# STANFORD UNIVERSITY ENVIRONMENTAL HEALTH AND SAFETY

# GENERAL WORKPLACE INSPECTION CHECKLIST

EH&S has developed this form to assist Stanford faculty and staff in identifying and when necessary, correcting general safety hazards. Periodic inspection and correction of identified hazards is a requirement of Stanford's Injury and Illness Prevention Program (IIPP). If you have any questions or suggestions regarding the content of this survey, please contact the EH&S Occupational Health and Safety program at 725-3209 or 723-0448.

### GENERAL WORKPLACE INSPECTION CHECKLIST

### **GENERAL**

- 1. Workplace clean and orderly.
- 2. Exits cleared of obstructions and accessible.
- 3. Stored materials secure & limited in height to prevent collapse.
- 4. Suitable warning signs and tags.

### **TRAINING**

- 1. New employees given basic safety training.
- 2. Job-specific safety training held for employees on a regular basis.
- 3. Personnel familiar with applicable Material Safety Data Sheets.
- 4. All personnel familiar with emergency evacuation plan.
- 5. Training documentation current and accessible.

# SAFE LIFTING

- Workers trained on and using safe lifting techniques. For information, call the EH&S Occupational Health and Safety program at 5-3209.
  - a. Size up/test load.
  - b. Avoid heavy loads split into smaller loads or ask for help.
  - c. When lifting, bend knees to take pressure off the back.
  - d. Consciously firm up abdominals when lifting.
  - e. Never twist.

### **ERGONOMICS**

 Workers trained on ergonomics, taking frequent breaks, varying activities to interrupt repetitive motions. For more information, call the EH&S Occupational Health and Safety program at 5-3209.

### **FIRE**

- 1. Emergency exit signs lit properly.
- 2. Fire alarms and fire extinguishers are visible and accessible.
- 3. Stairway doors are kept closed unless equipped with automatic closing device.
- 4. 18" vertical clearance is maintained below all sprinkler heads.
- 5. Fire extinguishers are serviced annually.
- 6. Corridors and stairways are kept free of obstruction and not used for storage.

### **EARTHQUAKE**

- 1. Bookcases, filing cabinets, shelves, racks, cages, storage cabinets and similar items over four feet tall are anchored to the wall.
- 2. Shelves have lip or other seismic restraints.
- 3. Portable machines or equipment secured against movement using chains, lockable casters, or other appropriate means.
- 4. Top-heavy equipment or apparatus bolted down or secured to withstand accelerations typically expected in an earthquake. These items should be secured to wall studs with large screws (1/4 or 3/16 shank).
- 5. Large & heavy objects stored on lower shelves or storage areas.
- 6. Valuable equipment sensitive to shock damage, such as instruments, computer disks and glassware are stored in latched cabinets or otherwise secured to prevent falling.
- 7. Storage areas uncluttered providing clear evacuation routes in the event of an emergency.
- 8. Cabinets and lockers containing hazardous materials equipped with positive latching or sliding doors.

### **EQUIPMENT AND MACHINERY**

- 1. Clean and working properly.
- 2. Electrical cord in good condition with proper grounding.
- 3. Only extension cords with circuit breakers, and multiple connectors are used but not as fixed wiring.
- 4. Sufficient clearances from combustibles (paper, cardboard or combustible liquids).
- 5. Adequately ventilated.
- Emergency stop mechanisms and dead-man switches identified and in proper working order.
   Mechanical safeguards in place and in proper working order.
   Appropriate Personal Protective Equipment (PPE) available to employees.

### GENERAL WORKPLACE INSPECTION CHECKLIST

If you store chemicals in your work area in amounts greater than typical office /household quantities, you are required to complete:

- the following Hazardous Materials and Hazardous Waste checklist sections, and
- a chemical inventory for your department.

### HAZARDOUS MATERIALS

- 1. Original product names (or full chemical names) and hazards clearly identified on labels.
- 2. Containers of non-hazardous substances (e.g., water) labeled explicitly to avoid confusion.
- 3. Secondary containment provided for liquid chemicals, as required (see Stanford Safety Manual) and used for dry chemicals next to or below liquids.
- 4. No hazardous materials stored next to or above sinks.
- 5. Incompatible chemicals (including solids) segregated by Stanford's Compatible Storage Groups (see SU Safety Manual).
- 6. All chemical containers capped and sealed, except when actively adding or removing materials from them.
- 7. Flammable liquids (including flammable liquid wastes) not stored outside of a storage cabinet if in excess of 10 gallons.
- 8. Employees have completed hazard communication training.
- 9. MSDSs and chemical inventory list are readily accessible.

## **HAZARDOUS WASTE**

- 1. Waste containers are sturdy, routinely inspected for leaks, compatible with the waste, and kept closed (i.e., no funnels left sticking out) using screw caps or other tight-fitting closure.
- 2. Containers are labeled with the initial date of accumulation, the words "HAZARDOUS WASTE," the waste's physical state and hazardous properties, and full chemical names.
- 3. Not stored for more than 9 months from the initial date of accumulation.
- 4. Waste pick-up forms submitted for wastes stored more than 8 months from the initial date of accumulation.
- 5. Red bags are only used for infectious wastes, no other wastes.
