PD Web Forms PeopleSoft Module Known Issues

As of March 26, 2012 (AR)

The following are "known issues" that are currently being fixed and/or will be fixed in the future:

- Currently, Firefox or IE are the preferred browsers for working with PD Web Forms; if you encounter a problem please refresh your browser and clear your browser's cache.

- Postdocs should upload only .pdf or .doc files (no .docx, .tif or .png files)

- Dual Citizenship data cannot be captured in Information Sheet. Please have the Postdoc enter the passport under which they will be applying for (or currently hold) a visa.

- Delay between documents being uploaded by Postdoc and the documents being viewable in WorkFlow/PeopleSoft = up to one hour (Browser refresh required)

- Must enter email address on postdoc invite's first page – cannot be entered later. If email not entered on the first "Add Value" panel, it will create a dead invite. Must create a new invite.

- All text entered by/editable by the admin. entry person (role #1) must be alphanumeric characters (no symbols, accents, etc.)
