues (perhaps together with others): allocation of health-care resources, the responsibilities of doctors to patients, the distinction between killing someone and letting them die, medically-assisted suicide, abortion, and the use of technologies for genetic screening and manipulation. Throughout, our focus will be on moral questions about how decisions in these areas should be made.

PHIL 64S. Introduction to Environmental Philosophy. 3 Units.

Environmental problems define and dominate the times. Climate Change threatens to displace and impoverish millions of people, species extinctions promise to reach unprecedented numbers, and sustainability has become a buzzword in discussions of responsible business practices. In this course we will explore some of the most pivotal environmental issues facing us today using the tools of philosophy. Together we'll ask questions such as: Are individuals or governments responsible for solving environmental problems? What objects should we care about in the natural world (animals, living things, ecosystems?), and what do we do when environmental problems force us to make tough choices in the face of competing values? Do we have responsibilities to future generations? This course will provide a foundation for thinking about these questions and for facing our environmental problems head on.

PHIL 65S. Technology and the Good Life. 3 Units.

Can we engineer our way to happiness? Should we try to? An introduction to select issues in engineering ethics, the course examines various threats to human welfare, environmental catastrophe, social injustice, the limitations of "human nature" that could be amenable to engineering solutions. We consider whether it is ethically permissible to address these threats via engineering (referring to various conceptions of the good life for human beings: hedonism, liberalism, virtue ethics) and what the costs of such solutions are.

PHIL 71H. Philosophy and the Real World. 2 Units.

Introduction to the humanities as an applied discipline; how literary and philosophical ideas illuminate and change how people live their lives as individuals and members of society. Focus is on short texts that illustrate how literary and philosophical ideas arise from social problems and attempt to confront those problems. Methods and approaches: how to read such texts; how to make arguments about them; how such texts shed light on contemporary situations.

PHIL 72. Contemporary Moral Problems. 5 Units.

As individuals and as members of societies, we make choices that can be assessed from the moral point of view. What choices should we make, and how should we make them? Topics will include: Is it ok to buy things when others lack basic nutrition? Does a preference for the taste of meat justify killing and eating animals? Under what circumstances, if any, is abortion morally permissible? Should employers and schools be allowed to favor minority candidates? Is a ban on trans fat morally impermissible paternalism? Readings for these and other topics will be drawn from contemporary philosophers such as Frances Kamm, Jeff McMahan, Robert Nozick, Debra Satz, Tommie Shelby, Peter Singer, and Judith Jarvis Thomson.

Same as: ETHICSOC 185M, POLISCI 134P.

PHIL 73. Collective Action: Ethics and Policy. 3-5 Units.

Individually rational actions can give rise to results that are collectively irrational. For example, the collective result of our consumption decisions is to warm the planet, destroy the world's fisheries, and increase reliance on factory farming; at the same time, the decisions of a single individual seem to have no tangible effect on such things. In light of this, what (if anything) are you as an individual required to do in these and other collective action situations, especially when others are not doing their part to prevent things from getting out of control? For example, are you required to reduce your carbon footprint and avoid products that are produced in ethically objectionable ways? Do you have a duty to vote? Is free-riding always ethically objectionable? Can you be required to 'cooperate' in a situation where you know that most others will 'defect'? Finally, from a real-world policy perspective, how can we bring about the best solutions to these and other collective action problems? Is the best policy response always a straightforward function of the variable features of each case? Interdisciplinary readings from authors in philosophy, politics, economics, and law such as Elinor Ostrom, Peter Singer, and Cass Sunstein.

Same as: ETHICSOC 180M, PUBLPOL 304A.

PHIL 74. Business Ethics. 4 Units.

What do people mean when they say, "it's just business"? Do they mean that there are no moral norms in business or do they mean that there are special moral norms in business that differ from those of personal relationships and other spheres of social activity? In this class we will examine ethical questions that arise in the domain of business. We will ask, for example: What does the market reward and what should it reward? What are the moral responsibilities of a business owner in a competitive environment? Is it acceptable to employ "sweatshop labor"? How do the moral responsibilities of a business owner differ from that of a policy maker? What information does a seller (or buyer) have a moral duty to disclose? In real estate, is a strategic default morally wrong? How much government regulation of Wall Street is morally justified? We will use the writings of Plato, Aristotle, Cicero, J. S. Mill, Marx, Jevons and Menger, Hayek, Walzer, and Sandel, among others, to help us answer these questions. We will see, for example, what Aristotle thought about day trading.

Same as: ETHICSOC 182M.

PHIL 76. Introduction to Global Justice. 4 Units.

Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.
Same as: ETHICSOC 136R, INTNLREL 136R, POLISCI 136R, POLISCI 336.

PHIL 77S. Philosophy of Religion. 3 Units.

Key philosophical questions concerning the nature of the divine and the religious through a close reading of some classic philosophical texts, while aiming to develop critical thinking about these issues. Topics include: the existence and nature of God, the problem of evil, the justification of religious belief, the nature of and relationship between faith and reason, and the function(s) of religion. Key texts will include Plato, St. Anselm, Hume, and Nietzsche.
Same as: RELIGST 62S.

PHIL 80. Mind, Matter, and Meaning. 5 Units.

Central topics in philosophy emphasizing development of analytical writing skills. Are human beings free? How do human minds and bodies interact? Prerequisite: introductory philosophy course.

PHIL 81. Philosophy and Literature. 5 Units.

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. Taught in English.
Same as: CLASSGEN 81, COMPLIT 181, ENGLISH 81, FRENCH 181, GERMAN 181, ITALIAN 181, SLAVIC 181.

PHIL 90A. The Philosophy of John Perry. 4 Units.

John Perry is among the most influential philosophers of the last several decades, making important contributions to the philosophy of language, metaphysics, and the philosophy of mind. Focus on Perry's work on indexicality, belief reports, reference, pragmatics, identity, personal identity, modality, and consciousness. Perry's work in these areas will be studied in conjunction with that of some key figures in the surrounding literatures, including Kaplan, Lewis, Stalnaker, Kripke, and Chalmers.

PHIL 90B. The Ethics of War. 4 Units.

Issues both in contemporary just war theory and political philosophy. Relevant questions include: Can conscription ever be justified? If not, is there anything wrong with targeting poor people as part of efforts to recruit a 'volunteer' military? If, during war itself, combatants act in ways prohibited by the moral requirements governing war's conduct, then does it make any moral difference whether they were acting as ordered? And how do we identify these moral requirements in the first place? For example, what distinguishes a legitimate target from an illegitimate one? What determines whether military action is disproportionate? What, if anything, is morally distinctive about terrorism? Explores the complexities behind these questions and others, with a view to evaluating the potential answers to them.

PHIL 90C. Predicting the Future: Puzzles of Induction. 4 Units.

Can we know that the future is likely to resemble the past? Do we have reason to believe that the Sun is even remotely likely to rise again tomorrow? Are we rationally justified in accepting the confident predictions of science and commonsense, based on well-observed regularities? Consider several paradoxes of induction (that is, extrapolation from observed to unobserved), including those raised by Hume, Hempel, and Goodman, the Doomsday and Sleeping Beauty paradoxes, as well as some attempts to solve or cope with them.

PHIL 90D. What do Philosophers do?. 4 Units.**PHIL 90E. Ethics in Real Life: How Philosophy Can Make Us Better People. 4 Units.**

Socrates thought that philosophy was supposed to be practical, but most of the philosophy we do today is anything but. This course will convince you that philosophy actually is useful outside of the classroom--and can have a real impact on your everyday decisions and how to live your life. We'll grapple with tough practical questions such as: 'Is it selfish if I choose to have biological children instead of adopting kids who need homes?' 'Am I behaving badly if I don't wear a helmet when I ride my bike?' 'Should I major in a subject that will help me make a lot of money so I can then donate most of it to overseas aid instead of choosing a major that will make me happy?' Throughout the course, we will discuss philosophical questions about blame, impartiality, the force of different 'shoulds,' and whether there are such things as universal moral rules that apply to everyone.
Same as: ETHICSOC 203R.

PHIL 90G. Native American Philosophy. 4 Units.

Examine traditional philosophical questions like "How do we know?" "What exists?" "What is a person?" and "What is the good life?" from the perspectives of classical and contemporary Native American thinkers. We will look at Native American beliefs about respect for persons and places; reactions to colonial doctrines of conversion, treaties, and removal; and the importance of the themes of circularity and performance in classical and contemporary Native philosophical thought. Also of importance will be to contrast some Native American approaches to philosophical questions against Western attempts to answer these same questions. How are the approaches the same? How are they different? What assumptions about the natures of reality or humanity account for the similarities or differences?.

PHIL 90J. Is it Always Good to "Be Yourself?" - Issues at the Intersection of Ethics and Moral Psychology. 4 Units.

It may seem obvious that it is always good to 'be yourself,' to be who you 'really' are, or to do what you 'really' want to do - but is it? Some philosophers believe that we are our 'true,' or 'real,' selves when we act on our values, or what we care most about. But if that is true, then is it still good to be yourself when what you value and care most about involves a commitment to acts of terrorism, torturing others, or a life of pain and boredom? We will look at contemporary philosophical attempts to make sense of the idea of 'being yourself,' and potential reasons in favor of its supposed value. Authors include Bratman, Frankfurt, Korsgaard, Millgram and Williams.

PHIL 90L. Probability and the Law. 4 Units.

What does it mean to prove guilt beyond a reasonable doubt? Can we interpret legal standards of proof probabilistically? What is the role of probability and statistics in the courtroom? How are quantitative methods changing legal proceedings? Courtroom movies, criminal and civil cases, and academic scholarship will help us address these and related questions. No statistical or legal background is expected.

PHIL 90S. Philosophical Dimensions of Cognitive Science. 4 Units.

What is consciousness? What is the relation between the mind and the body? How does the mind represent the world around it? Are our minds just sophisticated computers? If they are, what functions as the 1s and 0s in our brains? Or are our minds something else altogether? This course will look at the philosophical foundations of cognitive science with a particular focus on cognitive architecture. In addition we will consider the nature of mental representation and the challenges presented by subjective experience.

PHIL 100. Greek Philosophy. 4 Units.

We shall cover the major developments in Greek philosophical thought, focusing on Plato, Aristotle, and the Hellenistic schools (the Epicureans, the Stoics, and the Skeptics). Topics include epistemology, metaphysics, psychology, ethics and political theory.

PHIL 101. Introduction to Medieval Philosophy. 4 Units.

Classics of Western philosophy by Augustine, Boethius, Anselm, and Aquinas. Explore the puzzles facing someone seeking to lead a good life and to understand herself and her world. A theory of will and human motivation, a theory of ethics based on the agent's intention, and a theory of divine omniscience and omnipotence consistent with divine goodness and human freedom. Works include *On Free Choice*, *The Consolation of Philosophy*, *On the Fall of the Devil*, and *Summa Theologiae*.

Same as: PHIL 201.

PHIL 102. Modern Philosophy, Descartes to Kant. 4 Units.

Major figures in early modern philosophy in epistemology, metaphysics, and philosophy of mind. Writings by Descartes, Leibniz, Hume, and Kant.

PHIL 103. 19th-Century Philosophy. 4 Units.

Focus is on ethics and the philosophy of history. Works include Mill's *Utilitarianism*, Hegel's *The Philosophy of World History*, Marx's *Economic and Philosophic Manuscripts*, Kierkegaard's *The Sickness Unto Death*, and Nietzsche's *On the Genealogy of Morals*.

PHIL 104. Philosophy of Religion. 4 Units.

Key issues in the philosophy of religion. Topics include the relationship between faith and reason, the concept of God, proofs of God's existence, the meaning of religious language, arguments for and against divine command theory in ethics and the role of religious belief in a liberal society.

PHIL 106. Ancient Skepticism. 4 Units.

The ancient Pyrrhonian skeptics who think that for any claim there is no more reason to assert it than deny it and that a life without any beliefs is the best route to happiness. Some ancient opponents of the Pyrrhonian skeptics and some relations between ancient and modern skepticism.

Same as: PHIL 206.

PHIL 107. Early Plato. 4 Units.

We shall focus on Plato's early or Socratic dialogues (e.g. the *Crito*, the *Gorgias*, and the *Protagoras*). In these dialogues, Plato focuses on ethics and ethical psychology without explicitly drawing on epistemological and metaphysical claims. We'll try to determine whether the Socrates of these dialogues is a purely destructive critic or whether he has a positive ethical view that he advances.

Same as: PHIL 207.

PHIL 107A. The Greeks on Irrationality. 2-4 Units.

In this course, we shall examine the views of some central Greek philosophers (Plato, Aristotle, the Epicureans, and the Stoics) on the irrational and non-rational aspects of human life. What makes something irrational and what roles (negative and perhaps positive as well) does the irrational play in our lives? We shall examine their views on anger, fear, madness, love, pleasure and pain, sexual desire and so on. We shall also consider more briefly some depictions of these psychic items in ancient Greek literature.

Same as: PHIL 207A.

PHIL 107B. Plato's Metaphysics and Epistemology. 4 Units.

We will read the *Theaetetus* and the *Parmenides*, and consider various definitions of knowledge, and metaphysical problems about the objects of knowledge, and a proposed method for examining and resolving such problems. Prerequisite: Philosophy 80 or consent of instructor.

Same as: PHIL 207B.

PHIL 108. Aristotle's Metaphysics Book Alpha. 4 Units.

An introduction both to Aristotle's own metaphysics and to his treatment of his predecessors on causality, included the early Ionian cosmologists, atomism, Pythagoreans, Heraclitus, Parmenides, Empedocles, Anaxagoras and Plato. Prerequisite: one course in ancient Greek philosophy.

Same as: PHIL 208.

PHIL 108A. Aristotelian Logic. 4 Units.

A careful examination of Aristotle's syllogistic, with special emphasis on the interpretation of his modal syllogistic. This course will serve both as an introduction to ancient term logic and to the difference between sentential modal operators and modal modifiers to the copula. Topics will include the analysis of syllogisms into figures and moods, the reduction of 2nd and 3rd figure syllogisms to the first, the consistency of the modal syllogistic, models for the syllogistic, and *de re* versus *de dicto* modalities. For students with at least some introductory background in logic.

Same as: PHIL 208A.

PHIL 108B. Aristotle's Physics Book One. 4 Units.

A chapter by chapter analysis of Aristotle's introductory discussions of physical theory. Topics to be considered include Aristotle's treatment of Eleatic monism, the role of opposites in pre-Socratic physics, the role of matter in physics, and an analysis of the elements of changing objects into form, privation and a subject.

Same as: PHIL 208B.

PHIL 109. Topics in Ancient Philosophy: Plato and Aristotle on Art and Rhetoric. 4 Units.

Plato's and Aristotle's views on the nature of art and rhetoric and their connections with the emotions, reason and the good life. Readings include Plato's *Gorgias*, *Ion* and parts of the *Republic* and the *Laws* and Aristotle's *Poetics* and *Rhetoric*.

Same as: PHIL 209.

PHIL 109A. Special Topics in Ancient Philosophy. 4 Units.

In this course we will read carefully Book I, Chapters 1-3, of Aristotle's *Physics* and the commentary on those chapters by John Philoponus.

Topics to be covered include Aristotle's preliminary discussion of the principles of natural science and his detailed exposition and refutation of Eleatic Monism.

Same as: PHIL 209A.

PHIL 109B. Greek philosophers read their ancestors: Intro to the ancient reception of Presocratic philosophy. 4 Units.

The first Greek philosophers are known to us only through fragments of their original works, generally few in number and transmitted by later authors, as well as through a set of testimonies covering a thousand years and more. Thus it is crucial, in order to understand archaic thought, to get a sense of how they were read by those to whom we owe their transmission. What was their aim, their method, their presuppositions or prejudices? The course will employ this perspective to examine authors such as Plato, Aristotle, Theophrastus, Diogenes Laertius, Simplicius, among others. We shall also reflect, on the basis of the paradigmatic case of the Presocratics, on some of the more general problems raised by literary and philosophical approaches to the notion of reception.

Same as: PHIL 209B.

PHIL 110. Plato. 4 Units.

Plato's *Republic*.

Same as: PHIL 210.

PHIL 111. Aristotle and Contemporary Ethics. 4 Units.

Aristotle's *Nicomachean Ethics*, focusing on virtue, happiness, pleasure, practical reasoning, and particularism. Sources include the *Eudemian Ethics*, contemporary philosophers who have taken many of these topics up again, and contemporary material such as that by Anscombe, Foot, Hursthouse, Korsgaard, and McDowell.

Same as: PHIL 211.

PHIL 113. Hellenistic Philosophy. 4 Units.

Epicureans, skeptics, and stoics on epistemology, ethics, metaphysics, and psychology.

Same as: PHIL 213.

PHIL 115. Problems in Medieval Philosophy: Islamic Aristotelianism and Western Scholasticism. 3-5 Units.

The western world adopted Aristotle's metaphysics and natural philosophy as the foundation of its educational system and scholarly life between 1210 and 1255. Christian Europe was thereby following the example set by Islam in Spain and the Near East. Today some people believe that this development was independent, and others think that the scholastics copied even their methods from Arabic philosophers. Historical evaluation of those claims.

Same as: PHIL 215.

PHIL 116. Aquinas. 4 Units.

The focus will be on Thomas Aquinas' metaphysics. Works include *Summa contra Gentiles*, and *Summa Theologiae*, as well as some smaller pieces.

Same as: PHIL 216.

PHIL 117. Descartes. 4 Units.

(Formerly 121/221.) Descartes's philosophical writings on rules for the direction of the mind, method, innate ideas and ideas of the senses, mind, God, eternal truths, and the material world.

Same as: PHIL 217.

PHIL 118. British Empiricism, 1660s-1730s. 4 Units.

Focus is on the big three British Empiricists and their developments of thought based on the foundational role that they give to sensory perception or experience as the source of knowledge. Topics may include the theory of ideas, idealism, personal identity, human agency, moral motivation, causation, and induction. Readings predominantly from Locke, Berkeley, and Hume.

PHIL 118A. Origins of Empiricism: Gassendi, Locke, and Berkeley. 4 Units.

Particular light is shed on both the strengths and weaknesses of empiricism by studying it as it first arose during the 17th century revolution in philosophy and the sciences initiated by Descartes. Three philosophers of that period helped to advance empiricism: Pierre Gassendi (1592-1655), John Locke (1632-1704), and George Berkeley (1685-1753). A brief introduction to Descartes is followed by Gassendi's reaction to Descartes and his influence on Locke; Locke's theory of ideas, mind, language, reality, and natural philosophy expounded in his *An Essay concerning Human Understanding* (Fourth Edition, 1689); and Berkeley's later reaction to Locke.

Same as: PHIL 218A.

PHIL 119. Rationalists. 4 Units.

Developments in 17th-century continental philosophy. Descartes's views on mind, necessity, and knowledge. Spinoza and Leibniz emphasizing their own doctrines and their criticism of their predecessors. Prerequisite: 102.

Same as: PHIL 219.

PHIL 120A. The Leibniz-Clarke Correspondence. 4 Units.

Correspondence on metaphysics, theology, and science.

Same as: PHIL 220A.

PHIL 122. Hume. 4 Units.

(Formerly 120/220; graduate students enroll in 222.) Hume's theoretical philosophy, in particular, skepticism and naturalism, the theory of ideas and belief, space and time, causation and necessity, induction and laws of nature, miracles, a priori reasoning, the external world, and the identity of the self.

Same as: PHIL 222.

PHIL 124. Topics in Early Modern Philosophy. 4 Units.

Philosophical views of the highly influential rationalist philosophers Benedict (or Baruch) Spinoza (1632-1677) and G. W. Leibniz (1646-1716). Topics to be treated include: the nature of God and the question of his providential care for human beings, the concept of substance and its extension, the ontological relation of finite beings to God, the mental and its relation to the corporeal, and the nature of human freedom.

PHIL 125. Kant's First Critique. 4 Units.

(Graduate students register for 225.) The founding work of Kant's critical philosophy emphasizing his contributions to metaphysics and epistemology. His attempts to limit metaphysics to the objects of experience. Prerequisite: course dealing with systematic issues in metaphysics or epistemology, or with the history of modern philosophy.

Same as: PHIL 225.

PHIL 126B. Kant's Ethical Theory. 2-4 Units.

(Graduate students register for 226B.) Kant's moral philosophy based primarily on the *Groundwork of Metaphysics of Morals*, *Critique of Practical Reason*, and *The Metaphysics of Morals*.

Same as: PHIL 226B.

PHIL 127. Kant's Ethics. 4 Units.

A study of Kant's ethical thought, focusing on *The Groundwork of the Metaphysics of Morals*, *The Critique of Practical Reason*, and *The Metaphysics of Morals*. Prerequisite: Phil. 2, Phil. 170, or equivalent (consult the instructor). Designed for undergraduate department majors and graduate students.

Same as: PHIL 227.

PHIL 127A. Kant's Value Theory. 4 Units.

(Graduate students register for 227A.) The role of autonomy, principled rational self-governance, in Kant's account of the norms to which human beings are answerable as moral agents, citizens, empirical inquirers, and religious believers. Relations between moral values (goodness, rightness) and aesthetic values (beauty, sublimity).

Same as: PHIL 227A.

PHIL 127B. Kant's Anthropology and Philosophy of History. 4 Units.

Kant's conception of anthropology or human nature, based on his philosophy of history, which influenced and anticipated 18th- and 19th-century philosophers of history such as Herder, Fichte, Hegel, and Marx. Texts include *Idea for a Universal History*, *Conjectural Beginning of Human History*, and *Anthropology from a Pragmatic Point of View*. Topics include: Kant's pragmatic approach to the study of human nature; the difficulty of human self knowledge; the role of regulative and teleological principles in studying human history; and Kant's theory of race.

Same as: PHIL 227B.

PHIL 128. Fichte's Ethics. 4 Units.

(Graduate students register for 228.) The founder of the German Idealist movement who adopted but revised Kant's project of transcendental philosophy basing it on the principle of awareness of free self-activity. The awareness of other selves and of ethical relations to them as a necessary condition for self-awareness. His writings from 1793-98 emphasizing the place of intersubjectivity in his theory of experience.

Same as: PHIL 228.

PHIL 130. Hegel. 4 Units.

(Formerly 122/222; graduate students register for 230.) Introduction to Hegel's philosophy, emphasizing his moral and political philosophy, through study of his last major work (1821). May be repeated for credit. Prerequisite: course in the history of modern philosophy.

Same as: PHIL 230.

PHIL 134. Phenomenology and Intersubjectivity. 4 Units.

(Graduate students register for 234.) Readings from Husserl, Stein, Heidegger, Sartre, and Merleau-Ponty on subjects related to awareness of others. Topics include solipsism, collective experience, empathy, and objectification of the other.

Same as: PHIL 234.

PHIL 135. Existentialism. 4 Units.

Focus is on the existentialist preoccupation with human freedom. What constitutes authentic individuality? What is one's relation to the divine? How can one live a meaningful life? What is the significance of death? A rethinking of the traditional problem of freedom and determinism in readings from Rousseau, Kierkegaard, and Nietzsche, and the extension of these ideas by Sartre, Beauvoir, and Camus, including their social and political consequences in light of 20th-century fascism and feminism. Same as: PHIL 235.

PHIL 136. History of Analytic Philosophy. 4 Units.

(Formerly 147/247; graduate students register for 236.) Theories of knowledge in Frege, Carnap, and Quine. Emphasis is on conceptions of analyticity and treatment of logic and mathematics. Prerequisite: 50 and one course numbered 150-165 or 181-90. Same as: PHIL 236.

PHIL 137. Wittgenstein. 4 Units.

(Graduate students register for 237.) An exploration of Wittgenstein's changing views about meaning, mind, knowledge, and the nature of philosophical perplexity and philosophical insight, focusing on the *Tractatus Logico-Philosophicus* and *Philosophical Investigations*. Same as: PHIL 237.

PHIL 138. Recent European Philosophy: Between Nature and History. 4 Units.

A critical introduction to the novel understandings of time, language, and cultural power developed by 20th-century continental thinkers, with close attention to work by Heidegger, Saussure, Benjamin, and Foucault. Same as: PHIL 238.

PHIL 143. Quine. 4 Units.

(Formerly 183/283; graduate students register for 243.) The philosophy of Quine: meaning and communication; analyticity, modality, reference, and ontology; theory and evidence; naturalism; mind and the mental. Same as: PHIL 243.

PHIL 150. Basic Concepts in Mathematical Logic. 4 Units.

The concepts and techniques used in mathematical logic, primarily through the study of the language of first order logic. Topics: formalization, proof, propositional logic, quantifiers, sets, mathematical induction, modal logics and the logic of diagrams. Same as: PHIL 250.

PHIL 150E. Logic in Action: A New Introduction to Logic. 4 Units.

A new introduction to logic, covering propositional, modal, and first-order logic, with special attention to major applications in describing information and information-driven action. Highlights connections with philosophy, mathematics, computer science, linguistics, and neighboring fields. Based on the open source course 'Logic in Action,' available online at <http://www.logicinaction.org/>. nFulfills the undergraduate philosophy logic requirement.

PHIL 150X. Basic Concepts in Mathematical Logic. 2 Units.

Equivalent to the second half of 150. Students attend the first meeting of 150 and rejoin the class on October 30. Prerequisite: CS 103A or X, or PHIL 50.

PHIL 151. First-Order Logic. 4 Units.

(Formerly 160A.) The syntax and semantics of sentential and first-order logic. Concepts of model theory. Gödel's completeness theorem and its consequences: the Löwenheim-Skolem theorem and the compactness theorem. Prerequisite: 150 or consent of instructor. Same as: PHIL 251.

PHIL 151A. Recursion Theory. 4 Units.

Computable functions, Turing degrees, generalized computability and definability. "What does it mean for a function from the natural numbers to themselves to be computable?" and "How can noncomputable functions be classified into a hierarchy based on their level of noncomputability?". Theory of relative computability, reducibility notions and degree structures. Prerequisite is PHIL 150, or PHIL 151 or CS 103. Same as: PHIL 251A.

PHIL 152. Computability and Logic. 4 Units.

Approaches to effective computation: recursive functions, register machines, and Turing machines. Proof of their equivalence, discussion of Church's thesis. Elementary recursion theory. These techniques used to prove Gödel's incompleteness theorem for arithmetic, whose technical and philosophical repercussions are surveyed. Prerequisite: 151. Same as: PHIL 252.

PHIL 153. Feminist Theories and Methods Across the Disciplines. 2-5 Units.

(Graduate Students register for PHIL 253 or FEMGEN 203) The interdisciplinary foundations of feminist thought. The nature of disciplines and of interdisciplinary work. Challenges of feminism for scholarship and research. Prerequisites: Feminist Studies 101 or equivalent with consent of instructor. Same as: FEMGEN 103, FEMGEN 203, PHIL 253.

PHIL 154. Modal Logic. 4 Units.

(Graduate students register for 254.) Syntax and semantics of modal logic, and technical topics like completeness and correspondence theory, including both classical and recent developments. Applications to topics in philosophy, computer science, and other fields. Prerequisite: 150 or preferably 151. Same as: PHIL 254.

PHIL 155. General Interest Topics in Mathematical Logic. 4 Units.

Introduction to formalization using language of logic and to problems of philosophical logic and computer science that can be handled this way. Propositional calculus, Sudoku puzzles, resolution rule, problem P=NP. Possible worlds, modal logic with emphasis on individuation problems. May be repeated for credit. Same as: PHIL 255.

PHIL 157. Topics in Philosophy of Logic. 3 Units.

(Graduate students register for 257.) Disputed foundational issues in logic; the question of what the subject matter and boundaries of logic are, such as whether what is called second-order logic should be counted as logic. What is the proper notion of logical consequence? May be repeated for credit. Pre- or corequisite: 151, or consent of instructor. Same as: PHIL 257.

PHIL 158. Topics in Logic: Ten Problems in Deontic Logic. 2 Units.

As witnessed by the handbook of deontic logic and normative systems, the area of deontic logic is in flux. Traditional questions and logical methods of deontic logic are being supplemented by new questions and new techniques. This tutorial gives an introduction to the current discussion in deontic logic. In what sense are obligations different from norms? Jorgensen's dilemma, from preference based modal logic to the modern approach. How to reason about dilemmas, contrary-to-duty and defeasible norms? Distinguishing various kinds of defeasibility. How to relate various kinds of permissive and constitutive norms? Permissions as exceptions and prioritized norms. How do norms relate to other modalities like beliefs, desires, and intentions. How do norms change? What is the role of time, action and games in deontic reasoning? For each problem, we discuss traditional as well as new research questions. We see the new questions as good questions for current research, in the sense that they point to modern theories and applications. We are especially interested in new questions that make older traditional questions obsolete in the sense that they are now addressed from a modern perspective, or in a more general setting. This mini-course will run from the week of 15 April through the week of 13 May. Same as: PHIL 258.

PHIL 160A. Newtonian Revolution. 4 Units.

(Graduate students register for 260A.) 17th-century efforts in science including by Kepler, Galileo, Descartes, and Huygens, that formed the background for and posed the problems addressed in Newton's *Principia*. Same as: PHIL 260A.

PHIL 160B. Newtonian Revolution. 4 Units.

(Graduate students register for 260B.) Newton's *Principia* in its historical context, emphasizing how it produced a revolution in the conduct of empirical research and in standards of evidence in science. Same as: PHIL 260B.

PHIL 162. Philosophy of Mathematics. 4 Units.

(Graduate students register for PHIL 262.) 20th-century approaches to the foundations and philosophy of mathematics. The background in mathematics, set theory, and logic. Schools and programs of logicism, predicativism, platonism, formalism, and constructivism. Readings from leading thinkers. Prerequisite: PHIL151 or consent of instructor. Same as: MATH 162, PHIL 262.

PHIL 163. Significant Figures in Philosophy of Science. 4 Units.

(Graduate students register for 263.) Directed study of two or more thinkers, past or present, who have made a lasting impact on contemporary philosophy of science. Subjects last year were Henri Poincaré, Pierre Duhem, and Gaston Bachelard. Same as: PHIL 263.

PHIL 164. Central Topics in the Philosophy of Science: Theory and Evidence. 4 Units.

(Graduate students register for 264.) Is reductionism opposed to emergence? Are they compatible? If so, how or in what sense? We consider methodological, epistemological, logical and metaphysical dimensions of contemporary discussions of reductionism and emergence in physics, in the sciences of complexity, and in philosophy of mind. Same as: PHIL 264.

PHIL 164A. Central Topics in Philosophy of Science: Causation. 4 Units.

(Graduate Students register for 264A.) Establishing causes in science, engineering, and medicine versus establishing them in Anglo-American law, considered in the context of Hume and Mill on causation. May be repeated for credit. Same as: PHIL 264A.

PHIL 165. Philosophy of Physics. 4 Units.

Graduate students register for 265.) Central topic alternates annually between space-time theories and philosophical issues in quantum mechanics; the latter in Winter 2013-14. Conceptual problems regarding the uncertainty principle, wave-particle duality, quantum measurement, spin, and their treatment within the 'Copenhagen interpretation' of quantum mechanics, and the related doctrine of complementarity. The issue of quantum entanglement as raised by Einstein and Schrödinger in the 1930s and the famous EPR (Einstein-Podolsky-Rosen) paper of 1935. Examination of EPR-type experimental set-ups and a result due to Bell in the 1960s, according to which no "hidden variables" theory satisfying a certain locality condition (apparently assumed by EPR) can reproduce all the predictions of quantum mechanics. Survey of several live interpretive options for standard quantum mechanics: Bohmian mechanics (a.k.a. 'pilot wave theory'), 'spontaneous collapse' theories, and Everett's relative-state interpretation. Critical scrutiny of the 'decoherence' program that seeks to explain the classical-to-quantum transition, i.e., the emergence of the world of classical physics and macroscopic objects from quantum physics. May be repeated for credit if content is different. Same as: PHIL 265.

PHIL 166. Probability: Ten Great Ideas About Chance. 4 Units.

Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116. Same as: PHIL 266, STATS 167, STATS 267.

PHIL 166A. Foundations of Quantum Mechanics. 4 Units.

This seminar will concentrate on a variety of probability questions that arise in quantum mechanics, including some from recent experiments. Negative probabilities and nonmonotonic upper probabilities will be emphasized. Same as: PHIL 266A.

PHIL 167A. Philosophy of Biology. 2-4 Units.

(Graduate students register for 267A.) Evolutionary theory and in particular, on characterizing natural selection and how it operates. We examine debates about fitness, whether selection is a cause or force, the levels at which selection operates, and whether cultural evolution is a Darwinian process. Same as: PHIL 267A.

PHIL 167B. Philosophy, Biology, and Behavior. 4 Units.

(Graduate Students register for 267B) Philosophical study of key theoretical ideas in biology as deployed in the study of behavior. Topics to include genetic, neurobiological, ecological approaches to behavior; the classification and measurement of behaviors: reductionism, determinism, interactionism. Prerequisites: one PHIL course and either one BIO course or Human Biology core; or equivalent with consent of instructor. Same as: PHIL 267B.

PHIL 167C. Associative Theories of Mind and Brain. 4 Units.

After a historical survey of associative theories from Hume to William James, current versions will be analyzed including the important early ideas of Karl Lashley. Emphasis will be on the computational power of associative networks and their realization in the brain. Same as: PHIL 267C.

PHIL 167D. Philosophy of Neuroscience. 4 Units.

Can problems of mind be solved by understanding the brain, or models of the brain? The views of philosophers and neuroscientists who believe so, and others who are skeptical of neurophilosophical approaches to the mind. Historical and recent literature in philosophy and neuroscience. Topics may include perception, memory, neural accounts of consciousness, neurophenomenology, neuroscience and physics, computational models, and eliminativism. Same as: PHIL 267D, SYMSYS 206.

PHIL 170. Ethical Theory. 4 Units.

A more challenging version of Phil 2 designed primarily for juniors and seniors (may also be appropriate for some freshmen and sophomores - contact professor). Fulfills the Ethical Reasoning requirement. Graduate section (270) will include supplemental readings and discussion, geared for graduate students new to moral philosophy, as well as those with some background who would like more. Same as: ETHICSOC 170, PHIL 270.

PHIL 170B. Metaphor. 4 Units.

In metaphor we think and talk about two things at once: two different subject matters are mingled to rich and unpredictable effect. A close critical study of the main modern accounts of metaphor's nature and interest, drawing on the work of writers, linguists, philosophers, and literary critics. Attention to how understanding, appreciation, and pleasure connect with one another in the experience of metaphor. Consideration of the possibility that metaphor or something very like it occurs in nonverbal medial: gesture, dance, painting, music. Same as: PHIL 270B.

PHIL 170D. Trust and Trustworthiness. 4 Units.

An exploration of the place of interpersonal trust in ethical thought. What is it to trust another person? How is trusting related to, though different from, other attitudes we sometimes bear towards others (e.g. justified beliefs we form about others and their conduct; ethically significant expectations we have of others, etc.)? What is involved in acquiring/possessing the virtue of trustworthiness? How should trust (and trustworthiness) figure in our thinking about important ethical activities, for example promising, friendship, or the practice of politics?

Same as: PHIL 270D.

PHIL 171. Justice. 4-5 Units.

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: ETHICSOC 171, IPS 208, PHIL 271, POLISCI 3P, POLISCI 136S, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307.

PHIL 172. History of Modern Moral Philosophy. 4 Units.

This course traces the development of moral philosophy in Britain just prior to the nearly simultaneous emergence of Kant's moral philosophy and Bentham's utilitarianism in the 1780's. Emphasis is on the dialogue between empiricists and rationalists on the subject of the relationship between the natural and the normative. Authors include Hobbes, Clarke, Hutcheson, Hume, Smith, Price, and Bentham. Prerequisite: some familiarity with Kant's moral theory and utilitarianism, and demonstrated interest in philosophy.

Same as: PHIL 272.

PHIL 172B. Recent Ethical Theory. 4 Units.

Study the works of several prominent contemporary moral philosophers. Possible authors include: Scanlon, Darwall, Nagel, Williams, Blackburn, Gibbard, Korsgaard. Prerequisite: students should have taken an introduction to moral philosophy (Phil. 20, Phil. 170 or equivalent).

Same as: PHIL 272B.

PHIL 172D. Bernard Williams. 4 Units.

An exploration of some central themes from the work of Bernard Williams. Particular attention will be paid to his discussion of the character and identity of the self, his sustained critique of morality and moral philosophy. We will also read several of Williams's interlocutors, including Nagel, Parfit, Korsgaard, and Herman.

Same as: PHIL 272D.

PHIL 172N. Prudence and Morality. 4 Units.

We sometimes think we should do something just because it will benefit us in the future, even though we don't particularly feel like doing it now (e.g. we exercise, go to the dentist for a check-up, or set aside money for retirement). And we sometimes think we should do something for the sake of another person, even when it is inconvenient, costly, or unpleasant (e.g. we stop to help a stranded motorist, donate to charity, or tell someone an embarrassing truth rather than a face-saving lie). When we do the former, we act prudently. When we do the latter, we act morally. This course explores the debate among philosophers about the source of our reasons for acting prudently and morally. Some argue that our reasons to be prudent and moral stem directly from the fact that we are rational & that it is contrary to reason to ignore our own future interests, or the interests of other people. Others disagree, arguing that the source of these reasons must lie elsewhere. Course readings will include work by Thomas Nagel, Bernard Williams, Christine Korsgaard, Derek Parfit, Philippa Foot, and others.

Same as: PHIL 272N.

PHIL 173A. Aesthetics: Metaphor across the Arts. 4 Units.

What if a metaphor is an instructively compact work of art, or if finding a metaphor apt is an instructively simple case of finding something aesthetically valuable? What does this reveal about the nature of art and language? Introduction to the philosophical study of art and aesthetic value, organized around metaphor. Contemporary accounts of metaphor as a verbal device. Arguments for the existence of nonverbal metaphor in nonliterary arts. The power and appeal of metaphors drawn from art, art criticism, theoretical inquiry, and everyday life.

PHIL 173B. Metaethics. 4 Units.

This is an undergraduate only class. Can moral and ethical values be justified or is it just a matter of opinion? Is there a difference between facts and values? Are there any moral truths? Does it matter if there are not? Is anything in life really valuable or meaningful? Focus is not on which things or actions are valuable or morally right, but what is value or rightness itself. Contemporary metaethics. Prerequisites: 1 and 80.

PHIL 174. Freedom and the Practical Standpoint. 4 Units.

(Graduate students register for 274.) Confronted with the question of how to act, people think of themselves as freely determining their own conduct. Natural science poses a challenge to this by explaining all events, including human actions, in terms of causal processes. Are people justified in thinking of themselves as free? Major philosophical approaches to this question: incompatibilism, compatibilism, and the two-standpoint view.

Same as: PHIL 274.

PHIL 174A. Moral Limits of the Market. 4 Units.

Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute?

Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases.

Same as: ETHICSOC 174A, PHIL 274A, POLISCI 135P.

PHIL 174D. Moral Luck. 4 Units.

We draw a fundamental distinction between what a person voluntarily does, and what is beyond her control. Such a distinction seems central to how we think about what it is to justify our actions (whether to ourselves or to one another), as well as to our practice of holding one another morally responsible for what we do. Yet under pressure, this distinction can appear to collapse & we find that we cannot successfully disentangle what a person controls from what she does not when she acts. This course examines this problem in depth, and considers how we might respond in the face of it: Is it really a problem? If so, does it threaten our moral practices? How should it influence the way in which we make choices, or the way we understand those choices once we've made them?

Same as: PHIL 274D.

PHIL 174L. Betrayal and Loyalty, Treason and Trust. 2 Units.

The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. SAME AS LAW 520.

Same as: ETHICSOC 174L, ETHICSOC 274L, PHIL 274L.

PHIL 175. Philosophy of Law. 4 Units.

Philosophical foundations of law and the legal system. The justifiability of patterns of assigning legal responsibility within criminal law. Prerequisite: PHIL 80 and one additional PHIL course.

PHIL 175A. Ethics and Politics of Public Service. 5 Units.

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.

Same as: CSRE 178, ETHICSOC 133, HUMBIO 178, PHIL 275A, POLISCI 133, PUBLPOL 103D, URBANST 122.

PHIL 175M. Two Ethical Theories and Being a Person. 4 Units.

The distinction between the ethics of being a person and the ethics of rules as opposed to the distinction between Kantian ethics and utilitarianism or consequentialism. Comparison of these two types of ethics with respect to their relationship to agency and being a good person. Relations between Western ethics and those of other continents.

Same as: PHIL 275M.

PHIL 176. Political Philosophy: The Social Contract Tradition. 4 Units.

(Graduate students register for 276.) Why and under what conditions do human beings need political institutions? What makes them legitimate or illegitimate? What is the nature, source, and extent of the obligation to obey the legitimate ones, and how should people alter or overthrow the others? Study of the answers given to such questions by major political theorists of the early modern period: Hobbes, Locke, Rousseau, and Kant.

Same as: PHIL 276.

PHIL 176A. Classical Seminar: Origins of Political Thought. 4-5 Units.

Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change.

Same as: CLASSHIS 133, CLASSHIS 333, PHIL 276A, POLISCI 330A.

PHIL 176B. The Economic Individual in the Behavioral Sciences. 4 Units.

(Graduate students register for 276B.)

Same as: PHIL 276B.

PHIL 176C. Two Views on the Place of Religion in Politics: Religion in the Political Sphere and Laicism. 4 Units.

The purpose of this course is to introduce students to two views on the relation between religion and politics. The view according to which the expression of religious convictions and arguments must have a place in the political sphere is dominant in political philosophy. By contrast, the "laicist" view, which is common in Mexico and in France, holds that such an expression must be absent from the institutions of the State as well as from political discourse. This course examines the reasons that motivate the differences between these two views, such as the assumption of a strong religious pluralism in the former and the presupposition of a dominant church and religion in the latter. The course is organized in four parts. In the first part we will consider two kinds of political secularization following the well known characterization by Charles Taylor: the "common ground" and the "independent ethic" approaches. We will see how these two approaches result in the two views on the relation between religion and politics mentioned above. In the second part, we will study John Rawls's influential view on the place of religious argument in legal and judicial reasoning in his theory of "public reason." We will contrast this view with Jürgen Habermas's defense of a wide role for religious argument in the public sphere. We will devote one week for assessing criticisms. In the third part, we will turn to the laicist view in the work of both French and Mexican scholars. We will focus on the reasons that motivate a laicist State (Estado laico) and examine whether they still hold. We will examine how the growth of religious pluralism in societies formerly dominated by one single church and religion has forced revisions in the understanding of laicism. We will also devote one week for assessing criticisms. In the fourth and final part of the course, we will consider the implications of these two views on the relation between religion and politics for public schooling, religious freedom, and the separation of Church and State.

Same as: PHIL 276C.

PHIL 177B. EMOTIONS: MORALITY AND LAW. 2 Units.

If emotions are the stuff of life, some emotions are the stuff of our moral and legal life. Emotions such as: guilt, shame, revenge, indignation, resentment, disgust, envy, jealousy and humiliation, along with forgiveness, compassion, pity, mercy and patriotism, play a central role in our moral and legal life. The course is about these emotions, their meaning and role in morality and law. Issues such as the relationship between punishment and revenge, or between envy and equality, or St. Paul's contrast between law and love, or Nietzsche's idea that resentment is what feeds morality, will be discussed alongside other intriguing topics.

Same as: ETHICSOC 202, ETHICSOC 302, PHIL 277B.

PHIL 178. Ethics in Society Honors Seminar. 3 Units.

For students planning honors in Ethics in Society. Methods of research. Students present issues of public and personal morality; topics chosen with advice of instructor.

Same as: ETHICSOC 190.

PHIL 178A. The Ethics of Environmental Choices. 4 Units.

(Formerly PHIL 278/378.) The institutional and individual dimensions of environmental choices. On the institutional side, examine externalities, the tragedy of the commons, sustainable development and environmental policy. On the individual side, discuss individual responsibility, intrinsic value, and moral pluralism. Focus is on decision making including the role of risk analysis, the rate of discount for effects on future generations, cost-benefit analysis, and scientific epistemology.

Same as: EARTHSYS 178, EARTHSYS 278, PHIL 278A.

PHIL 178M. Introduction to Environmental Ethics. 5 Units.

This course examines the following ethical questions about the environment: (1) how we ought morally to relate to animals; (2) attempts to expand the circle of moral concern beyond animals to other parts of nature; (3) economic approaches to environmental problems (e.g. cost-benefit analysis) and the justification of the precautionary principle; and (4) our moral obligations to future people. The class will conclude by considering whether the theoretical tools that we have examined help to address the problems of climate change, one of the most pressing environmental challenges of our time.

Same as: ETHICSOC 178M, ETHICSOC 278M, PHIL 278M, POLISCI 134L.

PHIL 179S. Moral Psychology, Reasons for Action, and Moral Theory. 4 Units.

What sorts of considerations does an ethical agent take to be good reasons for action? Work in moral psychology to illuminate the theory of practical reasons, and the theory of practical reasons to test the prospects for systematic moral theory. Can any systematic moral theory be reconciled with the moral psychology of ordinary, morally respectable agents?

Reading include Bernard Williams, Rosalind Hursthouse, Peter Railton, T.M. Scanlon, and Barbara Herman.

Same as: PHIL 279S.

PHIL 180. Metaphysics. 4 Units.

The course will be devoted to an exploration of the mereological structure of material objects, and the related notions of 'part', 'whole' and 'constitution'. For instance, an ordinary physical object is susceptible to an analysis in terms of material parts and a structure such that the material constitute that object in virtue of having a certain structure. Among other things, we will consider questions of identity, both at a time and through time, of material objects from this perspective. We will consider both the antecedents for this kind of analysis in Plato and Aristotle and contemporary developments in the mereological analysis of objects.

Prerequisite: Philosophy 80 (or consent of instructor).

Same as: PHIL 280.

PHIL 180A. Realism, Anti-Realism, Irrealism, Quasi-Realism. 4 Units.

Realism and its opponents as options across a variety of different domains: natural science, mathematics, ethics, and aesthetics. Clarify the various conceptions that fall under these terms and outline the reasons for and against adopting realism for the various domains. Highlight the general issues involved. Prerequisites: 80, 181

Same as: PHIL 280A.

PHIL 181. Philosophy of Language. 4 Units.

The study of conceptual questions about language as a focus of contemporary philosophy for its inherent interest and because philosophers see questions about language as behind perennial questions in other areas of philosophy including epistemology, philosophy of science, metaphysics, and ethics. Key concepts and debates about the notions of meaning, truth, reference, and language use, with relations to psycholinguistics and formal semantics. Readings from philosophers such as Frege, Russell, Wittgenstein, Grice, and Kripke. Prerequisites: 80 and background in logic. Same as: PHIL 281.

PHIL 181B. Philosophy of Language: Contemporary Debates. 4 Units.

This course builds on the material of 181/281, focusing on debates and developments in the pragmatics of conversation, the semantics/pragmatics distinction, the contextuality of meaning, the nature of truth and its connection to meaning, and the workings of particular linguistic constructions of special philosophical relevance. Students who have not taken 181/281 should seek the instructor's advice as to whether they have sufficient background.

Same as: PHIL 281B.

PHIL 182. Truth. 2-4 Units.

Focus on the nature of truth; specifically, ongoing debates between so-called correspondence theorists and deflationists. The former generally think truth amounts to some kind of structural isomorphism between the world and our representations of it (like the relationship between a subway map and the subway route itself). Deflationists think the nature of truth is exhausted by something as trifling as the equivalence between affirming something and affirming that it's true: e.g., it's true that Modest Mouse is God's gift to indie rock if and only if Modest Mouse IS God's gift to indie rock. Related issues include the possibility of truth-value "gaps" (claims that are neither true nor false), degrees of truth, relativism and realism about arbitrary subject matters, the semantic paradoxes (like the Liar), the role of truth in the theory of meaning, and the value of true belief. Most readings were written after 1980. Previous courses in philosophy of language and/or metaphysics very strongly encouraged. Phil 80 a must.

Same as: PHIL 282.

PHIL 184. Theory of Knowledge. 4 Units.

What is knowledge? How are beliefs justified? Contemporary theories evaluated against central problems: the regress argument, Gettier problem, and skeptical paradox.

Same as: PHIL 284.

PHIL 184C. Epistemology of Testimony. 4 Units.

Many of our beliefs come from others, and not from direct experience. Is testimony a source of fundamental reasons; reasons that do not have to be supported or validated by other sources like perception or inference? What sort of responsibility does one have to one's hearers, when one gives testimony?

Same as: PHIL 284C.

PHIL 184F. Feminist Theories of Knowledge. 4 Units.

Feminist critique of traditional approaches in epistemology and alternative feminist approaches to such topics as reason and rationality, objectivity, experience, truth, the knowing subject, knowledge and values, knowledge and power.

Same as: FEMST 166, PHIL 284F.

PHIL 184P. Probability and Epistemology. 4 Units.

Confirmation theory and various ways of trying to understand the concept of evidence. Discuss a series of issues in epistemology including probabilism (the view that you should assign degrees of belief to various propositions), conditionalization, confirmational holism, reliabilism and justification, and disagreement.

PHIL 185. Memory. 4 Units.

Structure, content, functional role, and epistemic authority of human memories. Sources include philosophical and psychological literature from different schools and historical periods.

PHIL 185B. Philosophy of Perception. 4 Units.

The nature of perceptual experience and the role it plays in securing empirical knowledge. Focus will be on what is sometimes called "the problem of perception": the question of how perception could provide us with direct awareness of the surrounding environment given the possibility of illusions or hallucinations. Topics, include the relationship between perception and belief, the nature of perceptual phenomenology, whether or not perceptual experiences are representational states, and the philosophical relevance of empirical research on perception.

Same as: PHIL 285B.

PHIL 186. Philosophy of Mind. 4 Units.

(Graduate students register for 286.) Debates concerning the nature of mental states, their relation to physical states of the human body, how they acquire their content, how people come to know about them in themselves and others, and the roles they play in the explanation of human conduct.

Same as: PHIL 286.

PHIL 186B. Inner Sense. 4 Units.

Often the label "inner" is used to describe aspects of ourselves we believe are not immediately observable to another. Thoughts, feelings, sensations; these all happen on the "inside," whereas speech, mannerisms, and actions are "outward" expressions. But how useful is this way of thinking? And what does it assume about what is "inner" versus what is "outer"? How reliable are the various internal mechanisms that allow us to know ourselves? Do we have a special kind of direct access to our own inner lives? And what can we know about the inner lives of others? Readings from philosophy of mind and cognitive science.

PHIL 187. Philosophy of Action. 4 Units.

(Graduate students register for 287.) Contemporary research in the philosophy of action. Topics include: What is it to be an agent? Is there a philosophically defensible contrast between being an agent and being a locus of causal forces to which one is subject? What is it to act purposively? What is intention? What is the relation between intention and belief? What is it to act intentionally? What is it to act for a reason? What is the relation between explaining why someone acted by citing the reasons for which she acted and causal explanation of her action? What is the relation between theoretical and practical rationality? What is the nature of our knowledge of our own intentional activity? What is it to act autonomously? What is shared cooperative activity? Prerequisite: 80.. Same as: PHIL 287.

PHIL 188. Personal Identity. 4 Units.

Do you persist through time the way that a skyscraper persists through space, by having different parts at different locations? Or are you ζ wholly present ζ at every moment of your life, in something more like the way that an elevator is present in each place as it travels up to the top floor? What criteria determine whether you now are the very same person as some unique person located at some time in the past? Is the continuity of your memories or other mental states sufficient for your survival? Can you survive the loss or destruction of your body? Do you really exist for more than just the present moment? How do different answers to these questions bear on your moral, personal, and professional obligations? What kinds of considerations could possibly help us to answer these questions? This course explores these and related issues. Readings include a mix of introductory survey, historical, and contemporary material. Same as: PHIL 288.

PHIL 189. Examples of Free Will. 4 Units.

Examples drawn from three domains: choice, computation, and conflict of norms. Conceptually, a distinction is made between examples that are predictable and those that are not, but skepticism about making a sharp distinction between determinism and indeterminism is defended. Same as: PHIL 289.

PHIL 190. Introduction to Cognitive and Information Sciences. 4 Units.

The history, foundations, and accomplishments of the cognitive sciences, including presentations by leading Stanford researchers in artificial intelligence, linguistics, philosophy, and psychology. Overview of the issues addressed in the Symbolic Systems major. Same as: LINGUIST 144, PSYCH 35, SYMSYS 100.

PHIL 193C. Film & Philosophy. 4 Units.

Issues of freedom, morality, faith, knowledge, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include *Twelve Monkeys* (Gilliam), *Ordet* (Dreyer), *The Dark Knight* (Nolan), *Vicky Cristina Barcelona* (Allen), and *Eternal Sunshine of the Spotless Mind* (Kaufman). Taught in English. Same as: COMPLIT 154A, FRENCH 154, ITALIAN 154, PHIL 293C.

PHIL 193H. The Art of the Movies: Story, Drama, and Image. 4 Units.

A philosophical study of how movies coordinate and transform elements they borrow from older arts of literary narrative, live theater, and graphic illustration. Examples from the career of Alfred Hitchcock.

PHIL 193W. Nietzsche, Dostoevsky, and Sartre. 4 Units.

Literary works in which philosophical ideas and issues are put forward, such as prose poems, novels, and plays. Ideas and issues and the dramatic or narrative structures through which they are presented. Texts include: Nietzsche, *Thus Spoke Zarathustra*; Dostoevsky, *The Brothers Karamazov*; and Sartre, *Nausea* and *No Exit*..

PHIL 194A. Rationality Over Time. 4 Units.

Our beliefs and intentions seem to be subject to norms of rationality that enjoin consistency and coherence at a given time. Are there also norms of rationality that concern the relations among and changes in our beliefs and intentions over time? What might such norms of rationality over time be, how might we defend them (or argue that they are not defensible), how are they related to norms of rationality at a time, and how does our approach to these rationality norms affect our overall understanding of the kind of thinkers and actors we are? Our focus will be primarily on potential norms of practical rationality concerning intention, but we will also consider potential norms of theoretical rationality concerning belief. We will proceed by studying contemporary work on these issues, including Richard Holton's *Willing, Wanting, Waiting*.

PHIL 194B. Reason and Passion. 4 Units.

An influential strand of the Western philosophical tradition maintains that human beings are composites of two motivational sources: reason and passion (sometimes called 'feeling,' or 'emotion'). What are the philosophical reasons for positing this division? If there is such a division, how are we to conceive of passion? In what ways is it like and/or unlike reason? In what ways does it interact and/or fail to interact with reason? And how are both sources related to the self as a whole? We will explore these questions by drawing on both classical and contemporary readings.

PHIL 194C. Time and Free Will. 4 Units.

Classic and contemporary reading on free will, with special attention to the consequence argument for incompatibilism, and issues involving causation and time.

PHIL 194E. Beauty and Other Forms of Value. 4 Units.

The nature and importance of beauty and of our capacity to discern it and respond to it, as discussed by philosophers and artists from various traditions and historical periods. Attempts to think out the relations between beauty and ethical values (such as goodness) on the one hand and cognitive values (such as truth) on the other. Fulfills capstone seminar requirement for the Philosophy and Literature tracks.

PHIL 194G. Philosophical Issues in Language. 4 Units.**PHIL 194H. Explanation and Justification. 4 Units.**

We will discuss the nature of epistemic justification ζ in particular, whether it's "internal" or "external" and how, if at all, justification can explain belief. Assignments include a term paper + an oral presentation.

PHIL 194L. Montaigne. 4 Units.

Preference to Philosophy seniors. Philosophical and literary aspects of Montaigne's *Essays* including the nature of the self and self-fashioning, skepticism, fideism, and the nature of Montaigne's philosophical project. Montaigne's development of the essay as a literary genre.

PHIL 194N. Philosophical Issues in Cognitive Science. 4 Units.

Philosophers generally do not perform systematic empirical observations or construct computational models. But philosophy remains important to cognitive science because it deals with fundamental issues that underlie the experimental and computational approach to mind. Abstract questions such as the nature of representation and computation. Relation of mind and body and methodological questions such as the nature of explanations found in cognitive science. Normative questions about how people should think as well as with descriptive ones about how they do. In addition to the theoretical goal of understanding human thinking, cognitive science can have the practical goal of improving it, which requires normative reflection on what we want thinking to be. Philosophy of mind does not have a distinct method, but should share with the best theoretical work in other fields a concern with empirical results.

PHIL 194P. Naming and Necessity. 4 Units.

Saul Kripke's lectures on reference, modal metaphysics, and the mind/body problem.

PHIL 194R. Epistemic Paradoxes. 4 Units.

Paradoxes that arise from concepts of knowledge and rational belief, such as the skeptical paradox, the preface paradox, and Moore's paradox. Can one lose knowledge without forgetting anything? Can one change one's mind in a reasonable way without gaining new evidence?.

PHIL 194S. Skepticism. 4 Units.

Modern arguments for skepticism are hard to combat, but also curiously inert in ordinary life. We will look at a variety of contemporary attempts to come to terms with skepticism about the external world, each of which seeks to exploit the curious inertness of skeptical hypotheses.

PHIL 194T. Practical Reason. 4 Units.

Contemporary research on practical reason, practical rationality, and reasons for action. Enrollment limited to 12. Priority given to undergraduate Philosophy majors.

PHIL 195A. Unity of Science. 4-5 Units.

Primarily for seniors.

PHIL 195B. Donor Seminar: Practical Reasoning. 4 Units.

Primarily for seniors. Relationships among action, deliberation, reasons, and rationality. On what basis do people decide what to do? What norms or rules structure reasoning? What constitutes rationality?.

PHIL 196. Tutorial, Senior Year. 5 Units.

(Staff).

PHIL 197. Individual Work, Undergraduate. 1-15 Unit.

May be repeated for credit.

PHIL 198. The Dualist. 1 Unit.

Weekly meeting of the editorial board of *The Dualist*, a national journal of undergraduate work in philosophy. Open to all undergraduates. May be taken 1-3 quarters. (AU) (Potochnik, Yap).

PHIL 199. Seminar for Prospective Honors Students. 2 Units.

Open to juniors intending to do honors in philosophy. Methods of research in philosophy. Topics and strategies for completing honors project. May be repeated for credit.

PHIL 201. Introduction to Medieval Philosophy. 4 Units.

Classics of Western philosophy by Augustine, Boethius, Anselm, and Aquinas. Explore the puzzles facing someone seeking to lead a good life and to understand herself and her world. A theory of will and human motivation, a theory of ethics based on the agent's intention, and a theory of divine omniscience and omnipotence consistent with divine goodness and human freedom. Works include *On Free Choice*, *The Consolation of Philosophy*, *On the Fall of the Devil*, and *Summa Theologiae*. Same as: PHIL 101.

PHIL 201B. John Duns Scotus: Politics, Metaphysics & Philosophy of Mind. 1-2 Unit.

Life and an introduction to the difficulties of medieval biography. Franciscanism and Scotus' view on property and ownership. Proofs for the existence of God. Philosophy of mind. Metaphysics in general. Universals, Common natures, Formal Distinction, and Individuation. Formal distinction, individual forms and the precedents for Scotus' view in Richard Rufus.

PHIL 206. Ancient Skepticism. 4 Units.

The ancient Pyrrhonian skeptics who think that for any claim there is no more reason to assert it than deny it and that a life without any beliefs is the best route to happiness. Some ancient opponents of the Pyrrhonian skeptics and some relations between ancient and modern skepticism.

Same as: PHIL 106.

PHIL 207. Early Plato. 4 Units.

We shall focus on Plato's early or Socratic dialogues (e.g. the *Crito*, the *Gorgias*, and the *Protagoras*). In these dialogues, Plato focuses on ethics and ethical psychology without explicitly drawing on epistemological and metaphysical claims. We'll try to determine whether the Socrates of these dialogues is a purely destructive critic or whether he has a positive ethical view that he advances.

Same as: PHIL 107.

PHIL 207A. The Greeks on Irrationality. 2-4 Units.

In this course, we shall examine the views of some central Greek philosophers (Plato, Aristotle, the Epicureans, and the Stoics) on the irrational and non-rational aspects of human life. What makes something irrational and what roles (negative and perhaps positive as well) does the irrational play in our lives? We shall examine their views on anger, fear, madness, love, pleasure and pain, sexual desire and so on. We shall also consider more briefly some depictions of these psychic items in ancient Greek literature.

Same as: PHIL 107A.

PHIL 207B. Plato's Metaphysics and Epistemology. 4 Units.

We will read the *Theaetetus* and the *Parmenides*, and consider various definitions of knowledge, and metaphysical problems about the objects of knowledge, and a proposed method for examining and resolving such problems. Prerequisite: Philosophy 80 or consent of instructor.

Same as: PHIL 107B.

PHIL 208. Aristotle's Metaphysics Book Alpha. 4 Units.

An introduction both to Aristotle's own metaphysics and to his treatment of his predecessors on causality, included the early Ionian cosmologists, atomism, Pythagoreans, Heraclitus, Parmenides, Empedocles, Anaxagoras and Plato. Prerequisite: one course in ancient Greek philosophy.

Same as: PHIL 108.

PHIL 208A. Aristotelian Logic. 4 Units.

A careful examination of Aristotle's syllogistic, with special emphasis on the interpretation of his modal syllogistic. This course will serve both as an introduction to ancient term logic and to the difference between sentential modal operators and modal modifiers to the copula. Topics will include the analysis of syllogisms into figures and moods, the reduction of 2nd and 3rd figure syllogisms to the first, the consistency of the modal syllogistic, models for the syllogistic, and *de re* versus *de dicto* modalities. For students with at least some introductory background in logic.

Same as: PHIL 108A.

PHIL 209. Topics in Ancient Philosophy: Plato and Aristotle on Art and Rhetoric. 4 Units.

Plato's and Aristotle's views on the nature of art and rhetoric and their connections with the emotions, reason and the good life. Readings include Plato's *Gorgias*, *Ion* and parts of the *Republic* and the *Laws* and Aristotle's *Poetics* and *Rhetoric*.

Same as: PHIL 109.

PHIL 209A. Special Topics in Ancient Philosophy. 4 Units.

In this course we will read carefully Book I, Chapters 1-3, of Aristotle's *Physics* and the commentary on those chapters by John Philoponus. Topics to be covered include Aristotle's preliminary discussion of the principles of natural science and his detailed exposition and refutation of Eleatic Monism.

Same as: PHIL 109A.

PHIL 209B. Greek philosophers read their ancestors: Intro to the ancient reception of Presocratic philosophy. 4 Units.

The first Greek philosophers are known to us only through fragments of their original works, generally few in number and transmitted by later authors, as well as through a set of testimonies covering a thousand years and more. Thus it is crucial, in order to understand archaic thought, to get a sense of how they were read by those to whom we owe their transmission. What was their aim, their method, their presuppositions or prejudices? The course will employ this perspective to examine authors such as Plato, Aristotle, Theophrastus, Diogenes Laertius, Simplicius, among others. We shall also reflect, on the basis of the paradigmatic case of the Presocratics, on some of the more general problems raised by literary and philosophical approaches to the notion of reception.

Same as: PHIL 109B.

PHIL 210. Plato. 4 Units.

Plato's *Republic*.

Same as: PHIL 110.

PHIL 211. Aristotle and Contemporary Ethics. 4 Units.

Aristotle's *Nicomachean Ethics*, focusing on virtue, happiness, pleasure, practical reasoning, and particularism. Sources include the Eudemean *Ethics*, contemporary philosophers who have taken many of these topics up again, and contemporary material such as that by Anscombe, Foot, Hursthouse, Korsgaard, and McDowell.

Same as: PHIL 111.

PHIL 213. Hellenistic Philosophy. 4 Units.

Epicureans, skeptics, and stoics on epistemology, ethics, metaphysics, and psychology.

Same as: PHIL 113.

PHIL 215. Problems in Medieval Philosophy: Islamic Aristotelianism and Western Scholasticism. 3-5 Units.

The western world adopted Aristotle's metaphysics and natural philosophy as the foundation of its educational system and scholarly life between 1210 and 1255. Christian Europe was thereby following the example set by Islam in Spain and the Near East. Today some people believe that this development was independent, and others think that the scholastics copied even their methods from Arabic philosophers. Historical evaluation of those claims.

Same as: PHIL 115.

PHIL 216. Aquinas. 4 Units.

The focus will be on Thomas Aquinas' metaphysics. Works include *Summa contra Gentiles*, and *Summa Theologiae*, as well as some smaller pieces.

Same as: PHIL 116.

PHIL 217. Descartes. 4 Units.

(Formerly 121/221.) Descartes's philosophical writings on rules for the direction of the mind, method, innate ideas and ideas of the senses, mind, God, eternal truths, and the material world.

Same as: PHIL 117.

PHIL 218A. Origins of Empiricism: Gassendi, Locke, and Berkeley. 4 Units.

Particular light is shed on both the strengths and weaknesses of empiricism by studying it as it first arose during the 17th century revolution in philosophy and the sciences initiated by Descartes. Three philosophers of that period helped to advance empiricism: Pierre Gassendi (1592-1655), John Locke (1632-1704), and George Berkeley (1685-1753). A brief introduction to Descartes is followed by Gassendi's reaction to Descartes and his influence on Locke; Locke's theory of ideas, mind, language, reality, and natural philosophy expounded in his *An Essay concerning Human Understanding* (Fourth Edition, 1689); and Berkeley's later reaction to Locke.

Same as: PHIL 118A.

PHIL 219. Rationalists. 4 Units.

Developments in 17th-century continental philosophy. Descartes's views on mind, necessity, and knowledge. Spinoza and Leibniz emphasizing their own doctrines and their criticism of their predecessors. Prerequisite: 102.

Same as: PHIL 119.

PHIL 220A. The Leibniz-Clarke Correspondence. 4 Units.

Correspondence on metaphysics, theology, and science.

Same as: PHIL 120A.

PHIL 222. Hume. 4 Units.

(Formerly 120/220; graduate students enroll in 222.) Hume's theoretical philosophy, in particular, skepticism and naturalism, the theory of ideas and belief, space and time, causation and necessity, induction and laws of nature, miracles, a priori reasoning, the external world, and the identity of the self.

Same as: PHIL 122.

PHIL 224. Kant's Philosophy of Physical Science. 2-4 Units.

Kant's *Metaphysical Foundations of Natural Science* (1786), published between the first (1781) and second (1787) editions of the *Critique of Pure Reason*, in the scientific and philosophical context provided by Newtonian natural philosophy and the Leibnizean tradition. The place of this work in the development of Kant's thought. Prerequisite: acquaintance with either Kant's theoretical philosophy or the contemporaneous scientific context, principally Newton, Leibniz, and Euler.

PHIL 224A. Mathematics in Kant's Philosophy. 4 Units.

Recent work in Kant's philosophy of mathematics, examined with a view to the role of mathematics, both pure and applied, within Kant's theory of experience. Particular attention to the Transcendental Deduction and the Categories of Quantity. Prerequisite: prior acquaintance with Kant's theoretical philosophy and the *Critique of Pure Reason*.

PHIL 225. Kant's First Critique. 4 Units.

(Graduate students register for 225.) The founding work of Kant's critical philosophy emphasizing his contributions to metaphysics and epistemology. His attempts to limit metaphysics to the objects of experience. Prerequisite: course dealing with systematic issues in metaphysics or epistemology, or with the history of modern philosophy.

Same as: PHIL 125.

PHIL 226B. Kant's Ethical Theory. 2-4 Units.

(Graduate students register for 226B.) Kant's moral philosophy based primarily on the *Groundwork of Metaphysics of Morals*, *Critique of Practical Reason*, and *The Metaphysics of Morals*.

Same as: PHIL 126B.

PHIL 227. Kant's Ethics. 4 Units.

A study of Kant's ethical thought, focusing on *The Groundwork of the Metaphysics of Morals*, *The Critique of Practical Reason*, and *The Metaphysics of Morals*. Prerequisite: Phil. 2, Phil. 170, or equivalent (consult the instructor). Designed for undergraduate department majors and graduate students.

Same as: PHIL 127.

PHIL 227A. Kant's Value Theory. 4 Units.

(Graduate students register for 227A.) The role of autonomy, principled rational self-governance, in Kant's account of the norms to which human beings are answerable as moral agents, citizens, empirical inquirers, and religious believers. Relations between moral values (goodness, rightness) and aesthetic values (beauty, sublimity).

Same as: PHIL 127A.

PHIL 227B. Kant's Anthropology and Philosophy of History. 4 Units.

Kant's conception of anthropology or human nature, based on his philosophy of history, which influenced and anticipated 18th- and 19th-century philosophers of history such as Herder, Fichte, Hegel, and Marx. Texts include *Idea for a Universal History*, *Conjectural Beginning of Human History*, and *Anthropology from a Pragmatic Point of View*. Topics include: Kant's pragmatic approach to the study of human nature; the difficulty of human self knowledge; the role of regulative and teleological principles in studying human history; and Kant's theory of race. Same as: PHIL 127B.

PHIL 227C. Rousseau and Kant. 1-2 Unit.

Kant considered Rousseau the Newton of the moral world. A portrait of Rousseau was reportedly the only decoration in Kant's study, and it was Kant's reading of *Émile*, or *On Education* and *On the Social Contract* in the early 1760s which, more than anything else, first awakened Kant's interest in moral philosophy. In a three-day intensive mini-course, we will explore the relation between Rousseau's philosophy and Kant's on such topics as the standards of right and virtue, human equality, the relation of reason and feeling in human nature, and the philosophy of history.

PHIL 228. Fichte's Ethics. 4 Units.

(Graduate students register for 228.) The founder of the German Idealist movement who adopted but revised Kant's project of transcendental philosophy basing it on the principle of awareness of free self-activity. The awareness of other selves and of ethical relations to them as a necessary condition for self-awareness. His writings from 1793-98 emphasizing the place of intersubjectivity in his theory of experience. Same as: PHIL 128.

PHIL 230. Hegel. 4 Units.

(Formerly 122/222; graduate students register for 230.) Introduction to Hegel's philosophy, emphasizing his moral and political philosophy, through study of his last major work (1821). May be repeated for credit. Prerequisite: course in the history of modern philosophy. Same as: PHIL 130.

PHIL 231. Introduction to Philosophy of Education. 3 Units.

How to think philosophically about educational problems. Recent influential scholarship in philosophy of education. No previous study in philosophy required. Same as: EDUC 204.

PHIL 233. Husserl. 4 Units.

Husserl's phenomenology. Main themes in his philosophy and their interconnections, including consciousness, perception, intersubjectivity, lifeworld, ethics, mathematics and the sciences, and time and space. Works in English translation.

PHIL 234. Phenomenology and Intersubjectivity. 4 Units.

(Graduate students register for 234.) Readings from Husserl, Stein, Heidegger, Sartre, and Merleau-Ponty on subjects related to awareness of others. Topics include solipsism, collective experience, empathy, and objectification of the other. Same as: PHIL 134.

PHIL 234B. The Later Heidegger: Art, Poetry, Language. 3 Units.

Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from "On the Origin of the Work of Art" and *Elucidations of Holderlin's Poetry*. Same as: RELIGST 277, RELIGST 377.

PHIL 235. Existentialism. 4 Units.

Focus is on the existentialist preoccupation with human freedom. What constitutes authentic individuality? What is one's relation to the divine? How can one live a meaningful life? What is the significance of death? A rethinking of the traditional problem of freedom and determinism in readings from Rousseau, Kierkegaard, and Nietzsche, and the extension of these ideas by Sartre, Beauvoir, and Camus, including their social and political consequences in light of 20th-century fascism and feminism. Same as: PHIL 135.

PHIL 236. History of Analytic Philosophy. 4 Units.

(Formerly 147/247; graduate students register for 236.) Theories of knowledge in Frege, Carnap, and Quine. Emphasis is on conceptions of analyticity and treatment of logic and mathematics. Prerequisite: 50 and one course numbered 150-165 or 181-90. Same as: PHIL 136.

PHIL 237. Wittgenstein. 4 Units.

(Graduate students register for 237.) An exploration of Wittgenstein's changing views about meaning, mind, knowledge, and the nature of philosophical perplexity and philosophical insight, focusing on the *Tractatus Logico-Philosophicus* and *Philosophical Investigations*. Same as: PHIL 137.

PHIL 238. Recent European Philosophy: Between Nature and History. 4 Units.

A critical introduction to the novel understandings of time, language, and cultural power developed by 20th-century continental thinkers, with close attention to work by Heidegger, Saussure, Benjamin, and Foucault. Same as: PHIL 138.

PHIL 239. Teaching Methods in Philosophy. 1-4 Unit.

For Ph.D. students in their first or second year who are or are about to be teaching assistants for the department. May be repeated for credit.

PHIL 240. Individual Work for Graduate Students. 1-15 Unit.

May be repeated for credit.

PHIL 241. Dissertation Development Seminar. 1-4 Unit.

Required of second-year Philosophy Ph.D. students; restricted to Stanford Philosophy Ph.D. students. Prerequisite: consent of instructor.

PHIL 243. Quine. 4 Units.

(Formerly 183/283; graduate students register for 243.) The philosophy of Quine: meaning and communication; analyticity, modality, reference, and ontology; theory and evidence; naturalism; mind and the mental. Same as: PHIL 143.

PHIL 248. Medieval Latin Paleography. 3-5 Units.

The history of medieval scripts and medieval abbreviation. Dating and placing Latin European medieval manuscripts. Editing medieval texts in philosophy, psychology, physics, and theology. Class project: an early 13th century encyclopedia (with entries citing both Plato and Aristotle). Intellectually exciting, easy to read (textualis script).

PHIL 249. Evidence and Evolution. 3-5 Units.

The logic behind the science. The concept of evidence and how it is used in science with regards to testing claims in evolutionary biology and using tools from probability theory, Bayesian, likelihoodist, and frequentist ideas. Questions about evidence that arise in connection with evolutionary theory. Creationism and intelligent design. Questions that arise in connection with testing hypotheses about adaptation and natural selection and hypotheses about phylogenetic relationships. Same as: PHIL 349.

PHIL 250. Basic Concepts in Mathematical Logic. 4 Units.

The concepts and techniques used in mathematical logic, primarily through the study of the language of first order logic. Topics: formalization, proof, propositional logic, quantifiers, sets, mathematical induction, modal logics and the logic of diagrams. Same as: PHIL 150.

PHIL 251. First-Order Logic. 4 Units.

(Formerly 160A.) The syntax and semantics of sentential and first-order logic. Concepts of model theory. Gödel's completeness theorem and its consequences: the Löwenheim-Skolem theorem and the compactness theorem. Prerequisite: 150 or consent of instructor. Same as: PHIL 151.

PHIL 251A. Recursion Theory. 4 Units.

Computable functions, Turing degrees, generalized computability and definability. "What does it mean for a function from the natural numbers to themselves to be computable?" and "How can noncomputable functions be classified into a hierarchy based on their level of noncomputability?". Theory of relative computability, reducibility notions and degree structures. Prerequisite is PHIL 150, or PHIL 151 or CS 103. Same as: PHIL 151A.

PHIL 252. Computability and Logic. 4 Units.

Approaches to effective computation: recursive functions, register machines, and Turing machines. Proof of their equivalence, discussion of Church's thesis. Elementary recursion theory. These techniques used to prove Gödel's incompleteness theorem for arithmetic, whose technical and philosophical repercussions are surveyed. Prerequisite: 151. Same as: PHIL 152.

PHIL 253. Feminist Theories and Methods Across the Disciplines. 2-5 Units.

(Graduate Students register for PHIL 253 or FEMGEN 203) The interdisciplinary foundations of feminist thought. The nature of disciplines and of interdisciplinary work. Challenges of feminism for scholarship and research. Prerequisites: Feminist Studies 101 or equivalent with consent of instructor. Same as: FEMGEN 103, FEMGEN 203, PHIL 153.

PHIL 254. Modal Logic. 4 Units.

(Graduate students register for 254.) Syntax and semantics of modal logic, and technical topics like completeness and correspondence theory, including both classical and recent developments. Applications to topics in philosophy, computer science, and other fields. Prerequisite: 150 or preferably 151. Same as: PHIL 154.

PHIL 255. General Interest Topics in Mathematical Logic. 4 Units.

Introduction to formalization using language of logic and to problems of philosophical logic and computer science that can be handled this way. Propositional calculus, Sudoku puzzles, resolution rule, problem $P=NP$. Possible worlds, modal logic with emphasis on individuation problems. May be repeated for credit. Same as: PHIL 155.

PHIL 257. Topics in Philosophy of Logic. 3 Units.

(Graduate students register for 257.) Disputed foundational issues in logic; the question of what the subject matter and boundaries of logic are, such as whether what is called second-order logic should be counted as logic. What is the proper notion of logical consequence? May be repeated for credit. Pre- or corequisite: 151, or consent of instructor. Same as: PHIL 157.

PHIL 258. Topics in Logic: Ten Problems in Deontic Logic. 2 Units.

As witnessed by the handbook of deontic logic and normative systems, the area of deontic logic is in flux. Traditional questions and logical methods of deontic logic are being supplemented by new questions and new techniques. This tutorial gives an introduction to the current discussion in deontic logic. In what sense are obligations different from norms? Jorgensen's dilemma, from preference based modal logic to the modern approach. How to reason about dilemmas, contrary-to-duty and defeasible norms? Distinguishing various kinds of defeasibility. How to relate various kinds of permissive and constitutive norms? Permissions as exceptions and prioritized norms. How do norms relate to other modalities like beliefs, desires, and intentions How do norms change? What is the role of time, action and games in deontic reasoning? For each problem, we discuss traditional as well as new research questions. We see the new questions as good questions for current research, in the sense that they point to modern theories and applications. We are especially interested in new questions that make older traditional questions obsolete in the sense that they are now addressed from a modern perspective, or in a more general setting. This mini-course will run from the week of 15 April through the week of 13 May. Same as: PHIL 158.

PHIL 258. Minds and Machines. 4 Units.

Readings on arguments concerning mechanical models of the mind including Turing machine models to which Gödel's incompleteness theorems are relevant, and connectionist (neural net) models. Prerequisites: 151 (formerly 160A), 152, or equivalents. Recommended: 389. (Feferman).

PHIL 260A. Newtonian Revolution. 4 Units.

(Graduate students register for 260A.) 17th-century efforts in science including by Kepler, Galileo, Descartes, and Huygens, that formed the background for and posed the problems addressed in Newton's *Principia*. Same as: PHIL 160A.

PHIL 260B. Newtonian Revolution. 4 Units.

(Graduate students register for 260B.) Newton's *Principia* in its historical context, emphasizing how it produced a revolution in the conduct of empirical research and in standards of evidence in science. Same as: PHIL 160B.

PHIL 262. Philosophy of Mathematics. 4 Units.

(Graduate students register for PHIL 262.) 20th-century approaches to the foundations and philosophy of mathematics. The background in mathematics, set theory, and logic. Schools and programs of logicism, predicativism, platonism, formalism, and constructivism. Readings from leading thinkers. Prerequisite: PHIL 151 or consent of instructor. Same as: MATH 162, PHIL 162.

PHIL 263. Significant Figures in Philosophy of Science. 4 Units.

(Graduate students register for 263.) Directed study of two or more thinkers, past or present, who have made a lasting impact on contemporary philosophy of science. Subjects last year were Henri Poincaré, Pierre Duhem, and Gaston Bachelard. Same as: PHIL 163.

PHIL 264. Central Topics in the Philosophy of Science: Theory and Evidence. 4 Units.

(Graduate students register for 264.) Is reductionism opposed to emergence? Are they compatible? If so, how or in what sense? We consider methodological, epistemological, logical and metaphysical dimensions of contemporary discussions of reductionism and emergence in physics, in the sciences of complexity, and in philosophy of mind. Same as: PHIL 164.

PHIL 264A. Central Topics in Philosophy of Science: Causation. 4 Units.

(Graduate Students register for 264A.) Establishing causes in science, engineering, and medicine versus establishing them in Anglo-American law, considered in the context of Hume and Mill on causation. May be repeated for credit. Same as: PHIL 164A.

PHIL 265. Philosophy of Physics. 4 Units.

(Graduate students register for 265.) Central topic alternates annually between space-time theories and philosophical issues in quantum mechanics; the latter in Winter 2013-14. Conceptual problems regarding the uncertainty principle, wave-particle duality, quantum measurement, spin, and their treatment within the 'Copenhagen interpretation' of quantum mechanics, and the related doctrine of complementarity. The issue of quantum entanglement as raised by Einstein and Schrödinger in the 1930s and the famous EPR (Einstein-Podolsky-Rosen) paper of 1935. Examination of EPR-type experimental set-ups and a result due to Bell in the 1960s, according to which no "hidden variables" theory satisfying a certain locality condition (apparently assumed by EPR) can reproduce all the predictions of quantum mechanics. Survey of several live interpretive options for standard quantum mechanics: Bohmian mechanics (a.k.a. 'pilot wave theory'), 'spontaneous collapse' theories, and Everett's relative-state interpretation. Critical scrutiny of the 'decoherence' program that seeks to explain the classical-to-quantum transition, i.e., the emergence of the world of classical physics and macroscopic objects from quantum physics. May be repeated for credit if content is different. Same as: PHIL 165.

PHIL 265C. Philosophy of Physics: Probability and Relativity. 4 Units.
Conceptual puzzles in formulating probability concepts to be invariant in the sense of the Lorentz transformation of special relativity. Problems arise in both classical and quantum physics.

PHIL 266. Probability: Ten Great Ideas About Chance. 4 Units.
Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116.
Same as: PHIL 166, STATS 167, STATS 267.

PHIL 266A. Foundations of Quantum Mechanics. 4 Units.
This seminar will concentrate on a variety of probability questions that arise in quantum mechanics, including some from recent experiments. Negative probabilities and nonmonotonic upper probabilities will be emphasized
Same as: PHIL 166A.

PHIL 267A. Philosophy of Biology. 2-4 Units.
(Graduate students register for 267A.) Evolutionary theory and in particular, on characterizing natural selection and how it operates. We examine debates about fitness, whether selection is a cause or force, the levels at which selection operates, and whether cultural evolution is a Darwinian process.
Same as: PHIL 167A.

PHIL 267B. Philosophy, Biology, and Behavior. 4 Units.
(Graduate Students register for 267B) Philosophical study of key theoretical ideas in biology as deployed in the study of behavior. Topics to include genetic, neurobiological, ecological approaches to behavior; the classification and measurement of behaviors: reductionism, determinism, interactionism. Prerequisites: one PHIL course and either one BIO course or Human Biology core; or equivalent with consent of instructor.
Same as: PHIL 167B.

PHIL 267C. Associative Theories of Mind and Brain. 4 Units.
After a historical survey of associative theories from Hume to William James, current versions will be analyzed including the important early ideas of Karl Lashley. Emphasis will be on the computational power of associative networks and their realization in the brain.
Same as: PHIL 167C.

PHIL 267D. Philosophy of Neuroscience. 4 Units.
Can problems of mind be solved by understanding the brain, or models of the brain? The views of philosophers and neuroscientists who believe so, and others who are skeptical of neurophilosophical approaches to the mind. Historical and recent literature in philosophy and neuroscience. Topics may include perception, memory, neural accounts of consciousness, neurophenomenology, neuroscience and physics, computational models, and eliminativism.
Same as: PHIL 167D, SYMSYS 206.

PHIL 270. Ethical Theory. 4 Units.
A more challenging version of Phil 2 designed primarily for juniors and seniors (may also be appropriate for some freshmen and sophomores - contact professor). Fulfills the Ethical Reasoning requirement. Graduate section (270) will include supplemental readings and discussion, geared for graduate students new to moral philosophy, as well as those with some background who would like more.
Same as: ETHICSOC 170, PHIL 170.

PHIL 270B. Metaphor. 4 Units.
In metaphor we think and talk about two things at once: two different subject matters are mingled to rich and unpredictable effect. A close critical study of the main modern accounts of metaphor's nature and interest, drawing on the work of writers, linguists, philosophers, and literary critics. Attention to how understanding, appreciation, and pleasure connect with one another in the experience of metaphor. Consideration of the possibility that metaphor or something very like it occurs in nonverbal medial: gesture, dance, painting, music.
Same as: PHIL 170B.

PHIL 270D. Trust and Trustworthiness. 4 Units.
An exploration of the place of interpersonal trust in ethical thought. What is it to trust another person? How is trusting related to, though different from, other attitudes we sometimes bear towards others (e.g. justified beliefs we form about others and their conduct; ethically significant expectations we have of others, etc.)? What is involved in acquiring/possessing the virtue of trustworthiness? How should trust (and trustworthiness) figure in our thinking about important ethical activities, for example promising, friendship, or the practice of politics?
Same as: PHIL 170D.

PHIL 270E. Sexual Ethics. 4 Units.
What is sex? What are the implications of different conceptions of sex for sexual ethics? Are there any distinctively sexual ethical principles or virtues or are principles and virtues that govern the sexual domain specific instances of principles and virtues that govern human activity more generally? Readings will range from historical to contemporary sources.

PHIL 271. Justice. 4-5 Units.
Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.
Same as: ETHICSOC 171, IPS 208, PHIL 171, POLISCI 3P, POLISCI 136S, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307.

PHIL 272. History of Modern Moral Philosophy. 4 Units.
This course traces the development of moral philosophy in Britain just prior to the nearly simultaneous emergence of Kant's moral philosophy and Bentham's utilitarianism in the 1780's. Emphasis is on the dialogue between empiricists and rationalists on the subject of the relationship between the natural and the normative. Authors include Hobbes, Clarke, Hutcheson, Hume, Smith, Price, and Bentham. Prerequisite: some familiarity with Kant's moral theory and utilitarianism, and demonstrated interest in philosophy.
Same as: PHIL 172.

PHIL 272B. Recent Ethical Theory. 4 Units.
Study the works of several prominent contemporary moral philosophers. Possible authors include: Scanlon, Darwall, Nagel, Williams, Blackburn, Gibbard, Korsgaard. Prerequisite: students should have taken an introduction to moral philosophy (Phil. 20, Phil. 170 or equivalent).
Same as: PHIL 172B.

PHIL 272D. Bernard Williams. 4 Units.
An exploration of some central themes from the work of Bernard Williams. Particular attention will be paid to his discussion of the character and identity of the self, his sustained critique of morality and moral philosophy. We will also read several of Williams's interlocutors, including Nagel, Parfit, Korsgaard, and Herman.
Same as: PHIL 172D.

PHIL 272N. Prudence and Morality. 4 Units.

We sometimes think we should do something just because it will benefit us in the future, even though we don't particularly feel like doing it now (e.g. we exercise, go to the dentist for a check-up, or set aside money for retirement). And we sometimes think we should do something for the sake of another person, even when it is inconvenient, costly, or unpleasant (e.g. we stop to help a stranded motorist, donate to charity, or tell someone an embarrassing truth rather than a face-saving lie). When we do the former, we act prudently. When we do the latter, we act morally. This course explores the debate among philosophers about the source of our reasons for acting prudently and morally. Some argue that our reasons to be prudent and moral stem directly from the fact that we are rational; that it is contrary to reason to ignore our own future interests, or the interests of other people. Others disagree, arguing that the source of these reasons must lie elsewhere. Course readings will include work by Thomas Nagel, Bernard Williams, Christine Korsgaard, Derek Parfit, Philippa Foot, and others.
Same as: PHIL 172N.

PHIL 273B. Metaethics. 2-4 Units.

This a graduate student only introduction to contemporary metaethics. Can moral and ethical values be justified or is it just a matter of opinion? Is there a difference between facts and values? Are there any moral truths? Does it matter if there are not? Focus is not on which things or actions are valuable or morally right, but what is value or rightness itself. Prerequisites: 181, and an ethics course.

PHIL 274. Freedom and the Practical Standpoint. 4 Units.

(Graduate students register for 274.) Confronted with the question of how to act, people think of themselves as freely determining their own conduct. Natural science poses a challenge to this by explaining all events, including human actions, in terms of causal processes. Are people justified in thinking of themselves as free? Major philosophical approaches to this question: incompatibilism, compatibilism, and the two-standpoint view.
Same as: PHIL 174.

PHIL 274A. Moral Limits of the Market. 4 Units.

Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases.
Same as: ETHICSOC 174A, PHIL 174A, POLISCI 135P.

PHIL 274D. Moral Luck. 4 Units.

We draw a fundamental distinction between what a person voluntarily does, and what is beyond her control. Such a distinction seems central to how we think about what it is to justify our actions (whether to ourselves or to one another), as well as to our practice of holding one another morally responsible for what we do. Yet under pressure, this distinction can appear to collapse; we find that we cannot successfully disentangle what a person controls from what she does not when she acts. This course examines this problem in depth, and considers how we might respond in the face of it: Is it really a problem? If so, does it threaten our moral practices? How should it influence the way in which we make choices, or the way we understand those choices once we've made them?
Same as: PHIL 174D.

PHIL 274L. Betrayal and Loyalty, Treason and Trust. 2 Units.

The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. SAME AS LAW 520.
Same as: ETHICSOC 174L, ETHICSOC 274L, PHIL 174L.

PHIL 275A. Ethics and Politics of Public Service. 5 Units.

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.
Same as: CSRE 178, ETHICSOC 133, HUMBIO 178, PHIL 175A, POLISCI 133, PUBLPOL 103D, URBANST 122.

PHIL 275M. Two Ethical Theories and Being a Person. 4 Units.

The distinction between the ethics of being a person and the ethics of rules as opposed to the distinction between Kantian ethics and utilitarianism or consequentialism. Comparison of these two types of ethics with respect to their relationship to agency and being a good person. Relations between Western ethics and those of other continents.
Same as: PHIL 175M.

PHIL 276. Political Philosophy: The Social Contract Tradition. 4 Units.

(Graduate students register for 276.) Why and under what conditions do human beings need political institutions? What makes them legitimate or illegitimate? What is the nature, source, and extent of the obligation to obey the legitimate ones, and how should people alter or overthrow the others? Study of the answers given to such questions by major political theorists of the early modern period: Hobbes, Locke, Rousseau, and Kant.
Same as: PHIL 176.

PHIL 276A. Classical Seminar: Origins of Political Thought. 4-5 Units.

Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change.
Same as: CLASSHIS 133, CLASSHIS 333, PHIL 176A, POLISCI 330A.

PHIL 276B. The Economic Individual in the Behavioral Sciences. 4 Units.

(Graduate students register for 276B.)
Same as: PHIL 176B.

PHIL 276C. Two Views on the Place of Religion in Politics: Religion in the Political Sphere and Laicism. 4 Units.

The purpose of this course is to introduce students to two views on the relation between religion and politics. The view according to which the expression of religious convictions and arguments must have a place in the political sphere is dominant in political philosophy. By contrast, the "laicist" view, which is common in Mexico and in France, holds that such an expression must be absent from the institutions of the State as well as from political discourse. This course examines the reasons that motivate the differences between these two views, such as the assumption of a strong religious pluralism in the former and the presupposition of a dominant church and religion in the latter. The course is organized in four parts. In the first part we will consider two kinds of political secularization following the well known characterization by Charles Taylor: the "common ground" and the "independent ethic" approaches. We will see how these two approaches result in the two views on the relation between religion and politics mentioned above. In the second part, we will study John Rawls's influential view on the place of religious argument in legal and judicial reasoning in his theory of "public reason." We will contrast this view with Jürgen Habermas's defense of a wide role for religious argument in the public sphere. We will devote one week for assessing criticisms. In the third part, we will turn to the laicist view in the work of both French and Mexican scholars. We will focus on the reasons that motivate a laicist State (Estado laico) and examine whether they still hold. We will examine how the growth of religious pluralism in societies formerly dominated by one single church and religion has forced revisions in the understanding of laicism. We will also devote one week for assessing criticisms. In the fourth and final part of the course, we will consider the implications of these two views on the relation between religion and politics for public schooling, religious freedom, and the separation of Church and State.

Same as: PHIL 176C.

PHIL 277B. EMOTIONS: MORALITY AND LAW. 2 Units.

If emotions are the stuff of life, some emotions are the stuff of our moral and legal life. Emotions such as: guilt, shame, revenge, indignation, resentment, disgust, envy, jealousy and humiliation, along with forgiveness, compassion, pity, mercy and patriotism, play a central role in our moral and legal life. The course is about these emotions, their meaning and role in morality and law. Issues such as the relationship between punishment and revenge, or between envy and equality, or St. Paul's contrast between law and love, or Nietzsche's idea that resentment is what feeds morality, will be discussed alongside other intriguing topics.

Same as: ETHICSOC 202, ETHICSOC 302, PHIL 177B.

PHIL 278A. The Ethics of Environmental Choices. 4 Units.

(Formerly PHIL 278/378.) The institutional and individual dimensions of environmental choices. On the institutional side, examine externalities, the tragedy of the commons, sustainable development and environmental policy. On the individual side, discuss individual responsibility, intrinsic value, and moral pluralism. Focus is on decision making including the role of risk analysis, the rate of discount for effects on future generations, cost-benefit analysis, and scientific epistemology.

Same as: EARTHSYS 178, EARTHSYS 278, PHIL 178A.

PHIL 278M. Introduction to Environmental Ethics. 5 Units.

This course examines the following ethical questions about the environment: (1) how we ought morally to relate to animals; (2) attempts to expand the circle of moral concern beyond animals to other parts of nature; (3) economic approaches to environmental problems (e.g. cost-benefit analysis) and the justification of the precautionary principle; and (4) our moral obligations to future people. The class will conclude by considering whether the theoretical tools that we have examined help to address the problems of climate change, one of the most pressing environmental challenges of our time.

Same as: ETHICSOC 178M, ETHICSOC 278M, PHIL 178M, POLISCI 134L.

PHIL 279S. Moral Psychology, Reasons for Action, and Moral Theory. 4 Units.

What sorts of considerations does an ethical agent take to be good reasons for action? Work in moral psychology to illuminate the theory of practical reasons, and the theory of practical reasons to test the prospects for systematic moral theory. Can any systematic moral theory be reconciled with the moral psychology of ordinary, morally respectable agents?

Reading include Bernard Williams, Rosalind Hursthouse, Peter Railton, T.M. Scanlon, and Barbara Herman.

Same as: PHIL 179S.

PHIL 280. Metaphysics. 4 Units.

The course will be devoted to an exploration of the mereological structure of material objects, and the related notions of 'part', 'whole' and 'constitution'. For instance, an ordinary physical object is susceptible to an analysis in terms of material parts and a structure such that the material constitute that object in virtue of having a certain structure. Among other things, we will consider questions of identity, both at a time and through time, of material objects from this perspective. We will consider both the antecedents for this kind of analysis in Plato and Aristotle and contemporary developments in the mereological analysis of objects.

Prerequisite: Philosophy 80 (or consent of instructor).

Same as: PHIL 180.

PHIL 280A. Realism, Anti-Realism, Irrealism, Quasi-Realism. 4 Units.

Realism and its opponents as options across a variety of different domains: natural science, mathematics, ethics, and aesthetics. Clarify the various conceptions that fall under these terms and outline the reasons for and against adopting realism for the various domains. Highlight the general issues involved. Prerequisites: 80, 181

Same as: PHIL 180A.

PHIL 281. Philosophy of Language. 4 Units.

The study of conceptual questions about language as a focus of contemporary philosophy for its inherent interest and because philosophers see questions about language as behind perennial questions in other areas of philosophy including epistemology, philosophy of science, metaphysics, and ethics. Key concepts and debates about the notions of meaning, truth, reference, and language use, with relations to psycholinguistics and formal semantics. Readings from philosophers such as Frege, Russell, Wittgenstein, Grice, and Kripke. Prerequisites: 80 and background in logic.

Same as: PHIL 181.

PHIL 281B. Philosophy of Language: Contemporary Debates. 4 Units.

This course builds on the material of 181/281, focusing on debates and developments in the pragmatics of conversation, the semantics/pragmatics distinction, the contextuality of meaning, the nature of truth and its connection to meaning, and the workings of particular linguistic constructions of special philosophical relevance. Students who have not taken 181/281 should seek the instructor's advice as to whether they have sufficient background.

Same as: PHIL 181B.

PHIL 282. Truth. 2-4 Units.

Focus on the nature of truth; specifically, ongoing debates between so-called correspondence theorists and deflationists. The former generally think truth amounts to some kind of structural isomorphism between the world and our representations of it (like the relationship between a subway map and the subway route itself). Deflationists think the nature of truth is exhausted by something as trifling as the equivalence between affirming something and affirming that it's true: e.g., it's true that Modest Mouse is God's gift to indie rock if and only if Modest Mouse IS God's gift to indie rock. Related issues include the possibility of truth-value "gaps" (claims that are neither true nor false), degrees of truth, relativism and realism about arbitrary subject matters, the semantic paradoxes (like the Liar), the role of truth in the theory of meaning, and the value of true belief. Most readings were written after 1980. Previous courses in philosophy of language and/or metaphysics very strongly encouraged. Phil 80 a must.

Same as: PHIL 182.

PHIL 284. Theory of Knowledge. 4 Units.

What is knowledge? How are beliefs justified? Contemporary theories evaluated against central problems: the regress argument, Gettier problem, and skeptical paradox.

Same as: PHIL 184.

PHIL 284C. Epistemology of Testimony. 4 Units.

Many of our beliefs come from others, and not from direct experience. Is testimony a source of fundamental reasons? reasons that do not have to be supported or validated by other sources like perception or inference? What sort of responsibility does one have to one's hearers, when one gives testimony?

Same as: PHIL 184C.

PHIL 284F. Feminist Theories of Knowledge. 4 Units.

Feminist critique of traditional approaches in epistemology and alternative feminist approaches to such topics as reason and rationality, objectivity, experience, truth, the knowing subject, knowledge and values, knowledge and power.

Same as: FEMST 166, PHIL 184F.

PHIL 285B. Philosophy of Perception. 4 Units.

The nature of perceptual experience and the role it plays in securing empirical knowledge. Focus will be on what is sometimes called "the problem of perception": the question of how perception could provide us with direct awareness of the surrounding environment given the possibility of illusions or hallucinations. Topics, include the relationship between perception and belief, the nature of perceptual phenomenology, whether or not perceptual experiences are representational states, and the philosophical relevance of empirical research on perception.

Same as: PHIL 185B.

PHIL 286. Philosophy of Mind. 4 Units.

(Graduate students register for 286.) Debates concerning the nature of mental states, their relation to physical states of the human body, how they acquire their content, how people come to know about them in themselves and others, and the roles they play in the explanation of human conduct.

Same as: PHIL 186.

PHIL 287. Philosophy of Action. 4 Units.

(Graduate students register for 287.) Contemporary research in the philosophy of action. Topics include: What is it to be an agent? Is there a philosophically defensible contrast between being an agent and being a locus of causal forces to which one is subject? What is it to act purposively? What is intention? What is the relation between intention and belief? What is it to act intentionally? What is it to act for a reason? What is the relation between explaining why someone acted by citing the reasons for which she acted and causal explanation of her action? What is the relation between theoretical and practical rationality? What is the nature of our knowledge of our own intentional activity? What is it to act autonomously? What is shared cooperative activity? Prerequisite: 80..

Same as: PHIL 187.

PHIL 288. Personal Identity. 4 Units.

Do you persist through time the way that a skyscraper persists through space, by having different parts at different locations? Or are you wholly present, at every moment of your life, in something more like the way that an elevator is present in each place as it travels up to the top floor? What criteria determine whether you now are the very same person as some unique person located at some time in the past? Is the continuity of your memories or other mental states sufficient for your survival? Can you survive the loss or destruction of your body? Do you really exist for more than just the present moment? How do different answers to these questions bear on your moral, personal, and professional obligations? What kinds of considerations could possibly help us to answer these questions?

This course explores these and related issues. Readings include a mix of introductory survey, historical, and contemporary material.

Same as: PHIL 188.

PHIL 289. Examples of Free Will. 4 Units.

Examples drawn from three domains: choice, computation, and conflict of norms. Conceptually, a distinction is made between examples that are predictable and those that are not, but skepticism about making a sharp distinction between determinism and indeterminism is defended.

Same as: PHIL 189.

PHIL 293C. Film & Philosophy. 4 Units.

Issues of freedom, morality, faith, knowledge, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include *Twelve Monkeys* (Gilliam), *Ordet* (Dreyer), *The Dark Knight* (Nolan), *Vicky Cristina Barcelona* (Allen), and *Eternal Sunshine of the Spotless Mind* (Kaufman). Taught in English.

Same as: COMPLIT 154A, FRENCH 154, ITALIAN 154, PHIL 193C.

PHIL 300. Proseminar. 4 Units.

Typically focused seminar. Required of all first year Philosophy PhD students.

PHIL 301. Dissertation Development Proseminar. 2-4 Units.

An optional seminar for third year philosophy PhD students, designed to extend and consolidate work done in the dissertation development seminar the previous summer.

PHIL 308. Aristotle's Politics. 4 Units.

The seminar will be a critical examination of Aristotle's political philosophy and we shall focus on his *Politics* as our primary text. We'll supplement this with some other texts by Aristotle that are relevant and explore the most important connections between Aristotle's political philosophy and his ethics.

PHIL 308B. Aristotle on his Predecessors. 2-4 Units.

An introduction both to Aristotle's own metaphysics and to his treatment of his predecessors on causality, included the early Ionian cosmologists, atomism, Pythagoreans, Heraclitus, Parmenides, Empedocles, Anaxagoras and Plato. Prerequisite: one course in ancient Greek philosophy.

PHIL 312. Aristotle's Psychology. 4 Units.

De Anima and parts of *Parva Naturalia*.

PHIL 314. Practical Reasoning in Plato and Aristotle. 2-4 Units.

It is often said that the greatest difference between Plato's ethics and those of Aristotle is that the latter thinks that practical and theoretical reason are distinct, but the former does not. We shall read some of both Plato and Aristotle and ask whether the above claim is true and then consider what the implications the differences between their views of practical reason have for the rest of their ethics.

PHIL 316. Ethics before ethics: moral conduct in archaic philosophy. 2-4 Units.

Depicting Socrates as the founder of ethics is certainly legitimate in some sense, but it also tends to minimize or even obfuscate the importance of the references to human conduct in Presocratic thought. The aim of the seminar is to draw a map of the available material in this respect, and to assess the role that ethical and social thought and concepts plays in some of the most prominent archaic thinkers. Anaximander, Xenophanes, Parmenides, Empedocles and Democritus receive special attention.

PHIL 317. Topics in Plato: Middle and Late Ethics & Politics. 2-4 Units.

Examine the fundamentals of Plato's political philosophy by reading the *Politics* as well relevant parts of some of his other ethical and political works.

PHIL 318. Aristotle and the Object of Mathematical Reasoning. 4 Units.

The concept of definition plays a central role in Aristotle's treatment of both philosophical and scientific inquiry, as well as explanation. A definition is an account of what something is, and some definitions are used to guide causal inquiry whereas others function as explanatory starting points. In this course we will examine texts from his logic, natural science and metaphysics in order to see what the different kinds of definition are, how they obtained, and how they capture the nature or essence of a definable object. Particular attention will be given to the role of matter in the definition of the form of a natural substance, state, process or activity. For instance, what role does a specification of physiological processes play in the definitions of emotions such as anger? No knowledge of Greek is required. May be repeat for credit.

Same as: CLASSGEN 338.

PHIL 319. Topics in Greek Philosophy: Plato and Aristotle on Knowledge and Action. 2-4 Units.

Aristotle's views about substance and the nature and possibility of metaphysics. Focus is on *Categories* and *Metaphysics* Book Zeta.

PHIL 321. Leibniz's Metaphysics. 2-4 Units.

Leibniz's metaphysical views during his so-called "mature period" (early 1680s to 1716). Topics will include Leibniz's conception of substance, his alleged idealism, his doctrine of possible worlds and his doctrine of pre-established harmony. Reading of the *Discourse on Metaphysics* (1686) and the correspondence with Arnauld (1686-1690).

PHIL 322. Hume. 2-4 Units.

Hume's theoretical philosophy emphasizing skepticism and naturalism, the theory of ideas and belief, space and time, causation and necessity, induction and laws of nature, miracles, a priori reasoning, the external world, and the identity of the self.

PHIL 323. Kant's Criticism of Metaphysics. 4 Units.

Motivations and strategies of Kant's criticisms of traditional metaphysics in the *Critique of Pure Reason*. Leibnizian and Wolffian versions of the concept containment theory of truth and the Wolffian ideal of a conceptual system of metaphysical knowledge. Kant's analytic/synthetic distinction, focusing on its place in the rejection of metaphysics and in arguments about the ideas of reason in the transcendental dialectic. Prerequisite: course on the first *Critique*, or consent of instructor.

PHIL 324. Kant's System of Nature and Freedom. 4 Units.

The aim is to acquire a sense of how the two main parts of Kant's philosophy, theoretical and practical, fit together. These two parts, according to the *Critique of the Power of Judgment*, concern the realm of nature and the realm of freedom respectively. We shall study parts of all three *Critiques*, along with appropriate supplementary materials. Prior acquaintance with both Kant's theoretical and his practical philosophy is presupposed.

PHIL 332. Nietzsche. 2-4 Units.

Preference to doctoral students. Nietzsche's later works emphasizing *The Gay Science*, *Beyond Good and Evil*, and *On the Genealogy of Morals*. The shape of Nietzsche's philosophical and literary projects, and his core doctrines such as eternal recurrence, will to power, and perspectivism. Problems such as the proper regulation of belief, and the roles of science, morality, art, and illusion in life.

PHIL 334. Habermas. 3-5 Units.

Does Habermas have a distinctive account of normativity and normative judgements?.

PHIL 335. Topics in Aesthetics. 4 Units.

May be repeated for credit.

PHIL 339. Marx. 2-4 Units.

This course examines the works of a thinker who radically transformed the ways that we think about modern society. Marx saw fundamental problems with capitalist societies, including: un-freedom, alienation, inequality, and bureaucratization. He developed a theory to account for these problems. Our task will be to read his works critically and to evaluate their contributions to our understanding the relationship between politics, social structure, knowledge and human agency. We will also be especially interested in comparing his view with alternative diagnoses of the problems of modern capitalist societies, especially those of Max Weber and John Rawls.

Same as: POLISCI 333S.

PHIL 340. Time and Free Will. 3-5 Units.

Free will and the consequence argument of Peter van Inwagen and others. Focus is on the principle that one cannot change the past and the problem of backtracking conditionals, and less on the problem raised by determinism. Hypotheses less drastic than determinism support backtrackers; given the backtracker, would someone's not having done something require that he change the past? Issues related to time, change, the phenomenology of agency, and McTaggart's argument about the reality of time.

PHIL 348. Evolution of Signals. 2-4 Units.

Explores evolutionary (and learning) dynamics applied to simple models of signaling, emergence of information and inference. Classroom presentations and term papers. Text: Skyrms - SIGNALS: EVOLUTION, LEARNING and INFORMATION and selected articles.

PHIL 349. Evidence and Evolution. 3-5 Units.

The logic behind the science. The concept of evidence and how it is used in science with regards to testing claims in evolutionary biology and using tools from probability theory, Bayesian, likelihoodist, and frequentist ideas. Questions about evidence that arise in connection with evolutionary theory. Creationism and intelligent design. Questions that arise in connection with testing hypotheses about adaptation and natural selection and hypotheses about phylogenetic relationships.

Same as: PHIL 249.

PHIL 350A. Model Theory. 3 Units.

Back-and-forth arguments with applications to completeness, quantifier-elimination and omega-categoricity. Elementary extensions and the monster model. Preservation theorems. Interpolation and definability theorems. Imaginaries. Prerequisite: Phil151A or consent of the instructor.

PHIL 350B. Model Theory B. 1-3 Unit.

Decidable theories. Model-theoretic background. Dense linear orders, arithmetic of addition, real closed and algebraically closed fields, o-minimal theories.

Same as: MATH 290B.

PHIL 351A. Recursion Theory. 3 Units.

Theory of recursive functions and recursively enumerable sets. Register machines, Turing machines, and alternative approaches. Gödel's incompleteness theorems. Recursively unsolvable problems in mathematics and logic. Introduction to higher recursion theory. The theory of combinators and the lambda calculus. Prerequisites: 151, 152, and 161, or equivalents.

PHIL 351B. Proof Mining. 1-3 Unit.

Uses of proof theory in analysis and number theory. Proof mining: extraction of bounds from non-effective proofs. May be repeated for credit. Prerequisite: 151, 152 or equivalents, and a calculus course.

PHIL 352A. Set Theory. 3 Units.

The basics of axiomatic set theory; the systems of Zermelo-Fraenkel and Bernays-Gödel. Topics: cardinal and ordinal numbers, the cumulative hierarchy and the role of the axiom of choice. Models of set theory, including the constructible sets and models constructed by the method of forcing. Consistency and independence results for the axiom of choice, the continuum hypothesis, and other unsettled mathematical and set-theoretical problems. Prerequisites: PHIL151 and MATH 161, or equivalents. Same as: MATH 292A.

PHIL 353A. Proof Theory. 3 Units.

Gentzen's natural deduction and sequential calculi for first-order propositional and predicate logics. Normalization and cut-elimination procedures. Relationships with computational lambda calculi and automated deduction. Prerequisites: 151, 152, and 161, or equivalents. Same as: MATH 293A.

PHIL 353B. Proof Theory B. 2-3 Units.

Consistency ordinal as a measure of the strength of a mathematical theory. The open problem of describing the ordinal of mathematical analysis (second order arithmetic). Present state of the problem and approaches to a solution. Prerequisites: Phil 151,152 or equivalents.

PHIL 353C. Functional Interpretations. 4 Units.

Finite-type arithmetic. Gödel's functional interpretation and Kreisel's modified realizability. Systems based on classical logic. Spector's extension by bar-recursive functionals. Kohlenbach's monotone interpretation and the bounded functional interpretation. The elimination of weak König's lemma. Uniform boundedness. A look at Tao's hard/soft analysis distinction.

PHIL 354. Topics in Logic. 1-3 Unit.

Complexity of propositional calculi. P=NP problem. Exponential lower bounds for resolution and for intuitionistic derivations. Problem of saving proofs. Complexity of derivations in arithmetic. Inventor's paradox. Synthesis of inductive invariants. Prerequisites: Phil 151,152 or equivalents.

PHIL 355. Logic and Social Choice. 4 Units.

Topics in the intersection of social choice theory and formal logic. Voting paradoxes, impossibility theorems and strategic manipulation, logical modeling of voting procedures, preference versus judgment aggregation, role of language in social choice, and metatheory of social choice. May be repeated for credit. Prerequisite: 151 or consent of instructor.

PHIL 356. Applications of Modal Logic. 3 Units.

Applications of modal logic to knowledge and belief, and actions and norms. Models of belief revision to develop a dynamic doxastic logic. A workable modeling of events and actions to build a dynamic deontic logic on that foundation. (Staff).

PHIL 358. Rational Agency and Intelligent Interaction. 3 Units.

For advanced undergraduates, and M.S. and beginning Ph.D. students. Logic-based methods for knowledge representation, information change, and games in artificial intelligence and philosophy. Topics: knowledge, certainty, and belief; time and action; belief dynamics; preference and social choice; games; and desire and intention. Prerequisite: propositional and first-order logic. Same as: CS 222.

PHIL 359. Topics in Logic, Information and Interaction. 2-4 Units.

Logical analysis of information, interaction and games, with topics connecting philosophy, computer science, game theory, and other fields. The focus is on current research at these interfaces. Prerequisite: 151, 154/254, or equivalent background.

PHIL 360. Core Seminar in Philosophy of Science. 4 Units.

Limited to first- and second-year Philosophy Ph.D. students.

PHIL 361. Social Dimensions of Science. 4 Units.

Study of philosophical issues raised by the social character of scientific research and the relation of scientific inquiry to its broader social, economic, and cultural context.

PHIL 365. Seminar in Philosophy of Science: Time. 4 Units.**PHIL 366. Evolution and Communication. 4 Units.**

Topics include information bottlenecks, signaling networks, information processing, invention of new signals, teamwork, evolution of complex signals, teamwork. Sources include signaling games invented by David Lewis and generalizations thereof, using evolutionary and learning dynamics.

PHIL 369. Philosophy of Linguistics. 4 Units.

Philosophical issues raised by contemporary work in linguistics. Topics include: the subject matter of linguistics (especially internalism vs. externalism), methodology and data (especially the role of quantitative methods and the reliance on intuitions), the relationship between language and thought (varieties of Whorfianism and anti-Whorfianism), nativist arguments about language acquisition, and language evolution. Same as: LINGUIST 204, SYMSYS 204.

PHIL 370. Core Seminar in Ethics. 4 Units.

Limited to first- and second-year students in the Philosophy Ph.D. program.

PHIL 370A. Grad Seminar in Ethics. 4 Units.

Conceptions of the self in practical philosophy. Graduate seminar exploring topics at the intersection of personal identity, agency, and morality. Specific topics and authors to be determined.

PHIL 371D. Graduate Seminar on Equality. 5 Units.

This seminar will focus on ideas of equality of opportunity, with readings from political theory, as well as American constitutional law, political science, economics, and sociology. The readings will address four main questions: What is equality of opportunity? Why is equality of opportunity an important requirement of justice? What are the principal sources of inequalities of opportunity? And how might those inequalities be remedied? Readings from: Hayek, Rawls, Dworkin, Okin, Roemer, Tawney, Bourdieu, Barry, Jencks, Mazumder, Alstott, McLanahan, and Heckman.

PHIL 372. Topics in Kantian Ethics. 4 Units.

Selected topics in ethics, considering both Kant's texts and recent writings by Kant interpreters and moral philosophers in the Kantian tradition. Among the topics covered will be: Practical reason, personal relationships, duties to oneself, evil, right and politics, lying, constructivism in ethics.

PHIL 372D. Topics in Political Philosophy. 5 Units.

Leading ideas in *A Theory of Justice*, *Political Liberalism*, and *The Law of Peoples*. Same as: POLISCI 332.

PHIL 372E. Graduate Seminar on Moral Psychology. 3-5 Units.

Recent philosophical works on desire, intention, the motivation of action, valuing, and reasons for action. Readings: Williams, Korsgaard, Smith, Blackburn, Velleman, Stampe, Frankfurt.

PHIL 372P. Korsgaard and her Critics. 2-4 Units.

Christine Korsgaard has developed an unusually complex and comprehensive theory of morality, according to which moral authority has its source in our authority over ourselves simply as human agents. Her view purports to be humanist without falling into relativism, subjectivism, or voluntarism. Our aim is to understand and evaluate Korsgaard's theory, which Derek Parfit has characterized as combining "Kantian, Humean, and existentialist ideas in unexpected, platitude-denying ways." Readings include Korsgaard's own works as well as selected critiques. Graduate level seminar aimed primarily at philosophy students.

PHIL 372R. Political Realism. 3-5 Units.

This seminar will explore various articulations of political realism in their historical contexts. Realism is generally taken to be a pragmatic approach to a political world marked by the competition for material interests and the struggle for power. Yet beyond a shared critique of idealism and an insistence on the priority and autonomy of the political, realists tend to have very different normative visions and political projects. We will consider the works of several political realists from the history of political and international relations thought, including: Thucydides, Machiavelli, Hobbes, Carr, Niebuhr, and Morgenthau. Same as: POLISCI 435R.

PHIL 373. Moral Psychology: The Concept of Inclination. 4 Units.

The weight placed by Kantian and rationalist moral theories on the distinction between inclination and reason. The concept of inclination as that which inclines but does not determine how people act. How are inclinations related to the people who hold them? Are they expressions of values, or more like internal weather? What is their nature? What does it mean to act from inclination? Are actions on inclination unchosen or just badly chosen? Historical and contemporary sources.

PHIL 374. Caring and Practical Reasoning. 4 Units.

What is it to care about something; how is caring related to desiring, emotions, and having policies; what is the relationship between caring and the will; why do people care about things; can attention to caring help explain the phenomenon of silencing reasons? Readings from contemporary literature, including Frankfurt, Watson, Bratman, Scanlon, Williams, Helm, and Kolodny. May be repeated for credit.

PHIL 374C. Democracy and the Constitution. 5 Units.

Connections between democratic theory and constitutional theory. Sources include literature from political philosophy, constitutional law, and jurisprudence, and arguments about freedom of expression, campaign finance, legislative apportionment, federalism, and separation of powers. Readings from Scalia, Breyer, Ely, Ackerman, Dahl, Rawls, Habermas, Dworkin, Riker, and Schumpeter, as well as constitutional cases.

PHIL 376. Agency and Personal Identity. 4 Units.

How philosophical theories of agency interact with philosophical accounts of personal identity. Readings include David Velleman and Harry Frankfurt.

PHIL 377. Rational and Social Agency. 2-5 Units.

Contemporary discussions of practical reason, individual rational agency, planning agency, diachronic agency, intention, belief, intentional action, shared agency, identification and self-governance. Tentative list of authors whose work will be studied includes: Michael Bratman, Margaret Gilbert, Richard Holton, Christine Korsgaard, Alfred Mele, Kieran Setiya, Scott Shapiro, Michael Smith, David Velleman, Jay Wallace, and Gary Watson. Same as: POLISCI 333.

PHIL 378. Amartya Sen's capability theory. 2-4 Units.

Amartya Sen's pioneering work attempts to open up economics to missing informational and evaluative dimensions. This seminar will explore Sen's "capability approach" and its implications for the study of economics, gender, and justice. It will look at different ways that the capability approach has been developed, in particular, by Martha Nussbaum, but also by other political philosophers. Same as: POLISCI 436R.

PHIL 379. Graduate Seminar in Metaethics. 2-4 Units.

Theories about the meaning of ethical terms and the content of ethical judgements. Do these theories fit with best accounts of human agency and practical deliberation? Readings from recent literature. Prerequisites: 173B/273B, 181, 187/287 or equivalent.

PHIL 380. Core Seminar in Metaphysics and Epistemology. 4 Units.

Limited to first- and second-year students in the Philosophy Ph.D. program.

PHIL 381. Core Seminar in Philosophy of Language. 4 Units.

Limited to first- and second-year students in the Philosophy Ph.D. program.

PHIL 382. Seminar on Reference. 4 Units.

Philosophical issues concerning the relationship between linguistic expressions and the objects to which they refer. Is it possible to get one unified theory of reference for different kinds of referring expressions such as proper names, pronouns, demonstratives, and other kinds of indexicals? Unsolved problems and desiderata for a theory of reference?.

PHIL 382A. Pragmatics and Reference. 4 Units.

Grice's theory of conversational implicatures, Relevance Theory and other contemporary pragmatic theories, focusing on issues involving singular reference, "pragmatic intrusion," and the semantics - pragmatics "interface." Throughout the seminar will be developing the approach Kefa Korta and Perry call "critical pragmatics.".

PHIL 383. Philosophy of Mind Seminar. 2-4 Units.

May be repeated for credit.

PHIL 383B. What's an Inference?. 2-4 Units.

Fundamental issues in epistemology, philosophy of mind and language: issues relating to the notion (or rather, notions) of an inference. What's inferential justification? What's an inferential reasoning process? What are inference rules, and what distinguishes a good rule of inference from a bad rule? Subtopics to be discussed include: the problem of mental causation, the distinction between personal and sub-personal levels of explanation, preservation of content and warrant, the epistemic support relation, and time permitting the nature of perceptual justification.

PHIL 384. Seminar in Metaphysics and Epistemology. 4 Units.

May be repeated for credit.

PHIL 385. Pragmatics and Reference. 2-4 Units.

Problems about reference have played a large role in the philosophy of language since the days of Frege and Russell. An approach to reference from the point of view of pragmatics, that Kefa Korta and John Perry have developed in their book CRITICAL PRAGMATICS. Rely on ideas from John Perry's book REFERENCE AND REFLEXIVITY. Also look at other approaches to reference, and to pragmatics.

PHIL 385B. Topics in Metaphysics and Epistemology: Vagueness. 4 Units.

Contemporary proposals for how and whether to explain and accommodate vagueness in reality and in representation. Theories of mental and linguistic representation that struggle to explain imprecise representation, and metaphysical theories of the ultimate structure of reality that are threatened with incoherence if worldly boundaries are vague. May be repeated for credit.

PHIL 385C. Topics in Philosophy of Language: The Frege-Russell Problems. 2-4 Units.

Explore various approaches to the difficulties for semantic theories raised by the behavior of propositional attitude sentences. How, if Superman and Clark are the same person, can Lois have different beliefs about them? "Classic" treatments of the issues including Frege, Russell, Quine, Davidson, and Kripke. Contemporary debates about the most promising approaches, including "naive Russellianism" and "unarticulated constituent" accounts.

PHIL 385D. Topics in Philosophy of Language. 2-4 Units.

Course may be repeated for credit.

PHIL 385M. The Metaphysics of Meaning. 2-4 Units.

One central project in the philosophy of language is to explain the relationships between paradigmatically semantic phenomena like meaning, truth, and reference (as well as entailment, satisfaction, application, and others). Often the pursuit of this project generates orders of explanation in which some notions are privileged as more "fundamental" than others, in what is arguably a metaphysical sense of the expression. The dominant order of explanation in both philosophical and linguistic semantics seems to be Referentialism, according to which word/world relationships like reference and application are taken to be more fundamental than sentential truth or meaning. (Think: correspondence theory + model-theoretic semantics.) Alternatives to the orthodoxy include certain versions of conceptual-role semantics, Brandom's inferentialism, and Horwich's use theory of meaning. The aims of this seminar will be to acquaint ourselves with these and other going concerns in the theory of meaning, to organize logical space so that gaps might more easily be spotted, and to help the instructor develop his own, as yet nascent form of opposition to Referentialism. Of special interest will be the alleged normativity of meaning and the Field/Wright dispute over reference to abstracta. Besides the authors already mentioned, readings will be drawn from Katz, King, Kripke, and perhaps (time permitting) Millikan, Peacocke, and/or Taylor as well. But we should probably begin by rehashing Davidson v. Dummett.

PHIL 385R. Metaphysics of Reference. 2-4 Units.

This seminar is an investigation of the nature of reference in both private thought and public talk. Just what is it for some bits of either our shared public language or our inner thoughts to refer to or stand for bits of the world? In virtue of what does the relation of reference obtain between some bit of the world and some bit of either outer language or inner thought? What about apparent reference to putatively non-existent objects, like Santa Claus or Sherlock Holmes? We appear to think and talk about objects that do not exist. But there are no such objects. So just how do we manage to think and talk about them? Or consider abstract objects, like numbers, that are thought by some to exist outside the spatial-temporal order. We appear to think and talk about such objects as well. But it is a mystery how, if at all, the reach of our thought could possibly extend beyond even the bounds of space and time. Though we will canvass a number of different answers to this questions, proposed by a variety of philosophers, my main goal will be to develop and defend a view that I call two-factor referentialism. Readings will be drawn from a number of sources, including several chapters of my book in progress Referring to the World.

PHIL 386. Topics in Philosophy of Mind: Dual Process Theories of Mind. 4 Units.

System 1/system 2 terminology have recently made its way into everyday parlance. But do we understand it? In this seminar, I want to take a closer look at dual process theories, broadly construed, including the two-systems hypothesis, and engage the on-going debate in cognitive psychology about their viability and interpretation. I also want to explore how these theories relate to other models of the mind, both competing and compatible, and to the (philosophical) distinction between personal and sub-personal levels of explanation. The approach is distinctively philosophical, but the reading includes texts in contemporary cognitive science, as well as in philosophy of mind. (Some background in philosophy of mind is recommended, but it is not required.)

PHIL 386B. Husserl and Adam Smith. 4 Units.

Readings from Husserl and others in the phenomenological tradition, and recent work on intentionality and consciousness by philosophers and cognitive scientists.

PHIL 386C. Subjectivity. 4 Units.

Continuation of 386B.

PHIL 386D. Personal Identity. 4 Units.

Focus on personal identity as a case study in metaphysical indeterminacy. The classic puzzles of PI can be construed as arguments that it can be indeterminate whether person A is identical to person B, and indeed, whether person A exists. Can such cases of indeterminacy be plausibly interpreted as semantic (or epistemic), or do they support the possibility of worldly or "ontic" indeterminacy? Is ontic indeterminacy even coherent? How might it be modeled? Parallel questions arise in the metaphysics of ordinary material objects, of course; but it's not obvious that their answers should also run parallel. And even if they do, focusing on PI lends the questions some real urgency. How should I feel about the interests of a past or future person who's only indeterminately me? Should I fear a future in which I merely indeterminately exist? Maybe outright death is preferable to being literally liminal. Seminar. Graduate work in core philosophy a prerequisite.

PHIL 386E. About Being. 4 Units.

A pop-up course on Burgess' eponymous book project, which deals with the metaphysics of linguistic representation in the service of developing a methodology for adjudicating ontological disputes. Keywords: linguistic turn, Plato's beard, problem of intentionality, grounding, deflationism, metaontology, etc. Readings will be a mix of chapter drafts and recent, relevant work by other people, including Rayo, Sider, Manley & Hawthorne; with a couple classics by Quine and Stalnaker thrown in for good measure.

PHIL 387. Intention and Normative Judgment. 2-4 Units.

Prominent views in both metaethics and the philosophy of action hold that there are distinctively practical states of mind that nonetheless play many of the roles traditionally associated with belief. Some action theorists hold that intention is a kind of practical attitude subject to rational requirements such as requirements of consistency and coherence. Metaethical noncognitivists hold that normative judgments are distinctively practical, perhaps even a species of intention, and face the well-known Frege-Geach problem because of that commitment. We will consider what metaethicists can learn from debates about intention in the philosophy of action, and what philosophers of action can learn from debates about metaethical non-cognitivism.

PHIL 387C. Consistency and Coherence. 2-4 Units.

Some philosophers think that attitudes like belief and intention are subject to consistency and coherence requirements. Are there such general purpose cogency requirements on attitudes? If so, what is their nature and strength? What grounds these requirements; for instance, does the point or purpose of a belief or an intention ground consistency and coherence requirements on that attitude? How are such requirements on belief related to requirements on intention? How does the answer to such questions bear on understanding of the interrelations between theoretical and practical rationality?

PHIL 387D. Rationality over Time. 2-4 Units.**PHIL 387S. Practical Reasons and Practical Reasoning. 4 Units.**

Attempts to develop alternatives to Humean, instrumentalist conceptions of practical reasoning, and alternatives to Humean, non-cognitivist views of practical reasons. Readings include Aurel Kolnai, Bernard Williams, David Wiggins, Joseph Raz, Michael Bratman, Elijah Millgram, and T.M. Scanlon.

PHIL 388. Normativity. 2-4 Units.

May be repeated for credit.

PHIL 389. Advanced Topics in Epistemology. 2-5 Units.

Advanced topics in epistemology. Pre-requisite Phil 284.

PHIL 391. Research Seminar in Logic and the Foundations of Mathematics. 1-3 Unit.

Contemporary work. May be repeated a total of three times for credit. Math 391 students attend the logic colloquium in 380-381T. Same as: MATH 391.

PHIL 450. Thesis. 1-15 Unit.

(Staff).

PHIL 470. Proseminar in Moral Psychology. 4 Units.

Restricted to Philosophy doctoral students. May be repeated for credit.

PHIL 500. Advanced Dissertation Seminar. 1 Unit.

Presentation of dissertation work in progress by seminar participants. May be repeated for credit.

PHIL 801. TGR Project. 0 Units.**PHIL 802. TGR Dissertation. 0 Units.**

(Staff).

Physics Courses

PHYSICS 15. The Nature of the Universe. 3 Units.

The structure, origin, and evolution of the major components of the Universe: planets, stars, and galaxies. Emphasis is on the formation of the Sun and planets, the evolution of stars, and the structure and content of the Milky Way galaxy. Topics: cosmic enigmas (dark matter, black holes, pulsars, x-ray sources), star birth and death, and the origins of and search for life in the solar system and beyond.

PHYSICS 16. Cosmic Horizons. 3 Units.

The origin and evolution of the universe and its contents: stars, galaxies, quasars. The overall structure of the cosmos and the physical laws that govern matter, space, and time. Topics include the evolution of the cosmos from the origin of the elements and the formation of stars and galaxies, exotic astronomical objects (black holes, quasars, supernovae, and gamma ray bursts), dark matter, inflationary cosmology, and the fate of the cosmos.

PHYSICS 17. Black Holes. 3 Units.

Newton's and Einstein's theories of gravitation and their relationship to the predicted properties of black holes. Their formation and detection, and role in galaxies and high-energy jets. Hawking radiation and aspects of quantum gravity.

PHYSICS 18N. Frontiers in Theoretical Physics and Cosmology. 3 Units.

Preference to freshmen. The course will begin with a description of the current standard models of gravitation, cosmology, and elementary particle physics. We will then focus on frontiers of current understanding including investigations of very early universe cosmology, string theory, and the physics of black holes.

PHYSICS 19. How Things Work: An Introduction to Physics. 3 Units.

Introduction to the principles of physics through familiar objects and phenomena, including airplanes, cameras, computers, engines, refrigerators, lightning, radio, microwave ovens, and fluorescent lights. Estimates of real quantities from simple calculations. Prerequisite: high school algebra and trigonometry.

PHYSICS 21. Mechanics and Heat. 3 Units.

For biology, social science, and premedical students. Introduction to Newtonian mechanics, fluid mechanics, theory of heat. Prerequisite: high school algebra and trigonometry; calculus not required.

PHYSICS 21S. Mechanics and Heat with Laboratory. 4 Units.

For biology, social science, and premedical students. The sequence PHYSICS 21S, PHYSICS 23S and PHYSICS 25S fulfills, in nine weeks, the one-year college physics requirement with lab of most medical schools. Labs are an integrated part of the summer courses. Introduction to Newtonian mechanics, fluid mechanics, theory of heat. Prerequisite: high school algebra and trigonometry; calculus not required.

PHYSICS 22. Mechanics and Heat Laboratory. 1 Unit.

Guided hands-on exploration of concepts in classical mechanics and thermodynamics with an emphasis on student predictions, observations and explanations. Pre- or corequisite: PHYS 21.

PHYSICS 23. Electricity and Optics. 3 Units.

Electric charges and currents, magnetism, induced currents; wave motion, interference, diffraction, geometrical optics. Prerequisite: PHYSICS 21.

PHYSICS 23S. Electricity and Optics with Lab. 4 Units.

For biology, social science, and premedical students. The sequence PHYSICS 21S, PHYSICS 23S and PHYSICS 25S fulfills, in nine weeks, the one-year college physics requirement with lab of most medical schools. Labs are an integrated part of the summer courses. Electric charges and currents, magnetism, induced currents; wave motion, interference, diffraction, geometrical optics. Prerequisite: PHYSICS 21S or 21.

PHYSICS 24. Electricity and Optics Laboratory. 1 Unit.

Guided hands-on exploration of concepts in electricity and magnetism, circuits and optics with an emphasis on student predictions, observations and explanations. Introduction to multimeters and oscilloscopes. Pre- or corequisite: PHYS 23.

PHYSICS 25. Modern Physics. 3 Units.

Introduction to modern physics. Relativity, quantum mechanics, atomic theory, radioactivity, nuclear reactions, nuclear structure, high energy physics, elementary particles, astrophysics, stellar evolution, and the big bang. Prerequisite: PHYSICS 23 or consent of instructor.

PHYSICS 25S. Modern Physics with Laboratory. 4 Units.

For biology, social science, and premedical students. The sequence PHYSICS 21S, PHYSICS 23S and PHYSICS 25S fulfills, in nine weeks, the one-year college physics requirement with lab of most medical schools. Labs are an integrated part of the summer courses. Introduction to modern physics. Relativity, quantum mechanics, atomic theory, radioactivity, nuclear reactions, nuclear structure, high energy physics, elementary particles, astrophysics, stellar evolution, and the big bang. Prerequisite: PHYSICS 23S or 23.

PHYSICS 26. Modern Physics Laboratory. 1 Unit.

Guided hands-on and simulation-based exploration of concepts in modern physics, including special relativity, quantum mechanics and nuclear physics with an emphasis on student predictions, observations and explanations. Pre- or corequisite: PHYSICS 25.

PHYSICS 41. Mechanics. 4 Units.

Vectors, particle kinematics and dynamics, work, energy, momentum, angular momentum; conservation laws; rigid bodies; mechanical oscillations and waves. Discussions based on use of calculus. Prerequisite: High school physics or PHYSICS 19. MATH 19 or MATH 41 or equivalent. Corequisite: MATH 20 or MATH 42 or MATH 51.

PHYSICS 41A. Mechanics Concepts, Calculations, and Context. 1 Unit.

Additional assistance and applications for PHYSICS 41. In-class problems in physics and engineering. Exercises in the concepts and calculations of vectors, translational and rotational velocity and acceleration, equations of motion for particles and rigid bodies, and principles of energy and linear/angular momentum. In-class participation required. Limited enrollment.

PHYSICS 42. Classical Mechanics Laboratory. 1 Unit.

Hands-on exploration of concepts in classical mechanics: Newton's laws, conservation laws, rotational motion. Introduction to laboratory techniques, experimental equipment and data analysis. Pre- or corequisite: PHYSICS 41.

PHYSICS 43. Electricity and Magnetism. 4 Units.

Electrostatics, Coulomb's law, electric fields and fluxes, electric potential, properties of conductors, Gauss's law, capacitors and resistors, DC circuits; magnetic forces and fields, Biot-Savart law, Faraday's law, Ampere's law, inductors, transformers, AC circuits, motors and generators, electric power, Galilean transformation of electric and magnetic fields, Maxwell's equations; limited coverage of electromagnetic fields and special relativity. Prerequisite: PHYSICS 41 or equivalent. MATH 20 or MATH 42 or MATH 51 or equivalent. Recommended corequisite: Math 52.

PHYSICS 43N. Understanding Electromagnetic Phenomena. 1 Unit.

Preference to freshmen. Expands on the material presented in PHYSICS 43; applications of concepts in electricity and magnetism to everyday phenomena and to topics in current physics research. Corequisite: PHYSICS 43 or advanced placement.

PHYSICS 44. Electricity and Magnetism Lab. 1 Unit.

Hands-on exploration of concepts in electricity and magnetism and circuits. Introduction to multimeters, function generators, oscilloscopes, and graphing techniques. Pre- or corequisite: PHYSICS 43.

PHYSICS 45. Light and Heat. 4 Units.

Reflection and refraction, lenses and lens systems; polarization, interference, and diffraction; temperature, properties of matter and thermodynamics, introduction to kinetic theory of matter. Prerequisites: PHYSICS 41 or equivalent. MATH 20 or MATH 42 or MATH 51 or equivalent.

PHYSICS 45N. Advanced Topics in Light and Heat. 1 Unit.

Preference to freshmen. Expands on the subject matter presented in PHYSICS 45 to include optics and thermodynamics in everyday life, and applications from modern physics and astrophysics. Corequisite: PHYSICS 45 or advanced placement.

PHYSICS 46. Light and Heat Laboratory. 1 Unit.

Hands-on exploration of concepts in geometrical optics, wave optics and thermodynamics. Pre- or corequisite: PHYSICS 45.

PHYSICS 50. Astronomy Laboratory and Observational Astronomy. 3 Units.

Introduction to observational astronomy emphasizing the use of optical telescopes. Observations of stars, nebulae, and galaxies in laboratory sessions with 16- and 24-inch telescopes at the Stanford Observatory. Meets one evening per week from dusk until well after dark at the Stanford Observatory. No previous physics required. Limited enrollment. Lab.

PHYSICS 59. Current Research Topics. 1 Unit.

Recommended for prospective Physics majors. Presentations of current research topics by faculty with research interests related to physics, often including tours of experimental laboratories where the research is conducted.

PHYSICS 61. Mechanics and Special Relativity. 4 Units.

(First in a three-part series: PHYSICS 61, PHYSICS 63, PHYSICS 65.) Advanced freshman physics. For students with a strong high school mathematics and physics background contemplating a major in Physics or interested in a rigorous treatment of physics. Special theory of relativity and Newtonian mechanics with multi-variable calculus. Postulates of special relativity, simultaneity, time dilation, length contraction, the Lorentz transformation, causality, and relativistic mechanics. Central forces, contact forces, linear restoring forces. Momentum transport, work, energy, collisions. Angular momentum, torque, moment of inertia in three dimensions. Damped and forced harmonic oscillators. Recommended prerequisites: Mastery of mechanics at the level of AP Physics C and AP Calculus B/C or equivalent. Corequisite: MATH 51.

PHYSICS 62. Classical Mechanics Laboratory. 1 Unit.

Introduction to laboratory techniques, experiment design, data collection and analysis simulations, and correlating observations with theory. Labs emphasize discovery with open-ended questions and hands-on exploration of concepts developed in PHYSICS 61 including Newton's laws, conservation laws, rotational motion. Pre- or corequisite PHYSICS 61.

PHYSICS 63. Electricity, Magnetism, and Waves. 4 Units.

(Second in a three-part series: PHYSICS 61, PHYSICS 63, PHYSICS 65.) Advanced freshman physics. For students with a strong high school mathematics and physics background contemplating a major in Physics or interested in a rigorous treatment of physics. Electricity, magnetism and waves with some description of optics. Electrostatics and Gauss' law. Electric potential, electric field, conductors, image charges. Other theorems of vector calculus. Electric currents, DC circuits. Moving charges, magnetic field, Ampere's law. Solenoids, transformers, induction, AC circuits, resonance. Relativistic point of view for moving charges. Displacement current, Maxwell's equations. Electromagnetic waves, dielectrics. Diffraction, interference, refraction, reflection, polarization. Prerequisite: PHYSICS 61 and MATH 51; Pre- or corequisite: MATH 52.

PHYSICS 64. Electricity, Magnetism and Optics Laboratory. 1 Unit.

Introduction to multimeters, breadboards, function generators and oscilloscopes. Emphasis on student-developed design of experimental procedure and data analysis for topics covered in PHYSICS 63: electricity, magnetism, circuits, and optics. Pre- or corequisite: PHYSICS 63.

PHYSICS 65. Quantum and Thermal Physics. 4 Units.

(Third in a three-part series: PHYSICS 61, PHYSICS 63, PHYSICS 65.) Advanced freshman physics. For students with a strong high school mathematics and physics background contemplating a major in Physics or interested in a rigorous treatment of physics. Introduction to quantum mechanics: matter waves, atomic structure, Schrödinger's equation. Thermodynamics and statistical mechanics: entropy and heat, Boltzmann statistics, quantum statistics. Prerequisites: PHYSICS 61 & PHYSICS 63. Pre- or corequisite: MATH 53.

PHYSICS 67. Introduction to Laboratory Physics. 2 Units.

Methods of experimental design, data collection and analysis, statistics, and curve fitting in a laboratory setting. Experiments drawn from electronics, optics, heat, and modern physics. Lecture plus laboratory format. Required for PHYSICS 60 series Physics and Engineering Physics majors; recommended, in place of PHYSICS 44, for PHYSICS 40 series students who intend to major in Physics or Engineering Physics. Pre- or corequisite: PHYSICS 65 or PHYSICS 43.

PHYSICS 70. Foundations of Modern Physics. 4 Units.

Required for Physics majors who completed the PHYSICS 40 series, or the PHYSICS 60 series prior to 2005-06. Special relativity, the experimental basis of quantum theory, atomic structure, quantization of light, Schrödinger equation, nuclear physics, elementary particles and cosmology. Prerequisites: PHYSICS 41, PHYSICS 43. Pre or corequisite: PHYSICS 45. Recommended: prior or concurrent registration in MATH 53.

PHYSICS 70N. Modern Physics in Your Life. 1 Unit.

How does modern physics intersect with your everyday life? Topics may include the quantum nature of light, atomic physics and an introduction to semiconductor physics, applications to light sources (incandescent, fluorescent, light-emitting diodes, lasers) and light sensors (photodiodes and solar cells), introduction to nuclear physics (e.g., fission, fusion, interaction of radiation with matter). Co- or pre-requisite: PHYSICS 70, PHYSICS 65, or similar high-school physics preparation.

PHYSICS 80N. The Technical Aspects of Photography. 3 Units.

Preference to freshmen and sophomores with some background in photography. How cameras record photographic images on film and electronically. Technical photographic processes to use cameras effectively. Camera types and their advantages, how lenses work and their limitations, camera shutters, light meters and the proper exposure of film, film types, depth of focus, control of the focal plane and perspective, and special strategies for macro and night photography. View cameras and range finder technical cameras. Students take photographs around campus. Prerequisite: high school physics.

PHYSICS 81N. Science on the Back of the Envelope. 3 Units.

Understanding the complex world around us quantitatively, using order of magnitude estimates and dimensional analysis. Starting from a handful of fundamental constants of Nature, one can estimate complex quantities such as cosmological length and time scales, size of the atom, height of Mount Everest, speed of tsunami, energy density of fuels and climate effects. Through these examples students learn the art of deductive thinking, fundamental principles of science and the beautiful unity of nature.

PHYSICS 83N. Physics in the 21st Century. 3 Units.

Preference to freshmen. Current topics at the frontier of modern physics. Topics include subatomic particles and the standard model, symmetries in nature, extra dimensions of space, string theory, supersymmetry, the big bang theory of the origin of the universe, black holes, dark matter, and dark energy of the universe. Why the sun shines. Cosmology and inflation.

PHYSICS 91SI. Practical Computing for Scientists. 2 Units.

Essential computing skills for researchers in the natural sciences. Helping students transition their computing skills from a classroom to a research environment. Topics include the Unix operating system, the Python programming language, and essential tools for data analysis, simulation, and optimization. More advanced topics as time allows. Prerequisite: CS106A or equivalent.

PHYSICS 100. Introduction to Observational and Laboratory Astronomy. 4 Units.

Designed for undergraduate physics majors but open to all students with a calculus-based physics background and some laboratory experience. Students make and analyze observations using telescopes at the Stanford Student Observatory. Topics include navigating the night sky, the physics of stars and galaxies, telescope instrumentation and operation, quantitative error analysis, and effective scientific communication. Limited enrollment. Prerequisites: prior completion of Physics 40 or PHYSICS 60 series.

PHYSICS 105. Intermediate Physics Laboratory I: Analog Electronics. 3 Units.

Analog electronics including Ohm's law, passive circuits and transistor and op amp circuits, emphasizing practical circuit design skills to prepare undergraduates for laboratory research. Short design project. Minimal use of math and physics, no electronics experience assumed beyond introductory physics. Prerequisite: PHYSICS 43 or PHYSICS 63.

PHYSICS 107. Intermediate Physics Laboratory II: Experimental Techniques and Data Analysis. 4 Units.

Experiments on lasers, Gaussian optics, and atom-light interaction, with emphasis on data and error analysis techniques. Students describe a subset of experiments in scientific paper format. Prerequisites: completion of PHYSICS 40 or PHYSICS 60 series, and PHYSICS 70 and PHYSICS 105. Recommended: PHYSICS 130, prior or concurrent enrollment in PHYSICS 120. WIM.

PHYSICS 108. Advanced Physics Laboratory: Project. 4 Units.

Small student groups plan, design, build, and carry out a single experimental project in low-temperature physics. Prerequisites PHYSICS 105, PHYSICS 107.

PHYSICS 110. Advanced Mechanics. 3-4 Units.

Lagrangian and Hamiltonian mechanics. Principle of least action, Euler-Lagrange equations. Small oscillations and beyond. Symmetries, canonical transformations, Hamilton-Jacobi theory, action-angle variables. Introduction to classical field theory. Selected other topics, including nonlinear dynamical systems, attractors, chaotic motion. Undergraduates register for Physics 110 (4 units). Graduates register for Physics 210 (3 units). (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor.) Prerequisites: MATH 131P, and PHYS 112 or MATH elective 104 or higher. Recommended prerequisite: PHYS 130. Same as: PHYSICS 210.

PHYSICS 112. Mathematical Methods of Physics. 4 Units.

Theory of complex variables, complex functions, and complex analysis. Fourier series and Fourier transforms. Special functions such as Laguerre, Legendre, and Hermite polynomials, and Bessel functions. The uses of Green's functions. Covers material of MATH 106 and MATH 132 most pertinent to Physics majors. Prerequisites: MATH 50 or 50H series, and MATH 131P or MATH 173.

PHYSICS 113. Computational Physics. 4 Units.

Numerical methods for solving problems in mechanics, electromagnetism, quantum mechanics, and statistical mechanics. Methods include numerical integration; solutions of ordinary and partial differential equations; solutions of the diffusion equation, Laplace's equation and Poisson's equation with relaxation methods; statistical methods including Monte Carlo techniques; matrix methods and eigenvalue problems. Short introduction to MatLab, used for class examples; class projects may be programmed in any language such as C. Prerequisites: MATH 53 and PHYS 120. Previous programming experience not required.

PHYSICS 120. Intermediate Electricity and Magnetism I. 4 Units.

(First in a two-part series: PHYS 120, PHYS 121.) Vector analysis. Electrostatic fields, including boundary-value problems and multipole expansion. Dielectrics, static and variable magnetic fields, magnetic materials. Maxwell's equations. Prerequisites: PHYSICS 43 or PHYS 63; MATH 52 and MATH 53. Pre- or corequisite: MATH 131P or MATH 173. Recommended corequisite: PHYS 112.

PHYSICS 121. Intermediate Electricity and Magnetism II. 4 Units.

(Second in a two-part series: PHYS 120, PHYS 121.) Conservation laws and electromagnetic waves, Poynting's theorem, tensor formulation, potentials and fields. Plane wave problems (free space, conductors and dielectric materials, boundaries). Dipole and quadrupole radiation. Special relativity and transformation between electric and magnetic fields. Prerequisites: PHYS 120 and MATH 131P or MATH 173; Recommended: PHYS 112.

PHYSICS 130. Quantum Mechanics. 4 Units.

The origins of quantum mechanics and wave mechanics. Schrödinger equation and solutions for one-dimensional systems. Commutation relations. Generalized uncertainty principle. Time-energy uncertainty principle. Separation of variables and solutions for three-dimensional systems; application to hydrogen atom. Spherically symmetric potentials and angular momentum eigenstates. Spin angular momentum. Addition of angular momentum. Prerequisites: PHYSICS 65 or PHYSICS 70. Pre- or corequisites: PHYSICS 120 and MATH 131P or MATH 173.

PHYSICS 131. Quantum Mechanics II. 4 Units.

Identical particles; Fermi and Bose statistics. Time-independent perturbation theory. Fine structure, the Zeeman effect and hyperfine splitting in the hydrogen atom. Time-dependent perturbation theory. Variational principle and WKB approximation. Prerequisite: PHYSICS 120, PHYSICS 130, MATH 131P, or MATH 173. Pre- or PHYSICS 121.

PHYSICS 134. Advanced Topics in Quantum Mechanics. 3-4 Units.

Scattering theory, partial wave expansion, Born approximation. Additional topics may include nature of quantum measurement, EPR paradox, Bell's inequality, and topics in quantum information science; path integrals and applications; Berry's phase; structure of multi-electron atoms (Hartree-Fock); relativistic quantum mechanics (Dirac equation). Undergraduates register for PHYSICS 134 (4 units). Graduate students register for PHYSICS 234 (3 units); graduate students required to complete additional assignments in a format determined by the instructor. Prerequisites: PHYSICS 130, PHYSICS 131. Same as: PHYSICS 234.

PHYSICS 152. Introduction to Particle Physics I. 3 Units.

Elementary particles and the fundamental forces. Quarks and leptons. The mediators of the electromagnetic, weak and strong interactions. Interaction of particles with matter; particle acceleration, and detection techniques. Symmetries and conservation laws. Bound states. Decay rates. Cross sections. Feynman diagrams. Introduction to Feynman integrals. The Dirac equation. Feynman rules for quantum electrodynamics and for chromodynamics. Undergraduates register for PHYSICS 152. Graduate students register for PHYSICS 252. (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 130. Pre- or corequisite: PHYSICS 131. Same as: PHYSICS 252.

PHYSICS 160. Introduction to Stellar and Galactic Astrophysics. 3 Units.

Observed characteristics of stars and the Milky Way galaxy. Physical processes in stars and matter under extreme conditions. Structure and evolution of stars from birth to death. White dwarfs, planetary nebulae, supernovae, neutron stars, pulsars, binary stars, x-ray stars, and black holes. Galactic structure, interstellar medium, molecular clouds, HI and HII regions, star formation, and element abundances. Undergraduates register for PHYSICS 160. Graduate students register for PHYSICS 260. (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor.) Pre or corequisites: PHYSICS 130. Same as: Physics 260. Same as: PHYSICS 260.

PHYSICS 161. Introduction to Extragalactic Astrophysics and Cosmology. 3 Units.

Big bang theory, cosmic inflation, expansion of space. Composition of the universe. Origin of matter and the elements. The cosmic distance ladder. Observational evidence for dark matter and dark energy. Geometry of space and the standard model of cosmology. Formation of galaxies and large scale structure. Ultimate fate of the universe. Undergraduates register for Physics 161. Graduates register for Physics 261. (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor). Pre or corequisites: PHYSICS 121 Same as: PHYSICS 261.

PHYSICS 170. Thermodynamics, Kinetic Theory, and Statistical Mechanics I. 3-4 Units.

Foundations of statistical mechanics. Thermodynamic variables and basic thermodynamics. Ideal gases (including Maxwell-Boltzmann distribution). Bose and Fermi gases; examples including blackbody radiation, Debye theory of phonons, Sommerfeld theory of electrons in metals. Thermodynamic functions. Undergraduates register for Physics 170 (4 units). Graduates register for Physics 270 (3 units). (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor.) Recommended prerequisite: PHYSICS 130. Same as: PHYSICS 270.

PHYSICS 171. Thermodynamics, Kinetic Theory, and Statistical Mechanics II. 3-4 Units.

Mean-field theory of phase transitions; critical exponents. Ferromagnetism, the Ising model. The renormalization group. Dynamics near equilibrium: Brownian motion, diffusion, Boltzmann equations. Other topics at discretion of instructor. Prerequisite: PHYS 170/270. Undergraduates register for Physics 171 (4 units). Graduate students register for Physics 271 (3 units). (Graduates student enrollees will be required to complete additional assignments in a format determined by the instructor.) Recommended pre- or corequisite: PHYS 130. Same as Physics 271. Same as: PHYSICS 271.

PHYSICS 172. Solid State Physics. 3 Units.

Introduction to the properties of solids. Crystal structures and bonding in materials. Momentum-space analysis and diffraction probes. Lattice dynamics, phonon theory and measurements, thermal properties. Electronic structure theory, classical and quantum; free, nearly-free, and tight-binding limits. Electron dynamics and basic transport properties; quantum oscillations. Properties and applications of semiconductors. Reduced-dimensional systems. (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor.) Undergraduates should register for PHYSICS 172 and graduate students for APPPHYS 272. Prerequisites: PHYSICS 170 and PHYSICS 171, or equivalents. Same as APPPHYS 272. Same as: APPPHYS 272.

PHYSICS 190. Independent Research and Study. 1-9 Unit.

Undergraduate research in experimental or theoretical physics under the supervision of a faculty member. Prerequisites: superior work as an undergraduate Physics major and consent of instructor.

PHYSICS 205. Senior Thesis Research. 1-12 Unit.

Long-term experimental or theoretical project and thesis in Physics under supervision of a faculty member. Planning of the thesis project is recommended to begin as early as middle of the junior year. Successful completion of a senior thesis requires a minimum of 3 units for a letter grade completed during the senior year, along with the other formal thesis and physics major requirements. Students doing research for credit prior to senior year should sign up for Physics 190. Prerequisites: superior work as an undergraduate Physics major and approval of the thesis application.

PHYSICS 210. Advanced Mechanics. 3-4 Units.

Lagrangian and Hamiltonian mechanics. Principle of least action, Euler-Lagrange equations. Small oscillations and beyond. Symmetries, canonical transformations, Hamilton-Jacobi theory, action-angle variables. Introduction to classical field theory. Selected other topics, including nonlinear dynamical systems, attractors, chaotic motion. Undergraduates register for Physics 110 (4 units). Graduates register for Physics 210 (3 units). (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor.) Prerequisites: MATH 131P, and PHYS 112 or MATH elective 104 or higher. Recommended prerequisite: PHYS 130. Same as: PHYSICS 110.

PHYSICS 211. Continuum Mechanics. 3 Units.

Elasticity, fluids, turbulence, waves, gas dynamics, shocks, and MHD plasmas. Examples from everyday phenomena, geophysics, and astrophysics.

PHYSICS 216. Back of the Envelope Physics. 3 Units.

Techniques such as scaling and dimensional analysis, useful to make order-of-magnitude estimates of physical effects in different settings. Goals are to promote a synthesis of physics through solving problems, including problems that are not usually thought of as physics. Applications include properties of materials, fluid mechanics, geophysics, astrophysics, and cosmology. Prerequisites: undergraduate mechanics, statistical mechanics, electricity and magnetism, and quantum mechanics.

PHYSICS 220. Classical Electrodynamics. 3 Units.

Special relativity: The principles of relativity, Lorentz transformations, four vectors and tensors, relativistic mechanics and the principle of least action. Lagrangian formulation, charges in electromagnetic fields, gauge invariance, the electromagnetic field tensor, covariant equations of electrodynamics and mechanics, four-current and continuity equation. Noether's theorem and conservation laws, Poynting's theorem, stress-energy tensor. Constant electromagnetic fields: conductors and dielectrics, magnetic media, electric and magnetic forces, and energy. Electromagnetic waves: Plane and monochromatic waves, spectral resolution, polarization, electromagnetic properties of matter, dispersion relations, wave guides and cavities. Prerequisites: PHYSICS 121 and PHYSICS 210, or equivalent; MATH 106 or MATH 116, and MATH 132 or equivalent.

PHYSICS 230. Quantum Mechanics. 3 Units.

Fundamental concepts. Introduction to Hilbert spaces and Dirac's notation. Postulates applied to simple systems, including those with periodic structure. Symmetry operations and gauge transformation. The path integral formulation of quantum statistical mechanics. Problems related to measurement theory. The quantum theory of angular momenta and central potential problems. Prerequisite: PHYSICS 131 or equivalent.

PHYSICS 231. Quantum Mechanics. 3 Units.

Basis for higher level courses on atomic solid state and particle physics. Problems related to measurement theory and introduction to quantum computing. Approximation methods for time-independent and time-dependent perturbations. Semiclassical and quantum theory of radiation, second quantization of radiation and matter fields. Systems of identical particles and many electron atoms and molecules. Prerequisite: PHYSICS 230.

PHYSICS 234. Advanced Topics in Quantum Mechanics. 3-4 Units.

Scattering theory, partial wave expansion, Born approximation. Additional topics may include nature of quantum measurement, EPR paradox, Bell's inequality, and topics in quantum information science; path integrals and applications; Berry's phase; structure of multi-electron atoms (Hartree-Fock); relativistic quantum mechanics (Dirac equation). Undergraduates register for PHYSICS 134 (4 units). Graduate students register for PHYSICS 234 (3 units); graduate students required to complete additional assignments in a format determined by the instructor. Prerequisites: PHYSICS 130, PHYSICS 131. Same as: PHYSICS 134.

PHYSICS 240. Introduction to the Physics of Energy. 3 Units.

Energy as a consumable. Forms and interconvertability. World joule budget. Equivalents in rivers, oil pipelines and nuclear weapons. Quantum mechanics of fire, batteries and fuel cells. Hydrocarbon and hydrogen synthesis. Fundamental limits to mechanical, electrical and magnetic strengths of materials. Flywheels, capacitors and high pressure tanks. Principles of AC and DC power transmission. Impossibility of pure electricity storage. Surge and peaking. Solar constant. Photovoltaic and thermal solar conversion. Physical limits on agriculture.

PHYSICS 241. Introduction to Nuclear Energy. 3 Units.

Radioactivity. Elementary nuclear processes. Energetics of fission and fusion. Cross-sections and resonances. Fissionable and fertile isotopes. Neutron budgets. Light water, heavy water and graphite reactors. World nuclear energy production. World reserves of uranium and thorium. Plutonium, reprocessing and proliferation. Half lives of fission decay products and actinides made by neutron capture. Nuclear waste. Three Mile Island and Chernobyl. Molten sodium breeders. Generation-IV reactors. Inertial confinement and magnetic fusion. Laser compression. Fast neutron production and fission-fusion hybrids. **PREREQUISITES:** Strong undergraduate background in elementary chemistry and physics. PHYS 240 and PHYS 252 recommended but not required. Interested undergraduates encouraged to enroll, with permission of instructor.

PHYSICS 252. Introduction to Particle Physics I. 3 Units.

Elementary particles and the fundamental forces. Quarks and leptons. The mediators of the electromagnetic, weak and strong interactions. Interaction of particles with matter; particle acceleration, and detection techniques. Symmetries and conservation laws. Bound states. Decay rates. Cross sections. Feynman diagrams. Introduction to Feynman integrals. The Dirac equation. Feynman rules for quantum electrodynamics and for chromodynamics. Undergraduates register for PHYSICS 152. Graduate students register for PHYSICS 252. (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 130. Pre- or corequisite: PHYSICS 131. Same as: PHYSICS 152.

PHYSICS 260. Introduction to Stellar and Galactic Astrophysics. 3 Units.

Observed characteristics of stars and the Milky Way galaxy. Physical processes in stars and matter under extreme conditions. Structure and evolution of stars from birth to death. White dwarfs, planetary nebulae, supernovae, neutron stars, pulsars, binary stars, x-ray stars, and black holes. Galactic structure, interstellar medium, molecular clouds, HI and HII regions, star formation, and element abundances. Undergraduates register for PHYSICS 160. Graduate students register for PHYSICS 260. (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor.) Pre or corequisites: PHYSICS 130. Same as Physics 260. Same as: PHYSICS 160.

PHYSICS 261. Introduction to Extragalactic Astrophysics and Cosmology. 3 Units.

Big bang theory, cosmic inflation, expansion of space. Composition of the universe. Origin of matter and the elements. The cosmic distance ladder. Observational evidence for dark matter and dark energy. Geometry of space and the standard model of cosmology. Formation of galaxies and large scale structure. Ultimate fate of the universe. Undergraduates register for Physics 161. Graduates register for Physics 261. (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor). Pre or corequisites: PHYSICS 121 Same as: PHYSICS 161.

PHYSICS 262. Introduction to Gravitation. 3 Units.

Introduction to general relativity. Curvature, energy-momentum tensor, Einstein field equations. Weak field limit of general relativity. Black holes, relativistic stars, gravitational waves, cosmology. Prerequisite: PHYSICS 121 or equivalent including special relativity.

PHYSICS 270. Thermodynamics, Kinetic Theory, and Statistical Mechanics I. 3-4 Units.

Foundations of statistical mechanics. Thermodynamic variables and basic thermodynamics. Ideal gases (including Maxwell-Boltzmann distribution). Bose and Fermi gases; examples including blackbody radiation, Debye theory of phonons, Sommerfeld theory of electrons in metals. Thermodynamic functions. Undergraduates register for Physics 170 (4 units). Graduates register for Physics 270 (3 units). (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor.) Recommended prerequisite: PHYSICS 130. Same as: PHYSICS 170.

PHYSICS 271. Thermodynamics, Kinetic Theory, and Statistical Mechanics II. 3-4 Units.

Mean-field theory of phase transitions; critical exponents. Ferromagnetism, the Ising model. The renormalization group. Dynamics near equilibrium: Brownian motion, diffusion, Boltzmann equations. Other topics at discretion of instructor. Prerequisite: PHYS 170/270. Undergraduates register for Physics 171 (4 units). Graduate students register for Physics 271 (3 units). (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor.) Recommended pre- or corequisite: PHYS 130. Same as Physics 271. Same as: PHYSICS 171.

PHYSICS 290. Research Activities at Stanford. 1 Unit.

Required of first-year Physics graduate students; suggested for junior or senior Physics majors for 1 unit. Review of research activities in the department and elsewhere at Stanford at a level suitable for entering graduate students.

PHYSICS 291. Practical Training. 1-3 Unit.

Opportunity for practical training in industrial labs. Arranged by student with the research adviser's approval. A brief summary of activities is required, approved by the research adviser.

PHYSICS 293. Literature of Physics. 1-15 Unit.

Study of the literature of any special topic. Preparation, presentation of reports. If taken under the supervision of a faculty member outside the department, approval of the Physics chair required. Prerequisites: 25 units of college physics, consent of instructor.

PHYSICS 294. Teaching of Physics Seminar. 1 Unit.

Required of all Teaching Assistants prior to the first teaching assignment. Weekly seminar/discussions on interactive techniques for nnteaching physics. Practicum which includes class observations, grading nand student teaching in current courses.

PHYSICS 301. Astrophysics Laboratory. 3 Units.

Open to all graduate students with a calculus-based physics background and some laboratory experience. Students make and analyze observations using telescopes at the Stanford Student Observatory. Topics include navigating the night sky, the physics of stars and galaxies, telescope instrumentation and operation, quantitative error analysis, and effective scientific communication. The course also introduces a number of hot topics in astrophysics and cosmology. Limited enrollment.

PHYSICS 312. Basic Plasma Physics. 3 Units.

For the nonspecialist who needs a working knowledge of plasma physics for space science, astrophysics, fusion, or laser applications. Topics: orbit theory, the Boltzmann equation, fluid equations, magneto hydrodynamics (MHD) waves and instabilities, electromagnetic (EM) waves, the Vlasov theory of electrostatic (ES) waves and instabilities including Landau damping and quasilinear theory, the Fokker-Planck equation, and relaxation processes. Advanced topics in resistive instabilities and particle acceleration. Prerequisite: PHYSICS 220, or consent of instructor.

PHYSICS 321. Laser Spectroscopy. 3 Units.

Theoretical concepts and experimental techniques. Absorption, dispersion, Kramers-Kronig relations, line-shapes. Classical and laser linear spectroscopy. Semiclassical theory of laser atom interaction: time-dependent perturbation theory, density matrix, optical Bloch equations, coherent pulse propagation, multiphoton transitions. High-resolution nonlinear laser spectroscopy: saturation spectroscopy, polarization spectroscopy, two-photon and multiphoton spectroscopy, optical Ramsey spectroscopy. Phase conjugation. Four-wave mixing, harmonic generation. Coherent Raman spectroscopy, quantum beats, ultra-sensitive detection. Prerequisite: 230. Recommended: 231.

PHYSICS 330. Quantum Field Theory I. 3 Units.

Quantization of scalar and Dirac fields. Feynman diagrams. Quantum electrodynamics. Elementary electrodynamic processes: Compton scattering; $e+e-$ annihilation. Loop diagrams and electron ($g-2$). Introduction to supersymmetry. Prerequisites: PHYSICS 130, PHYSICS 131, or equivalents.

PHYSICS 331. Quantum Field Theory II. 3 Units.

Functional integral methods. Local gauge invariance and Yang-Mills fields. Asymptotic freedom. Spontaneous symmetry breaking and the Higgs mechanism. Unified models of weak and electromagnetic interactions. Prerequisite: PHYSICS 330.

PHYSICS 332. Quantum Field Theory III. 3 Units.

Theory of renormalization. The renormalization group and applications to the theory of phase transitions. Renormalization of Yang-Mills theories. Applications of the renormalization group of quantum chromodynamics. Perturbation theory anomalies. Applications to particle phenomenology. Prerequisite: PHYSICS 330.

PHYSICS 351. Standard Model of Particle Physics. 3 Units.

Symmetries, group theory, gauge invariance, Lagrangian of the Standard Model, flavor group, flavor-changing neutral currents, CKM quark mixing matrix, GIM mechanism, rare processes, neutrino masses, seesaw mechanism, QCD confinement and chiral symmetry breaking, instantons, strong CP problem, QCD axion. Prerequisite: PHYSICS 330; PHYSICS 331 and PHYSICS 332 recommended.

PHYSICS 361. Advanced Topics in Radiative Processes and Stellar Astrophysics. 3 Units.

Astronomical data on stars, star clusters, interstellar medium, and the Milky Way galaxy. Theory of stellar structure; hydrostatic equilibrium, radiation balance, and energy production. Stellar formation, Jean's mass, and protostars. Evolution of stars to the main sequence and beyond to red giants, white dwarfs, neutron stars, and black holes. Supernovae and compact sources. Structure of the Milky Way: disk and spiral arms; dark matter and the halo mass; central bulge or bar; and black hole. Prerequisite: PHYSICS 221 or equivalent. Recommended: PHYSICS 260, PHYSICS 360.

PHYSICS 362. Advanced Extragalactic Astrophysics and Cosmology. 3 Units.

Observational data on the content and activities of galaxies, the content of the Universe, cosmic microwave background radiation, gravitational lensing, and dark matter. Models of the origin, structure, and evolution of the Universe based on the theory of general relativity. Test of the models and the nature of dark matter and dark energy. Physics of the early Universe, inflation, baryosynthesis, nucleosynthesis, and galaxy formation. Prerequisites: PHYSICS 210, PHYSICS 211, and PHYSICS 260 or PHYSICS 360.

PHYSICS 364. Advanced Gravitation. 3 Units.

Classical and quantum gravity in Anti-de Sitter spacetime (AdS). History and uses of AdS. Basic classical physics of AdS: metric, conformal structure, common coordinate systems. Black holes in AdS: thermodynamics, Hawking-Page transition. Classical fields in AdS: action of conformal group, singletons. Stability of AdS and positive energy theorems. Towards the holographic correspondence: geodesics and the UV-IR relation. AdS from supergravity. Recommended: PHYSICS 330, some familiarity with general relativity.

PHYSICS 372. Condensed Matter Theory I. 3 Units.

Fermi liquid theory, many-body perturbation theory, response function, functional integrals, interaction of electrons with impurities. Prerequisite: APPPHYS 273 or equivalent.

PHYSICS 373. Condensed Matter Theory II. 3 Units.

Superfluidity and superconductivity. Quantum magnetism. Prerequisite: PHYSICS 372.

PHYSICS 450. Lattice Gauge Theory. 3 Units.

This will be a systematic introduction to Lattice Gauge Theory building on the Wilsonian approach to Quantum Field Theory. Topics to be covered include: basics of the Wilsonian approach; Euclidean setup, Wilson loops and the strong coupling expansion; Hamiltonian setup; Abelian systems and electric-magnetic dualities; Finite Temperature behavior; Scalar matter, phase diagrams and emergent gauge symmetries; Lattice fermions. Numerical approaches.

PHYSICS 451. TOPICS IN STRING THEORY. 3 Units.

The course will cover several topics in modern string theory including aspects of 2d conformal field theory, mirror symmetry, geometric transitions and large N dualities, and moonshine. Other topics may be discussed as time and interests dictate. Prerequisites: No formal requirements, but a familiarity with quantum field theory at the level of the 330 sequence, and some moderate mathematical maturity, will be useful.

PHYSICS 490. Research. 1-15 Unit.

Open only to Physics graduate students, with consent of instructor. Work is in experimental or theoretical problems in research, as distinguished from independent study of a non-research character in 190 and 293.

PHYSICS 801. TGR Project. 0 Units.**PHYSICS 802. TGR Dissertation. 0 Units.**

Political Economics Courses

POLECON 230. Strategy Beyond Markets. 2 Units.

This course develops techniques and tools to use in firms' strategic interactions beyond the market environment. We'll examine firms' interactions with stakeholders, constituents, and institutions, including interest groups, legislatures, regulatory agencies, courts, international organizations, and the public. Topics covered in the class include: intellectual property, health care reform, carried interest in private equity, strategic corporate social responsibility, and beyond market strategy for start-ups. The goal is to develop integrated strategies for optimal firm performance that combine strategies within and beyond markets.

POLECON 231. Strategy Beyond Markets: Challenges and Opportunities in Developing Economies. 3 Units.

This course shares significant material with POLECON 230 and the goal of developing integrated strategies for optimal firm performance that combine elements within and beyond markets. POLECON 231 diverges from the base course to delve deeper into issues that are particularly salient for entrepreneurs in emerging and frontier markets. Using a combination of cases from developed and developing countries, we will expand the list of topics considered to include managing political risk and protecting the firm in the face of uncertain and discretionary regulatory environments. The objective is to provide a solid grounding in the techniques explored in 230, while refining skill sets and whetting appetites for investment in higher risk environments.

POLECON 232. Law and Economics for Corporate Strategy. 3 Units.

This course introduces students to the core issues of law and economics and their applications to managerial strategy. Markets and the legal environment are increasingly interrelated: issues such as antitrust, intellectual property, privacy rights, product regulation, and torts affect firms' profitability both directly through legal action and indirectly by determining the "rules of the game." Nor are companies simply reactive to legal and political forces; actions taken by managers in firms often propel issues before the public eye. For instance, electronic collection and collation of personal data has stimulated new concerns about privacy, while court decisions, new legislation, and public opinion have all played roles in determining what is acceptable. Such legal and political forces invariably necessitate changes in corporate strategy, and the effectiveness of corporate strategy often rests on managers' ability to anticipate, rather than simply react to, developments in the nonmarket environment. Cases and readings consider specific legal principles and how executives can anticipate, and take effective action with regards to, the threats and opportunities they present. The course will focus on legal doctrine within the United States, but will also consider the legal ramifications of corporate actions with regards to other nations and international law. The course also considers other important nonmarket issues, such as responding to pressure from independent interest groups and understanding how firms may influence the legislative process, though in less depth than Nonmarket Strategy. Students are expected to come to class with a thorough understanding of the both the legal issues involved and the economic considerations of the case under discussion. By the end of the course, students will have acquired a thorough understanding of the legal principles covered, as well as a strategic acuity regarding the appropriate market and nonmarket responses. Grades will be based on student's demonstration of this understanding through class participation and a final exam.

POLECON 239. MSx: Strategy Beyond Markets. 3 Units.

This course addresses managerial issues in the social, political, legal, and ethical environments of business. Cases and readings emphasize strategies to improve the performance of companies in light of their multiple constituencies, in both international and US environments. Most core courses focus on firms' interactions with customers, suppliers, and alliance partners in the form of mutually beneficial voluntary exchange transacted in markets. In contrast, this course considers the strategic interactions of firms with comparably important constituents, organizations, and institutions beyond markets. Issues considered include those involving activist and interest groups, the media, legislatures, regulatory and antitrust agencies, and international organizations such as the WTO. In many of the class sessions, we will draw on theoretical and empirical research in political economy, a field that is particularly relevant for understanding relationships between firms and governments, because (unlike most of economics) political economy focuses on interactions that are neither voluntary nor transacted via money.

POLECON 330. Law and Economics for Corporate Strategy. 3 Units.

This is an advanced version of the GSB's class on Strategy Beyond Markets. It is intended for students who have substantive experience working with/for governments, activist groups, the media, or heavily-regulated industries, and particularly those students with previous legal experience. The class may also be appropriate for students who have academic backgrounds in political science or public policy. Cases and readings consider specific legal principles (e.g., antitrust, fiduciary duty, intellectual property) and how executives can anticipate and take effective action with regards to the threats and opportunities they present. The course will focus on legal doctrine within the United States, but will also consider the legal ramifications of corporate actions with regards to other nations' legal doctrine and international law. By the end of the course, students are expected to acquire not only a thorough understanding of the legal principles covered, but also insight into the appropriate market-based and non-market-based responses.

POLECON 332. Managers and the Legal Environment. 4 Units.

To excel, managers and entrepreneurs must know how to operate successfully in the legal environment in which they must conduct business. This course addresses the legal aspects of business agreements and relationships. The course begins with an overview of the different forms of business organizations available, mergers and acquisitions, public and private offerings of securities, and the fiduciary duties of officers, directors and controlling shareholders. The course covers the US court system and the laws of contracts, torts, antitrust and intellectual property. The legal aspects of the employment relationship as they relate to the liability of corporations and managers for the acts of their employees, wrongful termination, discrimination, and sexual harassment will also be covered. Students who have a JD degree, or will receive a JD degree, from a U.S. university should not take this class. If you cannot attend a class, you must notify instructors before class.

POLECON 349. The Business World: Moral and Spiritual Inquiry through Literature. 3 Units.

This course uses novels and plays as a basis for examining the moral and spiritual aspects of business leadership and of the environment in which business is done. On the one hand literature is used as the basis for examining the character of business people, while on the other hand literature provides illumination of the cultural contexts of values and beliefs within which commercial activities take place in a global economy. The course is organized around the interplay of religious traditions and national identities. Classes are taught in a Socratic, discussion-based style, creating as much of a seminar atmosphere as possible. A two-text method is used, encouraging students to examine their own personal stories with as much care as the stories presented in the literature. This course will be graded on the basis of class participation and a final paper. There will be no exam.

POLECON 530. Law and Economics for Corporate Strategy. 3 Units.

This is an advanced version of the GSB's class on Strategy Beyond Markets. It is intended for students who have substantive experience working with/for governments, activist groups, the media, or heavily-regulated industries, and particularly those students with previous legal experience. The class may also be appropriate for students who have academic backgrounds in political science or public policy. Cases and readings consider specific legal principles (e.g., antitrust, fiduciary duty, intellectual property) and how executives can anticipate and take effective action with regards to the threats and opportunities they present. The course will focus on legal doctrine within the United States, but will also consider the legal ramifications of corporate actions with regards to other nations' legal doctrine and international law. By the end of the course, students are expected to acquire not only a thorough understanding of the legal principles covered, but also insight into the appropriate market-based and non-market-based responses.

POLECON 547. Intellectual Property and Its Effect on Business. 2 Units.

This course explores the impact intellectual property rights have on business decisions. We begin with a general background of intellectual property law including copyright, trademark, patent and trade secret. We will also cover quasi property rights such as database and privacy. Each of these distinct rights will be examined through a case methodology affording students an opportunity to gauge the relative strengths and weaknesses of a particular form of protection. As the value of intellectual property rises, the avenues of economic return increase. We will analyze various methods of maximizing such economic returns. Focus for this course is on the impact both technological innovation and intellectual property law have on business strategies. This is not a class designed to teach students the law of intellectual property. Rather, this course educates business decision makers on the impact intellectual property can have on the bottom line. This course employs a mixed lecture/case discussion format. We will have several sessions with lectures by visiting industry experts.

POLECON 555. New Opportunities in the Changing World of American Health Care. 1 Unit.

In this class, we will visit and analyze two health care organizations that are experimenting with innovative approaches to delivering care. The visits will highlight: nn- the new technologies that clinics and hospitals are using to improve health outcomes, reduce cost, and enhance customer service; nn- how clinics and hospitals are reorganizing the division of labor between physicians, nurses, and support workers to make optimal use of new technology; nn- the challenges of obtaining payment from an insurance system that has historically focused on the volume of services rather than quality or efficiency. nnnIn the first session, we will review how health care is financed in the U.S. and how the Affordable Care Act, the country's new health reform law, will change the finance and delivery of care starting in 2014. In the last session, we will discuss the two organizations that we visited, which aspects of their approaches are most (and least) likely to succeed, and which areas of the sector offer the greatest opportunities for the future. Students will be expected to participate in both visits and the discussions before and after them.

POLECON 571. The Future of Growth: Developed and Developing World. 2 Units.

The course deals with the recent (post war) sustained high growth in the developing world and its likely evolution and impact in the future. How are these kinds of growth rates possible? What accounts for the absence of growth in a part of the developing world? What are the key political ingredients? Attention will be given to the evolving global landscape surrounding this growth. What is the impact of this widening pattern of growth and are there natural brakes that may slow the process down or make it difficult for the non-G20 developing countries and their 1/3 of the world's population to start or sustain the high growth process. The class will attempt to identify and assess the impact of important global trends and challenges. Included in the latter will be governance issues. We will spend a little time on the impact of the 2008-2009 crisis, the transmission channels and lessons learned from the vantage point of developing countries.

POLECON 584. Managing Global Political Risk. 1 Unit.

In a globalized world, managers and investors are increasingly realizing that politics matter as much as economic fundamentals. Micro-level decisions made by local politicians in Brazil or India, national-level strategies of countries like China and Russia, and multi-national regimes, policies, and norms are all affecting global businesses in significant and often surprising ways. This course examines the full array of political risks confronting businesses today, from creeping expropriations to sudden shocks like national debt defaults and coups to emerging threats like cyber exploitation. Students will learn about impediments to assessing political risk and how to tackle them; develop strategies for managing political risk in a systematic way; and craft tools for mitigating the downside effects of political risk to business. Each session will include customized case studies and mini-simulations for students to walk in the shoes of senior managers confronting these challenges.

POLECON 670. Advanced Topics in Political Economy. 4 Units.

This is a topics class aimed at advanced students in political economy and related disciplines. It will consist of a combination of lectures and student presentations. Grading will be based on class participation and a research proposal/paper.

POLECON 676. Behavioral Political Economy. 4 Units.

This course examines organizational decision making in ways that depart from the "thin theory" of rationality in one of two respects. (1) The thin theory presumes that decision makers are fully rational, i.e., they are cognitively unconstrained. We will examine a variety of cognitive constraints and their effects on institutional behavior and policy outcomes. (2) The thin theory presumes individualistic preferences: people care only about their own payoffs. There is now substantial evidence that this assumption is sometimes inaccurate. We will study some of this literature. nnnMuch of the important work in this area has come not from political economy but from cognitive psychology and behavioral economics. Hence, we will spend between a third and a half of the quarter on micro-foundations. nnnThroughout the course, contrasts will be drawn between models based on the thin theory of rationality and less orthodox ones. Consequently, some familiarity with theories of rational choice is desirable. Any course on game theory or normative decision theory suffices. nnnAlthough the motivation for relaxing the thin theory has been largely empirical, the orientation of this course is heavily theoretical. Many of the theories that we will study are expressed as mathematical or computational models. Students are expected either to have a taste for formal reasoning or at least to tolerate it.

POLECON 680. Foundations of Political Economy. 3 Units.

This course provides an introduction to political economy with an emphasis on formal models of collective choice, public institutions, and political competition. Topics considered include voting theory, social choice, institutional equilibria, agenda setting, interest group politics, bureaucratic behavior, and electoral competition. Also listed as Political Science 351A.

POLECON 681. Economic Analysis of Political Institutions. 4 Units.

This course extends the foundations developed in P680 by applying techniques of microeconomic analysis and game theory to the study of political behavior and institutions. The techniques include information economics, games of incomplete information, sequential bargaining theory, repeated games, and rational expectations. The applications considered include agenda formation in legislatures, government formation in parliamentary systems, the implications of legislative structure, elections and information aggregation, lobbying, electoral competition and interest groups, the control of bureaucracies, interest group competition, and collective choice rules. Also listed as Political Science 351B.

POLECON 682. Testing Models of Governmental Decision-Making. 4 Units.

This course surveys applications of formal models to several stages of decision making, primarily in the U.S. national government and with an emphasis on the legislative branch. The course begins with explicit consideration of issues in philosophy of science and introduces an analytic framework to be applied to specific research throughout remaining sessions. Substantive topics and applications covered include strategies of committees, roll call voting, policy formation, effects of special rules, congressional-presidential relations, and congressional-agency relations. Students should have taken POLECON 680 and POLECON 681. Also listed as Political Science 351C.

Same as: POLISCI 351C.

POLECON 683. Political Development Economics. 4 Units.

This course surveys emerging research in political economics as it applies to developing societies, emphasizing both theoretical and empirical approaches. Topics will include: corruption and "forensic" political economics, institutional reform and democratization, ethnicity, conflict and public goods provision, and the role of trade and financial innovations in political development. The aim of the course is to bring students to the frontier of the field and develop their own research. Graduate level proficiency in microeconomics and empirical methods will be required.

POLECON 691. PhD Directed Reading. 1-15 Unit.

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, OIT 691, STRAMGT 691.

POLECON 692. PhD Dissertation Research. 1-15 Unit.

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, OIT 692, STRAMGT 692.

POLECON 802. TGR Dissertation. 0 Units.

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, OIT 802, STRAMGT 802.

Political Science Courses

POLISCI 1. Introduction to International Relations. 5 Units.

Approaches to the study of conflict and cooperation in world affairs. Applications to war, terrorism, trade policy, the environment, and world poverty. Debates about the ethics of war and the global distribution of wealth.

Same as: INTNLREL 1.

POLISCI 1Z. Introduction to International Relations. 5 Units.

Approaches to the study of conflict and cooperation in world affairs. Applications to war, terrorism, trade policy, the environment, and world poverty. Debates about the ethics of war and the global distribution of wealth.

POLISCI 2. Introduction to American National Government and Politics. 5 Units.

The role and importance of the ideal of democracy in the evolution of the American political system. American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) are examined against the backdrop of American culture and political history. The major areas of public policy in the current practice of the ideal of democracy.

Same as: AMSTUD 2.

POLISCI 3P. Justice. 4-5 Units.

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 136S, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307.

POLISCI 4. Introduction to Comparative Politics. 5 Units.

Why are some countries prone to civil war and violence, while others remain peaceful? Why do some countries maintain democratic systems, while others do not? Why are some countries more prosperous than others? This course will provide an overview of the most basic questions in the comparative study of political systems, and will introduce the analytical tools that can help us answer them.

POLISCI 10SC. American Foreign Policy in the 21st Century. 2 Units.

Some 20 years after the end of the Cold War and the collapse of the Soviet Union, the United States confronts a dizzying array of foreign policy challenges. The world in which we find ourselves is complex, contradictory, and highly uncertain. What role can and should the United States play in such a world? What are the major international challenges with which U.S. policymakers and the American people will have to contend in the immediate future and over the longer term? Given that the power of the United States is limited, how should we determine our priorities? Under what conditions should the United States be prepared to use force, and when is force inappropriate? What lessons have we learned from the wars in Iraq and Afghanistan? Can and should the United States provide the kind of global leadership that our political leaders tell us that we must? In this course we will explore the substance of U.S. foreign policy as well as the political considerations that influence both the making and the actual conduct of American diplomacy. Topics will include the challenges to policy associated with the proliferation of weapons of mass destruction, international terrorism, failing and failed states, and regional, interstate, and intrastate conflict. We will also examine how the changing distribution of power in the international system is likely to impact the United States and its allies. Finally, we will consider how domestic political considerations influence both the framing and the implementation of this country's foreign policy. In addition to the readings, students, operating in teams of three, will research and write a short policy memorandum on a topic the instructor designates. Students, each of whom will be assigned a particular role, will also take part in a 48-hour crisis simulation at the end of the course.

POLISCI 11N. The Rwandan Genocide. 3 Units.

Preference to freshmen. In 1994, more than 800,000 Tutsi and moderate Hutu Rwandans were killed in the most rapid genocide in history. What could bring humans to carry out such violence? Could it have been prevented? Why did no major power intervene to stop the killing? Should the U.N. be held accountable? What were the consequences for Central Africa? How have international actors respond to the challenges of reconstructing Rwanda? What happened to the perpetrators? Sources include scholarly and journalistic accounts.

POLISCI 12N. Climate Change and Conflict: Will Warming Lead to Warring?. 3 Units.

Policymakers and scholars are increasingly interested in whether climate change and its associated effects could contribute to the risk of violent conflict within and between countries. Will drought and rising temperatures lead to struggles over a dwindling supply of agricultural land? Will shortages of fresh water cause growing tension over access to rivers and lakes? Will rising sea levels cause mass migration from coastal areas, bringing people into conflict? Will social unrest arising from such stresses lead to violent efforts to topple governments or spill over across borders? In this seminar, we explore such questions as: How could the expected effects of climate change make civil or international conflicts more likely? What evidence is there that environmental factors contribute to violent conflicts, historically and today? What regions or countries are most at risk from these challenges, and why? Answering these questions requires that we not only think about the human and social impacts of climate change but also ask basic questions about what causes political violence within and between countries and how we can assess the contribution of different risk factors. Assignments will encourage students to learn more about the conflict risks in countries that interest them and to gain familiarity with some of the methods that political scientists use to explore these issues systematically. The connection between climate and conflict is relatively new area of inquiry, without many settled answers, so this seminar presents an opportunity to explore what we know, what we do not yet know, and what we can do to further our understanding of this issue going forward.

POLISCI 18SC. The Federal Government and the West. 2 Units.

Historical development and current status of the relationship between the U.S. federal government and the American West. Land ownership, natural resource management, agriculture, water, energy, and environmental quality.

POLISCI 19N. Politics of Energy Efficiency. 5 Units.

We will examine the political context of energy efficiency and climate change. Why are some countries, such as Japan and France, able to achieve high levels of energy efficiency, while others, such as the United States and Australia, struggle to do so? What political factors facilitate or impede energy efficiency policies? Why is international cooperation on climate change so difficult?

POLISCI 22SC. The Face of Battle. 2 Units.

Our understanding of warfare often derives from the lofty perspective of political leaders and generals: what were their objectives and what strategies were developed to meet them? This top-down perspective slights the experience of the actual combatants and non-combatants caught in the crossfire. This course focuses on the complexity of the process by which strategy is translated into tactical decisions by the officers and foot soldiers on the field of battle. We will focus on three battles in American history: Gettysburg (July 1863), the Battle of Little Bighorn (June 1876), and the Korengal Valley campaign in Afghanistan (2006-2010). In addition to reading major works on these battles and the conflicts in which they occurred, we will travel to Gettysburg, Pennsylvania, and the Little Bighorn battlefield in Montana. The course's battlefield tours are based on the "staff rides" developed by the Prussian Army in the mid-1800s and employed by the U.S. Army since the early 1900s. While at Stanford, students will conduct extensive research on individual participants at Gettysburg and Little Bighorn. Then, as we walk through the battlefield sites, students will brief the group on their subjects' experience of battle and on why they made the decisions they did during the conflict. Why did Lt. General Longstreet oppose the Confederate attack on the Union Army at Gettysburg? What was the experience of a military surgeon on a Civil War battlefield? Why did Custer divide his 7th Cavalry troops as they approached the Little Bighorn River? What was the role of Lakota Sioux women after a battle? Travel will be provided and paid by Sophomore College (except incidentals) and is made possible by the support of the Center for International Security and Cooperation (CISAC). The course is open to students from a range of disciplines; an interest in the topic is the only prerequisite.

POLISCI 24Q. Law and Order. 3 Units.

Preference to sophomores. The role of law in promoting social order. What is the rule of law? How does it differ from the rule of men? What institutions best support the rule of law? Is a state needed to ensure that laws are enforced? Should victims be allowed to avenge wrongs? What is the relationship between justice and mercy?

POLISCI 24SC. Conservatism and Liberalism in American Politics and Policy. 2 Units.

What influence do political ideologies have in American politics and government? In this course, students will study liberal and conservative ideology in American politics and public policy from the mid-20th century onward. The course begins with an examination of ideology in the American public and then considers ideology among political activists and elected officials, focusing on members of Congress and the president. The course will also cover the ideological polarization of political elites and its impact on the policy-making process. In the final part of the course, through a series of policy case studies, students will also evaluate how well certain public policies have met the ideological goals of their liberal and conservative sponsors. The course will include several lunches and dinners with guest speakers.

POLISCI 27N. Thinking Like a Social Scientist. 3 Units.

Preference to freshman. This seminar will consider how politics and government can be studied systematically: the compound term Political SCIENCE is not an oxymoron. The seminar will introduce core concepts and explore a variety of methodological approaches. Problems of inference from evidence will be a major concern. Classic and contemporary research studies will be the basis of discussion throughout.

POLISCI 28N. The Changing Nature of Racial Identity in American Politics. 3 Units.

Almost one-third of Americans now identify with a racial/ethnic minority group. This seminar examines the relationship between racial identity, group consciousness, and public opinion. Topics include the role of government institutions in shaping identification, challenges in defining and measuring race, attitudes towards race-based policies, and the development of political solidarity within racial groups. Particular attention will be paid to the construction of political identities among the growing mixed-race population.

POLISCI 34S. Religion and Politics. 3 Units.

What is the relationship between religion, international conflict and peace? This course takes up this question by examining contemporary thinking in international relations, conflict management, political science, and religious ethics. Topics to be taken up include: whether religion is fundamentally a positive or negative force in conflict management; how do major world religions think about war and peace; the relationship of religion to terrorism; whether thinking about religion in international conflict requires its own categories, distinct from models concerning ethnic or nationalistic communities in conflict; varieties of religious militancy; religion's potential role in conflict resolution; among others. Through these investigations, students will better grasp the contemporary scholarship on the place of religion in international conflict and peace building. Readings are interdisciplinary in nature, and include case studies. No prerequisite. Open to all majors/minors, and will be particularly beneficial to students in International Relations, Religious Studies, International Policy Studies, and Political Science, as well as students with specific regional political interests where the themes of the course are especially relevant (e.g., Middle East, Latin America, Russia and Eastern Europe, Africa, and so on).

POLISCI 42Q. The Rwandan Genocide. 5 Units.

Between April and July of 1994 more than 800,000 Rwandans, mostly Tutsi but also moderate Hutus, were killed in the most rapid genocide the world has ever known. The percentage of Rwandans killed in a single day of the genocide was ten times greater than the percentage of Americans killed in the entire Vietnam war. What could bring humans to plan and carry out such an orgy of violence? Could it have been prevented? Why did the United States or any other major power not intervene to stop the killing? To what extent should the United Nations be held accountable for the failure to end the genocide? What were the consequences of the genocide for the region of Central Africa? How did international actors respond to the challenges of reconstructing Rwanda after the killings? What has happened to the perpetrators of the genocide? This course surveys scholarly and journalistic accounts of the genocide to seek answers to these questions. This seminar will be residence based in Crothers, but will be open to Crothers residents and non-residents.

POLISCI 45N. Civil War Narratives. 3 Units.

Preference to freshmen. Focus is on a new statistics-based theory to account for the susceptibility of countries to civil war. How to write a theory-based historical narrative. Students write and present an original historical narrative focusing on how well the theory explains a particular history and on the importance of factors that are absent from the theory in explaining civil war onsets.

POLISCI 49N. Dictators. 3 Units.

This course explores how dictators perpetuate their rule through the use of ideology, coercion and political institutions. We will examine existing typologies of authoritarian rule and investigate examples of dictatorship from across the world, both contemporary and historical. Using works of fiction in addition to historical and political science texts, we will consider why some people resist authoritarian rule while others do not and the conditions under which dictators are overthrown.

POLISCI 110C. America and the World Economy. 5 Units.

Examination of contemporary US foreign economic policy. Areas studied: the changing role of the dollar; mechanism of international monetary management; recent crises in world markets including those in Europe and Asia; role of IMF, World Bank and WTO in stabilizing world economy; trade politics and policies; the effects of the globalization of business on future US prosperity. Enroll in PoliSci 110C for WIM credit. Same as: INTNLREL 110C, POLISCI 110X.

POLISCI 110D. War and Peace in American Foreign Policy. 5 Units.

(Students not taking this course for WIM, register for 110Y.) The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period. Same as: INTNLREL 110D, POLISCI 110Y.

POLISCI 110X. America and the World Economy. 5 Units.

Examination of contemporary US foreign economic policy. Areas studied: the changing role of the dollar; mechanism of international monetary management; recent crises in world markets including those in Europe and Asia; role of IMF, World Bank and WTO in stabilizing world economy; trade politics and policies; the effects of the globalization of business on future US prosperity. Enroll in PoliSci 110C for WIM credit. Same as: INTNLREL 110C, POLISCI 110X.

POLISCI 110Y. War and Peace in American Foreign Policy. 5 Units.

(Students not taking this course for WIM, register for 110Y.) The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period. Same as: INTNLREL 110D, POLISCI 110D.

POLISCI 114D. Democracy, Development, and the Rule of Law. 5 Units.

Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts. Same as: INTNLREL 114D, IPS 230, POLISCI 314D.

POLISCI 114S. International Security in a Changing World. 5 Units.

This class surveys the most pressing international security issues facing the world today and includes an award-winning two-day international crisis simulation led by Stanford faculty and former policymakers. Guest lecturers have included former Secretary of Defense William Perry, former U.S. Ambassador to Afghanistan Gen. Karl Eikenberry, and former Secretary of State Condoleezza Rice. Major topics covered: cyber security, nuclear proliferation, insurgency and intervention, terrorism, the Arab Spring, and the future of U.S. leadership in the world. No prior background in international relations is necessary. Same as: IPS 241.

POLISCI 116. History of Nuclear Weapons. 5 Units.

The development of nuclear weapons and policies. How existing nuclear powers have managed their relations with each other. How nuclear war has been avoided so far and whether it can be avoided in the future.

POLISCI 118P. U.S. Relations in Iran. 5 Units.

The evolution of relations between the U.S. and Iran. The years after WW II when the U.S. became more involved in Iran. Relations after the victory of the Islamic republic. The current state of affairs and the prospects for the future. Emphasis is on original documents of U.S. diplomacy (White House, State Department, and the U.S. Embassy in Iran). Research paper.

POLISCI 120B. Campaigns, Voting, Media, and Elections. 4-5 Units.

This course examines the theory and practice of American campaigns and elections. First, we will attempt to explain the behavior of the key players -- candidates, parties, journalists, and voters -- in terms of the institutional arrangements and political incentives that confront them. Second, we will use current and recent election campaigns as "laboratories" for testing generalizations about campaign strategy and voter behavior. Third, we examine selections from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. As well, we'll explore issues of electoral reform and their more long-term consequences for governance and the political process. Same as: COMM 162, COMM 262.

POLISCI 120C. What's Wrong with American Government? An Institutional Approach. 5 Units.

How politicians, once elected, work together to govern America. The roles of the President, Congress, and Courts in making and enforcing laws. Focus is on the impact of constitutional rules on the incentives of each branch, and on how they influence law. Fulfills the Writing in the Major Requirement for Political Science majors. Same as: PUBLPOL 124.

POLISCI 121. Urban Politics. 5 Units.

The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances. Prerequisite: POLISCI 2 or consent of instructor. Same as: AMSTUD 121Z, PUBLPOL 133, URBANST 111.

POLISCI 121L. Racial-Ethnic Politics in US. 5 Units.

This course examines various issues surrounding the role of race and ethnicity in the American political system. Specifically, this course will evaluate the development of racial group solidarity and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. We will also examine the politics surrounding the Multiracial Movement and the development of racial identity and political attitudes in the 21st century. Stats 60 or Econ 1 is strongly recommended. Same as: AMSTUD 121L, CSRE 121L, PUBLPOL 121L.

POLISCI 122. Introduction to American Law. 3-5 Units.

For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general. Same as: AMSTUD 179, PUBLPOL 302A.

POLISCI 123. Politics and Public Policy. 4-5 Units.

Analysis of how public policy is made in the U.S. Theories from political science and public policy studies are assessed using case studies in contemporary policy areas, including tax, social welfare, and environmental policy. Each student also studies a policy issue of their own choice. Same as: PUBLPOL 101, PUBLPOL 201.

POLISCI 124A. THE AMERICAN WEST. 4 Units.

The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America; its history, geology, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students will examine several themes fundamental to understanding the region: borders (including how we define the West), space and distance, Native Americans, water, and boom and bust cycles. Same as: AMSTUD 124A, ARTHIST 152, ENGLISH 124, HISTORY 151.

POLISCI 124R. The Federal System: Judicial Politics and Constitutional Law. 5 Units.

The impact of constitutional rules on policy making in the U.S. with a focus on structural issues such as separation of powers and federalism. Topics such as: the role of unelected judges in a democracy; the rule of law; and the constitutionality of the war in Iraq. Prerequisites: 2 or equivalent, and sophomore standing. Fulfills Writing in the Major requirement for PoliSci majors.

POLISCI 124S. Civil Liberties: Judicial Politics and Constitutional Law. 5 Units.

The role and participation of courts, primarily the U.S. Supreme Court, in public policy making and the political system. Judicial activity in civil liberty areas (religious liberty, free expression, race and sex discrimination, political participation, and rights of persons accused of crime). Prerequisites: 2 or equivalent, and sophomore standing.

POLISCI 125S. Chicano/Latino Politics. 5 Units.

The political position of Latinos and Latinas in the U.S.. Focus is on Mexican Americans, with attention to Cuban Americans, Puerto Ricans, and other groups. The history of each group in the American polity; their political circumstances with respect to the electoral process, the policy process, and government; the extent to which the demographic category Latino is meaningful; and group identity and solidarity among Americans of Latin American ancestry. Topics include immigration, education, affirmative action, language policy, and environmental justice.

Same as: CHILATST 125S.

POLISCI 125V. The Voting Rights Act. 5 Units.

Focus is on whether and how racial and ethnic minorities including African Americans, Asian Americans, and Latinos are able to organize and press their demands on the political system. Topics include the political behavior of minority citizens, the strength and effect of these groups at the polls, the theory and practice of group formation among minorities, the responsiveness of elected officials, and the constitutional obstacles and issues that shape these phenomena.

Same as: AFRICAAM 125V, CSRE 125V.

POLISCI 127P. Economic Inequality and Political Dysfunction. 5 Units.

This course will examine how two of the defining features of contemporary U.S. politics, economic inequality and political polarization, relate to each other and to Congressional gridlock. The reading list will focus on several books recently authored by preeminent political scientists on this important topic. The course will cover a range of topics, including the disparity in political representation of the preferences of the affluent over those of the poor, the origins of Congressional polarization, the influence of money in politics, budgetary politics, immigration policy, and electoral and institutional barriers to reform.

POLISCI 131L. Modern Political Thought: Machiavelli to Marx and Mill. 5 Units.

This course offers an introduction to the history of Western political thought from the late fifteenth through the nineteenth centuries. We will consider the development of ideas like individual rights, government by consent, and the protection of private property. We will also explore the ways in which these ideas continue to animate contemporary political debates. Thinkers covered will include: Niccolò Machiavelli, Thomas Hobbes, John Locke, Jean-Jacques Rousseau, Edmund Burke, John Stuart Mill, and Karl Marx. Same as: ETHICSOC 131S.

POLISCI 132C. Family, Friends, and Groups: The Ethics of Association. 4 Units.

The practice of associating with others is a fundamental part of human existence. We cultivate friendships, we grow up in families, we work for nonprofit associations or businesses, we join social movements and sport clubs, and we participate in political associations with our fellow citizens. This seminar explores the ethical dimensions of association. What grounds a right to freedom of association? Do we have, beyond a right, also a duty to participate in associational life? Do we have special obligations towards our friends, family members, or fellow-citizens that we do not have toward strangers? To what extent should the internal life of private associations, such as families or churches, be regulated by the state? Should the state support, through tax-exemptions and subsidies, the nonprofit associations of civil society? Can a state exclude non-citizens, such as immigrants, in the same way in which a private club excludes non-members? These questions have wide-ranging implications for contemporary political and legal debates.

Same as: ETHICSOC 183M.

POLISCI 133. Ethics and Politics of Public Service. 5 Units.

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.

Same as: CSRE 178, ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, PUBLPOL 103D, URBANST 122.

POLISCI 134L. Introduction to Environmental Ethics. 5 Units.

This course examines the following ethical questions about the environment: (1) how we ought morally to relate to animals; (2) attempts to expand the circle of moral concern beyond animals to other parts of nature; (3) economic approaches to environmental problems (e.g. cost-benefit analysis) and the justification of the precautionary principle; and (4) our moral obligations to future people. The class will conclude by considering whether the theoretical tools that we have examined help to address the problems of climate change, one of the most pressing environmental challenges of our time.

Same as: ETHICSOC 178M, ETHICSOC 278M, PHIL 178M, PHIL 278M.

POLISCI 134P. Contemporary Moral Problems. 5 Units.

As individuals and as members of societies, we make choices that can be assessed from the moral point of view. What choices should we make, and how should we make them? Topics will include: Is it ok to buy iThings when others lack basic nutrition? Does a preference for the taste of meat justify killing and eating animals? Under what circumstances, if any, is abortion morally permissible? Should employers and schools be allowed to favor minority candidates? Is a ban on trans fat morally impermissible paternalism? Readings for these and other topics will be drawn from contemporary philosophers such as Frances Kamm, Jeff McMahan, Robert Nozick, Debra Satz, Tommie Shelby, Peter Singer, and Judith Jarvis Thomson.

Same as: ETHICSOC 185M, PHIL 72.

POLISCI 135P. Moral Limits of the Market. 4 Units.

Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases.

Same as: ETHICSOC 174A, PHIL 174A, PHIL 274A.

POLISCI 136R. Introduction to Global Justice. 4 Units.

Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.

Same as: ETHICSOC 136R, INTNLREL 136R, PHIL 76, POLISCI 336.

POLISCI 136S. Justice. 4-5 Units.

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307.

POLISCI 140L. China in World Politics. 5 Units.

The implications of the rise of China in contemporary world politics and for American foreign policy, including issues such as arms and nuclear proliferation, regional security arrangements, international trade and investment, human rights, environmental problems, and the Taiwan and Tibet questions.

Same as: POLISCI 340L.

POLISCI 141S. Politics of India. 5 Units.

This course provides an overview of the political institutions, processes, and issues in post-independence India. The purpose is not merely to familiarize students to the politics of India, but also to facilitate a good understanding of, and stimulate keen interest in, the subject. The course hopes to build a strong foundation for acquiring a deeper understanding of Indian politics. The subject-matter will be approached from a comparative perspective, and students are encouraged to think about the topics covered with a view on cases beyond India.

POLISCI 142B. British Politics. 5 Units.

The impact on the world's oldest democracy of major changes in policies, politics, and the institution of government made over the last two decades by Margaret Thatcher and Tony Blair.

POLISCI 143S. Comparative Corruption. 5 Units.

Causes, effects, and solutions to various forms of corruption in business and politics in both developing regions (e.g. Asia, E. Europe) and developed ones (the US and the EU).

Same as: SOC 113.

POLISCI 147. Comparative Democratic Development. 5 Units.

Social, cultural, political, economic, and international factors affecting the development and consolidation of democracy in historical and comparative perspective. Individual country experiences with democracy, democratization, and regime performance. Emphasis is on the third wave of democratization over the past three decades and contemporary possibilities for democratic change. (Diamond)

Same as: SOC 112.

POLISCI 148. Chinese Politics: The Transformation and the Era of Reform. 5 Units.

Overview of the reforms in China since 1978 that have made its economy one of the fastest growing in the world yet it still has the Chinese Communist Party at the helm wielding one party rule. Key questions addressed include the following: What has been the process and challenges of reform that have reshaped China's economic landscape? What are the political consequences of these dramatic economic changes? Why has the CCP remained strong while other communist regimes have failed? Markets have spread but what is the role of the state? What are the opportunities for political participation and prospects for political change? Materials will include readings, lectures, and selected films. This course has no prerequisites. (Graduate students register for 348.) This fulfills the Writing in the Major requirement for PoliSci majors.

Same as: POLISCI 348.

POLISCI 149S. Islam, Iran, and the West. 5 Units.

Changes in relative power and vitality of each side. The relationship in the Middle Ages revolved around power and domination, and since the Renaissance around modernity. Focus is on Muslims of the Middle East.

POLISCI 149T. Middle Eastern Politics. 5 Units.

Topics in contemporary Middle Eastern politics including institutional sources of underdevelopment, political Islam, electoral authoritarianism, and the political economy of oil.

POLISCI 152. Introduction to Game Theoretic Methods in Political Science. 3-5 Units.

Concepts and tools of non-cooperative game theory developed using political science questions and applications. Formal treatment of Hobbes' theory of the state and major criticisms of it; examples from international politics. Primarily for graduate students; undergraduates admitted with consent of instructor.

Same as: POLISCI 352.

POLISCI 155. Applied Quantitative Research in Political Science. 5 Units.

Introduction to methods of research design and data analysis used in quantitative political research. The course will cover issues that are typically missing from intro stats and econometrics courses but are central to applied political science research. Methods topics include: experimental and observational approaches to estimating causal effects, measuring political preferences from data, working with big data, and effective data presentation and visualization. These topics will be introduced using data sets from American politics, international relations, and comparative politics. The course will include an introduction to the widely used R statistical programming language. Satisfies quantitative methods requirement for the Political Science Research Honors Track. Prerequisites: Stat 60, Econ 102A, or instructor consent.

Same as: PUBLPOL 157.

POLISCI 204. Sanela Diana Jenkins International Human Rights Colloquium. 1 Unit.

This course focuses on the relationship between global health and human rights. The course will feature leading human rights scholars and practitioners from around the world. We will examine the conceptual linkages between global health and human rights and explore both the promise of the field and the challenges inherent in implementing its norms on the ground. Health and human rights are interrelated in multiple ways: human rights abuses have negative health consequences; health policies and programs can enhance or hinder human rights; and health outcomes are improved by fulfilling the full range of human rights. Stanford students may enroll in the course for 1 Unit credit based upon attendance. The Series is also open to the Stanford community and the general public.

Same as: FEMGEN 205X, INTNLREL 110, IPS 271, POLISCI 304.

POLISCI 211. Political Economy of East Asia. 3-5 Units.

(Formerly 117.) Comparative and international political economy of E. and S.E. Asia. Industrial development and the Asian miracle, economic integration, regional cooperation, the Asian financial crisis, and contemporary challenges.

Same as: INTNLREL 159.

POLISCI 211P. International Security in South Asia: Pakistan, India and the United States.. 5 Units.

This course critically examines the dynamics of continuity and change in American interactions with nuclear armed adversaries, India and Pakistan. It also aims to sensitize the students to Indian and Pakistani perspectives on regional security and the mainsprings of their interactions with United States. There will be an in-depth exploration of the impact of the Indo-US strategic partnership for evolving balance of power in South Asia.

POLISCI 213S. A Post American Century? American Foreign Policy in a Uni-Multi-unipolar World. 5 Units.

This seminar examines recent policy from Bush to Obama in the context of two classic traditions: Wilsonianism vs. Realism. What is the role of the international system, what is the weight of domestic forces like ideology, history and identity? Prerequisite: junior or senior standing.

POLISCI 214R. Challenges and Dilemmas in American Foreign Policy. 5 Units.

This seminar will examine the complexities and trade offs involved in foreign policy decision-making at the end of the twentieth century and the dawn of the post-9/11 era. Students will analyze dilemmas confronting policymakers through case studies including post-conflict reconstruction and state-building, nuclear proliferation, democratization and peace negotiation. The seminar will conclude with a 48-hour crisis simulation. For advanced undergraduates and graduate students. Application for enrollment required. Pick up application in Political Science Department (Encina West 100).

Same as: POLISCI 314R.

POLISCI 215. Explaining Ethnic Violence. 5 Units.

What is ethnic violence and why does it occur? Should elite machinations, the psychology of crowds, or historical hatreds be blamed? Case studies and theoretical work on the sources and nature of ethnic violence. Counts as Writing in the Major for PoliSci majors.

POLISCI 215F. Nuclear Weapons and International Politics. 5 Units.

Why do states develop nuclear weapons and why do some states, that have the technological capacity to build nuclear weapons, refrain from doing so? What are the strategic consequences of new states deploying nuclear weapons? What is the relationship between the spread of nuclear energy and the spread of nuclear weapons? We will study the political science and history literature on these topics. Research paper required.

Same as: POLISCI 315F.

POLISCI 216E. International History and International Relations Theory. 5 Units.

The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system.

Same as: HISTORY 306E, POLISCI 316.

POLISCI 216G. International Organizations and Institutions. 5 Units.

What is the appropriate balance between government regulation and market freedom? Introduction to important theoretical and policy debates in international political economy. Topics include: political economy of trade; exchange rate policy; the liberalization of trade and finance; the global move to openness; development, debt and aid; and the role of international organizations. Discussion of application of academic insights to key policy debates, including whether governments should offset the welfare costs of globalization, whether the IMF and World Bank should be reformed to meet the needs of the 21st century, and how the international community should respond to financial crises. Students will research, write and orally present policy briefs on specific policy questions.

POLISCI 218J. Japanese Politics and International Relations. 5 Units.

The domestic politics, political economy, and international relations of contemporary Japan. The role of political parties, the bureaucracy, and private actors. Economic development and challenges. Relations with the United States and East Asia.

Same as: POLISCI 318J.

POLISCI 218S. Political Economy of International Trade and Investment. 5 Units.

How domestic and international politics influence the economic relations between countries. Why do governments promote or oppose globalization? Why do countries cooperate economically in some situations but not others? Why do countries adopt bad economic policies? Focus on the politics of international trade and investment. Course approaches each topic by examining alternative theoretical approaches and evaluate these theories using historical and contemporary evidence from many geographical regions around the world. Prerequisites: ECON 1A, ECON 1B, and a statistics course.

Same as: INTNLREL 118S.

POLISCI 218T. Terrorism. 5 Units.

The course is primarily concerned with variation in terrorist group behavior and therefore concentrates on issues on the organizational level of analysis. We address questions such as: Why and how do terrorist groups emerge? Who joins terrorist groups? Which organizational challenges do terrorists face and how do they solve them? Why are some groups more lethal than others? Why has suicide terrorism increased in the 2000s? How and why do groups decline? Topics such as counterterrorism, macrostructural determinants of terrorism, or the effects of terrorism will be treated only peripherally.

POLISCI 219. Directed Reading and Research in International Relations. 1-10 Unit.

May be repeated for credit.

POLISCI 222S. Topics in Constitutional History. 5 Units.

Ideas of rights in American history emphasizing the problem of defining constitutional rights, the free exercise of religion, freedom of expression, and the contemporary debate over rights talk and the idiom of human rights. Same as: AMSTUD 251, HISTORY 251G.

POLISCI 223F. Ethics and Politics. 5 Units.

A discussion of critical ethical issues faced by American and other national leaders. Case studies of 20th- and 21st-century decisions, including those involved with violence (e.g., the use of drone missiles or torture to extract information from enemies), whistle-blowing in government (e.g., decisions to expose what was known about 9/11 in advance), disobedience of those in authority (e.g., Daniel Ellsberg's release of the Pentagon Papers), policies on distributing scarce goods in society (e.g. rationing health care), policies involving justice and equal treatment (e.g. affirmative action or gay marriage), policies regarding life and death (e.g., abortion and euthanasia laws), and others. Students will debate some of the key issues, relying on ethical principles that will be discussed each week, and develop their own case studies.

Same as: ETHICSOC 202R.

POLISCI 223R. Pivotal Moments in American Institutions and Public Law, 1781-Present. 5 Units.

American lawyers and policymakers work today in a system of institutions that are strikingly unique in comparative and historical terms. With some exceptions, that system is characterized by relatively stable political and legal institutions, low levels of explicit corruption, high bureaucratic capacity in public organizations, and relatively open, impersonal access to political, policymaking, and legal institutions. Although these characteristics are now too often taken for granted, the process through which they emerged remains remarkably opaque. In the 1780s under the Articles of Confederation, the United States was a poor developing country on the fringe of the Atlantic community with limited capacity and a striking inability to provide basic public goods, such as security. One hundred years later, it well along the way to becoming the richest nation in the world. How did this transformation occur? Drawing on judicial opinions, legal scholarship, political science, economics, and history, this course explores how institutions evolved to create such a system. It traces the problem of institutional development through several critical periods in the history of American public law, including the emergence of the Constitution, the events leading up to and following the Civil War, the Progressive era, World War II, 1964-75, and the emergence of the modern administrative state. Although the primary focus is on the American experience, we place these developments in comparative context as well.

POLISCI 224H. Heretics to Headscarves. 5 Units.

Broad survey of religious discrimination and persecution in the Euro-American tradition, and the rise of tolerationist ideas and practices, from Augustine's rationale for punishing dissenters to the current European debates over the regulation of Islam. Topics include the Inquisition; struggles over toleration in Reformation Europe; the impact of Locke, Bayle, and Spinoza; Spanish practice in the Americas; and the American constitutional experiment in free exercise.

POLISCI 224L. The Psychology of Communication About Politics in America. 4 Units.

Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research. Same as: COMM 164, COMM 264, PSYCH 170.

POLISCI 225C. Fixing US Politics: Political Reform in Principle and Practice. 5 Units.

Americans have been trying to perfect their system of government since its founding. Despite some notable achievements, there is a pervasive sense of frustration with political reform. This course will examine the goals and political consequences of American political regulation. Topics will vary by year to some degree but examples include campaign finance, lobbying, term limits, conflict of interest regulation, direct democracy, citizen commissions and assemblies, vote administration problems, transparency, and open meeting laws. Political Science 2 required or by special permission of the instructor.

POLISCI 226. Race and Racism in American Politics. 5 Units.

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

Same as: AMSTUD 226, CSRE 226, POLISCI 326.

POLISCI 226U. Approaches to American Legal History. 5 Units.

Legal history, once primarily devoted to exploring legal doctrines and key judicial opinions and thus of interest mainly to legal scholars and lawyers, now resembles historical writing more generally; the study of legal ideas and practices is increasingly integrated with social, intellectual, cultural, and political history. Recent writings in American legal history; how the field reflects developments in historical writing; and how the use of legal materials affects understanding of American history.

Same as: HISTORY 253D.

POLISCI 228. The Democratic Faith: An Empirical Analysis of Citizenship. 5 Units.

Political scientists have now accumulated evidence over more than fifty years documenting the limits of ordinary citizens; their minimal levels of information about public affairs; their minimal capacity for thinking coherently about political choices; their limited understanding of and commitment to core democratic values; their susceptibility to racism and intolerance of many forms. These findings, taken all in all, seem to add up to a conclusion that citizens are incapable of discharging the duties of democratic citizenship. It seems, these results suggest, that the best contribution that they can make to a democratic politics is to stay out of the way. The aim of this course to examine a paradox: how can it simultaneously be true that findings of citizen incompetence and intolerance are valid and that citizens nonetheless can be capable of discharging the duties of democratic citizenship. In particular, this course will concentrate on three main topics: racism in contemporary politics; commitment to civil liberties and civil rights, and multiculturalism. The course will require intensive reading and analysis of quantitative research on public opinion surveys and experiments.

POLISCI 229. Directed Reading and Research in American Politics. 1-10 Unit.

May be repeated for credit.

POLISCI 229R. Running Time: Running and Winning Elections. 5 Units.

This course aims to teach you the nuts-n-bolts of political campaigning. How do campaign consultants organize a campaign, draft a strategy, come up with a theme, target voters, raise money, write and produce ads and get voters to the ballot? Drawing upon academic writings in the fields of political science and communication, articles by campaign consultants, TV ads, and documentaries, you will learn all about how elections are won and lost. You will master, and yet learn to be critical of, current electoral politics with their emphasis on money, polls, and sound bites. Finally, you will harness this new knowledge to do some good, by promoting a worthy cause.

Same as: COMM 163.

POLISCI 231. High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests. 3-5 Units.

Normative political theory combined with positive political theory to better explain how major texts may have responded to and influenced changes in formal and informal institutions. Emphasis is on historical periods in which catastrophic institutional failure was a recent memory or a realistic possibility. Case studies include Greek city-states in the classical period and the northern Atlantic community of the 17th and 18th centuries including upheavals in England and the American Revolutionary era.

Same as: CLASSHIS 332.

POLISCI 232T. The Dialogue of Democracy. 4-5 Units.

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized. Same as: AMSTUD 137, COMM 137W, COMM 237, POLISCI 332T.

POLISCI 233F. Science, Technology, and Society in the Face of the Looming Disaster. 3-5 Units.

The major topic will be the indeterminacy regarding the survival of humankind. With the advent of the atomic bomb humankind became potentially the maker of its own demise. Will combine a number of significant case studies (environmental disasters, industrial catastrophes, threat of nuclear devastation, technological risks) with the lessons drawn from a form of literature that is at the intersection of STS and the Humanities, in particular the early warnings made by such thinkers as Ivan Illich, Martin Heidegger, Hans Jonas, Günther Anders, and Hannah Arendt. Same as: FRENCH 228, ITALIAN 228.

POLISCI 234P. Deliberative Democracy and its Critics. 3-5 Units.

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion. Same as: AMSTUD 135, COMM 135, COMM 235, COMM 335, POLISCI 334P.

POLISCI 235J. Creative Political Thinking: Three Cases. 4-5 Units.

How can we account for creativity and innovation in political thinking? Are these qualities simply a product of political expediency and rhetorical urgency, or do they also depend on qualities of mind and historical contingencies that have to be studied individually? This class will explore these questions with three noteworthy cases: Niccolò Machiavelli, John Locke, and James Madison. Extensive reading in both primary writings and secondary sources. Same as: HISTORY 305G, POLISCI 335J.

POLISCI 235J. Creative Political Thinking: Three Cases. 5 Units.

Same as: POLISCI 335J.

POLISCI 236. Theories of Civil Society, Philanthropy, and the Nonprofit Sector. 5 Units.

What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? How do nongovernmental organizations operate domestically and globally? The historical development and modern structure of civil society emphasizing philanthropy and nonprofit sector. Readings in political philosophy, political sociology, and public policy. WIM for PoliSci students who enroll in PoliSci 236S.

Same as: ETHICSOC 232T, POLISCI 236S.

POLISCI 236S. Theories of Civil Society, Philanthropy, and the Nonprofit Sector. 5 Units.

What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? How do nongovernmental organizations operate domestically and globally? The historical development and modern structure of civil society emphasizing philanthropy and nonprofit sector. Readings in political philosophy, political sociology, and public policy. WIM for PoliSci students who enroll in PoliSci 236S.

Same as: ETHICSOC 232T, POLISCI 236.

POLISCI 237M. Politics and Evil. 5 Units.

In the aftermath of the Second World War, the political theorist Hannah Arendt wrote that the problem of evil will be the fundamental question of postwar intellectual life in Europe. This question remains fundamental today. The acts to which the word "evil" might apply—genocide, terrorism, torture, human trafficking, etc.—persist. The rhetoric of evil also remains central to American political discourse, both as a means of condemning such acts and of justifying preventive and punitive measures intended to combat them. In this advanced undergraduate seminar, we will examine the intersection of politics and evil by considering works by philosophers and political theorists, with occasional forays into film and media. The thinkers covered will include: Hannah Arendt, Immanuel Kant, Niccolò Machiavelli, Friedrich Nietzsche, and Michael Walzer.

Same as: ETHICSOC 237M.

POLISCI 238. Political Disagreement. 5 Units.

Disagreement is a permanent and ubiquitous feature of political life. Furthermore, political disagreement can stem from a wide range of sources. Perhaps most importantly, democratic citizens disagree at the level of values: they disagree about the proper form of the good life as well as the human interests that political laws and institutions ought to serve. This course will focus primary attention on the implications of such value-based disagreement for how we should think about political justice.

POLISCI 238C. Governing the 21st Century World. 5 Units.

How is our world governed, and by whom? How are decisions made on the most important issues of our time, including climate change, global inequality, and protection of human rights? A traditional answer to these questions is that only official governments have the power to govern -to set and enforce rules on these and other issues. In contrast, this class explores the emerging roles of non-state actors, including NGOs, for-profit corporations, informal social movements, and international institutions, in governing our world and making decisions on these and other key issues. We will also study the ways that the governance by non-state actors challenges our ideas of democracy, legitimacy, and justice. The class thus seeks to bring together perspectives and tools from both empirical social science and political theory in order to better understand this important phenomenon.

POLISCI 238T. History of International Relations Thought. 5 Units.

In this course, we will examine the intellectual origins of contemporary theories and approaches to international politics. In particular, we will trace the classical and early modern roots of contemporary realism, idealism, and cosmopolitanism. We will also address some of the enduring normative and empirical questions about international politics: (1) What is the basis of political power and authority? (2) What rights and obligations do individuals have? (3) What rights and obligations do states have? (4) What are the causes of conflict? (5) What are the prospects for enduring peace? Thinkers covered may include: Thucydides, Cicero, Augustine, Aquinas, Grotius, Hobbes, Kant, Morgenthau, and Waltz.

Same as: INTNLREL 136.

POLISCI 239. Directed Reading and Research in Political Theory. 1-10 Unit.

May be repeated for credit.

POLISCI 240C. The Comparative Political Economy of Post-Communist Transitions. 3-4 Units.

Dominant theoretical perspectives of comparative democratization and marketization; focus is on the political economy of transition in Eastern Europe and Eurasia while comparing similar processes in Latin America and Asia. Topics include: meanings of democracy, synergy between democracies and markets, causes of the collapse of communism, paths to political liberalization and democracy, civil society, constitutions, parliaments, presidents, the rule of law, electoral systems, market requirements, strategies of reform, the Russian experience of market building, exporting democracy and the market, and foreign aid and assistance.

POLISCI 240T. Democracy, Promotion, and American Foreign Policy. 5 Units.

Theoretical and intellectual debates about democracy promotion with focus on realism versus liberalism. The evolution of these debates with attention to the Cold War, the 90s, and American foreign policy after 9/11. Tools for and bureaucratic struggles over how to promote democracy. Contemporary case studies.

POLISCI 241C. Campaigns and Elections in Israel. 5 Units.

Employing a theoretical and comparative framework, this seminar focuses on campaigns and elections in Israel. The seminar is divided into two interrelated sections. In the first section, we will cover voting behavior. Here we will look at Israel's election laws, its political culture, socialization and cleavages, turnout, political sophistication, ideology, partisanship and issue voting. In the second half of the semester we will examine elections from the perspective of candidates and campaign strategists. The topics we will focus on include election laws, public and private campaign finance, campaign strategy, media, polling, and advertising. In examining these topics, we will cover a variety of elections campaigns since Israel's birth, with an emphasis on the most recent ones.

Same as: JEWISHST 271C.

POLISCI 241S. Spatial Approaches to Social Science. 5 Units.

This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space. Same as: ANTHRO 130D, ANTHRO 230D, URBANST 124.

POLISCI 242A. Civil War and Peace Processes. 5 Units.

The objective of this course is to provide students with the wherewithal to acquire a good understanding of civil war. We would survey some of the main issues and debates as reflected in the last three decades of prolific research on the subject. While our emphasis will be on understanding key theoretical arguments advanced in the literature, we also hope to familiarize students with the advances made by researchers to test the empirical validity of their arguments. The lectures are structured around four broad themes derived from the literature: causes, conflict dynamics, consequences and post-conflict trajectory. While these four themes are not exhaustive, we will cover most of the critical issues highlighted in the literature.

POLISCI 242C. Corruption, Conflict and Financial Crisis: Contemporary Global Politics and Journalism. 5 Units.

This course offers students interested in contemporary global politics a unique introduction to the critical analysis of current events through the lens of award-winning non-fiction writing. Each week, we will explore a new political issue crucial to understanding today's world by reading some of the most gripping (and best written!) first- and second-hand narratives of these events, as recounted by journalists, academics and documentarians working in the field. Topics will include: global poverty, the overthrow of authoritarian regimes, terrorism, genocide and crimes against humanity, the Israel-Palestinian conflict, financial crises, and political corruption. In class, students will discuss the readings and learn to apply major social scientific theories to systematically analyze these complex political issues. Through this course, students will not only gain exposure to some exemplary writing on topics of current importance, but also acquire the skills and tools necessary to understand some of the most intractable and interesting problems in the world today.

POLISCI 243C. The Political Economy of Development. 5 Units.

Why are some countries rich and others poor? What explains the economic policies that governments adopt, and how do those policies affect economic performance? Why some policies persist over time while other don't? We will use tools from political science and economics to explore these important questions. The readings for this course will include conceptual and historical material from many geographic regions. As we explore the fascinating relationship between politics and economics, we will evaluate hypotheses according to robust and sound empirical evidence.

POLISCI 243E. Political Economy of Development in Rural India. 5 Units.

When and why do farmers accept, manipulate, or overthrow the pre-existing distribution of political, economic and social power? This course will help students utilize political economy theories and methods of analysis to understand the institutional dynamics of change in rural India. First, it will provide students with a deeper understanding of the nature of change in a particularly dynamic, varied and influential state with a mainly-rural population: India. Second, it will focus on three major topics in political economy: control over land; taxation and investment; and anti-state resistance. The course will draw from political science's examinations of how and why states succeed, fail, and conduct major reforms by examining these questions in the context of rural India's small farmers. Indian political institutions are simultaneously lauded as extremely stable, highly-prone to decentralized rebellion, and models for innovation from which the rest of the world has much to learn. Overall, this course will expect students to engage with the political economy literature, both historical and contemporary, in order to develop two short research papers and present well-argued positions in class-wide debates on the nature of political, economic and social change driven by and for small farmers in rural India.

POLISCI 243L. Politics of Economic Reform. 5 Units.

Description to come.

POLISCI 244. An Introduction to Political Development. 5 Units.

Political development concerns the evolution of three categories of institutions: (1) the state itself; (2) the rule of law; and (3) accountable government. Focus on many of the major theories of political development, beginning with some classic social theorists and continuing up through the present.

POLISCI 244P. Religion and Politics in Latin America. 5 Units.

The purpose of this seminar is to introduce students to the complexities of Politics and Religion in Latin America from a historical and sociological perspective. The seminar will examine the evolution of Church-State-Society-Community-Individual relations in Latin America, from Independence to present day. Topics will include new definitions of religious freedom, debates concerning the so called "lay State" (Estado laico), secularization, and the role of the lay or secular state and religious groups in the development of democratic or authoritarian regimes, as well as civil and religious freedoms, particularly sexual and reproductive rights and bioethical issues (contraception, abortion euthanasia, stem cell research, homosexual rights and homophobia). The course will combine a series of reading tests designed to introduce central questions of the texts with a critical discussion of the assigned source material, in order to develop a knowledgeable approach and research interest in the student.

POLISCI 244T. Organized Crime and Democracy in Latin America. 5 Units.

Scholars and policy analysts have long emphasized the strength of the rule of law as a key determinant of economic development and social opportunity. They also agree that the rule of law requires an effective and accountable legal system. The growth of transnational organized crime is a major impediment, however, to the creation of effective and accountable legal systems. This seminar examines how and why transnational criminal organizations have developed in Latin America, explores why they constitute a major challenge to the consolidation of democratic societies, economic development and individual rights. It also examines the efforts of governments to combat them, with a focus on the experiences of Mexico, Colombia, and Brazil. The course examines these cases in order to draw lessons, by pointing to both successes and failures, of use to policy analysts, legal scholars, and practitioners.

Same as: INTNLREL 152, IPS 247.

POLISCI 244U. Political Culture. 5 Units.

Implications of cultural coordination and cultural difference for political processes and institutions. Prerequisite: 4 or equivalent.

Same as: POLISCI 344U.

POLISCI 245E. Middle East Politics. 5 Units.

This course offers a thematic approach to the study of Middle Eastern politics. We will overview the major areas of political science research on the contemporary Middle East while simultaneously building empirical knowledge about the politics of individual countries in the region. Topics to be covered include: state capacity and democracy; economic development and mineral resources; the politics of religion and gender; international relations and civil conflict; terrorism and revolution.

POLISCI 245R. Politics in Modern Iran. 5 Units.

Modern Iran has been a smithy for political movements, ideologies, and types of states. Movements include nationalism, constitutionalism, Marxism, Islamic fundamentalism, social democracy, Islamic liberalism, and fascism. Forms of government include Oriental despotism, authoritarianism, Islamic theocracy, and liberal democracy. These varieties have appeared in Iran in an iteration shaped by history, geography, proximity to oil and the Soviet Union, and the hegemony of Islamic culture.

POLISCI 246P. The Dynamics of Change in Africa. 4-5 Units.

Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.

Same as: AFRICAST 301A, POLISCI 346P.

POLISCI 247G. Governance and Poverty. 5 Units.

Poverty relief requires active government involvement in the provision of public services such as drinking water, healthcare, sanitation, education, roads, electricity and public safety. Failure to deliver public services is a major impediment to the alleviation of poverty in the developing world. This course will use an interdisciplinary approach to examining these issues, bringing together readings from across the disciplines of political science, economics, law, medicine and education to increase understanding of the complex causal linkages between political institutions, the quality of governance, and the capacity of developing societies to meet basic human needs. Conceived in a broadly comparative international perspective, the course will examine cross-national and field-based research projects, with a particular focus on Latin America and Mexico.

POLISCI 248L. Political-Economy of Crime and Violence in Latin America. 5 Units.

Latin America has experienced a significant wave of crime and violence in the past two decades. Criminal organizations have penetrated State organizations and are increasingly embedded in society. These organizations have created wide and solid networks all over the region, including the United States. The activities of criminal organizations in Latin America have eroded the social fabric, weakened State institutions, have caused a significant number of deaths, and have created strong disincentives for productive investment. The course aims at acquainting students with the political-economy of crime and violence. It focuses on understanding the incentives that individuals face for engaging in criminal activities; the incentives that criminal organizations have to use violence against each other, against citizens, and against State forces; the incentives that citizens face to side, or not, with criminal organizations; and the responses that States have structured against crime and violence. The course focuses on Latin America, but also learns from the case of the United States for which there is a relatively more extensive literature. The course makes extensive use of available data on the topic and emphasizes the learning of adequate methods for measuring these phenomena.

Same as: POLISCI 348L.

POLISCI 248S. Latin American Politics. 5 Units.

Fundamental transformations in Latin America in the last two decades: why most governments are now democratic or semidemocratic; and economic transformation as countries abandoned import substitution industrialization policies led by state intervention for neoliberal economic policies. The nature of this dual transformation.

Same as: POLISCI 348S.

POLISCI 249. Directed Reading and Research in Comparative Politics. 1-10 Unit.

May be repeated for credit.

POLISCI 249P. Introduction to Israeli Politics. 5 Units.

This course aims to introduce students to Israel's political system and its major actors. We will survey Israel's political landscape, both chronologically and thematically, covering the major issues and conflicts which have dominated Israeli politics since its inception.

Same as: INTNLREL 163, JEWISHST 279P.

POLISCI 259. Directed Reading and Research in Political Methodology. 1-10 Unit.

May be repeated for credit.

POLISCI 291. Political Institutions. 5 Units.

This course focuses on the role of political institutions in shaping policy outcomes around the world, with special attention to the United States. Students will become familiar with a wide range of theoretical approaches to the study of institutions, and they will learn the basics of applied quantitative empirical analysis. Enrollment is restricted to Political Science Research Honors Track students.

POLISCI 292. Political Behavior. 5 Units.

This research seminar will survey important topics in the study of mass political behavior including public opinion, political participation, partisanship and voting. Open only to students in the Political Science Research Honors Track.

POLISCI 293. Research Design. 5 Units.

This course is designed to teach students how to design a research project. The course emphasizes the specification of testable hypotheses, the building of data sets, and the inferences from that may be drawn from that evidence. It is only open to students in the PS Research Honors Track.

POLISCI 299A. Honors Thesis. 1-5 Unit.

Students conduct independent research work towards a senior honors thesis. Restricted to students in the Research Track Honors Program in Political Science.

POLISCI 299B. Honors Thesis. 1-5 Unit.

Students conduct independent research work towards a senior honors thesis.

POLISCI 299C. Honors Thesis. 1-5 Unit.

Students conduct independent research work towards a senior honors thesis.

POLISCI 299Q. Honors Thesis Seminar. 3-5 Units.

Restricted to Research Honors Track students who have completed PoliSci 291, 292, and 293.

POLISCI 304. Sanela Diana Jenkins International Human Rights Colloquium. 1 Unit.

This course focuses on the relationship between global health and human rights. The course will feature leading human rights scholars and practitioners from around the world. We will examine the conceptual linkages between global health and human rights and explore both the promise of the field and the challenges inherent in implementing its norms on the ground. Health and human rights are interrelated in multiple ways: human rights abuses have negative health consequences; health policies and programs can enhance or hinder human rights; and health outcomes are improved by fulfilling the full range of human rights. Stanford students may enroll in the course for 1 Unit credit based upon attendance. The Series is also open to the Stanford community and the general public.

Same as: FEMGEN 205X, INTNLREL 110, IPS 271, POLISCI 204.

POLISCI 314D. Democracy, Development, and the Rule of Law. 5 Units.

Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts. Same as: INTNLREL 114D, IPS 230, POLISCI 114D.

POLISCI 314R. Challenges and Dilemmas in American Foreign Policy. 5 Units.

This seminar will examine the complexities and trade offs involved in foreign policy decision-making at the end of the twentieth century and the dawn of the post-9/11 era. Students will analyze dilemmas confronting policymakers through case studies including post-conflict reconstruction and state-building, nuclear proliferation, democratization and peace negotiation. The seminar will conclude with a 48-hour crisis simulation. For advanced undergraduates and graduate students. Application for enrollment required. Pick up application in Political Science Department (Encina West 100).

Same as: POLISCI 214R.

POLISCI 315F. Nuclear Weapons and International Politics. 5 Units.

Why do states develop nuclear weapons and why do some states, that have the technological capacity to build nuclear weapons, refrain from doing so? What are the strategic consequences of new states deploying nuclear weapons? What is the relationship between the spread of nuclear energy and the spread of nuclear weapons? We will study the political science and history literature on these topics. Research paper required.

Same as: POLISCI 215F.

POLISCI 316. International History and International Relations Theory. 5 Units.

The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system.

Same as: HISTORY 306E, POLISCI 216E.

POLISCI 318J. Japanese Politics and International Relations. 5 Units.

The domestic politics, political economy, and international relations of contemporary Japan. The role of political parties, the bureaucracy, and private actors. Economic development and challenges. Relations with the United States and East Asia.

Same as: POLISCI 218J.

POLISCI 319. Directed Reading in International Relations. 1-10 Unit.

May be repeated for credit.

POLISCI 323. Pivotal Moments in American Institutions and Public Law, 1781-Present. 5 Units.

(Same as Law 680) American lawyers and policymakers work today in a system of institutions that are strikingly unique in comparative and historical terms. With some exceptions, that system is characterized by relatively stable political and legal institutions, low levels of explicit corruption, high bureaucratic capacity in public organizations, and relatively open, impersonal access to political, policymaking, and legal institutions. Although these characteristics are now too often taken for granted, the process through which they emerged remains remarkably opaque. In the 1780s under the Articles of Confederation, the United States was a poor developing country on the fringe of the Atlantic community with limited capacity and a striking inability to provide basic public goods, such as security. One hundred years later, it well along the way to becoming the richest nation in the world. How did this transformation occur? Drawing on judicial opinions, legal scholarship, political science, economics, and history, this course explores how institutions evolved to create such a system. It traces the problem of institutional development through several critical periods in the history of American public law, including the emergence of the Constitution, the events leading up to and following the Civil War, the Progressive era, World War II, 1964-75, and the emergence of the modern administrative state. Although the primary focus is on the American experience, we place these developments in comparative context as well.

POLISCI 323R. The Press and the Political Process. 4-5 Units.

(Graduate students register for COMM 260.) The role of mass media and other channels of communication in political and electoral processes.

Same as: COMM 160, COMM 260.

POLISCI 324. Graduate Seminar in Political Psychology. 1-3 Unit.

For students interested in research in political science, psychology, or communication. Methodological techniques for studying political attitudes and behaviors. May be repeated for credit.

Same as: COMM 308.

POLISCI 326. Race and Racism in American Politics. 5 Units.

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

Same as: AMSTUD 226, CSRE 226, POLISCI 226.

POLISCI 326T. The Politics of Education. 5 Units.

America's public schools are government agencies, and virtually everything about them is subject to political authority--and thus to decision through the political process. This seminar is an effort to understand the politics of education and its impacts on the nation's schools. Our focus is on the modern era of reform, with special attention to the most prominent efforts to bring about fundamental change through accountability (including No Child Left Behind), school choice (charter schools, vouchers), pay for performance, and more and more to the politics of blocking that has made genuine reform so difficult to achieve.

POLISCI 327. Minority Behavior and Representation. 5 Units.

Politics of minorities in the U.S. Topics include: historic and contemporary struggles of Latinos, African Americans, and gays and lesbians for political power and social acceptance; group-level public opinion and electoral behavior; scholarship on group influence in the policy making process and policy issues of importance; and the jurisprudence shaping minority political access and civil rights.

POLISCI 329. Directed Reading and Research in American Politics. 1-10 Unit.

May be repeated for credit.

POLISCI 330A. Classical Seminar: Origins of Political Thought. 4-5 Units.

Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change. Same as: CLASSHIS 133, CLASSHIS 333, PHIL 176A, PHIL 276A.

POLISCI 332. Topics in Political Philosophy. 5 Units.

Leading ideas in *A Theory of Justice*, *Political Liberalism*, and *The Law of Peoples*.

Same as: PHIL 372D.

POLISCI 332T. The Dialogue of Democracy. 4-5 Units.

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized. Same as: AMSTUD 137, COMM 137W, COMM 237, POLISCI 232T.

POLISCI 333. Rational and Social Agency. 2-5 Units.

Contemporary discussions of practical reason, individual rational agency, planning agency, diachronic agency, intention, belief, intentional action, shared agency, identification and self-governance. Tentative list of authors whose work will be studied includes: Michael Bratman, Margaret Gilbert, Richard Holton, Christine Korsgaard, Alfred Mele, Kieran Setiya, Scott Shapiro, Michael Smith, David Velleman, Jay Wallace, and Gary Watson. Same as: PHIL 377.

POLISCI 333S. Marx. 2-4 Units.

This course examines the works of a thinker who radically transformed the ways that we think about modern society. Marx saw fundamental problems with capitalist societies, including: un-freedom, alienation, inequality, and bureaucratization. He developed a theory to account for these problems. Our task will be to read his works critically and to evaluate their contributions to our understanding the relationship between politics, social structure, knowledge and human agency. We will also be especially interested in comparing his view with alternative diagnoses of the problems of modern capitalist societies, especially those of Max Weber and John Rawls.

Same as: PHIL 339.

POLISCI 334. Philanthropy and Civil Society. 1-3 Unit.

Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units.

Same as: EDUC 374, SOC 374.

POLISCI 334P. Deliberative Democracy and its Critics. 3-5 Units.

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.

Same as: AMSTUD 135, COMM 135, COMM 235, COMM 335, POLISCI 234P.

POLISCI 335J. Creative Political Thinking: Three Cases. 5 Units.

Same as: POLISCI 235J.

POLISCI 335J. Creative Political Thinking: Three Cases. 4-5 Units.

How can we account for creativity and innovation in political thinking? Are these qualities simply a product of political expediency and rhetorical urgency, or do they also depend on qualities of mind and historical contingencies that have to be studied individually? This class will explore these questions with three noteworthy cases: Niccolo Machiavelli, John Locke, and James Madison. Extensive reading in both primary writings and secondary sources.

Same as: HISTORY 305G, POLISCI 235J.

POLISCI 336. Introduction to Global Justice. 4 Units.

Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.

Same as: ETHICSOC 136R, INTNLREL 136R, PHIL 76, POLISCI 136R.

POLISCI 336S. Justice. 4-5 Units.

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S, PUBLPOL 103C, PUBLPOL 307.

POLISCI 337S. Seminar on Liberation Technologies. 1 Unit.

This one-unit seminar will present speakers relevant in a variety of ways to how various forms of information technology are being used to defend human rights, improve governance, deepen democracy, empower the poor, promote economic development, protect the environment, enhance public health, and pursue a variety of other social goods. Same as: CS 546.

POLISCI 337T. Designing Liberation Technology. 3-4 Units.

Small project teams work with NGOs to design new technologies for promoting development and democracy. Students conduct observations to identify needs, generate concepts, create prototypes, and test their appropriateness. Some projects may continue past the quarter toward full-scale implementation. Taught through the Hasso Plattner Institute of Design at Stanford (<http://dschool.stanford.edu>). Enrollment limited. Application required. Prerequisites: consent of instructor(s). Design Institute class; see <http://dschool.stanford.edu>.

POLISCI 338E. The Problem of Evil in Literature, Film, and Philosophy. 3-5 Units.

Conceptions of evil and its nature and source, distinctions between natural and moral evil, and what belongs to God versus to the human race have undergone transformations reflected in literature and film. Sources include Rousseau's response to the 1755 Lisbon earthquake; Hannah Arendt's interpretation of Auschwitz; Günther Anders' reading of Hiroshima; and current reflections on looming climatic and nuclear disasters. Readings from Rousseau, Kant, Dostoevsky, Arendt, Anders, Jonas, Camus, Ricoeur, Houellebecq, Girard. Films by Lang, Bergman, Losey, Hitchcock. Same as: FRENCH 265.

POLISCI 339. Directed Reading and Research in Political Theory. 1-5 Unit.

May be repeated for credit.

POLISCI 340L. China in World Politics. 5 Units.

The implications of the rise of China in contemporary world politics and for American foreign policy, including issues such as arms and nuclear proliferation, regional security arrangements, international trade and investment, human rights, environmental problems, and the Taiwan and Tibet questions.

Same as: POLISCI 140L.

POLISCI 344. Politics and Geography. 3-5 Units.

The role of geography in topics in political economy, including development, political representation, voting, redistribution, regional autonomy movements, fiscal competition, and federalism.

POLISCI 344U. Political Culture. 5 Units.

Implications of cultural coordination and cultural difference for political processes and institutions. Prerequisite: 4 or equivalent.

Same as: POLISCI 244U.

POLISCI 346P. The Dynamics of Change in Africa. 4-5 Units.

Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.

Same as: AFRICAST 301A, POLISCI 246P.

POLISCI 347D. Rebooting Government with Design Thinking. 3-4 Units.

Students apply tools of human-centered design to issues of government performance. Small project teams work with NGO and government partners (in the U.S. and abroad) on concrete design challenges focused on issues such as how to deliver services more effectively and ensure that citizens' voices are heard. Students identify needs, generate concepts, create prototypes, and test their appropriateness. Taught through the Hasso Plattner Institute of Design at Stanford (<http://dschool.stanford.edu>). Enrollment limited. Application required. Prerequisites: consent of instructor(s).

Same as: PUBLPOL 347D.

POLISCI 348. Chinese Politics: The Transformation and the Era of Reform. 5 Units.

Overview of the reforms in China since 1978 that have made its economy one of the fastest growing in the world yet it still has the Chinese Communist Party at the helm wielding one party rule. Key questions addressed include the following: What has been the process and challenges of reform that have reshaped China's economic landscape? What are the political consequences of these dramatic economic changes? Why has the CCP remained strong while other communist regimes have failed? Markets have spread but what is the role of the state? What are the opportunities for political participation and prospects for political change? Materials will include readings, lectures, and selected films. This course has no prerequisites. (Graduate students register for 348.) This fulfills the Writing in the Major requirement for PoliSci majors.

Same as: POLISCI 148.

POLISCI 348L. Political-Economy of Crime and Violence in Latin America. 5 Units.

Latin America has experienced a significant wave of crime and violence in the past two decades. Criminal organizations have penetrated State organizations and are increasingly embedded in society. These organizations have created wide and solid networks all over the region, including the United States. The activities of criminal organizations in Latin America have eroded the social fabric, weakened State institutions, have caused a significant number of deaths, and have created strong disincentives for productive investment. The course aims at acquainting students with the political-economy of crime and violence. It focuses on understanding the incentives that individuals face for engaging in criminal activities; the incentives that criminal organizations have to use violence against each other, against citizens, and against State forces; the incentives that citizens face to side, or not, with criminal organizations; and the responses that States have structured against crime and violence. The course focuses on Latin America, but also learns from the case of the United States for which there is a relatively more extensive literature. The course makes extensive use of available data on the topic and emphasizes the learning of adequate methods for measuring these phenomena.

Same as: POLISCI 248L.

POLISCI 348S. Latin American Politics. 5 Units.

Fundamental transformations in Latin America in the last two decades: why most governments are now democratic or semidemocratic; and economic transformation as countries abandoned import substitution industrialization policies led by state intervention for neoliberal economic policies. The nature of this dual transformation.

Same as: POLISCI 248S.

POLISCI 349. Directed Reading and Research in Comparative Politics. 1-10 Unit.

May be repeated for credit.

POLISCI 350A. Political Methodology I. 5 Units.

Introduction to probability and statistical inference, with applications to political science and public policy. Prerequisite: elementary calculus.

POLISCI 350B. Political Methodology II. 5 Units.

Understanding and using the linear regression model in a social-science context; properties of the least squares estimator; inference and hypothesis testing; assessing model fit; presenting results for publication; consequences and diagnosis of departures from model assumptions; outliers and influential observations, graphical techniques for model fitting and checking; interactions among exploratory variables; pooling data; extensions for binary responses.

Same as: PUBLPOL 303B.

POLISCI 350C. Political Methodology III. 3-5 Units.

Models for discrete outcomes, time series, measurement error, and simultaneity. Introduction to nonlinear estimation, large sample theory.

Prerequisite: 150B/350B.

POLISCI 351A. Foundations of Political Economy. 3 Units.

Introduction to political economy with an emphasis on formal models of collective choice, public institutions, and political competition. Topics include voting theory, social choice, institutional equilibria, agenda setting, interest group politics, bureaucratic behavior, and electoral competition.

POLISCI 351B. Economic Analysis of Political Institutions. 4 Units.

Applying techniques such as information economics, games of incomplete information, sequential bargaining theory, repeated games, and rational expectations of microeconomic analysis and game theory to political behavior and institutions. Applications include agenda formation in legislatures, government formation in parliamentary systems, the implications of legislative structure, elections and information aggregation, lobbying, electoral competition and interest groups, the control of bureaucracies, interest group competition, and collective choice rules.

POLISCI 351C. Testing Models of Governmental Decision-Making. 4 Units.

This course surveys applications of formal models to several stages of decision making, primarily in the U.S. national government and with an emphasis on the legislative branch. The course begins with explicit consideration of issues in philosophy of science and introduces an analytic framework to be applied to specific research throughout remaining sessions. Substantive topics and applications covered include strategies of committees, roll call voting, policy formation, effects of special rules, congressional-presidential relations, and congressional-agency relations. Students should have taken POLECON 680 and POLECON 681. Also listed as Political Science 351C.

Same as: POLECON 682.

POLISCI 352. Introduction to Game Theoretic Methods in Political Science. 3-5 Units.

Concepts and tools of non-cooperative game theory developed using political science questions and applications. Formal treatment of Hobbes' theory of the state and major criticisms of it; examples from international politics. Primarily for graduate students; undergraduates admitted with consent of instructor.

Same as: POLISCI 152.

POLISCI 353A. Workshop in Statistical Modeling. 1-2 Unit.

Theoretical aspects and empirical applications of statistical modeling in the social sciences. Guest speakers. Students present a research paper.

Prerequisite: 350B or equivalent.

POLISCI 353C. Workshop in Statistical Modeling. 1-2 Unit.

Continuation of 353A. May be repeated for credit. Prerequisite: 353A and B.

POLISCI 357. Sampling and Surveys. 5 Units.

The importance of sample surveys as a source of social science data including public opinion, voting, welfare programs, health, employment, and consumer behavior. Survey design, sampling theory, and estimation. Nonresponse, self-selection, measurement error, and web survey methods. Prerequisite: 350B or equivalent.

POLISCI 359. Advanced Individual Study in Political Methodology. 1-10 Unit.

May be repeated for credit.

POLISCI 362. New Economics of Organization. 5 Units.

Survey of economic approaches to organization, emphasizing theory and application, with attention to politics.

POLISCI 400. Dissertation. 1-10 Unit.**POLISCI 404. Dispute Resolution in International Economic Law. 1 Unit.**

(Same as LAW 356.) Topics include: theoretical work on international trade and investment disputes; empirical work on WTO dispute resolution and the efficacy of developing country participation; and legal analysis of current, prominent disputes in the WTO and under international investment treaties. Substantial paper required. May be repeated for credit.

POLISCI 410A. International Relations Theory, Part I. 5 Units.

First of a three-part graduate sequence. History of international relations, current debates, and applications to problems of international security and political economy.

POLISCI 410B. International Relations Theory, Part II. 5 Units.

Second of a three-part graduate sequence. History of international relations theory, current debates, and applications to problems of international security and political economy. Prerequisite: 410A.

POLISCI 410C. Research in International Relations. 5 Units.

Third of a three-part graduate sequence. Focus is on developing research papers begun in 410A or B, and exploring active areas of research in the field. Prerequisite: 410B.

POLISCI 411A. Workshop in International Relations. 1-2 Unit.

For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.

POLISCI 411B. Workshop in International Relations. 1-2 Unit.

For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.

POLISCI 412. The Politics and Economics of Modern Europe. 3-5 Units.

What are the implications of European integration for social and economic policy and outcomes? In this course, we will examine how EU membership has altered the democratic politics of Europe, with a special focus on policymaking during Europe's most recent financial crisis.

POLISCI 420A. American Political Institutions. 5 Units.

Theories of American politics, focusing on Congress, the presidency, the bureaucracy, and the courts.

POLISCI 420B. Topics in American Political Behavior. 4-5 Units.

For graduate students with background in American politics embarking on their own research. Current research in American politics, emphasizing political behavior and public opinion. Possible topics: uncertainty and ambivalence in political attitudes, heterogeneity in public opinion, the structure of American political ideology, political learning, the media as a determinant of public opinion, and links between public opinion and public policy.

POLISCI 420C. Discovery in American Politics. 5 Units.

What are the "novel facts" being generated in the study of American politics, and how are these discoveries being made? Emphasis on strengths and limitations of emerging methodologies and review of the substantive contributions they yield. Student-led replication of extant research and development of original research ideas a key component of the course. Prerequisites: 420A,B.

POLISCI 421K. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives. 4 Units.

The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions. Same as: COMM 339, PSYCH 231.

POLISCI 422. Workshop in American Politics. 1-2 Unit.

Research seminar. Frontiers in mass political behavior. Sources include data sets from the 2004 election cycle. Prerequisite: 420B or equivalent. Course may be repeated for credit.

POLISCI 423A. The Laboratory of the Study of American Values I. 1-5 Unit.

Designed for graduate students who are writing dissertations about American public opinion. Students participate in all phases of the research process and include questions on nationally representative surveys. Enrollment is limited to members of the Laboratory for the Study of American Values.

POLISCI 423B. The Laboratory of the Study of American Values II. 1-5 Unit.

Designed for graduate students who are writing dissertations about American public opinion. Students participate in all phases of the research process and include questions on nationally representative surveys. Enrollment is limited to members of the Laboratory for the Study of American Values.

POLISCI 423C. The Laboratory of the Study of American Values III. 1-5 Unit.

Designed for graduate students who are writing dissertations about American public opinion. Students participate in all phases of the research process and include questions on nationally representative surveys. Enrollment is limited to members of the Laboratory for the Study of American Values.

POLISCI 425. Political Communication. 1-5 Unit.

An overview of research in political communication with particular reference to work on the impact of the mass media on public opinion and voting behavior. Limited to Ph.D. students. Prerequisite: 260 or consent of instructor. Same as: COMM 360G.

POLISCI 426S. Theories of Racism in American Politics: A Critique. 0 Units.**POLISCI 427R. Race and Racism in American Politics. 5 Units.**

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

POLISCI 430A. Wealthy Hellas. 4-5 Units.

Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.

POLISCI 430B. Wealthy Hellas. 1-5 Unit.

Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.

POLISCI 432R. Selections in Modern Political Thought. 5 Units.

This graduate-level seminar will explore selections from the canon of Western political thought from the late fifteenth through nineteenth centuries. Throughout the course, we will engage in close textual readings of individual thinkers and consider some of the larger questions raised by political modernity. The readings will expose students to the republican, liberal, conservative, and democratic traditions that had a formative influence on the United States. The thinkers covered will include: Niccolò Machiavelli, John Locke, Jean-Jacques Rousseau, Edmund Burke, Publius (Alexander Hamilton, James Madison, and John Jay), and Alexis de Tocqueville.

POLISCI 433. Workshop in Political Theory. 1-2 Unit.

For graduate students. May be repeated for credit.

POLISCI 434. Egalitarianism. 5 Units.

This seminar will explore different theories of equality in contemporary political philosophy. Topics include: the currency of equality (equality of what?); equality versus sufficiency or prioritarianism; the relationship between equality and responsibility; the value of equality; and different interpretations of equality of opportunity. Readings will be drawn from the work of Elizabeth Anderson, G.A. Cohen, Ronald Dworkin, Thomas Nagel, Derek Parfit, John Rawls, Thomas Scanlon, Amartya Sen, and others.

POLISCI 435R. Political Realism. 3-5 Units.

This seminar will explore various articulations of political realism in their historical contexts. Realism is generally taken to be a pragmatic approach to a political world marked by the competition for material interests and the struggle for power. Yet beyond a shared critique of idealism and an insistence on the priority and autonomy of the political, realists tend to have very different normative visions and political projects. We will consider the works of several political realists from the history of political and international relations thought, including: Thucydides, Machiavelli, Hobbes, Carr, Niebuhr, and Morgenthau. Same as: PHIL 372R.

POLISCI 436R. Amartya Sen's capability theory. 2-4 Units.

Amartya Sen's pioneering work attempts to open up economics to missing informational and evaluative dimensions. This seminar will explore Sen's "capability approach" and its implications for the study of economics, gender, and justice. It will look at different ways that the capability approach has been developed, in particular, by Martha Nussbaum, but also by other political philosophers. Same as: PHIL 378.

POLISCI 437. Autonomy. 5 Units.**POLISCI 440A. Theories in Comparative Politics. 5 Units.**

Required of Political Science Ph.D. students with comparative politics as first or second concentration; others by consent of instructor. Theories addressing major concerns in the comparative field including democracy, regime change, the state, revolutions, national heterogeneity, and economic performance.

POLISCI 440B. Political Economy of Development. 5 Units.

Required of Political Science Ph.D. students with comparative politics as a first or second concentration; others by consent of the instructor. The origins of political and economic institutions and their impact on long run outcomes for growth and democracy. Emphasis is on the analysis of causal models, hypothesis testing, and the quality of evidence.

POLISCI 440C. Methods in Comparative Politics. 5 Units.

Required of Political Science Ph.D. candidates with comparative politics as a first or second concentration; others by consent of instructor. Current methodological standards in comparative politics. Students develop their own research design that meets these standards.

POLISCI 440D. Workshop in Comparative Politics. 1-2 Unit.

Faculty, guest speakers, and graduate students conducting research in comparative politics present work-in-progress. Graduate students may enroll for up to 5 total units apportioned by quarter. Auditors welcome. Graduate students whose major or minor field is comparative politics must make at least one presentation to the seminar. Course may be repeated for credit.

POLISCI 441L. Grad Seminar on Middle Eastern Politics. 5 Units.

Survey of major topics in the study of Middle Eastern politics including state formation, authoritarian resilience and political Islam.

POLISCI 443S. Political Economy of Reform in China. 5 Units.

Content, process, and problems of China's post-Mao reforms. Changes in property rights, markets, credit, and the role of the state in economic development. Comparative insights about reform in the Chinese communist system that distinguishes it from the experience of regimes in E. Europe and the former Soviet Union.

POLISCI 444. Comparative Political Economy: Advanced Industrial Societies. 3-5 Units.

Political economy approaches to key policy outcomes including redistribution, the size of government, fiscal behavior, and pork-barrel politics. Theories related to institutions, interest groups, and geography, focusing on middle- and upper-income countries.

POLISCI 448R. Workshop: China Social Science. 1 Unit.

For Ph.D. students in the social sciences and history. Research on contemporary society and politics in the People's Republic of China. May be repeated for credit. Prerequisite: consent of instructor. Same as: SOC 368W.

POLISCI 451. Design and Analysis of Experiments. 3-5 Units.

Political scientists increasingly rely on experimental methods. This course covers the principles and logic of experimental design as applied to laboratory, field and survey experiments. We discuss the strengths and limitations of experiments in relation to observational methods. Design considerations include randomization, the construction of treatments, the use of deception, the ethical implications of deception, and new developments in subject recruitment. Turning to the analysis of experimental data, we describe the methods for estimating treatment effects, interactions, and more complex indirect effects stemming from either mediator or moderator variables. We also cover appropriate data analytic strategies for quasi-experimental designs including interrupted time series, matching and propensity scores.

POLISCI 801. TGR Project. 0 Units.**POLISCI 802. TGR Dissertation. 0 Units.**

Portuguese Language Courses

PORTLANG 1A. Accelerated First-Year Portuguese, Part 1. 4-5 Units.

For students with two years of college level study of a Romance language, preferably Spanish. Goal is to use socially and culturally appropriate forms in conversations, providing and obtaining information, and expressing feelings, emotions, and opinions. Students learn the language as they contrast Brazilian culture with their own. Lab. Completion of PORTLANG 2A fulfills the University's foreign language requirement.

PORTLANG 1F. Accelerated First-Year Business Portuguese, Part I: Focus on Business and Economics.. 4-5 Units.

For GSB students and business/economics-oriented majors with two years of formal study of a Romance language, preferably Spanish. Goal is to use socially and culturally appropriate forms in Portuguese-speaking work environments, establishing relationships, providing and obtaining information, and expressing feelings, emotions, and opinions. Written and spoken language; social and cultural influences; and how to present information, concepts, and ideas related to business and organizational contexts. Completion of PORTLANG 2F fulfills the University foreign language requirement.

PORTLANG 2A. Accelerated First-Year Portuguese, Part 2. 4-5 Units.

Continuation of PORTLANG 1A. For students with two years of college level study of a Romance language, preferably Spanish. Goal is to use socially and culturally appropriate forms in conversations, providing and obtaining information, describing and narrating, and expressing feelings, emotions, and opinions. Students learn the language as they contrast Brazilian culture with their own. Lab. Completion of PORTLANG 2A fulfills the University's foreign language requirement. Prerequisite: Placement Test, or PORTLANG 1A.

PORTLANG 2F. Accelerated First-Year Business Portuguese, Part 2: Focus on Business and Economics.. 4-5 Units.

Continuation of PORTLANG 1F. For GSB students and business/economics-oriented majors with two years of formal study of a Romance language, preferably Spanish. Goal is to use socially and culturally appropriate forms in Portuguese-speaking work environments, establishing relationships, providing and obtaining information, and expressing feelings, emotions, and opinions. Written and spoken language; social and cultural influences; and how to present information, concepts, and ideas related to business and organizational contexts. Completion of PORTLANG 2F fulfills the University foreign language requirement. Prerequisite: Placement Test, or completion of PORTLANG 1A or 1F. Fulfill the University Foreign Language Requirement.

PORTLANG 11A. Accelerated Second-Year Portuguese, Part 1. 4-5 Units.

Continuation of PORTLANG 2A. Goal is to use linguistically and culturally appropriate forms in oral narrations, descriptions, and expression of ideas and opinions. Emphasis is on expository speech. Prerequisite: Placement Test, PORTLANG 2A or PORTLANG 3.

PORTLANG 12A. Accelerated Second-Year Portuguese, Part 2. 4-5 Units.

Continuation of PORTLANG 11A. Goal is to use linguistically and culturally appropriate forms in narrations, descriptions, and expression of ideas and opinions. Emphasis on expository writing. Prerequisite: Placement Test or PORTLANG 11A.

PORTLANG 99. Language Specials. 1-5 Unit.

Prerequisite: consent of instructor.nn (Staff).

PORTLANG 101. Reading Brazil. 3-5 Units.

Short expository readings, guest lectures, discussions, compositions on Brazilian issues. Review of grammatical structures. Vocabulary building with emphasis on common idiomatic expressions and troublesome lexical distinctions. Prerequisite: PORTLANG 12A or equivalent.

PORTLANG 102. Brazil in Text: Advanced Grammar and Composition. 3-5 Units.

3rd year course. Further development of academic writing. Short fictional and expository readings, guest lectures, discussions, compositions on Brazilian issues. Emphasis is on building paragraphs, organizing arguments, and justifying positions. May be used as workshop to write papers in Portuguese for another course. May be repeated once for credit. Prerequisite: PORTLANG 12A or equivalent.

PORTLANG 103. Advanced Conversation: Brazil Today. 3-5 Units.

3rd year course. Reading and discussions on issues from current newspapers and magazines, reading comprehension strategies with online news updates, and vocabulary building with emphasis on formal expository writing. Writing practice if desired. Students prepare short presentations and lead subsequent discussions. May be repeated once for credit. Prerequisite: PORTLANG 12A.

PORTLANG 161. Advanced Reading in Portuguese, Fourth-year Portuguese. 3-5 Units.

The course emphasizes high-level reading comprehension and leads to advanced development of communication skills for extended formal and informal discourse in Portuguese. Prerequisite: Placement Test or PORTLANG 101.

PORTLANG 162. Advanced Writing in Portuguese, Fourth-year Portuguese. 3-5 Units.

The course has two tracks, depending on the interest of the student: a) technical writing (business letters, technical reports, expressing/supporting opinions, etc.) and b) creative writing ('crônicas' short stories, poems, etc.). Prerequisite: Placement Test or PORTLANG 102.

PORTLANG 163. Contemporary Issues in the Lusophone World. Fourth-Year Portuguese. 3-5 Units.

The class emphasizes formal presentations/discussions in Portuguese, based on contemporary issues in the lusophone world. Students use as linguistic models newspaper and magazine articles, TV news broadcasts, online news services, films, art exhibits, news on scientific advances, etc. Focus is on mastering high-level vocabulary/structures, as well as reading and rhetorical strategies, for appropriate use in professional settings. Prerequisite: Placement Test or PORTLANG 103.

PORTLANG 164. Translating the Lusophone world, Fourth-Year Portuguese. 3-5 Units.

For advanced students. Literary and technical translation. Readings on theoretical topics on translation; discussion, analysis and comparison of existing translations (literary and technical); individual translation projects according to students field of study, and discussion and analysis of those projects in class. Final translation project to be undertaken individually. Prerequisite: PORTLANG 250 or completion of 3rd year sequence.

PORTLANG 193Q. Spaces and Voices of Brazil through Film. 3-4 Units.

The manners in which a country is perceived and defines itself is a result of many complex forces, and involves the reproduction of social relations and complex social constructions both on the part of those who live there and those who see it from a distance. The perceptions of what Brazil is and what defines the country has changed throughout times, but has conserved some clear pervasive defining traits. This course is an introduction to the history, culture, politics and artistic production of Brazil as seen through feature films, documentaries and some complementary readings. Movies include, among others, Banana is my Business, Black Orpheus, Olga, They Don't Use Black-Tie, City of God, Central Station, Gaijin, and Four Days in September-among others. In English. Same as: ILAC 193Q.

PORTLANG 250. Reading in Portuguese. 4 Units.

Introductory class for students with superior reading proficiency in Spanish or another Romance language. Reading competence for research and courses in Luso-Brazilian studies. Literary, journalistic, and academic readings. Fulfills University reading requirement for advanced degrees. May be offered alternate years.

PORTLANG 297. Directed Reading. 1-4 Unit.

Prerequisite: consent of instructor.nn (Staff).

PORTLANG 394. Graduate Studies in Portuguese Conversation. 1-3 Unit.

Prerequisite: consent of instructor.nn (Staff).

PORTLANG 395. Graduate Studies in Portuguese. 2-5 Units.

Prerequisite: consent of instructor.nn (Staff).

Psychiatry Courses

PSYC 60N. Cupid's Dilemma: Understanding Dating Dynamics. 3 Units.

Why is true love so difficult to find? Why do we find some people to be attractive dating partners, but not others? How do relationships typically evolve and what happens after the infatuation fades? When do people become comfortable with emotional intimacy or a committed relationship? These questions and others all relating to dating will be addressed in this seminar. We will critically explore what is known about dating and the relevance of attachment styles, studies of emotions, social and communication models, evolutionary perspectives, theories of Skinner, Freud and Erickson, the neurobiology of empathy and monogamy, and more. For the rest of the course, the group will assist in choosing from a range of topics like the portrayal of dating in movies, the effects of online dating, heterosexual and homosexual perspectives, dating in other cultures, body image and beauty, "hook up" culture, and more. The format will favor student interaction with short presentations by faculty or students, small group discussions, and team exercises. Students will prepare for short presentations and discussions, along with reading and some written assignments. By the end of this seminar, you will be able to critically describe several perspectives on the custom of "dating," and its evolution, as it exists in our society. Grading will be based on contributions during the classes and some writing. This seminar requires active participation and self-reflection that should prove stimulating, at times provocative, and, above all, fun. nn nn Learning Goals: By the end of the seminar, students should be able to: (1) outline research and inquiry from biological, psychological, and social approaches to the study of human behavior relevant to the social structures of dating (attraction, intimate communication, and relationship formation) (2) discuss what makes a question about human behavior relevant to the social structures of dating empirically tractable, significant, and researchable and thereby become a capable consumer of research in this area.

PSYC 70N. Mind-Body Medicine: A Global Perspective. 3 Units.

Introduces the science of Mind-Body Medicine. Intended for students with general interests in matters of mind and health, as well as students who are specifically interested in the psychological/biological/medical sciences. Begins with historical perspective and discussion of how diverse cultures and schools of medical thought from around the world grapple with the concept of Mind-Body Medicine. Other topics include: clear and accessible overviews of the basic elements and functions of the nervous, endocrine, and immune systems, how multiple biological systems need to act in concert to support life and health, the role of Mind-Body Medicine in context of modern western and non-western systems of medicine, health-related effects of "good" versus "bad" stress, stress reduction, positive and negative emotions, exercise, the placebo effect, and disorders like anxiety and depression. Course requirements include engaged and consistent participation, brief presentation and a final 6-8 page paper.

PSYC 76Q. Temperament and Creativity in Mood Disorders. 2 Units.

Preference to sophomores. Western cultural notions of mad geniuses and artistic temperaments. How many individuals who suffer from depression, bipolar disorder, and related problems are nonetheless productively creative. Current psychological and neurobiological research, and assessment of mood, temperament, and creativity. Emphasis is on written and oral communications and multimedia presentations.

PSYC 77N. Deviants in Literature. 3 Units.

Many literary works are enhanced by, in fact demand, a psychological perspective to achieve a fully informed reading. In *The Devils* Dostoevsky uses the issues and process of anarchy as a platform on which to develop some of the most unforgettable characters in literary history. Death in Venice contains among its many themes the darker dynamic of paraphilia. Guilt searches for a validating crime in Kafka's *The Penal Colony*. Capote uses a journalistic style to manage horrible fact during *In Cold Blood*. Conrad shows that telling a story of the journey outward is more nearly an analysis of the journey inward in *Heart of Darkness*. Albee's *Zoo Story* asks whether the man on the street is prepared to confront his own worst nightmare. Close reading of works such as these presents opportunities to learn about character pathology and to expand traditional approaches to literary criticism by applying a psychological perspective.

PSYC 78Q. Mental Health in Collegiate Athletes. 3 Units.

Developmental, psychological, social, and performance issues in collegiate sports. Topics include transition to Stanford, time management, optimizing mental fitness, coping with injuries.

PSYC 79Q. Family Dynamics in Literature. 3 Units.

Preference to sophomores. Using a psychological approach, explores relationships between and among the characters of well-known literary works. Primary readings include: Freud's *Dora: An Analysis of a Case of Hysteria*; Shakespeare's *Henry IV, Part 1*, which anticipates what Freud later calls "the unconscious,"; Kafka's *Metamorphosis*, the "identified patient" in family of seemingly unconventional make-up; and Flaubert's *Madame Bovary*.

PSYC 81Q. Fate of Orphans and Vulnerable Children in Sub Saharan Africa: The HIV/AIDS Pandemic. 2 Units.

The complicated forces, shaped by geopolitical history and current events, that frame all social programs, the care of orphans in the context of the AIDS pandemic in particular; history of the care of orphans; developmental effects of deprivation of care and nurturing. Guest speakers.

PSYC 111Q. Madness and the Womb: Medical and Artistic Approaches to Mental Illness in Women Through the Ages. 3 Units.

Historical and current concepts of mental illness in women. Premenstrual dysphoric disorder (PMS), postpartum depression, menopausal mood disorders, and eating disorders. Historical biopsychosocial approach. Readings include women's diaries and advice books, physicians' casebooks, and 19th- and 20th-century medical texts. Guest speakers from art and literature departments. Literary and artistic images, and the social and cultural contexts of these disorders during the last 300 years.

PSYC 135. Sleep and Dreams. 3 Units.

Current research on how sleep affects our daily lives. Physiology of non-REM and REM sleep, dreams and dreaming, content, psychophysiological cause, lucid dreaming, sleep need, sleep debt, daytime alertness, and performance; biological clock and circadian rhythms; sleep disorders, insomnia, narcolepsy, sleep apnea, sleepwalking, jet lag, sleeping pills, sleep and mental illness, sleep and memory, and the impact of sleep deprivation and sleep disorders on academic and social life. Multimedia presentations, guest lectures, and projects.
Same as: PSYC 235.

PSYC 136A. Valuescience: Shedding Illusion to Live Better. 3-4 Units.

Students may enroll in PSYC 136A or PSYC 136B or both. Either may be taken first. Apply scientific methods and principles to discern and realize value. Read history, philosophy, ecology, economics, sociology, linguistics and psychology pertinent to emergence of valuescience as foundation for an increasing range of human action. Explore perceptual, cognitive, and cultural impediments to valuescience; strategies for overcoming these; and personal and social benefits of doing so. 4 units includes weekly practice (e.g., meditation, aerobic exercise).
Same as: PSYC 236A.

PSYC 136B. Valuescience: Shedding Illusion to Live Better. 3-4 Units.

Students may enroll in PSYC 136A or PSYC 136B or both. Either may be taken first. Apply scientific methods and principles to discern and realize value. Read history, philosophy, ecology, economics, sociology, linguistics and psychology pertinent to emergence of valuescience as foundation for an increasing range of human action. Explore perceptual, cognitive, and cultural impediments to valuescience, strategies for overcoming these, and personal and social benefits of doing so. 4 units includes weekly practice (e.g., meditation, aerobic exercise).
Same as: PSYC 236B.

PSYC 139. Changing Relationships. 4 Units.

Basic concepts underlying family-systems theory and practice, drawing on concepts from psychology, psychiatry, biology, anthropology, and sociology. Major theoretical premises of the family-systems approach to the assessment of intimate relationships, including family structure, development, history, intimacy and sexuality, culture, and larger systems. Tools required for assessing and changing relationships are examined and videotaped case examples are used to develop case formulations and illustrate systemic intervention strategies of major contributors to the field. Finally, applications of the family-systems approach in educational, medical, business, and community settings are considered.
Same as: PSYC 239.

PSYC 195. Special Laboratory Projects. 1-3 Unit.

Assist Behavioral Neuroendocrinology Program with data entry, library organization, and study-related projects.

PSYC 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

PSYC 211. Child and Adolescent Psychopathology. 1 Unit.

Common syndromes in child psychiatry. Topics include diagnosis, epidemiology, etiology, course, outcome and therapeutic interventions. Prerequisite: familiarity with the basics of psychiatric and psychological discourse; psychiatry clerkship or course in psychology.

PSYC 212. Pediatric Psychosomatic Medicine: Psychological Issues in the Physically Ill Child. 1 Unit.

Open to MD and graduate students; qualified undergraduates by consent of instructor. Diagnosis and management of emotional disorders and difficulties in physically ill children and adolescents. Topics include psychotherapeutic and psychopharmacologic approaches to psychiatric disorders encountered in the pediatric medical health care setting. Oral and multimedia presentations. Prerequisite: familiarity with basic principles of psychopathology.

PSYC 225. Stanford Klingenstein Fellowship Program. 1 Unit.

A mentoring program designed to expose first and second year medical students to the rewarding field of child and adolescent psychiatry, and to increase awareness and education about child and adolescent mental health issues. Offers a year-long program wherein medical students are paired with child and adolescent psychiatrists, meeting bimonthly for clinical experiences and mentoring. Also provides opportunities for the students to get involved in cutting-edge scientific research, networking opportunities, and opportunities to attend professional conferences.

PSYC 233. Mindfulness: An Awareness-Based Stress Reduction Program in Medicine. 3 Units.

An experiential program in which the participants learn the techniques of mindfulness meditation. Modeled after the program started by Jon Kabat-Zinn and featured on Bill Moyers' *Healing and the Mind*, there are approximately 400 hospitals around the world that provide mindfulness-based programs. Courses are designed to work with the mind/body relationship to stress and chronic illness. Participants are involved in a class with patients and observe the impact of the program on a variety of medical conditions. Requires daily practice of mindfulness meditation, attendance at weekly class meetings and the all day retreat, home reading, and a final paper covering the student's observations.

PSYC 235. Sleep and Dreams. 3 Units.

Current research on how sleep affects our daily lives. Physiology of non-REM and REM sleep, dreams and dreaming, content, psychophysiological cause, lucid dreaming, sleep need, sleep debt, daytime alertness, and performance; biological clock and circadian rhythms; sleep disorders, insomnia, narcolepsy, sleep apnea, sleepwalking, jet lag, sleeping pills, sleep and mental illness, sleep and memory, and the impact of sleep deprivation and sleep disorders on academic and social life. Multimedia presentations, guest lectures, and projects.

Same as: PSYC 135.

PSYC 236A. Valuescience: Shedding Illusion to Live Better. 3-4 Units.

Students may enroll in PSYC 136A or PSYC 136B or both. Either may be taken first. Apply scientific methods and principles to discern and realize value. Read history, philosophy, ecology, economics, sociology, linguistics and psychology pertinent to emergence of valuescience as foundation for an increasing range of human action. Explore perceptual, cognitive, and cultural impediments to valuescience; strategies for overcoming these; and personal and social benefits of doing so. 4 units includes weekly practice (e.g., meditation, aerobic exercise).

Same as: PSYC 136A.

PSYC 236B. Valuescience: Shedding Illusion to Live Better. 3-4 Units.

Students may enroll in PSYC 136A or PSYC 136B or both. Either may be taken first. Apply scientific methods and principles to discern and realize value. Read history, philosophy, ecology, economics, sociology, linguistics and psychology pertinent to emergence of valuescience as foundation for an increasing range of human action. Explore perceptual, cognitive, and cultural impediments to valuescience, strategies for overcoming these, and personal and social benefits of doing so. 4 units includes weekly practice (e.g., meditation, aerobic exercise).

Same as: PSYC 136B.

PSYC 239. Changing Relationships. 4 Units.

Basic concepts underlying family-systems theory and practice, drawing on concepts from psychology, psychiatry, biology, anthropology, and sociology. Major theoretical premises of the family-systems approach to the assessment of intimate relationships, including family structure, development, history, intimacy and sexuality, culture, and larger systems. Tools required for assessing and changing relationships are examined and videotaped case examples are used to develop case formulations and illustrate systemic intervention strategies of major contributors to the field. Finally, applications of the family-systems approach in educational, medical, business, and community settings are considered.

Same as: PSYC 139.

PSYC 247. Principles and Practices in Care of the Dying. 1 Unit.

Detailed, systematic survey of a generalized terminal illness and elaboration of the basic principles underlying approaches to the care of the dying. Particular attention is paid to problem areas involving medical ethics and multi-culture. Practical strategies for managing the special medical and emotional problems that arise in the care of the dying patient. There may be guest speakers and patient interviews. No final examination. (Minimum: 4 students).

PSYC 250. Methodology of Research in Behavioral Sciences. 1-3 Unit.

Statistical and methodological issues in two major psychiatric research themes: clinical psychiatric research (Aut), neuroimaging research (Win), and statistical genetics and general statistical modeling (Spr). Autumn series includes: basics of inferential statistics, group comparison, analysis of variance, regression analysis, multivariate analysis, and longitudinal analysis in the context of psychiatric and behavioral research. Also included are conceptual topics such as risk factors, mediation, moderation, and causal inference. Winter series includes: functional and structural neuroimaging research methods (e.g. functional magnetic resonance imaging (fMRI), structural MRI (sMRI), diffusion tensor imaging (DTI), transcranial magnetic stimulation (TMS), near-infrared spectroscopy (NIRS), electroencephalogram (EEG)). Basic principles, statistical analysis methods, advantages and limitations, and applications are discussed. Spring series includes: tests and effect estimation for multiple SNPs, genes or pathways in genetic association studies, gene-gene interactions, twins and heritability estimates, Hardy-Weinberg and linkage equilibrium, interpretation and presentation of results for a range of statistical models for different types of data. Practical examples from recent research within the Department of Psychiatry will be used throughout the course. Prerequisite: Some exposure to statistical methods, either from course work or from participation in research having some behavioral aspects, or consent of instructor. 1 unit for class participation only, 2 units includes weekly assignments, 3 units includes a final project.

PSYC 290. Teaching in Psychiatry. 1-10 Unit.

Practical experience in teaching by serving as a teaching assistant in a psychiatry course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student.

PSYC 299. Directed Reading in Psychiatry. 1-18 Unit.

Prerequisite: consent of instructor.

PSYC 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

PSYC 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Psychology Courses

PSYCH 1. Introduction to Psychology. 5 Units.

Human behavior and mental processes including the nervous system, consciousness, learning, memory, development, emotion, psychopathology, interpersonal process, society, and culture. Current research.

PSYCH 7Q. Language Understanding by Children and Adults. 3 Units.

How do we first learn to find meaning in strings of speech sounds? Understanding spoken language requires the rapid integration of acoustic information with linguistic knowledge and with conceptual knowledge based on experience with how things happen in the world. Topics include research on early development of language understanding and laboratory methods of how young children make sense of speech. Observations of preschool children and visits to Stanford laboratories. Might be repeatable for credit.

PSYCH 8N. The New Longevity. 3 Units.

Adult development from the perspective of life-span theory -- a conceptual framework that views development as a series of adaptations to physical, societal and individual resources and constraints. Students will learn about demographic and medical changes, ways that individuals typically change socially, emotionally and cognitively as they move through adulthood. An understanding of the conceptual foundations of the life-span approach and place aging of young people today in historical context.

PSYCH 10. Introduction to Statistical Methods: Precalculus. 5 Units.

Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages.

Same as: STATS 60, STATS 160.

PSYCH 11N. Origin of Mental Life. 3 Units.

Preference to freshmen. Mental life in infancy; how thinking originates. How do babies construe the objects, events, people, and language that surround them? Recent advances in psychological theory, hypotheses, and evidence about how the infant human mind develops.

PSYCH 12N. Self Theories. 3 Units.

Preference to freshmen. The impact of people's belief in a growing versus fixed self on their motivation and performance in school, business, sports, and relationships. How such theories develop and can be changed.

PSYCH 13N. Emotion Regulation. 3 Units.

This seminar provides a selective overview of the scientific study of emotion regulation. Topics include: theoretical foundations, cognitive consequences, developmental approaches, personality processes and individual differences, and clinical and treatment implications. Our focus is on interesting, experimentally tractable ideas. Meetings will be discussion based.

PSYCH 13S. Dynamical models of mental processes: Development, analysis, and simulation. 2 Units.

Mathematical modeling has been a critical component in modern psychological and cognitive neuroscience research on the dynamics of mental processes. This course is designed to equip the new generation of such scientists with tailored mathematical knowledge to develop models of their own. I will use classical models and my own experience in modeling decision making as examples to demonstrate the process from vague ideas to the development, refinement, analysis and simulation of dynamical models. Along the way, systematic knowledge in differential equations, numerical methods, principle component analysis etc will be provided to facilitate the general ground for future models of students, choosing. Open to graduate students and advanced undergraduates.

PSYCH 15N. Interpersonal Influence. 3 Units.

This course will examine how individuals influence each other, both intentionally as well as nonconsciously. The focus will be on individuals in dyads rather than in groups. We will examine a) subtle interpersonal influence processes such as nonverbal communication, b) structural sources of interpersonal influence such as gender, race, social class, and culture, and c) interpersonal influence within different relationships such as organizational and romantic relationships. Familiarity with technology and video editing is useful. Students will have the opportunity to make brief podcasts and iMovie videos, as weekly responses to readings, as well as for the final class project.

PSYCH 16N. Amines and Affect. 3 Units.

Preference to freshmen. How serotonin, dopamine, and norepinephrine influence people's emotional lives. This course is ideal for students that would like to get deeper exposure to cutting edge concepts and methods at the intersection of psychology and biology, and who plan to apply their knowledge to future research.

PSYCH 17N. Language and Society: How Languages Shape Lives. 3 Units.

Do people who speak different languages think differently? What role does language play in politics, law, and religion? The role of language in individual cognition and in society. Breaking news about language and society; the scientific basis for thinking about these broad issues.

PSYCH 25N. Psychology, Inequality, and the American Dream. 3 Units.

Despite legal prohibitions against discrimination and the fact that many people endorse egalitarian values, inequality persists in America. What role do psychological factors play in perpetuating inequality? How can psychologically "wise" reforms promote equal opportunity? Topics include prejudice and discrimination, school achievement, social class, and race/ethnicity.

PSYCH 26N. Language Acquisition: Exploring the Minds of Children. 3 Units.

Language is an extraordinary competence distinguishing humans from other species, yet there is debate about the role of biology in guiding language acquisition. Does language development follow an innate ζ bioprogram ζ or does it build on more general cognitive abilities, influenced by early experience? Topics include biological and experiential influences on the emergence of linguistic ability as children learn a first language. Discussions of theory and research, visits to Stanford laboratories and observations of very young language learners.

PSYCH 27N. The Psychology of Prejudice. 3 Units.

Preference to freshmen. Social psychological theories and research on stereotypes, prejudice, discrimination, and racism. Psychological perspectives include those emphasizing personologic, cognitive, motivational, and sociocultural contributions to prejudice. Emphasis is on applying each approach to understanding real-world contexts such as educational and occupational contexts, and to the implications of this research for efforts to reduce prejudice and discrimination.

PSYCH 29N. Growing Up in America. 3 Units.

Preference to freshmen. To what extent is it possible to describe an "American" experience? How are different people included in or excluded from the imagined community that is America? How do a person's race, class, gender and sexuality affect his or her experience of belonging to this country? These are just some of the questions we will consider as we familiarize ourselves with the great diversity of childhood and young adult experiences of people who have grown up in America. We will read and discuss narratives written by men and women, by urban, suburban, and rural Americans, and by Asian Americans, African Americans, Native Americans, Latina/os, and European Americans.
Same as: ENGLISH 64N.

PSYCH 30. Introduction to Perception. 3 Units.

Behavioral and neural aspects of perception focusing on visual and auditory perception. Topics include: scientific methods for studying perception, anatomy and physiology of the visual and auditory systems, color vision, depth perception, motion perception, stereopsis, visual recognition, pitch and loudness perception, speech perception, and reorganization of the visual system in the blind. nEnrollment open to incoming freshman.

PSYCH 35. Introduction to Cognitive and Information Sciences. 4 Units.

The history, foundations, and accomplishments of the cognitive sciences, including presentations by leading Stanford researchers in artificial intelligence, linguistics, philosophy, and psychology. Overview of the issues addressed in the Symbolic Systems major.
Same as: LINGUIST 144, PHIL 190, SYMSYS 100.

PSYCH 45. Introduction to Learning and Memory. 3 Units.

The literature on learning and memory including cognitive and neural organization of memory, mechanisms of remembering and forgetting, and why people sometimes falsely remember events that never happened. Cognitive theory and behavioral evidence integrated with data from patient studies and functional brain imaging. Recommended: 1.

PSYCH 50. Introduction to Cognitive Neuroscience. 4 Units.

Survey of topics relating brain activity to cognitive processes and behavior. The course begins with an overview of neurophysiology and techniques to measure brain activity. We then discuss perceptual and motor processes before investigating neural responses related to attention, memory, and cognitive control. The course concludes with a discussion of brain processes related to reward, decision making, and social cognition.

PSYCH 55. Introduction to Cognition and the Brain. 4 Units.

Major topics in cognitive psychology and neuroscience, including empirical approaches to perception, language, learning, memory, knowledge representation, problem solving, and reasoning.

PSYCH 60. Introduction to Developmental Psychology. 3 Units.

Psychological development from birth to adulthood, emphasizing infancy and the early and middle childhood years. The nature of change during childhood and theories of development. Recommended: 1.

PSYCH 60A. Introduction to Developmental Psychology Section. 2 Units.

Guided observation of children age 2-5 at Bing Nursery School. Corequisite: 60.

PSYCH 70. Introduction to Social Psychology. 4 Units.

Topics related to the influence of other people on individuals' thoughts, emotions, and behaviors. Factors that affect the way that we perceive ourselves and others; how people influence others; how persuasion happens; what causes us to like, love, help, or hurt others; and how social psychology helps to understand questions about law, business, and health. Fulfills WIM requirement.

PSYCH 75. Introduction to Cultural Psychology. 5 Units.

The cultural sources of diversity in thinking, emotion, motivation, self, personality, morality, development, and psychopathology.

PSYCH 80. Introduction to Personality and Affective Science. 3 Units.

How do we measure personality and emotion? What parts of your personality and emotions are set at birth? What parts of your personality and emotions are shaped by your sociocultural context? Can your personality and emotions make you sick? Can you change yours personality and emotions? There are questions we begin to address in this introductory course on personality and emotion. Prerequisite: Psych 1.

PSYCH 90. Introduction to Clinical Psychology. 3 Units.

History of clinical psychology, models and assessment of personality, behavior, cognition, psychopathology, and approaches to the treatment of abnormal behavior. Emphasis is on current theory, research, issues in, and the role of clinical psychology in contemporary society. Recommended: 1.

PSYCH 95. Introduction to Abnormal Psychology. 3 Units.

Theories of and approaches to understanding the phenomenology, etiology, and treatment of psychological disorders among adults and children. Research findings and diagnostic issues. Recommended: PSYCH 1.

PSYCH 101. Community Health Psychology. 4 Units.

Social ecological perspective on health emphasizing how individual health behavior is shaped by social forces. Topics include: biobehavioral factors in health; health behavior change; community health promotion; and psychological aspects of illness, patient care, and chronic disease management. Prerequisites: HUMBIO 3B or PSYCH 1, or equivalent. Same as: HUMBIO 128.

PSYCH 102. Longevity. 4 Units.

Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists.

Same as: HUMBIO 149L, NENS 202.

PSYCH 104. Uniquely Human. 3 Units.

Are humans the only species that displays altruism, experiences uncertainty, and is capable of language and deception? Sources include empirical and theoretical papers in comparative psychology. Prerequisite: 1.

PSYCH 104S. Affective Science. 3 Units.

This course will provide an introduction to a growing field known as affective science, which focuses on the study of emotion and other related phenomena (i.e., motivation, pain, etc.). We will explore core questions in affective science, including: 1) What is emotion and why is it useful? 2) How do emotions influence the way we perceive, attend to, and understand the world? 3) How do emotions become dysfunctional, and how can individuals control them? We will attempt to approach these questions from multiple perspectives, including i) neurobiological ii) behavioral, and iii) sociocultural perspectives.

PSYCH 105. Social Neuroscience. 3 Units.

Over the last 20 years, neuroscientists have become increasingly interested in studying topics that were previously the purview of social psychologists. In this seminar, we will survey neuroimaging research on topics such as self perception, person perception, empathy, and social influence. More broadly, we will consider the contributions that neuroscience can (and cannot) make to social psychological theory. Students will be responsible for leading discussions and producing one in-depth review or research paper at the end of the quarter.

PSYCH 105S. General Psychology. 3 Units.

In what ways does the scientific study of psychology increase our understanding of the thoughts, feelings, and behaviors we observe and experience in everyday life? What are the main areas of psychology and the different questions they seek to answer? This course will give you an introduction to the field of psychology and its many different areas. You will learn about the central methods, findings, and unanswered questions of these areas, as well as how to interpret and critically evaluate research findings.

PSYCH 106. Seminar on Visual Development. 3 Units.

Describe basic development of visual system, introduce research methods/experimental designs, and present pathologies of visual development.

PSYCH 107. Visual Processing of Faces. 2-3 Units.

How do we perceive a face, recognize its identity or judge its subtle communicative cues (e.g. emotion or intention)? How does our ability to visually process faces develop with age and change though out our life span? What is the role of nature vs. nurture in this development? How do social attitudes, culture and face perception interact? In addressing these questions, we will learn about behavioral, electrophysiological and neuroimaging approaches to understanding face processing and critically examine the theories and original research that have defined the field. The course is designed to give you an in depth understanding of face processing while exposing you to methods and ideas that are useful in evaluating a wide range of cognitive neuroscience research.

PSYCH 107S. Introduction to Social Psychology. 3 Units.

A comprehensive overview of social psychology with in-depth lectures exploring the history of the field, reviewing major findings and highlighting areas of current research. Focus is on classic studies that have profoundly changed our understanding of human nature and social interaction, and, in turn, have triggered significant paradigm shifts within the field. Topics include: individuals and groups, conformity and obedience, attraction, intergroup relations, and judgment and decision-making.

PSYCH 108S. Introduction to Social Psychology. 3 Units.

This course aims to blend a comprehensive overview of social psychology with in-depth lectures exploring the history of the field, reviewing major findings and highlighting areas of current research. The course will focus on classic studies that have profoundly changed our understanding of human nature and social interaction, and, in turn, have triggered significant paradigm shifts within the field. Some of the topics covered in this class will include: individuals and groups, conformity and obedience, attraction, intergroup relations, and judgment and decision-making. The course, overall, will attempt to foster interest in social psychology as well as scientific curiosity in a fun, supportive and intellectually stimulating environment.

PSYCH 109S. Introduction to Cognitive Neuroscience. 3 Units.

3) Introduction of the neurobiology of behavior including the biology of nervous system, the neural basis for perception, learning, memory, decision making and neurological disorders. Introduction to different research techniques that are prevalent in current neuroscience studies including fMRI, EEG, TMS and single unit recording.

PSYCH 110. Research Methods and Experimental Design. 5 Units.

Structured research exercises and design of an individual research project. Prerequisite: consent of instructor.

PSYCH 111S. Abnormal Psychology. 3 Units.

This course will provide an introduction to abnormal psychology. It will be targeted towards students who have had little or no exposure to coursework on mental disorders. The course will have three core aims: 1) Explore the nature of mental disorders, including the phenomenology, signs/symptoms, and causal factors underlying various forms of mental illness, 2) Explore conventional and novel treatments for various mental disorders, 3) Develop critical thinking skills in the theory and empirical research into mental disorders. The course will explore a wide range of mental disorders, including depression, anxiety, schizophrenia, addiction, eating disorders, and personality disorders.

PSYCH 113S. Developmental Psychology. 3 Units.

This class will introduce students to the basic principles of developmental psychology. As well as providing a more classic general overview, we will also look towards current methods and findings. Students will gain an appreciation of how developmental psychology as a science can be applied to their general understanding of children and the complicated process of growing into adults.

PSYCH 115S. Personality Psychology. 3 Units.

This course will focus on current empirical and theoretical approaches to personality. Lectures will be organized around the following questions central to personality research: How and why do people differ? How do we measure individual differences? Does personality change over time? How does personality interact with sociocultural factors to influence behavior? What makes people happy? What are the physical, mental, and social consequences of personalities?.

PSYCH 118F. Literature and the Brain. 5 Units.

Recent developments in and neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts? Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer? Same as: ENGLISH 118, FRENCH 118, FRENCH 318.

PSYCH 119. Psychology and Public Policy. 5 Units.

Applications of psychology to public and social policy. Factors that affect the influence of psychological research and individual psychology on the creation of policy, and the influence of policy on attitudes and behavior at the personal and societal levels. Topics include education, health care, and criminal justice.

PSYCH 119S. The Psychology of Stigma. 3 Units.

What obese people, African Americans, people with physical disabilities, lesbians, and Muslims have in common: social stigma. The social and psychological experiences of individuals living with social stigmas. Classic and current theory and research. Topics include: function, nature, and types of stigma; how stigmatized individuals view their identities and cope; mental and cognitive consequences; and interactions between stigmatized and non-stigmatized. Literature employing research methods including neuroimaging and social interaction studies.

PSYCH 120. Cellular Neuroscience: Cell Signaling and Behavior. 4 Units.

Neural interactions underlying behavior. Prerequisites: PSYCH 1 or basic biology.

Same as: BIO 153.

PSYCH 121. Ion Transport and Intracellular Messengers. 1-3 Unit.

(Graduate students register for 228.) Ion channels, carriers, ion pumps, and their regulation by intracellular messengers in a variety of cell types.

Recommended: 120, introductory course in biology or human biology.

Same as: PSYCH 228.

PSYCH 124S. Applying Psychology to Modern Life. 3 Units.

A scientific examination of everyday modern life. Topics include: how research on attention and memory can be applied to improve study strategies; how advertisers persuade and how their techniques can be resisted; how interpersonal conflicts can be avoided through knowledge of common errors in judging other people; and how studies on attraction and love can improve close relationships.

PSYCH 125. Beyond Stereotype Threat: Claiming a Rightful Place in an Academic Community. 3 Units.

Stereotype threat as mitigating the quality of a student's test performance; its impact on academic success at Stanford. How to reduce the impact of stereotype threat on Stanford students.

Same as: CTL 130.

PSYCH 129. Happiness, Well-Being, Gender. 1-3 Unit.

Exploring the meaning and attainment of psychological well-being and happiness, this course will address gender differences in well-being and approaches that can be used by all individuals to improve their state of happiness and well-being. Course literature will be drawn primarily from social, clinical, and positive psychology, but will be drawn from other disciplines as well. Students will actively engage with course material by critiquing studies, discussing research, and applying methods for improving well-being to their daily lives.

Same as: FEMGEN 156.

PSYCH 131. Language and Thought. 4 Units.

The psychology of language including: production and understanding in utterances; from speech sounds to speaker's meaning; children's acquisition of the first language; and the psychological basis for language systems. Language functions in natural contexts and their relation to the processes by which language is produced, understood, and acquired. Prerequisite: 1 or LINGUIST 1.

Same as: PSYCH 262.

PSYCH 134. Seminar on Language and Deception. 3 Units.

Deceptive, exploitative, and other noncooperative uses of language. How is language used to deceive or exploit? Where are these techniques practiced and why? What are the personal, ethical, and social consequences of these practices? Prerequisite: 131, LINGUIST 1, or PHIL 181.

PSYCH 134S. The Art and Science of Emotional Intelligence. 3 Units.

Emotional intelligence has been promoted as essential in finding meaning and fulfillment in our work and relationships. This course is designed to provide an introduction to research and theory on emotional intelligence as a relatively new concept in psychology that has profound influence in education, health, and business. We will critically review it as a scientific concept, looking at the research and the biological bases for emotional intelligence. We will then explore its four basic areas of self understanding, self management, social understanding, and social management. For each area we will engage in self reflection and learn and practice ways of enhancing our emotional intelligence.

PSYCH 138. Wise Interventions. 4 Units.

Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy.
Same as: PSYCH 238.

PSYCH 140S. Sport Psychology. 3 Units.

Focus is on research methods and findings and how to apply these findings to students' own performance. Topics include methods of performance enhancement, psychological characteristics of top performers, group dynamics and processes, effective leadership practices, the effects of stereotyping on sport participation and performance, and debates in the field. Emphasis will be on sports, although most topics can be applied to performance in general.

PSYCH 141. Cognitive Development. 3 Units.

How children's thinking and mental abilities change from infancy on. The major theories and explanations of intellectual growth. Sources include classic findings and state-of-the-art research on cognitive development.
Prerequisite: 1.

PSYCH 141S. Health Psychology. 3 Units.

Why is it so difficult for people to stick to an exercise plan? Why don't people take their doctor's advice? Why aren't public health announcements more effective? This course addresses these questions by providing an overview of health psychology: the scientific study of behaviors and cognitive processes related to health states. In this course, we will discuss the mind/body connection, the influence of social/cultural and physical environments on our health, cognitive processing of health information, health belief models, and the link between emotion and health. Understanding the interactions between these biological, psychological, and social influences on individuals' health states is crucial for developing effective health communication and intervention programs. We will approach all course topics from both theory-driven and applied perspectives.

PSYCH 142S. The Psychology of Social Media. 3 Units.

People interact with the world around them largely through mediated means: internet, television, radio, etc. This course will survey current social media: e.g. Facebook, Twitter, YouTube, etc. and popular culture in order to highlight the psychological processes at play. Topics will include: social belonging, interpersonal attraction, identity, bias, and cyberbullying. Students will be expected to learn how to study social media and popular culture using psychological methods.

PSYCH 143. Developmental Anomalies. 3 Units.

For advanced students. Developmental disorders and impairments. What the sparing of mental abilities in otherwise devastating disorders (or vice versa) tells about the mind and its development in the normal case. Examples of disorders and impairments: autism, congenital blindness, deafness, mental retardation, attachment disorder, and Williams syndrome. Limited enrollment. Prerequisite: consent of instructor.

PSYCH 143S. The Psychology of Mean Girls. 3 Units.

This course examines the phenomenon of relational aggression and its implications on girls' lives and relationships. Using the theoretical lenses of moral and social psychology, we will consider how girls experience relational aggression and how it affects their friendships and other social negotiations. While adolescents will be the main focus group, examples from college-age and older girls will also be considered. Classwork will include case studies, reflection papers, and a final research paper on a related topic of the students' choice.

PSYCH 145. Seminar on Infant Development. 1-2 Unit.

For students preparing honors research. Conceptual and methodological issues related to research on developmental psycholinguistics; training in experimental design; and collection, analysis, and interpretation of data.

PSYCH 146. Observation of Children. 3-5 Units.

Learning about children through guided observations at Bing Nursery School. Psychology's lab for research and training in child development. Physical, emotional, social, cognitive, and language development.
Recommended: 60.

PSYCH 147. Development in Early Childhood. 3-5 Units.

Supervised experience with young children at Bing Nursery School. 3 units require 4 hours per week in Bing classrooms throughout the quarter; 4 units require 7 hours per week; 5 units require 10.5 hours per week. Seminar on developmental issues in the Bing teaching/learning environment.
Recommended: 60 or 146, or consent of instructor.

PSYCH 148. Introduction to Counseling. 3 Units.

The goal of counseling is to help others to create more satisfying lives for themselves. Clients learn to create and capitalize on unexpected events to open up new opportunities. The success of counseling is judged, not by the words and actions of the counselor, but by the progress that the client makes in the real world after counseling itself is ended. Students are encouraged to exert their full efforts within reasonable time limits to improve their competence.
Same as: EDUC 130.

PSYCH 149. The Infant Mind: Cognitive Development over the First Year. 3 Units.

How do babies learn so much in so little time? Emphasis is on cognitive and perceptual development, and the relationship between brain and behavior in infancy. Prerequisite: 1. Recommended: 60 or 141.

PSYCH 150. Race and Crime. 3 Units.

The goal of this course is to examine social psychological perspectives on race, crime, and punishment in the United States. Readings will be drawn not only from psychology, but also from sociology, criminology, economics, and legal studies. We will consider the manner in which social psychological variables may operate at various points in the criminal justice system- from policing, to sentencing, to imprisonment, to re-entry. Conducted as a seminar.

PSYCH 151. Emotion Regulation and Psychopathology. 3 Units.

A broad overview of specific emotion regulation impairments in various psychopathologies and discussion of how current treatment protocols are likely to aid recovery by forming more adaptive emotion regulation ability. Topics include: Foundations and Emotion regulation models, Emotion regulation impairments in Mood disorders (Unipolar Depression and Bipolar Disorder), Anxiety disorders (Social Phobia, Post Traumatic Stress Disorder, General Anxiety Disorder), Eating disorders (Anorexia and Bulimia Nervosa), and Personality Disorders (Narcissistic Personality Disorder, Borderline Personality Disorder).

PSYCH 152. Mediation for Dispute Resolution. 3 Units.

Mediation as more effective and less expensive than other forms of settling disputes such as violence, lawsuits, or arbitration. How mediation can be structured to maximize the chances for success. Simulated mediation sessions.

Same as: EDUC 131.

PSYCH 152F. Doing Race and Ethnicity: How and Why it Matters. 3 Units.

Going to school and work, renting an apartment, going to the doctor, watching television, voting, reading, and attending religious services are all activities that involve doing, consciously or unconsciously, race and ethnicity. In this course, we draw from history, psychology, genetics, and literary studies to understand contemporary racial formations and cultural representations. Course will include two 50-minute lectures with a required online discussion section. Enrollment capped at 20 students.

PSYCH 154. Judgment and Decision-Making. 3 Units.

Survey of research on how we make assessments and decisions particularly in situations involving uncertainty. Emphasis will be on instances where behavior deviates from optimality. Overview of recent works examining the neural basis of judgment and decision-making.

PSYCH 157. Social Foundations of Expertise and Intelligence. 3 Units.

Psychological conceptions of expertise, ability, and intelligence and the research methods used to study these attributes. Topics include: research on how expertise in a diverse set of disciplines is developed; the role of practice in nurturing expertise; whether intelligence predicts life outcomes; the genetic and environmental determinants of intelligence; whether genes or environment explain racial differences such as the Black-White performance gap and the East Asian achievement advantage; and the Flynn effect.

PSYCH 158. Emotions: History, Theories, and Research. 1-3 Unit.

Graduate students register for 259. Theoretical and empirical issues in the domain of emotions. The history of emotion theories, current approaches, and the interaction between emotion and cognition.

Same as: PSYCH 259.

PSYCH 159. Psychology of Attitude Change and Social Influence. 3 Units.

Review of classic and current research on attitudes, attitude change and persuasion. Increase appreciation for the ways that our thoughts, actions, and feelings are shaped and manipulated by social influences.

PSYCH 161. Emotion. 3 Units.

(Graduate students register for 261.) The scientific study of emotion. Topics: models of emotion, emotion antecedents, emotional responses (facial, subjective, and physiological), functions of emotion, emotion regulation, individual differences, and health implications. Focus is on experimentally tractable ideas.

Same as: PSYCH 261.

PSYCH 167. Seminar on Aggression. 3 Units.

The causes and modification of individual and collective aggression. Major issues in aggression: social labeling of injurious conduct, social determinants of aggression, effects of the mass media, institutionally sanctioned violence, terrorism, psychological mechanisms of moral disengagement, modification of aggressive styles of behavior, and legal sanctions and deterrence doctrines.

PSYCH 170. The Psychology of Communication About Politics in America. 4 Units.

Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research. Same as: COMM 164, COMM 264, POLISCI 224L.

PSYCH 171. Research Seminar on Aging. 4 Units.

Two quarter practicum exposes students to multiple phases of research by participating in a laboratory focusing on social behavior in adulthood and old age. Review of current research; participation in ongoing data collection, analysis, and interpretation. Prerequisites: 1, research experience, and consent of instructor. May be repeated for credit.

PSYCH 179. The Psychology of Everyday Morality. 4 Units.

(Graduate students register for 270.) For graduate students, coterminals, and senior Psychology majors. Traditional approaches focusing on how morality colors mundane human activities such as eating and on morality as defined by actors themselves rather than social scientists. Moral hypocrisy, food and disgust, taboo trade-offs, moral reproach, and prejudice with compunction. Limited enrollment. Prerequisite: 70 and consent of instructor.

Same as: PSYCH 270.

PSYCH 180. Social Psychological Perspectives on Stereotyping and Prejudice. 4 Units.

The seminar will review classic and current literature from social psychology on stereotyping and prejudice. We will cover the perceiver's perspective including the formation and maintenance of stereotypes, the functions and costs of stereotyping, and stereotype change. We will also explore how targets are affected by stereotypes and prejudice, as well as intergroup relations. Recent research concerning the role of cognitive, affective, motivational and behavioral processes will be emphasized.

PSYCH 182. Seminar in Applied Cognitive Development. 3 Units.

Much is known about how children learn. But how can this knowledge be used to create effective, age-appropriate health and educational interventions for children? This course surveys research in basic and applied cognitive development. Students will then have the opportunity to design an intervention for young children based on what they've learned. Recommended: Psych 60 or Psych 141.

PSYCH 183. Mind, Culture, and Society Research Core. 2-3 Units.

Required of students in the mind, culture, and society specialization track. Research training on a variety of projects that explore how social identities such as race, class, gender, and culture affect psychological experiences across domains including education, law, business and health. Must participate for two consecutive quarters. Permission of instructor required. May be repeated for credit.

PSYCH 186. The Psychology of Everyday Morality. 3 Units.

Recent literature on morality from a social psychological perspective. Topics include moral judgment, moral intuitions, moral hypocrisy, moral identity, moralization, moral reproach, shame and guilt, temptations, and self-regulation. Contemporary psychological research emphasizing descriptive approaches (what people actually do) rather than normative ones (what one should do). Same as: PSYCH 286.

PSYCH 189. Stanford Center on Longevity Practicum. 3 Units.

Student involvement in an interdisciplinary center aimed at changing the culture of human aging using science and technology. May be repeated for credit.

PSYCH 190. Special Research Projects. 1-6 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

PSYCH 192. Career and Personal Counseling. 3 Units.

Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences. Same as: EDUC 134, EDUC 234.

PSYCH 193. Special Laboratory Research. 1-6 Unit.

May be repeated for credit. Prerequisites: 1, 10, and consent of instructor.

PSYCH 193A. Special Laboratory Research. 1-6 Unit.

May be repeated for credit. Prerequisites: 1, 10, and consent of instructor.

PSYCH 194. Reading and Special Work. 1-3 Unit.

Independent study. May be repeated for credit. Prerequisite: consent of instructor.

PSYCH 195. Special Laboratory Projects. 1-6 Unit.

Independent study. May be repeated for credit. Prerequisites: 1, 10, and consent of instructor.

PSYCH 196. Contemporary Psychology: Overview of Theory, Research, Applications. 3 Units.

Capstone experience for juniors and seniors that bridges course work with research opportunities. Lectures representing the department's areas: social, personality, developmental, neuroscience, and cognitive psychology. Faculty present current research. Discussions led by advanced graduate students in the field represented by that week's guest. Students write research proposals. Small grants available to students to conduct a pilot study of their proposed research. Limited enrollment. Prerequisite: consent of instructor.

PSYCH 196A. Advanced Psychology Research Methods. 3 Units.

This course is designed for advanced psychology students familiar with basic research methods (Honors and Coterm) who wish to build on and develop more sophisticated, independent research skills. Topics will include research design and evaluation, introductory statistics and basic programming in R, logistics of running a study at Stanford (including online studies with Qualtrics and Amazon's Mechanical Turk), interpreting and writing up the results of statistical analyses, giving an academic presentation, and more. Students will gain hands on, pragmatic skills in each of these areas through individual and group projects and presentations, problem sets, and instructor and peer feedback. By the end of the course, students will have the knowledge and skills they need to develop and execute their own independent research project (e.g., their honors or coterm thesis project).

PSYCH 197. Advanced Research. 1-4 Unit.

Limited to students in senior honors program. Weekly research seminar, independent research project under the supervision of an appropriate faculty member. A detailed proposal is submitted at the end of Autumn Quarter. Research continues during Winter and Spring quarters as 198. A report demonstrating sufficient progress is required at the end of Winter Quarter.

PSYCH 198. Senior Honors Research. 1-4 Unit.

Limited to students in the senior honors program. Finishing the research and data analysis, written thesis, and presentation at the Senior Honors Convention. May be repeated for credit.

PSYCH 199. Temptations and Self Control. 2 Units.

(Graduate students register for 299.) Why do people do things that that they come to regret? How can people minimize behavior such as exercise avoidance, angry words, overeating, unsafe sex, and dangerous driving? Sources include classical and current research from experimental psychology, neuroscience, behavioral economics, and neuroeconomics. Real-world applications. Same as: PSYCH 299.

PSYCH 201. Social Psychology Lecture Series. 3 Units.

Required of social psychology graduate students. Guest lecturers from Stanford and other institutions. May be repeated for credit. (Miller).

PSYCH 202. Cognitive Neuroscience. 3 Units.

Graduate core course. The anatomy and physiology of the brain. Methods: electrical stimulation of the brain, neuroimaging, neuropsychology, psychophysics, single-cell neurophysiology, theory and computation. Neuronal pathways and mechanisms of attention, consciousness, emotion, language, memory, motor control, and vision. Prerequisite: 207 or consent of instructor.

PSYCH 203. MODELS OF LANGUAGE ACQUISITION. 3 Units.

How do children learn to understand and produce their native language? Language acquisition is a core topic in cognitive science and has been a key test case for formal approaches. Topics include: learnability theory, grammatical approaches, connectionist models, and probabilistic models.

PSYCH 204. Computation and cognition: the probabilistic approach. 3-4 Units.

This course will introduce the probabilistic approach to cognitive science, in which learning and reasoning are understood as inference in complex probabilistic models. Examples will be drawn from areas including concept learning, causal reasoning, social cognition, and language understanding. Formal modeling ideas and techniques will be discussed in concert with relevant empirical phenomena.

PSYCH 204A. Human Neuroimaging Methods. 3 Units.

This course introduces the student to human neuroimaging using magnetic resonance scanners. The course is a mixture of lectures and hands-on software tutorials. The course begins by introducing basic MR principles. Then various MR measurement modalities are described, including several types of structural and functional imaging methods. Finally algorithms for analyzing and visualizing the various types of neuroimaging data are explained, including anatomical images, functional data, diffusion imaging (e.g., DTI) and magnetization transfer. Emphasis is on explaining software methods used for interpreting these types of data.

PSYCH 204B. Computational Neuroimaging: Analysis Methods. 1-3 Unit.

Neuroimaging methods with focus on data analysis techniques. Basic MR physics and BOLD signals. Methods for neuroimaging data using real and simulated data sets. Topics include: linearity of the fmri signal; time versus space resolution tradeoffs; noise in neuroimaging; correlation analysis; visualization methods; cortical reconstruction, inflation, and flattening; reverse engineering; can cognitive states be predicted from brain activation? Prerequisite: consent of instructor.

PSYCH 205. Foundations of Cognition. 1-3 Unit.

Topics: attention, memory, language, similarity and analogy, categories and concepts, learning, reasoning, and decision making. Emphasis is on processes that underlie the capacity to think and how these are implemented in the brain and modeled computationally. The nature of mental representations, language and thought, modular versus general purpose design, learning versus nativism. Prerequisite: 207 or consent of instructor. nOpen to Psychology PhD students only.

PSYCH 206. Cortical Plasticity: Perception and Memory. 1-3 Unit.

Seminar. Topics related to cortical plasticity in perceptual and memory systems including neural bases of implicit memory, recognition memory, visual priming, and perceptual learning. Emphasis is on recent research with an interdisciplinary scope, including theory, behavioral findings, neural mechanisms, and computational models. May be repeated for credit. Recommended: 30, 45.

PSYCH 207. Professional Seminar for First-Year Ph.D. Graduate Students. 2-3 Units.

Required of and limited to first-year Ph.D. students in Psychology. Major issues in contemporary psychology with historical backgrounds.

PSYCH 207B. Professional Development Seminar in Psychology. 0-1 Units.

For graduate students who wish to gain professional development skills to pursue an academic career. May be repeated for credit. Course is intended for second year Ph.D. student in Psychology but open to all years.

PSYCH 208. Advanced Topics in Self-Defense. 1-3 Unit.

Seminar. Threat to the self and how people deal with them. Readings from social psychological areas including social comparison, self-affirmation, self-completion, self-discrepancy, shame and guilt, terror management, dimensions of self-worth, self-regulation, self-presentation, psychophysiology, and moral identity. Enrollment limited to 15.

PSYCH 209. Models of Cognitive Processes. 4 Units.

For advanced undergraduates and graduate students. Models of cognitive and developmental processes, including perception, attention, memory, decision making, acting and thinking; and on modeling cognitive development, domain learning, and skill acquisition as processes that take place over time. Models considered will include parallel distributed processing models and other types of artificial neural network models as well as process models spanning a spectrum from abstract to neurally realistic. Students learn about classic models and carry out exercises in the first six weeks and will undertake projects and learn about recent developments during the last four weeks of the quarter. Recommended: computer programming ability, familiarity with differential equations, linear algebra, and probability theory, and courses in cognitive psychology and/or cognitive/systems neuroscience.

PSYCH 211. Developmental Psychology. 1-3 Unit.

Prerequisite: 207 or consent of instructor.

PSYCH 212. Social Psychology. 1-3 Unit.

Classic studies in experimental social psychology. Group and group dynamics; compliance and social pressure; conformity, cooperation, conflict, and social dilemmas; attraction and preference; attitudes and attitude change; social comparison, emotion, and affiliation; dissonance, consistency, and self-justification; attribution and self-perception; judgment and decision making, motivation, automaticity, and culture.

PSYCH 213. Affective Science. 3 Units.

This seminar is the core graduate course on affective science. We consider definitional issues, such as differences between emotion and mood, as well as issues related to the function of affect, such as the role affect plays in daily life. We review autonomic, neural, genetic, and expressive aspects of affective responding. Later in the course we discuss the role of affect in cognitive processing, specifically how affective states direct attention and influence memory, as well as the role of affect in decision making. We will also discuss emotion regulation and the strategic control of emotion; the cultural shaping of emotional experience and regulation; disorders of emotion; and developmental trajectories of experience and control from early to very late life. Meetings are discussion based. Attendance and active participation are required. Prerequisite: 207 or consent of instructor.

PSYCH 215. Mind, Culture, and Society. 3 Units.

Social psychology from the context of society and culture. The interdependence of psychological and sociocultural processes: how sociocultural factors shape psychological processes, and how psychological systems shape sociocultural systems. Theoretical developments to understand social issues, problems, and polity. Works of Baldwin, Mead, Asch, Lewin, Burner, and contemporary theory and empirical work on the interdependence of psychology and social context as constituted by gender, ethnicity, race, religion, and region of the country and the world. Prerequisite: 207 or consent of instructor.

PSYCH 216. Public Policy and Social Psychology: Implications and Applications. 4 Units.

Theories, insights, and concerns of social psychology relevant to how people perceive issues, events, and each other, and links between beliefs and individual and collective behavior. Topics include: situationist and subjectivist traditions of applied and theoretical social psychology; social comparison, dissonance, and attribution theories; social identity, stereotyping, racism, and sources of intergroup conflict and misunderstanding; challenges to universality assumptions regarding human motivation, emotion, and perception of self and others; the problem of producing individual and collective changes in norms and behavior. Same as: IPS 207B, PUBLPOL 305B.

PSYCH 216A. Statistics and data analysis in MATLAB. 1-3 Unit.

This course will cover basic statistical principles that are widely useful for the analysis of neuroscience and behavioral data, such as error bars and confidence intervals, multivariate probability distributions, regression and classification, linear and nonlinear models, cross-validation, bootstrapping, and model selection. In each class, we will cover the theory behind a statistical principle and learn how to implement the principle efficiently in MATLAB. Example material can be found at <http://randomanalyses.blogspot.com>. Prerequisites: Familiarity with basic statistics and programming in MATLAB.

PSYCH 217. Topics and Methods Related to Culture and Emotion. 1-3 Unit.

Preference to graduate students. How cultural factors shape emotion and other feeling states. Empirical and ethnographic literature, theories, and research on culture and emotion. Applications to clinical, educational, and occupational settings. Research in psychology, anthropology, and sociology. May be repeated for credit.

PSYCH 218. Early Social Cognitive Development. 1-3 Unit.

Current literature on social and cognitive development in infancy emphasizing the interface between the two domains. May be repeated for credit. Prerequisite: consent of instructor.

PSYCH 220. Special Topics in Cognitive Development. 1-3 Unit.

In the last few years, research at the intersection of cognitive and social development has burgeoned, yielding unprecedented knowledge about the roots of the human (social) mind in infants and children. In this course, using an outstanding new volume edited by Susan Gelman and Mahzarin Banaji, we will discuss work that highlights the social nature of cognitive development (e.g., the degree to which social learning may account for uniquely human cognitive abilities) and that explores the early emergence of social knowledge and understanding (e.g., mental models of relationships, knowledge of good and bad, beliefs about ingroups and outgroups, and knowledge of other people's minds). Prerequisites: Psychology 207 or permission of instructor.

PSYCH 220S. Temptations and Self Control. 3 Units.

Why do people do things they come to regret, such as lack of exercise, angry words, overeating, unsafe sex, or dangerous driving? How can they minimize such behaviors? Sources include classical and current research from experimental psychology, neuroscience, behavioral economics, and neuroeconomics. Emphasis is on real-world applications.

PSYCH 221. Applied Vision and Image Systems. 1-3 Unit.

This course is an introduction to imaging technologies including hardware and the image processing pipeline. There is an emphasis on how these technologies accommodate the requirements of the human visual system. The course is intended for students interested in various aspects of imaging technologies, including Digital cameras and displays, Image processing and compression, Image quality analysis, Human color, pattern and motion vision. The course consists of lectures, tutorials and a project. Lectures cover the tools used in digital imaging and image quality measurement. Tutorials and projects include extensive software simulations of the digital imaging pipeline. Some background in mathematics (linear algebra) and programming (Matlab) is valuable.

PSYCH 223. Social Norms. 3 Units.

This course covers research and theory on the origins and function of social norms. Topics include the estimation of public opinion, the function of norms as ideals and standards of judgment, and the impact of norms on collective and individual behavior. In addition to acquainting students with the various forms and functions of social norms the course will provide students with experience in identifying and formulating tractable research questions. Same as: OB 630.

PSYCH 224. Research Topics in Emotion Regulation. 1 Unit.

Current research findings and methods, ongoing student research, and presentations by visiting students and faculty. May be repeated for credit. Prerequisite: consent of instructor.

PSYCH 225. Special Neuroscience Seminar with Dr. Shinobu Kitayama. 1-2 Unit.

How will culture influence the human mind? Is culture a superficial overlay on the basic, universal computational machine called the mind? Alternatively, is culture a crucial constitutive element of the mind? If so, what are specific mechanisms underlying this constitution process? And what theoretical framework do we need to make a visible progress on these questions? More generally, how can we start discussing meaningfully and productively about various problematic dichotomies such as mind versus body, culture versus biology, and nurture versus nature? An emerging field of cultural neuroscience has the potential of addressing these and other important questions and thus bridging natural, behavioral, and social sciences of the human mind. This seminar reviews the field of cultural neuroscience. It starts with a discussion of some theoretical foundations of the field, including cultural psychology, cognitive and social neuroscience, evolutionary psychology, and population genetics (PART 1). We will then discuss several specific content domains with a focus on cross-cultural variations in brain responses (PART 2). The seminar will conclude with a discussion on gene x environment interaction in varying cultural contexts (PART 3). Students can take the seminar for credit. One unit for attending all five sessions, two units for all five session and a short paper.

PSYCH 226. Models and Mechanisms of Memory. 1-3 Unit.

Current topics in memory as explored through computational models addressing experimental findings and physiological and behavioral investigations. Topics include: explicit and implicit learning; role of MTL structures in learning and memory; and single versus dual processes approaches to recognition. May be repeated for credit.

PSYCH 228. Ion Transport and Intracellular Messengers. 1-3 Unit.

(Graduate students register for 228.) Ion channels, carriers, ion pumps, and their regulation by intracellular messengers in a variety of cell types. Recommended: 120, introductory course in biology or human biology. Same as: PSYCH 121.

PSYCH 231. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives. 4 Units.

The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions. Same as: COMM 339, POLISCI 421K.

PSYCH 232. Brain and Decision Making. 3 Units.

Neuroeconomics combines experimental techniques from neuroscience, psychology, and experimental economics, such as electrophysiology, fMRI, eye tracking, and behavioral studies, and models from computational neuroscience and economics. May be repeated for credit. Prerequisite: consent of instructor.

PSYCH 233. MATLAB and Psychtoolbox for the Behavioral Sciences. 1-3 Unit.

Topics such as experiment design, stimulus presentation, counterbalancing, response collection, data analysis, and plotting. Programming experiments. Final project programming a complete behavioral experiment relevant to student's research.

PSYCH 234. Topics in Depression. 1-3 Unit.

Current research topics including epidemiology and phenomenology of affective disorders, psychological theories of depression, gender differences in affective disorders, cognitive and social functioning of depressed persons, psychobiology of affective disorders, depression in children, postpartum depression, suicide issues in the treatment of depression, and cultural aspects of affective disorders. Prerequisite: graduate standing in Psychology or consent of instructor. May be repeated for credit.

PSYCH 235. Motivation and Emotion. 3 Units.

This graduate seminar will take a social-cognitive perspective on motivation and emotion. Meetings will be discussion oriented, and each meeting will focus on a different question of theoretical and applied significance. Prerequisite: 207 or consent of instructor.

PSYCH 236C. SEM IN SEMANTICS: Representations of meaning. 3 Units.

Representations of meaning from psychological, linguistic, and computational viewpoints. Topics include lambda calculus, probabilistic programming, and vector spaces. Special emphasis on the challenges of semantic composition. May be repeated for credit. Same as: LINGUIST 236.

PSYCH 237. Mathematical Cognition. 2-4 Units.

The course will examine the basis of numerical and mathematical abilities, and the acquisition and learning of mathematical skills, drawing on experimental and modeling studies. Topics will include numerosity, counting, basic arithmetic, and fractions, as well as algebraic and geometric reasoning as well as insight into mathematical and scientific problems. Roles of rules, procedures and symbolic, spatial, and sensory-motor representations; relationship between skill and understanding; nature of discovery and insight in mathematical reasoning; the relationship between insight and proof. Open to PhD and Masters students and to Juniors and Seniors who have completed an introductory level course in cognitive or developmental psychology.

PSYCH 238. Wise Interventions. 4 Units.

Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy. Same as: PSYCH 138.

PSYCH 239. Formal and Computational Approaches in Psychology and Cognitive Science. 3 Units.

Do psychology and cognitive science need formal theories and/or explicit computational models? What insights should such things provide? What is the proper relationship between different theoretical and modeling approaches? Between different levels or kinds of analysis? Where do informally stated theories fit in and what are the roles of formal and computational modeling approaches in relation to other less explicitly specified forms of theorizing? This seminar will explore these issues and compare different formal and computational model variants, especially connectionist and probabilistic models, within 3-4 different target domains. Possible target domains include categorization, property induction, causal learning, perceptual decision making, language acquisition, semantics and pragmatics, and mid-level vision.

PSYCH 241. Probabilistic Models of Social Behavior and Affect. 4 Units.

How do we reason about other people and ourselves? Is human behavior in social situations a set of ad-hoc and irrational responses--or can we understand humans as making rational inferences under uncertainty about the people they are interacting with? This project-based seminar will re-examine classic findings from social psychology and affective science through the lens of rational analysis and probabilistic models. In collaboration with instructors, students will develop projects focused on making testable theoretical models of classic tasks and literatures with the goal of creating a publishable end product. Phenomena under consideration include but are not limited to: cognitive dissonance, attribution theory, mindset theory, stereotyping, and emotion perception.

PSYCH 243. General Development Seminar. 1-2 Unit.

May be repeated for credit. Prerequisite: consent of instructors. Restricted to Developmental graduate students.

PSYCH 244. Psychology of Aging. 1-3 Unit.

Theory and research in gerontology. Normal and abnormal changes that occur in biological, cognitive, and psychological aging. Emphasis is on the environmental factors that influence the aging process. Prerequisite: graduate standing in Psychology or consent of instructor.

PSYCH 245. Social Psychological Perspectives on Stereotyping and Prejudice. 3 Units.

Classic and contemporary social psychological approaches to prejudice and stereotyping. Emphasis is on how stereotypes are employed and maintained, and the influence of stereotyping and prejudice on behavior in domains including education, employment, politics, and law. Limited enrollment.

PSYCH 246. Cognitive and Neuroscience Friday Seminar. 1 Unit.

Participant presentations. May be repeated for credit. Prerequisite: graduate standing in psychology or neuroscience program.

PSYCH 247. Fundamentals of Neuroscience for Non-Life-Scientists. 2 Units.

Human behavior and the human brain and how it enables perception, learning, decision making, planning, and action with a focus on how neuroscience may be presented or used in law, business, or education contexts. Neurotechnology and experimental methods used to conduct research.

PSYCH 249. Human Motivation. 1-3 Unit.

Current research and theory including questions concerning the nature of human motives, intrinsic motivation, self-regulation, the roles of affect and cognition, and lifespan and cultural influences on motivation. Prerequisite: 207 or consent of instructors.

PSYCH 250. High-Level Vision: Object Representation. 3 Units.

(Formerly CS423 High-Level Vision: Behaviors, Neurons, and Computational Models) Interdisciplinary seminar focusing on understanding how computations in the brain enable rapid and efficient object perception. Covers topics from multiple perspectives drawing on recent research in Psychology, Neuroscience, Computer Science and Applied Statistics. Emphasis on discussing recent empirical findings, methods and theoretical debates in the field. Topics include: theories of object perception, neural computations underlying invariant object perception, how visual exemplars and categories are represented in the brain, what information is present in distributed activations across neural populations and how it relates to object perception, what modern statistical and analytical tools there are for multi-variate analysis of brain activations. Same as: CS 431.

PSYCH 251. Affective Neuroscience. 3 Units.

Theory and research. Comparative and human research approaches map affective function to neuroanatomical and neurochemical substrates. Prerequisite: consent of instructor.

PSYCH 252. Statistical Methods for Behavioral and Social Sciences. 1-6 Unit.

For students who seek experience and advanced training in empirical research. Analysis of data from experimental through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through two-way tables. Integrated with the use of statistical computing packages. Prerequisite: 10 or equivalent.

PSYCH 253. Statistical Theory, Models, and Methodology. 3 Units.

Practical and theoretical advanced data analytic techniques such as loglinear models, signal detection, meta-analysis, logistic regression, reliability theory, and factor analysis. Prerequisite: 252 or EDUC 257.

PSYCH 254. Lab in Experimental Methods. 3 Units.

Laboratory class in experimental methods for psychology, with a focus on technical/computer-based methods. Programming experience helpful although not required. Topics include data collection on the web, data management and data analysis.

PSYCH 257. Individually Supervised Practicum. 3-5 Units.

Satisfies INS requirements for curricular practical training. Relevant experience for graduate students as part of their program of study. May be repeated for credit. Prerequisites: graduate standing in Psychology, consent of adviser.nn (Staff).

PSYCH 258. Graduate Seminar in Social Psychology Research. 1-3 Unit.

For students who are already or are planning to become involved in research on social construal and the role that it plays in a variety of phenomena, notably the origin and escalation of conflict.

PSYCH 259. Emotions: History, Theories, and Research. 1-3 Unit.

Graduate students register for 259. Theoretical and empirical issues in the domain of emotions. The history of emotion theories, current approaches, and the interaction between emotion and cognition.

Same as: PSYCH 158.

PSYCH 261. Emotion. 3 Units.

(Graduate students register for 261.) The scientific study of emotion. Topics: models of emotion, emotion antecedents, emotional responses (facial, subjective, and physiological), functions of emotion, emotion regulation, individual differences, and health implications. Focus is on experimentally tractable ideas.

Same as: PSYCH 161.

PSYCH 261A. Learning and Cognition in Activity. 3 Units.

Methods and results of research on learning, understanding, reasoning, problem solving, and remembering, as aspects of participation in social organized activity. Principles of coordination that support cognitive achievements and learning in activity settings in work and school environments.

Same as: EDUC 295.

PSYCH 262. Language and Thought. 4 Units.

The psychology of language including: production and understanding in utterances; from speech sounds to speaker's meaning; children's acquisition of the first language; and the psychological basis for language systems. Language functions in natural contexts and their relation to the processes by which language is produced, understood, and acquired. Prerequisite: 1 or LINGUIST 1.

Same as: PSYCH 131.

PSYCH 265. Social Psychology and Social Change. 2-3 Units.

The course is intended an exploration of the major ideas, theories, and findings of social psychology and their applied status. Special attention will be given to historical issues, classic experiments, and seminal theories, and their implications for topics relevant to education. Contemporary research will also be discussed. Advanced undergraduates and graduate students from other disciplines are welcome.

Same as: EDUC 371X.

PSYCH 266. Current Debates in Learning and Memory. 1-3 Unit.

Memory is not a unitary faculty, but consists of multiple forms of learning and remembering. The cognitive and neural architectures of memory, focusing on the application of functional brain imaging (primarily fMRI and ERP). Recommended: 45.

PSYCH 267. Human Memory: Facts, Fallacies, and Fragile Powers. 1-3 Unit.

Seminar. Applications of memory concepts in everyday life and in social and clinical settings. Topics include personal identity, childhood amnesia, autobiographic memory, emotions and memory, memory distortions, illusions, self-serving biases, recovery of repressed memories, false memories, implicit memories, and unconscious influences on social behavior, with applications to psychopathology.

PSYCH 269. Graduate Seminar in Affective Science. 1 Unit.

May be repeated for credit. Prerequisite: graduate standing in Psychology. (Gotlib).

PSYCH 270. The Psychology of Everyday Morality. 4 Units.

(Graduate students register for 270.) For graduate students, coterm, and senior Psychology majors. Traditional approaches focusing on how morality colors mundane human activities such as eating and on morality as defined by actors themselves rather than social scientists. Moral hypocrisy, food and disgust, taboo trade-offs, moral reproach, and prejudice with compunction. Limited enrollment. Prerequisite: 70 and consent of instructor. Same as: PSYCH 179.

PSYCH 272. Special Topics in Psycholinguistics. 1-3 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

PSYCH 273. Graduate Seminar on Language, Cognition, and Perception. 3 Units.

Current topics and debates. Readings from psychology, linguistics, neuroscience, ethology, anthropology, and philosophy. May be repeated for credit.

PSYCH 274. Graduate Research Workshop on Psychological Interventions. 3 Units.

Psychological research has the potential to create novel interventions that promote the public good. This workshop will expose students to psychologically 'wise' intervention research and to support their efforts to conduct such interventions, especially in the context of education, broadly conceived, as well as other areas. The first part of the class will address classic interventions and important topics in intervention research, including effective delivery mechanisms, sensitive behavioral outcomes, the role of theory and psychological process, and considerations of the role of time and of mechanisms that can sustain treatment effects over time. In the second part of the class, students will present and receive feedback on their own ongoing and/or future intervention research. Prerequisite: Graduate standing in Psychology or Education, or consent of instructor. Same as: EDUC 287X.

PSYCH 275. Graduate Research. 1-15 Unit.

Intermediate-level research undertaken with members of departmental faculty. Prerequisite: consent of instructor.nn (Staff).

PSYCH 277. Psychology of Pedagogy. 1-3 Unit.

How can methods and insights from psychology inform education practice, particularly in a higher education context? This course aims to develop your skills as critical consumers and producers of empirical findings on teaching and learning. Course involves a quarter-long project to develop a pedagogical research proposal, supplemented and informed by readings, guided discussions, and group workshops. Same as: EDUC 248X.

PSYCH 279. Topics in Cognitive Control. 1-3 Unit.

The processes that enable flexible behavior by biasing contextually relevant perceptual, mnemonic, and response representations or processing pathways. Cognitive control is central to volitional action, allowing work with memory, task/goal states, and overriding inappropriate responses. Current models of cognitive control, functional neuroimaging, and neuropsychological evidence. Recommended: 45. May be repeated for credit.

PSYCH 281. Practicum in Teaching. 1-5 Unit.

Enrollment limited to teaching assistants in selected Psychology courses. May be repeated for credit.

PSYCH 282. Practicum in Teaching PSYCH 1. 1-2 Unit.

Logistical TA training including: preparing for sections; creating, correcting exams; grading an iterative writing assignment; office hours; review sessions; developing audiovisual expertise; communicating via coursework. Review of student evaluations with instructor to set goals and strategies. Second quarter focuses on pedagogical improvement. Limited to current PSYCH 1 TAs. May be repeated for credit.

PSYCH 283. International Conflict Resolution Colloquium. 1 Unit.

(Same as LAW 611.) Sponsored by the Stanford Center on International Conflict and Negotiation (SCICN). Conflict, negotiation, and dispute resolution with emphasis on conflicts and disputes with an international dimension, including conflicts involving states, peoples, and political factions such as the Middle East and Northern Ireland. Guest speakers. Issues including international law, psychology, and political science, economics, anthropology, and criminology. Same as: IPS 250A.

PSYCH 284. Computational Modeling of a Range of Neural Circuits. 1-3 Unit.

Lectures, student presentations, and extensive software exercises. Focus on quantifiable models of neural signaling, starting with physical specification of input signals, sensory transductions, spiking, and mean electrical field potentials, and the inter-relation to BOLD signals (fMRI). Applications will be drawn from many examples, but there will be a particular focus on the visual pathways and how measurements and models relate to visual perception.

PSYCH 286. The Psychology of Everyday Morality. 3 Units.

Recent literature on morality from a social psychological perspective. Topics include moral judgment, moral intuitions, moral hypocrisy, moral identity, moralization, moral reproach, shame and guilt, temptations, and self-regulation. Contemporary psychological research emphasizing descriptive approaches (what people actually do) rather than normative ones (what one should do). Same as: PSYCH 186.

PSYCH 287. Connectomes. 1-3 Unit.

(Same as MCP 287) Neural circuitry can be measured over a huge range of spatial scales, from sub-synaptic to whole brain connectomes. The methods used to measure at these scales differ enormously, and scientists working at one scale should be able to understand and communicate with those measuring at other scales. This seminar will review methods, principal results, and ideas for integrating the findings across scales by large-scale computational modeling. nLectures, student presentations, and software exercises.

PSYCH 288. Hierarchical Linear Modeling for Psychological Sciences. 1-3 Unit.

HLM is a statistical theory and a computer program used to analyze multi-level data, such as trials within participants or students within classrooms. HLM allows researchers to analyze data at each level of analysis separately, to partition the total variance across different levels, to explain variance at each level separately using level-appropriate predictors, and to model cross-level interactions. How to use the HLM program and to model various types of multi-level data using it. May be repeated for credit.

PSYCH 289. Sensory Representations in Language and Memory. 1-3 Unit.

Is recollecting an experience similar to re-experiencing it? How closely tied is our knowledge to the perceptual representations and processes that may have given rise to it? What role do perceptuo-motor representations play in understanding language? We will review the recent literature on perceptual re-activation in episodic memory, perceptual grounding in semantic representations, and neural reuse of perceptual mechanisms for abstract thought. Emphasis will be placed on recent research with an interdisciplinary scope, including discussion of theory, behavioral findings, neural mechanisms, and computational models. Prerequisite: Psych 207 or consent of instructor.

PSYCH 290. Graduate Research Methods. 2 Units.

Primary tool use for psychologists: basics of experiment design; computer-based experiments; web-based experiments; data analysis packages and data presentation; exploratory statistics; eye-tracking methods; psychophysiology methods; survey construction; corpus and discourse analysis; and perhaps hypnosis. Prerequisite: Ph.D. student in Psychology.

PSYCH 291. Psychology Teaching Methods. 1-2 Unit.

Open to graduate students and advanced undergraduates. Principles of good teaching. Students practice teaching skills.

PSYCH 292. Special Topics in Emotion Regulation. 1 Unit.

This seminar will consider special topics in emotion regulation. Admission is by invitation only.

PSYCH 293. Communication, Intentionality, and the Origins of Language. 3 Units.

How did language evolve to become a ubiquitous, definitional part of human life? What relationship does children's early language have to their understanding of intentionality and other methods of non-verbal communication? This seminar will survey theoretical and experimental work on the foundations of human language, communication, and intentionality, with the goal of understanding what we know and what questions are still open. Areas of focus include developmental work on communication; whether early language use is referential/intentional and whether early words are general or particular; and research on language evolution and animal communication.

PSYCH 294. Human Prosociality. 3 Units.

Human beings engage in a vast amount of prosocial behaviors (including altruism and cooperation) that critically support our success as a social species. That said, the psychological underpinnings of prosociality remain surprisingly enigmatic. This seminar will survey classic and modern theories of prosocial behavior from evolutionary biology, economics, psychology, and neuroscience, with an emphasis on common ideas about the cognitive and affective mechanisms supporting such behaviors. Students will be responsible for leading discussions and producing one in-depth review or research paper at the end of the quarter.

PSYCH 295. Cognitive Modeling using Bayesian Statistics. 2-3 Units.

This course introduces the student to cognitive modeling from a Bayesian statistical approach. The goal of the course is to facilitate and promote Bayesian fitting for a large variety of latent cognitive models to data through the use of accessible computer software. Within particular cognitive models, students will learn how to first construct a basic model, and then add various effects such as individual or group differences, substantive prior information, covariates, and contaminant processes. Along the way, students will gain a better understanding of the many advantages of Bayesian statistics over frequentist-type analyses. A strong statistical or computer science background is not required.

PSYCH 297. Seminar for Coterminal Master of Arts. 1-2 Unit.

Contemporary issues and student research. Student and faculty presentations.

PSYCH 299. Temptations and Self Control. 2 Units.

(Graduate students register for 299.) Why do people do things that that they come to regret? How can people minimize behavior such as exercise avoidance, angry words, overeating, unsafe sex, and dangerous driving? Sources include classical and current research from experimental psychology, neuroscience, behavioral economics, and neuroeconomics. Real-world applications.

Same as: PSYCH 199.

PSYCH 303. Human and Machine Hearing. 3 Units.

Topics: Linear and nonlinear system theory applied to sound and hearing; understanding how to model human hearing in the form of algorithms that can process general sounds efficiently; how to construct, display, and interpret "auditory images"; how to extract features compatible with machine-learning systems; how to build systems that extract information from sound to do a job; and example applications of machine hearing to speech, music, security and surveillance, personal sound diaries, smart house, etc. Prerequisites: basic calculus and algorithms.

PSYCH 373. Research Seminar: Mind, Brain, and Computation. 1 Unit.

Faculty and student research presentations focusing on work linking cellular, systems, cognitive, behavioral, and computational neuroscience. Limited to affiliates of the Center for Mind, Brain and Computation. May be repeated for credit.

PSYCH 380. Collaborating with the Future: Launching Large Scale Sustainable Transformations. 3-4 Units.

This project-based d.school class combines Design Thinking Processes, Behavioral Sciences, and elements of Diffusion Theory. Tools and theories introduced in class will be used to structure large-scale transformations that simultaneously create value on environmental, societal, and economic fronts. We encourage students to use this class as a launching pad for real initiatives. Primarily meant for Graduate Students. (Especially qualified/motivated Seniors will be considered). Admission to the class is through an application process which ends on March 3. Please find instructions and applications at <https://dschool.stanford.edu/groups/largetransformations/>.

PSYCH 383. International Conflict Resolution. 3 Units.

(Same as LAW 656) This seminar examines the challenges of managing and resolving violent inter-group and international conflicts. Employing an interdisciplinary approach drawing on social psychology, political science, game theory, and international law, the course identifies various tactical, psychological, and structural barriers that can impede the achievement of efficient solutions to conflicts. We will explore a conceptual framework for conflict management and resolution that draws not only on theoretical insights, but also builds on historical examples and practical experience in the realm of conflict resolution. This approach focuses on the following questions: (1) how can the parties to conflict develop a vision of a mutually bearable shared future; (2) how can parties develop trust in the enemy; (3) how can each side be persuaded, as part of a negotiated settlement, to accept losses that it will find very painful; and (4) how do we overcome the perceptions of injustice that each side are likely to have towards any compromise solution? Among the conceptual issues we will examine include the problem of spoilers who seek to sabotage agreements, the role of mediators, the role international legal rules can play in facilitating or impeding conflict resolution, and the advantages and disadvantages of unilateral versus and reciprocal measures in advancing conflict resolution efforts. Particular conflicts we will explore include the Northern Ireland conflict, the Israeli-Palestinian conflict, and the U.S.-Soviet Cold War rivalry. Prerequisite for undergraduates: consent of instructor. Same as: IPS 250.

PSYCH 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIO 459, BIOC 459, BIOE 459, CHEM 459, CHEMENG 459.

PSYCH 801. Master's TGR Project. 0 Units.**PSYCH 802. PhD TGR Dissertation. 0 Units.**

Public Policy Courses

PUBLPOL 55N. Public Policy and Personal Finance. 3 Units.

The seminar will provide an introduction and discussion of the impact of public policy on personal finance. Voters regularly rate the economy as one of the most important factors shaping their political views and most of those opinions are focused on their individual bottom lines. In this course we will discuss the rationale for different public policies and how they affect personal financial situations. We will explore personal finance issues such as taxes, loans, charity, insurance, and pensions. Using the context of (hypothetical) personal finance positions, we will discuss the public policy implications of various proposals and how they affect different groups of people, for example: the implications of differential tax rates for different types of income, the promotion of home ownership in the U.S., and policies to care for our aging population. While economic policy will be the focus of much of the course, we will also examine some of the implications of social policies on personal finance as well. There will be weekly readings and several short policy-related writing assignments.

Same as: ECON 25N.

PUBLPOL 101. Politics and Public Policy. 4-5 Units.

Analysis of how public policy is made in the U.S. Theories from political science and public policy studies are assessed using case studies in contemporary policy areas, including tax, social welfare, and environmental policy. Each student also studies a policy issue of their own choice.

Same as: POLISCI 123, PUBLPOL 201.

PUBLPOL 102. Organizations and Public Policy. 4-5 Units.

Analysis of organizational processes emphasizing organizations that operate in a non-market environment. Prerequisite: ECON 1.

Same as: PUBLPOL 202.

PUBLPOL 103C. Justice. 4-5 Units.

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S, POLISCI 336S, PUBLPOL 307.

PUBLPOL 103D. Ethics and Politics of Public Service. 5 Units.

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.

Same as: CSRE 178, ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133, URBANST 122.

PUBLPOL 104. Economic Policy Analysis. 4-5 Units.

The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50 and ECON 102B.

Same as: ECON 150, PUBLPOL 204.

PUBLPOL 106. Law and Economics. 4-5 Units.

Law as a tool for correcting market and cognitive failures. Design and consequences of laws, given alternative policy objectives. Welfarist approach to legal policy; deontological perspectives including Kant, Mill, and Rawls. Economic efficiency and agent rationality, effects of law on expectations and incentives, balancing costs of type I and type II legal errors. Empirical studies of law's effects. Applications: property, tort, contract, antitrust, discrimination, crime, legal procedure. Examples chiefly from U.S. law, but analytical tools of general applicability. Prerequisite: ECON 50.

Same as: ECON 154, PUBLPOL 206.

PUBLPOL 107. Public Finance and Fiscal Policy. 5 Units.

What role should and does government play in the economy? What are the effects of government spending, borrowing, and taxation on efficiency, equity and economic stability and growth? The course covers economic analysis, statistical evidence and historical and current fiscal policy debates in the U.S. and around the world. Policy topics: Fiscal crises, budget surpluses/deficits; tax reform; social security, public goods, and externalities; fiscal federalism; public investment; and cost-benefit analysis. Prerequisites: ECON 51, ECON 52 (can be taken concurrently).

Same as: ECON 141.

PUBLPOL 115. Practical Training. 1-10 Unit.

Students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. May be repeated for credit.

PUBLPOL 121. Policy and Climate Change. 4-5 Units.

Science and economics, including recent findings. History and evolution of local, state, regional, national, and international policy. California's recent landmark climate change bill. Future policy prospects, emphasizing national and international levels.

PUBLPOL 121L. Racial-Ethnic Politics in US. 5 Units.

This course examines various issues surrounding the role of race and ethnicity in the American political system. Specifically, this course will evaluate the development of racial group solidarity and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. We will also examine the politics surrounding the Multiracial Movement and the development of racial identity and political attitudes in the 21st century. Stats 60 or Econ 1 is strongly recommended.

Same as: AMSTUD 121L, CSRE 121L, POLISCI 121L.

PUBLPOL 122. Biosecurity and Bioterrorism Response. 2-6 Units.

Provides an overview of the most pressing biosecurity issues facing the world today. Guest lecturers have included former Secretary of State Condoleezza Rice, former Special Assistant on BioSecurity to Presidents Clinton and Bush Jr. Dr. Ken Bernard, Chief Medical Officer of the Homeland Security Department Dr. Alex Garza, eminent scientists, innovators and physicians in the field, and leaders of relevant technology companies. The class explores how well the US and global healthcare systems are prepared to withstand a pandemic or a bioterrorism attack, how the medical/healthcare field, government, and the technology sectors are involved in biosecurity and pandemic or bioterrorism response and how they interface, the rise of synthetic biology with its promises and threats, global bio-surveillance, making the medical diagnosis, isolation, containment, hospital surge capacity, stockpiling and distribution of countermeasures, food and agriculture biosecurity, new promising technologies for detection of bio-threats and countermeasures. Open to medical, graduate, and undergraduate students. No prior background in biology necessary. 2 unit option for once weekly attendance (Wed only); 4 unit option for twice weekly attendance (Mon and Wed); 1-2 additional units (for a maximum of 6 units total) for a research paper.

Same as: PUBLPOL 222, SURG 222.

PUBLPOL 124. What's Wrong with American Government? An Institutional Approach. 5 Units.

How politicians, once elected, work together to govern America. The roles of the President, Congress, and Courts in making and enforcing laws. Focus is on the impact of constitutional rules on the incentives of each branch, and on how they influence law. Fulfills the Writing in the Major Requirement for Political Science majors.

Same as: POLISCI 120C.

PUBLPOL 125. Law and Public Policy. 5 Units.

Do Super PACs and corporate lobbying corrupt democratic elections? Do Democratic and Republican economic proposals hold up to scrutiny? Can a state prevent you from buying and carrying a gun? How would Martin Luther King analyze American society, public policy and racial discourse had he lived to celebrate the 50th anniversary of his "I Have A Dream" speech this year? This seminar investigates the relationship between law and public policy on issues related to economic regulation, electoral politics and finance, civil rights, sexuality and culture. We will explore how law both facilitates and constrains public policy reforms in historical context and our own era of challenging budgetary pressures, intensive political division, and increasing socio-economic inequality. Class discussion will involve the close reading and interpretation of judicial opinions, legislation and other legal texts, interdisciplinary scholarship, and film.

PUBLPOL 128. International Problem-Solving Through NGOs: Policy, Players, Strategies, and Ethics. 2 Units.

This course will focus on advanced international problem-solving through the lens of international NGOs, while integrating other relevant players that address global issues within a lens of ethics and accountability. Particular aspects of NGOs that will be assessed are: policy, business, strategy, and engagement with other players. Students will consider the major issues that international NGOs face in their effort to effect positive change in an increasingly complex global environment. The course draws heavily on a series of sophisticated case studies involving a variety of NGOs, areas of specialization, and geographic regions. Topics may include: poverty and famine; the natural resources curse; terrorism; HIV/Aids and other epidemics and neglected diseases; natural disasters and emergencies; climate change; and contagion of unethical behavior. A final project tailored to each student's interest will be in lieu of a final exam. Students will have the opportunity to work with several internationally prominent guests.

Same as: INTNLREL 128B, PUBLPOL 228.

PUBLPOL 132. The Politics of Policy Making. 3 Units.

Public policymaking in the United States is part of a political process that can take years or even decades to play out. A familiarity with the politics of policymaking is key to understanding why some reform attempts are successful while others are not. This course will give students a behind-the-scenes look at how policy actually gets made. Students will gain exposure to the theory and literature behind policy formulation, and engage in debates over historical and contemporary efforts at reform.

Same as: PUBLPOL 232.

PUBLPOL 133. Urban Politics. 5 Units.

The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances. Prerequisite: POLISCI 2 or consent of instructor.

Same as: AMSTUD 121Z, POLISCI 121, URBANST 111.

PUBLPOL 134. Ethics Today: Business, Non-Profit Organizations, Government, and Individuals. 2-4 Units.

The objective of the course is to explore the current international emphasis on organizational ethics. Students will consider in-depth complex ethics matters across business, the non-profit sector, and government. We will unravel the factors contributing to the seemingly pervasive failure of ethics today, including commonalities and links among sectors, through a broad range of international case studies. Examples might include: the Bangladesh garment factory fire and collapse; corruption in Nigeria; the Libor rate-rigging scandal; the US military sex abuse scandal; the GlaxoSmithKline China corruption scandal; racism in international football; drones; social media; and a non-profit sector ethics challenge to be identified. Prominent guest speakers will attend certain sessions interactively. Questions of cultural context, how ethics lags behind technology, ethics and leadership, and ethics and global systemic risks (poverty, financial system meltdown, climate change, cyber terrorism) will be considered. Attendance required. Grading is based 25% on short assignments, 35% class participation, and 40% final project. The final project is in lieu of exam on a topic of each student's choice. Class participation may include a variety of options beyond simply speaking up in class (e.g. participation on the class web site, assisting other students with presentations or final projects, participation in relevant University events, group discussions during office hours). Same as: PUBLPOL 234.

PUBLPOL 135. Regional Politics and Decision Making in Silicon Valley and the Greater Bay Area. 3 Units.

Dynamics of regional leadership and decision making in Silicon Valley, a complex region composed of 40 cities and four counties without any overarching framework for governance. Formal and informal institutions shaping outcomes in the region. Case studies include transportation, workforce development, housing and land use, and climate change.

PUBLPOL 144. Giving 2.0: Philanthropy by Design. 4 Units.

Seminar and practicum. Students drive an actual \$10,000 philanthropic process and design their own social change strategy. Topics: strategic planning, nonprofit assessment and site visits, innovative social change models, and leadership development. Speakers include philanthropic leaders and social entrepreneurs. Class activities: group grant assessments and selection, creative problem solving, and decision-making simulations. Individual project: Social Impact Strategic Plan. Must attend first class; limited enrollment. Recommended: PUBPOL 183.

PUBLPOL 154. Politics and Policy in California. 3 Units.

State politics and policy making, including the roles of the legislature, legislative leadership, governor, special interests, campaign finance, advocacy groups, ballot initiatives, state laws, media, and research organizations. Case studies involving budgets, education, pensions, health care, political reform, open primaries, infrastructure and more. Evaluation of political actions, both inside and outside of government, that can affect outcomes. One day trip to Sacramento.

PUBLPOL 155. Disruption for Good- Technology, Innovation and Philanthropy. 2 Units.

A new breed of technologies and nonprofits are driving unprecedented innovation in how we create, deliver and measure social change. Innovative models and technology's extraordinary potential to transform billions of individual lives. Topics: social network campaigns, mobile platforms and international development, apps for good, crowdsourcing, crowdfunding, creative swarms, nonprofit evaluators, and new generation corporate philanthropy. Readings: articles, blogs, studies, book chapters and websites. Guest speakers include technology, nonprofit and philanthropic leaders. Individual Project: "Unusual Suspects" Technology Innovators interviews and paper. Must attend first class; limited enrollment.

PUBLPOL 156. Health Care Policy and Reform. 3 Units.

Focuses on healthcare policy at the national, state, and local levels. Includes sessions on international models, health insurance, the evolution of healthcare policy in the U.S., key U.S. healthcare topics (Patient Protection and Affordable Care Act [PPACA], Medicare, Medicaid, public employee retiree health care), the role of technology, reform proposals (single payer, national health care, market-based systems, regulated markets, state and local reform efforts), efficiency/cost drivers and prospects for future policy. We expect to spend at least two sessions on recent developments surrounding PPACA (aka Obamacare) and its implementation.

PUBLPOL 157. Applied Quantitative Research in Political Science. 5 Units.

Introduction to methods of research design and data analysis used in quantitative political research. The course will cover issues that are typically missing from intro stats and econometrics courses but are central to applied political science research. Methods topics include: experimental and observational approaches to estimating causal effects, measuring political preferences from data, working with big data, and effective data presentation and visualization. These topics will be introduced using data sets from American politics, international relations, and comparative politics. The course will include an introduction to the widely used R statistical programming language. Satisfies quantitative methods requirement for the Political Science Research Honors Track. Prerequisites: Stat 60, Econ 102A, or instructor consent. Same as: POLISCI 155.

PUBLPOL 168. Global Organizations: Managing Diversity. 3 Units.

Analytical tools derived from the social sciences to analyze global organizations and projects, and applied to the tradeoffs between different designs of teams and organizations. Focus is on tribal mentality and how to design effective organizations and projects for policy implementation within and across institutional settings. This class is associated with a study trip during the Spring Break. Recommended: PUBLPOL 102, MS&E 180, SOC 160, ECON 149, or MGTECON 330. Same as: PUBLPOL 268, SOC 168, SOC 268.

PUBLPOL 170. Political Corruption. 2 Units.

Sources and effects of political corruption in the United States, with focus on potential solutions. Perspectives include political contribution and lobbying laws, rational and passionate collective action incentives, welfare effects of congressional control of the administrative state, voter behavior, agency theory, and the role of competition among politicians and interest groups. Grading based on participation and term paper. Enrollment is limited to 15 students and permission of the instructor required. Email bruceowen@stanford.edu. Same as: PUBLPOL 270.

PUBLPOL 174. The Urban Economy. 4-5 Units.

Applies the principles of economic analysis to historical and contemporary urban and regional development issues and policies. Explores themes of urban economic geography, location decision-making by firms and individuals, urban land and housing markets, and local government finance. Critically evaluates historical and contemporary government policies regulating urban land use, housing, employment development, and transportation. Prerequisite: Econ 1A or permission of instructor. Same as: URBANST 173.

PUBLPOL 183. Philanthropy and Social Innovation. 4 Units.

Philanthropic innovation, action and social transformation in the 21st century. Topics: individual giving; philanthropic landscape and models; foundation mission and infrastructure; philanthropic strategy and grantmaking; accountability and knowledge management; global, venture and corporate philanthropy; public policy and advocacy. Readings: business school cases and industry articles. Guest speakers include individual donors and foundation presidents. Class activities: case discussions, role-plays, breakouts, and debates. Individual project: \$10 million Foundation Business Plan. Must attend first class; limited enrollment.

PUBLPOL 184. Poverty and Policies in Developing Economies. 5 Units.

Economic models of growth and poverty, differences in growth rates among countries, and the persistence of poverty. Models of physical and human capital accumulation, and recent theories of the importance of institutions, social capital, and political factors. The effectiveness of social policies in developing countries, emphasizing India, in the light of theories of growth and poverty, and in terms of immediate goals and long-term consequences. Policies include schooling and health, anti-poverty, banking, and political decentralization. Limited Enrollment. Prerequisites: ECON 1 and ECON 50.

PUBLPOL 194. Technology Policy. 3-4 Units.

How the U.S. federal government promotes, uses, and regulates new technologies; tensions between representative governance and the need for elite expertise in policymaking; contemporary debates over international security, energy, health, information technology, and economic competitiveness. Recommended: POLISCI 2. Same as: PUBLPOL 294.

PUBLPOL 197. Junior Honors Seminar. 5 Units.

Primarily for students who expect to write an honors thesis. Weekly sessions discuss writing an honors thesis proposal (prospectus), submitting grant applications, and completing the honors thesis. Readings focus on writing skills and research design. Students select an adviser, outline a program of study for their senior year, and complete a prospectus by the end of the quarter. Enrollment limited to 25. Same as: ECON 198.

PUBLPOL 198. Directed Readings in Public Policy. 1-5 Unit.**PUBLPOL 199. Senior Research. 1-15 Unit.**

May be repeated for credit.

PUBLPOL 200A. Senior Practicum. 5 Units.

Small student teams conduct policy analyses requested by government and nonprofit organizations. With guidance from the instructor and client organization, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the client organization. Prerequisites: core courses in Public Policy or consent of instructor.

PUBLPOL 200B. Senior Practicum. 5 Units.

Small student teams conduct policy analyses requested by government and nonprofit organizations. With guidance from the instructor and client organization, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the client organization. Prerequisites: core courses in Public Policy or consent of instructor.

PUBLPOL 200C. Senior Practicum. 5 Units.

Small student teams conduct policy analyses requested by government and nonprofit organizations. With guidance from the instructor and client organization, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the client organization. Prerequisites: core courses in Public Policy or consent of instructor.

PUBLPOL 200H. Senior Honors Seminar. 3 Units.

Students conduct original research for oral presentations and a paper on a policy-related topic. Topic and methods of analysis determined by student in consultation with instructor. Goal is to improve analytical, research, writing, and communication skills. Prerequisites: core courses in Public Policy or consent of instructor.

PUBLPOL 201. Politics and Public Policy. 4-5 Units.

Analysis of how public policy is made in the U.S. Theories from political science and public policy studies are assessed using case studies in contemporary policy areas, including tax, social welfare, and environmental policy. Each student also studies a policy issue of their own choice. Same as: POLISCI 123, PUBLPOL 101.

PUBLPOL 202. Organizations and Public Policy. 4-5 Units.

Analysis of organizational processes emphasizing organizations that operate in a non-market environment. Prerequisite: ECON 1. Same as: PUBLPOL 102.

PUBLPOL 204. Economic Policy Analysis. 4-5 Units.

The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50 and ECON 102B.

Same as: ECON 150, PUBLPOL 104.

PUBLPOL 206. Law and Economics. 4-5 Units.

Law as a tool for correcting market and cognitive failures. Design and consequences of laws, given alternative policy objectives. Welfarist approach to legal policy; deontological perspectives including Kant, Mill, and Rawls. Economic efficiency and agent rationality, effects of law on expectations and incentives, balancing costs of type I and type II legal errors. Empirical studies of law's effects. Applications: property, tort, contract, antitrust, discrimination, crime, legal procedure. Examples chiefly from U.S. law, but analytical tools of general applicability. Prerequisite: ECON 50.

Same as: ECON 154, PUBLPOL 106.

PUBLPOL 222. Biosecurity and Bioterrorism Response. 2-6 Units.

Provides an overview of the most pressing biosecurity issues facing the world today. Guest lecturers have included former Secretary of State Condoleezza Rice, former Special Assistant on BioSecurity to Presidents Clinton and Bush Jr. Dr. Ken Bernard, Chief Medical Officer of the Homeland Security Department Dr. Alex Garza, eminent scientists, innovators and physicians in the field, and leaders of relevant technology companies. The class explores how well the US and global healthcare systems are prepared to withstand a pandemic or a bioterrorism attack, how the medical/healthcare field, government, and the technology sectors are involved in biosecurity and pandemic or bioterrorism response and how they interface, the rise of synthetic biology with its promises and threats, global bio-surveillance, making the medical diagnosis, isolation, containment, hospital surge capacity, stockpiling and distribution of countermeasures, food and agriculture biosecurity, new promising technologies for detection of bio-threats and countermeasures. Open to medical, graduate, and undergraduate students. No prior background in biology necessary. 2 unit option for once weekly attendance (Wed only); 4 unit option for twice weekly attendance (Mon and Wed); 1-2 additional units (for a maximum of 6 units total) for a research paper.

Same as: PUBLPOL 122, SURG 222.

PUBLPOL 228. International Problem-Solving Through NGOs: Policy, Players, Strategies, and Ethics. 2 Units.

This course will focus on advanced international problem-solving through the lens of international NGOs, while integrating other relevant players that address global issues within a lens of ethics and accountability. Particular aspects of NGOs that will be assessed are: policy, business, strategy, and engagement with other players. Students will consider the major issues that international NGOs face in their effort to effect positive change in an increasingly complex global environment. The course draws heavily on a series of sophisticated case studies involving a variety of NGOs, areas of specialization, and geographic regions. Topics may include: poverty and famine; the natural resources curse; terrorism; HIV/Aids and other epidemics and neglected diseases; natural disasters and emergencies; climate change; and contagion of unethical behavior. A final project tailored to each student's interest will be in lieu of a final exam. Students will have the opportunity to work with several internationally prominent guests. Same as: INTNLREL 128B, PUBLPOL 128.

PUBLPOL 231. Health Care Regulation, Finance and Policy. 3 Units.

(SAME AS LAW 348, MGTECON 331) Provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. Potential topics include: health reform, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), medical malpractice and quality regulation, pharmaceuticals, the corporate practice of medicine, regulation of fraud and abuse, and international comparisons.

Same as: HRP 391.

PUBLPOL 232. The Politics of Policy Making. 3 Units.

Public policymaking in the United States is part of a political process that can take years or even decades to play out. A familiarity with the politics of policymaking is key to understanding why some reform attempts are successful while others are not. This course will give students a behind-the-scenes look at how policy actually gets made. Students will gain exposure to the theory and literature behind policy formulation, and engage in debates over historical and contemporary efforts at reform.

Same as: PUBLPOL 132.

PUBLPOL 234. Ethics Today: Business, Non-Profit Organizations, Government, and Individuals. 2-4 Units.

The objective of the course is to explore the current international emphasis on organizational ethics. Students will consider in-depth complex ethics matters across business, the non-profit sector, and government. We will unravel the factors contributing to the seemingly pervasive failure of ethics today, including commonalities and links among sectors, through a broad range of international case studies. Examples might include: the Bangladesh garment factory fire and collapse; corruption in Nigeria; the Libor rate-rigging scandal; the US military sex abuse scandal; the GlaxoSmithKline China corruption scandal; racism in international football; drones; social media; and a non-profit sector ethics challenge to be identified. Prominent guest speakers will attend certain sessions interactively. Questions of cultural context, how ethics lags behind technology, ethics and leadership, and ethics and global systemic risks (poverty, financial system meltdown, climate change, cyber terrorism) will be considered. Attendance required. Grading is based 25% on short assignments, 35% class participation, and 40% final project. The final project is in lieu of exam on a topic of each student's choice. Class participation may include a variety of options beyond simply speaking up in class (e.g. participation on the class web site, assisting other students with presentations or final projects, participation in relevant University events, group discussions during office hours).

Same as: PUBLPOL 134.

PUBLPOL 235. From Innovation to Implementation: How Government Can Develop and Apply New Ideas. 3-5 Units.

What are the barriers to reform and innovative thinking in government? What are the factors that need to be taken into account when implementing change? What are the bureaucratic structures and power relationships that policy-makers must understand and navigate in order to embed reform? The aim of this seminar is to give students a detailed understanding of how political change happens and an understanding of why it often doesn't. Using cases studies from successful and unsuccessful reform programs around the world, this course will expose students to innovations in key public sector issue areas including education, healthcare, well-being, and government transparency and accountability; provides a sense of what's it's like actually trying to make change happen in a government context, and will equip students with the skills and understanding to be able to make change happen in a government setting.

Same as: IPS 235.

PUBLPOL 236. Law and Public Policy: Issues in Implementation. 3 Units.

(Same as LAW 636). This seminar will focus on issues related to achieving successful implementation of the goals of legislation. It is widely recognized that the goals of legislation often are not realized and that the failure frequently rests in breakdowns in the implementation process by the agencies and organizations charged with implementing the legislation. In response to problems in implementation, the institutional context of public policy implementation is changing. One category of innovations, known by names such as "management-based regulation" and "evidence-based" social service delivery, gives broad discretion to street-level service providers but subjects them to intensive monitoring and disciplined performance comparison. Another category applies market concepts to regulation or social services, for example, by creating tradeable rights (e.g., pollution allowances) or vouchers (for schools, housing, or healthcare). These, and other, new approaches are affecting both the contours of public law doctrine and the nature of lawyering in the public sector. Lawyers in the public sector are increasingly drawing on skills of institutional design and monitoring of the kind associated with private sector transactional practice. The seminar will examine some of the emerging general themes of innovative policy implementation and look at a range of case studies. Topics will include the conditions under which financial and other rewards and sanctions are useful in bringing about desired behaviors, the pluses and minuses of the creation of markets as alternatives to government run programs, and efforts at improving implementation by improving management activities. Examples will be taken from both regulation and social services, and are likely to include environmental protection, education, child protective services, healthcare, food and workplace safety, nuclear power safety, and regulation of financial institutions.

PUBLPOL 240. Designing the Way Up: Breaking the Cycle of Poverty in America through Innovative Early Intervention. 3-4 Units.

Conventional efforts to fight poverty are not working - it remains an intractable social problem. This class will address one aspect that is gaining increased attention from policy-makers: the connection between adverse childhood experiences and poverty in later life. We will partner with a nationally-recognized pediatric clinic and advocacy organisation, the Center for Youth Wellness in San Francisco. Focusing on the diagnosis and treatment of toxic childhood stress, students will help design solutions that can be spread and scaled across the US. This is a complex area that is ripe for design thinking - and one that has tough constraints. We want students who are generally staying at a high-level policy perspective in their other classes to grapple with the challenges of manifesting designs that can have practical and real-world impact in helping children break out of the cycle of poverty. Previous d.school experience is valued but not required.

PUBLPOL 268. Global Organizations: Managing Diversity. 3 Units.

Analytical tools derived from the social sciences to analyze global organizations and projects, and applied to the tradeoffs between different designs of teams and organizations. Focus is on tribal mentality and how to design effective organizations and projects for policy implementation within and across institutional settings. This class is associated with a study trip during the Spring Break. Recommended: PUBLPOL 102, MS&E 180, SOC 160, ECON 149, or MGTECON 330.

Same as: PUBLPOL 168, SOC 168, SOC 268.

PUBLPOL 270. Political Corruption. 2 Units.

Sources and effects of political corruption in the United States, with focus on potential solutions. Perspectives include political contribution and lobbying laws, rational and passionate collective action incentives, welfare effects of congressional control of the administrative state, voter behavior, agency theory, and the role of competition among politicians and interest groups. Grading based on participation and term paper. Enrollment is limited to 15 students and permission of the instructor required. Email bruceowen@stanford.edu

Same as: PUBLPOL 170.

PUBLPOL 294. Technology Policy. 3-4 Units.

How the U.S. federal government promotes, uses, and regulates new technologies; tensions between representative governance and the need for elite expertise in policymaking; contemporary debates over international security, energy, health, information technology, and economic competitiveness. Recommended: POLISCI 2.

Same as: PUBLPOL 194.

PUBLPOL 298. Directed Readings in Public Policy. 1-5 Unit.**PUBLPOL 301A. Microeconomics. 4 Units.**

Microeconomic concepts relevant to decision making. Topics include: competitive market clearing, price discrimination; general equilibrium; risk aversion and sharing, capital market theory, Nash equilibrium; welfare analysis; public choice; externalities and public goods; hidden information and market signaling; moral hazard and incentives; auction theory; game theory; oligopoly; reputation and credibility. Prerequisites: ECON 50 and MATH 51 or equiv.

Same as: IPS 204A.

PUBLPOL 301B. Cost-Benefit Analysis and Evaluation. 4-5 Units.

This class provides the economic and institutional background necessary to use "cost-benefit analysis" or CBA to evaluate public policy. We will examine the economic justification for government intervention and apply these concepts in different policy contexts. We will also examine the theoretical foundations and the practical challenges of implementing CBA. The goal of the course is to provide you with the conceptual foundations and practical skills you will need to be thoughtful consumers or producers of CBA.

Same as: IPS 204B.

PUBLPOL 302A. Introduction to American Law. 3-5 Units.

For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general.

Same as: AMSTUD 179, POLISCI 122.

PUBLPOL 302B. Economic Analysis of Law. 4 Units.

(Same as LAW 528.) This course will provide a broad overview of the scholarly field known as "law and economics." The focus will be on how legal rules and institutions can correct market failures. We will discuss the economic function of contracts and, when contracts fail or are not feasible, the role of legal remedies to resolve disputes. We will also discuss at some length the choice between encouraging private parties to initiate legal actions to correct externalities and governmental actors, such as regulatory authorities. Extensive attention will be given to the economics of litigation, and to how private incentives to bring lawsuits differs from the social value of litigation. The economic motive to commit crimes, and the optimal governmental response to crime, will be studied in depth. Specific topics within the preceding broad themes include: the Coase Theorem; the tradeoff between the certainty and severity of punishment; the choice between ex ante and ex post sanctions; negligence versus strict liability; property rules; remedies for breach of contract; and the American rule versus the English rule for allocating litigation costs. Because this course is taught jointly with Law 528 in the Law School, it will not be mathematically oriented; there are no prerequisites to take the course.

PUBLPOL 303B. Political Methodology II. 5 Units.

Understanding and using the linear regression model in a social-science context: properties of the least squares estimator; inference and hypothesis testing; assessing model fit; presenting results for publication; consequences and diagnosis of departures from model assumptions; outliers and influential observations, graphical techniques for model fitting and checking; interactions among exploratory variables; pooling data; extensions for binary responses.

Same as: POLISCI 350B.

PUBLPOL 303C. Bayesian Statistics and Econometrics. 5 Units.

(Same as LAW 243.) Linear and nonlinear regression, covariance structures, panel data, qualitative variable models, nonparametric and semiparametric methods, time series, Bayesian model averaging and variable selection. It explores Bayesian methodology including Markov Chain Monte Carlo methods, hierarchical models, model checking, mixture models, empirical Bayes approaches, approximations, and computational issues and gives some attention to foundations. Prerequisite: graduate-level econometrics or equivalent.

PUBLPOL 303D. Applied Econometrics for Public Policy. 4-5 Units.

This course aims to present the theory and practice of empirical research in economics with particular emphasis on topics relating to public policy questions. We will start with a quick re-cap of basic probability theory and statistics, then move on to basic regression analysis and introduce the statistical software STATA. The course will put a substantial amount of effort on work with STATA in analyzing actual data sets, reproducing and criticizing results in scientific research and learning the actual practice of econometrics. The final part of the course will focus on the identification of causal effects and the various econometric techniques available to learn about causality. While this is primarily a methodology module, most examples and applications will be drawn from the area of public policy.

PUBLPOL 304A. Collective Action: Ethics and Policy. 3-5 Units.

Individually rational actions can give rise to results that are collectively irrational. For example, the collective result of our consumption decisions is to warm the planet, destroy the world's fisheries, and increase reliance on factory farming; at the same time, the decisions of a single individual seem to have no tangible effect on such things. In light of this, what (if anything) are you as an individual required to do in these and other collective action situations, especially when others are not doing their part to prevent things from getting out of control? For example, are you required to reduce your carbon footprint and avoid products that are produced in ethically objectionable ways? Do you have a duty to vote? Is free-riding always ethically objectionable? Can you be required to 'cooperate' in a situation where you know that most others will 'defect'? Finally, from a real-world policy perspective, how can we bring about the best solutions to these and other collective action problems? Is the best policy response always a straightforward function of the variable features of each case? Interdisciplinary readings from authors in philosophy, politics, economics, and law such as Elinor Ostrom, Peter Singer, and Cass Sunstein. Same as: ETHICSOC 180M, PHIL 73.

PUBLPOL 305A. Judgment and Decision Making. 4-5 Units.

(Same as LAW 333.) Introduction to problem framing and problem solving. Theories and research on heuristics and biases in human inference, judgment, and decision making. Experimental and theoretical work in prospect theory emphasizing loss and risk aversion. Challenges that psychology offers to the rationalist expected utility model; attempts to meet this challenge through integration with modern behavioral economics. Decision making biases and phenomena of special relevance to public policy such as group polarization, group think, and collective action. Same as: IPS 207A.

PUBLPOL 305B. Public Policy and Social Psychology: Implications and Applications. 4 Units.

Theories, insights, and concerns of social psychology relevant to how people perceive issues, events, and each other, and links between beliefs and individual and collective behavior. Topics include: situationist and subjectivist traditions of applied and theoretical social psychology; social comparison, dissonance, and attribution theories; social identity, stereotyping, racism, and sources of intergroup conflict and misunderstanding; challenges to universality assumptions regarding human motivation, emotion, and perception of self and others; the problem of producing individual and collective changes in norms and behavior. Same as: IPS 207B, PSYCH 216.

PUBLPOL 306. Writing and Rhetoric for Policy Audiences. 4 Units.

This course offers hands-on learning of effective writing and presentation techniques for audiences that include policy makers, decision and stakeholders, interest groups, the media, and the public. Class time will be spent learning lessons in rhetoric, reviewing different written genres (op-ed, report, memo), editing and peer review using large screens and laptops, as well as analyzing and practicing presentations (PPT, elevator pitch, radio broadcast, board meeting). Sources include policy briefings, memos, model videos, rhetoric handouts, style manual. Students will write and make oral and multimedia arguments, individually and in teams; students will also be responsible for peer review, introducing speakers, and moderating discussions at the colloquia. Enrollment limited. Prerequisite: consent of instructor.

PUBLPOL 307. Justice. 4-5 Units.

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors. Same as: ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S, POLISCI 336S, PUBLPOL 103C.

PUBLPOL 308. Political Analysis for Public Policymakers. 4 Units. Policymakers in the United States, whether elected or unelected, operate in a governmental system where politics pervades nearly every element of their daily activity. This course provides students with both the theory and real-world examples they need to understand and evaluate the impact of politics, political institutions, and the political process on policymaking. Readings will include selections from the public policy, political science, legal, and economics literatures.

PUBLPOL 309. Practicum. 1-10 Unit.

Applied policy exercises in various fields. Multidisciplinary student teams apply skills to a contemporary problem in a major policy exercise with a public sector client such as a government agency. Problem analysis, interaction with the client and experts, and presentations. Emphasis is on effective written and oral communication to lay audiences of recommendations based on policy analysis.

PUBLPOL 309X. Public Policy Research Project. 1-10 Unit.

Supervised research internship. Individual students perform policy research for outside client, applying analytical skills from core curriculum. Requires permission of program director.

PUBLPOL 310. Master of Arts Thesis. 1-5 Unit.

Restricted to students writing a master's thesis in Public Policy. May be repeated for credit.

PUBLPOL 311. Public Policy Colloquium. 1 Unit.

Weekly colloquia speaker series required for M.P.P. and M.A. in Public Policy students. Themes vary each quarter.

PUBLPOL 313. Issues in Science Policy. 1 Unit.

Lecture series on significant issues in science and technology policy. Guest speakers will discuss issues including but not limited to: who should make science policy, educational dimension of science policy, manufacturing and science policy, California's stem cell policy, immigration and science policy, and the role of industry in science policy.

PUBLPOL 315. Practical Training. 1-10 Unit.

Students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. May be repeated for credit.

PUBLPOL 317. Comparing Institutional Forms: Public, Private, and Nonprofit. 4 Units.

For students interested in the nonprofit sector, those in the joint Business and Education program, and for Public Policy MA students. The focus is on the missions, functions, and capabilities of nonprofit, public, and private organizations, and the managerial challenges inherent in the different sectors. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials. Same as: EDUC 377, GSBGEN 346, SOC 377.

PUBLPOL 347D. Rebooting Government with Design Thinking. 3-4 Units.

Students apply tools of human-centered design to issues of government performance. Small project teams work with NGO and government partners (in the U.S. and abroad) on concrete design challenges focused on issues such as how to deliver services more effectively and ensure that citizens' voices are heard. Students identify needs, generate concepts, create prototypes, and test their appropriateness. Taught through the Hasso Plattner Institute of Design at Stanford (<http://dschool.stanford.edu>). Enrollment limited. Application required. Prerequisites: consent of instructor(s). Same as: POLISCI 347D.

PUBLPOL 353. Science and Technology Policy. 3-4 Units.

How U.S. and international political institutions and processes govern science and technology, the roles of scientists, engineers, and physicians in creating and implementing policies, and how these processes shape specific mission areas (economic growth, health, environment, information technology, international security). Assignments: analyzing the politics of particular legislative outcomes, assessing options for trying to reach a policy objective, and preparing mock memos and testimony.

PUBLPOL 354. Economics of Innovation. 5 Units.

The modern, knowledge-based economy characterized by: rapid innovation; a dramatic increase in the rate of production of information and decline in the cost of producing it; and pervasive network externalities or increasing returns to scale. Emphasis is on the role of patents and alternative mechanisms for creating incentives for firms to innovate. Topics include: why there may be too much innovative activity; how patent laws may slow rather than help innovation; and the interaction between public and private sector innovation. Prerequisites: 51,102B.

Same as: ECON 113.

PUBLPOL 364. Policy and Strategy Issues in Quantitative Finance. 2 Units.

(Same as LAW 564). This interdisciplinary course will survey the current landscape of the global markets as the world continues to progress through the financial crisis. We will discuss the sweeping change underway at the policy level by regulators and legislators around the world as well as the strategic discussions, which will include guest-lecturer perspectives on how affairs may change as a result and where the greatest opportunities exist for students entering the world of finance today. The course will also review, in a non-technical way, the basics of the financial derivatives and other quantitative techniques that are a core part of the global capital markets. The subject matter, by necessity, is multi-disciplinary and the course is particularly suited to those students having an interest in finance-based careers, entering legal, regulatory or public policy positions related to finance or studying the evolution of modern financial markets. Elements used in grading: Class Participation, Attendance, Final Paper. nConsent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

Same as: ECON 152, ECON 252.

ROTC Air Force Courses

ROTCAF 1. Air Force ROTC Lab. 1 Unit.

Practical leadership exercises including physical fitness training. May be repeated for credit.

ROTCAF 11. The Foundation of the United States Air Force. 1 Unit.

Introduces students to the Air Force and AFROTC with an overview of basic characteristics, missions, and organization of the Air Force; additional topics include officership and professionalism, career opportunities, military customs and courtesies, and an introduction to communications skills. May be repeat for credit.

ROTCAF 13. The Foundation of the United States Air Force III. 1 Unit.

Introduces students to the Air Force and AFROTC with an overview of basic characteristics, missions, and organization of the Air Force; additional topics include officership and professionalism, career opportunities, military customs and courtesies, and an introduction to communications skills.

ROTCAF 21. The Evolution of USAF Air and Space Power. 2 Units.

Examines general aspects of air and space power through historical study and analysis and provides the student with a knowledge level understanding of the capabilities, function and doctrinal employment of aerospace forces; emphasizes development of oral and written communication skills. May be repeat for credit.

ROTCAF 131. Air Force Leadership Studies. 2 Units.

Study of leadership, management fundamentals, professional knowledge, Air Force personnel system, ethics, and communication skills; develops application level knowledge of skills required of junior Air Force officer through case studies, practical exercises, and seminar discussion. May be repeat for credit.

ROTCAF 141. National Security Affairs. 2 Units.

Examines the national security process, international and regional relations, advanced leadership ethics, and Air Force doctrine with focus on the military as a profession, officership, military justice, civilian control of the military and current issues affecting military professionalism.

ROTCAF 142. PREPARATION FOR ACTIVE DUTY. 2 Units.

An examination of the role of the Air Force officer in contemporary society with emphasis on knowledge, comprehension, and application of skills needed to facilitate a smooth transition from civilian to military life. May be repeated for credit.

ROTC Army Courses

ROTCARMY 1. ARMY ROTC LAB. 1 Unit.

Leadership laboratories, held weekly for three hours, are required of all students. Performance during lab periods is reflected in the student's course grade. Labs include activities such as rappelling, terrain navigation, marksmanship, drill and ceremonies, and tactical field training exercises.

ROTCARMY 11. Leadership and Personal Development. 1 Unit.

Introduces students to the personal challenges and competencies that are critical for effective leadership. Students learn how the personal development of life skills such as goal setting, time management, physical fitness, and stress management relate to leadership and officership. Students develop their own personal fitness program under the guidance of an Army master fitness trainer.

ROTCARMY 12. Foundations in Leadership I. 1 Unit.

An overview of leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback and using effective writing skills. Students begin to explore leadership dimensions and values.

ROTCARMY 13. Foundations in Leadership II. 1 Unit.

An overview of the leadership framework with practical applications in fundamentals such as problem solving, listening, presenting briefs, and using effective writing skills. Students explore dimensions of leadership, values, attributes, skills, and actions in the context of practical, hands-on, and interactive exercises.

ROTCARMY 21. Innovative Leadership. 2 Units.

Explores the dimensions of creative leadership strategies and styles by studying historical cases and engaging in interactive exercises. Students practice aspects of personal motivation and team building within the context of planning, executing and assessing team exercises. Focus will be on the continued development of the knowledge of leadership values and attributes through an understanding of organizational customs and courtesies. Leadership case studies provide tangible context for learning Individual Creeds and Organizational Ethos.

ROTCARMY 22. Leadership in Changing Environments I. 2 Units.

Examines the challenges of leadership in complex contemporary operational environments. Dimensions of the cross-cultural challenges of leadership in a constantly changing world and their application to leadership tasks and situations. Case studies stressing importance of teamwork and tactics in real-world settings.

ROTCARMY 23. Leadership in Changing Environments II. 2 Units.

Examines the decision-making process and plans/orders that enable small units to complete assigned tasks. Planning techniques used to develop orders and briefing plans and decisions.

ROTCARMY 131. Adaptive Team Leadership. 2 Units.

Challenges students to study, practice, and evaluate adaptive leadership skills as they are presented with the demands of the ROTC Leader Development Assessment Course. Challenging scenarios related to small unit tactical operations are used to develop self-awareness and critical thinking skills. Students receive systematic and specific feedback on their leadership abilities.

ROTCARMY 132. Situational Leadership I. 2 Units.

Study of intense situational leadership challenges to build student awareness and skills in leading small units. Skills in decision-making, persuading, and motivating team members when "under fire" are explored, evaluated, and developed.

ROTCARMY 133. Situational Leadership II. 2 Units.

Practical applications of intense situational leadership challenges that will provide awareness and specific feedback on leadership abilities. Student skills are evaluated using practical applications in decision making, persuading, and motivating team members when "under fire." Aspects of military operations are reviewed as a means of preparing for the ROTC Leader Development Assessment Course (LDAC).

ROTCARMY 141. Developing Adaptive Leaders. 2 Units.

Students develop proficiency in planning, executing, and assessing complex operations; in functioning as a member of a staff; and in providing leadership performance feedback to subordinates. Students are given situational opportunities to assess risk, make ethical decisions, and provide coaching to fellow ROTC students. Students are challenged to instruct younger students. Students identify responsibilities of key staff roles and use situational opportunities to develop subordinates.

ROTCARMY 142. Leadership in a Complex World I. 2 Units.

Explores the dynamics of leadership in the complexity of current military operations. Students examine customs and courtesies, military law, principles of war and rules of engagement in the face of international terrorism. Aspects of interacting with nongovernmental organizations, civilians on the battlefield, and host nation support are examined and evaluated.

ROTCARMY 143. Leadership in a Complex World II. 2 Units.

Significant emphasis is placed on preparing students for their first unit of assignment and transition to lieutenant. Case studies, scenarios, and exercises are used to prepare students to face the complex ethical and practical demands of leading as commissioned officers in the U.S. Army.

ROTCARMY 176. Military History. 2 Units.

A survey of the military and diplomatic aspects of American involvement in conflicts from the Anglo-Indian Wars to the present.

ROTC Navy Courses

ROTCNAVY 1. Naval ROTC Lab. 1 Unit.

Activities consist of drill, athletics, and professional information events. Students gain experience in actual leadership situations and learn the fundamentals of seamanship, military formations, movements, commands, discipline, courtesies, and honors. During information briefings, special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer's duties.

ROTCNAVY 11. Introduction to Naval Science. 1 Unit.

An introduction to the naval profession and to the concepts of seapower. The mission, organization, and warfare components of the Navy and Marine Corps, including an overview of officer and enlisted ranks, rates, and career patterns; naval courtesy and customs, military justice, leadership, and nomenclature are discussed.

ROTCNAVY 12. Sea Power. 2 Units.

Provides an understanding of the role that the United States Navy has played in its nation's history, both in times of peace and in times of war, from 1775 to present day. Covers the early development of sea power and its effect on world events. Examines the continued importance of sea power and the many roles of the United States Navy from war fighting entity to international maritime peacekeeper to foreign policy instrument.

ROTCNAVY 21. Leadership and Management. 2 Units.

Introduces basic management, decision making, and moral leadership. The student will learn to establish meaningful goals, prioritize among competing demands, and plan and forecast in a task-centered organization. The course includes exposure to measures of organizational effectiveness, methods to overcome resistance to change, effective communications, and techniques to aid in counseling, team building, and resolution of disciplinary and personnel matters.

ROTCNAVY 22. Naval Ship Systems - Engineering. 2 Units.

Introduces the principles of the design, construction, and propulsion of ships. Includes the analysis of ship stability and thermodynamic cycles, and provides an introduction to ship main propulsion and auxiliary systems.

ROTCNAVY 131. Navigation. 2 Units.

Introduces the fundamentals of marine navigation emphasizing piloting and electronic navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, and study of tides and currents.

ROTCNAVY 132. Naval Operations & Seamanship. 2 Units.

Application of the nautical rules and maneuvering board in order to avoid collisions at sea. Other aspects of naval surface ship operations that are introduced include visual and electronic communications methods, tactical disposition of forces, ship handling theory, and deck seamanship topics.

ROTCNAVY 141. Naval Ship Systems - Weapons. 2 Units.

Examines the principles and theories used in the development of naval weapons systems. Extensive study is made of detection systems, especially radar and sonar, followed by discussions of ancillary systems for computing, stabilizing, tracking, and weapons control and delivery.

ROTCNAVY 142. Leadership and Ethics. 2 Units.

Integrates an intellectual exploration of Western moral traditions and ethical philosophy with a variety of topics, such as military leadership, core values, and professional ethics; the Uniform Code of Military Justice and Navy regulations; and discussions relating to the roles of enlisted members, junior and senior officers, command relationships and the conduct of warfare. The course provides midshipmen with a foundation of moral traditions, combined with a discussion of actual and historical events in the United States Navy and Marine Corps to prepare them for the roles and responsibilities of Naval leadership.

Radiation Oncology Courses

RADO 101. Readings in Radiation Biology. 1-18 Unit.**RADO 121. Imaging Anatomy in Animal Models. 0 Units.****RADO 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

RADO 202. The Basic Science of Radiation Therapy. 1 Unit.

For residents or fellows in the training program in the Division of Radiation Therapy, and for interested medical students. Basic processes of radiation biology that underly the treatment of malignant diseases by radiation. Carcinogenesis and mutagenesis by radiation are also covered. Prerequisite: familiarity with cell biology and physiology; consent of instructor.

RADO 244. Radiation and Cancer Biology Seminar Series. 1 Unit.

Open to graduate and undergraduate students. Current research in radiation and cancer biology summarized by two laboratories.

RADO 280. Early Clinical Experience in Radiation Oncology. 1-2 Unit.

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

RADO 299. Directed Reading in Radiation Oncology. 1-18 Unit.

Prerequisite: consent of instructor.

RADO 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

RADO 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Radiology Courses

RAD 101. Readings in Radiology Research. 1-18 Unit.

Prerequisite: consent of instructor.

RAD 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

RAD 220. Introduction to Imaging and Image-based Human Anatomy. 3 Units.

Focus on learning the fundamentals of each imaging modality including X-ray Imaging, Ultrasound, CT, and MRI, to learn normal human anatomy and how it appears on medical images, to learn the relative strengths of the modalities, and to answer, "What am I looking at?"

Same as: BIOE 220.

RAD 222A. Multimodality Molecular Imaging in Living Subjects I. 4 Units.

Focuses on instruments, algorithms and other technologies for imaging of cellular and molecular processes in living subjects. Introduces preclinical and clinical molecular imaging modalities, including strategies for molecular imaging using PET, SPECT, MRI, Ultrasound, and Optics. Covers basics of instrumentation physics, and the origin and properties of the signal generation.

Same as: BIOE 222A.

RAD 222B. Multimodality Molecular Imaging in Living Subjects II. 4 Units.

Focuses on molecular contrast agents (a.k.a. "probes") that interrogate and target specific cellular and molecular disease mechanisms. Covers the ideal characteristics of molecular probes and how to optimize their design for use as effective imaging reagents that enables readout of specific steps in biological pathways and reveal the nature of disease through noninvasive assays.

Same as: BIOE 222B.

RAD 222C. Multimodality Molecular Imaging in Living Subjects III. 4 Units.

Covers advanced topics in molecular imaging instrumentation, probes and assays that address unmet needs for improved diagnosis and disease management in cancer, neurological disease, cardiovascular medicine and musculoskeletal disorders. Lecturers identify problems or controversies in the field. The lectures are in the form of a grant proposal covering aims, background and relevance, innovation, proposed approaches to achieving the aims, and a review of the relevant primary literature. Students learn key elements of writing a successful grant proposal in the field of molecular imaging.

Same as: BIOE 222C.

RAD 223. Physics and Engineering of X-Ray Computed Tomography. 3 Units.

CT scanning geometries, production of x-rays, interactions of x-rays with matter, 2D and 3D CT reconstruction, image presentation, image quality performance parameters, system components, image artifacts, radiation dose. Prerequisites: differential and integral calculus. Knowledge of Fourier transforms (EE261) recommended.
Same as: BIOE 223.

RAD 225. Ultrasound Imaging and Therapeutic Applications. 3 Units.

Covers the basic concepts of ultrasound imaging including acoustic properties of biological tissues, transducer hardware, beam formation, and clinical imaging. Also includes the therapeutic applications of ultrasound including thermal and mechanical effects, visualization of the temperature and radiation force with MRI, tissue assessment with MRI and ultrasound, and ultrasound-enhanced drug delivery. Course website: <http://bioe325.stanford.edu>
Same as: BIOE 325.

RAD 226. In Vivo Magnetic Resonance Spectroscopy and Imaging. 3 Units.

Collections of identical independent nuclear spins are described by the classical vector model of magnetic resonance imaging (MRI); however, interactions among spins, as occur in many in vivo processes, require a more complete description. Physics and engineering principles of these in vivo magnetic resonance phenomena with emphasis on current research questions and clinical applications. Topics: quantum mechanical description of magnetic resonance, density matrix theory, product operator formalism, relaxation theory and contrast mechanisms, spectroscopic imaging, spectral editing, and multinuclear studies. Prerequisites: EE 369B or familiarity with magnetic resonance, working knowledge of linear algebra.

RAD 226. In Vivo Magnetic Resonance Spectroscopy and Imaging. 3 Units.

Collections of identical independent nuclear spins are described by the classical vector model of magnetic resonance imaging (MRI); however, interactions among spins, as occur in many in vivo processes, require a more complete description. Physics and engineering principles of these in vivo magnetic resonance phenomena with emphasis on current research questions and clinical applications. Topics: quantum mechanical description of magnetic resonance, density matrix theory, product operator formalism, relaxation theory and contrast mechanisms, spectroscopic imaging, spectral editing, and multinuclear studies. Prerequisites: EE 369B or familiarity with magnetic resonance, working knowledge of linear algebra.
Same as: BIOE 226.

RAD 227. Functional MRI Methods. 3 Units.

Basics of functional magnetic resonance neuroimaging, including data acquisition, analysis, and experimental design. Journal club sections. Cognitive neuroscience and clinical applications. Prerequisites: basic physics, mathematics; neuroscience recommended.
Same as: BIOPHYS 227.

RAD 228. Magnetic Resonance Imaging Programming Topics. 3 Units.

Primarily for students working on research projects involving MRI pulse sequence programming. Introductory and student-initiated topics in seminars and hands-on labs. Image contrast mechanisms achieved by pulse sequences that control radiofrequency and gradient magnetic fields in real time, while acquiring data in an organized manner for image reconstruction. Prerequisites: EE 369B and consent of instructor.

RAD 260. Computational Methods for Biomedical Image Analysis and Interpretation. 3-4 Units.

The latest biological and medical imaging modalities and their applications in research and medicine. Focus is on computational analytic and interpretive approaches to optimize extraction and use of biological and clinical imaging data for diagnostic and therapeutic translational medical applications. Topics include major image databases, fundamental methods in image processing and quantitative extraction of image features, structured recording of image information including semantic features and ontologies, indexing, search and content-based image retrieval. Case studies include linking image data to genomic, phenotypic and clinical data, developing representations of image phenotypes for use in medical decision support and research applications and the role that biomedical imaging informatics plays in new questions in biomedical science. Includes a project. Enrollment for 3 units with reduced project requirements requires instructor consent. Prerequisites: programming ability at the level of CS 106A, familiarity with statistics, basic biology. Knowledge of Matlab highly recommended.
Same as: BIOMEDIN 260.

RAD 280. Early Clinical Experience in Radiology. 1-2 Unit.

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

RAD 299. Directed Reading in Radiology. 1-18 Unit.

Prerequisite: consent of instructor.

RAD 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

RAD 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Religious Studies Courses

RELIGST 1. Religion Around the Globe. 4 Units.

A survey of significant religious traditions of the world with emphasis on contemporary manifestations. We will address aspects of Buddhism, Christianity, Hinduism, Islam, Judaism, and Sikhism. In addition, we will discuss interaction between individuals and communities in diverse and complex religious settings such as East Asia, the Middle East, and North America.

RELIGST 2. Is Stanford a Religion?. 4 Units.

This course seeks to introduce students to the study of religion by posing a two-part question: What is a religion, and does Stanford qualify as one? Scientific, pragmatic, seemingly secular, Stanford may not seem at all similar to religions like Christianity, Judaism or Buddhism, but a deeper look reveals that it has many of the qualities of religion--origin stories, rituals and ceremonies, sacred spaces and times, visions of the future, even some spirits. By learning some of the theories and methods of the field of religious studies, students will gain a better understanding not just of Stanford culture but of what motivates people to be religious, the roles religion plays in people's lives, and the similarities and differences between religious and secular culture.

RELIGST 5B. Biblical Greek II. 3-5 Units.

This is a continuation of the Winter Quarter Biblical Greek Course. We will be reading selections primarily from the New Testament (both Gospels and Epistles) as well as focusing on knowledge of key vocabulary and grammar needed to read the Greek Bible with ease. Readings will be supplemented with sections from the Septuagint and Early Christian texts (Apostolic Fathers and Early Creeds). Pre-requisite: ClassGrk 5 or a similar introductory course in Ancient Greek.
Same as: CLASSGRK 5B.

RELIGST 13Q. Mystical Journeys: Beyond Knowing and Reason. 3 Units.

What makes a mystic a mystic? This question has many sides. Why do we call someone a mystic? Is there such a thing as mystical experience? Do experiences make a mystic? Do beliefs? Practices? Many religious traditions have records of visionaries whose lives and writings open windows on the more hidden and aspirational aspects of belief and practice. These writings also take many forms: poem, letters, teachings, and accounts of visions, which we will encounter in the course of the quarter. Readings for the course will cover a cross-section of texts taken from Christian, Jewish, Muslim, Buddhist, and Native American sources.

RELIGST 14N. Demons, Death, and the Damned: The 'Other' and the Otherworldly in America. 3 Units.

This course will examine how beliefs about the "other world" actually shape and are shaped by Americans' this-worldly actions and interactions (i.e. in the demonization of the "other," whether defined religiously, racially, ethnically, or in gendered terms). Students will ask how ideas about demons and death, heaven and hell have reflected the concerns, values, and identities of Americans over time. Students will learn how to read primary sources against secondary literature.

RELIGST 17N. Love, Power, and Justice: Ethics in Christian Perspective. 3 Units.

From its inception, the Christian faith has, like all religions, implied an ethos as well as a worldview, a morality and way of life as well as a system of beliefs, an ethics as well as a metaphysics. Throughout history, Christian thinkers have offered reasoned accounts of the moral values, principles, and virtues that ought to animate the adherents of what eventually became the world's largest religion. We will explore a variety of controversial issues, theological orientations, and types of ethical reasoning in the Christian tradition, treating the latter as one 'comprehensive doctrine' (John Rawls) among many; a normative framework (actually a variety of contested religious premises, moral teachings, and philosophical arguments) formally on par with the religious ethics of other major faiths as well as with the various secular moral theories typically discussed in the modern university. We will learn to interpret, reconstruct, criticize, and think intelligently about the coherence and persuasiveness of moral arguments offered by a diverse handful of this religious tradition's best thinkers and critics, past and present.

RELIGST 18N. Religion and Politics: Comparing Europe to the U.S. 3-4 Units.

Interdisciplinary and comparative. Historical, political, sociological, and religious studies approaches. The relationship between religion and politics as understood in the U.S. and Europe. How this relationship has become tense both because of the rise of Islam as a public religion in Europe and the rising influence of religious groups in public culture. Different understandings and definitions of the separation of church and state in Western democratic cultures, and differing notions of the public sphere. Case studies to investigate the nature of public conflicts, what issues lead to conflict, and why. Why has the head covering of Muslim women become politicized in Europe? What are the arguments surrounding the Cordoba House, known as the Ground Zero Mosque, and how does this conflict compare to controversies about recent constructions of mosques in Europe? Resources include media, documentaries, and scholarly literature. Same as: JEWISHST 18N.

RELIGST 21. Religion in Science Fiction and Fantasy. 4 Units.

Science fiction and fantasy create alternate worlds that incorporate religious institutions and beliefs that illuminate how we think about religion now and for the future. Texts work off diverse religious traditions: Islam, Buddhism, Catholic and Protestant forms of Christianity, ancient Sumerian and Mayan religion, and Voudou are some that appear. Themes of free will and determinism, immortality, apocalypse and redemption. Myth, ritual, prophecy, the messianic hero, monasticism and mysticism. Texts like *Dune*, *Snow Crash*, *Count Zero* and the like explore religion in the contemporary imagination. Main assignment: write a short story.

RELIGST 22. Science and Ideology. 4 Units.

Is science objective? Do ideologies shape knowledge? Do accepted theories reflect factors other than evidence, such as social values, political agenda, or philosophical assumptions? Can there be such a thing as Marxist/Christian/Islamic/Feminist science? Does religion hamper science? As part of an introduction to the philosophy of science, the course considers these questions, and examines the nature of knowledge and the relationship between theory and evidence. We focus on how scientific theories are formed and evaluated, examine the arguments for and against the objectivity of science, and explore the debates occasioned by religion, feminism, and Marxism. Several historical case studies are considered.

RELIGST 24. Sexuality, Gender, and Religion. 2 Units.

From ancient times to the present, religious texts, authority figures, adherents, and critics have had a great deal to say about sexuality and gender, with powerful impacts in personal, social and political spheres. Today these debates are more wide ranging and public than ever. In this lecture and discussion series, distinguished scholars from within and beyond Stanford will consider how sexuality and gender become religious; in Judaism, Islam, Christianity, Hinduism, and Buddhism. Same as: FEMGEN 24.

RELIGST 28. Religion and Science in Dialogue: Possibilities and Future Directions. 1-2 Unit.

Religion and science are widely seen to be in conflict with each other, particularly in the West where science was under the aegis of the Church for centuries, until the advent of an independent scientific community and the tragedy of the Galileo affair. This course explores the historical and philosophical grounds for the conflictual view, areas where the two domains remain distinct, and contemporary and future strategies for dialogue on the basis of overlapping understandings of how we go about knowing anything at all. Features guest speakers from Stanford and elsewhere in the scientific, philosophical, historical and theological fields.

RELIGST 31. The Religious Life of Things. 3-5 Units.

Temples, prayer beads, icons, robes, books, relics, candles and incense, scarves and hats, sacred food and holy water; objects of all sorts play a prominent role in all religions, evoking a wide range of emotional responses, from reverence, solace and even ecstasy, to fear, hostility and violence. What is it about these things that makes them so powerful? Is it beliefs and doctrines that inspire particular attitudes towards certain objects, or is it the other way around? Many see a tension or even contradiction between religion and material pursuits and argue that the true religious life is a life without things. But is such a life even possible? This course adopts a comparative approach, drawing on a variety of traditions to examine the place of images, food, clothing, ritual objects, architecture and relics in religious thought and practice. Materials for the course include scholarship, scripture, images and at least one museum visit.

RELIGST 55. Exploring Zen. 4 Units.

Reading and discussion of Zen texts in English translation.

RELIGST 56. Exploring Chinese Religions. 4 Units.

An overview of major themes and historical developments in 5000 years of Chinese religion. In this course, we will try as much as possible to appreciate Chinese religion from the Chinese perspective, paying particular attention to original texts in translation in an attempt to discern the logic of Chinese religion and the role it has played in the course of Chinese history. To a greater extent perhaps than any other civilization, Chinese have left behind a continuous body of written documents and other artifacts relating to religion stretching over thousands of years, providing a wealth of material for studying the place of religion in history and society.

RELIGST 61. Exploring Islam. 4 Units.

Introduction to the most important features of the Islamic religious tradition in the premodern period. The ways in which Muslims have interpreted and practiced their religion. The main subjects of discussion include the life of the Prophet Muhammad, the Qur'an, law, ritual, mysticism, theology, politics, and art, with reference to their historical contexts. Topics include abortion, gender, war, and the visual vocabulary of paintings. Important theories and methods in the academic study of religion. No prior knowledge of religion required.

RELIGST 62. Philosophy of Religion. 4 Units.

Classic and modern questions in the philosophy of religion traced through Western and Eastern traditions: the coherence of theism, relativism, verification and ethics of belief, and mystical experience. Readings from traditional and modern texts.

RELIGST 62S. Philosophy of Religion. 3 Units.

Key philosophical questions concerning the nature of the divine and the religious through a close reading of some classic philosophical texts, while aiming to develop critical thinking about these issues. Topics include: the existence and nature of God, the problem of evil, the justification of religious belief, the nature of and relationship between faith and reason, and the function(s) of religion. Key texts will include Plato, St. Anselm, Hume, and Nietzsche.

Same as: PHIL 77S.

RELIGST 71. Exploring Judaism. 4 Units.

Introduction to the varied beliefs, ritual practices, and sacred stories of Judaism, moving from foundational texts like the Bible and the Talmud to recent changes in Jewish religious life that have arisen in response to secular and feminist critiques, the Holocaust, and the emergence of the State of Israel.

RELIGST 82. Approaches to the Study of Religion: Exploring Christianity. 4 Units.

Historical and contemporary Christianity from four viewpoints: ritual and prayer; sacred texts and creeds; ethics and life; and community governance.

RELIGST 86. Exploring the New Testament. 4 Units.

The New Testament is many things to many people. Around the globe, it is and has been for two millennia a source of culture, law, and faith. It has been used both to undergird battles for civil rights and to fight against them. It has been used both to justify wars and to argue that all war is unjust. Yet, many people haven't read the New Testament and still more haven't looked at it from historical, sociological, comparative and literary frameworks. This course will provide you the opportunity to read the New Testament and to study it closely. We will ask questions of the New Testament about the early Jesus movement, how it fits into its historical context and how it developed. We will look at the range of opinions and views about Jesus present in this literature. We will explore the different genres used by early Christians. We will examine how this set of Early Christian texts came to be considered the canon.

Same as: CLASSGEN 86.

RELIGST 91. Exploring American Religious History. 4 Units.

This course will trace how contemporary beliefs and practices connect to historical trends in the American religious landscape.

Same as: AMSTUD 91.

RELIGST 93. Exploring Zoroastrianism. 4 Units.

Zoroastrianism was once considered one of the great religions of antiquity. It was the state religion of the Persian Empire and its theological influence has been traced in Graeco-Roman mystery cults, Judaism, Christianity, Islam, Hinduism and Buddhism. Yet, today it is one of the least understood of living religions. This introductory class will introduce and analyze Zoroastrianism through some of its defining themes, including an examination of the figure of the prophet Zoroaster, modes of transmitting sacred knowledge, the nature of good and evil, and the importance of ritual practice and practitioners. We will also discuss how Zoroastrianism views the individual with respect to the body, the life cycle, and issues of gender and sexuality. Finally, this course will also examine the intersection of religion and ethnicity that has defined Zoroastrianism from its origins in the 2nd millennium BCE up to the present.

RELIGST 95. How to Read the Bible. 4 Units.

What does the Bible mean? Seeks to help students answer this question for themselves by introducing some of the many ways in which the Bible has been read over the ages. The focus will be the book of Genesis, but the real subject is the history of biblical interpretation; how Genesis has been understood by theologians, writers, artists, scholars and others; and the ultimate goal is not merely to engage the Bible itself but to gain a better appreciation of the act of reading, why people read differently and the consequences of that difference for religious history.

RELIGST 105. Religion and War in America. 4 Units.

Scholars have devoted much attention to wars in American history, but have not agreed as to whether religion was a major cause or simply a cover for political, economic, and other motives. We will compare interpretations that leave religion out, with those that take it into account. We will also look at the impact of war on the religious lives of ordinary Americans. We will examine both secondary as well as primary sources, beginning with King Philip's War in the 17th century, and ending with the "War on Terror" in the present day.

Same as: HISTORY 154D.

RELIGST 106. Religion and the Environment: The Moral Meanings of Nature. 3 Units.

What does it mean to live in "harmony" with nature? What do humans seek and find in nature and our relationship to it? How have understandings of nature oriented human actions and values and given "place" to humanity in the cosmos? From religious texts to Deep Ecology, American conservationism to Buddhist and Romantic nature poetry, naturalist critics of religion to religious naturalists, and finally debates over the role of religion in dealing with environmental crisis, this course is designed as a general introductory survey of the topic of religion and the environment. It will be guided by the question of how conceptions of nature have been a source of reflection on the goals of life and the ways in which humans are to understand their existential "lot". Readings will include primary texts from major religious traditions, poetry, and scholarly and philosophical texts from figures including, among others, Descartes, Goethe, Nietzsche, J.S. Mill, Thoreau, Aldo Leopold, John Muir, Gary Snyder, and Peter Singer.

RELIGST 107. Hindus and Muslims in South Asia. 4 Units.

Hindus and Muslims have lived together in the subcontinent for over 1000 years, joined by Sikhs in the last 500. Contrasting narratives may emphasize composite cultures and interdependent societies, or separation and conflict. In the first half we will introduce these traditions and communities and highlight composite cultures in religion, literature, and music. In the second half we will examine key moments of conflict: the 11th-century invasions of Mahmud of Ghazni and narratives about them in Hindu and Muslim sources; the 1947 Partition of India and Pakistan; the Khalistan movement and the 1984 massacre of Sikhs after Indira Gandhi's assassination; the 2002 Gujarat riots. Learning goals: critically examine the categories 'Hindu,' 'Muslim,' 'Sikh,' 'religion'; analyze differing narratives of the same events; clarify the complex factors involved in violent 'religious' conflict.

RELIGST 108. Indian Epics: Past and Present. 4 Units.

The Mahabharata and the Ramayana, the two great epics of India, have been crucial texts in South Asian literature and culture for millennia. In this course, we will explore the diverse forms and impacts of both epics from their Sanskrit versions, first composed more than 2,000 years ago, into retellings through newer media forms well into the twenty-first century. We begin with abridged translations of both the Mahabharata (including the Bhagavadgita) and the Ramayana. We will discuss the major literary, religious, and social themes of each text as well as subsequent retellings in Sanskrit and vernacular languages. Throughout the course we will also investigate the modern lives of the Indian epics, including their transformations into Indian television serials, film versions of both narratives (from India and America), and invocations of the epic stories in contemporary political disputes. In addition to gaining exposure to some of the foundational texts for the study of South Asia, students will cultivate the ability to fruitfully analyze texts and stories from different cultures. Same as: COMPLIT 148B.

RELIGST 109. Emperor, Explorer, and God: Alexander the Great in the Global Imagination. 3 Units.

This course will survey the changing image of Alexander the Great from the Hellenistic world to the contemporary. We shall study the appropriation of his life and legend in a variety of cultures both East and West and discuss his reception as both a divine and a secular figure by examining a variety of media including texts (primary and secondary) and images (statues, coins, mosaics, illuminated manuscripts, film, and TV) in the Hellenistic, Roman, Byzantine, Jewish, Islamic, Medieval, Renaissance, and Early Modern contexts. In concluding the quarter, students will evaluate contemporary representations in film and popular culture, such as Alexander directed by Oliver Stone and Pop Art in order to better appreciate his enduring legacy. Same as: CLASSGEN 109.

RELIGST 110. Islam, Art, Modernity. 3-5 Units.

Taught in conjunction with a major exhibition of modern Islamic art at the Cantor Museum. We will consider theoretical discussions regarding art and modern Muslim identities and examine the use of Islamic motifs in art and architecture in detail. Same as: RELIGST 310.

RELIGST 111. Islam in India: Conflict and Accommodation. 4 Units.

This course will investigate the history of Islam in South Asia, particularly interactions between Muslims and Hindus, through the lenses of conflict and accommodation. This topic has become increasingly important in modern times as India and neighboring nations experience sectarian violence and simultaneously strive to engender the peaceful coexistence of multiple religious communities. In many ways the debate over South Asia's present and future is being played out in regards to interpretations of its past. In this course, students will gain a solid overview of the chronological development of Islam in India and its negotiations with other religious traditions on the subcontinent. We will think critically about the relevance of South Asia's past to its present and the crucial role of forms of Indian Islam in the broader context of Islamic cultures across the globe. Same as: HISTORY 195X.

RELIGST 113B. Japanese Religion Through Film. 4 Units.

Themes in premodern and modern Japanese religion through animations, movies and documentaries.

RELIGST 113C. Asceticism: The Practice of Desire. 3 Units.

Asceticism is an intense negotiation of the self with its desires, usually taking the form of the attempt to repress or curtail desire. Asceticism is often understood as a radical response to the problem of obsessive desire. Excessive attachments to food, money, and sex are among the most common of these concerns; today we refer to these as addictions; both in the contemporary world and to those living in a pre-modern context. In this course, we will discuss the experiences of ascetic figures throughout history not as relics of history but as intelligible responses to the problem of obsessive desire common to all ages. We will comparatively examine case studies from the ancient Christian world and the modern Indian world. The first part of the course will be devoted to understanding some of the most notable theoretical approaches to ascetic behavior in the field of religious studies while the second part of the course will be devoted to close readings of the cases in light of these theoretical approaches. Cross-cultural comparison and contrast will also be stressed. In the final part of the course, we will turn to modern philosophical reflections on ascetic behavior, attempting to answer the question, does the ascetic response to obsessive desire make sense in the world we live in today?.

RELIGST 114. Yoga Ancient and Modern. 4-6 Units.

Originating in ancient India, yoga went through many developments over more than 4000 years in India and other parts of Asia. Having migrated to Euro-America in the late nineteenth century, today yoga is everywhere--studios, schools, gyms, malls, resorts, ashrams, retreat centers. It comes in many flavors; austere, with meditative instructors and Sanskrit chants; stylish, in 105-degree heat, with portable-miked instructors loudly motivating students to go through poses with speed and intensity; niche-crafted to meet the needs of busy professionals, pregnant women, senior citizens, or people with back problems. It may appear as a spiritual path or as a heavily marketed commodity. It generates lawsuits as teachers dispute ownership of certain styles, or as some Americans oppose its teaching yoga in public schools. In the first half of the course we will study the history of yoga in India, reading primary texts composed between about 500 BCE and 1600 CE. In the second half we will learn about yoga's globalization in the last century. Participating in a yoga class is recommended. 4 units without yoga class, 6 units with yoga class and weekly short reflections on the experience. Same as: RELIGST 214.

RELIGST 116. Who Speaks for Religion? Scholars Versus Believers. 4 Units.

This course introduces students to the Insider /Outsider problem in the study of Religion focusing on questions of location, position, relation and boundaries. Who possesses the authority to decide on which people are inside/outside a religion, religious group or tradition? How do we conceive of the participant observer relationship and the speaking and writing about religion? How should we think about the scientific pretensions of religious studies as a reductionist approach? How do we meaningfully engage with questions of faith, theology, and the beliefs of others as part of a historical narrative of religious studies that both privileges lived experience of believers and extols the need for critical distance on the part of scholars?.

RELIGST 117. Christianity in 21st-century America. 4 Units.

As the largest religion practiced in the United States, Christianity not only shapes the lives of a large number of its citizens but also impinges on public discourse, policies, and debates. This course investigates the ways in which Christianity in America is changing and what these changes bode for its role in the public and private spheres. Issues include shifting demographics lead to declining numbers in 'mainline' denominations; the polarization of Christian conservatives and religious 'nones'; interfaith toleration and cooperation alongside interreligious conflict; the rise of 'spiritual, not religious' young adults; the effects of immigration; religion and science.

RELIGST 119. Gandhi and His Legacy: Violence and Nonviolence in the World and in Ourselves. 4-5 Units.

Gandhi, the pioneer of nonviolent political struggle in the first half of the 20th century, is used as a springboard to study violence more broadly; what it is, what it does to individuals and societies, how it can be addressed and transformed. Special attention to connections between (non)violence on an individual/personal level and in the larger world. New format includes both academic study and experiential workshops

Same as: RELIGST 219.

RELIGST 119A. Spirits, Selves, and the Social: Histories of Thinking about Religion. 5 Units.

Why do humans worship gods, spirits, and ancestors? What roles do religion, witchcraft, and magic play in everyday life? How does religious action become meaningful in a particular context? In what sense can we know about the religious experiences of others? Focus is on approaches to religion throughout anthropology's history. Each student will carry out a mini-ethnography on a religious community of their choice. Students will not be required to have any previous knowledge in anthropology or the study of religion.

Same as: ANTHRO 119A.

RELIGST 124. Sufi Islam. 4 Units.

The complex of Islamic intellectual and social perspectives subsumed under the term Sufism. Sufi mystical philosophies and historical and social evolution. Major examples include: Qushayrî, Râbi'a, Junayd, Hallâj, Sulamî, Ibn al-'Arabî, Rûmî, Nizâm al-Dîn Awliyâ'. Social and political roles of Sufi saints and communities. Readings include original prose and poetry in translation, secondary discussions, and ethnography.

RELIGST 126. Protestant Reformation. 4 Units.

16th-century evangelical reformers (Luther, Calvin, Zwingli) and reform movements (Lutheran, Reformed, Anabaptist) in their medieval context.

RELIGST 128. The Five Books of Moses. 4 Units.

A survey of the first five books of the Hebrew Bible/Old Testament--Genesis, Exodus, Leviticus, Numbers and Deuteronomy; that will explore their authorship, form and meaning.

RELIGST 129. Modern Jewish Thought. 4 Units.

From 1870 to the late twentieth century, Jewish thought and philosophy attempted to understand Judaism in response to the developments and crises of Jewish life in the modern world. In this course we shall explore the responses of figures such as Martin Buber, Franz Rosenzweig, Hermann Cohen, Abraham Joshua Heschel, Joseph Soloveitchik, Emil Fackenheim, and Emmanuel Levinas. Central topics will concern ethics and politics, faith and revelation, redemption and messianism, and the religious responses to catastrophe and atrocity. We shall discuss Judaism in European culture before and after World War I and in North America in the postwar period and after the Six Day War. A central theme will be the ways in which attempts to understand Jewish experience are related to history.

Same as: JEWISHST 129.

RELIGST 132. Jesus the Christ. 4 Units.

How did Jesus of Nazareth, who never claimed to be Christ or divine, become the son of God after his death? Sources include the history of first-century Judaism and Christianity.

RELIGST 132C. How Jesus the Jew became God. 4 Units.

Contemporary historical-critical methods in investigating how one might study Jewish and Christian texts of the 1st century CE. Social contexts including economic realities and elite ideological views. What can be known historically about 1st-century Judaism and Jesus' part in it. How Jewish apocalyptic messianism shaped the birth of Christianity and its trajectory through the 1st century.

RELIGST 132D. Early Christian Gospels. 4 Units.

An exploration of Christian gospels of the first and second century. Emphasis on the variety of images and interpretations of Jesus and the good news, the broader Hellenistic and Jewish contexts of the gospels, the processes of developing and transmitting gospels, and the creation of the canon. Readings include the Gospel of John, the Gospel of Mark, the Gospel of Thomas, the Gospel of Mary and other canonical and non-canonical gospels.

Same as: CLASSGEN 132.

RELIGST 133. Inventing Christianity in Late Antiquity. 4 Units.

The transformation of an apocalyptic sect into an imperial religion from 200 to 600 C.E. Shifts in structures of authority, worship, and belief mapped against shifts in politics, economics and religion in the larger Roman empire. Cultural visions of this history including Edward Gibbon's *Decline and Fall of the Roman Empire*, Dan Brown's conspiracy theory in *The Da Vinci Code*, and Elaine Pagels' *The Secret Gospel of Thomas*.

RELIGST 134. Sacred Space. 4 Units.

Religions throughout history have marked certain spaces as out-of-the-ordinary, as places where the gods reveal themselves, where special events have taken place, where one can see and experience things not possible in ordinary space. Individuals and groups who enter and create these sacred spaces create the opportunity to transcend the everyday world. Some of these spaces are natural--mountains, rivers, deserts. Others are constructed--temples, churches, tombs. This course will explore such sacred spaces: how they come to be, what distinguishes them from ordinary space, what happens in them. Part of the course will be theoretical, looking at different approaches to sacred spaces developed by recent scholars of religion; part of it will be focused on specific sacred spaces, especially in Israel and America, and the course will conclude with a chance for students to explore the variety of sacred spaces found in our own community.

RELIGST 136. Buddhist Yoga. 4 Units.

Buddhist models of spiritual practice emphasizing issues in the interpretation of the contemplative path.

RELIGST 140. RELIGION AND ETHICS: The Limits of Dialogue. 3 Units.

How do religious traditions address ethical problems? Although the good seems like a universal goal, religious traditions force us to consider non-universal ways of defining it. From marriage to genetic engineering, from abortion to organ donation, issues of community, faith, and practice continue to complicate our ethical thinking. Exploration of case-studies and concepts, with readings from Kant, Foucault, Butler and others, as well as Jewish and Christian interpretations of the Bible.

RELIGST 144. John Calvin and Christian Faith. 5 Units.

Close reading and analysis of Calvin's *Institutes of the Christian Religion* as a classic expression of Christian belief.

RELIGST 146. Religious Mystery and Rational Reflection. 4 Units.

Explores the boundaries of rational knowledge about Christian faith through a careful reading of the transcendental project of Jesuit theologian Karl Rahner. Rahner's thought, informed by various sources (e.g., the mystics, Aquinas, Kant, Hegel and Ignatius Loyola), results in an interpretation of Christian faith that strives for intellectual honesty in the face of challenges from science, atheism and post-modern culture. Yet it leaves room for a fundamental human openness to the source and goal of self-transcendence, what Rahner calls Holy Mystery. Weekly short position papers will be required to stir both reflection and discussion.

RELIGST 148. From Jesus to Paul. 4 Units.

Jesus considered himself God's definitive prophet, but he did not think he was God, and had no intention of founding a new religion. How did this Jewish prophet become the gentile God and the founder of Christianity? The role of Paul.

RELIGST 148A. St. Paul and the Politics of Religion. 4 Units.

The major letters written by Paul, the Apostle, and his biography, Acts of the Apostles. Historical context in first century Jewish cultural politics. Origins of Christianity, and the split into Judaism and Christianity. The relationship between Jews and non-Jews. The juxtaposition of law and faith. Origins of cultural universalism. Paul as Jewish radical versus Paul, the first Christian thinker and theologian. Recent philosophical readings of Paul (Taubes, Badiou, and Agamben).

RELIGST 150. The Lotus Sutra: Story of a Buddhist Book. 4 Units.

The Lotus school of Mahayana, and its Indian sources, Chinese formulation, and Japanese developments.

RELIGST 156. Music and Religious Experience in the Contemporary World. 3-5 Units.

Explores the central role of music in the performance and experience of religion, positioning music not as an adjunct to silent rituals and liturgy, but as the catalyst and carrier of religious experience, indeed as religious experience itself. Topics include: trance, spirit possession, heightened religious experience, sacred sound and chant, shamanism, politics, and identity. Musical traditions include: Zimbabwean mbira music, African-American church music, Southeast Asian Buddhist ritual music, South Asian Hindu and Islamic devotional music, shamanistic music of Southeast Asia.

Same as: MUSIC 186A, MUSIC 286A, RELIGST 256.

RELIGST 161. Modern Religious Thought: From Galileo to Freud. 4-5 Units.

The three centuries following the Protestant Reformation led to a gradual clarification of the notions of the religious and secular and gave rise to a new genre of religious thought, ideally freed from theology, church or synagogue—a secular philosophy of religion, or in some cases a religiously-imbued philosophy. We will examine some of the foundations of religious thought in modernity, including Galileo, Spinoza, Diderot, Kant, Hegel, Schleiermacher, Kierkegaard, Feuerbach, Marx, Nietzsche and Freud.

RELIGST 162. Spirituality and Nonviolent Urban and Social Transformation. 3 Units.

A life of engagement in social transformation is often built on a foundation of spiritual and religious commitments. Case studies of nonviolent social change agents including Rosa Parks in the civil rights movement, César Chávez in the labor movement, and William Sloane Coffin in the peace movement; the religious and spiritual underpinnings of their commitments. Theory and principles of nonviolence. Films and readings. Service learning component includes placements in organizations engaged in social transformation. Service Learning Course (certified by Haas Center). Same as: CSRE 162A, URBANST 126.

RELIGST 168. Philosophy of Religion. 3 Units.

Course traces efforts within the Western tradition from Boethius through Anselm, Aquinas, Descartes, Hume, Kant, and Kierkegaard to Camus to establish a rational foundation for theist belief and its consistency or coherence with everyday experience. We will deal extensively with the criticisms that that effort has cast up and then turn to investigate issues that extraordinary or mystical experience raises. We will incorporate a look at Buddhist traditions as well as those in the west to gain insight into these questions. And finally, we will look at the ethics of belief, at our responsibility toward our commitments, and some of the varying positions available to us.

RELIGST 170A. Biblical Hebrew, First Quarter. 2 Units.

Establish a basic familiarity with the grammar and vocabulary of Biblical Hebrew and will begin developing a facility with the language. Students that are enrolled in this course must also enroll in Beginning Hebrew. This course requires no prior knowledge of Hebrew and will begin with learning the alphabet. By the end of the year, students will be able to translate basic biblical texts, will be familiar with common lexica and reference grammars, and will have sufficient foundational knowledge to enable them to continue expanding their knowledge either in a subsequent course or own their own. Same as: AMELANG 170A, JEWISHST 107A.

RELIGST 170C. Reading in Biblical Hebrew. 4 Units.

Third of a three quarter sequence. Readings and translation of biblical narratives emphasizing grammar and literary techniques. Prerequisite: AMELANG 170B.

RELIGST 170D. Readings in Talmudic Literature. 1 Unit.

Readings of the talmudic texts. Some knowledge of Hebrew is preferred. The ongoing seminar is designed to study the making of the talmudic sugya (unit of discourse), along with classic commentaries. Students will consider some of the recent developments in the academic study of Talmudic literature, introduced by the instructor. The goal of the ongoing seminar is to provide Stanford students and faculty with the opportunity to engage in regular Talmud study, and to be introduced to a variety of approaches to studying Talmudic texts. In 2013-14 sugyot will be selected from the context of civic and criminal law.

Same as: JEWISHST 127D, JEWISHST 227D, RELIGST 270D.

RELIGST 171A. Biblical Greek. 3-5 Units.

This is a one term intensive class in Biblical Greek. After quickly learning the basics of the language, we will then dive right into readings from the New Testament and the Septuagint, which is the ancient Greek translation of the Hebrew Bible. By the end of the term everyone will be able to read the Greek Bible with ease. No previous knowledge of Greek required.

Same as: CLASSGRK 5, JEWISHST 5.

RELIGST 173. What is Enlightenment? Religion in the Age of Reason. 4 Units.

Many contemporary attitudes towards religion were forged in 17th- and 18th-century Europe in the midst of heated debates over the meaning and value of Christianity in a world 'come of age': Liberal calls for justice, toleration, and pluralism in matters religious; secular suspicions about religious superstition, fanaticism, and ideology; skepticism regarding the solubility of ultimate questions of meaning and metaphysics. Seminal readings on religion from Descartes, Pascal, Leibniz, Voltaire, Hume, Mendelssohn and Kant.

RELIGST 174. Religious Existentialism-Kierkegaard. 4 Units.

Existentialism is often understood to be a secular or anti-religious philosophy of life, a substitute for Christian ethics in a post-theistic world come of age. Yet this twentieth-century philosophical movement owes many of its concerns and much of its vocabulary to the hyper-Protestant Danish thinker Soren Kierkegaard, and much of the best Christian and Jewish thought in the 20th-century (Bultmann, Buber, Tillich) adopted existentialism as the 'best philosophy' for making sense of these traditions in a secular age. This course will examine the origins of existentialist thought in the writings of Kierkegaard and its appropriation by a handful of influential 20th-century religious thinkers.

RELIGST 176. Religious Diversity: Theoretical and Practical Issues. 4 Units.

What does it mean for a religion to be true? If one religion is true, what about the truth of other religious possibilities? How, and why, should religious traditions be compared? Readings address tolerance and pluralism, relativism, comparative theory, and new religious virtues.

RELIGST 183. The Death of God: Between Hegel and Marx. 4 Units.

The radical transformations in Western notions of God between the death of Hegel and the birth of historical materialism, arguing that questions about theism and atheism, humanism, and history formulated in the period 1831-50 are still pertinent today. Texts from Hegel, the young Hegelians, Feuerbach, and Marx on issues of God, history, and the social dimensions of human nature.

RELIGST 185. Prophetic Voices of Social Critique. 4 Units.

Judges, Samuel, Amos, and Isaiah depict and question power, strong leaders who inevitably fail, the societal inequities and corruption inevitable in prosperity, and the interplay between prophet as representative of God and the human king. How these texts succeed in their scrutiny of human power and societal arrangements through attention to narrative artistry and poetic force, and condemnation of injustice. Includes service-learning component in conjunction with the Haas Center.

RELIGST 188A. Issues in Liberation: El Salvador. 4 Units.

Within the context of US intervention in Central America the course investigates the history of liberation movements in El Salvador (including liberation theology), as well as ethical questions relating economic, social, and political issues in that country. This class will likely include immersion travel to El Salvador over spring break and consequently the size of this course is limited. Students will be given an application by email. All applications will be reviewed to determine final class enrollment.

RELIGST 199. Individual Work. 1-15 Unit.

Prerequisite: consent of instructor and department. May be repeated for credit.

RELIGST 201. Classical Islamic Law. 3-5 Units.

Emphasis is on methods of textual interpretation. History of premodern Islamic law, including origins, formation of schools of law, and social and political contexts. Laws of sale, marriage, divorce, and the obligation to forbid wrong.

Same as: RELIGST 301.

RELIGST 201A. Gender in Classical Islamic Law. 3-5 Units.

The course examines classical Islamic society and law. It covers historical development, the unity and diversity of Muslim legal traditions, and the relationship between laws and values. Constructions of gender in law are examined through rituals, marriage, divorce, birth control, child custody, and sexuality.

Same as: RELIGST 301A.

RELIGST 203. Myth, Place, and Ritual in the Study of Religion. 3-5 Units.

Sources include: ethnographic texts and theoretical writings; the approaches of Charles Long, Jonathan Z. Smith, Victor Turner, Michael D. Jackson, and Wendy Doniger; and lived experiences as recounted in Judith Sherman's *Say the Name: A Survivor's Tale in Prose and Poetry*, Jackson's *At Home in the World*, Marie Cardinal's *The Words to Say It*, and John Phillip Santos's *Places Left Unfinished at the Time of Creation*.

Same as: RELIGST 303.

RELIGST 204. Paleography of Medieval and Early Modern Manuscripts. 3-5 Units.

Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures.

Same as: CLASSGEN 311, DLCL 209, ENGLISH 209, HISTORY 309G.

RELIGST 205. Religious Poetry. 4 Units.

Religious poetry drawn from the Islamic, Christian, Confucian and Daoist traditions. Limited enrollment or consent of the instructor required.

RELIGST 208A. Ex Oriente Lux: Orientalism and the Study of Religion. 3-5 Units.

This seminar is designed to expose students to issues relating to discourse and subjectivity within the textual constructions of Oriental religions in the colonial era. We will begin with Edward W. Said's provocative work on notions of representation and power embedded in the discourse on the Orient that established, produced, and, ultimately, perpetuated western knowledge about the Other. We will then discuss the impact of the Oriental Renaissance and the vital role that Eastern wisdom played in constructing the field of Comparative Religious Studies. In addition, students will also read ethnographies, fables, and travelogues that both support and undermine Said's thesis of an active West constructing a largely passive East.

Same as: RELIGST 308A.

RELIGST 208C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSART 108, CLASSART 208, MUSIC 208C, MUSIC 408C, REES 208C, REES 408C, RELIGST 308C.

RELIGST 209. Priests, Prophets, and Kings: Religion and Society in Late Antique Iran. 4-5 Units.

From India to the Levant and from the Caspian Sea to the Arabian Peninsula, the Sasanian Empire (224-651 CE) was the dominant power in the Middle East till the advent of Islam. Diverse religious institutions and social practices of the Zoroastrians, Manicheans, Jews, and Christians in late antique Iran. Complex relationships between the Zoroastrian priesthood, the Sasanian monarchs, and these minority religions within the context of imperial rule. Profound religious and social changes that occurred with the Islamic conquests of Iran as well as examine the rich cultural continuities that survived from the Pre-Islamic past.

Same as: CLASSGEN 106, CLASSGEN 206, RELIGST 309.

RELIGST 209A. Sugar in the Milk: Modern Zoroastrianism as Race, Religion, and Ethnicity. 4-5 Units.

Modern Zoroastrian experience as race, religion, and ethnic identity. Some 60,000 Zoroastrians now live in India and have resided there for a millennium. In the 19th century, these peoples from Persia/Parsis became colonial elites yet were acutely aware that they were not quite Indian, British, or Persian. Diverse ways this experience of dislocation has served as a defining characteristic in Parsi communal identity and contrast these South Asian experiences with the minority socio-politics of those who remained in Iran. Survey the colonial and post-colonial communities in England, East Africa, Hong Kong, Australia, and North America and examine the expression of these global diasporic experiences in literature and the arts.

Same as: RELIGST 309A.

RELIGST 209D. 'Crow Eaters' & 'Fire Worshippers': Exploring Contemporary Zoroastrianism Thru Reading Parsi Lit. 3-5 Units.

In the past three decades Parsi fiction has rapidly emerged as a unique and creative voice in modern Anglophone literature from South Asia. From Bapsi Sidhwa to Thrity Umrigar to Rohinton Mistry, Parsi novelists address the most poignant concerns of Zoroastrians living in an era of rapid social, political, and religious transformation. The erosion of tradition; the breakdown of the Parsi family; the demise of religion among the young; and the cultural losses and gains of living in diaspora are common themes in their works. The unique vantage point of the Parsis; neither Hindu nor Muslim, neither quite Indian nor quite British; will serve as a lens for examining the inherent tensions in multicultural societies both East and West.

Same as: RELIGST 309D.

RELIGST 209E. Imperishable Heroes and Unblemished Goddesses: Myth, Ritual, and Epic in Ancient Iran. 3-5 Units.

Designed as a broad introduction to the world of ancient Iran, students will be introduced to the Indo-European inheritance in ancient Iranian culture; the shared world of ritual, religion, and mythology between Zoroastrianism in Iran and Vedic Hinduism in India; and to the contours of early Zoroastrian religious thought. We will also survey mythoepic literature in translation from the archaic Avesta through the late antique Zoroastrian Middle Persian corpus to the early medieval national epic of Iran, the Book of Kings of Ferdowsi.

Same as: CLASSGEN 189, CLASSGEN 289, RELIGST 309E.

RELIGST 212. Chuang Tzu. 5 Units.

The *Chuang Tzu* (Zhuangzi) in its original setting and as understood by its spiritual progeny. Limited enrollment.

RELIGST 214. Yoga Ancient and Modern. 4-6 Units.

Originating in ancient India, yoga went through many developments over more than 4000 years in India and other parts of Asia. Having migrated to Euro-America in the late nineteenth century, today yoga is everywhere--studios, schools, gyms, malls, resorts, ashrams, retreat centers. It comes in many flavors; austere, with meditative instructors and Sanskrit chants; stylish, in 105-degree heat, with portable-miked instructors loudly motivating students to go through poses with speed and intensity; niche-crafted to meet the needs of busy professionals, pregnant women, senior citizens, or people with back problems. It may appear as a spiritual path or as a heavily marketed commodity. It generates lawsuits as teachers dispute ownership of certain styles, or as some Americans oppose its teaching yoga in public schools. In the first half of the course we will study the history of yoga in India, reading primary texts composed between about 500 BCE and 1600 CE. In the second half we will learn about yoga's globalization in the last century. Participating in a yoga class is recommended. 4 units without yoga class, 6 units with yoga class and weekly short reflections on the experience.

Same as: RELIGST 114.

RELIGST 216. Japanese Buddhism. 4 Units.

Focus on the religious lives of lay people in medieval Japan, as evidenced in collections of Buddhist stories (setsuwashu), narrative picture scrolls (emaki), and related historical materials. All readings are in English, but the instructor will also work with students interested in reading the original Japanese.

RELIGST 217. Japanese Studies of Religion in China. 3 Units.

(Graduate students register for 317.) Readings in Japanese secondary sources on Chinese religions.

Same as: RELIGST 317.

RELIGST 219. Gandhi and His Legacy: Violence and Nonviolence in the World and in Ourselves. 4-5 Units.

Gandhi, the pioneer of nonviolent political struggle in the first half of the 20th century, is used as a springboard to study violence more broadly; what it is, what it does to individuals and societies, how it can be addressed and transformed. Special attention to connections between (non)violence on an individual/personal level and in the larger world. New format includes both academic study and experiential workshops

Same as: RELIGST 119.

RELIGST 221. The Talmud. 4 Units.

Strategies of interpretation, debate, and law making. Historical contexts. Prerequisite: Hebrew.

Same as: RELIGST 321.

RELIGST 221B. What is Talmud?. 5 Units.

In what sense can Talmud be studied as literature? Which voices can be identified? Concepts of author, editor, or redactor. The basic textual units of Talmud: sugya, chapter, and tractate. The sugya as literary genre. The aesthetic of talmudic dialectics. Prerequisite: reading Hebrew with some understanding of biblical Hebrew

Same as: RELIGST 321B.

RELIGST 222B. Sufism Seminar. 3-5 Units.

Sufism through original texts and specialized scholarship. Prerequisite: ability to read at least one major language of Islamic religious literature (Arabic, Persian, Turkish, Urdu).

Same as: RELIGST 322B.

RELIGST 224. Classical Islamic Texts. 3 Units.

Readings in key genres of pre-modern Islamic scholarship. Genre-specific historical research methods. The 'ad'ith literature, tafs'ir, biographical dictionaries, fiqh, ta'r'ikh, and geographical works. Reading knowledge of Arabic is required.

Same as: RELIGST 324.

RELIGST 224B. Unveiling the Sacred: Explorations in Islamic Religious Imagination. 3-5 Units.

Poetry and prose in translation as well as historical studies. Islamic movements invested in the idea that the sensory world has a hidden or esoteric counterpart that can be understood or experienced through following particular religious programs. Various forms of Shi'ism and Sufism, millenarian and apocalyptic movements, the Nation of Islam and its offshoots. Philosophical propositions, historical contexts, and the role of ritual in the construction of religious systems.

Same as: RELIGST 324B.

RELIGST 226A. Judaism and Hellenism. 3-5 Units.

interactions and conflicts between Jews and Greeks in the centuries following the conquests of Alexander the Great and the cultural/religious repercussions of their encounter. In what ways were Jews influenced by Greek culture? In what ways, and for what reasons, did they resist it? And how the interaction of these cultures shape the subsequent development of Judaism and Christianity? Jewish texts in the Greco-Roman period, including Jewish-Greek writers like Philo of Alexandria, the Apocrypha, the Dead Sea Scrolls, selected writings from the New Testament, and the Passover Haggadah.

Same as: RELIGST 326A.

RELIGST 226D. Jewish-Christian Relations in Antiquity. 1-2 Unit.

Constructions of identity, community, ethnicity: these considerations frame the investigation of ancient Christian rhetoric and theology contra Iudaeos. This historical project will be set within the larger intellectual and cultural context of a) learned Graeco-Roman traditions of ethnic stereotyping; b) forensic rhetoric; and c) philosophical paideia; and these traditions will be considered within their larger social context of the Mediterranean ncity (I-III). Specifically, various Christian, and especially Latin ntraditions contra Iudaeos (IV-VI) will be studied.

Same as: CLASSGEN 126B.

RELIGST 227. The Qur'an. 5 Units.

Early history, themes, structure, chronology, and premodern interpretation. Relative chronology of passages.

Same as: RELIGST 327.

RELIGST 229. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire. 3-5 Units.

Since Herodotus in the 5th century BCE, the Persian Empire has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West and Greek democracy. History of the Achaemenid Empire, beginning with the rise of the Medes in the 7th century BCE to the fall of the Achaemenids to Alexander the Great's armies in 331 BCE. Focus on the intimate relationship between religion and empire and will also survey the diverse cultural institutions and religious practices found within the Empire. Evaluate contemporary representations of the Persians in politics and popular culture, such as the recent film "300" and the graphic novel on which it is based, in an attempt to better appreciate the enduring cultural legacy of the Greco-Persian wars.

Same as: CLASSGEN 159, CLASSGEN 259, RELIGST 329.

RELIGST 230B. Zen Studies. 4 Units.

Readings in recent English-language scholarship on Chan and Zen Buddhism

Same as: RELIGST 330B.

RELIGST 231X. Knowing God: Learning Religion in Popular Culture. 4 Units.

This course will examine how people learn religion outside of school, and in conversation with popular cultural texts and practices. Taking a broad social-constructivist approach to the variety of ways people learn, this course will explore how people assemble ideas about faith, identity, community, and practice, and how those ideas inform individual, communal and global notions of religion. Much of this work takes place in formal educational environments including missionary and parochial schools, Muslim madrasas or Jewish yeshivot. However, even more takes place outside of school, as people develop skills and strategies in conversation with broader social trends. This course takes an interdisciplinary approach to questions that lie at the intersection of religion, popular culture, and education.

Same as: EDUC 231X, JEWISHST 291X.

RELIGST 233. The Ethics of Religious Politics. 3-5 Units.

Is it possible for a deeply committed religious person to be a good citizen in a liberal, pluralistic democracy? Is it morally inappropriate for religious citizens to appeal to the teachings of their tradition when they support and vote for laws that coerce fellow citizens? Must the religiously committed be prepared to defend their arguments by appealing to 'secular reasons' ostensibly accessible to all 'reasonable' citizens? Exploration of the debates surrounding the public role of religion in a religiously pluralistic American democracy through the writings of scholars on all sides of the issue from the fields of law, political science, philosophy, and religious studies.

Same as: RELIGST 333.

RELIGST 234. Emmanuel Levinas: Ethics, Philosophy and Religion. 4 Units.

Emmanuel Levinas (1906-1995) is a major French philosopher of the second half of the twentieth century and is among the half-dozen most important Jewish thinkers of the century. Born in Lithuania, Levinas lived most of his life in France; he was primarily a philosopher but also a deeply committed Jewish educator who often lectured and wrote about Judaism and Jewish matters. Levinas was influenced by Bergson, Husserl, Heidegger, and others, like Buber and Rosenzweig. We will look at the philosophical world in which he was educated and explore his unique development as a philosopher in the years after World War Two. Levinas reacted against the main tendencies of Western philosophy and religious thought and as a result shaped novel, powerful, and challenging ways of understanding philosophy, religion, ethics, and politics. In this course, we will examine works from every stage of Levinas's career, from his early study of Husserl and Heidegger to the emergence of his new understanding of the human condition and the primacy of ethics, the face-to-face encounter with the human other, the role of language and the relationship between ethics and religion, and finally his understanding of Judaism and its relationship to Western philosophy. We will be interested in his philosophical method, the relevance of his thinking for ethics and religion, the role of language in his philosophy and the problem of the limits of expressibility, and the implications of his work for politics. We shall also consider his conception of Judaism, its primary goals and character, and its relation to Western culture and philosophy.

Same as: JEWISHST 224, JEWISHST 324, RELIGST 334.

RELIGST 235. Religion in Modern Society: Secularization and the Sacred. 4 Units.

Due to the retreat of religion from spheres of public life and the domination of technology and scientific rationality in modern globalized culture, it has been claimed that the modern West has ushered in 'a secular age' in which religion has an unclear and contested place. This course will address pressing questions about the role of religion in modern society by looking at the historical development and current form of the theory of secularization. The central goals of the course are to understand the meaning of 'secular' against its counterpart, 'religious,' and to understand the many issues involved in distinguishing these terms and applying them to gain a greater understanding of the dynamics and tensions of modern life.

Same as: RELIGST 335.

RELIGST 236. European Reformations. 4-5 Units.

Readings in and discussion of theological and social aspects of sixteenth century reformations: Luther, Radical Reform, Calvin, and Council of Trent, missionary expansion, religious conflict, creative and artistic expressions. Texts include primary sources and secondary scholarly essays and monographs.

Same as: HISTORY 231G, HISTORY 331G, RELIGST 336.

RELIGST 237. Heavenly Bodies: Saints' Bodies, Relics and Miracles in Late Antique and Medieval Europe. 4-5 Units.

This seminar will use both written and visual sources to explore how the body mattered in the creation of saintly tropes and cults in late antique and medieval Europe. We will begin by reading the diary of an early Christian martyr to consider how a good death set the terms for an ideal Christian life. We will then explore a number of medieval vitae or saints' lives to uncover narrative devices used to describe an exemplary life and consider the role self-denial, bodily and otherwise, played in constructing those portraits. We will conclude by considering the power medieval people ascribed to the remains of saints' bodies and look at the cult of relics as well as miracle accounts describing the bodily healings and transformations ascribed to saints.

Same as: HISTORY 207F, HISTORY 307F, RELIGST 337.

RELIGST 238. Christian Neo-Platonism, East and West. 3-5 Units.

Christianity's shift to neo-Platonic Greek philosophical categories and its significance for contemporary spirituality. Readings from Plotinus, Proclus, Greek fathers such as Pseudo-Dionysus, and from Ambrose and Augustine.

Same as: RELIGST 338.

RELIGST 239. Luther and the Reform of Western Christianity. 3-5 Units.

Luther's theology, ethics, biblical interpretation, and social reforms and their significance for the remaking of Western Christianity. Readings include Luther's own writings and secondary sources about Luther and his world.

Same as: RELIGST 339.

RELIGST 245. Religion, Reason, and Romanticism. 5 Units.

The late 18th-century European cultural shift from rationalist to romantic modes of thought and sensibility. Debates about religion as catalysts for the new *Zeitgeist*. Readings include: the Jewish metaphysician, Mendelssohn; the dramatist, Lessing; the philosopher of language and history, Herder; the critical idealist, Kant; and the transcendental idealist, Fichte.

RELIGST 246. Constructing Race and Religion in America. 4-5 Units.

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time.

Same as: CSRE 246, HISTORY 256G, HISTORY 356G, RELIGST 346.

RELIGST 247. Chinese Buddhist Texts. 3-5 Units.

Chinese Buddhist texts from the Han Dynasty onwards, including sutra translations, prefaces, colophons, story collections and biographies.

Prerequisite: reading competence in Chinese.

Same as: RELIGST 347.

RELIGST 247B. Readings in Chinese Religious Texts: The Lingbao Scriptures. 4 Units.

A survey of the original Lingbao scriptures. Composed in the late-4th / early 5th century, these texts radically revised Daoist practice, incorporated elements of Buddhist thought and practice, and created liturgies that are still used in Daoist communities today. (Reading knowledge of Literary Chinese *cc* required).

Same as: RELIGST 347B.

RELIGST 248. Chinese Buddhism in World Historical Perspective. 3-5 Units.

Shared cosmologies, trade routes, and political systems. Prerequisite: background in Chinese or Japanese.
Same as: RELIGST 348.

RELIGST 248A. Chinese Buddhism Beyond the Great Wall. 3-5 Units.

The thought, practice, and cultural resonance of the sorts of originally Chinese Buddhism that flourished to the north and northwest of China proper during the two to three centuries following the fall of the Tang - i.e., under the Khitan Liao (907-1125) and the Tangut Xixia (1032-1227) dynasties - with special emphasis on the later fortunes of the Huayan, Chan, and Mijiao (Esoteric) traditions. Prerequisite: reading knowledge of Chinese.

Same as: RELIGST 348A.

RELIGST 250. Classics of Indian Buddhism. 4 Units.

Texts in English translation including discourses (sutras), philosophical treatises, commentaries, didactic epistles, hymns, biographies, and narratives.

RELIGST 251. Readings in Indian Buddhist Texts. 3-5 Units.

(Graduate students register for 351.) Introduction to Buddhist literature through reading original texts in Sanskrit. Prerequisite: Sanskrit.

Same as: RELIGST 351.

RELIGST 252. Hearts and Diamonds: The Lives of Buddhist Sacred Texts. 4 Units.

An exploration of two key Mahayana Buddhist scriptures (the Heart & Diamond Sutras) and their histories, looking at what they say and how they have been used, from the first millennium to the present day.

RELIGST 252A. The Story of a Buddhist Megascripture: Readings in the Avatamsaka. 3-5 Units.

In this course we will explore the massive Mah'y'na Buddhist scriptural compilation known as the Avatamsaka S'tra (more correctly: Buddh'vata'saka S'tra). We will investigate the development of the text in India, study its contents, and consider its later reception in East Asia. Since much of the course will be devoted to reading sections of the Buddh'vata'saka, a reading knowledge of Chinese is required.

Same as: RELIGST 352A.

RELIGST 253. Mountains, Buddhist Practice, and Religious Studies. 3-5 Units.

The notion of the sacred mountain. Readings from ethnographic and theoretical works, and primary sources.

Same as: RELIGST 353.

RELIGST 254. Recent Contributions to Buddhist Studies. 4 Units.

May be repeated for credit.

RELIGST 256. Music and Religious Experience in the Contemporary World. 3-5 Units.

Explores the central role of music in the performance and experience of religion, positioning music not as an adjunct to silent rituals and liturgy, but as the catalyst and carrier of religious experience, indeed as religious experience itself. Topics include: trance, spirit possession, heightened religious experience, sacred sound and chant, shamanism, politics, and identity. Musical traditions include: Zimbabwean mbira music, African-American church music, Southeast Asian Buddhist ritual music, South Asian Hindu and Islamic devotional music, shamanistic music of Southeast Asia.

Same as: MUSIC 186A, MUSIC 286A, RELIGST 156.

RELIGST 256. The Brahma Net Sutra (Fanwang Jing). 4 Units.

A study of an important Chinese Buddhist apocryphal work, with special attention to interpretation of content, impact on monastic codes in medieval China, transmissal history and commentarial tradition.

Same as: RELIGST 356.

RELIGST 257. Readings in Daoist Texts. 4 Units.

Readings from primary sources. Prerequisite: classical Chinese.

Same as: RELIGST 357.

RELIGST 258. Japanese Buddhist Texts. 3-5 Units.

Readings in medieval Japanese Buddhist materials. May be repeated for credit. Prerequisite: background in Japanese or Chinese.

Same as: RELIGST 358.

RELIGST 259. Religion and Music in South Asia. 4-5 Units.

How music and other arts in South Asia are intertwined with religion. Classical, devotional, folk, and popular examples introduce Gods as musicians, sound as God, music as yoga, singing as devotion, music as ecstasy-inducing, music as site for doctrinal argument, music and religion as vehicles for nationalism. Co-taught by professors of Music and Religious Studies, focusing Hinduism and Islam in India, Pakistan, and the diaspora. Music practice along with academic study; guest artists and films; no background required.

Same as: MUSIC 186, MUSIC 286.

RELIGST 261A. Belief. 5 Units.

The post-Christain (or post-modern) age has given rise to new forms of faith, ranging from secular humanism and cultural atheism to rediscovery of the transcendent in the cosmos and quantum mechanics. However, unlike the era of "Christendom," belief is no longer necessarily hinged to faith. This course explores the origins of this phenomenon in Thomas Aquinas, and then newer philosophical approaches to understanding belief, ranging from Charles Taylor and Talal Asad and their theories of the secular, to Catherine Bell and the role of practice in believing. Finally, we turn to the work of three contemporary theorists of religious belief: Gianni Vattimo, Jean-Luc Marion, and Richard Kearney, who endeavor to cast believing outside established theological categories, yet still speak of "god."

Same as: in a post-Christian Age.

RELIGST 263. Judaism and the Body. 4 Units.

Representations and discourses of the body in Jewish culture; theories of body and ritual. Case studies of circumcision, menstrual impurity, and intersexuality. Readings include classical texts in Jewish tradition and current discussions of these textual traditions.

RELIGST 270D. Readings in Talmudic Literature. 1 Unit.

Readings of the talmudic texts. Some knowledge of Hebrew is preferred. The ongoing seminar is designed to study the making of the talmudic sugya (unit of discourse), along with classic commentaries. Students will consider some of the recent developments in the academic study of Talmudic literature, introduced by the instructor. The goal of the ongoing seminar is to provide Stanford students and faculty with the opportunity to engage in regular Talmud study, and to be introduced to a variety of approaches to studying Talmudic texts. In 2013-14 sugyot will be selected from the context of civic and criminal law.

Same as: JEWISHST 127D, JEWISHST 227D, RELIGST 170D.

RELIGST 271A. Dante's Spiritual Vision. 4-5 Units.

Poetry, ethics, and theology in Dante's Divine Comedy. Supplementary readings from classical authors such as St. Thomas Aquinas, and from modern writers, such as Jorge Borges. Fulfills capstone seminar requirement for the Philosophy and Literature tracks. Students may take 271A without taking 271B. Consent of the instructor required.

RELIGST 271B. Dante's Spiritual Vision. 4-5 Units.

Poetry, ethics, and theology in Dante's Divine Comedy. Supplementary readings from classical authors such as St. Thomas, and from modern writers, such as Jorge Borges. Fulfills capstone seminar requirement for the Philosophy and Literature tracks. Prerequisite: 271A.

RELIGST 272. Kant on Religion. 3-5 Units.

Critical examination of Kant's principle writings on religion against the background of his general theoretical and practical philosophy and guided by the hypothesis that his philosophy of religion continues to offer significant insights and resources to contemporary theories of religion. Recent reassessments of Kant on religion in the secondary literature will also be read and discussed.

Same as: RELIGST 372.

RELIGST 273. Historicism and Its Problems: Ernst Troeltsch, the Study of Religion, and the Crisis of Historicism. 3-5 Units.

Examination of the early twentieth-century historian of religion, philosopher of culture, sociologist of religion, Christian theologian, and philosopher of history, Ernst Troeltsch, within the context of the late nineteenth-century "crisis of historicism," i.e., the historicization and relativization of religious, ethical, social, and political norms. Attention to seminal theorists of history (Herder, Kant, Ranke, Hegel, Nietzsche) in the post-Enlightenment German intellectual tradition and the attempts of Christian and Jewish thinkers in the Weimar era (Barth, Gogarten, Rosenzweig, L. Strauss) to "overcome" the crisis wrought by a radically historical approach to human culture.

Same as: RELIGST 373.

RELIGST 274. From Kant to Kierkegaard. 3-5 Units.

(Graduate students register for 374.) The main currents of religious thought in Germany from Kant's critical philosophy to Kierkegaard's revolt against Hegelianism. Emphasis is on the theories of religion, the epistemological status of religious discourse, the role of history (especially the figure of Jesus), and the problem of alienation/reconciliation in seminal modern thinkers: Kant, Schleiermacher, Hegel, and Kierkegaard.

Same as: RELIGST 374.

RELIGST 275. Kierkegaard. 3-5 Units.

(Graduate students register for 375.) Close reading of Kierkegaard's magnum opus, *Concluding Unscientific Postscript to Philosophical Fragments*, in its early 19th-century context.

Same as: RELIGST 375.

RELIGST 277. The Later Heidegger: Art, Poetry, Language. 3 Units.

Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from "On the Origin of the Work of Art" and Elucidations of Holderlin's Poetry.

Same as: PHIL 234B, RELIGST 377.

RELIGST 278. Heidegger: Confronting the Ultimate. 3-5 Units.

Heidegger's work on meaning, the self, and the sacred. Texts include *Being and Time*, courses and opuscula up to 1933, the *Letter on Humanism*, and *Contributions of Philosophy*.

Same as: RELIGST 378.

RELIGST 279. Heidegger and the Philosophy of Religion. 4 Units.

Exploration of the end of the metaphysical quest for God in nineteenth and twentieth century thought. Seminal works of German philosopher Martin Heidegger, including *Being and Time*, *What Is Metaphysics?* Nietzsche's Saying 'God is Dead.' Phenomenological method and its application to traditional and contemporary philosophy of religion, including works by John D. Caputo and Gianni Vattimo.

Same as: RELIGST 379.

RELIGST 279A. Heidegger on human being and God. 4 Units.

This lecture-seminar first raises the question of essential characteristics of human being, such as temporality, mortality, hermeneutics and the relation to meaning, and then, via readings from Karl Rahner, asks whether human being is open to a possible relation to a supernatural divinity.

Same as: RELIGST 379A.

RELIGST 280. Schleiermacher: Reconstructing Religion. 3-5 Units.

Idealist philosopher, Moravian pietist, early German Romantic, co-founder of the University of Berlin, head preacher at Trinity Church, translator of Plato's works, Hegel's opponent, pioneer in modern hermeneutics, father of modern theology. Schleiermacher's controversial reconception of religion and theology in its philosophical context.

Same as: RELIGST 380.

RELIGST 281. Asian Religions in America; Asian American Religions. 4 Units.

This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions.

Same as: AMSTUD 281, ASNAMST 281, RELIGST 381.

RELIGST 282. King Solomon and the Search for Wisdom. 4 Units.

What is wisdom according to the Bible? The course addresses this question by surveying various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon's role in Jewish, Christian and Islamic tradition.

Same as: RELIGST 382.

RELIGST 283A. Heidegger, Hölderlin, and the Gods. 3-5 Units.

The radical transformations in Western notions of God between the death of Hegel and the birth of historical materialism, arguing that questions about theism and atheism, humanism, and history formulated in the period 1831-50 are still pertinent. Texts from Hegel, the young Hegelians, Feuerbach, and Marx on issues of God, history, and the social dimensions of human nature.

Same as: RELIGST 383A.

RELIGST 290. Majors Seminar. 5 Units.

Required of all majors and joint majors. The study of religion reflects upon itself. Representative modern and contemporary attempts to "theorize," and thereby understand, the phenomena of religion in anthropology, psychology, sociology, cultural studies, and philosophy. WIM.

RELIGST 293X. Religion and Education. 4 Units.

This course will examine interactions between religion and education, focusing on both formal and experiential sites in which people and communities explore, articulate, encounter, and perform religious ideologies and identities. The class will focus on different religious traditions and their encounters the institutions and structures of education in American culture, both in the United States and as it manifests in American culture transnationally.

Same as: EDUC 293X.

RELIGST 297. Senior Essay/Honors Essay Research. 3-5 Units.

Guided by faculty adviser. May be repeated for credit. Prerequisite: consent of instructor and department.

RELIGST 298. Senior Colloquium. 5 Units.

For Religious Studies majors writing the senior essay or honors thesis. Students present work in progress, and read and respond to others. Approaches to research and writing in the humanities.

RELIGST 300. Theory in the Study of Religion. 4 Units.

This course explores how religious belief, ritual, and tradition, interact with, embed, or respond to aspects of social reality or human nature, such as economics, institutions, law, art, values, and psychology. The course examines a number of approaches to the study of religion, including sociological and anthropological ones. The course is intended for Religious Studies MA students and graduate students from other departments.

RELIGST 301. Classical Islamic Law. 3-5 Units.

Emphasis is on methods of textual interpretation. History of premodern Islamic law, including origins, formation of schools of law, and social and political contexts. Laws of sale, marriage, divorce, and the obligation to forbid wrong.

Same as: RELIGST 201.

RELIGST 301A. Gender in Classical Islamic Law. 3-5 Units.

The course examines classical Islamic society and law. It covers historical development, the unity and diversity of Muslim legal traditions, and the relationship between laws and values. Constructions of gender in law are examined through rituals, marriage, divorce, birth control, child custody, and sexuality.

Same as: RELIGST 201A.

RELIGST 302. Islamic Studies Proseminar. 1-5 Unit.

Research methods and materials for the study of Islam. May be repeated for credit.

RELIGST 303. Myth, Place, and Ritual in the Study of Religion. 3-5 Units.

Sources include: ethnographic texts and theoretical writings; the approaches of Charles Long, Jonathan Z. Smith, Victor Turner, Michael D. Jackson, and Wendy Doniger; and lived experiences as recounted in Judith Sherman's *Say the Name: A Survivor's Tale in Prose and Poetry*, Jackson's *At Home in the World*, Marie Cardinal's *The Words to Say It*, and John Phillip Santos's *Places Left Unfinished at the Time of Creation*. Same as: RELIGST 203.

RELIGST 304A. Theories and Methods. 4 Units.

Required of graduate students in Religious Studies. Approaches to the study of religion. Prerequisite: consent of instructor.

RELIGST 304B. Theories and Methods. 4 Units.

Required of graduate students in Religious Studies. Approaches to the study of religion. Prerequisite: consent of instructor.

RELIGST 306. Life, Love, and Death in Islamic Narratives. 3-5 Units.

A wide-ranging engagement with Islamic perspectives on fundamental human preoccupations. We will utilize religious and literary sources spanning Islamic history to discuss topics such as: the ends of human life in the material world: pleasures and pains of love for God and human beings; death and dying; eschatology and resurrection; and skepticism regarding religious claims. Emphasis on original sources in translation considered in relation to theoretical perspectives in the humanities.

RELIGST 308. Medieval Japanese Buddhism. 3-5 Units.

Japanese religion and culture, including Buddhism, Shinto, popular religion, and new religions, through the medium of film.

RELIGST 308A. Ex Oriente Lux: Orientalism and the Study of Religion. 3-5 Units.

This seminar is designed to expose students to issues relating to discourse and subjectivity within the textual constructions of Oriental religions in the colonial era. We will begin with Edward W. Said's provocative work on notions of representation and power embedded in the discourse on the Orient that established, produced, and, ultimately, perpetuated western knowledge about the Other. We will then discuss the impact of the Oriental Renaissance and the vital role that Eastern wisdom played in constructing the field of Comparative Religious Studies. In addition, students will also read ethnographies, fables, and travelogues that both support and undermine Said's thesis of an active West constructing a largely passive East. Same as: RELIGST 208A.

RELIGST 308C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field. Same as: ARTHIST 208C, ARTHIST 408C, CLASSART 108, CLASSART 208, MUSIC 208C, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C.

RELIGST 309. Priests, Prophets, and Kings: Religion and Society in Late Antique Iran. 4-5 Units.

From India to the Levant and from the Caspian Sea to the Arabian Peninsula, the Sasanian Empire (224-651 CE) was the dominant power in the Middle East till the advent of Islam. Diverse religious institutions and social practices of the Zoroastrians, Manicheans, Jews, and Christians in late antique Iran. Complex relationships between the Zoroastrian priesthood, the Sasanian monarchs, and these minority religions within the context of imperial rule. Profound religious and social changes that occurred with the Islamic conquests of Iran as well as examine the rich cultural continuities that survived from the Pre-Islamic past. Same as: CLASSGEN 106, CLASSGEN 206, RELIGST 209.

RELIGST 309A. Sugar in the Milk: Modern Zoroastrianism as Race, Religion, and Ethnicity. 4-5 Units.

Modern Zoroastrian experience as race, religion, and ethnic identity. Some 60,000 Zoroastrians now live in India and have resided there for a millennium. In the 19th century, these peoples from Persia became colonial elites yet were acutely aware that they were not quite Indian, British, or Persian. Diverse ways this experience of dislocation has served as a defining characteristic in Parsi communal identity and contrast these South Asian experiences with the minority socio-politics of those who remained in Iran. Survey the colonial and post-colonial communities in England, East Africa, Hong Kong, Australia, and North America and examine the expression of these global diasporic experiences in literature and the arts. Same as: RELIGST 209A.

RELIGST 309D. 'Crow Eaters' & 'Fire Worshipers': Exploring Contemporary Zoroastrianism Thru Reading Parsi Lit. 3-5 Units.

In the past three decades Parsi fiction has rapidly emerged as a unique and creative voice in modern Anglophone literature from South Asia. From Bapsi Sidhwa to Thrity Umrigar to Rohinton Mistry, Parsi novelists address the most poignant concerns of Zoroastrians living in an era of rapid social, political, and religious transformation. The erosion of tradition; the breakdown of the Parsi family; the demise of religion among the young; and the cultural losses and gains of living in diaspora are common themes in their works. The unique vantage point of the Parsis; neither Hindu nor Muslim, neither quite Indian nor quite British; will serve as a lens for examining the inherent tensions in multicultural societies both East and West. Same as: RELIGST 209D.

RELIGST 309E. Imperishable Heroes and Unblemished Goddesses: Myth, Ritual, and Epic in Ancient Iran. 3-5 Units.

Designed as a broad introduction to the world of ancient Iran, students will be introduced to the Indo-European inheritance in ancient Iranian culture; the shared world of ritual, religion, and mythology between Zoroastrianism in Iran and Vedic Hinduism in India; and to the contours of early Zoroastrian religious thought. We will also survey mythoepic literature in translation from the archaic Avesta through the late antique Zoroastrian Middle Persian corpus to the early medieval national epic of Iran, the Book of Kings of Ferdowsi. Same as: CLASSGEN 189, CLASSGEN 289, RELIGST 209E.

RELIGST 309P. Readings in Indo-Persian Literature. 3-5 Units.

This course introduces the life, poetry, and mystical thought of the Indo-Persian poet Mirza Abd al-Qadir Bedil (1644-1720) through reading selections from his autobiographical work *Chahar Unsur*. In this work, composed in ornate prose interspersed with poetry, Bedil recounts episodes from his life: miraculous events, encounters with Sufis, the composition of poems, and elaborates on themes of mysticism. We will pay close attention to Bedil's peculiar linguistic and literary style and tackle his metaphysical views. Two years Persian language required. Same as: HISTORY 397D, ICA 397D.

RELIGST 310. Islam, Art, Modernity. 3-5 Units.

Taught in conjunction with a major exhibition of modern Islamic art at the Cantor Museum. We will consider theoretical discussions regarding art and modern Muslim identities and examine the use of Islamic motifs in art and architecture in detail. Same as: RELIGST 110.

RELIGST 312. Buddhist Studies Proseminar. 1-5 Unit.

Research methods and materials for the study of Buddhism. May be repeated for credit. Prerequisite: reading knowledge of Chinese or Japanese.

RELIGST 313X. The Education of American Jews. 4 Units.

This course will take an interdisciplinary approach to the question of how American Jews negotiate the desire to retain a unique ethnic sensibility without excluding themselves from American culture more broadly. Students will examine the various ways in which people debate, deliberate, and determine what it means to be an "American Jew". This includes an investigation of how American Jewish relationships to formal and informal educational encounters through school, popular culture, religious ritual, and politics.

Same as: EDUC 313X, JEWISHST 393X.

RELIGST 315. Third Bhavanakrama & the Writings of Héshang Moheyan: Scripture in Buddhist Scholastic Polemics. 3-5 Units.

Readings in the original languages (Sanskrit, Tibetan and Chinese) of materials from the debates of late 8th Century Tibet (so-called debate at Bsam-yas). The course focuses on the use of scriptural quotations in those passages where the arguments of Kamalasila, the leading Indian representative at the debates, best map on to the arguments of his Chinese rival, Héshang Moheyan.

RELIGST 315A. Chinese Buddhism. 3-5 Units.

This course provides an overview of the major themes and historical developments in 2000 years of Buddhist history in China, from its early transmission from India to contemporary developments in the PRC, Taiwan and Hong Kong. Themes include monasticism, doctrine, popular devotion, state policy and the encounter with modernity.

RELIGST 317. Japanese Studies of Religion in China. 3 Units.

(Graduate students register for 317.) Readings in Japanese secondary sources on Chinese religions.

Same as: RELIGST 217.

RELIGST 321. The Talmud. 4 Units.

Strategies of interpretation, debate, and law making. Historical contexts. Prerequisite: Hebrew.

Same as: RELIGST 218.

RELIGST 321B. What is Talmud?. 5 Units.

In what sense can Talmud be studied as literature? Which voices can be identified? Concepts of author, editor, or redactor. The basic textual units of Talmud: sugya, chapter, and tractate. The sugya as literary genre. The aesthetic of talmudic dialectics. Prerequisite: reading Hebrew with some understanding of biblical Hebrew

Same as: RELIGST 221B.

RELIGST 322B. Sufism Seminar. 3-5 Units.

Sufism through original texts and specialized scholarship. Prerequisite: ability to read at least one major language of Islamic religious literature (Arabic, Persian, Turkish, Urdu).

Same as: RELIGST 222B.

RELIGST 324. Classical Islamic Texts. 3 Units.

Readings in key genres of pre-modern Islamic scholarship. Genre-specific historical research methods. The 'ad'ith literature, tafs'r, biographical dictionaries, fiqh, ta'r'kh, and geographical works. Reading knowledge of Arabic is required.

Same as: RELIGST 224.

RELIGST 324B. Unveiling the Sacred: Explorations in Islamic Religious Imagination. 3-5 Units.

Poetry and prose in translation as well as historical studies. Islamic movements invested in the idea that the sensory world has a hidden or esoteric counterpart that can be understood or experienced through following particular religious programs. Various forms of Shi'ism and Sufism, millenarian and apocalyptic movements, the Nation of Islam and its offshoots. Philosophical propositions, historical contexts, and the role of ritual in the construction of religious systems.

Same as: RELIGST 224B.

RELIGST 326A. Judaism and Hellenism. 3-5 Units.

interactions and conflicts between Jews and Greeks in the centuries following the conquests of Alexander the Great and the cultural/religious repercussions of their encounter. In what ways were Jews influenced by Greek culture? In what ways, and for what reasons, did they resist it? And how the interaction of these cultures shape the subsequent development of Judaism and Christianity? Jewish texts in the Greco-Roman period, including Jewish-Greek writers like Philo of Alexandria, the Apocrypha, the Dead Sea Scrolls, selected writings from the New Testament, and the Passover Haggadah.

Same as: RELIGST 226A.

RELIGST 327. The Qur'an. 5 Units.

Early history, themes, structure, chronology, and premodern interpretation. Relative chronology of passages.

Same as: RELIGST 227.

RELIGST 328S. The Study of the Midrash. 1-2 Unit.

Two-week block seminar; four sessions. Talmudic philology; development and transmission of the Talmudic text and manuscripts. Relationship between Midrash and Mishnah and between Mishnah and Tosefta; development of talmudic sugiot; relationship between the Babylonian and Palestinian Talmud.

RELIGST 329. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire. 3-5 Units.

Since Herodotus in the 5th century BCE, the Persian Empire has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West and Greek democracy. History of the Achaemenid Empire, beginning with the rise of the Medes in the 7th century BCE to the fall of the Achaemenids to Alexander the Great's armies in 331 BCE. Focus on the intimate relationship between religion and empire and will also survey the diverse cultural institutions and religious practices found within the Empire. Evaluate contemporary representations of the Persians in politics and popular culture, such as the recent film "300" and the graphic novel on which it is based, in an attempt to better appreciate the enduring cultural legacy of the Greco-Persian wars.

Same as: CLASSGEN 159, CLASSGEN 259, RELIGST 229.

RELIGST 330B. Zen Studies. 4 Units.

Readings in recent English-language scholarship on Chan and Zen Buddhism

Same as: RELIGST 230B.

RELIGST 332. Religion and Modernity. 5 Units.

What role has the category of religion played in the development of the modern state, both colonial and national? How have central concepts of liberal political thought, such as freedom, progress, and history, depended on certain normative ideas of religion? Through various genealogical, historical, and ethnographic inquiries, this course examines how the category of religion has both subtended and disturbed formations of colonial and post-colonial modernity.

Same as: ANTHRO 347.

RELIGST 333. The Ethics of Religious Politics. 3-5 Units.

Is it possible for a deeply committed religious person to be a good citizen in a liberal, pluralistic democracy? Is it morally inappropriate for religious citizens to appeal to the teachings of their tradition when they support and vote for laws that coerce fellow citizens? Must the religiously committed be prepared to defend their arguments by appealing to 'secular reasons' ostensibly accessible to all 'reasonable' citizens? Exploration of the debates surrounding the public role of religion in a religiously pluralistic American democracy through the writings of scholars on all sides of the issue from the fields of law, political science, philosophy, and religious studies.

Same as: RELIGST 233.

RELIGST 334. Emmanuel Levinas: Ethics, Philosophy and Religion. 4 Units.

Emmanuel Levinas (1906-1995) is a major French philosopher of the second half of the twentieth century and is among the half-dozen most important Jewish thinkers of the century. Born in Lithuania, Levinas lived most of his life in France; he was primarily a philosopher but also a deeply committed Jewish educator who often lectured and wrote about Judaism and Jewish matters. Levinas was influenced by Bergson, Husserl, Heidegger, and others, like Buber and Rosenzweig. We will look at the philosophical world in which he was educated and explore his unique development as a philosopher in the years after World War Two. Levinas reacted against the main tendencies of Western philosophy and religious thought and as a result shaped novel, powerful, and challenging ways of understanding philosophy, religion, ethics, and politics. In this course, we will examine works from every stage of Levinas's career, from his early study of Husserl and Heidegger to the emergence of his new understanding of the human condition and the primacy of ethics, the face-to-face encounter with the human other, the role of language and the relationship between ethics and religion, and finally his understanding of Judaism and its relationship to Western philosophy. We will be interested in his philosophical method, the relevance of his thinking for ethics and religion, the role of language in his philosophy and the problem of the limits of expressibility, and the implications of his work for politics. We shall also consider his conception of Judaism, its primary goals and character, and its relation to Western culture and philosophy.

Same as: JEWISHST 224, JEWISHST 324, RELIGST 234.

RELIGST 335. Religion in Modern Society: Secularization and the Sacred. 4 Units.

Due to the retreat of religion from spheres of public life and the domination of technology and scientific rationality in modern globalized culture, it has been claimed that the modern West has ushered in 'a secular age' in which religion has an unclear and contested place. This course will address pressing questions about the role of religion in modern society by looking at the historical development and current form of the theory of secularization. The central goals of the course are to understand the meaning of 'secular' against its counterpart, 'religious,' and to understand the many issues involved in distinguishing these terms and applying them to gain a greater understanding of the dynamics and tensions of modern life.

Same as: RELIGST 235.

RELIGST 336. European Reformations. 4-5 Units.

Readings in and discussion of theological and social aspects of sixteenth century reformations: Luther, Radical Reform, Calvin, and Council of Trent, missionary expansion, religious conflict, creative and artistic expressions. Texts include primary sources and secondary scholarly essays and monographs.

Same as: HISTORY 231G, HISTORY 331G, RELIGST 236.

RELIGST 337. Heavenly Bodies: Saints' Bodies, Relics and Miracles in Late Antique and Medieval Europe. 4-5 Units.

This seminar will use both written and visual sources to explore how the body mattered in the creation of saintly tropes and cults in late antique and medieval Europe. We will begin by reading the diary of an early Christian martyr to consider how a good death set the terms for an ideal Christian life. We will then explore a number of medieval vitae or saints' lives to uncover narrative devices used to describe an exemplary life and consider the role self-denial, bodily and otherwise, played in constructing those portraits. We will conclude by considering the power medieval people ascribed to the remains of saints' bodies and look at the cult of relics as well as miracle accounts describing the bodily healings and transformations ascribed to saints.

Same as: HISTORY 207F, HISTORY 307F, RELIGST 237.

RELIGST 338. Christian Neo-Platonism, East and West. 3-5 Units.

Christianity's shift to neo-Platonic Greek philosophical categories and its significance for contemporary spirituality. Readings from Plotinus, Proclus, Greek fathers such as Pseudo-Dionysius, and from Ambrose and Augustine. Same as: RELIGST 238.

RELIGST 339. Luther and the Reform of Western Christianity. 3-5 Units.

Luther's theology, ethics, biblical interpretation, and social reforms and their significance for the remaking of Western Christianity. Readings include Luther's own writings and secondary sources about Luther and his world.

Same as: RELIGST 239.

RELIGST 340. Contemporary Religious Reflection. 3-5 Units.

Focus is on normative and prescriptive proposals by recent and contemporary philosophers and theologians, as opposed to the domination of Religious Studies by textual, historical, cultural, and other largely descriptive and interpretive approaches. Do such normative and prescriptive proposals belong in the academy? Has Religious Studies exorcised its theological nimbus only to find contemporary religious reflection reappearing elsewhere in the university?.

RELIGST 341. Comparative Perspectives on Classical Chinese Texts. 4-5 Units.

Classical Chinese texts, in prose and poetry, interpreted through comparative perspectives drawn from both inside and outside China. Consent of the instructor required.

RELIGST 346. Constructing Race and Religion in America. 4-5 Units.

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time.

Same as: CSRE 246, HISTORY 256G, HISTORY 356G, RELIGST 246.

RELIGST 347. Chinese Buddhist Texts. 3-5 Units.

Chinese Buddhist texts from the Han Dynasty onwards, including sutra translations, prefaces, colophons, story collections and biographies.

Prerequisite: reading competence in Chinese.

Same as: RELIGST 247.

RELIGST 347B. Readings in Chinese Religious Texts: The Lingbao Scriptures. 4 Units.

A survey of the original Lingbao scriptures. Composed in the late-4th / early 5th century, these texts radically revised Daoist practice, incorporated elements of Buddhist thought and practice, and created liturgies that are still used in Daoist communities today. (Reading knowledge of Literary Chinese 44 required).

Same as: RELIGST 247B.

RELIGST 348. Chinese Buddhism in World Historical Perspective. 3-5 Units.

Shared cosmologies, trade routes, and political systems. Prerequisite: background in Chinese or Japanese.

Same as: RELIGST 248.

RELIGST 348A. Chinese Buddhism Beyond the Great Wall. 3-5 Units.

The thought, practice, and cultural resonance of the sorts of originally Chinese Buddhism that flourished to the north and northwest of China proper during the two to three centuries following the fall of the Tang - i.e., under the Khitan Liao (907-1125) and the Tangut Xixia (1032-1227) dynasties - with special emphasis on the later fortunes of the Huayan, Chan, and Mijiao (Esoteric) traditions. Prerequisite: reading knowledge of Chinese.

Same as: RELIGST 248A.

RELIGST 349. Meditation and Mythology in Chinese Buddhism. 3-5 Units.

Readings in Chinese texts and English scholarly literature on issues such as specific techniques and hagiographical imagery in Chinese Buddhist traditions of self-cultivation. Prerequisite: background in Chinese or Japanese.

RELIGST 350. Modern Western Religious Thought Proseminar. 1-5 Unit.

Selected topics in recent and contemporary religious thought. May be repeated for credit.

RELIGST 351. Readings in Indian Buddhist Texts. 3-5 Units.

(Graduate students register for 351.) Introduction to Buddhist literature through reading original texts in Sanskrit. Prerequisite: Sanskrit. Same as: RELIGST 251.

RELIGST 352A. The Story of a Buddhist Megascripture: Readings in the Avatamsaka. 3-5 Units.

In this course we will explore the massive Mah'y'na Buddhist scriptural compilation known as the Avatamsaka S'tra (more correctly: Buddh'vata'saka S'tra). We will investigate the development of the text in India, study its contents, and consider its later reception in East Asia. Since much of the course will be devoted to reading sections of the Buddh'vata'saka, a reading knowledge of Chinese is required. Same as: RELIGST 252A.

RELIGST 353. Mountains, Buddhist Practice, and Religious Studies. 3-5 Units.

The notion of the sacred mountain. Readings from ethnographic and theoretical works, and primary sources. Same as: RELIGST 253.

RELIGST 356. The Brahma Net Sutra (Fanwang Jing). 4 Units.

A study of an important Chinese Buddhist apocryphal work, with special attention to interpretation of content, impact on monastic codes in medieval China, transmissional history and commentarial tradition. Same as: RELIGST 256.

RELIGST 357. Readings in Daoist Texts. 4 Units.

Readings from primary sources. Prerequisite: classical Chinese. Same as: RELIGST 257.

RELIGST 358. Japanese Buddhist Texts. 3-5 Units.

Readings in medieval Japanese Buddhist materials. May be repeated for credit. Prerequisite: background in Japanese or Chinese. Same as: RELIGST 258.

RELIGST 370. Comparative Religious Ethics. 4 Units.

The difference that the word religious makes in religious ethics and how it affects issues of genre. Theoretical analyses with examples from W. and E. Asia. Prerequisite: consent of instructor.

RELIGST 372. Kant on Religion. 3-5 Units.

Critical examination of Kant's principle writings on religion against the background of his general theoretical and practical philosophy and guided by the hypothesis that his philosophy of religion continues to offer significant insights and resources to contemporary theories of religion. Recent reassessments of Kant on religion in the secondary literature will also be read and discussed. Same as: RELIGST 272.

RELIGST 373. Historicism and Its Problems: Ernst Troeltsch, the Study of Religion, and the Crisis of Historicism. 3-5 Units.

Examination of the early twentieth-century historian of religion, philosopher of culture, sociologist of religion, Christian theologian, and philosopher of history, Ernst Troeltsch, within the context of the late nineteenth-century "crisis of historicism," i.e., the historicization and relativization of religious, ethical, social, and political norms. Attention to seminal theorists of history (Herder, Kant, Ranke, Hegel, Nietzsche) in the post-Enlightenment German intellectual tradition and the attempts of Christian and Jewish thinkers in the Weimar era (Barth, Gogarten, Rosenzweig, L. Strauss) to "overcome" the crisis wrought by a radically historical approach to human culture. Same as: RELIGST 273.

RELIGST 374. From Kant to Kierkegaard. 3-5 Units.

(Graduate students register for 374.) The main currents of religious thought in Germany from Kant's critical philosophy to Kierkegaard's revolt against Hegelianism. Emphasis is on the theories of religion, the epistemological status of religious discourse, the role of history (especially the figure of Jesus), and the problem of alienation/reconciliation in seminal modern thinkers: Kant, Schleiermacher, Hegel, and Kierkegaard. Same as: RELIGST 274.

RELIGST 375. Kierkegaard. 3-5 Units.

(Graduate students register for 375.) Close reading of Kierkegaard's magnum opus, *Concluding Unscientific Postscript to Philosophical Fragments*, in its early 19th-century context. Same as: RELIGST 275.

RELIGST 377. The Later Heidegger: Art, Poetry, Language. 3 Units.

Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from "On the Origin of the Work of Art" and Elucidations of Holderlin's Poetry. Same as: PHIL 234B, RELIGST 277.

RELIGST 378. Heidegger: Confronting the Ultimate. 3-5 Units.

Heidegger's work on meaning, the self, and the sacred. Texts include *Being and Time*, courses and opuscula up to 1933, the *Letter on Humanism*, and *Contributions of Philosophy*. Same as: RELIGST 278.

RELIGST 379. Heidegger and the Philosophy of Religion. 4 Units.

Exploration of the end of the metaphysical quest for God in nineteenth and twentieth century thought. Seminal works of German philosopher Martin Heidegger, including *Being and Time*, *What Is Metaphysics?* Nietzsche's *Saying 'God is Dead.'* Phenomenological method and its application to traditional and contemporary philosophy of religion, including works by John D. Caputo and Gianni Vattimo. Same as: RELIGST 279.

RELIGST 379A. Heidegger on human being and God. 4 Units.

This lecture-seminar first raises the question of essential characteristics of human being, such as temporality, mortality, hermeneutics and the relation to meaning, and then, via readings from Karl Rahner, asks whether human being is open to a possible relation to a supernatural divinity. Same as: RELIGST 279A.

RELIGST 380. Schleiermacher: Reconstructing Religion. 3-5 Units.

Idealist philosopher, Moravian pietist, early German Romantic, co-founder of the University of Berlin, head preacher at Trinity Church, translator of Plato's works, Hegel's opponent, pioneer in modern hermeneutics, father of modern theology. Schleiermacher's controversial reconception of religion and theology in its philosophical context. Same as: RELIGST 280.

RELIGST 381. Asian Religions in America; Asian American Religions. 4 Units.

This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions. Same as: AMSTUD 281, ASNAMST 281, RELIGST 281.

RELIGST 382. King Solomon and the Search for Wisdom. 4 Units.

What is wisdom according to the Bible? The course addresses this question by surveying various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon's role in Jewish, Christian and Islamic tradition. Same as: RELIGST 282.

RELIGST 383A. Heidegger, Hölderlin, and the Gods. 3-5 Units.

The radical transformations in Western notions of God between the death of Hegel and the birth of historical materialism, arguing that questions about theism and atheism, humanism, and history formulated in the period 1831-50 are still pertinent. Texts from Hegel, the young Hegelians, Feuerbach, and Marx on issues of God, history, and the social dimensions of human nature.

Same as: RELIGST 283A.

RELIGST 385. Research in Buddhist Studies. 1-15 Unit.

Independent study in Buddhism. May be repeated for credit. Prerequisite: consent of instructor.

RELIGST 386. Research in Islamic Studies. 1-15 Unit.

Independent study in Islamic Studies. May be repeated for credit. Prerequisite: consent of instructor.

RELIGST 387. Research in Jewish Studies. 1-15 Unit.

Independent study in Jewish Studies. May be repeated for credit. Prerequisite: consent of instructor.

RELIGST 388. Research in Modern Religious Thought, Ethics, and Philosophy. 1-15 Unit.

Independent study in Modern Religious Thought, Ethics, and Philosophy. May be repeated for credit. Prerequisite: consent of instructor.

RELIGST 389. Individual Work for Graduate Students. 1-15 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

RELIGST 390. Teaching Internship. 3-5 Units.

Required supervised internship for PhDs.

RELIGST 391. Teaching Religious Studies. 3 Units.

Workshop/seminar for doctoral students in Religious Studies and adjacent fields designed to cultivate methods for teaching Religious Studies in an academic setting.

RELIGST 392. Paper in the Field. 1-15 Unit.

Prerequisite: consent of graduate director. May be repeated for credit.

RELIGST 395. Master of Arts Thesis. 2-9 Units.**RELIGST 399. Recent Works in Religious Studies. 1-2 Unit.**

Readings in secondary literature for Religious Studies doctoral students. May be repeated for credit.

RELIGST 801. TGR Project. 0 Units.

(Staff).

RELIGST 802. TGR Dissertation. 0 Units.

Russian, East European, & Eurasian Studies Courses

REES 18. Understanding the Jews of Russia and Poland. 1 Unit.

A preparatory course, for field trip to Moscow and Warsaw, that would cover Russian and Polish History, former Soviet Jewry, international relations, and current social realities.

REES 23. Issues in Global Health: Russia and Eastern Europe. 1-2 Unit.

Activity course features Stanford faculty and researchers who lecture weekly on their experiences working international health issues. Focus this year will be on the global region including Russia, and East Europe.

REES 35. Films of Central Asia. 1-2 Unit.

Films with English subtitles from Tajikistan, Uzbekistan, Kazakhstan, Kyrgyzstan, and Turkmenistan. May be repeated once for credit. (AU).

REES 54A. Central Asia Through Films: A Weekly 3-Hour Seminar. 3-5 Units.

Through films this course explores major issues of contemporary peoples of Central Asia while learning fundamental concepts in cultural anthropology. In this seminar we will consider a wide range of examples, including first of all the new feature films, which will be used as a window into the modern reality and therefore could be served in a certain sense as anthropological fieldwork data. Films are prearranged by the instructor according to certain thematic subjects for in-class discussions.

Same as: ANTHRO 54A.

REES 100. Current Issues in Russian, East European, and Eurasian Studies. 1-2 Unit.

Enrollment limited to REEES students. Scholars present analyses of methodologies, challenges, and current issues in the study of Russia, E. Europe, and Eurasia.

REES 105. Central and East European Politics. 5 Units.

Focus is on how the states of Central and East Europe, including the Baltic states, have moved from communism and the Soviet Bloc to democracy, NATO and the EU. Topics include the communist legacy, transitions and their legacies, ethnic issues, and the evolution of economic and social policies, and the comparison of democratization processes in these countries to democracies in other regions, such as Latin America and southern Europe.

Same as: REES 205.

REES 130. With God in Russia: Orthodox Christianity in the 19th and 20th Centuries. 4-5 Units.

The experience of religion, particularly Orthodoxy, under tsars and commissars. Religion as a lived experience; practice and belief in the provinces and villages, intertwining of religion and folk customs (the so-called double faith); condition of the Church before and after the Revolutions of 1917; religion under Soviet control; and liberation of the Church since the collapse of the Soviet Union.

Same as: REES 330.

REES 145D. Jewish American Literature. 5 Units.

Fiction of Jewish-American writers across the 20th and into the 21st centuries, both immigrants and subsequent generations of native-born Jews, to show how the topic of assimilation is thematized in the literature and to evaluate the distinctiveness of Jewish-American literature as a minority literature.

Same as: ENGLISH 145D, JEWISHST 155D.

REES 200. Current Issues in Russian, East European, and Eurasian Studies. 1-2 Unit.

Enrollment limited to REEES students. Scholars present analyses of methodologies, challenges, and current issues in the study of Russia, E. Europe, and Eurasia.

REES 205. Central and East European Politics. 5 Units.

Focus is on how the states of Central and East Europe, including the Baltic states, have moved from communism and the Soviet Bloc to democracy, NATO and the EU. Topics include the communist legacy, transitions and their legacies, ethnic issues, and the evolution of economic and social policies, and the comparison of democratization processes in these countries to democracies in other regions, such as Latin America and southern Europe.

Same as: REES 105.

REES 208C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSART 108, CLASSART 208, MUSIC 208C, MUSIC 408C, REES 408C, RELIGST 208C, RELIGST 308C.

REES 219. The Russian Economy. 4-5 Units.

Brief introduction to the economic history of Russia, general overview of the modern Russian economy with analysis of its macroeconomic features and dynamics, industrial structure, and the major institutional features that are important for understanding Russian economic development. The period of transition from Soviet-type planned economy to a market economy and market reforms (1991-1998), the period of economic growth (1999-2007), and the economic development of Russia during the current global crisis of 2008-2010. Analysis of Russia's social structure and social policy, labor markets, the regional structure of the economy, the role of the state, and major Russian industries (oil, metals, machinery). Emphasis on the specific institutional aspects that have shaped Russia's economic development.

Same as: ECON 119.

REES 244A. Practice of Everyday Life in Kazakhstan: From Nomadism to Modernity. 3-5 Units.

An interdisciplinary introduction to the historically nomadic land of Kazakhstan, its peoples and their lifestyles; the practice of everyday life. Ranked as the ninth largest country in the world, Kazakhstan is also the world's largest landlocked country; its territory is greater than Western Europe: it stretches from the fringes of Europe to the borders of Mongolia and China. The seminar surveys language and society, traditional economics and customary law, rituals and folk customs, local dwelling, craft and art, the cultural panorama, the historical relationship between sedentary and nomadic peoples as well as new approaches to the study of nomads in modernity. Speaking of the present time, we will follow the changing nomads in a changing world. The instructor is going to base, to the extent possible, on the extremely rich fieldwork data recently discovered in Kazakhstan -- the data is yet little known in the West. The seminar will make extensive use of audio-visual materials and films.

Same as: ANTHRO 144A.

REES 247A. Folklore, Mythology, and Islam in Central Asia. 3-5 Units.

Central Asian cults, myths, and beliefs from ancient time to modernity. Life crisis rites, magic ceremonies, songs, tales, narratives, taboos associated with childbirth, marriage, folk medicine, and calendrical transitions. The nature and the place of the shaman in the region. Sources include music from the fieldwork of the instructor and the Kyrgyz epoch *Manas*. The cultural universe of Central Asian peoples as a symbol of their modern outlook.

Same as: ANTHRO 147A.

REES 250A. Minaret and Mahallah: Women and Islam in Central Asia. 3-5 Units.

Introduction to women's culture and art in Muslim countries of Central Asia. Women, bearers of family rites and folklore, are the key figures in transmission of traditional culture and guardians of folk Islam. Women helped to keep the continuity of Islamic education in Central Asia during the harsh times of Communist dominance. The whole wealth of women's oral tradition will be demonstrated and examined to the extent possible. The course will make broad use of audio-visual materials.

Same as: ANTHRO 150A, ANTHRO 250A.

REES 299. Directed Reading. 1-12 Unit.**REES 301. An Introduction to Russian, East European and Eurasian Studies. 5 Units.**

This seminar investigates the origins and evolution of the field and exposes students to major debates about the history, geography, politics, societies, economics, cultures, and languages of the region.

REES 301A. History and Politics in Russian and Eastern European Cinema. 4-5 Units.

From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica.

Same as: FILMSTUD 145B, FILMSTUD 345B.

REES 312. Socio-Economic Issues in Contemporary Russia and Eastern. 3-5 Units.

Course focus on the political dynamics of market liberalization and response to economic crisis in these emerging markets, including the sources of support and opposition to reform, the interplay between international organizations and domestic politics, and the challenges of protecting the losers of economic liberalization.

REES 320. State and Nation Building in Central Asia. 5 Units.

Issues of identity, development, and security following the dissolution of the Soviet Union and the emergence of independent states in Central Asia and the Southern Caucasus. Topics include the impact of 9/11, the spread of radical Islamist movements in the region, its growing role as a transit route for drugs, weapons, and possibly nuclear materials, the impact of the Soviet legacy, the nature of political and economic transformations, relations with neighboring countries, security challenges, and options facing U.S. policy makers.

REES 330. With God in Russia: Orthodox Christianity in the 19th and 20th Centuries. 4-5 Units.

The experience of religion, particularly Orthodoxy, under tsars and commissars. Religion as a lived experience; practice and belief in the provinces and villages, intertwining of religion and folk customs (the so-called double faith); condition of the Church before and after the Revolutions of 1917; religion under Soviet control; and liberation of the Church since the collapse of the Soviet Union.

Same as: REES 130.

REES 408C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSART 108, CLASSART 208, MUSIC 208C, MUSIC 408C, REES 208C, RELIGST 208C, RELIGST 308C.

Science in the Making Courses

SIMILE 91. Science In the Making an Integrated Learning Environment. 4 Units.

SIMILE is a new residentially-based program organized around the question of when something we might call "science" identifiably began, what it became, and what it might become. While we may believe that science, technology and medicine represent some of the powerful tools we have for making a difference in the world, SIMILE challenges students to consider these as dynamic and changing fields of knowledge which must be understood in their historical, cultural and social contexts. Only then can we consider how new ideas, interpretations, technological artifacts and systems respond to societal needs within the limits of what is possible but also, importantly, in light of what might even become plausible.

SIMILE 92. Science in the Making Integrated Learning Environment. 4 Units.

SIMILE is a new residentially-based program organized around the question of when something we might call "science" identifiably began, what it became, and what it might become. While we may believe that science, technology and medicine represent some of the powerful tools we have for making a difference in the world, SIMILE challenges students to consider these as dynamic and changing fields of knowledge which must be understood in their historical, cultural and social contexts. Only then can we consider how new ideas, interpretations, technological artifacts and systems respond to societal needs within the limits of what is possible but also, importantly, in light of what might even become plausible.

SIMILE 93. Science in the Making Integrated Learning Environment. 4 Units.

SIMILE is a new residentially-based program organized around the question of when something we might call "science" identifiably began, what it became, and what it might become. While we may believe that science, technology and medicine represent some of the powerful tools we have for making a difference in the world, SIMILE challenges students to consider these as dynamic and changing fields of knowledge which must be understood in their historical, cultural and social contexts. Only then can we consider how new ideas, interpretations, technological artifacts and systems respond to societal needs within the limits of what is possible but also, importantly, in light of what might even become plausible.

SIMILE 95W. Science In the Making an Integrated Learning Environment, Writing Section. 4 Units.

SIMILE is a new residentially-based program organized around the question of when something we might call "science" identifiably began, what it became, and what it might become. While we may believe that science, technology and medicine represent some of the powerful tools we have for making a difference in the world, SIMILE challenges students to consider these as dynamic and changing fields of knowledge which must be understood in their historical, cultural and social contexts. Only then can we consider how new ideas, interpretations, technological artifacts and systems respond to societal needs within the limits of what is possible but also, importantly, in light of what might even become plausible.

Science, Technology, & Society Courses

STS 1. The Public Life of Science and Technology. 5 Units.

Focus on key social, cultural, and values issues raised by contemporary scientific and technological developments through STS interdisciplinary lens that encompasses historical dimensions (e.g., legacy of scientific revolution); technological impact (e.g., affordances of new tools and media); economic and management aspects (e.g., business models, design and engineering strategies); legal and ethical elements (e.g., intellectual property, social justice); and societal response and participation (e.g., media coverage, forms of activism). Discussion section is required and will be assigned the first week of class.

STS 131. Science Technology & Environmental Justice. 5 Units.

This course explores the relationships among science, technology, and social environments, with an eye to inequalities of race, class, gender, region, and nation-state. It engages STS from the vantage of environmental justice and public health activism, with an emphasis on California and the Bay Area. Topics include: the social construction of the environment; risk assessment and the politics of science; undone science; food justice; built environments and regional equity; climate change and green jobs initiatives; greenwashing and the politics of sustainability.

STS 140. Science, Technology and Politics. 4 Units.

This course will critically interrogate the relationship between science and technology and politics. Politics plays a significant role in the production of scientific knowledge and technological artifacts. Science and technology in turn constitute crucial elements of politics and governance in modern democracy. This course will explore these interactions through (1) key theoretical texts in STS and (2) case studies of such issues as climate change, race and science, urban planning, elections and technology, and information technology in social movements. Preference to juniors and seniors. First class attendance mandatory. Enrollment limited to 16.

STS 144. Game Studies: Issues in Design, Technology, and Player Creativity. 4 Units.

What can be learned about innovation from digital games? Digital game technologies, communities, and cultures. Topics include game design, open source ideas and modding, technology studies, player/consumer-driven innovation, fan culture, transgressive play, and collaborative co-creation drawn from virtual worlds and online games.

STS 160Q. Technology in Contemporary Society. 4 Units.

Preference to sophomores. Introduction to the STS field. The natures of science and technology and their relationship, what is most distinctive about these forces today, and how they have transformed and been affected by contemporary society. Social, cultural, and ethical issues raised by recent scientific and technological developments. Case studies from areas such as information technology and biotechnology, with emphasis on the contemporary U.S. Unexpected influences of science and technology on contemporary society and how social forces shape scientific and technological enterprises and their products. Enrollment limited to 12.

STS 190. Issues in Technology and the Environment. 4 Units.

Humans have long shaped and reshaped the natural world with technologies. Once a menacing presence to conquer or an infinite reserve for resources, nature is now understood to require constant protection from damage and loss. This course will examine humanity's varied relationship with the environment, with a focus on the role of technology. Topics include: industrialization, modernism, nuclear technology, and biotechnology. Students will explore theoretical and methodological approaches in STS and conduct original research that addresses this human-nature-technology nexus. STS majors must have Senior status to enroll in this Senior Capstone course.

STS 199. Individual Work. 1-5 Unit.

Every unit of credit is understood to represent three hours of work per week per term and is to be agreed upon between the student and the faculty member.

STS 199J. Editing a Science Technology and Society Journal. 1-2 Unit.

The Science Technology and Society (STS) Program has a student journal, *Intersect*, that has been publishing STS student papers for a number of years. This course involves learning about how to serve as an editor of a peer-reviewed journal, while serving as one of the listed editors of *Intersect*. Entirely operated online, the journal uses a work-flow management to help with the submission process, peer-review, editing, and publication. Student editors learn by being involved in the publishing process, from soliciting manuscripts to publishing the journal's annual issue, while working in consultation with the instructor. Students will also learn about current practices and institutional frameworks around open access and digital publishing.

STS 200A. Food and Society: Politics, Culture and Technology. 5 Units.

This course will examine how politics, culture, and technology intersect in our food practices. Through a survey of academic, journalistic, and artistic works on food and eating, the course will explore a set of key analytical frameworks and conceptual tools in STS, such as the politics of technology, classification and identity, and nature/culture boundaries. The topics covered include: the industrialization of agriculture; technology and the modes of eating (e.g., the rise of restaurants); food taboos; globalization and local foodways; food and environmentalism; and new technologies in production (e.g., genetically modified food). Through food as a window, the course intends to achieve two broad intellectual goals. First, students will explore various theoretical and methodological approaches in STS. In particular, they will pay particular attention to the ways in which politics, culture, and technology intersect in food practices. Second, student will develop a set of basic skills and tools for their own critical thinking and empirical research, and design and conduct independent research on a topic related to food. First class attendance mandatory. STS majors must have Senior status to enroll in this Senior Capstone course.

STS 200B. Global Mobilities. 5 Units.

In this STS senior capstone seminar, students will study the local and global impacts of the technologies that have increased personal mobility. STS majors must have Senior status to enroll in this Senior Capstone course. Same as: ANTHRO 146.

STS 200C. STS Senior Capstone. 5 Units.

Genetics, Ethics and Society. This course will explore three socially transforming components of genetics research that hold simultaneously liberating and constraining possibilities for populations and publics, both locally and globally. Topically the course will be divided into three sections. First, we will examine past and present issues dealing with the study of human subjects, as well as recent proposals to eventually bring full genome scans to every individual (personal genomics). Next we will learn of large-scale projects that aim to map the presence of environmental pathogens by their genetic signatures on a planetary scale and how different global populations may be affected. The last section of the course will focus on still other projects and policies that aim to expand the scope and capacity of state and international law enforcement through DNA-based forensics (the FBI CODIS database and the UK's Human Provenance Pilot Project). Projects like the latter also overlap with theories about community, families, and citizens who may or may not be linked through DNA. New concepts, such as the forensic "genetic informant" within a family unit, human DNA and isotope ζ country matches ζ in cases of state asylum, and DNA based kinship rules for family reunification in many Western countries, will be explored. In all three sections we will also examine scientific ethics when subject populations are minorities, or somehow structurally disadvantaged globally. This capstone course will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state and certain publics in shaping scientific research agendas that promise to reorganize critical aspects of human life. Students will be encouraged to explore these dynamics within such important societal domains as health, law, markets of bio-surveillance, and the growing industry of disease and heritage DNA identity testing among others. We will read works from social scientists of science practice, ethicists, medial humanists and scientists. This course will equip students with tools to write about the intersection of science and society and to engage in a research project that relates to the topical foci of the course, broadly conceived.

Same as: ANTHRO 200C.

STS 200D. Text Technologies: A History. 5 Units.

Beginning with cave painting, carving, cuneiform, hieroglyph, and other early textual innovations, survey of the history of writing, image, sound, and byte, all text technologies employed to create, communicate and commemorate. Focus on the recording of language, remembrance and ideas explicating significant themes seen throughout history; these include censorship, propaganda, authenticity, apocalypticism, technophobia, reader response, democratization and authority. The production, transmission and reception of tablet technology, the scroll, the manuscript codex and handmade book, the machine-made book, newspapers and ephemera; and investigate the emergence of the phonograph and photograph, film, radio, television and digital multimedia. The impact of these various text technologies on their users, and try to draw out similarities and differences in our cultural and intellectual responses to evolving technologies. STS majors must have senior status to enroll in this senior capstone course. Same as: ENGLISH 184H.

STS 200E. Technology, Nature, and Environmentalism. 5 Units.

Humans have long shaped and reshaped the natural world with technologies. Once a menacing presence to conquer or an infinite reserve for resources, nature is now understood to require constant protection from damage and loss. Humanity's relationships with the environment have changed over time and differed across societies. In this course, students (1) explore diverse ways in which people in different historical and cultural settings have conceptualized nature and their relationships with it, with a focus on the role of technology; and (2) learn the basics of STS research and conduct an original study that addresses this human-nature-technology nexus. First class attendance mandatory. STS majors must have senior status to enroll in this senior capstone course.

STS 200F. Sociology of Innovation and Invention. 5 Units.

This course examines the social, cultural, and economic factors that foster novelty. We will study a wide array of historical contexts, from the Renaissance to the present day, in which clusters of related innovations transformed the way things are done. We ask when do such innovations cascade out and produce social inventions that, for good and bad, create profound changes in how things are done, leading to new forms of organizations and new categories of people. Seminar/lecture format, reading intensive, final term paper. Prerequisite: admission to the course is restricted to declared STS seniors and is by application only. Email Andrew Weger (aweger@stanford.edu) for an application. Applications must be submitted by 5pm on November 8th.

STS 210. Ethics, Science, and Technology. 4 Units.

Ethical issues raised by advances in science and technology. Topics: biotechnology including agriculture and reproduction, the built environment, energy technologies, and information technology. Prerequisite: 110 or another course in ethics. Limited enrollment.

STS 299. Advanced Individual Work. 1-5 Unit.

For students in the STS Honors program. Every unit of credit is understood to represent three hours of work per week per term and is to be agreed upon between the student and the faculty member. May be repeated for credit.

Scientific Computing & Comput'l Math Courses

SCCM 398. Curricular Practical Training. 1 Unit.

Provides students with on-the-job training under the guidance of experienced, on-site supervisors. Students must register the quarter after their training. Students receive credit and a grade after submitting a concise report detailing work activities, problems worked on, and key results. Prerequisite: written consent of adviser. (Staff).

SCCM 499. Advanced Reading and Research. 1-15 Unit.

Prerequisites: majoring in SC/CM; consent of adviser. (Staff).

Slavic General Courses

Slavic Language Courses

SLAVLANG 1. First-Year Russian, First Quarter. 5 Units.

Functionally-based communicative approach, including essential Russian grammar. Discussions of Russian culture and the Russian view of reality.

SLAVLANG 2. First-Year Russian, Second Quarter. 5 Units.

Continuation of SLAVLANG 1. Functionally-based communicative approach, including essential Russian grammar. Discussions of Russian culture and the Russian view of reality. Prerequisite: Placement Test or SLAVLANG 1.

SLAVLANG 3. First-Year Russian, Third Quarter. 5 Units.

Continuation of SLAVLANG 2. Functionally-based communicative approach, including essential Russian grammar. Discussions of Russian culture and the Russian view of reality. Prerequisite: Placement Test or SLAVLANG 2.

SLAVLANG 6. Russian for Native Speakers, Second Quarter. 2 Units.

Self-paced. Reading and writing skills and communicating in formal and informal settings. Does not fulfill the University foreign language requirement. Prerequisite: SLAVLANG 5.

SLAVLANG 7. Russian for Native Speakers, Third Quarter. 2 Units.

Continuation of SLAVLANG 6. Self-paced. Reading and writing skills and communicating in formal and informal settings. Does not fulfill the University foreign language requirement. Prerequisite: SLAVLANG 6.

SLAVLANG 51. Second-Year Russian, First Quarter. 5 Units.

Proficiency development at the intermediate level, including more difficult grammar such as numbers, verb conjugation, and aspect. Vocabulary, speaking skills. Prerequisite: Placement Test, SLAVLANG 3.

SLAVLANG 52. Second-Year Russian, Second Quarter. 5 Units.

Continuation of 51. Proficiency development at the intermediate level, including more difficult grammar such as numbers, verb conjugation, and aspect. Vocabulary, speaking skills. Prerequisite: placement test or 51.

SLAVLANG 53. Second-Year Russian, Third Quarter. 5 Units.

Continuation of 52. Proficiency development at the intermediate level, including more difficult grammar such as numbers, verb conjugation, and aspect. Vocabulary, speaking skills. Prerequisite: placement test or 52.

SLAVLANG 55. Intermediate Russian Conversation. 2 Units.

May be repeated for credit. Prerequisite: SLAVLANG 3 or equivalent placement.

SLAVLANG 60A. Beginning Russian Conversation. 1 Unit.

SLAVLANG 60B. Intermediate Russian Conversation. 1 Unit.

SLAVLANG 60C. Advanced Russian Conversation. 1 Unit.

SLAVLANG 60E. The Sensuality of Slavic Sustenance. 1 Unit.

SLAVLANG 60F. Perspectives on Slavic Culture and History through Film. 1 Unit.

SLAVLANG 60H. Culture and Politics of Russian Athleticism through the lens of Sochi 2014. 1 Unit.

SLAVLANG 60M. Songs and Poems of Comrades, Cossacks, Gypsies, and Peasants. 1 Unit.

SLAVLANG 60P. Slav Dom Theme Projects. 1 Unit.

SLAVLANG 60T. Teaching Slavic Conversation. 1 Unit.

SLAVLANG 99. Language Specials. 1-5 Unit.

Prerequisite: consent of instructor.

SLAVLANG 111. Third-Year Russian, First Quarter. 4 Units.

Continuation of SLAVLANG 53. A snapshot of Russian life. Reading comprehension, conversational competence, grammatical accuracy, and cultural sophistication. Prerequisite: Placement Test or SLAVLANG 53.

SLAVLANG 112. Third-Year Russian, Second Quarter. 4 Units.

Continuation of SLAVLANG 111. A snapshot of Russian life. Reading comprehension, conversational competence, grammatical accuracy, and cultural sophistication. Prerequisite: Placement Test or SLAVLANG 111.

SLAVLANG 113. Third-Year Russian, Third Quarter. 4 Units.

Continuation of SLAVLANG 112. A snapshot of Russian life. Reading comprehension, conversational competence, grammatical accuracy, and cultural sophistication. Prerequisite: Placement Test or SLAVLANG 112.

SLAVLANG 177. Fourth-Year Russian, First Quarter. 3 Units.

Continuation of SLAVLANG 113. Culture, history, and current events. Films, classical and contemporary writers, newspaper articles, documentaries, radio and TV programs, and music. Review and fine-tuning of grammar and idiomatic usage. Prerequisite: Placement Test, SLAVLANG 113.

SLAVLANG 178. Fourth-Year Russian, Second Quarter. 3 Units.

Continuation of SLAVLANG 177. Culture, history, and current events. Films, classical and contemporary writers, newspaper articles, documentaries, radio and TV programs, and music. Review and fine-tuning of grammar and idiomatic usage. Prerequisite: Placement Test, SLAVLANG 177.

SLAVLANG 179. Fourth-Year Russian, Third Quarter. 3 Units.

Continuation of SLAVLANG 178. Culture, history, and current events. Films, classical and contemporary writers, newspaper articles, documentaries, radio and TV programs, and music. Review and fine-tuning of grammar and idiomatic usage. Prerequisite: Placement Test, SLAVLANG 178.

SLAVLANG 181. Fifth-Year Russian, First Quarter. 3 Units.

Continuation of SLAVLANG 179. Language proficiency maintenance; appropriate for majors and non-majors with significant language experience overseas. Discussions, oral presentations, and writing essays on contemporary Russia. Prerequisite: Placement Test, or SLAVLANG 179.

SLAVLANG 182. Fifth-Year Russian, Second Quarter. 3 Units.

Continuation of SLAVLANG 181. Language proficiency maintenance; appropriate for majors and non-majors with significant language experience overseas. Discussions, oral presentations, and writing essays on contemporary Russia. Prerequisite: Placement Test or SLAVLANG 181.

SLAVLANG 183. Fifth-Year Russian, Third Quarter. 3 Units.

Continuation of SLAVLANG 182. Language proficiency maintenance; appropriate for majors and non-majors with significant language experience overseas. Discussions, oral presentations, and writing essays on contemporary Russia. Prerequisite: Placement Test or SLAVLANG 182.

SLAVLANG 184A. Russian Reading Conversation and Composition. 2-3 Units.

Proficiency in reading, spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.

SLAVLANG 184B. Russian Advanced Conversation and Composition. 2-3 Units.

Proficiency in spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.

SLAVLANG 184C. Russian Advanced Conversation and Composition. 2-3 Units.

Proficiency in spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.

SLAVLANG 199. Individual Work. 1-5 Unit.

Prerequisite: consent of instructor.

SLAVLANG 299. Independent Study. 1-5 Unit.

SLAVLANG 394. Graduate Studies in Russian Conversation. 1-3 Unit.

SLAVLANG 395. Graduate Studies in Russian. 2-5 Units.

Prerequisite: consent of instructor.nn (Staff).

Slavic Languages and Literatures Courses

SLAVIC 77Q. Russia's Weird Classic: Nikolai Gogol. 3-4 Units.

Preference to sophomores. An investigation of the works and life of Nikolai Gogol, the most eccentric of Russian authors and the founder of what is dubbed Fantastic Realism. Our investigation will be based on close reading of works written in various genres and created in various stages of Gogol's literary career. Taught in English.

SLAVIC 78N. Poetry to Prose: The Birth of the Great Russian Novel in Alexander Pushkin's Eugene Onegin. 3-4 Units.

Devoted to a close reading and detailed discussion of Alexander Pushkin's masterpiece in the context of XIX century Russian and continental literary history. Pushkin (1799-1837) is the founder of modern Russian literature; his place in it is comparable to that of Shakespeare in Britain. Taught in English.

SLAVIC 115. Between Europe and Asia: Introduction to Russian Culture. 3 Units.

This course offers a short survey of the main stages of the history of Russian statehood from Kievan Rus' to the present, post-Soviet situation. It also covers most important trends in Russian intellectual and religious life, as well as major developments in Russian literature, music, and visual arts from medieval age to 20th century avant-garde, socialist realism and current tendencies in culture. Offered as a part of the "Gateways to the World" program.

SLAVIC 129. Poetry as System: Introduction to Theory and Practice of Russian Verse. 4 Units.

The history and theory of Russian versification from the 17th to the 20th century. Prerequisite: reading knowledge of Russian. Same as: SLAVIC 329.

SLAVIC 145. Age of Experiment: Russian Literature in 1820-1845. 3-5 Units.

The course investigates the transition from poetry to prose and the rise of Russian novel and discusses Alexander Pushkin's novel in verse, "Eugene Onegin", his "Tales of Belkin" and "The Captain's Daughter", Mikhail Lermontov's psychological novel, "A Hero of Our Time", and Nikolay Gogol's "Petersburg Tales" and "Dead Souls". Taught in English. Graduate students will have the opportunity to work with texts in original. Same as: SLAVIC 345.

SLAVIC 146. The Great Russian Novel: Theories of Time and Action. 3-5 Units.

Connections of philosophy and science to literary form in War and Peace, Brothers Karamazov, Chekhov stories: alternative shapes of time, perception, significant action. Taught in English. Same as: SLAVIC 346.

SLAVIC 147. Modern Russian Literature and Culture: The Age of War and Revolution. 3-5 Units.

Surveys major authors (may include: Mayakovsky, Babel, Kharms, Platonov, Bunin, Nabokov, Bulgakov, and Pasternak) and artistic tendencies in 20th century Russian literature and culture in the context of social and political turmoil in Russia from the 1917 revolution to the demise of Stalinism. An emphasis is placed on close reading and detailed analysis of artistic qualities of the literary works. Taught in English. Same as: SLAVIC 347.

SLAVIC 148. Dissent and Disenchantment: Russian Literature and Culture since the Death of Stalin. 3-5 Units.

Russian culture and society since 1953 through literature (in English translation). Topics: opposition and dissent; generational conflict; modernization; everyday life, gender, ethnicity, class, citizenship, exit from communism. Literature of the "Thaw," state-published and samizdat, "village" and "cosmopolitan," the new emigration, Sots-Art, and the Russian "post-modern." Solzhenistyn, Shalamov, Trifonov, Siniavsky-Tertz, Erofeev, Dovlatov, Brodsky, Petrushevskaya, Pelevin, Ulitskaya, Sorokin. Requirements: three reaction papers and final exam (UG); research paper for graduate credit (extra section for graduate students; may register for SLAVLIT 399) Same as: SLAVIC 348.

SLAVIC 156. Nabokov in the Transnational Context. 3-5 Units.

Nabokov's techniques of migration and camouflage as he inhabits the literary and historical contexts of St. Petersburg, Berlin, Paris, America, and Switzerland. His early and late stories, last Russian novel "The Gift," "Lolita" (the novel and screenplay), and "Pale Fire." Readings in English. Russian speakers will be encouraged to read Russian texts in original. Same as: COMPLIT 115, COMPLIT 315, SLAVIC 356.

SLAVIC 179. Literature from Old Rus' and Medieval Russia. 2-4 Units.

From earliest times through the 17th century. The development of literary and historical genres, and links among literature and art, architecture, and religious culture. Readings in English; graduate students read in original. Same as: SLAVIC 379.

SLAVIC 181. Philosophy and Literature. 5 Units.

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. Taught in English. Same as: CLASSGEN 81, COMPLIT 181, ENGLISH 81, FRENCH 181, GERMAN 181, ITALIAN 181, PHIL 81.

SLAVIC 187. Russian Poetry of the 18th and 19th Centuries. 3-4 Units.

Required of majors in Russian language and literature; open to undergraduates who have completed three years of Russian, and to graduate students. The major poetic styles of the 19th century as they intersected with late classicism, the romantic movement, and the realist and post-realist traditions. Representative poems by Lomonosov, Derzhavin, Zhukovskii, Pushkin, Baratynskii, Lermontov, Tiutchev, Nekrasov, Fet, Soloviev. Taught in Russian. Prerequisites: 2nd-year Russian Same as: SLAVIC 387.

SLAVIC 188. 20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky. 3-5 Units.

Developments in and 20th-century Russian poetry including symbolism, acmeism, futurism, and literature of the absurd. Emphasis is on close readings of individual poems. Taught in Russian. Same as: SLAVIC 388.

SLAVIC 190. Tolstoy's Anna Karenina in Dialogue with Contemporary Philosophical, Social, and Ethical Thought. 3-5 Units.

Anna Karenina, the novel as a case study in the contest between "modernity" and "tradition," their ethical order, ideology, cultural codes, and philosophies. Images of society, women and men in Tolstoy v. those of his contemporaries: Marx, Mill, Nietzsche, Weber, Durkheim, Freud. Open to juniors, seniors and graduate students. Requirements: three interpretive essays (500-1000 words each). Analysis of a passage from the novel; AK refracted through a "philosophical" prism and vice versa (30% each); class discussion and Forum (10%).

Same as: COMPLIT 190, COMPLIT 390, SLAVIC 390.

SLAVIC 194. Russia: Literature, Film, Identity, Alterity. 3-5 Units.

How do Russian literature and film imagine Russian identity and, in contrast, the ethnic or national Other? Does political and literary theory analyzing national identity and the literary imagination elsewhere hold true in the Russian context? Texts include works by Pushkin, Dostoevsky, Tolstoy, Blok, Mayakovsky, Platonov; Soviet and post-Soviet films; theory and history. Recommended for returnees from Moscow, Slavic majors, and CREES MA students. Accepted for IR credit. Readings in English and films subtitled; additional section for Russian readers. Taught in English. Same as: SLAVIC 394.

SLAVIC 195. Russian and East European Theater. 3-5 Units.

Evolution of modernist Russian/EEur. dramaturgy, theatrical practices, landmark productions from Chekhov-Meyerhold-Grotowski to present; re-performance of classics; techniques of embodiment. Taught in English. Same as: SLAVIC 395.

SLAVIC 198. Writing Between Languages: The Case of Eastern European Jewish Literature. 3-5 Units.

Eastern European Jews spoke and read Hebrew, Yiddish, and their co-territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well.

Same as: JEWISHST 148, JEWISHST 348, SLAVIC 398.

SLAVIC 199. Individual Work for Undergraduates. 1-5 Unit.

Open to Russian majors or students working on special projects. May be repeated for credit. Prerequisite: consent of instructor.

SLAVIC 200. Proseminar in Literary Theory and Study of Russian Literature. 3-5 Units.

Introduction to advance study of Russian literature and culture: profession, discipline, theoretical perspectives. Variety of approaches, from semiological to psychoanalytic, phenomenological, historical, and sociological; practical exercises in the analysis of verse, narrative, and visual representation in literature and art. Three short essays (800 words) and a review of a recent monograph on Russian literature and culture. Required for graduate students and honors seniors in Russian; first-year graduate students must enroll during their first quarter. Prerequisites: Knowledge of Russian language and literature.

SLAVIC 225. Readings in Russian Realism. 3-5 Units.

For graduate students or upper-level undergraduates. What did Realism mean for late imperial Russian writers? What has it meant for twentieth-century literary theory? As we seek to answer these questions, we read Tolstoy, Dostoevsky, Turgenev, and Chekhov, alongside their brilliant but less often taught contemporaries such as Goncharov, Saltykov-Shchedrin, Leskov, Garshin, Korolenko, Gorky, Andreev, and Bunin. Reading in Russian; discussion in English.

SLAVIC 230. 18th Century Russian Literature. 5 Units.

For graduate students and upper-level undergraduates. Russian literature of the long 18th century, from the late 1600s to 1800. Readings in the Baroque, Neoclassicism and Sentimentalism. Major works are examined in their literary and historical context and also in relation to the principal subcultures of the period, including the court, academy, church and Old Believer diaspora.

SLAVIC 235. Late and Post-Soviet Literature. 5 Units.

This course will cover major trends and in Russian literature of the late and post-Soviet periods. We will give some consideration of related developments in art and cinema. Readings will be in Russian, and course discussions will be in English.

SLAVIC 236. The Russian Long Take. 3-5 Units.

Time flows in a film not by virtue but in defiance of montage-cuts, wrote the great Russian filmmaker Andrei Tarkovsky. An exploration of the phenomenon of long take (a single continuous shot which presents a vision of time) and its aesthetic and philosophical significance to the art of cinema. Key films by cult Russian/Soviet auteurs such as Andrei Tarkovsky, Sergei Paradzhanov and Aleksandr Sokurov will be used as case studies and read through the prism of film theory (Gilles Deleuze, Andre Bazin and Jean Epstein). Taught in English.

SLAVIC 242. Artists and Power: Eastern European Literature and Film from 1945 to 1991. 5 Units.

During the Cold War, the highly diverse region of Eastern Europe was largely united by a common political allegiance to the USSR. The oppressive politics of the Eastern Bloc regimes meant that artists were frequently compelled to respond to political pressure in their works. This situation has been interpreted according to the logic of the Cold War: artists were either courageous dissidents who opposed the regime or brainwashed conformists. In this course we will consider examples that conform to this frame--literature and film of political reform as well as models of Socialist Realism. In addition, however, we will also consider works of self-reflection, escapism, and every-day life under Socialism, in order to arrive at a more complete understanding of the cultural history of the era. The course will include literature and film produced by artists from Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, the Soviet Union, and Yugoslavia. All readings will be in English.

SLAVIC 251. Dostoevsky: Narrative Performance and Literary Theory. 3-5 Units.

This course is an in-depth engagement with a range of Dostoevsky's genres: early works (epistolary novella *Poor Folk* and experimental *Double*), major novels (*Crime and Punishment*, *The Idiot*), less-read shorter works ("A Faint Heart," "Bobok," and "The Meek One"), and genre-bending *House of the Dead* and *Diary of a Writer*. We will apply recent theory of autobiography, performance, repetition and narrative gaps, to Dostoevsky's transformations of genre, philosophical and dramatic discourse, and narrative performance. For graduate students. Slavic students will read primary texts in Russian, other participants in translation. Course conducted in English. Undergraduates with advanced linguistic and critical competence may enroll with consent of instructor.

Same as: COMPLIT 219.

SLAVIC 270. Pushkin's Golden Age. 3-5 Units.

Pushkin's poems, prose, and drafts in dialogue with contemporaries and cultural milieu. Emphasis on innovation and controversy in genre, lyrical form and personal idiom, shaping a public discourse. Taught in English.

SLAVIC 300B. Research Tools and Professionalization Workshop. 1 Unit.

This course introduces graduate students in Slavic Studies to library, archival, and web resources for research, grant opportunities, publication strategies, and professional timelines. Open to PhD students in the Slavic Department and other departments and to MA students in CREES.

SLAVIC 311. Introduction to Old Church Slavic. 2-4 Units.

The first written language of the Slavic people. Grammar. Primarily a skills course, with attention to the historical context of Old Church Slavic.

SLAVIC 315. Isaac Babel and His Worlds. 3-4 Units.

Isaac Babel, his oeuvre, literary, theatrical, and cinematic; his milieu; cultural and historical setting; literary and cultural legacy. Taught in English, knowledge of Russian language and literature strongly recommended.

SLAVIC 327. Boris Pasternak and the Poetry of the Russian Avant Garde. 4 Units.

Focus on three major figures of Russian modernism: Boris Pasternak, Vladimir Mayakovsky and Marina Tsvetaeva. An analysis of experimental Futurist poetic language and techniques in the context of the polemics of various modernist movements. Taught in Russian. Prerequisites: 3rd-year Russian.

SLAVIC 329. Poetry as System: Introduction to Theory and Practice of Russian Verse. 4 Units.

The history and theory of Russian versification from the 17th to the 20th century. Prerequisite: reading knowledge of Russian. Same as: SLAVIC 129.

SLAVIC 340. Russia's Castaway Classic: Andrei Platonov. 3-5 Units.

"The power of devastation [Platonov's texts] inflict upon their subject matter exceeds by far any demands of social criticism and should be measured in units that have very little to do with literature as such," wrote Joseph Brodsky. Explores key texts of Andrei Platonov, who is frequently considered the greatest Russian prose writer of the twentieth century, and covers major critical approaches to his "devastating" oeuvre. The texts will be read in Russian, discussion in English.

SLAVIC 345. Age of Experiment: Russian Literature in 1820-1845. 3-5 Units.

The course investigates the transition from poetry to prose and the rise of Russian novel and discusses Alexander Pushkin's novel in verse, "Eugene Onegin", his "Tales of Belkin" and "The Captain's Daughter", Mikhail Lermontov's psychological novel, "A Hero of Our Time", and Nikolay Gogol's "Petersburg Tales" and "Dead Souls". Taught in English. Graduate students will have the opportunity to work with texts in original. Same as: SLAVIC 145.

SLAVIC 346. The Great Russian Novel: Theories of Time and Action. 3-5 Units.

Connections of philosophy and science to literary form in War and Peace, Brothers Karamazov, Chekhov stories: alternative shapes of time, perception, significant action. Taught in English. Same as: SLAVIC 146.

SLAVIC 347. Modern Russian Literature and Culture: The Age of War and Revolution. 3-5 Units.

Surveys major authors (may include: Mayakovsky, Babel, Kharms, Platonov, Bunin, Nabokov, Bulgakov, and Pasternak) and artistic tendencies in 20th century Russian literature and culture in the context of social and political turmoil in Russia from the 1917 revolution to the demise of Stalinism. An emphasis is placed on close reading and detailed analysis of artistic qualities of the literary works. Taught in English. Same as: SLAVIC 147.

SLAVIC 348. Dissent and Disenchantment: Russian Literature and Culture since the Death of Stalin. 3-5 Units.

Russian culture and society since 1953 through literature (in English translation). Topics: opposition and dissent; generational conflict; modernization; everyday life, gender, ethnicity, class, citizenship, exit from communism. Literature of the "Thaw," state-published and samizdat, "village" and "cosmopolitan," the new emigration, Sots-Art, and the Russian "post-modern." Solzhenitsyn, Shalamov, Trifonov, Siniavsky-Tertz, Erofeev, Dovlatov, Brodsky, Petrushevskaya, Pelevin, Ulitskaya, Sorokin. Requirements: three reaction papers and final exam (UG); research paper for graduate credit (extra section for graduate students; may register for SLAVLIT 399) Same as: SLAVIC 148.

SLAVIC 356. Nabokov in the Transnational Context. 3-5 Units.

Nabokov's techniques of migration and camouflage as he inhabits the literary and historical contexts of St. Petersburg, Berlin, Paris, America, and Switzerland. His early and late stories, last Russian novel "The Gift," "Lolita" (the novel and screenplay), and "Pale Fire." Readings in English. Russian speakers will be encouraged to read Russian texts in original. Same as: COMPLIT 115, COMPLIT 315, SLAVIC 156.

SLAVIC 369. Folklore Theory and Slavic Folklore. 1-3 Unit.

Why do educated elites care about popular or folk culture, and how do they use it? An intellectual history of two centuries of folklore theory, with examples drawn from Eastern European (Slavic and Jewish) lore; students collect other folklore themselves and analyze it. Separate section for Russian readers.

SLAVIC 379. Literature from Old Rus' and Medieval Russia. 2-4 Units.

From earliest times through the 17th century. The development of literary and historical genres, and links among literature and art, architecture, and religious culture. Readings in English; graduate students read in original. Same as: SLAVIC 179.

SLAVIC 387. Russian Poetry of the 18th and 19th Centuries. 3-4 Units.

Required of majors in Russian language and literature; open to undergraduates who have completed three years of Russian, and to graduate students. The major poetic styles of the 19th century as they intersected with late classicism, the romantic movement, and the realist and post-realist traditions. Representative poems by Lomonosov, Derzhavin, Zhukovskii, Pushkin, Baratynskii, Lermontov, Tiutchev, Nekrasov, Fet, Soloviev. Taught in Russian. Prerequisites: 2nd-year Russian Same as: SLAVIC 187.

SLAVIC 388. 20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky. 3-5 Units.

Developments in and 20th-century Russian poetry including symbolism, acmeism, futurism, and literature of the absurd. Emphasis is on close readings of individual poems. Taught in Russian. Same as: SLAVIC 188.

SLAVIC 390. Tolstoy's Anna Karenina in Dialogue with Contemporary Philosophical, Social, and Ethical Thought. 3-5 Units.

Anna Karenina, the novel as a case study in the contest between "modernity" and "tradition," their ethical order, ideology, cultural codes, and philosophies. Images of society, women and men in Tolstoy v. those of his contemporaries: Marx, Mill, Nietzsche, Weber, Durkheim, Freud. Open to juniors, seniors and graduate students. Requirements: three interpretive essays (500-1000 words each). Analysis of a passage from the novel; AK refracted through a "philosophical" prism and vice versa (30% each); class discussion and Forum (10%). Same as: COMPLIT 190, COMPLIT 390, SLAVIC 190.

SLAVIC 394. Russia: Literature, Film, Identity, Alterity. 3-5 Units.

How do Russian literature and film imagine Russian identity *¿* and, in contrast, the ethnic or national Other? Does political and literary theory analyzing national identity and the literary imagination elsewhere hold true in the Russian context? Texts include works by Pushkin, Dostoevsky, Tolstoy, Blok, Mayakovsky, Platonov; Soviet and post-Soviet films; theory and history. Recommended for returnees from Moscow, Slavic majors, and CREEES MA students. Accepted for IR credit. Readings in English and films subtitled; additional section for Russian readers. Taught in English. Same as: SLAVIC 194.

SLAVIC 395. Russian and East European Theater. 3-5 Units.

Evolution of modernist Russian/EEur. dramaturgy, theatrical practices, landmark productions from Chekhov-Meyerhold-Grotowski to present; re-performance of classics; techniques of embodiment. Taught in English. Same as: SLAVIC 195.

SLAVIC 398. Writing Between Languages: The Case of Eastern European Jewish Literature. 3-5 Units.

Eastern European Jews spoke and read Hebrew, Yiddish, and their co-territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well.

Same as: JEWISHST 148, JEWISHST 348, SLAVIC 198.

SLAVIC 399. INDIVIDUAL WORK. 1-15 Unit.

Open to Russian majors or students working on special projects. May be repeated for credit. Prerequisite: consent of instructor.

SLAVIC 802. TGR Dissertation. 0 Units.

Slavic Literature Courses

Sociology Courses

SOC 1. Introduction to Sociology at Stanford. 5 Units.

The Stanford Sociology department includes some of the best-known and most influential thinkers in the discipline. This class will be an opportunity to meet them and hear about their research and other interests that occupy them as professional sociologists. As you learn about their work, you also will learn about key concepts, methods, and theoretical orientations within sociology.

SOC 14N. Inequality in American Society. 3 Units.

An overview of the major forms of inequality in American society, their causes and consequences. Special attention will be devoted to public policy associated with inequality.

SOC 15N. The Transformation of Socialist Societies. 3 Units.

Preference to freshmen. The impact of societal organization on the lives of ordinary people in socialist societies and in the new societies arising through the processes of political, economic, and social transformation. Do the concepts of democratization and marketization suffice to characterize ongoing changes? Enrollment limited to 16.

SOC 16N. African Americans and Social Movements. 3 Units.

Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women's rights, LGBT rights, environmental movement, and contemporary political conservatism. Same as: AFRICAAM 16N, CSRE 16N.

SOC 22N. The Roots of Social Protest. 3 Units.

Preference to freshmen. The conditions under which social protest occurs and the emergence, success, and viability of contemporary social movements. Examples include women's civil rights, ecology, and antiwar and anti-globalization movements in the U.S. and elsewhere. Sociological theories to explain the timing, location, and causes of mobilization; how researchers evaluate these theories. Comparison of tactics, trajectories, and outcomes.

SOC 45Q. Understanding Race and Ethnicity in American Society. 3 Units.

Preference to sophomores. Historical overview of race in America, race and violence, race and socioeconomic well-being, and the future of race relations in America. Enrollment limited to 16.

Same as: CSRE 45Q.

SOC 46N. Race, Ethnic, and National Identities: Imagined Communities. 3 Units.

Preference to freshmen. How new identities are created and legitimated. What does it mean to try on a different identity? National groups and ethnic groups are so large that one individual can know only an infinitesimal fraction of other group members. What explains the seeming coherence of groups? If identities are a product of the imagination, why are people willing to fight and die for them? Enrollment limited to 16.

SOC 100SI. Student Initiated Course. 1 Unit.

SOC 107. China After Mao. 5 Units.

China's post-1976 recovery from the late Mao era; its reorientation toward an open market-oriented economy; the consequences of this new model and runaway economic growth for standards of living, social life, inequality, and local governance; the political conflicts that have accompanied these changes.

Same as: SOC 207.

SOC 108. Political & Historical Sociology. 5 Units.

The differences between historical and sociological analysis of past events. The difference between constructing sociological explanations and describing past events. Topics include: the rise of Christianity, the mafia in a Sicilian village, the trade network of the East India Company.

Same as: SOC 208.

SOC 111. State and Society in Korea. 4 Units.

20th-century Korea from a comparative historical perspective. Colonialism, nationalism, development, state-society relations, democratization, and globalization with reference to the Korean experience.

Same as: INTNLREL 143, SOC 211.

SOC 111D. Social-Psychology and Economics: The trouble with how economists think you think. 5 Units.

This course will compare and contrast explanations for human behavior; specifically, those derived from economic theory with those from social-psychological research. Rationality, decision-making, happiness, motivation, the persistence of inequality, and evaluation of outputs will be examined. It will also investigate the shortcomings of estimating individual preferences without taking into account macro-level phenomenon, such as hierarchy and justice. For students who lack familiarity with economics, the course will also cover basic economic theory as necessary. The use of economic versus social-psychological theory in determining appropriate public policy will also be explored.

SOC 112. Comparative Democratic Development. 5 Units.

Social, cultural, political, economic, and international factors affecting the development and consolidation of democracy in historical and comparative perspective. Individual country experiences with democracy, democratization, and regime performance. Emphasis is on the third wave of democratization over the past three decades and contemporary possibilities for democratic change. (Diamond)

Same as: POLISCI 147.

SOC 113. Comparative Corruption. 5 Units.

Causes, effects, and solutions to various forms of corruption in business and politics in both developing regions (e.g. Asia, E. Europe) and developed ones (the US and the EU).

Same as: POLISCI 143S.

SOC 113D. Sociology of Sport. 5 Units.

This course is designed to examine sports from a sociological perspective and to develop a greater understanding of the impact of sports on societies and individuals. We will analyze sports and sporting cultures using several theoretical frameworks such as functionalism, conflict theory, critical theory, feminist theory, and an internationalist perspective. This course will address questions such as: What role do sports have in society? How can we understand the importance societies place on sports? How are social inequalities replicated or challenged through sports? How do sports influence individuals and the construction of a social reality?.

SOC 114. Economic Sociology. 4 Units.

(Graduate students register for 214.) The sociological approach to production, distribution, consumption, and markets, emphasizing the impact of norms, power, social structure, and institutions on the economy. Comparison of classic and contemporary approaches to the economy among the social science disciplines. Topics: consumption, labor markets, organization of professions such as law and medicine, the economic role of informal networks, industrial organization, including the structure and history of the computer and popular music industries, business alliances, capitalism in non-Western societies, and the transition from state socialism in E. Europe and China.

Same as: SOC 214.

SOC 114D. Sociology of the Great Recession. 5 Units.

The Great Recession (2007-2009), one of the most socially significant events of our time. This course will cover the economic, social, cultural, and political consequences of the recession. We will address its impact on: inequality; job prospects for college graduates; trust in the government; the 2012 presidential election; marriage; child birth; and immigration. We examine the rise of protest movements during the recession period, such as Occupy Wall Street and the Tea Party, and explore the idea of "class warfare". Class will feature several guest speakers and will focus on developing a general understanding of trends emerging in these events.

SOC 115. Topics in Economic Sociology. 5 Units.

(Graduate students register for 315.) Discussion of topics initially explored in 114/214, with emphasis on countries and cultures outside N. America. Possible topics: families and ethnic groups in the economy, corporate governance and control, corporate strategy, relations among firms in industrial districts and business groups, the impact of national institutions and cultures on economic outcomes, transitions from state socialism and the role of the state in economic development. Possible case studies: the U.S., Germany, Italy, Britain, France, Brazil, Korea, India, Japan, and China. Prerequisite: 114/214 or 314.

Same as: SOC 315.

SOC 115D. Can Law Fix Race? Race, Law, and Contemporary American Society. 5 Units.

In this Age of Obama, why are we still talking about legal remedies to racial inequality? This course will explore this question from an interdisciplinary perspective, focusing on perspectives from law and social science. Students will read both actual Supreme Court opinions as well as foundational works in the sociology of race and law. Through readings and discussion, students will leave this course with 1) a background in the historical role of the law in relation to race; 2) an understanding in how law's role in the maintenance of racial inequality has evolved; and 3) an ability to articulate their own views on why we are and whether we should be still talking about race, using both theory and empirical evidence to support their views. Specifically, students will be able to answer this question: "Is it appropriate for law to attempt to remedy racial inequality?"

SOC 116. Chinese Organizations and Management. 5 Units.

Seminar for advanced undergraduates and all graduate students. Same as: SOC 216.

SOC 116D. The Sociological Complexities of Human Trafficking. 5 Units.

Human trafficking is more than a crime and a human rights violation; it reveals the complex interactions of social norms, policies, and actions. In this course, we will consider norms of sexuality and morality in relation to sex trafficking and consenting sex workers, politics and labor policy in relation to labor trafficking and day workers, and political consumerism as a form of collective action in relation to fair trade. Specific topics include the impact of legalized prostitution on human trafficking, the effects of the annual US-released Trafficking In Persons report on international migrant labor laws, and the question of whether or not fair trade is fair. This seminar will provide students opportunities to think critically about society and to collaborate as researchers and activists on the issue of human trafficking.

SOC 117A. China Under Mao. 5 Units.

(Graduate students register for 217A.) The transformation of Chinese society from the 1949 revolution to the eve of China's reforms in 1978: creation of a socialist economy, reorganization of rural society and urban workplaces, emergence of new inequalities of power and opportunity, and new forms of social conflict during Mao's Cultural Revolution of 1966-69 and its aftermath.

Same as: SOC 217A.

SOC 117D. Recognizing Inequality. 5 Units.

Over the last few years social and economic inequality has become a major topic in the media and public policy. Gaps and inequalities between groups exist across a range of arenas including education, wages and promotions, housing and cultural consumption. In this course we'll bring these big ideas down to the individual level--investigating and analyzing manifestations of inequality in our everyday lives, considering why these inequalities exist and developing strategies to alleviate them. This seminar will call upon students' imagination and analytical savvy to tackle pressing societal problems by considering the dynamics of their own lives. In the process, students will develop skills that can be applied in fields as diverse as public policy, health care, non-profit work and entrepreneurship.

SOC 118. Social Movements and Collective Action. 5 Units.

Why social movements arise, who participates in them, the obstacles they face, the tactics they choose, and how to gauge movement success or failure. Theory and empirical research. Application of concepts and methods to social movements such as civil rights, environmental justice, antiglobalization, and anti-war.

Same as: SOC 218.

SOC 119. Understanding Large-Scale Societal Change: The Case of the 1960s. 5 Units.

The demographic, economic, political, and cultural roots of social change in the 60s; its legacy in the present U.S.

Same as: SOC 219.

SOC 120. Interpersonal Relations. 4 Units.

(Graduate students register for 220.) Forming ties, developing norms, status, conformity, deviance, social exchange, power, and coalition formation; important traditions of research have developed from the basic theories of these processes. Emphasis is on understanding basic theories and drawing out their implications for change in a broad range of situations, families, work groups, and friendship groups.

Same as: SOC 220.

SOC 121. The Individual in Social Structure: Foundations in Sociological Social Psychology. 5 Units.

Dynamics of the relationship between the individual and social structure, the relationship between the individual and immediate social context, and relationships between individuals. Focus is on the dominant theoretical perspectives in sociological social psychology: social structure and personality, structural social psychology, and symbolic interactionism.

SOC 123. Sex and Love in Modern U.S. Society. 5 Units.

Social influences on private intimate relations involving romantic love and sexuality. Topics include the sexual revolution, contraception, dating, hook-ups, cohabitation, sexual orientation, and changing cultural meanings of marriage, gender, and romantic love.

Same as: SOC 223.

SOC 124. The New Science of Right and Wrong: The Social Psychology of Morality and Justice. 4 Units.

Social psychology class focusing on topics related to morality, broadly defined (generosity, moral reasoning, discrimination, obedience, deviance, political psychology).

Same as: SOC 224.

SOC 125. Sociology of Religion. 5 Units.

The social patterns of religious belief and practice, and the classical and contemporary theoretical approaches to understanding these patterns. Topics: churches, sects and cults, sources of religious pluralism, relationships between religion and aspects of social structures including the economy, class structure, ethnicity, social networks, and the state.

SOC 126. Introduction to Social Networks. 5 Units.

(Graduate students register for 226.) Theory, methods, and research. Concepts such as density, homogeneity, and centrality; applications to substantive areas. The impact of social network structure on individuals and groups in areas such as communities, neighborhoods, families, work life, and innovations.

Same as: SOC 226.

SOC 127. Bargaining, Power, and Influence in Social Interaction. 5 Units.

(Graduate students register for 227.) Research and theoretical work on bargaining, social influence, and issues of power and justice in social settings such as teams, work groups, and organizations. Theoretical approaches to the exercise of power and influence in social groups and related issues in social interaction such as the promotion of cooperation, effects of competition and conflict, negotiation, and intergroup relations. Enrollment limited to 40.

Same as: SOC 227.

SOC 128. Introduction to Social Network Analysis. 5 Units.

(Graduate students register for SOC 228.) Theory and methods of network analysis in sociology (with an emphasis on social movements), anthropology, history, social psychology, economics, political science, and public health. Prerequisite: basic mathematics.

Same as: SOC 228.

SOC 129. Social Psychology: Self and Society. 4 Units.

Why do people behave the way they do? This fundamental question drives social psychology, a field that bridges psychology and sociology. This course surveys social psychological research on a wide variety of topics including conformity, morality, respect, generosity, identity, and prejudice, giving students a deeper understanding of the causal architecture of the social world.

Same as: SOC 229.

SOC 129X. Urban Education. 3-4 Units.

(Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education. Same as: AFRICAAM 112, CSRE 112X, EDUC 112X, EDUC 212X, SOC 229X.

SOC 130. Education and Society. 4-5 Units.

The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.

Same as: EDUC 120C, EDUC 220C, SOC 230.

SOC 132. Sociology of Education: The Social Organization of Schools. 4 Units.

Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.

Same as: EDUC 110, EDUC 310, SOC 332.

SOC 133. Law and Wikinomics: The Economic and Social Organization of the Legal Profession. 1-5 Unit.

(Graduate and Law students enroll in 333.) Seminar. Emphasis is on the labor market for large-firm lawyers, including the market for entry-level lawyers, attorney retention and promotion practices, lateral hiring of partners, and increased use of forms of employment such as the non-equity form of partnership. Race and gender discrimination and occupational segregation; market-based pressure tactics for organizational reform. Students groups collect and analyze data about the profession and its markets. Multimedia tools for analysis and for producing workplace reforms. May be repeated for credit. Prerequisite: consent of instructor. Same as: SOC 333.

SOC 134. Education, Gender, and Development. 4 Units.

Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes. Same as: EDUC 197, FEMGEN 297.

SOC 135. Poverty, Inequality, and Social Policy in the United States. 5 Units.

Causes and consequences. Effects of antipoverty policies, and debates over effective social policies. Focus is on how poverty and inequality are experienced by families, children, and communities. Topics include welfare reform and labor market policies, education, and community-based antipoverty strategies. Preference to Sociology majors and Sociology cotermin students.

Same as: SOC 235.

SOC 136. Sociology of Law. 4 Units.

(Graduate students register for 236) Major issues and debates. Topics include: historical perspectives on the origins of law; rationality and legal sanctions; normative decision making and morality; cognitive decision making; crime and deviance; the law in action versus the law on the books; organizational responses to law in the context of labor and employment; the roles of lawyers, judges, and juries; and law and social change emphasizing the American civil rights movement.

Same as: SOC 236.

SOC 136A. Law and Society. 5 Units.

Law and social inequality. Major sociological perspectives on where the law comes from, what law and justice systems do, and how they work.

Same as: SOC 236A.

SOC 136B. Advanced Topics in Sociology of Law. 5 Units.

(Same as LAW 538.) Historical perspectives on the origins of law, rationality and legal sanctions, law on the books versus the law in action, crime and deviance, school desegregation, privatization of prisons, American civil rights, file sharing, jury decision making, the role of lawyers and judges, and cynicism about the American legal system.

Same as: SOC 236B.

SOC 137. Global Capitalism and Development. 5 Units.

Global interactions are the norm in today's emerging markets. We explore how globalization affects capitalism in the developing world, including the process of market creation, responses to economic crisis, the actors and mechanisms behind policy diffusion, the effects of globalization on socio-economic development, and the prospects for change.

SOC 138. American Indians in Comparative Historical Perspective. 4 Units.

(Graduate students register for 238.) Demographic, political, and economic processes and events that shaped relations between Euro-Americans and American Indians, 1600-1890. How the intersection of these processes affected the outcome of conflicts between these two groups, and how this conflict was decisive in determining the social position of American Indians in the late 19th century and the evolution of the doctrine of tribal sovereignty.

Same as: NATIVEAM 138, SOC 238.

SOC 139. American Indians in Contemporary Society. 5 Units.

(Graduate students register for 239.) The social position of American Indians in contemporary American society, 1890 to the present. The demographic resurgence of American Indians, changes in social and economic status, ethnic identification and political mobilization, and institutions such as tribal governments and the Bureau of Indian Affairs. Recommended: 138 or a course in American history. Same as: NATIVEAM 139, SOC 239.

SOC 140. Introduction to Social Stratification. 3 Units.

(Graduate students register for 240.) The main classical and modern explanations of the causes of social, economic, and political inequality. Issues include: power; processes that create and maintain inequality; the central axes of inequality in contemporary societies (race, ethnicity, class, and gender); the consequences of inequality for individuals and groups; and how social policy can mitigate and exacerbate inequality. Cases include technologically simple groups, the Indian caste system, and the modern U.S. Same as: SOC 240.

SOC 141. Controversies about Inequality. 5 Units.

(Graduate students register for 241.) Debate format involving Stanford and guest faculty. Forms of inequality including racial, ethnic, and gender stratification; possible policy interventions. Topics such as welfare reform, immigration policy, affirmative action, discrimination in labor markets, sources of income inequality, the duty of rich nations to help poor nations, and causes of gender inequality. Same as: SOC 241.

SOC 142. Sociology of Gender. 5 Units.

(Graduate students register for 242.) Gender inequality in contemporary American society and how it is maintained. The social and relative nature of knowledge and the problems this poses for understanding sex differences and gendered behavior in society. Analytical levels of explanation for gender inequalities: socialization, interaction processes, and socioeconomic processes; arguments and evidence for each approach. The social consequences of gender inequality such as the feminization of poverty, and problems of interpersonal relations. Same as: FEMGEN 142, FEMGEN 242, SOC 242.

SOC 143. Sociology of the Middle Class. 4 Units.

This class focuses on understanding of how social research is conducted, and gaining the ability to evaluate the quality of empirical research. The course will focus on the process of designing a research project, including: formulating research questions, developing hypotheses, developing valid and reliable measures, deciding on the types of data needed, making decisions on sampling, choosing research design and data collection methods, the challenges of making causal inferences, and criteria for evaluating the quality of social research.

SOC 143. Sociology of the Middle Class. 4 Units.

This class focuses on understanding of how social research is conducted, and gaining the ability to evaluate the quality of empirical research. The course will focus on the process of designing a research project, including: formulating research questions, developing hypotheses, developing valid and reliable measures, deciding on the types of data needed, making decisions on sampling, choosing research design and data collection methods, the challenges of making causal inferences, and criteria for evaluating the quality of social research.

SOC 144. Inequality and the Workplace. 5 Units.

How characteristics of workplaces, such as hiring practices, workforce diversity, organizational policies and legal mandates, produce variation in inequality. Examines the sources, extent, and consequences of workplace inequality across gender, racial and ethnic lines. Topics include earnings, social status, geographical location, and opportunities for people in the workforce. Same as: SOC 244.

SOC 145. Race and Ethnic Relations in the USA. 5 Units.

(Graduate students register for 245.) Race and ethnic relations in the U.S. and elsewhere. The processes that render ethnic and racial boundary markers, such as skin color, language, and culture, salient in interaction situations. Why only some groups become targets of ethnic attacks. The social dynamics of ethnic hostility and ethnic/racial protest movements. Same as: CSRE 145, SOC 245.

SOC 146. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Same as: ANTHRO 33, CSRE 196C, ENGLISH 172D, TAPS 165.

SOC 148. Comparative Ethnic Conflict. 4 Units.

Causes and consequences of racial and ethnic conflict, including nationalist movements, ethnic genocide, civil war, ethnic separatism, politics, indigenous peoples' movements, and minority rights movements around the world. Same as: CSRE 148, SOC 248.

SOC 149. The Urban Underclass. 5 Units.

(Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor. Same as: SOC 249, URBANST 112.

SOC 150. Race and Political Sociology. 3 Units.

How race informs the theories and research within political sociology. The state's role in creation and maintenance of racial categories, the ways in which racial identity motivates political actors, how race is used to legitimate policy decisions, comparisons across racial groups. Emphasis on understanding the ways race operates in the political arena. Same as: CSRE 150, SOC 250.

SOC 151. From the Cradle to the Grave: How Demographic Processes Shape the Social World. 5 Units.

(Graduate students register for 251.) Comparative analysis of historical, contemporary, and anticipated demographic change. Draws on case studies from around the world to explore the relationship between social structure and population dynamics. Introduces demographic measures, concepts and theory. Course combines lecture and seminar-style discussion. Same as: SOC 251.

SOC 152. The Social Determinants of Health. 4 Units.

How social differences, such as where we live, whether and how we work, or how much money we make, and our gender, race or ethnicity, also play a role in who gets sick and who does not. Same as: SOC 252.

SOC 155. The Changing American Family. 4 Units.

Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change. Same as: FEMGEN 155, FEMGEN 255, SOC 255.

SOC 156. Ritual, Politics, Power. 5 Units.

Our everyday lives are made up of multiple routines, some consciously staged and imagined and others unconscious and insidious. Anthropologists call these rituals. Rituals shape every aspect of our lives, creating our symbolic universes and governing the most minute of our practices. For early anthropologists and for those interested in religious and symbolic life, rituals and rites were seen as both one of the most universal features of human existence, and, as that which enables us to reflect upon our human existence. A prominent example are that of the *rites de passage* found in every culture, from puberty initiation rites, weddings or funerals, which socially signal the change from one status to another. While initially for anthropologists, rituals marked the difference between the sacred and the profane, soon scholars began to see the ubiquity of ritual and the symbolic in shaping even the most mundane activity such as the structure of a meal and why one is not meant to eat dessert before the main course. The first half of the class examines these different debates surrounding the meaning and effects of rituals and rites. The second half of the class takes these debates to think about the question of power and politics. We return to the question of how our symbolic universes are staged and imagined by us through ritual forms such as the annual Presidential *pardoning the turkey* at Thanksgiving. The question of power however pushes us even further to ask why it is that we obey particular kinds of authority, consent to particular actions, and find ourselves doing things we haven't consciously decided to do. Many have argued that these kinds of political questions about how we respond and are shaped by power have something to do with our symbolic worlds and ritual, from the most obvious (the monarchy) to the most subtle (listening in a classroom). Throughout the course, these abstract questions will be grounded in cross-cultural examples and analysis. Same as: ANTHRO 152.

SOC 160. Formal Organizations. 5 Units.

(Graduate students register for 260.) The roles of formal organizations in production processes, market transactions, and social movements; and as sources of income and ladders of mobility. Relationships of modern organizations to environments and internal structures and processes. Concepts, models, and tools for analyzing organizational phenomena in contemporary societies. Sources include the literature and case studies. Same as: SOC 260.

SOC 161. The Social Science of Entrepreneurship. 4 Units.

(Graduate students register for 261.) Who is likely to become an entrepreneur and where is entrepreneurship likely to occur? Classic and contemporary theory and research. Interaction with expert practitioners in creating entrepreneurial opportunities including venture and corporate capitalists. The role of culture, markets, hierarchies, and networks. Market creation and change, and factors that affect success of new organizations. Field projects on entrepreneurial environments such as technology licensing offices, entrepreneurial development organizations, venture capital firms, and corporate venturing groups. Same as: SOC 261.

SOC 162. Markets and Governance. 5 Units.

Social and political forces that shape market outcomes. The emergence and creation of markets, how markets go wrong, and the roles of government and society in structuring market exchange. Applied topics include development, inequality, globalization, and economic meltdown. Preference to Sociology majors and Sociology cotermin students. Same as: SOC 262.

SOC 163. Foundations of Organizational Theory. 5 Units.

Foundational material in organizational theory literature. Same as: SOC 263.

SOC 165. Seminar on the Everyday Lives of Immigrants. 5 Units.

Everyday experience of immigrants and the immigrant second generation through the ethnographic lens. Ethnographies that focus on the immigrant experience. Limited enrollment. Same as: SOC 265.

SOC 166. Mexicans, Mexican Americans, and Chicanos in American Society. 5 Units.

Contemporary sociological issues affecting Mexican-origin people in the U.S. Topics include: the immigrant experience, immigration policy, identity, socioeconomic integration, internal diversity, and theories of incorporation. Same as: SOC 266.

SOC 167A. Asia-Pacific Transformation. 5 Units.

Post-WW II transformation in the Asia-Pacific region, with focus on the ascent of Japan, the development of newly industrialized capitalist countries (S. Korea and Taiwan), the emergence of socialist states (China and N. Korea), and the changing relationship between the U.S. and these countries. Same as: SOC 267A.

SOC 168. Global Organizations: Managing Diversity. 3 Units.

Analytical tools derived from the social sciences to analyze global organizations and projects, and applied to the tradeoffs between different designs of teams and organizations. Focus is on tribal mentality and how to design effective organizations and projects for policy implementation within and across institutional settings. This class is associated with a study trip during the Spring Break. Recommended: PUBLPOL 102, MS&E 180, SOC 160, ECON 149, or MGTECON 330. Same as: PUBLPOL 168, PUBLPOL 268, SOC 268.

SOC 170. Classics of Modern Social Theory. 3 Units.

(Graduate students register for 270). Preference to Sociology majors. Contributions of Marx, Weber, and Durkheim to contemporary sociology. Topics: the problem of social order and the nature of social conflict; capitalism and bureaucracy; the relationship between social structure and politics; the social sources of religion and political ideology; and the evolution of modern societies. Examples from contemporary research illustrate the impact of these traditions. Limited enrollment. Same as: SOC 270.

SOC 173. Gender and Higher Education: National and International Perspectives. 4 Units.

This course examines the ways in which higher education structures and policies affect females, males, and students in relation to each other and how changes in those structures and policies improve experiences for females and males similarly or differently. Students are expected to gain an understanding of theories and perspectives from the social sciences relevant to an understanding of the role of higher education in relation to structures of gender differentiation and hierarchy. Topics include undergraduate and graduate education; identity and sexuality; gender and science; gender and faculty; and the development of feminist scholarship and pedagogy. Attention is paid to how these issues are experienced by women and men in the United States, including people of color, and by academics throughout the world, and how these have changed over time. Same as: EDUC 173, EDUC 273, FEMST 173, SOC 273.

SOC 180A. Foundations of Social Research. 4 Units.

Formulating a research question, developing hypotheses, probability and non-probability sampling, developing valid and reliable measures, qualitative and quantitative data, choosing research design and data collection methods, challenges of making causal inference, and criteria for evaluating the quality of social research. Emphasis is on how social research is done, rather than application of different methods. Limited enrollment; preference to Sociology and Urban Studies majors, and Sociology coterms. Same as: SOC 280A.

SOC 180B. Introduction to Data Analysis. 5 Units.

Methods for analyzing and evaluating quantitative data in sociological research. Students will be taught how to run and interpret multivariate regressions, how to test hypotheses, and how to read and critique published data analyses. Limited enrollment; preference to Sociology majors. Same as: SOC 280B.

SOC 181B. Sociological Methods: Statistics. 5 Units.

(Graduate students register for 281B.) Statistical methods of relevance to sociology: contingency tables, correlation, and regression. Same as: SOC 281B.

SOC 190. Undergraduate Individual Study. 1-5 Unit.

Prior arrangement required.

SOC 191. Undergraduate Directed Research. 1-5 Unit.

Work on a project of student's choice under supervision of a faculty member. Prior arrangement required.

SOC 192. Undergraduate Research Apprenticeship. 1-5 Unit.

Work in an apprentice-like relationship with faculty on an on-going research project. Prior arrangement required.

SOC 193. Undergraduate Teaching Apprenticeship. 1-5 Unit.

Prior arrangement required.

SOC 196. Senior Thesis. 1-15 Unit.

Work on an honors thesis project under faculty supervision (see description of honors program). Must be arranged early in the year of graduation or before.

SOC 200. Junior/Senior Seminar for Majors. 4 Units.

For Sociology majors. Capstone course in which sociological problems are framed, linked to theories, and answers pursued through research designs. Independent research. How to formulate a research question; how to integrate theory and methods. Prerequisites: SOC 170, 180B.

SOC 201. Preparation for Senior Project. 5 Units.

First part of capstone experience for Urban Studies majors pursuing an internship-based research project or honors thesis. Assignments culminate in a research proposal, which may be submitted for funding. Students also identify and prepare for a related internship, normally to begin in Spring Quarter in URBANST 201B or in Summer. Research proposed in the final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research. Service Learning Course (certified by Haas Center).

Same as: URBANST 201.

SOC 202. Preparation for Senior Research. 5 Units.

Required of all juniors in Urban Studies and those juniors in Sociology planning on writing an honors thesis. Students write a research prospectus and grant proposal, which may be submitted for funding. Research proposal in final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research.

Same as: URBANST 202.

SOC 207. China After Mao. 5 Units.

China's post-1976 recovery from the late Mao era; its reorientation toward an open market-oriented economy; the consequences of this new model and runaway economic growth for standards of living, social life, inequality, and local governance; the political conflicts that have accompanied these changes.

Same as: SOC 107.

SOC 208. Political & Historical Sociology. 5 Units.

The differences between historical and sociological analysis of past events. The difference between constructing sociological explanations and describing past events. Topics include: the rise of Christianity, the mafia in a Sicilian village, the trade network of the East India Company.

Same as: SOC 108.

SOC 211. State and Society in Korea. 4 Units.

20th-century Korea from a comparative historical perspective. Colonialism, nationalism, development, state-society relations, democratization, and globalization with reference to the Korean experience.

Same as: INTNLREL 143, SOC 111.

SOC 214. Economic Sociology. 4 Units.

(Graduate students register for 214.) The sociological approach to production, distribution, consumption, and markets, emphasizing the impact of norms, power, social structure, and institutions on the economy. Comparison of classic and contemporary approaches to the economy among the social science disciplines. Topics: consumption, labor markets, organization of professions such as law and medicine, the economic role of informal networks, industrial organization, including the structure and history of the computer and popular music industries, business alliances, capitalism in non-Western societies, and the transition from state socialism in E. Europe and China.

Same as: SOC 114.

SOC 216. Chinese Organizations and Management. 5 Units.

Seminar for advanced undergraduates and all graduate students.

Same as: SOC 116.

SOC 217A. China Under Mao. 5 Units.

(Graduate students register for 217A.) The transformation of Chinese society from the 1949 revolution to the eve of China's reforms in 1978: creation of a socialist economy, reorganization of rural society and urban workplaces, emergence of new inequalities of power and opportunity, and new forms of social conflict during Mao's Cultural Revolution of 1966-69 and its aftermath.

Same as: SOC 117A.

SOC 218. Social Movements and Collective Action. 5 Units.

Why social movements arise, who participates in them, the obstacles they face, the tactics they choose, and how to gauge movement success or failure. Theory and empirical research. Application of concepts and methods to social movements such as civil rights, environmental justice, antiglobalization, and anti-war.

Same as: SOC 118.

SOC 219. Understanding Large-Scale Societal Change: The Case of the 1960s. 5 Units.

The demographic, economic, political, and cultural roots of social change in the 60s; its legacy in the present U.S.

Same as: SOC 119.

SOC 220. Interpersonal Relations. 4 Units.

(Graduate students register for 220.) Forming ties, developing norms, status, conformity, deviance, social exchange, power, and coalition formation; important traditions of research have developed from the basic theories of these processes. Emphasis is on understanding basic theories and drawing out their implications for change in a broad range of situations, families, work groups, and friendship groups.

Same as: SOC 120.

SOC 223. Sex and Love in Modern U.S. Society. 5 Units.

Social influences on private intimate relations involving romantic love and sexuality. Topics include the sexual revolution, contraception, dating, hook-ups, cohabitation, sexual orientation, and changing cultural meanings of marriage, gender, and romantic love.

Same as: SOC 123.

SOC 224. The New Science of Right and Wrong: The Social Psychology of Morality and Justice. 4 Units.

Social psychology class focusing on topics related to morality, broadly defined (generosity, moral reasoning, discrimination, obedience, deviance, political psychology).

Same as: SOC 124.

SOC 224B. Microsociology: Social Structure and Interaction. 4 Units.

How to interpret interpersonal situations using microsociological theories. Focuses on the role of intention, identity, routines, scripts, rituals, conceptual frameworks, talk and emotions in social interaction. Processes by which interactions reverberate outward to transform groups and social structures. Special consideration will be placed on organizational contexts like schools, workplaces and policy decision arenas.

Same as: EDUC 312B.

SOC 226. Introduction to Social Networks. 5 Units.

(Graduate students register for 226.) Theory, methods, and research. Concepts such as density, homogeneity, and centrality; applications to substantive areas. The impact of social network structure on individuals and groups in areas such as communities, neighborhoods, families, work life, and innovations.
Same as: SOC 126.

SOC 227. Bargaining, Power, and Influence in Social Interaction. 5 Units.

(Graduate students register for 227.) Research and theoretical work on bargaining, social influence, and issues of power and justice in social settings such as teams, work groups, and organizations. Theoretical approaches to the exercise of power and influence in social groups and related issues in social interaction such as the promotion of cooperation, effects of competition and conflict, negotiation, and intergroup relations. Enrollment limited to 40.
Same as: SOC 127.

SOC 228. Introduction to Social Network Analysis. 5 Units.

(Graduate students register for SOC 228.) Theory and methods of network analysis in sociology (with an emphasis on social movements), anthropology, history, social psychology, economics, political science, and public health. Prerequisite: basic mathematics.
Same as: SOC 128.

SOC 229. Social Psychology: Self and Society. 4 Units.

Why do people behave the way they do? This fundamental question drives social psychology, a field that bridges psychology and sociology. This course surveys social psychological research on a wide variety of topics including conformity, morality, respect, generosity, identity, and prejudice, giving students a deeper understanding of the causal architecture of the social world.
Same as: SOC 129.

SOC 229X. Urban Education. 3-4 Units.

(Graduate students register for EDUC 212X or SOC 229X.) Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.
Same as: AFRICAAM 112, CSRE 112X, EDUC 112X, EDUC 212X, SOC 129X.

SOC 230. Education and Society. 4-5 Units.

The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.
Same as: EDUC 120C, EDUC 220C, SOC 130.

SOC 231. World, Societal, and Educational Change: Comparative Perspectives. 4-5 Units.

Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.
Same as: EDUC 136, EDUC 306D.

SOC 234. Research Seminar on Access to Justice. 1-5 Unit.

The functions and dysfunctions of modern legal systems. Topics include: official statements of the U.S. and the EU about the rights of parties to civil disputes; the roles of lawyers as gatekeepers and facilitators; the filtering process by which injuries and experiences become the basis for legal claims; access to and use of courts; the balance of power and advantage between individual persons and organizations in disputes. Prerequisite: advanced undergraduate or graduate standing, or consent of instructor.
Same as: SOC 334.

SOC 235. Poverty, Inequality, and Social Policy in the United States. 5 Units.

Causes and consequences. Effects of antipoverty policies, and debates over effective social policies. Focus is on how poverty and inequality are experienced by families, children, and communities. Topics include welfare reform and labor market policies, education, and community-based antipoverty strategies. Preference to Sociology majors and Sociology cotermin students.
Same as: SOC 135.

SOC 236. Sociology of Law. 4 Units.

(Graduate students register for 236) Major issues and debates. Topics include: historical perspectives on the origins of law; rationality and legal sanctions; normative decision making and morality; cognitive decision making; crime and deviance; the law in action versus the law on the books; organizational responses to law in the context of labor and employment; the roles of lawyers, judges, and juries; and law and social change emphasizing the American civil rights movement.
Same as: SOC 136.

SOC 236A. Law and Society. 5 Units.

Law and social inequality. Major sociological perspectives on where the law comes from, what law and justice systems do, and how they work.
Same as: SOC 136A.

SOC 236B. Advanced Topics in Sociology of Law. 5 Units.

(Same as LAW 538.) Historical perspectives on the origins of law, rationality and legal sanctions, law on the books versus the law in action, crime and deviance, school desegregation, privatization of prisons, American civil rights, file sharing, jury decision making, the role of lawyers and judges, and cynicism about the American legal system.
Same as: SOC 136B.

SOC 238. American Indians in Comparative Historical Perspective. 4 Units.

(Graduate students register for 238.) Demographic, political, and economic processes and events that shaped relations between Euro-Americans and American Indians, 1600-1890. How the intersection of these processes affected the outcome of conflicts between these two groups, and how this conflict was decisive in determining the social position of American Indians in the late 19th century and the evolution of the doctrine of tribal sovereignty.
Same as: NATIVEAM 138, SOC 138.

SOC 239. American Indians in Contemporary Society. 5 Units.

(Graduate students register for 239.) The social position of American Indians in contemporary American society, 1890 to the present. The demographic resurgence of American Indians, changes in social and economic status, ethnic identification and political mobilization, and institutions such as tribal governments and the Bureau of Indian Affairs. Recommended: 138 or a course in American history.
Same as: NATIVEAM 139, SOC 139.

SOC 240. Introduction to Social Stratification. 3 Units.

(Graduate students register for 240.) The main classical and modern explanations of the causes of social, economic, and political inequality. Issues include: power; processes that create and maintain inequality; the central axes of inequality in contemporary societies (race, ethnicity, class, and gender); the consequences of inequality for individuals and groups; and how social policy can mitigate and exacerbate inequality. Cases include technologically simple groups, the Indian caste system, and the modern U.S.
Same as: SOC 140.

SOC 241. Controversies about Inequality. 5 Units.

(Graduate students register for 241.) Debate format involving Stanford and guest faculty. Forms of inequality including racial, ethnic, and gender stratification; possible policy interventions. Topics such as welfare reform, immigration policy, affirmative action, discrimination in labor markets, sources of income inequality, the duty of rich nations to help poor nations, and causes of gender inequality.
Same as: SOC 141.

SOC 242. Sociology of Gender. 5 Units.

(Graduate students register for 242.) Gender inequality in contemporary American society and how it is maintained. The social and relative nature of knowledge and the problems this poses for understanding sex differences and gendered behavior in society. Analytical levels of explanation for gender inequalities: socialization, interaction processes, and socioeconomic processes; arguments and evidence for each approach. The social consequences of gender inequality such as the feminization of poverty, and problems of interpersonal relations.
Same as: FEMGEN 142, FEMGEN 242, SOC 142.

SOC 244. Inequality and the Workplace. 5 Units.

How characteristics of workplaces, such as hiring practices, workforce diversity, organizational policies and legal mandates, produce variation in inequality. Examines the sources, extent, and consequences of workplace inequality across gender, racial and ethnic lines. Topics include earnings, social status, geographical location, and opportunities for people in the workforce.
Same as: SOC 144.

SOC 245. Race and Ethnic Relations in the USA. 5 Units.

(Graduate students register for 245.) Race and ethnic relations in the U.S. and elsewhere. The processes that render ethnic and racial boundary markers, such as skin color, language, and culture, salient in interaction situations. Why only some groups become targets of ethnic attacks. The social dynamics of ethnic hostility and ethnic/racial protest movements.
Same as: CSRE 145, SOC 145.

SOC 248. Comparative Ethnic Conflict. 4 Units.

Causes and consequences of racial and ethnic conflict, including nationalist movements, ethnic genocide, civil war, ethnic separatism, politics, indigenous peoples' movements, and minority rights movements around the world.
Same as: CSRE 148, SOC 148.

SOC 249. The Urban Underclass. 5 Units.

(Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor.
Same as: SOC 149, URBANST 112.

SOC 250. Race and Political Sociology. 3 Units.

How race informs the theories and research within political sociology. The state's role in creation and maintenance of racial categories, the ways in which racial identity motivates political actors, how race is used to legitimate policy decisions, comparisons across racial groups. Emphasis on understanding the ways race operates in the political arena.
Same as: CSRE 150, SOC 150.

SOC 251. From the Cradle to the Grave: How Demographic Processes Shape the Social World. 5 Units.

(Graduate students register for 251.) Comparative analysis of historical, contemporary, and anticipated demographic change. Draws on case studies from around the world to explore the relationship between social structure and population dynamics. Introduces demographic measures, concepts and theory. Course combines lecture and seminar-style discussion.
Same as: SOC 151.

SOC 252. The Social Determinants of Health. 4 Units.

How social differences, such as where we live, whether and how we work, or how much money we make, and our gender, race or ethnicity, also play a role in who gets sick and who does not.
Same as: SOC 152.

SOC 255. The Changing American Family. 4 Units.

Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change.
Same as: FEMGEN 155, FEMGEN 255, SOC 155.

SOC 257. Causal Inference in Quantitative Educational and Social Science Research. 3-5 Units.

Quantitative methods to make causal inferences in the absence of randomized experiment including the use of natural and quasi-experiments, instrumental variables, regression discontinuity, matching estimators, longitudinal methods, fixed effects estimators, and selection modeling. Assumptions implicit in these approaches, and appropriateness in research situations. Students develop research proposals relying on these methods. Prerequisites: exposure to quantitative research methods; multivariate regression.
Same as: EDUC 255B.

SOC 258. Applied Quasi-Experimental Research in Education. 3-5 Units.

Course will provide hands-on practice in analysis of data from experimental and quasi-experimental research designs, including a) instrumental variables estimators; b) regression discontinuity estimators; c) difference-in-difference estimators; d) matching estimators; e) fixed effects estimators; and f) panel data methods (including individual fixed effects models, lagged covariate adjustment models, growth models, etc.). Prerequisites: satisfactory completion of EDUC 255B, EDUC 257C or SOC 257.
Same as: EDUC 255C.

SOC 260. Formal Organizations. 5 Units.

(Graduate students register for 260.) The roles of formal organizations in production processes, market transactions, and social movements; and as sources of income and ladders of mobility. Relationships of modern organizations to environments and internal structures and processes. Concepts, models, and tools for analyzing organizational phenomena in contemporary societies. Sources include the literature and case studies.
Same as: SOC 160.

SOC 261. The Social Science of Entrepreneurship. 4 Units.

(Graduate students register for 261.) Who is likely to become an entrepreneur and where is entrepreneurship likely to occur? Classic and contemporary theory and research. Interaction with expert practitioners in creating entrepreneurial opportunities including venture and corporate capitalists. The role of culture, markets, hierarchies, and networks. Market creation and change, and factors that affect success of new organizations. Field projects on entrepreneurial environments such as technology licensing offices, entrepreneurial development organizations, venture capital firms, and corporate venturing groups.
Same as: SOC 161.

SOC 262. Markets and Governance. 5 Units.

Social and political forces that shape market outcomes. The emergence and creation of markets, how markets go wrong, and the roles of government and society in structuring market exchange. Applied topics include development, inequality, globalization, and economic meltdown. Preference to Sociology majors and Sociology coterm students.
Same as: SOC 162.

SOC 263. Foundations of Organizational Theory. 5 Units.

Foundational material in organizational theory literature.
Same as: SOC 163.

SOC 265. Seminar on the Everyday Lives of Immigrants. 5 Units.

Everyday experience of immigrants and the immigrant second generation through the ethnographic lens. Ethnographies that focus on the immigrant experience. Limited enrollment.

Same as: SOC 165.

SOC 266. Mexicans, Mexican Americans, and Chicanos in American Society. 5 Units.

Contemporary sociological issues affecting Mexican-origin people in the U.S. Topics include: the immigrant experience, immigration policy, identity, socioeconomic integration, internal diversity, and theories of incorporation.

Same as: SOC 166.

SOC 267A. Asia-Pacific Transformation. 5 Units.

Post-WW II transformation in the Asia-Pacific region, with focus on the ascent of Japan, the development of newly industrialized capitalist countries (S. Korea and Taiwan), the emergence of socialist states (China and N. Korea), and the changing relationship between the U.S. and these countries.

Same as: SOC 167A.

SOC 268. Global Organizations: Managing Diversity. 3 Units.

Analytical tools derived from the social sciences to analyze global organizations and projects, and applied to the tradeoffs between different designs of teams and organizations. Focus is on tribal mentality and how to design effective organizations and projects for policy implementation within and across institutional settings. This class is associated with a study trip during the Spring Break. Recommended: PUBLPOL 102, MS&E 180, SOC 160, ECON 149, or MGTECON 330.

Same as: PUBLPOL 168, PUBLPOL 268, SOC 168.

SOC 270. Classics of Modern Social Theory. 3 Units.

(Graduate students register for 270). Preference to Sociology majors. Contributions of Marx, Weber, and Durkheim to contemporary sociology.

Topics: the problem of social order and the nature of social conflict; capitalism and bureaucracy; the relationship between social structure and politics; the social sources of religion and political ideology; and the evolution of modern societies. Examples from contemporary research illustrate the impact of these traditions. Limited enrollment.

Same as: SOC 170.

SOC 273. Gender and Higher Education: National and International Perspectives. 4 Units.

This course examines the ways in which higher education structures and policies affect females, males, and students in relation to each other and how changes in those structures and policies improve experiences for females and males similarly or differently. Students are expected to gain an understanding of theories and perspectives from the social sciences relevant to an understanding of the role of higher education in relation to structures of gender differentiation and hierarchy. Topics include undergraduate and graduate education; identity and sexuality; gender and science; gender and faculty; and the development of feminist scholarship and pedagogy. Attention is paid to how these issues are experienced by women and men in the United States, including people of color, and by academics throughout the world, and how these have changed over time.

Same as: EDUC 173, EDUC 273, FEMST 173, SOC 173.

SOC 280A. Foundations of Social Research. 4 Units.

Formulating a research question, developing hypotheses, probability and non-probability sampling, developing valid and reliable measures, qualitative and quantitative data, choosing research design and data collection methods, challenges of making causal inference, and criteria for evaluating the quality of social research. Emphasis is on how social research is done, rather than application of different methods. Limited enrollment; preference to Sociology and Urban Studies majors, and Sociology coterms.

Same as: SOC 180A.

SOC 280B. Introduction to Data Analysis. 5 Units.

Methods for analyzing and evaluating quantitative data in sociological research. Students will be taught how to run and interpret multivariate regressions, how to test hypotheses, and how to read and critique published data analyses. Limited enrollment; preference to Sociology majors.

Same as: SOC 180B.

SOC 281B. Sociological Methods: Statistics. 5 Units.

(Graduate students register for 281B.) Statistical methods of relevance to sociology: contingency tables, correlation, and regression.

Same as: SOC 181B.

SOC 300. Workshop: Teaching Development. 2 Units.

For first-year Sociology doctoral students only. The principles for becoming an effective instructor, adviser, and mentor to undergraduates. Topics: ethics, course organization and syllabus development, test construction and grading, conflict resolution, common classroom problems, and University policies related to matters such as sexual harassment. Technologies and other topics related to making effective presentations, and campus resources to improve classroom performance. Roundtable discussions with faculty and advanced graduate students known for teaching excellence. Students may be asked to give a demonstration lecture.

SOC 305. Graduate Proseminar. 1 Unit.

For first-year Sociology doctoral students only. Introduction and orientation to the field of Sociology.

SOC 308. Social Demography. 4-5 Units.

For graduate students and advanced undergraduates. Topics: models of fertility behavior, migration models, stable population theory, life table analysis, data sources, and measurement problems. How population behavior affects social processes, and how social processes influence population dynamics. Recommended: sociological research methods; basic regression analysis and log linear models.

SOC 309. Nations and Nationalism. 4-5 Units.

The nation as a form of collective identity in the modern era. Major works in the study of nations and nationalism from comparative perspectives with focus on Europe and E. Asia.

SOC 310. Political Sociology. 4-5 Units.

Theory and research on the relationship between social structure and politics. Social foundations of political order, the generation and transformation of ideologies and political identities, social origins of revolutionary movements, and social consequences of political revolution. Prerequisite: doctoral student.

SOC 311A. Workshop: Comparative Studies of Educational and Political Systems. 1-5 Unit.

Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor.

Same as: EDUC 387A.

SOC 311B. Workshop: Comparative Systems of Educational and Political Systems. 1-5 Unit.

Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor.

Same as: EDUC 387B.

SOC 311C. Workshop: Comparative Studies of Educational and Political Systems. 1-5 Unit.

Analysis of quantitative and longitudinal data on national educational systems and political structures. Prerequisite: consent of instructor. May be repeated for credit.

Same as: EDUC 387C.

SOC 312W. Workshop: Political Sociology, Social Movements, and Collective Action. 1-2 Unit.

Faculty and student presentations of ongoing research on topics including: social movement and organizations, and the relationship between them; democracy movements; legislative and policy outcomes; and collective action tactics, strategies, and trajectories. May be repeated for credit. Restricted to Sociology doctoral students; others by consent of instructor.

SOC 314. Economic Sociology. 4-5 Units.

Classical and contemporary literature covering the sociological approach to markets and the economy, and comparing it to other disciplines. Topics: consumption, labor, professions, industrial organization, and the varieties of capitalism; historical and comparative perspectives on market and non-market provision of goods and services, and on transitions among economic systems. The relative impact of culture, institutions, norms, social networks, technology, and material conditions. Prerequisite: doctoral student status or consent of instructor.

SOC 315. Topics in Economic Sociology. 5 Units.

(Graduate students register for 315.) Discussion of topics initially explored in 114/214, with emphasis on countries and cultures outside N. America. Possible topics: families and ethnic groups in the economy, corporate governance and control, corporate strategy, relations among firms in industrial districts and business groups, the impact of national institutions and cultures on economic outcomes, transitions from state socialism and the role of the state in economic development. Possible case studies: the U.S., Germany, Italy, Britain, France, Brazil, Korea, India, Japan, and China. Prerequisite: 114/214 or 314. Same as: SOC 115.

SOC 315W. Workshop: Economic Sociology and Organizations. 1-2 Unit.

Theory, methods, and research in the sociology of the economy and of formal organizations, through presentations of ongoing work by students, faculty, and guest speakers, and discussion of recent literature and controversies. May be repeated for credit. Restricted to Sociology doctoral students; others by consent of instructor.

SOC 316. Historical and Comparative Sociology. 4-5 Units.

Theory and research on macro-historical changes of sociological significance such as the rise of capitalism, the causes and consequences of revolutions, and the formation of the modern nation state and global world system. Methodological issues in historical and comparative sociology.

SOC 317W. Workshop: Networks, Histories, and Theories of Action. 1-2 Unit.

Yearlong workshop where doctoral students are encouraged to collaborate with peers and faculty who share an interest in researching the network dynamics, histories and theories of action that help explain particular social phenomena. Students present their own research and provide helpful feedback on others' work. Presentations may concern dissertation proposals, grants, article submissions, book proposals, datasets, methodologies and other texts. Repeatable for credit. Same as: EDUC 317X.

SOC 318. Social Movements and Collective Action. 4-5 Units.

Topics: causes, dynamics, and outcomes of social movements; organizational dimensions of collective action; and causes and consequences of individual activism.

SOC 320. Foundations of Social Psychology. 4-5 Units.

Major theoretical perspectives, and their assumptions and problems, in interpersonal processes and social psychology. Techniques of investigation and methodological issues. Perspectives: symbolic interaction, social structure and personality, and cognitive and group processes.

SOC 321W. Workshop: Social Psychology and Social Structure. 1-2 Unit.

Advanced graduate student workshop in social psychology. Current theories and research agendas, recent publications, and presentations of ongoing research by faculty and students. May be repeated for credit. Prerequisite: consent of instructor.

SOC 323. Sociology of the Family. 4-5 Units.

Sociological research on changing family forms. Topics include courtship, marriage, fertility, divorce, conflict, relationship skills and satisfaction, gender patterns, power relations within the family, and class and race differences in patterns. Enrollment limited to graduate students.

SOC 324. Social Networks. 3-5 Units.

How the study of social networks contributes to sociological research. Application of core concepts to patterns of relations among actors, including connectivity and clusters, duality of categories and networks, centrality and power, balance and transitivity, structural equivalence, and blockmodels. Friendship and kinship networks, diffusion of ideas and infectious diseases, brokerage in markets and organizations, and patronage and political influence in historical contexts.

SOC 325W. Family Workshop: Sociology Phd students present and critique work on family and demography.. 1 Unit.

Sociology PhD students will present their own work weekly, and read and critique the research-in-progress of their peers on issues of family, household structure, interpersonal relationships, marriage, demography, survey data, demographic methods, statistical methods, and related fields.

SOC 327. Frontiers of Social Psychology. 1-5 Unit.

Advanced topics, current developments, theory, and empirical research. Possible topics include social identity processes, status beliefs and processes, social exchange, affect and social cohesion, legitimacy, social difference and inequality, norms, and social dilemmas.

SOC 331. The Conduct of Qualitative Inquiry. 3-4 Units.

Two quarter sequence for doctoral students to engage in research that anticipates, is a pilot study for, or feeds into their dissertations. Prior approval for dissertation study not required. Students engage in common research processes including: developing interview questions; interviewing; coding, analyzing, and interpreting data; theorizing; and writing up results. Participant observation as needed. Preference to students who intend to enroll in 327C. Same as: EDUC 327A.

SOC 332. Sociology of Education: The Social Organization of Schools. 4 Units.

Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy. Same as: EDUC 110, EDUC 310, SOC 132.

SOC 333. Law and Wikinomics: The Economic and Social Organization of the Legal Profession. 1-5 Unit.

(Graduate and Law students enroll in 333.) Seminar. Emphasis is on the labor market for large-firm lawyers, including the market for entry-level lawyers, attorney retention and promotion practices, lateral hiring of partners, and increased use of forms of employment such as the non-equity form of partnership. Race and gender discrimination and occupational segregation; market-based pressure tactics for organizational reform. Students groups collect and analyze data about the profession and its markets. Multimedia tools for analysis and for producing workplace reforms. May be repeated for credit. Prerequisite: consent of instructor. Same as: SOC 133.

SOC 334. Research Seminar on Access to Justice. 1-5 Unit.

The functions and dysfunctions of modern legal systems. Topics include: official statements of the U.S. and the EU about the rights of parties to civil disputes; the roles of lawyers as gatekeepers and facilitators; the filtering process by which injuries and experiences become the basis for legal claims; access to and use of courts; the balance of power and advantage between individual persons and organizations in disputes. Prerequisite: advanced undergraduate or graduate standing, or consent of instructor. Same as: SOC 234.

SOC 336. Sociology of Law. 3-5 Units.

Sociological examination of law as a mechanism of social regulation and as a field of knowledge. Explores classical and contemporary theoretical and empirical contributions to the sociology of law. Law and social control, law and social change, social reality of the law, the profession and practice of law, legal mobilization, and the influence of race, gender, and social status in legal decisions and processes.

SOC 338W. Workshop: Sociology of Law. 1-5 Unit.

(Same as LAW 581.) Required for joint degree J.D./Ph.D. students in Sociology in the first three years of program; open to Ph.D. students in Sociology and related disciplines. Empirical, sociological study of law and legal institutions. Topics such as the relation of law to inequality and stratification, social movements, organizations and institutions, political sociology and state development, and the social construction of disputes and dispute resolution processes. Research presentations. Career development issues. May be repeated for credit.

SOC 339. Gender Meanings and Processes. 1-5 Unit.

Current theories and research on the social processes, such as socialization, status processes, stereotyping, and cognition, that produce gender difference and inequality. Intersections of gender with race, class, and bodies. Applications to workplaces, schools, families, and intimate relationships. Prerequisite: Sociology doctoral student or consent of instructor.

SOC 341W. Workshop: Inequality. 1-2 Unit.

Causes, consequences, and structure of inequality; how inequality results from and shapes social classes, occupations, professions, and other aspects of the economy. Research presentations by students, faculty, and guest speakers. Discussion of controversies, theories, and recent writings. May be repeated for credit. Restricted to Sociology doctoral students; others by consent of instructor.

SOC 342B. Gender and Social Structure. 4-5 Units.

The role of gender in structuring contemporary life. Social forces affecting gender at the psychological, interactional, and structural levels. Gender inequality in labor markets, education, the household, and other institutions. Theories and research literature.

SOC 346. Workshop: Ethnography. 1-2 Unit.

Restricted to doctoral students. Student research employing ethnographic methods. May be repeated for credit. Prerequisite: consent of instructor.

SOC 347. Race and Ethnicity in Society and Institutions. 1-5 Unit.

Primarily for doctoral students. Major theories and empirical research. Emphasis is on schooling and race, racial identity, urban issues, and the impact of immigration on race relations. Same as: EDUC 315X.

SOC 350. Sociology of Race. 3-5 Units.

Emphasis on cultural approaches that focus on meaning and meaning-making in the realm of race and race relations. Issues and complications in conceptualizing and theorizing race. Differentiation, organization, and stratification by race across a range of domains. Identity, political and economic participation, group solidarity. Prerequisite: Sociology doctoral student or consent of instructor.

SOC 350W. Workshop: Migration, Race, Ethnicity and Nation. 1-3 Unit.

Current theories and research, recent publications, and presentations of ongoing research by faculty and students. May be repeated for credit. Prerequisite: consent of instructor.

SOC 353X. Inequality, Society, and Education. 3-5 Units.

The course will focus on developing students' understanding of theory and research on several key issues in the relationship between education and inequality: 1) what are the recent patterns and trends in both economic and educational inequality? 2) what kinds of inequality (from a normative/philosophical perspective) should we worry about? 3) how do we measure educational inequality? 4) how are economic and educational inequality linked? 5) what policies/practices might reduce educational inequality? The course will be a graduate student seminar, with enrollment capped at 20-25. Same as: EDUC 253X.

SOC 357. Immigration and Assimilation. 3-5 Units.

Major theoretical debates and empirical applications in the study of immigrant assimilation. Topics include racial and ethnic identity, socioeconomic integration, political participation, and national identity. Companion to SOC 358.

SOC 358. Sociology of Immigration. 1-5 Unit.

Topics include: the process of migration; historical perspectives; immigrant integration; transnationalism; immigration policy; labor; nations and nationalism.

SOC 359. Organizations and Uncertainty. 3-5 Units.

Organizations and environments characterized by institutional uncertainty. Beliefs at the roots of shared routines and institutional myths are absent. Institutionalists and neo-institutionalists, organizations facing uncertain institutional environments.

SOC 361. Social Psychology of Organizations. 3 Units.

Seminar. Social psychological theories and research relevant to organizational behavior. Current research topics; theories in micro-organizational behavior. Topics include models of attribution, choice and decision making, intergroup behavior, stereotyping, and social influence. Prerequisites: Ph.D student; graduate-level social psychology course.

SOC 362. Organization and Environment. 3 Units.

This seminar considers the leading sociological approaches to analyzing relations of organizations and environments, with a special emphasis on dynamics. Attention is given to theoretical formulations, research designs, and results of empirical studies. Prerequisite: Enrollment in a PhD program.

SOC 363A. Seminar on Organizational Theory. 5 Units.

The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field. Same as: EDUC 375A, MS&E 389.

SOC 363B. Seminar on Organizations: Institutional Analysis. 3-5 Units.

Seminar. Key lines of inquiry on organizational change, emphasizing network, institutional, and evolutionary arguments. Same as: EDUC 375B.

SOC 366. Organizational Analysis. 4-5 Units.

Principles of organizational behavior and analysis; theories of group and individual behavior; organizational culture; and applications to school organization and design. Case studies. Same as: EDUC 288.

SOC 366A. Organizational Ecology. 4 Units.

This seminar examines theoretical and methodological issues in the study of the ecology of organizations. Particular attention is given to the dynamics that characterize the interface between organizational populations and their audiences. Same as: OB 601.

SOC 367. Institutional Analysis of Organizations. 3-5 Units.

Reading and research on the nature, origins, and effects of the modern institutional system. Emphasis is on the effects of institutional systems on organizational structure.

SOC 368W. Workshop: China Social Science. 1 Unit.

For Ph.D. students in the social sciences and history. Research on contemporary society and politics in the People's Republic of China. May be repeated for credit. Prerequisite: consent of instructor. Same as: POLISCI 448R.

SOC 370A. Sociological Theory: Social Structure, Inequality, and Conflict. 5 Units.

Restricted to Sociology doctoral students. The traditions of structural analysis derived from the work of Marx, Weber, and related thinkers. Antecedent ideas in foundational works are traced through contemporary theory and research on political conflict, social stratification, formal organization, and the economy. Priority is given to first year Sociology students.

SOC 370B. Social Interaction and Group Process. 3-5 Units.

Theoretical strategies for the study of interaction, group, and network processes, including rational choice and exchange theory, the theory of action, symbolic interactionism, formal sociology, and social phenomenology. Antecedent ideas in foundational works and contemporary programs of theoretical research.

SOC 372. Theoretical Analysis and Design. 3-5 Units.

Theoretical analysis and the logical elements of design, including the systematic analysis of the logical structure of arguments, the relationship of arguments to more encompassing theoretical or metatheoretical assumptions, the derivation of logical implications from arguments, assessments of theoretically significant problems or gaps in knowledge.

SOC 374. Philanthropy and Civil Society. 1-3 Unit.

Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units.

Same as: EDUC 374, POLISCI 334.

SOC 376. Perspectives on Organization and Environment: Social Movement Organizations and Environments. 3 Units.

This course examines the interaction between organizations and their environments. It is given every year by a different faculty member. What follows is the description of the course for the academic year 2012-13: This research seminar explores recent theory and research on social movement organizations and their environments. We'll consider the way in which organizational theories help us to explain social movement phenomena, and the way in which social movement theories help us to explain organizational phenomena.

SOC 377. Comparing Institutional Forms: Public, Private, and Nonprofit. 4 Units.

For students interested in the nonprofit sector, those in the joint Business and Education program, and for Public Policy MA students. The focus is on the missions, functions, and capabilities of nonprofit, public, and private organizations, and the managerial challenges inherent in the different sectors. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials. Same as: EDUC 377, GSBGEN 346, PUBLPOL 317.

SOC 378. Seminar on Institutional Theory and World Society. 1-5 Unit.

Sociological analyses of the rise and impact of the expanded modern world order, with its internationalized organizations and globalized discourse. Consequences for national and local society: education, political organization, economic structure, the environment, and science. The centrality of the individual and the rationalized organization as legitimated actors.

SOC 380. Qualitative Methods. 3-5 Units.

Priority to Sociology doctoral students. Emphasis is on observational and interview-based research. Limited enrollment.

SOC 381. Sociological Methodology I: Introduction. 5 Units.

Enrollment limited to first-year Sociology doctoral students. Basic math and statistics. Types of variables, how to recode and transform variables, and how to manage different types of data sets. How to use and think about weights. Introduction to statistical packages and programming. Introduction to multiple regression, and introduction to the interpretation of regression results.

SOC 382. Sociological Methodology II: Principles of Regression Analysis. 4-5 Units.

Preference to Sociology doctoral students. Required for Ph.D. in Sociology. Enrollment limited to first-year Sociology doctoral students. Rigorous treatment of linear regression models, model assumptions, and various remedies for when these assumptions are violated. Introduction to panel data analysis. Enrollment limited to 15. Prerequisites: 381.

SOC 383. Sociological Methodology III: Models for Discrete Outcomes. 5 Units.

Required for Ph.D. in Sociology; enrollment limited to first-year Sociology doctoral students. The rationale for and interpretation of static and dynamic models for the analysis of discrete variables. Prerequisites: 381 and 382, or equivalents.

SOC 384. New Models and Methods in the Social Sciences. 2-5 Units.

Two-week intensive introduction to new statistical approaches. Emphasis is on applications. Topics may include network models, multilevel models, latent class models, mixed methods, new qualitative methods, growth models, geostatistical tools, survey-based experiments, new methods for estimating causal effects, web-based surveys, advanced discrete choice models, and diffusion models.

SOC 385A. Research Practicum 1. 1-2 Unit.

Workshop on research methods for third year Sociology doctoral students. Ongoing student research, methodological problems, and possible solutions. Required for third year paper.

SOC 385B. Research Practicum II. 1 Unit.

Continuation of 385A. Workshop on research methods for second year Sociology doctoral students. Ongoing student research, methodological problems, and possible solutions. Required for second year paper.

SOC 388. Log-Linear Models. 3-5 Units.

Analysis of categorical data with log-linear and negative binomial models. Measures of fit and hypothesis testing.

SOC 389. Mixed Method Research Design and Analysis. 3-5 Units.

Research designs that incorporate qualitative and quantitative analyses in a single project. The tension between thinking case-wise and variable-wise; how the focus on relationships between variables that is the hallmark of the quantitative approach can be brought into qualitative work.

SOC 390. Graduate Individual Study. 1-5 Unit.

May be repeated for credit.

SOC 391. Graduate Directed Research. 1-5 Unit.

May be repeated for credit.

SOC 392. Research Apprenticeship. 1-5 Unit.

May be repeated for credit.

SOC 393. Teaching Apprenticeship. 1-15 Unit.**SOC 635. Social Movements and Organizations. 4 Units.**

This research seminar is intended for students seeking to learn more about how collective action underpins institutional change in organizations and industries, and how the success of collective action, in turn, hinges on organizational structures and processes to recruit and mobilize individuals. The purpose of this course is to provide you a roadmap for you to roam the terrain of movements and organizations, and be prepared to generate original research ideas that extend inquiry in your chosen area of research.

SOC 670. Designing Social Research. 4 Units.

This is a course in the design of social research, with a particular emphasis on research field (i.e., non-laboratory) settings. As such, the course is a forum for discussing and developing an understanding of the different strategies social theorists employ to explain social processes, develop theories, and make these theories as believable as possible. In general, these issues will be discussed in the context of sociological research on organizations, but this will not be the exclusive focus of the course. A range of topics will be covered, for example: formulating and motivating research questions; varieties of explanation; experimental and quasi-experimental methods, including natural experiments; counterfactual models; conceptualization and measurement; sampling and case selection; qualitative and quantitative approaches. This course is particularly oriented toward developing an appreciation of the tradeoffs of different approaches. It is well suited to Ph.D. students working on qualifying papers and dissertation proposals.

SOC 802. TGR Dissertation. 0 Units.

Spanish Language Courses

SPANLANG 1. First-Year Spanish, First Quarter. 5 Units.

Emphasis is on developing socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Influences shaping the production of oral and written texts in the Spanish- and English-speaking world.

SPANLANG 1A. Accelerated First-Year Spanish, Part 1. 5 Units.

Completes first-year sequence in two rather than three quarters. For students with previous knowledge of Spanish, or those with a strong background in another Romance language. SPANLANG 2A fulfills the University Foreign Language Requirement. Prerequisite: Placement Test.

SPANLANG 1G. Accelerated First-Year Business Spanish, Part 1. 4 Units.

For GSB students only. Limited enrollment.

SPANLANG 2. First-Year Spanish, Second Quarter. 5 Units.

Continuation of SPANLANG 1. Emphasis is on developing socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Prerequisite: Placement Test or SPANLANG 1.

SPANLANG 2A. Accelerated First-Year Spanish, Part 2. 5 Units.

Continuation of SPANLANG 1A. Completes first-year sequence in two rather than three quarters. For students with previous knowledge of Spanish, or those with a strong background in another Romance language. Prerequisite: Placement Test or SPANLANG 1A. Fulfills the University language requirement.

SPANLANG 2G. Accelerated First-Year Business Spanish, Part 2. 4 Units.

Continuation of 1G. For GSB students only. Limited enrollment.

SPANLANG 3. First-Year Spanish, Third Quarter. 5 Units.

Continuation of SPANLANG 2. Emphasis is on developing socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Prerequisite: Placement Test or SPANLANG 2. Fulfills the University Foreign Language Requirement.

SPANLANG 3G. Spanish for Business Professionals. 4 Units.

For GSB students only. Limited enrollment.

SPANLANG 5A. Intensive First-Year Spanish, Part A. 5 Units.

Same as SPANLANG 1. Goal is to engage in interactions with Spanish speakers in socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Only Stanford graduate students restricted to 9 units may register for 205A,B,C.

SPANLANG 5B. Intensive First-Year Spanish, Part B. 5 Units.

Same as SPANLANG 2. Continuation of 5A. Goal is to engage in interactions with Spanish speakers in socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Prerequisite 1 or 5A.

SPANLANG 5C. Intensive First-Year Spanish, Part C. 5 Units.

Same as SPANLANG 3. Continuation of 5B. Continuation of 5A. Goal is to engage in interactions with Spanish speakers in socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Prerequisite 2 or 5B. Fulfills the University Foreign Language Requirement.

SPANLANG 10. Beginning Oral Communication. 2 Units.

Additional pronunciation, vocabulary, and speaking skills. May be repeated once for credit. Prerequisite: one quarter of Spanish, demonstrated oral proficiency above the novice level; may be taken concurrently with SPANLANG 2, SPANLANG 2A 2A, or SPANLANG 3.

SPANLANG 11C. Second-Year Spanish: Cultural Emphasis, First Quarter. 4-5 Units.

Continuation of SPANLANG 3 or SPANLANG 2A. Sequence integrating culture and language, with emphasis on developing advanced proficiency in oral and written discourse. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic, and professional contexts. `C` content focuses on societal and cultural components of the Spanish-speaking world. Prerequisite: Placement Test, SPANLANG 3 or SPANLANG 2A.

SPANLANG 11R. Second-Year Spanish: Emphasis on International Relations, First Quarter. 4-5 Units.

Continuation of SPANLANG 3 or SPANLANG 2A. Sequence integrating geopolitics and language, with emphasis on developing advanced proficiency in oral and written discourse. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic, and professional contexts. `R` content focuses on international relations and socioeconomics of the Spanish-speaking world. Prerequisite: Placement Test, SPANLANG 2A or SPANLANG 3.

SPANLANG 12C. Second-Year Spanish: Cultural Emphasis, Second Quarter. 4-5 Units.

Continuation of SPANLANG 11C. Sequence integrating culture and language, with emphasis on developing advanced proficiency in oral and written discourse. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic, and professional contexts. `C` content focuses on societal and cultural components of the Spanish-speaking world. Prerequisite: Placement Test, SPANLANG 11C or 11R.

SPANLANG 12R. Second-Year Spanish: Emphasis on International Relations, Second Quarter. 4-5 Units.

Continuation of SPANLANG 11R. Sequence integrating geopolitics and language, with emphasis on developing advanced proficiency in oral and written discourse. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic, and professional contexts. `R` content focuses on international relations and socioeconomics of the Spanish-speaking world. Prerequisite: Placement Test, SPANLANG 11R or 11C.

SPANLANG 13C. Second-Year Spanish: Cultural Emphasis, Third Quarter. 4-5 Units.

Continuation of SPANLANG 12C. Sequence integrating culture and language, with emphasis on developing advanced proficiency in oral and written discourse. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic, and professional contexts. `C` content focuses on societal and cultural components of the Spanish-speaking world. Prerequisite: Placement Test, SPANLANG 12C or 12R. Fulfills the IR major Language Requirement.

SPANLANG 13R. Second-Year Spanish: Emphasis on International Relations, Third Quarter. 4-5 Units.

Continuation of SPANLANG 12R. Sequence integrating geopolitics and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language, international relations, and socioeconomics of the Spanish-speaking world. Prerequisite: SPANLANG 12R. Fulfills the IR major Language Requirement.

SPANLANG 15. Intermediate Oral Communication. 3 Units.

Emphasis is on interaction in Spanish locally and globally. Regional vocabularies and cultures at home and abroad. Interaction with local native Spanish speakers and communities globally via the Internet. May be repeated once for credit. Prerequisite: SPANLANG 2A, SPANLANG 3 and demonstrated oral proficiency above the low intermediate level.

SPANLANG 15S. Intermediate Oral Communication. 3 Units.

Emphasis is on interaction in Spanish locally and globally. Regional vocabularies and cultures at home and abroad. Interaction with local native Spanish speakers and communities globally via the Internet. May be repeated once for credit. Prerequisite: first-year Spanish and demonstrated oral proficiency above the low intermediate level.

SPANLANG 21B. Second-Year Spanish for Heritage Language Students, First Quarter. 3-5 Units.

Emphasis is on ability to communicate orally and in writing. Spelling and the written accent. Goal is to understand, interpret, and analyze texts, movies, radio, and television. Written language skills include rules for editing written language. Third quarter focus is on the development of written and oral styles and registers used in more formal settings. Prerequisite: Placement Test.

SPANLANG 22B. Second-Year Spanish for Heritage Language Students, Second Quarter. 3-5 Units.

Continuation of SPANLANG 21B. Emphasis is on ability to communicate orally and in writing. Spelling and the written accent. Goal is to understand, interpret, and analyze texts, movies, radio, and television. Written language skills include rules for editing written language. Prerequisite: Placement Test, SPANLANG or 21B.

SPANLANG 23B. Second-Year Spanish for Heritage Language Students, Third Quarter. 3-5 Units.

Continuation of SPANLANG 22B. Emphasis is on ability to communicate orally and in writing. Spelling and the written accent. Goal is to understand, interpret, and analyze texts, movies, radio, and television. Written language skills include rules for editing written language. Third quarter Focus is on the development of written and oral styles and registers used in more formal settings. Prerequisite: Placement Test or SPANLANG 22B.

SPANLANG 25A. Intensive Second-Year Spanish, Part A. 4 Units.

Same as SPANLANG 11. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: one year of college Spanish or equivalent.

SPANLANG 25B. Intensive Second-Year Spanish, Part B. 4 Units.

Same as SPANLANG 12. Continuation of 25A. Prerequisite: 25A or equivalent.

SPANLANG 25C. Intensive Second-Year Spanish, Part C. 4 Units.

Same as SPANLANG 13. Continuation of 25B. Prerequisite: 25B or equivalent.

SPANLANG 99. Language Specials. 1-5 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

SPANLANG 100. Advanced Oral Communication. 3 Units.

For students who have completed second-year Spanish or who have oral skills above the intermediate level. Interactive activities require students to persuade, analyze, support opinions, and gather and interpret others' points of view. Focus is on vocabulary enrichment and idiomatic expressions. Cultural, literary, political, and journalistic readings. May be repeated once for credit. Prerequisite: SPANLANG 13 or equivalent.

SPANLANG 101. The Structure of Spanish. 5 Units.

Criteria and skills to analyze Spanish grammatical structure. Identification of word functions in sentences and texts, types of sentences, and terminology. Structure of nouns, adjectives, and verbs, and their relationship with meaning. The differences between Spanish grammar as a formal system and in everyday life. Prerequisite: SPANLANG 13C, SPANLANG 13R or SPANLANG 23B.

SPANLANG 102. Composition and Writing Workshop. 3-5 Units.

Individual development of the ability to write in Spanish. Emphasis is on style and diction, and on preparing and writing essays on literary topics. Non-Spanish majors or minors may choose topics more closely related to their studies for projects. Prerequisite: two years of college Spanish or equivalent. WIM.

SPANLANG 102B. Composition and Writing Workshop for Heritage Language Students. 3-5 Units.

For students with a good understanding of written accents, spelling, and syntax. Focus is on the craft of writing with emphasis on brainstorming, planning, outlining, drafting, revising, style, diction, and editing. Writing essays on literary topics. Non-Spanish majors or minors may choose topics related to their studies. Prerequisite: 23B or equivalent.

SPANLANG 121M. Spanish for Medical Students. 3 Units.

First quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on taking the medical history. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Offered to undergraduates for 3 units(2 units for medical students). Same as: HRP 280.

SPANLANG 122M. Spanish for Medical Students. 2 Units.

Second quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on performing a physical examination. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Offered to undergraduates for 3 units(2 units for medical students). Same as: HRP 281.

SPANLANG 123M. Spanish for Medical Students. 2-3 Units.

Third quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on different specialties and medical conditions. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Offered to undergraduates for 3 units(2 units for medical students). Same as: HRP 282.

SPANLANG 131M. Spanish for Heritage and Foreign Language Pre-Med and Public Health Students. 3-4 Units.

For pre-med or public health students who grew up in homes where Spanish is spoken or for students who possess a considerable command of Spanish. Focus is on developing the ability to provide information on health-related topics to Spanish speakers in the U.S. Students participate in the organization and delivery of information on preventive health care in a workshop setting to a Spanish-speaking community.

SPANLANG 199. Individual Reading. 1-5 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

SPANLANG 205A. Intensive First-Year Spanish for Stanford Grads, Part A. 3-5 Units.

Equivalent to SPANLANG 1. For Stanford graduate students only. Goal is to engage in interactions with Spanish speakers using socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units.

SPANLANG 205B. Intensive First-Year Spanish for Stanford Grads, Part B. 3-5 Units.

Equivalent to SPANLANG 2. Continuation of 205A. For Stanford graduate students only. Goal is to engage in interactions with Spanish speakers using socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units. Prerequisite 205A or equivalent.

SPANLANG 205C. Intensive First-Year Spanish for Stanford Grads, Part C. 3-5 Units.

Equivalent to SPANLANG 3. Continuation of 205B. For Stanford graduate students only. Goal is to engage in interactions with Spanish speakers using socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units. Prerequisite 205B or equivalent.

SPANLANG 225A. Intensive Second-Year Spanish for Stanford Grads, Part A. 3-4 Units.

Same as SPANLANG 11. For Stanford Graduate students restricted to 9 units. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: one year of college Spanish or equivalent.

SPANLANG 225B. Intensive Second-Year Spanish for Stanford Grads, Part B. 3-4 Units.

Same as SPANLANG 12. Continuation of 225A. For Stanford Graduate students restricted to 9 units. Prerequisite 225A or equivalent.

SPANLANG 225C. Intensive Second-Year Spanish for Stanford Grads, Part C. 3-4 Units.

Same as SPANLANG 13. Continuation of 225B. For Stanford Graduate students restricted to 9 units. Prerequisite 225B or equivalent.

SPANLANG 250. Reading Spanish. 3 Units.

Reading Spanish - For students who have already taken Spanish for at least one year or have superior reading proficiency in another Romance language. Emphasis is on academic texts. Fulfills University reading requirements for advanced degrees if students earn a grade of 'B'.

SPANLANG 394. Graduate Studies in Spanish Conversation. 1-3 Unit.

Prerequisite: consent of instructor.

SPANLANG 395. Graduate Studies in Spanish. 2-5 Units.

Prerequisite: consent of instructor.

Special Language Program Courses

SPECLANG 75. Greek Culture, Ideals, and Themes. 3 Units.

Introduction to Greek culture and its global influence in a social historical context, through images from its past and institutions in contemporary Greek society. Limited enrollment.

SPECLANG 99. Language Specials. 2-5 Units.

Prerequisite: Consent of instructor.

SPECLANG 106A. Third-Year Albanian, First Quarter. 3 Units.

Continuation of SPECLANG 105C. Prerequisite: SPECLANG 105C.

SPECLANG 106B. Third-Year Albanian, Second Quarter. 3 Units.

Continuation of SPECLANG 106A. Prerequisite: SPECLANG 106A.

SPECLANG 109A. First-Year Bengali- First Quarter. 4 Units.

Grammatical structures, vocabulary and sentence patterns through speaking, reading, writing and listening. Bengali Culture.

SPECLANG 109B. First-Year Bengali-2nd qtr. 4 Units.

Grammatical structures, vocabulary and sentence patterns through speaking, reading, writing and listening. Bengali Culture- Prerequisite- 109A.

SPECLANG 109C. First-Year Bengali - Third Quarter. 4 Units.

Grammatical structures, vocabulary and sentence patterns through speaking, reading, writing and listening. Bengali Culture -Prerequisite 109B.

SPECLANG 129A. First-Year Ukrainian, First Quarter. 3 Units.

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Ukrainian culture.

SPECLANG 129C. First-Year Ukrainian, Third Quarter. 3 Units.

Continuation of SPECLANG 129B. Prerequisite: SPECLANG 129B.

SPECLANG 138A. First-Year Navajo, First Quarter. 4 Units.

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Navajo culture.

SPECLANG 138B. First-Year Navajo, Second Quarter. 4 Units.

Continuation of SPECLANG 138A. Prerequisite: SPECLANG 138A.

SPECLANG 138C. First-Year Navajo, Third Quarter. 4 Units.

Continuation of SPECLANG 138B. Prerequisite: SPECLANG 138B. Fulfills the University Foreign Language Requirement.

SPECLANG 144A. First-Year Tagalog, First Quarter. 5 Units.

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Tagalog culture.

SPECLANG 144B. First-Year Tagalog, Second Quarter. 5 Units.

Continuation of SPECLANG 144A. Prerequisite: SPECLANG 144A.

SPECLANG 144C. First-Year Tagalog, Third Quarter. 5 Units.

Continuation of SPECLANG 144B. Prerequisite: SPECLANG 144B. Fulfills the University Foreign Language Requirement.

SPECLANG 145A. Second-Year Tagalog, First Quarter. 4 Units.

Continuation of SPECLANG 144C. Prerequisite: SPECLANG 144C.

SPECLANG 145B. Second-Year Tagalog, Second Quarter. 4 Units.

Continuation of SPECLANG 145A. Prerequisite: SPECLANG 145A.

SPECLANG 145C. Second-Year Tagalog, Third Quarter. 4 Units.

Continuation of SPECLANG 145B. Prerequisite: SPECLANG 145B.

SPECLANG 146A. Third-Year Tagalog, First Quarter. 3 Units.

Continuation of SPECLANG 145C. Prerequisite SPECLANG 145C or consent of instructor.

SPECLANG 146B. Third-Year Tagalog, Second Quarter. 3 Units.

Continuation of SPECLANG 145A. Prerequisite: SPECLANG 145A.

SPECLANG 146C. Third-Year Tagalog, Third Quarter. 3 Units.

Continuation of SPECLANG 146B. Prerequisite SPECLANG 146B.

SPECLANG 150A. First-Year Vietnamese, First Quarter. 5 Units.

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Vietnamese culture.

SPECLANG 150B. First-Year Vietnamese, Second Quarter. 5 Units.

Continuation of SPECLANG 150A. Prerequisite: SPECLANG 150A.

SPECLANG 150C. First-Year Vietnamese, Third Quarter. 5 Units.

Continuation of SPECLANG 150B. Prerequisite: SPECLANG 150B. Fulfills the University Foreign Language Requirement.

SPECLANG 151A. Second-Year Vietnamese, First Quarter. 4 Units.

Continuation of SPECLANG 150C. Prerequisite: SPECLANG 150C.

SPECLANG 151B. Second-Year Vietnamese, Second quarter. 4 Units.
Continuation of SPECLANG 151A. Prerequisite: SPECLANG 151A.

SPECLANG 151C. Second-Year Vietnamese, Third Quarter. 4 Units.
Continuation of SPECLANG 151B. Prerequisite: SPECLANG 151B.

SPECLANG 152A. First-Year Hindi, First Quarter. 5 Units.
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Hindi culture.

SPECLANG 152B. First-Year Hindi, Second Quarter. 5 Units.
Continuation of SPECLANG 152A. Prerequisite: SPECLANG 152A.

SPECLANG 152C. First-Year Hindi, Third Quarter. 5 Units.
Continuation of SPECLANG 152B. Prerequisite: SPECLANG 152B.
Fulfills the University language requirement.

SPECLANG 153A. Second-Year Hindi, First Quarter. 4 Units.
Continuation of SPECLANG 152C. Second year sequence requires completion of first year or consent of the instructor. Focus on expanding all language skills, mastering grammar patterns and new vocabulary through authentic readings, writing essays, oral presentations and the use of multimedia-based materials. Focus on cultural proficiency. Prerequisite: SPECLANG 152C.

SPECLANG 153B. Second-Year Hindi, Second Quarter. 4 Units.
Continuation of SPECLANG 153A. Prerequisite: SPECLANG 153A.

SPECLANG 153C. Second-Year Hindi, Third Quarter. 4 Units.
Continuation of SPECLANG 153B. Prerequisite: SPECLANG 153B.

SPECLANG 154A. Third-Year Hindi, First Quarter. 4 Units.
Continuation of SPECLANG 153C. Prerequisite: SPECLANG 153C.

SPECLANG 154B. Third-Year Hindi, Second Quarter. 4 Units.
Continuation of SPECLANG 154A. Prerequisite: SPECLANG 154A.

SPECLANG 154C. Third-Year Hindi, Third Quarter. 4 Units.
Continuation of SPECLANG 154B. Prerequisite: SPECLANG 154B.

SPECLANG 164A. First-Year Czech, First Quarter. 3 Units.
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Czech culture.

SPECLANG 164B. First-Year Czech, Second Quarter. 3 Units.
Continuation of SPECLANG 164A. Prerequisite: SPECLANG 164A.

SPECLANG 164C. First-Year Czech, Third Quarter. 3 Units.
Continuation of SPECLANG 164B. Prerequisite: SPECLANG 164B.

SPECLANG 165A. Second-Year Czech, First Quarter. 3 Units.
Continuation of SPECLANG 164C. Prerequisite: SPECLANG 164C.
Fulfills the University language requirement.

SPECLANG 165C. Second-Year Czech, Third Quarter. 3 Units.
Continuation of SPECLANG 165B. Prerequisite: SPECLANG 165B.

SPECLANG 167A. First-Year Polish, First Quarter. 3 Units.
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Polish culture.

SPECLANG 167B. First-Year Polish, Second Quarter. 3 Units.
Continuation of SPECLANG 167A. Prerequisite: SPECLANG 167A.

SPECLANG 167C. First-Year Polish, Third Quarter. 3 Units.
Continuation of SPECLANG 167B. Prerequisite: SPECLANG 167B.

SPECLANG 168A. Second-Year Polish, First Quarter. 3 Units.
Continuation of SPECLANG 167C. Prerequisite: SPECLANG 167C.
Fulfills the University language requirement.

SPECLANG 168B. Second-Year Polish, Second Quarter. 3 Units.
Continuation of SPECLANG 168A. Prerequisite: SPECLANG 168A.

SPECLANG 168C. Second-Year Polish, Third Quarter. 3 Units.
Continuation of SPECLANG 168B. Prerequisite: SPECLANG 168B.

SPECLANG 169A. Third-Year Polish, First Quarter. 3 Units.
Continuation of SPECLANG 168C. Prerequisite: SPECLANG 168C.

SPECLANG 169B. Third-Year Polish, Second Quarter. 3 Units.
Continuation of SPECLANG 169A. Prerequisite: SPECLANG 169A.

SPECLANG 170A. First-Year Modern Greek, First Quarter. 5 Units.
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Greek culture.

SPECLANG 170B. First-Year Modern Greek, Second Quarter. 5 Units.
Continuation of SPECLANG 170A. Prerequisite: SPECLANG 170A.

SPECLANG 170C. First-Year Modern Greek, Third Quarter. 5 Units.
Continuation of SPECLANG 170B. Emphasis on speaking, reading, writing and listening. Student-centered, interactive approach focuses on mastering the basic grammar structures and basic vocabulary through a multimodal approach. Introduction to the Greek culture. Prerequisite: SPECLANG 170B. Fulfills the University language requirement.

SPECLANG 171A. Second-Year Modern Greek, First Quarter. 4 Units.
Continuation of SPECLANG 170C. Grammar structures and vocabulary through authentic materials. Cultural proficiency. Prerequisite: SPECLANG 170C.

SPECLANG 171B. Second-Year Modern Greek, Second Quarter. 4 Units.
Continuation of SPECLANG 171A. Prerequisite: SPECLANG 171A.

SPECLANG 171C. Second-Year Modern Greek, Third Quarter. 4 Units.
Continuation of SPECLANG 171B. Prerequisite: SPECLANG 171B.

SPECLANG 172A. Modern Greek Language and Culture through Literature and Film, First Quarter. 4 Units.
Accelerated. Vocabulary enrichment through multimedia, online materials.

SPECLANG 172B. Modern Greek Language and Culture through Literature and Film, Second Quarter. 4 Units.
Continuation of 172A.

SPECLANG 172C. Modern Greek Language and Culture through Literature and Film, Third Quarter. 4 Units.
Accelerated. Vocabulary enrichment through multimedia, online materials.

SPECLANG 173A. First-Year Hungarian, First Quarter. 3 Units.
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Hungarian culture.

SPECLANG 173B. First-Year Hungarian, Second Quarter. 3 Units.
Continuation of SPECLANG 173A. Prerequisite: SPECLANG 173A.

SPECLANG 173C. First-Year Hungarian, Third Quarter. 3 Units.
Continuation of SPECLANG 173B. Prerequisite: SPECLANG 173B.

SPECLANG 174A. First-Year Quechua, First Quarter. 3 Units.
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Quechua culture.

SPECLANG 174B. First-Year Quechua, Second Quarter. 3 Units.
Continuation of SPECLANG 174A. Prerequisite: SPECLANG 174A.

SPECLANG 174C. Beginning Quechua - 3rd quarter. 3 Units.

SPECLANG 174C. First-Year Quechua, Third Quarter. 4 Units.
Continuation of SPECLANG 174B. Prerequisite: SPECLANG 174B.

SPECLANG 175A. Second-Year Quechua, First Quarter. 3 Units.
Continuation of SPECLANG 174C. Prerequisite: SPECLANG 174C.
Fulfills the University Foreign Language Requirement.

SPECLANG 175B. Second-Year Quechua, Second Quarter. 4 Units.
Continuation of SPECLANG 175A. Prerequisite: SPECLANG 175A.

SPECLANG 175C. Second-Year Quechua, Third Quarter. 4 Units.
Continuation of SPECLANG 175B. Prerequisite: SPECLANG 175B.

SPECLANG 176A. First-Year Thai, First Quarter. 4 Units.
Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Thai culture.

SPECLANG 176B. First-Year Thai, Second Quarter. 4 Units.

Continuation of SPECLANG 176A. Prerequisite: SPECLANG 176A.

SPECLANG 177A. Second-Year Thai, First Quarter. 3 Units.

Continuation of SPECLANG 176C. Prerequisite: SPECLANG 176 C. Fulfills the University Foreign Language Requirement.

SPECLANG 177B. Second-Year Thai, Second Quarter. 4 Units.

Continuation of SPECLANG 177A. Prerequisite: SPECLANG 177A.

SPECLANG 177C. Second-Year Thai, Third Quarter. 4 Units.

Continuation of SPECLANG 177B. Prerequisite: SPECLANG 177B.

SPECLANG 178A. First-Year Sign Language, First Quarter. 4 Units.

Comprehension and production skills; cultural awareness necessary for communication. Limited enrollment.

SPECLANG 178B. First-Year Sign Language, Second Quarter. 4 Units.

Continuation of SPECLANG 178A. Prerequisite: SPECLANG 178A.

SPECLANG 178C. First-Year Sign Language, Third Quarter. 4 Units.

Continuation of SPECLANG 178B. Prerequisite: SPECLANG 178B. Fulfills the University language requirement.

SPECLANG 179A. Second-Year Sign Language, First Quarter. 4 Units.

Continuation of SPECLANG 178C. Additional functional structures, lexical items, and history. Prerequisite: SPECLANG 178B. Limited enrollment.

SPECLANG 179B. Second-Year Sign Language, Second Quarter. 4 Units.

Continuation of SPECLANG 179A. Prerequisite: SPECLANG 179A. Limited enrollment.

SPECLANG 179C. Second-Year Sign Language, Third Quarter. 4 Units.

Continuation of SPECLANG 179B. Prerequisite: SPECLANG 179B. Limited enrollment.

SPECLANG 182A. Second-Year Hungarian, First Quarter. 3 Units.

Continuation of SPECLANG 173C. Prerequisite: SPECLANG 173C. Fulfills the University Foreign Language Requirement.

SPECLANG 182B. Second-Year Hungarian, Second Quarter. 3 Units.

Continuation of SPECLANG 182A. Prerequisite: SPECLANG 182A.

SPECLANG 182C. Second-Year Hungarian, Third Quarter. 3 Units.

Continuation of SPECLANG 182B. Prerequisite: SPECLANG 182B.

SPECLANG 183A. First-Year Sanskrit, First Quarter. 4 Units.

Sanskrit script and literary readings.

SPECLANG 183B. First-Year Sanskrit, Second Quarter. 4 Units.

Continuation of SPECLANG 183A. Prerequisite: SPECLANG 183A.

SPECLANG 184A. Second-Year Sanskrit, First Quarter. 3 Units.

Continuation of SPECLANG 183C. Prerequisite: SPECLANG 183C. Fulfills the University language requirement.

SPECLANG 184B. Second-Year Sanskrit, Second Quarter. 4 Units.

Continuation of SPECLANG 184A. Prerequisite: SPECLANG 184A.

SPECLANG 184C. Second-Year Sanskrit, Third Quarter. 4 Units.

Continuation of SPECLANG 184B. Prerequisite: SPECLANG 184B.

SPECLANG 186A. First-Year Serbo-Croatian, First Quarter. 3 Units.

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Serb and Croat culture.

SPECLANG 186B. First-Year Serbo-Croatian, Second Quarter. 3 Units.

Continuation of SPECLANG 186A. Prerequisite: SPECLANG 186A.

SPECLANG 189A. First-Year Hawaiian, First Quarter. 4 Units.**SPECLANG 189B. First-Year Beginning Hawaiian, Second Quarter. 4 Units.**

Continuation of SPECLANG 189A. Prerequisite: SPAECLANG 189A.

SPECLANG 189C. First-Year Hawaiian, Third Quarter. 4 Units.

Continuation of SPECLANG 189B. Prerequisite: SPECLANG 189B. Fulfills the University Foreign Language Requirement.

SPECLANG 192A. First-Year Kazakh, First Quarter. 3 Units.

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Kazakh culture.

SPECLANG 192B. First-Year Kazakh, Second Quarter. 3 Units.

Continuation of SPECLANG 192A. Prerequisite: SPECLANG 192A.

SPECLANG 192C. First-Year Kazakh, Third Quarter. 3 Units.

Continuation of SPECLANG 192B. Prerequisite: SPECLANG 192B.

SPECLANG 193A. Second-Year Kazakh, First Quarter. 3 Units.

Continuation of SPECLANG 192C. Prerequisite: SPECLANG 192C. Fulfills the University language requirement.

SPECLANG 193B. Second-Year Kazakh, Second Quarter. 3 Units.

Continuation of SPECLANG 193A. Prerequisite: SPECLANG 193A.

SPECLANG 193C. Second-Year Kazakh, Third Quarter. 3 Units.

Continuation of SPECLANG 193B. Prerequisite: SPECLANG 193B.

SPECLANG 198Q. Modern Greece in Film and Literature. 3-5 Units.

Preference to sophomores. Cultural and literary highlights. Filmmakers include Kakoyannis, Dassen, Boulmetis, Angelopoulos, and Scorsese; readings from Eugenides, Gage, Kavafis, Kazantzakis, Samarakis, Seferis, and Elytis.

SPECLANG 215A. Modern Greek for Heritage Language Learners, First Quarter. 2-4 Units.

For students of Greek background. Sources include authentic texts, multimedia materials, and Greek media.

SPECLANG 215B. Modern Greek for Heritage Language Learners, Second Quarter. 2-4 Units.

Continuation of SPECLANG 215A. Prerequisite: SPECLANG 215A.

SPECLANG 215C. Modern Greek for Heritage Language Learners, Third Quarter. 2-4 Units.

Continuation of SPECLANG 215B. Prerequisite: SPECLANG 215A.

SPECLANG 218A. Beginning Urdu, First Quarter. 4 Units.

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Urdu culture.

SPECLANG 218B. Beginning Urdu, Second Quarter. 4 Units.

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Urdu culture.

SPECLANG 219A. Intermediate Urdu, First Quarter. 4 Units.

SPECLANG 219B. Intermediate Urdu, Second Quarter. 4 Units.
(Staff).

SPECLANG 224A. Third-Year Vietnamese, First Quarter. 4 Units.

Continuation of SPECLANG 151C. Grammar structures and vocabulary through authentic materials. Cultural proficiency. Prerequisite: SPECLANG 151C or consent of instructor.

SPECLANG 224B. Third-Year Vietnamese, Second Quarter. 3 Units.

Continuation of SPECLANG 224A. Prerequisite: SPECLANG 224A or consent of instructor.

SPECLANG 224C. Third-Year Vietnamese, Third Quarter. 3 Units.

Continuation of SPECLANG 224B. Prerequisite: SPECLANG 224B or consent of instructor.

SPECLANG 229A. Beginning Pashto, First Quarter. 4 Units.

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Pashto culture.

SPECLANG 229B. Beginning Pashto, Second Quarter. 4 Units.

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Pashto culture.

SPECLANG 239A. Second-Year Uzbek, First Quarter. 3 Units.
Continuation of SPECLANG 238C. Prerequisite: SPECLANG 228C or consent of instructor. Fulfills the University Foreign Language Requirement.

SPECLANG 239B. Second-Year Uzbek, Second Quarter. 3 Units.
Continuation of SPECLANG 239A. Prerequisite: SPECLANG 239A or consent of instructor.

SPECLANG 239C. Second-Year Uzbek, Third Quarter. 3 Units.
Continuation of SPECLANG 239B. Prerequisite: SPECLANG 239B or consent of instructor.

SPECLANG 240A. Third-Year Uzbek, First quarter. 3 Units.
Continuation of SPECLANG 239C. Prerequisite: SPECLANG 239C or consent of instructor.

SPECLANG 247A. First-Year Lakota, First Quarter. 4 Units.

SPECLANG 247B. First-Year Lakota, Second Quarter. 4 Units.
Continuation of SPECLANG 247A. Prerequisite: SPECLANG 247A or consent of instructor.

SPECLANG 248. Introduction to Siouan Language & Culture II. 5 Units.

Continuation of the Introduction to Siouan Language & Culture I. This course will take a more focused approach on one cultural aspect of Dakota/Nakota/Lakota culture through the analysis of Dakota/Nakota/Lakota words in the lyrics of songs sung in the Sundance as a focus of study in the continuing use of language in the Dakota/Nakota/Lakota culture."

SPECLANG 248A. Second-Year Lakota, First Quarter. 4 Units.

SPECLANG 248B. Second-Year Lakota. 4 Units.
prerequisite- speclang 248A.

SPECLANG 248C. Second-Year, third Quarter. 4 Units.
Prerequisite- must have completed 248B.

SPECLANG 250A. First-Year Romanian, First Quarter. 3 Units.

SPECLANG 250B. First-Year Romanian, Second Quarter. 3 Units.
Continuation of SPECLANG 250A. Prerequisite: SPECLANG 250A or consent of instructor.

SPECLANG 250C. First-Year Romanian, Third Quarter. 3 Units.
Continuation of SPECLANG 250B. Prerequisite: SPECLANG 250B or consent of instructor.

SPECLANG 251A. Second-Year Romanian, First Quarter. 3 Units.
Continuation of SPECLANG 250C. Prerequisite: SPECLANG 250C or consent of instructor. Fulfills the University Foreign Language Requirement.

SPECLANG 251B. Second-Year Romanian, Second Quarter. 3 Units.
Continuation of SPECLANG 251A. Prerequisite: SPECLANG 251A or consent of instructor.

SPECLANG 251C. Second-Year Romanian, Third Quarter. 3 Units.
Continuation of SPECLANG 251B. Prerequisite: SPECLANG 251B or consent of instructor.

SPECLANG 254C. Third-Year Hungarian, Third Quarter. 3 Units.
Continuation of SPECLANG 254B. Prerequisite: SPECLANG 254B or consent of instructor.

SPECLANG 255A. Fourth-Year Albanian, 1st quarter. 3-4 Units.
Continuation of SPECLANG 106C.

SPECLANG 255B. Fourth-Year Albanian, 2nd quarter. 3-4 Units.
Continuation of SPECLANG 255A.

SPECLANG 255C. Fourth-Year Albanian, 3rd Quarter. 3-4 Units.
Continuation of 255B.

SPECLANG 264A. Advanced Czech Conversation, First Quarter. 1-4 Unit.
Repeatable once for credit.

SPECLANG 265A. Third-Year Hungarian, First Quarter. 3 Units.
Continuation of SPECLANG 182C. Prerequisite completion of SPECLANG 182C or consent of instructor.

SPECLANG 265B. Third-Year Hungarian, Second Quarter. 3 Units.
Continuation of SPECLANG 265A. Prerequisite completion of SPECLANG 265A or consent of instructor.

SPECLANG 265C. Third-Year Hungarian, Third Quarter. 3 Units.
Continuation of SPECLANG 265B. Prerequisite completion of SPECLANG 265B or consent of instructor.

SPECLANG 297. Directed Reading. 1-5 Unit.
Prerequisite: consent of instructor.

SPECLANG 395. Graduate Studies in Special Language. 1-5 Unit.
Prerequisite: consent of instructor.

Stanford in Washington Courses

SIW 101. Policymaking in the Washington Community. 5 Units.

SIW 102. Promoting Democracy. 5 Units.

SIW 103. Economic Growth and Development Patterns, Policies, and Prospects. 5 Units.

SIW 104. Congressional Oversight and the Press. 5 Units.

SIW 105. Education Policy. 5 Units.

SIW 106. Criminal Justice Policy. 5 Units.

SIW 107. Civil Rights Law. 5 Units.

SIW 108. Urban Policy. 5 Units.

SIW 109. Trans-Atlantic Relations. 5 Units.

SIW 110. U.S. Foreign Policy. 3 Units.

SIW 111. Composing a Life in Public Service. 3 Units.

SIW 198V. Women and Children's Health. 5 Units.

SIW 198W. Environmental Education. 5 Units.

SIW 198X. International Environmental Policy. 5 Units.

SIW 198Y. Health Policy. 5 Units.

SIW 198Z. International Economic Policy. 5 Units.

SIW 201A. CSRE Public Policy Seminar. 3-5 Units.

SIW 201B. CSRE Public Policy Seminar. 3-5 Units.

Statistics Courses

STATS 42Q. Undergraduate Admissions to Selective Universities - a Statistical Perspective. 2 Units.

The goal is the building of a statistical model, based on applicant data, for predicting admission to selective universities. The model will consider factors such as gender, ethnicity, legacy status, public-private schooling, test scores, effects of early action, and athletics. Common misconceptions and statistical pitfalls are investigated. The applicant data are not those associated with any specific university.

STATS 48N. Riding the Data Wave. 3 Units.

Imagine collecting a bit of your saliva and sending it in to one of the personalized genomics company: for very little money you will get back information about hundreds of thousands of variable sites in your genome. Records of exposure to a variety of chemicals in the areas you have lived are only a few clicks away on the web; as are thousands of studies and informal reports on the effects of different diets, to which you can compare your own. What does this all mean for you? Never before in history humans have recorded so much information about themselves and the world that surrounds them. Nor has this data been so readily available to the lay person. Expression as "data deluge" are used to describe such wealth as well as the loss of proper bearings that it often generates. How to summarize all this information in a useful way? How to boil down millions of numbers to just a meaningful few? How to convey the gist of the story in a picture without misleading oversimplifications? To answer these questions we need to consider the use of the data, appreciate the diversity that they represent, and understand how people instinctively interpret numbers and pictures. During each week, we will consider a different data set to be summarized with a different goal. We will review analysis of similar problems carried out in the past and explore if and how the same tools can be useful today. We will pay attention to contemporary media (newspapers, blogs, etc.) to identify settings similar to the ones we are examining and critique the displays and summaries there documented. Taking an experimental approach, we will evaluate the effectiveness of different data summaries in conveying the desired information by testing them on subsets of the enrolled students.

STATS 60. Introduction to Statistical Methods: Precalculus. 5 Units.

Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages.

Same as: PSYCH 10, STATS 160.

STATS 90. Mathematics and Statistics in the Real World. 3 Units.

This is an introductory quantitative literacy course, that offers an introduction to the mathematics (outside of calculus) used in real-world problems. Topics include: (a) Exponential functions, compound interest, population growth. (b) Geometric series, applications to mortgage payments, amortization of loans, present value of money, drug doses and blood levels. (c) First-order approximation, estimating areas and volumes. (d) Basic probability: Bayes's rule, false positives in disease detection and drug testing. (e) Basic descriptive statistics: mean, median, standard deviation f) Least squares and linear regression.

Same as: MATH 16.

STATS 110. Statistical Methods in Engineering and the Physical Sciences. 4-5 Units.

Introduction to statistics for engineers and physical scientists. Topics: descriptive statistics, probability, interval estimation, tests of hypotheses, nonparametric methods, linear regression, analysis of variance, elementary experimental design. Prerequisite: one year of calculus.

STATS 116. Theory of Probability. 3-5 Units.

Probability spaces as models for phenomena with statistical regularity. Discrete spaces (binomial, hypergeometric, Poisson). Continuous spaces (normal, exponential) and densities. Random variables, expectation, independence, conditional probability. Introduction to the laws of large numbers and central limit theorem. Prerequisites: MATH 52 and familiarity with infinite series, or equivalent.

STATS 141. Biostatistics. 3-5 Units.

Introductory statistical methods for biological data: describing data (numerical and graphical summaries); introduction to probability; and statistical inference (hypothesis tests and confidence intervals). Intermediate statistical methods: comparing groups (analysis of variance); analyzing associations (linear and logistic regression); and methods for categorical data (contingency tables and odds ratio). Course content integrated with statistical computing in R.

Same as: BIO 141.

STATS 155. Statistical Methods in Computational Genetics. 3 Units.

The computational methods necessary for the construction and evaluation of sequence alignments and phylogenies built from molecular data and genetic data such as micro-arrays and data base searches. How to formulate biological problems in an algorithmic decomposed form, and building blocks common to many problems such as Markovian models, multivariate analyses. Some software covered in labs (Python, Biopython, XGobi, MrBayes, HMMER, Probe). Prerequisites: knowledge of probability equivalent to STATS 116, STATS 202 and one class in computing at the CS 106 level. (WIM).

STATS 160. Introduction to Statistical Methods: Precalculus. 5 Units.

Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages.

Same as: PSYCH 10, STATS 60.

STATS 167. Probability: Ten Great Ideas About Chance. 4 Units.

Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116.

Same as: PHIL 166, PHIL 266, STATS 267.

STATS 191. Introduction to Applied Statistics. 3-4 Units.

Statistical tools for modern data analysis. Topics include regression and prediction, elements of the analysis of variance, bootstrap, and cross-validation. Emphasis is on conceptual rather than theoretical understanding. Applications to social/biological sciences. Student assignments/projects require use of the software package R. Recommended: 60, 110, or 141.

STATS 195. Introduction to R. 1 Unit.

This short course runs for the first four weeks of the quarter and is offered in the fall. It is recommended for students who want to use R in statistics, science, or engineering courses and for students who want to learn the basics of R programming. The goal of the short course is to familiarize students with R's tools for scientific computing. Lectures will be interactive with a focus on learning by example, and assignments will be application-driven. No prior programming experience is needed. Topics covered include basic data structures, File I/O, graphs, control structures, etc., and some useful packages in R.

Same as: CME 195.

STATS 198. Practical Training. 1-3 Unit.

For students majoring in Mathematical and Computational Science only. Students obtain employment in a relevant industrial or research activity to enhance their professional experience.

STATS 199. Independent Study. 1-15 Unit.

For undergraduates.

STATS 200. Introduction to Statistical Inference. 3 Units.

Modern statistical concepts and procedures derived from a mathematical framework. Statistical inference, decision theory; point and interval estimation, tests of hypotheses; Neyman-Pearson theory. Bayesian analysis; maximum likelihood, large sample theory. Prerequisite: 116.

STATS 201. Design and Analysis of Experiments. 3-5 Units.

Theory and applications. Factors that affect response. Optimum levels of parameters. How to balance theory and practical design techniques. Prerequisites: basic statistics and probability theory.

STATS 202. Data Mining and Analysis. 3 Units.

Data mining is used to discover patterns and relationships in data. Emphasis is on large complex data sets such as those in very large databases or through web mining. Topics: decision trees, association rules, clustering, case based methods, and data visualization.

STATS 203. Introduction to Regression Models and Analysis of Variance. 3 Units.

Modeling and interpretation of observational and experimental data using linear and nonlinear regression methods. Model building and selection methods. Multivariable analysis. Fixed and random effects models. Experimental design. Pre- or corequisite: 200.

STATS 205. Introduction to Nonparametric Statistics. 3 Units.

Nonparametric analogs of the one- and two-sample *t*-tests and analysis of variance; the sign test, median test, Wilcoxon's tests, and the Kruskal-Wallis and Friedman tests, tests of independence. Nonparametric regression and nonparametric density estimation, modern nonparametric techniques, nonparametric confidence interval estimates.

STATS 206. Applied Multivariate Analysis. 3 Units.

Introduction to the statistical analysis of several quantitative measurements on each observational unit. Emphasis is on concepts, computer-intensive methods. Examples from economics, education, geology, psychology. Topics: multiple regression, multivariate analysis of variance, principal components, factor analysis, canonical correlations, multidimensional scaling, clustering. Pre- or corequisite: 200.

STATS 207. Introduction to Time Series Analysis. 3 Units.

Time series models used in economics and engineering. Trend fitting, autoregressive and moving average models and spectral analysis, Kalman filtering, and state-space models. Seasonality, transformations, and introduction to financial time series. Prerequisite: basic course in Statistics at the level of 200.

STATS 208. Introduction to the Bootstrap. 3 Units.

The bootstrap is a computer-based method for assigning measures of accuracy to statistical estimates. By substituting computation in place of mathematical formulas, it permits the statistical analysis of complicated estimators. Topics: nonparametric assessment of standard errors, biases, and confidence intervals; related resampling methods including the jackknife, cross-validation, and permutation tests. Theory and applications. Prerequisite: course in statistics or probability.

STATS 209. Statistical Methods for Group Comparisons and Causal Inference. 3 Units.

Critical examination of statistical methods in social science applications, especially for cause and effect determinations. Topics: path analysis, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, longitudinal data, mediating and moderating variables. See <http://www-stat.stanford.edu/~rag/stat209>. Prerequisite: intermediate-level statistical methods
Same as: EDUC 260X, HRP 239.

STATS 211. Meta-research: Appraising Research Findings, Bias, and Meta-analysis. 3 Units.

Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics.

Same as: HRP 206, MED 206.

STATS 212. Applied Statistics with SAS. 3 Units.

Data analysis and implementation of statistical tools in SAS. Topics: reading in and describing data, categorical data, dates and longitudinal data, correlation and regression, nonparametric comparisons, ANOVA, multiple regression, multivariate data analysis, using arrays and macros in SAS. Prerequisite: statistical techniques at the level of STATS 191 or 203; knowledge of SAS not required.

STATS 213. Introduction to Graphical Models. 3 Units.

Multivariate Normal Distribution and Inference, Wishart distributions, graph theory, probabilistic Markov models, pairwise and global Markov property, decomposable graph, Markov equivalence, MLE for DAG models and undirected graphical models, Bayesian inference for DAG models and undirected graphical models. Prerequisites: STATS 116 (preferably STATS 217), STATS 200 (preferably STATS 300A), MATH 104 or equivalent class in linear algebra.

Same as: STATS 313.

STATS 216. Introduction to Statistical Learning. 3 Units.

Overview of supervised learning, with a focus on regression and classification methods. Syllabus includes: linear and polynomial regression, logistic regression and linear discriminant analysis; cross-validation and the bootstrap, model selection and regularization methods (ridge and lasso); nonlinear models, splines and generalized additive models; tree-based methods, random forests and boosting; support-vector machines; Some unsupervised learning: principal components and clustering (k-means and hierarchical). Computing is done in R, through tutorial sessions and homework assignments. This math-light course is offered via video segments (MOOC style), and in-class problem solving sessions. Prerequisites: first courses in statistics, linear algebra, and computing.

STATS 217. Introduction to Stochastic Processes. 3 Units.

Discrete and continuous time Markov chains, poisson processes, random walks, branching processes, first passage times, recurrence and transience, stationary distributions. Non-Statistics masters students may want to consider taking STATS 215 instead. Prerequisite: STATS 116 or consent of instructor.

STATS 218. Introduction to Stochastic Processes. 3 Units.

Renewal theory, Brownian motion, Gaussian processes, second order processes, martingales.

STATS 219. Stochastic Processes. 3 Units.

Introduction to measure theory, L_p spaces and Hilbert spaces. Random variables, expectation, conditional expectation, conditional distribution. Uniform integrability, almost sure and L_p convergence. Stochastic processes: definition, stationarity, sample path continuity. Examples: random walk, Markov chains, Gaussian processes, Poisson processes, Martingales. Construction and basic properties of Brownian motion. Prerequisite: STATS 116 or MATH 151 or equivalent. Recommended: MATH 115 or equivalent.

Same as: MATH 136.

STATS 221. Introduction to Mathematical Finance. 3-4 Units.

Interest rate and discounted value. Financial derivatives, hedging, and risk management. Stochastic models of financial markets, introduction to Ito calculus and stochastic differential equations. Black-Scholes pricing of European options. Optimal stopping and American options. Prerequisites: MATH 53, STATS 116, or equivalents.

STATS 222. Statistical Methods for Longitudinal Data. 2-3 Units.

Research designs and statistical procedures for time-ordered (repeated-measures) data. The analysis of longitudinal panel data is central to empirical research on learning and development. Topics: measurement of change, growth curve models, analysis of durations including survival analysis, experimental and non-experimental group comparisons, reciprocal effects, stability. See <http://www-stat.stanford.edu/~rag/stat222/>.

Prerequisite: intermediate statistical methods.

Same as: EDUC 351A.

STATS 231. Statistical Learning Theory. 3 Units.

(Same as STATS 231) For a given learning problem, what methods should be employed, and under what assumptions can we expect them to work?

This course focuses on developing algorithms for various scenarios (e.g., high-dimensional, online, unsupervised) as well as theoretical analyses of these algorithms. Topics include kernel methods, generalization bounds, spectral methods, online learning, and nonparametric Bayes. Prerequisites: A solid background in linear algebra and probability theory. Basic exposure to statistics and machine learning (STAT 315A or CS 229), and graphical models (CS 228) is helpful but not essential.

Same as: CS 229T.

STATS 237. Theory of Investment Portfolios and Derivative Securities. 3 Units.

Asset returns and their volatilities. Markowitz's portfolio theory, capital asset pricing model, multifactor pricing models. Measures of market risk. Financial derivatives and hedging. Black-Scholes pricing of European options. Valuation of American options. Implied volatility and the Greeks. Prerequisite: STATS 116 or equivalent.

STATS 238. Policy & Strategy Issues in Financial Engineering. 2 Units.

(Same as LAW 564). This is a non-technical course that will focus on a series of case studies each designed to illuminate a serious public policy issue raised by the evolution of modern financial engineering. These will include discussions of Freddie Mac, Fannie Mae, sub-prime and Alt-A mortgages and the flaws of AAA CDOs; the spectacular losses by Orange County and the Florida Local Government Investment Pool and the challenges posed by unregulated investment pools; how credit default swaps are likely to change with central clearing using the PIIGS (Portugal/ Ireland/ Iceland/ Greece/ Spain), the monolines, AIG, Lehman and MF Global as examples; views of rogue trading using the similarities and disparities of Askin, Madoff, Barings, Soc Gen and UBS for discussion; and Risk Management 101: the why/ how/ where/ when firms went wrong plus what to keep and what to throw out in the next phase of risk programs among other case studies. The subject matter, by necessity, is multi-disciplinary and so the course is particularly suited to those students having an interest in public policy and the evolution of modern financial markets. This includes students from the law or business schools, or the public policy, economics, EES, political science, or financial math and engineering programs among others. Several themes will tie the case studies, reading and discussions together: -Is this an example of an innovation that got too far ahead of existing operations, risk management, legal, accounting, regulatory or supervisory oversight? -How might temporary infrastructure be implemented without stifling innovation or growth? -How might losses be avoided by requiring permanent infrastructure sooner? Will Dodd-Frank, Basel III, etc., help to prevent such problems? What are the potential unintended consequences? -Is this an example of improperly viewing exposures that are subject to uncertainty or incorrectly modeling risk or both? Guest speakers will be invited to share their experiences. This course will aim to provide a practitioner(s) view of financial engineering over the past 3 1/2 decades as well as a broad understanding of what went right and what went wrong plus cutting edge views of the future of financial engineering. Prerequisite: STATS 237 or equivalent and consent of instructor.

STATS 239A. Workshop in Quantitative Finance. 1 Unit.

Topics of current interest.

STATS 239B. Workshop in Quantitative Finance. 1 Unit.

Topics of current interest. May be repeated for credit.

STATS 240. Statistical Methods in Finance. 3-4 Units.

(SCPD students register for 240P.) Regression analysis and applications to investment models. Principal components and multivariate analysis. Likelihood inference and Bayesian methods. Financial time series. Estimation and modeling of volatilities. Statistical methods for portfolio management. Prerequisite: STATS 200 or equivalent.

STATS 240P. Statistical Methods in Finance. 3 Units.

For SCPD students; see 240.

STATS 241. Econometric Modeling Methodology and Applications to Financial Markets. 3-4 Units.

(SCPD students register for 241P.) Substantive and empirical modeling approaches in options and interest rate markets. Nonlinear least squares and nonparametric regression. Multivariate time series modeling and forecasting. Applications of canonical correlation analysis and cointegration. Statistical trading strategies and their evaluation. Prerequisite: 240 or equivalent.

STATS 241P. Econometric Modeling Methodology and Applications to Financial Markets. 3 Units.

For SCPD students; see STATS241.

STATS 242. Algorithmic Trading and Quantitative Strategies. 3 Units.

An introduction to financial trading strategies based on methods of statistical arbitrage that can be automated. Methodologies related to high frequency data and stylized facts on asset returns; models of order book dynamics and order placement, dynamic trade planning with feedback; momentum strategies, pairs trading. Emphasis on developing and implementing models that reflect the market and behavioral patterns. Prerequisite: STATS 240 or equivalent.

STATS 243. Financial Models and Statistical Methods in Active Risk Management. 3-4 Units.

(SCPD students register for 243P.) Market risk and credit risk, credit markets. Back testing, stress testing and Monte Carlo methods. Logistic regression, generalized linear models and generalized mixed models. Loan prepayment and default as competing risks. Survival and hazard functions, correlated default intensities, frailty and contagion. Risk surveillance, early warning and adaptive control methodologies. Banking and bank regulation, asset and liability management. Prerequisite: STATS 240 or equivalent.

STATS 243P. Financial Models and Statistical Methods in Risk Management. 3 Units.

For SCPD students; see STATS243.

STATS 250. Mathematical Finance. 3 Units.

Stochastic models of financial markets. Forward and futures contracts. European options and equivalent martingale measures. Hedging strategies and management of risk. Term structure models and interest rate derivatives. Optimal stopping and American options. Corequisites: MATH 236 and 227 or equivalent.

Same as: MATH 238.

STATS 253. Spatial Statistics. 3 Units.

Statistical descriptions of spatial variability, spatial random functions, grid models, spatial partitions, spatial sampling, linear and nonlinear interpolation and smoothing with error estimation, Bayes methods and pattern simulation from posterior distributions, multivariate spatial statistics, spatial classification, nonstationary spatial statistics, space-time statistics and estimation of time trends from monitoring data, spatial point patterns, models of attraction and repulsion. Applications to earth and environmental sciences, meteorology, astronomy, remote-sensing, ecology, materials.

Same as: STATS 352.

STATS 260A. Workshop in Biostatistics. 1-2 Unit.

Applications of statistical techniques to current problems in medical science. To receive credit for one or two units, a student must attend every workshop. To receive two units, in addition to attending every workshop, the student is required to write an acceptable one page summary of two of the workshops, with choices made by the student.

Same as: HRP 260A.

STATS 260B. Workshop in Biostatistics. 1-2 Unit.

Applications of statistical techniques to current problems in medical science. To receive credit for one or two units, a student must attend every workshop. To receive two units, in addition to attending every workshop, the student is required to write an acceptable one page summary of two of the workshops, with choices made by the student.

Same as: HRP 260B.

STATS 260C. Workshop in Biostatistics. 1-2 Unit.

Applications of statistical techniques to current problems in medical science. To receive credit for one or two units, a student must attend every workshop. To receive two units, in addition to attending every workshop, the student is required to write an acceptable one page summary of two of the workshops, with choices made by the student.

Same as: HRP 260C.

STATS 261. Intermediate Biostatistics: Analysis of Discrete Data. 3 Units.

Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference.

Same as: BIOMEDIN 233, HRP 261.

STATS 262. Intermediate Biostatistics: Regression, Prediction, Survival Analysis. 3 Units.

Methods for analyzing longitudinal data. Topics include Kaplan-Meier methods, Cox regression, hazard ratios, time-dependent variables, longitudinal data structures, profile plots, missing data, modeling change, MANOVA, repeated-measures ANOVA, GEE, and mixed models. Emphasis is on practical applications. Prerequisites: basic ANOVA and linear regression.

Same as: HRP 262.

STATS 267. Probability: Ten Great Ideas About Chance. 4 Units.

Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116.

Same as: PHIL 166, PHIL 266, STATS 167.

STATS 270. A Course in Bayesian Statistics. 3 Units.

Advanced-level Bayesian statistics. Topics: Discussion of the mathematical and theoretical foundation for Bayesian inferential procedures. Examination of the construction of priors and the asymptotic properties of likelihoods and posterior densities. Discussion including but not limited to the case of finite dimensional parameter space. Prerequisite: familiarity with standard probability and multivariate distribution theory.

Same as: STATS 370.

STATS 290. Paradigms for Computing with Data. 3 Units.

Advanced programming and computing techniques to support projects in data analysis and related research. For Statistics graduate students and others whose research involves data analysis and development of associated computational software. Prerequisites: Programming experience including familiarity with R; computing at least at the level of CS 106; statistics at the level of STATS 110 or 141.

STATS 297. Practical Training. 1-3 Unit.

For students in the M.S. program in Financial Mathematics only. Students obtain employment, with the approval and supervision of a faculty member, in a relevant industrial or research activity to enhance their professional experience. Students must submit a written final report upon completion of the internship in order to receive credit. May be repeated once for credit. Prerequisite: consent of adviser.

STATS 298. Industrial Research for Statisticians. 1-3 Unit.

Masters-level research as in 299, but with the approval and supervision of a faculty adviser, it must be conducted for an off-campus employer. Students must submit a written final report upon completion of the internship in order to receive credit. May be repeated once for credit. Prerequisite: enrollment in Statistics M.S. or Ph.D. program, prior to candidacy.

STATS 299. Independent Study. 1-10 Unit.

For Statistics M.S. students only. Reading or research program under the supervision of a Statistics faculty member. May be repeated for credit.

STATS 300. Advanced Topics in Statistics. 2-3 Units.

May be repeated for credit.

STATS 300A. Theory of Statistics. 2-3 Units.

Finite sample optimality of statistical procedures; Decision theory: loss, risk, admissibility; Principles of data reduction: sufficiency, ancillarity, completeness; Statistical models: exponential families, group families, nonparametric families; Point estimation: optimal unbiased and equivariant estimation, Bayes estimation, minimax estimation; Hypothesis testing and confidence intervals: uniformly most powerful tests, uniformly most accurate confidence intervals, optimal unbiased and invariant tests. Prerequisites: Real analysis, introductory probability (at the level of STATS 116), and introductory statistics.

STATS 300B. Theory of Statistics. 2-4 Units.

Elementary decision theory; loss and risk functions, Bayes estimation; UMVU estimator, minimax estimators, shrinkage estimators. Hypothesis testing and confidence intervals: Neyman-Pearson theory; UMP tests and uniformly most accurate confidence intervals; use of unbiasedness and invariance to eliminate nuisance parameters. Large sample theory: basic convergence concepts; robustness; efficiency; contiguity, locally asymptotically normal experiments; convolution theorem; asymptotically UMP and maximin tests. Asymptotic theory of likelihood ratio and score tests. Rank permutation and randomization tests; jackknife, bootstrap, subsampling and other resampling methods. Further topics: sequential analysis, optimal experimental design, empirical processes with applications to statistics, Edgeworth expansions, density estimation, time series.

STATS 300C. Theory of Statistics. 2-4 Units.

Decision theory formulation of statistical problems. Minimax, admissible procedures. Complete class theorems ("all" minimax or admissible procedures are "Bayes"), Bayes procedures, conjugate priors, hierarchical models. Bayesian non parametrics: diaichlet, tail free, polya trees, bayesian sieves. Inconsistency of bayes rules.

STATS 302. Qualifying Exams Workshop. 3 Units.

Prepares Statistics Ph.D. students for the qualifying exams by reviewing relevant course topics and problem solving strategies.

STATS 303. PhD First Year Student Workshop. 1 Unit.

For Statistics First Year PhD students only. Discussion of relevant topics in first year student courses, consultation with PhD advisor.

STATS 305. Introduction to Statistical Modeling. 3 Units.

Review of univariate regression. Multiple regression. Geometry, subspaces, orthogonality, projections, normal equations, rank deficiency, estimable functions and Gauss-Markov theorem. Computation via QR decomposition, Gram-Schmidt orthogonalization and the SVD. Interpreting coefficients, collinearity, graphical displays. Fits and the Hat matrix, leverage & influence, diagnostics, weighted least squares and resistance. Model selection, Cp/Aic and crossvalidation, stepwise, lasso. Basis expansions, splines. Multivariate normal distribution theory. ANOVA: Sources of measurements, fixed and random effects, randomization. Emphasis on problem sets involving substantive computations with data sets. Prerequisites: consent of instructor, 116, 200, applied statistics course, CS 106A, MATH 114.

STATS 306A. Methods for Applied Statistics. 3 Units.

Regression modeling extended to categorical data. Logistic regression. Loglinear models. Generalized linear models. Discriminant analysis. Categorical data models from information retrieval and Internet modeling. Prerequisite: 305 or equivalent.

STATS 306B. Methods for Applied Statistics: Unsupervised Learning. 2-3 Units.

Unsupervised learning techniques in statistics, machine learning, and data mining.

STATS 310A. Theory of Probability. 2-4 Units.

Mathematical tools: sigma algebras, measure theory, connections between coin tossing and Lebesgue measure, basic convergence theorems. Probability: independence, Borel-Cantelli lemmas, almost sure and L_p convergence, weak and strong laws of large numbers. Large deviations. Weak convergence; central limit theorems; Poisson convergence; Stein's method. Prerequisites: 116, MATH 171. Same as: MATH 230A.

STATS 310B. Theory of Probability. 2-3 Units.

Conditional expectations, discrete time martingales, stopping times, uniform integrability, applications to 0-1 laws, Radon-Nikodym Theorem, ruin problems, etc. Other topics as time allows selected from (i) local limit theorems, (ii) renewal theory, (iii) discrete time Markov chains, (iv) random walk theory, (v) ergodic theory. Prerequisite: 310A or MATH 230A. Same as: MATH 230B.

STATS 310C. Theory of Probability. 2-4 Units.

Continuous time stochastic processes: martingales, Brownian motion, stationary independent increments, Markov jump processes and Gaussian processes. Invariance principle, random walks, LIL and functional CLT. Markov and strong Markov property. Infinitely divisible laws. Some ergodic theory. Prerequisite: 310B or MATH 230B. Same as: MATH 230C.

STATS 313. Introduction to Graphical Models. 3 Units.

Multivariate Normal Distribution and Inference, Wishart distributions, graph theory, probabilistic Markov models, pairwise and global Markov property, decomposable graph, Markov equivalence, MLE for DAG models and undirected graphical models, Bayesian inference for DAG models and undirected graphical models. Prerequisites: STATS 116 (preferably STATS 217), STATS 200 (preferably STATS 300A), MATH 104 or equivalent class in linear algebra. Same as: STATS 213.

STATS 314. Advanced Statistical Methods. 3 Units.

Topic this year is empirical likelihood. Empirical likelihood (EL) allows likelihood based inferences without assuming any parametric form for the likelihood. It is based instead on reweighting the sample values. It provides data driven shapes for confidence regions and confidence bands. EL tests have competitive power. This course covers: nonparametric maximum likelihood and likelihood ratios, censoring and truncation, biased sampling, estimating equations, GMM, Bayesian bootstrap, Euclidean and Kullback-Leibler log likelihoods and recent research directions.

STATS 315A. Modern Applied Statistics: Learning. 2-3 Units.

Overview of supervised learning. Linear regression and related methods. Model selection, least angle regression and the lasso, stepwise methods. Classification. Linear discriminant analysis, logistic regression, and support vector machines (SVMs). Basis expansions, splines and regularization. Kernel methods. Generalized additive models. Kernel smoothing. Gaussian mixtures and the EM algorithm. Model assessment and selection: crossvalidation and the bootstrap. Pathwise coordinate descent. Sparse graphical models. Prerequisites: STATS 305, 306A,B or consent of instructor.

STATS 315B. Modern Applied Statistics: Data Mining. 2-3 Units.

Two-part sequence. New techniques for predictive and descriptive learning using ideas that bridge gaps among statistics, computer science, and artificial intelligence. Emphasis is on statistical aspects of their application and integration with more standard statistical methodology. Predictive learning refers to estimating models from data with the goal of predicting future outcomes, in particular, regression and classification models. Descriptive learning is used to discover general patterns and relationships in data without a predictive goal, viewed from a statistical perspective as computer automated exploratory analysis of large complex data sets.

STATS 316. Stochastic Processes on Graphs. 1-3 Unit.

Local weak convergence, Gibbs measures on trees, cavity method, and replica symmetry breaking. Examples include random k-satisfiability, the assignment problem, spin glasses, and neural networks. Prerequisite: 310A or equivalent.

STATS 317. Stochastic Processes. 3 Units.

Semimartingales, stochastic integration, Ito's formula, Girsanov's theorem. Gaussian and related processes. Stationary/isotropic processes. Integral geometry and geometric probability. Maxima of random fields and applications to spatial statistics and imaging.

STATS 318. Modern Markov Chains. 3 Units.

Tools for understanding Markov chains as they arise in applications. Random walk on graphs, reversible Markov chains, Metropolis algorithm, Gibbs sampler, hybrid Monte Carlo, auxiliary variables, hit and run, Swedson-Wong algorithms, geometric theory, Poincare-Nash-Cheger-Log-Sobolov inequalities. Comparison techniques, coupling, stationary times, Harris recurrence, central limit theorems, and large deviations.

STATS 319. Literature of Statistics. 1-3 Unit.

Literature study of topics in statistics and probability culminating in oral and written reports. May be repeated for credit.

STATS 320. Heterogeneous Data with Kernels. 3 Units.

Mathematical and computational methods necessary to understanding analysis of heterogeneous data using generalized inner products and Kernels. For areas that need to integrate data from various sources, biology, environmental and chemical engineering, molecular biology, bioinformatics. Topics: Distances, inner products and duality. Multivariate projections. Complex heterogeneous data structures (networks, trees, categorical as well as multivariate continuous data). Canonical correlation analysis, canonical correspondence analysis. Kernel methods in Statistics. Representer theorem. Kernels on graphs. Kernel versions of standard statistical procedures. Data cubes and tensor methods.

STATS 321. Modern Applied Statistics: Transposable Data. 2-3 Units.

Topics: clustering, biclustering, and spectral clustering. Data analysis using the singular value decomposition, nonnegative decomposition, and generalizations. Plaid model, aspect model, and additive clustering. Correspondence analysis, Rasch model, and independent component analysis. Page rank, hubs, and authorities. Probabilistic latent semantic indexing. Recommender systems. Applications to genomics and information retrieval. Prerequisites: 315A,B, 305/306A,B, or consent of instructor.

STATS 322. Function Estimation in White Noise. 3 Units.

Gaussian white noise model sequence space form. Hyperrectangles, quadratic convexity, and Pinsker's theorem. Minimax estimation on L_p balls and Besov spaces. Role of wavelets and unconditional bases. Linear and threshold estimators. Oracle inequalities. Optimal recovery and universal thresholding. Stein's unbiased risk estimator and threshold choice. Complexity penalized model selection. Connecting fast wavelet algorithms and theory. Beyond orthogonal bases.

STATS 324. Multivariate Analysis. 2-3 Units.

Classic multivariate statistics: properties of the multivariate normal distribution, determinants, volumes, projections, matrix square roots, the singular value decomposition; Wishart distributions, Hotelling's T-square; principal components, canonical correlations, Fisher's discriminant, the Cauchy projection formula.

STATS 325. Multivariate Analysis and Random Matrices in Statistics. 2-3 Units.

Topics on Multivariate Analysis and Random Matrices in Statistics (full description TBA).

STATS 329. Large-Scale Simultaneous Inference. 1-3 Unit.

Estimation, testing, and prediction for microarray-like data. Modern scientific technologies, typified by microarrays and imaging devices, produce inference problems with thousands of parallel cases to consider simultaneously. Topics: empirical Bayes techniques, James-Stein estimation, large-scale simultaneous testing, false discovery rates, local fdr, proper choice of null hypothesis (theoretical, permutation, empirical nulls), power, effects of correlation on tests and estimation accuracy, prediction methods, related sets of cases ("enrichment"), effect size estimation. Theory and methods illustrated on a variety of large-scale data sets.

STATS 330. An Introduction to Compressed Sensing. 3 Units.

Compressed sensing is a new data acquisition theory asserting that one can design nonadaptive sampling techniques that condense information in a compressible signal into a small amount of data. This revelation may change the way engineers think about signal acquisition. Course covers fundamental theoretical ideas, numerical methods in large-scale convex optimization, hardware implementations, connections with statistical estimation in high dimensions, and extensions such as recovery of data matrices from few entries (famous Netflix Prize). Same as: CME 362.

STATS 331. Survival Analysis. 2 Units.

The course introduces basic concepts, theoretical basis and statistical methods associated with survival data. Topics include censoring, Kaplan-Meier estimation, logrank test, proportional hazards regression, accelerated failure time model, multivariate failure time analysis and competing risks. The traditional counting process/martingale methods as well as modern empirical process methods will be covered. Prerequisite: Understanding of basic probability theory and statistical inference methods.

STATS 338. Topics in Biostatistics. 3 Units.

Data monitoring and interim analysis of clinical trials. Design of Phase I, II, III trials. Survival analysis. Longitudinal data analysis.

STATS 341. Applied Multivariate Statistics. 3 Units.

Theory, computational aspects, and practice of a variety of important multivariate statistical tools for data analysis. Topics include classical multivariate Gaussian and undirected graphical models, graphical displays. PCA, SVD and generalizations including canonical correlation analysis, linear discriminant analysis, correspondence analysis, with focus on recent variants. Factor analysis and independent component analysis. Multidimensional scaling and its variants (e.g. Isomap, spectral clustering). Students are expected to program in R. Prerequisite: STATS 305 or equivalent.

STATS 344. Introduction to Statistical Genetics. 3 Units.

Statistical methods for analyzing human genetics studies of Mendelian disorders and common complex traits. Probable topics include: principles of population genetics; epidemiologic designs; familial aggregation; segregation analysis; linkage analysis; linkage-disequilibrium-based association mapping approaches; and genome-wide analysis based on high-throughput genotyping platforms. Prerequisite: STATS 116 or equivalent or consent of instructor.

Same as: GENE 244.

STATS 350. Topics in Probability Theory: Probabilistic Concepts in Statistical Physics and Information Theory. 1-3 Unit.

Concentration of measure techniques. Mean field models for disordered systems: infinite size limit, computing the free energy, ultrametricity, dynamics. Interpolation techniques and infinite size limit in information theory and coding. May be repeated once for credit. Prerequisite: 310A or equivalent.

STATS 351. Random Walks, Networks and Environment. 3 Units.

Selected material about probability on trees and networks, random walk in random and non-random environments, percolation and related interacting particle systems. Prerequisite: Exposure to measure theoretic probability and to stochastic processes.

STATS 351A. An Introduction to Random Matrix Theory. 3 Units.

Patterns in the eigenvalue distribution of typical large matrices, which also show up in physics (energy distribution in scattering experiments), combinatorics (length of longest increasing subsequence), first passage percolation and number theory (zeros of the zeta function). Classical compact ensembles (random orthogonal matrices). The tools of determinantal point processes.

Same as: MATH 231A.

STATS 352. Spatial Statistics. 3 Units.

Statistical descriptions of spatial variability, spatial random functions, grid models, spatial partitions, spatial sampling, linear and nonlinear interpolation and smoothing with error estimation, Bayes methods and pattern simulation from posterior distributions, multivariate spatial statistics, spatial classification, nonstationary spatial statistics, space-time statistics and estimation of time trends from monitoring data, spatial point patterns, models of attraction and repulsion. Applications to earth and environmental sciences, meteorology, astronomy, remote-sensing, ecology, materials.

Same as: STATS 253.

STATS 355. Observational Studies. 2-3 Units.

This course will cover statistical methods for the design and analysis of observational studies. Topics for the course will include the potential outcomes framework for causal inference; randomized experiments; methods for controlling for observed confounders in observational studies; sensitivity analysis for hidden bias; instrumental variables; tests of hidden bias; coherence; and design of observational studies.

Same as: HRP 255.

STATS 362. Monte Carlo. 2-3 Units.

Random numbers and vectors: inversion, acceptance-rejection, copulas. Variance reduction: antithetics, stratification, control variates, importance sampling. MCMC: Markov chains, detailed balance, Metropolis-Hastings, random walk Metropolis, independence sampler, Gibbs sampling, slice sampler, hybrids of Gibbs and Metropolis, tempering. Sequential Monte Carlo. Quasi-Monte Carlo. Randomized quasi-Monte Carlo. Examples, problems and motivation from Bayesian statistics, machine learning, computational finance and graphics.

STATS 366. Modern Statistics for Modern Biology. 3 Units.

Application based course in nonparametric statistics. Modern toolbox of visualization and statistical methods for the analysis of data, examples drawn from immunology, microbiology, cancer research and ecology. Methods covered include multivariate methods (PCA and extensions), sparse representations (trees, networks, contingency tables) as well as nonparametric testing (Bootstrap, permutation and Monte Carlo methods). Hands on, use R and cover many Bioconductor packages. Prerequisite: Minimal familiarity with computers. Instructor consent.

Same as: BIOS 221.

STATS 370. A Course in Bayesian Statistics. 3 Units.

Advanced-level Bayesian statistics. Topics: Discussion of the mathematical and theoretical foundation for Bayesian inferential procedures. Examination of the construction of priors and the asymptotic properties of likelihoods and posterior densities. Discussion including but not limited to the case of finite dimensional parameter space. Prerequisite: familiarity with standard probability and multivariate distribution theory.

Same as: STATS 270.

STATS 374. Large Deviations Theory. 3 Units.

Combinatorial estimates and the method of types. Large deviation probabilities for partial sums and for empirical distributions, Cramer's and Sanov's theorems and their Markov extensions. Applications in statistics, information theory, and statistical mechanics. Prerequisite: MATH 230A or STATS 310.

Same as: MATH 234.

STATS 375. Inference in Graphical Models. 3 Units.

Graphical models as a unifying framework for describing the statistical relationships between large sets of variables; computing the marginal distribution of one or a few such variables. Focus is on sparse graphical structures, low-complexity algorithms, and their analysis. Topics include: variational inference; message passing algorithms; belief propagation; generalized belief propagation; survey propagation. Analysis techniques: correlation decay; distributional recursions. Applications from engineering, computer science, and statistics. Prerequisite: EE 278, STATS 116, or CS 228. Recommended: EE 376A or STATS 217.

STATS 376A. Information Theory. 3 Units.

The fundamental ideas of information theory. Entropy and intrinsic randomness. Data compression to the entropy limit. Huffman coding. Arithmetic coding. Channel capacity, the communication limit. Gaussian channels. Kolmogorov complexity. Asymptotic equipartition property. Information theory and Kelly gambling. Applications to communication and data compression. Prerequisite: EE178/278A or STATS 116, or equivalent.

Same as: EE 376A.

STATS 390. Consulting Workshop. 1-3 Unit.

Skills required of practicing statistical consultants, including exposure to statistical applications. Students participate as consultants in the department's drop-in consulting service, analyze client data, and prepare formal written reports. Seminar provides supervised experience in short term consulting. May be repeated for credit. Prerequisites: course work in applied statistics or data analysis, and consent of instructor.

STATS 396. Research Workshop in Computational Biology. 1-2 Unit.

Applications of Computational Statistics and Data Mining to Biological Data. Attendance mandatory. Instructor approval required.

STATS 397. PhD Oral Exam Workshop. 1 Unit.

For Statistics PhD students defending their dissertation.

STATS 398. Industrial Research for Statisticians. 1-3 Unit.

Doctoral research as in 298, but must be conducted for an off-campus employer. Final report required. May be repeated for credit. Prerequisite: Statistics Ph.D. candidate.

STATS 399. Research. 1-10 Unit.

Research work as distinguished from independent study of nonresearch character listed in 199. May be repeated for credit.

STATS 801. TGR Project. 0 Units.

STATS 802. TGR Dissertation. 0 Units.

Stem Cell Biology and Regenerative Medicine Courses

STEMREM 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

STEMREM 200. Stem Cell Intensive. 1 Unit.

Open to first year Stem Cell Biology and Regenerative Medicine graduate students or consent of Instructor. Hands-on, five-day immersion to learn basic methods of tissue culture, mouse embryo fibroblast (MEF) preparation, embryonic stem and induced pluripotent stem (ES/iPS) cell culture, differentiation, DNA isolation, polymerase chain reaction (PCR), sequencing, and basic microscopy.

STEMREM 201A. Stem Cells and Human Development: From Embryo to Cell Lineage Determination. 1-2 Unit.

For graduate, undergraduate and medical students. Offers didactic lectures focused on human developmental biology, derivation of pluripotent stem cells, cell sorting, genomics, bioinformatics, imaging and other related topics. Provides the educational foundation and social group building within each first-year class of STEMREM graduate students. Students enrolling for 1 unit attend all lectures; students enrolling for 2 units attend all lectures and discussion sections.

STEMREM 201B. Stem Cells and Human Development Laboratory. 3 Units.

Limited enrollment restricted to first year majors. Lab fee may apply. Focus is on human development from embryo to cell lineage determination. Emphasis is on human developmental biology, derivation of pluripotent stem cells, cell sorting, genomics, bioinformatics, imaging and other related topics. Comprehensive laboratory-based instruction focused on human developmental biology, derivation of pluripotent stem cells, cell sorting, genomics, bioinformatics, imaging and other related topics. Provides hands-on skills development within each first-year class of STEMREM graduate students. Must be taken concurrently with STEMREM 201A.

STEMREM 202. Stem Cells and Translational Medicine. 3-5 Units.

For graduate, undergraduate and medical students. Focus is on fundamentals of stem cell biology and regenerative Medicine. Topics include exploration of the well-studied system of hematopoiesis, molecular pathways of pluripotency and tissue-specific stem cells and ends with coverage of aging as related to stem cell dynamics. Features include lectures on the basic science of each topic, followed by clinical applications in order to show the mechanisms and methods to translate findings to therapeutic applications, culminated with construction of a research proposal or business plan in an area of interest, to be further explored in STEMREM 203. Students enrolling for 3 units submit four of seven problem-sets; students enrolling for 4 units submit five of seven problem-sets; students enrolling for 5 units turn in seven of seven problem-sets.

STEMREM 203. Stem Cells Immersion: Applications in Medicine, Business and Law. 3 Units.

For graduate and medical students. Provides the clinical, pharmaceutical, biotechnology or business immersion necessary to allow insight into the world of medicine from multiple vantage points, setting the stage for students to translate research successfully beyond the academic sphere and gain the necessary knowledge to move their research proposal/business plan forward (from STEMREM 202). Prerequisites: STEMREM 201A and STEMREM 202.

STEMREM 250. Regenerative Medicine Seminar Series. 1 Unit.

For graduate, medical and undergraduate students. A forum for Stanford researchers to meet, hear about what is going on in Stem Cell Biology and Regenerative Medicine at Stanford, and spark collaborations. Topics include all areas of regenerative medicine, broadly defined, ranging from fundamental biological principles and basic science advances to novel applications in biotechnology, stem cell biology, and human disease.

STEMREM 280. Stem Cell Biology and Regenerative Medicine Journal Club. 2 Units.

For graduate, medical and undergraduate students. Review of current literature in both basic and translational medicine as it relates to stem cell biology and/or regenerative medicine in a seminar format consisting of both faculty and student presentations. Includes discussions led by faculty experts in the area covered for that particular session. Topics may range widely, depending on the available literature and students' interests. Students are expected to review the chosen article before class presentations and participate in discussion. Discussion includes methodology and statistical analysis of each study and its relevance to stem cell biology and/or regenerative medicine.

STEMREM 281. Landmark Papers in Immunology and Stem Cell Biology: How to Pose Experimental Questions. 2 Units.

Focus on deciphering article titles to accurately assess the biological question being asked, and what experiment design might best approach the question, encouraging students to become experimentalists, not memorizers, of information presented by authors. Topics include implications of paper questions for the field, deciphering paper titles, hypothesizing research questions.

STEMREM 299. Directed Reading in Stem Cell Biology and Regenerative Medicine. 1-18 Unit.

Prerequisite: consent of instructor.

STEMREM 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

STEMREM 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

STEMREM 801. TGR Project. 0 Units.

STEMREM 802. TGR Dissertation. 0 Units.

Strategic Management Courses

STRAMGT 110Q. Making Sense of Strategy. 3 Units.

Get the strategy right, and the chance for success is great. Nowhere is this more evident than in today's world of major challenges. Strategy is at the heart of problem solving and achieving objectives, yet few people can define strategy, much less understand how to conceptualize, design, and execute effective strategies that yield the best outcomes. This course will meet once a week to focus on interesting and engaging case studies, each of which illustrates a key ingredient of strategy. Some are well-known historical events, while others are less obvious, but all have a strategic lesson to share. They are quite diverse, from the planning of a high-risk rescue in the Colorado Rockies, to a product crisis in a Fortune 50 company, to a little-known failed military mission of WWII, to a commercial airline disaster. The ability to think through challenging and varied scenarios is both instructive and mind-stretching. There will be some pre-reading on each case study and there may be a field trip for students to put their lessons into practice. The course is designed to be highly interactive; all to enable students to unravel the mystery and power of strategic thinking. Students will also have the opportunity to select and analyze a case reflecting interests of their own. This course can help students not only prepare for a career in a range of fields, but also as they meet the challenges of their current coursework. Problem-solving skills are central in every walk of life; this seminar can help students build a stronger foundation for sound decision-making.

STRAMGT 207. Strategic Leadership. 3 Units.

This course examines fundamental issues of general management and leadership within an organization. You will learn about setting an organization's strategic direction, aligning structure to implement strategy, and leading individuals within the firm. You will master concepts, frameworks, and tools to assess an industry and a firm's competitive environment, and to craft alternatives. You will study the interplay among formal structure, informal networks, and culture in shaping organizational performance. By integrating leadership theory, the lessons of practical application, and your own experience, you will develop skills and capabilities essential to leading others. And you'll gain a better understanding of your own leadership preferences, strengths, and weaknesses.

STRAMGT 209. Leadership Laboratory. 1 Unit.

Having the opportunity to choose one's colleagues is rare in corporate life - we usually inherit them when we join an organization. More often than not, when we assume a management position in an organization, we inherit our subordinates as well. How do we maximize the performance of the teams we become part of? What interpersonal skills give us influence? Which interpersonal strengths can propel us to our next promotion? What development areas might prevent our ascension to the executive suite? In the Leadership Labs, we focus on these questions. However, rather than tackle cases where you can distance yourself in comfortable analytical discussions, we throw you into experiential exercises, testing your ability to build effective relationships, motivate others, and influence outcomes. The Leadership Labs are designed for deep self-reflection about what behaviors you choose to use, the consequences of those behaviors, and given choices, how you might be even more productive. In total, there are ten Leadership Lab Sessions--six, three-hour Interpersonal Skills Labs, and four, 90-minute Managerial Skills Labs. The Interpersonal Skills Labs sessions are comprised of short lectures and increasingly challenging simulations and role-plays facilitated by the Arbuckle Leadership Fellows. The Leadership Fellows are second-year GSB students who have participated in a rigorous training program that prepares them to facilitate the exercises and cases used in the Interpersonal Skills Labs. In the 90-minute Managerial Skills Labs we examine several common managerial challenges faced by executives. Together with Faculty, students explore these topics using four case examples, each asking students to evaluate a series of situations, develop alternatives for their resolution, and ultimately recommend and implement a course of action from the point of view of the company's owner/manager. We have selected small to midsized businesses as the context for these discussions in order to highlight the impact that key decisions and their implementation can have on the broader organization. Class preparation should include not only analysis and conclusions, but also specific recommendations on implementation. Students should come to class prepared to role play important conversations between management and other key individuals.

STRAMGT 210. Managerial Skills. 1 Unit.

In the Managerial Skills Labs we examine several common managerial challenges faced by executives. Together with Faculty, students explore these topics using four case examples, each asking students to evaluate a series of situations, develop alternatives for their resolution, and ultimately recommend and implement a course of action from the point of view of the company's owner/manager. We have selected small to midsized businesses as the context for these discussions in order to highlight the impact that key decisions and their implementation can have on the broader organization. Class preparation should include not only analysis and conclusions, but also specific recommendations on implementation. Students should come to class prepared to role play important conversations between management and other key individuals.

STRAMGT 257. Sloan: Strategic Leadership. 2 Units.

This 9-session course focuses on situations where senior executives must execute strategic action fast because of rapidly changing environmental conditions. The focus of the course is on the approaches successful leaders use to recognize the need for strategic change early, determine which particular approach is likely to be successful, and then implement the change to its conclusion. Leaders in these situations often confront the problem that many people in the organization do not yet recognize the need for change and resist making the personal adjustments required. The course provides these leaders with tools to initiate and execute the changes required to address key strategic challenges: how to capitalize better on the position an organization occupies in its environment, how to reposition the organization relative to its competitors and how to develop and implement a plan to accomplish the required changes successfully. GSB professor Robert A. Burgelman, an active field researcher of strategic change in complex organizations, and Dr. Robert Pearl, CEO of The Permanente Medical Group, Kaiser Permanente, who has taken one of the largest healthcare delivery organizations in the world through a major strategic change journey, jointly teach this course.

STRAMGT 259. MSx: Generative Leadership. 2 Units.

Generative Leadership: How to Create Innovative Ideas and Convey Them with Impact
 There are three major sections to this course - Design Thinking, The Improvisational Mindset, and High Performance Communication.
Design Thinking
 Outcome: Participants learn to employ User Centered Design as promoted by the Stanford d.school. They become adept at Empathizing with the end user, practicing focused Need Finding, Defining the Problem, Ideating, Rapidly Prototyping and Adapting to Feedback.
Experiences: Participants learn the Design Thinking process through a hands-on, collaborative design challenge, like redesigning the Briefcase for a specific user.
The Improvisational Mindset
 Outcome: The participants increase their ability to respond flexibly to novel situations and to generate innovative solutions on a collaborative, creative team. The mindset is cultivated by practicing 5 key principles. Say "Yes, and". Treat Mistakes as Gifts. Inspire your Partner. Dare to be Obvious. Notice the World.
Experiences: The key principles are taught through a series of immersive theater exercises derived from Johnstone, Spolin, and Ryan. Valuable readings include IMPROV WISDOM, by Patricia Ryan and journal articles on improv and brainstorming.
High Performance Communication
 Outcome: The final segment of the class is a chance to apply the principles of User Centered Design and the Improvisational Mindset to design and deliver messages that go beyond just transmitting information - they get results. Participants successfully use a version of the Design Thinking process to rapidly develop content that is tuned to the audience's needs, and that they can deliver in a way that is agile and responsive to real time feedback.
Experiences: Generative Leadership culminates in a group presentation designed to influence key stakeholders. To be successful, participants will have to draw on all sections of the course. AS WE SPEAK is our text.

STRAMGT 279. MSx: Global Strategic Management. 4 Units.

This course introduces the basic concepts of strategic management, focusing on their application in a semi-globalized world, where international borders are less significant than in the past but still very important. There are texts that will be required reading, but each class will also feature a case discussion.

STRAMGT 313. The New Business Ideas Workshop. 4 Units.

This workshop provides students with a forum through which they can develop and receive feedback on a new venture idea. It covers: the process of finding new business ideas; how to research and vet a new idea; how to pivot an idea; how to build a business model around an idea; and how to ultimately pitch the idea to others. This workshop is most suited for students who do not have a new business idea or are in the very early stages of thinking about an idea. As part of the workshop, students will spend time helping classmates think through and improve their ideas. Students will have the option to present their ideas at the end of the quarter.

STRAMGT 315. From Launch to Liquidity. 4 Units.

This course considers the challenges faced by start-ups in achieving liquidity. We take the perspectives of organizational behavior, marketing, and finance, and examine forks in the road faced by firms that have already launched products. Marketing topics include how to market firms for sale and calculating the addressable market. Organizational topics include hiring and firing, and the role of founders after sales. Finance topics include how the choice between sale and IPO affects value realized, and private equity exits.

STRAMGT 321. Create a New Venture: From Idea to Launch I. 4 Units.

This is an integrated lab course in Entrepreneurship designed to teach students the process of creating a new viable venture - from idea to launch. It is a dynamic and interactive course organized around projects undertaken by teams of 3 to 4 registered students from the Sloan and MBA programs, together with other graduate students within Stanford who bring expertise of particular relevance to the idea being pursued. This course is designed not only for students with immediate entrepreneurial aspirations, but also for any student considering starting an entrepreneurial venture at some point in his or her career. The course is a two quarter class, with admission to the class by team and idea. In the winter quarter, teams will research, craft, and morph their idea into a viable business concept. In the spring quarter they will further refine their concept and develop a strategy and plan to attract financial, human and other resources. At the end of the spring quarter, teams will present their plan to a panel of experts and potential investors to simulate the funding process. The new course builds on a predecessor course S356 "Evaluating Entrepreneurial Opportunities" and encapsulates new and important research and findings as they relate to the process of new venture creation. The teaching method is primarily learning by doing (LBD) through a structured process and supported by relevant lectures. Learning is further enhanced through meetings with the instructor, coaching by experienced mentors and review by peers. Field research as well as prototype product development are integral to the course. Since admittance to S321/S322 is by team and the quality of their idea, team formation takes place during the autumn quarter. Informal student mixers and seminars will be held to facilitate team formation and idea generation. Each team must consist of at least 2 enrolled Sloan students and preferably 1-2 enrolled graduate students from the MBA program or other Schools - Engineering, Medicine, Law, Science, Education - to bring diversity and depth to the team. The application-selection process is described on the S321/S322 website.

STRAMGT 322. Create a New Venture: From Idea to Launch II. 4 Units.

This is an integrated lab course in Entrepreneurship designed to teach students the process of creating a new viable venture from idea to launch. It is a dynamic and interactive course organized around projects undertaken by teams of 3 to 4 registered students from the Sloan and MBA programs, together with other graduate students within Stanford who bring expertise of particular relevance to the idea being pursued. This course is designed not only for students with immediate entrepreneurial aspirations, but also for any student considering starting an entrepreneurial venture at some point in his or her career. The course is a two quarter class, with admission to the class by team and idea. In the winter quarter, teams will research, craft, and morph their idea into a viable business concept. In the spring quarter they will further refine their concept and develop a strategy and plan to attract financial, human and other resources. At the end of the spring quarter, teams will present their plan to a panel of experts and potential investors to simulate the funding process. The course is taught by a serial entrepreneur and former CEO who also led and taught the predecessor course S356 "Evaluating Entrepreneurial Opportunities". The new course builds on this experience and encapsulates new and important research and findings as they relate to the process of new venture creation. The teaching method is primarily learning by doing (LBD) through a structured process and supported by relevant lectures. Learning is further enhanced through meetings with the instructor, coaching by experienced mentors and review by peers. Field research as well as prototype product development are integral to the course. Since admittance to S321/S322 is by team and the quality of their idea, team formation takes place during the autumn quarter. Informal student mixers and seminars will be held to facilitate team formation and idea generation. Each team must consist of at least 2 enrolled Sloan students and preferably 1-2 enrolled graduate students from the MBA program or other Schools to bring diversity and depth to the team. The application-selection process is described on the S321/S322 website.

STRAMGT 341. Achieving Social Impact. 4 Units.

Social Enterprise explores a range of leading issues focused on the challenges and opportunity for impact through social entrepreneurship. Students explore a range of organizations from nonprofits, to for-profits, to hybrid forms of organization, and examine issues from a variety of different perspectives, including those of entrepreneur, CEO, funder, and board member. nnnDesigned to appeal to students who seek to take on leadership roles in social value creation throughout their careers, whether as leaders in the private, nonprofit, or government sectors, or some combination thereof. nnnSocial Enterprise focuses on innovative approaches for creating social value through a variety of social enterprises. Cases explore the unique challenges of creating and leading social enterprises, particularly those that depart from traditional approaches to social value creation. The course modules encompass the following topics: Undertaking the Social Entrepreneurship Process; Mobilizing Economic and Human Resources; Achieving Social Objectives with Commercial Vehicles; Crafting Alliances; Managing Growth; Measuring and Managing Performance; Governing for Excellence. The course utilizes case studies and readings. There will also be frequent direct interaction with dynamic social entrepreneurs who will discuss challenges that they currently face in their organizations and who will share with students their experiential wisdom. For the course paper, students will carry out field-based research in teams, analyzing a significant strategic or operational issue of a social enterprise of their choosing. This field-based applied learning component in lieu of an exam has proven to be a particular enriching for students with high impact on the organizations.

STRAMGT 348. Creating and Managing Very Early Stage Ventures. 4 Units.

The early stages of a new venture pose special challenges and issues for founders. For some entrepreneurs, the questions are basic: Should I seek to start a new business? And, How can I find an idea worth pursuing? Later, the question is: How do I evaluate whether my (our) idea is worth pursuing? To answer these questions, it is useful for founders to have an integrated framework for evaluating new business opportunities. In this class we develop such a framework and show how it can usefully compare and contrast new product or service businesses. We also consider the very first steps startups must take. These include how startups can begin to accumulate resources, as well as early legal, organizational, personnel and financial issues that must be handled. The course is largely case-based. It is supplemented with lectures and guests. The target audience is students who are thinking about forming a new venture early in their career. This class is appropriate for first or second year MBAs who have not yet taken S356, as well as other Stanford graduate students.

STRAMGT 350. Global Value Chain Strategies. 4 Units.

This course addresses how the increasingly large number of firms that use or provide outsourcing and "offshoring" can create a sustainable competitive advantage. Students who complete the course will have a framework and a set of concepts that can be used to position a firm for strategic advantage in these supply networks. Positioning in and strategic analysis of product markets is covered in a variety of courses and books. A distinguishing feature of this course is that it addresses positioning and strategic analysis for firms operating as part of a network of providers, sellers and buyers... the factor markets. The course takes a general management perspective and provides examples through cases and discussions with visitors. The major theme of the course is that these firms must carefully consider how they position themselves in both the product and factor markets.

STRAMGT 351. Building and Managing Professional Sales Organizations. 4 Units.

The focus of this class is on the challenges and key issues associated with the creation and management of a professional sales organization. Our emphasis is developing and managing the selling effort of business-to-business and business-to-consumer capital goods and services. There will be relatively little emphasis on sales technique (i.e., students should not expect a course on "How to be a Better Salesperson"). The course is organized to follow the development of the sales function from strategic inception through to execution and implementation: choosing a go-to-market model (e.g., direct sales, VARs, OEMs, hybrid models); building and structuring the sales organization (e.g., sales learning curve, organizational structure, allocating territories and quotas); and managing the sales force (e.g., hiring/firing, compensation, forecasting, culture). We will address these topics in the context of both early stage ventures and later stage enterprises.

STRAMGT 353. Entrepreneurship: Formation of New Ventures. 4 Units.

This course is offered for students who at some time may want to undertake an entrepreneurial career by pursuing opportunities leading to partial or full ownership and control of a business. The 2013-14 spring quarter section, taught by Russ Siegelman and Laura Hattendorf, will exclusively focus on social ventures and is not recommended for students NOT interested in social ventures. The course deals with case situations from the point of view of the entrepreneur/manager rather than the passive investor. Many cases involve visitors, since the premise is that opportunity and action have large idiosyncratic components. Students must assess opportunity and action in light of the perceived capabilities of the individuals and the nature of the environments they face. The course is integrative and will allow students to apply many facets of their business school education. Each section will have a specific focus, please select the instructor(s) with your interests: Leslie, Siegelman - High tech ventures Ellis, Chambers, Childs - Diverse types of ventures Ellis, Foster - Diverse types of ventures Siegel, Brady - High tech emphasis, but diverse types of ventures Siegelman, Hattendorf - Social ventures Reiss, Chess - Very early stage ventures.

STRAMGT 354. Entrepreneurship and Venture Capital. 4 Units.

Many of America's most successful entrepreneurial companies have been substantially influenced by professionally managed venture capital. This relationship is examined from both the entrepreneur's and the venture capitalist's perspective. From the point of view of the entrepreneur, the course considers how significant business opportunities are identified, planned, and built into real companies; how resources are matched with opportunity; and how, within this framework, entrepreneurs seek capital and other assistance from venture capitalists or other sources. From the point of view of the venture capitalist, the course considers how potential entrepreneurial investments are evaluated, valued, structured, and enhanced; how different venture capital strategies are deployed; and how venture capitalists raise and manage their own funds. The course includes a term-long project where students work in teams (4-5 students per team) to write a business plan for a venture of the team's choosing.

STRAMGT 355. Managing Growing Enterprises. 4 Units.

This course is offered for students who, in the near term, aspire to the management and full or partial ownership of a new or newly-acquired business. The seminar, which is limited to 40 students, has a strong implementation focus, and deals in some depth with certain selected, generic entrepreneurial issues, viewed from the perspective of the owner/manager. Broad utilization is made of case materials, background readings, visiting experts, and role playing. Throughout the course, emphasis is placed on the application of analytical tools to administrative practice.

STRAMGT 356. The Startup Garage: Design. 4 Units.

Startup Garage is an intensive hands-on, project-based course, in which graduate students will apply the concepts of design thinking, engineering, finance, business and organizational skills to design and test new business concepts that address real world needs. Our aspiration is to help teams identify an unmet customer need, design new products or services that meet that need, and develop business models to support the creation and launch of startup products or services. Even those teams that do not successfully launch a venture, or individuals who decide not to move forward, will learn critical, cutting-edge techniques about starting and launching a venture. Collaborative, multi-disciplinary teams will identify and work with users, domain experts, and industry participants to identify and deeply understand customer needs, then proceed to design products or services and a business model to address those needs. Each team will conceive, design, build, and field-test critical aspects of both the product or service and the business model. This course is offered by the Graduate School of Business. It integrates methods from human-centered design, lean startup, and business model planning. The course focuses on developing entrepreneurial skills (using short lectures and in-class exercises) and then applying these skills to specific problems faced by those users identified by the teams. Teams will "get out of the building" and interact directly with users and advisors to develop a deep understanding of the challenges they face and to field test their proposed services, products, and business models.

STRAMGT 359. Aligning Start-ups with their Market. 4 Units.

Most everyone associated with technology start-ups would agree that the most important initial characteristic of a successful endeavor is a compelling vision. The journey from vision to escape velocity is highly dependent on management's ability to translate that vision into a product or service that closely and economically addresses a customer's significant point of pain. Without a tight product market fit, the start-up's offering will not be able to break through the market's gravitational forces which strongly favor existing solutions, resulting in likely failure. With tight product/market fit, it is far more likely the company will achieve repeatable and growing sales success. Conventional wisdom dictates that a start-up launching a new product should focus its energy understanding what the market wants (problem) and then translating that knowledge into an optimal set of product features (solution). This is the ideal strategy if one is attacking a market that already exists. However if the start-up pursues an entirely new market or re-segments an existing market, customers are unlikely to be able to articulate the benefits and features they will need. The approaches required to pursue new or re-segmented markets are radically different from those applied to existing markets. As a result it is not relentless execution and exploitation of a well understood market that will lead to success, but discovery of a new market or segment that is in need of the product as envisioned. If done well, this process of finding the optimal product/market fit has a disproportionate impact on success. Our intention is to create a course that explores the many issues associated with optimizing product/market fit. Two group papers comprise 50% of a student's grade with class participation representing the remainder. STRAMGT 353 is recommended prior to taking this course.

STRAMGT 365. Strategic Decision Making. 4 Units.

This compressed course concerns the analysis of strategic decision-making, with an emphasis on the process of "big stakes" analysis in complex corporate settings. The first week is devoted primarily to the tools of this process and to coping with (strategic) unawareness (especially in competitive situations). The second week is devoted primarily to "learning by doing," as we apply the tools developed in the first week to real-life problems. The overall objective of the course is to develop the student's working knowledge of these techniques, so the student can fruitfully apply these techniques on his/her own. The course may be taken as a two-unit compressed course by signing up for STRAMGT 565 and participating in the first week only. Alternately, students may sign up for both weeks, by registering for STRAMGT 365. Students who sign up initially for STRAMGT 565 will be able to decide late in week 1 whether to continue into week 2 (in effect, these students will have the registration changed from 565 to 365). Note that, in the registration process, students who rank STRAMGT 365 will have a greater chance of getting a spot than students ranking STRAMGT 565. (It will not be possible to change in midstream from 365 to 565, i.e., to drop the second week). Students will be expected to do approximately 90 minutes of work outside of class each day both weeks. A group project will be the main work product in the second week. The course will be taught jointly by Carl Spetzler, Chairman, Strategic Decisions Group and Professor Yossi Feinberg.

STRAMGT 366. The Startup Garage: Testing and Launch. 4 Units.

Teams that concluded at the end of the fall quarter that their preliminary product or service and business model suggest a path to viability, continue with the winter quarter course. In this course, the teams develop more elaborate versions of their product/service and business model, perform a series of experiments to test the key hypotheses about their product and business model, and prepare and present an investor pitch for a seed round of financing to a panel of seasoned investors and entrepreneurs. The key premise for the course is that a robust venture creation process involves development and validation of a series of hypotheses about a new product or service, its value proposition, and how the business will acquire customers, make money, scale up to achieve profitability, and raise funds to achieve the key milestones to profitability. In Startup Garage: Testing and Launch, teams will learn how to precisely formulate these hypotheses and early stage milestones, and how to test them using one or more of the following low-cost approaches: a) online experiments with minimally viable products; b) interviews with partners, advisors, investors, and business experts; c) analogies from existing businesses that were successful in proving hypotheses that are analogous to what the new startup wants to prove. The course focuses on further developing entrepreneurial skills using the same pedagogical approach used in S356: short lectures, extensive in-class exercises focused on each team's specific projects, and "get out of the building" assignments. Teams will have the opportunity to: "Get out of the building and interact with users, advisors, investors and partners to develop a deep understanding of the challenges they face, to field test their proposed services, products, and business models, and to gather data." Interpret the data and make important startup decisions in the context of their own project: pivot, persevere, or perish. Develop creative go-to-market strategies and test their effectiveness. Develop and deliver in front of real investors an investor pitch, elevator pitch and executive summary. Negotiate term sheets with venture investors. Develop a hiring plan for their first year of operation and consider equity and other compensation plan.

STRAMGT 367. Social Entrepreneurship and Social Innovation. 3 Units.

This course examines individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ "entrepreneurial skills," such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all else. We will study some of the most promising and the best-proven innovations for improving people's lives. We will also examine mature projects that are now tackling the issue of "scale", moving from local innovations to solutions that create deep systemic changes for larger numbers of economically disadvantaged individuals and communities throughout the world. This year we will focus on what are the constraints and opportunities for creating a social enterprise at scale. The process of "scale" poses tremendous challenges. Even when organizations manage to overcome the many obstacles to growth, and achieve appreciable scale, this approach is seldom sufficient to achieve significant social impact on its own. This year our course will pay particular attention to network approaches which require the mobilization of a vast array of actors and resources, but have the potential to generate rapid and sustained social impact.

STRAMGT 368. Strategic Management of Nonprofit Organizations and Social Ventures. 4 Units.

This course seeks to provide a survey of the strategic, governance, and management issues facing a wide range of nonprofit organizations and their executive and board leaders, in the era of venture philanthropy and social entrepreneurship. The students will also be introduced to core managerial issues uniquely defined by this sector such as development/fundraising, investment management, performance management and nonprofit finance. The course also provides an overview of the sector, including its history and economics. Cases involve a range of nonprofits, from smaller, social entrepreneurial to larger, more traditional organizations, including education, social service, environment, health care, religion, NGO's and performing arts. In exploring these issues, this course reinforces the frameworks and concepts of strategic management introduced in the core first year courses. In addition to case discussions, the course employs role plays, study group exercises and many outsider speakers.

STRAMGT 369. Social Entrepreneurship. 4 Units.

This course is about the efforts of private citizens to create effective responses to social needs and innovative solutions to social problems. History is full of examples of this kind of activity, though its character continues to evolve. Social entrepreneurs are increasingly blurring the lines between the sectors, using for-profit and hybrid forms of organization to achieve social objectives. This creates new opportunities for applying business skills in the social sector. Despite its prominence and complexity, this combination of private initiative and public purpose is not well understood. The objectives of this course are: (1) to introduce students to the concepts, practices, and challenges of social entrepreneurship in the United States and around the world; (2) to equip students with frameworks and tools that will help them be more effective in their socially entrepreneurial pursuits, and (3) to engage students in a joint learning process as a better understanding of this emerging field is developed by all in this class.

STRAMGT 371. Strategic Management of Technology and Innovation. 4 Units.

This course focuses on the strategic management of technology-based innovation in the firm. The purpose is to provide students with concepts, frameworks, and experiences that are useful for taking part in the management of innovation processes in the firm. The course examines how they can be managed effectively. Specific topics include: assessing the innovative capabilities of the firm, managing the Corporate R & D function, managing the interfaces between functional groups in the development function in the firm, understanding and managing technical entrepreneurs, building technology-based distinctive competencies and competitive advantages, technological leadership versus followership in competitive strategy, institutionalizing innovation, attracting and keeping corporate entrepreneurs.

STRAMGT 373. Strategic Thinking in Action --- in Business and Beyond. 4 Units.

The seminar's aim is to develop participants' ability to create strategically informed action plans that are imaginative, inspiring and workable in highly dynamic environments. The seminar's pedagogy involves informed debate to evaluate and hone well-researched views by the participants and instructors, as well as the writing and presentation of position papers by small groups of seminar participants on the seminar's focal theme. Andy Grove will continue to participate as co-instructor of the seminar, but at a reduced level. In the course of the seminar discussions, we aim to deepen our understanding of strategic dynamics and transformational change at the societal, industry and organizational levels of analysis. In fall 2010, the focal theme of the seminar will be "The Future Role of Silicon Valley: Prospective Strategic Analyses." Within the overarching theme, we will research four sub-themes. Domain experts for three of the sub-themes have committed to co-leading the related sessions with the instructors (see below). The four sub-themes are: 1. The role of Silicon Valley in the future of the semiconductor industry. George Cogan, Partner at Bain & Company and expert of the semiconductor industry, will co-lead this sub-theme. 2. The role of Silicon Valley in the future of the computer industry. Tien Tzuo, CEO of Zuora Inc. and expert of SaaS and cloud computing, will co-lead this sub-theme. 3. The role of Silicon Valley in the future of the automotive industry. Sven Beiker, Executive Director of the Center for Automotive Research at Stanford - CARS, will co-lead this sub-theme. 4. The role of Silicon Valley in the future of U.S. Employment. Andy Grove will lead this sub-theme. Two seminar sessions will be devoted to each sub-theme. The first session will be led by the instructors. It will involve discussion of reading material and data and focus on refining the key research questions for the sub-theme. The second session (4 weeks later) will be led by the student team carrying out research on that sub-theme. Seminar participants will organize into four teams, each one focused on a sub-theme. Each team will research the forces that are shaping the evolving role of Silicon Valley in relation to their sub-theme, try to assess the implications of that evolution for the future of the U.S. economy, and propose executable recommendations for strengthening Silicon Valley's future role. Each team will be expected to produce a monograph (10-15 pages) presenting and discussing its findings and recommendations, to be handed in at the end of the quarter.

STRAMGT 376. Entrepreneur Leader-Identity Development: A Critical-Incident Approach. 4 Units.

Entrepreneurship can be an exhaustive experience. This course is structured to provide valuable skills and strategies aimed at enabling aspiring entrepreneurs to mitigate personal burnout while in pursuit of new ventures. In terms of this course, an entrepreneur is defined as a person who risks mobilizing resources to capitalize on a perceived opportunity of value-creation-change. A "social entrepreneur" creates social value, a "business entrepreneur" creates profit, and a "hybrid entrepreneur" blends the two. This course will tailor student's class work to fit his or her entrepreneurial orientation. Students who opt to focus their coursework on social or environmental entrepreneurship may petition to have this course count toward the Certificate in Public Management and Social Innovation. Research is showing that a significant career hazard of entrepreneurship is emotional burnout- exhaustion from raising capital, growing new teams, competing with established players, and more contributes to the challenges of entrepreneurship. The goal of this course is to teach students how to identify and develop an increased capacity in emotional resilience as a means of mitigating burnout in oneself and in the diverse "community of actors" one is attempting to mobilize into concerted action aimed at value-creation-change. Research is also showing that one of the key causes of chronic stress is leader-identity development: when men and women of diverse-identities - different from the dominant-identity, engage in value-creation-change within a given community of practice and context, chronic adversity is a given. The effort of diverse-identities to lead value-creation-change introduces a chronic re-evaluation and re-definition of 'leader' within the given culture. From a global perspective this chronic adversity dynamic is especially true for women leaders. For men and women of diverse-identity, this dynamic is a consequence of power inequity. Both the diverse-identity and dominant-identity leader need to strategically anticipate and proactively address this dynamic in order to sustain his or her role as an agent of value-creation-change. Using the "critical-incident empathetic-inquiry" approach students will interview aspiring and practicing entrepreneurs on how they successfully recovered from, adapted to, and sustained perseverance in the face of situational and chronic adversity. These interviews will be recorded and analyzed from both a content and emotional decision-making perspective. Particular attention will be paid to how the practice of "empathetic-inquiry" in itself is a learnable micro-intervention with the potential of alleviating stress, supporting recovery, and sustaining effort. It is presented, taught, and practiced as a fundamental "emotional literacy" entrepreneur leadership skill. From a diversity perspective, students will also be exploring how unsupported leader-identity development within a given cultural context and community of practice can be a major cause of stress and burnout. Via the "critical-incident empathetic inquiry" process students will focus on interviewing and learning from "exemplars" with whom they identify, with the aim of learning from "exemplar's" personal leader-identity journey. This course enables students to be practitioners of "empathetic inquiry" in entrepreneurial contexts in order to provide an added advantage to GSB students pursuing entrepreneurship after graduation and beyond.

STRAMGT 378. Strategic Leadership of Nonprofits. 4 Units.

Formulating, evaluating, and implementing mission and strategy. Case studies from nonprofits in social services, health care, education, and arts and culture. The interaction of strategy and mission, industry structure and evolution, strategic change, growth and replication, corporate strategy, governance, commercialization, alliances, capacity building, and leadership. Same as: EDUC 377D.

STRAMGT 381. Leading Strategic Change in the Health Care Industry. 3 Units.

This seminar provides the opportunity for students to study the structure and dynamics of the U.S. health care industry, and some of the ways it intersects with the global health care industry. The U.S. health care industry represents over 15 percent of the nation's GDP and is rapidly changing as a result of government regulatory reform enacted in 2010. The seminar's aim is to develop participants' ability to create strategically informed action plans that are imaginative, inspiring and workable in this highly dynamic environment. The seminar's pedagogy involves informed debate to evaluate and hone well-researched views by the participants and instructors, as well as the writing and presentation of position papers by small groups of seminar participants on the key dynamics of the industry. In the course of the seminar discussions, we aim to deepen our understanding of strategic dynamics and transformational change at the societal, industry and organizational levels of analysis. After developing a complete picture of the structure of the health care industry and the strategic relationships among the key players - the strategic landscape -, the seminar will focus on how health care reform and other external forces will affect the strategic opportunities and challenges of four types of players in the strategic landscape: (1) Incumbents (e.g., pharmaceutical companies, hospital companies, insurance companies); (2) entrepreneurial startups (e.g., home monitoring, genetic testing companies, information services); (3) cross-boundary disruptors (e.g., health clinics, Wal-Mart, Cisco, Google); and (4) international health care providers (e.g. in Mexico, India, Thailand) Four student teams will be formed to focus on one of the four types of players. Each team will prepare a research paper focused on determining how their type of player can take advantage of the regulatory, technological, social, cultural and demographic changes, and who will be the likely winners and why. During the first round of discussions (sessions 2-5) all participants will take part in examining the different parts of the competitive landscape. During the second round (sessions 6-9), the different teams will present their research findings and perspectives about the strategic opportunities and threats which exist. As part of the second set of sessions, the instructors will bring in domain experts to further augment the discussion.

STRAMGT 508. Entrepreneurship from the Perspective of Women. 2 Units.

There are now over a dozen courses taught on entrepreneurship at the GSB. These courses cover a wide range of topics of interest to the budding entrepreneur and venture capitalists. But what unique challenges do women face when approaching entrepreneurship? This seminar will showcase successful women entrepreneurs and the challenges they encountered in funding, communication styles, lifestyle balance, and paths to success. We will do so with mini-cases, panel discussions, readings, and some social time with experienced entrepreneurs. Men are also welcome to enroll.

STRAMGT 512. The Yin and Yang of Family Business Transitions. 2 Units.

This seminar provides students with practical solutions to some of the challenges faced in family business transitions. Family businesses are by far the dominant form of commerce world-wide, albeit the majority are small "mom and pop shops." Some research shows that large businesses, whatever the form of ownership, have an average lifespan of around forty years, while small businesses (at least in Japan and Europe) average around twelve years. So, if businesses in general do not survive, then it is a wonder that any family business can survive from one generation to another, let alone two, three, four or more. There are three essential requirements to succeed in a family business transition. First, it may seem obvious that the business must succeed, but it is less obvious what advantages a family business has over its non-family-owned counterparts. Second, the ownership structure must effectively maintain family cohesion and support the business. Finally, family members need to organize in thoughtful ways to work effectively with one another. The beauty of a family business is that it can be more profitable than companies with non-family ownership. Two fundamentals, at least, provide this advantage - a strong value system and a long-term economic perspective. The operative word above, however, is "can"; it is by no means a foregone conclusion that a family business will be more successful. Families must thoughtfully develop their advantages, while at the same time avoiding the pitfalls inherent in any family business. Accordingly, this course is offered for students whose families own a family business or who are interested in the special challenges faced by family businesses. International students are encouraged to register as different cultural perspectives to family business will enrich the experience for everyone. Particular focus will be given to the transitions from one generation to another and the lessons learned that can be applied during the entire life of the business.

STRAMGT 513. New Venture Pitch Workshop. 2 Units.

This workshop provides students with a forum through which they can develop and receive feedback on a new venture idea. Class time will be devoted to understanding how to improve the viability of a new venture idea and how to present that idea clearly to others. At the course conclusion, students will present their idea to others in the class and outside guests. The workshop can handle up to 15 ideas or teams; you may develop your own idea and pitch, or partner with other students. You must have your team formed before registering for the course. Note: students should be pitching ideas that are at an EARLY stage, ones that have not been pitched previously or are existing businesses.

STRAMGT 514. The Improvisational Entrepreneur. 1 Unit.

Improvisational acting (i.e., improv) requires fast, flexible, and creative thinking; intense listening and effective self-presentation; and the ability to act without fear of failure. These skills are also vital for being a successful entrepreneur. In this class, you will learn techniques of improvisational acting that can transform your thinking about business and your approach to life.

STRAMGT 516. Fundamentals of Effective Selling. 2 Units.

The primary objective of this course is to introduce students to the fundamentals of how to sell and to what selling is truly about. The course is appropriate for anyone who wants to understand and show proficiency with the skills required by different selling situations (e.g., direct sales of products and services, selling oneself in an interview, raising money for a new venture, running a company as CEO, etc.). The course looks at the entire selling process of lead generation, prospecting, qualifying, discovery, understanding value, customizing presentations, objection handling, negotiation and closing. Students will work together in groups outside of class to complete team-based exercises designed to introduce them to and give them practice with selling fundamentals in each stage of the selling process; students will then come together in class with the instructors to share and process the learning from these exercises.

STRAMGT 524. Strategy Implementation. 2 Units.

The seminar is built around five company visits to some of the most innovative firms in Silicon Valley. We visit their location, meet with mid-level managers who are encouraged to engage us in candid conversation about the challenges facing the company, and the challenges they personally face on a daily basis to implement their firm's strategy. Key questions include: What is the role, if any, of middle-managers in helping to formulate strategy? How is the strategy communicated to employees? In what circumstances do middle-managers explicitly invoke the strategy, if at all? What role do middle-managers play in strategic change? Do you distinguish financial and strategic health in your business? If so, do you quantify strategic health? How important is culture to the company's success and how do you reinforce this? What challenges have you faced in managing growth and organizational change at your company? What are the challenges to managing innovation in your company? The seminar will be particularly useful to students interested in strategy consulting or line management positions where you will participate in the strategy process, or any kind of implementation role. Each day we will spend time in class before each company visit to discuss a reading, the company background, and share reactions to the day's visit (this is an especially important aspect of the experience). In the past we have visited: Apple, Cisco, Facebook, Google, Ideo, Tesla and Yahoo!, among others. We plan to organize the same or similar visits this year.

STRAMGT 526. Managing to Outcomes in Government, Education, and Nonprofit Organizations. 2 Units.

This course focuses on actionable measurement in government agencies, non-profit organizations, and schools. Actionable means that the measurement is used by managers and other stakeholders to make decisions, influence behavior, and hold agents accountable. The course explores the intersection of several ideas that seem to be in some tension with each other. (1) You can't manage what you can't measure, (2) Measurement is expensive and its results are often ignored, (3) Not everything that counts can be counted and not everything that can be counted counts (apocryphally attributed to Einstein), (4) The more any quantitative social indicator is used for decision making, the more subject it will be to corruption pressures and the more apt it will be to distort and corrupt the social processes it is intended to monitor. (Campbell's Law). Among other things, we will consider logic models, theories of change, strategic design, monitoring and evaluation, social impact measures, performance contracting, and techniques for improving the behavior and accountability of individuals and organizations. The classes will be taught mainly through case studies that place the students in the position of managers and stakeholders called upon to make decisions. We will examine the challenges of managing to outcomes in various contexts, including government agencies (e.g., police departments), nonprofit organizations, and schools. We will also look at innovative funding vehicles that depend on measuring outcomes, such conditional and unconditional cash transfers, pay for performance schemes, and social impact bonds.

STRAMGT 535. Entrepreneurial Approaches to Education Reform. 2 Units.

This course will investigate the ways in which entrepreneurs have and could transform K-12 public schooling in the United States, a \$650 billion dollar industry that has a direct and long-term effect on nation's economy, democracy and culture. We will explore how human capital solutions, new schools, and technology products can all dramatically improve student learning and solve pain points. We will study a variety of ways to evaluate the efficacy, scalability, and financial sustainability of entrepreneurial enterprises serving students, families, educators and administrators in public education. The course will feature for-profit, not-for-profit, as well as double-bottom-line organizations. This course is suitable for students aspiring to be entrepreneurs, leaders in entrepreneurial organizations, leaders in educational organizations, donors or investors. Gloria Lee is a serial education entrepreneur who co-founded Aspire Public Schools, Teaching Channel, and Yu Ming Charter School. She is currently Chief Operating Officer at NewSchools Venture Fund. This course was designed to be taken in tandem with STRAMGT 537: Leading Change in Public Education and the courses will be highly complementary in approach.

STRAMGT 537. Leading Change in Public Education. 2 Units.

American public education is in crisis. What will it take to get it back on track? As in all large-scale enterprises in need of transformative change, leadership matters greatly. This course focuses on what it takes to lead change from a strategic and extremely practical perspective to lead change in public education at the systems level. We will meet some of the most exciting educational leaders in public education today and dissect their leadership styles, strategies, innovations and solutions. We will look for lessons from traditional U.S. districts, successful charter management organizations, and international perspectives to determine what it takes to be an effective leader in education reform. Students will debate the strategies and efficacy of how different leaders approached systems-level change, and will form their own working hypotheses of what is needed to help transform the American education system. The course will end with a look at education fellowship programs and other ways for Stanford graduates to take on meaningful leadership roles in K-12 education reform. Dan Katzir worked for Bain & Company, Teach for America, and Sylvan Learning Systems before joining The Broad Foundation as its founding managing director. He is an experienced case study teacher and the editor of *The Redesign of Urban School Systems* (Harvard University Press, 2013). This course was designed to be taken in tandem with STRAMGT 535: Entrepreneurial Approaches to Education Reform and the courses will be highly complementary in approach.

STRAMGT 542. Entrepreneurial Investing in Health Care. 1 Unit.

Investing in the healthcare sector is fraught with idiosyncratic challenges. First, the sector is very diverse and it spans biopharmaceuticals, medical devices, diagnostics, health care information technology, and health care services. Second, business models are evolving: business-to-business, business-to-physician, business-to-patient, business-to-business-to-patient, business-to-business-to-physician, etc. Third, the sector is exposed to strong non-market forces: regulatory and reimbursement which are important elements to one's investment thesis. These challenges are amplified when investments focus on either early stage private ventures, or small capitalization public companies. Yet the possible returns for early stage and small cap investors are significant: fledgling healthcare companies can grow to multi-billion business and can have a long and lasting impact on people's life and well being. Topics to examine in the seminar include:
 * Investment criteria that investors use to screen investment opportunities in this sector. Specific issues in biotech, medical devices, and services will be addressed.
 * How early stage ventures evolve as they mature and how the investment criteria change with the stage of the company
 * How the investors change with the stage of the company: venture capitalists, private equity, public markets.
 We will examine these topics through a combination of guest presentations, lectures, and practical applications to real investment opportunities.
 Instructors: Richard Lin, Stefanos Zenios
 Richard Lin is a partner with Three Arch Partners, a healthcare focused venture capital firm and is also the general partner/portfolio manager of Three Arch Opportunity Fund, a hedge fund focused on small cap healthcare opportunities. He is looking forward to sharing his experience with the class. Stefanos Zenios is a professor at the GSB, an expert on health care systems and the on the innovation process. He has recently completed a study in which he has developed a data-driven methodology that can be used by investors to identify predictors of success in early stage ventures. He will share his research findings with the class.

STRAMGT 543. Entrepreneurial Acquisition. 2 Units.

For aspiring entrepreneurs who don't have a burning idea or desire to start a company from scratch, acquiring a small business can provide a direct route to running and growing a business. This class will explore entrepreneurial acquisition (EA), including the Search Fund model. Key topics to be addressed:
 - Raising the money to acquire a company and building an investor group
 - Conducting a search for a company to buy: analyzing industries, finding resources, creating deal flow and managing relationships
 - Evaluating acquisition opportunities, including financial analysis
 - Performing due diligenc
 - Legal considerations
 - Structuring and closing the deal
 - Assuming leadership from the seller
 - Early stages of operating and building the business
 - Economics to the entrepreneur and investors
 - Partnering or doing it alone.

STRAMGT 546. Small Business Strategy. 1 Unit.

We will visit and analyze four local small businesses. (I hope we will visit all four companies but, when it makes more sense logistically, we may meet the manager at the GSB). The companies will vary from very small companies with limited growth plans (for example, in the past we visited a yogurt shop and a small company that makes devices elderly people use to call for help) to start-up technology companies with dreams of rapid growth (in the past we visited a venture-backed greentech company and an internet wedding products business). We will talk with the owners about a wide range of strategic issues, including:

- nn- How are they organized?
- nn- What plans do they have for new lines of business? Why? How do these fit with the current business?
- nn- How do they set prices?
- nn- What incentive systems do they use to manage various types of employees? How do they find new employees? What do they look for when they hire?
- nn- What do they see as their potential sources of competitive advantage?
- nn- Where do they see their companies in 5 years? What will it take to get there?

nnnBefore each meeting, we will spend a little time going over basic background information about the company and its industry. After each meeting, we will spend time analyzing the company and its challenges, focusing on what is and is not scalable, if and how the company can insure a profitable strategy going forward, and what strategic changes the company should consider now and as it grows.

nnnStudents will be responsible for helping gather background information before the visits. They will be expected to participate in the visits and the discussions before and after the visits. Finally, if time allows, students will make a short presentation on the final day of the class about the strategy of a small business (either one they have worked for, one that they are familiar with, or even just one that they have read about.)

nnnThis class is the result of a book project that the instructor is currently working on about small business strategy. He (along with two co-authors) has been visiting small businesses all over the United States (specializing in remote locations and, as luck would have it, extreme weather conditions.) See our blog at <http://www.roadside-mba.com/> for more details. This class brings these small business road trips to Silicon Valley.

STRAMGT 552. Angel And Venture Capital: Financing and Decision-Making. 1 Unit.

This course covers some of the stages of investment in early stage high-growth companies, especially the seed funding of a novel idea to initial venture capital rounds. We will concentrate on how investors and entrepreneurs make and should make important decisions at different stages and on typical mistakes. Some questions that we will discuss are: How do angels and VCs generate and process their deal flow and select companies? What are typical mistakes of entrepreneurs in raising capital and negotiating with financiers? How do VC funds operate and make decisions? How are VCs involved in business decisions such as recruiting talent and replacing CEOs? What are the important provisions of financial contracts between VCs and founders? How to value early-stage companies? The course is mostly case-based. The course is for those who want to become entrepreneurs and thus likely consumers of angel and VC financing and those who want to pursue a career in the financial services industry. No prior knowledge of the VC industry is needed.

STRAMGT 554. Entrepreneurship and Venture Capital. 2 Units.

This new course, STRAMGT 554, is a two unit version of the popular course, STRAMGT 354: Entrepreneurship and Venture Capital. Many of America's most successful entrepreneurial companies have been substantially influenced and supported by professionally managed venture capital funds. This relationship is examined from both the entrepreneur's and the venture capitalist's perspective. From the point of view of the entrepreneur, the course considers how significant and global business opportunities are identified, planned, and built into real companies; how resources are matched with opportunity; and how, within this framework, entrepreneurs seek capital and other assistance from venture capitalists, angel investors or other sources. From the point of view of the venture capitalist, the course considers how potential entrepreneurial investments are evaluated, valued, structured, and enhanced; how different venture capital strategies are deployed; and how venture capitalists raise and manage their own funds and add value to their companies.

nnnThis course represents a shorter, more intense version of STRAMGT 354 - Entrepreneurship and Venture Capital. Students should not take both courses, as there is considerable overlap in course content.

STRAMGT 562. Intellectual Property: Financial and Strategic Management. 1 Unit.

In today's competitive marketplace, smart companies from Fortune 500 firms to early stage start-ups rely on innovation to keep them one step ahead of the game. The role of intellectual property (IP) as a strategic business asset has been punctuated by the recent multi-billion dollar deals involving patent portfolios, as well as the fierce patent wars raging in courts around the world.

nnThis class will help you understand the value of IP, by thinking strategically about how to effectively leverage the trade secrets, patents, technologies, trademarks, structures and processes that are critical to many businesses. The class will focus on the state-of-the-art, best practices related to IP strategy, and how they are shaped by economic, strategic, legal, regulatory, and market factors.

nnThrough a combination of case studies, class discussion and guest speakers, the class will cover a variety of issues shaping a successful IP strategy in today's global marketplace. Some of the topics we will cover include:

- n- Building and managing an IP portfolio that is aligned with business objectives;
- n- The innovation cycle and technology transfer mechanisms;
- n- Extracting value from the IP portfolio through transactions (e.g., licensing, sale, enforcement);
- n- IP valuation in financial reporting;
- n- Tax planning related to IP (e.g., cross border transfer pricing, IP holding companies);
- n- Review of corporate IP litigation and the principals of IP damages;
- n- Patent reform and the role of the U.S. Patent & Trademark Office (USPTO);
- n- IP strategies for start-ups & entrepreneurs

nnRon Kasznik is Professor of Accounting (Stanford GSB). Ms. Efrat Kasznik is an IP valuation and strategy expert, with 20 years of consulting experience, focusing on helping companies bring their innovation to market. She is the founder and President of Foresight Valuation Group, an IP consulting firm providing valuation and strategy. Ms. Kasznik is a member of the leadership committee of the Licensing Executives Society (LES) High Tech Sector, and has been listed on the IAM Strategy 300 list of top IP strategists in 2013.

STRAMGT 565. Strategic Decision Making. 2 Units.

This compressed course concerns the analysis of strategic decision-making, with an emphasis on the process of "big stakes" analysis in complex corporate settings. The first week is devoted primarily to the tools of this process and to coping with (strategic) unawareness (especially in competitive situations). The second week is devoted primarily to "learning by doing," as we apply the tools developed in the first week to real-life problems. The overall objective of the course is to develop the student's working knowledge of these techniques, so the student can fruitfully apply these techniques on his/her own. The course may be taken as a two-unit compressed course by signing up for STRAMGT 565 and participating in the first week only. Alternately, students may sign up for both weeks, by registering for STRAMGT 365. Students who sign up initially for STRAMGT 565 will be able to decide late in week 1 whether to continue into week 2 (in effect, these students will have the registration changed from 565 to 365). Note that, in the registration process, students who rank STRAMGT 365 will have a greater chance of getting a spot than students ranking STRAMGT 565. (It will not be possible to change in midstream from 365 to 565, i.e., to drop the second week.) Students will be expected to do approximately 90 minutes of work outside of class each day both weeks. A group project will be the main work product in the second week. The course will be taught jointly by Carl Spetzler, Chairman, Strategic Decisions Group and Professor Yossi Feinberg.

STRAMGT 567. Social Entrepreneurship and Social Innovation. 2 Units.

This course examines individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ "entrepreneurial skills," such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all else. We will study some of the most promising and the best-proven innovations for improving people's lives. We will also examine mature projects that are now tackling the issue of "scale", moving from local innovations to solutions that create deep systemic changes for larger numbers of economically disadvantaged individuals and communities throughout the world. This year we will focus on what are the constraints and opportunities for creating a social enterprise at scale. The process of "scale" poses tremendous challenges. Even when organizations manage to overcome the many obstacles to growth, and achieve appreciable scale, this approach is seldom sufficient to achieve significant social impact on its own. This year our course will pay particular attention to network approaches which require the mobilization of a vast array of actors and resources, but have the potential to generate rapid and sustained social impact.

STRAMGT 573. Strategic Thinking in Action - In Business & Beyond: Evolution of the Global Semiconductor Industry. 2 Units.

This five-session 2-point Bass seminar will involve students (maximum 20) in analyzing the evolution of the global semiconductor industry and how it has been and will be affected by strategic actions of entrepreneurial startups, incumbent corporations, and governments in multiple geographies. The purpose of the seminar is to help students sharpen their skills at the intersection of business strategy and technology strategy in order to more effectively lead strategic change in and of large complex systems. While the instructors will provide relevant pre-readings, students will be expected to complement these materials with their own research of theoretical and empirical sources. Class discussions will focus on several topics: (1) the converging computing and wireless communications industries; (2) The future growth of key market segments of the semiconductor industry; (3) The prospects of different technologies and architectures going forward; and, (4) The future structure of the semiconductor industry. Students will be expected to help structure the discussion and move it forward toward conclusions. Students will organize into three teams each focused on one of the topics and prepare a five-to-ten page group report of their most important findings and conclusions that extend current knowledge.

STRAMGT 574. Strategic Thinking in Action - In Business and Beyond. 2 Units.

This five-session 2-point Bass seminar will involve students (maximum 18) in analyzing the emerging global electric automotive industry by focusing on: (1) The electric automotive industry in the U.S. and Europe, (2) the electric automotive industry in Japan and Korea, and (3) the electric automotive industry in China. We will each time examine the strategies of the key automotive companies as well as that of the government and other key players such as infrastructure providers. The purpose of the seminar is to help students sharpen their skills in identifying facilitating and impeding forces of strategic change, and in assessing and estimating the direction and rate of strategic change. While the instructors will provide relevant pre-readings related to these topics, students will be expected to complement these materials with their own research of theoretical and empirical sources. They will also be expected to help structure the discussion and move it forward toward conclusions. Students will organize into three teams each focused on one of the regions and prepare a five-to-ten page group report of their most important findings and conclusions that extend current knowledge.

Same as: II.

STRAMGT 577. Strategic Interactions. 1 Unit.

This course will cover advanced game theoretical tools by studying applications to competitive and cooperative interactions. Game theory provides an analytical method for modeling decision makers, their actions, preferences, information, dynamics and decision making process. Complex strategic environments usually do not yield themselves to a simple game structure, hence this course will be based on cases suggested by the students. Students will suggest a case (in the form of an industry, a specific interaction, a topic, etc.) the class will then jointly analyze the selected cases.

STRAMGT 583. The Challenges in/with China. 2 Units.

This course is designed to provide students with a solid grasp of the socio-economic, business and political situation in China (with its challenges for China, the rest of the world and the planet). It will identify the multicausality conducive to the achievements and the performance of China (a "Chinese Renaissance") while assessing some of the important issues faced by China today. The dysfunctions brought by success will be discussed with their implications for foreign partners operating in China. Learning will be drawn from recent examples of corporate behavior in China and from Chinese strategies outside China. From the course and with a prospective perspective - we will explore alternative strategic approaches and responsible management practices likely to make less difficult the maintenance of a sustainable, mutually rewarding interdependence between China and the rest of the world. The course will rely upon different pedagogical methods and use a number of recent cases and research results. This course will be taught by Henri-Claude de BETTIGNIES, The Aviva Chair of Leadership and Responsibility, Emeritus Professor of Asian Business at INSEAD. He is also Distinguished Professor of Globally Responsible Leadership, Emeritus, at the China Europe International Business School (CEIBS), in Shanghai, where he has spent the last 5 years. Previously, he was for 16 years (1988-2004) Visiting Professor at the GSB, Stanford University.

STRAMGT 584. New Business Models in the Developing World. 2 Units.

In recent years, we've seen an explosion of innovative business models blazing new trails in emerging markets. Many of these models are achieving commercial success while transforming the lives of the poor. Using ten cases and drawing on the investor's lens, this course will examine best practices for seeding and scaling these new enterprises. It will also explore what is required to spark, nurture and scale entire sectors targeting fast-growing, often low-income markets. What does it mean to work in markets with limited infrastructure? What common mistakes are made- whether in business design, in supply chains, or in dealing with government - and how can we avoid them? Which are the right business models to serve markets that have traditionally been ignored by corporations, and where government has failed to deliver? Who might be threatened by the success of these new businesses? The seminar is a good match for Stanford students interested in working or investing in emerging markets. It will be taught by Matt Bannick, who leads Omidyar Network (a \$550m impact investing fund) and is the former President of eBay International and of PayPal.

STRAMGT 585. International Business. 2 Units.

This course addresses key issues in the creation and implementation of company strategies in the international environment: Why and how do firms internationalize? How should a firm assess the opportunities and risks in a foreign environment? What are the competences a firm needs successfully to enter foreign markets, where it faces unfamiliar environments and entrenched local competitors? How does a firm balance risk and return in deciding the best mode of foreign market entry? What are the strategic options available to a firm in competing internationally? How do international firms organize to deal with complexity? The course is in two parts, which are closely linked. The first is concerned with the strategy and operations of international firm, focusing on how corporations overcome the challenges of foreign environments to expand globally. This section covers foreign market assessment (analyzing the business opportunities and investment climate in a foreign country) and foreign entry strategy, including the alternatives of exporting, licensing, greenfield foreign direct investment or cross-border M&A. We look at trade-offs firms face between global or regional operating economies, on the one hand, and responsiveness to local customers, on the other, leading them to adopt global versus multi-local strategies. In the second part, we consider the development and adaptation of competences in the face of international competition. This section concerns the operational processes and organization structures firms use to support their international strategies. These include the generation and diffusion of knowledge across the corporate network, and the role of innovation and leadership in the transformation of international companies. The course uses a combination of case studies, problems, lectures and discussion, over a variety of companies and countries. Country settings include Japan, Spain, Italy, Singapore, India, Brazil, Romania, China, and the US. Companies may include P&G, Singapore Airlines, Timken, Indesit, HP, Inditex (Zara), Arcor and others.

STRAMGT 586. New World Global Business. 2 Units.

This elective is concerned with two themes: nnn1. The strategies and competitive basis of new business challengers-- enterprises based in the countries of the "New World" of rapidly developing economies, including China, India, Brazil and Russia, Mexico, Indonesia and Turkey; nnn2. How companies based in the developed world can compete with the challengers.nnnThe rapidly developing economies are the home bases for highly competitive new firms which have employed novel and successful business models to gain significant stakes in domestic markets. Their home economies have been, to varying degrees, less affected than the mature economies by the global financial crisis and their firms have been able to continue remarkable domestic growth trajectories. Further, many of these firms are outwardly focused and rapidly gaining positions in the developed world, where they are challenging the interests of developed world multinationals. For global incumbents, it is critical to understand the strategies of the new challengers and how to compete with them. nnnThe focus of the course will be on these New World firms, with the aim of understanding the strategies and competences they are deploying in their successful expansion. Integral to their developing global competences is the role of disruptive innovation, addressing under-served markets, and exploiting institutional distance in establishing competitive positions in the home base. Yet it is not clear to what extent these competences can be successfully translated into more developed markets. The course will address strategies multinationals based in the developed world can adopt to counter the new challengers and succeed in their home markets, as well as in the home markets of these challengers.nnnThe course will be taught with newly developed case studies written for this and related courses. The cases provide insight into the strategies of New World companies, how companies from the developed world can address the opportunities and risks in New World countries and use them as platforms for expansion.nnnThe following are examples of companies which will be included:nnnNatura - Exporting Brazilian Beauty, BrazilnnLenovo: Managing a Global Merger, ChinannHaier: Taking a Chinese Company Global, ChinannInfosys Technologies Ltd.: Looking to the Future, IndiannTNK-BP: Russian Oil and Foreign Interests, RussiannSamsung Electronics: Global Flash Memory Business, KoreannArcor: The Challenge of Becoming a Global Competitor, ArgentinannMetro Cash & Carry, Russia, India, ChinannMonsanto: Realizing Biotech Value in Brazil, Brazil, USnnArcelik's International Expansion, TurkeynnStudio Moderna in Eastern Europe, Slovenia.

STRAMGT 587. Strategy and Management in Developing Economies. 1 Unit.

An important channel for economic development, and the progress of poverty alleviation, is to drive productivity improvements and growth among firms in developing countries. Yet scaling firms in environments characterized by extreme poverty, weak institutions and high levels of inequality poses severe challenges. This seminar will explore the issues facing firms in such environments, including the strategic challenges the firms face as well as the challenges involved in improving managerial practices. Many of the issues and potential solutions to these problems are poorly understood, and the goal of the seminar will be to deepen everyone's understanding of the challenges, as well as brainstorm about potential solutions. This will be an interactive seminar, based on readings and/or guest speakers, with students expected to engage in active discussion of the materials.

STRAMGT 691. PhD Directed Reading. 1-15 Unit.

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, OIT 691, POLECON 691.

STRAMGT 692. PhD Dissertation Research. 1-15 Unit.

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, OIT 692, POLECON 692.

STRAMGT 802. TGR Dissertation. 0 Units.

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, OIT 802, POLECON 802.

Structural Biology Courses

SBIO 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

SBIO 225. Bio-chips, Imaging and Nanomedicine. 3 Units.

The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-therapies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies.

Same as: EE 225, MATSCI 382.

SBIO 228. Computational Structural Biology. 3 Units.

Interatomic forces and interactions such as electrostatics and hydrophobicity, and protein structure in terms of amino acid properties, local chain conformation, secondary structure, domains, and families of folds. How protein motion can be simulated. Bioinformatics introduced in terms of methods that compare proteins via their amino acid sequences and their three-dimensional structures. Structure prediction via simple comparative modeling. How to detect and model remote homologues. Predicting the structure of a protein from knowledge of its amino acid sequence. Via Internet.

Same as: BIOPHYS 228.

SBIO 241. Biological Macromolecules. 3-5 Units.

The physical and chemical basis of macromolecular function. Topics include: forces that stabilize macromolecular structure and their complexes; thermodynamics and statistical mechanics of macromolecular folding, binding, and allostery; diffusional processes; kinetics of enzymatic processes; the relationship of these principles to practical application in experimental design and interpretation. The class emphasizes interactive learning, and is divided equally among lectures, in-class group problem solving, and discussion of current and classical literature. Enrollment limited to 50. Prerequisites: Background in biochemistry and physical chemistry recommended but material available for those with deficiency in these areas; undergraduates with consent of instructor only.

Same as: BIOC 241, BIOPHYS 241.

SBIO 242. Methods in Molecular Biophysics. 3 Units.

Experimental methods in molecular biophysics from theoretical and practical standpoints. Emphasis is on X-ray diffraction, nuclear magnetic resonance, and fluorescence spectroscopy. Prerequisite: physical chemistry or consent of instructor.

Same as: BIOPHYS 242.

SBIO 274. Topics in Nucleic Acid Structure and Function. 2 Units.

Principles of nucleic acid structure and function. Methods for investigating nucleic acid structure. Limited to graduate students and postdoctoral fellows in structural biology. Prerequisite: consent of instructor.

SBIO 299. Directed Reading in Structural Biology. 1-18 Unit.

Prerequisite: consent of instructor.

SBIO 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

SBIO 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

SBIO 801. TGR Project. 0 Units.**SBIO 802. TGR Dissertation. 0 Units.**

Structured Liberal Education Courses

SLE 91. Structured Liberal Education. 8 Units.

Three quarter sequence; restricted to and required of SLE students. Comprehensive study of the intellectual foundations of the western tradition in dialogue with eastern, indigenous, and postcolonial perspectives. The cultural foundations of western civilization in ancient Greece, Rome, and the Middle East, with attention to Buddhist and Hindu counterparts and the questions these traditions address in common. Texts and authors include Homer, Plato, Aristotle, Greek tragedy, Sappho, the Hebrew Bible, the New Testament, Saint Augustine, and texts from Hindu and Buddhist traditions.

SLE 92. Structured Liberal Education. 8 Units.

Three quarter sequence; restricted to and required of SLE students. Comprehensive study of the intellectual foundations of the western tradition in dialogue with eastern, indigenous, and postcolonial perspectives. The foundations of the modern world, from late antiquity through the Middle Ages, the Renaissance, the Enlightenment, and the Scientific Revolution. Authors include Dante, Descartes, Shakespeare, and texts from Chinese and Islamic traditions.

SLE 93. Structured Liberal Education. 8 Units.

Three quarter sequence; restricted to and required of SLE students. Comprehensive study of the intellectual foundations of the western tradition in dialogue with eastern, indigenous, and postcolonial perspectives. Modernity as a period in intellectual history and a problem in the human sciences. Authors include Marx, Nietzsche, Freud, Kafka, Woolf, Eliot, and Sartre.

SLE 199. Teaching SLE. 1 Unit.**SLE 299. Structured Liberal Education Capstone Seminar. 1 Unit.**

Senior capstone project for students who were enrolled in SLE their freshman year.

Surgery Courses

SURG 60Q. Virtual to Real: Fundamentals of Human Anatomy. 3 Units.

Advances in imaging technologies allow us to interact with anatomical information in ways that have not been previously possible. This course is designed to teach human anatomy through the interpretation of radiographs and CT scans, and the correlation of these images to real anatomy. Utilizes resources such as virtual interactive scans via the virtual anatomy table and interactive digital applications to aid students in developing their image interpretive skills. First six weeks focus on image interpretation and the remaining four weeks on the utilization of this knowledge in the understanding and identification of human anatomy on human prosecutions (cadaver material).

SURG 68Q. Current Concepts in Transplantation. 3 Units.

Preference to sophomores. Biological aspects of cell and organ transplantation, including issues that arise in the popular media. Diseases for which transplantation is a treatment, the state of the art in human transplantation, transplantation of animal tissue into humans (xenotransplantation), development of new tissue and organs in the laboratory (tissue engineering and cloning), and development of drugs and biological strategies to promote long-term survival of the tissue or organ (tolerance). How to write a scientific abstract, critique scientific literature, and research and present topics in contemporary transplantation.

SURG 70Q. Surgical Anatomy of the Hand: From Rodin to Reconstruction. 2 Units.

The surgical anatomy of the hand is extremely complex in terms of structure and function. Exploration of the anatomy of the hand in different contexts: its representation in art forms, the historical development of the study of hand anatomy, current operative techniques for reconstruction, advances in tissue engineering, and the future of hand transplantation.

SURG 71Q. Procedural Anatomy. 3 Units.

Study of human anatomy through the understanding of eight to ten common conditions, such as diseases, injuries, and genetic defects, that affect the head and neck region and the associated surgical procedures to treat these conditions. Students are exposed to the modalities involved in confirming the diagnosis of these common conditions, the benefits and risks of the procedures to treat these conditions, and the anatomy affected by the conditions and procedures. The laboratory component exposes students to surgical procedures on cadaver material and the learning of anatomy via 3D digital images, the 3D dissection table and models. The focus is on learning clinically relevant anatomy of the head and neck region.

SURG 72Q. Anatomy in Society. 3 Units.

Preference to sophomores. The influence of human anatomy on the design of commercial products and competitive activities (such as: automobile and furniture design, sports clothing and shoe design, robotics, and dance and choreography). How societal advancements have evolved to increasingly accommodate human form and function. Guest speakers in the fields of design, architecture, and sports. Exposure to human anatomy via cadaver material, 3D digital images, the 3D dissection table and models.

SURG 101. Regional Study of Human Structure. 5 Units.

Enrollment limited to seniors and graduate students. Comprises two parts, lecture and lab, both of which are required. Lectures in regional anatomy and dissection of the human cadaver; the anatomy of the trunk and limbs through the dissection process, excluding the head and neck.

SURG 101A. Head and Neck Anatomy. 3 Units.

Introduces students to human anatomy of the head and neck through a dissection based course. Students use proper anatomical terminology to describe structures and their relationships. Emphasis on typical anatomy as seen in healthy individuals, with some examples of anatomical variation introduced through dissection and clinical cases. Ideal for senior undergraduate students who have completed SURG 101 or equivalent, are familiar with basic anatomy, and have some dissection experience. Prerequisites: Surgery 101 or equivalent.

SURG 110. Basic Cardiac Life Support for Undergraduates. 1 Unit.

Preference to undergraduates. Teaches one- and two-rescuer adult CPR and management of an obstructed airway using the American CPR model. Does not satisfy MD student BCLS requirement; MD students take Surgery 201.

SURG 111A. Emergency Medical Technician Training. 3-4 Units.

Basics of life support outside the hospital setting. Topics include emergency patient assessments for cardiac, respiratory, and neurological emergencies, as well as readiness training for emergencies on and off campus. Lectures, practicals, and applications. Students taking the class for 4 units complete additional FEMA training and additional clinical rotations. Upon completion of SURG 111A,B,C or 211A,B,C, students are eligible to sit for the National Registry EMT licensure exam. Freshmen and Sophomores are highly encouraged to apply. Prerequisites: application (see <http://surg211.stanford.edu>), and consent of instructor. Same as: SURG 211A.

SURG 111B. Emergency Medical Technician Training. 3-4 Units.

Continuation of 111A/211A. Approach to traumatic injuries. Topics include head, neck, and trunk injuries, bleeding and shock, burn emergencies, and environmental emergencies. Lectures, practicals, and applications. Students taking the class for 4 units complete additional online FEMA training and additional clinical rotations. Upon completion of SURG 111A,B,C or 211A,B,C, students are eligible to sit for the National Registry EMT licensure exam. Prerequisites: 111A/211A, CPR-PR certification, and consent of instructor. Same as: SURG 211B.

SURG 111C. Emergency Medical Technician Training. 3-4 Units.

Continuation of 111B/211B. Special topics in EMS. Topics include pediatric, obstetric, and gynecologic emergencies, EMS operations, mass casualty incidents, and assault. Lectures, practicals, and applications. Students taking the class for 4 units complete additional online FEMA training and additional clinical rotations. Upon completion of SURG 111A,B,C or 211A,B,C, students are eligible to sit for the National Registry EMT certification exam. Prerequisites: 111B/211B, CPR-PR certification, and consent of instructor. Same as: SURG 211C.

SURG 112A. Advanced Training and Teaching for the EMT. 2-3 Units.

Ongoing training for current EMS providers. Students practice BLS assessments and medical care through simulated patient encounters. Topics include airway and stroke management, abdominal emergencies, prehospital pharmacology, and teaching skills. Students taking the course for 3 units also serve as teaching assistants for Surgery 111, the Stanford EMT training course. Prerequisites: SURG 111/211 A-C (or equivalent EMT Certification course), CPR-PR certification, and consent of instructor. Same as: SURG 212A.

SURG 112B. Advanced Training and Teaching for the EMT. 2-3 Units.

Ongoing training for current EMS providers. Students practice BLS assessments and medical care through simulated patient encounters. Topics include assessment and treatment of the undifferentiated trauma patient (including airway management, monitoring, and evaluation) and prehospital care in nontraditional locations. Students taking the course for 3 units also serve as teaching assistants for Surgery 111, the Stanford EMT training course. Prerequisites: SURG 111/211 A-C (or equivalent EMT Certification course), CPR-PR certification, and consent of instructor. Same as: SURG 212B.

SURG 112C. Advanced Training and Teaching for the EMT. 2-3 Units.

Ongoing training for current EMS providers. Students practice BLS assessments and medical care through simulated patient encounters. Topics include mass casualty incidents, assaults, and pediatric emergencies. Expanded scope topics may be included - ACLS, ultrasound, and suturing. Students taking the course for 3 units also serve as teaching assistants for Surgery 111, the Stanford EMT training course. Prerequisites: SURG 111/211 A-C (or equivalent EMT Certification course), CPR-PR certification, and consent of instructor. Same as: SURG 212C.

SURG 150. Global Humanitarian Medicine. 1 Unit.

Open to undergraduate students and medical students. Focus is on understanding the theory behind medical humanitarianism, the growing role of surgery in international health, and the clinical skills necessary for students to partake in global medical service. Guest speakers include world-renowned physicians and public health workers. Same as: SURG 250.

SURG 199. Undergraduate Research. 1-18 Unit.

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

SURG 201. Basic Cardiac Life Support for Healthcare Professionals. 1 Unit.

All medical students must be certified in Basic Cardiac Life Support before the end of the first (autumn) quarter. Students who provide documentation of certification received within six months prior to the date of matriculation will be exempted from the requirement. The course teaches one- and two-rescuer CPR, management of an obstructed airway, and CPR for infants and children. Upon completion of the course, students receive an American Heart Association certificate in BLS.

SURG 203A. Clinical Anatomy. 11 Units.

Introduction to human structure and function presented from a clinical perspective. Includes clinical scenarios, frequently used medical imaging techniques, and interventional procedures to illustrate the underlying anatomy. Students are required to attend lectures and engage in dissection of the human body in the anatomy laboratory. Surgery 203A presents structures of the thorax, abdomen, pelvis, back, upper and lower limbs.

SURG 203B. Clinical Anatomy. 4 Units.

Continues the introduction to human structure and function from a clinical perspective. Includes clinical scenarios, frequently used medical imaging techniques, and interventional procedures to illustrate the underlying anatomy. Students are required to attend lectures and engage in dissection of the human body in the anatomy laboratory. Surgery 203B presents structures of the head and neck.

SURG 204. Introduction to Surgery. 1 Unit.

Designed to give pre-clinical MD students a broad overview of all the surgical specialties. Lectures by leading surgeons from General Surgery, Plastic Surgery, Neurosurgery, Orthopedic Surgery, Head and Neck Surgery, Transplantation Surgery and Cardiac Surgery highlight the array of diseases and operations performed in their disciplines. In addition, each lecture gives students a "roadmap" as to how to enter that discipline.

SURG 205. Advanced Suturing Techniques. 1 Unit.

Designed for preclinical medical students. Builds upon skills taught in the Surgical Interest Group's introductory suturing workshops. Topics include knot tying, suturing, hand-sewn anastomosis, stapled anastomosis, and laparoscopic technique. Emphasizes hands-on work with live tissue and surgical simulation. Preference to second year medical students.

SURG 208. Plastic Surgery Tutorial. 2 Units.

Diagnosis, theory, and practice of plastic and reconstructive surgery. Limited to two students per faculty member.

SURG 209. Plastic Surgery. 1-18 Unit.

Students participate in plastic and reconstructive surgery as functioning members of the clinical team. Students are exposed to operative surgery, emergency and trauma care, evaluation of operative candidates in the outpatient setting, and also attend teaching conferences. Limited to four students. Prerequisite: completion of first year or clinical experience.

SURG 210. Managing Emergencies: What Every Doctor Should Know. 2 Units.

Reviews critical concepts in evaluating and managing patients with possible life-threatening emergencies with a special focus on avoiding common errors. Topics include cardiovascular collapse, airway management, chest pain, and traumatic injuries. Teaches skills for skillful and knowledgeable response to patients presenting with life-threatening complaints.

SURG 211A. Emergency Medical Technician Training. 3-4 Units.

Basics of life support outside the hospital setting. Topics include emergency patient assessments for cardiac, respiratory, and neurological emergencies, as well as readiness training for emergencies on and off campus. Lectures, practicals, and applications. Students taking the class for 4 units complete additional FEMA training and additional clinical rotations. Upon completion of SURG 111A,B,C or 211A,B,C, students are eligible to sit for the National Registry EMT licensure exam. Freshmen and Sophomores are highly encouraged to apply. Prerequisites: application (see <http://surg211.stanford.edu>), and consent of instructor. Same as: SURG 111A.

SURG 211B. Emergency Medical Technician Training. 3-4 Units.

Continuation of 111A/211A. Approach to traumatic injuries. Topics include head, neck, and trunk injuries, bleeding and shock, burn emergencies, and environmental emergencies. Lectures, practicals, and applications. Students taking the class for 4 units complete additional online FEMA training and additional clinical rotations. Upon completion of SURG 111A,B,C or 211A,B,C, students are eligible to sit for the National Registry EMT licensure exam. Prerequisites: 111A/211A, CPR-PR certification, and consent of instructor. Same as: SURG 111B.

SURG 211C. Emergency Medical Technician Training. 3-4 Units.

Continuation of 111B/211B. Special topics in EMS. Topics include pediatric, obstetric, and gynecologic emergencies, EMS operations, mass casualty incidents, and assault. Lectures, practicals, and applications. Students taking the class for 4 units complete additional online FEMA training and additional clinical rotations. Upon completion of SURG 111A,B,C or 211A,B,C, students are eligible to sit for the National Registry EMT certification exam. Prerequisites: 111B/211B, CPR-PR certification, and consent of instructor. Same as: SURG 111C.

SURG 212A. Advanced Training and Teaching for the EMT. 2-3 Units.

Ongoing training for current EMS providers. Students practice BLS assessments and medical care through simulated patient encounters. Topics include airway and stroke management, abdominal emergencies, prehospital pharmacology, and teaching skills. Students taking the course for 3 units also serve as teaching assistants for Surgery 111, the Stanford EMT training course. Prerequisites: SURG 111/211 A-C (or equivalent EMT Certification course), CPR-PR certification, and consent of instructor. Same as: SURG 112A.

SURG 212B. Advanced Training and Teaching for the EMT. 2-3 Units.

Ongoing training for current EMS providers. Students practice BLS assessments and medical care through simulated patient encounters. Topics include assessment and treatment of the undifferentiated trauma patient (including airway management, monitoring, and evaluation) and prehospital care in nontraditional locations. Students taking the course for 3 units also serve as teaching assistants for Surgery 111, the Stanford EMT training course. Prerequisites: SURG 111/211 A-C (or equivalent EMT Certification course), CPR-PR certification, and consent of instructor. Same as: SURG 112B.

SURG 212C. Advanced Training and Teaching for the EMT. 2-3 Units.

Ongoing training for current EMS providers. Students practice BLS assessments and medical care through simulated patient encounters. Topics include mass casualty incidents, assaults, and pediatric emergencies. Expanded scope topics may be included - ACLS, ultrasound, and suturing. Students taking the course for 3 units also serve as teaching assistants for Surgery 111, the Stanford EMT training course. Prerequisites: SURG 111/211 A-C (or equivalent EMT Certification course), CPR-PR certification, and consent of instructor. Same as: SURG 112C.

SURG 220. Emergency Medicine: Introduction. 1-2 Unit.

An introduction to the specialty of emergency medicine, including the emergency stabilization of patients in both the pre-hospital phase and in the emergency department. The course will include both lectures and hands on practical sessions. Topics consist of management of trauma patients and common medical emergencies, with hands on sessions including how to manage airway emergencies and suturing. 2 units includes two four-hour emergency department shadow shifts.

SURG 222. Biosecurity and Bioterrorism Response. 2-6 Units.

Provides an overview of the most pressing biosecurity issues facing the world today. Guest lecturers have included former Secretary of State Condoleezza Rice, former Special Assistant on BioSecurity to Presidents Clinton and Bush Jr. Dr. Ken Bernard, Chief Medical Officer of the Homeland Security Department Dr. Alex Garza, eminent scientists, innovators and physicians in the field, and leaders of relevant technology companies. The class explores how well the US and global healthcare systems are prepared to withstand a pandemic or a bioterrorism attack, how the medical/healthcare field, government, and the technology sectors are involved in biosecurity and pandemic or bioterrorism response and how they interface, the rise of synthetic biology with its promises and threats, global bio-surveillance, making the medical diagnosis, isolation, containment, hospital surge capacity, stockpiling and distribution of countermeasures, food and agriculture biosecurity, new promising technologies for detection of bio-threats and countermeasures. Open to medical, graduate, and undergraduate students. No prior background in biology necessary. 2 unit option for once weekly attendance (Wed only); 4 unit option for twice weekly attendance (Mon and Wed); 1-2 additional units (for a maximum of 6 units total) for a research paper. Same as: PUBLPOL 122, PUBLPOL 222.

SURG 223. Wilderness Medicine. 2-3 Units.

Open to all students. Wilderness-related illnesses and injuries; a framework for evaluation and treatment of emergencies in the backcountry. Hands-on clinical skills. Topics include high altitude medicine, hypothermia, envenomations, search and rescue, improvisation, and survival medicine. 3 units includes participation in an Emergency Department observation shift and a day-long field-trip for hands-on field work.

SURG 224. Wilderness First Aid. 2 Units.

Provides basic introductory back country and emergency medicine skill development. Topics covered include patient assessment, addressing life threats, shock, spine safety, musculoskeletal injuries, medical emergencies, and environmental emergencies.

SURG 226. Wilderness First Responder. 4 Units.

A more advanced and intensive class building on wilderness first aid that teaches first responder skills using improvised resources in varying environmental conditions and extended-care situations. This is used as a framework for learning to respond to medical emergencies in remote wilderness settings. Examines necessary tools to make critical medical and evacuation decisions.

SURG 230. Obesity in America. 1 Unit.

Prevalence and effects of the obesity epidemic in America and the growing prevalence of associated comorbidities such as diabetes, hypertension, hyperlipidemia, sleep apnea, and joint problems. Risk factors, multi-disciplinary treatment options, the role of food in society, patients' perspectives, and current research in the field.

SURG 231. Healthcare in Haiti and other Resource Poor Countries. 1 Unit.

Originally developed to highlight healthcare in extreme poverty in Haiti, related lectures have been added covering healthcare in resource poor environments with the objective to introduce students to the complexity and unique problems of working in the Third World's healthcare morass.

SURG 232. Social Emergency Medicine and Service Learning. 2-3 Units.

Focus on understanding the social determinants of health and exploring the relationship between emergency medicine and public health affecting the Emergency Department patient population by: 1) Discussion and critique of relevant literature; 2) Learning about community resources for patient's social needs; 3) Conducting screening and intervention for ED patient; 4) Shadowing ED physicians. Topics include how public health initiatives can improve access to hospital and community resources, and how patients receive care in a busy, fast-paced environment. Requires a 3-quarter commitment, personal statement and faculty approval. Students enrolling for 3 units complete two additional hours of screening per week.

SURG 242. Art and Anatomy Studio. 1 Unit.

Discusses the intersection of art and anatomy and provides the opportunity to explore one art medium in depth. Students select a medium from drawing, painting, sculpture, digital art and art appreciation, and work in small groups with a mentor artist. Class time includes art instruction, creation and feedback. Enrollment limited to 15. May be repeated for credit. May be taken for 1-3 units; units awarded commensurate with project time. Prerequisites: SURG 203A, SURG 203B, or SURG 101.

SURG 250. Global Humanitarian Medicine. 1 Unit.

Open to undergraduate students and medical students. Focus is on understanding the theory behind medical humanitarianism, the growing role of surgery in international health, and the clinical skills necessary for students to partake in global medical service. Guest speakers include world-renowned physicians and public health workers. Same as: SURG 150.

SURG 251. Imaging Anatomy. 1 Unit.

Accompanies existing clinical anatomy course for first year medical students (SURG 203A). Sessions focus on the anatomical region being taught and dissected during the same week in SURG 203A. Students revisit anatomy using a variety of basic and advanced imaging modalities. Emphasis on correlating imaging to dissection, studying anatomical variations, discussing clinical vignettes. Enrollment limited to MD students.

SURG 251B. Imaging Anatomy (Head & Neck) II. 1 Unit.

Accompanies existing clinical anatomy course for first year medical students (SURG 203B) concentrating on the head and neck region. Sessions focus on the anatomical region being taught and dissected during the same week in SURG 203B. Students revisit anatomy using a variety of basic and advanced imaging modalities. Emphasis on correlating imaging to dissection, studying anatomical variations, discussing clinical vignettes. Enrollment limited to MD students.

SURG 252. Bedside Anatomy. 1 Unit.

Provides an opportunity to revisit anatomy in a clinical context. Using case discussions, clinical vignettes, radiological imaging, and hands-on exercises, students are challenged to apply their knowledge of anatomy to explain common diagnostic maneuvers and interventional procedures performed at the bedside or in the outpatient setting. Emphasis will be on anatomical considerations in successfully performing these procedures and avoiding errors that may arise due to anatomical changes, oddities, or variations.

SURG 253. Topics in Simulation of Human Physiology & Anatomical Systems. 1 Unit.

Biweekly interdisciplinary lecture series on the development of computational tools for modeling and simulation of human physiological and anatomical systems. Lectures by instructors and guest speakers on topics such as surgical simulation, anatomical & surgical Modeling, neurological Systems, and biomedical models of human movement. Group discussions, team based assignments, and project work. Prerequisite: Medical students, residents or fellows from school of medicine, and computationally oriented students with a strong interest to explore computational and mathematical methods related to the health sciences. Same as: CME 520.

SURG 253. Topics in Simulation of Human Physiological and Anatomical Systems. 1 Unit.

Focus on the development of computational tools for modeling and simulation of human physiological and anatomical systems. Lecture series topics include surgical simulation, anatomical and surgical modeling, neurological systems, and biomedical models of human movement.

SURG 254. Operative Anatomy and Techniques. 1 Unit.

For preclinical students; provides a background in and integrates knowledge of surgical anatomy and therapy. Surgical or operative anatomy differs from gross anatomy in that the area exposed during surgery may be limited, the dissection may require exposing other seemingly unrelated anatomic structures with unique landmarks, and the procedure may require unusual technical facility. Provides an opportunity for students to understand the goals of representative surgical procedures (translating pathophysiology to surgical decision making to actual incision). Students learn surgical skills and perform the dissection of a number of commonly performed operations in the bio-skills laboratory. Emphasizes hands-on participation in surgical procedures in the laboratory and is taught by attending physicians in general, cardiothoracic, vascular, plastic, head and neck, urologic, and orthopedic surgery.

SURG 280. Early Clinical Experience in Surgery. 1-2 Unit.

Provides an observational experience in a surgery specialty. Prerequisite: consent of instructor.

SURG 290. 3D Biomedical Visualization: Techniques, Methods, and Applications. 1 Unit.

Explores the power of digital anatomy. How 3D anatomical data sets like CT and MRI scans are created from human specimens; how they are processed, analyzed, and rendered. Focus on how digital content is best used for learning anatomy, patient education, and clinical practice.

SURG 296. Individual Work: Human Anatomy. 1-18 Unit.

Carried out under the supervision of one or more members of the staff. Prerequisite: consent of instructor.

SURG 299. Directed Reading in Surgery. 1-18 Unit.

Consists of studies in progress, including cardiovascular and circulatory problems; gastric physiology; hemostatic disorders; homotransplantation; liver disorders; orthopedic pathology; bone growth; radiation injury; immunology, bacteriology, pathology, and physiology of the eye; physiological optics; comparative ophthalmology; neurophysiology of hearing; spatial orientation and disorientation; nasal function; and psychophysics of sensation. Prerequisite: consent of instructor.

SURG 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

SURG 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members.

Symbolic Systems Courses

SYMSYS 22. History and Philosophy of Artificial Intelligence. 2 Units.

More than most emerging fields, the history of Artificial Intelligence has been characterized by passionate debates. Is it merely clever programming, or an expedition into the fundamental nature of intelligence? Will machines ever be conscious? Will robots assist or enslave us? Can self-driving cars be legally responsible for their actions? This course recounts the history of AI and explores the major controversies through a series of classroom discussions, each in preparation for a lively debate by prominent historical figures and cutting-edge researchers in the field. Open to all undergraduate and graduate students.

Same as: CS 22.

SYMSYS 100. Introduction to Cognitive and Information Sciences. 4 Units.

The history, foundations, and accomplishments of the cognitive sciences, including presentations by leading Stanford researchers in artificial intelligence, linguistics, philosophy, and psychology. Overview of the issues addressed in the Symbolic Systems major.
Same as: LINGUIST 144, PHIL 190, PSYCH 35.

SYMSYS 130. Research Methods in the Cognitive and Information Sciences. 3 Units.

Understanding the different methodological approaches used in disciplines that study cognition and information. Emphasis is on philosophical/analytical, formal/mathematical, empirical, and computational thinking styles, with some attention to other methods as well. What assumptions underlie these methods? How can they be combined? How do practitioners of each discipline think differently about problems, and what are the challenges involved in studying or working across them?.

SYMSYS 170. Decision Behavior: Theory and Evidence. 3-4 Units.

Introduction to the study of judgment and decision making, relating theory and evidence from disciplines such as psychology, economics, statistics, neuroscience, and philosophy. The development and critique of Homo economicus as a model of human behavior, and more recent theories based on empirical findings. Recommended: background in formal reasoning.
Same as: SYMSYS 270.

SYMSYS 190. Senior Honors Tutorial. 1-5 Unit.

Under the supervision of their faculty honors adviser, students work on their senior honors project. May be repeated for credit.

SYMSYS 191. Senior Honors Seminar. 1 Unit.

Recommended for seniors doing an honors project. Under the leadership of the Symbolic Systems program coordinator, students discuss, and present their honors project.

SYMSYS 196. Independent Study. 1-15 Unit.

Independent work under the supervision of a faculty member. Can be repeated for credit.

SYMSYS 200. Symbolic Systems in Practice. 2-3 Units.

Applying a Symbolic Systems education at Stanford and outside. The basics of research and practice. Students develop and present a project, and investigate different career paths, including academic, industrial, professional, and public service, through interviews with alumni.

SYMSYS 201. ICT, Society, and Democracy. 3 Units.

The impact of information and communication technologies on social and political life. Interdisciplinary. Classic and contemporary readings focusing on topics such as social networks, virtual versus face-to-face communication, the public sphere, voting technology, and collaborative production.

SYMSYS 204. Philosophy of Linguistics. 4 Units.

Philosophical issues raised by contemporary work in linguistics. Topics include: the subject matter of linguistics (especially internalism vs. externalism), methodology and data (especially the role of quantitative methods and the reliance on intuitions), the relationship between language and thought (varieties of Whorfianism and anti-Whorfianism), nativist arguments about language acquisition, and language evolution.
Same as: LINGUIST 204, PHIL 369.

SYMSYS 206. Philosophy of Neuroscience. 4 Units.

Can problems of mind be solved by understanding the brain, or models of the brain? The views of philosophers and neuroscientists who believe so, and others who are skeptical of neurophilosophical approaches to the mind. Historical and recent literature in philosophy and neuroscience. Topics may include perception, memory, neural accounts of consciousness, neurophenomenology, neuroscience and physics, computational models, and eliminativism.
Same as: PHIL 167D, PHIL 267D.

SYMSYS 209. Battles Over Bits. 3 Units.

The changing nature of information in the Internet age and its relationship to human behavior. Philosophical assumptions underlying practices such as open source software development, file sharing, common carriage, and community wireless networks, contrasted with arguments for protecting private and commercial interests such as software patents, copy protection, copyright infringement lawsuits, and regulatory barriers. Theory and evidence from disciplines including psychology, economics, computer science, law, and political science. Prerequisite: PSYCH 40, 55, 70, or SYMSYS 202.

SYMSYS 210. Learning Facial Emotions: Art and Psychology. 3 Units.

Artistic and psychological learning approaches for emotion recognition from facial expressions. The advantages of learning by image-based microexpressions, subtle expressions, macro expressions, art drawing and actor mimicry when there are cognitive deficits due to conditions such as autism. Comparative analysis uses brain studies, learning theory, and human-computer interaction. Studio component conveys the artistic and psychological approaches. Prerequisites: PSYCH 1, SYMSYS 100 or consent of instructor. Go to www.stanford.edu/~dwilkins/Symsys210Enroll.doc to sign up for a Permission Number.

SYMSYS 211. Learning Facial Emotions: Art, Psychology, Human-Computer Interaction. 3 Units.

Learning to recognize facial emotions by drawing a live model versus the psychology method of using classified images of subtle and micro expressions. Dimensions of analysis include cognitive modeling and neuroscience. The design of human-computer interaction systems for people with cognitive deficits such as autism and Aspergers, which integrate the art and psychology approaches using methods such as robot heads, avatars, and facial recognition software. Prerequisites: PSYCH 1 or consent of instructor.

SYMSYS 245. Cognition in Interaction Design. 3 Units.

Note: Same course as 145 which is no longer active. Interactive systems from the standpoint of human cognition. Topics include skill acquisition, complex learning, reasoning, language, perception, methods in usability testing, special computational techniques such as intelligent and adaptive interfaces, and design for people with cognitive disabilities. Students conduct analyses of real world problems of their own choosing and redesign/analyze a project of an interactive system. Limited enrollment seminar taught in two sections of approximately ten students each. Admission to the course is by application to the instructor, with preference given to Symbolic Systems students of advanced standing. Recommended: a course in cognitive psychology or cognitive anthropology."

SYMSYS 255. Building Digital History: Social Movements and Protest at Stanford. 3-5 Units.

A project-based course focused on developing a collaborative history website based on oral and archival history research. Thematic focus is the history of student activism at Stanford. How have political activities such as demonstrations, assemblies, educational events, and nonviolent civil disobedience been organized on campus, and how have they affected Stanford? What lessons can be drawn from the past for students interested in social change? Students will choose historical periods and/or specific social movements for research. Course will feature guest appearances by representatives from a range of social movements at Stanford the past fifty years, and the building of an online repository and community for the collaborative representation and discussion of history.

SYMSYS 255A. Building Digital History: Social Movements and Protest at Stanford. 1 Unit.

Lectures-only version of Symsys 255.

SYMSYS 270. Decision Behavior: Theory and Evidence. 3-4 Units.

Introduction to the study of judgment and decision making, relating theory and evidence from disciplines such as psychology, economics, statistics, neuroscience, and philosophy. The development and critique of Homo economicus as a model of human behavior, and more recent theories based on empirical findings. Recommended: background in formal reasoning. Same as: SYMSYS 170.

SYMSYS 280. Symbolic Systems Research Seminar. 1 Unit.

A mixture of public lectures of interest to Symbolic Systems students (the Symbolic Systems Forum) and student-led meetings to discuss research in Symbolic Systems. Can be repeated for credit. Open to both undergraduates and Master's students.

SYMSYS 290. Master's Degree Project. 1-15 Unit.**SYMSYS 291. Master's Program Seminar. 1 Unit.**

Enrollment limited to students in the Symbolic Systems M.S. degree program. May be repeated for credit.

SYMSYS 296. Independent Study. 1-15 Unit.

Independent work under the supervision of a faculty member. Can be repeated for credit.

SYMSYS 299. Curricular Practical Training. 1 Unit.

Students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of advisor.

Theater and Performance Studies Courses

TAPS 1. Introduction to Theater and Performance Studies. 4 Units.

What brings together a contemporary company such as Google and an experimental theater such as The Wooster Group? What sets them apart? Approaching theater as presentational form of organization, this class shifts study of theater from the context of literature to that of performance. It offers an overview of performance across disciplines: from theater and other performing arts, to law, management, sports, and new technologies. In this interdisciplinary exploration, performance emerges as a model that cuts across diverse branches of contemporary culture, from sports events, to social dances, to political protests, to the organization of a workplace. It is designed to serve students who may go on to major or minor in Theater and Performance Studies including the Dance division and also students for whom this knowledge is a general contribution to their liberal arts education or to their own field of study. It integrates scholarly research and practical use of performance. No previous performing arts training or skills are required.

TAPS 1. Introduction to Theater and Performance Studies. 4 Units.

It integrates scholarly research and practical use of performance. No previous performing arts training or skills are required.

TAPS 6P. Art is My Occupation: Professional Development for Creatives. 1 Unit.

This course is designed to empower arts students to explore their personal and artistic identity, asking: How do I define success and fulfillment? What role will my art play in my professional and personal life? How can I shape the educational experience and career that will serve my long-term goals? Students will also be exposed to various methods and skills from other fields that will be helpful tools in an arts-related career, or any other profession, ranging from branding and promotion, design thinking, and mission-vision strategy. Students will also prepare resumes and an artist biography or cover letter, and create other materials that will assist in the process of job or graduate school applications. Same as: ARTSINST 5, ARTSTUDI 6P, MUSIC 6P.

TAPS 6P. Art is My Occupation: Professional Development for Creatives. 1 Unit.

Same as: ARTSINST 5, ARTSTUDI 6P, MUSIC 6P.

TAPS 10AX. Acting Intensive: Theatre and Beyond, Into the World of Film. 2 Units.

Introduction to the craft of acting for film and reinforcement of basic concepts for the experienced student. Skill-building in the areas of acting, movement, voice, and speech, utilizing material from the film and theater. In-depth work on technique, utilization of action, specificity of language, personalization, emotional truth, character, and given circumstance. Blocking of scenes live performance and video recording of performances. Final performance of the two scenes in a showcase afternoon.

TAPS 10AX. Acting Intensive: Theatre and Beyond, Into the World of Film. 2 Units.

Introduction to the craft of acting for film and reinforcement of basic concepts for the experienced student. Skill-building in the areas of acting, movement, voice, and speech, utilizing material from the film and theater. In-depth work on technique, utilization of action, specificity of language, personalization, emotional truth, character, and given circumstance. Blocking of scenes live performance and video recording of performances. Final performance of the two scenes in a showcase afternoon.

TAPS 10N. Arts and Ideas: 20th Century Art in Conflict. 4 Units.

The second quarter of Art & Ideas builds on the examples of Modernism students in Arts and Ideas studied in the first quarter. The Frosh Seminar ¿20th-Century Art in Conflict¿ will focus on drama and film that experiments with new possibilities of form, shaping the direction of later artistic practice. We will trace how the political and aesthetic concerns of the 20th century reflect and exploit new technologies, both in theater and film, altering the position and function of author, actor, director, and audience.

TAPS 10N. Arts and Ideas: 20th Century Art in Conflict. 4 Units.

We will trace how the political and aesthetic concerns of the 20th century reflect and exploit new technologies, both in theater and film, altering the position and function of author, actor, director, and audience.

TAPS 11AX. Set Design. 2 Units.

How ideas in fine art, architecture, and installation inform the practice of theatre set design. Traditional techniques of stage scenery design, basic drafting and model making guide the process of designing a set for an opera or play in this hands-on workshop.

TAPS 11AX. Set Design. 2 Units.

How ideas in fine art, architecture, and installation inform the practice of theatre set design. Traditional techniques of stage scenery design, basic drafting and model making guide the process of designing a set for an opera or play in this hands-on workshop.

TAPS 11N. Dramatic Tensions: Theater and the Marketplace. 4 Units.

Preference to freshmen. The current state of the American theater and its artists. Conventional wisdom says that theater is a dying art, and a lost cause, especially in an age of multi-media entertainment. But there are more young playwrights, actors, and directors entering the field today than at any other time in American history. Focus is on the work of today's theater artists, with an emphasis on an emerging generation of playwrights. Students read a cross-section of plays from writers currently working in the US and UK, covering a spectrum of subjects and styles from serious to comic, from the musical to the straight play. Hits and misses from recent seasons of the New York and London stages and some of the differences of artistic taste across the Atlantic. Hands-on exploration of the arts and skills necessary to make a play succeed. Students develop their own areas of interest, in guided projects in design, direction or performance. Conversations with playwrights, designers, and directors. Labs and master classes to solve problems posed in areas of creative production. Class meets literary managers and producers who are on the frontlines of underwriting new talent. Class trips include two plays at major Bay Area Stages.

TAPS 11N. Dramatic Tensions: Theater and the Marketplace. 4 Units.

TAPS 11SC. Learning Theater: From Audience to Critic at the Oregon Shakespeare Festival. 2 Units.

Who doesn't love going to a play: sitting in the darkened theater, an anonymous member of the audience waiting to be entertained, charmed, and challenged? But how many of us know enough about the details of the plays, their interpretation, their production, and acting itself, to allow us to appreciate fully the theatrical experience? In this seminar, we will spend 13 days in Ashland, Oregon, at the Oregon Shakespeare Festival (OSF), where we will attend these plays: Shakespeare's King Lear, Cymbeline, A Midsummer Nights Dream, and The Taming of the Shrew; Tennessee Williams' A Streetcar Named Desire; the U.S. premiere of David Farr's The Heart of Robin Hood; Alan Jay Lerner and Frederick Loewe's My Fair Lady; and three world premieres -- Jon Beavers, Ramiz Monsef, Ian Merrigan, and Casey Hurt's The Unfortunates; Naomi Wallace's The Liquid Plain; and Tanya Saracho's The Tenth Muse. (To read more about these productions, go to <http://www.osfashland.org>.) We will also spend time backstage, meeting with actors, designers, and artistic and administrative directors of OSF. Students will read the plays before the seminar begins. In Ashland, they will produce staged readings and design a final paper based on one of the productions. These reviews will be delivered to the group and turned in on Thursday, September 19. Note: This seminar will convene in Ashland on Monday, September 2, and will adjourn to Stanford on Sunday, September 15. Students must arrive in Ashland by 4:00 p.m. on September 2. Room and board in Ashland and transportation to Stanford will be provided and paid for by the program.

TAPS 12AX. Sketch Comedy and Improvisation. 2 Units.

Explore improvisation and sketch comedy in an intensive ensemble and create an original show. Pure improvisational theater techniques. Concepts covered include spontaneity, shared control, creative collaboration, narrative, and status. Students apply those skills to writing and staging scripted monologues, two-handers, and ensemble sketches. Students create an original show with the entire class.

TAPS 12AX. Sketch Comedy and Improvisation. 2 Units.

Explore improvisation and sketch comedy in an intensive ensemble and create an original show. Pure improvisational theater techniques. Students apply those skills to writing and staging scripted monologues, two-handers, and ensemble sketches. Students create an original show with the entire class.

TAPS 12N. To Die For: Antigone and Political Dissent. 4 Units.

Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of *Antigone* by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta.

Same as: CLASSGEN 6N.

TAPS 12N. To Die For: Antigone and Political Dissent. 4 Units.

TAPS 12SC. Playwriting Lab: The Art of Dramatic Writing. 2 Units.

Workshop. Each student develops an original script which is presented in theater by the other students. How to develop, expand, and condition the creative mind. Topics including dramatic action, text and subtext, characterization, language, and style. Students function as a theatrical collective where each has the opportunity to participate in reading and serving the vision of each student-author.

TAPS 13AX. Musical Theater. 2 Units.

Have you ever seen a great musical and wondered, "How do the actors do it?" In this workshop we will explore the mechanics of acting in musicals as we practice solos and scene work from contemporary and classic musicals. Material will range from the "golden age" of musicals of the 1930s to new releases. Possible choices are: *Gypsy*, *Company*, *My Fair Lady*, *Sweeney Todd*, *Oklahoma!*, *Guys and Dolls*, *Cabaret*, *West Side Story*, *A Chorus Line*, *Ragtime*, *Urinetown*, *Dreamgirls*, *Hairspray*, *Avenue Q*, *South Pacific*, *Damn Yankees*, *Anything Goes*, *Hedwig and the Angry Inch*, *Caroline, or Change*, *Ain't Misbehavin'*, *Next to Normal*, *Hairspray*, and others. Students are encouraged to suggest their own material in their application for the program. The class will be accessible to both beginners and experienced actors/singers and will include in-depth work on vocal technique, utilization of action, specificity of language, personalization, emotional truth, character, and given circumstance. Students will develop an awareness of the demands of the performance experience in a safe and supportive environment. They will be encouraged to work to expand their range and will study and perform a solo and a scene from a musical. These assignments will require a minimum of 2 two-hour sessions with a scene partner during a scene rehearsal week. Commitment and responsibility to scene partners is a crucial component to successful work in the theater. In addition to required readings, students will be expected to conduct some research on the world of the playwright, librettist, and composer. We will end our workshop with a final performance of the work in a showcase for an invited audience. All levels welcome!

TAPS 13N. Law and Drama. 4 Units.

Preference to Freshmen. Beyond the obvious traits that make a good (court room) drama, theater and jurisprudence have much more in common. Just as drama is engaged not only in entertainment but also in examination of social conventions and mechanisms, so law is not only concerned with dispensing justice but with shaping and maintaining a viable human community. In this class we will read and discuss a series of plays in which court proceedings are at the center of dramatic action and concluding with an investigation of the new genre of documentary drama.

TAPS 13SC. Journeying In and Out: Creative Writing and Performance in Prison. 2 Units.

The United States imprisons more people than any other nation. Including those on probation or parole, over seven million adults are currently under correctional supervision in the U.S. - that's 1 in every 50 Americans. The United States also incarcerates more youth than all other countries. Each year approximately 500,000 young people are brought to detention centers, and an estimated 250,000 young people are tried, sentenced, or incarcerated as adults, the majority for non-violent offenses. On any given night in America, 87,000 children are housed in juvenile residential placements, and 10,000 children are held in adult jails and prisons. Despite the magnitude of these numbers, prisons and juvenile detention centers are uniquely closed and sequestered institutions. This class works collaboratively with a local juvenile hall to use literature, writing, and performance to explore the lives of incarcerated youth. In the process, students gain an understanding of incarceration on an immediate and personal scale. Stanford students will work directly with students serving sentences at Hillcrest Juvenile Hall, using collaborative writing and performance projects to share their individual experiences and voices. Stanford students will also engage in writing exercises and discussion groups on campus in order to explore their own relationship to freedom and punishment, choices, changes, and mercy. Class readings, screenings, and discussions will foreground the legal, social, and historical contexts surrounding incarceration as well as the social and behavioral changes made possible through arts programming in prisons. In addition to sustained collaborations with incarcerated youth, the class includes workshops with formerly incarcerated artists, authors, and advocates as well as visits to historic and active prison facilities. Taught jointly by a fiction writer and a dance studies historian, and using the template of the hero's journey as our guide, we will consider how writing and performance might mediate understandings of crime, punishment, and rehabilitation.

TAPS 20. Acting for Non-Majors. 1-3 Unit.

Creative play, ensemble work in a supportive environment. Designed for the student to experience a range of new creative skills, from group improvisation to partner work. Introductory work on freeing the natural voice and physical relaxation. Emphasis on rediscovering imaginative and creative impulses. Movement improvisation, listening exercises, and theater games release the energy, playfulness and willingness to take risks that is the essence of free and powerful performance. Course culminates with work on dramatic text.

Same as: TAPS 124D.

TAPS 21. StoryCraft. 1 Unit.

Workshop on Performance in Storytelling. Times and Dates TBD.

TAPS 21. StoryCraft. 1 Unit.

Workshop on Performance in Storytelling. Times and Dates TBD.

TAPS 22. Scene Work. 1-2 Unit.

For actors who complete substantial scene work with graduate directors in the graduate workshop.

TAPS 22. Scene Work. 1-2 Unit.

For actors who complete substantial scene work with graduate directors in the graduate workshop.

TAPS 23. Game Design: Making Play. 4 Units.

Exploration of games, gaming and game design. Culminates in creation of entirely new games.

TAPS 23. Game Design: Making Play. 4 Units.

Exploration of games, gaming and game design. Culminates in creation of entirely new games.

TAPS 25Q. Science-in-Theatre: A New Genre?. 3 Units.

Preference to sophomores. Contrasts through selected "science-in-theatre" plays what Theatre can do for science compared to what Science occasionally does for the theatre as well as emphasizing in that regard some unique features of the theatre compared to films. Illustrates why more intellectually challenging "science-in-theatre" plays have appeared in recent times where scientific behavior and scientists are presented accurately rather than just as Frankensteins, Strangeloves or nerds. Students engage in a playwriting experiment.

Same as: CHEM 25Q.

TAPS 28. Makeup for the Stage. 2 Units.

Techniques of make-up application and design for the actor and artist including corrective, age, character, and fantasy. Emphasis placed on utilizing make-up for development of character by the actor. Limited enrollment.

TAPS 28. Makeup for the Stage. 2 Units.

Techniques of make-up application and design for the actor and artist including corrective, age, character, and fantasy. Emphasis placed on utilizing make-up for development of character by the actor. Limited enrollment.

TAPS 29. Theater Performance: Acting. 1-3 Unit.

Students cast in department productions receive credit for their participation as actors; 1-2 units for graduate directing workshop projects and 1-3 units for major productions (units determined by instructor). May be repeated for credit. Prerequisite: consent of instructor.

TAPS 29. Theater Performance: Acting. 1-3 Unit.

Students cast in department productions receive credit for their participation as actors; 1-2 units for graduate directing workshop projects and 1-3 units for major productions (units determined by instructor). May be repeated for credit. Prerequisite: consent of instructor.

TAPS 30. How Theater is Designed. 4 Units.

Team-taught. An introduction to theatrical set, costume and lighting design. Emphasis on balancing practical skill with conceptual ideas for live stage performance. Hands-on projects.

TAPS 30. How Theater is Designed. 4 Units.

Team-taught. An introduction to theatrical set, costume and lighting design. Emphasis on balancing practical skill with conceptual ideas for live stage performance. Hands-on projects.

TAPS 31. Introduction to Lighting and Production. 4 Units.

How light contributes to the creation of mood and atmosphere and different kinds of visibility in theatrical storytelling. The use of controllable qualities of light including color, brightness, angle, and movement in the theatrical process of creative scenography. Hands-on laboratory time.

TAPS 31. Introduction to Lighting and Production. 4 Units.

How light contributes to the creation of mood and atmosphere and different kinds of visibility in theatrical storytelling. The use of controllable qualities of light including color, brightness, angle, and movement in the theatrical process of creative scenography. Hands-on laboratory time.

TAPS 32. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations.

Same as: AFRICAAM 32, CSRE 32A.

The production process, duties, and responsibilities of a stage manager. Skills needed to stage manage a production.

Same as: TAPS 334.

TAPS 39. Theatre Crew. 1-3 Unit.

Under faculty guidance, working backstage on Drama Department productions. Open to any student interested in gaining back stage experience. Night and weekend time required.

TAPS 39. Theatre Crew. 1-3 Unit.

Under faculty guidance, working backstage on Drama Department productions. Open to any student interested in gaining back stage experience. Night and weekend time required.

TAPS 39D. Theater Performance: Prosser Stage Management. 2-4 Units.

For students stage managing a Department of Drama Senior Project or Assistant Stage managing a Department Drama production.

TAPS 39D. Theater Performance: Prosser Stage Management. 2-4 Units.

For students stage managing a Department of Drama Senior Project or Assistant Stage managing a Department Drama production.

TAPS 41N. Inventing Modern Theatre: Georg Büchner and Frank Wedekind. 3 Units.

The German writers Georg Büchner (1813-1837) and Frank Wedekind (1864-1918). Many of the most important theater and film directors of the last century, including Max Reinhardt, G. W. Pabst, Orson Welles, Robert Wilson, and Werner Herzog, have wrestled with their works, as have composers and writers from Alban Berg and Bertolt Brecht through Christa Wolf and Thalia Field. Rock artists as diverse as Tom Waits, Lou Reed, Duncan Sheik, and Metallica have recently rediscovered their urgency. Reading these works in translation and examining artistic creations they inspired. Classroom discussions and written responses; students also rehearse and present in-class performances of excerpts from the plays. The aim of these performances is not to produce polished stagings but to creatively engage with the texts and their interpretive traditions. No previous theatrical experience required.

TAPS 103. Beginning Improvising. 3 Units.

The improvisational theater techniques that teach spontaneity, cooperation, team building, and rapid problem solving, emphasizing common sense, attention to reality, and helping your partner. Based on TheatreSports by Keith Johnstone. Readings, papers, and attendance at performances of improvisational theater. Limited enrollment.

TAPS 103. Beginning Improvising. 3 Units.

The improvisational theater techniques that teach spontaneity, cooperation, team building, and rapid problem solving, emphasizing common sense, attention to reality, and helping your partner. Based on TheatreSports by Keith Johnstone. Readings, papers, and attendance at performances of improvisational theater. Limited enrollment.

TAPS 105V. Improv & Design. 1 Unit.

This class will only meet on select days: 10am-6pm Saturday April 13, 2013 and 2pm-7pm Sunday April 14, 2013 with a performance on 8pm Thursday April 18th. Improv & Design is a wildly practical class exploring the intersection of Improvisational Theater & Design Thinking. The class is for: Improvisers who want to practice using their skills in other domains. Improvisers who want to learn about design thinking. Designers who want to deepen their core skills in collaboration, creativity, empathy, acting and rich scenario prototyping. Undergraduates who want to check out the d.school. Graduates who want to practice with a diverse group. You are guaranteed to learn 10 useful things! (We do not guarantee everyone will learn the same 10 things!). nDesign Institute class; see <http://dschool.stanford.edu>.

TAPS 112. Creative Expression: Musical Theater. 4 Units.

Students begin to create pieces that are fresh and innovative forms of musical theater that do not necessarily appeal to specifically popular audiences but perhaps to audiences more associated with high art, opera, or even contemporary independent music. Musical theater is an untapped resource of potential artistic innovation and has unfortunately become stuck in an ideal of universal accessibility. In present popular culture and the culture of contemporary art forms, musical theater almost exclusively refers to popular productions such as Phantom of the Opera, Rent, Wicked, Jesus Christ Superstar. Although excellent pieces of art in their own way, both dramaturgically and in their ability to evoke emotion through catchy melodies, for the most part each of them have their basis in popular and traditional musical idioms and theatrical forms, seldom exploring more advanced or avant-garde and experimental compositional and theatrical techniques.

Same as: MUSIC 112.

TAPS 113. Creative Expression: Directing the Musical. 3 Units.

This course would teach conductors, composers, sound engineers and directors what to consider when directing the music for a musical theater production. Students would learn to efficiently schedule and conduct rehearsals, create legible scores and parts, make a checklist for all the required nuances ie: Music stands, stand lights, stools etc. Additionally, it is evident that musicians, theater artists, dancers, lighting designers, costume designers and scenic designers all have very different cultures in the way they operate: punctuality, preparation, warm ups, expectations etc. In order to have a smooth and successful working relationship with all of these important members of a theatrical production, a musical director must understand these cultures and how to communicate with them using a language they all understand.

TAPS 114. Designing Wonder: Creating "everyday audiences". 4 Units.

Flash Mobs, Concerts, Amusement Parks, Bakeries. Art and Theater does not need to be confined to a stage, and audiences do not need to be confined to comfy red velvet seats. In this course, students will explore and create unexpected and engaging experiences in everyday spaces. Sidewalks, Parks, Stanford Dining Halls. All of the work will seek to make the world a more WONDERous place in which moments of amazement and delight are possible around every corner. Class time will frequently be substituted for off-campus excursions including Great America, The Exploratorium, House of Air, Alcatraz Island, and Outdoor Movie Screenings. This is a hands-on, creative course.

TAPS 120A. Acting I: Scene Study. 1-3 Unit.

A substantive introduction to the basics of the craft of acting, this course gives all incoming students the foundation of a common vocabulary. Students will learn fundamental elements of dramatic analysis, and how to apply it in action. Topics include scene analysis, environment work, psychological and physical scoring, and development of a sound and serviceable rehearsal technique. Scene work will be chosen from accessible, contemporary, and realistic plays. Outside rehearsal time required.

TAPS 120A. Acting I: Scene Study. 1-3 Unit.

Topics include scene analysis, environment work, psychological and physical scoring, and development of a sound and serviceable rehearsal technique. Scene work will be chosen from accessible, contemporary, and realistic plays. Outside rehearsal time required.

TAPS 120B. Acting II: Advanced Scene Study. 1-3 Unit.

Learn how to expand character work, beyond what is immediately familiar. Continuing basic practices from the first part of the sequence, in this quarter they will look beyond the strictly contemporary, and may begin to approach roles drawn from more challenging dramatic texts. This might include plays chosen from mid-century American classics, World Theater, or other works with specific historic or cultural requirements. Actors begin to learn how a performing artist researches and how that research can be used to enrich and deepen performance. Prerequisite: 120A or consent of instructor.

TAPS 120B. Acting II: Advanced Scene Study. 1-3 Unit.

Learn how to expand character work, beyond what is immediately familiar. Continuing basic practices from the first part of the sequence, in this quarter they will look beyond the strictly contemporary, and may begin to approach roles drawn from more challenging dramatic texts. This might include plays chosen from mid-century American classics, World Theater, or other works with specific historic or cultural requirements. Actors begin to learn how a performing artist researches and how that research can be used to enrich and deepen performance. Prerequisite: 120A or consent of instructor.

TAPS 120D. Studio Performance. 1-5 Unit.

Rehearsal and development of a studio performance project for an end of quarter presentation. Emphasis is on development of acting skills with minimal technical support. Material chosen from classic plays, American realism, world theater, or created group ensemble pieces.

TAPS 120D. Studio Performance. 1-5 Unit.

Rehearsal and development of a studio performance project for an end of quarter presentation. Emphasis is on development of acting skills with minimal technical support. Material chosen from classic plays, American realism, world theater, or created group ensemble pieces.

TAPS 120V. Vocal Production and Audition. 1-3 Unit.

An introductory study of the vocal mechanism and the development of voice and articulation for the stage. Students will be introduced to the actor's tools of phonetics, verbal action and text analysis. Vocal technique will then be applied to the actor's process in preparation for audition. Actors will fully participate in the audition process, from beginning to end. Emphasis will be on relaxation, selection of appropriate material, and versatility to show contrast and range. Same as: TAPS 210V.

TAPS 120V. Vocal Production and Audition. 1-3 Unit.

An introductory study of the vocal mechanism and the development of voice and articulation for the stage. Same as: TAPS 210V.

TAPS 121C. Physical Characterization. 3 Units.

Workshop incorporating styles of movement and characterization for the stage. Tools to aid in theatrical transformation. Triggers include psychological gesture, shifting centers, full face photographs, collected live studies, vocal shifts, and rhythmic and metabolic changes.

TAPS 121C. Physical Characterization. 3 Units.

Workshop incorporating styles of movement and characterization for the stage. Tools to aid in theatrical transformation. Triggers include psychological gesture, shifting centers, full face photographs, collected live studies, vocal shifts, and rhythmic and metabolic changes.

TAPS 121P. Period and Style: Acting. 3 Units.

This course is designed for the actor and theater-lover who has completed 120a or an equivalent basic acting class. Students will develop their acting skills towards the ability to perform in some of the major classics of the theater, from Shakespeare's plays through the fast-paced physical comedies of twentieth-century farce. Acting in "big" plays without damaging the voice, working physically with safety, how to research like an artist, and rehearse like a professional are all topics that will be covered. Class culminates in an open Scene Showing of Period Plays.

TAPS 121P. Period and Style:Acting. 3 Units.

This course is designed for the actor and theater-lover who has completed 120a or an equivalent basic acting class. Students will develop their acting skills towards the ability to perform in some of the major classics of the theater, from Shakespeare's plays through the fast-paced physical comedies of twentieth-century farce. Class culminates in an open Scene Showing of Period Plays.

TAPS 121S. Shakespeare Performance Intensive. 4 Units.

This course explores the unique demands of playing Shakespeare on the stage. Through deep exploration of language and performance techniques in sonnets, speeches and scenes in (an edited) full-length play, the student will learn how to bring Shakespeare's passions to life through research, analysis, and a dynamic use of voice, body and imagination. This course is designed to increase the actor's physical, vocal, emotional, and intellectual responsiveness to the demands, challenges and joys of playing Shakespeare.

TAPS 121S. Shakespeare Performance Intensive. 4 Units.

This course explores the unique demands of playing Shakespeare on the stage. Through deep exploration of language and performance techniques in sonnets, speeches and scenes in (an edited) full-length play, the student will learn how to bring Shakespeare's passions to life through research, analysis, and a dynamic use of voice, body and imagination. This course is designed to increase the actor's physical, vocal, emotional, and intellectual responsiveness to the demands, challenges and joys of playing Shakespeare.

TAPS 122P. Undergrad Performance Project: Attempts on Her Life by Martin Crimp. 2-9 Units.

The Undergraduate Performance Project provides students the opportunity to study and perform in major dramatic works. The Fall 2013 Undergraduate Acting Project presents the edgy, satirical play: `Attempts on Her Life; by the acclaimed contemporary British playwright Martin Crimp. Students learn to form an artistic ensemble, develop dramaturgical materials, learn professional arts protocols and practice, devise within the ensemble, and develop live performance ability. Audition required. Preference to majors/minors. Maybe repeated for credit.

TAPS 124D. Acting for Non-Majors. 1-3 Unit.

Creative play, ensemble work in a supportive environment. Designed for the student to experience a range of new creative skills, from group improvisation to partner work. Introductory work on freeing the natural voice and physical relaxation. Emphasis on rediscovering imaginative and creative impulses. Movement improvisation, listening exercises, and theater games release the energy, playfulness and willingness to take risks that is the essence of free and powerful performance. Course culminates with work on dramatic text.

Same as: TAPS 20.

TAPS 126. Your American Life. 4 Units.

This is a small seminar designed for students interested in creating scored stories for radio/podcast or live performance; spoken, sonic stories. We will examine the main features and craft of these kinds of stories, popularized by radio programs like This American Life and live shows like The Moth and you will then write and produce your own piece, be it memoir, documentary, inquiry, or some combination of these genres. Students will have the opportunity to meet at work with some of the best storytellers in America; this term, you will get to meet and work with Julie Snyder, senior producer of This American Life.

TAPS 127. Dynamics of Conflict: Contact and Combat in Performance. 4 Units.

How do experiments in movement help artists mine a play for its meanings? How does physical staging illuminate for the audience truths about characters, relationships and the arc of a scene? What can actors learn about themselves and their ensemble through physical improvisation and composition? This course is for students interested in movement and dynamic storytelling; no prior training is required. We will explore the fundamentals of contact improvisation and stage combat as a means of strengthening mind-body connection and preparing the actor for more nuanced, compelling, emotionally-rooted work on the stage. Our training consists of four main components: physical conditioning, practical technique, movement improvisation and the creation of several short performance pieces.

TAPS 128. Acting for Film and Video. 4 Units.

Acting techniques for working on film and with video.

TAPS 128. Acting for Film and Video. 4 Units.

Acting techniques for working on film and with video.

TAPS 129. Advanced Acting. 4 Units.

Advanced study and practice of acting.

TAPS 129. Advanced Acting. 4 Units.

Advanced study and practice of acting.

TAPS 130. ReDesigning Theater: Live & Digital Performance. 3 Units.

This quarter's version of ReDesigning Theater looks at Live and Digital Performance. We will examine the use of digital technology in collaboration with live performance. Students will learn and employ the design thinking process as well as improv and theatrical techniques. We aim to create user-centric, interactive experiences where technology enables the audience to become part of and/or influence the outcome of the story or its presentation. Student projects will begin with the concepts enabled by personal technology such as smart phones and expand to animation, video projection, and other media. Students will work in small groups to investigate and experiment with formats that blur the lines between live and digital, performer and audience, and physical and virtual platforms. This project-based course is accessible to students of all backgrounds interested in exploring and transforming the frontiers of technology, art, and live performance.

Same as: ME 288.

TAPS 131. Lighting Design. 4 Units.

Hands-on laboratory projects in lighting and designing stage productions and other live performances. The content and format of lighting plots. Prerequisite DRAMA 31.

TAPS 131. Lighting Design. 4 Units.

Hands-on laboratory projects in lighting and designing stage productions and other live performances. The content and format of lighting plots. Prerequisite DRAMA 31.

TAPS 132. Costume Design. 4 Units.

Process of designing costumes for the stage, covering script analysis, rendering techniques, character development and conceptual ideas. Project related work with smaller, pertinent exercises. Prerequisite: 30 or consent of instructor.

TAPS 132. Costume Design. 4 Units.

Process of designing costumes for the stage, covering script analysis, rendering techniques, character development and conceptual ideas. Project related work with smaller, pertinent exercises. Prerequisite: 30 or consent of instructor.

TAPS 133. Stage Scenery Design. 3-4 Units.

Craft and Theory of stage scenery design including visual research, spatial organization, basic drafting, sketching and model-building. Prerequisite: 30, or consent of instructor.

TAPS 133. Stage Scenery Design. 3-4 Units.

Craft and Theory of stage scenery design including visual research, spatial organization, basic drafting, sketching and model-building. Prerequisite: 30, or consent of instructor.

TAPS 134. Stage Management Project. 3-4 Units.

For students stage managing a Department of Drama production.

TAPS 134. Stage Management Project. 3-4 Units.

For students stage managing a Department of Drama production.

TAPS 136. Virtual Drafting for Designers. 3-5 Units.

A new course looking at virtual drafting methods and opportunities.

TAPS 136. Virtual Drafting for Designers. 3-5 Units.

A new course looking at virtual drafting methods and opportunities.

TAPS 137. Hand Drafting for Designers. 3 Units.

Fundamentals of hand-drafting. Standard drawing conventions; the use of line weight, color, composition, and graphic style. Creation of construction documents for real-world applications. May be repeated for credit.

TAPS 151H. ID21 STRATLAB: Interdisciplinary Approaches to Improvising Identities. 4-5 Units.

A quarter-long exploration of improvisation in relationship to identity and race in the 21st century in which students investigate new dynamics of doing and thinking identities through the arts. Panel discussions, performances, and talks that engage critically with the theme, concept, and practice of improvising identity across a variety of contexts and genres such as jazz music, modern dance, contemporary art, race comedy, food, and hip-hop poetry/freestyle. Strategies that artists/scholars have used to overturn essentializing notions of identity in theory and practice.

Same as: AMSTUD 151H, CSRE 151H, DANCE 151H, DANCE 251H, TAPS 351H.

Same as: TAPS 351.

TAPS 152H. Food and Performance: Meals, Markets, Maize and Macaroni. 4 Units.

Come hungry to learn! This course serves as an introduction to food and performance culture. We will engage ethical and aesthetic questions about factory farms, feminist performance art and futuristic cooking. Emphasis is on original research, interdisciplinary analysis and doing performance. We will attend events, have guest speakers, create our own mini-performances around the broad themes of the course, write critical reviews and conduct archival research. We begin by studying the work of anthropologists of food and then move on to contemplate the way food and performance converge in modern thought and art. We will vary our approaches to the texts and debate a broad range of topics. For example, we will discuss: food's connection to sexuality, memory, race, embodiment, colonialism, violence, protest, public policy and science. The parameters of the course have been limited to food movements in the U.S. in the 20th and 21st centuries; however the opportunity to work on topics beyond this geopolitical and historical scope is possible and encouraged. Texts may include works by Yayoi Kusama, Dwight Conquergood, Mary Douglas, Karen Finley, Psyche Williams, Alice Waters, Jonathan Foer, Michael Pollan, Julia Child, Lauren Berlant, Laura Esquivel, Douglas Sirk, Coco Fusco, Nao Bustamante, Doris Witt and more.

TAPS 153S. Japanese Theater: Noh to Contemporary Performance. 4 Units.

This course will provide a historical overview of Japanese theater from traditional (Noh, Kabuki, Bunraku) to contemporary (Angura, Butoh, and performance art). We will focus on the relationship between Japanese theaters and its audiences, exploring the contexts in which theater forms developed and how these forms themselves reflect Japanese culture and society.

TAPS 153S. Japanese Theater: Noh to Contemporary Performance. 4 Units.

This course will provide a historical overview of Japanese theater from traditional (Noh, Kabuki, Bunraku) to contemporary (Angura, Butoh, and performance art). We will focus on the relationship between Japanese theaters and its audiences, exploring the contexts in which theater forms developed and how these forms themselves reflect Japanese culture and society.

TAPS 154S. Theater and Legal Regulation. 4 Units.

This course examines how legal statutes, lawsuits, and contracts police theatrical practice, particularly in Britain and the United States in the nineteenth and twentieth centuries. Three particular forms of legal intervention will concern us: ownership of theaters and plays, government censorship and authorial control, and health and safety laws. We will explore how, despite their apparently different aims, these manifestations of the law pursue closely related ends.

TAPS 154S. Theater and Legal Regulation. 4 Units.

TAPS 155T. Theatre of War. 4 Units.

Military personnel and politicians alike use the phrase “the theatre of war” to refer to the geographical area of a military conflict and the more intangible concerns of battle. The primary concern of this class is the intersection between performance and war. Our inquiry will focus on drama, film, the media, and role-playing scenarios as a military training tool, and we will approach these objects through critical theories of justice, performance theory, and trauma.

TAPS 156. Performing History: Race, Politics, and Staging the Plays of August Wilson. 4 Units.

This course purposefully and explicitly mixes theory and practice. Students will read and discuss the plays of August Wilson, the most celebrated and most produced contemporary American playwright, that comprise his 20th Century History Cycle. Class stages scenes from each of these plays, culminating in a final showcase of longer scenes from his work as a final project.

Same as: AFRICAAM 156, TAPS 356.

TAPS 157. World Drama and Performance. 4 Units.

This course takes up a geographically expansive conversation by looking at modern and contemporary drama from nations including Ghana, Egypt, India, Argentina, among others. Considering influential texts from the Global South will also enable us to explore a range of themes and methodologies that are radically re-shaping the field of Performance Studies. We will examine the relationship between colonialism and globalization, empire and capital, cosmopolitanism and neoliberalism. Re-situating our perspective from the Global South and the non-western world, we will “provincialize Europe” and probe the limits of its universalizing discourses.

TAPS 158H. Proximity and Temporality in Performance. 4-5 Units.

This course considers the relationship between proximity and temporality in live performance, looking quite literally at the distance in space and time between performers and audiences. Alongside case studies of performance works, class readings will be drawn from current Performance Studies scholarship as well as discourses in postmodern geographies and anthropological studies of “proxemics” as well as key philosophic works such as Lefebvre’s *The Production of Space* and Heidegger’s *The Concept of Time*.

Same as: TAPS 358H.

TAPS 159. Introduction to Game Studies. 4 Units.

Games are not new; they are older than civilization. But in the past 50 years or so, we have seen an explosion of creativity in the development of new games, many of which, especially video games, complicate older understandings of what games are. This explosion of creativity has been matched by the increasing visibility and ubiquity of new games and ways of seeing games: as video games, televised professional sports, and even distributed urban events. Games are not a simple object of study. There are many ways to understand them: as social practices, as formal systems, as representative artwork, as modes of learning, and many more. We will start by considering games as a mode of performance, considering games in relation to theater and other forms of aesthetic performance. However, we will take a deeply interdisciplinary approach to the study of games, and will draw on perspectives from design, philosophy, education, and the emerging discipline of video game studies. We will also, of course, draw on a variety of games, both online and offline. As we bring in these perspectives, we will begin to consider games in at least two other fundamental ways: as designed experiences and as composed systems or artworks. This course is less an attempt to provide a survey of the entire field of games. It is more an attempt to provide a basic toolbox for critically examining and analyzing games. These tools are potentially useful for anyone who interacts with games: whether as a consumer of entertainment, a critical analyst of play, a user of serious games, or a game designer.

TAPS 160. Rethinking the Ballerina. 4 Units.

The ballerina occupies a unique place in popular imagination as an object of over-determined femininity as well as an emblem of extreme physical accomplishment for the female dancer. This seminar is designed as an investigation into histories of the ballerina as an iconographic symbol and cultural reference point for challenges to political and gender ideals. Through readings, videos, discussions and viewings of live performances this class investigates pivotal works, artists and eras in the global histories of ballet from its origins as a symbol of patronage and power in the 15th century through to its radical experiments as a site of cultural obedience and disobedience in the 20th and 21st centuries.

Same as: DANCE 160, TAPS 260.

TAPS 160N. Chican@/Latin@ Performance in the U.S.. 4 Units.

This course will introduce works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course's conclusion, each student will create and perform in a staged reading of an original performance piece.

Same as: CHILATST 160N.

TAPS 161H. Dance, History and Conflict. 4 Units.

This seminar investigates how moving bodies are compelling agents of social, cultural, and political change. Through readings, videos, discussions and viewings of live performances this class questions the impact of social conflict and war on selected 20th and 21st century dances and dance practices. This class asks to what extent dance, in its history as well as contemporary development, is linked to concepts of the political and conflict.

Same as: DANCE 161H.

TAPS 162H. Baroque Modernities: Dance, Theater, Film, Political Theory. 4 Units.

What do seventeenth-century choreography and dramaturgy contribute to (mean to) choreographic and theatrical modernity? How can we explain the recurrent baroque phenomenon across the twentieth century -- becoming particularly prominent in the 1980s -- beyond the historicist accounts of theatrical reconstruction? How does the baroque locate itself within cultural modernity? This seminar asks this question of choreography at several junctures: The analysis of seventeenth century baroque spectacle that fashioned dance and theatre into political tools of monarchical sovereignty; Twentieth-century literature on the Baroque that destabilizes received notions of subjectivity and political sovereignty; Twentieth-century choreography and film that deploys baroque figures and techniques. Thus, our material shall range from seventeenth-century dance and theater to contemporary dance, film and literature.

Same as: DANCE 162H.

TAPS 162I. The Idea of a Theater. 5 Units.

Examines the idea of a theater from the religious street theater of Medieval York, though Shakespeare's Globe, and onto the mental theater of the Romantic reader and the alienation effects of Brecht's radical playhouse in the 20th cent.

TAPS 162I. The Idea of a Theater. 5 Units.

Examines the idea of a theater from the religious street theater of Medieval York, though Shakespeare's Globe, and onto the mental theater of the Romantic reader and the alienation effects of Brecht's radical playhouse in the 20th cent.

TAPS 164T. Queer Art and Performance. 4-5 Units.

Examines the late 19th, 20th and 21st century forms of performance-- including examples from drama, theater, cabaret, and performance art -- through the perspectives of contemporary critical gender and queer theories. Texts and movements range from early avant-garde (Dada, Futurism) to gay and lesbian drama (Lillian Hellmann, Joe Orton, Tony Kushner) to post-liberation Queer performance and video (Split Britches, Carmelita Tropicana, Kalup Linzy). Theorists include Judith Butler, Michel Foucault, and Eve Kosofsky Sedgwick.

Same as: FEMGEN 140P, TAPS 364T.

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Same as: ANTHRO 33, CSRE 196C, ENGLISH 172D, SOC 146.

TAPS 166H. Historiography of Theater. 3-5 Units.

Goal is to design an undergraduate theater history class. Standard theater history textbooks, alternative models of theater history scholarship, and critical literature engaging historiography in general.

Same as: TAPS 304.

TAPS 166H. Historiography of Theater. 3-5 Units.

Goal is to design an undergraduate theater history class. Standard theater history textbooks, alternative models of theater history scholarship, and critical literature engaging historiography in general.

Same as: TAPS 304.

TAPS 167. Introduction to Greek Tragedy. 4 Units.

Gods and heroes, fate and free choice, gender conflict, the justice or injustice of the universe: these are just some of the fundamental human issues that we will explore in about ten of the tragedies of Aeschylus, Sophocles, and Euripides.

Same as: CLASSGEN 110.

TAPS 167. Introduction to Greek Tragedy. 4 Units.

Same as: CLASSGEN 110.

TAPS 170. Directing & Dramaturgy: Composition and Adaptation for Theatre. 4-5 Units.

This course explores dramaturgy and directing in the research and production of theatre primarily through practical creative projects with secondary readings on dramaturgy as a discipline. In this course we will consider the role of the dramaturg in its broadest sense, running across theatrical production from research to playwriting, adaptation, choreography, devising and directing. Students will work individually and in small groups researching, adapting, crafting and workshopping material. Same as: TAPS 370.

TAPS 170. Directing & Dramaturgy: Composition and Adaptation for Theatre. 4-5 Units.

In this course we will consider the role of the dramaturg in its broadest sense, running across theatrical production from research to playwriting, adaptation, choreography, devising and directing. Students will work individually and in small groups researching, adapting, crafting and workshopping material. Same as: TAPS 370.

TAPS 170B. Directing Workshop: The Actor-Director Dialogue. 4 Units.

This course focuses on the actor-director dialogue. We will work with actors and directors developing approaches to collaboration that make the actor-director dialogue in theater.

Same as: TAPS 372.

TAPS 170B. Directing Workshop: The Actor-Director Dialogue. 4 Units.

This course focuses on the actor-director dialogue. We will work with actors and directors developing approaches to collaboration that make the actor-director dialogue in theater.

Same as: TAPS 372.

TAPS 171. Performance Making: Process. 4 Units.

A studio course focused on creative processes and generating original material. Students will be encouraged to think critically about the relationship between form and content exploring the possibilities of site specific, gallery and theatre settings. Students will reflect throughout on the types of contact and communication uniquely possible in the live moment, such as interaction or the engagement of the senses. The emphasis is on weekly experimentation in the creation of short works rather than on a final production.

Same as: TAPS 371.

TAPS 172. Out of Place: (W)riting Home. 4 Units.

A creative writing workshop; all genres. This course will introduce students to the fundamentals of a productive creative writing practice, including the beginner's mind (as founded in Eastern spiritual practices); and, an indigenous approach to authenticity in one's work and one's words. Through writing, one returns to the body of home-knowledges, languages, and geographies to uncover what is profoundly original in us as artists, writers and thinkers.

Same as: CSRE 172, TAPS 272.

TAPS 173. Solo Performance. 4-5 Units.

Students learn how to draw from the specificity of their own unique experiences, connecting with ideas, issues and questions that resonate with race, class, gender, environmental, and global issues. The course gives students the creative and critical tools to enable them to connect the personal with the political and see the solo voice as a powerful, potent form of artistic expression. Students have the opportunity to hone their own creative talents in writing, devising, composing, producing and creating work.

Same as: TAPS 373W.

TAPS 173. Solo Performance. 4-5 Units.

Same as: TAPS 373W.

TAPS 174A. Performance Making: Production. 5 Units.

A structured, creative environment for students working toward the realization of Senior Projects and 2nd year graduate productions. Instructors will work with students to develop the relationships between the content and the form of their productions using critical and creative tools to develop and reflect on the work. There will be a staged class showing at the end of the quarter followed by critiques designed to help students as they begin preparing for their final public performances (beyond the class).

Same as: TAPS 374A.

TAPS 174A. Performance Making: Production. 5 Units.

Same as: TAPS 374A.

TAPS 175. Writing for Performance: The Fundamentals. 5 Units.

Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter's end.

Same as: CSRE 177.

TAPS 176S. Mindful Public Narrative: Telling Our Stories of Identity, Community, and Agency. 5 Units.

Mindful public narrative is a process of reflective practice that can guide us in the vital challenge of finding meaning through acting to make ourselves better persons and the world a better place. Through greater understanding of who we are as individual selves and as parts of something beyond ourselves we develop the awareness and courage to turn values into action. We will develop our personal stories of identity, community, and agency that are deeply connected to our wounds and our dreams, and tell them in a respectful and disciplined community of discourse to help empower us to act. In this narrative approach stories teach us how to act and inspire us with the courage to act by communicating our values through emotions. Our public narrative offers others a story of who we are in terms of race, sex, class, religion, and nation, what we believe, why we do what we do and with whom, and where we hope to lead. We are mindful inquirers in using awareness of self in our studies, bringing attention to where we are in the present moment.

Same as: CSRE 176S.

Same as: CHILATST 179, TAPS 379.

TAPS 179C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what the facts can offer.

Same as: CSRE 179C, CSRE 279C, TAPS 279C.

TAPS 179C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.

This course emphasizes the study and practice of personal memoir writing and literary journalism. Same as: CHILATST 179F, CSRE 179F, TAPS 279F.

TAPS 179G. Indigenous Identity in Diaspora: People of Color Art Practice in North America. 3-5 Units.

This "gateway" core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.

Same as: CSRE 179G, CSRE 279G, TAPS 279G.

TAPS 190. Special Research. 1-5 Unit.

Individual project on the work of a playwright, period, or genre. Prerequisite: consent of instructor.

TAPS 190. Special Research. 1-5 Unit.

Individual project on the work of a playwright, period, or genre. Prerequisite: consent of instructor.

TAPS 191. Independent Study. 1-18 Unit.

Individual supervision of off-campus internship. Prerequisite: consent of instructor.

TAPS 191. Independent Study. 1-18 Unit.

Individual supervision of off-campus internship. Prerequisite: consent of instructor.

TAPS 193. Life in the Body, Performing the Self. 2 Units.

No Class on January 8th. Class meets 7:00-8:50 every Tuesday beginning January 15th through March 12th, with a 10th and final required class during finals week on March 19th from 7:00-8:50. Also, students will be joined in the classroom by Continuing Studies students. Life is a performance of gestures. Dance is any conscious movement. Based on a "choreography of the everyday," this course invites participants to experience the subtle surprise of performing oneself. Working with our own gestures, words, thoughts, and perceptions, and drawing upon the basic elements of composition in performance, music, and choreography, we will develop a performance work in the mode of a "chamber piece." Building individual movement-based portraits, and then weaving them together as a whole, this gestural performance "chamber piece" will reflect the community of class participants and the Stanford community as a whole. Considerations of time, space, and quality of motion will be at the forefront of our work together. We will investigate the cultural identity and history of our gestures, as well as trace the evolution of this type of performance work in art, dance, and performance history. Participants can expect to find inspiration, delight, refreshment, and renewal through this performance process. No experience is necessary, just a willingness to move and reflect upon having a life in a body at this moment in history. The work of this course is the springboard of a larger performance work, "The Symphonic Body," which is scheduled to be performed at the new Bing Concert Hall in May 2013. Course participants have the option to perform in the larger work.

TAPS 203. Advanced Improvisation. 3 Units.

Further development of improvisational skills.

TAPS 203. Advanced Improvisation. 3 Units.

Further development of improvisational skills.

TAPS 210V. Vocal Production and Audition. 1-3 Unit.

An introductory study of the vocal mechanism and the development of voice and articulation for the stage. Students will be introduced to the actor's tools of phonetics, verbal action and text analysis. Vocal technique will then be applied to the actor's process in preparation for audition. Actors will fully participate in the audition process, from beginning to end. Emphasis will be on relaxation, selection of appropriate material, and versatility to show contrast and range.

Same as: TAPS 120V.

Individually structured workshop. May be repeated for credit. Prerequisite: 133 or consent of instructor.

TAPS 233. Advanced Scene Design. 1-5 Unit.

Individually structured workshop. May be repeated for credit. Prerequisite: 133 or consent of instructor.

TAPS 234. Advanced Stage Management Project. 2-9 Units.

For students stage managing a Department of Drama production. Prerequisite: 134.

TAPS 234. Advanced Stage Management Project. 2-9 Units.

For students stage managing a Department of Drama production. Prerequisite: 134.

TAPS 236. Directing Scenes: The Director's Toolkit. 4 Units.

This first half of this course, a practicum, introduces you to basic concepts in directing live theatre, such as creating strong spatial relationships on stage or in a performance space, interpreting and building a concept for a scene, and beginning to work with actors. You will then spend the second half of the course directing 2-3 modern and contemporary scenes, with actors.

TAPS 260. Rethinking the Ballerina. 4 Units.

The ballerina occupies a unique place in popular imagination as an object of over-determined femininity as well as an emblem of extreme physical accomplishment for the female dancer. This seminar is designed as an investigation into histories of the ballerina as an iconographic symbol and cultural reference point for challenges to political and gender ideals. Through readings, videos, discussions and viewings of live performances this class investigates pivotal works, artists and eras in the global histories of ballet from its origins as a symbol of patronage and power in the 15th century through to its radical experiments as a site of cultural obedience and disobedience in the 20th and 21st centuries.

Same as: DANCE 160, TAPS 160.

Emphasis is on how performance and media intervene to reproduce, historicize, or criticize the history of drama.

Same as: TAPS 162.

TAPS 262S. The Total Work of Art. 5 Units.

Frequently associated with the work of Richard Wagner, The Total Work of Art (or Gesamtkunstwerk) is a genre that aims to synthesize a range of artistic forms into an organic unity, a unity that both models and helps to forge an ideal state. This seminar will examine the history of the Gesamtkunstwerk from its roots in German Romanticism to the present day, focusing on the genre's relations with technology and mass culture across a wide range of media. Creations we will consider include Wagner's Festival Theatre at Bayreuth, Walter Gropius' plans for a Totaltheater, Bertolt Brecht and Kurt Weill's radio-oratorio The Lindbergh Flight, Leni Riefenstahl's Triumph of the Will, Walt Disney's theme parks, Andy Warhol's Exploding Plastic Inevitable, and Bill Gates' "home of the future." Taught in English.

Same as: GERMAN 262.

TAPS 272. Out of Place: (W)riting Home. 4 Units.

A creative writing workshop; all genres. This course will introduce students to the fundamentals of a productive creative writing practice, including the beginner's mind (as founded in Eastern spiritual practices); and, an indigenous approach to authenticity in one's work and one's words. Through writing, one returns to the body of home-knowledges, languages, and geographies to uncover what is profoundly original in us as artists, writers and thinkers.

Same as: CSRE 172, TAPS 172.

Same as: CSRE 172, TAPS 172.

TAPS 273. Directing & Dramaturgy: Composition and Adaptation for Theatre. 4 Units.

This course explores dramaturgy and directing in the research and production of theatre primarily through practical creative projects with secondary readings on dramaturgy as a discipline. In this course we will consider the role of the dramaturg in its broadest sense, running across theatrical production from research to playwriting, adaptation, choreography, devising and directing. Students will work individually and in small groups researching, adapting, crafting and workshopping material. Same as: TAPS 373.

TAPS 273. Directing & Dramaturgy: Composition and Adaptation for Theatre. 4 Units.

This course explores dramaturgy and directing in the research and production of theatre primarily through practical creative projects with secondary readings on dramaturgy as a discipline. In this course we will consider the role of the dramaturg in its broadest sense, running across theatrical production from research to playwriting, adaptation, choreography, devising and directing. Students will work individually and in small groups researching, adapting, crafting and workshopping material. Same as: TAPS 373.

TAPS 278. Intensive Playwriting. 5 Units.

Intermediate level study of fundamentals of playwriting through an intensive play development process. Course emphasizes visual scripting for the stage and play revision. Script analysis of works by contemporary playwrights may include: Suzan-Lori Parks, Tony Kushner, Adrienne Kennedy, Edward Albee, Maria Irene Fornes and others. Table readings of full length work required by quarter's end.

Same as: CSRE 178B, TAPS 178B.

TAPS 278. Page to Stage: Playwriting and Solo Performance. 3-5 Units.

Dramatic writing: scripted and solo, and as performed by actors or by the playwright. Physical and psychological theatrical action. Development of skills in dialogue, story structure, style, and personal voice. Script readings and directed staging sessions.

Same as: TAPS 178.

Same as: TAPS 178.

TAPS 279C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what facts can offer.

Same as: CSRE 179C, CSRE 279C, TAPS 179C.

TAPS 279C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Same as: CSRE 179C, CSRE 279C, TAPS 179C.

TAPS 279F. Flor y Canto: Poetry Workshop. 3-5 Units.

Poetry reading and writing. The poet as philosopher and the poet as revolutionary. Texts: the philosophical meditations of pre-Columbian Aztec poetry known as *flor y canto*, and reflections on the poetry of resistance born out of the nationalist and feminist struggles of Latin America and Aztlán. Required 20-page poetry manuscript.

Same as: CHILATST 179F, CSRE 179F, TAPS 179F.

TAPS 279F. Flor y Canto: Poetry Workshop. 3-5 Units.

Same as: CHILATST 179F, CSRE 179F, TAPS 179F.

TAPS 279G. Indigenous Identity in Diaspora: People of Color Art Practice in North America. 3-5 Units.

This "gateway" core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.
Same as: CSRE 179G, CSRE 279G, TAPS 179G.

TAPS 290. Special Research. 1-5 Unit.

Individual project on the work of a playwright, period, or genre.

TAPS 290. Special Research. 1-5 Unit.

Individual project on the work of a playwright, period, or genre.

TAPS 300A. Critical Styles I. 5 Units.

Literary criticism and theory, emphasizing style as evidence of historical, cultural, and ideological concerns. Assumptions about written texts by authors such as Coleridge, Bradley, and Burke. How style reveals context. Students write in the style of authors discussed.

TAPS 300A. Critical Styles I. 5 Units.

Literary criticism and theory, emphasizing style as evidence of historical, cultural, and ideological concerns. Assumptions about written texts by authors such as Coleridge, Bradley, and Burke. How style reveals context. Students write in the style of authors discussed.

TAPS 300B. Critical Styles II. 5 Units.

This seminar follows on from Critical Styles I in which students were grounded in the rigors of critical writing. In this sequel seminar, the emphasis will be on the overtones and undertones of critical thought in performance making and performance analysis. Students will generate weekly critical and creative responses to readings from contemporary writers and artists such as Jacques Rancière, Amelia Jones, Guillermo Gómez-Peña and Marina Abramovic. Workshop activities and performances will take place alongside seminar discussions of readings.

TAPS 314. Performing Identities. 4 Units.

This course focuses on contemporary South Asian and Black diasporic art work that concerns itself with questions of atrocity and activism. We will ask how artists engage world-historical events and what constitutes activism. Theoretical work will be wide-ranging as will the kinds of art and topics studied: indeed, we will discuss everything from Agamben to AIDS, Ai Wei-Wei to feminist punk in Russia, female circumcision in Sweden to U.N. aid workers in Afghanistan, queer subjects and global ideas freedom.

TAPS 321. Proseminar. 3-5 Units.

Workshop. Skills needed to participate in the academic profession including abstract, conference presentation, and dissertation or book chapter.

TAPS 321. Proseminar. 3-5 Units.

Workshop. Skills needed to participate in the academic profession including abstract, conference presentation, and dissertation or book chapter.

TAPS 334. Stage Management Techniques. 3 Units.

The production process, duties, and responsibilities of a stage manager. Skills needed to stage manage a production. Same as: TAPS 34.

TAPS 334. Stage Management Techniques. 3 Units.

The production process, duties, and responsibilities of a stage manager. Skills needed to stage manage a production. Same as: TAPS 34.

TAPS 336. Comprehensive 1st Year Exam. 2 Units.

Required course for first-year Ph.D. students in Theater & Performance Studies. Credits for work toward the Comprehensive 1st-year Exam taken in late February or Early March.

TAPS 336. Comprehensive 1st Year Exam. 2 Units.

Required course for first-year Ph.D. students in Theater & Performance Studies. Credits for work toward the Comprehensive 1st-year Exam taken in late February or Early March.

TAPS 351. Great Books: Dramatic Traditions. 4 Units.

The most influential and enduring texts in the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons. Same as: TAPS 151T.

TAPS 351. Great Books: Dramatic Traditions. 4 Units.

The most influential and enduring texts in the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons. Same as: TAPS 151T.

TAPS 351H. ID21 STRATLAB: Interdisciplinary Approaches to Improvising Identities. 4-5 Units.

A quarter-long exploration of improvisation in relationship to identity and race in the 21st century in which students investigate new dynamics of doing and thinking identities through the arts. Panel discussions, performances, and talks that engage critically with the theme, concept, and practice of improvising identity across a variety of contexts and genres such as jazz music, modern dance, contemporary art, race comedy, food, and hip-hop poetry/freestyle. Strategies that artists/scholars have used to overturn essentializing notions of identity in theory and practice. Same as: AMSTUD 151H, CSRE 151H, DANCE 151H, DANCE 251H, TAPS 151H.

TAPS 354. The Nervous Age: Neurosis, Neurology, and Nineteenth-century Theatre. 5 Units.

The nineteenth century witnessed profound developments in neurological and psychological sciences, developments that fundamentally altered conceptions of embodiment, agency, and mind. This course will place these scientific shifts in conversation with theatrical transformations of the period. We will read nineteenth-century neuropsychologists such as Charles Bell, Johannes Müller, George Miller Beard, Jean-Martin Charcot, and Hippolyte Bernheim alongside artists such as Percy Shelley, Georg Büchner, Richard Wagner, Émile Zola, and August Strindberg. Same as: GERMAN 284.

TAPS 354. The Nervous Age: Neurosis, Neurology, and Nineteenth-century Theatre. 5 Units.

Same as: GERMAN 284.

TAPS 356. Performing History: Race, Politics, and Staging the Plays of August Wilson. 4 Units.

This course purposefully and explicitly mixes theory and practice. Students will read and discuss the plays of August Wilson, the most celebrated and most produced contemporary American playwright, that comprise his 20th Century History Cycle. Class stages scenes from each of these plays, culminating in a final showcase of longer scenes from his work as a final project. Same as: AFRICAAM 156, TAPS 156.

TAPS 356. Performing History: Race, Politics, and Staging the Plays of August Wilson. 4 Units.

Same as: AFRICAAM 156, TAPS 156.

TAPS 357. World Drama and Performance. 4 Units.

This course takes up a geographically expansive conversation by looking at modern and contemporary drama from nations including Ghana, Egypt, India, Argentina, among others. Considering influential texts from the Global South will also enable us to explore a range of themes and methodologies that are radically re-shaping the field of Performance Studies. We will examine the relationship between colonialism and globalization, empire and capital, cosmopolitanism and neoliberalism. Re-situating our perspective from the Global South and the non-western world, we will ¿provincialize Europe¿ and probe the limits of its universalizing discourses.

Same as: TAPS 157.

Same as: TAPS 157.

TAPS 358H. Proximity and Temporality in Performance. 4-5 Units.

This course considers the relationship between proximity and temporality in live performance, looking quite literally at the distance in space and time between performers and audiences. Alongside case studies of performance works, class readings will be drawn from current Performance Studies scholarship as well as discourses in postmodern geographies and anthropological studies of `proxemics¿ as well as key philosophic works such as Lefebvre¿s *The Production of Space* and Heidegger¿s *The Concept of Time*.

Same as: TAPS 158H.

Same as: TAPS 158H.

TAPS 360. Greek Tragedy. 3-5 Units.

The seminar explores the intellectual, political, and cultural background of 5th-century Athenian tragedy, with special focus on the theatrical dynamics of the major plays of Aeschylus, Sophocles, and Euripides. Although the seminar emphasizes a close reading of the tragedies themselves, secondary sources include selections from Homer, Thucydides, Aristophanes, Aristotle, Hegel, and Nietzsche, as well as modern and contemporary classical scholars (Jebb, Dodds, Segal, Taplin, Goldhill, Nussbaum, Easterling, Foley, Seidensticker, Griffiths, Rehm, Wiles, Hall, Budelmann, and others). The seminar assigns the plays in English translation, but students with ancient Greek are encouraged to enroll, and accommodations can be made to attend to their interests. Plays include Persians, Prometheus Bound, the Oresteia trilogy (Aeschylus); Antigone, Oedipus, Oedipus at Colonus, Electra, and Philoctetes (Sophocles); and Medea, Heracles, Electra, Ion, Helen, and Bacchae (Euripides).

TAPS 360. Greek Tragedy. 3-5 Units.

TAPS 364T. Queer Art and Performance. 4-5 Units.

Examines the late 19th, 20th and 21st century forms of performance-- including examples from drama, theater, cabaret, and performance art -- through the perspectives of contemporary critical gender and queer theories. Texts and movements range from early avant-garde (Dada, Futurism) to gay and lesbian drama (Lillian Hellmann, Joe Orton, Tony Kushner) to post-liberation Queer performance and video (Split Britches, Carmelita Tropicana, Kalup Linzy). Theorists include Judith Butler, Michel Foucault, and Eve Kosofsky Sedgwick.

Same as: FEMGEN 140P, TAPS 164T.

TAPS 364T. Queer Art and Performance. 4-5 Units.

Same as: FEMGEN 140P, TAPS 164T.

TAPS 368S. Understanding and Staging Molière Theatre. 3-5 Units.

Devoted to an in depth analysis of Molière¿s major plays, as well as a study of contemporary productions of his work. Taught in French.

Same as: FRENCH 316.

TAPS 368S. Understanding and Staging Molière Theatre. 3-5 Units.

Devoted to an in depth analysis of Molière¿s major plays, as well as a study of contemporary productions of his work. Taught in French.

Same as: FRENCH 316.

TAPS 370. Directing & Dramaturgy: Composition and Adaptation for Theatre. 4-5 Units.

This course explores dramaturgy and directing in the research and production of theatre primarily through practical creative projects with secondary readings on dramaturgy as a discipline. In this course we will consider the role of the dramaturg in its broadest sense, running across theatrical production from research to playwriting, adaptation, choreography, devising and directing. Students will work individually and in small groups researching, adapting, crafting and workshopping material. Same as: TAPS 170.

TAPS 370. Directing & Dramaturgy: Composition and Adaptation for Theatre. 4-5 Units.

This course explores dramaturgy and directing in the research and production of theatre primarily through practical creative projects with secondary readings on dramaturgy as a discipline. Students will work individually and in small groups researching, adapting, crafting and workshopping material. Same as: TAPS 170.

TAPS 371. Performance Making: Process. 4 Units.

A studio course focused on creative processes and generating original material. Students will be encouraged to think critically about the relationship between form and content exploring the possibilities of site specific, gallery and theatre settings. Students will reflect throughout on the types of contact and communication uniquely possible in the live moment, such as interaction or the engagement of the senses. The emphasis is on weekly experimentation in the creation of short works rather than on a final production.

Same as: TAPS 171.

TAPS 371. Performance Making: Process. 4 Units.

In this course we will consider the role of the dramaturg in its broadest sense, running across theatrical production from research to playwriting, adaptation, choreography, devising and directing. Students will work individually and in small groups researching, adapting, crafting and workshopping material. Same as: TAPS 273.

TAPS 373W. Solo Performance. 4-5 Units.

Students learn how to draw from the specificity of their own unique experiences, connecting with ideas, issues and questions that resonate with race, class, gender, environmental, and global issues. The course gives students the creative and critical tools to enable them to connect the personal with the political and see the solo voice as a powerful, potent form of artistic expression. Students have the opportunity to hone their own creative talents in writing, devising, composing, producing and creating work.

Same as: TAPS 173.

TAPS 373W. Solo Performance. 4-5 Units.

Same as: TAPS 173.

TAPS 374. Practice Based Research. 4 Units.

A structured, creative environment for students working toward the realization of 2nd year graduate productions. Instructors will work with students to develop the relationships between the content and the form of their productions using critical and creative tools to develop and reflect on the work. There will be a staged class showing at the end of the quarter followed by critiques designed to help students as they begin preparing for their final public performances (beyond the class).

TAPS 374. Practice Based Research. 4 Units.

A structured, creative environment for students working toward the realization of 2nd year graduate productions. Instructors will work with students to develop the relationships between the content and the form of their productions using critical and creative tools to develop and reflect on the work. There will be a staged class showing at the end of the quarter followed by critiques designed to help students as they begin preparing for their final public performances (beyond the class).

TAPS 374A. Performance Making: Production. 5 Units.

A structured, creative environment for students working toward the realization of Senior Projects and 2nd year graduate productions. Instructors will work with students to develop the relationships between the content and the form of their productions using critical and creative tools to develop and reflect on the work. There will be a staged class showing at the end of the quarter followed by critiques designed to help students as they begin preparing for their final public performances (beyond the class).

Same as: TAPS 174A.

There will be a staged class showing at the end of the quarter followed by critiques designed to help students as they begin preparing for their final public performances (beyond the class).

Same as: TAPS 174A.

TAPS 375. Main Stage Production. 3-5 Units.

Production of a full-length play as part of the Department of Drama season. Public performance.

TAPS 375. Main Stage Production. 3-5 Units.

Production of a full-length play as part of the Department of Drama season. Public performance.

TAPS 376. Projects in Performance. 4 Units.

Creative projects to be determined in consultation with Drama graduate faculty and production advisor.

TAPS 376. Projects in Performance. 4 Units.

Creative projects to be determined in consultation with Drama graduate faculty and production advisor.

TAPS 377. Graduate Directors' Staged Reading Project. 2 Units.

Presentation of a new or newly adapted work for the stage, in a mode employed in professional theater for the development of new plays. Two to four rehearsals. Public performance.

TAPS 377. Graduate Directors' Staged Reading Project. 2 Units.

Presentation of a new or newly adapted work for the stage, in a mode employed in professional theater for the development of new plays. Two to four rehearsals. Public performance.

TAPS 379. Chicano & Chicana Theater: Politics In Performance. 3-5 Units.

This is a practicum course, where the basic tenets and evolving politic and philosophies of Chicano and Latin American liberationist theater are examined through direct engagement with its theatrical forms, including, social protest & agit-prop, myth & ritual, scripting through improvisation, in-depth character and solo work, collective conceptualization and more. The course will culminate in an end-of-the quarter play performance in the Niterly Theater (Old Union) and at a Mission District theater in San Francisco.

Same as: CHILATST 179, TAPS 179.

TAPS 379. Chicano & Chicana Theater: Politics In Performance. 3-5 Units.

This is a practicum course, where the basic tenets and evolving politic and philosophies of Chicano and Latin American liberationist theater are examined through direct engagement with its theatrical forms, including, social protest & agit-prop, myth & ritual, scripting through improvisation, in-depth character and solo work, collective conceptualization and more. The course will culminate in an end-of-the quarter play performance in the Niterly Theater (Old Union) and at a Mission District theater in San Francisco.

Same as: CHILATST 179, TAPS 179.

TAPS 381. Instantaneous, Incessant, Infinite: Time and Performance. 4 Units.

Time is the most fundamental and elusive aspect of performance. In this graduate seminar we will investigate time in performance from various perspectives: while getting acquainted with some of the most prominent recent conceptualizations of temporality (Henri Bergson, Marin Heidegger, Gilles Deleuze) we will also explore questions of politics of temporality, ethnographic and sociological study of time, and its peculiar place within literary studies. Most of all, we will investigate complex temporality of performance: from performances of great magnitude, to micro performances, to performance as a medium of time's commodification. While drawing on questions that emerge from PSi 19: Performance and Temporality, we will explore some aspects of this theme that were insufficiently addressed in the conference.

Thinking Matters Courses

THINK 1. The Science of MythBusters. 4 Units.

How do scientists actually go about answering practical questions? How does science function as a way of understanding our world, and -- importantly -- how does it differ from other approaches? As its point of departure, this course will examine and critique selected episodes of the television series, *MythBusters* (Discovery Channel), which tests the validity of many popular beliefs, including myths, rumors, traditions, and stories, in a variety of imaginative ways. We will take the opportunity to delve more deeply into the applicability of the scientific method in understanding a vast range of real-world problems, and into the practical acquisition of fact-based knowledge, which together form the cornerstone of all science. The intellectual framework of this course will be based, first and foremost, on skeptical inquiry, combined with the other key ingredients of good science, which include: careful experimental design, meticulous observation and measurement, quantitative analysis and modeling, the evaluation of statistical significance, recovery from failure, and the continuous cycle of hypothesis and testing. We hope to inculcate in our students " a taste for questioning, a sense of observation, intellectual rigor, practice with reasoning, modesty in the face of facts, the ability to distinguish between true and false, and an attachment to logical and precise language. " (Yves Quéré, 2010 *Science* 330:605).

THINK 2. The Art of Living. 4 Units.

Where do our ideals for living come from, and how should they be structured? How do we justify them in the face of criticism? What role do great works of art play in this creative process? Our lives are not simply given to us, but also something we make: as we examine the circumstances of our existence, recognizing certain facts as immutable and others as subject to our control, each of us faces the challenge of fashioning out of them a way of living that is both meaningful and justifiable. The Art of Living will explore different ways to think about the nature of that challenge: how to accommodate conflicting demands and values, how to make our choices artfully, how we might use works of imaginative literature to inspire us. We will read important works of literature and philosophy, each of which implies a different value by which to live, whether reason, authenticity, community, art, or faith. In each case, you will be presented with different perspectives and asked to work out for yourself what you find most persuasive, thereby fine-tuning skills essential to your own lifelong project of self-construction.

THINK 3. Breaking Codes, Finding Patterns. 4 Units.

Why are humans drawn to making and breaking codes? To what extent is finding patterns both an art and a science? Cryptography has been used for millennia for secure communications, and its counterpart, cryptanalysis, or code breaking, has been around for just slightly less time. In this course we will explore the history of cryptography and cryptanalysis including the Enigma code, Navajo windtalkers, early computer science and the invention of modern Bayesian inference. We will try our own hand at breaking codes using some basic statistical tools for which no prior experience is necessary. Finally, we will consider the topic of patterns more generally, raising such questions as why we impute meaning to patterns, such as Biblical codes, and why we assume a complexity within a pattern when it's not there, such as the coincidence of birthdays in a group.

THINK 4. Can the People Rule?. 4 Units.

How did our ideas about democracy as a universal norm evolve from a term once used to describe a handful of ancient Greek city-states? Would American democracy function better if we applied ancient practices that allowed the people to rule more directly and knowledgeably? In this course, we will explore the idea of democracy through the experience of the American republic, focusing on the constitutional experiments of the Revolutionary era and the 19th-century democracy analyzed by Alexis de Tocqueville. We then address contemporary criticisms voiced against many democracies today: that the public is not well informed and therefore incapable of governing. You will read and learn to draw on major works of political theory to think critically about the complexities of American democracy. You will also be asked to participate in a two-week experiment in Deliberative Polling, which involves gathering citizens in random groups to study and discuss issues. Through this exercise, you will explore whether this structure might offer an attractive or complementary alternative to representative rule.

THINK 5. Constituting Justice. 4 Units.

How does justice incorporate the ideals of freedom, equality, and security? How are these ideals balanced against each other? How are they made concrete in the U.S. Constitution and law? In this course we consider three core ideals that animate the idea of justice: freedom, equality, and security. We explore the relationship between these different concepts through an interdisciplinary inquiry that includes political philosophy, history, and law. In your reading, writing, and thinking, you will move between the realm of abstract ideas and actual legal cases. We begin with the philosophical roots of the ideals of freedom, equality, and security, and then focus on their articulation in the U.S. Constitution and the overarching U.S. legal framework. Students will learn to analyze the distinctive challenges posed to the ideals of freedom, equality, and security by 21st century developments such as the emergence of the internet and the rise of non-state warfare.

THINK 6. Everyday Life: How History Happens. 4 Units.

To what extent can individuals' daily actions influence world events, and to what extent are individuals influenced by world events? This course investigates the relationship between private lives and public affairs. We will trace how small acts contribute to global change and, in turn, how global change can shape one's sense of self. We will explore the shifting mentalities of individuals during the most dramatic transformations in 20th century Europe: World War I, communist revolution, the rise of Nazism, World War II, the Holocaust, and the Cold War. Through analysis of memoirs, diaries, essays, novels, and state documents, you will examine how social and political developments can reveal the very boundaries between self and society. To make this exploration more personal, you will develop a fictional persona that you will keep throughout the quarter through which you explore the everyday workings behind momentous change.

THINK 7. Journeys. 4 Units.

Is death final or only the beginning of another journey? How do the mysteries of destination give rise to our most basic questions of purpose, meaning, and faith, and challenge us to consider our proper relation to others? Journeys will examine works written across a span of some 2,300 years, from Chinese philosophy to American short stories. Each of these forms and genres presents some essential aspect of the journey we all share, and of the various passages we make within that one great journey that relentlessly challenge and transform us even as we advance toward what the poet Thomas Gray called our "inevitable hour." By reading, discussing, and interpreting these works, we will ask you to consider how each text compels us, by the penetration of its vision and the power of its art, to make part of our own journey in its company.

THINK 8. Sustainability and Collapse. 4 Units.

What does it mean to live sustainably? How do our different definitions of nature: scientific, literary, cultural, and historical: shape the way we answer that question? Sustainability and Collapse will explore what people in different places and periods of time have envisioned as successful ways of living with nature and how such ways of life have come under pressure. We will focus particularly on the interface between scientific and humanistic approaches to questions of environmental sustainability through a study of novels, historical texts, and works of biogeography. You will learn to ask how textual and visual images inform our ideas about what it means to live sustainably. We will then consider whether those ideas are in accordance with or in conflict with scientific understandings of human uses of nature. This course takes on some of the fundamental problems that presently confront our global community.

THINK 9. Technological Visions of Utopia. 4 Units.

How do science and technology shape the frameworks for imagining utopian or dystopian societies? Sir Thomas More gave a name to the philosophical ideal of a good society: a word that is now a part of common language: utopia. In the almost 500 years since More's Utopia appeared, changes in society: including enormous advances in science and technology: have opened up new possibilities for the utopian society that More and his predecessors could not have envisioned. At the same time science and technology also entail risks that suggest more dystopian scenarios: in their most extreme form, threats to humanity's very survival. We will look at several works that consider how literary visions of society have evolved with the progress of science and technology. The readings begin with More and include examples of more technologically determined visions of the late 20th century, as imagined in works of fiction.

THINK 10. Voyages and Visionaries. 4 Units.

How did cross-cultural contact between Europe and Asia in the pre-modern era produce our modern concept of civilization? In this course we examine five moments of intellectual encounter in the pre-modern era among civilizations of the eastern hemisphere, including India and China and what we now call the Middle East. Through the eyes of scholars, pilgrims, and missionaries, you will learn to map the itineraries of early travelers and to analyze their experiences from a comparative perspective. We will focus on reconstructing the worldviews and geographical imaginations that inform each text with reference to historical maps and images.

THINK 11. Bioethical Challenges of New Technology. 4 Units.

How might we apply ideas from ethical theory to contemporary issues and debates in biotechnology? This course will provide critical encounters with some of the central topics in the field of bioethics, with an emphasis on new technologies. Controversies over genetic engineering, stem cell research, reproductive technologies, and genetic testing will provide an opportunity for you to critically assess arguments and evidence. We will begin with an overview of the field and the theoretical approaches to bioethics that have been derived from philosophy. You will then have the opportunity to engage in debate and learn how to identify underlying values and how to apply ideas from ethical theory to contemporary problems.

THINK 12. Century of Violence. 4 Units.

What is modern about modern mass violence? This course explores the evolution, varieties, and logic of mass violence from the early 20th century to the present day. You will engage with and analyze primary accounts of such violence by victims, observers, perpetrators, and courts. We will then consider the effectiveness of various efforts to confront genocides and crimes against humanity in international courts and institutions, past and present. We start with the emergence of genocide as a modern, international issue; proceed with colonial massacres in early 20th century Africa; move to the Armenian genocide in the Ottoman Empire and WWI; Nazi and Nazi-inspired racial murder; communist-induced mass violence in the Soviet Union and Asia; ethnic cleansing in former Yugoslavia; and end with an examination of the recent genocides in Rwanda, Sudan, and the Middle East.

THINK 13. Epic Journeys. 4 Units.

What makes an epic hero? How does the epic poem externalize our quest for identity and self-definition? The human quest for identity and self-knowledge is the oldest story of human culture. It almost always involves a confrontation with death. As the epic hero journeys across the physical world and descends into the underworld to visit the dead and seek counsel from them, he gradually comes to understand himself in a deeper, more meaningful way than before he set out on his journey. In this course, you will learn to engage in depth with some of the great epics of the Western tradition, beginning with *The Epic of Gilgamesh* and ending with Dante's masterpiece, *The Divine Comedy*. In each case, we will consider the unique goals of each hero's journey and the obstacles he must confront in order to reach his destination, with particular attention to the themes of violence in self and society, exile and alienation, the encounter with ancestors, the female voice, and divine guidance. We will focus on how the hero's search for a moral identity in relation to his community connects to current definitions of the ethical life in relation to political violence, war, honoring the dead, and confronting our mortality.

THINK 14. From the Closed World to the Infinite Universe: Science, Philosophy and Religion. 4 Units.

How and why did the Copernican revolution in astronomy—which placed the Sun at the center of the solar system rather than the earth—have such a profound effect on the relationship between science, philosophy, and religion? How did it ultimately lead to the secularization of modern society? This course examines the defining moments when western science, philosophy, and religion became disentangled from one another, eventually leading to the development of our modern secular culture. As background for understanding the Copernican revolution and its aftermath, we begin with a brief examination of Plato and Aristotle, and how these two Ancient Greek thinkers were later taken up in the medieval period, resulting in a synthesis in which science, philosophy, and religion were intimately interconnected. Against this background we will then focus on the scientific revolution of the 16th and 17th centuries and encounter thinkers who during their lifetimes defied easy categorization: Were Galileo and Newton philosophers or scientists? What about Descartes and Leibniz? In reading texts that we now understand as belonging to one or the other category, we will see how the two disciplines eventually became sharply distinguished from one another—which then led, in turn, to the modern separation between science and religion.

THINK 15. How Does Your Brain Work?. 4 Units.

How to learn to formulate questions about the brain that are observable, testable, and answerable? What is the relationship between the biology and chemistry of the brain and the mind that lets us talk, walk, laugh, love, learn, remember, and forget? What might neuroscience reveal about what makes us human? The human brain is the most complex organ known. It has evolved over time by adapting to the various behavioral and environmental constraints. The validity of common beliefs about the brain and the structure of the brain and the nervous system; how the elements of the brain function and how together these units produce action. The brain evolved in response to natural selection like all other biological structures. Evolutionary comparisons that illuminate questions about brain function including: What are the origins and consequences of brain damage, how and where do drugs act, how do you collect information about the world and how do you interpret and understand it? Through interactive lectures and discussions, this course is directed at understanding the biological mechanisms of brain function, from its individual components to functioning brains. Students learn to analyze how the science of the brain has emerged through the study of experiments and other observations. In the final project, students learn to critically assess, analyze, and write about a popular media representation of brain science from available scientific literature.

THINK 16. Is the Universe Just? Explorations in the Classics. 4 Units.

What can the Classics teach us about understanding justice and injustice? Do you ask yourself whether your life is controlled more by your own free choices or by your genetic code? Do you worry whether a superpower can function without hubristic arrogance? Do you ponder what constitutes the Good Life? If these sorts of issues are central to your intellectual and personal growth, this course will demonstrate to you that the ancient Mediterranean world was equally consumed with questions about the nature of human society and human existence. We will explore certain recurring themes within classical text such as the relationship between power and gender; gods and humans; innocence and evil. We will read a wide and deep selection of important and influential literary texts from the Near East, Greece, and Rome, spanning from c.2000 BCE to the first century BCE. The readings will include creation texts, epic, lyric, tragedy, and philosophy.

THINK 17. The Poet Re-Making the World. 4 Units.

Can poetry change the world? Poets use form and language to hold up a mirror to the events that change the world and the making of a poem can also be the re-making of a world. We will read and study poetry from different historical, cultural, and poetic traditions, and explore whether something as individual as artistic expression can help us cope with the social and political events that bring suffering and destruction. The course follows the adventures of the individual poet: from a young man caught in the trenches of the First World War, to a Japanese haiku master of the 17th century, to an American Beat, to an English woman trapped in the conventions of her time, to a contemporary U.S. soldier in Iraq. Poets show us the many similarities, as well as rich cultural differences, between us all.

THINK 18. Rebellious Daughters and Filial Sons of the Chinese Family. 4 Units.

How has the family been broken, preserved, and reinvented in the fast-changing world of revolution and modernization? *Rebellious Daughters and Filial Sons of the Chinese Family* follows the theme of the Chinese family in fiction and film to investigate the core values that hold it together in the midst of great historical change. You will learn to interpret both fiction and film as visual and textual narratives that illuminate the multiple aspects of family and community. We will explore how modernization, colonialism, revolution, war, and immigration disrupt traditional home and family. Through film and text, we will discover the various poignant attempts to rebuild family relations in the midst of such dislocation. As you embark on your college education and take leave of your own families, you might start to consider how your familial ties shape your concept of self, your emotional attachment to community, social relationships with society, and political consciousness.

THINK 19. Rules of War. 4 Units.

When, if ever, is war justified? How are ethical norms translated into rules that govern armed conflict? Are these rules still relevant in light of the changing nature of warfare? We will examine seminal readings on just war theory, investigate the legal rules that govern the resort to and conduct of war, and study whether these rules affect the conduct of states and individuals. We will examine alternative ethical frameworks, competing disciplinary approaches to war, and tensions between the outcomes suggested by ethical norms, on the one hand, and legal rules, on the other. Students will engage actively with these questions by participating in an interactive role-playing simulation, in which they will be assigned roles as government officials, advisors, or other actors. The class will confront various ethical, legal, and strategic problems as they make decisions about military intervention and policies regarding the threat and use of force in an international crisis.

THINK 20. Ultimate Meanings: The Stories Buddhists Tell. 4 Units.

Does human existence have some ultimate meaning or purpose? What are we here for, and how should we live our lives? Can the stories used by the world's religions help us answer these questions? For a religion which teaches that we have no selves, Buddhism has produced many great stories with many great characters. In this course students will read and think about some of these stories, drawn from the Buddhist tradition in the many forms which it developed as it spread across Asia. We will look at the biography of the founder, the Buddha, the tales of his previous lives, the stories of his disciples, and of later saints and heroes, religious practitioners and ordinary folk. In reading these stories we will investigate how they elaborate a persuasively constructed world of meaning in terms of which people can make sense of their own personal histories, and from which they can learn how to lead a good and meaningful life.

THINK 21. Folklore and Literature in Russia and Beyond: Vampires, Talking Cats, and Frog Princesses. 4 Units.

What is folklore and what is its purpose? How do we decide if something is authentically folk and does it matter? Why are Eastern Europe and Russia associated with the idea of folklore? For the past two centuries, elite writers, composers, and artists have found inspiration in the stories, songs, and beliefs of their grandparents, their servants (or their slaves), and their neighbors. This class asks what folklore means and what purposes political and philosophical as well as artistic it can serve. We begin with examples from around the world: the German Brothers Grimm as well as the Americans Alan and John Lomax. Then we turn to Eastern Europe and the role it has played in the Western European and American imagination as the home of the archaic and the authentic, from the vampires of Transylvania to the oral epics of the Bosnian Serbs to the nostalgic idea of the Jewish shtetl to the fantasy of Soviet communism as a survival of a pre-capitalist order. Students will analyze both folk and elite texts, and will experiment with gathering oral texts and transforming them just as the writers we study did.

THINK 22. Who Owns the Past? Archaeology, Heritage and Global Conflicts. 4 Units.

Who owns the past? Is cultural heritage a universal right? This course interrogates the relationship between the past and the present through archaeology. Increasingly, heritage sites are flash points in cultural, economic, and religious conflicts around the globe. Clearly history matters but how do certain histories come to matter in particular ways, and to whom? Through close study of important archaeological sites, you will learn to analyze landscapes, architecture, and objects, as well as reflect on the scholarly and public debates about history and heritage around the world. Far from being a neutral scholarly exercise, archaeology is embedded in the heated debates about heritage and present-day conflicts.

THINK 23. The Cancer Problem: Causes, Treatments, and Prevention. 4 Units.

How has our approach to cancer been affected by clinical observations, scientific discoveries, social norms, politics, and economic interests? Approximately one in three Americans will develop invasive cancer during their lifetime; one in five Americans will die as a result of this disease. This course will expose you to multiple ways of approaching the cancer problem, including laboratory research, clinical trials, population studies, public health interventions, and health care economics. We will start with the 18th century discovery of the relationship between coal tar and cancer, and trace the role of scientific research in revealing the genetic basis of cancer. We will then discuss the development of new treatments for cancer as well as measures to screen for and prevent cancer, including the ongoing debate over tobacco control. Using cancer as a case study, you will learn important aspects of the scientific method including experimental design, data analysis, and the difference between correlation and causation. You will learn how science can be used and misused with regard to the public good. You will also learn about ways in which social, political, and economic forces shape our knowledge about and response to disease.

THINK 24. Evil. 4 Units.

What is evil? Are we naturally good or evil? How should we respond to evil? There are many books and courses that focus on the good life or the virtues. Yet despite their obvious apparent presence in our life and world, evil and the vices are rarely taken as explicit topics. We will read philosophical and literary texts that deal with the question of evil at an abstract level and then use other readings that help us focus on more practical implications of the meaning and consequences of evil. By exploring the issue of evil, we will confront larger questions about the nature of humans, the responsibility to address evil as a society, and the moral and ethical ways we might begin to define what is evil.

THINK 25. Evolution on Earth. 4 Units.

How does evolution, the foundation of biology, underlie the diversification of life on earth? What are the mechanisms of evolution, and how are they discovered and explored? What are the practical implications of evolution for agriculture, medicine, and the future of life on earth? The history of life on earth is inextricably intertwined with the history of geological change on earth. Early ideas about biological evolution came from young people who went on wild adventures. Their observations generated ideas about what must have happened; but since, at the time, little was known about the mechanisms of inheritance, they were never to know how it happened. In time, two major advances came along: a much more comprehensive fossil record that substantiated many of their ideas, and a deep understanding of genetic mechanisms of inheritance. In parallel, the idea of geologic forms as dynamic, especially volcanic eruptions and plate tectonics, provided a new narrative of earth history that informed ideas about spreading and changing life forms. Then mechanisms of developmental biology showed how inherited genes carry out recipes for building bodies with certain structures. We will examine evolution from scientific, historical, and artistic perspectives, including evolution of microbes, plants, animals, and humans, and implications of evolution for medicine. The course will include introductory lectures, some in class and some online, discussion sessions, and three team projects for each student. Student teams will examine topics of their choosing in depth and create reports that will be assembled into a comprehensive book.

THINK 26. How Do You Build a Nation? Inclusion and Exclusion in the Making of Modern Iran. 4 Units.

Why were minority religious groups excluded from the majority's vision of a Shi'i Iranian nation? How and when were women included as citizens of a new Iran? In this course, specific attention will be paid to key events of the 20th century that shaped modern Iran: the Constitutional Revolution (1905-11), the 1953 coup, the White Revolution (1963), the Islamic Revolution (1978-79), the Iran-Iraq War (1980-1988), and the post-revolutionary period in general. Through a close reading of key poems, short stories, and films created in this period, this course will identify major inclusionary and exclusionary forces in the process of nation-building in 20th-century Iran. Specific attention will be paid to issues of ethnicity, religion, and gender. In addition to reading texts (poetry and prose) and watching films, students will be called on to present critiques of these literary and cinematic products in the form of brief oral presentations and short writing assignments. The final project will involve interviewing Iranian expatriates on issues covered in the lectures. Students will work in small groups to produce short videos of these interpersonal encounters.

THINK 27. Human Rights and Humanitarianism. 4 Units.

Why do certain governments and citizens feel obliged to ease the suffering of distant people in need? How did the humanitarian sensibilities and human rights discourses that now define global politics come into being? In this course, you will consider how contemporary ethical motivations for human rights and humanitarianism have developed. We will investigate the emergence and transformation of these ideas through the study of key historical events in the modern world: slavery and its abolition, colonialism, the World Wars, apartheid, decolonization, and the Cold War. We will then consider how this longer history has influenced the ways activists, NGOs, and governments today draw attention to global crises and abuses. Our ultimate objective is to gain an understanding of how the language and ideals of human rights and humanitarianism emerged from the context of liberalism, capitalism, and imperialism.

THINK 28. Media and Message. 4 Units.

How do different media embody information? What are the implications for the ways we understand the world and our place in it? Visual media are conduits for information and narrative but are experienced very differently. We will explore a range of historical and contemporary media, with an emphasis on the ways that different media present, organize, and structure information as forms that are read or experienced. You will be asked to compare, for example, how different media explore the same or similar content: examples might be viewing the film version of *Hellboy* as compared to reading the comic book, or considering how a historical event such as the D-Day landings is understood differently via photography, film, and interactive games. We start with considerations of the illuminated book, print, painting, and photography and move to the more recent cinema, television, and interactive and computational media.

THINK 29. Networks: Ecological, Revolutionary, Digital. 4 Units.

Why is the word network used to describe the behavior of computers, ants, and people? Do all these networks share certain properties? What might we learn by comparing them? We like to think of social networks as a contemporary phenomenon. But before Facebook, individuals organized themselves in social networks; before Twitter, revolutionaries used media to communicate and coordinate their messages. In fact, even animal societies are networked. Through project-based exercises, you will learn to study, analyze, and write about networks from the perspectives of a biologist, a computer scientist, and a historian. We will retrace social networks in the 18th and 21st centuries, observe the organization of animal networks, and investigate the structure of online networks. Our goal is to use the concept of the network to deepen our understanding of the natural world, historical change, and our own social lives.

THINK 30. Race Matters. 4 Units.

What are race and ethnicity? How do they shape society and individual experience? What role do they play in identity formation? Going to school and work, renting an apartment, going to the doctor, watching television, voting, reading books and newspaper, or attending religious services are all activities that are influenced consciously and unconsciously by race and ethnicity. In this course, we will draw on scholarship from psychology, genetics, history, and cultural studies to understand contemporary racial formations and cultural representations. We will look at how recent research on the human genome has reinvigorated biological conceptions of race and ethnicity, engage in activities that highlight the psychological consequences of race and ethnicity, and analyze selected race-relevant memes that appear in popular media.

THINK 31. Reimagining America: Cultural Memory and Identity Since the Civil War. 4 Units.

We will focus on how Americans negotiated issues of cultural memory and national identity through a close analysis of historical texts, novels, poems, films, paintings, cartoons, photographs, and music. Our interpretations will foreground the particular themes of race and nationhood; freedom and citizenship; and changing notions of individual and collective identity. Our assumption in this course is that history is not available to us as a set of events - fixed, past, and unchanging. Rather, history is known through each generation's interpretations of those events, and these interpretations are shaped by each generation's lived experience. What stories get told? Whose? And in what ways? The stories we choose to tell about the past can shape not only our understanding of the present, but also the kind of future we can imagine and strive to realize.

THINK 32. Subversive Acts: Invention and Convention in the 20th Century. 4 Units.

Can art subvert social practice and politics? In this course, we will learn how to "read" art and analyze the ways aesthetic objects can raise larger conceptual questions about culture, society, and change. We will do this by investigating the broad range of artistic, social, and political meanings of the term "avant-garde" in the 20th century. The course looks at some of the key moments in avant-garde art in Europe, including Dadaism and Futurism, with a particular emphasis on Russia. Through an examination of various aesthetic case studies, we will be able to ask the larger question of whether art can actually challenge social conventions and established political ideologies.

THINK 33. The Water Course. 4 Units.

How can we balance all the competing, and growing, demands for freshwater? When you turn on your tap, where does the water come from? Water is essential for life. But, around the world, governments and citizens are challenged to balance the human demands on our freshwater resources, while protecting the integrity of natural ecosystems. At the core of the challenge is our limited understanding, in many parts of the world, of the watershed-scale hydrologic cycle; the course that the water follows from rainfall, to river, to groundwater, to ocean, to atmosphere, and back again. The Water Course takes students along that course, exploring the role that natural systems and human systems play in impacting both the quantity and quality of our freshwater. We will consider questions surrounding decisions about water allocation, and discuss new scientific methods that provide support for science-based decision making in the management of freshwater resources. You will connect global-scale issues to your personal experiences with water through a quarter-long project investigating both water quantity and water quality for a city or watershed in the western U.S. You will produce a numerical model, and make approximations, to describe a complex natural system. Using online resources you will explore the pathway that water takes from rainfall to your tap.

THINK 39. Energy? Understanding the Challenge, Developing Solutions. 4 Units.

How much energy do we need to run the world and what energy resources can we use? How do we convert those resources into energy services? What are the economic, environmental, and security costs of energy services? How will energy markets address the challenges of reducing greenhouse gas emission? Energy is the lifeblood of human societies. Energy use is intricately woven through the fabric of the productive (and comfortable) lives we live in the developed world. We use energy to move and sometimes make fresh water, grow food, transport it to markets, heat, cool, and light our dwellings and workplaces, communicate and compute, and travel the world. We worry about energy security and fret about the cost of gasoline. And as world population continues to grow and the developing world seeks to use energy for the services we enjoy, the challenge of supplying the energy the world needs will grow commensurately. Energy is also a primary way human activities interact with global air, water, and biological systems that provide essential services to us and the planet. Balancing our interactions with those systems will require dramatic changes to the world's energy systems in the decades to come. This course examines the energy challenges, opportunities, and choices that lie ahead.

THINK 40. A Transition Toward Sustainability. 4 Units.

What are the most critical sustainability challenges facing us in this century? How can natural and social sciences, humanities, and technology fields interact to contribute to their solution? How do we balance the needs and desires of current generations with the needs of future generations? The term "sustainability" seems to be everywhere. Businesses, cities, non-governmental organizations, individuals, and universities such as Stanford use the term to characterize decisions that make sense for the well-being of people as well as the environment. Beyond the popular use of the term is an emerging field of study that focuses on the goals of sustainable development; improving human well-being while preserving Earth's life support systems (air, water, climate, ecosystems) over the long run; and explores how science and technology can contribute to the solution of some of the most critical problems of the 21st Century. The goal of this course is to engage you in critical thinking and analysis about complex sustainability challenges and to encourage you to consider the need for integrative solutions that draw on different disciplines. We will examine some of the major problems of sustainable development (including issues related to food, water, and energy resources, climate change, and protection of ecosystem services), grapple with the complexities of problem solving in complex human-environment systems, and participate in the design of effective strategies and policies for meeting sustainability goals. You will learn to develop policy briefs addressing sustainability issues in the university, local communities, state and the nation as well as work on team projects with decision makers that address real-life challenges in your local area.

THINK 41. The Conscious Mind: The Philosophy and Biology of Consciousness, Memory, and Personal Identity. 4 Units.

How do our common-sense conceptions of the mind and of ourselves hold up against the growing body of psychological and neurobiological knowledge of the brain? How is your mental life anchored to your physical self? You wake up from a dreamless sleep and suddenly everything's buzzing with color and sound. Somehow your brain sustains this rich landscape of experience, integrating it with a repertoire of memories to constitute yourself. This course probes the neurobiological bases of these familiar yet miraculous facets of the mind. You'll learn to analyze primary philosophical and scientific texts, using basic knowledge of the brain to assess and even innovate experiments that could shed light on the nature of consciousness and personal identity.

THINK 42. Thinking through Africa: Perspectives on Wealth, Well-Being, and Development. 4 Units.

What is human well-being? How do we define it? How do we measure it? What do we mean when we talk about certain parts of the world as "developed" and others as "underdeveloped" or "developing"? How do improvements in human well-being come about? In this course, we will explore concepts of wealth and well-being by focusing on the African experience. We will equip you with the tools and techniques of three diverse disciplines "history, political science, and engineering" as you tackle essential questions about the meaning of development and how to measure it, the long-run impact of historical events, the role of politics in the development process, and the challenges of engineering improvements to human well-being. You will tackle primary source documents as we explore the slave trade and colonial rule; you will engage cutting-edge social science as we dissect contemporary trends; and you will learn how engineers are grappling with the importance of the contexts in which they operate. Students will also engage directly with contemporaries at African universities throughout the quarter.

Tibetan Language Courses

TIBETLNG 1. First-Year Tibetan, First Quarter. 4 Units.

Grammar, reading, and composition. Tibetan culture and the Tibetan view of reality.

TIBETLNG 2. First Year Tibetan, Second Quarter. 4 Units.

Continuation of 1.

TIBETLNG 3. First Year Tibetan, Third Quarter. 4 Units.
Continuation of 2. Fulfills the University Foreign Language Requirement.

TIBETLNG 13. Intermediate Tibetan, Third-Quarter. 4 Units.
Continuation of 12.

TIBETLNG 21. Intermediate/Advanced Tibetan, First Quarter. 4 Units.

TIBETLNG 23. Intermediate/Advance Tibetan, Third Quarter. 4 Units.

TIBETLNG 199. Individual Work. 1-5 Unit.
May be repeated for credit. Prerequisite: consent of instructor.

TIBETLNG 395. Graduate Studies in Tibetan. 2-5 Units.
May be repeated for credit. Prerequisite: consent of instructor.

Undergraduate Advising and Research Courses

UAR 10. Intellectual Journeys. 1 Unit.
Stanford speakers share their research as well as their intellectual and life paths, including how they chose their undergraduate major, how they found mentors, and what their field offers undergraduates.

UAR 42A. LSP First Year Seminar. 1 Unit.
For freshmen who participated in the Leland Scholars Program. This seminar supports LSP students in the first year in the areas of institutional engagement, academic empowerment, their sense of belonging to Stanford, and builds their cohort identity.

UAR 42B. LSP First Year Seminar B. 1 Unit.
For freshmen who participated in the Leland Scholars Program. This seminar supports LSP students in the first year in the areas of institutional engagement, academic empowerment, their sense of belonging to Stanford, and builds their cohort identity.

UAR 46. Challenges Facing First-Gen Students In Their Transition To College. 2 Units.
This course will focus on the multiple perspectives relating to why women and first generation students experience challenges to successfully navigating paths in Science, Technology, Engineering, and Mathematics (STEM) professions and majors. Students will explore how such constructs as power, privilege, and identity play a role in their academic and future careers. Connections to theoretical works of stereotype threat, cultural capital, and belonging will also be emphasized. Throughout the course, students will learn and enhance foundational skills aimed at supporting their trajectory in STEM majors and ultimately, STEM careers.

UAR 56. Building a Successful Academic Career. 1 Unit.
For freshmen in expanded advising programs. Techniques for honing academic skills for college, and applying those skills to better define intellectual identity in academic pursuits. May be repeated for credit.

UAR 60. Engaging, Exploring, and Reflecting on Alumni Career Worlds. 1 Unit.
This course helps students access and navigate the professional world with tools such as e-Portfolios, Strengths Quest, and alumni shadow visits. Assignments and discussions will encourage deep reflection on the values, philosophies, and backgrounds that can help shape each student's long term goals.

Urban Studies Courses

URBANST 100A. Pre-field Course for Urban Studies Alternative Spring Break. 1 Unit.
Limited to students participating in the Alternative Spring Break program. See <http://asb.stanford.edu> for more information.

URBANST 110. Utopia and Reality: Introduction to Urban Studies. 4 Units.

The study of cities and urban civilization. History of urbanization and current issues such as suburbanization, racial discrimination, globalization, and urban sustainability. Public policies designed to address these issues and Utopian versions of what cities could be in the future.

URBANST 111. Urban Politics. 5 Units.
The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances. Prerequisite: POLISCI 2 or consent of instructor. Same as: AMSTUD 121Z, POLISCI 121, PUBLPOL 133.

URBANST 112. The Urban Underclass. 5 Units.
(Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor. Same as: SOC 149, SOC 249.

URBANST 113. Introduction to Urban Design: Contemporary Urban Design in Theory and Practice. 5 Units.
Comparative studies in neighborhood conservation, inner city regeneration, and growth policies for metropolitan regions. Lect-disc and research focusing on case studies from North America and abroad, team urban design projects. Two Saturday class workshops in San Francisco: Jan 19 and Feb 2. Terms: Win | Units: 5 | UG Reqs: GER:DBSocSci | Grading: Letter (ABCD/NP).

URBANST 114. Urban Culture in Global Perspective. 5 Units.
Core course for Urban Studies majors. We will study urban space both historically and cross-culturally. Urban Studies, by definition, is an interdisciplinary field, where the methodological approaches draw upon a diverse set of analytic tools. Disciplines that occupy a prominent place in this class are geography, cultural anthropology, sociology, history, media studies, and literature. In this context, we will discuss the importance of cities around the world to the economic, cultural, and political well-being of modern societies and examine how forces such as industrialization, decentralization, and globalization affect the structure and function of cities. Same as: ANTHRO 126.

URBANST 115. Urban Sustainability: Long-Term Archaeological Perspectives. 3-5 Units.
Comparative and archaeological view of urban design and sustainability. How fast changing cities challenge human relationships with nature. Innovation and change, growth, industrial development, the consumption of goods and materials. Five millennia of city life including Near Eastern city states, Graeco-Roman antiquity, the Indus Valley, and the Americas. Same as: CLASSGEN 123, CLASSGEN 223.

URBANST 121. Public Scholarship & Social Change. 2 Units.
Introduces students to the diverse ways of doing public/community-engaged scholarship, including public interest and public policy-oriented research, design research, social entrepreneurship, activist/advocacy and community-based research models. Through a multidisciplinary set of case studies of actual research/action projects in the US and abroad, students will compare and assess research models in terms of methodological approach, academic rigor, control and ownership of the research process, means and modes of data dissemination, researcher subjectivity, depth of community partnership, and relative potential for sustainable, long-term community impact. The course material is designed to provide students with a broad framework and context to imagine how to produce their own scholarship/research as a form of public service and social transformation.

URBANST 122. Ethics and Politics of Public Service. 5 Units.

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.

Same as: CSRE 178, ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D.

URBANST 123. Approaching Research and the Community. 2-3 Units.

Comparative perspective on research with communities and basic overview of research methodologies, with an emphasis on the principles and practices of doing community-based research as a collaborative enterprise between academic researchers and community members. How academic scholarship can be made useful to communities. How service experiences and interests can be used to develop research questions in collaboration with communities and serve as a starting point for developing senior theses or other independent research projects.

URBANST 124. Spatial Approaches to Social Science. 5 Units.

This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space. Same as: ANTHRO 130D, ANTHRO 230D, POLISCI 241S.

URBANST 126. Spirituality and Nonviolent Urban and Social Transformation. 3 Units.

A life of engagement in social transformation is often built on a foundation of spiritual and religious commitments. Case studies of nonviolent social change agents including Rosa Parks in the civil rights movement, César Chávez in the labor movement, and William Sloane Coffin in the peace movement; the religious and spiritual underpinnings of their commitments. Theory and principles of nonviolence. Films and readings. Service learning component includes placements in organizations engaged in social transformation. Service Learning Course (certified by Haas Center). Same as: CSRE 162A, RELIGST 162.

URBANST 127. Community Planning Workshop. 4-5 Units.

Students work in teams to conduct research, analyze and evaluate alternatives, and make recommendations for possible solutions to local community development issues. Students work with community partners to blend theory and practice to accomplish a community based project.

URBANST 127. COMMUNITY PLANNING WORKSHOP. 4-5 Units.**URBANST 128. Community Mapping Practicum. 4 Units.**

Students will use mapping techniques to explore community planning and policy issues in Redwood City. Focusing on building other skills including teamwork, writing, and oral communication. GIS is not a prerequisite.

URBANST 131. VIP: Very Impactful People - Social Innovation & the Social Entrepreneur. 1 Unit.

Invited lecture series. Perspectives and endeavors of thought leaders and entrepreneurs who address social needs in the U.S. and internationally through private for-profit and nonprofit organizations, nongovernmental organizations, or public institutions.

URBANST 132. Concepts and Analytic Skills for the Social Sector. 4 Units.

How to create and grow innovative, not-for-profit organizations and for-profit enterprises which have the primary goal of solving social and environmental problems. Topics include organizational mission, strategy, communications/marketing, financing and evaluation. Opportunities and limits of methods from the for-profit sector to meet social goals. Perspectives from the field of social entrepreneurship. Focus is on integrating theory with practical applications. Enrollment limited to 20. Prerequisite: consent of instructor. Email lalitvak@stanford.edu.

URBANST 133. Social Entrepreneurship Collaboratory. 4 Units.

Interdisciplinary student teams create and develop U.S. and international social entrepreneurship initiatives. Proposed initiatives may be new entities, or innovative projects, partnerships, and/or strategies impacting existing organizations and social issues in the U.S. and internationally. Focus is on each team's research and on planning documents to further project development. Project development varies with the quarter and the skill set of each team, but should include: issue and needs identification; market research; design and development of an innovative and feasible solution; and drafting of planning documents. In advanced cases, solicitation of funding and implementation of a pilot project. Enrollment limited to 30. May be repeated for credit. Prerequisites: 131 and 132, or consent of instructor.

URBANST 137. Innovations in Microcredit and Development Finance. 4 Units.

The role of innovative financial institutions in supporting economic development, the alleviation of rural and urban poverty, and gender equity. Analysis of the strengths and limits of commercial banks, public development banks, credit unions, and microcredit organizations both in the U.S. and internationally. Readings include academic journal articles, formal case studies, evaluations, and annual reports. Priority to students who have taken any portion of the social innovation series: URBANST 131, 132, or 133. Recommended: ECON 1A or 1B.

URBANST 140. Urban Ethnography. 5 Units.

Ethnographic research and writing focuses on the ways our lives are shaped by interacting forces such as history, political economy, and creative cultural practices. In the last fifty years, more and more cultural anthropology has been carried out in urban contexts, due to both urbanization around the world and changes in anthropology as a field. This seminar focuses on careful reading and analysis of book-length ethnographies about urban cultures, people and dynamics to consider what the theory and methodological tools of anthropology have to offer us as we seek to better understand the city. Readings include a variety of approaches to ethnographic research in and/or about cities, with a mix from different eras and about different cities around the world. Same as: ANTHRO 102.

URBANST 144. Cities and Citizens in the Middle East. 4 Units.

This course will explore historical formation of cities and citizens in the Eastern Mediterranean since the 19th century. We will explore urban development, economy, social classes and local politics with a focus Egypt and Turkey and in particular two world-historical cities, Cairo and Istanbul. Drawing on history, cultural anthropology, geography and sociology disciplines, we will examine how urban space in Egypt and Turkey have reconfigured through histories of colonialism, nationalism, developmentalism and globalization. Rural to urban immigration, informality, gendered places, consumption, urban regeneration, local politics and branding the city will be the themes of our discussion. We will study these themes in relation to two main questions: How do spatial changes engender new social practices and redefine cultural difference?; How do power struggles at the intersection of local and global interests shape urban change? It will be of interest for urban studies majors and other students at all levels who would like to study urban struggles and change in Turkey, Egypt, the Middle East and the Global South. Same as: ANTHRO 149A.

URBANST 145. China International Urbanization Seminar: Community Partnerships for Sustainable Urban Development. 4-5 Units.

Comparative approach to sustainable cities, with focus on international practices and applicability to China. Tradeoffs regarding land use, infrastructure, energy and water, and the need to balance economic vitality, environmental quality, cultural heritage, and social equity. Student teams collaborate with NGO partners to support sustainability projects. Enrollment limited. Application required. Prerequisites: consent of the instructor(s).

URBANST 150. History of San Francisco. 5 Units.

This class will examine the history of San Francisco, with a focus on social and political history. Possible topics include Indians and Spanish settlers, the Gold Rush, immigration, public culture, Progressive Era reform, the earthquake and fire of 1906 and its legacy, labor and unionism, race and civil rights, sexuality and politics, and redevelopment.

URBANST 160. Environmental Policy and the City in U.S. History. 5 Units.

Looks at the historical backgrounds of current issues in urban environmental policy, including waste, transportation, air pollution, and other major issues. Covers the period 1800 to the present. Explores the relevance of historical scholarship.

URBANST 161. U.S. Urban History since 1920. 5 Units.

The end of European immigration and its impact on cities; the Depression and cities; WW II and the martial metropolis; de-industrialization; suburbanization; African American migration; urban renewal; riots, race, and the narrative of urban crisis; the impact of immigration from Asia, Latin America, and Africa; homelessness; the rise of the Sunbelt cities; gentrification; globalization and cities. Final project is history of a San Francisco neighborhood, based on primary sources and site visit.

URBANST 162. Managing Local Governments. 4 Units.

In-the-trenches approach. Issues in leading and managing local governments in an era of accelerating and discontinuous change. Focus is on practical strategies related to financing, public services impacted by increasing demand and revenue constraints, the politics of urban planning, private-public partnerships, public sector marketing, entrepreneurial problem solving, promoting a learning and risk-taking organizational culture, and developing careers in local government. Enrollment limited to 25; preference to Urban Studies majors.

URBANST 163. Land Use Control. 4 Units.

Methods of land use control related to the pattern and scale of development and the protection of land and water resources. Emphasis is on the relationship between the desired land use goal and geographical landscape, physical externalities, land use law, and regulatory agencies. Topics include the historical roots of modern land use controls; urban reforms of the 19th century; private ownership of land; zoning; local, state, and federal land use regulation; and land trusts preservation. Smart growth, environmental impact consideration, private property rights, and special purpose agencies are related to current issues.

URBANST 164. Sustainable Cities. 4-5 Units.

Service-learning course that exposes students to sustainability concepts and urban planning as a tool for determining sustainable outcomes in the Bay Area. Focus will be on the relationship of land use and transportation planning to housing and employment patterns, mobility, public health, and social equity. Topics will include government initiatives to counteract urban sprawl and promote smart growth and livability, political realities of organizing and building coalitions around sustainability goals, and increasing opportunities for low-income and communities of color to achieve sustainability outcomes. Students will participate in team-based projects in collaboration with local community partners and take part in significant off-site fieldwork.

URBANST 165. Sustainable Urban and Regional Transportation Planning. 4-5 Units.

Environmental, economic, and equity aspects of urban transportation in 21st-century U.S. Expanded choices in urban and regional mobility that do not diminish resources for future generations. Implications for the global environment and the livability of communities.

URBANST 166. East Palo Alto: Reading Urban Change. 5 Units.

Examines the changes in East Palo Alto's built environment, economy, and civil society since the 1990s. Focus on environmental activism, sustainability, and environmental justice issues. Students use archived film footage to analyze the history.

URBANST 167. The Automobile and the City. 4 Units.

This course will examine the impact of the automobile on urban development and the social life of the modern city from three perspectives. First, as Auto-Utopia: a look at the golden age of automobiling during the early and late 20th century when the private car and the truck expanded the full range of opportunities for the economy and for both urban and rural residents of the modern world. Second, Auto-Dystopia: an examination of the negative impacts of the automobile that emerged in the late 20th and early 21st centuries in regard to safety, congestion, pollution, sustainability, and the development of a monoculture of the automobile in urban transportation. And third, Auto-Futures: a look at the ways that urban society -- both in the developed world and in the emerging economies of Asia, Africa, and Latin America -- will plan for and manage a multi-modal transportation system (walking, cycling, transit, and the achievement of a better jobs/housing balance) in which the automobile will be one of many options and will serve both private and public needs.

URBANST 171. Urban Design Studio. 5 Units.

The practical application of urban design theory. Projects focus on designing neighborhood and downtown regions to balance livability, revitalization, population growth, and historic preservation.

URBANST 172. Design Approaches to Mending a City: Rethinking the 101 in East Palo Alto. 4 Units.

The omnipresence of automobile infrastructure negotiating the urban, suburban, and rural landscapes emphasizes the prioritization of this mode of transportation in the United States. Although the overlap of highway and urban area is sometimes addressed (and re-addressed), it tends to create sub-districts, fragmentation, and unnecessary conditions of separation. While serving as an important circulation network on the west coast, connecting Los Angeles to Seattle, the infrastructure of Highway 101 cuts through various communities, at times creating division at the local scale. One of the more marked manifestations of this division is in East Palo Alto, where the highway separates residents on the west side from schools and activities on the east side, acting as a barrier that must be navigated by car. This studio aims to articulate the issues created by the presence of the highway and study design solutions that not only mitigate the presence of these two systems (highway and community) at a general level, but develop strategic approaches to the issues facing the specific area. In this regard, students will engage with the site, community members, and local officials. They will focus on the issues and impact of transportation infrastructure and offer design oriented ideas and responses for addressing the intersection of urban development and highway systems.

Same as: CEE 134C.

URBANST 173. The Urban Economy. 4-5 Units.

Applies the principles of economic analysis to historical and contemporary urban and regional development issues and policies. Explores themes of urban economic geography, location decision-making by firms and individuals, urban land and housing markets, and local government finance. Critically evaluates historical and contemporary government policies regulating urban land use, housing, employment development, and transportation. Prerequisite: Econ 1A or permission of instructor. Same as: PUBLPOL 174.

URBANST 190. Urban Professions Seminar. 1 Unit.

Workshop. Contemporary practice of urban design and planning, community development, urban education, public service law, and related fields. Topics depend partly on student interests. Bay Area professionals lecture and respond to questions concerning their day-to-day work, impressions of their field, and the academic background recommended for their work.

URBANST 194. Internship in Urban Studies. 2-4 Units.

For Urban Studies majors only. Students organize an internship in an office of a government agency, a community organization, or a private firm directly relevant to the major. Reading supplements internship. Paper summarizes internship experience and related readings.

URBANST 195. Special Projects in Urban Studies. 1-5 Unit.**URBANST 197. Directed Reading. 1-5 Unit.****URBANST 198. Senior Research in Public Service. 1-3 Unit.**

Limited to seniors approved by their departments for honors thesis and admitted to the year-round Public Service Scholars Program sponsored by the Haas Center for Public Service. What standards in addition to those expected by the academy apply to research conducted as a form of public service? How can communities benefit from research? Theory and practice of research as a form of public service readings, thesis workshops, and public presentation of completed research. May be repeated for credit. Corequisite: 199.

URBANST 199. Senior Honors Thesis. 1-10 Unit.**URBANST 201. Preparation for Senior Project. 5 Units.**

First part of capstone experience for Urban Studies majors pursuing an internship-based research project or honors thesis. Assignments culminate in a research proposal, which may be submitted for funding. Students also identify and prepare for a related internship, normally to begin in Spring Quarter in URBANST 201B or in Summer. Research proposed in the final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research. Service Learning Course (certified by Haas Center). Same as: SOC 201.

URBANST 201A. Capstone Internship in Urban Studies. 3 Units.

Restricted to Urban Studies majors. Students work at least 80 hours with a supervisor, establish learning goals, and create products demonstrating progress. Reflection on service and integration of internship with senior research plans. Must be completed by start of Winter Quarter senior year. May continue for additional quarter as 194. Service Learning Course (certified by Haas Center). Corequisite: URBANST 201 or consent of instructor.

URBANST 201B. Capstone Internship Seminar. 3-4 Units.

Students carry out an internship of at least 80 hours with a community organization or government agency. Class meets weekly to discuss related issues, including ethics of service, combining service and research, navigating organizational dynamics, and setting and accomplishing internship goals. Students submit internship agreement and internship-related deliverables, and give in-class presentations.

URBANST 202. Preparation for Senior Research. 5 Units.

Required of all juniors in Urban Studies and those juniors in Sociology planning on writing an honors thesis. Students write a research prospectus and grant proposal, which may be submitted for funding. Research proposal in final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research. Same as: SOC 202.

URBANST 203. Senior Seminar. 5 Units.

Conclusion of capstone sequence. Students write a substantial paper based on the research project developed in 201 or 202. Students in the honors program may incorporate paper into their thesis. Guest scholar chosen by students.

Urology Courses

UROL 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

UROL 280. Early Clinical Experience in Urology. 1-2 Unit.

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

UROL 299. Directed Reading in Urology. 1-18 Unit.

Prerequisite: consent of instructor.

UROL 310W. Advanced Surgery/Urology Clerkship. 6 Units.**UROL 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

UROL 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Woods Institute for the Environment Courses

ENVRINST 109. Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision. 2 Units.

Examination of program-based local actions that promote resource conservation and an educational environment for sustainability. Examination of building-level actions that contribute to conservation, lower utility costs, and generate understanding of sustainability consistent with Stanford's commitment to sustainability as a core value. Overview of operational sustainability including energy, water, buildings, waste, and food systems. Practical training to enable students to become sustainability coordinators for their dorms or academic units. Same as: CEE 109, EARTHSYS 109.

ENVRINST 177. Interdisciplinary Research Survival Skills. 2 Units.

Learning in interdisciplinary situations. Framing research questions. Developing research methods that benefit from interdisciplinary understanding. Writing for multiple audiences and effectively making interdisciplinary presentations. Discussions with interdisciplinary experts from across campus regarding interdisciplinary research projects. Same as: EARTHSYS 177, EARTHSYS 277, ENVRINST 277.

ENVRINST 199. Interschool Honors Program in Environmental Science, Technology, and Policy. 1-9 Unit.

Students from the schools of Humanities and Sciences, Engineering, and Earth Sciences analyze important problems in a year-long small group seminar. Combines research methods, oral presentations, preparation of an honors project by each student, and where relevant, field study. May be repeated for credit.

ENVRINST 220. The Social Ocean: Ocean Conservation, Management, and Policy. 1-2 Unit.

This interdisciplinary seminar examines current ocean issues and ideas through a series of readings, discussions, and guest lecturer presentations of seminal works about ethical, physical, and emotional relationships of human beings to the marine world. Through the lenses offered by several classic readings, we will examine and reinterpret the challenges of fisheries collapse, climate change, shipping, marine spatial planning, biodiversity conservation, and the management of land-sea interactions. Though the seminar is open to all undergraduate and graduate students, our course is designed especially for those with a particular interest in studying and solving key issues of ocean policy and management, from coastal adaptation to fisheries management to cumulative impacts assessments. In addition to this interest, students must be willing to take the time to dig deeper into the foundations of environmental thinking about the relationship of human beings and the sea.

ENVRINST 260. Water in the West: Challenges and Opportunities. 2-3 Units.

This 3-unit course explores challenges and opportunities in the management of water resources to protect the economic, ecological, and social values of the American West. Lectures and readings will cover a wide array of subjects and take an interdisciplinary approach to issues affecting water supply, water quality, and ecosystems with an emphasis on applications to policy and practice. Invited speakers from Stanford, other universities, government agencies, business, and non-governmental organizations will discuss relevant topics such as climate change, agricultural and urban water demand, impacts on business, management of freshwater ecosystems, markets and pricing, and other topics to be determined. Class discussion will focus on potential solutions in the areas of policy, markets, technology, and other interventions. Assignments will require students to applying knowledge from readings, lectures, and discussions to practical, real-world scenarios in the form of public comments, editorials, plans, or proposals. Through this course, students will gain an understanding of the complex water landscape of the American West, how decisions affecting water resources in the West are made and may be influenced, and be able to discuss the trade-offs between different various solutions. Limited enrollment. Prerequisite: consent of instructor.

ENVRINST 277. Interdisciplinary Research Survival Skills. 2 Units.

Learning in interdisciplinary situations. Framing research questions. Developing research methods that benefit from interdisciplinary understanding. Writing for multiple audiences and effectively making interdisciplinary presentations. Discussions with interdisciplinary experts from across campus regarding interdisciplinary research projects. Same as: EARTHSYS 177, EARTHSYS 277, ENVRINST 177.

Writing & Rhetoric, Program in Courses

PWR 1AH. Writing & Rhetoric 1: The Rhetoric of American Multicultural Experience. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of multicultural experience and cultural assimilation, focusing on the theme of social acceptance. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1AOA. Writing & Rhetoric 1: Music and Making Meaning. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1AT. Writing & Rhetoric 1: A Mountain for Itself: The Rhetoric of Wilderness. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1CA. Writing & Rhetoric 1: The Rhetoric of Gaming. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include how gameplay in a variety of genres operates as argument about cultural values and how games function as sites of community building, social networking, and learning. Students produce research-based arguments on these issues and merge practice and production in storyboarding rhetorically persuasive games. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1CG. Writing & Rhetoric 1: Mixtapes & Meetups: The Interactive Rhetoric of Media and Relationships. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of styles of leadership across the globe and communication strategies used to bring about change. Exploration of how global leaders learn cross-cultural rhetoric skills to adapt to dynamic and unfamiliar situations. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1CGA. Writing & Rhetoric 1: Popular Science to Girl Talk: Writing as Adaptation and Remix. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1CK. Writing & Rhetoric 1: Investigating the News: Journalism, Technology & the Future. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1CL. Writing & Rhetoric 1: The Politics of Difference, Identity, and Harm: The Rhetoric of Hate Crimes. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1CR. Writing & Rhetoric 1: Writing Nature: Discourses in Ecology, Culture, and Technology. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Inquiry into human relationships with nature and how these influence ethical choices and social justice. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

PWR 1CS. Writing & Rhetoric 1: Debating the Environment. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1CW. Writing & Rhetoric 1: Sporting Rhetoric: Power, Performance, Profit and Politics. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 1D. Writing Well: An Introduction to College Writing. 3 Units.

Offered only to participants in the Summer College for High School Students. Develops critical reading, writing, and research skills applicable to any area of study. Emphases include close reading, analysis of varied texts, development of strong theses, revision strategies, and introduction to research-based argument. Classes are small, encouraging extensive interaction between students and instructors. Discussions of readings, peer work, and individual conferences with instructors. Each section has a thematic emphasis developed by the instructor; students choose sections based on their individual interests. Does not meet the Stanford first-year writing requirement.

PWR 1DC. Writing & Rhetoric 1: Is This What a Feminist Looks Like? Race/Gender in the Obama Age. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the coverage of and activism in a post-racial U.S., including evaluation of the debate over the intersections of racial activism and feminist activism in U.S. politics. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1DH. Writing & Rhetoric 1: The Virtue of Vice and the Vice of Virtue: The Rhetoric of Criminality. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students investigate language and images that construct criminals, analyzing how these representations shape personal and cultural beliefs. Analysis of the costs and benefits of retributive, restorative, and transformative justice systems. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1DW. Writing & Rhetoric 1: Gangsters, Glamour Girls & Gold-diggers: Dialectic of Am. Culture & Hollywood. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of American film and its conversation with American culture. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1EC. Writing & Rhetoric 1: From the Galleries to the Streets: The Rhetoric of Public Space Art. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1EE. Writing & Rhetoric 1: Wishy-Washy or Wise?: The Rhetoric of Ambivalence. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1EP. Writing & Rhetoric 1: The Rhetoric of Global Development and Social Change. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GAA. Writing & Rhetoric 1: Writing Rites: The Rhetoric of Ritual. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GAC. Writing & Rhetoric 1: Protest Art!: The Rhetoric of Art as Social Activism. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of art in drawing our attention to social issues such as racism, poverty, sexism, and homophobia and in moving us to social action. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GAD. Writing & Rhetoric 1: Display Cases and Databases: The Rhetoric of Collection. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GAF. Writing & Rhetoric 1: Little Boxes: The Rhetoric of the American Suburb. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of the suburbs as a site of cultural debate through investigation of the ways that authors and artists imagine the physical landscape of the suburb and the inner lives of suburbanites. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GAJ. Writing & Rhetoric 1: The Rhetoric of Eating. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GAK. Writing & Rhetoric 1: No Filter: The Rhetoric of Young Adulthood. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GAL. Writing & Rhetoric 1: The Rhetoric of Disgust. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GAT. Writing & Rhetoric 1: Size Matters: The Writing and Rhetoric of Short Stories. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GAU. Writing & Rhetoric 1: Mind vs. Brain: The Rhetoric of Consciousness. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GAW. Writing & Rhetoric 1: Global Exchange: Intercultural Communication. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. The American cultural apparatus, its limitations, and development of other world views. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GAZ. Writing & Rhetoric 1: From Cradle to Grave: The Rhetoric of Age and Aging. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the history of aging in America; developments in reproductive science; the proverbial mid-life crisis; and how people cope with the ultimate horizon of death. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GBJ. Writing & Rhetoric 1: The Rhetoric of Cultural Memories of Violence. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GBR. Writing & Rhetoric 1: Spill: The Rhetoric of Confessions and Self-Revelations. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GBW. Writing & Rhetoric 1: Deathbeds: Art and the Rhetoric of Disease. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GCA. Writing & Rhetoric 1: AH! Real Monsters: The Rhetoric of Monstrosity in Popular Culture. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GCD. Writing & Rhetoric 1: Domsdays: The Rhetoric of Apocalypse. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GCJ. Writing & Rhetoric 1: El Otro Lado / The Other Side: The rhetoric of real and imagined borders. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. The physical border between the United States and Mexico is the focus of the examination of the artistic, scholarly, and political rhetoric of real and imagined borders. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GCL. Writing & Rhetoric 1: Rhetoric of Ledbetter. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GCO. Writing & Rhetoric 1: To Boldly Go: The Rhetoric of Travel. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GCX. Writing & Rhetoric 1: "I Do": The Rhetoric of Consent. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of the idea of consent and the underlying principles of free will and autonomy in the fields of law, intellectual property, marriage contracts, political philosophy, medical ethics, and sex. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GCZ. Writing & Rhetoric 1: "It Never Got Weird Enough For Me": The Rhetoric of Intoxication. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GDM. Writing & Rhetoric 1: Revolution and Revolt: Political Writing for Political Action. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GDS. Writing & Rhetoric 1: From Trash Talk to Toxic Discourse: Rhetorics of Waste. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GEM. Writing & Rhetoric 1: The Rhetoric of Foodie Culture. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GER. Writing & Rhetoric 1: The Rhetoric of Social Media. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of the multifaceted and hypertextual rhetoric of social media, the intersection between rhetoric and social media, and how new types of online media have heightened participation, openness, and a sense of community. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GEV. Writing & Rhetoric 1: All the World's a Stage: The Rhetoric of Theater. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students investigate the role theater plays in the rhetorical strategies of various literary and non-literary texts as well as visual materials such as films and cartoons. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.

PWR 1GFL. Writing & Rhetoric 1: From Con Artists to Catfish: The Rhetoric of Trickery. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GGH. Writing & Rhetoric 1: Understanding American Political Speeches of the 20th and 21st Centuries. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Rhetorical analyses of speeches by a range of 20th-century American political figures and the political rhetoric of the present day. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GGK. Writing & Rhetoric 1: Ladies, Tramps, and Other Furry Friends: The Rhetoric of Pets. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GGZ. Writing & Rhetoric 1: The Rhetoric of Race in American Cinema. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GIF. Writing & Rhetoric 1: Dark Humor: A Rhetoric of Social Taboos. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of dark humor as it deals with the most delicate subject matter, topics we designate as sacred and beyond criticism: violence and bodily damage, illness, aging and death, race and ethnicity, and gender and sexuality. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GIY. Writing & Rhetoric 1: Jekylls and Hydes: Rhetoric of the Scientist. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GJE. Writing & Rhetoric 1: Gay Ghettos, Queer Hoods: The Rhetoric of Race and Urban Sexual Subcultures. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the rhetoric of urban sexual subcultures, and how the rhetoric in medical science, journalism, and popular entertainment defines queers of color in intellectual thought and pop culture. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GJH. Writing & Rhetoric 1: Invention and Imagination in the Nineteenth Century. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GJM. Writing & Rhetoric 1: The Rhetoric of California. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

PWR 1GJN. Writing & Rhetoric 1: Speaking of Dreams. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GJS. Writing & Rhetoric 1: Our Warded World: The Rhetoric of Conservation. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GJU. Writing & Rhetoric 1: 'Surface of Past Time': The Rhetoric of Nostalgia. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GJW. Writing & Rhetoric 1: I Know It When I Hear It: The Rhetoric of the Unspeakable. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GKL. Writing & Rhetoric 1: The Use and Abuse of Civil Debate: The Rhetoric of Collective Thinking. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GLA. Writing & Rhetoric 1: Code Orange: Post-9/11 America and the Rhetoric of Alarm. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GLB. Writing & Rhetoric 1: In Poor Taste: The Rhetoric of Catastrophe Comedy. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GLD. Writing & Rhetoric 1: The Cyborg Body: The Rhetoric of Disability. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of disability, using the analogy of the cyborg, in an era when the human body has become plastic, digitized and surgically manipulated. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GLL. Writing & Rhetoric 1: Wow, that's so postcard: The Rhetoric of Tourism. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of tourism as a way of seeing and representing the rest of the world and oneself, touching on some of the most pressing political, economic, and cultural questions facing an increasingly globalized world. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GLR. Writing & Rhetoric 1: Are you Fuzzy and Techie?: The Rhetoric of Art and Science. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GMG. Writing & Rhetoric 1: Love to Hate: The Rhetoric of Misanthropy. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GMH. Writing & Rhetoric 1: Transformative Turns: The Rhetoric of Revolution. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GMK. Writing & Rhetoric 1: Pure and Unadulterated: The Rhetoric of Contamination. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GML. Writing & Rhetoric 1: The Rhetoric of Migrant Protest. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GMR. Writing & Rhetoric 1: Fearful Symmetry: The Rhetoric of the Double. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of the fictions of the double and the philosophies of personal identity, and how both anticipate and condition contemporary responses to the twin issues of human cloning and intellectual property. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GMT. Writing & Rhetoric 1: The Shape of Things: The Rhetoric of Design. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GMV. Writing & Rhetoric 1: Don't Take it Personally!: The Rhetoric of The Insult. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of how insults function rhetorically in specific situations and how they have catalyzed prolonged confrontations around race, education, politics, sexual orientation, and national standing. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GMX. Writing & Rhetoric 1: 'Too Much Information?': The Rhetoric of Social Networking & Online Privacy. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Critical analysis of the ways in which online life intersects with real life around issues including privacy, authorship, and morality. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GMZ. Writing & Rhetoric 1: The Rhetoric of Institutional Power. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GNA. Writing & Rhetoric 1: Talking Baseball. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GNL. Writing & Rhetoric 1: Punk Rock and Rhetoric of Protest Music. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GNV. Writing & Rhetoric 1: Rhetoric of Bioethics and Biopolitics. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GPS. Writing & Rhetoric 1: The Rhetoric of English. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GRA. Writing & Rhetoric 1: Millions Like Us: The Rhetoric of Crowds. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include symbolic meaning of rock, sports, and political events; virtual crowds online; and use of crowds to shape ideology. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GRH. Writing & Rhetoric 1: 2012 & the Rhetoric of Apocalypse. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of apocalypse as a cultural phenomenon. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GRK. Writing & Rhetoric 1: Plugged In: The Rhetoric of Networks. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GRL. Writing & Rhetoric 1: Queer Rhetoric: The Language of Sex, Gender, and Identity. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GRN. Writing & Rhetoric 1: Lasting Only One Day: The Rhetoric of Ephemera and Other Discarded Things. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of ephemera and how they argue for their meaning as they collect and preserve the past while reflecting humantransience. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GRY. Writing & Rhetoric 1: Fashionable Fables: The Rhetoric of Modern Mythology. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GRZ. Writing & Rhetoric 1: Decisions, Rhetoric, and the Art of Choosing. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GSD. Writing & Rhetoric 1: Masters of Style - The Rhetoric of Sophistication. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of how style is mastered and deployed in a range of genres. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GSG. Writing & Rhetoric 1: From Cowboys to Computers: Rhetoric of the American West. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GSO. Writing & Rhetoric 1: The Varieties of Conservative Experience. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GTA. Writing & Rhetoric 1: What Lies Beneath: The Rhetoric of the Underworld. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GTJ. Writing & Rhetoric 1: Rhetoric of the Unruly: Iconoclasts and Their Controversies. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GTL. Writing & Rhetoric 1: Love at First Sight and Forever: The Rhetoric of Romance. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GTM. Writing & Rhetoric 1: The Rhetoric of Taste. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of the rhetoric of taste as the luxurious product of a sophisticated society and as tedious, stultifying, snobby, or outright offensive. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GTX. Writing & Rhetoric 1: 'Making My Way Downtown': The Rhetoric of the City. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Through historic, literary, journalistic, and film portrayals of city life, we will analyze the idea of 'the city' as constructed through media and in the imaginations of its residents, and the way life in cities is really lived. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GVC. Writing & Rhetoric 1: The Rhetoric of Circus. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GVG. Writing & Rhetoric 1: The Way of the Dodo: Rhetoric of Extinction. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1GWI. Writing & Rhetoric 1: Rhetoric of Winkler. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GWS. Writing & Rhetoric 1: Body Politics: The Rhetoric of Transhumanism. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1GWT. Writing & Rhetoric 1: Money for 'Nothing': The Rhetoric of Silicon Valley. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1HR. Writing & Rhetoric 1: Fake News and the Rhetoric of "Truthiness". 4 Units.

Development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Critical analysis of the fake news phenomenon, considering its impact on the political process and how we discuss important issues of the day. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1JH. Writing & Rhetoric 1: Lies and the Lying Liars Who Tell Them: Rhetoric and Deception. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of untruth, misrepresentation, and deception in journalistic and scientific rhetoric. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1JJK. Writing & Rhetoric 1: The Rhetoric of Futility. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1JL. Writing & Rhetoric 1: 'Saving Strangers': Rhetoric and Humanitarian Intervention. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of how media representations of world crises are crafted to persuade us to action, appealing to our senses of justice, pragmatism, outrage, and compassion. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1JM. Writing & Rhetoric 1: The Rhetoric of the Startup. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1JP. Writing & Rhetoric 1: The Rhetoric of Consumer Culture. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students explore what consumerism says about the larger culture and the segmented groups within it, analyzing popular and scholarly texts as well as current trends in pop culture, to research how the activities of consumerism shape culture. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1JPA. Writing & Rhetoric 1: The Rhetoric of Liberal Arts Education. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Engagement with debates and issues related to liberal arts education, including the tension between education as training for a career and as a venue for developing the life of the mind. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

PWR 1JS. Writing & Rhetoric 1: Beyond DNA: The Omics Revolution. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1JT. PWR 1: RHETORIC HEALTH CARE. 4 Units.**PWR 1KB. Writing & Rhetoric 1: Authentic Experience: The Rhetoric of Tourism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1KBA. Writing & Rhetoric 1: On Display: The Rhetoric of Museums and Exhibition Spaces. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1KD. Writing & Rhetoric 1: the Feature Article: Writing and Change. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. How various feature article writers argue the issues of soaring energy and food prices, serious market volatility, climate change, an ongoing war in the Middle East, and how terms like *ζcrisisζ* or *ζchangeζ* impact the discussion. See http://ual.stanford.edu/AP/univ_req/PWR/Courses.html.

PWR 1KE. Writing & Rhetoric 1: The Science of Sports. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include sports at the level of cells and psychology, the science of sports equipment and sports spaces, the ethics of performance enhancement, and sports-related research projects on the Stanford campus. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1KM. Writing & Rhetoric 1: If These Walls Could Talk: The Rhetoric of Places and Spaces. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Explores the *ζlanguageζ* of man-made environments such as universities, theme parks, monuments, shopping malls, museums, and public buildings. Students analyze space through physical exploration and critical inquiry and discover the applications of rhetoric not only to traditional texts but to physical structures and spaces as well. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1KMA. Writing & Rhetoric 1: Metaphor and Motion: The Rhetoric of Sacred Space. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1KMB. Writing & Rhetoric 1: Cradle to Cradle: the Rhetoric of Sustainability. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1KMC. Writing & Rhetoric 1: Staying Cool on a Hot Planet: Environmental Rhetoric for a Changing World. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1KS. Writing & Rhetoric 1: Imagining Others: 21st Century Cosmopolitanism. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of cosmopolitanism, questions related to globalization, nationalism, citizenship, cultural values, aesthetics, and identity. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1KSA. Writing & Rhetoric 1: Constructing Childhood. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1KSB. Writing & Rhetoric 1: Health Matters: Health Innovation and Communication. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1KT. Writing & Rhetoric 1: The Emperor's New Clothes: The Rhetoric of Modern Mythology. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1MF. Writing & Rhetoric 1: Writing about Cities: Exploration, Observation, Research, Analysis. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1MFA. Writing & Rhetoric 1: Shades of Green: The Rhetoric of Contemporary Environmentalism. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1MG. Writing & Rhetoric 1: The Rhetoric of the American West. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1MS. Writing & Rhetoric 1: Environmental Aesthetics: The Rhetoric of Beauty Worth Saving. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 1PB. Writing & Rhetoric 1: Supreme Court Rhetoric. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of Supreme Court opinions, *amicus curiae* briefs, editorials about Court opinions, and pertinent lower court decisions. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1PH. Writing & Rhetoric 1: He Said, She Said: The Rhetoric of Gender Politics. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the ways in which news articles, movie clips, magazine advertisements, television commercials, and other texts present gender roles, and how the roles and bodies of both sexes are presented as objects open to scrutiny, critique, exploitation, abuse, and awe. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1PHA. Writing & Rhetoric 1: Sisterhood, Brotherhood, Solidarity: The Rhetoric of Greek Life. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1RC. Writing & Rhetoric 1: Domestication: How Humans Shape the Natural World. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1RT. Writing & Rhetoric 1: The War Between Wars: the "isms" of modernism. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of modernism in art, literature, and thought between the two world wars. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1RTA. Writing & Rhetoric 1: Modernism and the Wreck of Education. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SB. Writing & Rhetoric 1: Machine Dreams: The Rhetoric of Technology. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the arguments we make about technology, the arguments various technologies produce about us, and the ways in which rhetoric itself might be productively viewed as a technology for producing arguments. Students explore the social, economic, political, and psychological consequences of rapidly developing technologies. See http://ual.stanford.edu/AP/univ_req/PWR/Req.html.

PWR 1SG. Writing & Rhetoric 1: Body and Mind: The Rhetoric of Gesture. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SH. Writing & Rhetoric 1: Strange Art, Stranger Politics: Absurdism and the Rhetoric of Social Action. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the benefits and drawbacks of deploying strange art as artistic and political protest, how breaking the aesthetic rules sometimes serves to argue for social change, and how absurdist protests succeed or fail to gain social traction. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SL. Writing & Rhetoric 1: New Media Rhetoric and Web 2.0. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students define new media and debate the ideas of web 2.0; the virtue of Web 2.0 in digital game modifications and the potential subversive effects of web 2.0 on advertising restrictions; and look into the possibilities and limitations of democracy 2.0. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SLA. Writing & Rhetoric 1: "Advertising R Us": The Rhetoric of Advertising. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SM. Writing & Rhetoric 1: The Elephant, the Tiger, and the Cellphone: Rhetoric of India and Indian Film. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the rhetoric of the India of the new millennium, including issues of gender, caste, class, religion, sexuality, nationalism, diaspora, outsourcing, and globalization. Service Learning Course (certified by Haas Center). See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SMA. Writing & Rhetoric 1: Humans and Things: The Rhetoric of Commodities and Commodification. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SMB. Writing & Rhetoric 1: The Jewel in the Crown: The Rhetoric of (Post)Colonialism. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SP. Writing & Rhetoric 1: Growing Up Global: The Rhetoric of Children's Culture Today. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SS. Writing & Rhetoric 1: The Page and the Stage: Writing and Performance. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students explore identity as a social, political, and cultural performance; how different situations call for particular styles of rhetorical performance; and how people evaluate and analyze different types of performances, including artistic and political performances, as well as the performances of everyday life. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SSA. Writing & Rhetoric 1: Real and Imagined Lives: Narrative, Rhetoric, and Identity. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of identity as constructed in a range of narrative forms including fiction, memoirs, political campaigns, and social media. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1ST. Writing & Rhetoric 1: The Rhetoric of Biomedical Ethics. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SU. Writing & Rhetoric 1: The World According to Bollywood: Indian Cinema and its Representations. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of representations of India's culture through Indian film and how such representations have coincided with India's economic success over the last two decades of the twentieth century, giving rise to a new trend in global popular culture. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SUA. Writing & Rhetoric 1: Such a Long Journey: South Asian Diaspora in the World. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1SW. Writing & Rhetoric 1: Scandals, Private Lives, and Public Faces: The Rhetoric of Stanford. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the early history and rhetoric of the public face of Stanford University, from the post-Gold Rush and Big Four railroad era to the building of the University. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1VS. Writing & Rhetoric 1: Eating-Animals: The Rhetoric of Animals, Food, and the Environment. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1WG. Writing & Rhetoric 1: Reading Minds: The Rhetoric of Consciousness. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of states of mind ranging from the radical self-possession cultivated through practice to altered states induced through drugs and trauma, illness, and religion. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 1ZS. Writing & Rhetoric 1: On Cages, Boxes & Boundaries: The Rhetoric of Limits. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

PWR 2AH. Writing & Rhetoric 2: Ethnic Narratives and the Rhetoric of American Identity. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how race and ethnicity in America have become subjects of personal negotiations and public perception. Addresses various topics such as biracial and bicultural identity, acculturation, and stereotyping. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2AO. Writing & Rhetoric 2: Rhetoric and Global Leadership. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of styles of leadership across the globe and communication strategies used to bring about change. Exploration of how global leaders learn cross-cultural rhetoric skills to adapt to dynamic and unfamiliar situations. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2AT. Writing & Rhetoric 2: House Red, Hot Bellies, and High Velocity Lead Therapy: The Rhetoric of Trauma. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2CA. Writing & Rhetoric 2: Networked Rhetoric: Social Networks, Participatory Media and the Future of Wr. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of the issues surrounding participatory media and social networking in contemporary digital culture from the perspective of both theory and practice. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2CAB. Writing & Rhetoric 2: The Rhetoric of Gender and Technology. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 2CG. Writing & Rhetoric 2: Sounds of Stanford: Listening & Writing to Higher Education. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2CK. Writing & Rhetoric 2: Speaking Out: Claiming Citizenship, Demanding Rights. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2CL. Writing & Rhetoric 2: Invisible Crimes, Masked Vices: The Rhetoric of Violence. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 2CR. Writing & Rhetoric 2: Communicating Science and the Environment. 4 Units.

Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Examination of the motivations and appeals of environmental arguments, considering underlying assumptions and contexts of time, culture, audience, purpose, and mode of delivery. Participation in Community Writing Project, working with local nonprofit environmental organizations to produce real-world writing, multimedia, and/or speaking projects on these organizations' behalf. Work in the community will form the basis of the major research project. Service Learning Course (certified by Haas Center). Prerequisite: PWR 1. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2CRA. Writing & Rhetoric 2: The State of California: Rhetoric of a Dream. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Service Learning Course (certified by Haas Center). See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2CW. Writing & Rhetoric 2: Rhetorical Games: Sport, Policy and Development in the 21st Century. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 2DC. Writing & Rhetoric 2: The Popular Science of Sex. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of the intersection between social debate and scientific research about sex and gender; how social debates draw on, represent, respond to, and influence scientific studies; and how the process shapes our knowledge and beliefs about sex and gender. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2DCA. Writing & Rhetoric 2: Race/Gender in the "Obama Age". 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of perceptions of race and gender seen through the political lens of the 2008 presidential campaign. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2DH. Writing & Rhetoric 2: Me and My iPod: The Rhetoric of Identity. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the message, performance, and construction of identity, electronic renditions of the self, and the constant or changing nature of identity. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2DHA. Writing & Rhetoric 2: P-Sets, Essays and Midterms: Making Time for Social Change in a Busy World. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2EC. Writing & Rhetoric 2: 'Like' this Class: The Rhetoric of Public Relations. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 2EE. Writing & Rhetoric 2: Once Upon a Cause: Producing Picture Books for Local Children. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2EP. Writing & Rhetoric 2: Rhetoric of Polk. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 2GAW. Writing & Rhetoric 2: 'Don't Stand so Close to Me' : Cross-cultural Communication. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of how rhetoric functions in various cultures, considering body language, symbols, visual media, and the Internet. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2GM. Writing & Rhetoric 2: Unpredictable Dialogue: Art of the Interview, Art of the Essay. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the rhetorical craft of the interview, exploring structure, language, timing, and development in a range of forums, including documentaries, radio, transcription, campus conversations, and television. Research of a Stanford professor's work, including interview. Presentation of findings from research and interview to the class. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2GMA. Writing & Rhetoric 2: Breaking News, Making News 1.0. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2GMB. Writing & Rhetoric 2: The Life of Things. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2JB. Writing & Rhetoric 2: Rhetoric of Ethics in Research and Technology. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the rhetoric of ethical discourse, including the ethical standards guiding research at Stanford and examples of ethical misconduct. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2JH. Writing & Rhetoric 2: Cred: Rhetoric and Credibility in Research, Politics, and Everyday Life. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Work on making students more effective researchers and communicators in their areas of interest, with a focus on gaining and projecting credibility. Exploration of how speakers and writers gain and lose credibility, how people evaluate the credibility of others, and how the rules of credibility are different in politics, in scholarship, and in popular culture. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2JL. Writing & Rhetoric 2: Doomsday Rhetoric. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Investigation of how the doomsday epic expresses real concerns emerging from fields like technology, environmental studies, pathobiology, and politics. Consideration of apocalypticism as a mode of argument. Examination of how belief in the imminent destruction of the present world order influences our political decisions and personal behavior. Topics in religious eschatology and apocalypticism illuminate the genre's origins. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2JLA. Writing & Rhetoric 2: Speaking About Art: Narrating the Collections of the Cantor Art Center. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration and theory of successful strategies of oral communication, considering how words and images (in this case works of art) work together to create meaning, culminating in creation of an audio guide for the Cantor Arts Center. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2JLB. Writing & Rhetoric 2: Rhetoric and Education Reform. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of social, ideological, and pedagogical perspectives on education reform. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2JLC. Writing & Rhetoric 2: Illness Narratives: Attention, Empathy, and Storytelling. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 2JMJ. Writing & Rhetoric 2: Criminal Matters: Evidence, Detection, Expertise. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2JP. Writing & Rhetoric 2: The Rhetoric of Art and Commerce. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Examination of unspoken rules regarding the separation of creativity and commerce and arguments about how consumer culture influences the work of the artist. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2JS. Writing & Rhetoric 2: Eureka!: The Rhetoric of the Scientist. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 2KD. Writing & Rhetoric 2: Un-Performing Ourselves: The Design and Craft of Presentations. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how the application of performance techniques makes academic or professional presentations more compelling. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2KDA. Writing & Rhetoric 2: DJ's, Django and Drones: Mashups and Popular Culture. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 2KEB. Writing & Rhetoric 2: Sports Appeal: Packaging and Promoting Stanford Athletics. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2KEC. Writing & Rhetoric 2: It's About Time: Seizing Opportunity in Rhetoric, Writing, and Performance. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2KM. Writing & Rhetoric 2: A Planet on the Edge: The Rhetoric of Sustainable Energy. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Focus on the rhetoric and ethics of sustainable energy, investigating both the alarmism and optimism which fuel this debate. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2KMA. Writing & Rhetoric 2: Natural Enemies: The Rhetoric of Invasion Biology. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the use of metaphors and argument in the context of invasion biology and species conservation, especially the effects those metaphors and claims have on practice and policy outcomes. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2KS. Writing & Rhetoric 2: Happy Now? The Anatomy of Happiness. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. How the emerging field of happiness studies involves psychologists, economists and policy-makers in defining what happiness is and determining how society might create the conditions in which it can flourish. Exploration of how happiness studies can uncover happiness at the heart of arguments about democracy, religion, and personal lifestyles, exploring what makes people happy across cultural, social, and national contexts. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2KSA. Writing & Rhetoric 2: The Rhetoric of Childhood and Children's Culture. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2KSB. Writing & Rhetoric 2: Design Thinking: Bringing d.thinking to Research, Writing & Presentation. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2KT. Writing & Rhetoric 2: Rhetoric of Tarr. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 2LK. Writing & Rhetoric 2: Rhetoric in Crisis!. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2MF. Writing & Rhetoric 2: Speaking About Art: Narrating the Cantor's Collections. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of strategies for developing museum audio guides, including analysis of existing guides and behind-the-scenes work in the Cantor Arts Center. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2MFA. Writing & Rhetoric 2: Searching for San Jose: Urban Studies Audio Walking Tours. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2MFB. Writing & Rhetoric 2: Sustainability: Making an Impact with Research and Rhetoric. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2MR. Writing & Rhetoric 2: Technology and the Demonic: Rhetoric Against the Machine. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2MS. Writing & Rhetoric 2: Rhetoric of Stroud. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 2PB. Writing & Rhetoric 2: The Power of Political Photography. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Topics include the role of photographers and photo-journalists in helping viewers see the world differently and the political implications of fashion photography, environmental photography, music photography, and fashion photography. Traditional readings as well as archival and field research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2PH. Writing & Rhetoric 2: Equal Treatment: The Rhetoric of Public Health. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of how public health discourses influence policymaking, practitioners, and community members, how the public understands the rhetoric of public health, and how that understanding affects public and government support of health-related research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2PHA. Writing & Rhetoric 2: You Go Girl: The Rhetoric of Gender Equality. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2PHB. Writing & Rhetoric 2: Indecision 2012: The Rhetoric of Politics. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2RC. Writing & Rhetoric 2: Red Pill or Blue Pill? : The Rhetoric of Drugs. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 2RS. Writing & Rhetoric 2: The Rhetoric in Memoir. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2RT. Writing & Rhetoric 2: Stepping Out of the Shadows: Music, Bass Guitar, and the Rhetoric of Revoluti. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of how the emergence of the electric bass in the fifties helped usher in a revolution that challenged commonplace assumptions concerning nationality, race, gender, and sexuality. Exploration of the history of the electric bass as a case study of musical revolutions, focusing on how music revolutions reflect emerging ideologies in any given culture. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2RTA. Writing & Rhetoric 2: Postmodernism and the Rhetoric of Uncertainty. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Inquiry into major theories of the postmodern and analysis of postmodernism's effect on culture. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2RTB. Writing & Rhetoric 2: The Language and Style of Virginia Woolf. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SB. Writing & Rhetoric 2: Writing 'Science': Fact, Fiction, and Everything Between. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of science fiction and popular writing about science and technology as arguments about where we are headed, where we are, who we are, and what we value. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SG. Writing & Rhetoric 2: Bodies of Knowledge: The bodily foundations of human thought and reason. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SGA. Writing & Rhetoric 2: Lie Detection and the Social Functions of Deception. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SH. Writing & Rhetoric 2: The Ugly American: Tourism and the Rhetoric of Power. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of the Ugly American in aesthetics and culture, in films and novels, tourist locations and business conferences, to illuminate America's complex role in the world. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SL. Writing & Rhetoric 2: Got Ads: Visual Design in Print Advertising. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Introduction to the rhetorical interplay of visuals, text, and design layout in print advertising, and narrative, classificatory, and dynamic patterns in print advertisement campaigns. Culminates in design and presentation of an original ad campaign. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SLA. Writing & Rhetoric 2: Information Design: The Visual Language of Graphic Communication. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SM. Writing & Rhetoric 2: Dirty, Pretty Things: The Rhetoric of Objects and Objectification. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of objects and objectification, from the relationships shared by cultures, objects, and people to how human beings have been objectified through colonialism, enslavement, sex-trafficking, and organ trade. Material objects discussed in terms of staging, collecting, design, location, inheritance, and cultural meaning. Service Learning Course (certified by Haas Center). See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SMA. Writing & Rhetoric 2: Love and Longing in Bombay: Romance and Rebellion in Indian Film. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SPA. Writing & Rhetoric 2: Other Selves: The Art & Science of Friendship. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SS. Writing & Rhetoric 2: Mass Audiences and Modern Communication. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how the ability to reproduce a work for increasingly large audiences has fundamentally changed the nature of art and its effect on culture. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SSA. Writing & Rhetoric 2: Rhetoric of Reality Culture. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SSB. Writing & Rhetoric 2: Superfans and Scholars: Writing Fan Culture. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2ST. Writing & Rhetoric 2: Science, Democracy and Social Media. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SU. Writing & Rhetoric 2: Hollywood Bollywood: Rhetoric of India in Global Cinema. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how the rhetoric of India is constructed for an international audience through films and how such representations have coincided with India's recent economic success to give rise to a new trend in global popular culture. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2SW. Writing & Rhetoric 2: Propaganda of World War II: Strategies of Persuasion. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Through work with the Hoover Archives, exploration of how written, visual, and film sources were used by a variety of countries to influence their citizens during WWII. Topics include the rhetoric of eugenics, political speeches, war posters, and how advertising during WWII pursued clear agendas to support government goals. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2WG. Writing & Rhetoric 2: All That Jazz: The Rhetoric of American Musical Theater. 4 Units.

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of the conventions and strategies that define the genre of American musical theater. Analysis of how contemporary musicals mirror, revise, and even subvert traditional rules while addressing a range of current issues. See http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html.

PWR 2ZS. Writing & Rhetoric 2: Designing Memorials: Building Rhetoric into Commemoration. 4 Units.

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

PWR 4. Directed Writing. 3-4 Units.

Further work on developing writing. Analysis and research-based argument, writing for a range of audiences and in varied disciplinary contexts. Workshops and individual conferences. May be repeated for credit. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

PWR 5. Independent Writing. 1-5 Unit.

Individual writing project under the guidance of a PWR instructor. May be repeated for credit. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

PWR 6. Writing Workshop. 1-3 Unit.**PWR 91. Intermediate Writing. 3 Units.**

For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr.

PWR 91B. Intermediate Writing: Digital Rhetoric, New Media, and Transformations in Writing. 3 Units.

Writing operates in multiple modes (word, image, sound) in the new media environment. Examples of texts - invention, drafting, revision, and communication - governed by the evolving conditions of a new, digital rhetoric. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr.

PWR 91C. Intermediate Writing: The Stanford Daily Show. 3 Units.

Class will study fake news programs such as the Daily Show, the Colbert Report and the Onion, and will produce The Stanford Daily Show, our own version of a fake news program. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr.

PWR 91D. Intermediate Writing: Your American Life. 3 Units.

In this course, you'll read and listen to some of the most moving and insightful pieces of the last decade, explore the important differences between print and oral storytelling, and then script and record your own full-length audio piece. Along the way, we will explore many craft elements that apply equally to print and audio pieces. You will learn, for example, how to organize your material, choose an effective structure, blend dramatization and reflection, ground insights in concrete scenes, create a strong narrative arc, and manage elements such as characterization, description, and dialogue. We will also, of course, explore craft elements unique to the audio form and you will learn how to use your voice and other sonic elements to craft the kind of piece you might hear on This American Life. Through a special arrangement with the Stanford Storytelling Project, in the spring of 2012 this course will feature special sessions with prominent contributors to This American Life. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr.

PWR 91E. Intermediate Writing: The Oral Tradition: Myth, Folklore, and Fairy Tale. 3 Units.

Contemporary storytelling covers a variety of media - from movies to novels, theatre and beyond. What this course offers is an in depth study of the roots of that practice - the oral tradition. Over the course we will explore many different motifs and structures that arise in the oral tradition, myth, folklore and fairy tale. What universal themes do we detect, and what separates the progression of a Pacific Northwest Trickster story from an Arthurian romance? Why is it that in the early twenty-first century many of our most acclaimed art forms carry narrative forms that are thousands of years old? Star Wars, Lord of the Rings and the recent Broadway show Jerusalem, all follow scenic progressions informed by myth. The first encounter with the story will be an oral narrative - the myth told unscripted in the classroom. The stories, which range from the Arthurian romance Parzival to Trickster folk tales, will be told in several sections - with a running exegesis and student response alongside. Many of these stories are now transcripts and have become works of literature. We will explore both the complementary aspects of this development, and areas of tension. During the course each student will embark on a project that demonstrates a thorough understanding of the topics covered, and utilizes those elements in their wider practice of writing and rhetoric. The project will be to research a story handed down within the family - an adventure of some distant relative, or a family migration from one country to another. Factoring in elements from the taught class, the student will mythologize the story: by writing an in depth commentary on its implications - factoring in contemporary, psychological and metaphorical associations. The second element will be to tell the story to the class. In these ways we experience myth as a living principle, not something just from a long time ago.

PWR 91F. Intermediate Writing: Finding Your Story. 3 Units.

Life challenges us to become aware of the stories that shape us; family stories, cultural mythologies, even popular movies, television shows, and songs, and then create and live our own story. We face this challenge throughout our lives but perhaps most acutely as we move into adulthood; this is the period when we most need to become conscious of stories and their power, to gather wisdom, practices, and resources for finding our own story. This class, designed with seniors in mind, will illuminate and explore these resources and give you the opportunity to reflect deeply, in discussion and writing, on what truly calls to you in this life. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr.

PWR 91JS. Intermediate Writing: Stanford Science Podcast. 3 Units.

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

PWR 91KS. Intermediate Writing: Design Thinking and Science Communication. 3 Units.

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

PWR 91RS. Intermediate Writing: Communicating Bioinformation. 3 Units.

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

PWR 91S. Intermediate Writing: Communicating Science. 3 Units.

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr.

PWR 99A. Portfolio Preparation I. 1 Unit.

A 1-unit introductory course on ePortfolios at the beginning of the Notation to assist students in developing and assessing writing samples that represent student learning. In this course, students will begin to collect the documents, slides, and videos that will demonstrate development as a science communicator. This is the first of a two-part course series for the ePortfolio required as part of the Notation. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

PWR 99B. Portfolio Preparation II. 2 Units.

A 2-unit culminating course on ePortfolios for students completing the Notation. In this course, students will continue building and polishing a portfolio of documents, slides, and videos that will demonstrate development as a science communicator. This is the second of a two-part course series for the ePortfolio required as part of the Notation. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

PWR 191. Advanced Writing. 3 Units.

Open to undergraduates and graduate students. Crafting nonfiction prose in a range of genres. Focus is on the relationship of genre and form; attention to developing stylistic versatility. Individual conferences with instructor. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

PWR 192. Projects in Research, Writing, and Rhetoric. 1-5 Unit.

Advanced work on research projects, early drafts of theses, proposals. Shared work, discussions, and examination of methods, rhetorics, and styles in all disciplines. May be repeated for credit. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

PWR 193. Writing the Honors Thesis. 1-5 Unit.

For students from all majors in the process of writing an honors thesis. Review of key elements of thesis process, including literature reviews, structure, argumentation, style, and documentation. Group and individual workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

PWR 194. Topics in Writing and Rhetoric. 4 Units.

Understanding rhetoric as readers and interpreters of texts and to develop skills as writers and speakers. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr.

PWR 194B. Advanced Writing. 4 Units.

Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For details, see http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr.

PWR 194C. Make Them Laugh: Comedy as Persuasion and Argument. 4 Units.

Exploration of major theories of comedy and application of these theories to historical and contemporary comedic practice, with particular attention to comedy as a form of argument in a range of contexts. For more information, see http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr. Prerequisite: first two levels of the undergraduate writing requirement or equivalent transfer credit. Not repeatable for credit.

PWR 194SB. Topics in Writing and Rhetoric: Rhetoric of Science. 4 Units.

Understanding rhetoric as readers and interpreters of texts and to develop skills as writers and speakers. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>.

PWR 195. Writing Center Peer Tutor Seminar. 3 Units.

For students selected to serve as peer writing tutors in the Stanford Writing Center and/or at other campus sites. Readings on and reflection about writing processes, the dynamics of writing and tutoring situations, tutoring techniques, learning styles, diversity, and ethics. Observation of tutoring sessions, written responses to readings, and other written work. Same as: ENGLISH 195W.
