Portola Avenue	Manzanita Avenue	Miramonte Avenue
Robb Road	Manuela Avenue	End
Santa Rita Avenue	Alma Street	Bryant Street

### Project Overview:

Prior to repaving, the Contractor will remove and replace damaged concrete road base, sidewalk, curb and gutter and driveway aprons to meet City Standards. This work will require limited parking restrictions and driveway closures during construction.

### Street Closure Notifications:

- During asphalt milling and paving, streets will need to be completely closed from **8 AM until 6 PM**.
- 7 days before asphalt milling begins, you will receive a flyer notifying you of the street closure.
- 3 days before work begins, you will see No Parking signs on the street restricting parking in work areas.
- 24 hours before asphalt milling begins, you will receive a second flyer notifying you of the street closure.
- A link to the two week look ahead map for all road rehabilitation projects can be found at: [www.CityofPaloAlto.org/Streets](http://www.CityofPaloAlto.org/Streets)
- *If you will be traveling during the construction time period please park your vehicles off the street or make arrangements for them to be moved if needed.*

### — SPECIAL INSTRUCTIONS —

**If you are planning an upcoming major home construction project which requires the replacement or relocation of utility services, please call us at 650-329-2295 soon!**

You may be able to save our time and your money on street cutting fees if we know of your plans in advance. This will allow the Public Works and Utilities Departments to coordinate the timing of your project so the utility work can be completed before the road is repaved. If we hear from you in time, this can result in a smoother, longer lasting street for everyone.
