(Same as ME 339) This class will give hands on experience with programming multicore processors, graphics processing units (GPU), and parallel computers. Focus will be on the message passing interface (MPI, parallel clusters) and the compute unified device architecture (CUDA, GPU). Topics will include: network topologies, modeling communication times, collective communication operations, parallel efficiency, MPI, dense linear algebra using MPI. Symmetric multiprocessing (SMP), pthreads, openMP, CUDA, combining MPI and CUDA, dense linear algebra using CUDA, sort, reduce and scan using CUDA. Pre-requisites include: C programming language and numerical algorithms (solution of differential equations, linear algebra, Fourier transforms).

3 units, Spr (Darve, E)

**CME 215A. Advanced Computational Fluid Dynamics**

(Same as AA 215A) High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

3 units, Win (Jameson, A)

**CME 215B. Advanced Computational Fluid Dynamics**

(Same as AA 215B) High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

3 units, Spr (Jameson, A)

**CME 263. Introduction to Linear Dynamical Systems**

(Same as EE 263) Applied linear algebra and linear dynamical systems with application to circuits, signal processing, communications, and control systems. Topics: least-squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm, and singular value decomposition. Eigenvalues, left and right eigenvectors, with dynamical interpretation. Matrix

exponential, stability, and asymptotic behavior. Multi-input/multi-output systems, impulse and step matrices; convolution and transfer matrix descriptions. Control, reachability, and state transfer; observability and least-squares state estimation. Prerequisites: linear algebra and matrices as in MATH 103; differential equations and Laplace transforms as in EE 102A.

3 units, Aut (Lall, S)

**CME 291. Master's Research**

Students require faculty sponsor. (Staff)

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**CME 300. Departmental Seminar Series**

Required for first-year ICME Ph.D. students; recommended for first-year ICME M.S. students. Presentations about research at Stanford by faculty and researchers from Engineering, H&S, and organizations external to Stanford. May be repeated for credit.

1 unit, Aut (Murray, W), Win (Murray, W)

**CME 302. Numerical Linear Algebra**

First in a three quarter graduate sequence. Solution of systems of linear equations: direct methods, error analysis, structured matrices; iterative methods and least squares. Parallel techniques. Prerequisites: CME 108, MATH 103 or 113.

3 units, Aut (Gerritsen, M)

**CME 303. Partial Differential Equations of Applied Mathematics**

(Same as MATH 220) First-order partial differential equations; method of characteristics; weak solutions; elliptic, parabolic, and hyperbolic equations; Fourier transform; Fourier series; and eigenvalue problems. Prerequisite: foundation in multivariable calculus and ordinary differential equations.

3 units, Aut (Ryzhik, L)

**CME 304. Numerical Optimization**

(Same as MS&E 315) Solution of nonlinear equations; unconstrained optimization; linear programming; quadratic programming; global optimization; general linearly and nonlinearly constrained optimization. Theory and algorithms to solve these problems. Prerequisite: background in analysis and numerical linear algebra.

3 units, Win (Murray, W)

**CME 305. Discrete Mathematics and Algorithms**

(Same as MS&E 316) Topics: enumeration such as Cayley's theorem and Prufer codes, SDR, flows and cuts (deterministic and randomized algorithms), probabilistic methods and random graphs, asymptotics (NP-hardness and approximation algorithms). Topics illustrated with EE, CS, and bioinformatics applications. Prerequisites: MATH 51 or 103 or equivalents.

3 units, Win (Saber, A)

**CME 306. Numerical Solution of Partial Differential Equations**

(Same as MATH 226) Hyperbolic partial differential equations: stability, convergence and qualitative properties; nonlinear hyperbolic equations and systems; combined solution methods from elliptic, parabolic, and hyperbolic problems. Examples include: Burger's equation, Euler equations for compressible flow, Navier-Stokes equations for incompressible flow. Prerequisites: MATH 220A or CME 302.

3 units, Spr (Garapon, P)

**CME 308. Stochastic Methods in Engineering**

(Same as MATH 228) Review of basic probability; Monte Carlo simulation; state space models and time series; parameter estimation, prediction, and filtering; Markov chains and processes; stochastic control; and stochastic differential equations. Examples from various engineering disciplines. Prerequisites: exposure to probability; background in real variables and analysis.

3 units, Spr (Papanicolaou, G)

**CME 309. Randomized Algorithms**

(Same as CS 365) Design and analysis of algorithms that use randomness to guide their computations. Topics include: basic tools, from probability theory and probabilistic analysis that are recurrent in algorithmic applications; randomized complexity theory and game-theoretic techniques; algebraic techniques, probability amplification and derandomization. Applications: sorting and searching, data structures, combinatorial optimization and graph algorithms, geometric algorithms and linear programming, approximation and counting problems, similarity

search and metric embeddings, online algorithms. Prerequisites: CS 161 and STAT 116, or equivalents and instructor consent.

3 units, Win (Goel, A)

### **CME 325. Numerical Approximations of Partial Differential Equations in Theory and Practice**

Finite volume and finite difference methods for initial boundary value problems in multiple space dimensions. Emphasis is on formulation of boundary conditions for the continuous and the discrete problems. Analysis of numerical methods with respect to stability, accuracy, and error behavior. Techniques of treating non-rectangular domains, and effects of non-regular grids.

1-2 units, not given this year

### **CME 326. Numerical Methods for Initial Boundary Value Problems**

Initial boundary value problems model many phenomena in engineering and science such as, fluid flow problems, wave propagation, fluid-structure interaction, conjugate heat transfer and financial mathematics. We discuss numerical techniques for such simulations and focus on the underlying principles and theoretical understanding. Emphasis is on stability, convergence and efficiency for methods applied to hyperbolic and parabolic initial boundary value problems.

3 units, not given this year

### **CME 327. Numerical Methods for Stiff Problems**

Focus is on analysis of numerical techniques for stiff ordinary differential equations, including those resulting from spatial discretization of partial differential equations. Topics include stiffness, convergence, stability, adaptive time stepping, implicit time-stepping methods (SDIRK, Rosenbrock), linear and nonlinear system solvers (Fixed Point, Newton, Multigrid, Krylov subspace methods) and preconditioning. Pre-requisites: CME200/ME300A or equivalent; or consent of instructor.

3 units, not given this year

### **CME 330. Applied Mathematics in the Chemical and Biological Sciences**

(Same as CHEMENG 300) Mathematical solution methods via applied problems including chemical reaction sequences, mass and heat transfer in chemical reactors, quantum mechanics, fluid mechanics of reacting systems, and chromatography. Topics include generalized vector space theory, linear operator theory with eigenvalue methods, phase plane methods, perturbation theory (regular and singular), solution of parabolic and elliptic partial differential equations, and transform methods (Laplace and Fourier). Prerequisites: CME 102/ENGR 155A and CME 104/ENGR 155B, or equivalents.

3 units, Aut (Shaqfeh, E)

### **CME 334. Advanced Methods in Numerical Optimization**

(Same as MS&E 312) Topics include interior-point methods, relaxation methods for nonlinear discrete optimization, sequential quadratic programming methods, optimal control and decomposition methods. Topic chosen in first class; different topics for individuals or groups possible. Individual or team projects. May be repeated for credit.

3 units, Aut (Murray, W)

### **CME 335. Advanced Topics in Numerical Linear Algebra**

Possible topics: Discrete Fourier Transform from linear algebra point of view, convolution and circulant matrices, multi-resolution and Discrete Wavelet Transform, Discrete Radon Transform, Fractional Fourier Transform and Toeplitz matrices, Pseudo-polar Fast Fourier Transform and Fast Slant Stack Transform; orthogonal projections and linear least squares models, regularization of least squares models and sparse representation methods, orthogonal matching pursuit and basis pursuit algorithms, dimensionality reduction and principle components analysis, reconstruction from projections in tomographic imaging, denoising, compression and image interpolation using sparse representation with over-complete dictionaries. Students will get hands-on experience. Prerequisite - CME 302: Numerical Linear Algebra

3 units, Win (Staff)

### **CME 336. Linear and Conic Optimization with Applications**

(Same as MS&E 314) Linear, semidefinite, conic, and convex nonlinear optimization problems as generalizations of classical linear programming. Algorithms include the interior-point, barrier

function, and cutting plane methods. Related convex analysis, including the separating hyperplane theorem, Farkas lemma, dual cones, optimality conditions, and conic inequalities. Complexity and/or computation efficiency analysis. Applications to combinatorial optimization, sensor network localization, support vector machine, and graph realization. Prerequisite: MS&E 211 or equivalent.

3 units, alternate years, not given this year

### **CME 337. Information Networks**

(Same as MS&E 337) Network structure of the Internet and the web. Modeling, scale-free graphs, small-world phenomenon. Algorithmic implications in searching and inter-domain routing; the effect of structure on performance. Game theoretic issues, routing games, and network creation games. Security issues, vulnerability, and robustness. Prerequisite: basic probability and graph theory.

3 units, Spr (Saber, A), alternate years, not given next year

### **CME 338. Large-Scale Numerical Optimization**

(Same as MS&E 318) The main algorithms and software for constrained optimization emphasizing the sparse-matrix methods needed for their implementation. Iterative methods for linear equations and least squares. The simplex method. Basic factorization and updates. Interior methods. The reduced-gradient method, augmented Lagrangian methods, and SQP methods. Prerequisites: Basic numerical linear algebra, including LU, QR, and SVD factorizations, and an interest in MATLAB, sparse-matrix methods, and gradient-based algorithms for constrained optimization. Recommended: MS&E 310, 311, 312, 314, or 315; CME 108, 200, 302, 304, 334, or 335.

3 units, Spr (Saunders, M)

### **CME 342. Parallel Methods in Numerical Analysis**

Emphasis is on techniques for obtaining maximum parallelism in numerical algorithms, especially those occurring when solving matrix problems, partial differential equations, and the subsequent mapping onto the computer. Implementation issues on parallel computers. Topics: parallel architecture, programming models (MPI, GPU Computing with CUDA  $\zeta$  quick review), matrix computations, FFT, fast multiple methods, domain decomposition, graph partitioning, discrete algorithms. Prerequisites: 302 or 200 (ME 300A), 213 or equivalent, or consent of instructor. Recommended: differential equations and knowledge of a high-level programming language such as C or C++ (F90/95 also allowable).

3 units, Spr (Alonso, J)

### **CME 345. Model Reduction**

Model reduction is an indispensable tool for computational-based design and optimization, statistical analysis, embedded computing and real-time optimal control. This course presents the basic mathematical theory for projection-based model reduction. Topics include: notions of linear dynamical systems and projection; projection-based model reduction; error analysis; proper orthogonal decomposition; Hankel operator and balancing of a linear dynamical system; balanced truncation method; modal reduction and other reduction methods for linear oscillators; model reduction via moment matching methods based on Krylov subspaces; introduction to model reduction of parametric systems and notions of nonlinear model reduction. Course material is complemented by a balanced set of theoretical, algorithmic and Matlab computer programming assignments. Pre-requisites: CME200 or equivalent, CME 263 or equivalent and basic numerical methods for ODEs.

3 units, not given this year

### **CME 356. Engineering Functional Analysis and Finite Elements**

(Same as ME 412) Concepts in functional analysis to understand models and methods used in simulation and design. Topology, measure, and integration theory to introduce Sobolev spaces. Convergence analysis of finite elements for the generalized Poisson problem. Extensions to convection-diffusion-reaction equations and elasticity. Upwinding. Mixed methods and LBB conditions. Analysis of nonlinear and evolution problems. Prerequisites: 335A,B, CME 200, CME 204, or consent of instructor. Recommended: 333, MATH 171.

3 units, not given this year

**CME 358. Finite Element Method for Fluid Mechanics**

Mathematical theory of the finite element method for incompressible flows; related computational algorithms and implementation details. Poisson equation; finite element method for simple elliptic problems; notions of mathematical analysis of non-coercive partial differential equations; the inf-sup or Babushka-Brezzi condition and its applications to the Stokes and Darcy problems; presentation of stable mixed finite element methods and corresponding algebraic solvers; stabilization approaches in the context of advection-diffusion equation; numerical solution of the incompressible Navier-Stokes equations by finite element method. Theoretical, computational, and MATLAB computer programming assignments. Prerequisites: foundation in multivariate calculus and ME 335A or equivalent.

3 units, not given this year

**CME 362. An Introduction to Compressed Sensing**

(Same as STATS 330) Compressed sensing is a new data acquisition theory asserting that one can design nonadaptive sampling techniques that condense the information in a compressible signal into a small amount of data. This revelation may change the way engineers think about signal acquisition. Course covers fundamental theoretical ideas, numerical methods in large-scale convex optimization, hardware implementations, connections with statistical estimation in high dimensions, and extensions such as recovery of data matrices from few entries (famous Netflix Prize).

3 units, Aut (Donoho, D)

**CME 364A. Convex Optimization I**

(Same as EE 364A) Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as EE263, EE178/278A.

3 units, Win (Boyd, S)

**CME 364B. Convex Optimization II**

(Same as EE 364B) Continuation of 364. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Exploiting problem structure in implementation. Convex relaxations of hard problems. Global optimization via branch and bound. Robust and stochastic optimization. Applications in areas such as control, circuit design, signal processing, and communications. Substantial project. Prerequisite: 364A.

3 units, not given this year

**CME 390. Curricular Practical Training**

May be repeated three times for credit.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**CME 400. Ph.D. Research**

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**CME 444. Computational Consulting**

Advice by graduate students under supervision of ICME faculty. Weekly briefings with faculty adviser and associated faculty to discuss ongoing consultancy projects and evaluate solutions. May be repeated for credit.

1-3 units, Aut (Gerritsen, M), Win (Gerritsen, M), Spr (Gerritsen, M)

**CME 500. Numerical Analysis and Computational and Mathematical Engineering Seminar**

Weekly research lectures by experts from academia, national laboratories, industry, and doctoral students. May be repeated for credit.

1 unit, Aut (Gerritsen, M), Win (Gerritsen, M), Spr (Gerritsen, M)

**CME 510. Linear Algebra and Optimization Seminar**

Recent developments in numerical linear algebra and numerical optimization. Guest speakers from other institutions and local industry. Goal is to bring together scientists from different

theoretical and application fields to solve complex scientific computing problems. May be repeated for credit.

1 unit, Aut (Saunders, M), Win (Saunders, M), Spr (Saunders, M)

**CME 801. TGR Project**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**CME 802. TGR Dissertation**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## COMPUTER SCIENCE (CS) COURSES

### UNDERGRADUATE COURSES IN COMPUTER SCIENCE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**CS 1C. Introduction to Computing at Stanford**

For those with limited experience with computers or who want to learn more about Stanford's computing environment. Topics include: computer maintenance and security, computing resources, Internet privacy, and copyright law. One-hour lecture/demonstration in dormitory clusters prepared and administered weekly by the Resident Computer Consultant (RCC). Final project. Not a programming course.

1 unit, Aut (Smith, S)

**CS 1U. Practical Unix**

A practical introduction to using the Unix operating system with a focus on Linux command line skills. Class will consist of video tutorials and weekly hands-on lab sections. The time listed on AXESS is for the first week's logistical meeting only. Topics include: grep and regular expressions, ZSH, Vim and Emacs, basic and advanced GDB features, permissions, working with the file system, revision control, Unix utilities, environment customization, and using Python for shell scripts. Topics may be added, given sufficient interest. Course website: <http://cs1u.stanford.edu>

1 unit, Aut (King, S; Zelenski, J; Topalovic, E)

**CS 2C. Multimedia Production**

Sound, image and video editing techniques and applications, including understanding file formats and publishing multimedia online. Topics: GarageBand, Photoshop, iMovie, Final Cut Pro, and iDVD. Weekly lecture followed by lab section. Second unit for additional creative production assignments completed outside of class time and Final Project with group. Not a programming course, but will use computer multimedia applications heavily for editing.

1-2 units, Aut (Chan, K), Win (Chan, K)

**CS 21N. Can Machines Know? Can Machines Feel?**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Can mental attitudes attributed to people and sometimes to animals, including knowledge, belief, desire, and intention, also be ascribed to machines? Can light sensors have a belief? Can a pool cleaning robot or tax-preparation software have an intention? If not, why not? If yes, what are the rules of such ascription, and do they vary between human beings and machines? Sources include philosophy, neuroscience, computer science, and artificial intelligence. Topics: logic, probability theory, and elements of computation. Students present a paper. GER:DB-EngrAppSci

3 units, Aut (Shoham, Y)

**CS 26N. Motion Planning for Robots, Digital Actors, and Other Moving Objects**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Motion planning theory and computational approaches: how to represent, simulate, and plan motions in a computer. Intriguing algorithms, representations, and applications: terminology and concepts for reading motion planning research literature. Problems include: how a robot arm manipulates parts without colliding with its environment; how many maneuvers are required to park a car in a tight spot; how characters in computer games avoid running into obstacles; how molecules change shapes to perform biological

functions; how to assemble a product from individual parts; how a multi-limbed robot can navigate on rough terrain; how robots can perform surgical procedures. Prerequisite: some computer programming experience in any language. GER:DB-EngrAppSci, DB-EngrAppSci

3 units, *Win (Latombe, J)*

#### **CS 45N. Computers and Photography: From Capture to Sharing**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen with experience in photography and use of computers. Elements of photography, such as lighting, focus, depth of field, aperture, and composition. How a photographer makes photos available for computer viewing, reliably stores them, organizes them, tags them, searches them, and distributes them online. No programming experience required. Digital SLRs and editing software will be provided to those students who do not wish to use their own.

3-4 units, *Aut (Garcia-Molina, H)*

#### **CS 47N. Computers and the Open Society**

(F,Sem) Stanford Introductory Seminar. How online technologies change our lives and the social structure that we live in. Course emphasizes critical analyses of current trends i.e. blogging, social networks, and instant mobile communication. Readings include case studies and analyses of basic principles i.e. privacy, equity and sustainability. Guest speakers who have participated in development of computers and the net will share their experiences and enter into debates on current issues. Students work individually and in small groups to research issues, develop the capacity for critical thinking about them, and use the results as the basis for writing and discussions both in class and on-line.

3 units, *Aut (Winograd, T)*

#### **CS 73N. The Business of the Internet**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Issues in Internet history, technology, and public policy are discussed as well as the Internet's impact on commerce, education, government, and health care. Writing for the web. Participants develop a substantial website. GER:DB-EngrAppSci

3 units, *Spr (Wiederhold, G; Barr, A; Tessler, S)*

#### **CS 74N. Digital Dilemmas**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Issues where policy decision making requires understanding computer and communications technology. Technology basics taught in non-technology terms. Topics include consumer privacy, government surveillance, file sharing and intellectual property, and electronic voting. GER:DB-EngrAppSci

3 units, *Spr (Dill, D)*

#### **CS 75N. Cell Phones, Sensors, and You**

(F,Sem) Stanford Introductory Seminar. Focuses on the role of cell phones as the first prevalent wearable sensors that gather information about you that can be both useful and potentially harmful. Topics include the state of technology, sociological and privacy implications, potential governmental regulation, etc. Addresses omniscient big brother technology including radar guns and the recording devices that led to the Watergate scandal. Students will gather and compile information on topics and come to class ready to discuss and debate with formulated opinions. GER:DB-EngrAppSci

3 units, *Spr (Fedkiw, R)*

#### **CS 81G. Social Animals, Social Revolutions and Social Networks**

(Same as BIO 167, FRENGEN 167) We like to think of social networks as contemporary phenomena. But before Facebook, individuals organized themselves in social networks; before Twitter, revolutionaries used media to communicate and coordinate their messages. In fact, even animal societies are networked. Do all these social networks share certain properties? What can we learn by comparing them? These are some of the questions we will ask in this course, as we traverse the natural world and past societies before taking a fresh look at our modern social networks. GER: DB-NatSci

4 units, *Spr (Gordon, D; Edelstein, D; Roberts, E)*

#### **CS 101. Introduction to Computing Principles**

Introduces the essential ideas of computing: data representation, algorithms, programming code, computer hardware, networking, security, and social issues. Students learn how computers work and

what they can do through hands-on exercises. In particular, students will see the capabilities and weaknesses of computer systems so they are not mysterious or intimidating. Course features many small programming exercises, although no prior programming experience is assumed or required. CS101 is not a complete programming course such as CS106A. CS101 is effectively an alternative to CS105. A laptop computer is required for the in-class exercises. Limited enrollment GER:DB-EngrAppSci

3-5 units, *Win (Parlante, N)*

#### **CS 103. Mathematical Foundations of Computing**

Mathematical foundations required for computer science, including propositional predicate logic, induction, sets, functions, and relations. Formal language theory, including regular expressions, grammars, finite automata, Turing machines, and NP-completeness. Mathematical rigor, proof techniques, and applications. May not be taken by students who have completed 103A,B or 103X. Prerequisite: 106A or equivalent. GER:DB-Math

3-5 units, *Aut (Schwarz, K), Win (Dill, D), Spr (Schwarz, K)*

#### **CS 105. Introduction to Computers**

For non-technical majors. What computers are and how they work. Practical experience in programming. Construction of computer programs and basic design techniques. A survey of Internet technology and the basics of computer hardware. Students in technical fields and students looking to acquire programming skills should take 106A or 106X. Students with prior computer science experience at the level of 106 or above require consent of instructor. Prerequisite: minimal math skills. GER:DB-EngrAppSci

3-5 units, *Aut (Young, P), Win (Cooper, S), Spr (Young, P)*

#### **CS 106A. Programming Methodology**

(Same as ENGR 70A) Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required. GER:DB-EngrAppSci

3-5 units, *Aut (Sahami, M), Win (Schwarz, K), Spr (Cain, G), Sum (Staff)*

#### **CS 106B. Programming Abstractions**

(Same as ENGR 70B) Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or equivalent. GER:DB-EngrAppSci

3-5 units, *Aut (Cain, G), Win (Roberts, E), Spr (Schwarz, K), Sum (Staff)*

#### **CS 106L. Standard C++ Programming Laboratory**

Supplemental lab to 106B and 106X. Additional features of standard C++ programming practice. Possible topics include advanced C++ language features, standard libraries, STL containers and algorithms, object memory management, operator overloading, and inheritance. Prerequisite: consent of instructor. Corequisite: 106B or 106X.

1 unit, *Aut (Cain, G; Costello, P; Zhou, D), Win (Staff), Spr (Schwarz, K)*

#### **CS 106X. Programming Abstractions (Accelerated)**

(Same as ENGR 70X) Intensive version of 106B for students with a strong programming background interested in a rigorous treatment of the topics at an accelerated pace. Additional advanced material and more challenging projects. Prerequisite: excellence in 106A or equivalent, or consent of instructor. GER:DB-EngrAppSci

3-5 units, *Aut (Cain, G)*

#### **CS 107. Computer Organization and Systems**

Introduction to the fundamental concepts of computer systems. Explores how computer systems execute programs and manipulate data, working from the C programming language down to the microprocessor. Topics covered include: the C programming language, data representation, machine-level code, computer arithmetic, elements of code compilation, memory organization

and management, and performance evaluation and optimization. Prerequisites: 106B or X, or consent of instructor. GER:DB-EngrAppSci

3-5 units, *Aut (Zelenski, J), Win (Cain, G), Spr (Zelenski, J)*

### CS 108. Object-Oriented Systems Design

Software design and construction in the context of large OOP libraries. Taught in Java. Topics: OOP design, design patterns, testing, graphical user interface (GUI) OOP libraries, software engineering strategies, approaches to programming in teams. Prerequisite: 107. GER:DB-EngrAppSci

3-4 units, *Aut (Young, P), Win (Young, P)*

### CS 109. Introduction to Probability for Computer Scientists

Topics include: counting and combinatorics, random variables, conditional probability, independence, distributions, expectation, point estimation, and limit theorems. Applications of probability in computer science including machine learning and the use of probability in the analysis of algorithms. Prerequisites: 103, 106B or X, MATH 51 or equivalent. GER:DB-EngrAppSci

3-5 units, *Win (Sahami, M), Spr (Sahami, M)*

### CS 109L. Statistical Computing with R Laboratory

Supplemental lab to CS109. Introduces the R programming language for statistical computing. Topics include basic facilities of R including mathematical, graphical, and probability functions, building simulations, introductory data fitting and machine learning. Provides exposure to the functional programming paradigm. Corequisite: CS109.

1 unit, *Win (Sahami, M; Rothfels, J), Spr (Sahami, M; Rothfels, J)*

### CS 110. Principles of Computer Systems

Principles and practice of engineering of computer software and hardware systems. Topics include: techniques for controlling complexity; strong modularity using client-server design, virtual memory, and threads; networks; atomicity and coordination of parallel activities; security, and encryption; and performance optimizations. Prerequisite: 107. GER:DB-EngrAppSci

3-5 units, *Aut (Rosenblum, M), Win (Rosenblum, M)*

### CS 116. From Nand to Tetris

Imagine starting with nothing more than a vast supply of Nand gates, and then building, step by step, a general purpose computer that can run Tetris, or any other game that you fancy. That's precisely what we'll do in this course. In the process, you will learn how to construct a simple hardware platform, and how to develop an assembler, a virtual machine, a compiler for a simple Java-like language, and a basic operating system. Open to undergraduate and graduate students of all levels. Prerequisites: programming experience (Introduction to CS or equivalent).

3 units, *Spr (Staff)*

### CS 121. Introduction to Artificial Intelligence

(Only one of 121 or 221 counts towards any CS degree program.) Concepts, representations, and techniques used in building practical computational systems (agents) that appear to display artificial intelligence (AI), through the use of adaptive information processing algorithms. Topics: history of AI, reactive systems, heuristic search, planning, constraint satisfaction, knowledge representation and uncertain reasoning, machine learning, classification, applications to language, and vision. Prerequisites: 103 or 103B, and facility with differential calculus, vector algebra, and probability theory. GER:DB-EngrAppSci

3 units, *not given this year*

### CS 124. From Languages to Information

(Same as LINGUIST 180, LINGUIST 280) Automated processing of less structured information: human language text and speech, web pages, social networks, genome sequences, with goal of automatically extracting meaning and structure. Methods include: string algorithms, automata and transducers, hidden Markov models, graph algorithms, XML processing. Applications such as information retrieval, text classification, social network models, machine translation, genomic sequence alignment, word meaning extraction, and speech recognition. Prerequisite: CS103, CS107, CS109.

3-4 units, *Win (Jurafsky, D)*

### CS 140. Operating Systems and Systems Programming

Operating systems design and implementation. Basic structure; synchronization and communication mechanisms; implementation

of processes, process management, scheduling, and protection; memory organization and management, including virtual memory; I/O device management, secondary storage, and file systems. Prerequisite: CS 110. GER:DB-EngrAppSci

3-4 units, *Win (Ousterhout, J)*

### CS 142. Web Applications

Concepts and techniques used in constructing interactive web applications. Browser-side web facilities such as HTML, cascading stylesheets, javascript, and the document object model. Server-side technologies such as sessions, templates, relational databases, and object-relational mapping. Issues in web security and application scalability. New models of web application deployment. Prerequisites: CS 107 and CS 108.

3 units, *Spr (Ousterhout, J)*

### CS 143. Compilers

Principles and practices for design and implementation of compilers and interpreters. Topics: lexical analysis; parsing theory; symbol tables; type systems; scope; semantic analysis; intermediate representations; runtime environments; code generation; and basic program analysis and optimization. Students construct a compiler for a simple object-oriented language during course programming projects. Prerequisites: 103 or 103B, and 107. GER:DB-EngrAppSci

3-4 units, *Spr (Aiken, A), Sum (Staff)*

### CS 144. Introduction to Computer Networking

Principles and practice. Structure and components of computer networks, packet switching, layered architectures. Applications: web/http, voice-over-IP, p2p file sharing and socket programming. Reliable transport: TCP/IP, reliable transfer, flow control, and congestion control. The network layer: names and addresses, routing. Local area networks: ethernet and switches. Wireless networks and network security. Prerequisite: CS 110. GER:DB-EngrAppSci

3-4 units, *Aut (Levis, P)*

### CS 145. Introduction to Databases

Database design and use of database management systems for applications. The relational model, relational algebra, and SQL, the standard language for creating, querying, and modifying relational databases. XML data including DTDs and XML Schema for validation, and the query and transformation languages XPath, XQuery and XSLT. UML database design, and relational design principles based on functional dependencies and normal forms. Indexes, views, transactions, authorization, integrity constraints, and triggers, and on-line analytical processing (OLAP). Guest speakers from industry and additional advanced topics as time and class interest permits. Prerequisites: 103 and 107 (or equivalent). GER:DB-EngrAppSci

3-4 units, *Aut (Widom, J)*

### CS 147. Introduction to Human-Computer Interaction Design

Introduces fundamental methods and principles for designing, implementing, and evaluating user interfaces. Topics: user-centered design, rapid prototyping, experimentation, direct manipulation, cognitive principles, visual design, social software, software tools. Learn by doing: work with a team on a quarter-long design project, supported by lectures, readings, and studios. Prerequisite: 106B or X or equivalent programming experience.

3-4 units, *Aut (Klemmer, S)*

### CS 147L. Human-Computer Interaction Technology Laboratory

Hands-on introduction to building mobile web applications with html, css, and php. Corequisite: 147. Concurrent enrollment in CS147 required.

1 unit, *Aut (Brandt, J)*

### CS 148. Introduction to Computer Graphics and Imaging

Topics: Image input and output devices such as cameras and displays, graphics hardware and software, input technologies and interactive techniques, typography and page layout, light and color representations, exposure and tone reproduction, image composition and imaging models, digital signal processing, sampling, aliasing and antialiasing, compression, two- and three-dimensional geometry and formations, modeling techniques including curves and surfaces, reflection models and illumination algorithms, and basic methods of animation. Programming assignments using C++ and OpenGL. Prerequisites: CS 107,

MATH 51. GER:DB-EngrAppSci  
3-4 units, Aut (Hanrahan, P), Sum (Staff)

**CS 149. Parallel Computing**

This course is an introduction to parallelism and parallel programming. Most new computer architectures are parallel; programming these machines requires knowledge of the basic issues of and techniques for writing parallel software. Topics: varieties of parallelism in current hardware (e.g., fast networks, multicore, accelerators such as GPUs, vector instruction sets), importance of locality, implicit vs. explicit parallelism, shared vs. non-shared memory, synchronization mechanisms (locking, atomicity, transactions, barriers), and parallel programming models (threads, data parallel/streaming, futures, SPMD, message passing, SIMT, transactions, and nested parallelism). Significant parallel programming assignments will be given as homework. The course is open to students who have completed the introductory CS course sequence through 110 and have taken CS 143. GER:DB-EngrAppSci

3-4 units, Win (Aiken, A; Olukotun, O)

**CS 154. Introduction to Automata and Complexity Theory**

Regular sets: finite automata, regular expressions, equivalences among notations, methods of proving a language not to be regular. Context-free languages: grammars, pushdown automata, normal forms for grammars, proving languages non-context-free. Turing machines: equivalent forms, undecidability. Nondeterministic Turing machines: properties, the class NP, complete problems for NP, Cook's theorem, reducibilities among problems. Prerequisites: 103 or 103B. GER:DB-EngrAppSci

3-4 units, Spr (Trevisan, L)

**CS 155. Computer and Network Security**

For seniors and first-year graduate students. Principles of computer systems security. Attack techniques and how to defend against them. Topics include: network attacks and defenses, operating system holes, application security (web, email, databases), viruses, social engineering attacks, privacy, and digital rights management. Course projects focus on building reliable code. Prerequisite: 140. Recommended: basic Unix. GER:DB-EngrAppSci

3 units, Spr (Boneh, D; Mitchell, J)

**CS 157. Logic and Automated Reasoning**

An elementary exposition from a computational point of view of propositional and predicate logic, axiomatic theories, and theories with equality and induction. Interpretations, models, validity, proof, strategies, and applications. Automated deduction: polarity, skolemization, unification, resolution, equality. Prerequisite: 103 or 103B. GER:DB-EngrAppSci

3 units, Aut (Genesereth, M)

**CS 161. Design and Analysis of Algorithms**

Worst and average case analysis. Recurrences and asymptotics. Efficient algorithms for sorting, searching, and selection. Data structures: binary search trees, heaps, hash tables. Algorithm design techniques: divide-and-conquer, dynamic programming, greedy algorithms, amortized analysis, randomization. Algorithms for fundamental graph problems: minimum-cost spanning tree, connected components, topological sort, and shortest paths. Possible additional topics: network flow, string searching. Prerequisite: 103 or 103B; 109 or STATS 116. GER:DB-EngrAppSci

3-5 units, Aut (Roughgarden, T), Spr (Guibas, L), Sum (Staff)

**CS 164. Computing with Physical Objects: Algorithms for Shape and Motion**

Algorithms and data structures dealing with the representation and manipulation of physical objects and entities in the computer. Computational structures for shape and motion, shape fitting and matching, triangulations and other spatial subdivisions, and low-dimensional search and optimization. Examples relevant to computer graphics, computer vision, robotics and geometric computation emphasizing algorithmic paradigms applicable to multidimensional data. Prerequisites: CS 103 or 103B, and CS 109 or STATS 116, and CS 106B/X or consent of instructor. GER:DB-EngrAppSci

3 units, not given this year

**CS 170. Stanford Laptop Orchestra: Composition, Coding, and Performance**

(Same as MUSIC 128) Classroom instantiation of the Stanford

Laptop Orchestra (SLOrk) which includes public performances. An ensemble of more than 20 humans, laptops, controllers, and special speaker arrays designed to provide each computer-mediated instrument with its sonic identity and presence. Topics and activities include issues of composing for laptop orchestras, instrument design, sound synthesis, programming, and live performance. May be repeated four times for credit.

1-5 units, Spr (Wang, G)

**CS 178. Digital Photography**

Scientific, artistic, and computing aspects of digital photography. Topics: lenses and optics, light and sensors, optical effects in nature, perspective and depth of field, sampling and noise, the camera as a computing platform, image processing and editing, history of photography, computational photography. Counts as a CS elective in the Graphics track. Prerequisites: introductory calculus; students must have a digital camera with manual control over shutter speed and aperture. Loaner cameras may be available. No programming experience required. GER:DB-EngrAppSci

3-5 units, Spr (Levoy, M)

**CS 181. Computers, Ethics, and Public Policy**

(Formerly 201.) Primarily for majors entering computer-related fields. Ethical and social issues related to the development and use of computer technology. Ethical theory, and social, political, and legal considerations. Scenarios in problem areas: privacy, reliability and risks of complex systems, and responsibility of professionals for applications and consequences of their work. Prerequisite: 106B or X. GER:EC-EthicReas

4 units, Aut (Cooper, S), Spr (Cooper, S)

**CS 181W. Computers, Ethics and Public Policy (WIM)**

Writing-intensive version of CS181. Satisfies the WIM requirement for Computer Science and Computer Systems Engineering undergraduates. GER:EC-EthicReas

4 units, Aut (Cooper, S), Spr (Cooper, S)

**CS 191. Senior Project**

Restricted to Computer Science and Computer Systems Engineering students. Group or individual projects under faculty direction. Register using instructor's section number. A project can be either a significant software application or publishable research. Software application projects include substantial programming and modern user-interface technologies and are comparable in scale to shareware programs or commercial applications. Research projects may result in a paper publishable in an academic journal or presentable at a conference. Required public presentation of final application or research results.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**CS 191W. Writing Intensive Senior Project**

Restricted to Computer Science and Computer Systems Engineering students. Writing-intensive version of CS191. Register using the section number of an Academic Council member.

3-6 units, Aut (Staff), Win (Staff), Spr (Staff)

**CS 192. Programming Service Project**

Restricted to Computer Science students. Appropriate academic credit (without financial support) is given for volunteer computer programming work of public benefit and educational value.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**CS 193A. Android Programming**

Introduction to building programs for the Android platform. The course walks through the key concepts of android programming: android tool chain, application life-cycle, no Moore's law for batteries, views, controls, persistence, custom view drawing, sensors, android intents, networking, threading. The course features ten weekly lectures and a series of small programming projects. A phone is not required to take this course, although a phone makes the projects more engaging. Prerequisites: 106B or Java programming experience at the 106B level.

1 unit, Aut (Parlante, N)

**CS 193C. Client-Side Internet Technologies**

Client-side technologies used to create web sites such as sophisticated Web 2.0 interfaces similar to Google maps. XHTML, CSS, JavaScript, document object model (DOM), AJAX, and Flash. Prerequisite: programming experience at the level of 106A.

3 units, Sum (Staff)

**CS 193D. Professional Software Development with C++**

Programming techniques and methodologies. Language concepts including object-oriented design, memory management, and the standard library. Modern software development concepts such as design patterns, test-driven development, extreme programming, and XML. Prerequisites: basic C++ or significant experience in C or Java. GER:DB-EngrAppSci

*3 units, not given this year*

**CS 193P. iPhone and iPad Application Programming**

Tools and APIs required to build applications for the iPhone and iPad platform using the iOS SDK. User interface designs for mobile devices and unique user interactions using multi-touch technologies. Object-oriented design using model-view-controller paradigm, memory management, Objective-C programming language. Other topics include: object-oriented database API, animation, mobile device power management, multi-threading and performance considerations. Prerequisites: C language and object-oriented programming experience at 106B or X level. Recommended: CS107, UNIX, graphics, databases.

*3 units, Aut (Hegarty, P)*

**CS 193R. Green Computing**

Power is becoming a central issue in designing systems. The amount of energy consumed by data centers has doubled in recent years and minimizing power consumption is one of the primary technical challenges facing today's IT industry. This course will cover various components of power-aware computing and energy usage in systems ranging from tablets/smartphones to data centers. Topics include: power management in modern computing systems, fine grain power measurement of computing systems, software energy efficiency, optimizing active power and idle efficiency, energy-aware computing for small form factor devices (netbooks, tablets, smartphones, etc.), minimizing energy usage in data centers and server farms. Prerequisites: 107, 110.

*3 units, Win (Staff)*

**CS 193S. Scalable Web 2.0 Programming**

Course charts development path for a large scale modern web service. Resource efficiency demands a single developer should be able to build, test and deploy a single codebase using only open source tools and libraries. Difficult to accomplish in practice due to variety of skill sets needed for UI, client, server and database coding. Course framework presented offers solution that does not sacrifice long term scalability and maintainability for rapid development cycles and easy prototyping. Programming projects provide overview of technologies and critical constraints. Prerequisites: CS107, CS108.

*3 units, not given this year*

**CS 194. Software Project**

Design, specification, coding, and testing of a significant team programming project under faculty supervision. Documentation includes a detailed proposal. Public demonstration of the project at the end of the quarter. Prerequisites: CS 110 and CS 161.

*3 units, Spr (Borenstein, J)*

**CS 194W. Software Project (WIM)**

Restricted to Computer Science and Computer Systems Engineering undergraduates. Writing-intensive version of CS194.

*3 units, Spr (Borenstein, J)*

**CS 196. Computer Consulting**

Focus is on Macintosh and Windows operating system maintenance and troubleshooting through hardware and software foundation and concepts. Topics include operating systems, networking, security, troubleshooting methodology with emphasis on Stanford's computing environment. Not a programming course. Prerequisite: 1C or equivalent.

*2 units, Win (Smith, S), Spr (Smith, S)*

**CS 198. Teaching Computer Science**

Students lead a discussion section of 106A while learning how to teach a programming language at the introductory level. Focus is on teaching skills, techniques, and course specifics. Application and interview required; see <http://cs198.stanford.edu>.

*3-4 units, Aut (Sahami, M; Walsh, R; Cuthriell, L), Win (Sahami, M; Cuthriell, L; Walsh, R), Spr (Sahami, M; Walsh, R; Cuthriell, L)*

**CS 199. Independent Work**

Special study under faculty direction, usually leading to a written

report. Letter grade; if not appropriate, enroll in 199P.

*1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**CS 199P. Independent Work**

(Staff)

*1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**CS 210B. Software Project Experience with Corporate Partners**

Continuation of CS210A. Focus is on real-world software development. Corporate partners seed projects with loosely defined challenges from their R&D labs; students innovate to build their own compelling software solutions. Student teams are treated as start-up companies with a budget and a technical advisory board comprised of the instructional staff and corporate liaisons. Teams will typically travel to the corporate headquarters of their collaborating partner, meaning some teams will travel internationally. Open loft classroom format such as found in Silicon Valley software companies. Exposure to: current practices in software engineering; techniques for stimulating innovation; significant development experience with creative freedoms; working in groups; real world software engineering challenges; public presentation of technical work; creating written descriptions of technical work. Prerequisites: 109 or 210A.

*1-4 units, Spr (Borenstein, J)*

**GRADUATE COURSES IN COMPUTER SCIENCE**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**CS 202. Law for Computer Science Professionals**

Intellectual property law as it relates to computer science including copyright registration, patents, and trade secrets; contract issues such as non-disclosure/non-compete agreements, license agreements, and works-made-for-hire; dispute resolution; and principles of business formation and ownership. Emphasis is on topics of current interest such as open source and the free software movement, peer-to-peer sharing, encryption, data mining, and spam.

*1 unit, Win (Hansen, D)*

**CS 204. Computational Law**

Legal informatics based on representation of regulations in computable form. Encoding regulations facilitate creation of legal information systems with significant practical value. Convergence of technological trends, growth of the Internet, advent of semantic web technology, and progress in computational logic make computational law prospects better. Topics: current state of computational law, prospects and problems, philosophical and legal implications. Prerequisite: basic concepts of programming.

*3 units, not given this year*

**CS 205A. Mathematical Methods for Robotics, Vision, and Graphics**

Continuous mathematics background necessary for research in robotics, vision, and graphics. Possible topics: linear algebra; the conjugate gradient method; ordinary and partial differential equations; vector and tensor calculus. Prerequisites: 106B or X; MATH 51 and 113; or equivalents.

*3 units, Aut (Fedkiw, R)*

**CS 205B. Mathematical Methods for Fluids, Solids, and Interfaces**

Numerical methods for simulation of problems involving solid mechanics and fluid dynamics. Focus is on practical tools needed for simulation, and continuous mathematics involving nonlinear hyperbolic partial differential equations. Possible topics: finite element method, highly deformable elastic bodies, plasticity, fracture, level set method, Burgers' equation, compressible and incompressible Navier-Stokes equations, smoke, water, fire, and solid-fluid coupling. Prerequisite: 205A or equivalent.

*3 units, not given this year*

**CS 207. The Economics of Software**

How software products are moved into the marketplace and how the resulting intellectual property is exploited. Concepts that are outside of the common knowledge of computer scientists such as business terms and spreadsheet computations to quantitatively compare alternatives. Goal is to contribute to informed decision

making in high-tech product design, acquisition, production, marketing, selection of business structures, outsourcing, and impact of taxation policies. No specific background required.

*1 unit, Aut (Wiederhold, G)*

### CS 208. Canon of Computer Science

Analysis and discussion of seminal works in computer science. Emphasis on works that changed the course of computing and continue to this day to provoke and stimulate. Course will study foundational ideas that are at the core of personal computing, artificial intelligence, computer systems, computer networks, and more. Through immersion in original literature, we can more deeply comprehend the present state of computing, its origins, its underlying assumptions, and its major open questions. In connecting students with the ideas that shaped computer science, course aims to instill lasting inspiration and a deep understanding of major trends in the field.

*3-4 units, not given this year*

### CS 210A. Software Project Experience with Corporate Partners

Two-quarter project course. Focus is on real-world software development. Corporate partners seed projects with loosely defined challenges from their R&D labs; students innovate to build their own compelling software solutions. Student teams are treated as start-up companies with a budget and a technical advisory board comprised of instructional staff and corporate liaisons. Teams will typically travel to the corporate headquarters of their collaborating partner, meaning some teams will travel internationally. Open loft classroom format such as found in Silicon Valley software companies. Exposure to: current practices in software engineering; techniques for stimulating innovation; significant development experience with creative freedoms; working in groups; real-world software engineering challenges; public presentation of technical work; creating written descriptions of technical work. Prerequisites: 109 or 110.

*3-4 units, Win (Borenstein, J)*

### CS 221. Artificial Intelligence: Principles and Techniques

(Only one of 121 or 221 counts toward any CS degree program.) Topics: search, constraint satisfaction, knowledge representation, probabilistic models, Bayesian networks, machine learning, neural networks, vision, robotics, and natural language processing. Prerequisites: 103 or 103B/X; 106B or 106X; and exposure to probability. Recommended: 107 and facility with basic differential calculus.

*3-4 units, Aut (Thrun, S)*

### CS 222. Rational Agency and Intelligent Interaction

(Same as PHIL 358) For advanced undergraduates, and M.S. and beginning Ph.D. students. Logic-based methods for knowledge representation, information change, and games in artificial intelligence and philosophy. Topics: knowledge, certainty, and belief; time and action; belief dynamics; preference and social choice; games; and desire and intention. Prerequisite: propositional and first-order logic.

*3 units, not given this year*

### CS 223A. Introduction to Robotics

(Same as ME 320) Robotics foundations in modeling, design, planning, and control. Class covers relevant results from geometry, kinematics, statics, dynamics, motion planning, and control, providing the basic methodologies and tools in robotics research and applications. Concepts and models are illustrated through physical robot platforms, interactive robot simulations, and video segments relevant to historical research developments or to emerging application areas in the field. Recommended: matrix algebra.

*3 units, Win (Khatib, O)*

### CS 224M. Multi-Agent Systems

For advanced undergraduates, and M.S. and beginning Ph.D. students. Topics: logics of knowledge and belief, other logics of mental state, theories of belief change, multi-agent probabilities, essentials of game theory, social choice and mechanism design, multi-agent learning, communication. Applications discussed as appropriate; emphasis is on conceptual matters and theoretical foundations. Prerequisites: basic probability theory and first-order logic.

*3 units, Spr (Shoham, Y)*

### CS 224N. Natural Language Processing

(Same as LINGUIST 284) Methods for processing human language information and the underlying computational properties of natural languages. Syntactic and semantic processing from linguistic and algorithmic perspectives. Focus is on modern quantitative techniques in NLP: using large corpora, statistical models for acquisition, translation, and interpretation; and representative systems. Prerequisites: CS124 or CS121/221.

*3-4 units, Aut (Manning, C)*

### CS 224S. Speech Recognition and Synthesis

(Same as LINGUIST 285) Automatic speech recognition, speech synthesis, and dialogue systems. Focus is on key algorithms including noisy channel model, hidden Markov models (HMMs), Viterbi decoding, N-gram language modeling, unit selection synthesis, and roles of linguistic knowledge. Prerequisite: programming experience. Recommended: CS 221 or 229.

*3-4 units, not given this year*

### CS 224U. Natural Language Understanding

(Same as LINGUIST 188, LINGUIST 288) Machine understanding of human language. Computational semantics (determination of word sense and synonymy, event structure and thematic roles, time, aspect, causation, compositional semantics, scopal operators), and computational pragmatics and discourse (coherence, coreference resolution, information packaging, dialogue structure). Theoretical issues, online resources, and relevance to applications including question answering and summarization. Prerequisites: one of LINGUIST 180 / CS 124 / CS 224N,S; and logic such as LINGUIST 130A or B, CS 157, or PHIL150).

*3-4 units, Win (MacCartney, W; Potts, C)*

### CS 224W. Social and Information Network Analysis

(Formerly 322) How do rumors and information spread? Who are the influencers? Can we predict friendships on Facebook? Networks are the core of the WWW, blogs, Twitter and Facebook. They can be characterized by the complex interplay between information content, millions of individuals and organizations that create it, and the technology that supports it. Course will focus on how to analyze the structure and dynamics of large networks, how to model links, and how design algorithms that work with such large networks. Topics: statistical properties of large networks, models of social network structure and evolution, link prediction, network community detection, diffusion of innovation, information propagation, six-degrees of separation, finding influential nodes in networks, disease outbreak detection, networks with positive and negative ties, and connections with work in the social sciences and economics.

*3 units, Aut (Leskovec, J)*

### CS 225A. Experimental Robotics

Hands-on laboratory course experience in robotic manipulation. Topics include robot kinematics, dynamics, control, compliance, sensor-based collision avoidance, and human-robot interfaces. Second half of class is devoted to final projects using various robotic platforms to build and demonstrate new robot task capabilities. Previous projects include the development of autonomous robot behaviors of drawing, painting, playing air hockey, yoyo, basketball, ping-pong or xylophone. Prerequisites: 223A or equivalent.

*3 units, Spr (Khatib, O)*

### CS 225B. Robot Programming Laboratory

For robotics and non-robotics students. Students program mobile robots to exhibit increasingly complex behavior (simple dead reckoning and reactivity, goal-directed motion, localization, complex tasks). Topics: motor control and sensor characteristics; sensor fusion, model construction, and robust estimation; control regimes (subsumption, potential fields); probabilistic methods, including Markov localization and particle filters. Student programmed robot contest. Programming is in C++ on Unix machines, done in teams. Prerequisite: programming at the level of 106B, 106X, 205, or equivalent.

*3-4 units, Aut (Konolige, K)*

### CS 227. Knowledge Representation and Reasoning

Representing knowledge symbolically in a form suitable for automated reasoning, and associated reasoning methods. Combines formal algorithmic analysis with a description of recent

applications. Topics: object-oriented knowledge representation, description logics, inheritance networks, logic programming, propositional satisfiability, constraint satisfaction, planning and scheduling, abductive explanation, tractable reasoning. Prerequisites: familiarity with basic notions in data structures and with techniques in algorithm design and analysis. Computational logic (CS157 or equivalent). Recommended: previous or concurrent course in AI. Knowledge of Lisp or Prolog programming.

3 units, not given this year

### CS 227B. General Game Playing

A general game playing system accepts a formal description of a game to play it without human intervention or algorithms designed for specific games. Hands-on introduction to these systems and artificial intelligence techniques such as knowledge representation, reasoning, learning, and rational behavior. Students create GGP systems to compete with each other and in external competitions. Prerequisite: programming experience. Recommended: 103 or equivalent.

3 units, Spr (Genesereth, M)

### CS 228. Probabilistic Graphical Models: Principles and Techniques

Probabilistic graphical modeling languages for representing complex domains, algorithms for reasoning using these representations, and learning these representations from data. Topics include: Bayesian and Markov networks, extensions to temporal modeling such as hidden Markov models and dynamic Bayesian networks, exact and approximate probabilistic inference algorithms, and methods for learning models from data. Also included are sample applications to various domains including speech recognition, biological modeling and discovery, medical diagnosis, message encoding, vision, and robot motion planning. Prerequisites: basic probability theory and algorithm design and analysis.

3-4 units, Win (Koller, D)

### CS 228T. Probabilistic Graphical Models: Advanced Methods

For students interested in advanced methods in machine learning and probabilistic AI. Describes the theoretical foundations for methods of inference and learning in probabilistic graphical models, allowing for the derivation of properties of these methods and for the development of more advanced methods. Sample topics include advanced methods in Markov chain Monte Carlo, approximate message-passing algorithms for inference derived from an optimization perspective, representation and inference in models involving continuous variables, learning undirected models, learning with hidden variables, and non-parametric Bayesian methods. Prerequisites: CS228; strong mathematical foundation.

3 units, Spr (Koller, D)

### CS 229. Machine Learning

Topics: statistical pattern recognition, linear and non-linear regression, non-parametric methods, exponential family, GLMs, support vector machines, kernel methods, model/feature selection, learning theory, VC dimension, clustering, density estimation, EM, dimensionality reduction, ICA, PCA, reinforcement learning and adaptive control, Markov decision processes, approximate dynamic programming, and policy search. Prerequisites: linear algebra, and basic probability and statistics.

3-4 units, Aut (Ng, A)

### CS 229A. Machine Learning (Applied)

Covers algorithms that allow computers to learn from data. Emphasis on practical skills and methods for applying learning techniques and building practical AI/Learning systems. Course covers commonly used learning techniques (classification, regression, clustering, dimensionality reduction), specific applications (anomaly detection, recommender systems, search), as well as working with big data. Online, self-paced course. Enrollment limited. Consent of instructor required. Prerequisites: Programming at the level of CS106B or 106X, and basic linear algebra such as Math 51.

3-4 units, Aut (Ng, A)

### CS 231A. Introduction to Computer Vision

(Formerly 223B) An introduction to the concepts and applications in computer vision. Topics include: cameras and projection

models, low-level image processing methods such as filtering and edge detection; mid-level vision topics such as segmentation and clustering; shape reconstruction from stereo, as well as high-level vision tasks such as object recognition, scene recognition, face detection and human motion categorization. Prerequisites: linear algebra, basic probability and statistics.

3 units, Aut (Li, F)

### CS 231B. The Cutting Edge of Computer Vision

(Formerly 223C) More than one-third of the brain is engaged in visual processing, the most sophisticated human sensory system. Yet visual recognition technology has fundamentally influenced our lives on the same scale and scope as text-based technology has, thanks to Google, Twitter, Facebook, etc. This course is designed for those students who are interested in cutting edge computer vision research, and/or are aspiring to be an entrepreneur using vision technology. Course will guide students through the design and implementation of three core vision technologies: segmentation, detection and classification on three highly practical, real-world problems. Course will focus on teaching the fundamental theory, detailed algorithms, practical engineering insights, and guide them to develop state-of-the-art systems evaluated based on the most modern and standard benchmark datasets. Prerequisites: CS2223B or equivalent and a good machine learning background (i.e. CS221, CS228, CS229). Fluency

3 units, not given this year

### CS 240. Advanced Topics in Operating Systems

Recent research. Classic and new papers. Topics: virtual memory management, synchronization and communication, file systems, protection and security, operating system extension techniques, fault tolerance, and the history and experience of systems programming. Prerequisite: 140 or equivalent.

3 units, Win (Engler, D), Spr (Engler, D)

### CS 240H. Functional Systems in Haskell

Covers an array of practical issues and techniques that arise when building real-world systems in the Haskell programming language. Topics include the basics of Haskell, laziness, monads, parsers, testing and debugging, performance tuning, interfacing to native code, concurrency and I/O paradigms, language extensions, meta-programming, and applications to the web and security. Concepts will be reinforced through a few individual programming assignments followed by a larger team project. Prior familiarity with Haskell may be helpful but is not required. Prerequisites: CS106B or 106X.

3-4 units, Aut (Mazieres, D)

### CS 241. Secure Web Programming

Building secure Web applications is key to the continued success of the Web. Course will cover the key components and available tools for securing web applications. Discussions on browser security policy and how to properly use it, server-side abstractions for building secure applications, and common errors found in existing applications. Course will include student presentations on course projects.

3 units, alternate years, not given this year

### CS 242. Programming Languages

Central concepts in modern programming languages, impact on software development, language design trade-offs, and implementation considerations. Functional, imperative, and object-oriented paradigms. Formal semantic methods and program analysis. Modern type systems, higher order functions and closures, exceptions and continuations. Modularity, object-oriented languages, and concurrency. Runtime support for language features, interoperability, and security issues. Prerequisite: 107, or experience with Lisp, C, and an object-oriented language.

3 units, Aut (Mitchell, J)

### CS 243. Program Analysis and Optimizations

Program analysis techniques used in compilers and software development tools to improve productivity, reliability, and security. The methodology of applying mathematical abstractions such as graphs, fixpoint computations, binary decision diagrams in writing complex software, using compilers as an example. Topics include data flow analysis, instruction scheduling, register allocation, parallelism, data locality, interprocedural analysis, and garbage collection. Prerequisites: 103 or 103B, and 107.

3-4 units, Win (Lam, M)

### CS 244. Advanced Topics in Networking

Classic papers, new ideas, and research papers in networking. Architectural principles: naming, addressing, routing; congestion control, traffic management, QoS; wireless and mobility; overlay networks and virtualization; network security; switching and routing; content distribution; and proposals for future Internet structures. Prerequisite: 144 or equivalent.

3-4 units, Spr (McKeown, N)

### CS 244B. Distributed Systems

Distributed operating systems and applications issues, emphasizing high-level protocols and distributed state sharing as the key technologies. Topics: distributed shared memory, object-oriented distributed system design, distributed directory services, atomic transactions and time synchronization, application-sufficient consistency, file access, process scheduling, process migration, and storage/communication abstractions on distribution, scale, robustness in the face of failure, and security. Prerequisites: CS 144 and CS 249A.

3 units, Spr (Cheriton, D)

### CS 244C. Readings and Projects in Distributed Systems

Companion project option for 244B. Corequisite: 244B.

3-6 units, not given this year

### CS 244E. Networked Wireless Systems

(Same as EE 384E) Design and implementation of wireless networks and mobile systems. The course will commence with a short retrospective of wireless communication and initially touch on some of the fundamental physical layer properties of various wireless communication technologies. The focus will then shift to design of media access control and routing layers for various wireless systems. The course will also examine adaptations necessary at transport and higher layers to cope with node mobility and error-prone nature of the wireless medium. Finally, it will conclude with a brief overview of other related issues including emerging wireless/mobile applications. Prerequisites: EE 284

3 units, Win (Katti, S)

### CS 245. Database Systems Principles

File organization and access, buffer management, performance analysis, and storage management. Database system architecture, query optimization, transaction management, recovery, concurrency control. Reliability, protection, and integrity. Design and management issues. Prerequisites: 145, 161.

3 units, Win (Garcia-Molina, H)

### CS 246. Mining Massive Data Sets

Distributed file systems: Hadoop, map-reduce; PageRank, topic-sensitive PageRank, spam detection, hubs-and-authorities; similarity search; shingling, minhashing, random hyperplanes, locality-sensitive hashing; analysis of social-network graphs; association rules; dimensionality reduction: UV, SVD, and CUR decompositions; algorithms for very-large-scale mining: clustering, nearest-neighbor search, gradient descent, support-vector machines, classification, and regression; submodular function optimization. Prerequisites: At least one of CS107 or CS145; at least one of CS109 or STAT116, or equivalent.

3 units, Win (Leskovec, J)

### CS 247. Human-Computer Interaction Design Studio

Project-based. Methods used in interaction design including needs analysis, user observation, idea sketching, concept generation, scenario building, storyboards, user character stereotypes, usability analysis, and market strategies. Prerequisites: 147 and 106A or equivalent background in programming.

3-4 units, Win (Heer, J)

### CS 247L. Human Computer Interaction Technology Laboratory

Hands-on introduction to contemporary HCI technologies. Interaction design with Adobe Flash, mobile development, physical computing, and web applications. Corequisite: 247.

1 unit, Win (Heer, J)

### CS 248. Interactive Computer Graphics

Rendering and animation for interactive computer graphics. Topics in rendering include: the graphics pipeline, rasterization, lighting and surface shading, texture mapping and its applications, graphics hardware, and rendering optimization. Topics in animation

include: keyframing and interpolation, physics-based simulation, and character animation. Prerequisite: CS148.

3-4 units, Win (Koltun, V)

### CS 249A. Object-Oriented Programming from a Modeling and Simulation Perspective

Topics: large-scale software development approaches for complex applications, class libraries and frameworks; encapsulation, use of inheritance and dynamic dispatch, design of interfaces and interface/implementation separation, exception handling, smart pointers and reference management, minimalizing dependencies and value-oriented programming. Inheritance: when and why multiple inheritance naming, directories, manager, and disciplined use of design patterns including functors, event notification and iterators. Prerequisites: C, C++, and programming methodology as developed in 106B or X, and 107 (107 may be taken concurrently). Recommended: 193D.

3 units, Aut (Cheriton, D)

### CS 249B. Large-scale Software Development

Software engineering of high quality large-scale complex software with a focus on evolvability, performance and cost. Software development processes, people and practice; audit: integrating invariant checks with production software; concurrency with modular object-oriented programming; collection implementation; generic programming and templates; design of value types; named descriptions for large value types; memory management; controlling placement, locality and consumption; run-time vs. static type checking and identification.

3 units, not given this year

### CS 254. Computational Complexity

An introduction to computational complexity theory. The P versus NP problem; diagonalization and relativization; space complexity, Savitch's algorithm, NL=coNL, Reingold's algorithm; counting problem and #P-completeness; circuit complexity; pseudorandomness, derandomization, and the Natural Proofs barrier; complexity of approximation; quantum computing. Prerequisites: 154 or equivalent; mathematical maturity.

3 units, Win (Trevisan, L)

### CS 255. Introduction to Cryptography

For advanced undergraduates and graduate students. Theory and practice of cryptographic techniques used in computer security. Topics: encryption (single and double key), digital signatures, pseudo-random bit generation, authentication, electronic commerce (anonymous cash, micropayments), key management, PKI, zero-knowledge protocols. Prerequisite: basic probability theory.

3 units, Win (Boneh, D)

### CS 258. Introduction to Programming Language Theory

Syntactic, operational, and semantic issues in the mathematical analysis of programming languages. Type systems and non-context-free syntax. Universal algebra and algebraic data types. Operational semantics given by rewrite rules; confluence and termination. Denotational semantics and elementary domain theory for languages with higher-type functions and recursion. Treatment of side effects. Prerequisites: 154, 157 or PHIL 160A.

3 units, Win (Mitchell, J)

### CS 259. Security Analysis of Network Protocols

General methods for security modeling and analysis, illustrated using network protocol security. Common security protocols and their properties including secrecy, authentication, key establishment, and fairness. Fully automated, finite-state, model-checking techniques. Constraint solving, process algebras, protocol logics, probabilistic model checking, and game theory. Students select a protocol, web component, hardware architecture, or other system to analyze, specify it in a chosen model, use an analysis tool or method to find vulnerabilities and verify properties, and present findings.

3 units, not given this year

### CS 259C. Elliptic Curves in Cryptography

(Same as MATH 250) Discusses the mathematics of elliptic curves and their applications in cryptography. Studies crypto-systems based on elliptic curves and discuss their security. Studies algorithmic aspects of elliptic curves related to crypto-system construction and security. Topics include: elliptic curves over finite fields, attacks on elliptic curve crypto-systems, point

counting, pairing-based cryptography. Suggested background: Math 120 or 152, or CS255.

3 units, Aut (Freeman, D)

### CS 261. Optimization and Algorithmic Paradigms

Algorithms for network optimization: max-flow, min-cost flow, matching, assignment, and min-cut problems. Introduction to linear programming. Use of LP duality for design and analysis of algorithms. Approximation algorithms for NP-complete problems such as Steiner Trees, Traveling Salesman, and scheduling problems. Randomized algorithms. Introduction to online algorithms. Prerequisite: 161 or equivalent.

3 units, Win (Plotkin, S)

### CS 262. Computational Genomics

(Same as BIOMEDIN 262) Applications of computer science to genomics, and concepts in genomics from a computer science point of view. Topics: dynamic programming, sequence alignments, hidden Markov models, Gibbs sampling, and probabilistic context-free grammars. Applications of these tools to sequence analysis: comparative genomics, DNA sequencing and assembly, genomic annotation of repeats, genes, and regulatory sequences, microarrays and gene expression, phylogeny and molecular evolution, and RNA structure. Prerequisites: 161 or familiarity with basic algorithmic concepts. Recommended: basic knowledge of genetics.

3 units, Win (Batzoglou, S)

### CS 263. Algorithms for Modern Data Models

(Same as MS&E 317) We traditionally think of algorithms as running on data available in a single location, typically main memory. In many modern applications including web analytics, search and data mining, computational biology, finance, and scientific computing, the data is often too large to reside in a single location, is arriving incrementally over time, is noisy/uncertain, or all of the above. Paradigms such as map-reduce, streaming, sketching, Distributed Hash Tables, Bulk Synchronous Processing, and random walks have proved useful for these applications. This course will provide an introduction to the design and analysis of algorithms for these modern data models. Prerequisite: Algorithms at the level of CS 261.

3 units, Aut (Goel, A)

### CS 268. Geometric Algorithms

Techniques for design and analysis of efficient geometric algorithms for objects in 2-, 3-, and higher dimensions. Topics: convexity, triangulations and simplicial complexes, sweeping, partitioning, and point location. Voronoi/Delaunay diagrams and their properties. Arrangements of curves and surfaces. Intersection and visibility problems. Geometric searching and optimization. Random sampling methods. Impact of numerical issues in geometric computation. Example applications to robotic motion planning, visibility preprocessing and rendering in graphics, model-based recognition in computer vision, and structural molecular biology. Prerequisite: discrete algorithms at the level of 161. Recommended: 164.

3 units, not given this year

### CS 270. Modeling Biomedical Systems: Ontology, Terminology, Problem Solving

(Same as BIOMEDIN 210) Methods for modeling biomedical systems and for making those models explicit in the context of building software systems. Emphasis is on intelligent systems for decision support and Semantic Web applications. Topics: knowledge representation, controlled terminologies, ontologies, reusable problem solvers, and knowledge acquisition. Recommended: exposure to object-oriented systems, basic biology.

3 units, Win (Musen, M)

### CS 271. Smart Health through Effective Design

(Same as BIOMEDIN 211) Methods of designing and engineering software systems in complex clinical environments. Case studies illustrate factors leading to success or failure of systems. Project assignments involve focused team-based design work. Topics: user and organizational requirements, data and knowledge modeling, component-based system design, system prototyping, and human-systems interaction. Prerequisite: BIOMEDIN 210 recommended, or database or object-oriented programming course.

3 units, Win (Das, A)

### CS 272. Introduction to Biomedical Informatics Research

#### Methodology

(Same as BIOE 212, BIOMEDIN 212, GENE 212) Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Prerequisites: BIOMEDIN 210, 211, 214, 217 or consent of instructor.

3 units, Spr (Altman, R)

### CS 273A. A Computational Tour of the Human Genome

(Same as BIOMEDIN 273A, DBIO 273A) Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing (technologies, assembly, personalized sequencing); functional landscape (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures from genomic researchers. No prerequisites. See <http://cs273a.stanford.edu/>.

3 units, Aut (Batzoglou, S; Bejerano, G)

### CS 274. Representations and Algorithms for Computational Molecular Biology

(Same as BIOE 214, BIOMEDIN 214, GENE 214) Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.

3-4 units, Aut (Altman, R)

### CS 275. Translational Bioinformatics

(Same as BIOMEDIN 217) Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A and familiarity with statistics and biology.

4 units, Spr (Butte, A)

### CS 276. Information Retrieval and Web Search

(Same as LINGUIST 286) Text information retrieval systems; efficient text indexing; Boolean, vector space, and probabilistic retrieval models; ranking and rank aggregation; evaluating IR systems. Text clustering and classification: classification algorithms, latent semantic indexing, taxonomy induction; Web search engines including crawling and indexing, link-based algorithms, and web metadata. Prerequisites: CS 107, CS 109, CS 161.

3 units, Spr (Nayak, P; Manning, C)

### CS 277. Experimental Haptics

Haptics as it relates to creating touch feedback in simulated or virtualized environments. Goal is to develop virtual reality haptic simulators and applications. Theoretical topics: psychophysical issues, performance and design of haptic interfaces, haptic rendering methods for 3-D virtual environments, and haptic simulation and rendering of rigid and deformable solids. Applied topics: the CHAI haptic library; implementation of haptic rendering algorithms; collision detection in 3-D environments; design of real-time models for deformable objects. Guest speakers. Lab/programming exercises; a more open-ended final project.

Enrollment limited to 20. Prerequisite: experience with C++. Recommended: 148 or 248, 223A.

3 units, Win (Conti, F; Salisbury, K)

### CS 278. Systems Biology

(Same as BIOE 310, CSB 278) Experimental and computational approaches to the dissection of complex biological systems. Topics include network structure, non-linear dynamics, numerical modeling approaches, noise, and robustness. Topics are introduced in the context of recent papers from the primary literature.

4 units, alternate years, not given this year

### CS 279. Computational Methods for Analysis and Reconstruction of Biological Networks

Types of interactions, including: regulatory such as transcriptional, signaling, and chromatin modification; protein-protein interactions; and genetic. Biological network structure at scales such as single interaction, small subgraphs, and global organization. Methods for analyzing properties of biological networks. Techniques for reconstructing networks from biological data, including: DNA/protein sequence motifs and sequence conservation; gene expression data; and physical binding data such as protein-DNA, protein-RNA, and protein-protein. Network dynamics and evolution. Prerequisites: biology at the level of BIOSCI 41; computer science and data structures at the level of CS 103 and 106; and probability and statistics at the level of STATS 116 or CS 109.

3 units, not given this year

### CS 294. Research Project in Computer Science

Student teams work under faculty supervision on research and implementation of a large project in some major sub-discipline in computer science. Lectures on state-of-the-art methods related to the particular problem domain. Prerequisites: consent of instructor.

3 units, OCCASIONAL

### CS 294A. Research Project in Artificial Intelligence

Student teams under faculty supervision work on research and implementation of a large project in AI. State-of-the-art methods related to the problem domain. Prerequisites: AI course from 220 series, and consent of instructor.

3 units, Win (Ng, A)

### CS 294H. Research Project in Human-Computer Interaction

Many of the most successful web applications are social, from personalized homepages to social networks. Focus is on fundamental interface design, systems, and algorithms concepts in designing social software. Case-based syllabus covers insights from research and industry. Students contribute to this growing field through a quarter-long, team-based project. Students are required to enter the class with an initial project idea.

3 units, not given this year

### CS 294S. Research Project in Software Systems and Security

Topics vary. Focus is on emerging research themes such as programmable open mobile Internet that spans multiple system topics such as human-computer interaction, programming systems, operating systems, networking, and security. May be repeated for credit. Prerequisites: CS 103 and 107.

3 units, Spr (Lam, M)

### CS 294W. Writing Intensive Research Project in Computer Science

Restricted to Computer Science and Computer Systems Engineering undergraduates. Students enroll in the CS 294W section attached to the CS 294 project they have chosen.

3 units, Win (Ng, A), Spr (Lam, M)

### CS 295. Software Engineering

Software specification, testing, and verification. Emphasis is on current best practices and technology for developing reliable software at reasonable cost. Assignments focus on applying these techniques to realistic software systems. Prerequisites: 108. Recommended a project course such as 140, 143, or 145.

2-3 units, not given this year

### CS 298. Seminar on Teaching Introductory Computer Science

Faculty, undergraduates, and graduate students interested in teaching discuss topics raised by teaching computer science at the introductory level. Prerequisite: consent of instructor.

1-3 units, Aut (Roberts, E)

### CS 300. Departmental Lecture Series

Priority given to first-year Computer Science Ph.D. students. CS Masters students admitted if space is available. Presentations by members of the department faculty, each describing informally his or her current research interests and views of computer science as a whole.

1 unit, Aut (Mitchell, J)

### CS 303. Designing Computer Science Experiments

Introduction to empirical research in computer science. Learn how to design, execute, interpret, and report on computer science experiments. Conducting empirical work and using experiments to build theory is one of the major ways to move computer science forward, but these issues are often omitted from computer science curricula. Course features case studies drawn from artificial intelligence, systems, and human-computer interaction. Emphasizes the decision-making aspects of research and the logic behind research procedures.

3 units, Spr (Klemmer, S)

### CS 309. Industrial Lectureships in Computer Science

Guest computer scientist. By arrangement. May be repeated for credit. (Staff)

1 unit, OCCASIONAL

### CS 309A. Cloud Computing

For technology and business students. The shift from traditional software model of disconnected development and CD-ROM deployment to engineering and delivery on the Internet as a service. Guest industry experts are typically CEOs of public companies who are delivering applications, platform or compute and storage cloud based services.

1 unit, Aut (Chou, T)

### CS 315A. Parallel Computer Architecture and Programming

The principles and tradeoffs in the design of parallel architectures. Emphasis is on naming, latency, bandwidth, and synchronization in parallel machines. Case studies on shared memory, message passing, data flow, and data parallel machines illustrate techniques. Architectural studies and lectures on techniques for programming parallel computers. Programming assignments on one or more commercial multiprocessors. Prerequisites: EE 282, and reasonable programming experience.

3 units, not given this year

### CS 315B. Parallel Computing Research Project

Advanced topics and new paradigms in parallel computing including parallel algorithms, programming languages, runtime environments, library debugging/tuning tools, and scalable architectures. Research project. Prerequisite: consent of instructor.

3 units, not given this year

### CS 319. Topics in Digital Systems

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, OCCASIONAL

### CS 321. Information Processing for Sensor Networks

Design and implementation of algorithms and protocols for performing information processing tasks in sensor networks, including routing, data dissemination and aggregation, information discovery and brokerage, service establishment (localization, time synchronization), sensor tasking and control, and distributed data storage. Techniques from signal processing, networking, energy-aware computing, distributed databases and algorithms, and embedded systems and platforms. Physical, networking, and application layers and design trade-offs across the layers. Prerequisites: linear algebra and elementary probability, networking background at the level of 144A or EE 284.

3-4 units, not given this year

### CS 324. Robot Perception

Advanced instruction and project work on robot perception, primarily focused on perception for manipulating objects, but this can include perception of people and other moving objects. Tools such as the Robot Operating System (ROS), the Open Source Computer Vision Library (Open CV), the Point Cloud Processing Library (PCL), and the Navigation, Planning, and Manipulation stacks on the PR2 robot. Review of the principles and code behind these tools so that the student has the basics to do state-of-the-art, publishable work in mobile robotic manipulation. Work is done on

real robots. Limited enrollment. Recommended: CS 223A, CS 223B.

*3 units, not given this year*

### CS 326A. Motion Planning

Computing object motions in computer graphics, geometrical computing, robotics, or artificial intelligence for applications such as design, manufacturing, robotics, animated graphics, surgical planning, drug design, assembly planning, graphic animation of human figures, humanoid robots, inspection and surveillance, simulation of crowds, and biology. Path planning methods to generate collision-free paths among static obstacles. Extensions include uncertainty, mobile obstacles, manipulating moveable objects, maneuvering with kinematic constraints, and making and breaking contacts. Configuration space, geometric arrangements, and random sampling. Theoretical methods.

*3 units, not given this year*

### CS 327A. Advanced Robotic Manipulation

Advanced control methodologies and novel design techniques for complex human-like robotic and bio mechanical systems. Class covers the fundamentals in operational space dynamics and control, elastic planning, human motion synthesis. Topics include redundancy, inertial properties, haptics, simulation, robot cooperation, mobile manipulation, human-friendly robot design, humanoids and whole-body control. Additional topics in emerging areas are presented by groups of students at the end-of-quarter mini-symposium. Prerequisites: 223A or equivalent.

*3 units, not given this year*

### CS 328. Topics in Computer Vision

Fundamental issues of, and mathematical models for, computer vision. Sample topics: camera calibration, texture, stereo, motion, shape representation, image retrieval, experimental techniques. May be repeated for credit. Prerequisites: 205, 223B, or equivalents.

*3 units, OCCASIONAL*

### CS 329. Topics in Artificial Intelligence

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

*3 units, OCCASIONAL*

### CS 331. Advanced Reading in Computer Vision

(Formerly CS323) The field of computer vision has seen an explosive growth in past decade. Much of recent effort in vision research is towards developing algorithms that can perform high-level visual recognition tasks on real-world images and videos. With development of Internet, this task becomes particularly challenging and interesting given the heterogeneous data on the web. Course will focus on reading recent research papers that are focused on solving high-level visual recognition problems, such as object recognition and categorization, scene understanding, human motion understanding, etc. Project required. Prerequisite: some experience in research with one of the following fields: computer vision, image processing, computer graphics, machine learning.

*3 units, not given this year*

### CS 340. Topics in Computer Systems

Topics vary every quarter, and may include advanced material being taught for the first time. May be repeated for credit.

*3-4 units, OCCASIONAL*

### CS 340V. Networked Systems for Virtual Worlds

Open to graduate students and advanced undergraduates. Systems and networking aspects of building large, distributed virtual 3D environments, with a focus on scalability, consistency, security, fairness, and federation. Topics include existing architectures, naming, routing, caching, migration, interoperability, and attribution. Open-ended research project. Prerequisite: some systems and networking background. May be repeated for credit.

*3-4 units, not given this year*

### CS 341. Project in Mining Massive Data Sets

Team project in data-mining of very large-scale data, including the problem statement and implementation and evaluation of a solution; some lectures on relevant materials will be given: Hadoop, Hive, Amazon EC2; other topics of possible relevance to some projects: computational advertising and the adwords problem; graph partitioning and community detection; extracting relations from the Web; stream data processing.

*3 units, Spr (Rajaraman, A; Ullman, J; Leskovec, J)*

### CS 342. Programming Language Design

Tools for analysis and optimization of iterative coding systems. LDPC codes, Turbo codes, RA codes, optimized ensembles, message passing algorithms, density evolution, analytic techniques. Prerequisite: 376A.

*3 units, not given this year*

### CS 343. Advanced Topics in Compilers

Topics change every year. May be repeated for credit. Prerequisite: 243.

*3 units, Spr (Engler, D)*

### CS 344. Topics in Computer Networks

High-performance embedded system design. Student teams of two software engineers (C experience required) and one hardware engineer (Verilog experience required) build a fully functioning Internet router. Work in teams of three. How router interoperates with others in class. Open-ended design challenge judged by panel of industry experts. Prerequisites: CS 144, 244, or network programming experience.

*3 units, not given this year*

### CS 344B. Advanced Topics in Distributed Systems

Continuation of 244B. The use of distributed systems research in practical systems. New applications due to the growth in high-bandwidth connections. Distributed systems knowledge and techniques from research and system implementations, and active research topics. Readings include research publications.

*2 units, not given this year*

### CS 344E. Advanced Wireless Networks

Networking research in wireless systems. Topics include: multi-channel/multi-radio systems, routing, coding, physical layer hints, low power, mesh networking, interference cancellation, technological trends, and protocol design. Students implement and test research ideas on SWAN, a WiFi testbed.

*3 units, not given this year*

### CS 345. Advanced Topics in Database Systems

Content varies. May be repeated for credit with instructor consent. Prerequisite: 145. Recommended: 245.

*3 units, OCCASIONAL*

### CS 347. Parallel and Distributed Data Management

The principles and system organization of distributed and parallel databases. Data fragmentation and distribution, distributed database design, query processing and optimization, distributed concurrency control, reliability and commit protocols, and replicated data management. Data management in peer-to-peer systems. Data management in the cloud using map-reduce and other massive parallelism techniques.

*3 units, Spr (Garcia-Molina, H)*

### CS 348A. Computer Graphics: Geometric Modeling

The mathematical tools needed for the geometrical aspects of computer graphics and especially for modeling smooth shapes. Fundamentals: homogeneous coordinates, transformations, and perspective. Theory of parametric and implicit curve and surface models: polar forms, Bezier arcs and de Casteljau subdivision, continuity constraints, B-splines, tensor product, and triangular patch surfaces. Subdivision surfaces and multiresolution representations of geometry. Representations of solids and conversions among them. Surface reconstruction from scattered data points. Geometry processing on meshes, including simplification. Prerequisite: linear algebra. Recommended: 164, 248.

*3-4 units, Win (Guibas, L)*

### CS 348B. Computer Graphics: Image Synthesis Techniques

Intermediate level, emphasizing the sampling, shading, and display aspects of computer graphics. Topics: local and global illumination methods including radiosity and distributed ray tracing, texture generation and rendering, volume rendering, strategies for anti-aliasing and photo-realism, human vision and color science as they relate to computer displays, and high-performance architectures for graphics. Written assignments and programming projects. Prerequisite: 248 or equivalent. Recommended: Fourier analysis or digital signal processing.

*3-4 units, Spr (Hanrahan, P)*

**CS 349. Topics in Programming Systems**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, OCCASIONAL

**CS 349C. Topics in Programming Systems: Readings in Distributed Systems**

Discussion of research publications that are of current interest in distributed systems. Students are expected to read all papers, and sign up for presentation of one paper. The course itself is 1 unit. Those interested in working on a project along with the readings should enroll for 3 units.

1-3 units, not given this year

**CS 354. Topics in Circuit Complexity**

An overview of circuit complexity, focusing on limitations of solving computational problems with circuits. Classical methods: diagonalization; the gate elimination method; the method of random restrictions; approximating circuits with polynomials. Connections between circuit-analysis algorithms and circuit complexity: learning circuits via queries; pseudorandomness and derandomization; satisfiability algorithms. Prerequisite: CS254 or the equivalent mathematical maturity.

3 units, Aut (Williams, R)

**CS 355. Advanced Topics in Cryptography**

Topics: pseudo-random generation, zero knowledge protocols, elliptic curve systems, threshold cryptography, security analysis using random oracles, lower and upper bounds on factoring and discrete log. May be repeated for credit. Prerequisite: 255.

3 units, not given this year

**CS 357. Advanced Topics in Formal Methods**

Topics vary annually. Possible topics include automata on infinite words, static analysis methods, runtime analysis methods, verification of real-time and hybrid systems, and formalization of middleware services. May be repeated for credit. Prerequisite: 256.

3 units, Aut (Aiken, A; Dill, D)

**CS 358. Topics in Programming Language Theory**

Topics of current research interest in the mathematical analysis of programming languages, structured operational semantics, domain theory, semantics of concurrency, rich type disciplines, problems of representation independence, and full abstraction. See Time Schedule or Axxess for current topics. May be repeated for credit. Prerequisites: 154, 157, 258, or equivalents. (Staff)

3 units, OCCASIONAL

**CS 359. Topics in the Theory of Computation**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, OCCASIONAL

**CS 359G. Graph Partitioning and Expanders**

Three topics related to the mathematics of expander graphs: (1) Approximation algorithms for finding a sparse balanced cut in a graph (spectral partitioning, Leighton-Rao algorithm, and Arora-Rao-Vazirani algorithm); (2) Explicit construction of expander graphs (combinatorial and algebraic); and (3) Analysis of Markov-Chain Monte-Carlo algorithm via the estimation of the convergence of certain random walks. Recommended: a basic course in linear algebra and a course on algorithms.

3 units, not given this year

**CS 361A. Advanced Algorithms**

Advanced data structures: union-find, self-adjusting data structures and amortized analysis, dynamic trees, Fibonacci heaps, universal hash function and sparse hash tables, persistent data structures. Advanced combinatorial algorithms: algebraic (matrix and polynomial) algorithms, number theoretic algorithms, group theoretic algorithms and graph isomorphism, online algorithms and competitive analysis, strings and pattern matching, heuristic and probabilistic analysis (TSP, satisfiability, cliques, colorings), local search algorithms. May be repeated for credit. Prerequisite: 161 or 261, or equivalent.

3 units, not given this year

**CS 361B. Advanced Algorithms**

Topics: fundamental techniques used in the development of exact and approximate algorithms for combinatorial optimization

problems such as generalized flow, multicommodity flow, sparsest cuts, generalized Steiner trees, load balancing, and scheduling. Using linear programming, emphasis is on LP duality for design and analysis of approximation algorithms; interior point methods for LP. Techniques for development of strongly polynomial algorithms. Prerequisites: 161 or 261, or equivalent.

3 units, Spr (Plotkin, S)

**CS 364A. Algorithmic Game Theory**

Topics at the interface of theoretical computer science and game theory such as: algorithmic mechanism design; combinatorial and competitive auctions; congestion and potential games; cost sharing; existence, computation, and learning of equilibria; game theory and the Internet; network games; price of anarchy; and selfish routing. Prerequisites: 154N and 161, or equivalents.

3 units, not given this year

**CS 364B. Topics in Algorithmic Game Theory**

Topics on the interface of theoretical computer science and game theory. May be taken prior to 364A; may be repeated for credit. Prerequisites: 154N and 161, or equivalents.

3 units, not given this year

**CS 365. Randomized Algorithms**

(Same as CME 309) Design and analysis of algorithms that use randomness to guide their computations. Topics include: basic tools, from probability theory and probabilistic analysis that are recurrent in algorithmic applications; randomized complexity theory and game-theoretic techniques; algebraic techniques, probability amplification and derandomization. Applications: sorting and searching, data structures, combinatorial optimization and graph algorithms, geometric algorithms and linear programming, approximation and counting problems, similarity search and metric embeddings, online algorithms. Prerequisites: CS 161 and STAT 116, or equivalents and instructor consent.

3 units, Win (Goel, A)

**CS 369. Topics in Analysis of Algorithms**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, OCCASIONAL

**CS 369N. Beyond Worst-Case Analysis**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, Aut (Roughgarden, T)

**CS 374. Algorithms in Biology**

(Same as BIOMEDIN 374) Algorithms and computational models applied to molecular biology and genetics. Topics vary annually. Possible topics include biological sequence comparison, annotation of genes and other functional elements, molecular evolution, genome rearrangements, microarrays and gene regulation, protein folding and classification, molecular docking, RNA secondary structure, DNA computing, and self-assembly. May be repeated for credit. Prerequisites: 161, 262 or 274, or BIOCHEM 218, or equivalents.

2-3 units, Aut (Batzoglou, S)

**CS 376. Research Topics in Human-Computer Interaction**

Prepares students to conduct original HCI research by reading and discussing seminal and cutting-edge research papers. This broad introduction covers topics in design, social software, input techniques, mobile, and ubiquitous computing. Student pairs perform a quarter-long mini research project; students are encouraged to select topics that leverage larger research efforts on campus. For undergraduates, CS147 is a prerequisite.

3-4 units, Spr (Klemmer, S)

**CS 377. Topics in Human-Computer Interaction**

Contents change each quarter. May be repeated for credit. See <http://hci.stanford.edu/academics> for offerings.

2-3 units, OCCASIONAL

**CS 377H. Topics in Learning and Technology: Core Mechanics for Learning**

(Same as COMM 180, COMM 280, EDUC 328X) Contents of the course change each year. The course can be repeated. In game play, core mechanics refers to the rules of interaction that drive the game forward. This class will consider whether there are core

mechanics that can drive learning forward, and if so, how to build them into learning environments.

3 units, Win (Schwartz, D)

### CS 377I. Prototyping Interactive Systems

Students learn a principled approach to rapid prototyping techniques of interactive systems, with an emphasis on successful redesign with users and exploring alternatives within a design space. Covers the scientific and design-based foundations of participatory design. In small groups, students apply these principles in a series of hands-on exercises for finding out about users, creating rapid prototypes, and evaluating multiple design alternatives. Techniques include: critical incident interviews, interactive thread, technology probes, video brainstorming, design spaces, participatory design workshops, branching scenarios, paper and video prototyping, interaction tables, co-adaptive instruments and generative walkthroughs. While CS147 Introduction to HCI is highly recommended, there are no formal prerequisites and no programming requirements.

4 units, Win (Mackay, W)

### CS 377L. Learning in a Networked World

(Same as EDUC 298) Foundations, theories and empirical studies for interdisciplinary advances in how we conceive of the potentials and challenges associated with lifelong, lifewide and life-deep learning in a networked world given the growth of always-on cyberinfrastructure for supporting information and social networks across space and time with personal computers, netbooks, and mobiles.

3 units, not given this year

### CS 378. Phenomenological Foundations of Cognition, Language, and Computation

Critical analysis of theoretical foundations of the cognitive approach to language, thought, and computation. Contrasts of the rationalistic assumptions of current linguistics and artificial intelligence with alternatives from phenomenology, theoretical biology, critical literary theory, and socially-oriented speech act theory. Emphasis is on the relevance of theoretical orientation to the design, implementation, and impact of computer systems as it affects human-computer interaction.

3-4 units, Aut (Winograd, T)

### CS 379. Interdisciplinary Topics

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

3 units, OCCASIONAL

### CS 379C. Computational Models of the Neocortex

In this course we explore the problem of modeling the primate cortex with an emphasis on the primary sensory areas and their related association areas, using probabilistic graphical models and modern variants of artificial neural networks. Class lectures and invited speakers will focus on the problems of biological learning, inference, and attention. Student projects will cover a range of computational models with an emphasis on classifying biological motion, coding for natural image sequences, and modeling sensory association areas spanning multiple sensory modalities. Primary sources include literature in computational and cognitive neuroscience, machine learning, and other fields that bear on how biological and engineered systems make sense of the world. Prerequisites: basic probability theory, algorithms, and statistics.

3 units, Spr (Dean, T)

### CS 379L. Designing Liberation Technology

(Same as POLISCI 337T) Small project teams work with NGOs to design new technologies for promoting development and democracy. Students conduct observations to identify needs, generate concepts, create prototypes, and test their appropriateness. Some projects may continue past the quarter toward full-scale implementation. Taught through the Hasso Plattner Institute of Design at Stanford (<http://dschool.stanford.edu>). Enrollment limited. Application required. Prerequisites: consent of instructor(s). Design Institute class; see <http://dschool.stanford.edu>.

3-4 units, Spr (Winograd, T)

### CS 390A. Curricular Practical Training

Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work

into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390 A, B, and C may each be taken once.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### CS 390B. Curricular Practical Training

Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390A,B,C may each be taken once.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### CS 390C. Curricular Practical Training

Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390A,B,C may each be taken once.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### CS 393. Computer Laboratory

For CS graduate students. A substantial computer program is designed and implemented; written report required. Recommended as a preparation for dissertation research. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### CS 395. Independent Database Project

For graduate students in Computer Science. Use of database management or file systems for a substantial application or implementation of components of database management system. Written analysis and evaluation required. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### CS 399. Independent Project

Letter grade only.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### CS 399P. Independent Project

Graded satisfactory/no credit.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### CS 402. Beyond Bits and Atoms: Designing Technological Tools

(Same as EDUC 236X) Practicum in designing and building technology-enabled curricula and learning environments. Students use software toolkits and state-of-the-art fabrication machines to design educational software, educational toolkits, and tangible user interfaces. How to design low-cost technologies, particularly for urban school in the US and abroad. The constructionist learning design perspective, critical pedagogy, and the application of complexity sciences in education.

3-5 units, Spr (Blikstein, P)

### CS 402L. Beyond Bits and Atoms - Lab

(Same as EDUC 211X) This course is a hands-on lab in the prototyping and fabrication of tangible technologies, with a special focus in learning and education. We will learn how to use state-of-the-art fabrication machines (3D printers, 3D scanners, laser cutters, routers) to design educational toolkits, educational toys, science kits, and tangible user interfaces. A special focus of the course will be to design low-cost technologies, particularly for urban school in the US and abroad.

1-3 units, Win (Blikstein, P), Spr (Blikstein, P)

### CS 422. Intelligent Avatar Laboratory

In this small lab course students will implement intelligent behaviors for autonomous avatars in virtual worlds. Working either individually or in pairs, students will be given a brief tutorial on the software environment, will design a behavior for the

autonomous avatar(s), and once that is approved, will implement the behavior. The programs can control a single avatars, or orchestrate a behavior of multiple avatars. This is an experimental class and enrollment will be limited this year. Prerequisites: CS106B or X, or equivalent. Experience with virtual worlds (such as Second Life or World of Warcraft) a plus.

3 units, not given this year

#### **CS 424M. Computational Modeling in Cognitive and Social Science**

(Same as EDUC 390X) Computational modeling and data-mining are dramatically changing the physical sciences, and more recently also the social and behavioral sciences. Traditional analysis techniques are insufficient to investigate complex dynamic social phenomena as social networks, online gaming, diffusion of innovation, opinion dynamics, classroom behavior, and other complex adaptive systems. In this course, we will learn about how modeling, network theory, and basic data-mining can support research in cognitive, and social sciences, in particular around issues of learning, cognitive development, and educational policy.

3-4 units, Win (Blikstein, P)

#### **CS 424P. Extracting Social Meaning and Sentiment**

(Same as LINGUIST 287) Methods for extracting social meaning (speaker perspectives, emotions and attitudes) from text and speech. Topics include sentiment analysis and summarization, detection of deception, sarcasm, emotion, and personality. Analysis of meaning-bearing characteristics of the speaker and topic, including text, discourse, prosodic and other cues. Prerequisite: CS 124 or 221 or 229 or permission of instructors.

3 units, not given this year

#### **CS 431. High-Level Vision: Object Representation**

(Same as PSYCH 250) (Formerly CS423 High-Level Vision: Behaviors, Neurons, and Computational Models) Interdisciplinary seminar focusing on understanding how computations in the brain enable rapid and efficient object perception. Covers topics from multiple perspectives drawing on recent research in Psychology, Neuroscience, Computer Science and Applied Statistics. Emphasis on discussing recent empirical findings, methods and theoretical debates in the field. Topics include: theories of object perception, neural computations underlying invariant object perception, how visual exemplars and categories are represented in the brain, what information is present in distributed activations across neural populations and how it relates to object perception, what modern statistical and analytical tools there are for multi-variate analysis of brain activations.

1-3 units, Spr (Li, F; Grill-Spector, K)

#### **CS 442. High Productivity and Performance with Domain-specific Languages in Scala**

Introduction to developing domain specific languages (DSLs) for productivity and performance using the Scala programming language. Goal is to equip students with the knowledge and tools to develop DSLs that can dramatically improve the experience of using high performance computation in important scientific and engineering domains. Aimed at two sorts of students: domain experts who can define key domain specific language elements that capture domain knowledge, and computer scientists who can implement these DSLs using a new DSL framework in Scala. First half of the course will focus on understanding the infrastructure for implementing DSLs in Scala and developing techniques for defining good DSLs. Second half of the course will focus on example DSLs that provide both high-productivity and performance. During the second half of the course groups of students will develop and implement their own DSLs using the Delite DSL process of implementing DSLs for parallel computation. Prerequisites

3 units, Spr (Olukotun, O)

#### **CS 447. Software Design Experiences**

Small teams develop technology prototypes combining product and interaction design. Focus is on software and hardware interfaces, interaction, design aesthetics, and underpinnings of successful design including a reflective, interactive design process, group dynamics of interdisciplinary teamwork, and working with users. Prerequisite: CS 247A.

3-4 units, not given this year

#### **CS 448. Topics in Computer Graphics**

Topic changes each quarter. Recent topics: computational photography, data visualization, character animation, virtual worlds, graphics architectures, advanced rendering. See <http://graphics.stanford.edu/courses> for offerings and prerequisites. May be repeated for credit.

3-4 units, OCCASIONAL

#### **CS 448B. Data Visualization**

Techniques and algorithms for creating effective visualizations based on principles from graphic design, visual art, perceptual psychology, and cognitive science. Topics: graphical perception, data and image models, visual encoding, graph and tree layout, color, animation, interaction techniques, automated design. Lectures, reading, and project. Prerequisite: one of 147, 148, or equivalent.

3 units, Aut (Heer, J)

#### **CS 450. Introduction to Biotechnology**

Academic and industrial experts discuss latest developments in fields such as bioenergy, green process technology, the production of industrial chemicals from renewable resources, protein pharmaceutical production, industrial enzyme production, stem cell applications, medical diagnostics, and medical imaging. Discussions of biotechnology ethics, business and patenting issues, and entrepreneurship in biotechnology.

3 units, not given this year

#### **CS 468. Geometry Processing Algorithms**

Contents of this course change with each offering. Past offerings have included geometric matching, surface reconstruction, collision detection, computational topology, etc. May be repeated for credit. Fall quarter 2010/11 topic will be Geometry Processing Algorithms. Techniques for modeling and efficient processing of polygonal geometric models. Topics: data structures for polygonal models, discrete differential geometry, mesh parameterization, mesh simplification and remeshing reconstruction from point clouds, mesh editing and deformation, geometric image editing. Recommended: 164.

3 units, Spr (Ben Chen Bolocan, M)

#### **CS 476A. Music, Computing, and Design I: Software Paradigms for Computer Music**

(Same as MUSIC 256A) Software design and implementation for computer audio. Strategies, best practices, and tradeoffs in building audio software systems of various sizes (S, M, L, XL), with a focus on interactive (real-time) systems. Lectures examine high-level designs as well as dissect code in a hands-on manner. Course work includes small programming assignments and a final software project. This course is the prerequisite for MUSIC 256B. Prerequisite: experience in C/C++ and/or Java.

1-4 units, Aut (Wang, G)

#### **CS 476B. Music, Computing, Design II: Mobil Music**

(Same as MUSIC 256B) Aesthetic, design, and implementation of mobile music, centered around the modern super smartphones such as the iPhone). Similarities and intrinsic differences between mobile and traditional computing and design for music. Topics include mobile software design, social and cloud computing, mobile interface design, and programming phones, in the service of music. Prerequisite: MUSIC 256A.

1-4 units, Win (Wang, G)

#### **CS 478. Computational Photography**

(Formerly CS448A) Sensing strategies and algorithmic techniques that extend traditional digital photography, with a focus on mobile devices. Topics: high-dynamic-range imaging; coded aperture and exposure; panoramic stitching; light-field imaging; image stabilization, processing and enhancement; programmable cameras. Lectures, readings, and project. Prerequisite: 178 or equivalent.

3-4 units, Win (Staff)

#### **CS 499. Advanced Reading and Research**

For CS graduate students. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **CS 545. Database and Information Management Seminar**

Current research and industrial innovation in database and information systems.

1 unit, Win (Widom, J)

**CS 546. Seminar on Liberation Technologies**

(Same as POLISCI 337S) This one-unit seminar will present speakers relevant in a variety of ways to how various forms of information technology are being used to defend human rights, improve governance, deepen democracy, empower the poor, promote economic development, protect the environment, enhance public health, and pursue a variety of other social goods.

*1 unit, Aut (Winograd, T; Cohen, J), Win (Diamond, L; Winograd, T)*

**CS 547. Human-Computer Interaction Seminar**

Weekly speakers. May be repeated for credit.

*1 unit, Aut (Winograd, T), Win (Winograd, T), Spr (Winograd, T)*

**CS 548. Internet and Distributed Systems Seminar**

Guest speakers from academia and industry. May be repeated for credit.

*1 unit, not given this year*

**CS 571. Surgical Robotics Seminar**

Surgical robots developed and implemented clinically on varying scales. Seminar goal is to expose students from engineering, medicine, and business to guest lecturers from academia and industry. engineering and clinical aspects connected to design and use of surgical robots, varying in degree of complexity and procedural role.

*1 unit, Spr (Barbagli, F)*

**CS 801. TGR Project**

*0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**CS 802. TGR Dissertation**

*0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

## DANCE (DANCE) COURSES

### UNDERGRADUATE COURSES IN DANCE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**DANCE 13AX. Ballet Intensive**

Rigorous daily practice that will challenge and expand students' understanding of and perspective on the art form. Focus on strengthening technique, exploring ballet as an expressive form and performing art, and developing an artistic voice.

*2 units, Aut (Elliott, K; Maffre, M)*

**DANCE 27. Faculty Choreography**

Rehearsal and performance of faculty choreography. Selection by audition and invitation. May be repeated for credit.

*1 unit, Aut (Frank, D), Win (Frank, D)*

**DANCE 28. Choreography: Color Purple**

Students in this class will participate in the choreographic process that will ultimately lead to the dance and movement vocabulary of the Drama production of the Color Purple. Taken through permission of the instructor.

*1 unit, Win (Hayes, A)*

**DANCE 30. Chocolate Heads Dance and Performance Workshop**

Students in the Chocolate Heads Workshop will participate in the construction of a new dance-driven and musical performance work drawn from performance styles and various contemporary dances from around the world. Dancers, musicians and performance artists from diverse backgrounds (Social dance-current styles, Western Classical, West African, Musical Theater, other contemporary forms) will collaborate with the director to create an original work. Students will gain compositional and performance training. May be repeated for credit.

*1 unit, Aut (Hayes, A)*

**DANCE 43. Liquid Flow: Introduction to Dance and Movement**

Body expression, articulation, and anatomical basics through Contemporary Dance technique and other somatic practices such as tai chi and yoga. Emphasis is on development of awareness of the body in space and organic fluidity of motion. Exploration of improvisation and creativity. May be repeated for credit

*1 unit, Aut (Hayes, A)*

**DANCE 46. Social Dances of North America I**

Introduction to the partner dances found in American popular culture: waltz, swing, tango, club two step, cha cha, merengue, and salsa. May be repeated for credit. (AU)

*1 unit, Aut (Powers, R), Win (Powers, R), Spr (Powers, R)*

**DANCE 48. Beginning Ballet**

Fundamentals of ballet technique including posture, placement, the foundation steps, and ballet terms; emphasis on the development of coordination, balance, flexibility, sense of lines, and sensitivity to rhythm and music. May be repeated for credit.

*1 unit, not given this year*

**DANCE 51. Congolese Dance**

(Same as AFRICAST 51, AFRICAAM 51) Movements and choreography from Central Africa. Elements unique to all African dance movement: body isolation, polyrhythmic movement, and body posture. Live drumming. Open to all levels of dancers.

*1 unit, alternate years, not given this year*

**DANCE 56. Ballet Repertory**

Live collaboration with choreographer during bi-weekly rehearsals focusing on the creation of a new dance to be performed during the Spring Dance Division performance series and to be integrated in the Dance Division repertory. The course is designed to engage students in developing adaptability of technique, and artistic voice.

*1 unit, not given this year*

**DANCE 57. Dance Repertory: Anna Sokolow**

Anna Sokolow's Rooms In conjunction with a traveling photographic exhibit on Master Choreographer Anna Sokolow -- on display at Stanford Hillel Winter Quarter -- the Dance Division will re-stage four sections of Anna Sokolow's signature dance masterpiece Rooms. The work will be set by guest artist Lorrie May, the head of the Sokolow Foundation and a leading interpreter of Sokolow's choreography. May will be assisted in rehearsal by Diane Frank. Students perform the work of visiting artist with faculty supervision. Audition or invitation. May be repeated for credit.

*1 unit, Win (Frank, D)*

**DANCE 58. Beginning Hip Hop**

Steps and styling in one of America's 21st-century vernacular dance forms. May be repeated for credit.

*1 unit, Aut (Reddick, R)*

**DANCE 59. Intermediate-Advanced Hip-Hop**

Steps and styling in one of America's 21st-century vernacular dance forms. May be repeated for credit.

*1 unit, Aut (Reddick, R)*

**DANCE 60. The Evolution of Hip Hop and the Dance Stage: From Broadway to Hollywood and MTV**

The repertory of Hip Hop history through steps and choreography. May be repeated for credit.

*1 unit, not given this year*

**DANCE 63. Beginning Contemporary and Beginning Dance Making**

This course offers beginning study in technique, placement, principles and musical approach current in contemporary dance as well as basic instruction in dance makings. Time will be split evenly on each area of instruction.

*1 unit, Win (Moses, R)*

**DANCE 69. The Athletic Body in Dance**

Aesthetics to conditioning, this course provides instruction in the fundamentals of the goal-oriented body in artistic practice. Emphasis will be placed on using sports movement as a base for training in dance.

*1 unit, Aut (Moses, R)*

**DANCE 100. Student Choreography: Studio to Stage**

Student choreography developed under close faculty guidance, leading to performance. Requirement for students working towards performance on major Division concerts. May be repeated for credit.

*1 unit, not given this year*

**DANCE 103. Dance, Text and Gesture**

Workshop geared for dance, spoken word and dramatic performers who want to explore and gain facility with written and spoken word text in relation to various modes of choreographic

development and gestural vocabulary. Students will also both create original compositions and draw from existing texts, as well as participate in guest workshops by Bay Area Spoken Word artists. May be repeated for credit. All levels welcome.

*1 unit, Win (Hayes, A)*

**DANCE 105. Contemporary Afro Styles and Dancemaking**

Studio class with live percussion and electronic accompaniment, which studies traditional to current African diaspora dances. This course also looks at contemporary African American artistic expression and the aesthetic sensibility that is rendered through cultural activities such as: current social dances, marching bands, street style and motion, step shows, vocal styles. . All levels welcome May be repeated for credit

*2 units, Aut (Hayes, A)*

**DANCE 108. Hip Hop Meets Broadway**

What happens when Hip Hop meets Fosse, Aida, Dream Girls and In the Heights? The most amazing collaboration of Hip Hop styles adapted to some of the most memorable Broadway Productions. This class will explore the realm between Hip Hop Dance and the Broadway Stage. Infusing Acting thru dance movement and exploring the Art of Lip Sync thru Hip Hop Dance styles.

*1 unit, Spr (Reddick, R)*

**DANCE 120. Hip Hop/Pop Fusion and Urban Dance:**

**Choreography**

This class will focus on defining, developing, and exploring stylistic elements in the many variations of Hip Hop and Urban Dance Styles. Visiting Hip Hop professionals will perform.

*1 unit, not given this year*

**DANCE 121. The Day Before Hip Hop: Lecture and Technique**

Lecture and technique study of Hip hop dance (street dance) technique and Hip-hop dance history prior to the existence of the umbrella term “Hip-hop”. Fundamental history of various street dance styles which may or may not fall under the umbrella term of Hip hop; technical foundation rooted in an Afro-centric approach to movement that is dynamic, fluid and rhythmically diverse in space.

*1 unit, not given this year*

**DANCE 131. Beginning/Intermediate Ballet**

Structured studio practice reviewing the basics of ballet technique including posture, placement, the foundation steps and ballet terms, and progressing to more complex positions and combination of steps. Emphasis is placed on improving forms, developing coordination and connectivity, securing balance, increasing strength, flexibility, sense of lines, and sensitivity to rhythm and music.

*1 unit, Aut (Elliott, K), Win (Maffre, M), Spr (Elliott, K)*

**DANCE 133. History of the Waltz**

From Vienna in 1800. Redowa and mazurka, waltz variations, the 20th-century hesitation waltz, Parisian valse musette, and 30s Boston and waltz swing. Studio technique with performance practice for stage. May be repeated for credit two times.

*1 unit, Win (Powers, R)*

**DANCE 138. Mind in Motion: Knowledge Creation Through Dance Practice and Design Thinking**

Dance technique and movement fundamentals drawn from Liquid Flow. Looking at the body as the source of design, students will also look at concepts and principles drawn from design and engineering through a tactile, kinetic and kinesthetic lens. Improvisation and creative composition throughout the course.

*1 unit, Win (Hayes, A)*

**DANCE 140. Intermediate Modern Dance**

Intermediate technique. Improvisation and composition in directed studies. May be repeated for credit.

*1 unit, Spr (Frank, D)*

**DANCE 141. Advanced Modern Dance**

Advanced dance technique. Complex movement combinations intended to build skills necessary to meet performance demands of contemporary concert dance. Studio work supplemented by professional concert attendance, readings, and participation in culminating informal showing. Intermediate/advanced skill level or permission of instructor required. May be repeated for credit.

*2 units, Aut (Frank, D), Win (Frank, D), Spr (Moses, R)*

**DANCE 144. Intermediate Modern Jazz Dance**

Practical skills of intermediate technique will focus on elements of contemporary jazz dance. Los Angeles, Broadway, and video dance styles will be covered. Studio work will focus on phrasing, endurance, technical proficiency, and musicality. Course includes viewing of a professional live performance. May be repeated for credit.

*1 unit, not given this year*

**DANCE 146. Social Dances of North America II**

Intermediate survey of dances in American popular culture: Lindy hop, Viennese waltz, cross-step waltz, foxtrot, and hustle. May be repeated for credit. Prerequisite: Dance 46 or equivalent.

*1 unit, Aut (Powers, R), Spr (Powers, R)*

**DANCE 149. Advanced Ballet**

Continuation of 148. Development of professional level ballet technique with increased complexity of forms and combination of steps. Emphasis is on classical and contemporary ballet technique. Open to men and women. Optional pointe work. May be repeated for credit.

*2 units, Aut (Elliott, K), Win (Elliott, K), Spr (Maffre, M)*

**DANCE 151. Dance and Theater and Music Workshop: New Shows**

New Shows: students in this course will work collaboratively to create a new artistic work. Emphasis will be placed on dance: s relationship to dialogue and music. This course will provide students with a basic understanding of the development, creation and staging of original performance pieces.

*1 unit, Aut (Moses, R)*

**DANCE 152. Dance and the Visual Arts: A New Public Dialogue**

A New Public Dialogue consists of a series of project-based classes that aim to engage students through seminars and labs. This quarter, the labs will be directly related to the development and implementation of two dance-based installations at the Cantor Arts Center exploring Rodin's fascination with the dancing body, and will involve workshops with eminent local dance artist Alonzo King. The seminars will include focused inquiries into the meaning of the body in public spaces, theories of perception and the correlations between performance and society, and will incorporate related reading, guest lectures, video documentaries, and writing assignments.

*1 unit, Aut (Maffre, M)*

**DANCE 156. Social Dances of North America III**

Advanced survey of the partner dances found in American popular culture: waltz, redowa, Bohemian National Polka, tango, cha cha, salsa, samba. May be repeated for credit. Prerequisite: Dance 46 or equivalent experience.

*1 unit, Win (Powers, R)*

**DANCE 160. Dance and History: From Postwar to Postmodernism**

(Same as DRAMA 160, DRAMA 260) The cultural and historical unfolding of the genre of contemporary performance known as postmodern dance over the past six decades. Dance history used to trace the effects of visual art and movement experimentalists as they have teamed up since the first decades of the 20th century, redrawing the boundaries of live art and dance performance. GER:DB-Hum, EC-Gender

*4 units, not given this year*

**DANCE 162H. Baroque Modernities: Dance, Theater, Film, Political Theory**

(Same as DRAMA 162H) What do seventeenth-century choreography and dramaturgy contribute to (mean to) choreographic and theatrical modernity? How can we explain the recurrent baroque phenomenon across the twentieth century -- becoming particularly prominent in the 1980s -- beyond the historicist accounts of theatrical reconstruction? How does the baroque locate itself within cultural modernity? This seminar asks this question of choreography at several junctures: The analysis of seventeenth century baroque spectacle that fashioned dance and theatre into political tools of monarchical sovereignty; Twentieth-century literature on the Baroque that destabilizes received notions of subjectivity and political sovereignty; Twentieth-century choreography and film that deploys baroque figures and techniques. Thus, our material shall range from seventeenth-

century dance and theater to contemporary dance, film and literature.

4 units, Win (Staff)

#### **DANCE 190. Special Research**

Topics related to the discipline of dance. May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **DANCE 191. Independent Research**

Individual supervision of off-campus internship. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **DANCE 197. Dance in Prisons: The Arts, Juvenile Justice, and Rehabilitation in America**

Participatory seminar. The nexus of art, community, and social action, using dance to study how the performing arts affect self-construction, perception and experiences of embodiment, and social control for incarcerated teenagers in Santa Clara Juvenile Hall. Service Learning Course (certified by Haas Center). GER:DB-Hum, EC-AmerCul

4 units, not given this year

### **GRADUATE COURSES IN DANCE**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **DANCE 290. Special Research**

Individual project on the work of any choreographer, period, genre, or dance-related topic. May be repeated for credit.

1-18 units, Aut (Staff), Win (Ross, J), Spr (Staff), Sum (Staff)

## DEMOCRACY, DEVELOPMENT, AND THE RULE OF LAW (DDRL) COURSES

### **UNDERGRADUATE COURSES IN DEMOCRACY, DEVELOPMENT, AND THE RULE OF LAW**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **DDRL 189. Honors Research Methods for Democracy, Development, and the Rule of Law**

This course is for all CDDRL Senior Honors Students in the 2011-12 class

3 units, Spr (Stoner-Weiss, K)

#### **DDRL 190. Interschool Honors Program on Democracy, Development, and the Rule of Law**

Students from different schools meet in a year-long seminar to discuss, analyze, and conduct research on issues pertaining to Democracy, Development, and the Rule of Law (DDRL). This will combine research methods and policy evaluations in preparation for an honors thesis to be submitted by each student. All students must submit a thesis to receive a grade for this course.

3 units, Aut (Stoner-Weiss, K), Win (Stoner-Weiss, K)

## DERMATOLOGY (DERM) COURSES

### **UNDERGRADUATE COURSES IN DERMATOLOGY**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **DERM 199. Undergraduate Research**

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **GRADUATE COURSES IN DERMATOLOGY**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **DERM 370. Medical Scholars Research**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **DERM 399. Graduate Research**

Allows for qualified students to undertake investigations sponsored by individual faculty members. Opportunities are available in dermatopathology, histochemistry, electron microscopy, biochemistry, tissue culture, quantitative and qualitative evaluation of peripheral vascular disease and sweating, immunofluorescent microscopy, connective tissue molecular biology, and wound healing. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## DEVELOPMENTAL BIOLOGY (DBIO) COURSES

### **UNDERGRADUATE COURSES IN DEVELOPMENTAL BIOLOGY**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **DBIO 11N. Human Development: Egg to Embryo**

Considers aspects of the developmental biology of human eggs and the first three weeks of human development. Topics include activation of sperm and eggs during the fertilization process, sperm motility and chemotaxis, cell recognition and immuno-contraception, onset of embryonic transcription, control of cell division, ethical and biological limitations to cloning, and the early establishment of pattern in the human embryo. Social and ethical concerns regarding infertility and the use of human pre-embryos in research are also considered. Readings include current review articles from medical and biological literature. Prerequisite: Advanced-placement Biology. GER: DB-NatSci

3 units, alternate years, not given this year

#### **DBIO 12Q. The Evolution and Development of the Human Hand**

Evolution of the human hand in the context of primate evolution; roles of the human hand in tool use, manufacture, art, music, and communication. Development of the hand: embryonic axes, appearance of the digit program, roles of cell death, molecular bases of normal and abnormal hand patterns. Prerequisite: advanced placement biology.

3-4 units, not given this year

#### **DBIO 156. Human Developmental Biology and Medicine**

(Same as HUMBIO 156A) The biological, medical, and social aspects of normal and abnormal human development. Topics: in vitro fertilization and embryo transfer; gene and cell therapy; gametogenesis; pattern formation in the nervous system and limb development; gene and grand multiple pregnancies; prematurity, in utero effects of teratogens; sex determination and differentiation; growth control; gigantism and dwarfism; neural tube defects; cardiac morphogenesis; progress in the developmental biology of humans. Limited enrollment. Prerequisites: Human Biology or Biology core, or consent of instructor.

3-4 units, NEXTYEAR

#### **DBIO 199. Undergraduate Research**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## GRADUATE COURSES IN DEVELOPMENTAL BIOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

### DBIO 201. Development and Disease Mechanisms

Mechanisms that direct human development from conception to birth. Conserved molecular and cellular pathways regulate tissue and organ development; errors in these pathways result in congenital anomalies and human diseases. Topics: molecules regulating development, cell induction, developmental gene regulation, cell migration, programmed cell death, pattern formation, stem cells, cell lineage, and development of major organ systems. Emphasis on links between development and clinically significant topics including infertility, assisted reproductive technologies, contraception, prenatal diagnosis, multiparity, teratogenesis, inherited birth defects, fetal therapy, adolescence, cancer, and aging.

4 units, Aut (Porzig, E; Kingsley, D; Kim, S; Scott, M)

### DBIO 202. Assisted Reproductive Technologies

(Same as OBGYN 202, HUMBIO 150A) Primary and current literature in basic and clinical science aspects of assisted reproductive technologies (ART), and demonstrations of current ART techniques including in vitro fertilization and embryo culture, and micromanipulation procedures such as intracytoplasmic sperm injection and embryo biopsy and cryopreservation. Class only may be taken for 1 unit. 2 units includes papers and attendance at clinical demonstrations. 3 units includes a term paper. Recommended: DBIO 201, or consent of instructors.

1-3 units, Win (Staff)

### DBIO 203. Advanced Genetics

(Same as BIO 203, GENE 203) For graduate students in Bioscience programs; may be appropriate for graduate students in other programs. Focused on application of the genetics toolbox to problems in modern biology research. Topics covered include analytic methods, genetic manipulation, genome analysis, and human genetics. Lectures and faculty-led discussion sections with evaluation of papers. Students with minimal experience in genetics should prepare by working out problems in college level textbooks.

4 units, Aut (Stearns, T; Bustamante, C; Fire, A; Sidow, A)

### DBIO 210. Developmental Biology

Current areas of research in developmental biology. How organismic complexity is generated during embryonic and post-embryonic development. The roles of genetic networks, induction events, cell lineage, maternal inheritance, cell-cell communication, and hormonal control in developmental processes in well-studied organisms such as vertebrates, insects, and nematodes. Team-taught. Students meet with faculty to discuss current papers from the literature. Prerequisite: graduate standing, consent of instructor. Recommended: familiarity with basic techniques and experimental rationales of molecular biology, biochemistry, and genetics.

5 units, Spr (Staff)

### DBIO 215. Frontiers in Biological Research

(Same as BIOC 215, GENE 215) Literature discussion in conjunction with the Frontiers in Biological Research seminar series in which investigators present current work. Students and faculty meet beforehand to discuss papers from the speaker's primary research literature. Students meet with the speaker after the seminar to discuss their research and future direction, commonly used techniques to study problems in biology, and comparison between the genetic and biochemical approaches in biological research.

1 unit, Aut (Harbury, P; Villeneuve, A; Calos, M), Win (Harbury, P; Villeneuve, A; Calos, M)

### DBIO 221. Current Issues in Aging

(Same as GENE 221) Current research literature on genetic mechanisms of aging in animals and human beings. Topics include: mitochondria mutations, insulin-like signaling, sirtuins, aging in flies and worms, stem cells, human progeria, and centenarian studies. Prerequisite: GENE 203.

2 units, Spr (Staff), alternate years, not given next year

### DBIO 257. The Biology of Stem Cells

(Same as HUMBIO 157) The role of stem cells in human

development and potential for treating disease. Guest lectures by biologists, ethicists, and legal scholars. Prerequisites: 2A,B, or consent of instructor.

3 units, not given this year

### DBIO 273A. A Computational Tour of the Human Genome

(Same as BIOMEDIN 273A, CS 273A) Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing (technologies, assembly, personalized sequencing); functional landscape (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures from genomic researchers. No prerequisites. See <http://cs273a.stanford.edu/>.

3 units, Aut (Batzoglou, S; Bejerano, G)

### DBIO 299. Directed Reading in Developmental Biology

Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### DBIO 370. Medical Scholars Research

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### DBIO 399. Graduate Research

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### DBIO 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## DIVISION OF LITERATURES, CULTURES, AND LANGUAGES (DLCL) COURSES

### UNDERGRADUATE COURSES IN DIVISION OF LITERATURES, CULTURES, AND LANGUAGES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### DLCL 99. Multimedia Course Lab

Designed to supplement the literature curriculum of existing undergraduate courses in DLCL departments in which a multimedia component may benefit collaborative or individual research projects. Taken for credit at the discretion of the instructor or the departmental literature course.

1 unit, Aut (Chandler, Z), Win (Chandler, Z), Spr (Chandler, Z)

#### DLCL 151. Monster Mothers and Critical Relations

(Same as DLCL 251) An inquiry into the principal modalities of the maternal figure as constructed in representative European, Asian, and American texts, including those of Euripedes, Balzac, Fontane, James, Tanizaki, Garcia Lorca, and Bazin. Such canonical literary works will be read with methodical attention to the relationship between primary texts and given analytical frameworks in Barthes, Benjamin, Freud, Kristeva, and Said, incorporating strategies of research.

3-5 units, not given this year

#### DLCL 189. Honors Thesis Seminar

For undergraduate majors in DLCL departments; required for honors students. Planning, researching, and writing an honors thesis. Oral presentations and peer workshops. Research and writing methodologies, and larger critical issues in literary studies.

5 units, Aut (Hoyos, H)

## GRADUATE COURSES IN DIVISION OF LITERATURES, CULTURES, AND LANGUAGES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

### DLCL 200. Teaching of Second Language Literatures

Focus is on literacy development in a second language, emphasizing literary texts, and assessing the learners' second-language linguistic level and requisite background knowledge with regard to particular literary texts. Instructional strategies and feedback techniques for written and oral work.

3 units, Aut (Bernhardt, E)

### DLCL 201. The Learning and Teaching of Second Languages

Learning perspective rather than traditional teaching methods. Focus is on instructional decision making within the context of student intellectual and linguistic development in university settings to different populations. Readings in second-language acquisition. Might be repeatable for credit.

3 units, Spr (Bernhardt, E)

### DLCL 220. Humanities Education

Humanities Education explores issues concerning teaching and learning in the humanities, including research on student learning, innovation in pedagogy, the role of new technologies in humanities instruction, and professional issues for humanities teachers at all educational levels.

1 unit, Aut (Staff), Win (Berman, R), Spr (Berman, R)

### DLCL 221. Performance

The Performance Group brings together diverse departments within the DLCL with other disciplines, such as Drama, to achieve a cross-pollination: to reinvigorate performance theory through our own consciously re-mediated research interests, methodologies, and forms of scholarly expression. Drawn to topics involving space, temporality, and embodiment, we still want to do things with words.

1 unit, Aut (Staff), Win (Greenleaf, M; Phelan, P), Spr (Greenleaf, M; Phelan, P; Erman, I)

### DLCL 222. Philosophy and Literature

The Focal Group in Philosophy and Literature brings together scholars and students from eight departments to investigate questions in aesthetics and literary theory, philosophically-inflected literary texts, and the form of philosophical writings. Fields of interest include both continental and analytic philosophy, as well as cognitive science, political philosophy, rational choice theory, and related fields.

1 unit, Aut (Staff), Win (Landy, J; Anderson, L), Spr (Landy, J; Anderson, L)

### DLCL 223. Renaissances

The Renaissances Group brings together faculty members and students from over a dozen departments at Stanford to consider the present and future of early modern studies (provisionally framed as a period spanning the fourteenth through the seventeenth centuries) within the humanities. Taking seriously the plural form of the group's name, we seek to explore the early modern period from the widest range of disciplinary, cultural, linguistic, and geographical perspectives possible.

1 unit, Aut (Staff), Win (Alduy, C; Greene, R; Barletta, V; Springer, C), Spr (Greene, R; Springer, C; Barletta, V; Alduy, C)

### DLCL 224. Workshop in Poetics

The Workshop in Poetics is concerned with the theoretical and practical dimensions of the reading and criticism of poetry. During the three years of its existence, the Workshop has become a central venue at Stanford enabling participants to share their individual projects in a general conversation outside of disciplinary and national confinements. The two dimensions that the workshop sees as urgent are: poetics in its specificity as an arena for theory and interpretive practice, and historical poetics as a particular set of challenges for the reader and scholar.

1 unit, Aut (Staff), Win (Greene, R), Spr (Greene, R)

### DLCL 251. Monster Mothers and Critical Relations

(Same as DLCL 151) An inquiry into the principal modalities of the maternal figure as constructed in representative European,

Asian, and American texts, including those of Euripedes, Balzac, Fontane, James, Tanizaki, Garcia Lorca, and Bazin. Such canonical literary works will be read with methodical attention to the relationship between primary texts and given analytical frameworks in Barthes, Benjamin, Freud, Kristeva, and Said, incorporating strategies of research.

3-5 units, not given this year

### DLCL 308. Comparative Literature Colloquium

Participants discuss and critique work presented by graduate students and faculty in the DLCL. Work may include conference or seminar papers, thesis chapters, or works-in-progress. Feedback focuses on writing and argumentation, and more general responses to the subject matter. Meetings open to the public. May be repeated for credit.

1-2 units, Aut (Staff), Win (Palumbo-Liu, D), Spr (Palumbo-Liu, D)

### DLCL 309. Teaching of Literature

Prepares graduate students in DLCL departments to teach literature at the undergraduate level. Topics include: the opportunities and problems of transposing a research project into a feasible course; the logic of syllabi and reading lists; the structuring of a course from week to week; and other matters relevant to first-time teachers of literature. Supervised by the graduate affairs committee of the DLCL. May be repeated for credit.

1-2 units, Win (Edelstein, D)

### DLCL 310. The Development of a Dissertation from Prospectus to Defense

Meets regularly throughout the year to advise and support dissertation-level students as they prepare a prospectus, begin writing, submit chapters, and complete their projects. Focus of the workshop shifts from term to term as appropriate to the participants. Supervised by the graduate affairs committee of the DLCL. May be repeated for credit.

1-2 units, Win (Staff)

### DLCL 311. Professional Workshop

Meets regularly throughout the year to discuss issues in the professional study of literature. Topics include the academic job market and the challenges of research and teaching at different types of institutions. Supervised by the graduate affairs committee of the DLCL. May be repeated for credit.

1-2 units, Aut (Staff)

### DLCL 349. LITERARY THEORY

(Same as COMPLIT 349, SLAVLIT 349, ILAC 349) Advanced survey course of key schools in literary theory, from formalism onwards. Emphasis is on the discussion of primary sources. Topics include structuralism, ideology critique, psychoanalysis, reception aesthetics, deconstruction, feminism, and post-colonialism. Readings by Barthes, Bakhtin, Benjamin, Borges, Derrida, de Man, Foucault, Freud, Iser, Lacan, Shklovsky, and Spivak, among others.

3-5 units, Aut (Hoyos, H; Skakov, N)

### DLCL 349. LITERARY THEORY

(Same as COMPLIT 349, SLAVLIT 349, ILAC 349) Advanced survey course of key schools in literary theory, from formalism onwards. Emphasis is on the discussion of primary sources. Topics include structuralism, ideology critique, psychoanalysis, reception aesthetics, deconstruction, feminism, and post-colonialism. Readings by Barthes, Bakhtin, Benjamin, Borges, Derrida, de Man, Foucault, Freud, Iser, Lacan, Shklovsky, and Spivak, among others.

3-5 units, Aut (Staff)

## DRAMA (DRAMA) COURSES

### UNDERGRADUATE COURSES IN DRAMA

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### DRAMA 10AX. Acting Intensive: Theatre and Beyond, Into the World of Film

Introduction to the craft of acting for film and reinforcement of basic concepts for the experienced student. Skill-building in the areas of acting, movement, voice, and speech, utilizing material

from the film and theater. In-depth work on technique, utilization of action, specificity of language, personalization, emotional truth, character, and given circumstance. Blocking of scenes live performance and video recording of performances. Final performance of the two scenes in a showcase afternoon.

2 units, Aut (Kostopoulos, K)

**DRAMA 10N. Arts and Ideas: 20th Century Art in Conflict**

(F,Sem) Stanford Introductory Seminar. The second quarter of Art & Ideas builds on the examples of Modernism students in Arts and Ideas studied in the first quarter. The Frosh Seminar *20th-Century Art in Conflict*, will focus on drama and film that experiments with new possibilities of form, shaping the direction of later artistic practice. We will trace how the political and aesthetic concerns of the 20th century reflect and exploit new technologies, both in theater and film, altering the position and function of author, actor, director, and audience. GER:IHUM-3

4 units, Spr (Rehm, R)

**DRAMA 11AX. Set Design**

How ideas in fine art, architecture, and installation inform the practice of theatre set design. Traditional techniques of stage scenery design, basic drafting and model making guide the process of designing a set for an opera or play in this hands-on workshop.

2 units, not given this year

**DRAMA 11N. Dramatic Tensions: Theater and the Marketplace**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Tension between artistic and commercial forces in modern theater; the conflicted state of the art form. Sources include major and emerging contemporary figures in commercial, fringe, and nonprofit theater in the U.S. and UK. Visits with writers, directors, and dramaturges. GER:DB-Hum

4 units, Win (Freed, A)

**DRAMA 12AX. Sketch Comedy and Improvisation**

Explore improvisation and sketch comedy in an intensive ensemble and create an original show. Pure improvisational theater techniques. Concepts covered include spontaneity, shared control, creative collaboration, narrative, and status. Students apply those skills to writing and staging scripted monologues, two-handers, and ensemble sketches. Students create an original show with the entire class.

2 units, not given this year

**DRAMA 12N. Antigone: From Ancient Democracy to Contemporary Dissent**

(F,Sem) (Same as CLASSGEN 6N) Stanford Introductory Seminar. Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of *Antigone* by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta. GER:DB-Hum, EC-Gender

4 units, Aut (Rehm, R; Miller, D)

**DRAMA 12SC. Playwriting Lab: The Art of Dramatic Writing**

Workshop. Each student develops an original script which is presented in theater by the other students. How to develop, expand, and condition the creative mind. Topics including dramatic action, text and subtext, characterization, language, and style. Students function as a theatrical collective where each has the opportunity to participate in reading and serving the vision of each student-author.

2 units, not given this year

**DRAMA 13N. Law and Drama**

(F,Sem) Stanford Introductory Seminar. Preference to Freshmen. Beyond the obvious traits that make a good (court room) drama, theater and jurisprudence have much more in common. Just as drama is engaged not only in entertainment but also in examination of social conventions and mechanisms, so law is not only concerned with dispensing justice but with shaping and maintaining a viable human community. In this class we will read and discuss a series of plays in which court proceedings are at the center of dramatic action and concluding with an investigation of the new genre of documentary drama.

4 units, Aut (Jakovljevic, B)

**DRAMA 17N. Latino/Latina Performance in the United States** (F,Sem) (Same as CHICANST 160N, CSRE 160N) Stanford Introductory Seminar. Preference to freshmen. This course will introduce works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course's conclusion, each student will create and perform in a staged reading of an original performance piece. GER:DB-Hum, EC-AmerCul

3 units, Win (Moraga, C)

**DRAMA 20. Acting for Non-Majors**

(Same as DRAMA 124D) A class designed for all interested students. Creative play, ensemble work in a supportive environment. Designed for the student to experience a range of new creative skills, from group improvisation to partner work. Introductory work on freeing the natural voice and physical relaxation. Emphasis on rediscovering imaginative and creative impulses. Movement improvisation, listening exercises, and theater games release the energy, playfulness and willingness to take risks that is the essence of free and powerful performance. Course culminates with work on dramatic text.

1-3 units, Aut (Kostopoulos, K), Win (Kostopoulos, K), Spr (Kostopoulos, K), Sum (Staff)

**DRAMA 22. Scene Work**

For actors who complete substantial scene work with graduate directors in the graduate workshop.

1-2 units, Aut (Staff), Win (Staff), Spr (Staff)

**DRAMA 25N. Science-in-Theatre: A New Genre?**

(S,Sem) (Same as CHEM 25Q) Stanford Introductory Seminar. Preference to sophomores. How scientists acquire their rules, mores, and idiosyncrasies through a form of intellectual osmosis in a mentor-disciple relationship. Scientists represented as Franksteins or nerds, rather than normal. Why more intellectually challenging plays have appeared on the Anglo-American theatre scene where scientific behavior and even science are presented accurately. Students engage in a playwriting experiment.

3 units, Win (Djerassi, C)

**DRAMA 28. Makeup for the Stage**

Techniques of make-up application and design for the actor and artist including corrective, age, character, and fantasy. Emphasis placed on utilizing make-up for development of character by the actor. Limited enrollment.

2 units, Aut (Strayer, C)

**DRAMA 29. Theater Performance: Acting**

Students cast in department productions receive credit for their participation as actors; 1-2 units for graduate directing workshop projects and 1-3 units for major productions (units determined by instructor). May be repeated for credit. Prerequisite: consent of instructor.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

**DRAMA 30. How Theater is Designed**

Team-taught. An introduction to theatrical set, costume and lighting design. Emphasis on balancing practical skill with conceptual ideas for live stage performance. Hands-on projects.

4 units, Aut (Gambatese, E; Ramsaur, M; Strayer, C)

**DRAMA 31. Introduction to Lighting and Production**

How light contributes to the creation of mood and atmosphere and different kinds of visibility in theatrical storytelling. The use of controllable qualities of light including color, brightness, angle, and movement in the theatrical process of creative scenography. Hands-on laboratory time.

4 units, Win (Ramsaur, M)

**DRAMA 32F. History of Costume and Fashion from 1500 to the Present**

The evolution of fashion and costume with an emphasis on the relationship between social, cultural, and political events and clothing style. Attention to major designers and creators and their shaping of resultant fashion and artistry in clothing.

4 units, Win (Strayer, C)

**DRAMA 34. Stage Management Techniques**

The production process, duties, and responsibilities of a stage manager. Skills needed to stage manage a production.

2 units, Aut (Apperson, L)

**DRAMA 34S. Fundamentals of Sound in Performance: Theory and Technique**

This course offers students a basis for producing audio for a variety of live performance genres, particularly theater and dance. In its workshop component, students will build technical skills, including audio sourcing and manipulation, show control, and signal chain management. The theoretical components of the course emphasize the unique demands of audio for live performance. Connections to sound installation and interactive sound design, including video games, are also emphasized. No prior experience with audio technology is necessary

4 units, Aut (St. Clair, M)

**DRAMA 39. Theatre Crew**

Under faculty guidance, working backstage on Drama Department productions. Open to any student interested in gaining back stage experience. Night and weekend time required.

1-3 units, Aut (Apperson, L; Ramsaur, M), Win (Apperson, L; Ramsaur, M), Spr (Apperson, L; Ramsaur, M), Sum (Staff)

**DRAMA 39D. Theater Performance: Prosser Stage Management**

For students stage managing a Department of Drama Senior Project or Assistant Stage managing a Department Drama production

2-4 units, Aut (Staff), Win (Staff), Spr (Staff)

**DRAMA 101H. How Theater Thinks: Introduction to Theater and Performance**

Gateway course for majors and students considering the Drama major. Theater practices and techniques such as space, actor, language, props, and composition: what is unique about them and how they address the spectator. Sources include plays and theoretical texts.

3-5 units, Win (Menon, J)

**DRAMA 101P. How Practice Practices**

(Same as DRAMA 341) This course will investigate practice in the context of theater, dance, performance and interdisciplinary work. We will consider the totality of the human experience as it applies to building a practice. Participants will be challenged to engage more fully in their everyday activities as well as to design their activities to respond to their artistic aspirations. Through class exercises, discussions, readings and assignments, as well as learning about the activities of other practitioners, participants will be challenged to build practices that are personally rigorous, socially grounded and aesthetically daring.

4 units, Spr (Carlson, A)

**DRAMA 103. Beginning Improvising**

The improvisational theater techniques that teach spontaneity, cooperation, team building, and rapid problem solving, emphasizing common sense, attention to reality, and helping your partner. Based on TheatreSports by Keith Johnstone. Readings, papers, and attendance at performances of improvisational theater. Limited enrollment.

3 units, Aut (Klein, D), Win (Klein, D)

**DRAMA 105V. Improv & Design**

Improv & Design is a wildly practical class exploring the intersection of Improvisational Theater & Design Thinking. The class is for: Improvisers who want to practice using their skills in other domains. Improvisers who want to learn about design thinking. Designers who want to deepen their core skills in collaboration, creativity, empathy, acting and rich scenario prototyping. Undergraduates who want to check out the d.school. Graduates who want to practice with a diverse group. You are guaranteed to learn 10 useful things! (We do not guarantee everyone will learn the same 10 things!). Design Institute class; see <http://dschool.stanford.edu>.

2 units, Spr (Klein, D)

**DRAMA 107. Creating Theater for Children**

This class is for current members of the Flying Treehouse, a children's theater ensemble that leads creative writing workshops

for elementary school students, then performs sketches based on the young author's writings. Topics include theater education, lesson planning, performing for children and producing community-based theater.

4 units, Win (Klein, D)

**DRAMA 110. Poetics, Culture, and Geopolitics: Performing Power**

(Same as CSRE 99) Poet/performer Mark Gonzales of the Human Writes Project leads a course that examines the relationship between traditional forms of power and the power of performance. Students will analyze the text of body and bureaucracy that is performed on the stage of the globe. Through this analysis students will engage in critical reflection of how performance creates spaces to move beyond the dialectic of oppression and dominance. At culmination, students will create their own text, through body, visuals, or multi-media, to share the summary of their ideas at a campus wide symposium. GER:DB-Hum

4 units, Aut (Staff)

**DRAMA 120A. Fundamentals of Acting**

A substantive introduction to the basics of the craft of acting, this course gives all incoming students the foundation of a common vocabulary. Students will learn fundamental elements of dramatic analysis, and how to apply it in action. Topics include scene analysis, environment work, psychological and physical scoring, and development of a sound and serviceable rehearsal technique. Scene work will be chosen from accessible, contemporary, and realistic plays. Outside rehearsal time required.

1-3 units, Aut (Kostopoulos, K), Win (Freed, A)

**DRAMA 120B. Fundamentals of Acting**

Learn how to expand character work, beyond what is immediately familiar. Continuing basic practices from the first part of the sequence, in this quarter they will look beyond the strictly contemporary, and may begin to approach roles drawn from more challenging dramatic texts. This might include plays chosen from mid-century American classics, World Theater, or other works with specific historic or cultural requirements. Actors begin to learn how a performing artist researches and how that research can be used to enrich and deepen performance. Prerequisite: 120A or consent of instructor.

1-3 units, Spr (Kostopoulos, K)

**DRAMA 120D. Studio Performance**

Rehearsal and development of a studio performance project for an end of quarter presentation. Emphasis is on development of acting skills with minimal technical support. Material chosen from classic plays, American realism, world theater, or created group ensemble pieces.

1-5 units, not given this year

**DRAMA 120V. Vocal Production and Audition**

(Same as DRAMA 210V) An introductory study of the vocal mechanism and the development of voice and articulation for the stage. Students will be introduced to the actor's tools of phonetics, verbal action and text analysis. Vocal technique will then be applied to the actor's process in preparation for audition. Actors will fully participate in the audition process, from beginning to end. Emphasis will be on relaxation, selection of appropriate material, and versatility to show contrast and range.

1-3 units, Win (Kostopoulos, K)

**DRAMA 121P. Acting: Period and Style**

Expanding the acting range through heightened language. Scenes from non-contemporary dramatic literature including texts from Shakespeare, Shaw, Turgenev, Ibsen, and Strindberg.

3 units, Spr (Staff)

**DRAMA 121S. Acting Shakespeare Project**

Work on a shortened Shakespeare play leading to a studio performance project. Skills in understanding and performing Shakespeare, conducted as series of rehearsals, and culminating in group performance. Development of voice, movement, and speaking skills necessary for classical theater work. Prerequisites: DRAMA120A,B, or consent of instructor.

3 units, Aut (Bihl, J)

**DRAMA 124D. Acting for Non-Majors**

(Same as DRAMA 20) A class designed for all interested students. Creative play, ensemble work in a supportive environment. Designed for the student to experience a range of new creative

skills, from group improvisation to partner work. Introductory work on freeing the natural voice and physical relaxation. Emphasis on rediscovering imaginative and creative impulses. Movement improvisation, listening exercises, and theater games release the energy, playfulness and willingness to take risks that is the essence of free and powerful performance. Course culminates with work on dramatic text.

*1-3 units, Aut (Kostopoulos, K), Win (Kostopoulos, K), Spr (Kostopoulos, K), Sum (Staff)*

#### **DRAMA 132. Costume Design**

Process of designing costumes for the stage, covering script analysis, rendering techniques, character development and conceptual ideas. Project related work with smaller, pertinent exercises. Prerequisite: 30 or consent of instructor.

*4 units, Spr (Strayer, C)*

#### **DRAMA 133. Stage Scenery Design**

Craft and Theory of stage scenery design including visual research, spatial organization, basic drafting, sketching and model-building. Prerequisite: 30, or consent of instructor.

*3-4 units, Win (Gambatese, E)*

#### **DRAMA 134. Stage Management Project**

For students stage managing a Department of Drama production.

*2-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

#### **DRAMA 137. Hand Drafting for Designers**

Fundamentals of hand-drafting. Standard drawing conventions; the use of line weight, color, composition, and graphic style. Creation of construction documents for real-world applications. May be repeated for credit.

*3 units, Spr (Gambatese, E)*

#### **DRAMA 138. DIGITAL PROJECTION**

This course will cover the fundamentals of creating digital projections for a theatrical production starting with the basics of computer and projector setups and progressing through the creation of both static and moving projection using the software tools of Isadora, Photoshop, and Aftereffects.

*4 units, Spr (Staff)*

#### **DRAMA 140. Projects in Theatrical Production**

An independent study course for students performing significant production work on Drama Department or other Stanford University student theatre projects. Students serving as producers, directors or designers who wish mentorship and credit for their production work sign up for this course and contact the Michael Ramsaur, Director of Production, at [mrasm@stanford.edu](mailto:mrasm@stanford.edu) Prerequisite: consent of instructor.

*1-4 units, Aut (Staff), Win (Staff), Spr (Staff)*

#### **DRAMA 142P. ANIMALS AND PERFORMANCE**

(Same as DRAMA 342) Using the template of Ann Carlson's 1988 series, *Animals*, students will be exposed to working with live animals in performance, the perils and potential. Learning specific works from Carlson's performance series and building their own works with animals, this course interrogates the setting of live performance as a site for attention and new meaning between human and animal species. The course will address issues of interspecies communication, animals behavior, the use of language, and the history of human relationships with domesticated animals.

*4 units, Win (Carlson, A)*

#### **DRAMA 143P. Stillness In Action: The Body Out of Time**

(Same as DRAMA 343P) This course will investigate stillness as a performative event. We will look at the still body as its own method of inquiry, as a scholarly consideration and as a tool for understanding time, motion, activity and culture. Stillness in Action; the body out of time will begin with questions: What is the difference between no movement and stillness? What is the history of stillness with respect to artistic process? What is the impact of stillness on the performer and spectator? What other disciplines utilize ideas and practices of stillness and to what ends? The course will be a combination of laboratory and discussion, reading and workshop with the intent to practice and interrogate stillness in art and life.

*4 units, Aut (Carlson, A)*

#### **DRAMA 151T. Great Books: Dramatic Traditions**

(Same as DRAMA 351) The most influential and enduring texts in

the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons.

*3-5 units, Spr (Menon, J)*

#### **DRAMA 152H. Markets, Movements and Macaroni**

(Same as DRAMA 352H) Come hungry to learn! This course looks at how food and performance converge in contemporary cultural studies. We will study the politics and poetics of food as it transforms us and the environments (indeed the worlds) in which we live. From feminist artists use of food (such as macaroni) in performance, to the circulation of food in economic markets to the ways in which food moves through us, we will learn to think about the myriad meanings of food in and through performance. The course features trips in the field and varied experiences as appropriate to the subject matter. Selected texts: Jonathan Foer's *Eating Animals*, Nao Bustamante's *Idig/urrito*, Yayoi Kusama's installations and Julie Dash's *Daughters of the Dust*.

*4 units, Spr (Staff)*

#### **DRAMA 155H. A study of Thornton Wilder's play Our Town**

(Same as DRAMA 355) This course will be mainly devoted to a close analysis of Thornton Wilder's major play, *Our Town*. The play will be considered in its literary, political, aesthetical and sociological dimension. The work on *Our Town* should be seen as a complement of the staging taking place during the same academic quarter. However, students do not need to be enrolled in the production to take this class.

*5 units, Aut (Apostolides, J)*

#### **DRAMA 156T. Africa in the African American Imaginary: Black Drama in the United States from 1950 to the Present**

(Same as AFRICAAM 156T) What role has imagining Africa played in the construction of an African American identity? How do playwrights stage Afrocentric politics? We shall interrogate the intellectual questions that come to bear at the juncture where Africa meets African America and discuss themes that include Christianity, exploitation, gender relations, and more. By the end of the quarter students will have a critical understanding of how playwrights interwove politics and ideologies that articulated African/African American relationships.

*4 units, Spr (Mbowe, A)*

#### **DRAMA 159H. Creating Comedy, Performing Identity**

(Same as CSRE 159H) This course examines how comedy has been utilized as a performance structure to negotiate issues of personal and group identity, including race, gender and sexuality. We will range from Shakespeare to Richard Pryor, covering stage comedy, solo performance, stand-up comedy, and sitcom. GER:DB-Hum

*4 units, Aut (Daube, M)*

#### **DRAMA 160. Dance and History: From Postwar to Postmodernism**

(Same as DANCE 160, DRAMA 260) The cultural and historical unfolding of the genre of contemporary performance known as postmodern dance over the past six decades. Dance history used to trace the effects of visual art and movement experimentalists as they have teamed up since the first decades of the 20th century, redrawing the boundaries of live art and dance performance. GER:DB-Hum, EC-Gender

*4 units, not given this year*

#### **DRAMA 162. Performance and the Text**

(Same as DRAMA 262) Formal elements in Greek, Elizabethan, Noh, Restoration, romantic, realistic, and contemporary world drama; how they intersect with the history of performance styles, character, and notions of action. Emphasis is on how performance and media intervene to reproduce, historicize, or criticize the history of drama. GER:DB-Hum

*5 units, not given this year*

#### **DRAMA 162H. Baroque Modernities: Dance, Theater, Film, Political Theory**

(Same as DANCE 162H) What do seventeenth-century choreography and dramaturgy contribute to (mean to) choreographic and theatrical modernity? How can we explain the recurrent baroque phenomenon across the twentieth century -- becoming particularly prominent in the 1980s -- beyond the historicist accounts of theatrical reconstruction? How does the baroque locate itself within cultural modernity? This seminar asks

this question of choreography at several junctures: The analysis of seventeenth century baroque spectacle that fashioned dance and theatre into political tools of monarchical sovereignty; Twentieth-century literature on the Baroque that destabilizes received notions of subjectivity and political sovereignty; Twentieth-century choreography and film that deploys baroque figures and techniques. Thus, our material shall range from seventeenth-century dance and theater to contemporary dance, film and literature.

*4 units, Win (Staff)*

**DRAMA 163S. Post Black Drama in the Age of Obama**

(Same as AFRICAAM 163S, AMSTUD 163S, CSRE 163S, DRAMA 363S) This course will examine works of the new millennium that confront questions of African American experience. These plays are written by African American and non-black writers. In analyzing these works, this course will investigate such questions as: In a time that has been called 'Post Race' or 'Post Soul' or even 'Post Black,' what can we discern about African American drama? How do these plays reflect or contradict such labeling? How do these works speak to our times? Who does the form relate to in matters of content in these works? What do these works tell us about the contemporary constructions and meanings of blackness? GER:DB-Hum

*5 units, Win (Elam, H)*

**DRAMA 164. Performance and Gender**

(Same as DRAMA 364H) The intersectionality of race, sex, gender, and class in the formation of gendered performance. Readings from the work of Judith Butler, Eve Sedgwick, David Savran, Judith Halberstam, and David Eng. Case studies include: M. Butterfly, The Crying Game, Paris is Burning, Angels in America, and American Idol.. GER:DB-Hum

*3-5 units, Spr (Menon, J)*

**DRAMA 165R. Theater and Memory**

(Same as CLASSGEN 165R) The course explores the extraordinary ways memory works in the theater and in film. Have you ever left a performance wondering, How did the actor learn all those lines? But that's only the beginning. When Hamlet promises that \* will As long as Memory holds a seat / In this distracted Globe, he refers not only to his own powers of memory, but also links his troubled psyche to Shakespeare's own theater (the Globe), suggesting the interplay between memory and the theater audience. Even in a film like The Social Network, memory plays an important role. At the end, the founder of Facebook logs onto his own invention to find the girl he insulted and lost as a freshman, a billionaire haunted by the memory of a human connection he yearns to recover.

*3-5 units, Sum (Staff)*

**DRAMA 166H. Historiography of Theater**

(Same as DRAMA 304) Goal is to design an undergraduate theater history class. Standard theater history textbooks, alternative models of theater history scholarship, and critical literature engaging historiography in general.

*3-5 units, Spr (Rayner, A)*

**DRAMA 167T. INTERPRETATION AND THEORY**

(Same as DRAMA 367, FRENGEN 268) This course will present majors French authors whose work have help to create Literary and Drama Theory in America. Among the authors we will devote a special interest to the work of Roland Barthes, Jacques Derrida, Jacques Lacan, Luce Irigaray, Gilles Deleuze, Julia Kristeva, Jacques Rancière and Alain Badiou. Paralellism between the interpretation of drama and the interpretation of painting will constitute the core of this course.

*5 units, Aut (Apostolides, J)*

**DRAMA 168H. Art and Life: The Second Avant Garde**

(Same as DRAMA 268H) Experiments in the second half of the 20th century that produced new genres such as happenings and performance art, and theoretical debates that attempted to reformulate relations between art forms and their changed role in society. How these fundamentals of performance were challenged and reshaped. WIM Course GER:DB-Hum

*3-5 units, Win (Jakovljevic, B)*

**DRAMA 168T. Biology and Biography in Performance and Art**

(Same as DRAMA 368) This course explores the connections

between biology and biography in performance and art through practice-based research and readings in contemporary art and science. The course combines seminar discussions of art practices and scientific research with devising techniques in the studio. Students will generate original material using the senses, automatic writing and body memory and can work in any format (live performance, visual art or film) toward their final creative piece. Assessment is equally weighted between critical and creative work.

*4 units, Aut (Hill, L; Paris, H)*

**DRAMA 169T. Performance, History, and Memory: The Jasper Ridge Project**

(Same as DRAMA 369T) The course will invite participants into the collision of history, preservation, memory and performance in the contemporary moment. Working in dialogue with Ann Carlson's proposed project for Jasper Ridge, we will utilize the strategy of re-staging archival photos in the tradition of tableau vivant to investigate an institution's history of itself as expressed in it's photographic archive. We will consider how that history choreographs the body, acts on student's, faculty and staff's daily performances of themselves, as well as how the archive functions in the present.

*4 units, Aut (Carlson, A)*

**DRAMA 170B. Directing Workshop: The Actor-Director Dialogue**

(Same as DRAMA 372) This course focuses on the actor-director dialogue. We will work with actors and directors developing approaches to collaboration that make the actor-director dialogue in theater.

*5 units, Aut (Rehm, R; Miller, D)*

**DRAMA 171. Performance Making: Process**

(Same as DRAMA 371) A studio course focused on creative processes and generating original material. Students will be encouraged to think critically about the relationship between form and content exploring the possibilities of site specific, gallery and theatre settings. Students will reflect throughout on the types of contact and communication uniquely possible in the live moment, such as interaction or the engagement of the senses. The emphasis is on weekly experimentation in the creation of short works rather than on a final production.

*5 units, Spr (Hill, L; Paris, H)*

**DRAMA 174A. PERFORMANCE MAKING: PRODUCTION**

(Same as DRAMA 374A) A structured, creative environment for students working toward the realization of Senior Projects and 2nd year graduate productions. Instructors will work with students to develop the relationships between the content and the form of their productions using critical and creative tools to develop and reflect on the work. There will be a staged class showing at the end of the quarter followed by critiques designed to help students as they begin preparing for their final public performances (beyond the class).

*5 units, Aut (Hill, L; Paris, H)*

**DRAMA 176H. Black Women Playwrights, 1900-the present**

(Same as AFRICAAM 176H, DRAMA 336, FEMST 140W) From the rave reviews garnered by Angelina Weld Grimke's lynching play, Rachel to recent work by Lynn Nottage on Rwanda, black women playwrights have addressed key issues in modern culture and politics. We will analyze and perform work written by black women in the U.S., Britain and the Caribbean in the 20th and 21st centuries. Topics include: sexuality, surrealism, colonialism, freedom, violence, colorism, love, history, community and more. Playwrights include: Angelina Grimke, Lorriane Hansberry, Winsome Pinnock, Adrienne Kennedy, Suzan- Lori Parks, Ntzoke Shange, Pearl Cleage, Sarah Jones, Anna DeVeare Smith, Alice Childress, Lydia Diamond and Zora Neale Hurston.

*4 units, Aut (Brody, J)*

**DRAMA 177. Writing for Performance: The Fundamentals**

(Same as CSRE 177, DRAMA 277) Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length

work required by quarter's end. GER:DB-Hum  
5 units, Win (Moraga, C)

**DRAMA 178. Page to Stage: Playwriting and Solo Performance**

(Same as DRAMA 278) Dramatic writing: scripted and solo, and as performed by actors or by the playwright. Physical and psychological theatrical action. Development of skills in dialogue, story structure, style, and personal voice. Script readings and directed staging sessions.

3-5 units, Spr (Freed, A)

**DRAMA 178B. Intensive Playwriting Workshop**

(Same as DRAMA 278B) Intermediate level study of fundamentals of playwriting through an intensive play development process. Course emphasizes visual scripting for the stage and play revision. Script analysis of works by contemporary playwrights may include: Suzan-Lori Parks, Tony Kushner, Adrienne Kennedy, Edward Albee, Maria Irene Fornes and others. Table readings of full length work required by quarter's end.

5 units, Spr (Staff)

**DRAMA 179F. Flor y Canto: Poetry Workshop**

(Same as CSRE 179F, DRAMA 279F) Poetry reading and writing. The poet as philosopher and the poet as revolutionary. Texts: the philosophical meditations of pre-Columbian Aztec poetry known as flor y canto, and reflections on the poetry of resistance born out of the nationalist and feminist struggles of Latin America and Aztlán. Required 20-page poetry manuscript. GER:DB-Hum

3-5 units, Spr (Moraga, C)

**DRAMA 179G. Indigenous Identity in Diaspora: People of Color Art Practice in North America**

(Same as CSRE 179G, CSRE 279G, DRAMA 279G) This gateway core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.

3-5 units, not given this year

**DRAMA 180Q. Noam Chomsky: The Drama of Resistance**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Chomsky's ideas and work which challenge the political and economic paradigms governing the U.S. Topics include his model for linguistics; cold war U.S. involvements in S.E. Asia, the Middle East, Central and S. America, the Caribbean, and Indonesia and E. Timor; the media, terrorism, ideology, and culture; student and popular movements; and the role of resistance. GER:DB-Hum

4 units, Aut (Rehm, R; Miller, D)

**DRAMA 190. Special Research**

Individual project on the work of a playwright, period, or genre. Prerequisite: consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 191. Independent Study**

Individual supervision of off-campus internship. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 200. Senior Project**

See Undergraduate Programs for description. (Staff)

2-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 201A. Honors Colloquium**

See Undergraduate Programs for description.

1 unit, Aut (Jakovljevic, B), Win (Jakovljevic, B), Spr (Jakovljevic, B), Sum (Staff)

**DRAMA 201B. Honors Colloquium**

See Undergraduate Programs for description.

1 unit, Aut (Jakovljevic, B), Win (Jakovljevic, B), Spr (Jakovljevic, B), Sum (Staff)

**DRAMA 201C. Honors Colloquium**

See Undergraduate Programs for description.

1 unit, Aut (Jakovljevic, B), Win (Jakovljevic, B), Spr (Jakovljevic, B), Sum (Staff)

**DRAMA 201D. Honors Colloquium**

See Undergraduate Programs for description.

1 unit, Aut (Jakovljevic, B), Win (Jakovljevic, B), Spr (Jakovljevic, B), Sum (Staff)

**DRAMA 202. Honors Thesis**

See Undergraduate Programs for description. May be repeated for credit. (Staff)

2-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 203. Advanced Improvisation**

Further development of improvisational skills.

3 units, Aut (Klein, D)

**DRAMA 210V. Vocal Production and Audition**

(Same as DRAMA 120V) An introductory study of the vocal mechanism and the development of voice and articulation for the stage. Students will be introduced to the actor's tools of phonetics, verbal action and text analysis. Vocal technique will then be applied to the actor's process in preparation for audition. Actors will fully participate in the audition process, from beginning to end. Emphasis will be on relaxation, selection of appropriate material, and versatility to show contrast and range.

1-3 units, Win (Kostopoulos, K)

**DRAMA 213. Stanford Improv Ensemble**

By audition only, for members of the improvisation troupe. Special project work. Prerequisite: 103.

1-2 units, Aut (Klein, D), Win (Klein, D), Spr (Klein, D)

**DRAMA 231. Advanced Stage Lighting Design**

Individually structured class in lighting mechanics and design through experimentation, discussions, and written reports. Prerequisite: 131 or consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 232. Advanced Costume Design**

Individually structured tutorial for costume designers. May be repeated for credit. Prerequisite: 132 or consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 233. Advanced Scene Design**

Individually structured workshop. May be repeated for credit. Prerequisite: 133 or consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 234. Advanced Stage Management Project**

For students stage managing a Department of Drama production. Prerequisite: 134.

2-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GRADUATE COURSES IN DRAMA**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**DRAMA 260. Dance and History: From Postwar to Postmodernism**

(Same as DANCE 160, DRAMA 160) The cultural and historical unfolding of the genre of contemporary performance known as postmodern dance over the past six decades. Dance history used to trace the effects of visual art and movement experimentalists as they have teamed up since the first decades of the 20th century, redrawing the boundaries of live art and dance performance.

4 units, not given this year

**DRAMA 262. Performance and the Text**

(Same as DRAMA 162) Formal elements in Greek, Elizabethan, Noh, Restoration, romantic, realistic, and contemporary world drama; how they intersect with the history of performance styles, character, and notions of action. Emphasis is on how performance and media intervene to reproduce, historicize, or criticize the history of drama.

5 units, not given this year

**DRAMA 268H. Art and Life: The Second Avant Garde**

(Same as DRAMA 168H) Experiments in the second half of the 20th century that produced new genres such as happenings and performance art, and theoretical debates that attempted to reformulate relations between art forms and their changed role in society. How these fundamentals of performance were challenged and reshaped. WIM Course

3-5 units, Win (Jakovljevic, B)

**DRAMA 277. Writing for Performance: The Fundamentals**

(Same as CSRE 177, DRAMA 177) Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter's end.

5 units, Win (Moraga, C)

**DRAMA 278. Page to Stage: Playwriting and Solo Performance**

(Same as DRAMA 178) Dramatic writing: scripted and solo, and as performed by actors or by the playwright. Physical and psychological theatrical action. Development of skills in dialogue, story structure, style, and personal voice. Script readings and directed staging sessions.

3-5 units, Spr (Freed, A)

**DRAMA 278B. Intensive Playwriting Workshop**

(Same as DRAMA 178B) Intermediate level study of fundamentals of playwriting through an intensive play development process. Course emphasizes visual scripting for the stage and play revision. Script analysis of works by contemporary playwrights may include: Suzan-Lori Parks, Tony Kushner, Adrienne Kennedy, Edward Albee, Maria Irene Fornes and others. Table readings of full length work required by quarter's end.

5 units, Spr (Staff)

**DRAMA 279F. Flor y Canto: Poetry Workshop**

(Same as CSRE 179F, DRAMA 179F) Poetry reading and writing. The poet as philosopher and the poet as revolutionary. Texts: the philosophical meditations of pre-Columbian Aztec poetry known as flor y canto, and reflections on the poetry of resistance born out of the nationalist and feminist struggles of Latin America and Aztlán. Required 20-page poetry manuscript.

3-5 units, Spr (Moraga, C)

**DRAMA 279G. Indigenous Identity in Diaspora: People of Color Art Practice in North America**

(Same as CSRE 179G, CSRE 279G, DRAMA 179G) This gateway core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.

3-5 units, not given this year

**DRAMA 290. Special Research**

Individual project on the work of a playwright, period, or genre.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 300A. Critical Styles I**

Literary criticism and theory, emphasizing style as evidence of historical, cultural, and ideological concerns. Assumptions about written texts by authors such as Coleridge, Bradley, and Burke. How style reveals context. Students write in the style of authors discussed.

5 units, Aut (Jakovljevic, B)

**DRAMA 300B. Critical Styles II**

This seminar follows on from Critical Styles I in which students were grounded in the rigors of critical writing. In this sequel seminar, the emphasis will be on the overtones and undertones of critical thought in performance making and performance analysis. Students will generate weekly critical and creative responses to readings from contemporary writers and artists such as Jacques Rancière, Amelia Jones, Guillermo Gómez-Peña and Marina Abramovic. Workshop activities and performances will take place alongside seminar discussions of readings.

5 units, Win (Paris, H; Hill, L; Preston, V)

**DRAMA 301. Performance and Performativity**

Performance theory through topics including: affect/trauma, embodiment, empathy, theatricality/performativity, specularity/visibility, liveness/disappearance, belonging/abjection, and utopias and dystopias. Readings from Schechner, Phelan, Austin, Butler, Conquergood, Roach, Schneider, Silverman,

Caruth, Fanon, Moten, Anzaldúa, Agamben, Freud, and Lacan. May be repeated for credit.

5 units, Win (Menon, J)

**DRAMA 304. Historiography of Theater**

(Same as DRAMA 166H) Goal is to design an undergraduate theater history class. Standard theater history textbooks, alternative models of theater history scholarship, and critical literature engaging historiography in general.

3-5 units, Spr (Rayner, A)

**DRAMA 316V. Metaphysics and the Mise-en-scene**

Theoretical paradigms of avant garde practices past and present.

5 units, Spr (Jakovljevic, B)

**DRAMA 335H. Methods in Interdisciplinary Studies**

This course introduces interdisciplinary methods in/for Performance Studies. Specifically, we will examine how the concept of performance interacts with dance, music, film, visual art, subjectivity and the everyday. We will investigate the ways in which performance can be understood as intermedial (to use Rebecca Schneider's term). Readings will range widely--from the classical to the contemporary. Texts may include works by Bill T. Jones, Susan Foster, Joseph Roach, J.L. Austin, Kobena Mercer, Kristine Stiles, Peggy Phelan, Stuart Hall, Adrian Piper, Split Britches, Paul Connor, Dwight Conquergood, Isaac Julien and more. This course is only open to Graduate Students.

4 units, Win (Brody, J)

**DRAMA 336. Black Women Playwrights, 1900-the present**

(Same as AFRICAAM 176H, DRAMA 176H, FEMST 140W) From the rave reviews garnered by Angelina Weld Grimke's lynching play, *Rachel* to recent work by Lynn Nottage on Rwanda, black women playwrights have addressed key issues in modern culture and politics. We will analyze and perform work written by black women in the U.S., Britain and the Caribbean in the 20th and 21st centuries. Topics include: sexuality, surrealism, colonialism, freedom, violence, colorism, love, history, community and more. Playwrights include: Angelina Grimke, Lorraine Hansberry, Winsome Pinnock, Adrienne Kennedy, Suzan-Lori Parks, Ntzoke Shange, Pearl Cleage, Sarah Jones, Anna DeVeare Smith, Alice Childress, Lydia Diamond and Zora Neale Hurston.

4 units, Aut (Brody, J)

**DRAMA 341. How Practice Practices**

(Same as DRAMA 101P) This course will investigate practice in the context of theater, dance, performance and interdisciplinary work. We will consider the totality of the human experience as it applies to building a practice. Participants will be challenged to engage more fully in their everyday activities as well as to design their activities to respond to their artistic aspirations. Through class exercises, discussions, readings and assignments, as well as learning about the activities of other practitioners, participants will be challenged to build practices that are personally rigorous, socially grounded and aesthetically daring.

4 units, Spr (Carlson, A)

**DRAMA 342. ANIMALS AND PERFORMANCE**

(Same as DRAMA 142P) Using the template of Ann Carlson's 1988 series, *Animals*, students will be exposed to working with live animals in performance, the perils and potential. Learning specific works from Carlson's performance series and building their own works with animals, this course interrogates the setting of live performance as a site for attention and new meaning between human and animal species. The course will address issues of interspecies communication, animals behavior, the use of language, and the history of human relationships with domesticated animals.

4 units, Win (Carlson, A)

**DRAMA 343P. Stillness In Action: The Body Out of Time**

(Same as DRAMA 143P) This course will investigate stillness as a performative event. We will look at the still body as its own method of inquiry, as a scholarly consideration and as a tool for understanding time, motion, activity and culture. Stillness in Action; the body out of time will begin with questions: What is the difference between no movement and stillness? What is the history of stillness with respect to artistic process? What is the impact of stillness on the performer and spectator? What other disciplines utilize ideas and practices of stillness and to what ends? The course will be a combination of laboratory and discussion, reading and

workshop with the intent to practice and interrogate stillness in art and life.

4 units, Aut (Carlson, A)

**DRAMA 351. Great Books: Dramatic Traditions**

(Same as DRAMA 151T) The most influential and enduring texts in the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons.

3-5 units, Spr (Menon, J)

**DRAMA 352H. Markets, Movements and Macaroni**

(Same as DRAMA 152H) Come hungry to learn! This course looks at how food and performance converge in contemporary cultural studies. We will study the politics and poetics of food as it transforms us and the environments (indeed the worlds) in which we live. From feminist artists use of food (such as macaroni) in performance, to the circulation of food in economic markets to the ways in which food moves through us, we will learn to think about the myriad meanings of food in and through performance. The course features trips in the field and varied experiences as appropriate to the subject matter. Selected texts: Jonathan Foer's *Eating Animals*, Nao Bustamante's *Idig/urrito*, Yayoi Kusama's installations and Julie Dash's *Daughters of the Dust*.

4 units, Spr (Staff)

**DRAMA 355. A study of Thornton Wilder's play *Our Town***

(Same as DRAMA 155H) This course will be mainly devoted to a close analysis of Thornton Wilder's major play, *Our Town*. The play will be considered in its literary, political, aesthetic and sociological dimension. The work on *Our Town* should be seen as a complement of the staging taking place during the same academic quarter. However, students do not need to be enrolled in the production to take this class.

5 units, Aut (Apostolides, J)

**DRAMA 363S. Post Black Drama in the Age of Obama**

(Same as AFRICAAM 163S, AMSTUD 163S, CSRE 163S, DRAMA 163S) This course will examine works of the new millennium that confront questions of African American experience. These plays are written by African American and non-black writers. In analyzing these works, this course will investigate such questions as: In a time that has been called 'Post Race' or 'Post Soul' or even 'Post Black,' what can we discern about African American drama? How do these plays reflect or contradict such labeling? How do these works speak to our times? Who does the form relate to in matters of content in these works? What do these works tell us about the contemporary constructions and meanings of blackness?

5 units, Win (Elam, H)

**DRAMA 364H. Performance and Gender**

(Same as DRAMA 164) The intersectionality of race, sex, gender, and class in the formation of gendered performance. Readings from the work of Judith Butler, Eve Sedgwick, David Savran, Judith Halberstam, and David Eng. Case studies include: *M. Butterfly*, *The Crying Game*, *Paris is Burning*, *Angels in America*, and *American Idol*.

3-5 units, Spr (Menon, J)

**DRAMA 367. INTERPRETATION AND THEORY**

(Same as DRAMA 167T, FRENGEN 268) This course will present majors French authors whose work have help to create Literary and Drama Theory in America. Among the authors we will devote a special interest to the work of Roland Barthes, Jacques Derrida, Jacques Lacan, Luce Irigaray, Gilles Deleuze, Julia Kristeva, Jacques Rancière and Alain Badiou. Paralellism between the interpretation of drama and the interpretation of painting will constitute the core of this course.

5 units, Aut (Apostolides, J)

**DRAMA 368. Biology and Biography in Performance and Art**

(Same as DRAMA 168T) This course explores the connections between biology and biography in performance and art through practice-based research and readings in contemporary art and science. The course combines seminar discussions of art practices and scientific research with devising techniques in the studio. Students will generate original material using the senses, automatic writing and body memory and can work in any format (live performance, visual art or film) toward their final creative piece. Assessment is equally weighted between critical and creative

work.

4 units, Aut (Hill, L; Paris, H)

**DRAMA 369T. Performance, History, and Memory: The Jasper Ridge Project**

(Same as DRAMA 169T) The course will invite participants into the collision of history, preservation, memory and performance in the contemporary moment. Working in dialogue with Ann Carlson's proposed project for Jasper Ridge, we will utilize the strategy of re-staging archival photos in the tradition of *tableau vivant* to investigate an institution's history of itself as expressed in its photographic archive. We will consider how that history choreographs the body, acts on student's, faculty and staff's daily performances of themselves, as well as how the archive functions in the present.

4 units, Aut (Carlson, A)

**DRAMA 371. Performance Making: Process**

(Same as DRAMA 171) A studio course focused on creative processes and generating original material. Students will be encouraged to think critically about the relationship between form and content exploring the possibilities of site specific, gallery and theatre settings. Students will reflect throughout on the types of contact and communication uniquely possible in the live moment, such as interaction or the engagement of the senses. The emphasis is on weekly experimentation in the creation of short works rather than on a final production.

5 units, Spr (Hill, L; Paris, H)

**DRAMA 372. Directing Workshop: The Actor-Director Dialogue**

(Same as DRAMA 170B) This course focuses on the actor-director dialogue. We will work with actors and directors developing approaches to collaboration that make the actor-director dialogue in theater.

5 units, Aut (Rehm, R; Miller, D)

**DRAMA 374A. PERFORMANCE MAKING: PRODUCTION**

(Same as DRAMA 174A) A structured, creative environment for students working toward the realization of Senior Projects and 2nd year graduate productions. Instructors will work with students to develop the relationships between the content and the form of their productions using critical and creative tools to develop and reflect on the work. There will be a staged class showing at the end of the quarter followed by critiques designed to help students as they begin preparing for their final public performances (beyond the class).

5 units, Aut (Hill, L; Paris, H)

**DRAMA 374B. Projects in Directing**

Creative projects to be determined in consultation with Drama graduate faculty and production advisor

3-5 units, Aut (Staff), Win (Staff), Spr (Hill, L; Paris, H; Carlson, A), Sum (Staff)

**DRAMA 375. Main Stage Production**

Production of a full-length play as part of the Department of Drama season. Public performance.

3-5 units, Aut (Staff), Win (Hayes, A; Moraga, C), Spr (Hill, L; Ramsaur, M), Sum (Staff)

**DRAMA 377. Graduate Directors' Staged Reading Project**

Presentation of a new or newly adapted work for the stage, in a mode employed in professional theater for the development of new plays. Two to four rehearsals. Public performance.

2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 390. Directed Reading**

(Staff) Students may take directing reading only with the permission of their dissertation advisor. Might be repeatable for credit twice for 6 units total.

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 399. Dissertation Research**

(Staff)

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 801. TGR Project**

(Staff)

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**DRAMA 802. TGR Dissertation**

(Staff)

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

# EARTH SYSTEMS (EARTHSYS) COURSES

## UNDERGRADUATE COURSES IN EARTH SYSTEMS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

### **EARTHSYS 2. Earth System History**

(Same as EESS 2) The evolution of Earth's systems from formation to the present. Couplings and relationships among biosphere, lithosphere, hydrosphere, and atmosphere. Topics include the evolution of life, origin of the oceans, atmosphere and continents, and changes in climate. Modern climate change and anthropogenic effects. GER: DB-NatSci

*3 units, Win (Chamberlain, P)*

### **EARTHSYS 4. Evolution and Extinction: Introduction to Historical Geology**

(Same as GES 4) Introduction to the basic tools and principles geologists and paleontologists use to reconstruct the history of the Earth. Principles of stratigraphy, correlation, the geological timescale, the history of biodiversity, and the interpretation of fossils. The use of data from sedimentary geology, geochemistry, and paleontology to test theories for critical events in Earth history such as mass extinctions. Two half-day field trips. GER: DB-NatSci

*4 units, Win (Payne, J)*

### **EARTHSYS 5. Ecology for Everyone**

(Same as BIO 5) Basics of ecology, from gut bacteria to global climate change. We will link processes at several scales to connect individual behavior, population growth, species interactions and ecosystem function. Combining classroom and field experience, we will see how basic hypothesis testing provides a way to learn about the world by considering the ecology of familiar organisms such as ants, squirrels, trees and some kinds of food. No prerequisites except arithmetic; open to everyone, including but not only those who may be headed for more advanced courses in ecology and environmental science. GER: DB-NatSci

*4 units, Spr (Gordon, D)*

### **EARTHSYS 8. The Oceans: An Introduction to the Marine Environment**

(Same as EESS 8) For non-majors and majors in earth science or environmental science. Students will learn about the major ocean ecosystems and how they function both naturally and under the influence of human activities. Emphasis will be placed on the dominant organisms of each ecosystem and how they interact with each other and their physical and chemical environment. The types of ecosystems discussed will include coral reefs, deep-sea hydrothermal vents, coastal upwelling systems, blue-water oceans, estuaries, near-shore dead zones, etc. The course will incorporate a mix of lectures, multi-media presentations, and group activities.

*3 units, Spr (Arrigo, K)*

### **EARTHSYS 10. Introduction to Earth Systems**

For non-majors and prospective Earth Systems majors. Multidisciplinary approach using the principles of geology, biology, engineering, and economics to describe how the Earth operates as an interconnected, integrated system. Goal is to understand global change on all time scales. Focus is on sciences, technological principles, and sociopolitical approaches applied to solid earth, oceans, water, energy, and food and population. Case studies: environmental degradation, loss of biodiversity, and resource sustainability. GER: DB-NatSci

*4 units, Aut (Ernst, G)*

### **EARTHSYS 18. Promoting Sustainability Behavior Change at Stanford**

Stanford Green Living Council training course. Effective strategies for enacting sustainable behavior change on campus. Community-based social marketing, psychology, sociology, and design. Behavior change intervention project targeting a specific sustainable behavior. Lectures online.

*2 units, Aut (Robinson, T)*

### **EARTHSYS 21. Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years**

(Same as ANTHRO 18, ARCHLGY 12, HUMBIO 182) Fossil, genetic and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. This class introduces students to the data and issues regarding human dispersal, migration and colonization of continents and islands around the world. We explore problems related to the timing and cause of colonizing events, and investigate questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and our contemporary environmental crisis. GER:DB-SocSci

*3-5 units, Aut (Bird, D)*

### **EARTHSYS 37N. Energy and the Environment on the Back of an Envelope**

(Same as EESS 37N) Preference to freshmen. How quantitative understanding of the Earth helps inform decisions about energy supply. How can enough energy be provided to support future growth and development throughout the world without damaging the natural environment? Focus is on simple quantitative observations and calculations that facilitate evaluation of potential solutions to this problem; algebra only, no calculus. GER: DB-NatSci

*3 units, not given this year*

### **EARTHSYS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration**

(Same as EESS 38N, GES 38N) Preference to freshmen. The isolation of polar explorers under the harshest conditions on Earth, and the chronicles of their explorations and hardships dating to the 1500s for the Arctic and the 1700s for the Antarctic. Focus is on scientific and geographic achievements. Sources include *The Worst Journey in the World* by Apsley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Class jointly authors essay on themes from such literature. Optional field trip into the high Sierra in December. (Dunbar) GER: DB-NatSci

*3 units, NEXTYEAR*

### **EARTHSYS 39N. The Carbon Cycle: Reducing Your Impact**

(Same as EESS 39N) Preference to freshmen. Changes in the long- and short-term carbon cycle and global climate through the burning of fossil fuels since the Industrial Revolution. How people can shrink their carbon footprints. Long-term sources and sinks of carbon and how they are controlled by tectonics and short-term sources and sinks and the interaction between the biosphere and ocean. How people can shrink their carbon footprints. Held at the Stanford Community Farm. GER: DB-NatSci

*3 units, not given this year*

### **EARTHSYS 41N. The Global Warming Paradox**

(F,Sem) (Same as EESS 41N) Stanford Introductory Seminar. Preference to freshman. Focus is on the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Topics include: Earth's energy balance; detection and attribution of climate change; the climate response to enhanced greenhouse forcing; impacts of climate change on natural and human systems; and proposed methods for curbing further climate change. Sources include peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks.

*3 units, Aut (Diffenbaugh, N)*

### **EARTHSYS 46N. Exploring the Critical Interface between the Land and Monterey Bay: Elkhorn Slough**

(Same as EESS 46N) Preference to freshmen. Field trips to sites in the Elkhorn Slough, a small agriculturally impacted estuary that opens into Monterey Bay, a model ecosystem for understanding the complexity of estuaries, and one of California's last remaining coastal wetlands. Readings include Jane Caffrey's *Changes in a California Estuary: A Profile of Elkhorn Slough*. Basics of biogeochemistry, microbiology, oceanography, ecology, pollution,

and environmental management.

*3 units, alternate years, not given this year*

**EARTHSYS 49N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay**

(F,Sem) (Same as EESS 49N) Stanford Introductory Seminar. This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended.

*3 units, Spr (Francis, C)*

**EARTHSYS 56Q. Changes in the Coastal Ocean: The View From Monterey and San Francisco Bays**

(S,Sem) (Same as EESS 56Q) Stanford Introductory Seminar. Preference to sophomores. Recent changes in the California current, using Monterey Bay as an example. Current literature introduces principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC. Optional field trip to MBARI and Monterey Bay. GER: DB-NatSci

*3 units, Spr (Dunbar, R)*

**EARTHSYS 57Q. Climate Change from the Past to the Future**

(S,Sem) (Same as EESS 57Q) Stanford Introductory Seminar. Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.

*3 units, Win (Chamberlain, P)*

**EARTHSYS 61Q. Food and security**

(S,Sem) (Same as EESS 61Q, INTNLREL 61Q) Stanford Introductory Seminar. The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

*5 units, Aut (Naylor, R; Stedman, S)*

**EARTHSYS 70. How the Earth Works: Physics for Earth and Environmental Scientists**

How do tsunamis form? What drives a hurricane? How are environmental pollutants transported? Introduction to the study of motion, forces, waves, and electromagnetism from the perspective of Earth and environmental scientists. Examination of the physics behind Earth processes that shape the environment we live in. Topics include groundwater flow, geothermal gradients, tidal and tsunami wave motion, seismic waves, earthquake propagation and hazard assessment, and the energy of photosynthesis. Lab/computer exercises incorporated into class time. Prerequisites: GES 1A, B or C or EARTHSYS 10 or GEOPHYS 113; and MATH 21 or 42; or instructor consent.

*3 units, Spr (Lawrence, K)*

**EARTHSYS 100. Environmental and Geological Field Studies in the Rocky Mountains**

(Same as EESS 101, GES 101) Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.

*3 units, Aut (Chamberlain, P)*

**EARTHSYS 101. Energy and the Environment**

(Same as ENERGY 101) Energy use in modern society and the consequences of current and future energy use patterns. Case studies illustrate resource estimation, engineering analysis of energy systems, and options for managing carbon emissions. Focus is on energy definitions, use patterns, resource estimation, pollution. Recommended: MATH 21 or 42. GER:DB-EngrAppSci

*3 units, Win (Durllofsky, L)*

**EARTHSYS 102. Renewable Energy Sources and Greener Energy Processes**

(Same as ENERGY 102) The energy sources that power society are rooted in fossil energy although energy from the core of the Earth and the sun is almost inexhaustible; but the rate at which energy can be drawn from them with today's technology is limited. The renewable energy resource base, its conversion to useful forms, and practical methods of energy storage. Geothermal, wind, solar, biomass, and tidal energies; resource extraction and its consequences. Recommended: MATH 21 or 42. GER:DB-EngrAppSci

*3 units, Spr (Gerritsen, M; Monroe, I)*

**EARTHSYS 103. Energy Resources**

(Same as CEE 173A, CEE 207A) Comprehensive overview of fossil and renewable energy resources and energy efficiency. Topics covered for each resource: resource abundance, location, recovery, conversion, consumption, end-uses, environmental impacts, economics, policy, and technology. Applied lectures in specific energy sectors: buildings, transportation, the electricity industry, and energy in the developing world. Required field trips to local energy facilities. Optional discussion section for extra unit. GER:DB-EngrAppSci

*3-5 units, Aut (Woodward, J; Knapp, K)*

**EARTHSYS 104. The Water Course**

(Same as GEOPHYS 104) The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water; taste tests of water from around the world. Current U.S. and world water supply issues. Offered occasionally. GER: DB-NatSci

*3 units, not given this year*

**EARTHSYS 105. Food and Community: New Visions for a Sustainable Future**

(Same as EESS 105) Service and research focused on providing healthy and environmentally friendly food for the under served in our community. Hands-on collaboration with the Stanford Glean student group, the Stanford Community Garden, and San Francisco nonprofits. Coverage of the broad spectrum from garden development to food dispersal to the needy. Design and implementation of projects that address an aspect of food and social justice, such as urban farming in low-income communities and sustainable food networks for the elderly. Service Learning Course (certified by Haas Center).

*3-5 units, Aut (Chamberlain, P), Spr (Chamberlain, P)*

**EARTHSYS 105A. Ecology and Natural History of Jasper Ridge Biological Preserve**

(Same as BIO 105A) Formerly 96A - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRB community after the course.

*4 units, Win (Dirzo, R; Wilber, C)*

**EARTHSYS 105B. Ecology and Natural History of Jasper Ridge Biological Preserve**

(Same as BIO 105B) Formerly 96B - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology,

land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course.

*4 units, Spr (Dirzo, R; Wilber, C)*

#### **EARTHSYS 106. World Food Economy**

(Same as ECON 106, EESS 106) The interrelationships among food, populations, resources, and economic development. The role of agricultural and rural development in achieving economic and social progress in low-income nations. Emphasis is on public sector decision making as it relates to food policy.

*5 units, Win (Naylor, R; Falcon, W)*

#### **EARTHSYS 108. Coastal Wetlands**

(Same as EARTHSYS 208) Ecological structure and function of wetlands emphasizing local, coastal wetlands. Topics include: wetland distribution, classification, and history; and interactions between biotic and abiotic components of wetland ecosystems. Labs and local field trips for exposure to landscape patterns, and common sampling equipment and methods. Recommended: 104 or CEE 166A. GER: DB-NatSci

*3 units, not given this year*

#### **EARTHSYS 109. Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision**

(Same as CEE 109) Examination of program-based local actions that promote resource conservation and an educational environment for sustainability. Examination of building-level actions that contribute to conservation, lower utility costs, and generate understanding of sustainability consistent with Stanford's commitment to sustainability as a core value. Overview of operational sustainability including energy, water, buildings, waste, and food systems. Practical training to enable students to become sustainability coordinators for their dorms or academic units.

*2 units, Win (Koseff, J; Ahmed, F)*

#### **EARTHSYS 111. Biology and Global Change**

(Same as BIO 117, EESS 111) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing. GER: DB-NatSci

*4 units, Win (Vitousek, P; Arrigo, K)*

#### **EARTHSYS 112. Human Society and Environmental Change**

(Same as EESS 112, HISTORY 103D) Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1A

*4 units, Aut (Naylor, R; Frank, Z; Pizarro Gariazzo, R)*

#### **EARTHSYS 113. Earthquakes and Volcanoes**

(Same as GEOPHYS 113) Earthquake location, magnitude and intensity scales, seismic waves, styles of eruptions and volcanic hazards, tsunami waves, types and global distribution of volcanoes, volcano forecasting. Plate tectonics as a framework for understanding earthquake and volcanic processes. Forecasting; earthquake resistant design; building codes; and probabilistic hazard assessment. For non-majors and potential earth scientists. Offered every year, spring quarter. GER:DB-EngrAppSci

*3 units, Spr (Beroza, G)*

#### **EARTHSYS 116. Ecology of the Hawaiian Islands**

(Same as BIO 116) Terrestrial and marine ecology and conservation biology of the Hawaiian Archipelago. Taught in the field in Hawaii as part of quarter-long sequence of courses including Earth Sciences and Anthropology. Topics include ecological succession, plant-soil interactions, conservation biology, biological invasions and ecosystem consequences, and coral reef ecology. Restricted to students accepted into the Earth Systems of Hawaii Program. GER: DB-NatSci

*4 units, alternate years, not given this year*

#### **EARTHSYS 117. Earth Sciences of the Hawaiian Islands**

(Same as EARTHSCI 117, EESS 117) Progression from volcanic

processes through rock weathering and soil-ecosystem development to landscape evolution. The course starts with an investigation of volcanic processes, including the volcano structure, origin of magmas, physical-chemical factors of eruptions. Factors controlling rock weathering and soil development, including depth and nutrient levels impacting plant ecosystems, are explored next. Geomorphic processes of landscape evolution including erosion rates, tectonic/volcanic activity, and hillslope stability conclude the course. Methods for monitoring and predicting eruptions, defining spatial changes in landform, landform stability, soil production rates, and measuring biogeochemical processes are covered throughout the course. This course is restricted to students accepted into the Earth Systems of Hawaii Program.

*4 units, alternate years, not given this year*

#### **EARTHSYS 118. Heritage, Environment, and Sovereignty in Hawaii**

(Same as ANTHRO 118) This course explores the cultural, political economic, and environmental status of contemporary Hawaiians. What sorts of sustainable economic and environmental systems did Hawaiians use in prehistory? How was colonization of the Hawaiian Islands informed and shaped by American economic interests and the nascent imperialism of the early 20th century? How was sovereignty and Native Hawaiian identity shaped by these forces? How has tourism and the leisure industry affected the natural environment? This course uses archaeological methods, ethnohistorical sources, and historical analysis in an exploration of contemporary Hawaiian social economic and political life.

*4 units, not given this year*

#### **EARTHSYS 122. Paleobiology**

(Same as GES 123) Introduction to the fossil record with emphasis on marine invertebrates. Major debates in paleontological research. The history of animal life in the oceans. Topics include the nature of the fossil record, evolutionary radiations, mass extinctions, and the relationship between biological evolution and environmental change. Fossil taxa through time. Exercises in phylogenetics, paleoecology, biostratigraphy, and statistical methods. GER: DB-NatSci

*4 units, alternate years, not given this year*

#### **EARTHSYS 123. From Local to Global: Collaborations for International Environmental Education**

(Same as EDUC 122X) A collaboration with three universities in Africa. Discourse and debate using Internet and mobile technology interactions. Topics include the global environment, climate change, sustainable development, and food security.

*2 units, not given this year*

#### **EARTHSYS 124. Environmental Justice: Local, National, and International Dimensions**

(Same as EARTHSYS 224) Focus is on whether minorities and low income citizens suffer disproportionate environmental and health impacts resulting from government and corporate decision making in contexts such as the siting of industrial facilities and waste dumps, toxic chemical use and distribution, and the enforcement of environmental mandates and policies. Implications of environmental justice issues at the international level, emphasizing climate change.

*4 units, not given this year*

#### **EARTHSYS 131. Communicating Environmental Research Using Narratives and Stories**

(Same as EESS 131, EESS 231, EARTHSYS 231) Creative strategies by which earth scientists can overcome impediments to scientific literacy. Construction of stories and narratives out of research. The role of imagination and cognitive perception in environmental issues. Barriers and problems that arise in risk and science awareness. Connections between environmentalism and environmental science. Environmental issues in fictional narratives. The responsible function for earth scientists in public debates. Reflections on the role of science in current and future issues likely to involve members outside of science. Priority given to students seeking degrees in the School of Earth Sciences.

*1 unit, not given this year*

#### **EARTHSYS 132. Energy and Climate Cooperation in the Western Hemisphere**

(Same as EARTHSYS 232, IPS 263, INTNLREL 146A) Current

political dynamics in major western hemisphere fossil fuel producers in N. America, the Andean region, the Southern Cone of S. America, and Trinidad and Tobago. The potential for developing sustainable alternative energy resources in the western hemisphere for export particularly biofuels, and its impact on agricultural policy, environmental protection, and food prices. The feasibility of creating regional energy security rings such as the proposed N. American Energy Security and Prosperity Partnership.

*4 units, not given this year*

**EARTHSYS 133. Climate Change Law and Policy: From California to the Federal Government**

(Same as EARTHSYS 233) California climate laws, including the California Global Warming Solutions Act of 2006 (AB32), the Clean Cars and Trucks Bill (SB 1493), and the Greenhouse Gas Emissions Performance Standard (SB 1368), and complementary and subsidiary regulations such as the Renewable Portfolio Standard, the Low Carbon Fuel Standard, land use law, and energy efficiency and decoupling. The draft scoping plan to outline California's policies for achieving its ambitious economy-wide reductions in greenhouse gas emissions. The Western Climate Initiative. The history, details, and current status of California's efforts as platforms to delve into larger legal issues.

*3 units, not given this year*

**EARTHSYS 134. Stable Isotopes in Biogeochemistry**

(Same as EARTHSYS 234, EESS 134, EESS 234) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and rocks and minerals. GER: DB-NatSci

*3 units, not given this year*

**EARTHSYS 135. Podcasting the Anthropocene**

(Same as EARTHSYS 235) Identification and interview of a Stanford researcher to be featured in an audio podcast. Exploration of interviewing techniques, audio manipulation, and podcasting as a newly emerging media platform. Individual and group projects. Group workshops focused on preparation, review, and critiques of podcasts.

*1 unit, Win (Staff)*

**EARTHSYS 141. Remote Sensing of the Oceans**

(Same as EARTHSYS 241, EESS 141, EESS 241) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER: DB-NatSci

*3-4 units, alternate years, not given this year*

**EARTHSYS 142. Remote Sensing of Land**

(Same as EARTHSYS 242, EESS 162, EESS 262) The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

*4 units, Win (Lambin, E)*

**EARTHSYS 142A. Negotiating Sustainable Development**

(Same as CEE 142A, CEE 242A, EARTHSYS 242A) How to be effective at achieving sustainability by learning the skills required to negotiate differences between stakeholders who advocate for their own interests. How ecological, social, and economic interests can be effectively balanced and managed. How to be effective actors in the sustainability movement, and use frameworks to solve complex, multiparty processes. Case study analysis of domestic and international issues. Students negotiate on behalf of different interest groups in a variety of arenas including energy, climate, land use, and the built environment. One Saturday all day field trip. No prerequisites.

*3 units, Win (Christensen, S)*

**EARTHSYS 143. Marine Biogeochemistry**

(Same as EARTHSYS 243, EESS 143, EESS 243) (Graduate students register for 243.) Processes that control the mean concentration and distribution of biologically utilized elements and

compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget. GER: DB-NatSci

*3-4 units, Win (Arrigo, K)*

**EARTHSYS 143J. Climate Change in the West: A History of the Future**

(Same as HISTORY 243J) Global warming is changing the American West. But this region is no stranger to environmental change and human adaption to harsh environments. How can history create more clear thinking about the current crisis and choices for the future? The long history of climate change in the West, as well as current warming, through scientific research, historical sources, environmental histories, and visions for the future, including plans for mitigation and adaption, scientific predictions, and science fiction.

*5 units, not given this year*

**EARTHSYS 144. Fundamentals of Geographic Information Science (GIS)**

(Same as EESS 164) Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments. GER: DB-NatSci

*4 units, Aut (Thomas, N; Carbajales, P)*

**EARTHSYS 145. The Environmental History of North America**

(Same as HISTORY 169) Concentrates on anthropogenic environmental change and its consequences for both the natural environment and human society. Human alteration of the continent began well before the arrival of Europeans, and many developments usually considered as only human history are embedded in a wider environmental history. Begins with the Columbian Exchange and the demographic disaster that followed and ends with global climate change. GER:DB-SocSci

*4-5 units, Spr (White, R)*

**EARTHSYS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation**

(Same as EARTHSYS 246A, EESS 146A, EESS 246A, GEOPHYS 146A, GEOPHYS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

*3 units, Win (Thomas, L; Diffenbaugh, N; Skinner, C), alternate years, not given next year*

**EARTHSYS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation**

(Same as EARTHSYS 246B, EESS 146B, EESS 246B, GEOPHYS 146B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

*3 units, Spr (Thomas, L; Diffenbaugh, N), alternate years, not given next year*

**EARTHSYS 147. Controlling Climate Change in the 21st Century**

(Same as EARTHSYS 247, HUMBIO 116) Global climate change science, impacts, and response strategies. Topics: scientific understanding of the climate system; modeling future climate change; global and regional climate impacts and vulnerability; mitigation and adaptation approaches; the international climate policy challenge; and decarbonization of energy and transportation systems. GER: DB-NatSci

*3 units, not given this year*

**EARTHSYS 153. Soils and Nutrient Cycling in the Amazon Rainforest**

(Same as EARTHSYS 253, EESS 153, EESS 253) Focus is on Amazon soils as dynamic but also as a non-renewable natural resource, especially in the impoverished soils. Course will cover the importance of the soils in the Amazon region rain forest ecosystem sustainability and the geographic distribution of the main soils classes in the Amazon region. Additional topics include the chemical and mineralogical characteristics of these soils classes and the factors influencing elemental cycling within the terrestrial Amazon rain forest ecosystem.

*3 units, Win (Staff)*

**EARTHSYS 155. Science of Soils**

(Same as EESS 155) Physical, chemical, and biological processes within soil systems. Emphasis is on factors governing nutrient availability, plant growth and production, land-resource management, and pollution within soils. How to classify soils and assess nutrient cycling and contaminant fate. Recommended: introductory chemistry and biology. GER: DB-NatSci

*4 units, Spr (Fendorf, S)*

**EARTHSYS 156. Soil and Water Chemistry**

(Same as EARTHSYS 256, EESS 156, EESS 256) (Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology. GER: DB-NatSci

*1-4 units, Win (Fendorf, S)*

**EARTHSYS 156M. Marine Resource Economics and Policy**

(Same as ECON 156) Economic, political, and institutional frameworks for understanding the causes and potential solutions to marine resource problems. Marine policy formation, implementation and evaluation. Applications include: offshore energy production, managing fisheries, marine spatial planning, protecting biodiversity, and ocean recreation. Prerequisite: Econ 1A

*5 units, not given this year*

**EARTHSYS 158. Geomicrobiology**

(Same as EESS 158, EESS 258, EARTHSYS 258) How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

*3 units, Win (Francis, C)*

**EARTHSYS 160. Statistical Methods for Earth and Environmental Sciences: General Introduction**

(Same as EESS 160) Extracting information from data using statistical summaries and graphical visualization, statistical measures of association and correlation, distribution models, sampling, error estimation and confidence intervals, linear models and regression analysis, introduction to time-series and spatial data with geostatistics, applications including environmental monitoring, natural hazards, and experimental design. GER:DB-Math

*3 units, not given this year*

**EARTHSYS 161. Statistical Methods for the Earth and****Environmental Sciences: Geostatistics**

(Same as EESS 161, ENERGY 161) Statistical analysis and graphical display of data, common distribution models, sampling, and regression. The variogram as a tool for modeling spatial correlation; variogram estimation and modeling; introduction to spatial mapping and prediction with kriging; integration of remote sensing and other ancillary information using co-kriging models; spatial uncertainty; introduction to geostatistical software applied to large environmental, climatological, and reservoir engineering databases; emphasis is on practical use of geostatistical tools. GER: DB-NatSci

*3-4 units, not given this year*

**EARTHSYS 170. Environmental Geochemistry**

(Same as GES 170) Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor. GER: DB-NatSci

*4 units, Win (Brown, G)*

**EARTHSYS 173. Aquaculture and the Environment: Science, History, and Policy**

(Same as EARTHSYS 273, EESS 173, EESS 273) Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures.

*3 units, Spr (Staff), alternate years, not given next year*

**EARTHSYS 175. California Coast: Science, Policy, and Law**

(Same as CEE 175A, CEE 275A, EARTHSYS 275) Same as LAW 514. Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in at least three mandatory field trips.

*3-4 units, alternate years, not given this year*

**EARTHSYS 177. Interdisciplinary Research Survival Skills**

(Same as EARTHSYS 277) Learning in interdisciplinary situations. Framing research questions. Developing research methods that benefit from interdisciplinary understanding. Writing for multiple audiences and effectively making interdisciplinary presentations. Discussions with interdisciplinary experts from across campus regarding interdisciplinary research projects.

*2 units, Spr (Root, T)*

**EARTHSYS 178. The Ethics of Environmental Choices**

(Same as EARTHSYS 278, PHIL 178A, PHIL 278A) (Formerly PHIL 278/378.) The institutional and individual dimensions of environmental choices. On the institutional side, examine externalities, the tragedy of the commons, sustainable development and environmental policy. On the individual side, discuss individual responsibility, intrinsic value, and moral pluralism. Focus is on decision making including the role of risk analysis, the rate of discount for effects on future generations, cost-benefit analysis, and scientific epistemology. GER:DB-Hum

*4 units, not given this year*

**EARTHSYS 180B. Principles and Practices of Sustainable Agriculture**

(Same as EESS 180B) Field-based training in ecologically sound agricultural practices at the Stanford Community Farm. Weekly

lessons, field work, and group projects. Field trips to educational farms in the area. Topics include: soils, composting, irrigation techniques, IPM, basic plant anatomy and physiology, weeds, greenhouse management, and marketing.

3-4 units, Aut (Archie, J), Spr (Archie, J)

#### **EARTHSYS 181. Concepts of Urban Agriculture**

(Same as EARTHSYS 281, EESS 181, EESS 281) For advanced undergraduates and graduate students from all fields. Seminar. Current status of and potential for global urban agriculture. Topics include: environmental and economic dimensions of urban food production and sourcing; city policy and land-use planning; and an ecosystem services approach to urban agriculture. Developed and developing world contexts. Two field trips to nearby cities; guest lectures; case studies; group projects. Attendance at first class is mandatory. Enrollment is limited. Enrollment permissions will be determined after first class meeting.

3 units, Win (Matson, P)

#### **EARTHSYS 182. Current Issues in Sustainable Agriculture**

(Same as EARTHSYS 282, EESS 182, EESS 282) Sustainability and ethics of animal production in the U.S. Demystification of the marketing of agricultural products. The past, present, and future of small family farms. Farm labor issues. Students lead discussions and write response papers.

2 units, not given this year

#### **EARTHSYS 183. Food Matters: Agriculture in Film**

(Same as EARTHSYS 283, EESS 183, EESS 283) Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

1 unit, Win (Staff)

#### **EARTHSYS 184. Climate and Agriculture**

(Same as EARTHSYS 284, EESS 184, EESS 284) The effects of climate change on global food and agricultural systems. Climate assessment and socioeconomic modeling approaches to quantify the impacts of climate on agro-ecosystems and society. Enrollment limited to 25; priority to graduate students, seniors, and juniors. Prerequisites: ECON 106/206.

3-4 units, Spr (Lobell, D)

#### **EARTHSYS 188. Social and Environmental Tradeoffs in Climate Decision-Making**

(Same as EARTHSYS 288) How can we ensure that measures taken to mitigate global climate change don't create larger social and environmental problems? What metrics should be used to compare potential climate solutions beyond cost and technical feasibility, and how should these metrics be weighed against each other? How can modeling efforts and stakeholder engagement be best integrated into climate decision making? What information are we still missing to make fully informed decisions between technologies and policies? Exploration of these questions, alongside other issues related to potential negative externalities of emerging climate solutions. Evaluation of energy, land use, and geoengineering approaches in an integrated context, culminating in a climate stabilization group project.

1-2 units, Win (Monroe, I; Matson, P)

#### **EARTHSYS 199. Honors Program in Earth Systems**

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EARTHSYS 210B. Senior Seminar**

Interdisciplinary problem analysis and oral communication. Students present results of their Earth Systems internship or research project. Students participate in a research or service learning group project focused on a local environmental issue. Service Learning Course (certified by Haas Center). Prerequisite: EARTHSYS 260.

3 units, Win (Kennedy, J)

#### **EARTHSYS 210C. Senior Seminar**

Interdisciplinary problem analysis and oral communication. Students present results of their Earth Systems internship or research project. Students participate in a research or service learning group project focused on a local environmental issue. Service Learning Course (certified by Haas Center). Prerequisite: EARTHSYS 260.

3 units, Win (Kennedy, J)

#### **EARTHSYS 210D. Senior Seminar**

Interdisciplinary problem analysis and oral communication. Students present results of their Earth Systems internship or research project. Students participate in a research or service learning group project focused on a local environmental issue. Service Learning Course (certified by Haas Center). Prerequisite: EARTHSYS 260.

3 units, Win (Dunbar, R)

## **GRADUATE COURSES IN EARTH SYSTEMS**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **EARTHSYS 200. Sustaining Action: Research, Analysis and Writing for the Public**

(Same as ENVRES 200) Preference to graduate students and senior undergraduates in environmental, natural and social sciences, engineering, journalism. Students help produce and publish SAGE, an eco advice column, by choosing, researching, and answering questions about sustainable living submitted by Stanford alumni and the general public. Prerequisite: admission by application, available from instructor, thayden@stanford.edu, and due 9/21/11 (Aut) or 3/28/12 (Spr). (Meets Earth Systems WIM requirement).

3 units, Aut (Hayden, T), Spr (Hayden, T)

#### **EARTHSYS 201. Climate Change and the IPCC**

(Same as EESS 201) The Intergovernmental Panel on Climate Change has begun work on its 5th Assessment Report, due in 2014. The Working Group II (WGII) contribution to the AR5 will have an increased focus on assessing vulnerability, impacts, and adaptation in the context of multiple stresses, assessing a broader range of impacts, including impacts on oceans systems, approaches for effectively managing the risks of climate change in the context of multiple stresses, and providing more information on the costs of climate change for different sectors and regions. Examination of the IPCC assessment process, as well as the current research on the range of issues that will be covered in the WGII report presented by Stanford faculty and Bay Area scientists involved in WGII.

1-2 units, Aut (Matson, P)

#### **EARTHSYS 208. Coastal Wetlands**

(Same as EARTHSYS 108) Ecological structure and function of wetlands emphasizing local, coastal wetlands. Topics include: wetland distribution, classification, and history; and interactions between biotic and abiotic components of wetland ecosystems. Labs and local field trips for exposure to landscape patterns, and common sampling equipment and methods. Recommended: 104 or CEE 166A.

3 units, not given this year

#### **EARTHSYS 210A. Senior Seminar**

Interdisciplinary problem analysis and oral communication. Students present results of their Earth Systems internship or research project. Students participate in a research or service learning group project focused on a local environmental issue. Service Learning Course (certified by Haas Center). Prerequisite: EARTHSYS 260.

3 units, Aut (Kennedy, J)

#### **EARTHSYS 211. Fundamentals of Modeling**

(Same as EESS 211) Simulation models are a powerful tool for environmental research, if used properly. The major concepts and techniques for building and evaluating models. Topics include model calibration, model selection, uncertainty and sensitivity analysis, and Monte Carlo and bootstrap methods. Emphasis is on gaining hands-on experience using the R programming language. Prerequisite: basic knowledge of statistics.

3 units, Aut (Lobell, D)

#### **EARTHSYS 224. Environmental Justice: Local, National, and International Dimensions**

(Same as EARTHSYS 124) Focus is on whether minorities and low income citizens suffer disproportionate environmental and health impacts resulting from government and corporate decision making in contexts such as the siting of industrial facilities and waste dumps, toxic chemical use and distribution, and the enforcement of environmental mandates and policies. Implications

of environmental justice issues at the international level, emphasizing climate change.

*4 units, not given this year*

**EARTHSYS 231. Communicating Environmental Research Using Narratives and Stories**

(Same as EESS 131, EESS 231, EARTHSYS 131) Creative strategies by which earth scientists can overcome impediments to scientific literacy. Construction of stories and narratives out of research. The role of imagination and cognitive perception in environmental issues. Barriers and problems that arise in risk and science awareness. Connections between environmentalism and environmental science. Environmental issues in fictional narratives. The responsible function for earth scientists in public debates. Reflections on the role of science in current and future issues likely to involve members outside of science. Priority given to students seeking degrees in the School of Earth Sciences.

*1 unit, not given this year*

**EARTHSYS 232. Energy and Climate Cooperation in the Western Hemisphere**

(Same as EARTHSYS 132, IPS 263, INTNLREL 146A) Current political dynamics in major western hemisphere fossil fuel producers in N. America, the Andean region, the Southern Cone of S. America, and Trinidad and Tobago. The potential for developing sustainable alternative energy resources in the western hemisphere for export particularly biofuels, and its impact on agricultural policy, environmental protection, and food prices. The feasibility of creating regional energy security rings such as the proposed N. American Energy Security and Prosperity Partnership.

*4 units, not given this year*

**EARTHSYS 233. Climate Change Law and Policy: From California to the Federal Government**

(Same as EARTHSYS 133) California climate laws, including the California Global Warming Solutions Act of 2006 (AB32), the Clean Cars and Trucks Bill (SB 1493), and the Greenhouse Gas Emissions Performance Standard (SB 1368), and complementary and subsidiary regulations such as the Renewable Portfolio Standard, the Low Carbon Fuel Standard, land use law, and energy efficiency and decoupling. The draft scoping plan to outline California's policies for achieving its ambitious economy-wide reductions in greenhouse gas emissions. The Western Climate Initiative. The history, details, and current status of California's efforts as platforms to delve into larger legal issues.

*3 units, not given this year*

**EARTHSYS 234. Stable Isotopes in Biogeochemistry**

(Same as EARTHSYS 134, EESS 134, EESS 234) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and rocks and minerals.

*3 units, not given this year*

**EARTHSYS 235. Podcasting the Anthropocene**

(Same as EARTHSYS 135) Identification and interview of a Stanford researcher to be featured in an audio podcast. Exploration of interviewing techniques, audio manipulation, and podcasting as a newly emerging media platform. Individual and group projects. Group workshops focused on preparation, review, and critiques of podcasts.

*1 unit, Win (Staff)*

**EARTHSYS 241. Remote Sensing of the Oceans**

(Same as EARTHSYS 141, EESS 141, EESS 241) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.

*3-4 units, alternate years, not given this year*

**EARTHSYS 242. Remote Sensing of Land**

(Same as EARTHSYS 142, EESS 162, EESS 262) The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization,

deforestation, vegetation health, and wildfires.

*4 units, Win (Lambin, E)*

**EARTHSYS 242A. Negotiating Sustainable Development**

(Same as CEE 142A, CEE 242A, EARTHSYS 142A) How to be effective at achieving sustainability by learning the skills required to negotiate differences between stakeholders who advocate for their own interests. How ecological, social, and economic interests can be effectively balanced and managed. How to be effective actors in the sustainability movement, and use frameworks to solve complex, multiparty processes. Case study analysis of domestic and international issues. Students negotiate on behalf of different interest groups in a variety of arenas including energy, climate, land use, and the built environment. One Saturday all day field trip. No prerequisites.

*3 units, Win (Christensen, S)*

**EARTHSYS 243. Marine Biogeochemistry**

(Same as EARTHSYS 143, EESS 143, EESS 243) (Graduate students register for 243.) Processes that control the mean concentration and distribution of biologically utilized elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget.

*3-4 units, Win (Arrigo, K)*

**EARTHSYS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation**

(Same as EARTHSYS 146A, EESS 146A, EESS 246A, GEOPHYS 146A, GEOPHYS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

*3 units, Win (Thomas, L; Diffenbaugh, N; Skinner, C), alternate years, not given next year*

**EARTHSYS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation**

(Same as EARTHSYS 146B, EESS 146B, EESS 246B, GEOPHYS 146B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

*3 units, Spr (Thomas, L; Diffenbaugh, N), alternate years, not given next year*

**EARTHSYS 247. Controlling Climate Change in the 21st Century**

(Same as EARTHSYS 147, HUMBIO 116) Global climate change science, impacts, and response strategies. Topics: scientific understanding of the climate system; modeling future climate change; global and regional climate impacts and vulnerability; mitigation and adaptation approaches; the international climate policy challenge; and decarbonization of energy and transportation systems.

*3 units, not given this year*

**EARTHSYS 250. Directed Research**

Independent research related to student's primary track, carried out after the junior year, during the summer, and/or during the senior year. Student develops own project with faculty supervision. 10-15 page thesis. May be repeated for credit.

*1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**EARTHSYS 253. Soils and Nutrient Cycling in the Amazon Rainforest**

(Same as EARTHSYS 153, EESS 153, EESS 253) Focus is on Amazon soils as dynamic but also as a non-renewable natural resource, especially in the impoverished soils. Course will cover the importance of the soils in the Amazon region rain forest ecosystem sustainability and the geographic distribution of the main soils classes soils in the Amazon region. Additional topics include the chemical and mineralogical characteristics of these soils classes and the factors influencing elemental cycling within the terrestrial Amazon rain forest ecosystem.

3 units, Win (Staff)

**EARTHSYS 256. Soil and Water Chemistry**

(Same as EARTHSYS 156, EESS 156, EESS 256) (Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

1-4 units, Win (Fendorf, S)

**EARTHSYS 258. Geomicrobiology**

(Same as EESS 158, EESS 258, EARTHSYS 158) How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

3 units, Win (Francis, C)

**EARTHSYS 260. Internship**

Supervised field, lab, or private sector project. May consist of directed research under the supervision of a Stanford faculty member, participation in one of several off campus Stanford programs, or an approved non-Stanford program relevant to the student's Earth Systems studies. Required of and restricted to declared Earth Systems majors. Includes 15-page technical summary research paper that is subject to iterative revision. (WIM)

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**EARTHSYS 272. Antarctic Marine Geology**

(Same as EESS 242) For upper-division undergraduates and graduate students. Intermediate and advanced topics in marine geology and geophysics, focusing on examples from the Antarctic continental margin and adjacent Southern Ocean. Topics: glaciers, icebergs, and sea ice as geologic agents (glacial and glacial marine sedimentology), Southern Ocean current systems and deep ocean sedimentation), Antarctic biostratigraphy and chronostratigraphy (continental margin evolution). Students interpret seismic lines and sediment core/well log data. Examples from a recent scientific drilling expedition to Prydz Bay, Antarctica. Up to two students may have an opportunity to study at sea in Antarctica during Winter Quarter.

3 units, NEXTYEAR

**EARTHSYS 273. Aquaculture and the Environment: Science, History, and Policy**

(Same as EARTHSYS 173, EESS 173, EESS 273) Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures.

3 units, Spr (Staff), alternate years, not given next year

**EARTHSYS 275. California Coast: Science, Policy, and Law**

(Same as CEE 175A, CEE 275A, EARTHSYS 175) Same as LAW 514. Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and

biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in at least three mandatory field trips.

3-4 units, alternate years, not given this year

**EARTHSYS 277. Interdisciplinary Research Survival Skills**

(Same as EARTHSYS 177) Learning in interdisciplinary situations. Framing research questions. Developing research methods that benefit from interdisciplinary understanding. Writing for multiple audiences and effectively making interdisciplinary presentations. Discussions with interdisciplinary experts from across campus regarding interdisciplinary research projects.

2 units, Spr (Root, T)

**EARTHSYS 278. The Ethics of Environmental Choices**

(Same as EARTHSYS 178, PHIL 178A, PHIL 278A) (Formerly PHIL 278/378.) The institutional and individual dimensions of environmental choices. On the institutional side, examine externalities, the tragedy of the commons, sustainable development and environmental policy. On the individual side, discuss individual responsibility, intrinsic value, and moral pluralism. Focus is on decision making including the role of risk analysis, the rate of discount for effects on future generations, cost-benefit analysis, and scientific epistemology.

4 units, not given this year

**EARTHSYS 281. Concepts of Urban Agriculture**

(Same as EARTHSYS 181, EESS 181, EESS 281) For advanced undergraduates and graduate students from all fields. Seminar. Current status of and potential for global urban agriculture. Topics include: environmental and economic dimensions of urban food production and sourcing; city policy and land-use planning; and an ecosystem services approach to urban agriculture. Developed and developing world contexts. Two field trips to nearby cities; guest lectures; case studies; group projects. Attendance at first class is mandatory. Enrollment is limited. Enrollment permissions will be determined after first class meeting.

3 units, Win (Matson, P)

**EARTHSYS 282. Current Issues in Sustainable Agriculture**

(Same as EARTHSYS 182, EESS 182, EESS 282) Sustainability and ethics of animal production in the U.S. Demystification of the marketing of agricultural products. The past, present, and future of small family farms. Farm labor issues. Students lead discussions and write response papers.

2 units, not given this year

**EARTHSYS 283. Food Matters: Agriculture in Film**

(Same as EARTHSYS 183, EESS 183, EESS 283) Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

1 unit, Win (Staff)

**EARTHSYS 284. Climate and Agriculture**

(Same as EARTHSYS 184, EESS 184, EESS 284) The effects of climate change on global food and agricultural systems. Climate assessment and socioeconomic modeling approaches to quantify the impacts of climate on agro-ecosystems and society. Enrollment limited to 25; priority to graduate students, seniors, and juniors. Prerequisites: ECON 106/206.

3-4 units, Spr (Lobell, D)

**EARTHSYS 288. Social and Environmental Tradeoffs in Climate Decision-Making**

(Same as EARTHSYS 188) How can we ensure that measures taken to mitigate global climate change don't create larger social and environmental problems? What metrics should be used to compare potential climate solutions beyond cost and technical feasibility, and how should these metrics be weighed against each other? How can modeling efforts and stakeholder engagement be best integrated into climate decision making? What information are we still missing to make fully informed decisions between technologies and policies? Exploration of these questions, alongside other issues related to potential negative externalities of emerging climate solutions. Evaluation of energy, land use, and geoeengineering approaches in an integrated context, culminating in

a climate stabilization group project.

1-2 units, Win (Monroe, I; Matson, P)

#### **EARTHSYS 290. Master's Seminar**

Required of and open to Earth Systems master's students only. Discussion of topical published literature relevant to Earth systems.

2 units, Spr (Phillips, K)

#### **EARTHSYS 297. Directed Individual Study in Earth Systems**

Under supervision of an Earth Systems faculty member on a subject of mutual interest.

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EARTHSYS 298. Earth Systems Book Review**

For Earth Systems master's students and advanced undergraduates only. Analysis and discussion of selected literary nonfiction books relevant to Earth systems topics. Examples of previous topics include political presentations of environmental change in the popular press, review of the collected works of Aldo Leopold, disaster literature, and global warming.

2 units, Spr (Kennedy, J)

#### **EARTHSYS 299. M.S. Thesis**

1-9 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EARTHSYS 323. Stanford at Sea**

(Same as BIOHOPK 182H, BIOHOPK 323H, EESS 323) (Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.

16 units, alternate years, not given this year

## EARTH, ENERGY, AND ENVIRONMENTAL SCIENCES (EEES) COURSES

### GRADUATE COURSES IN EARTH, ENERGY, AND ENVIRONMENTAL SCIENCES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **EEES 302. Challenges and Practices in Crossdisciplinary Research and Teaching**

Required EEES core course. Presentations by Earth Sciences faculty. Pedagogical tools to present interdisciplinary concepts to a non-specialist audience.

1 unit, not given this year

#### **EEES 400. Research in Earth, Energy, and Environmental Sciences**

May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EEES 802. TGR Dissertation**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## EAST ASIAN STUDIES (EASTASN) COURSES

### UNDERGRADUATE COURSES IN EAST ASIAN STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **EASTASN 70SI. Critical Issues in U.S.-China Relations Today**

Multidisciplinary approach to historical factors, current events, and key issues that drive relations between the United States and China today, including: economic reform and the current financial crisis; security concerns over Taiwan, North Korea and Tibet; energy and the environment; role of NGOs and media in society; and human rights and prospects for political liberalization. Guest lectures from faculty and personal experiences from individuals who have lived or worked in China.

2 units, Spr (Staff)

#### **EASTASN 117. Health and Healthcare Systems in East Asia**

(Same as EASTASN 217) China, Japan, and both Koreas. Healthcare economics as applied to East Asian health policy, including economic development, population aging, infectious disease outbreaks (SARS, avian flu), social health insurance, health service delivery, payment incentives, competition, workforce policy, pharmaceutical industry, and regulation. No prior knowledge of economics or healthcare required.

3-5 units, Win (Eggleston, K)

#### **EASTASN 189K. Korea's Relations with Major Neighboring Countries and Its Growing Role on a Global Stage**

(Same as EASTASN 289K) Topics on Korea vary each year. Topics this year include South Korea's relations with the U.S., Japan, China, ASEAN and the EU. Focus is on South Korea's diplomatic practices during early 1990's to 2010 in dealing with pending issues with these countries and communities. In addition to required readings in English, supplemental basic readings in Korean, Japanese, and Chinese will be recommended.

3 units, Win (Staff)

#### **EASTASN 191. Journal of East Asian Studies**

(Staff)

1 unit, Aut (Wigen, K), Win (Wigen, K), Spr (Wigen, K)

### GRADUATE COURSES IN EAST ASIAN STUDIES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **EASTASN 217. Health and Healthcare Systems in East Asia**

(Same as EASTASN 117) China, Japan, and both Koreas. Healthcare economics as applied to East Asian health policy, including economic development, population aging, infectious disease outbreaks (SARS, avian flu), social health insurance, health service delivery, payment incentives, competition, workforce policy, pharmaceutical industry, and regulation. No prior knowledge of economics or healthcare required.

3-5 units, Win (Eggleston, K)

#### **EASTASN 289K. Korea's Relations with Major Neighboring Countries and Its Growing Role on a Global Stage**

(Same as EASTASN 189K) Topics on Korea vary each year. Topics this year include South Korea's relations with the U.S., Japan, China, ASEAN and the EU. Focus is on South Korea's diplomatic practices during early 1990's to 2010 in dealing with pending issues with these countries and communities. In addition to required readings in English, supplemental basic readings in Korean, Japanese, and Chinese will be recommended.

3 units, Win (Staff)

#### **EASTASN 300. Graduate Directed Reading**

Independent studies under the direction of a faculty member for which academic credit may properly be allowed. For East Asian Studies M.A. students only.

1-7 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EASTASN 330. Core Seminar: Issues and Approaches in East Asian Studies**

For East Asian Studies M.A. students only.

1 unit, Aut (Chang, G)

#### **EASTASN 390. Practicum Internship**

On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **EASTASN 801. TGR Project**

0 units, Aut (Wigen, K), Win (Wigen, K), Spr (Wigen, K), Sum (Staff)

## **ECONOMICS (ECON) COURSES**

### **UNDERGRADUATE COURSES IN ECONOMICS**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **ECON 1A. Introductory Economics A**

The economic way of thinking and the functioning of a market economy. The behavior of consumers and firms, markets for goods and inputs, and principles of international exchange. Applications and policy issues in economics. GER:DB-SocSci

5 units, Aut (Taylor, J), Win (Wright, G), Sum (Staff)

#### **ECON 1B. Introductory Economics B**

Aggregate economic relationships, including output, employment, inflation, interest rates, and exchange rates. Short-run fluctuations and long-run growth. Issues in monetary and fiscal policy. Prerequisite: 1A. GER:DB-SocSci

5 units, Win (Amador Lopez, M), Spr (Clerici-Arias, M), Sum (Staff)

#### **ECON 10. Silicon Valley Meets Wall Street**

Seminar in applied economics with focus on the microcosm of Silicon Valley, how growth companies are originated, managed and financed from start-up to IPO. Round-table discussion format. Applicable to those students with an interest in technical innovation and business development. Enrollment limited to 10 students; selection based on short application. Priority given to juniors and seniors majoring in in Economics or Engineering.

1 unit, Aut (Shanahan, T)

#### **ECON 11N. Understanding the Welfare System**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Welfare reform legislation and the devolution revolution. The transfer of responsibility for antipoverty programs to the states. How recent reforms change the welfare system and who is likely to be affected. Food stamps, AFDC, TANF, SSI, and Medicaid. Income transfer programs such as earned income tax credit and income taxes, and labor market regulations such as minimum wages and overtime rules. Economic principles to understand the effectiveness of these programs and their consequences on the behavior of families. Pre- or corequisite: ECON 1. Recommended: basic understanding of labor markets, taxes, and transfers.

2 units, Aut (MacCurdy, T)

#### **ECON 13SC. Economic Policies of the Presidential Candidates**

Modern finance theory. Financial instruments including stocks, bonds, options, mutual funds, and exchange-traded funds. Historical returns on asset classes. Equity analysis. Capital pricing model. Efficient market hypotheses. Index funds. Meetings with financial managers and venture capitalists.

2 units, not given this year

#### **ECON 17N. Energy, the Environment, and the Economy**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The relationship between environmental quality and production and consumption of energy. Can environmentally-friendly energy production and consumption compete with conventional sources? How to estimate and compare environmental impact costs of nonrenewable sources such as fossil fuels and nuclear power versus renewable sources such as solar and wind power. Implicit subsidies in conventional energy sources and the environmental costs of these subsidies. Regulatory and legal barriers to more environmentally friendly energy sources.

2 units, Spr (Wolak, F)

#### **ECON 19N. The Economics of Cities**

In most countries of the world, urban areas tend to have the highest per-worker productivity and generate most of the economic output and economic innovation. In this class, we will explore what economics has to say about the costs and benefits of urbanization. We will discuss a number of classic topics in urban economics,

including agglomeration advantages, human capital externalities, the economics of congestion, and efficient economic development policies. Prerequisite: Econ 1A

2 units, not given this year

#### **ECON 20N. Economy and Economics of Ancient Greece**

Cultural background for Athens of the 5th and 4th century BC. Strengths and weaknesses of Athenian democracy. Athenian economy of the 4th century BC. Economic ideas of Plato, Aristotle, and Xenophon. Pros and cons of utilitarianism in light of the ethical theories of Plato and Aristotle. GER:EC-GlobalCom

3 units, not given this year

#### **ECON 20SI. Sustainability from the Economic Perspective**

In spite of its apparent universal popularity, environmental sustainability is a concept that is impossible to define objectively. Nevertheless, many aspects of economic activity reduce the quality of environmental services available to consumers. The local and global pollutants that result from the production and consumption of fossil fuels is perhaps the most highly publicized example of this phenomenon. However, virtually all aspects of modern economic activity degrade some aspect of available environmental services. Consequently, a major challenge to increasing the share of the world's population with a modern standard of living is the need to balance the adverse impacts of modern economic activity on all of the dimensions of environmental services. This course will analyze the full range of mechanisms available to manage these tradeoffs. The course will focus on solutions from business, government, and the non-profit sectors. Guest speakers will include venture capitalists, consul

1-2 units, not given this year

#### **ECON 50. Economic Analysis I**

Individual consumer and firm behavior under perfect competition. The role of markets and prices in a decentralized economy. Monopoly in partial equilibrium. Economic tools developed from multivariable calculus using partial differentiation and techniques for constrained and unconstrained optimization. Prerequisites: 1A and MATH 51(must be taken for a letter grade). GER:DB-Math

5 units, Aut (Tendall, M), Spr (Tendall, M), Sum (Staff)

#### **ECON 51. Economic Analysis II**

Neoclassical analysis of general equilibrium, welfare economics, imperfect competition, externalities and public goods, intertemporal choice and asset markets, risk and uncertainty, game theory, adverse selection, and moral hazard. Multivariate calculus is used. Prerequisite: 50.

5 units, Aut (Clerici-Arias, M), Win (Scheuer, F), Sum (Staff)

#### **ECON 52. Economic Analysis III**

Long-run economic growth and short-run economic fluctuations. Focus on the macroeconomic tools of government: fiscal policy (spending and taxes) and monetary policy, and their effects on growth, employment, and inflation. Prerequisites: 1B, 50.

5 units, Win (Kurlat, P), Spr (Staff), Sum (Staff)

#### **ECON 90. Introduction to Financial Accounting**

(Same as ECON 190) How to read, understand, and use corporate financial statements. Oriented towards the use of financial accounting information (rather than the preparer), and emphasizes the reconstruction of economic events from published accounting reports.

5 units, Aut (Stanton, F), Win (Stanton, F)

#### **ECON 91. Introduction to Cost Accounting**

(Same as ECON 191) The use of internal financial data for managerial decision making.

5 units, Spr (Staff)

#### **ECON 101. Economic Policy Analysis**

Economic policy analysis, writing, and oral presentation. Topics vary with instructor. Limited enrollment. Prerequisites: 51 and 52, 102B, and two field courses. Some sections require additional prerequisites. WIM

5 units, Aut (Steiner, F), Win (Steiner, F), Spr (Steiner, F)

#### **ECON 102A. Introduction to Statistical Methods (Postcalculus) for Social Scientists**

Description and examples of the use of statistical techniques relevant to economics. Basic rules of probability, conditional probability, discrete and continuous probability distributions. Point estimation, tests of hypotheses, confidence intervals, and linear

regression model. Prerequisite: MATH 41 or equivalent. GER:DB-Math

5 units, *Aut (McKeon, S), Win (McKeon, S), Spr (McKeon, S)*

### **ECON 102B. Introduction to Econometrics**

Descriptive statistics. Regression analysis. Hypothesis testing. Confidence regions. Simultaneous equation models. Instrumental variables. Panel data. Limited dependent variables. Time series. Prerequisites: 50, 102A or equivalent. Recommended: computer experience.

5 units, *Win (Harding, M), Spr (Mahajan, A)*

### **ECON 102C. Advanced Topics in Econometrics**

Identification and estimation of the effect of human capital variables on earnings (such as the return to education, tenure). The evaluation problem. Identification and estimation of social interactions. Topics: instrumental variable estimation, limited dependent variable models (probit, logit, and Tobit models), panel data techniques (fixed effect and random effect models, dynamic panel data models), introduction to non-parametric methods.

5 units, *Spr (DeGiorgi, G)*

### **ECON 103. Applied Econometrics**

The construction and use of econometric models for analyzing economic phenomena. Students complete individual projects and core material. Topics vary with the instructor. Enrollment restricted to Juniors and Seniors. Limited enrollment. Prerequisites: 52, 102B.

5 units, *not given this year*

### **ECON 104. Econometrics Applied to Macroeconomics and Finance**

Seminar in quantitative analysis of issues relating to the overall performance of the American and global economies. Emphasis on the recent economic crisis. Requires the execution and presentation of an original research paper using econometric techniques. Prerequisites: Econ 51, 52, 102B. Recommended: Econ 140. Limited enrollment.

5 units, *not given this year*

### **ECON 106. World Food Economy**

(Same as EARTHSYS 106, EESS 106) The interrelationships among food, populations, resources, and economic development. The role of agricultural and rural development in achieving economic and social progress in low-income nations. Emphasis is on public sector decision making as it relates to food policy.

5 units, *Win (Naylor, R; Falcon, W)*

### **ECON 111. Money and Banking**

Money, interest rates, banks and other financial institutions at both micro and macro levels. Micro: alternative financial instruments, the determination of interest rates, the yield curve, and the role of banks and other capital market institutions in the intermediation process. Supply of money, regulation, and supervision. Macro: the choice of monetary policy by the central bank, the impact of monetary policy making institutions on this choice and the various channels through which monetary policy affects inflation and real variables in the economy. Emphasis is on the institutional structure of Federal Reserve System and the conduct of monetary policy in the U.S. Prerequisites: 50, 52.

5 units, *Win (Schneider, K), Sum (Staff)*

### **ECON 113. Economics of Innovation**

(Same as PUBLPOL 354) The modern, knowledge-based economy characterized by: rapid innovation; a dramatic increase in the rate of production of information and decline in the cost of producing it; and pervasive network externalities or increasing returns to scale. Emphasis is on the role of patents and alternative mechanisms for creating incentives for firms to innovate. Topics include: why there may be too much innovative activity; how patent laws may slow rather than help innovation; and the interaction between public and private sector innovation. Prerequisites: 51, 102B.

5 units, *Spr (Moser, P)*

### **ECON 114. Economy and Economics of Ancient Greece**

Cultural and political background for Athens of the 5th and 4th century BC. Athenian economy of the 4th century BC. Economic ideas of Plato, Aristotle, and Xenophon. Pros and Cons of utilitarianism in light of the ethical theories of Plato and Aristotle. Economy and economics of ancient Greece will be compared to the same of ancient China. There is an interesting parallel.

GER:EC-GlobalCom

5 units, *Win (Amemiya, T)*

### **ECON 115. European Economic History**

Economic changes and growth in W. Europe from antiquity to the present. The transformation of Europe from an economically and culturally backward part of the world to the center of the pre-WW I world economy. Topics: the role of techniques and sciences, variations of the extent of market activities, institutional changes, international politics, demography. Prerequisites: 51, 52. GER:DB-SocSci

5 units, *not given this year*

### **ECON 116. American Economic History**

(Same as AMSTUD 116) The American economy from colonial times to the present, illustrating the role of history in economic life. Topics: U.S. economic development in global and comparative context; slavery as an economic system; origins and consequences of the American technology and business organization; economics of the Great Depression and New Deal; post-World War II economic performance and social change; recent U.S. economic record in historical perspective. Prerequisite: 1A. GER:DB-SocSci, EC-AmerCul

5 units, *Spr (Wright, G)*

### **ECON 117. Economic History and Modernization of the Islamic Middle East**

From the rise of Islam to the present. Transformation of region from economically advanced to underdeveloped. Role of religion in economic successes and failures. Current obstacles to development. Topics: Islamic economic institutions; innovation and change; political economy of modernization; interactions with other regions; and economic consequences of Islamism. Prerequisites: ECON 51, 52, 102B.

5 units, *not given this year*

### **ECON 118. Development Economics**

The economic problems and policy concerns of developing countries. Theories of growth and development; inequality and poverty; credit and labor markets; health and education; politics and corruption. Emphasis is on economic models and econometric evidence rather than case studies. Prerequisites: 52, 102B. GER:EC-GlobalCom

5 units, *Aut (Blimpo, M)*

### **ECON 119. The Russian Economy**

(Same as REES 119, REES 219) Brief introduction to the economic history of Russia, general overview of the modern Russian economy with analysis of its macroeconomic features and dynamics, industrial structure, and the major institutional features that are important for understanding Russian economic development. The period of transition from Soviet-type planned economy to a market economy and market reforms (1991-1998), the period of economic growth (1999-2007), and the economic development of Russia during the current global crisis of 2008-2010. Analysis of Russia's social structure and social policy, labor markets, the regional structure of the economy, the role of the state, and major Russian industries (oil, metals, machinery). Emphasis on the specific institutional aspects that have shaped Russia's economic development.

4-5 units, *not given this year*

### **ECON 120. Socialist Economies in Transition**

Privatization, restructuring, and institutional change in E. Europe and the former Soviet Union. Analysis of property rights, corporate governance, incentives, and resource allocation in socialist and transitional economies. Emphasis is on liberalization and privatization policies (including mass and voucher programs) as the primary instruments to induce changes in behavior. Prerequisite: 50. Recommended: 51.

5 units, *not given this year*

### **ECON 123. Regulation and Competition in Less Developed Countries**

The economics and workings of public intervention, control and liberalization of markets in less developed countries. Topics: natural monopoly regulation; institutions and regulatory commitment; infrastructure concessions; regulation and competition in network industries such as telecoms and electricity; liberalization of markets and competition policy; competition and efficiency; antitrust with a weak judiciary. Prerequisite: 51.

5 units, not given this year

#### **ECON 124. Contemporary Japanese Economy**

Comparative and historical perspective. Micro and institutional aspects, such as firms, the employment system, corporate governance and financial institutions, and the macro economy. Elementary applications of macro- and microeconomics. Prerequisite: 50. GER:EC-GlobalCom

5 units, not given this year

#### **ECON 126. Economics of Health and Medical Care**

(Same as BIOMEDIN 156, BIOMEDIN 256, HRP 256) Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; socioeconomic status and epidemiology; economics of obesity. Graduate students with research interests should take ECON 248. Prerequisites: ECON 50 and ECON 102A or Stats 116 or the equivalent. Recommended: ECON 51.

5 units, Aut (Bhattacharya, J)

#### **ECON 127. Economics of Health Improvement in Developing Countries**

(Same as MED 262) Application of economic paradigms and empirical methods to health improvement in developing countries. Emphasis is on unifying analytic frameworks and evaluation of empirical evidence. How economic views differ from public health, medicine, and epidemiology; analytic paradigms for health and population change; the demand for health; the role of health in international development. Prerequisites: ECON 50 and 102B.

5 units, Win (Miller, N)

#### **ECON 135. Finance for Non-MBAs**

(Same as MS&E 245G) For graduate students and advanced undergraduates. The foundations of finance; applications in corporate finance and investment management. Financial decisions made by corporate managers and investors with focus on process valuation. Topics include criteria for investment decisions, valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the valuation of derivative securities. Corporate financial instruments including debt, equity, and convertible securities. Equivalent to core MBA finance course, FINANCE 220. Prerequisites: ECON 51, or ENGR 60, or equivalent; ability to use spreadsheets, and basic probability and statistics concepts including random variables, expected value, variance, covariance, and simple estimation and regression.

3-5 units, Aut (Perez-Gonzalez, F), Win (Admati, A)

#### **ECON 136. Market Design**

Use of economic theory and analysis to design allocation mechanisms and market institutions. Course focuses on three areas: the design of matching algorithms to solve assignment problems, with applications to school choice, entry-level labor markets, and kidney exchanges; the design of auctions to solve general resource allocation problems, with applications to the sale of natural resources, financial assets, and advertising; and the design of platforms and exchanges, with applications to internet markets. Emphasis on connecting economic theory to practical applications. Students must write term paper. Prerequisites: recommended: 51.

5 units, Aut (Levin, J)

#### **ECON 137. Information and Incentives**

Effective decision models consider a decision maker's alternatives, information and preferences. The construction of such models in single-party situations with emphasis on the role of information. The course then evolves to two-party situations where one party has more information than the other. The general structure of such problems and the design of contracts to create compatible incentives between the parties. Situations involving moral hazard, adverse selection and signaling with a variety of applications. Prerequisite: 51

5 units, Spr (McKeon, S)

#### **ECON 138. Risk and Insurance**

The nature of economic risk, its effect on allocation of resources and how public policy should be conducted in markets for risk. Preferences among risky prospects: expected utility theory and the theory of risk aversion. Allocation of risk using markets for

contingent claims vs. insurance pools in economies with complete information. The functioning of insurance markets when information is asymmetric, under moral hazard and adverse selection. Can insurance markets function well in a competitive equilibrium and what should be public policy in markets such as medical insurance? Role of asset markets in allocating risk. Hedging strategies using futures markets, options and other derivative assets. The role of risk taking in the 2007-2008 financial crises. Prerequisite: 50.

5 units, Win (Kurz, M)

#### **ECON 139D. Directed Reading**

May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **ECON 140. Introduction to Financial Economics**

Modern portfolio theory and corporate finance. Topics: present value and discounting, interest rates and yield to maturity, various financial instruments including financial futures, mutual funds, the efficient market theory, basic asset pricing theory, the capital asset pricing model, and models for pricing options and other contingent claims. Use of derivatives for hedging. Prerequisites: 51, 102A.

5 units, Spr (Shoven, J)

#### **ECON 141. Public Finance and Fiscal Policy**

(Same as PUBLPOL 107) What role should and does government play in the economy? What are the effects of government spending, borrowing, and taxation on efficiency, equity and economic growth? The course covers economic analysis, statistical evidence and historical and current fiscal policy debates in the U.S. and around the world. Policy topics: budget surpluses/deficits; tax reform; social security, public goods, and externalities; fiscal federalism; public investment; and cost-benefit analysis. Prerequisites: 51, 52 (can be taken concurrently).

5 units, Spr (Boskin, M)

#### **ECON 144. Family Economics**

Topics at the intersection of economics and demography. Causes and consequences of historical trends such as the demographic transition, the increase in female labor force participation and its macroeconomic implications, the connection between economic development and family laws (child labor laws, women's rights), and policies affecting families and children (such as parental leave policies, social security policy, education subsidies). Economic models of household bargaining, fertility choice, and intergenerational transfers. Prerequisites: 51.

5 units, not given this year

#### **ECON 145. Labor Economics**

Analysis and description of labor markets. Determination of employment, unemployment, hours of work, wages. Welfare programs and work effort. Wage differentials by schooling, experience, gender, and race. Economics of discrimination. Earnings inequality and changes in inequality. Employment contracts, labor unions, and bargaining. International comparisons. Prerequisites: 51, 102B. GER:EC-Gender

5 units, Aut (Pencavel, J)

#### **ECON 146. Economics of Education**

How a decision to invest in education is affected by factors including ability and family background. Markets for elementary and secondary schooling; topics such as vouchers and charter schools, accountability, expenditure equalization among schools, and the teacher labor market. The market for college education emphasizing how college tuition is determined, and whether students are matched efficiently with colleges. How education affects economic growth, focusing on developing countries. Theory and empirical results. Application of economics from fields such as public economics, labor economics, macroeconomics, and industrial organization. Prerequisites: 50, 102B.

5 units, Win (Hoxby, C)

#### **ECON 147. Economics of Human Resources**

Issues in the economics of human beings including the organization of work inside firms, the link between family background and adult outcomes, the operation of some cooperative organizations, the economic analysis of inequality, and the association between health and income. Prerequisite: 51.

5 units, Win (Pencavel, J)

#### **ECON 149. The Modern Firm in Theory and Practice**

Combines the latest theory and empirics on the modern firm.

Theoretical topics will include transactions cost theory, contract theory and incentives. Applied topics include the organization of firms in US and internationally. Management practices around information systems, target setting and human resources. Focus on management practices in manufacturing, but also analyze retail, hospitals and schools, plus some recent field-experiments in developing countries. Prerequisites: Econ 51, 102B

*5 units, Win (Bloom, N; Milgrom, P)*

#### **ECON 150. Economic Policy Analysis**

(Same as PUBLPOL 104, PUBLPOL 204) The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50, and 102B.

*5 units, Win (Rosston, G; Clemens, J)*

#### **ECON 153. Economics of the Internet**

Economic models and tools used to understand online market phenomena, including standards, network and platform economics, online transactions, advertising, auctions, information, communications, and networking. The contemporary economics literature on internet markets and mobile communications markets. Public policy issues in competition policy, communication policy, and support for innovation. Prerequisites: 51 and 102B.

*5 units, Win (Bresnahan, T)*

#### **ECON 154. Economics of Legal Rules and Institutions**

(Same as PUBLPOL 106, PUBLPOL 206) Design and consequences of laws, given alternative policy objectives. Welfare approach to legal policy; deontological perspectives including Kant, Locke, Mill, and Rawls. Economic efficiency and agent rationality, law as mitigation of market and cognitive failures, effects of law on expectations and incentives, balancing costs of type I and type II legal errors. Empirical studies of law's effects. Applications: property, tort, contract, antitrust, discrimination, crime, legal procedure. Examples chiefly from U.S. law, but analytical tools of general applicability. Prerequisite: ECON 50.

*4-5 units, Aut (Owen, B)*

#### **ECON 155. Environmental Economics and Policy**

Economic sources of environmental problems and alternative policies for dealing with them (technology standards, emissions taxes, and marketable pollution permits). Evaluation of policies addressing regional air pollution, global climate change, water allocation in the western U.S., and the use of renewable resources. Connections between population growth, economic output, environmental quality, and human welfare. Prerequisite: ECON 50. GER: DB-NatSci

*5 units, Win (Goulder, L)*

#### **ECON 156. Marine Resource Economics and Policy**

(Same as EARTHSYS 156M) Economic, political, and institutional frameworks for understanding the causes and potential solutions to marine resource problems. Marine policy formation, implementation and evaluation. Applications include: offshore energy production, managing fisheries, marine spatial planning, protecting biodiversity, and ocean recreation. Prerequisite: Econ 1A

*5 units, not given this year*

#### **ECON 157. Imperfect Competition**

The interaction between firms and consumers in markets that fall outside the benchmark competitive model. How firms acquire and exploit market power. Game theory and information economics to analyze how firms interact strategically. Topics include monopoly, price discrimination, oligopoly, collusion and cartel behavior, anti-competitive practices, the role of information in markets, anti-trust policy, and e-commerce. Sources include theoretical models, real-world examples, and empirical papers. Prerequisite: 51.

*5 units, not given this year*

#### **ECON 158. Regulatory Economics**

The history, economics, and legal background of the institutions

under which U.S. industry is subject to government control. Topics: economics and practice of public utility regulation in the communications, television, transportation, energy, and postal delivery sectors and health and safety regulation. Emphasis on the application of economic concepts in evaluating the performance and policies of government agencies. Antitrust law will be introduced and discussed where necessary. Prerequisite: 51 or equivalent intermediate microeconomics course.

*5 units, not given this year*

#### **ECON 160. Game Theory and Economic Applications**

Introduction to game theory and its applications to economics. Topics: strategic and extensive form games, dominant strategies, Nash equilibrium, subgame-perfect equilibrium, Bayesian equilibrium, and behavioral game theory. The theory is applied to repeated games, voting, auctions, and bargaining with examples from economics and political science. Prerequisites: 51 and course in calculus.

*5 units, Spr (Jackson, M)*

#### **ECON 162. Monetary Economics**

Dynamic analysis of the role of money and monetary policy in the macro economy, using calculus. Topics: the exchange process and the role of money; inflation, the inflation tax, and hyperinflation; costs of inflation; monetary policy: rules vs discretion; inflation targeting; international monetary unions; the indeterminacy of floating exchange rates; money and interest-bearing government debt; the government's budget constraint and the coordination of monetary and fiscal policies; the effect of the national debt on consumption, savings, investment and output; time consistency of government policies; the financial crisis and unconventional monetary policy.. Prerequisite: 52.

*5 units, Aut (Hafstead, M)*

#### **ECON 165. International Finance**

Introduction to international macroeconomics. Topics: intertemporal approach to the current account, international investment patterns, sovereign debt, crises in international financial markets, real and nominal exchange rate determination and exchange rate policy. Prerequisite: ECON 52.

*5 units, Aut (Fitzgerald, D), Sum (Staff)*

#### **ECON 166. International Trade**

Different sources of comparative advantage in production and trade among nations. Aggregate gains from trade, winners and losers from globalization. International migration, outsourcing and multinational companies. Trade policy and international trade agreements. Theory, empirical evidence, and real-life anecdotes. Lectures supplemented by in-class debates on current topics from the popular press. Prerequisite: 51.

*5 units, Spr (Manova, K)*

#### **ECON 167. European Monetary and Economic Integration**

The economics of the European Community and the internal market. Analysis of current competition, transportation, and factor market policies, including the problems of agriculture and unemployment. Fiscal harmonization and mercantilist rivalry. European Monetary Union (EMU): genesis, implementation, and consequences of a common currency and central bank. Foreign exchange and foreign trade. Prerequisites: 51, 52, or equivalents.

*5 units, not given this year*

#### **ECON 168. International Finance and Exchange Rates**

(Same as ECON 268) (Graduate students register for 268.) Monetary foundations of international exchange; the rules of the game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity relationships. International capital flows and the current account. Global trade imbalances; China and Japan versus the U.S. Inflation versus exchange rate targeting in developing countries. Prerequisite for undergraduates: 50; recommended: 165.

*5 units, Win (McKinnon, R)*

#### **ECON 179. Experimental Economics**

Methods and major subject areas that have been addressed by laboratory experiments. Focus is on a series of experiments that build on one another. Topics include decision making, two player games, auctions, and market institutions. How experiments are used to learn about preferences and behavior, trust, fairness, and learning. Final presentation of group projects. Prerequisites: 50, 51, 102A.

5 units, Win (Niederle, M)

**ECON 190. Introduction to Financial Accounting**

(Same as ECON 90) How to read, understand, and use corporate financial statements. Oriented towards the use of financial accounting information (rather than the preparer), and emphasizes the reconstruction of economic events from published accounting reports.

5 units, Aut (Stanton, F), Win (Stanton, F)

**ECON 191. Introduction to Cost Accounting**

(Same as ECON 91) The use of internal financial data for managerial decision making.

5 units, Spr (Staff)

**ECON 198. Junior Honors Seminar**

(Same as PUBLPOL 197) Primarily for students who expect to write an honors thesis. Weekly sessions discuss writing an honors thesis proposal (prospectus), submitting grant applications, and completing the honors thesis. Readings focus on writing skills and research design. Students select an adviser, outline a program of study for their senior year, and complete a prospectus by the end of the quarter. Enrollment limited to 25.

5 units, Spr (Rothwell, G)

**ECON 199D. Honors Thesis Research**

In-depth study of an appropriate question and completion of a thesis of very high quality. Normally written under the direction of a member of the Department of Economics (or some closely related department). See description of honors program. Register for at least 1 unit for at least one quarter. Meets first week of Autumn Quarter.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GRADUATE COURSES IN ECONOMICS**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**ECON 202. Core Economics: Modules 1 and 2**

(Non-Economics graduate students register for 202N.) Open to advanced undergraduates with consent of instructors. Theory of the consumer and the implications of constrained maximization; uses of indirect utility and expenditure functions; theory of the producer, profit maximization, and cost minimization; behavior under uncertainty; partial equilibrium analysis and introduction to models of general equilibrium. Limited enrollment. Prerequisite: thorough understanding of the elements of multivariate calculus and linear algebra.

2-5 units, Aut (Segal, I)

**ECON 202N. 202 For Non-Economics Ph.D. Students**

Core Economics modules 1 and 2 for non-Economics Ph.D. students.

2-5 units, Aut (Handley, K)

**ECON 203. Core Economics: Modules 5 and 6**

(Non-Economics graduate students register for 203N.) Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities and public goods. The theory of imperfect competition: static Bertrand and Cournot competition, dynamic oligopoly, entry decisions, entry deterrence, strategic behavior to alter market conditions. Limited enrollment. Prerequisite: 202.

2-5 units, Win (Bernheim, D)

**ECON 203N. 203 For Non-Economics Ph.D. Students**

Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities, public goods, and asymmetric information. The theory of imperfect competition and other applications. Limited enrollment. Prerequisite: 202N or consent of instructor.

2-5 units, Win (Staff)

**ECON 204. Core Economics: Modules 9 and 10**

The theory of contracts, emphasizing contractual incompleteness and the problem of moral hazard. Incentive regulation. Competition with imperfect information, including signaling and adverse selection. The theory of resource allocation over time, competitive equilibrium, and intertemporal efficiency. Limited enrollment. Prerequisite: 203.

2-5 units, Spr (Jackson, M)

**ECON 210. Core Economics: Modules 3 and 7**

Dynamic economics applied to aggregate economic fluctuations and economic growth. Solving dynamic, stochastic rational expectation models using discrete time dynamic programming. Growth theory (neoclassical models, growth accounting, technical change, endogenous growth) using optimal control theory. Limited enrollment.

2-5 units, Aut (Amador Lopez, M; Klenow, P)

**ECON 211. Core Economics: Modules 11 and 12**

Investment theory and empirics, including adjustment costs and the q theory; consumption theory and empirics, focusing on the life-cycle model; and the labor market. Macro economics of financial markets. Limited enrollment. Prerequisite: 210.

2-5 units, Win (Piazzesi, M; Schneider, K)

**ECON 212. Core Economics: Modules 4 and 8**

General equilibrium with incomplete markets: precautionary savings; income, wealth, and consumption distribution; constrained efficiency. Endogenous market incompleteness: limited commitment, moral hazard, hidden income and hidden savings; recursive contracts. Optimal income taxation: the primal approach; taxation of capital income; optional taxation with heterogeneity; commitment and time inconsistency. Monetary theory and policy: time series techniques to characterize and evaluate policy; models with rational expectations and rigidities; the Lucas critique; time inconsistency; staggered price and wage setting; optimal policy rules; the term structure of interest rates. Limited enrollment. Prerequisites: 203, 211.

2-5 units, Spr (Taylor, J; Kurlat, P)

**ECON 214. Development Economics I**

Consumption smoothing and insurance. Lack of enforceability and imperfect (partial) insurance. Social networks and informal institutions. Evaluation of policy interventions in developing countries. Joint liability and micro-credit. Institutions and the process of development. Climate change. Prerequisites: 202 or 202N, 270.

2-5 units, Win (DeGiorgi, G)

**ECON 215. Economic Development**

Microeconomic analysis of markets and institutions in developing countries. Topics: agriculture; insurance, credit and saving; health and nutrition; education; public service delivery. Emphasis is on empirical tests of and evidence for theoretical models. Prerequisites: 202 or 202N.

2-5 units, Spr (Staff)

**ECON 216. Development Economics III**

Use of quantitative theory to understand various aspects of the growth and development process. Emphasis on family and demographic issues and their importance for development. Theoretical models of fertility and marriage decisions, and their empirical relevance. Unified growth theories: demographic transition and industrial revolution. Family institutions such as marriage payments and polygamy. The political economy of family-related institutions, e.g. the evolution of women's and children's rights. Female labor supply and development. Theories of disease and development. Prerequisite: 202, 203, 204, 210, 211, 212, 270, 271, 272.

2-5 units, not given this year

**ECON 217. Topics in Latin American Macroeconomics and Development**

Banking systems, interest rates, regulatory policies, and the productivity of capital in developing countries. Controlling inflation: fiscal and monetary policies for macroeconomic stability. Currency crises, exchange rates, and the liberalization of foreign trade. Further applications to transitional socialist economies in Asia and E. Europe.

2-5 units, Win (Neumeyer, P)

**ECON 220. Political Economy I**

Positive and normative theories of political economy. Positive topics include direct democracy, electoral competition, legislative policy making, agenda setting, lobbying, comparative constitutions, and intergenerational politics, with applications to income taxation, redistribution, and the size of government. Normative topics include social choice theory with and without interpersonal comparisons, Pareto efficiency with public goods,

potential Pareto improvements, welfare measurement, cost benefit analysis, and analysis of economic policy reform.

2-5 units, not given this year

### **ECON 221. Political Economy II**

Continuation of 220. Preparation for advanced research in applied political economy. Focus is on econometric methods (panel data, IV, treatment estimation, nonlinear models, random coefficients, duration models, factor analysis) with applications to economic and political development, economic voting, war and economic interdependence, corruption, legislative behavior, and social networks.

2-5 units, not given this year

### **ECON 224. Science, Technology, and Economic Growth**

Upper-division undergraduates may enroll with consent of instructor. The roles played by the growth of scientific knowledge and technical progress in the development of industrial societies. Emphasis is on the interactions between science and technology, and the organizational factors which have influenced their effectiveness in contributing to productivity growth.

2-5 units, not given this year

### **ECON 225. Economics of Technology and Innovation**

Theoretical and empirical analysis of innovation. Topics include optimal design of patents laws and alternative mechanisms to create incentives for innovation, such as technology transfer to developing countries, (compulsory) licensing, and patent pools. Emphasis on empirical analyses of both historical and contemporary data.

2-5 units, Spr (Moser, P)

### **ECON 226. U.S. Economic History**

The role of economic history as a distinctive approach to the study of economics, using illustrations from U.S. history. Topics: historical and institutional foundations of the U.S. rise to world economic preeminence; economic causes and consequences of slavery; the origins and character of national systems of technology; the Great Depression of the 30s.

2-5 units, not given this year

### **ECON 227. European Economic History**

European economic history from middle ages to the twentieth century. Topics: competing hypotheses in explaining long term trends in economic growth and cross-country differences in long-term economic growth; formation, function, and persistence of institutions and organizations; the role of institutions and organizations (e.g. apprenticeship, servitude, partnerships, cooperatives, social networks, share cropping, and communes) as solutions to contractual problems; the economics of migration; the changing economic role of the family. Use of economic theory in guiding hypothesis testing, as well as construction of new datasets and the execution of empirical analysis.

2-5 units, Aut (Abramitzky, R)

### **ECON 228. Institutions and Organizations in Historical Perspective**

Emphasis is on the formative period from the 11th to 18th centuries. Formation, function, and evolution of institutions; alternative conceptual frameworks such as neoclassical, transaction cost economics, institutionalism, and Marxism and neo-Marxism; game theory, mechanism design, and contract theory. Institutions related to trade organization, the organization of production, feudalism, mercantilism, and the state.

2-5 units, Win (Greif, A)

### **ECON 229. Topics in Economic History**

Emphasis is on institutions and organizations, such as risk-sharing organizations, and property rights, such as patent laws and their effects on technological change and economic growth. Topics include: competing hypotheses for cross-country differences in long-term growth; the importance of institutions to economic growth; formation, function, and persistence of institutions and organizations; role of patent laws in creating incentives for innovation; informal networks as a mechanism to trade property rights; causes and effects of institutional change; tests of contract theory in history; and long-term migration and its effect on economic development.

2-5 units, not given this year

### **ECON 233. Advanced Macroeconomics I**

Topics in the theory and empirics of economic growth.

2-5 units, Aut (Klenow, P)

### **ECON 234. Advanced Macroeconomics II**

Modern macroeconomics of aggregate fluctuations in advanced economies, concentrating mainly on the U.S. Current research on sovereign debt, fiscal policy and financial flows, with emphasis on current events. The bulk of the entire course will involve the study of recent research papers.

2-5 units, Win (Hall, R; Amador Lopez, M)

### **ECON 235. Advanced Macroeconomics III**

Current topics to prepare student for research in the field. Recent research in labor-market friction, reallocation, fluctuations, wage and price determination, innovation, and productivity growth. Research methods, presentations skills, and writing in advanced economics.

2-5 units, Spr (Kurlat, P)

### **ECON 236. Financial Economics I**

Tools: solving choice problems and equilibrium models with multiple risky assets, many agents, and frictions. Applications: household finance (including housing and mortgage choice); risk sharing and financial innovation; economies; trading volume; international capital flows and financial market integration. Prerequisites: 210, 211, 212.

2-5 units, Win (Schneider, K; Piazzesi, M)

### **ECON 237. Financial Economics II**

Topics in financial Economics. Discussion of recent academic papers on asset pricing. Student presentations and course paper requirement. Designed for second year PhD students in economics or finance.

2-5 units, Spr (Staff)

### **ECON 239D. Directed Reading**

May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **ECON 241. Public Finance and Taxation I**

Optimal taxation and design of tax/income transfer systems, including incidence and efficiency. Social welfare. Externalities and public goods. Local public economics, fiscal federalism, and education finance. Prerequisites: 202-204, 210, 270, 271, or equivalent with consent of instructor.

2-5 units, Win (Hoxby, C; Scheuer, F)

### **ECON 242. Public Finance and Taxation II**

Topics concerning dynamic taxation, including capital income taxation, taxation and saving, and corporate income taxation. Public expenditures, including government interventions in private insurance markets, adverse selection, optimal unemployment insurance design, and health economics. Prerequisites: 202, 203, 204, 210, 270, 271, or equivalent with consent of instructor. Recommended: 241.

2-5 units, Spr (Scheuer, F; Bernheim, D)

### **ECON 246. Labor Economics I**

The demand for workers and hours of work, substitution among different types of labor in production, technological change, adjustment costs, restrictions on layoffs. The supply of labor, hours of work, participation, life-cycle models of behavior, welfare programs. Wage differentials by schooling, age, cohort, gender, and race. Changes in these wage differentials and differences across countries. Economics of discrimination. Income inequality. Employment contracts and turnover. Models of labor union behavior. Bargaining. Worker-owned enterprises.

2-5 units, Aut (Pencavel, J)

### **ECON 247. Labor Economics II**

Recent topics in applied micro, focusing on top papers from the last five years. Skill-biased technical change, discrimination, media bias, management, pollution, culture, development and peer effects. Combination of student and faculty presentations. Additional sessions on general presentations, paper writing and research skills, as well as practical Stata sessions on estimation procedures and tricks. Short presentation of research idea required.

2-5 units, Win (Bloom, N)

### **ECON 248. Labor Economics III**

Topics in current applied microeconomic research including skill-biased technical change, income distribution, program evaluation, job search, migration, consumption behavior. Student and faculty presentations

2-5 units, not given this year

### **ECON 250. Environmental Economics**

Theoretical and empirical analysis of sources of and solutions to environmental problems, with application to local pollution challenges and global environmental issues such as climate change. Topics include: analysis of market failure, choice of environmental policy instruments, integrating environmental and distortionary taxes, environmental policy making under uncertainty, valuing environmental amenities, and measuring/promoting sustainable development.

2-5 units, Spr (Goulder, L; Sanders, N)

### **ECON 251. Natural Resource and Energy Economics**

Management and provision non-renewable and renewable natural resources, with considerable attention to energy provision and use. Topics include: fisheries problems and policy; energy industry market structure, pricing, and performance; and policies to facilitate transitions from non-renewable to renewable energy. Prerequisites: 202, 203, 204, 271, and 272, or equivalents with consent of instructor.

2-5 units, Win (Goulder, L)

### **ECON 257. Industrial Organization 1**

Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; price discrimination; price dispersion and consumer search; differentiated products; the role of information in markets, including insurance and adverse selection; auctions; collusion and cartel behavior; advertising; entry and market structure; market dynamics; strategic behavior.

2-5 units, Aut (Einav, L; Bresnahan, T)

### **ECON 258. Industrial Organization 2A**

Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; collusion and cartel behavior; advertising; signaling; auctions; financial markets.

2-5 units, Win (Kastl, J; Bagwell, K)

### **ECON 259. Industrial Organization II B**

Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; economics of antitrust and regulation, with focus on energy and environmental economics; the role of information asymmetries in markets; adverse selection and moral hazard, with focus on insurance and credit markets.

2-5 units, not given this year

### **ECON 260. Industrial Organization III**

Current research and policy questions in industrial organization. Course combines lectures by the instructors with student presentations, with an emphasis on initiating dissertation research in industrial organization. Prerequisites: 257, 258.

2-5 units, Spr (Einav, L; Bresnahan, T)

### **ECON 265. International Economics I**

International macroeconomics and finance, emphasizing current research. The course is organized around the role of different types of frictions (in asset and goods markets) in explaining features of the international macroeconomy. Prerequisites: 202, 203, 204, 210, 211, 212.

2-5 units, Aut (Fitzgerald, D)

### **ECON 266. International Economics II**

Commercial policies, unilateral trade policies, political economy of trade policy and the economics of trade agreements. Trade with perfectly and imperfectly competitive markets.

2-5 units, Win (Bagwell, K)

### **ECON 267. Topics in International Trade**

Topics from the frontier of current international trade research, presented through recent theoretical and empirical papers. Firm heterogeneity in trade and firms' export decisions. Different types of foreign direct investment. Multinational firms and the interaction between international trade and the theory of the firm. Institutional frictions and their effects on trade and FDI activity. Course goal is to prepare students for doing research in international trade and related fields.

2-5 units, Spr (Manova, K)

### **ECON 268. International Finance and Exchange Rates**

(Same as ECON 168) (Graduate students register for 268.)

Monetary foundations of international exchange; the rules of the game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity relationships. International capital flows and the current account. Global trade imbalances; China and Japan versus the U.S. Inflation versus exchange rate targeting in developing countries. Prerequisite for undergraduates: 50; recommended: 165.

5 units, Win (McKinnon, R)

### **ECON 270. Intermediate Econometrics I**

Probability, random variables, and distributions; large sample theory; theory of estimation and hypothesis testing. Limited enrollment. Prerequisites: math and probability at the level of Chapter 2, Paul G. Hoel, Introduction to Mathematical Statistics, 5th ed.

2-5 units, Aut (Hong, H)

### **ECON 271. Intermediate Econometrics II**

Linear regression model, relaxation of classical-regression assumptions, simultaneous equation models, linear time series analysis. Limited enrollment. Prerequisite: 270.

2-5 units, Win (Wolak, F)

### **ECON 272. Intermediate Econometrics III**

Continuation of 271. Nonlinear estimation, qualitative response models, limited dependent variable (Tobit) models. Limited enrollment. Prerequisite: 271.

2-5 units, Spr (MaCurdy, T)

### **ECON 273. Advanced Econometrics I**

Possible topics: parametric asymptotic theory. M and Z estimators. General large sample results for maximum likelihood; nonlinear least squares; and nonlinear instrumental variables estimators including the generalized method of moments estimator under general conditions. Model selection test. Consistent model selection criteria. Nonnested hypothesis testing. Markov chain Monte Carlo methods. Nonparametric and semiparametric methods. Quantile Regression methods.

2-5 units, Aut (Hong, H)

### **ECON 274. Advanced Econometrics II**

(Formerly 273B); Possible topics: nonparametric density estimation and regression analysis; sieve approximation; local polynomial regression; spline regression; cross validation; indirect inference; resampling methods: bootstrap and subsampling; quantile regression; nonstandard asymptotic distribution theory; empirical processes; set identification and inference, large sample efficiency and optimality.

2-5 units, Win (Romano, J)

### **ECON 275. Time Series Econometrics**

Stochastic processes and concepts such as stationarity, ergodicity, and mixing. Inference with heteroskedastic and autocorrelated time series; autoregressive and moving average models; unit root processes and asymptotic analysis of such; tests for structural change; vector autoregressive models; cointegration; impulse response analysis; forecasting; ARCH and GARCH volatility models. Prerequisites: 270, 271.

2-5 units, not given this year

### **ECON 276. Limited Dependent Variables**

(Formerly 274.) Parametric and semi-parametric approaches to the estimation of econometric models with discrete or limited dependent variables. Maximum likelihood, nonlinear panel data, duration models, rank estimation and index models, Bayesian approaches and MCMC. Estimation of discrete choice models with endogeneity, simulation methods and computationally intensive approaches. Estimation of social network models. Random matrix theory. Prerequisite: 273 or consent of instructor.

2-5 units, not given this year

### **ECON 278. Behavioral and Experimental Economics I**

This is the first half of a two course sequence (along with Econ 279) on behavioral and experimental economics. The sequence has two main objectives: 1) examines theories and evidence related to the psychology of economic decision making, 2) Introduces methods of experimental economics, and explores major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objects of improving the explanatory and predictive performance of standard

models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

2-5 units, Aut (Bernheim, D; Niederle, M)

### **ECON 279. Behavioral and Experimental Economics II**

This is the second half of a two course sequence (along with Econ 278) on behavioral and experimental economics. The sequence has two main objectives: 1) examines theories and evidence related to the psychology of economic decision making, 2) Introduces methods of experimental economics, and explores major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objects of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

2-5 units, Win (Staff)

### **ECON 281. Normative Decision Theory and Social Choice**

Normative principles of behavior, especially in single-person decision trees. Objective and subjective expected utility. Savage, Anscombe-Aumann, and consequentialist axioms. State dependence. Multi-person extensions: social choice, ethics, opinion pooling, and rationalizability in non-cooperative games. Prerequisite: 202 or equivalent. (Hammond)

2-5 units, not given this year

### **ECON 282. Contracts, Information, and Incentives**

Basic theories and recent developments in mechanism design and the theory of contracts. Topics include: hidden characteristics and hidden action models with one and many agents, design of mechanisms and markets with limited communication, long-term relationships under commitment and under renegotiation, property rights and theories of the firm.

2-5 units, Win (Segal, I)

### **ECON 283. Theory and Practice of Auction Market Design**

Basics of auction theory. Combinatorial auctions. Auction message spaces. Robust auction design. Connections to matching theory. Applied auction design with practical applications. Applied topics may include auctions for Internet advertising, radio spectrum auctions, securities markets, commodities, and complex procurements. US incentive auctions and procurement for the Connect America Fund are likely applications for 2012. Prerequisite: 282 or consent of instructors.

2-5 units, Win (Milgrom, P)

### **ECON 285. Auctions, Bargaining, and Pricing**

(Same as MGTECON 602.) Theory of auctions and related literature in bargaining and pricing. Key papers include Myerson and Satterthwaite on bargaining, Myerson on optimal auctions, and Milgrom and Weber's classic work. How markets with complicated preferences and constraints, limitations on the use of cash, or variations in contract details among bidders decisively impair the performance of simple market rules. Emphasis on matching markets such as the National Resident Matching Program, asset auctions such as the spectrum auctions. Literature on dynamic bargaining.

2-5 units, Aut (Niederle, M)

### **ECON 286. Game Theory and Economic Application**

Solution concepts for non-cooperative games, repeated games, games of incomplete information, reputation, and experiments. Standard results and current research topics. Prerequisite: 203 or consent of instructor.

2-5 units, not given this year

### **ECON 287. General Equilibrium Theory**

Existence, efficiency, and Walrasian equilibrium in exchange economies. Production, financial markets, incomplete markets, sequence economies with infinitely-lived agents. Prerequisites: 204 or consent of instructor.

2-5 units, not given this year

### **ECON 289. Advanced Topics in Game Theory and Information Economics**

Topics course covering a variety of game theory topics with emphasis on market design, such as matching theory and auction theory. Prerequisites: Econ 285 or equivalent.

2-5 units, not given this year

### **ECON 290. Multiperson Decision Theory**

dents and faculty review and present recent research papers on basic theories and economic applications of decision theory, game theory and mechanism design. Applications include market design and analyses of incentives and strategic behavior in markets, and selected topics such as auctions, bargaining, contracting, and computation.

4 units, not given this year

### **ECON 291. Social and Economic Networks**

Synthesis of research on social and economic networks by sociologists, economists, computer scientists, physicists, and mathematicians, with an emphasis on modeling. Includes methods for describing and measuring networks, empirical observations about network structure, models of random and strategic network formation, as well as analyses of contagion, diffusion, learning, peer influence, games played on networks, and networked markets.

2-5 units, Spr (Jackson, M)

### **ECON 299. Practical Training**

Students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **ECON 300. Third-Year Seminar**

Restricted to Economics Ph.D. students. Students present current research. May be repeated for credit.

1-10 units, Aut (Bresnahan, T; Mahajan, A), Spr (Bresnahan, T; Mahajan, A)

### **ECON 301. Microeconomic Workshop**

1-10 units, not given this year

### **ECON 310. Macroeconomic Workshop**

1-10 units, Aut (Hall, R; Klenow, P; Taylor, J; Amador Lopez, M; Tertilt, M; Piazzesi, M; Schneider, K; Bloom, N; Kurlat, P), Win (Hall, R; Klenow, P; Taylor, J; Amador Lopez, M; Piazzesi, M; Schneider, K; Bloom, N; Kurlat, P), Spr (Hall, R; Klenow, P;

### **ECON 315. Development Workshop**

1-10 units, Aut (DeGiorgi, G; Mahajan, A; Bloom, N), Win (Mahajan, A; DeGiorgi, G), Spr (DeGiorgi, G; Mahajan, A)

### **ECON 325. Economic History Workshop**

May be repeated for credit.

1-10 units, Aut (Greif, A; Wright, G; Abramitzky, R; Moser, P), Win (Greif, A; Wright, G; Moser, P; Abramitzky, R), Spr (Wright, G; Greif, A; Moser, P; Abramitzky, R)

### **ECON 341. Public Economics and Environmental Economics Seminar**

Issues in measuring and evaluating the economic performance of government tax, expenditure, debt, and regulatory policies; their effects on levels and distribution of income, wealth, and environmental quality; alternative policies and methods of evaluation. Workshop format combines student research, faculty presentations, and guest speakers. Prerequisite: 241 or consent of instructor.

1-10 units, Aut (Boskin, M; Shoven, J; Hoxby, C; Bloom, N), Win (Boskin, M; Shoven, J; Bloom, N; Hoxby, C), Spr (Boskin, M; Shoven, J; Bloom, N; Hoxby, C)

### **ECON 345. Applications Workshop**

1-10 units, Aut (MaCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; Mahajan, A; Dupas, P; Bloom, N), Win (MaCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; Mahajan, A; Hong, H; Dupas, P), Spr (MaCurdy, T; Pencavel, J; Pistaferri, L; Wolak, F; Mahajan, A)

### **ECON 354. Workshop in Law and Economics**

2-6 units, Aut (Polinsky, M), Win (Polinsky, M)

### **ECON 355. Industrial Organization Workshop**

Current research in the field by visitors, presentations by students, and discussion of recent papers. Students write an original research

paper, make a formal presentation, and lead a structured discussion.

*1-10 units, Aut (Bresnahan, T; Einav, L; Kastl, J; Levin, J; Wolak, F), Win (Bresnahan, T; Einav, L; Kastl, J; Levin, J; Wolak, F), Spr (Bresnahan, T; Einav, L; Kastl, J; Levin, J; Wolak, F)*

#### **ECON 365. International Trade Workshop**

*1-10 units, Aut (Fitzgerald, D; Manova, K; Staiger, R; Bagwell, K), Win (Staiger, R; Fitzgerald, D; Manova, K; Bagwell, K), Spr (Fitzgerald, D; Staiger, R; Bagwell, K; Manova, K)*

#### **ECON 370. Econometrics Workshop**

*1-10 units, Aut (Hong, H; Hansen, P; Mahajan, A; Harding, M; MaCurdy, T; Wolak, F), Win (Hansen, P; Mahajan, A; Hong, H; Harding, M; MaCurdy, T; Wolak, F), Spr (Hansen, P; Mahajan, A; Hong, H; Harding, M; MaCurdy, T; Wolak, F)*

#### **ECON 391. Microeconomic Theory Seminar**

*1-10 units, Aut (Segal, I; Milgrom, P; Niederle, M; Bernheim, D; Jackson, M; Kojima, F; Fong, K), Win (Bernheim, D; Milgrom, P; Niederle, M; Segal, I; Jackson, M; Kojima, F; Fong, K), Spr (Bernheim, D; Fong, K)*

#### **ECON 801. TGR Project**

*0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

#### **ECON 802. TGR Dissertation**

*0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

## EDUCATION (EDUC) COURSES

### UNDERGRADUATE COURSES IN EDUCATION

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **EDUC 11SC. Work and Family**

Examination into the forces behind the rise in women's paid work and subsequent changes in the workplace and in families. Topics include gendered division of labor, decisions about marriage and childrearing, economic issues, employers' role in structuring work and family, and public policy issues such as anti-discrimination laws, divorce laws, and subsidized child care.

*2 units, not given this year*

#### **EDUC 95SI. Learning with Improvisation: Enhancing Creativity, Confidence, and Empathy through Theatrical Play**

Can you imagine going on stage without memorizing any lines, knowing that absolutely anything could happen, and you're going to have to deal with it? Teachers do this every day! In this class, we will play theatrical games as an applied introduction to active learning in the classroom, effective leadership, and the psychology of creativity, effective group work, and emotional intelligence. Challenge and expand yourself; learn how to use improv to challenge and develop others when you are the leader or educator. Preference to students without significant theater or drama experience.

*1-2 units, Aut (Oishi, L; Oppizzo, M)*

#### **EDUC 97X. Science Education through Community Service**

This one-unit directed reading, service-learning course will focus on educational inequity in the sciences for k-8 children in the communities of the Ravenswood School District. It is intended for students who are participating in the Haas Center's Science in Service program. Students will attend a 2-hr/week seminar. Through the readings students will familiarize themselves with the communities, gain an understanding of the root causes of educational inequity in the sciences, and acquire skills in teaching science and mentoring children.

*1 unit, Aut (Beck, K)*

#### **EDUC 98X. Service Learning Practicum**

For Alternative Spring Break program leaders. The skills and philosophical framework to develop and lead an ASB experience.

*1 unit, Aut (McConnell, J)*

#### **EDUC 100A. EAST House Seminar: Current Issues and Debates in Education**

Education and Society Theme (EAST) House seminar. In fall

quarter, faculty from around the University discuss the latest issues and research related to education. In winter quarter, current issues in international and comparative education, particularly in developing countries, are explored. In the spring, the seminar revolves around race and ethnicity, political activism, and higher education. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice.

*1 unit, Aut (Wotipka, C)*

#### **EDUC 100B. EAST House Seminar: Current Issues and Debates in Education**

Education and Society Theme (EAST) House seminar. In fall quarter, faculty from around the University discuss the latest issues and research related to education. In winter quarter, current issues in international and comparative education, particularly in developing countries, are explored. In the spring, the seminar revolves around race and ethnicity, political activism, and higher education. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice.

*1 unit, Win (Wotipka, C)*

#### **EDUC 100C. EAST House Seminar: Current Issues and Debates in Education**

(Same as ASNAMST 100C) Education and Society Theme (EAST) House seminar. In fall quarter, faculty from around the University discuss the latest issues and research related to education. In winter quarter, current issues in international and comparative education, particularly in developing countries, are explored. In the spring, the seminar revolves around race and ethnicity, political activism, and higher education. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice.

*1 unit, Spr (Wotipka, C)*

#### **EDUC 101. Introduction to Teaching and Learning**

This course is designed to help undergraduates explore career interests in education; it is the core course for the Undergraduate Minor in Education, and fulfills requirements for Honors in Education. The course considers the philosophy, history, politics, professional practice and social structures of teaching in the United States. Students will read and discuss teaching theory and research, participate in learning activities and visit school teaching sites, as well as examine and analyze artifacts and models of teaching.

*3-5 units, Aut (Wolf, J)*

#### **EDUC 102. Examining Social Structures, Power, and Educational Access**

Goal is to prepare Education and Youth Development fellows for their work with adolescents in the Haas Center's pre-college summer programs and to define their role in addressing educational inequities in the summer programs and beyond.

*2-3 units, Spr (Metz, M)*

#### **EDUC 103A. Tutoring: Seeing a Child through Literacy**

(Same as EDUC 203A) Experience tutoring grade school readers in a low income community near Stanford under supervision. Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll. Service Learning Course (certified by Haas Center). GER:DB-SocSci

*4 units, Aut (Juel, C)*

#### **EDUC 103B. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices**

(Same as AFRICAAM 106, CSRE 103B, EDUC 337) Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.

*3-5 units, Spr (Ball, A)*

#### **EDUC 103C. Educational Policy, Diversity, and English Learners**

Undergraduates engage in the real world of teaching. Historical and legal foundations, and materials, methods, and strategies for English and primary language development. Students tutor an

English learner.

*3-4 units, not given this year*

**EDUC 104X. Conduct of Research with and in Communities**

For undergraduates interested in service learning and research in community settings. The historical and theoretical underpinnings of community-based participatory research (CBPR), action research, community-embedded research, participant observation, and qualitative research.

*3-4 units, not given this year*

**EDUC 105X. Introduction to Education Research for Undergraduates**

EDUC 105X explores types and purposes and products of education research. Broadly, this seminar course is designed to support Stanford undergraduates in exploring academic and career interests in education; specifically, this course satisfies requirements for the Education Minor, and supports students considering application to the Education Honors Program. In this course we consider what defines education research, and what factors make for quality research. Each week we will read current research by School of Education scholars and welcome the researcher-authors as guest speakers to the class. Students will identify an education topic of interest and write an educational literature review to that topic.

*3 units, Spr (Wolf, J)*

**EDUC 106. Interactive Media in Education**

Workshop. (CTE)

*3-5 units, not given this year*

**EDUC 109X. Educational Issues in Contemporary China**

(Same as EDUC 309X) Reforms such as the decentralization of school finance, emergence of private schools, expansion of higher education, and reframing of educational policy to focus on issues of quality. Have these reforms exacerbated educational inequality.

*3-4 units, not given this year*

**EDUC 110. Sociology of Education: The Social Organization of Schools**

(Same as EDUC 310, SOC 132, SOC 332) Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy. GER:DB-SocSci

*4 units, Spr (Carter, P)*

**EDUC 111. The Young Adult Novel: A Literature For and About Adolescents**

For undergraduates considering teaching or working with adolescents, and for those planning to apply to the coterminal program in the Stanford Teacher Education program (STEP). Students work together to define the genre of young adult novels. What they reveal about adolescence in America. How to read and teach young adult literature.

*4 units, not given this year*

**EDUC 112X. Urban Education**

(Same as AFRICAAM 112, EDUC 212X, SOC 129X, SOC 229X) (Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education. GER:DB-SocSci

*3-4 units, Spr (Ball, A)*

**EDUC 113X. Gender and Sexuality in Schools**

Issues at the intersection of queer theory and educational practice. Experiences, rights, and responsibilities of lesbian, gay, bisexual, transgender, intersex, queer, and questioning students and teachers as members of marginalized or majority cultures. GER:EC-Gender

*1-3 units, not given this year*

**EDUC 114N. Growing Up Bilingual**

(F,Sem) (Same as CHICANST 14N, CSRE 14N) Stanford Introductory Seminar. This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to

the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.

*3 units, Win (Valdes, G)*

**EDUC 115Q. Identities, Race, and Culture in Urban Schools**

Preference to sophomores. How urban youth come to a sense of themselves as students, members of cultural and racial groups, and young people in urban America. The nature and interaction of racial and academic identities: how identity takes shape; how it has been conceptualized. The relation between identities and learning. Urban schools as contexts for identity development. Theoretical perspectives include psychology, sociolinguistics, sociology, anthropology, and education. Students shadow a high-school student in a public school and write a case study.

*3 units, not given this year*

**EDUC 116X. Service Learning as an Approach to Teaching**

History, theory, and practice. Topics include: responsive community partnerships, cultural awareness, the role of reflection, and best practices in service learning.

*3 units, Spr (Mitchell, T)*

**EDUC 117. Research and Policy on Postsecondary Access**

(Same as EDUC 417) The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. Service Learning Course (certified by Haas Center).

*3 units, not given this year*

**EDUC 120C. Education and Society**

(Same as EDUC 220C, SOC 130, SOC 230) The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling. GER:DB-SocSci

*4-5 units, NEXTYEAR*

**EDUC 120X. Sociology of Knowledge Creation**

(Same as EDUC 320X, SOC 330) The sociology of knowledge creation explores systematic relationships between thought and social structure in order to examine how human beings construct, interpret, and view reality. How knowledge is socially constructed, patterned, and used, and how everyday and tacit forms of knowledge are achieved. Emphasis is on the creation and patterning of scientific paradigms, social science disciplines, and the field of education.

*3-4 units, Aut (McFarland, D)*

**EDUC 121X. Hip Hop, Youth Identities, and the Politics of Language**

(Same as AFRICAAM 121X, AMSTUD 121X, ANTHRO 121A, CSRE 121X, LINGUIST 155) Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

*3-4 units, Spr (Alim, H)*

**EDUC 122X. From Local to Global: Collaborations for International Environmental Education**

(Same as EARTHSYS 123) A collaboration with three universities in Africa. Discourse and debate using Internet and mobile technology interactions. Topics include the global environment, climate change, sustainable development, and food security.

*2 units, not given this year*

**EDUC 123X. Contexts that Promote Youth Development: Understandings of Effective Interventions**

How psychology, medicine, public health, sociology, education, and public policy define and promote youth development. How to build the resilience and competencies of youth through safe, supportive environments for building social, emotional, and intellectual skills. How to design settings that best promote youth development.

*2-4 units, not given this year*

**EDUC 124. Collaborative Design and Research of Technology-integrated Curriculum**

Design models for the development of educational materials through a studio-based, curriculum development project. Teams work with a teacher or non-school educator to design and test technology-integrated curricula. Focus is on the role that technologies can play in teaching and learning in school and out-of-school contexts. Open to all.

*3-4 units, not given this year*

**EDUC 126A. Introduction to Public Service Leadership**

Offered through the Haas Center for Public Service. A foundation and vision for a future of public service leadership. Students identify personal values and assess strengths as leaders. The ethics of public service and leadership theory.

*1-2 units, Win (Lobo, K)*

**EDUC 126B. Public Service Leadership Program Practicum**

This course is for students in the Public Service Leadership Program offered through the Haas Center for Public Service. Designed as a follow-up course to EDUC 126A: Introduction to Public Service Leadership, the PSLP Practicum provides an opportunity for PSLP students to reflect on their own leadership experiences and to learn from each other's leadership experiences while continuing to build a community of peer service leaders. The PSLP Practicum will meet every other week throughout the quarter.

*1 unit, Aut (Lobo, K), Win (Lobo, K), Spr (Lobo, K)*

**EDUC 130. Introduction to Counseling**

(Same as PSYCH 148) The goal of counseling is to help others to create more satisfying lives for themselves. Clients learn to create and capitalize on unexpected events to open up new opportunities. The success of counseling is judged, not by the words and actions of the counselor, but by the progress that the client makes in the real world after counseling itself is ended. Students are encouraged to exert their full efforts within reasonable time limits to improve their competence. (PSE)

*3 units, Win (Krumboltz, J)*

**EDUC 131. Mediation for Dispute Resolution**

(Same as PSYCH 152) Mediation as more effective and less expensive than other forms of settling disputes such as violence, lawsuits, or arbitration. How mediation can be structured to maximize the chances for success. Simulated mediation sessions.

*3 units, Aut (Krumboltz, J)*

**EDUC 131Q. Is Nationalism Dying?**

(F,Dial) Stanford Introductory Dialogue. The 19th century has been depicted as the age of nationalism. The nation-state as a blueprint and mass schooling as a nation-state project emerged and diffused. The transformation of transnational masses into national citizens is a core dynamic of this seminar, with special attention to how schools functioned as laboratories for nationalism. Readings will include Benedict Anderson's *Imagined Communities*, and selected chapters from Eugene Weber's *Peasants to Frenchmen* and from Michael Schudson's *The Good Citizen*. In recent decades, questions have been raised about nationalism and the role of schools in promoting nationalism. Some of these questions emphasize a cosmopolitan narrative that valorizes humanity, while others have stressed multiculturalism and the valorization of diversity. These questions are anchored in a human rights discourse that leads to the second core dynamic of this seminar: the rise of a human rights regime, in particular its education

*3 units, Win (Ramirez, F)*

**EDUC 134. Career and Personal Counseling**

(Same as EDUC 234, PSYCH 192) Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.

*3 units, Spr (Krumboltz, J)*

**EDUC 136. World, Societal, and Educational Change: Comparative Perspectives**

(Same as EDUC 306D, SOC 231) Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture. GER:DB-SocSci

*4-5 units, Win (Ramirez, F)*

**EDUC 140. Honors Research**

Provides opportunity for research in pursuit of senior honors theses.

*1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**EDUC 143. Boys' Psychosocial Development**

(Same as HUMBIO 144) From early childhood through adolescence. Emphasis is on how boys' lives and experiences are embedded within their interpersonal relationships and social and cultural contexts. Interdisciplinary approach including perspectives from fields such as psychology, sociology, anthropology, family studies, and education. Prerequisite: Human Biology core, or Developmental Psychology, or consent of instructor. GER:EC-Gender

*4 units, Spr (Chu, J)*

**EDUC 146X. Perspectives on the Education of Linguistic Minorities**

Social, political, linguistic, and pedagogical issues associated with educating students who do not speak the language or language variety of the majority society. Focus is on the U.S.; attention to minorities elsewhere. American attitudes toward linguistic and racial minorities. Educational problems of linguistically different children and non-English- or limited-English-speaking children. Approaches to solving problems.

*3-4 units, not given this year*

**EDUC 148X. Critical Perspectives on Teaching and Tutoring English Language Learners**

Theoretical foundation for volunteer tutors of English language learners in urban environments working with children in school-based programs or adults in community-based settings.

*3 units, Aut (Valdes, G), Win (Valdes, G), Spr (Valdes, G)*

**EDUC 149. Theory and Issues in the Study of Bilingualism**

(Same as EDUC 249) Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. (SSPEP)

*3-5 units, Aut (Valdes, G)*

**EDUC 165. History of Higher Education in the U.S.**

(Same as AMSTUD 165, EDUC 265, HISTORY 158C) Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities. (SSPEP-APA)

*3-5 units, Win (Labaree, D)*

**EDUC 170X. Preparation for Independent Public Service Projects**

Open only to recipients of the Haas Summer Fellowship, which offers students the opportunity to initiate and carry out an innovative service project in collaboration with a community partner. Goal is to expand upon the work fellows did during the application process with respect to the feasibility and sustainability of their field projects.

*2 units, Spr (Hawthorne, J)*

**EDUC 171. Early Childhood Education Practicum**

Year-long seminar; restricted to students who participate in JumpStart, a service learning program. Training for activities in preschool classrooms. Background on issues related to: young children's cognitive, language, and social development; classroom management; literacy; math; science teaching; cultural diversity; and early childhood education programs. May be repeated for credit.

*2-4 units, not given this year*

**EDUC 178X. Latino Families, Languages, and Schools**

The challenges facing schools to establish school-family partnerships with newly arrived Latino immigrant parents. How language acts as a barrier to home-school communication and parent participation. Current models of parent-school collaboration and the ideology of parental involvement in schooling. (SSPEP) (Valdés)

*3-5 units, Spr (Valdes, G)*

**EDUC 179. Urban Youth and Their Institutions: Research and Practice**

(Same as EDUC 279) The determinants and consequences of urban life for youth, emphasizing disciplinary and methodological approaches, and the gap between the perspectives of state and local organizations and those of youth and their communities. The diversity of urban youth experiences with respect to ethnicity, gender, and immigration histories. Case studies illustrate civic-level and grassroots institutions, their structures, networks, and philosophies; historical and contemporary realities of urban youth for policy makers, educators, and researchers. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)

*4-5 units, not given this year*

**EDUC 179B. Youth Empowerment and Civic Engagement**

(Same as EDUC 279B) Focus is on youth development policies and practices: what makes them effective, and how they operate in broader institutional contexts. Research-based information; conceptual underpinnings; best learning from experience; and the perspective of expert youth workers, policymakers, and youth about what works.

*2-4 units, not given this year*

**EDUC 180. Directed Reading in Education**

For undergraduates and master's degree students. (All Areas)

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**EDUC 180S. Pre-field Course for Alternative Spring Break**

Limited to students participating in the Alternative Spring Break program. See <http://asb.stanford.edu> for more information.

*1 unit, Win (Staff)*

**EDUC 181. Multicultural Issues in Higher Education**

(Same as EDUC 381) The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.

*4 units, not given this year*

**EDUC 187X. Math Mentoring: Working in the Zone with Learners**

(Same as EDUC 397X) The course focuses on how the tutorial relationship can help students learn mathematics. The course will provide background theory and knowledge as well as provide practical approaches to tutoring, supports for targeting activities to students, needs, selection of materials and activities, and ways to assess the progress of the students and reflect on your own experience. Topics will include social theories of learning, teaching for understanding, and challenges of students who are English language learners. In addition to attending 4, two-hour workshop classes, 1 hour of tutoring is required each week. The course will meet 4 times during the quarter for workshops and discussions following Friday tutoring sessions. Students will submit assignments on the Coursework site on weeks that the course does not meet. A 1 unit section of the course will run in Winter and Spring quarters.

*1-2 units, Win (Goldman, S; O'Connor, K)*

**EDUC 189X. Language and Minority Rights**

(Same as CHICANST 189W, CSRE 189W) Language as it is implicated in migration and globalization. The effects of globalization processes on languages, the complexity of language use in migrant and indigenous minority contexts, the connectedness of today's societies brought about by the development of communication technologies. Individual and societal multilingualism; preservation and revival of endangered languages. GER:EC-GlobalCom

*3 units, not given this year*

**EDUC 190. Directed Research in Education**

For undergraduates and master's students. May be repeated for credit. (all areas)

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**EDUC 191X. Introduction to Survey Research**

(Same as EDUC 291X) Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design,

refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity.

*3-4 units, Win (Rodriguez, E)*

**EDUC 193A. Listen Up! Core Peer Counseling Skills**

Topics: verbal and non-verbal skills, open and closed questions, paraphrasing, working with feelings, summarization, and integration. Individual training, group exercises, role play practice with optional video feedback. Sections on relevance to crisis counseling and student life. Guest speakers from University and community agencies. Students develop and apply skills in University settings.

*2 units, Aut (Martinez, A), Win (Martinez, A), Spr (Martinez, A)*

**EDUC 193B. Peer Counseling in the Chicano/Latino Community**

Topics: verbal and non-verbal attending and communication skills, open and closed questions, working with feelings, summarization, and integration. Salient counseling issues including Spanish-English code switching in communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, and Chicana/o student experience in University settings. Individual training, group exercises, role play, and videotape practice.

*1 unit, Aut (Martinez, A)*

**EDUC 193C. Peer Counseling in the African American Community**

Topics: the concept of culture, Black cultural attributes and their effect on reactions to counseling, verbal and non-verbal attending, open and closed questions, working with feelings, summarization, and integration. Reading assignments, guest speakers, role play, and videotaped practice. Students develop and apply skills in the Black community on campus or in other settings that the student chooses.

*1 unit, Aut (Adams, C; Michael, L)*

**EDUC 193F. Psychological Well-Being on Campus: Asian American Perspectives**

Topics: the Asian family structure, and concepts of identity, ethnicity, culture, and racism in terms of their impact on individual development and the counseling process. Emphasis is on empathic understanding of Asians in America. Group exercises.

*1 unit, Spr (Lin, O; Lee-Anderson, K; Brown, N)*

**EDUC 193N. Peer Counseling in the Native American Community**

Verbal and non-verbal communication, strategic use of questions, methods of dealing with strong feelings, and conflict resolution. How elements of counseling apply to Native Americans including client, counselor, and situational variables in counseling, non-verbal communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, the impact of family on personal development, gender roles, and the experience of Native American students in university settings. Individual skill development, group exercises, and role practice.

*1 unit, not given this year*

**EDUC 193P. Peer Counseling at the Bridge**

Mental health issues such as relationships, substance abuse, sexual assault, depression, eating disorders, academic stressors, suicide, and grief and bereavement. Guest speakers.

*1 unit, Aut (Martinez, A), Win (Martinez, A), Spr (Martinez, A)*

**EDUC 193S. Peer Counseling on Comprehensive Sexual Health**

Information on sexually transmitted infections and diseases, and birth control methods. Topics related to sexual health such as communication, societal attitudes and pressures, pregnancy, abortion, and the range of sexual expression. Role-play and peer-education outreach projects. Required for those wishing to counsel at the Sexual Health Peer Resource Center (SHPRC).

*1 unit, Aut (Yisrael, D), Win (Yisrael, D), Spr (Yisrael, D)*

**EDUC 196X. The Design of Technologies for Casual Learning**

(Same as EDUC 396X) Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as a prototype platform. The term casual is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in extreme informal learning circumstances (while on the go, any time and any place).

The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.

*3 units, not given this year*

**EDUC 197. Education, Gender, and Development**

(Same as SOC 134) Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes. (SSPEP) GER:EC-Gender

*4 units, Spr (Wotipka, C)*

**EDUC 199A. Undergraduate Honors Seminar**

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

*3 units, Aut (Stevens, M)*

**EDUC 199B. Undergraduate Honors Seminar**

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

*1 unit, Win (Stevens, M)*

**EDUC 199C. Undergraduate Honors Seminar**

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

*1 unit, Spr (Stevens, M)*

**EDUC 245. Understanding Racial and Ethnic Identity Development**

(Same as AFRICAAM 245, CSRE 245) African American, Native American, Mexican American, and Asian American racial and ethnic identity development; the influence of social, political and psychological forces in shaping the experience of people of color in the U.S. The importance of race in relationship to social identity variables including gender, class, and occupational, generational, and regional identifications. Bi- and multiracial identity status, and types of white racial consciousness.

*3-5 units, not given this year*

**EDUC 289. The Centrality of Literacies in Teaching and Learning**

(Formerly EDUC 166.) Focus is on principles in understanding, assessing, and supporting the reading and writing processes, and the acquisition of content area literacies in secondary schools. Literacy demands within particular disciplines and how to use oral language, reading, and writing to teach content area materials more effectively to all students. (STEP)

*3 units, Sum (Staff)*

**GRADUATE COURSES IN EDUCATION**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**EDUC 147X. Human-Computer Interaction in Education**

Required for students in the Learning Design and Technology Master's Program. Concepts underlying the design of human-computer interaction including usability and affordances, direct manipulation, systematic design methods, user conceptual models and interface metaphors, design languages and genres, human cognitive and physical ergonomics, information and interactivity structures, design tools, and environments. Studio/discussion component applies these principles to the design of interactive technology for teaching and learning.

*3 units, not given this year*

**EDUC 176X. The Design of Technologies for Casual Learning - Lab**

Lab. Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as

a prototype platform. The term casual is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in extreme informal learning circumstances (while on the go, any time and any place). The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.

*1 unit, not given this year*

**EDUC 185. Master's Thesis**

(all areas)

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**EDUC 200A. Introduction to Data Analysis and Interpretation**

(Formerly EDUC 150.) Primarily for master's students in the School of Education. Focus is on reading literature and interpreting descriptive and inferential statistics, especially those commonly found in education. Topics: basic research design, instrument reliability and validity, description statistics, correlation, t-tests, one-way analysis of variance, and simple and multiple regression.

*4 units, Aut (Porteus, A), Win (Porteus, A)*

**EDUC 200B. Introduction to Qualitative Research Methods**

(Formerly EDUC 151.) Primarily for master's students: An introduction to the core concepts and methods of qualitative research. Through a variety of hands-on learning activities, readings, field experiences, class lectures, and discussions, students will explore the processes and products of qualitative inquiry.

*4 units, Aut (Pope, D), Win (Wolf, J)*

**EDUC 200C. Introduction to Statistical Methods in Education**

(Formerly EDUC 160.) Basic techniques in descriptive and inferential statistics for educational research will be covered with an emphasis on rigorous preparation for intermediate and advanced courses. Topics include central tendency, variance, probability, distributions, confidence interval, t-test, F-test, correlation, regression, and analysis of variance. Non-parametric statistics and graphical principles for data representation will also be addressed. Students will also be introduced to STATA in preparation for subsequent higher level courses.

*3-4 units, Aut (Hakuta, K)*

**EDUC 201. History of Education in the United States**

(Same as AMSTUD 201, HISTORY 158B) How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching. (SSPEP)

*3-5 units, not given this year*

**EDUC 202. Introduction to Comparative and International Education**

Contemporary theoretical debates about educational change and development, and the international dimension of issues in education. Emphasis is on the development of students' abilities to make cross-national and historical comparisons of educational phenomena. (SSPEP/ICE)

*4-5 units, Aut (Davidson, S; Buckner, E)*

**EDUC 202I. Education Policy Workshop in International and Comparative Education**

For students in International and Comparative Education. Practical introduction to issues in educational policy making, educational planning, implementation, and the role of foreign expertise/consultants in developing country contexts. (SSPEP/ICE)

*3-4 units, not given this year*

**EDUC 203. The Anthropology of Education**

Learning across situations, organizations, institutions, and cultures. How and when people learn and where, with whom and for what and how answers to these questions change across the lifespan. Schools in relation to other settings in which learning takes place for children, adolescents, and adults. Apprenticeship, mentorship, and learning through observation and imitation.

*3-5 units, not given this year*

**EDUC 203A. Tutoring: Seeing a Child through Literacy**

(Same as EDUC 103A) Experience tutoring grade school readers in a low income community near Stanford under supervision.

Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll. Service Learning Course (certified by Haas Center).

4 units, Aut (Juel, C)

#### **EDUC 204. Introduction to Philosophy of Education**

How to think philosophically about educational problems. Recent influential scholarship in philosophy of education. No previous study in philosophy required. (SSPEP)

3 units, Aut (Callan, E)

#### **EDUC 204A. Introduction to the Philosophical and Educational Thought of John Dewey**

This course, which will have a seminar format, will entail close analytical reading (and intense and hopefully lively discussion) of primary sources - namely, some of the writings of John Dewey. These sources have been selected to give a fair overview of his work, but no one course can do Dewey full justice (he published more than 40 books and 800 journal articles). Dewey can be a difficult author to follow, but on the other hand there are passages of great force and beauty; and undoubtedly he has been of significant influence both in education and in philosophy. (It is important to note that Dewey himself regarded his work in philosophy and in education as being inextricably related.) No special intellectual preparation is required, except a willingness to read carefully and appreciatively, but critically.

3 units, Aut (Phillips, D)

#### **EDUC 204B. Philosophical Issues in Educational Research**

Several decades ago epistemological issues (that is, philosophical issues pertaining to the nature of knowledge, and how knowledge-claims are established as likely to be true) were not the focus of much serious attention in the educational research literature. Most how to do research textbooks had a short and bland chapter on philosophy of science issues in educational research, and occasionally a president of AERA would take advantage of the presidential address to make some relevant remarks. In general, a positivistic orientation pervaded these contributions. Over the past two decades or so the situation has changed remarkably - for example, over this period the house journal of the AERA, Educational Researcher, has published scores of papers that raise epistemological issues; many of these papers have been written by researchers themselves (instead of philosophers), and a wide range of positions are represented in these sources. Epistemological/philosophy of science

3 units, Spr (Phillips, D)

#### **EDUC 205X. The Impact of Social and Behavioral Science Research on Educational Issues**

Ways in which research intersects with educational policy and practice. Emphasis is on behavioral, social, and cognitive traditions. Topics include early childhood education, early reading, science education, bilingual education, school desegregation, class size reduction, classroom organization, violence and juvenile crime, and affirmative action in higher education. Policy debates and how research informs or fails to inform deliberations and decisions in these areas.

3 units, not given this year

#### **EDUC 206A. Applied Research Methods in International and Comparative Education I: Introduction**

Required for M.A. students in ICE and IEAPA. Orientation to the M.A. program and research project; exploration of resources for study and research. (SSPEP/ICE)

1 unit, Aut (Wotipka, C)

#### **EDUC 206B. Applied Research Methods in International and Comparative Education II: Master's Paper Proposal**

Required for M.A. students in ICE and IEAPA. Development of research skills through theoretical and methodological issues in comparative and international education. Preparation of a research proposal for the M.A. monograph. (SSPEP/ICE)

1-3 units, Win (Wotipka, C)

#### **EDUC 206C. Applied Research Methods in ICE III: Data Collection and Analysis**

Required for M.A. students in ICE and IEAPA. Practice in data collection and analysis. Preparation of the first draft of the M.A. monograph. (SSPEP/ICE)

1 unit, Spr (Wotipka, C)

#### **EDUC 206D. Applied Research Methods in International and Comparative Education IV: Master's Paper Workshop**

Conclusion of the M.A. program in ICE and IEAPA; required of M.A. students. Reviews of students' research in preparation for their master's monograph. (SSPEP/ICE)

3 units, Sum (Staff)

#### **EDUC 207X. School: What Is It Good For?**

(Same as HISTORY 258D) Focus is on authors who establish claims that the purposes, functions, impacts, and social roles of schooling promote human capital, citizenship, social reproduction, values transmission, social mobility, class equality, racial equality, social stratification, disciplinary power, and the pursuit of individual interests. Historical and sociological approaches.

3-4 units, Win (Labaree, D)

#### **EDUC 208B. Curriculum Construction**

The theories and methods of curriculum development and improvement. Topics: curriculum ideologies, perspectives on design, strategies for diverse learners, and the politics of curriculum construction and implementation. Students develop curriculum plans for use in real settings. Service Learning Course (certified by Haas Center). (CTE)

3-4 units, Win (Pope, D)

#### **EDUC 208C. Curriculum: In Theory and Policy**

Focus is on key works on the organization and structuring of learning in formal and informal educational settings in light of contemporary issues in curriculum theory, relation of theory and practice, and strategies of curriculum policy development and implementation.

4 units, Spr (Willinsky, J)

#### **EDUC 209X. Policy, Organization, and Leadership Studies Seminar**

Focus is on orienting students to a variety of educational topics pertaining to elementary, secondary, and higher education including program management, financial literacy, and effective communication.

1 unit, Spr (Salinas, N)

#### **EDUC 210X. Policy, Organization, and Leadership Studies Internship Workshop**

Forum for POLS students to link their academic learning to real world experience through in-class discussions, presentations, and reflective writing. Fall Quarter is focused on understanding the intern's role within the larger organization. Winter Quarter is outward looking with a focus on understanding the broader fields the students' organizations reside within. Spring Quarter focus is on students learning from and being prepared to teach others.

1-3 units, Aut (Salinas, N), Win (Salinas, N), Spr (Salinas, N)

#### **EDUC 211X. Beyond Bits and Atoms - Lab**

(Same as CS 402L) This course is a hands-on lab in the prototyping and fabrication of tangible technologies, with a special focus in learning and education. We will learn how to use state-of-the-art fabrication machines (3D printers, 3D scanners, laser cutters, routers) to design educational toolkits, educational toys, science kits, and tangible user interfaces. A special focus of the course will be to design low-cost technologies, particularly for urban school in the US and abroad.

1-3 units, Win (Blikstein, P), Spr (Blikstein, P)

#### **EDUC 212X. Urban Education**

(Same as AFRICAAM 112, EDUC 112X, SOC 129X, SOC 229X) (Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.

3-4 units, Spr (Ball, A)

#### **EDUC 213X. Introduction to Teaching**

Key concepts in teaching and learning. Student prior knowledge and preconceptions; facts, concepts, and the organization of knowledge; active learning; behavior and cognition; constructing knowledge; metacognition; motivation and affect; transfer; goals and objectives; zone of proximal development; input; organizing learning; modeling; feedback; practice; individual and group differences among students; and pedagogical content knowledge.

3-4 units, Aut (Borko, H)

**EDUC 214X. Social Entrepreneurship**

(Same as STRAMGT 369.) The efforts of private citizens to create effective responses to social needs and innovative solutions to social problems. New opportunities for applying business skills in the social sector. Concepts, practices, and challenges of social entrepreneurship in the U.S. and around the world. Frameworks and tools to be more effective in socially entrepreneurial.

*4 units, not given this year*

**EDUC 215X. International Human Rights and Education**

Theory and practice. Focus is on how education may be seen as a human rights issue and a tool to educate citizens about their human rights. The history of human rights and the spread of the international human rights regime in terms of organizations and treaties. Issues include street and working children, language rights, and women's right to education.

*4-5 units, not given this year*

**EDUC 216X. Education, Race, and Inequality in African American History, 1880-1990**

(Same as CSRE 216X, HISTORY 255E) Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

*3-5 units, not given this year*

**EDUC 217. Philosophical and Methodological Issues in Educational Research**

The role causation in educational phenomena, and how to determine causal factors. Is educational research based on a positivistic paradigm? Randomized controlled experimental designs. Criteria for judging the rigor of qualitative modes of inquiry. Do Popperian or Deweyan approaches hold the key to resolving contentious issues? Does a postpositivist perspective hold promise?

*3 units, not given this year*

**EDUC 218. Topics in Cognition and Learning: Visualization**

Topical seminar with changing topics on the psychological and social processes of learning. This year's course is on the use of visualizations for learning (e.g., maps, diagrams, art, sketches, videogames). Topics also include the psychological basis for why visualizations can be so effective. May be repeated for credit.

*3 units, Aut (Schwartz, D)*

**EDUC 219E. The Creative Arts in Elementary Classrooms**

For STEP Elementary only or for candidates in the Multiple Subjects program. Hands-on exploration of visual arts media and works of art.

*1 unit, Aut (Freeman, S)*

**EDUC 220A. Introduction to the Economics of Education**

The relationship between education and economic analysis. Topics: labor markets for teachers, the economics of child care, the effects of education on earnings and employment, the effects of education on economic growth and distribution of income, and the financing of education. Students who lack training in microeconomics, register for 220Y for 1 additional unit of credit. (SSPEP/APA)

*4 units, not given this year*

**EDUC 220B. Introduction to the Politics of Education**

(Same as GSBGEN 349.) The relationships between political analysis and policy formulation in education; focus is on alternative models of the political process, the nature of interest groups, political strategies, community power, the external environment of organizations, and the implementations of policy. Applications to policy analysis, implementation, and politics of reform. (APA)

*4 units, Aut (Bettinger, E)*

**EDUC 220C. Education and Society**

(Same as EDUC 120C, SOC 130, SOC 230) The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.

*4-5 units, NEXTYEAR*

**EDUC 220D. History of School Reform: Origins, Policies,****Outcomes, and Explanations**

(Same as HISTORY 258E) Required for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. (SSPEP/APA)

*3-5 units, Aut (Labaree, D)*

**EDUC 220Y. Introduction to the Economics of Education: Economics Section**

For those taking 220A who have not had microeconomics before or who need a refresher. Corequisite: 220A. (SSPEP/APA)

*1-2 units, not given this year*

**EDUC 221A. Policy Analysis in Education**

Major concepts associated with the development, enactment, and execution of educational policy. Issues of policy implementation, agenda setting and problem formulation, politics, and intergovernmental relations. Case studies. Goal is to identify factors that affect how analysts and policy makers learn about and influence education. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)

*4-5 units, Win (Staff)*

**EDUC 222. Resource Allocation in Education**

Problems of optimization and design, and evaluation of decision experience. Marginal analysis, educational production functions, cost effectiveness and cost-benefit analysis, constrained maximization, program evaluation. Introduction to linear models for large-scale data analysis. Implications to model assumptions. (SSPEP)

*4-5 units, Spr (Carnoy, M)*

**EDUC 223. Good Districts and Good Schools: Research, Policy, and Practice**

Recent studies of districts and schools that exceed expectations in producing desired results for students. Research methodologies, findings of studies, theories of change in reforming schools and districts and efforts to implement results. Components of good schools and districts. Required project studies a school or district to determine goodness. (SSPEP/APA, CTE)

*3-4 units, not given this year*

**EDUC 224. Social Entrepreneurship and Social Innovation**

(Same as STRAMGT 367). This course examines individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ entrepreneurial skills, such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all

*2-4 units, not given this year*

**EDUC 224A. Social Entrepreneurship and Social Innovation**

(Same as STRAMGT 367). This course examines individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ entrepreneurial skills, such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government, or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all

4 units, Spr (Aubry, R; Wei, J)

**EDUC 224B. Social Entrepreneurship and Social Innovation**  
(Same as STRAMGT 367). This course examines individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ entrepreneurial skills, such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all

2 units, Spr (Aubry, R; Wei, J)

**EDUC 225X. Business Skills and Concepts for the Non-Business Student**

For non-business students. Knowledge and tools for operating effectively in an organizational management capacity. Focus is on concepts developed for use in the business world in the areas of strategy, organizational behavior, financial accounting, and marketing. Case studies, podcasts, video, guest speakers, and team-based projects.

3-4 units, not given this year

**EDUC 226X. Empirical Analysis of Education Governance**

Emphasis is on strategies for empirical evaluation. Topics include: school board, superintendent, and principal decision making; the state role in education policy and budgeting; the impact of teacher unionization; and the growing influence of private foundations and parent associations. Students participate in an original data collection effort for an ongoing research project.

3 units, not given this year

**EDUC 228E. Becoming Literate in School I**

First in a three course sequence. Introduction to reading and language arts theory and methodology for candidates STEP Elementary Teacher program. Instructional methods, formats, and materials.

2 units, Sum (Staff)

**EDUC 228F. Becoming Literate in School II**

Second in a three-course required sequence of reading and language arts theory and methodology for candidates in the STEP Elementary program. Theories for guiding instruction and curricular choices.

2 units, Aut (Juel, C)

**EDUC 228G. Becoming Literate in School III**

Third in a three-course required sequence of reading and language arts theory and methodology for candidates in STEP Elementary Teacher program. Theories for guiding instruction and curricular choices.

2 units, Win (Aukerman, M; Chambers Schuldt, L)

**EDUC 228H. Literacy, History, and Social Science**

How elementary school teachers can teach history and social science within a literacy framework. Topics include: historical thinking, reading, and writing; current research; applying nonfiction reading and writing strategies to historical texts; using primary sources with elementary students; adapting instruction to meet student needs; state standards; evaluating curriculum; assessing student knowledge; developing history and social science units; and embedding history and social science into the general literacy curriculum.

1 unit, Spr (Martin, D)

**EDUC 229A. Learning Design and Technology Seminar**

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT)

1 unit, Aut (Forssell, K)

**EDUC 229B. Learning Design and Technology Seminar**

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT)

1 unit, Win (Forssell, K)

**EDUC 229C. Learning Design and Technology Seminar**

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT)

1 unit, Spr (Forssell, K)

**EDUC 229D. Learning Design and Technology Seminar**

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT)

2-5 units, Sum (Staff)

**EDUC 230X. Social Enterprise**

(Same as STRAMGT 341.) Approaches for creating social value through a social enterprises including nonprofits, for-profits, and hybrid forms of organization. Perspectives include entrepreneur, CEO, funder, and board member. Topics include undertaking the social entrepreneurship process; mobilizing economic and human resources; achieving social objectives with commercial vehicles; crafting alliances; managing growth; measuring and managing performance; governing for excellence. Case studies. Student teams carry out field-based research in a significant strategic or operational issue of a social enterprise

4 units, not given this year

**EDUC 231X. Education Schools: Historical and Sociological Perspectives**

(Same as HISTORY 258F) The lowly status of the education school in the United States is the issue that defines the starting point of this course. Topics include an exploration the historical development of this institution, its major social function, and the interaction between the two. The course touches on a variety of scholarly domains, including the history of education, sociology of education, higher education, and educational policy.

3-4 units, alternate years, not given this year

**EDUC 233A. Counseling Theories and Interventions from a Multicultural Perspective**

(Same as AFRICAAM 233A, CSRE 233A) In an era of globalization characterized by widespread migration and cultural contacts, professionals face a unique challenge: How does one practice successfully when working with clients/students from so many different backgrounds? This course focuses upon the need to examine, conceptualize, and work with individuals according to the multiple ways in which they identify themselves. It will systematically examine multicultural counseling concepts, issues, and research. Literature on counselor and client characteristics such as social status or race/ethnicity and their effects on the counseling process and outcome will be reviewed. Issues in consultation with culturally and linguistically diverse parents and students and work with migrant children and their families are but a few of the topics covered in this course.

3-5 units, not given this year

**EDUC 233B. Adolescent Development and Mentoring in the Urban Context**

Continuation of 233A. Topics include: developmental psychology and service learning; collaborating with the community; psychological research on altruism and prosocial behavior; volunteers' motivations; attributions about poverty, and the problem of prejudice.

3 units, not given this year

**EDUC 234. Career and Personal Counseling**

(Same as EDUC 134, PSYCH 192) Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.

3 units, Spr (Krumboltz, J)

**EDUC 235X. The Creative Arts in Schools and Classrooms**

Students work alongside teachers and performing artists to plan and implement classroom activities with elementary school children to prepare them for a Lively Arts performance. Background theory in education and arts education. Students develop a follow-up classroom activity for children in their own art form.

*2 units, not given this year*

**EDUC 236X. Beyond Bits and Atoms: Designing Technological Tools**

(Same as CS 402) Practicum in designing and building technology-enabled curricula and learning environments. Students use software toolkits and state-of-the-art fabrication machines to design educational software, educational toolkits, and tangible user interfaces. How to design low-cost technologies, particularly for urban school in the US and abroad. The constructionist learning design perspective, critical pedagogy, and the application of complexity sciences in education.

*3-5 units, Spr (Blikstein, P)*

**EDUC 240. Adolescent Development and Learning**

How do adolescents develop their identities, manage their inner and outer worlds, and learn? Presuppositions: that fruitful instruction takes into account the developmental characteristics of learners and the task demands of specific curricula; and that teachers can promote learning and motivation by mediating among the characteristics of students, the curriculum, and the wider social context of the classroom. Prerequisite: STEP student or consent of instructor. (STEP)

*5 units, Aut (Darling-Hammond, L)*

**EDUC 241S. Organizational Learning**

(Same as OB 586.) How firms learn from their experiences and the opportunities created by flawed learning. Common mistakes in learning and barriers to the adoption of effective practices. How to avoid common mistakes and build organizations that learn more effectively to identify possible opportunities in markets. Concepts and findings from organization theory, psychology, decision theory, and statistics.

*2 units, not given this year*

**EDUC 241X. Organizational Learning**

Why firms do not learn from their experiences and the opportunities created by flawed learning. Common mistakes in learning and barriers to the adoption of effective practices. How to avoid common mistakes and build organizations that learn more effectively to identify possible opportunities in markets. Concepts and findings from organization theory, psychology, decision theory, and statistics. Readings include teaching notes, papers in psychology and organization theory, HBR articles, and Moneyball by Michael Lewis who discusses market-level mistakes in professional baseball.

*4 units, not given this year*

**EDUC 242. Language Use in the Chicano Community**

(Same as SPANLIT 206) The significance and consequences of language diversity in the culture and society of the U.S. Experiences of non-English background individuals through focus on Spanish-English bilingual communities.

*3-5 units, not given this year*

**EDUC 243. Writing Across Languages and Cultures: Research in Writing and Writing Instruction**

Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area.

*3-5 units, not given this year*

**EDUC 244. Classroom Management and Leadership**

Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP secondary only.

*2 units, Aut (Haysman, C)*

**EDUC 244E. Elementary Classroom Leadership and Management**

How to best manage a classroom. Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP elementary

only.

*1 unit, Sum (Staff)*

**EDUC 244F. Elementary Classroom Leadership and Management**

Skills for developing a positive classroom learning environment. Theoretical issues and opportunities to acquire strategies and make links with practice teaching class. STEP elementary only.

*1 unit, Aut (Rose, D)*

**EDUC 246A. Secondary Teaching Seminar**

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.

*3 units, Sum (Staff)*

**EDUC 246B. Secondary Teaching Seminar**

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: guided observations, building classroom community, classroom interaction processes, topics in special education portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.

*5 units, Aut (Lotan, R; Haysman, C; Fogo, B; Tovar, M)*

**EDUC 246C. Secondary Teaching Seminar**

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student. (STEP)

*5 units, Win (Lotan, R; Haysman, C; Fogo, B; Tovar, M)*

**EDUC 246D. Secondary Teaching Seminar**

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.

*2-7 units, Spr (Lotan, R; Haysman, C; Fogo, B; Tovar, M)*

**EDUC 246E. Elementary Teaching Seminar**

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

*3 units, Sum (Staff)*

**EDUC 246F. Elementary Teaching Seminar**

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

*5-7 units, Aut (Lit, I)*

**EDUC 246G. Elementary Teaching Seminar**

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community

engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

3 units, Win (Lit, I)

#### **EDUC 246H. Elementary Teaching Seminar**

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

4 units, Spr (Lit, I)

#### **EDUC 247. Moral Education**

Contemporary scholarship and educational practice related to the development of moral beliefs and conduct in young people. The psychology of moral development; major philosophical, sociological, and anthropological approaches. Topics include: natural capacities for moral awareness in the infant; peer and adult influences on moral growth during childhood and adolescence; extraordinary commitment during adulthood; cultural variation in moral judgment; feminist perspectives on morality; the education movement in today's schools; and contending theories concerning the goals of moral education. (PSE)

3 units, not given this year

#### **EDUC 248X. Issues of Curriculum and Pedagogy in Multicultural Classrooms**

Debates concerning race, class, gender and sexuality, and ethnicity as they impact curriculum and practice in heterogeneous classrooms. How teachers and students can become agents of educational change. Sources include videos, scholarship, popular press, and voices of practitioners, students, and families.

3-4 units, not given this year

#### **EDUC 249. Theory and Issues in the Study of Bilingualism**

(Same as EDUC 149) Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. (SSPEP)

3-5 units, Aut (Valdes, G)

#### **EDUC 250A. Inquiry and Measurement in Education**

Part of doctoral research core. The logic of scientific inquiry in education, including identification of research questions, selection of qualitative or quantitative research methods, design of research studies, measurement, and collection, analysis and interpretation of evidence.

3 units, Aut (Stevens, M; Loeb, S)

#### **EDUC 250B. Statistical Analysis in Education: Regression**

Primarily for doctoral students; part of doctoral research core; prerequisite for advanced statistical methods courses in School of Education. Basic regression, a widely used data-analytic procedure, including multiple and curvilinear regression, regression diagnostics, analysis of residuals and model selection, logistic regression. Proficiency with statistical computer packages.

4 units, Win (Bettinger, E)

#### **EDUC 250C. Qualitative Analysis in Education**

Primarily for doctoral students; part of doctoral research core. Methods for collecting and interpreting qualitative data including case study, ethnography, discourse analysis, observation, and interview.

4 units, Spr (Grossman, P; Wineburg, S)

#### **EDUC 251B. Statistical Analysis in Educational Research: Analysis of Variance**

Primarily for doctoral students. ANOVA models as widely used data analytic procedures, especially in experimental, quasi-experimental, and criterion-group designs. Topics: single-factor ANOVA; factorial between and within subjects and mixed design ANOVA (fixed, random, and mixed models); analysis of covariance; and multiple comparison procedures. Prerequisite: 250A or equivalent. (all areas)

4 units, not given this year

#### **EDUC 251C. Statistical Analysis in Educational Research:**

##### **Applied Multivariate Analysis**

Primarily for doctoral students in education, social, and behavioral sciences. Multivariate analysis of variance, discriminant analysis, factor analysis, correlation analysis. Advanced regression methods. Data compression: principal components analysis, clustering. Computer packages for data analysis. Prerequisite: 250B, 257, STATS 200, or equivalent. (all areas)

1-4 units, not given this year

#### **EDUC 252. Introduction to Test Theory**

Concepts of reliability and validity; derivation and use of test scales and norms; mathematical models and procedures for test validation, scoring, and interpretation. Prerequisite: STATS 190 or equivalent. (PSE)

3-4 units, Aut (Haertel, E)

#### **EDUC 253X. Teaching the Unteachable: Teaching and Representing the Holocaust**

(Same as HISTORY 237B) Theodore Adorno asked whether it was possible to write poetry after Auschwitz; whatever the answer, each year witnesses exponential growth in state-sponsored mandates to teach the Holocaust. How and to what end does catastrophe become curriculum? How to assess what students learn from these efforts. The Nazis' efforts to teach for hate, and contemporary parallels. Historical and educational sources, especially films and memoirs.

3-5 units, not given this year

#### **EDUC 254S. Leadership in Diverse Organizations**

(Same as OB 593) This course is designed to help students improve their capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. The course is based on the premise that diversity can present unique challenges and opportunities and thereby pushes students to develop crucial leadership skills, many of which are relevant across a variety of situations. The class will address two primary questions: 1) What social and psychological obstacles limit people's ability to work effectively across identity-based differences? 2) What can you do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations? Students should be prepared to experiment with various conceptual and analytic skills inside and outside of the classroom. While the course focuses on dynamics of race and gender, there will be opportunities for students to exp

2 units, not given this year

#### **EDUC 254X. Leadership in Diverse Organizations**

How improve capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. Premise is that diversity presents challenges and opportunities that push students to develop leadership skills relevant across a variety of situations. What social and psychological obstacles limit people's ability to work effectively across identity-based differences? What can people do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations? Focus is on dynamics of race and gender; attention to other dimensions of identity and difference in organizations, including sexual orientation, nationality, class, and religion.

4 units, not given this year

#### **EDUC 255A. Experimental Research Designs in Educational Research**

The course will cover the following topics: a) the logic of causal inference and the Fisher/Neyman/Rubin counterfactual causal model (Fisher, 1935; Heckman, 1979; Holland, 1986; Neyman, 1990; Rubin, 1978); b) randomized experiments; c) complex randomized experiments in education (cluster randomized trials, multi-site trials, staggered implementation via randomization, etc.); d) policy experiments with randomization; e) meta-analysis; and f) power in randomized experiments; g) the ethics and politics of randomized experiments.

3-5 units, Aut (Bettinger, E)

#### **EDUC 255B. Causal Inference in Quantitative Educational and Social Science Research**

(Same as SOC 257) Quantitative methods to make causal inferences in the absence of randomized experiment including the

use of natural and quasi-experiments, instrumental variables, regression discontinuity, matching estimators, longitudinal methods, fixed effects estimators, and selection modeling. Assumptions implicit in these approaches, and appropriateness in research situations. Students develop research proposals relying on these methods. Prerequisites: exposure to quantitative research methods; multivariate regression.

3-5 units, Win (Reardon, S)

### **EDUC 255C. Applied Quasi-Experimental Research in Education**

(Same as SOC 258) Course will provide hands-on practice in analysis of data from experimental and quasi-experimental research designs, including a) instrumental variables estimators; b) regression discontinuity estimators; c) difference-in-difference estimators; d) matching estimators; e) fixed effects estimators; and f) panel data methods (including individual fixed effects models, lagged covariate adjustment models, growth models, etc.). Prerequisites: satisfactory completion of EDUC 255B, EDUC 257C or SOC 257.

3-5 units, Spr (Reardon, S)

### **EDUC 256. Psychological and Educational Resilience Among Children and Youth**

(Same as HUMBIO 149) Theoretical, methodological, and empirical issues pertaining to the psychological and educational resilience of children and adolescents. Overview of the resilience framework, including current terminology and conceptual and measurement issues. Adaptive systems that enable some children to achieve successful adaptation despite high levels of adversity exposure. How resilience can be studied across multiple levels of analysis, ranging from cell to society. Individual, family, school, and community risk and protective factors that influence children's development and adaptation. Intervention programs designed to foster resilient adaptation in disadvantaged children's populations.

4 units, not given this year

### **EDUC 256C. Negotiation and Influence**

(Same as COMM 156, COMM 256) No matter how excellent your ideas, most significant achievements require the ability to communicate with and influence others. This course examines the theory, research, and practice of negotiation across a variety of settings. It provides multiple opportunities for students to develop negotiation skills through role-plays, exercises, and useful analytical frameworks. Topics include: distributive and integrative bargaining, psychological biases, lessons from game theory, principles of influence, multiparty negotiation, and the value of relationships and trust. The course meets intensively over a highly condensed period of time. Intended for graduate students and advanced undergraduates. No prerequisites. Limited enrollment; advance application required; see <http://comm.stanford.edu/faculty/curhan>

1-2 units, Aut (Staff), Win (Curhan, J), Spr (Staff)

### **EDUC 257A. Statistical Methods for Behavioral and Social Sciences**

For students with experience in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through log-linear models, logistic regression. Integrated with the use of statistical computing packages. Prerequisite: analysis of variance and regression at the level of STATS 161.

3 units, not given this year

### **EDUC 257B. Statistical Methods for Behavioral and Social Sciences**

For students with experience in empirical research. Analysis of data from experimental studies through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through log-linear models, logistic regression. Integrated with the use of statistical computing packages. Prerequisite: analysis of variance and regression at the level of STATS 161.

3 units, not given this year

### **EDUC 258. Literacy Development and Instruction**

Literacy acquisition as a developmental and educational process.

Problems that may be encountered as children learn to read. How to disentangle home, community, and school instruction from development.

3-5 units, Win (Juel, C)

### **EDUC 259X. Application of Hierarchical Linear Models in Behavioral and Social Research**

The fundamental phenomenon of interest in educational research is the growth in knowledge and skills of individual students. Two facts - that children's growth is typically the object of inquiry and that such growth occurs in organizational settings - correspond to two of the most troublesome and persistent methodological problems in the social sciences: the measurement of change and the assessment of multi-level effects (also referred to as the unit of analysis problem). Although these two methodological problems have distinct, long-standing, and non-overlapping literatures, these problems, in fact, share a common cause - the inadequacy of traditional statistical techniques for the modeling of hierarchy.

4 units, not given this year

### **EDUC 260X. Understanding Statistical Models and their Social Science Applications**

(Same as HRP 239, STATS 209) Critical examination of statistical methods in social science applications, especially for cause and effect determinations. Topics: path analysis, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, longitudinal data, mediating and moderating variables. See <http://www-stat.stanford.edu/~rag/stat209>. Prerequisite: intermediate-level statistical methods

3 units, Win (Rogosa, D)

### **EDUC 262A. Curriculum and Instruction in English**

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP)

2 units, Sum (Staff)

### **EDUC 262B. Curriculum and Instruction in English**

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.

3 units, Aut (Grossman, P)

### **EDUC 262C. Curriculum and Instruction in English**

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP)

3 units, Win (Grossman, P)

### **EDUC 263A. Curriculum and Instruction in Mathematics**

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win

2 units, Sum (Staff)

### **EDUC 263B. Curriculum and Instruction in Mathematics**

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win

3 units, Aut (Boaler, J)

### **EDUC 263C. Curriculum and Instruction in Mathematics**

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win

3 units, Win (Boaler, J; Dance, K)

### **EDUC 263E. Quantitative Reasoning in Mathematics I**

First of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

2 units, Sum (Staff)

**EDUC 263F. Quantitative Reasoning in Mathematics II**

Second of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

2-3 units, Aut (Murata, A)

**EDUC 263G. Quantitative Reasoning in Mathematics III**

Third of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

2 units, Win (Alexander, A)

**EDUC 264A. Curriculum and Instruction in World Languages**

Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP)

2 units, Sum (Staff)

**EDUC 264B. Curriculum and Instruction in World Languages**

Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.

3 units, Aut (Silva, M)

**EDUC 264C. Curriculum and Instruction in World Languages**

Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP)

3 units, Win (Silva, M; Xu, X)

**EDUC 264E. Methods and Materials in Bilingual Classrooms**

Restricted to STEP elementary teacher candidates in the BCLAD program. Theories, research, and methods related to instruction of Spanish-English bilingual children, grades K-8. Approaches to dual language instruction, and pedagogical and curricular strategies for the instruction of reading, language arts, science, history, social science, and math in Spanish. Assessment issues and practices with bilingual students. In Spanish.

2 units, Aut (Poza, L)

**EDUC 265. History of Higher Education in the U.S.**

(Same as AMSTUD 165, EDUC 165, HISTORY 158C) Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities. (SSPEP-APA)

3-5 units, Win (Labaree, D)

**EDUC 266X. Workshop in Practical Quantitative Research on Educational Policy and Inequality**

Conceptual and technical skills for analyzing data concerning educational policy and inequality. How to design analytic strategies using available data sources. Interpreting and presenting results. Prerequisite: 250A.

3 units, not given this year

**EDUC 267A. Curriculum and Instruction in Science**

Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)

2 units, Sum (Staff)

**EDUC 267B. Curriculum and Instruction in Science**

Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)

3 units, Aut (Brown, B)

**EDUC 267C. Curriculum and Instruction in Science**

Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP)

3 units, Win (Osborne, J)

**EDUC 267E. Development of Scientific Reasoning and Knowledge**

For STEP elementary teacher candidates. Theories and methods of teaching and learning science. How to develop curricula and criteria for critiquing curricula. Students design a science curriculum plan for a real setting. State and national science frameworks and content standards. Alternative teaching approaches; how to select approaches that are compatible with learner experience and lesson objectives. Focus is on the linguistic and cultural diversity of California public school students.

2 units, Aut (Diffenbaugh, P; Patterson, A)

**EDUC 267F. Development of Scientific Reasoning and Knowledge II**

Continuation of 267E. Scientific knowledge and pedagogical skills for supporting science instruction. Topics include: how children build scientific understandings and what that understanding might look and sound like in young children; what school science is and how concepts are connected to the doing of it; physical, life, and earth science constructs.

2 units, Spr (Osborne, J)

**EDUC 267G. Integrating the Garden into the Elementary Curriculum**

This mini-course uses the garden and kitchen environments to provide teacher candidates with real-world contexts in which to explore some of the key issues that children face in health, nutrition, and sustainability. Teacher candidates will gain an understanding of how to integrate the various themes with content areas and standards and an appreciation for the importance of addressing children's health needs in an era when the country is facing increased obesity and other health problems.

1 unit, Spr (Costanzo, R; Cool, J)

**EDUC 268A. Curriculum and Instruction in History and Social Science**

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

2 units, Sum (Staff)

**EDUC 268B. Curriculum and Instruction in History and Social Science**

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

3 units, Aut (Breakstone, J; Terra, L)

**EDUC 268C. Curriculum and Instruction in History and Social Science**

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

3 units, Win (Breakstone, J; Terra, L)

**EDUC 268E. Elementary History and Social Science**

Teaching and learning history and social science in the elementary grades. What is included in the discipline and why it is important to teach. The development of historical thinking among children. How students learn and understand content in these disciplines.

3-4 units, not given this year

**EDUC 269. Analysis of Teaching**

Student learning and the epistemology of school subjects as related to the planning and implementation of teaching, analysis of curriculum, and evaluation of performance and understanding. Readings and activities are coordinated with student teaching activities of participants. Prerequisite: STEP student or consent of instructor.

3 units, not given this year

**EDUC 269X. The Ethics in Teaching**

Goal is to prepare for the ethical problems teachers confront in their professional lives. Skills of ethical reasoning, familiarity with ethical concepts, and how to apply these skills and concepts in the analysis of case studies. Topics: ethical responsibility in teaching, freedom of speech and academic freedom, equality and difference, indoctrination, and the teaching of values.

*1 unit, Win (Callan, E), Spr (Callan, E)*

**EDUC 270A. Learning to Lead in Public Service Organizations**

For Haas Center student service organization leaders. (Davis)

*3-5 units, not given this year*

**EDUC 270X. Youth Civic Development and Education**

The course will examine recent research on the development of civic understanding and action among diverse populations of youth. The role of communities, schools, and media will be considered. The course will also address the question of how young people from all backgrounds can be educated for participatory citizenship in a democratic society.

*3 units, Spr (Damon, W)*

**EDUC 271X. Education Policy in the United States**

The course will provide students from different disciplines with an understanding of the broad educational policy context. The course will cover topics including a) school finance systems; b) an overview of policies defining and shaping the sectors and institutional forms of schooling, c) an overview of school governance, d) educational human-resource policy, e) school accountability policies at the federal and state levels; and f) school assignment policies and law, including intra- and inter-district choice policies, desegregation law and policy.

*5 units, Spr (Loeb, S)*

**EDUC 272X. Understanding and Creating Value-Added Measures of Teacher Effectiveness**

This seminar will explore a variety of approaches to measuring teacher effectiveness using student performance on state standardized tests. We will read the recent research literature on value-added estimation, addressing issues such as bias and measurement error. We also will use administrative data from two large districts to create and compare multiple value-added measures. The class assumes a comfort with OLS regression and basic programming in Stata.

*3 units, not given this year*

**EDUC 273. Gender and Higher Education: National and International Perspectives**

(Same as SOC 273) The effects of interactions between gender and the structures of higher education; policies seeking changes in those structures. Topics: undergraduate and graduate education, faculty field of specialization, rewards and career patterns, sexual harassment, and the development of feminist scholarship and pedagogy.

*4 units, not given this year*

**EDUC 274X. School Choice: The Role of Charter Schools**

(Formerly EDUC 153X.) Is school choice, including vouchers, charter schools, contract schools, magnet schools, district options, and virtual schools, a threat or an opportunity for public education? Focus is on the charter school movement nationally and in California as reform strategy. Roles and responsibilities of charter schools emphasizing issues of governance, finance, curriculum, standards, and accountability.

*3 units, Win (Kushner, M)*

**EDUC 276. Educational Assessment**

Reliability, validity, bias, fairness, and properties of test scores. Uses of tests to monitor, manage, and reform instruction. Testing and competition, meritocracy, achievement gaps, and explanations for group differences.

*3 units, Spr (Haertel, E)*

**EDUC 277. Education of Immigrant Students: Psychological Perspectives**

Historical and contemporary approaches to educating immigrant students. Case study approach focuses on urban centers to demonstrate how stressed urban educational agencies serve immigrants and native-born U.S. students when confronted with overcrowded classrooms, controversy over curriculum, current school reform movements, and government policies regarding equal educational opportunity. (SSPEP)

*4 units, not given this year*

**EDUC 278. Introduction to Issues in Evaluation**

Open to master's and doctoral students with priority to students from education. Focus is on the basic literature and major theoretical and practical issues in program evaluation. Introduction to basic concepts and intellectual debates in the field: knowledge construction, purpose of evaluation, values in evaluation, knowledge utilization, professional standards of evaluation practice. Enrollment limited to 15. (SSPEP)

*3-4 units, Spr (Porteus, A)*

**EDUC 279. Urban Youth and Their Institutions: Research and Practice**

(Same as EDUC 179) The determinants and consequences of urban life for youth, emphasizing disciplinary and methodological approaches, and the gap between the perspectives of state and local organizations and those of youth and their communities. The diversity of urban youth experiences with respect to ethnicity, gender, and immigration histories. Case studies illustrate civic-level and grassroots institutions, their structures, networks, and philosophies; historical and contemporary realities of urban youth for policy makers, educators, and researchers. Limited enrollment. Prerequisite: consent of instructor. (SSPEP/APA)

*4-5 units, not given this year*

**EDUC 279B. Youth Empowerment and Civic Engagement**

(Same as EDUC 179B) Focus is on youth development policies and practices: what makes them effective, and how they operate in broader institutional contexts. Research-based information; conceptual underpinnings; best learning from experience; and the perspective of expert youth workers, policymakers, and youth about what works.

*2-4 units, not given this year*

**EDUC 281X. Technology for Learners**

Does the use of technology improve learning? Many hope that technology will make learning easier, faster, or accessible to more learners. This course explores a variety of different approaches to designing tools for learning, the learning theories behind them, and the research that tests their effectiveness.

*1-2 units, Aut (Forssell, K)*

**EDUC 282X. The Politics of Knowledge in the Twentieth Century United States**

This course examines the relationship between social scientific knowledge and power in the modern United States. Topics include the emergence of social scientific disciplines, debates over objectivity, and professionalization. The course examines both how universities, philanthropic foundations, and the federal government have shaped knowledge production and how social science has influenced law, social and educational policy, and popular social thought.

*3-5 units, not given this year*

**EDUC 283. Child Development In and Beyond Schools**

(Formerly EDUC 144). How schools form a context for children's social and cognitive development. Focus is on early and middle childhood. Transactional processes between children and learning opportunities in classroom contexts. Topics include: alternative theoretical perspectives on the nature of child development; early experience and fit with traditional school contexts; assessment practices and implications for developing identities as learners; psychological conceptions of motivational processes and alternative perspectives; the role of peer relationships in schools; and new designs for learning environments. Readings address social science and methodological issues. STEP Elementary only.

*2 units, Aut (Hill-Bonnet, L; Merino, N)*

**EDUC 284. Teaching and Learning in Heterogeneous Classrooms**

Teaching in academically and linguistically heterogeneous classrooms requires a repertoire of pedagogical strategies. Focus is on how to provide access to intellectually challenging curriculum and equal-status interaction for students in diverse classrooms. Emphasis is on group work and its cognitive, social, and linguistic benefits for students. How to prepare for group work, equalize participation, and design learning tasks that support conceptual understanding, mastery of content and language growth. How to assess group products and individual contributions. (STEP)

*3 units, Aut (Lotan, R)*

**EDUC 285. Supporting Students with Special Needs**

For STEP teacher candidates. Needs of exceptional learners, identification of learning differences and disabilities, and adaptations in the regular inclusion classroom. Legal requirements of special education, testing procedures, development of individualized education plans, and support systems and services. Students follow a special needs learner to understand diagnosis, student needs, and types of services.

2-3 units, Spr (Fur, E)

**EDUC 286B. Second Language Acquisition Research**

Major research findings and theories in second language acquisition. Second language research and theories in formal and informal settings where a second language is learned. (SSPEP)

4 units, Win (Hakuta, K)

**EDUC 287X. Graduate Research Workshop on Psychological Interventions**

(Same as PSYCH 274) Psychological research has the potential to create novel interventions that promote the public good. This workshop will expose students to psychologically 'wise' intervention research and to support their efforts to conduct such interventions, especially in the context of education, broadly conceived, as well as other areas. The first part of the class will address classic interventions and important topics in intervention research, including effective delivery mechanisms, sensitive behavioral outcomes, the role of theory and psychological process, and considerations of the role of time and of mechanisms that can sustain treatment effects over time. In the second part of the class, students will present and receive feedback on their own ongoing and/or future intervention research. Prerequisite: Graduate standing in Psychology or Education, or consent of instructor.

3 units, Win (Walton, G; Cohen, G)

**EDUC 288. Organization Studies: Theories and Analyses**

(Same as SOC 366) Principles of organizational behavior and analysis; theories of group and individual behavior; organizational culture; and applications to school organization and design. Case studies.

4-5 units, Aut (McFarland, D)

**EDUC 290. Leadership: Research, Policy, and Practice**

Conceptions of leadership that include the classroom, school, district office, and state capitol. The role of complexity; organizational leaders outside of schools past and present, and how that complexity permitted leadership to arise. Case studies. (SSPEP/APA)

4 units, not given this year

**EDUC 291. Learning Sciences and Technology Design Research Seminar and Colloquium**

Students and faculty present and critique new and original research relevant to the Learning Sciences and Technology Design doctoral program. Goal is to develop a community of scholars who become familiar with each other's work. Practice of the arts of presentation and scholarly dialogue while introducing seminal issues and fundamental works in the field.

1-3 units, Aut (Pea, R), Win (Schwartz, D), Spr (Goldman, S)

**EDUC 291X. Introduction to Survey Research**

(Same as EDUC 191X) Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design, refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity.

3-4 units, Win (Rodriguez, E)

**EDUC 292A. Acquisition of Japanese as a Second Language**

(Same as JAPANLIT 292) Provides students with a broad overview of second language acquisition (SLA) research and introduces recent SLA studies on Japanese as a second language.

2-4 units, Aut (Ishida, M)

**EDUC 292X. Academic Writing for Clarity and Grace**

Students will acquire helpful writing strategies, habits, and critical faculties; increase their sense of writing as revision; and leave them with resources that will support them in their own lifelong pursuit of good writing. Students will work on revising their own papers and editing papers of other students. Class will focus on exercises in a variety of critical writing skills: framing, concision, clarity, emphasis, rhythm, action, actors, argument, data,

quotations, and usage.

2-4 units, Spr (Labaree, D)

**EDUC 293X. American Philosophy of Education**

A century of classical writers in American philosophy, focusing on work on education, democracy, learning, and culture. Texts by Emerson, Peirce, James, Dewey, and Mead.

3-4 units, not given this year

**EDUC 294X. History of the Learned Book**

The course takes full advantage of the university library's Special Collections to examine the key historic works contributing to the advancement of learning and the organization of knowledge. Beginning with medieval manuscripts and progressing through all areas of human inquiry during the age of print, the course explores the economic and educational history of learned publishing in the West, while examining what these historic artifacts reveal about developments in the structure and authority, production and circulation, technology and aesthetics, of learning and knowledge.

3-5 units, not given this year

**EDUC 295. Learning and Cognition in Activity**

(Same as PSYCH 261A) Methods and results of research on learning, understanding, reasoning, problem solving, and remembering, as aspects of participation in social organized activity. Principles of coordination that support cognitive achievements and learning in activity settings in work and school environments.

3 units, Spr (Pea, R)

**EDUC 296X. School Leadership**

Can one person really make a difference for all the students in a school? Accurate or not, that's the expectation faced by school principals. This course will give students practice in translating school improvement ideas into practice and also help them develop a personal vision for school improvement. For students in POLS or MA/MBA program in School of Education.

3 units, not given this year

**EDUC 297X. Teaching and Learning in Higher Education**

(Same as CTL 297X) Open to master's and doctoral students in all disciplines. How teachers can promote lasting learning and ask which pedagogies are most effective in today's college classrooms. Readings analyze teaching and learning in diverse disciplines and institutional types. Students observe the instruction of a Stanford master teacher. Students write a paper about the instruction of the teacher they observe or prepare a syllabus and commentary for a course of their design.

3-4 units, Win (Ehrlich, T; Miller, B)

**EDUC 298. Learning in a Networked World**

(Same as CS 377L) Foundations, theories and empirical studies for interdisciplinary advances in how we conceive of the potentials and challenges associated with lifelong, lifewide and life-deep learning in a networked world given the growth of always-on cyberinfrastructure for supporting information and social networks across space and time with personal computers, netbooks, and mobiles.

3 units, not given this year

**EDUC 299. Educating for Equity and Democracy**

(Formerly EDUC 167.) Introduction to the theories and practices of equity and democracy in education. How to think about teaching and schooling in new ways; the individual moral and political reasons for becoming a teacher. (STEP)

2 units, Sum (Staff)

**EDUC 301X. Workshop on Race, Ethnicity, and Language in Schools**

(Same as LINGUIST 253A) The Workshop on Race, Ethnicity, and Language in Schools is a new School of Education initiative that examines the profound and enduring relationships between race, ethnicity, and language in education in the U.S. and elsewhere. The seminar brings together an interdisciplinary group of leading scholars and graduate students in language in education to address the role of race and ethnicity in a host of complex and controversial language educational issues that cut across the areas of practice, policy, and pedagogy.

1-4 units, Spr (Alim, H)

**EDUC 302X. Incentives In Education**

Seminar. Theoretical and empirical literatures from psychology

and economics that focus on group and individual incentives and their potential effects. Emphasis is on seminal experiments in psychology and the recent wave of economic field experiments that test the how individual incentives affect educational outcomes and intrinsic motivation.

*1-4 units, not given this year*

**EDUC 303X. Designing Learning Spaces**

Project-based. How space shapes personal interactions and affords learning opportunities in formal and informal settings. How to integrate learning principles into the design of spaces and develop a rubric to assess the impact on learning.

*3-4 units, Win (Forssell, K)*

**EDUC 304X. Critical Theory and Pedagogy**

The course samples the work of Critical Theory, proper, critical theory more generally, and critical pedagogy in the schools, as it draws on the educational consequences of a school of thought. The project of critical theory is examined in light of the curricular applications that it has inspired and the scholarly implications of studying education in this seemingly critical theoretical manner. Students will evaluate a particular curricular point of application of these related theoretical developments.

*1-5 units, Win (Willinsky, J)*

**EDUC 305X. Deprivation and Alienation in Fiction and Education**

This course seeks categories and procedures for the appreciation, description, analysis, and reorganization of people in difficult circumstances. Examples from the history of fiction and classic political economy are used to explore the strengths and weaknesses of various approaches. In depth attention to individual lives and daily struggles give fiction and economic theory more appropriately positive views of people without the advantages of schooling than most educational research. Readings include fiction by Defoe, Austen, Dickens, Hurston, and Morrison and economic visions from Smith, Marx, Veblen, Keynes, and Galbraith.

*3-4 units, Spr (McDermott, R)*

**EDUC 306A. Economics of Education in the Global Economy**

Case material considers development problems in the U.S. and abroad. Discussion sections on economic aspects of educational development. (SSPEP/ICE)

*5 units, Aut (Carnoy, M)*

**EDUC 306B. Politics, Policy Making, and Schooling Around the World**

Education policy, politics, and development. Topics include: politics, interests, institutions, policy, and civil society; how schools and school systems operate as political systems; how policy making occurs in educational systems; and theories of development.

*3-4 units, Spr (Russell, S; Buckner, E)*

**EDUC 306C. Political Economy of the Mind**

Theories of political economy related to theories of the learning mind, emphasizing theories of genius. Readings from Pascal, Defoe, Smith, Balzac, Emerson, Marx, Veblen, Joyce, and Morrison. (SSPEP)

*3-4 units, not given this year*

**EDUC 306D. World, Societal, and Educational Change: Comparative Perspectives**

(Same as EDUC 136, SOC 231) Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.

*4-5 units, Win (Ramirez, F)*

**EDUC 306Y. Economic Support Seminar for Education and Economic Development**

Core economic concepts that address issues in education in developing and developed countries. Supply and demand, elasticity, discount rates, rate of return analysis, utility functions, and production functions. Corequisite: 306A. (Carnoy)

*1 unit, Aut (Carnoy, M)*

**EDUC 307X. Organizing for Diversity: Opportunities and Obstacles in Groups and Organizations**

Obstacles in organizations and groups that prevent people from participating, working effectively, and developing relationships in the context of diversity. How to create conditions in which diversity enhances learning and effectiveness? Experiential exercises; students experiment with conceptual and analytic skills inside and outside of the classroom.

*3-4 units, not given this year*

**EDUC 308X. Mobile Learning Technology for the Marginalized**

Learning design principles as a basis for developing and evaluating mobile learning systems to address educational inequalities in underserved communities. Students analyze mobile learning scenarios, prototypes, and authoring tools while collaborating with research teams to develop a small-scale mobile empowerment scenario addressing education needs such as language, math, health, and civic and life skills in developing countries.

*1-3 units, not given this year*

**EDUC 309X. Educational Issues in Contemporary China**

(Same as EDUC 109X) Reforms such as the decentralization of school finance, emergence of private schools, expansion of higher education, and reframing of educational policy to focus on issues of quality. Have these reforms exacerbated educational inequality.

*3-4 units, not given this year*

**EDUC 310. Sociology of Education: The Social Organization of Schools**

(Same as EDUC 110, SOC 132, SOC 332) Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.

*4 units, Spr (Carter, P)*

**EDUC 311X. Designing Learning for Development: Learning Theories, Technology Design and Social Change**

Perspectives on learning and human development as they relate to prior technological interventions in the development sphere. Case studies in the international development context; historical perspective on learning and development. Methods of inquiry useful in a design process engaging technology within a development framework.

*3 units, not given this year*

**EDUC 312A. Traditions of Microsociology**

(Same as SOC 224A) The educational applications of sociological and social psychological theory and research to interaction processes in schools. Readings include: foundational works by Mead, Schutz, and Simmel; contemporary work by Goffman, Homans, Merton, Blau, and Harold. Readings span empirical settings such as work, classrooms, gangs, primate societies, and children's games. Topics: processes of influence, role differentiation, identity formation, social mechanisms, and intra/inter group dynamics of peer relations. Methods for observation and analysis of small groups. (SSPEP)

*4 units, not given this year*

**EDUC 312B. Microsociology: Social Structure and Interaction**

(Same as SOC 224B) How to interpret interpersonal situations using microsociological theories. Focuses on the role of intention, identity, routines, scripts, rituals, conceptual frameworks, talk and emotions in social interaction. Processes by which interactions reverberate outward to transform groups and social structures. Special consideration will be placed on organizational contexts like schools, workplaces and policy decision arenas.

*4 units, not given this year*

**EDUC 314. Workshop in Economics of Education**

Research by students and faculty engaged in problems in the economics of education. Prerequisites: advanced graduate training in economics theory and methodology; current ongoing research. May be repeated for credit. (SSPEP)

*1-2 units, not given this year*

**EDUC 315X. Race and Ethnicity in Society and Institutions**

(Same as SOC 347) Primarily for doctoral students. Major theories and empirical research. Emphasis is on schooling and race, racial identity, urban issues, and the impact of immigration on race relations.

*1-5 units, not given this year*

**EDUC 316. Social Network Analysis**

(Same as SOC 369) Introduction to social network theory, methods, and research applications in sociology. Network concepts of interactionist (balance, cohesion, centrality) and structuralist (structural equivalence, roles, duality) traditions are defined and applied to topics in small groups, social movements, organizations, communities. Students apply these techniques to data on schools and classrooms. (SSPEP)

*4-5 units, Win (McFarland, D)*

**EDUC 317X. Workshop: Networks, Histories, and Theories of Action**

(Same as SOC 317W) Yearlong workshop where doctoral students are encouraged to collaborate with peers and faculty who share an interest in researching the network dynamics, histories and theories of action that help explain particular social phenomena. Students present their own research and provide helpful feedback on others' work. Presentations may concern dissertation proposals, grants, article submissions, book proposals, datasets, methodologies and other texts. Repeatable for credit.

*1-2 units, Aut (McFarland, D; Parigi, P), Win (McFarland, D; Parigi, P), Spr (McFarland, D; Parigi, P)*

**EDUC 318X. The Discourses of Teaching Reading**

Students examine language, social relationships, and students' textual sense-making to further develop their conceptions of reading comprehension and their pedagogical practice as reading teachers. What it means to comprehend text; how classroom discourse matters in the development of textual understanding; and what understandings, purposes, and relationships should matter in classroom talk about text. Field work in which students facilitate small group text discussions for the duration of the quarter at a location of their choice.

*3-5 units, not given this year*

**EDUC 319. Research on Teaching**

Introduction and historical perspective to theory, methods, and substantive findings of research on teaching.

*1-4 units, Win (Borko, H)*

**EDUC 320X. Sociology of Knowledge Creation**

(Same as EDUC 120X, SOC 330) The sociology of knowledge creation explores systematic relationships between thought and social structure in order to examine how human beings construct, interpret, and view reality. How knowledge is socially constructed, patterned, and used, and how everyday and tacit forms of knowledge are achieved. Emphasis is on the creation and patterning of scientific paradigms, social science disciplines, and the field of education.

*3-4 units, Aut (McFarland, D)*

**EDUC 321B. Analysis of Social Interaction**

Practicum on discourse, interactional, and cultural analysis of videotaped data. Analysis of interactional data, and the basis on which analytic claims can be founded. The transcription of speech and movement in social interaction, and how to identify the patterns which participants use to display and interpret cultural meanings. The theoretical assumptions hidden in transcription systems. Prerequisite: first- or second-year graduate student. (SSPEP/ICE)

*4 units, Win (McDermott, R)*

**EDUC 321X. Leading Social Change: Educational and Social Entrepreneurship**

(Same as OB 385) (Same as OB 385) The course provides an overview of different approaches to leading change in the social sector, drawing primarily, but not exclusively, on case examples in education. While there is a substantial need for innovation and visionary leadership in sectors such as education, social entrepreneurs who want to drive change must appreciate the significant barriers and unique opportunities presented by non-market forces in these sectors. The course will equip students with an appreciation for different mechanisms of change and theories of action as well as some of the challenges of initiating and sustaining

meaningful change in social sectors such as education. The course will draw on readings and case studies, and we will benefit from the wisdom of an inspirational group of guest lecturers. While the course will benefit any student concerned with making a positive impact in the world, it is particularly (although not exclusively) appropriate for students in the joint MA/MB

*4 units, not given this year*

**EDUC 322. Discourse of Liberation and Equity in Schools and Society**

Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques. Prerequisite: graduate status or consent of instructor. (SSPEP)

*3-5 units, not given this year*

**EDUC 323A. The Practice of Education Policy Analysis**

Key issues in the K-12 education policy. Modern theories about the making of policy and its implementation. Preparation to do policy analysis in education. (SSPEP)

*3 units, Spr (Kelemen, M)*

**EDUC 324X. The Ecology of Equality**

This seminar is designed for doctoral students. One of the claims of American educational policy and practice is the desire to achieve equitable educational results across society. But what does equity really entail? This course will survey a range of research and literature that examines the landscape of myriad social institutions known to influence educational processes. The course will take an interdisciplinary approach to deconstructing the main issues confronting schools today and to discussing effective policies and practices.

*4 units, not given this year*

**EDUC 325A. Proseminar 1**

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?

*3 units, Aut (Carnoy, M; Willinsky, J)*

**EDUC 325B. Proseminar 2**

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?

*3 units, Win (Boaler, J; Murata, A)*

**EDUC 325C. Proseminar 3**

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?

*2-4 units, Spr (Antonio, A; Carter, P)*

**EDUC 327A. The Conduct of Qualitative Inquiry**

(Same as SOC 331) Two quarter sequence for doctoral students to engage in research that anticipates, is a pilot study for, or feeds into their dissertations. Prior approval for dissertation study not required. Students engage in common research processes including: developing interview questions; interviewing; coding, analyzing, and interpreting data; theorizing; and writing up results. Participant observation as needed. Preference to students who intend to enroll in 327C.

*3-4 units, not given this year*

**EDUC 327C. The Conduct of Qualitative Inquiry**

For doctoral students. Students bring research data for analysis and writing. Preference to those who have completed 327A.

*1-4 units, not given this year*

**EDUC 328X. Topics in Learning and Technology: Core Mechanics for Learning**

(Same as COMM 180, COMM 280, CS 377H) Contents of the course change each year. The course can be repeated. In game

play, core mechanics refers to the rules of interaction that drive the game forward. This class will consider whether there are core mechanics that can drive learning forward, and if so, how to build them into learning environments.

3 units, Win (Schwartz, D)

**EDUC 329X. Seminar on Teacher Professional Development**

For master's and doctoral students. Theories, principles, and models of professional development. Issues include: different conceptions of teaching, practice, and development; what gets developed in professional development; pedagogies of professional development; structures to support teacher learning; evaluating professional development; and policy issues.

1-4 units, alternate years, not given this year

**EDUC 330X. Teaching English Language Learners: Issues in Policy, Leadership, and Instruction**

Current perspectives and research on issues facing educators serving the English language learner population. Issues include federal education legislation, civil rights law, national Common Core Standards, content and language proficiency standards assessment and accountability, school improvement models, school structure, community engagement, addressing issues of long-term English learners, programming for newcomer ELLs, early childhood education, and promoting bilingualism.

3-4 units, Spr (Hakuta, K)

**EDUC 331A. Introduction to Research Design in Administration and Policy Analysis**

Required for first-year APA doctoral students; SSPEP first-year doctoral students with consent of instructor. How to conduct literature reviews. How to use literature to frame and formulate problem statements, research questions, and conceptual frameworks. (APA)

3 units, not given this year

**EDUC 332X. Theory and Practice of Environmental Education**

Foundational understanding of the history, theoretical underpinnings, and practice of environmental education as a tool for addressing today's pressing environmental issues. The purpose, design, and implementation of environmental education in formal and nonformal settings with youth and adult audiences. Field trip and community-based project offer opportunities for experiencing and engaging with environmental education initiatives.

3 units, Spr (Ardoin, N)

**EDUC 333A. Understanding Learning Environments**

Advanced seminar. Theoretical approaches to learning used to analyze learning environments and develop goals for designing resources and activities to support effective learning practices.

3 units, Win (McDermott, R; Pea, R)

**EDUC 333B. Imagining the Future of Learning**

How to understand and forecast social, educational, technological trends; how to develop concepts and ideas for engaging learning and technology. Presentations of scenarios for future learning concepts from education, government, technology, business and leisure sectors. Experiments with the research and visioning processes.

3 units, not given this year

**EDUC 334A. Youth and Education Law Project: Clinical Practice**

(Same as LAW 660A). The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and cou

4 units, Win (Koski, W), Spr (Koski, W)

**EDUC 334B. Youth and Education Law Project: Clinical**

**Methods**

(Same as LAW 660B). The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and cou

4 units, Win (Koski, W), Spr (Koski, W)

**EDUC 334C. Youth and Education Law Project: Clinical Coursework**

(Same as LAW 660C). The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and cou

4 units, Win (Koski, W), Spr (Koski, W)

**EDUC 334X. Education Advocacy Clinic**

(Same as LAW 660.) For students enrolled in the Education (M.A.) and Law (J.D.) joint degree program and those who already possess Law degrees only. Students participate in educational rights and reform work with clients and communities, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. May be repeated for credit. Prerequisite: consent of instructor.

2-10 units, Win (Staff), Spr (Staff)

**EDUC 336. Language, Identity, and Classroom Learning**

As contemporary research focuses on how people act and recognize each other, analyzing interaction while acknowledging identity allows for a dynamic examination of cultural interaction. Broad cultural categorization can be overly expansive in identifying the characteristics of large groups of individuals.

1-3 units, Aut (Brown, B)

**EDUC 336A. Law and Public Policy: Issues in Implementation**

(Same as LAW 636.) This seminar will focus on issues related to achieving successful implementation of the goals of legislation. It is widely recognized that the goals of legislation often are not realized and that the failure frequently rests in breakdowns in the implementation process by the agencies and organizations charged with implementing the legislation. In response to problems in implementation, the institutional context of public policy implementation is changing. One category of innovations, known by names such as management-based regulation and evidence-based social service delivery, gives broad discretion to street-level service providers but subjects them to intensive monitoring and disciplined performance comparison. Another category applies market concepts to regulation or social services, for example, by creating tradable rights (e.g. pollution allowances) or vouchers (for schools, housing, or healthcare). These, and other, new approaches are affecting both the

3 units, Win (Staff)

**EDUC 337. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices**

(Same as AFRICAAM 106, CSRE 103B, EDUC 103B) Focus is

on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.

3-5 units, *Spr* (Ball, A)

**EDUC 338X. Innovations in Education: Designing the teaching experience**

Design Institute class; see <http://dschool.stanford.edu>. Immersive experiences and real world projects focused around issues facing the teaching profession. Human capital as a top priority for the U.S. and other educational systems. Topics include teacher career ladders, induction, retention, and teacher knowledge sharing.

3-4 units, *not given this year*

**EDUC 339. Advanced Topics in Quantitative Policy Analysis**

For doctoral students. How to develop a researchable question and research design, identify data sources, construct conceptual frameworks, and interpret empirical results. Presentation by student participants and scholars in the field. May be repeated for credit.

1-2 units, *Aut* (Loeb, S), *Win* (Reardon, S), *Spr* (Staff)

**EDUC 340. Psychology and American Indian Mental Health**

(Same as NATIVEAM 240) Western medicine's definition of health as the absence of sickness, disease, or pathology; Native American cultures' definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities.

3-5 units, *not given this year*

**EDUC 341X. Urban School System Reform**

Strategies for large-scale reform of complex school systems. Case studies of urban school systems. Sources include approaches developed in management studies, organizational behavior, and school reform. Political and community contexts; the role of urban superintendents and administrators in creating reform strategies. Factors such as labor relations and the regulatory environment. Guest speakers.

4 units, *not given this year*

**EDUC 342. Child Development and New Technologies**

Focus is on the experiences computing technologies afford children and how these experiences might influence development. Sociocultural theories of development as a conceptual framework for understanding how computing technologies interact with the social ecology of the child and how children actively use technology to meet their own goals. Emphasis is on influences of interactive technology on cognitive development, identity, and social development equity.

1-3 units, *Win* (Barron, B; Goldman, S)

**EDUC 343X. Navigating the Academic Profession**

For DARE doctoral fellows only. The roles and responsibilities of faculty members in American colleges and universities in the 21st century. How to become productive faculty members within the higher education enterprise.

1-2 units, *Aut* (Golde, C)

**EDUC 344. Child Development and Schooling**

How the practices and activities of schooling influence the social, emotional, and cognitive development of children. Metatheoretical approaches (mechanistic, organismic, developmental contextualist) and methods of conducting research on schooling and development (experimental, survey, ethnographic, intervention). Topics: how teaching practices influence cognitive growth in academic domains; how the organizational structures of schools (grade related transitions, class organizations) fit or fail to fit developmental needs; how friendship groups create contexts for learning and can lead to different trajectories of development; and how grading and other evaluative practices influence motivational orientations. Focus is on elementary school years. (PSE)

3-4 units, *not given this year*

**EDUC 346. Research Seminar in Higher Education**

Required for higher education students. Major issues, current structural features of the system, the historical context that shaped

it, and theoretical frameworks. The purposes of higher education in light of interest groups including students, faculty, administrators, and external constituents. Issues such as diversity, stratification, decentralization, and changes that cut across these groups. (APA)

4 units, *Aut* (Stevens, M)

**EDUC 347. The Economics of Higher Education**

Topics: the worth of college and graduate degrees, and the utilization of highly educated graduates; faculty labor markets, careers, and workload; costs and pricing; discounting, merit aid, and access to higher education; sponsored research; academic medical centers; and technology and productivity. Emphasis is on theoretical frameworks, policy matters, and the concept of higher education as a public good. Stratification by gender, race, and social class.

4 units, *Win* (Bettinger, E)

**EDUC 348X. Policy and Practice in Science Education**

Values and beliefs that dominate contemporary thinking about the role and practice of science education, what the distinctive features of science are, and the arguments for its value as part of compulsory education. Research on the conceptual and affective outcomes of formal science education, how the changing nature of contemporary society challenges current practice, and the rationale for an alternative pedagogy, curriculum and assessment.

3-4 units, *alternate years, not given this year*

**EDUC 350A. Psychological Studies in Education**

Required of first-year doctoral students in Psychological Studies; others by consent of instructor. Introduction to the doctoral program in Psychological Studies in Education and to faculty and student research. (PSE)

2 units, *not given this year*

**EDUC 350C. Psychological Studies in Education**

Individual research projects in a group context. (PSE)

1-2 units, *not given this year*

**EDUC 351A. Statistical Methods for Longitudinal Data**

(Same as STATS 222) Research designs and statistical procedures for time-ordered (repeated-measures) data. The analysis of longitudinal panel data is central to empirical research on learning and development. Topics: measurement of change, growth curve models, analysis of durations including survival analysis, experimental and non-experimental group comparisons, reciprocal effects, stability. See <http://www-stat.stanford.edu/~rag/stat222/>. Prerequisite: intermediate statistical methods.

2-3 units, *Spr* (Rogosa, D)

**EDUC 351B. Statistical Issues in Testing and Assessment**

The new book by Howard Wainer, *Uneducated Guesses: Using Evidence to Uncover Misguided Education Policies* is the basis for this seminar. Also included will be supporting research literature and data analysis activities for topics such as college admissions, methods for missing data, assessment of achievement gaps, and the use of value-added analysis. See <http://www-stat.stanford.edu/~rag/ed351B/>

2-3 units, *Aut* (Rogosa, D)

**EDUC 351C. Workshop in Technical Quality of Educational Assessments and Accountability**

Topics include: determinations of accuracy for individual scores and group summaries; design and reporting of educational assessments; achievement instruments in state-level accountability systems; and policy implications of statistical properties. See <http://www.stanford.edu/~rag/>.

3 units, *not given this year*

**EDUC 352X. Education Schools: Historical and Sociological Perspectives**

The lowly status of the education school, defined as college, school, or department, within a university. Why does the education school get no respect? Its historical development, how it evolved into its current position in the academic hierarchy, and contemporary factors that help to reinforce that position. (SSPEP) (Labaree)

2-4 units, *not given this year*

**EDUC 353A. Problems in Measurement: Item Response Theory**

Alternative mathematical models used in test construction, analysis, and equating. Emphasis is on applications of item

response theory (latent trait theory) to measurement problems, including estimation of item parameters and person abilities, test construction and scoring, tailored testing, mastery testing, vertical and horizontal test equating, and detection of item bias. Prerequisites: 252 and 257, or PSYCH 248 and 252, or equivalent. (PSE)

3 units, Win (Haertel, E)

**EDUC 353C. Problems in Measurement: Generalizability Theory**

Application to analysis of educational achievement data, including performance assessments. Fundamental concepts, computer programs, and actual applications. (PSE)

3 units, Spr (Haertel, E)

**EDUC 354X. School-Based Decision Making**

Leadership and organizational issues. Leadership as it plays out in the pragmatic demands and tensions of site-level decision processes. The interdependence of factors critical to school achievement and equity outcomes: governance and culture, instruction, resource alignment, inquiry, community engagement. The complexity of decisions in these arenas and the capacity-building process of leadership for results.

3-4 units, Win (Hoagland, G)

**EDUC 355X. Higher Education and Society**

For undergraduates and graduate students interested in what colleges and universities do, and what society expects of them. The relationship between higher education and society in the U.S. from a sociological perspective. The nature of reform and conflict in colleges and universities, and tensions in the design of higher education systems and organizations.

3 units, not given this year

**EDUC 356. Street History: Learning the Past in School and Out**

(Same as HISTORY 337C) Interdisciplinary. Since Herodotus, history and memory have competed to shape minds: history cultivates doubt and demands interpretation; memory seeks certainty and detests that which thwarts its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to the process?

3-5 units, not given this year

**EDUC 357X. Science and Environmental Education in Informal Contexts**

There are ever-expanding opportunities to learn science in contexts outside the formal classroom, in settings such as zoos, museums, and science centers. How are issues around science and the environment presented in these contexts, how do people behave and learn in these contexts, and what messages do they take away? This course will cover the learning theories and empirical research that has been conducted in these settings. Case studies of nearby science centers will add an experiential dimension.

3-4 units, Win (Osborne, J; Ardoin, N)

**EDUC 358X. Learning, Sharing, Publishing, and Intellectual Property**

This course explores the legalities and economics entailed in sharing intellectual property (books, websites, games, journals, etc.) associated with learning at all age levels in the digital era. It assesses the implications of historical, contemporary, and innovative approaches to intellectual property in designing for learning and teaching, as well as for the place of knowledge in the society at large. The course considers new licensing agreements and economic models that apply to learning resources, software systems, research, archives, and data. And the course publishes its own open access and open source journal as a demonstration project: <http://accesscourse.stanford.edu>

1-4 units, Win (Willinsky, J)

**EDUC 359A. Research in Science and Mathematics Education: Assessment and Evaluation**

Historical and international perspectives. Emphasis is on trends and issues in contemporary American research and policy. Opportunity to develop and discuss dissertation plans. (CTE) (Shavelson)

2-4 units, Aut (Nandagopal, K)

**EDUC 359B. The History of Research in Science Education**

For doctoral students interested in science education and literacy in school subjects.

2-3 units, Win (Brown, B)

**EDUC 359C. Science Literacy**

The changing debate over conceptions of the nature of science and the calls to broaden it. Themes, directions, limitations, and epistemological foundations of the body of research on the nature of science.

2-3 units, not given this year

**EDUC 359E. Research on Mathematics Education**

Comparative and cultural perspectives on mathematics teaching and learning practices in the U.S. mathematics education in the context of cultural and educational systems. Teaching and learning as an interactive system, classroom discourse and math talk, teacher professional development, classroom culture and norms, educational equity, and issues of curriculum and standards.

2-4 units, Aut (Murata, A)

**EDUC 359F. Research in Mathematics Education: Conducting Inquiry**

The focus of this seminar is an exploration of relationships between theory, research, and practice. At the center will be the participants' own research studies in mathematics education that they will conduct throughout the 10 weeks of the course. These will be accompanied by focused readings that illustrate various issues within the research enterprise as well as give participants a broad perspective on the field of mathematics education.

2-4 units, not given this year

**EDUC 360X. Developmental Psychopathology and Resilience**

In this course students will learn about theoretical, methodological, and empirical issues pertaining to developmental psychopathology and resilience of children and adolescents. The course focuses on (1) current conceptual and empirical issues; (2) cognitive, affective, and motivational processes that underlie some of the most salient childhood mental health symptoms and disorders; (3) family, school, and cultural factors that contribute to developmental psychopathology and resilience; and (4) cutting-edge analytic methods that are currently employed in studies of developmental psychopathology and resilience.

3-4 units, Spr (Obradovic, J)

**EDUC 361. Workshop: Networks and Organizations**

(Same as SOC 361W) For students doing advanced research. Group comments and criticism on dissertation projects at any phase of completion, including data problems, empirical and theoretical challenges, presentation refinement, and job market presentations. Collaboration, debate, and shaping research ideas. Prerequisite: courses in organizational theory or social network analysis.

1-3 units, Aut (Powell, W), Win (Powell, W), Spr (Powell, W)

**EDUC 362X. The Science Curriculum: Values and Ideology in a Contested Terrain**

The issue of what should be taught in schools is a site of contestation where issues of beliefs, values and ideologies emerge. This course will use the school science curriculum and the history of its development to explore the common positions adopted and argued for in approaching curriculum development. Course will help students develop a knowledge of curriculum reform in school science and a deeper understanding of the arguments that have shaped its present form and their historical antecedents.

3-5 units, Spr (Osborne, J)

**EDUC 363X. Stress Reactivity and Biological Sensitivity to Context**

This class is designed to introduce students to two biological systems, the autonomic nervous system (ANS) and the hypothalamic-pituitary-adrenal (HPA) axis that help children respond to and cope with daily challenges, stressors, and adversities. We will examine: (1) how the ANS and HPA systems respond to daily stressors, as well as experiences of poverty, maltreatment, and neglect; (2) how different indices of stress reactivity independently and jointly relate to various domains of competence and psychopathology; and (3) how stress reactivity moderates contextual influences on children's adaptation.

3-4 units, Aut (Obradovic, J)

**EDUC 364. Cognition and Learning**

Cognitive psychology is the study of human thought including topics including the nature of expertise, creativity, and memory. Emphasis is on learning. The role of cognitive psychology in helping people learn, and determining the most desirable type of learning and whether people have learned. Students design and conduct their own learning study.

*3-4 units, alternate years, not given this year*

**EDUC 365. Social, Emotional, and Personality Development**

Limited to doctoral students in PSE and those with a background in child and adolescent development. Developmental processes that account for psychological adaptation in social relationships, schools, and other interpersonal settings. Theoretical models of social, personality, and emotional development. Topics such as self-concept, empathy, motivation, aggression, and personality formation.

*3 units, Win (Damon, W)*

**EDUC 366X. Learning in Formal and Informal Environments**

How learning opportunities are organized in schools and non-school settings including museums, after-school clubs, community art centers, theater groups, aquariums, sports teams, and new media contexts. Sociocultural theories of development as a conceptual framework. Readings from empirical journals, web publications, and books. Collaborative written or multimedia research project in which students observe and document a non-school learning environment.

*3 units, Spr (Barron, B)*

**EDUC 367. Cultural Psychology**

(Formerly 292.) The relationship between culture and psychological processes; how culture becomes an integral part of cognitive, social, and moral development. Both historical and contemporary treatments of cultural psychology, including deficit models, crosscultural psychology, ecological niches, culturally specific versus universal development, sociocultural frameworks, and minority child development. The role of race and power in research on cultural psychology.

*3-5 units, Spr (LaFromboise, T)*

**EDUC 368. Cognitive Development in Childhood and Adolescence**

This course aims to broaden and deepen students' understanding of cognitive development from the prenatal period through adolescence. It will examine various theoretical, methodological, and empirical issues pertaining to different domains of cognitive development, such as neurobiological plasticity, infant cognition, theory of mind, memory, language, and executive functions. Throughout the course, as we survey research findings, we will discuss (1) methods that researchers have employed in their study of cognitive development; (2) limitations of current research and directions for future research; and (3) translation of research findings for practitioners and policymakers.

*3-4 units, Aut (Obradovic, J)*

**EDUC 369. Human Cognitive Abilities**

(Same as PSYCH 133) Psychological theory and research on human cognitive abilities; their nature, development, and measurement; and their importance in society. Persistent controversies and new areas of research, recent perspectives on the nature-nurture debate and the roles of genetics, health and education in shaping HCAs. Prerequisite: PSYCH 1 or equivalent. (PSE)

*3 units, not given this year*

**EDUC 370X. Theories of Cognitive Development**

The contributions of Jean Piaget and Lev Vygotsky to the study of the developing mind of the child. Their theories, concepts, perspectives, empirical work, and lives. Topics: Piaget's genetic epistemology, constructivism, and idea of sensorimotor through formal operational stages; Vygotsky's cultural-historical approach, egocentric speech, and the relation between learning and development.

*3 units, not given this year*

**EDUC 371X. Social Psychology and Social Change**

(Same as PSYCH 265, PUBLPOL 305B) The course is intended an exploration of the major ideas, theories, and findings of social psychology and their applied status. Special attention will be given to historical issues, classic experiments, and seminal theories, and

their implications for topics relevant to education. Contemporary research will also be discussed. Advanced undergraduates and graduate students from other disciplines are welcome.

*2-3 units, Spr (Cohen, G)*

**EDUC 373X. Teaching in the Humanities-Research into Adolescent Literacy**

Relatively little attention has been paid to the role of humanities courses in teaching both general and disciplinary skills in reading and writing. With the growth of small schools, more middle and high school teachers find themselves teaching 'Humanities' courses. This seminar will explore what it means to teach the humanities, with special attention to how such courses can develop disciplinary reading and writing skills. Course will investigate how we develop tools to assess teaching and learning in the humanities.

*3-5 units, not given this year*

**EDUC 374. Philanthropy and Civil Society**

(Same as POLISCI 334, SOC 374) Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units.

*1-3 units, Aut (Powell, W), Win (Powell, W), Spr (Powell, W)*

**EDUC 375A. Seminar on Organizational Theory**

(Same as MS&E 389, SOC 363A) The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.

*5 units, Aut (Powell, W)*

**EDUC 375B. Seminar on Organizations: Institutional Analysis**

(Same as SOC 363B) Seminar. Key lines of inquiry on organizational change, emphasizing network, institutional, and evolutionary arguments.

*3-5 units, not given this year*

**EDUC 376. State Theory and Educational Policy**

The relationship between political system structures and educational change by analyzing theories and interpretations of how political systems function, and the implications of these theories for understanding education. Classical and Marxist interpretations. (SSPEP/ICE)

*4 units, not given this year*

**EDUC 377. Comparing Institutional Forms: Public, Private, and Nonprofit**

(Same as GSBGEN 346, PUBLPOL 317, SOC 377) For students interested in the nonprofit sector, those in the joint Business and Education program, and for Public Policy MA students. The focus is on the missions, functions, and capabilities of nonprofit, public, and private organizations, and the managerial challenges inherent in the different sectors. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials.

*4 units*

**EDUC 377B. Strategic Management of Nonprofits**

(Same as STRAMGT 368). Strategic, governance, and management issues facing nonprofit organizations and their leaders in the era of venture philanthropy and social entrepreneurship. Development and fundraising, investment management, performance management, and nonprofit finance. Case studies include smaller, social entrepreneurial and larger, more traditional organizations, including education, social service, environment, health care, religion, NGOs, and performing arts.

*4 units, Win (Meehan, W)*

**EDUC 377C. Strategic Issues in Philanthropy**

(Also GSBGEN 381). Operational and strategic distinctions between traditional philanthropic entities, such as community, private, and corporate foundations, and contemporary models, such as funding intermediaries and venture philanthropy partnerships. Philanthropic strategies as they relate to foundation mission, grant making, evaluation, financial management, infrastructure, and board governance. Guest speakers include philanthropists, foundation presidents, and Silicon Valley business leaders. Group

project in which students solicit a grant proposal from a local nonprofit organization and make a funding recommendation to a Silicon Valley-based foundation.

*4 units, Aut (Arrillaga, L)*

**EDUC 377D. Strategic Leadership of Nonprofits**

(Same as STRAMGT 378) Formulating, evaluating, and implementing mission and strategy. Case studies from nonprofits in social services, health care, education, and arts and culture. The interaction of strategy and mission, industry structure and evolution, strategic change, growth and replication, corporate strategy, governance, commercialization, alliances, capacity building, and leadership.

*4 units, not given this year*

**EDUC 378X. Seminar on Social Change Processes and Organizations**

Theories of social change and influence processes within and through organizations. Social change organizations. The interaction of philanthropic institutions and other social change organizations within civil society. Meso-level theories of change.

*3-4 units, not given this year*

**EDUC 379X. Educational Inequality: Legal and Social Science Perspectives (LAW 505)**

This class will examine the issue of inequality in primary and secondary education, particularly with respect to race and socioeconomic status, from the perspectives of both law and social science. The course will distinguish between inequality in terms of inputs versus outputs, presenting the empirical evidence about each and the relationship between the two. The course will explore the history of legal and policy responses to persistent inequality, and consider the challenge of contemporary educational inequality and survey the competing policy approaches, from desegregation to increased and redistributed funding to efforts to improve instructional quality, to centralized accountability and testing to market-based solutions.

*3-5 units, not given this year*

**EDUC 380. Supervised Internship**

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**EDUC 381. Multicultural Issues in Higher Education**

(Same as EDUC 181) The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.

*4 units, not given this year*

**EDUC 382. Student Development and the Study of College Impact**

The philosophies, theories, and methods that undergird most research in higher education. How college affects students. Student development theories, models of college impact, and issues surrounding data collection, national databases, and secondary data analysis.

*4 units, not given this year*

**EDUC 384. Advanced Topics in Higher Education**

Topics vary each year and may include faculty development, legal issues, curricular change, knowledge production, professional socialization, management of organizational decline, leadership and innovation, authority and power, diversity and equity, and interactions with government and industry. May be repeated for credit. Prerequisites: 346, consent of instructor. (APA)

*3-5 units, not given this year*

**EDUC 386X. Leadership and Administration in Higher Education**

Definitions of leadership and leadership roles within colleges and universities. Leadership models and organizational concepts. Case study analysis of the problems and challenges facing today's higher education administrators.

*4 units, Spr (Ehrlich, T)*

**EDUC 387A. Workshop: Comparative Studies of Educational and Political Systems**

(Same as SOC 311A) Analysis of quantitative and longitudinal data on national educational systems and political structures. May

be repeated for credit. Prerequisite: consent of instructor. (SSPEP/ICE)

*1-5 units, Aut (Ramirez, F; Meyer, J)*

**EDUC 387B. Workshop: Comparative Systems of Educational and Political Systems**

(Same as SOC 311B) Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor. (SSPEP/ICE)

*1-5 units, Win (Ramirez, F; Meyer, J)*

**EDUC 387C. Workshop: Comparative Studies of Educational and Political Systems**

(Same as SOC 311C) Analysis of quantitative and longitudinal data on national educational systems and political structures. Prerequisite: consent of instructor. May be repeated for credit. (SSPEP/ICE)

*1-5 units, Spr (Ramirez, F; Meyer, J)*

**EDUC 388A. Language Policies and Practices**

For STEP teacher candidates seeking to meet requirements for the English Learner Authorization on their preliminary credential. Historical, political, and legal foundations of education programs for English learners. Theories of second language learning, and research on the effectiveness of bilingual education. Theory-based methods to facilitate and measure English learners' growth in language and literacy acquisition, and create environments which promote English language development and content area learning through specially designed academic instruction in English. (STEP)

*2 units, Win (Goldenberg, C; Hill-Bonnet, L)*

**EDUC 388F. Introduction to Academic Language**

This course will provide opportunities for pre-service teachers to begin to develop an understanding of language uses, forms, and mechanics through application of a functional approach to academic language. By exploring language structures (phonology, morphology, syntax, semantics) as well as language-in-use (pragmatics and discourse), teacher candidates will be able to better recognize linguistic demands and challenges of students in the classroom.

*1 unit, Aut (Hill-Bonnet, L)*

**EDUC 389X. Race, Ethnicity, and Language**

(Same as ANTHRO 320A, LINGUIST 253) This seminar explores the linguistic construction of race and ethnicity across a wide variety of contexts and communities. Throughout the course, we will take a comparative perspective and highlight how different racial/ethnic formations participate in similar, yet different, ways of doing race through language, interaction and culture. Readings draw heavily from perspectives in (linguistic) anthropology and sociolinguistics.

*3-4 units, Win (Alim, H)*

**EDUC 390X. Computational Modeling in Cognitive and Social Science**

(Same as CS 424M) Computational modeling and data-mining are dramatically changing the physical sciences, and more recently also the social and behavioral sciences. Traditional analysis techniques are insufficient to investigate complex dynamic social phenomena as social networks, online gaming, diffusion of innovation, opinion dynamics, classroom behavior, and other complex adaptive systems. In this course, we will learn about how modeling, network theory, and basic data-mining can support research in cognitive, and social sciences, in particular around issues of learning, cognitive development, and educational policy.

*3-4 units, Win (Blikstein, P)*

**EDUC 391X. Web-Based Technologies in Teaching and Learning**

Project-based. Overview of instructional design theories and educational technologies to evaluate and develop a web-based educational application or system. Web-based applications and technologies designed for online interactions and collaborations. Instructional systems strategies to develop online environments that support and facilitate interactive learning. Students create a small-scale, web-based learning system.

*3 units, not given this year*

**EDUC 392X. The Political Economy of Global Higher**

## Education

The course is intended to introduce students to the analysis of higher education and higher educational change in an international context, reviewing critically the current literature and showing how social scientists study higher education using quantitative and qualitative tools. The course will present a model of studying change, review political, sociological, and economic theories applied to higher education, and focus on four important case studies of higher education in the developing world: Brazil, Russia, India, and China, known also as the BRIC countries.

3-4 units, *Win (Carnoy, M; Kuhns, K)*

### EDUC 393. Proseminar on Research in Education

Overview of the field of education for joint degree (M.B.A./M.A.) students. (SSPEP) (Strober)

4 units, *Spr (Staff)*

### EDUC 394X. Research in Progress Seminar

This seminar will provide a forum where graduate students could discuss prospective research ideas, present ongoing research, and consider theoretical issues of broad interest to the field. In this research in progress seminar students are expected to present ongoing research and have a discussion about it -- or a specific research article related to it --, with the purpose of eliciting feedback from the instructor and other seminar participants.

1 unit, *Spr (Rodriguez, E)*

### EDUC 395. Scholarly Writing in Education and the Social Sciences

Focus is on producing articles for scholarly journals in education and the social sciences. Ethics and craft of scholarly publishing. Writing opinion articles for lay audiences on issues of educational and social import.

3-5 units, *Win (Wineburg, S)*

### EDUC 396X. The Design of Technologies for Casual Learning

(Same as EDUC 196X) Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as a prototype platform. The term casual is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in extreme informal learning circumstances (while on the go, any time and any place). The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.

3 units, *not given this year*

### EDUC 397X. Math Mentoring: Working in the Zone with Learners

(Same as EDUC 187X) The course focuses on how the tutorial relationship can help students learn mathematics. The course will provide background theory and knowledge as well as provide practical approaches to tutoring, supports for targeting activities to students' needs, selection of materials and activities, and ways to assess the progress of the students and reflect on your own experience. Topics will include social theories of learning, teaching for understanding, and challenges of students who are English language learners. In addition to attending 4, two-hour workshop classes, 1 hour of tutoring is required each week. The course will meet 4 times during the quarter for workshops and discussions following Friday tutoring sessions. Students will submit assignments on the Coursework site on weeks that the course does not meet. A 1 unit section of the course will run in Winter and Spring quarters.

1-2 units, *Win (Goldman, S; O'Connor, K)*

### EDUC 398X. Market-Based Education Reforms

(Same as GSBGEN 577). This seminar course examines market-based education reforms and evidence on their impacts. Topics considered in depth will include public school choice, charter schools, vouchers, incentives for students and teachers, and accountability. We will pay special attention to the design and operation of education markets, the politics and legal challenges of market-based school reform, and methods for evaluating reform initiatives. The course will draw on cases both within the United States and internationally.

2 units, *Win (Staff)*

### EDUC 399X. Mixed Methods Research

This advanced course will address the theory and practice of

mixing inquiry methodologies in social inquiry. The course will cover: 1) selected roots of the contemporary interest in mixing methods, 2) conceptualizations of mixed methods design and analysis, and 3) challenges of mixed methods practice.

3 units, *Spr (Rodriguez, E)*

### EDUC 401A. Mini Courses in Methodology: Statistical Packages for the Social Sciences

Statistical analysis using SPSS, including generating descriptive statistics, drawing graphs, calculating correlation coefficients, conducting t-tests, analysis of variance, and linear regression. Building up datasets, preparing datasets for analysis, conducting statistical analysis, and interpreting results.

1 unit, *Aut (Chiatovich, T), Win (Chiatovich, T)*

### EDUC 401B. Mini Courses in Methodology: Stata

The computer as research tool. Statistical software Stata for data analysis, including t-tests, correlation, ANOVA, and multivariate linear regression.

1 unit, *Aut (Arshan, N), Win (Arshan, N)*

### EDUC 402X. Formative Assessment of Literacy Learning and Performance

With the emergence of national standards and assessments, the role of classroom assessments has received diminished attention. Literacy acquisition - learning to read and write as facets of academic language - is critical through the grades and across content areas. This course will cover (1) the recent history of classroom assessment, (2) a conception of assessment as practical inquiry, (3) a review of performance-based assessment methods, and (4) practical implementation of the preceding ideas.

2 units, *Aut (Calfee, R)*

### EDUC 405X. The Teaching of Literature: How We Teach & Why

(Same as ENGLISH 397X) This course is designed for graduate students in English and English Education who are interested in questions surrounding the teaching of literature at both the secondary and collegiate level. The course weaves together theoretical considerations of the purposes for teaching literature, including assumptions about the kinds of readings and readers literature teachers are trying to create, with investigation of pedagogical practices.

2-4 units, *not given this year*

### EDUC 410. Second-Year Research Workshop

For second-year doctoral students in APA and ICE. Issues in conceptualizing and designing research in the social sciences: methodology and epistemology; research proposals; and findings by students and faculty. Prerequisites: 306A,B,C,D or equivalents. (APA/ICE)

2-5 units, *not given this year*

### EDUC 412X. Organization Studies Research Workshop

For graduate students whose research is rooted in organization theory. Participants to present and receive feedback on their work including paper drafts, proposals and dissertation chapter. Sources include recent scholarship. May be repeated for credit.

1-2 units, *not given this year*

### EDUC 417. Research and Policy on Postsecondary Access

(Same as EDUC 117) The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. Service Learning Course (certified by Haas Center).

3 units, *not given this year*

### EDUC 418. Foundations of Case Study Research

Rationales for case study research in academic organizations emphasizing colleges and universities; high schools and related organizational contexts. Methodological training in fieldwork through hands-on data collection and analysis from interviews and documents. For doctoral students developing qualifying papers or dissertation proposals; required for higher education doctoral students; APA, SSE, and C&TE students with consent of instructor. (APA)

3-5 units, *not given this year*

### EDUC 419X. Academic Achievement of Language Minority Students

Emphasis is on the current state of knowledge in the research

literature and comparisons to students' experiences and observations in bilingual education, English as a second language, reading instruction, cultural issues in education, and research methods.

3-5 units, Spr (Goldenberg, C)

#### **EDUC 424. Introduction to Research in Curriculum and Teacher Education**

Required for first-year CTE Doctoral students. How to conceptualize, design, and interpret research. How to read, interpret, and critique research; formulate meaningful research questions; evaluate and conduct a literature review; and conceptualize a study. Readings include studies from different research paradigms. Required literature review in an area students expect to explore for their qualifying paper. (Darling-Hammond)

2-5 units, Spr (Borko, H)

#### **EDUC 435X. Research Seminar in Applied Linguistics**

(Same as LINGUIST 293) For graduate students in the schools of Education and Humanities and Sciences who are engaged in research pertaining to applied linguistic topics in original research. Topics: language policies and planning, language and gender, writing and critical thinking, foreign language education, and social applications of linguistic science. (SSPEP)

1-4 units, not given this year

#### **EDUC 453. Doctoral Dissertation**

For doctoral students only. (all areas)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EDUC 465. Seminar in the Pedagogy of Teacher Education**

For doctoral students interested in working in teacher education. Pedagogical approaches, including the use of modeling and simulations and hypermedia materials. Theoretical considerations of how teachers learn to teach.

3 units, not given this year

#### **EDUC 466. Doctoral Seminar in Curriculum Research**

Required of all doctoral students in CTE, normally during their second year in the program. Students present their ideas regarding a dissertation or other research project, and prepare a short research proposal that often satisfies their second-year review. (CTE)

2-4 units, Aut (Goldenberg, C)

#### **EDUC 470. Practicum**

For advanced graduate students. (all areas)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EDUC 480. Directed Reading**

For advanced graduate students. (all areas)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EDUC 490. Directed Research**

For advanced graduate students. (all areas)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EDUC 493. Workshop in Design and Analysis of Comparative Studies**

A workshop for second-year and later students with data analysis or research design activities including dissertation planning or analysis. Readings and exercises developed around participating student research. Topics have included: multilevel data analysis, within-subjects designs, and implementation of matching methods for comparing non-equivalent groups. Various computing customs accommodated. See <http://www-stat.stanford.edu/~rag/ed493/>. Prerequisite: intermediate statistical methods course work.

1-3 units, Spr (Rogosa, D)

#### **EDUC 496. Research in History and Social Science Education**

(Same as HISTORY 464E) For doctoral students. Literature on historical learning and teaching and corresponding social sciences research designs, assessment, and curriculum evaluation.

3-5 units, not given this year

#### **EDUC 801. TGR Project**

For advanced graduate students. Instructor consent required. (all areas)

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EDUC 802. TGR Dissertation**

For advanced graduate students. Instructor consent required. (all areas)

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## ELECTRICAL ENGINEERING (EE) COURSES

### UNDERGRADUATE COURSES IN ELECTRICAL ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **EE 14N. Things about Stuff**

Preference to freshmen. The stories behind disruptive inventions such as the telegraph, telephone, wireless, television, transistor, and chip are as important as the inventions themselves, for they elucidate broadly applicable scientific principles. Focus is on studying consumer devices; projects include building batteries, energy conversion devices and semiconductors from pocket change. Students may propose topics and projects of interest to them. The trajectory of the course is determined in large part by the students themselves. GER:DB-EngrAppSci

3 units, not given this year

#### **EE 15N. The Art and Science of Engineering Design**

The goal of this seminar is to introduce freshmen to the design process associated with an engineering project. The seminar will consist of a series of lectures. The first part of each lecture will focus on the different design aspects of an engineering project, including formation of the design team, developing a project statement, generating design ideas and specifications, finalizing the design, and reporting the outcome. Students will form teams to follow these procedures in designing a term project of their choice over the quarter. The second part of each lecture will consist of outside speakers, including founders of some of the most exciting companies in Silicon Valley, who will share their experiences about engineering design. On-site visits to Silicon Valley companies to showcase their design processes will also be part of the course. The seminar serves three purposes: (1) it introduces students to the design process of turning an idea into a final design, (2) it presents the GER:DB-EngrAppSci

3 units, not given this year

#### **EE 17N. Engineering the Micro and Nano Worlds: From Chips to Genes**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The first part is hands-on micro- and nano-fabrication including the Stanford Nanofabrication Facility (SNF) and the Stanford Nanocharacterization Laboratory (SNL) and field trips to local companies and other research centers to illustrate the many applications; these include semiconductor integrated circuits ('chips'), DNA microarrays, microfluidic bio-sensors and microelectromechanical systems (MEMS). The second part is to create, design, propose and execute a project. Most of the grade will be based on the project. By the end of the course you will, of course, be able to read critically a New York Times article on nanotechnology. More importantly you will have experienced the challenge (and fun) of designing, carrying out and presenting your own experimental project. As a result you will be better equipped to choose your major. This course can complement (and differs from) the seminars offered by Profs Philip Wong and Hari Manohar GER:DB-EngrAppSci

3 units, Spr (Pease, R)

#### **EE 19N. The Internet: how it works and the services it offers**

(F,Sem) Stanford Introductory Seminar. The Internet is a universal communication system that spans the entire globe and enables a wide range of services. It is very loosely managed, yet it works very well. The goal of this seminar is two-fold: (i) to describe how the Internet infrastructure works (its underlying functions and protocols) and (ii) to explore the many services that it offers (web browsing, social networking, VoIP, IPTV, etc.) Students will work in groups of two on projects related to Internet functions and services. GER:DB-EngrAppSci

3 units, Win (Tobagi, F)

#### **EE 21N. What is Nanotechnology?**

(F,Sem) Stanford Introductory Seminar. Nanotechnology is an often used word and it means many things to different people. Scientists and Engineers have some notion of what

nanotechnology is, societal perception may be entirely different. In this course, we start with the classic paper by Richard Feynman (There's Plenty of Room at the Bottom), which laid down the challenge to the nanotechnologists. Then we discuss two classic books that offer a glimpse of what nanotechnology is: *Engines of Creation: The Coming Era of Nanotechnology* by Eric Drexler, and *Prey* by Michael Crichton. Drexler's thesis sparked the imagination of what nano machinery might do, whereas Crichton's popular novel channeled the public's attention to this subject by portraying a disastrous scenario of a technology gone astray. We will use the scientific knowledge to analyze the assumptions and predictions of these classic works. We will draw upon the latest research advances to illustrate the possibilities and impossibilities

GER:DB-EngrAppSci  
3 units, Win (Wong, P)

#### EE 22N. Medical Imaging Systems

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The technology of major imaging modalities used for disease diagnosis: x-ray, ultrasound, and magnetic resonance; their history, societal impact, and clinical applications. Field trips to a medical center and an imaging research lab. Term paper and presentation. Prerequisites: high school physics and calculus. GER:DB-EngrAppSci

3 units, Win (Nishimura, D)

#### EE 25Q. Electric Automobiles and Aircraft

(S,Sem) (Same as AA 116N) Stanford Introductory Seminar. Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption. It has crucial impacts on climate change, air pollution, resource depletion, and national security. Students wishing to address these issues will need to reconsider how we move, finding sustainable transportation solutions. This course will provide an introduction to the issue, covering the past and present of transportation and its impacts; examining alternative fuel proposals; and digging deeper into the most promising option: battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Two fun opportunities for hands-on experiences with electric cars. Prerequisites: Introduction to calculus and Physics AP or elementary mechanics. GER:DB-EngrAppSci

3 units, Win (Cox, D; Enge, P)

#### EE 26N. Green Electronics

(F,Sem) Stanford Introductory Seminar. Many green technologies including hybrid cars, photovoltaic energy systems, efficient power supplies, and energy-conserving control systems have at their heart intelligent, high-power electronics. This freshman seminar examines the technology at the heart of the green-tech revolution and uses green-tech examples to teach the engineering principles of modeling, optimization, analysis, simulation, and design. The class will include a hands-on lab, readings, and discussion. Preference given to Freshman. GER:DB-EngrAppSci

3 units, Win (Dally, W)

#### EE 27N. Electronics Rocks

(F,Sem) Stanford Introductory Seminar. Electronics pervades our lives, yet we often feel obliged to let a device function as it was intended. This course is about not being intimidated by voiding a warranty and modding some commercial gadget and about being confident enough to build something cool from scratch. To get there, we will study the basics of how things work and learn how to hack/mod and scratch build. Students will be mentored and encouraged to work, in teams, to play with interesting electronics and ultimately to develop a creative final project. GER:DB-EngrAppSci

3 units, Win (Kovacs, G)

#### EE 28N. What Is Information?

(F,Sem) Stanford Introductory Seminar. Information is everywhere in our lives, from speaking and writing to web pages and social networking, but what is it actually? How do we define it? Is it physical? Can we measure it? Does it obey scientific laws? How do we send it, store it, access it and manipulate it? Are there limits to it? Will information technology save the planet or destroy it? This freshman seminar will examine the history, science, technology and future of information.

3 units, Spr (Miller, D)

#### EE 41. Physics of Electrical Engineering

(Same as ENGR 40P) How everything from electrostatics to quantum mechanics is used in common high-technology products. Electrostatics are critical in micro-mechanical systems used in many sensors and displays, and Electromagnetic waves are essential in all high-speed communication systems. How to propagate energy on transmission lines, optical fibers, and in free space. Which aspects of modern physics are needed to generate light for the operation of a DVD player or TV. Introduction to semiconductors, solid-state light bulbs, and laser pointers. Hands-on labs to connect physics to everyday experience. Prerequisites: Physics 43 GER:DB-EngrAppSci

5 units, Win (Solgaard, O)

#### EE 46. Engineering For Good: Save the World and Have Fun Doing It

Projects that provide immediate and positive impact on the world. Focus is on global health by learning from experts in this field. Students work on real-world projects with help from members of NGOs and social entrepreneurial companies as part of the hands-on learning experience. Prerequisite: ENGR 40 or EE 122A or CS 106B or consent of instructor.

3 units, not given this year

#### EE 47. Press Play: Interactive Device Design

Introduction to the human-centered and technical workings behind interactive devices ranging from cellphones and video controllers to smart cars and appliances. Students build a working MP3 player prototype of their own design, using embedded microcontrollers, digital audio decoders and component sensors, and other electronic hardware. Topics include electronics prototyping, interface prototyping, sensors and actuators, micro-controller development, physical prototyping, and user testing. Prerequisite: CS106A and X or consent of instructor.

3 units, Spr (Ju, W)

#### EE 48. Hacking Stuff

In this course, you will build miniature autonomous cars that compete in a race against the clock. You will learn how to design a complete system by bringing together the various disciplines of electrical engineering such as control theory, circuit design, microprocessor programming, and semiconductor device physics. You will design, build and program each component of your autonomous vehicle yourself and in doing so, you will be introduced to the broad discipline of electrical engineering through lab work. GER:DB-EngrAppSci

3 units, not given this year

#### EE 60N. Man versus Nature: Coping with Disasters Using Space Technology

(F,Sem) (Same as GEOPHYS 60N) Stanford Introductory Seminar. Preference to freshman. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliterate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. How spaceborne imaging technology makes it possible to respond quickly and mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. Offered every year, winter quarter. GER:DB-EngrAppSci

4 units, Win (Zebker, H)

#### EE 100. The Electrical Engineering Profession

(Same as EE 100X) Lectures/discussions on topics of importance to the electrical engineering professional. Continuing education, professional societies, intellectual property and patents, ethics, entrepreneurial engineering, and engineering management.

1-2 units, Aut (Dutton, R)

#### EE 100X. The Electrical Engineering Profession

(Same as EE 100) Lectures/discussions on topics of importance to the electrical engineering professional. Continuing education, professional societies, intellectual property and patents, ethics, entrepreneurial engineering, and engineering management. WIM

1-2 units, Aut (Dutton, R)

#### EE 101A. Circuits I

First of two-course sequence. Introduction to circuit modeling and analysis. Topics include creating the models of typical components in electronic circuits and simplifying non-linear models for

restricted ranges of operation (small signal model); and using network theory to solve linear and non-linear circuits under static and dynamic operations. Prerequisite: Physics 43 GER:DB-EngrAppSci

4 units, Win (Wong, S)

### EE 101B. Circuits II

Second of two-course sequence. MOS large-signal and small-signal models. MOS amplifier design including DC bias, small signal performance, multistage amplifiers, frequency response, and feedback. Prerequisite: 101A. GER:DB-EngrAppSci

4 units, Spr (Staff)

### EE 102A. Signal Processing and Linear Systems I

Concepts and mathematical tools in continuous-time signal processing and linear systems analysis, illustrated with examples from signal processing, communications, and control. Mathematical representation of signals and systems. Linearity and time-invariance. System impulse and step response. Frequency domain representations: Fourier series and Fourier transforms. Filtering and signal distortion. Time/frequency sampling and interpolation. Continuous-discrete time signal conversion and quantization. Stability and causality in linear systems. Laplace transforms and Bode plots. Feedback and control system design. Examples from filter design and linear control. Prerequisite: MATH 53 or ENGR 155A. GER:DB-EngrAppSci

4 units, Win (Pauly, J)

### EE 102B. Signal Processing and Linear Systems II

Concepts and mathematical tools in discrete-time signal processing and linear systems analysis with examples from digital signal processing, communications, and control. Discrete-time signal models. Continuous-discrete-continuous signal conversion. Discrete-time impulse and step response. Frequency domain representations: Fourier series and transforms. Connection between continuous and discrete time frequency representations. Discrete Fourier transform (DFT) and fast Fourier transform (FFT). Digital filter and signal processing examples. Discrete-time and hybrid linear systems. Stability and causality. Z transforms and their connection to Laplace transforms. Frequency response of discrete-time systems. Discrete-time control. Prerequisite: 102A. GER:DB-EngrAppSci

4 units, Spr (Kahn, J)

### EE 108A. Digital Systems I

Digital circuit, logic, and system design. Digital representation of information. CMOS logic circuits. Combinational logic design. Logic building blocks, idioms, and structured design. Sequential logic design and timing analysis. Clocks and synchronization. Finite state machines. Microcode control. Digital system design. Control and datapath partitioning. Lab. Prerequisite: ENGR 40. Corequisite for WIM: ENGR 102E. GER:DB-EngrAppSci, WIM

3-4 units, Aut (Dally, W), Win (Mitra, S)

### EE 108B. Digital Systems II

The design of processor-based digital systems. Instruction sets, addressing modes, data types. Assembly language programming, low-level data structures, introduction to operating systems and compilers. Processor microarchitecture, microprogramming, pipelining. Memory systems and caches. Input/output, interrupts, buses and DMA. System design implementation alternatives, software/hardware tradeoffs. Labs involve the design of processor subsystems and processor-based embedded systems. Prerequisite: 108A, CS 106B. GER:DB-EngrAppSci

3-4 units, Aut (Olukotun, O), Win (Kozyrakis, C)

### EE 109. Digital Systems Design Lab

The design of integrated digital systems encompassing both customized software and hardware. Software/hardware design tradeoffs. Algorithm design for pipelining and parallelism. System latency and throughput tradeoffs. FPGA optimization techniques. Integration with external systems and smart devices. Firmware configuration and embedded system considerations. Enrollment limited to 25; preference to graduating seniors. Prerequisites: 108B, and CS 106B or X. GER:DB-EngrAppSci

4 units, Spr (Olukotun, O)

### EE 114. Fundamentals of Analog Integrated Circuit Design

(Same as EE 214A) Analysis and simulation of elementary transistor stages, current mirrors, supply- and temperature-independent bias, and reference circuits. Overview of integrated

circuit technologies, circuit components, component variations and practical design paradigms. Performance evaluation using computer-aided design tools. Prerequisite: 101B. GER:DB-EngrAppSci GER:DB-EngrAppSci

4 units, Aut (Dutton, R)

### EE 116. Semiconductor Device Physics

The fundamental operation of semiconductor devices and overview of applications. The physical principles of semiconductors, both silicon and compound materials; operating principles and device equations for junction devices (diodes, bipolar transistor, photodetectors). Introduction to quantum effects and band theory of solids. Prerequisite: ENGR 40. Corequisite: 101B. GER:DB-EngrAppSci

3 units, Spr (Staff)

### EE 122A. Analog Circuits Laboratory

Practical applications of analog circuits, including simple amplifiers, filters, oscillators, power supplies, and sensors. Design skills, computer-aided design, and circuit fabrication and debugging. The design process through proposing, designing, simulating, building, debugging, and demonstrating a project. Radio frequency and largely digital projects not suitable for EE 122. Prerequisite: ENGR 40 or equivalent. GER:DB-EngrAppSci

3 units, Aut (Kovacs, G)

### EE 122B. Introduction to Biomedical Electronics

Key components of modern systems, their application in physiology measurements, and reduction to practice in labs. Fundamentals of analog/digital conversion and filtering techniques for biosignals, typical transducers (biopotential, electrochemical, temperature, pressure, acoustic, movement), and interfacing circuits. Issues of biomedical electronics (safety, noise). Prerequisite: EE122A or equivalent.

3 units, Spr (Kovacs, G)

### EE 124. Introduction to Neuroelectrical Engineering

Fundamental properties of electrical activity in neurons, technology for measuring and altering neural activity, and operating principles of modern neurological and neural prosthetic medical systems. Topics: action potential generation and propagation, neuro-MEMS and measurement systems, experimental design and statistical data analysis, information encoding and decoding, clinical diagnostic systems, and fully-implantable neural prosthetic systems design. Prerequisite: EE 101B and EE 102B.

3 units, Win (Shenoy, K)

### EE 133. Analog Communications Design Laboratory

(Same as EE 233) Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminous EE students. Prerequisite: EE101B. Undergraduate students enroll in EE133 and Graduate students enroll in EE233. Recommended: EE114/214A. GER:DB-EngrAppSci

3-4 units, Win (Dutton, R)

### EE 134. Introduction to Photonics

Photonics, optical components, and fiber optics. Conceptual and mathematical tools for design and analysis of optical communication, sensor and imaging systems. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors. Class project on confocal microscopy or other method of sensing or analyzing biometric data. Laboratory experiments. Prerequisite: 41 or equivalent. GER:DB-EngrAppSci

4 units, Spr (Ellerbee, A)

### EE 136. Introduction to Nanophotonics and Nanostructures

Electromagnetic and quantum mechanical waves and semiconductors. Confining these waves, and devices employing such confinement. Localization of light and applications: metallic mirrors, photonic crystals, optical waveguides, microresonators, plasmonics. Localization of quantum mechanical waves: quantum

wells, wires, and dots. Generation of light in semiconductors: spontaneous and stimulated emission, lasers, and light emitting diodes. Devices incorporating localization of both electromagnetic and quantum mechanical waves such as resonant cavity quantum well lasers and microcavity-based single photon sources. System-level applications such as optical communications, biochemical sensing, and quantum cryptography. Prerequisite: familiarity with electromagnetic and quantum mechanical waves and semiconductors at the level of EE 41 or equivalent. GER:DB-EngrAppSci

3 units, Win (Vuckovic, J)

#### EE 141. Engineering Electromagnetics

Lumped versus distributed circuits. Transient response of transmission lines with resistive and reactive loads. Reflection, transmission, attenuation and dispersion. Steady-state waves on transmission lines. Standing wave ratio, impedance matching, and power flow. Coulomb's law, electrostatic field, potential and gradient, electric flux and Gauss's Law and divergence. Metallic conductors, Poisson's and Laplace's equations, capacitance, dielectric materials. Electrostatic energy and forces. Steady electric currents, Ohm's Law, Kirchoff's Laws, charge conservation and the continuity equation, Joule's Law. Biot-Savart's law and the static magnetic field. Ampere's Law and curl. Vector magnetic potential and magnetic dipole. Magnetic materials, forces and torques. Faraday's Law, magnetic energy, displacement current and Maxwell's equations. Uniform plane waves. Prerequisites: 102A, MATH 52. GER:DB-EngrAppSci

3 units, Aut (Hesselink, L)

#### EE 151. Sustainable Energy Systems

Energy demand is expected to grow by 30% by 2025, while at the same time the European Union is demanding a carbon footprint at 1990 levels. We examine energy flow in the US and Europe, and deduce from it a strategy for sustainable growth. Potential solutions include distributed small scale networked energy generation, solar energy, wind and water, as well as nuclear energy. A systems perspective allows optimization. Fundamental concepts will be demonstrated in class through hands-on experiments.

3 units, Win (Hesselink, L)

#### EE 168. Introduction to Digital Image Processing

Computer processing of digital 2-D and 3-D data, combining theoretical material with implementation of computer algorithms. Topics: properties of digital images, design of display systems and algorithms, time and frequency representations, filters, image formation and enhancement, imaging systems, perspective, morphing, and animation applications. Instructional computer lab exercises implement practical algorithms. Final project consists of computer animations incorporating techniques learned in class. Prerequisite: Matlab programming. GER:DB-EngrAppSci

3-4 units, Win (Zebker, H)

#### EE 169. Introduction to Bioimaging

Bioimaging is important for both clinical medicine, and medical research. This course will provide an introduction to several of the major imaging modalities, using a signal processing perspective. The course will start with an introduction to multi-dimensional Fourier transforms, and image quality metrics. It will then study projection imaging systems (projection X-Ray), backprojection based systems (CT, PET, and SPECT), systems that use beam forming (ultrasound), and systems that use Fourier encoding (MRI).

3 units, Spr (Pauly, J)

#### EE 178. Probabilistic Systems Analysis

(Same as EE 278A) Introduction to probability and statistics and their role in modeling and analyzing real world phenomena. Events, sample space, and probability. Discrete random variables, probability mass functions, independence and conditional probability, expectation and conditional expectation. Continuous random variables, probability density functions, independence and expectation, derived densities. Transforms, moments, sums of independent random variables. Simple random processes. Limit theorems. Introduction to statistics: significance, estimation and detection. Prerequisites: basic calculus and linear algebra. GER:DB-EngrAppSci

3-4 units, Aut (Weissman, I), Spr (Prabhakar, B)

#### EE 179. Analog and Digital Communication Systems

This course covers the fundamental principles underlying the analysis, design and optimization of analog and digital communication systems. Design examples will be taken from the most prevalent communication systems today: cell phones, Wifi, radio and TV broadcasting, satellites, and computer networks. Analysis techniques based on Fourier transforms and energy/power spectral density will be developed. Mathematical models for random variables and random (noise) signals will be presented, which are used to characterize filtering and modulation of random noise. These techniques will then be used to design analog (AM and FM) and digital (PSK and FSK) communication systems and determine their performance over channels with noise and interference. Prerequisite: 102A. GER:DB-EngrAppSci

3 units, Spr (Staff)

#### EE 190. Special Studies or Projects in Electrical Engineering

Independent work under the direction of a faculty member. Individual or team activities involve lab experimentation, design of devices or systems, or directed reading.

1-15 units, Aut (Wong, S), Win (Wong, S), Spr (Wong, S), Sum (Staff)

#### EE 191. Special Studies and Reports in Electrical Engineering

Independent work under the direction of a faculty member given for a letter grade only. If a letter grade given on the basis of required written report or examination is not appropriate, enroll in 190.

1-15 units, Aut (Wong, S), Win (Wong, S), Spr (Wong, S), Sum (Staff)

## GRADUATE COURSES IN ELECTRICAL ENGINEERING

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### EE 202. Electrical Engineering in Biology and Medicine

Open to all. Primarily biological in nature, introduction to the physiological and anatomic aspects of medical instrumentation. Areas include patient monitoring, imaging, medical transducers, the unique aspects of medical electronic systems, the socio-economic impact of technology on medical care, and the constraints unique to medicine. Prerequisite: familiarity with circuit instrumentation techniques as in 101B.

3 units, Spr (Poon, A)

#### EE 203. The Entrepreneurial Engineer

Seminar. For prospective entrepreneurs with an engineering background. Contributions made to the business world by engineering graduates. Speakers include Stanford and other engineering and M.B.A. graduates who have founded large and small companies in nearby communities. Contributions from EE faculty and other departments including Law, Business, and MS&E.

1 unit, Win (Melen, R)

#### EE 204. Business Management for Electrical Engineers and Computer Scientists

For graduate students with little or no business experience. Leading computer, high-tech, and Silicon Valley companies and their best practices. Tools and frameworks for analyzing decisions these companies face. Corporate strategy, new product development, marketing, sales, distribution, customer service, financial accounting, outsourcing, and human behavior in business organizations. Case studies. Prerequisite: graduate standing.

3 units, Spr (Gibbons, F; Siegel, M)

#### EE 212. Integrated Circuit Fabrication Processes

For students interested in the physical bases and practical methods of silicon VLSI chip fabrication, or the impact of technology on device and circuit design, or intending to pursue doctoral research involving the use of Stanford's Nanofabrication laboratory. Process simulators illustrate concepts. Topics: principles of integrated circuit fabrication processes, physical and chemical models for crystal growth, oxidation, ion implantation, etching, deposition, lithography, and back-end processing. Required for 410.

3 units, Aut (Plummer, J)

#### EE 214A. Fundamentals of Analog Integrated Circuit Design

(Same as EE 114) Analysis and simulation of elementary transistor

stages, current mirrors, supply- and temperature-independent bias, and reference circuits. Overview of integrated circuit technologies, circuit components, component variations and practical design paradigms. Performance evaluation using computer-aided design tools. Prerequisite: 101B.GER:DB-EngrAppSci

4 units, Aut (Dutton, R)

#### EE 214B. Advanced Analog Integrated Circuit Design

Analysis and design of analog integrated circuits in advanced MOS and bipolar technologies. Device operation and compact modeling in support of circuit simulations needed for design. Emphasis on quantitative evaluations of performance using hand calculations and circuit simulations; intuitive approaches to design. Analytical and approximate treatments of noise and distortion; analysis and design of feedback circuits. Design of archetypal analog blocks for networking and communications such as broadband gain stages and transimpedance amplifiers. Prerequisites: EE114/214A.

3 units, Win (Staff)

#### EE 216. Principles and Models of Semiconductor Devices

Carrier generation, transport, recombination, and storage in semiconductors. Physical principles of operation of the p-n junction, heterojunction, metal semiconductor contact, bipolar junction transistor, MOS capacitor, MOS and junction field-effect transistors, and related optoelectronic devices such as CCDs, solar cells, LEDs, and detectors. First-order device models that reflect physical principles and are useful for integrated-circuit analysis and design. Prerequisite: 116 or equivalent.

3 units, Aut (Harris, J), Win (Saraswat, K; Howe, R)

#### EE 218. Introduction to Nanotechnology and Nanoelectronics

Device physics and operation principles. Device and material options beyond silicon FETs at the nanoscale. Topics identified by the International Technology Roadmap for Semiconductors, emerging research devices section; see <http://public.itrs.net>. Non-silicon-based devices such as carbon nanotubes, semiconductor nanowires, and molecular devices; and non-FET based devices such as single-electron transistors (SET), resonant tunneling diodes (RTD), and quantum dots. Logic and memory devices. Sources include current literature and reference books. Prerequisite: Undergraduate device physics. Recommended: Introductory graduate solid state physics.

3 units, not given this year

#### EE 222. Applied Quantum Mechanics I

Emphasis is on applications in modern devices and systems. Topics include: Schrödinger's equation, eigenfunctions and eigenvalues, solutions of simple problems including quantum wells and tunneling, quantum harmonic oscillator, coherent states, operator approach to quantum mechanics, Dirac notation, angular momentum, hydrogen atom, calculation techniques including matrix diagonalization, perturbation theory, variational method, and time-dependent perturbation theory with applications to optical absorption, nonlinear optical coefficients, and Fermi's golden rule. Prerequisites: MATH 52 and 53, PHYSICS 65 (or PHYSICS 43 and 45).

3 units, Aut (Miller, D)

#### EE 223. Applied Quantum Mechanics II

Continuation of 222, including more advanced topics: quantum mechanics of crystalline materials, methods for one-dimensional problems, spin, systems of identical particles (bosons and fermions), introductory quantum optics (electromagnetic field quantization, coherent states), fermion annihilation and creation operators, interaction of different kinds of particles (spontaneous emission, optical absorption, and stimulated emission). Quantum information and interpretation of quantum mechanics. Other topics in electronics, optoelectronics, optics, and quantum information science. Prerequisite: 222.

3 units, Win (Miller, D)

#### EE 225. Bio-chips, Imaging and Nanomedicine

(Same as MATSCI 382) The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-therapies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies.

3 units, Win (Wang, S; de la Zerda, A; Akin, D)

#### EE 228. Basic Physics for Solid State Electronics

Topics: energy band theory of solids, energy bandgap engineering, classical kinetic theory, statistical mechanics, and equilibrium and non-equilibrium semiconductor statistics. Prerequisite: course in modern physics.

3 units, not given this year

#### EE 231. Introduction to Lasers

How lasers work, including quantum transitions in atoms, stimulated emission and amplification, rate equations, saturation, feedback, coherent optical oscillation, laser resonators, and optical beams. Limited primarily to steady-state behavior; classical models for atomic transitions with little quantum mechanics background required. Prerequisites: electromagnetic theory to the level of 142, preferably 241, and some atomic or modern physics such as PHYSICS 70 or 130, 131.

3 units, not given this year

#### EE 232. Laser Dynamics

Continuation of 231, emphasizing dynamic and transient effects including spiking, Q-switching, mode locking, frequency modulation, frequency and spatial mode competition, linear and nonlinear pulse propagation, short pulse expansion, and compression. Prerequisite: 231.

3 units, Spr (Fejer, M)

#### EE 233. Analog Communications Design Laboratory

(Same as EE 133) Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminial EE students. Prerequisite: EE101B. Undergraduate students enroll in EE133 and Graduate students enroll in EE233. Recommended: EE114/214A.

3-4 units, Win (Dutton, R)

#### EE 234. Photonics Laboratory

Photonics and fiber optics with a focus on communication and sensing. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors and photonic crystals. Prerequisite: EE 142 or equivalent.

3 units, Aut (Solgaard, O; Ellerbee, A)

#### EE 235. Guided Wave Optical Devices

Guided wave optics, optical waveguide devices, and integrated optics. Wave propagation in layered media, slab waveguides, and optical fibers. Rectangular waveguides. Optical waveguide technology. Coupled-mode theory. Numerical analysis of complex waveguides. Photonic crystals and surface plasmon optics. Physics and design of waveguide devices. Fiber sensors, waveguide gratings, waveguide modulators, directional couplers, ring filters. Prerequisite: electromagnetic theory to the level of 142 or equivalent.

3 units, not given this year

#### EE 237. Solar Energy Conversion

Basics of solar energy conversion in photovoltaic devices and solar thermal systems. Solar cell device physics: electrical and optical. Solar system issues including module assembly, inverters, and micro-inverters. Concentrated solar power. Students design solar cells. Prerequisite: EE 116 or EE 216.

3 units, not given this year

#### EE 242. Electromagnetic Waves

Continuation of 141. Maxwell's equations. Plane waves in lossless and lossy media. Skin effect. Flow of electromagnetic power (Poynting's theorem). Reflection and refraction of waves at planar boundaries. Snell's law and total internal reflection. Reflection and refraction from lossy media. Guided waves. Parallel-plate and dielectric-slab waveguides. Hollow wave-guides, cavity resonators, microstrip waveguides, optical fibers. Interaction of fields with matter and particles. Antennas and radiation of electromagnetic energy. Prerequisite: 141 or PHYSICS 120.

3 units, Win (Fraser-Smith, A)

**EE 243. Semiconductor Optoelectronic Devices**

Semiconductor physics and optical processes in semiconductors. Operating principles and practical device features of semiconductor optoelectronic materials and heterostructures. Devices include: optical detectors (p-i-n, avalanche, and MSM); light emitting diodes; electroabsorptive modulators (Franz-Keldysh and QCSE), electrorefractive (directional couplers, Mach-Zehnder), switches (SEEDs); and lasers (waveguide and vertical cavity surface emitting). Prerequisites: semiconductor devices and solid state physics such as EE 216 or equivalent.

3 units, Win (Harris, J)

**EE 247. Introduction to Optical Fiber Communications**

Fibers: single- and multi-mode, attenuation, modal dispersion, group-velocity dispersion, polarization-mode dispersion. Nonlinear effects in fibers: Raman, Brillouin, Kerr. Self- and cross-phase modulation, four-wave mixing. Sources: light-emitting diodes, laser diodes, transverse and longitudinal mode control, modulation, chirp, linewidth, intensity noise. Modulators: electro-optic, electro-absorption. Photodiodes: p-i-n, avalanche, responsivity, capacitance, transit time. Receivers: high-impedance, transimpedance, bandwidth, noise. Digital intensity modulation formats: non-return-to-zero, return-to-zero. Receiver performance: Q factor, bit-error ratio, sensitivity, quantum limit. Sensitivity degradations: extinction ratio, intensity noise, jitter, dispersion. Wavelength-division multiplexing. System architectures: local-area, access, metropolitan-area, long-haul. Prerequisites: 102A, 242 or consent of instructor.

3 units, Aut (Kahn, J)

**EE 248. Fundamentals of Noise Processes**

Fundamentals of statistic, Fourier analysis, statistical and quantum mechanics, and linear and nonlinear circuit theory. Thermal, quantum and 1/f noise in resistors, pn junctions, lasers, and parametric amplifiers. Energy efficiency (bit/photon) and spectral efficiency (bit/s/Hz) in coherent and single photon optical communications. Protocols and security in quantum cryptography. Decoherence of qubits in quantum computation. Prerequisites: elementary device, circuit, and electromagnetic waves to the level of 101A,B and 242.

3 units, Aut (Yamamoto, Y)

**EE 252. Antenna Theory**

Fundamental properties. Dipoles, loops, reflectors, Yagis, helices, slots, horns, micro-strips. Antennas as transitions between guided and free radiation, ultrasound analogue. Famous antennas. Pattern measurements. Friis and radar equations. Feeds, matching, baluns. Broadbanding. Arrays, aperture synthesis, interferometry, very-long-baseline interferometry. Thermal radiation, antenna temperature, microwave passive remote sensing. Prerequisite: EE 141 or Physics 120.

3 units, Win (Poon, A)

**EE 254. Principles of Radar Systems**

Analysis and design. Radar equation and systems parameters, components of radar systems, radar cross-section and target characteristics, signal detection in noise, ambiguity function (with applications to measurement precision, resolution, clutter rejection, and waveform design); pulse compression waveforms, synthetic aperture radar, tracking and scanning radars, HF (OTH) radar, radar environmental and remote sensing, radar astronomy. Prerequisite: senior or graduate standing.

3 units, not given this year

**EE 257. Scientific Data Processing**

(Same as GEOPHYS 258) Assimilation, processing, and modeling of large observational data sets. Solution of scientific and engineering problems, especially those requiring large amounts of data. Inverse methods and transform domain analysis for indirect measurements, implemented on digital computers using scientific languages. Large-scale computing, including hardware architectures, input/output and data bus bandwidth, programming efficiency, parallel programming techniques. Student projects involve analyzing real data by implementing an observational system such as tomography for medical and Earth observation uses, radar and matched filtering, multispectral/multitemporal studies, or migration processing. Prerequisites: Programming with high level language. Recommended: EE261, EE178/278A, ME300 or equivalent.

3-4 units, not given this year

**EE 261. The Fourier Transform and Its Applications**

The Fourier transform as a tool for solving physical problems. Fourier series, the Fourier transform of continuous and discrete signals and its properties. The Dirac delta, distributions, and generalized transforms. Convolutions and correlations and applications; probability distributions, sampling theory, filters, and analysis of linear systems. The discrete Fourier transform and the FFT algorithm. Multidimensional Fourier transform and use in imaging. Further applications to optics, crystallography. Emphasis is on relating the theoretical principles to solving practical engineering and science problems. Prerequisites: Math through ODEs, Fourier series at the level of 102A, and linear algebra.

3 units, Aut (Osgood, B), Win (Gill, J)

**EE 262. Two-Dimensional Imaging**

Time and frequency representations, two-dimensional auto- and cross-correlation, Fourier spectra, diffraction and antennas, coordinate systems and the Hankel and Abel transforms, line integrals, impulses and sampling, restoration in the presence of noise, reconstruction and tomography, imaging radar. Tomographic reconstruction using projection-slice and layergarm methods. Students create software to form images using these techniques with actual data. Final project consists of design and simulation of an advanced imaging system. Prerequisite: EE261. Recommended: EE278B, EE279.

3 units, not given this year

**EE 263. Introduction to Linear Dynamical Systems**

(Same as CME 263) Applied linear algebra and linear dynamical systems with application to circuits, signal processing, communications, and control systems. Topics: least-squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm, and singular value decomposition. Eigenvalues, left and right eigenvectors, with dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input/multi-output systems, impulse and step matrices; convolution and transfer matrix descriptions. Control, reachability, and state transfer; observability and least-squares state estimation. Prerequisites: linear algebra and matrices as in MATH 103; differential equations and Laplace transforms as in EE 102A.

3 units, Aut (Lall, S)

**EE 264. Digital Signal Processing**

The fundamentals of digital signal processing techniques and their applications. Topics include review of two sided Z-transform, linear time invariant discrete-time systems, and sampling theory; A/D and D/A conversion, rate conversion, and oversampling techniques for ADC and DAC; filter design; quantization in digital filter implementation; discrete Fourier analysis; and parametric signal modeling. Prerequisite: EE102A and EE102B . Recommended: EE261, EE278B.

3 units, Aut (Schafer, R)

**EE 265. Digital Signal Processing Laboratory**

Applying 102A,B to real-world signal processing applications. Lab exercises use a programmable DSP to implement signal processing tasks. Topics: A/D conversion and quantization, sampling theorem, Z-transform, discrete-time Fourier transform, digital filter design and implementation, spectral analysis, rate conversion, wireless data communication, and OFDM receiver design. Prerequisites: 102A,B. Recommended: 261.

3-4 units, Win (Meng, T)

**EE 268. Introduction to Modern Optics**

Geometrical optics: ray matrices, Gaussian beams, optical instruments, and radiometry. Wave nature of light: Maxwell's equations, propagation through media with varying index of refraction (e.g., fibers). Interferometry: basic principles, practical systems, and applications.

3 units, Aut (Byer, R)

**EE 271. Introduction to VLSI Systems**

Provides a quick introduction to MOS transistors and IC fabrication and then creates abstractions to allow you to create and reason about complex digital systems. It uses a switch resistor model of a transistor, uses it to model gates, and then shows how gates and physical layout can be synthesized from Verilog or SystemVerilog descriptions. Most of the class will be spent on providing techniques to create designs that can be validated, are

low power, provide good performance, and can be completed in finite time. Prerequisites: 101A and 108B; familiarity with transistors, logic design, Verilog, and digital system organization.

3 units, Aut (Mittra, S)

### EE 272. Design Projects in VLSI Systems

Mixed signal design. Student teams create a small mixed-signal VLSI design using a modern design flow and CAD tools. The project involves writing a Verilog model of the chip, creating a testing/debug strategy for the chip, wrapping custom layout to fit into a std cell system, using synthesis and place and route tools to create the layout of your chip, and understanding all the stuff you need to do to tape-out a chip. Useful for those who plan to build a chip in their Ph.D. work. Prerequisites: EE 271 and experience in digital/analog circuit design.

3-4 units, Spr (Horowitz, M)

### EE 273. Digital Systems Engineering

Electrical issues in the design of high-performance digital systems, including signaling, timing, synchronization, noise, and power distribution. High-speed signaling methods; noise in digital systems, its effect on signaling, and methods for noise reduction; timing conventions; timing noise (skew and jitter), its effect on systems, and methods for mitigating timing noise; synchronization issues and synchronizer design; clock and power distribution problems and techniques; impact of electrical issues on system architecture and design. Prerequisites: EE101A and EE108A. Recommended: EE114/214A.

3 units, Win (Weaver, J)

### EE 276. Introduction to Wireless Personal Communications

Frequency reuse, cellular concepts, cochannel interference, handoff. Radio propagation in and around buildings: Friis equation, multipath, narrow-band and wide-band channels, small scale and large-scale statistics, space and time signal variation. Diversity. Receiver sensitivity, sources of noise, range. Performance statistics: coverage, margin, digital modulation, adjacent channel interference, and digital error rates. Wide band channels: maximum transmission rates. Multi-server queuing and traffic: Erlang formulas. Multiple access: FDMA, TDMA, CDMA; Duplexing: TDD, FDD. Prerequisites: 242 and 278B or equivalent. Corequisite: 279 or equivalent.

3 units, Spr (Cox, D)

### EE 278A. Probabilistic Systems Analysis

(Same as EE 178) Introduction to probability and statistics and their role in modeling and analyzing real world phenomena. Events, sample space, and probability. Discrete random variables, probability mass functions, independence and conditional probability, expectation and conditional expectation. Continuous random variables, probability density functions, independence and expectation, derived densities. Transforms, moments, sums of independent random variables. Simple random processes. Limit theorems. Introduction to statistics: significance, estimation and detection. Prerequisites: basic calculus and linear algebra.

3-4 units, Aut (Weissman, I), Spr (Prabhakar, B)

### EE 278B. Introduction to Statistical Signal Processing

Review of basic probability and random variables. Random vectors and processes; convergence and limit theorems; IID, independent increment, Markov, and Gaussian random processes; stationary random processes; autocorrelation and power spectral density; mean square error estimation, detection, and linear estimation. Prerequisites: EE178/278A and linear systems and Fourier transforms at the level of EE102A,B or EE261.

3 units, Aut (El Gamal, A), Win (El Gamal, A)

### EE 279. Introduction to Communication Systems

Analysis and design of communication systems; analog and digital modulation and demodulation, frequency conversion, multiplexing, noise and distortion; spectral and signal-to-noise ratio analysis, probability of error in digital systems, spread spectrum. Prerequisites: EE179 or EE261, and EE178/278A or EE278B.

3 units, Win (Cox, D)

### EE 282. Computer Systems Architecture

Course focuses on how to build modern computing systems, namely notebooks, smartphones, and data centers, covering primarily their hardware architecture and certain system software aspects. For each system class, we cover the system architecture,

processor technology, advanced memory hierarchy and I/O organization, power and energy management, and reliability. We will also cover topics such as interactions with system software, virtualization, solid state storage, and security. The programming assignments allow students to explore performance/energy tradeoffs when using heterogeneous hardware resources on smartphone devices. Prerequisite: EE108B. Recommended: CS 140.

3 units, Spr (Kozyrakis, C)

### EE 284. Introduction to Computer Networks

Structure and components of computer networks; functions and services; packet switching; layered architectures; OSI reference model; physical layer; data link layer; error control; window flow control; media access control protocols used in local area networks (Ethernet, Token Ring, FDDI) and satellite networks; network layer (datagram service, virtual circuit service, routing, congestion control, Internet Protocol); transport layer (UDP, TCP); application layer.

3 units, Aut (Tobagi, F)

### EE 290A. Curricular Practical Training for Electrical Engineers

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Nishimura, D), Win (Nishimura, D), Spr (Nishimura, D), Sum (Staff)

### EE 290B. Curricular Practical Training for Electrical Engineers

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Nishimura, D), Win (Nishimura, D), Spr (Nishimura, D), Sum (Staff)

### EE 290C. Curricular Practical Training for Electrical Engineers

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Nishimura, D), Win (Nishimura, D), Spr (Nishimura, D), Sum (Staff)

### EE 290D. Curricular Practical Training for Electrical Engineers

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, candidacy for Engineer or Ph.D. in Electrical Engineering; for 290C, candidacy for Ph.D. degree in Electrical Engineering; for 290D, consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### EE 292E. Analysis and Control of Markov Chains

Finite-state and countable-state Markov chains. Controlled Markov chains and dynamic programming algorithms. Application to modeling and analysis of engineering systems. Prerequisites: EE263, EE178/278A.

3 units, not given this year

### EE 292H. Engineering and Climate Change

The purpose of this seminar series is to help equip students and professionals with the tools to apply the engineering mindset to problems that stem from climate change, in order to consider and evaluate possible interventional, remedial and adaptive approaches. This course is not a crash course on climate change (established climate experts are better equipped for that), nor is it a crash course in policy; instead the course focuses on discovering and exploring climate problems that seem most likely to benefit from adding the engineering mindset as solutions are considered. In each weekly class, a guest speaker will deliver a brief introductory talk (20-30 minutes) in his/her area of expertise to set the framework in terms of climate, energy, resource, policy and public opinion, and then proceed to explore with the class some of

the problems that seem most amenable to engineering input. Reference material, made available as optional reading, will include quantitative and overvi

*1 unit, Aut (Field, L)*

### EE 292I. Insanely Great Products: How do they get built?

Great products emerge from a sometimes conflict-laden process of collaboration between different functions within companies. This Seminar seeks to demystify this process via case-studies of successful products. Engineers and businesspeople will share their experiences in discussion with students. This year, the co-founder of Twitter will be one of our guests. Previous guests include: Apple, Intel, Facebook, and Genentech to name a few. Students will have the opportunity to present product ideas to industry professionals (investors, developers, etc.). Pre-requisites: None

*1 unit, not given this year*

### EE 292J. Power Electronics

This power electronics overview course serves as a practical primer for specialists from other disciplines or an introduction for those wishing to investigate the field more deeply. The course covers a broad range of topics, including; power conversion circuit modeling and analysis, passive and active devices, converter topologies, control theory, power magnetics, and numerous applications. A field trip to the SLAC National Accelerator Laboratory focuses on specialty converters that are unique to high energy physics. Prerequisites: EE 101B.

*3 units, Win (Staff)*

### EE 293A. Fundamentals of Energy Processes

(Same as ENERGY 293A) For seniors and graduate students. Thermodynamics, heat engines, thermoelectrics, biomass. Recommended: MATH 41, 43; PHYSICS 41, 43, 45

*3-4 units, Aut (Brandt, A; Horne, R; Krevor, S)*

### EE 293B. Fundamentals of Energy Processes

(Same as ENERGY 293B) For seniors and graduate students. Fuel cells. Production of hydrogen: electrolytic, chemical, thermolytic, photolytic. Hydrogen storage: hydrides. Photoelectric converters; photo-thermovoltaic converters. Wind turbines. Recommended: EE 293A; MATH 41; PHYSICS 41, 43, 45

*3 units, Win (Brandt, A; Gerritsen, M; Wilcox, J)*

### EE 300. Master's Thesis and Thesis Research

Independent work under the direction of a department faculty. Written thesis required for final letter grade. The continuing grade 'N' is given in quarters prior to thesis submission. See 390 if a letter grade is not appropriate.

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

### EE 303. Autonomous Implantable Systems

How implantable systems can revolutionize health care in the coming decades. Potential applications include implantable sensors and monitoring devices for preventive and post-surgery monitoring; drug delivery systems that can be placed closer to cancer cells and are able to administer dosage automatically; medical robots that perform surgery inside patients with greater precision and less pain; and neural implants for brain-machine interface. Focus is on the analysis and design of remotely-powered, miniature implantable devices for those applications. Prerequisites: EE114/214A.

*3 units, not given this year*

### EE 309. Semiconductor Memory Devices and Technology

Focus is on the device physics and operation principles of nanoelectric devices. Topics identified by the International Technology Roadmap for Semiconductors, emerging research devices section; see <http://www.itrs.net>. Non-silicon-based devices such as carbon nanotubes, grapheme, semiconductor nanowires, and molecular devices; and non-FET based devices such as single electron transistors (SET) and resonant tunneling diodes (RTD). Logic and memory devices are covered. Prerequisite: undergraduate device physics, EE 222, EE 216. Recommended: EE 212, EE 223, EE 228, EE 311, and EE 316 Offered Alternate years.

*3 units, Spr (Wong, P)*

### EE 310. Integrated Circuits Technology and Design Seminar

State-of-the-art micro- and nanoelectronics, nanotechnology, advanced materials, and nanoscience for device applications. Prerequisites: EE216, EE316.

*1 unit, Win (Nishi, Y)*

### EE 311. Advanced Integrated Circuits Technology

What are the practical and fundamental limits to the evolution of the technology of modern MOS devices and interconnects? How are modern devices and circuits fabricated and what future changes are likely? Advanced techniques and models of MOS devices and back-end (interconnect and contact) processing. What are future device structures and materials to maintain progress in integrated electronics? MOS front-end and back-end process integration. Prerequisites: EE212, EE216 or equivalent.

*3 units, not given this year*

### EE 312. Micromachined Sensors and Actuators

Solid-state sensors and actuators, focusing on the use of integrated circuit fabrication technology for their realization. Categories of sensors and actuators include biological, chemical, mechanical, optical, and thermal. Mechanisms of transduction, fabrication techniques, and relative merits of different technologies. Micromachining techniques for monolithic integration of active circuits with sensors or actuators. Directions for future research. Prerequisite: 212 or equivalent.

*3 units, Win (Kovacs, G)*

### EE 313. Digital MOS Integrated Circuits

Looks a little more deeply at how digital circuits operate, what makes a gate digital, and how to cheat to improve performance or power. To aid this analysis we create a number of different models for MOS transistors and choose the simplest one that can explain our circuit's operation, using both hand and computer analysis. We explore static, dynamic, pulse-mode, and current mode logic, and show how they are used in SRAM design. Topics include sizing for min delay, noise and noise margins, power dissipation. The class uses memory design (SRAM) as a motivating example. DRAM and EEPROM design issues are also covered. Prerequisites: 101B, 108A. Recommended: 271.

*3 units, Win (Patil, D)*

### EE 314. RF Integrated Circuit Design

Design of RF integrated circuits for communications systems, primarily in CMOS. Topics: the design of matching networks and low-noise amplifiers at RF, mixers, modulators, and demodulators; review of classical control concepts necessary for oscillator design including PLLs and PLL-based frequency synthesizers. Design of low phase noise oscillators. Design of high-efficiency (e.g., class E, F) RF power amplifiers, coupling networks. Behavior and modeling of passive and active components at RF. Narrowband and broadband amplifiers; noise and distortion measures and mitigation methods. Overview of transceiver architectures. Prerequisite: EE214B.

*3 units, Spr (Rategh, H)*

### EE 315A. VLSI Signal Conditioning Circuits

Design and analysis of integrated circuits for active filters, precision gain stages, and sensor interfaces in CMOS VLSI technology. Operational transconductance amplifiers; sampled-data and continuous-time analog filters. Analysis of noise and amplifier imperfections; compensation techniques such as correlated double sampling. Sensor interfaces for micro-electromechanical and biomedical applications. Layout techniques for analog integrated circuits. Prerequisites: EE214B.

*3 units, Spr (Staff)*

### EE 315B. VLSI Data Conversion Circuits

Architectural and circuit level design and analysis of integrated analog-to-digital and digital-to-analog interfaces in CMOS VLSI technology. Fundamental circuit elements such as sampling circuits and voltage comparators. Circuits and architectures for Nyquist-rate and oversampling analog-to-digital and digital-to-analog conversion; digital decimation and interpolation filters. Examples of calibration and digital enhancement techniques. Prerequisite: EE 214B. Recommended: EE 315A.

*3 units, Aut (Vleugels, K)*

### EE 316. Advanced VLSI Devices

In modern VLSI technologies, device electrical characteristics are sensitive to structural details and therefore to fabrication techniques. How are advanced VLSI devices designed and what future changes are likely? What are the implications for device electrical performance caused by fabrication techniques? Physical models for nanometer scale structures, control of electrical characteristics (threshold voltage, short channel effects, ballistic

transport) in small structures, and alternative device structures for VLSI. Prerequisites: 212 and 216, or equivalent.

3 units, Win (Wong, P)

### EE 317. Micropatterning for Integrated Circuits

The fundamentals of generating submicron patterns in integrated circuit manufacturing. Technologies include the formation of submicron images of ultraviolet light, the resulting exposure of polymeric resists, the subsequent development of resist patterns and their transfer into functional circuit material patterns through plasma etching and other techniques. Use of phase-shifting masks and other wavefront-engineering approaches. Hands-on computer simulations. Prerequisites: 141 or equivalent, 212 or equivalent.

3 units, not given this year

### EE 319. Advanced Nanoelectronic Devices and Technology

Recent advances in materials science, device physics and structures, and processing technology, to extend VLSI device scaling towards atomistic and quantum-mechanical physics boundaries. Topics include: mobility-enhancement techniques; nanomaterial structures including tube, wire, beam, and crystal; conducting polymer; 3D FET; gate-wraparound FET; nonvolatile memory phenomena and devices; self-assembly; flash annealing; plasma doping; and nano patterning. Prerequisites: 216, 316.

3 units, not given this year

### EE 320. Nanoelectronics

Focus is on the device physics and operation principles of nanoelectronic devices. Topics identified by the International Technology Roadmap for Semiconductors, emerging research devices section; see <http://www.itrs.net>. Non-silicon-based devices such as carbon nanotubes, grapheme, semiconductor nanowires, and molecular devices; and non-FET based devices such as single electron transistors (SET) and resonant tunneling diodes (RTD). Logic and memory devices. Offered alternative years. Prerequisites: undergraduate device physics, EE 222, 216. Recommended: EE 223, 228, or 316.

3 units, alternate years, not given this year

### EE 322. Molecular Electronics and Photonics

Physics of charge and energy transfer in molecular systems and connection with traditional mesoscopic transport theories. Analysis of molecular organic light-emitting diodes, photovoltaic cells and transistors. Technology and applications of molecular semiconductors. Prerequisite: 228 or equivalent.

3 units, not given this year

### EE 327. Properties of Semiconductor Materials

Modern semiconductor devices and integrated circuits are based on unique energy band, carrier transport, and optical properties of semiconductor materials. How to choose these properties for operation of semiconductor devices. Emphasis is on quantum mechanical foundations of the properties of solids, energy bandgap engineering, semi-classical transport theory, semi-conductor statistics, carrier scattering, electro-magneto transport effects, high field ballistic transport, Boltzmann transport equation, quantum mechanical transitions, optical absorption, and radiative and non-radiative recombination that are the foundations of modern transistors and optoelectronic devices. Prerequisites: EE216 or equivalent.

3 units, not given this year

### EE 328. Physics of Advanced Semiconductor Devices

Principles governing the operation of modern semiconductor devices. Assumptions and approximations commonly made in analyzing devices. Emphasis is on the application of advanced semiconductor physics to the development of advanced semiconductor devices such as heterojunctions, HJ-bipolar transistors, HJ-FETs, nanostructures, tunneling, single electron transistor and photonic devices. Use of SENTARUS, a 2-D Poisson solver, for simulation of ultra-small devices. Examples related to state-of-the-art devices and current device research. Prerequisite: 216. Recommended: 316.

3 units, Spr (Harris, J)

### EE 329. The Electronic Structure of Surfaces and Interfaces

Physical concepts and phenomena for surface science techniques probing the electronic and chemical structure of surfaces, interfaces and nanomaterials. Microscopic and atomic models of microstructures; applications including semiconductor device technology, catalysis and energy. Physical processes of UV and X-

ray photoemission spectroscopy, Auger electron spectroscopy, surface EXAFS, low energy electron diffraction, electron/photon stimulated ion desorption, scanning tunneling spectroscopy, ion scattering, energy loss spectroscopy and related imaging methods; and experimental aspects of these surface science techniques. Prerequisites: PHYSICS 70 and MATSCI 199/209, or consent of instructor.

3 units, not given this year

### EE 331. Biophotonics: Light in Medicine and Biology

Current topics and trends in the use of light in medicine and for advanced microscopy. Course begins with a review of relevant optical principles (basic physics required). Key topics include: light-tissue interactions; sensing and spectroscopy; contrast-enhanced imaging; super-resolution and label-free microscopy; medical applications of light for diagnostics, in-vivo imaging, and therapy; nanophotonics and array technologies. Open to non-majors; programming experience (Matlab and/or C) required.

3 units, Win (Ellerbee, A)

### EE 334. Micro and Nano Optical Device Design

Lecture and project course on design and analysis of optical devices with emphasis on opportunities and challenges created by scaling to the micrometer and nanometer ranges. The emphasis is on fundamentals, combined with some coverage of practical implementations. Prerequisite: 242 or equivalent

3 units, not given this year

### EE 336. Nanophotonics

(Same as MATSCI 346) Recent developments in micro- and nanophotonic materials and devices. Basic concepts of photonic crystals. Integrated photonic circuits. Photonic crystal fibers. Superprism effects. Optical properties of metallic nanostructures. Sub-wavelength phenomena and plasmonic excitations. Metamaterials. Prerequisite: electromagnetic theory at the level of 242.

3 units, Aut (Brongersma, M; Fan, S)

### EE 340. Optical micro- and nano-cavities

Optical micro- and nano-cavities and their device applications. Types of optical cavities (microdisks, microspheres, photonic crystal cavities, plasmonic cavities), and their electromagnetic properties, design, and fabrication techniques. Cavity quantum electrodynamics: strong and weak-coupling regime, Purcell factor, spontaneous emission control. Applications of optical cavities, including low-threshold lasers, optical modulators, quantum information processing devices, and bio-chemical sensors.

3 units, Spr (Vuckovic, J)

### EE 344. High Frequency Laboratory

Lecture/lab emphasizing lab. Techniques in the 1MHz-1GHz range useful in designing and measuring oscillators, amplifiers, and mixers. High frequency measurement techniques including s-parameter measurements, amplifier noise figure, and oscillator phase noise. Guest speakers from Lucent and Hewlett-Packard. Enrollment limited to 25. Prerequisites: transmission lines, Smith charts. Recommended: 314.

3 units, Aut (Scherer, D; Cox, D)

### EE 345. Optical Fiber Communication Laboratory

Experimental techniques in optical fiber communications and networking. Experimental investigation of key optical communications components including fibers, lasers, modulators, photodiodes, optical amplifiers, and WDM multiplexers and demultiplexers. Fundamental optical communications systems techniques: eye diagrams, BER measurements, experimental evaluation of nonlinearities. Prerequisites: Undergraduate physics and optics.

3 units, alternate years, not given this year

### EE 346. Introduction to Nonlinear Optics

Wave propagation in anisotropic, nonlinear, and time-varying media. Microscopic and macroscopic description of electric dipole susceptibilities. Free and forced waves-phasematching; slowly varying envelope approximation-dispersion, diffraction, space-time analogy; harmonic generation; frequency conversion; parametric amplification and oscillation; electro-optic light modulation; nonlinear processes in optical fibers. Prerequisites: 141, 242.

3 units, not given this year

### EE 347. Optical Methods in Engineering Science

Design and understanding of modern optical systems. Topics:

geometrical optics; aberration theory; systems layout; applications such as microscopes, telescopes, optical processors. Computer ray tracing program as a design tool. Prerequisite: 268 or 366, or equivalent.

3 units, not given this year

### EE 348. Advanced Optical Fiber Communications

Optical amplifiers: gain, saturation, noise. Semiconductor amplifiers. Erbium-doped fiber amplifiers. System applications: preamplified receiver performance, amplifier chains. Raman amplifiers, lumped vs. distributed amplification. Group-velocity dispersion management: dispersion-compensating fibers, filters, gratings. Interaction of dispersion and nonlinearity, dispersion maps. Multichannel systems. Wavelength-division multiplexing components: filters, multiplexers. WDM systems, crosstalk. Time, subcarrier, code and polarization-division multiplexing. Comparison of modulation techniques: differential phase-shift keying, phase-shift keying, quadrature-amplitude modulation. Comparison of detection techniques: noncoherent, differentially coherent, coherent. Prerequisite: 247.

3 units, Win (Kahn, J)

### EE 349. Nano Optics and Grating Photonics

Coupled wave analysis of periodic structures, gratings structures for optical communications, wave-matter interactions with periodic media and photonic crystals, applications of periodic structures. Prerequisite: 268 or 366, or equivalent.

3 units, not given this year

### EE 355. Imaging Radar and Applications

(Same as GEOPHYS 265) Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: surface deformation, polarimetry and target discrimination, topographic mapping surface displacements, velocities of ice fields. Prerequisites: EE261. Recommended: EE254, EE278B, EE279.

3 units, not given this year

### EE 356. Elementary Plasma Physics: Principles and Applications

Plasmas in nature and industry. Single particle motions. Plasma kinetic theory. Boltzmann equation and its moments. Cold and warm plasma models. Plasma as a fluid. Magnetohydrodynamics. Plasma conductivity and diffusion. Langmuir oscillations. Debye shielding. Plasma sheath. Waves in cold, magnetized, warm, and hot plasmas. Electron and ion waves. MHD waves. Landau damping. Nonlinear effects. Applications in industry and space science. Prerequisite: 242 or PHYSICS 122.

3 units, not given this year

### EE 359. Wireless Communications

This course will cover advanced topics in wireless communications for voice, data, and multimedia. Topics include: an overview of current and future wireless systems; wireless channel models including path loss, shadowing, and statistical multipath channel models; fundamental capacity limits of wireless channels; digital modulation and its performance in fading and intersymbol interference; techniques to combat fading including adaptive modulation, diversity, and multiple antenna systems (MIMO); techniques to combat intersymbol interference including equalization, multicarrier modulation (OFDM), and spread spectrum; and an overview of wireless network design. Prerequisite: 279 or instructor consent.

3-4 units, Aut (Goldsmith, A)

### EE 360. Multiuser Wireless Systems and Networks

Design, analysis, and fundamental limits. Topics include multiuser channel capacity, multiple and random access techniques, interference mitigation, cellular system design, ad hoc wireless network design, sensor networks, green wireless networks, cognitive radios, and cross-layer design. Prerequisite: EE 359.

3 units, Win (Goldsmith, A)

### EE 363. Linear Dynamic Systems

Continuation of 263. Optimal control and dynamic programming; linear quadratic regulator. Lyapunov theory and methods. Linear estimation and the Kalman filter. Perron-Frobenius theory. Examples and applications from digital filters, circuits, signal processing, and control systems. Prerequisites: 263 or equivalent;

basic probability.

3 units, not given this year

### EE 364A. Convex Optimization I

(Same as CME 364A) Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as EE263, EE178/278A.

3 units, Win (Boyd, S)

### EE 364B. Convex Optimization II

(Same as CME 364B) Continuation of 364. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Exploiting problem structure in implementation. Convex relaxations of hard problems. Global optimization via branch and bound. Robust and stochastic optimization. Applications in areas such as control, circuit design, signal processing, and communications. Substantial project. Prerequisite: 364A.

3 units, not given this year

### EE 366. Introduction to Fourier Optics

Applications of Fourier theory to the analysis and synthesis of optical imaging and optical data processing systems. Propagation and diffraction of light, Fresnel and Fraunhofer approximations, Fourier transforming properties of lenses, image formation with coherent and incoherent light, transform functions of imaging systems, optical data processing, and holography. Prerequisite: familiarity with Fourier analysis. Recommended: 261.

3 units, not given this year

### EE 368. Digital Image Processing

Image sampling and quantization color, point operations, segmentation, morphological image processing, linear image filtering and correlation, image transforms, eigenimages, multiresolution image processing, wavelets, noise reduction and restoration, feature extraction and recognition tasks, image registration. Emphasis is on the general principles of image processing. Students write and investigate image processing algorithms in Matlab. Term project. Prerequisites: EE261, EE278B.

3 units, Spr (Girod, B)

### EE 369A. Medical Imaging Systems I

Imaging internal structures within the body using high-energy radiation studied from a systems viewpoint. Modalities covered: x-ray, computed tomography, and nuclear medicine. Analysis of existing and proposed systems in terms of resolution, frequency response, detection sensitivity, noise, and potential for improved diagnosis. Prerequisite: 261.

3 units, not given this year

### EE 369B. Medical Imaging Systems II

Imaging internal structures within the body using non-ionizing radiation studied from a systems viewpoint. Modalities include ultrasound and magnetic resonance. Analysis of ultrasonic systems including diffraction and noise. Analysis of magnetic resonance systems including physics, Fourier properties of image formation, and noise. Prerequisite: 261.

3 units, Spr (Nishimura, D)

### EE 369C. Medical Image Reconstruction

Reconstruction problems from medical imaging, including magnetic resonance imaging (MRI), computed tomography (CT), and positron emission tomography (PET). Problems include reconstruction from non-uniform frequency domain data, automatic deblurring, phase unwrapping, reconstruction from incomplete data, and reconstruction from projections. Prerequisite: 369B.

3 units, Aut (Pauly, J)

### EE 371. Advanced VLSI Circuit Design

Design of high-performance digital systems, the things that cause them to fail, and how to avoid these problems. Topics will focus

on current issues including: wiring resistance and how to deal with it, power and Gnd noise and regulation, clock (or asynchronous) system design and how to minimize clocking overhead, high-speed I/O design, energy minimization including leakage control, and structuring your Verilog code to result in high-performance, low energy systems. Extensive use of modern CAD tools. Prerequisites: 271 and 313, or consent of instructor.

*3 units, alternate years, not given this year*

### EE 373A. Adaptive Signal Processing

Learning algorithms for adaptive digital filters. Self optimization. Wiener filter theory. Quadratic performance functions, their eigenvectors and eigenvalues. Speed of convergence. Asymptotic performance versus convergence rate. Applications of adaptive filters to statistical prediction, process modeling, adaptive noise canceling, adaptive antenna arrays, adaptive inverse control, and equalization and echo cancelling in modems. Theoretical and experimental research projects in adaptive filter theory, communications, and audio systems. Biomedical research projects, supervised jointly by EE and Medical School faculty. Recommended: EE263, EE264, EE278B.

*3 units, Win (Widrow, B)*

### EE 374. Inference in Graphical Models

Probabilistic models with sparse graphical structures, low-complexity inference algorithms, and their analysis. Algorithmic methods: variational inference; message passing algorithms; belief propagation; generalized belief propagation; survey propagation. Learning graphical models, structural learning. Applications/examples include: Gaussian models with sparse inverse covariance; hidden Markov models (Viterbi and BCJR algorithms, Kalman filter); computer vision (segmentation, tracking, etc); constraint satisfaction problems; machine learning (clustering, classification); communications. Prerequisite: EE178/EE278A, STATS 116, or CS 228. Recommended: 376A or STATS 217/218.

*3 units, not given this year*

### EE 376A. Information Theory

(Same as STATS 376A) The fundamental ideas of information theory. Entropy and intrinsic randomness. Data compression to the entropy limit. Huffman coding. Arithmetic coding. Channel capacity, the communication limit. Gaussian channels. Kolmogorov complexity. Asymptotic equipartition property. Information theory and Kelly gambling. Applications to communication and data compression. Prerequisite: EE178/278A or STATS 116, or equivalent.

*3 units, Win (Weissman, I)*

### EE 376B. Information Theory

(Same as STATS 376B) Rate distortion theory and Kolmogorov complexity. Information theory and statistics. Method of types. Stein's lemma. AEP. Information capacity of networks. Slepian-Wolf theorem. Optimal investment and information theory. Universal portfolios and universal data compression. Maximum entropy and Burg's theorem. Prerequisite: EE376A.

*3 units, Spr (Cover, T)*

### EE 378A. Statistical Signal Processing

Random signals in electrical engineering. Discrete-time random processes: stationarity and ergodicity, covariance sequences, power spectral density, parametric models for stationary processes. Fundamentals of linear estimation: minimum mean squared error estimation, optimum linear estimation, orthogonality principle, the Wold decomposition. Causal linear estimation of stationary processes: the causal Wiener filter, Kalman filtering. Parameter estimation: criteria of goodness of estimators, Fisher information, Cramer-Rao inequality, Chapman-Robbins inequality, maximum likelihood estimation, method of moments, consistency, efficiency. ARMA parameter estimation: Yule-Walker equations, Levinson-Durbin algorithm, least squares estimation, moving average parameter estimation, modified Yule-Walker method for model order selection. Spectrum estimation: sample covariances, covariance estimation, Bartlett formula, periodogram, periodogram averaging, windowed periodograms. Prerequisites: EE 278B

*3 units, not given this year*

### EE 378B. Inference, Estimation, and Information Processing

Techniques and models for signal, data and information processing, with emphasis on incomplete data, non-ordered index

sets and robust low-complexity methods. Linear models; regularization and shrinkage; dimensionality reduction; streaming algorithms; sketching; clustering, search in high dimension; low-rank models; principal component analysis. Applications include: positioning from pairwise distances; distributed sensing; measurement/traffic monitoring in networks; finding communities/clusters in networks; recommendation systems; inverse problems. Prerequisites: EE278B and EE263 or equivalent. Recommended but not required: EE378A

*3 units, not given this year*

### EE 379. Digital Communication

Modulation methods and bandwidth requirements, baseband and passband system analysis, minimum-probability-of-error and maximum-likelihood detection, error-probability analysis, intersymbol interference, maximum-likelihood sequence detection, equalization methods, orthogonal frequency-division multiplexing. Prerequisite: EE102B, EE278B

*3 units, NEXTYEAR*

### EE 380. Colloquium on Computer Systems

Live presentations of current research in the design, implementation, analysis, and applications of computer systems. Topics range over a wide range and are different every quarter. Topics may include fundamental science, mathematics, cryptography, device physics, integrated circuits, computer architecture, programming, programming languages, optimization, applications, simulation, graphics, social implications, venture capital, patent and copyright law, networks, computer security, and other topics of related to computer systems.

*1 unit, Aut (Allison, D; Freeman, J), Win (Allison, D; Freeman, J), Spr (Allison, D; Freeman, J)*

### EE 382A. Advanced Processor Architecture

Provides in-depth coverage of fundamental architecture and implementation techniques for modern processor chips. Course covers topics such as advanced pipelining, superscalar execution, out-of-order processing, speculative execution, VLIW, data parallelism, multithreading, graphics processors, and multi-core chips. The students will become familiar with complex trade-offs between performance-power-complexity and the common techniques for addressing the challenges in historical and modern processors. A central part of EE382A is a group project on an open research question. Prerequisites: EE108B, CS140. Recommended: EE282, CS315A

*3 units, not given this year*

### EE 382C. Interconnection Networks

The architecture and design of interconnection networks used to communicate from processor to memory, from processor to processor, and in switches and routers. Topics: network topology, routing methods, flow control, router microarchitecture, and performance analysis. Enrollment limited to 30. Prerequisite: 282.

*3 units, alternate years, not given this year*

### EE 384A. Internet Routing Protocols and Standards

Local area networks addressing and switching; IEEE 802.1 bridging protocols (transparent bridging, virtual LANs). Internet routing protocols: interior gateways (RIP, OSPF) and exterior gateways (BGP); multicast routing; multiprotocol label switching (MPLS). Routing in mobile networks: Mobile IP, Mobile Ad Hoc Networks (MANET), Wireless Mesh Networks. Prerequisite: 284 or CS 144.

*3 units, alternate years, not given this year*

### EE 384B. Multimedia Communication over the Internet

Applications and requirements. Traffic generation and characterization: voice encoding (G.711, G.729, G.723); image and video compression (JPEG, H.261, MPEG-2, H.263, H.264), TCP data traffic. Quality impairments and measures. Networking technologies: LAN technologies; home broadband services (ADSL, cable modems, PONs); and wireless LANs (802.11). Network protocols for multimedia applications: resource reservation (ST2+, RSVP); differentiated services (DiffServ); and real-time transport protocol (RTP, RTCP). Audio-video-data conferencing standards: Internet architecture (SDP, SAP, SIP); ITU recommendations (H.320, H.323 and T.120); and real-time streaming protocol (RTSP). Emphasis will be placed on advances in network infrastructure and new services (VoIP, IPTV, Peer-to-peer communications, etc.) Prerequisite: 284 or CS 144.

Recommended: 384A.

3 units, Spr (Tobagi, F)

### EE 384C. Wireless Local and Wide Area Networks

Characteristics of wireless communication: multipath, noise, and interference. Communications techniques: spread-spectrum, CDMA, and OFDM. IEEE 802.11 physical layer specifications: FHSS, DSSS, IEEE 802.11b (CCK), and 802.11a/g (OFDM). IEEE 802.11 media access control protocols: carrier sense multiple access with collision avoidance (CSMA/CA), point coordination function (PCF), IEEE802.11e for differentiated services. IEEE 802.11 network architecture: ad hoc and infrastructure modes, access point functionality. Management functions: synchronization, power management and association. IEEE 802.11s Mesh Networks. IEEE 802.16 (WiMAX) network architecture and protocols: Physical Layer (OFDMA) and Media Access Control Layer. Current research papers in the open literature. Prerequisite: 284 or CS 244A.

3 units, alternate years, not given this year

### EE 384E. Networked Wireless Systems

(Same as CS 244E) Design and implementation of wireless networks and mobile systems. The course will commence with a short retrospective of wireless communication and initially touch on some of the fundamental physical layer properties of various wireless communication technologies. The focus will then shift to design of media access control and routing layers for various wireless systems. The course will also examine adaptations necessary at transport and higher layers to cope with node mobility and error-prone nature of the wireless medium. Finally, it will conclude with a brief overview of other related issues including emerging wireless/mobile applications. Prerequisites: EE 284

3 units, Win (Katti, S)

### EE 384M. Network Science

Modern large-scale networks consist of (i) Information Networks, such as the Web and Social Networks, and (ii) Data Centers, which are networks interconnecting computing and storage elements for servicing the users of an Information Network. This course is concerned with the mathematical models and the algorithms used in Information Networks and Data Centers. Prerequisite: EE178/278A or CS365.

3 units, not given this year

### EE 384S. Performance Engineering of Computer Systems & Networks

Modeling and control methodologies for high-performance network engineering, including: Markov chains and stochastic modeling, queueing networks and congestion management, dynamic programming and task/processor scheduling, network dimensioning and optimization, and simulation methods. Applications for design of high-performance architectures for wireline/wireless networks and the Internet, including: traffic modeling, admission and congestion control, quality of service support, power control in wireless networks, packet scheduling in switches, video streaming over wireless links, and virus/worm propagation dynamics and countermeasures. Enrollment limited to 30. Prerequisites: basic networking technologies and probability.

3 units, not given this year

### EE 384X. Packet Switch Architectures

The theory and practice of designing packet switches, such as Internet routers, and Ethernet switches. Introduction: evolution of switches and routers. Output queued switches: motivation and methods for providing bandwidth and delay guarantees. Switching: output queueing, parallelism in switches, distributed shared memory switches, input-queued switches, combined input-output queued switches, how to make fast packet buffers, buffered crossbar switches. Scheduling input queued crossbars: connections with bipartite graph matching, algorithms for 100% throughput, practical algorithms and heuristics. Looking forward: Architectures and switches for data center networks. Prerequisites: EE284 or CS 244A. Recommended: EE 178/278A or EE 278B or STAT 116.

3 units, Spr (Prabhakar, B; McKeown, N)

### EE 385A. Robust and Testable Systems Seminar

Student/faculty discussions of research problems in the design of reliable digital systems. Areas: fault-tolerant systems, design for testability, production testing, and system reliability. Emphasis is on student presentations and Ph.D. thesis research. May be

repeated for credit. Prerequisite: consent of instructor.

1-4 units, Aut (McCluskey, E; Mitra, S), Win (McCluskey, E; Mitra, S), Spr (McCluskey, E; Mitra, S)

### EE 386. Robust System Design

Causes of system malfunctions; techniques for building robust systems that avoid or are resilient to such malfunctions through built-in error detection and correction, prediction, self-test, self-recovery, and self-repair; case studies and new research problems. Prerequisites: 108A,B, 282.

3 units, alternate years, not given this year

### EE 387. Algebraic Error Control Codes

Theory and implementation of algebraic codes for detection and correction of random and burst errors. Introduction to finite fields. Linear block codes, cyclic codes, Hamming codes, BCH codes, Reed-Solomon codes. Decoding algorithms for BCH and Reed-Solomon codes. Prerequisites: elementary probability, linear algebra.

3 units, not given this year

### EE 388. Modern Coding Theory

Tools for analysis and optimization of iterative coding systems. LDPC, turbo and, RA codes. Optimized ensembles, message passing algorithms, density evolution, and analytic techniques. Prerequisite: 376A.

3 units, Spr (Montanari, A)

### EE 390. Special Studies or Projects in Electrical Engineering

Independent work under the direction of a faculty member. Individual or team activities may involve lab experimentation, design of devices or systems, or directed reading.

1-15 units, Aut (Wong, S), Win (Wong, S), Spr (Wong, S), Sum (Staff)

### EE 391. Special Studies and Reports in Electrical Engineering

Independent work under the direction of a faculty member; written report or written examination required. Letter grade given on the basis of the report; if not appropriate, student should enroll in 390.

1-15 units, Aut (Wong, S), Win (Wong, S), Spr (Wong, S), Sum (Staff)

### EE 392F. Logic Synthesis of VLSI Circuits

Similar to former 318. Solving logic design problems with CAD tools for VLSI circuits. Exact and heuristic algorithms for logic synthesis. Representation and optimization of combinational logic functions (encoding problems, binary decision diagrams) and of multiple-level networks (algebraic and Boolean methods, don't-care set computation, timing verification, and optimization); and modeling and optimization of sequential functions and networks (retiming), semicustom libraries, and library binding. Prerequisites: familiarity with logic design, algorithm development, and programming.

3 units, not given this year

### EE 392J. Digital Video Processing

Spatio-temporal sampling, motion analysis, parametric motion models, motion-compensated filtering, and video processing operations including noise reduction, restoration, superresolution, deinterlacing and video sampling structure conversion, and compression (frame-based and object-based methods). Video segmentation and layered video representations, video streaming, compressed-domain video processing, and digital TV. Prerequisite: 368.

3 units, not given this year

### EE 392N. INTELLIGENT ENERGY SYSTEMS

The key systems engineering steps for design of automated systems in application to of existing and future intelligent energy systems. Existing design approaches and practices for the energy systems. Every second lecture of the course will be a guest lecture discussing the communication system design for a certain type of energy system. They will alternate with guest lectures discussing the on-line analytical functions.

1 unit, not given this year

### EE 392T. Seminar in Chip Test and Debug

Seminars by industry professionals in digital IC manufacturing test and silicon debug. Topics include yield and binsplit modeling, defect types and detection, debug hardware, physical analysis, and design for test/debug circuits. Case studies of silicon failures. Prerequisite: basic digital IC design (271 or 371).

1 unit, Win (Stinson, J)

#### EE 392V. Signal Processing in VoIP Systems

VoIP protocols: RTP and SIP. Voice encoding standards: PCM, ADPCM, and LPC. Speech quality measurement: MOS, PESQ, and E-model. Characterization of VoIP impairments: delay, jitter, packet loss, and clock skew. Signal processing algorithms to improve VoIP quality: echo cancellation, adaptive jitter buffering, packet loss concealment, and decoder clock synchronization. Prerequisites: EE261 and EE278B, or equivalents.

3 units, not given this year

#### EE 395. Electrical Engineering Instruction: Practice Teaching

Open to advanced EE graduate students who plan to make teaching their career. Students conduct a section of an established course taught in parallel by an experienced instructor. Enrollment limited.

1-15 units, Aut (Nishimura, D), Win (Staff), Spr (Nishimura, D)

#### EE 398A. Image and Video Compression

Replaces EE398. The principles of source coding for the efficient storage and transmission of still and moving images. Entropy and lossless coding techniques. Run-length coding and fax compression. Arithmetic coding. Rate-distortion limits and quantization. Lossless and lossy predictive coding. Transform coding, JPEG. Subband coding, wavelets, JPEG2000. Motion-compensated coding, MPEG. Students investigate image and video compression algorithms in Matlab or C. Term project. Prerequisites: EE261, EE278B.

3 units, Win (Girod, B)

#### EE 398B. Advanced Topics in Image, Video, and Multimedia Systems

Replaces previous EE398B Image Communication II. Lectures on selected advanced topics, given by instructor, staff, and invited speakers from industry and academia. Emphasis on systems aspects. Topics covered depend on students' interest. Relevant topics include, but are not limited to: videoconferencing, telepresence, digital TV broadcasting, HDTV, 3-d television, digital cinema, audio and video streaming over the Internet, IPTV, peer-to-peer media delivery, mobile media delivery, mobile augmented reality, content-based retrieval, visual search, image and video databases. Students implement and investigate advanced algorithms for image, video, and multimedia signal processing and communication. Term project.

3 units, not given this year

#### EE 400. Thesis and Thesis Research

Limited to candidates for the degree of Engineer or Ph.D.

1-15 units, Aut (Wong, S), Win (Wong, S), Spr (Wong, S), Sum (Staff)

#### EE 402A. Topics in International Technology Management

Theme for Autumn 2011 is Mobile Internet Technologies and Businesses in Asia. Recent innovations in location based services, mobile online games, payment solutions, etc., and challenges such as privacy, business models, and differing regulatory regimes in major Asian economies. Implications for US firms and researchers.

1 unit, Aut (Dasher, R)

#### EE 402S. Topics in International Advanced Technology Research

Theme for Spring 2011 is Recent Approaches to Chip-Level Integration. Survey of advanced research into 3D integration, CMOS on encapsulated MEMS, III-V on Si, multi-processor architectures, etc. Distinguished speakers from industry and universities. May be repeated for credit. Recommended: basic electronics.

1 unit, not given this year

#### EE 402T. Entrepreneurship in Asian High Tech Industries

Distinctive patterns and challenges of entrepreneurship in Asia; update of business and technology issues in the creation and growth of start-up companies in major Asian economies. Distinguished speakers from industry, government, and academia.

1 unit, Spr (Dasher, R)

#### EE 410. Integrated Circuit Fabrication Laboratory

Fabrication, simulation, and testing of a submicron CMOS process. Practical aspects of IC fabrication including silicon wafer cleaning, photolithography, etching, oxidation, diffusion, ion implantation, chemical vapor deposition, physical sputtering, and electrical testing. Students also simulate the CMOS process using process

simulator TSUPREM4 of the structures and electrical parameters that should result from the process flow. Taught in the Stanford Nanofabrication Facility (SNF). Preference to students pursuing doctoral research program requiring SNF facilities. Enrollment limited to 20. Prerequisites: 212, 216, consent of instructor.

3-4 units, Win (Saraswat, K)

#### EE 412. Advanced Nanofabrication Laboratory

Experimental projects and seminars on integrated circuit fabrication using epitaxial, oxidation, diffusion, evaporation, sputtering, and photolithographic processes with emphasis on techniques for achieving advanced device performance. May be repeated for additional credit. Prerequisites: ENGR341 or EE410 or consent of instructor.

3 units, Aut (Howe, R), Spr (Solgaard, O)

#### EE 414. RF Transceiver Design Laboratory

Students design, build, and test GHz transceivers using microstrip construction techniques and discrete components. The design, construction, and experimental characterization of representative transceiver building blocks: low noise amplifiers (LNAs), diode ring mixers, PLL-based frequency synthesizers, voltage-controlled oscillators (VCOs), power amplifiers (PAs), and microstrip filters and patch antennas. The characteristics of passive microstrip components (including interconnect). Emphasis is on a quantitative reconciliation of theoretical predictions and extensive experimental measurements performed with spectrum and network analyzers, time-domain reflectometers (TDRs), noise figure meter and phase noise analyzers. Prerequisites: EE 314, EE 344.

3 units, not given this year

#### EE 418. Topics in Neuroengineering

Neuroscience and electrical engineering, focusing on principles and theory in modern neural prosthetic systems (brain-computer or brain-machine interfaces). Electrical properties of neurons, information encoding, neural measurement techniques and technology, processing electronics, information decoding and estimators, and statistical data analysis. Prerequisites: EE 214B, EE 278B.

3 units, not given this year

#### EE 469B. RF Pulse Design for Magnetic Resonance Imaging

Magnetic resonance imaging (MRI) and spectroscopy (MRS) based on the use of radio frequency pulses to manipulate magnetization. Analysis and design of major types of RF pulses in one and multiple dimensions, analysis and design of sequences of RF pulses for fast imaging, and use of RF pulses for the creation of image contrast in MRI. Prerequisite: 369B.

3 units, not given this year

#### EE 476. Network Information Theory

Network information theory deals with the fundamental limits on information flow in networks and the optimal coding schemes that achieve these limits. It aims to extend Shannon's point-to-point information theory and the Ford-Fulkerson max-flow min-cut theorem to networks with multiple sources and destinations. The course presents the basic results and tools in the field in a simple and unified manner. Topics covered include: multiple access channels, broadcast channels, interference channels, channels with state, distributed source coding, multiple description coding, network coding, relay channels, interactive communication, and noisy network coding. Prerequisites: EE376A.

3 units, not given this year

#### EE 477. Universal Schemes in Information Theory

Universal schemes for lossless and lossy compression, channel coding and decoding, prediction, denoising, and filtering. Characterization of performance limitations in the stochastic setting: entropy rate, rate-distortion function, channel capacity, Bayes envelope for prediction, denoising, and filtering. Lempel-Ziv lossless compression, and Lempel-Ziv based schemes for lossy compression, channel coding, prediction, and filtering. Discrete universal denoising. Compression-based approach to denoising. The compound decision problem. Prerequisites: EE278B, EE376A,B.

3 units, Aut (Weissman, I)

#### EE 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### EE 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

# ENERGY RESOURCES ENGINEERING (ENERGY) COURSES

## UNDERGRADUATE COURSES IN ENERGY RESOURCES ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

### ENERGY 24. Making Molehills out of Mountains: Energy and Development in Appalachia

Preparation for Alternative Spring Break trip to examine the past, present, and future role of energy in Appalachia. Positive and negative impacts of energy production; meetings with energy industry leaders, community groups, and policymakers. The larger role of energy development and energy issues in society. May be repeated for credit.

*1 unit, not given this year*

### ENERGY 101. Energy and the Environment

(Same as EARTHSYS 101) Energy use in modern society and the consequences of current and future energy use patterns. Case studies illustrate resource estimation, engineering analysis of energy systems, and options for managing carbon emissions. Focus is on energy definitions, use patterns, resource estimation, pollution. Recommended: MATH 21 or 42. GER:DB-EngrAppSci

*3 units, Win (Durlofsky, L)*

### ENERGY 102. Renewable Energy Sources and Greener Energy Processes

(Same as EARTHSYS 102) The energy sources that power society are rooted in fossil energy although energy from the core of the Earth and the sun is almost inexhaustible; but the rate at which energy can be drawn from them with today's technology is limited. The renewable energy resource base, its conversion to useful forms, and practical methods of energy storage. Geothermal, wind, solar, biomass, and tidal energies; resource extraction and its consequences. Recommended: MATH 21 or 42. GER:DB-EngrAppSci

*3 units, Spr (Gerritsen, M; Monroe, I)*

### ENERGY 104. Transition to sustainable energy systems

This course explores the transition to a sustainable energy system at large scales (national and global), and over long time periods (decades). Explores the drivers of global energy demand and the fundamentals of technologies that can meet this demand sustainably. Focuses on constraints affecting large-scale deployment of technologies, as well as inertial factors affecting this transition. Problems will involve modeling global energy demand, deployment rates for sustainable technologies, technological learning and economics of technical change. Recommended: ENERGY 101, 102.

*3 units, Spr (Benson, S; Brandt, A)*

### ENERGY 120. Fundamentals of Petroleum Engineering

(Same as ENGR 120) Lectures, problems, field trip. Engineering topics in petroleum recovery; origin, discovery, and development of oil and gas. Chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media. GER:DB-EngrAppSci

*3 units, Aut (Horne, R; Wilcox, J)*

### ENERGY 120A. Flow Through Porous Media Laboratory

Laboratory measurements of permeability and porosity in rocks. Applications to subsurface fluid mechanics. Course is intended as an accompaniment to Energy 120.

*1 unit, Aut (Al Askar, M; Horne, R)*

### ENERGY 121. Fundamentals of Multiphase Flow

(Same as ENERGY 221) Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy's law for multiphase flow, fractional flow equation, effects of gravity, Buckley-Leverett theory, recovery

predictions, volumetric linear scaling, JBN and Jones-Rozelle determination of relative permeability. Frontal advance equation, Buckley-Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities. GER:DB-EngrAppSci

*3 units, Win (Tchelepi, H)*

### ENERGY 125. Modeling and Simulation for Geoscientists and Engineers

Hands-on. Topics include deterministic and statistical modeling applied to problems such as flow in the subsurface, atmospheric pollution, biological populations, wave propagation, and crustal deformation. Student teams define and present a modeling problem.

*3 units, alternate years, not given this year*

### ENERGY 130. Well Log Analysis I

For earth scientists and engineers. Interdisciplinary, providing a practical understanding of the interpretation of well logs. Lectures, problem sets using real field examples: methods for evaluating the presence of hydrocarbons in rock formations penetrated by exploratory and development drilling. The fundamentals of all types of logs, including electric and non-electric logs.

*3 units, Aut (Lindblom, R)*

### ENERGY 141. Seismic Reservoir Characterization

(Same as GEOPHYS 241A, ENERGY 241) (Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112

*3-4 units, Spr (Mukerji, T)*

### ENERGY 146. Reservoir Characterization and Flow Modeling with Outcrop Data

(Same as GES 246, ENERGY 246) Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.

*3 units, Aut (Graham, S; Tchelepi, H; Mukerji, T; Boucher, A)*

### ENERGY 153. Carbon Capture and Sequestration

(Same as ENERGY 253) CO<sub>2</sub> separation from syngas and flue gas for gasification and combustion processes. Transportation of CO<sub>2</sub> in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO<sub>2</sub>. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis.

*3-4 units, Aut (Wilcox, J; Benson, S)*

### ENERGY 155. Undergraduate Report on Energy Industry Training

On-the-job practical training under the guidance of on-site supervisors. Required report detailing work activities, problems, assignments and key results. Prerequisite: written consent of instructor.

*1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

### ENERGY 160. Modeling Uncertainty in the Earth Sciences

(Same as ENERGY 260) Whether Earth Science modeling is performed on a local, regional or global scale, for scientific or engineering purposes, uncertainty is inherently present due to lack of data and lack of understanding of the underlying phenomena. This course highlights the various issues, techniques and practical modeling tools available for modeling uncertainty of complex 3D/4D Earth systems. The course focuses on a practical breath rather than theoretical depth. Topics covered are: the process of building models, sources of uncertainty, probabilistic techniques, spatial data analysis and geostatistics, grid and scale, spatio-temporal uncertainty, visualizing uncertainty in large dimensions, Monte Carlo simulation, reducing uncertainty with data, value of information. Applications to both local (reservoir, aquifer) and global (climate) are covered through literature study. Extensive

software use with SGEMS and Petrel. Project homework. Prerequisites: algebra (CME 104 or equivalent), introductory stat  
3 units, Win (Caers, J)

**ENERGY 161. Statistical Methods for the Earth and Environmental Sciences: Geostatistics**

(Same as EESS 161, EARTHSYS 161) Statistical analysis and graphical display of data, common distribution models, sampling, and regression. The variogram as a tool for modeling spatial correlation; variogram estimation and modeling; introduction to spatial mapping and prediction with kriging; integration of remote sensing and other ancillary information using co-kriging models; spatial uncertainty; introduction to geostatistical software applied to large environmental, climatological, and reservoir engineering databases; emphasis is on practical use of geostatistical tools. GER: DB-NatSci

3-4 units, not given this year

**ENERGY 167. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties**

(Same as ENERGY 267) Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor. GER:DB-EngrAppSci

3 units, Win (Kourt, W; Pande, K)

**ENERGY 175. Well Test Analysis**

Lectures, problems. Application of solutions of unsteady flow in porous media to transient pressure analysis of oil, gas, water, and geothermal wells. Pressure buildup analysis and drawdown. Design of well tests. Computer-aided interpretation.

3 units, Spr (Horne, R)

**ENERGY 180. Oil and Gas Production Engineering**

(Same as ENERGY 280) Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120. GER:DB-EngrAppSci

3 units, not given this year

**ENERGY 191. OPTIMIZATION OF ENERGY SYSTEMS**

(Same as ENERGY 291) Introductory mathematical programming and optimization using examples from energy industries. Emphasis on problem formulation and solving, secondary coverage of algorithms. Problem topics include optimization of energy investment, production, and transportation; uncertain and intermittent energy resources; energy storage; efficient energy production and conversion. Methods include linear and nonlinear optimization, as well as multi-objective and goal programming. Tools include Microsoft Excel and AMPL mathematical programming language. Prerequisites: MATH 41, MATH 51, or consent of instructor. Programming experience helpful (e.g. CS 106A-B).

3 units, Win (Brandt, A)

**ENERGY 192. Undergraduate Teaching Experience**

Leading field trips, preparing lecture notes, quizzes under supervision of the instructor. May be repeated for credit.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**ENERGY 193. Undergraduate Research Problems**

Original and guided research problems with comprehensive report. May be repeated for credit.

1-3 units, Aut (Staff), Win (Staff), Spr (Durllofsky, L; Gerritsen, M; Horne, R; Kavscek, A; Tchelepi, H), Sum (Staff)

**ENERGY 194. Special Topics in Energy and Mineral Fluids**

May be repeated for credit.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**ENERGY 199. Senior Project and Seminar in Energy Resources**

Individual or group capstone project in Energy Resources Engineering. Emphasis is on report preparation. May be repeated for credit.

1-4 units, Spr (Kavscek, A; Horne, R; Sandler, J)

**GRADUATE COURSES IN ENERGY RESOURCES ENGINEERING**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**ENERGY 201. Laboratory Measurement of Reservoir Rock Properties**

In this course, students will learn methods for measuring reservoir rock properties. Techniques covered include core preservation and sample preparation; Rock petrography; Interfacial tension of fluids; Measurement of contact angles of fluids on reservoir media; Capillary pressure measurement and interpretation; Absolute and effective porosities; Absolute permeability; Multiphase flow including relative permeability and residual saturation. The class will be 1 3-hour lecture/lab per week, with readings and weekly assignments. A field trip to a professional core characterization lab may be included.

3 units, Win (Benson, S; Pini, R; Krevor, S)

**ENERGY 210. Energy Policy for Scientists and Engineers**

Graduate level seminar that addresses energy policy issues through discussion, invited talks and visits/field trips to policy making organizations and industry leaders.

1 unit, Spr (Staff)

**ENERGY 212. Introduction to Large-Scale Computing in Engineering**

(Same as CME 212) Advanced programming methodologies for solving fundamental engineering problems using algorithms with pervasive application across disciplines. Overview of computer systems from a programming perspective including processor architectures, memory hierarchies, machine arithmetic, performance tuning techniques. Algorithms include iterative, direct linear solvers, fft, and divide and conquer strategies for n-body problems. Software development; other practical UNIX tools including shell scripting, vi/emacs, gcc, make, gdb, gprof, version control systems and LaTeX. Prerequisites: CME 200/ME 300A, CME 211, and CS 106X or equivalent level of programming in C/C++.

3 units, Win (Henderson, N)

**ENERGY 221. Fundamentals of Multiphase Flow**

(Same as ENERGY 121) Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy's law for multiphase flow, fractional flow equation, effects of gravity, Buckley-Leverett theory, recovery predictions, volumetric linear scaling, JBN and Jones-Rozelle determination of relative permeability. Frontal advance equation, Buckley-Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities.

3 units, Win (Tchelepi, H)

**ENERGY 222. Advanced Reservoir Engineering**

Lectures, problems. General flow equations, tensor permeabilities, steady state radial flow, skin, and succession of steady states. Injectivity during fill-up of a depleted reservoir, injectivity for liquid-filled reservoirs. Flow potential and gravity forces, coning. Displacements in layered reservoirs. Transient radial flow equation, primary drainage of a cylindrical reservoir, line source solution, pseudo-steady state. May be repeated for credit. Prerequisite: 221.

3 units, Spr (Durllofsky, L)

**ENERGY 223. Reservoir Simulation**

Fundamentals of petroleum reservoir simulation. Equations for multicomponent, multiphase flow between gridblocks comprising a petroleum reservoir. Relationships between black-oil and compositional models. Techniques for developing black-oil, compositional, thermal, and dual-porosity models. Practical considerations in the use of simulators for predicting reservoir performance. Class project. Prerequisite: 221 and 246, or consent of instructor. Recommended: CME 206.

3-4 units, Win (Durllofsky, L; Tchelepi, H; Gerritsen, M)

**ENERGY 224. Advanced Reservoir Simulation**

Topics include modeling of complex wells, coupling of surface facilities, compositional modeling, dual porosity models, treatment of full tensor permeability and grid nonorthogonality, local grid refinement, higher order methods, streamline simulation,

upscaling, algebraic multigrid solvers, unstructured grid solvers, history matching, other selected topics. Prerequisite: 223 or consent of instructor. May be repeated for credit.

3 units, Aut (Durlafsky, L; Tchelepi, H; Aziz, K)

#### **ENERGY 225. Theory of Gas Injection Processes**

Lectures, problems. Theory of multicomponent, multiphase flow in porous media. Miscible displacement: diffusion and dispersion, convection-dispersion equations and its solutions. Method of characteristic calculations of chromatographic transport of multicomponent mixtures. Development of miscibility and interaction of phase behavior with heterogeneity. May be repeated for credit. Prerequisite: CME 200.

3 units, Spr (Orr, F; Voskov, D)

#### **ENERGY 226. Thermal Recovery Methods**

Theory and practice of thermal recovery methods: steam drive, cyclic steam injections, and in situ combustion. Models of combined mass and energy transport. Estimates of heated reservoir volume and oil recovery performance. Wellbore heat losses, recovery production, and field examples.

3 units, not given this year

#### **ENERGY 227. Enhanced Oil Recovery**

The physics, theories, and methods of evaluating chemical, miscible, and thermal enhanced oil recovery projects. Existing methods and screening techniques, and analytical and simulation based means of evaluating project effectiveness. Dispersion-convection-adsorption equations, coupled heat, and mass balances and phase behavior provide requisite building blocks for evaluation.

3 units, Spr (Castanier, L)

#### **ENERGY 230. Advanced Topics in Well Logging**

State of the art tools and analyses; the technology, rock physical basis, and applications of each measurement. Hands-on computer-based analyses illustrate instructional material. Guest speakers on formation evaluation topics. Prerequisites: 130 or equivalent; basic well logging; and standard practice and application of electric well logs.

3 units, Spr (Lindblom, R)

#### **ENERGY 240. Geostatistics for Spatial Phenomena**

(Same as GES 240) Probabilistic modeling of spatial and/or time dependent phenomena. Kriging and cokriging for gridding and spatial interpolation. Integration of heterogeneous sources of information. Multiple-point geostatistics and training image-based stochastic imaging of reservoir/field heterogeneities. Introduction to GSLIB and SGEMS software. Case studies from the oil and mining industry and environmental sciences. Prerequisites: introductory calculus and linear algebra, STATS 116, GES 161, or equivalent.

2-3 units, Win (Journal, A)

#### **ENERGY 241. Seismic Reservoir Characterization**

(Same as GEOPHYS 241A, ENERGY 141) (Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112

3-4 units, Spr (Mukerji, T)

#### **ENERGY 242. Topics in Advanced Geostatistics**

(Same as EESS 263) Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran.

3-4 units, not given this year

#### **ENERGY 246. Reservoir Characterization and Flow Modeling with Outcrop Data**

(Same as GES 246, ENERGY 146) Project addressing a reservoir management problem by studying an outcrop analog, constructing

geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.

3 units, Aut (Graham, S; Tchelepi, H; Mukerji, T; Boucher, A)

#### **ENERGY 247. Stochastic Simulation**

Characterization and inference of statistical properties of spatial random function models; how they average over volumes, expected fluctuations, and implementation issues. Models include point processes (Cox, Poisson), random sets (Boolean, truncated Gaussian), and mixture of Gaussian random functions. Prerequisite: 240.

3 units, not given this year

#### **ENERGY 251. Thermodynamics of Equilibria**

Lectures, problems. The volumetric behavior of fluids at high pressure. Equation of state representation of volumetric behavior. Thermodynamic functions and conditions of equilibrium, Gibbs and Helmholtz energy, chemical potential, fugacity. Phase diagrams for binary and multicomponent systems. Calculation of phase compositions from volumetric behavior for multicomponent mixtures. Experimental techniques for phase-equilibrium measurements. May be repeated for credit.

3 units, Aut (Orr, F; Bazargan, M)

#### **ENERGY 252. Chemical Kinetics Modeling**

Fundamentals of chemical reaction kinetics in homogeneous and heterogeneous reaction systems from a molecular perspective. Development and application of the theory of chemical kinetics, including collision, transition state, and surface reactivity approaches. Relationships between thermodynamics and kinetics to overall mechanism predictions. Introduction to Gaussian 03. Lab involves chemical modeling including ab initio electronic structure calculations (Hartree-Fock, configuration interaction, coupled cluster, and many-body perturbation theory) and thermodynamic predictions.

3 units, Win (Wilcox, J)

#### **ENERGY 253. Carbon Capture and Sequestration**

(Same as ENERGY 153) CO<sub>2</sub> separation from syngas and flue gas for gasification and combustion processes. Transportation of CO<sub>2</sub> in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO<sub>2</sub>. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis.

3-4 units, Aut (Wilcox, J; Benson, S)

#### **ENERGY 255. Master's Report on Energy Industry Training**

On-the-job training for master's degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignments, and key results. May be repeated for credit. Prerequisite: consent of adviser.

1-3 units, Sum (Staff)

#### **ENERGY 259. Presentation Skills**

For teaching assistants in Energy Resources Engineering. Five two-hour sessions in the first half of the quarter. Awareness of different learning styles, grading philosophies, fair and efficient grading, text design; presentation and teaching skills, PowerPoint slide design; presentation practice in small groups. Taught in collaboration with the Center for Teaching and Learning.

1 unit, not given this year

#### **ENERGY 260. Modeling Uncertainty in the Earth Sciences**

(Same as ENERGY 160) Whether Earth Science modeling is performed on a local, regional or global scale, for scientific or engineering purposes, uncertainty is inherently present due to lack of data and lack of understanding of the underlying phenomena. This course highlights the various issues, techniques and practical modeling tools available for modeling uncertainty of complex 3D/4D Earth systems. The course focuses on a practical breath rather than theoretical depth. Topics covered are: the process of building models, sources of uncertainty, probabilistic techniques, spatial data analysis and geostatistics, grid and scale, spatio-temporal uncertainty, visualizing uncertainty in large dimensions, Monte Carlo simulation, reducing uncertainty with data, value of information. Applications to both local (reservoir, aquifer) and global (climate) are covered through literature study. Extensive software use with SGEMS and Petrel. Project homework.

Prerequisites: algebra (CME 104 or equivalent), introductory stat  
3 units, Win (Caers, J)

**ENERGY 267. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties**

(Same as ENERGY 167) Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor.

3 units, Win (Kourt, W; Pande, K)

**ENERGY 269. Geothermal Reservoir Engineering**

Conceptual models of heat and mass flows within geothermal reservoirs. The fundamentals of fluid/heat flow in porous media; convective/conductive regimes, dispersion of solutes, reactions in porous media, stability of fluid interfaces, liquid and vapor flows. Interpretation of geochemical, geological, and well data to determine reservoir properties/characteristics. Geothermal plants and the integrated geothermal system.

3 units, not given this year

**ENERGY 273. Special Topics in Petroleum Engineering**

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**ENERGY 280. Oil and Gas Production Engineering**

(Same as ENERGY 180) Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120.

3 units, not given this year

**ENERGY 281. Applied Mathematics in Reservoir Engineering**

The philosophy of the solution of engineering problems. Methods of solution of partial differential equations: Laplace transforms, Fourier transforms, wavelet transforms, Green's functions, and boundary element methods. Prerequisites: CME 204 or MATH 131, and consent of instructor.

3 units, alternate years, not given this year

**ENERGY 284. Optimization and Inverse Modeling**

Treatment of deterministic and stochastic optimization, gradient-based optimization, polytope method, generalized least squares, non-linear least squares and confidence intervals by numerical methods and bootstrap. Adjoint method for gradient calculation. Genetic algorithms and simulated annealing. Development of proxy functions using regression techniques and neural networks. Application of optimization methods to solving non-linear inverse problems. Bayesian method, rejection sampling, metropolis sampling, uncertainty quantification. Parameterization of high-dimensional problems through various expansion techniques. Examples of various Earth sciences inverse problems including flow and wave equations. Requirements: CME 106 and 200 (or equivalent courses)

3 units, Aut (Caers, J)

**ENERGY 285A. SUPRI-A Research Seminar: Enhanced Oil Recovery**

Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-A group. May be repeated for credit. Prerequisite: consent of instructor.

1 unit, Aut (Staff)

**ENERGY 285B. SUPRI-B Research Seminar: Reservoir Simulation**

Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in SUPRI-B (reservoir simulation) program. May be repeated for credit. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff)

**ENERGY 285C. SUPRI-C Research Seminar: Gas Injection Processes**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated

for credit. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff)

**ENERGY 285D. SUPRI-D Research Seminar: Well Test Analysis**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated for credit. Prerequisite: consent of instructor. (Horne)

1 unit, Aut (Staff), Win (Staff)

**ENERGY 285F. SCRF Research Seminar: Geostatistics and Reservoir Forecasting**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SCRF (Stanford Center for Reservoir Forecasting) program. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff)

**ENERGY 285G. Geothermal Reservoir Engineering Research Seminar**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the geothermal energy group. Presentation required for credit. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff)

**ENERGY 285H. SUPRI-HW Research Seminar: Horizontal Well Technology**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in SUPRI-HW (productivity and injectivity of horizontal wells) program. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff)

**ENERGY 290. Numerical Modeling of Fluid Flow in Heterogeneous Porous Media**

How to mathematically model and solve elliptic partial differential equations with variable and discontinuous coefficients describing flow in highly heterogeneous porous media. Topics include finite difference and finite volume approaches on structured grids, efficient solvers for the resulting system of equations, Krylov space methods, preconditioning, multi-grid solvers, grid adaptivity and adaptivity criteria, multiscale approaches, and effects of anisotropy on solver efficiency and accuracy. MATLAB programming and application of commercial or public domain simulation packages. Prerequisite: CME 200, 201, and 202, or equivalents with consent of instructor.

3 units, not given this year

**ENERGY 291. OPTIMIZATION OF ENERGY SYSTEMS**

(Same as ENERGY 191) Introductory mathematical programming and optimization using examples from energy industries. Emphasis on problem formulation and solving, secondary coverage of algorithms. Problem topics include optimization of energy investment, production, and transportation; uncertain and intermittent energy resources; energy storage; efficient energy production and conversion. Methods include linear and nonlinear optimization, as well as multi-objective and goal programming. Tools include Microsoft Excel and AMPL mathematical programming language. Prerequisites: MATH 41, MATH 51, or consent of instructor. Programming experience helpful (e.g., CS 106A-B).

3 units, Win (Brandt, A)

**ENERGY 293A. Fundamentals of Energy Processes**

(Same as EE 293A) For seniors and graduate students. Thermodynamics, heat engines, thermoelectrics, biomass. Recommended: MATH 41, 43; PHYSICS 41, 43, 45

3-4 units, Aut (Brandt, A; Horne, R; Krevor, S)

**ENERGY 293B. Fundamentals of Energy Processes**

(Same as EE 293B) For seniors and graduate students. Fuel cells. Production of hydrogen: electrolytic, chemical, thermolytic, photolytic. Hydrogen storage: hydrides. Photoelectric converters; photo-thermovoltaic converters. Wind turbines. Recommended: EE 293A; MATH 41; PHYSICS 41, 43, 45

3 units, Win (Brandt, A; Gerritsen, M; Wilcox, J)

### **ENERGY 301. The Energy Seminar**

(Same as CEE 301) Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students. May be repeated for credit.

1 unit, Aut (Benson, S), Win (Benson, S), Spr (Benson, S)

### **ENERGY 355. Doctoral Report on Energy Industry Training**

On-the-job training for doctoral students under the guidance of on-site supervisors. Students submit a report on work activities, problems, assignments, and results. May be repeated for credit. Prerequisite: consent of adviser.

1-3 units, Sum (Staff)

### **ENERGY 359. Teaching Experience in Energy Resources Engineering**

For TAs in Energy Resources Engineering. Course and lecture design and preparation; lecturing practice in small groups. Classroom teaching practice in an Energy Resources Engineering course for which the participant is the TA (may be in a later quarter). Taught in collaboration with the Center for Teaching and Learning.

1 unit, Spr (Gerritsen, M)

### **ENERGY 360. Advanced Research Work in Energy Resources Engineering**

Graduate-level work in experimental, computational, or theoretical research. Special research not included in graduate degree program. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **ENERGY 361. Master's Degree Research in Energy Resources Engineering**

Experimental, computational, or theoretical research. Advanced technical report writing. Limited to 6 units total. (Staff)

1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **ENERGY 362. Engineer's Degree Research in Energy Resources Engineering**

Graduate-level work in experimental, computational, or theoretical research for Engineer students. Advanced technical report writing. Limited to 15 units total, or 9 units total if 6 units of 361 were previously credited.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **ENERGY 363. Doctoral Degree Research in Energy Resources Engineering**

Graduate-level work in experimental, computational, or theoretical research for Ph.D. students. Advanced technical report writing.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **ENERGY 365. Special Research Topics in Energy Resources Engineering**

Graduate-level research work not related to report, thesis, or dissertation. May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **ENERGY 369. Practical Energy Studies**

Students work on realistic industrial reservoir engineering problems. Focus is on optimization of production scenarios using secondary or tertiary recovery techniques. When possible, projects are conducted in direct collaboration with industry. May be repeated for credit.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **ENERGY 801. TGR Project**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **ENERGY 802. TGR Dissertation**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## **ENGINEERING (ENGR) COURSES**

### **UNDERGRADUATE COURSES IN ENGINEERING**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **ENGR 10. Introduction to Engineering Analysis**

Integrated approach to the fundamental scientific principles that

are the cornerstones of engineering analysis: conservation of mass, atomic species, charge, momentum, angular momentum, energy, production of entropy expressed in the form of balance equations on carefully defined systems, and incorporating simple physical models. Emphasis is on setting up analysis problems arising in engineering. Topics: simple analytical solutions, numerical solutions of linear algebraic equations, and laboratory experiences. Provides the foundation and tools for subsequent engineering courses. GER:DB-EngrAppSci

4 units, Aut (Cappelli, M), Sum (Staff)

#### **ENGR 14. Intro to Solid Mechanics**

Introduction to engineering analysis using the principles of engineering solid mechanics. Builds on the math and physical reasoning concepts in Physics 41 to develop skills in evaluation of engineered systems across a variety of fields. Foundational ideas for more advanced solid mechanics courses such as ME80 or CEE101A. Interactive lecture sessions focused on mathematical application of key concepts, with weekly complementary lab session on testing and designing systems that embody these concepts. Limited enrollment, subject to instructor approval. GER:DB-EngrAppSci

4 units, Aut (Sheppard, S), Win (Sheppard, S), Spr (Mitiguy, P)

#### **ENGR 15. Dynamics**

The application of Newton's Laws to solve static and dynamic problems, particle and rigid body dynamics, freebody diagrams, and writing equations of motion. 2-D and 3-D cases including gyroscopes, spacecraft, and rotating machinery. Solution of equations of motion and dynamic response of simple mechanical systems. Prerequisites: Calculus (differentiation and integration), E14 (statics and strength), and a mechanics course in physics (e.g., Physics 41). GER:DB-EngrAppSci

3 units, Aut (Mitiguy, P), Spr (Lew, A)

#### **ENGR 20. Introduction to Chemical Engineering**

(Same as CHEMENG 20) Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, energy, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31. GER:DB-EngrAppSci

3 units, Spr (Khosla, C)

#### **ENGR 25B. Biotechnology**

(Same as CHEMENG 25B) Biology and chemistry fundamentals, genetic engineering, cell culture, protein production, pharmaceuticals, genomics, viruses, gene therapy, evolution, immunology, antibodies, vaccines, transgenic animals, cloning, stem cells, intellectual property, governmental regulations, and ethics. Prerequisites: CHEM 31 and MATH 41 or equivalent course. GER:DB-EngrAppSci

3 units, Spr (Wang, C)

#### **ENGR 25E. Energy: Chemical Transformations for Production, Storage, and Use**

(Same as CHEMENG 25E) An introduction and overview to the challenges and opportunities of energy supply and consumption. Emphasis on energy technologies where chemistry and engineering play key roles. Review of energy fundamentals along with historical energy perspectives and current energy production technologies. In depth analyses of solar thermal systems, biofuels, photovoltaics and electrochemical devices (batteries and fuel cells). Prerequisites: high school chemistry or equivalent. GER:DB-EngrAppSci

3 units, Win (Robertson, C; Bent, S)

#### **ENGR 30. Engineering Thermodynamics**

The basic principles of thermodynamics are introduced in this course. Concepts of energy and entropy from elementary considerations of the microscopic nature of matter are discussed. The principles are applied in thermodynamic analyses directed towards understanding the performances of engineering systems. Methods and problems cover socially responsible economic generation and utilization of energy in central power generation plants, solar systems, refrigeration devices, and automobile, jet and gas-turbine engines. GER:DB-EngrAppSci

3 units, Aut (Zheng, X), Win (Mitchell, R), Sum (Staff)

### **ENGR 31. Chemical Principles with Application to Nanoscale Science and Technology**

Preparation for engineering disciplines emphasizing modern technological applications of solid state chemistry. Topics include: crystallography; chemical kinetics and equilibria; thermodynamics of phase changes and reaction; quantum mechanics of chemical bonding, molecular orbital theory, and electronic band structure of crystals; and the materials science of basic electronic and photonic devices. Prerequisite: high school or college chemistry background in stoichiometry, periodicity, Lewis and VSEPR structures, dissolution/precipitation and acid/base reactions, gas laws, and phase behavior. GER: DB-NatSci

4 units, Aut (McIntyre, P)

### **ENGR 40. Introductory Electronics**

Overview of electronic circuits and applications. Electrical quantities and their measurement, including operation of the oscilloscope. Basic models of electronic components including resistors, capacitors, inductors, and the operational amplifier. Frequency response of linear circuits, including basic filters, using phasor analysis. Digital logic fundamentals, logic gates, and basic combinatorial logic blocks. Lab assignments. Enrollment limited to 200. Lab. Prerequisite: PHYSICS 43. GER:DB-EngrAppSci

5 units, Aut (Howe, R), Spr (Wong, S)

### **ENGR 40N. Engineering Wireless Networks**

A hands on introduction to the design and implementation of modern wireless networks. Via a quarter long project on programmable radios, students will learn the fundamentals of wireless channels, encoding and decoding information, modeling of errors and error recovery algorithms, and the engineering of packet-switched networks. These concepts will be used to illustrate general themes in EE and CS: the role of abstraction and modularity in engineering design, building reliable systems using imperfect components, understanding the limits imposed by energy and noise, choosing effective representations for information, and engineering tradeoffs in complex systems.

5 units, Spr (Katti, S)

### **ENGR 40P. Physics of Electrical Engineering**

(Same as EE 41) How everything from electrostatics to quantum mechanics is used in common high-technology products. Electrostatics are critical in micro-mechanical systems used in many sensors and displays, and Electromagnetic waves are essential in all high-speed communication systems. How to propagate energy on transmission lines, optical fibers, and in free space. Which aspects of modern physics are needed to generate light for the operation of a DVD player or TV. Introduction to semiconductors, solid-state light bulbs, and laser pointers. Hands-on labs to connect physics to everyday experience. Prerequisites: Physics 43 GER:DB-EngrAppSci

5 units, Win (Solgaard, O)

### **ENGR 50. Introduction to Materials Science, Nanotechnology Emphasis**

The structure, bonding, and atomic arrangements in materials leading to their properties and applications. Topics include electronic and mechanical behavior, emphasizing nanotechnology, solid state devices, and advanced structural and composite materials. GER:DB-EngrAppSci

4 units, Spr (Sinclair, R)

### **ENGR 50E. Introduction to Materials Science - Energy Emphasis**

Materials structure, bonding and atomic arrangements leading to their properties and applications. Topics include electronic, thermal and mechanical behavior; emphasizing energy related materials and challenges.

4 units, Aut (Melosh, N)

### **ENGR 50M. Introduction to Materials Science, Biomaterials Emphasis**

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite. GER:DB-EngrAppSci

4 units, Win (Heilshorn, S)

### **ENGR 60. Engineering Economy**

Fundamentals of economic analysis. Interest rates, present value, and internal rate of return. Applications to personal and corporate financial decisions. Mortgage evaluation, insurance decision, hedging/risk reduction, project selection, capital budgeting, and investment valuation. Decisions under uncertainty and utility theory. Prerequisite: MATH 41 or equivalent. Recommended: sophomore or higher class standing; knowledge of elementary probability. GER:DB-EngrAppSci

3 units, Aut (Primbs, J), Sum (Staff)

### **ENGR 62. Introduction to Optimization**

(Same as MS&E 111) Formulation and analysis of linear optimization problems. Solution using Excel solver. Polyhedral geometry and duality theory. Applications to contingent claims analysis, production scheduling, pattern recognition, two-player zero-sum games, and network flows. Prerequisite: MATH 51. GER:DB-EngrAppSci

4 units, Aut (Van Roy, B), Spr (Goel, A)

### **ENGR 70A. Programming Methodology**

(Same as CS 106A) Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required. GER:DB-EngrAppSci

3-5 units, Aut (Sahami, M), Win (Schwarz, K), Spr (Cain, G), Sum (Staff)

### **ENGR 70B. Programming Abstractions**

(Same as CS 106B) Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or equivalent. GER:DB-EngrAppSci

3-5 units, Aut (Cain, G), Win (Roberts, E), Spr (Schwarz, K), Sum (Staff)

### **ENGR 70X. Programming Abstractions (Accelerated)**

(Same as CS 106X) Intensive version of 106B for students with a strong programming background interested in a rigorous treatment of the topics at an accelerated pace. Additional advanced material and more challenging projects. Prerequisite: excellence in 106A or equivalent, or consent of instructor. GER:DB-EngrAppSci

3-5 units, Aut (Cain, G)

### **ENGR 80. Introduction to Bioengineering**

(Same as BIOE 80) Overview of bioengineering focused on engineering analysis and design of biological systems. Topics include chemical properties of biological components, rates and equilibrium properties of biological reactions, cellular structure and communication, genetic programming of biological systems, and engineering balances and systems analysis. Application of these concepts to engineering biological systems for diverse areas, including health and medicine, biomanufacturing, and sustainability, is emphasized. Includes an introduction to MATLAB as a problem-solving tool and a team-based project emphasizing the responsible development of technologies. 4 units, Spr (Smolke) GER:DB-EngrAppSci

4 units, Spr (Smolke, C)

### **ENGR 90. Environmental Science and Technology**

(Same as CEE 70) Introduction to environmental quality and the technical background necessary for understanding environmental issues, controlling environmental degradation, and preserving air and water quality. Material balance concepts for tracking substances in the environmental and engineering systems. GER:DB-EngrAppSci

3 units, Aut (Kopperud, R)

### **ENGR 100. Teaching Public Speaking**

The theory and practice of teaching public speaking and presentation development. Lectures/discussions on developing an instructional plan, using audiovisual equipment for instruction, devising tutoring techniques, and teaching delivery, organization,

audience analysis, visual aids, and unique speaking situations. Weekly practice speaking. Students serve as apprentice speech tutors. Those completing course may become paid speech instructors in the Technical Communications Program. Prerequisite: consent of instructor.

5 units, Aut (Vassar, M), Win (Vassar, M), Spr (Vassar, M)

#### **ENGR 102E. Technical/Professional Writing for Electrical Engineers**

Required of Electrical Engineering majors. The process of writing technical/professional documents. Lectures, writing assignments, individual conferences. Corequisite for WIM: EE 100X or 108A.

1 unit, Aut (Scully, J)

#### **ENGR 102M. Technical/Professional Writing for Mechanical Engineers**

Required of Mechanical Engineering majors. The process of writing technical/professional documents. Lecture, writing assignments, individual conferences. Corequisite for WIM: ME 203.

1 unit, Aut (McDevitt, M), Win (McDevitt, M)

#### **ENGR 103. Public Speaking**

Priority to Engineering students. Introduction to speaking activities, from impromptu talks to carefully rehearsed formal professional presentations. How to organize and write speeches, analyze audiences, create and use visual aids, combat nervousness, and deliver informative and persuasive speeches effectively. Weekly class practice, rehearsals in one-on-one tutorials, videotaped feedback. Limited enrollment.

3 units, Aut (Vassar, M), Win (Vassar, M), Spr (Vassar, M)

#### **ENGR 105. Feedback Control Design**

Design of linear feedback control systems for command-following error, stability, and dynamic response specifications. Root-locus and frequency response design techniques. Examples from a variety of fields. Some use of computer aided design with MATLAB. Prerequisite: EE 102, ME 161, or equivalent. GER:DB-EngrAppSci

3 units, Win (Okamura, A)

#### **ENGR 110. Perspectives in Assistive Technology**

(Same as ENGR 210) Seminar and student team project. Medical, social, psychological, and technical challenges surrounding the design, development, and use of assistive technologies to improve the lives of people with disabilities. Guest speakers include professionals, clinicians, and individuals with disabilities. 1 unit for seminar attendance only. 3 units for students who pursue a team-based assistive technology project. Projects can be continued in ME113 or CS194 or as independent study in Spring Quarter. See <http://www.stanford.edu/class/engr110>. Service Learning Course (certified by Haas Center).

1-3 units, Win (Jaffe, D; Nelson, D)

#### **ENGR 115. Design the Tech Challenge**

(Same as ENGR 215) Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at <http://techchallenge.thetech.org>. May be repeated for credit.

2 units, not given this year

#### **ENGR 120. Fundamentals of Petroleum Engineering**

(Same as ENERGY 120) Lectures, problems, field trip. Engineering topics in petroleum recovery; origin, discovery, and development of oil and gas. Chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media. GER:DB-EngrAppSci

3 units, Aut (Horne, R; Wilcox, J)

#### **ENGR 130. Science, Technology, and Contemporary Society**

(Same as STS 101, STS 201) Key social, cultural, and values issues raised by contemporary scientific and technological developments; distinctive features of science and engineering as sociotechnical activities; major influences of scientific and technological developments on 20th-century society, including transformations and problems of work, leisure, human values, the fine arts, and international relations; ethical conflicts in scientific and engineering practice; and the social shaping and management

of contemporary science and technology. GER:DB-SocSci

4-5 units, Aut (McGinn, R)

#### **ENGR 131. Ethical Issues in Engineering**

(Same as STS 115) Moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; the ethics of whistle blowing; ethical conflicts of engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations; ethical issues arising from engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Case studies, guest practitioners, and field research. Limited enrollment. GER:DB-Hum

4 units, Spr (McGinn, R)

#### **ENGR 140A. Leadership of Technology Ventures**

First of three-part sequence for students selected to the Mayfield Fellows Program. Management and leadership within high technology startups, focusing on entrepreneurial skills related to product and market strategy, venture financing and cash flow management, team recruiting and organizational development, and the challenges of managing growth and handling adversity in emerging ventures. Other engineering faculty, founders, and venture capitalists participate as appropriate. Recommended: accounting or finance course (MS&E 140, ECON 90, or ENGR 60).

3-4 units, Spr (Byers, T)

#### **ENGR 140B. Leadership of Technology Ventures**

Open to Mayfield Fellows only; taken during the summer internship at a technology startup. Students exchange experiences and continue the formal learning process. Activities journal. Credit given following quarter.

1-2 units, Aut (Seelig, T)

#### **ENGR 140C. Leadership of Technology Ventures**

Open to Mayfield Fellows only. Capstone to the 140 sequence. Students, faculty, employers, and venture capitalists share recent internship experiences and analytical frameworks. Students develop living case studies and integrative project reports.

2-3 units, Aut (Seelig, T)

#### **ENGR 145. Technology Entrepreneurship**

How do you create a successful start-up? What is entrepreneurial leadership in a large firm? What are the differences between an idea and true opportunity? How does an entrepreneur form a team and gather the resources necessary to create a great enterprise? This class mixes mentor-guided team projects, in-depth case studies, research on the entrepreneurial process, and the opportunity to network and ask questions of Silicon Valley's top entrepreneurs and venture capitalists. For undergraduates of all majors who seek to understand the formation and growth of high-impact start-ups in areas such as information, green/clean, medical and consumer technologies. No prerequisites. Limited enrollment. GER:DB-SocSci

4 units, Win (Eesley, C), Sum (Staff)

#### **ENGR 150. Social Innovation and Entrepreneurship**

(Same as ENGR 250) (Graduate students register for 250.) The art of innovation and entrepreneurship for social benefit. Project team develops, tests, and iteratively improves technology-based social innovation and business plan to deploy it. Feedback and coaching from domain experts, product designers, and successful social entrepreneurs. Limited enrollment; application required. See <http://sie.stanford.edu> for course information.

1-6 units, Aut (Behrman, W), Win (Behrman, W), Spr (Behrman, W)

#### **ENGR 154. Vector Calculus for Engineers**

(Same as CME 100) Computation and visualization using MATLAB. Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green's, divergence, and Stokes' theorems. Examples and applications drawn from various engineering fields. Prerequisites: MATH 41 and 42, or 10 units AP credit. GER:DB-Math

5 units, Aut (Khayms, V)

**ENGR 155A. Ordinary Differential Equations for Engineers**  
(Same as CME 102) Analytical and numerical methods for solving ordinary differential equations arising in engineering applications: Solution of initial and boundary value problems, series solutions, Laplace transforms, and non-linear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool kit for computations. Problems from various engineering fields. Prerequisite: CME 100/ENGR 154 or MATH 51. GER:DB-Math  
*5 units, Win (Darve, E)*

**ENGR 155B. Linear Algebra and Partial Differential Equations for Engineers**

(Same as CME 104) Linear algebra: matrix operations, systems of algebraic equations, Gaussian elimination, undetermined and overdetermined systems, coupled systems of ordinary differential equations, eigensystem analysis, normal modes. Fourier series with applications, partial differential equations arising in science and engineering, analytical solutions of partial differential equations. Numerical methods for solution of partial differential equations: iterative techniques, stability and convergence, time advancement, implicit methods, von Neumann stability analysis. Examples and applications from various engineering fields. Prerequisite: CME 102/ENGR 155A. GER:DB-Math  
*5 units, Spr (Khayms, V)*

**ENGR 155C. Introduction to Probability and Statistics for Engineers**

(Same as CME 106) Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR154 or MATH 51. GER:DB-Math  
*3-4 units, Win (Khayms, V), Sum (Staff)*

**ENGR 159Q. Japanese Companies and Japanese Society**

(S,Sem) (Same as MATSCI 159Q) Stanford Introductory Seminar. Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. GER:DB-SocSci  
*3 units, Spr (Sinclair, R)*

**ENGR 192. Engineering Public Service Project**

Volunteer work on a public service project with a technical engineering component. Project requires a faculty sponsor and a community partner such as a nonprofit organization, school, or individual. Required report. See <http://soe.stanford.edu/publicservice>. May be repeated for credit. Prerequisite: consent of instructor.  
*1-2 units, not given this year*

**ENGR 199. Special Studies in Engineering**

Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the section number corresponding to the particular faculty member. May be repeated for credit. Prerequisite: consent of instructor.  
*1-15 units, Aut (Staff), Win (Staff), Spr (Staff)*

**ENGR 199W. Writing of Original Research for Engineers**

Technical writing in science and engineering. Students produce a substantial document describing their research, methods, and results. Prerequisite: completion of freshman writing requirements; prior or concurrent in 2 units of research in the major department; and consent of instructor. WIM for BioMedical Computation.  
*1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GRADUATE COURSES IN ENGINEERING**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**ENGR 202S. Writing: Special Projects**

Writing tutorial for students working on non-course projects such

as theses, journal articles, and conference papers. Weekly individual conferences.

*1 unit, Aut (Reichard, C), Win (Reichard, C), Spr (Reichard, C)*

**ENGR 202W. Technical Writing**

How to write clear, concise, and well-ordered technical prose. Principles of editing for structure and style. Applications to a variety of genres in engineering and science.

*3 units, Aut (Reichard, C), Win (Reichard, C), Spr (Reichard, C)*

**ENGR 204. Research Ethics for Engineers and Scientists**

Explores ethical responsibilities of engineering and science researchers in relation to laboratory safety, data acquisition and management, experiment and product design, collaborative research, authorship and peer review, mentorship, human subjects research, funding applications and funded research, media accounts of research, and new and emerging technologies (e.g., in nanotechnology and bioengineering). Responsibilities of researchers toward society at large, and Stanford and government policies regarding the conduct of engineering and science research will also be addressed. Lectures, discussion, guest researchers, and real case studies. Primarily for graduate students and post-doctoral researchers in engineering and science. Limited enrollment.

*1-2 units, Spr (McGinn, R)*

**ENGR 205. Introduction to Control Design Techniques**

Review of root-locus and frequency response techniques for control system analysis and synthesis. State-space techniques for modeling, full-state feedback regulator design, pole placement, and observer design. Combined observer and regulator design. Lab experiments on computers connected to mechanical systems. Prerequisites: 105, MATH 103, 113. Recommended: Matlab.

*3 units, Aut (Rock, S)*

**ENGR 206. Control System Design**

Design and construction of a control system and working plant. Topics include: linearity, actuator saturation, sensor placement, controller and model order; linearization by differential actuation and sensing; analog op-amp circuit implementation. Emphasis is on qualitative aspects of analysis and synthesis, generation of candidate design, and engineering tradeoffs in system selection. Large team-based project. Limited enrollment. Prerequisite: 105.

*3-4 units, not given this year*

**ENGR 207A. Linear Control Systems I**

Introduction to control of discrete-time linear systems. State-space models. Controllability and observability. The linear quadratic regulator. Prerequisite: 105 or 205.

*3 units, not given this year*

**ENGR 207B. Linear Control Systems II**

Probabilistic methods for control and estimation. Statistical inference for discrete and continuous random variables. Linear estimation with Gaussian noise. The Kalman filter. Prerequisite: EE 263.

*3 units, not given this year*

**ENGR 207C. Linear Control Systems III**

Continuation of 207B. Introduction to stochastic control. Markov decision processes and stochastic dynamic programming. Separation of control and estimator design. Stochastic optimal control. Prerequisite: 207B.

*3 units, not given this year*

**ENGR 209A. Analysis and Control of Nonlinear Systems**

Introduction to nonlinear phenomena: multiple equilibria, limit cycles, bifurcations, complex dynamical behavior. Planar dynamical systems, analysis using phase plane techniques. Describing functions. Lyapunov stability theory. SISO feedback linearization, sliding mode control. Design examples. Prerequisite: 205.

*3 units, Win (Rock, S)*

**ENGR 210. Perspectives in Assistive Technology**

(Same as ENGR 110) Seminar and student team project. Medical, social, psychological, and technical challenges surrounding the design, development, and use of assistive technologies to improve the lives of people with disabilities. Guest speakers include professionals, clinicians, and individuals with disabilities. 1 unit for seminar attendance only. 3 units for students who pursue a team-based assistive technology project. Projects can be continued in ME113 or CS194 or as independent study in Spring Quarter.

See <http://www.stanford.edu/class/engr110>. Service Learning Course (certified by Haas Center).

1-3 units, Win (Jaffe, D; Nelson, D)

### **ENGR 210A. Robust Control**

Analysis and design techniques for multivariable feedback systems. Stability and robustness of feedback loops, passivity, and the small-gain theorem. Prerequisite: 207A or EE 263.

3 units, not given this year

### **ENGR 210B. Advanced Topics in Computation for Control**

Recent developments in computational techniques for feedback control systems. The use of convex optimization to solve problems in control. Prerequisites: Background in convex optimization, such as EE 364, and background in control, such as ENGR 207B.

3 units, not given this year

### **ENGR 215. Design the Tech Challenge**

(Same as ENGR 115) Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at <http://techchallenge.thetech.org>. May be repeated for credit.

2 units, not given this year

### **ENGR 231. Transformative Design**

(Same as ANTHRO 332) Project-based. How interactive technologies can be designed to encourage behavioral transformation. Topics such as self-efficacy, social support, and mechanism of cultural change in domains such as weight-loss, energy conservation, or safe driving. Lab familiarizes students with hardware and software tools for interaction prototyping. Students teams create functional prototypes for self-selected problem domains. Prerequisite: consent of instructor. Design Institute class; see <http://dschool.stanford.edu>.

3-5 units, Win (Roth, B; Dryer, M; Shanks, M)

### **ENGR 240. Introduction to Micro and Nano Electromechanical Systems**

Miniaturization technologies now have important roles in materials, mechanical, and biomedical engineering practice, in addition to being the foundation for information technology. This course will target an audience of first-year engineering graduate students and motivated senior-level undergraduates, with the goal of providing an introduction to M/NEMS fabrication techniques, selected device applications, and the design tradeoffs in developing systems. The course has no specific prerequisites, other than graduate or senior standing in engineering; otherwise, students will require permission of the instructors.

3 units, Spr (Howe, R)

### **ENGR 245. Technology Entrepreneurship and Lean Startups**

Apply emerging entrepreneurship principles including the popular lean startups and customer development frameworks to prototype, test, and iterate your product while discovering if you have a profitable business model. Work and study in teams or, in rare cases, alone. Proposal required during first week of the quarter. Proposals can be software, physical good, or service of any kind. Projects are treated as real start-ups, so work will be intense. Prerequisite: interest and passion in exploring whether a technology idea can become a real company.

3-4 units, Win (Blank, S)

### **ENGR 250. Social Innovation and Entrepreneurship**

(Same as ENGR 150) (Graduate students register for 250.) The art of innovation and entrepreneurship for social benefit. Project team develops, tests, and iteratively improves technology-based social innovation and business plan to deploy it. Feedback and coaching from domain experts, product designers, and successful social entrepreneurs. Limited enrollment; application required. See <http://sie.stanford.edu> for course information.

1-6 units, Aut (Behrman, W), Win (Behrman, W), Spr (Behrman, W)

### **ENGR 251. Work Seminar**

Students participate in the Creating Research Examples Across the Teaching Enterprise (CREATE) writing program. Goal is for students to produce, through a peer reviewed process, 1,000 word statements describing their research in ways that are understandable and compelling to undergraduates and other novices in the field. Unit credit when the final approved statements

appear on the CREATE web site.

1 unit, not given this year

### **ENGR 280. From Play to Innovation**

Project-based and team-centered. Enhancing the innovation process with playfulness. The human state of play and its principal attributes and importance to creative thinking. Play behavior, and its development and biological basis. Students apply those principles through design thinking to promote innovation in the corporate world with real-world partners on design projects with widespread application.

2-4 units, Spr (Boyle, B; Brown, S; Thompson, S)

### **ENGR 290. Graduate Environment of Support**

For course assistants (CAs) and tutors in the School of Engineering tutorial and learning program. Interactive training for effective academic assistance. Pedagogy, developing course material, tutoring, and advising. Sources include video, readings, projects, and role playing.

1 unit, Aut (Osgood, B; Lozano, N)

### **ENGR 298. Seminar in Fluid Mechanics**

Interdepartmental. Problems in all branches of fluid mechanics, with talks by visitors, faculty, and students. Graduate students may register for 1 unit, without letter grade; a letter grade is given for talks. May be repeated for credit.

1 unit, Aut (Staff), Win (Staff), Spr (Staff)

### **ENGR 299. Special Studies in Engineering**

Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the corresponding section. Prerequisite: consent of instructor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **ENGR 311A. Women's Perspectives**

Master's and Ph.D. seminar series driven by student interests. Possible topics: time management, career choices, health and family, diversity, professional development, and personal values. Guest speakers from academia and industry, student presentations with an emphasis on group discussion. Graduate students share experiences and examine scientific research in these areas. May be repeated for credit.

1 unit, Win (Sheppard, S)

### **ENGR 311B. Designing the Professional**

Continuation of ENGR 311A.

1 unit, Spr (Sheppard, S; Evans, D)

### **ENGR 312. Science and Engineering Course Design**

(Same as CTL 312) For students interested in an academic career and who anticipate designing science courses at the undergraduate or graduate level. Goal is to apply research on science learning to the design of effective course materials. Topics include syllabus design, course content and format decisions, assessment planning and grading, and strategies for teaching improvement.

2-3 units, Win (Sheppard, S; Wright-Dunbar, R)

### **ENGR 313. Topics in Engineering Education**

Master's and Ph.D. seminar series focused on teaching engineering courses based on research. Weekly, student-led group discussions follow engineering education and education literature. Topics include: best practices in teaching, theories on how people learn, education research methods, assessing learning, and evaluating teaching, all in an engineering context. May be repeated for credit.

1 unit, Spr (Sheppard, S)

### **ENGR 341. Micro/Nano Systems Design and Fabrication**

Laboratory course in micro and nano fabrication technology that combines lectures on theory and fundamentals with hands-on training in the Stanford Nanofabrication Facility. Prerequisite: ENGR 240 or equivalent.

3-5 units, not given this year

### **ENGR 342. MEMS Laboratory II**

Emphasis is on implementation of fabricated N/MEMS-based solutions. Student teams collaborate to develop, fabricate and test N/MEMS solutions proposed in E341. Design alternatives fabricated and tested in SNF with emphasis on manufacturability, assembly, test, and design. Limited enrollment. Prerequisite: ENGR 341.

3-4 units, not given this year

# ENGLISH (ENGLISH) COURSES

## UNDERGRADUATE COURSES IN ENGLISH

Primarily for undergraduates; graduate students may enroll with consent of adviser.

### ENGLISH 10AX. Fiction Writing

Introduction to short stories by past and contemporary masters. Basic elements of fiction writing: story structure, point of view, dialogue, exposition. Summer pre-class assignments include reading and online blog participation. Short story writing and feedback sessions, short writing exercises, and field trip to San Francisco.

2 units, Aut (*Tanaka, S*)

### ENGLISH 11SI. Neil Gaiman: International Man of Mystery

Neil Gaiman is an author that transcends the boundaries of form, genre, and age. Add to that the fact he grew up in England and lives in America, and it becomes almost impossible to pin him down on any front. By examining his graphic novels, short stories, novels, children's literature, and film, we will try our best to approach this living author from different angles and make sense of how he breaks down traditional barriers of classification. Along the way, we will examine the themes and style of a literary author that has managed to remain relevant in the modern, digital age.

2 units, Aut (*Lunsford, A*)

### ENGLISH 21. Masterpieces of American Literature

(Same as AMSTUD 121, ENGLISH 121) (English majors and others taking 5 units, register for 121.) A survey of some of the definitive texts of American writing, such as *Leaves of Grass*, *Benito Cereno*, *Adventures of Huckleberry Finn*, *The Waste Land*, *The Sun Also Rises*, *The Golden Apples*, and *The Crying of Lot 49*. GER:DB-Hum

3-5 units, not given this year

### ENGLISH 32. Technologies of Reading and Writing: The Nineteenth Century versus the Digital Age

(Same as ENGLISH 132) The nineteenth century was a critical period for technological development that accelerated forms of communication. As the telegraph replaced the letter, daily gossip columns replaced word of mouth, and photographs replaced the painted illustration, theories of writing and reading changed dramatically. Through texts such as Keats's *Letters*, Shelley's *Frankenstein*, Carroll's *Alice in Wonderland*, and Stoker's *Dracula*, this course explores the effects of media on the creation, dissemination, and reception of literature. This course also facilitates comparative work by juxtaposing 19th-century media with contemporary technologies of writing and reading, such as emails, blogs, and wikis, and the impact of these technologies on the creation, dissemination, and reception of literature today.

3-4 units, Sum (*Staff*)

### ENGLISH 36N. Lord Byron: Mad, Bad, and Dangerous to Know

(F,Sem) Stanford Introductory Seminar. The poetry, literary legacy, and significance of Lord Byron, a towering figure of European Romanticism. Emphasis on formal, aesthetic, and stylistic elements of the poetry, with additional topics to include modern celebrity, literary marketplace, scandal, and romantic heroism. GER:DB-Hum

3 units, Aut (*Rovee, C*)

### ENGLISH 43. Introduction to African American Literature

(Same as AFRICAAM 43, AMSTUD 143, ENGLISH 143) (English majors and others taking 5 units, register for 143.) African American literature from its earliest manifestations in the spirituals, trickster tales, and slave narratives to recent developments such as black feminist theory, postmodern fiction, and hip hop lyricism. We will engage some of the defining debates and phenomena within African American cultural history, including the status of realist aesthetics in black writing; the contested role of literature in black political struggle; the question of diaspora; the problem of intra-racial racism; and the emergence of black internationalism. Attuned to the invariably hybrid nature of this tradition, we will also devote attention to the discourse of the Enlightenment, modernist aesthetics, and the role of Marxism

in black political and literary history. GER:DB-Hum, EC-AmerCul  
3-5 units, Aut (*Raspberry, G*)

### ENGLISH 43A. American Indian Mythology, Legend, and Lore

(Same as NATIVEAM 143A, ENGLISH 143A) (English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, *Black Elk Speaks*. GER:DB-Hum

3-5 units, Aut (*Fields, K*)

### ENGLISH 45F. The Human Love of Mystery: A Journey Through Detective Fiction

(Same as ENGLISH 145F) Reading and discussion of mystery and detective fiction from Sherlock Holmes through the Golden Age of Agatha Christie, to the hard-boiled private eye in Ross Macdonald's *Lew Archer* novels. Topics include the independent female private eye and social changes that allowed her emergence; the definition of mystery and detective fiction to include Sophocles' *Oedipus Rex*, Morrison's *Song of Solomon*, and Freud's theories; the enduring hold this genre has on imaginations; the fundamental concerns with justice and fear; and stimulation of the deep human fascination with the apparently inexplicable and the intellectual satisfaction of arriving at understanding. GER:DB-Hum

3-4 units, Sum (*Staff*)

### ENGLISH 56N. Mixed Race in the New Millennium: Crossings of Kin, Faith & Culture

(F,Sem) (Same as AFRICAAM 56N, CSRE 56N) Stanford Introductory Seminar. Preference to freshmen. How literature, theater, graphic art and popular culture shape understandings of contemporary mixed race identity and other complex experiences of cultural hybridity. Course explores implications for racial identity, art, and politics for the new millennium. GER:DB-Hum

3 units, Win (*Elam, M*)

### ENGLISH 62N. Eros in Modern American Poetry

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Anne Carson, treating love from Sappho to Socrates, shows how the Greeks derived their philosophy from the erotic poetic tradition. Readings include: Carson's poetry which locates erotic desire in the larger context of the desire for knowledge; classic Japanese haiku masters such as Basho; and William Carlos Williams, Louise Bogan, and C.K. Williams. GER:DB-Hum

3 units, Win (*Fields, K*)

### ENGLISH 64N. Growing Up in America

(F,Sem) (Same as PSYCH 29N) Stanford Introductory Seminar. Preference to freshmen. To what extent is it possible to describe an American experience? How are different people included in or excluded from the imagined community that is America? How do a person's race, class, gender and sexuality affect his or her experience of belonging to this country? These are just some of the questions we will consider as we familiarize ourselves with the great diversity of childhood and young adult experiences of people who have grown up in America. We will read and discuss narratives written by men and women, by urban, suburban, and rural Americans, and by Asian Americans, African Americans, Syrian Americans, Native Americans, Latina/os, and European Americans. Throughout the course, we will explore how these writers write the self in literature. GER:DB-Hum, EC-AmerCul

3 units, Spr (*Markus, H; Moya, P*)

### ENGLISH 65N. Contemporary Women Fiction Writers

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Novels and story collections addressing childhood, coming of age, and maturity; love, sexuality, orientation; the experience of violence and the politics, domestic and global, of women's lives. Texts include Gordimer, Eisenberg, Latiolais, Munro, O'Brien, and others. GER:DB-Hum

3 units, Aut (*Tallent, E*)

### ENGLISH 68N. Mark Twain and American Culture

(F,Sem) (Same as AMSTUD 68N) Stanford Introductory Seminar. Preference to freshmen. Mark Twain has been called our Rabelais,

our Cervantes, our Homer, our Tolstoy, our Shakespeare. Ernest Hemingway maintained that all modern American literature comes from one book by Mark Twain called *The Adventures of Huckleberry Finn*. President Franklin D. Roosevelt got the phrase New Deal from A Connecticut Yankee in King Arthur's Court. Class discussions will focus on how Twain's work illuminates and complicates his society's responses to such issues as race, technology, heredity versus environment, religion, education, and what it means to be American. GER:DB-Hum

4 units, Aut (*Fishkin, S*)

**ENGLISH 74N. Race and Ethnicity in Contemporary American Fiction: Boundaries and Border Crossings**

(Same as ASNAMST 74N) The question of place and locality in studies of identity and racial formation. Goal is to engage and examine texts with a critical eye both toward the social contexts represented and to the imaginative aesthetic techniques that American writers of color offer to bring their fictional worlds to life. Theme of border hopping and boundary crossing in works by authors including Charles Johnson, Toni Morrison, Alejandro Morales, Julie Otsuka, Stephen Graham Jones, and Lan Samantha Chang. GER:DB-Hum

3 units, not given this year

**ENGLISH 77N. Living in the Past: Italy in the Anglo-American Imagination**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. A survey of the way in which British and American authors from Milton to Hellenga have portrayed Italian character and culture. Recommended as an ideal orientation course for students planning to attend the Bing Overseas Study Program in Florence. GER:DB-Hum

3 units, Aut (*Evans, M*)

**ENGLISH 80Q. All the World's a Stage: Dramatic Realism on the Threshold of the Modern World**

(S,Sem) Stanford Introductory Seminar. Witness the relationship between heightened dramatic realism ---or empiricism---and unprecedented historical, scientific, religious and cultural changes occurring in the Early Modern world, a defining moment in explorations of uncharted realms of the self, the world, the universe, and artistic form. Readings include Shakespeare's *Othello* and *As You Like It*; John Donne's dramatic poetry; Marlowe's *Doctor Faustus*; and Beckett's *Waiting for Godot*. We will examine how these and other texts---point their readers and viewers toward the modern world through cognitive innovations in the art of perspective. Selected art, film adaptations, and modern literature to be included.

4-5 units, Win (*Brooks, H*)

**ENGLISH 81. Philosophy and Literature**

(Same as CLASSGEN 81, COMPLIT 181, FRENGEN 181, ITALGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum

4-5 units, Win (*Staff*)

**ENGLISH 87N. The Graphic Novel: Word, Image, Sound, Silence**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Traces the history of graphic narrative from its beginnings to contemporary times. Students will read a number of graphic narratives, carry out research on some aspect of these narratives, and write an essay, which will then be reworked and remediated into an oral presentation with multimedia support. Fulfills the WRITE 2 requirement GER:DB-Hum

4-5 units, Aut (*Lunsford, A*)

**ENGLISH 90. Fiction Writing**

The elements of fiction writing: narration, description, and

dialogue. Students write complete stories and participate in story workshops. May be repeated for credit. Prerequisite: PWR 1 (waived in summer quarter).

5 units, Aut (*Soileau, S*), Win (*Quade, K*), Spr (*Clark, H*), Sum (*Staff*)

**ENGLISH 91. Creative Nonfiction**

(Formerly 94A.) Historical and contemporary as a broad genre including travel and nature writing, memoir, biography, journalism, and the personal essay. Students use creative means to express factual content.

5 units, Aut (*Antopol-Johnson, M*), Win (*Hummel, M*), Spr (*Perham, B*), Sum (*Staff*)

**ENGLISH 92. Reading and Writing Poetry**

Prerequisite: PWR 1. Issues of poetic craft. How elements of form, music, structure, and content work together to create meaning and experience in a poem. May be repeated for credit.

5 units, Aut (*Ekiss, K*), Win (*Perham, B*), Spr (*Edwards, J*)

**ENGLISH 94. Writing Across Genres**

For minors in creative writing. The forms and conventions of the contemporary short story and poem. How form, technique, and content combine to make stories and poems organic. Prerequisite: 90, 91, or 92.

5 units, Win (*Ekiss, K*), Spr (*Ekiss, K*)

**ENGLISH 100A. Literary History I**

First in a three quarter sequence. Team-taught, and ranging in subject matter across almost a millennium from the age of parchment to the age of Facebook, this required sequence of classes is the department's account of the major historical arc traced so far by literature in English. It maps changes and innovations as well as continuities, ideas, and aesthetic forms, providing a grid of knowledge and contexts for other, more specialized classes. GER:DB-Hum

5 units, Aut (*Greene, R*; *Summit, J*)

**ENGLISH 100B. Literary History II**

Second in a three quarter sequence. Team-taught, and ranging in subject matter across almost a millennium from the age of parchment to the age of Facebook, this required sequence of classes is the department's account of the major historical arc traced so far by literature in English. It maps changes and innovations as well as continuities, ideas as well as aesthetic forms, providing a grid of knowledge and contexts for other, more specialized classes. GER:DB-Hum

5 units, Win (*Castle, T*; *Hoxby, B*; *Richardson, J*)

**ENGLISH 100C. Literary History III**

Third in a three quarter sequence. Team-taught, and ranging in subject matter across almost a millennium from the age of parchment to the age of Facebook, this required sequence of classes is the department's account of the major historical arc traced so far by literature in English. It maps changes and innovations as well as continuities, ideas as well as aesthetic forms, providing a grid of knowledge and contexts for other, more specialized classes. GER:DB-Hum

5 units, Spr (*Saldivar, R*; *Jenkins, N*; *Moretti, F*)

**ENGLISH 102. Chaucer**

An introduction to Chaucer's writings, including *The Canterbury Tales*, *The Book of the Duchess*, and *The Parliament of Fowls*. Readings in Middle English. No prior knowledge of Middle English or medieval literature is expected. GER:DB-Hum

5 units, Aut (*Karnes, M*)

**ENGLISH 105. The Renaissance: English Literature from Sidney to Marvell**

A survey of English Renaissance literature from Sidney and Spenser to Milton and Marvell, and including Marlowe's *Doctor Faustus* and Shakespeare's *The Tempest*. The course gives training in the reading of early modern poetry and prose, and considers what kind of cultural, social and political institution literature was in Renaissance England: who wrote it and why and for whom, what the pressures were on it, what expectations it fulfilled (or on occasion defeated), whose interests it served. GER:DB-Hum

5 units, Aut (*Orgel, S*)

**ENGLISH 105H. Medievalism**

This course examines the medievalism of nineteenth-century British writers, their adoption of medieval subjects and themes,

within the context of medieval literature. Leading questions cluster around three topics: Romance, Nation, and Space. Readings may include Marie de France's *Lais*, Sir Gawain and the Green Knight, Malory's *Morte D'Arthur*, Chaucer's *House of Fame*, Spenser's *Faerie Queene*, Scott's *Ivanhoe*, poems by Morris, R. Browning, D. G. Rossetti, and Hopkins, criticism by Arnold and Ruskin, and selections from Tennyson's *Idylls of the Kings*. GER:DB-Hum

5 units, Aut (*Karnes, M; Jarvis, C*)

#### **ENGLISH 115A. Shakespeare and Modern Critical Developments**

Approaches include gender studies and feminism, race studies, Shakespeare's geographies in relation to the field of cultural geography, and the importance of religion in the period. GER:DB-Hum

5 units, Spr (*Parker, P*)

#### **ENGLISH 116A. The Poetry of John Milton**

A study of Milton's poetry from *On the Death of a Fair Infant and The Nativity Ode to Paradise Lost* and *Samson Agonistes*. Recommended: ENGLISH 160. Poetry and Poetics. GER:DB-Hum

5 units, Win (*Evans, M*)

#### **ENGLISH 121. Masterpieces of American Literature**

(Same as AMSTUD 121, ENGLISH 21) (English majors and others taking 5 units, register for 121.) A survey of some of the definitive texts of American writing, such as *Leaves of Grass*, *Benito Cereno*, *Adventures of Huckleberry Finn*, *The Waste Land*, *The Sun Also Rises*, *The Golden Apples*, and *The Crying of Lot 49*. GER:DB-Hum

3-5 units, not given this year

#### **ENGLISH 122A. Austen and Woolf**

Reading of three novels by Jane Austen—arguably the most influential and gifted of British female novelists—and three novels by Virginia Woolf, whose debt to Austen was immense. Topics include the relationship between women writers and the evolution of the English novel; the extraordinary predominance of the marriage plot in Austen's fiction (and the various transformations Woolf works on it); each novelist's relationship to the cultural and social milieu in which she wrote. GER:DB-Hum

5 units, not given this year

#### **ENGLISH 123. American Literature and Culture to 1855**

(Same as AMSTUD 150) A survey of early American writings, including sermons, poetry, captivity and slave narratives, essays, autobiography, and fiction, from the colonial era to the eve of the Civil War. GER:DB-Hum, EC-AmerCul

5 units, Spr (*Richardson, J*)

#### **ENGLISH 123D. American Literature, 1855 to World War I**

(Same as AMSTUD 123D) A survey of American writers from Whitman to T.S. Eliot, including Emily Dickinson, Mark Twain, Stephen Crane, Frank Norris, Kate Chopin, Theodore Dreiser, and Henry James. Topics include the tension between romance and realism, the impact of naturalism and modernism, as well as race, gender, and the literary evolution of the American language. GER:DB-Hum

5 units, not given this year

#### **ENGLISH 123G. Mark Twain: A Fresh Look at an Icon and Iconoclast, 100 Years after His Death**

(Same as AMSTUD 123G) The vitality and versatility of a writer who has been called America's Rabelais, Cervantes, Homer, Tolstoy, and Shakespeare. Journalism, travel books, fiction, drama, and sketches by Mark Twain; how Twain engaged such issues as personal and national identity, satire and social justice, imperialism, race and racism, gender, performance, travel, and technology. What are Twain's legacies in 2010, the centennial of his death, the 175th anniversary of his birth, and the 125th anniversary of his most celebrated novel? Guests include actor Hal Holbrook. GER:DB-Hum, EC-AmerCul

3-5 units, not given this year

#### **ENGLISH 125A. The Gothic Novel**

(Same as COMPLIT 125A) The Gothic novel and its relatives from its invention by Walpole in *The Castle of Otranto* of 1764. Readings include: *Northanger Abbey*, *The Italian*, *The Monk*, *Frankenstein*, *Jane Eyre*, *Great Expectations*, and *Dracula*. What defines the Gothic as it evolves from one specific novel to a mode that makes its way into a range of fictional types? GER:DB-Hum

5 units, not given this year

#### **ENGLISH 132. Technologies of Reading and Writing: The Nineteenth Century versus the Digital Age**

(Same as ENGLISH 32) The nineteenth century was a critical period for technological development that accelerated forms of communication. As the telegraph replaced the letter, daily gossip columns replaced word of mouth, and photographs replaced the painted illustration, theories of writing and reading changed dramatically. Through texts such as Keats's *Letters*, Shelley's *Frankenstein*, Carroll's *Alice in Wonderland*, and Stoker's *Dracula*, this course explores the effects of media on the creation, dissemination, and reception of literature. This course also facilitates comparative work by juxtaposing 19th-century media with contemporary technologies of writing and reading, such as emails, blogs, and wikis, and the impact of these technologies on the creation, dissemination, and reception of literature today.

3-4 units, Sum (*Staff*)

#### **ENGLISH 136E. Romantic Ruins**

The idea of the ruin. Romanticism in theory, literary treatments of ruins, fragments, remnants and remains, and the problem of post-romantic reception and a tradition in ruins. GER:DB-Hum

5 units, Spr (*Rovee, C*)

#### **ENGLISH 139A. Henry James**

Emphasis on the late style and issues related to gender and sexuality. Texts will include: *The Turn of the Screw*, *The Portrait of a Lady*, *The Beast in the Jungle*, *The Ambassadors*, *The Awkward Age*, and *The Golden Bowl*. GER:DB-Hum

5 units, Spr (*Ngai, S*)

#### **ENGLISH 139B. American Women Writers, 1850-1920**

(Same as AMSTUD 139B) The ways in which female writers negotiated a series of literary, social, and intellectual movements, from abolitionism and sentimentalism in the nineteenth century to Progressivism and avant-garde modernism in the twentieth. Authors include Harriet Beecher Stowe, Harriet Jacobs, Rebecca Harding Davis, Emily Dickinson, Kate Chopin, Edith Wharton, Gertrude Stein, Willa Cather, and Charlotte Perkins Gilman. GER:DB-Hum

5 units, Win (*Richardson, J*)

#### **ENGLISH 143. Introduction to African American Literature**

(Same as AFRICAAM 43, AMSTUD 143, ENGLISH 43) (English majors and others taking 5 units, register for 143.) African American literature from its earliest manifestations in the spirituals, trickster tales, and slave narratives to recent developments such as black feminist theory, postmodern fiction, and hip hop lyricism. We will engage some of the defining debates and phenomena within African American cultural history, including the status of realist aesthetics in black writing; the contested role of literature in black political struggle; the question of diaspora; the problem of intra-racial racism; and the emergence of black internationalism. Attuned to the invariably hybrid nature of this tradition, we will also devote attention to the discourse of the Enlightenment, modernist aesthetics, and the role of Marxism in black political and literary history. GER:DB-Hum, EC-AmerCul

3-5 units, Aut (*Raspberry, G*)

#### **ENGLISH 143A. American Indian Mythology, Legend, and Lore**

(Same as NATIVEAM 143A, ENGLISH 43A) (English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, *Black Elk Speaks*. GER:DB-Hum

3-5 units, Aut (*Fields, K*)

#### **ENGLISH 145F. The Human Love of Mystery: A Journey Through Detective Fiction**

(Same as ENGLISH 45F) Reading and discussion of mystery and detective fiction from Sherlock Holmes through the Golden Age of Agatha Christie, to the hard-boiled private eye in Ross Macdonald's *Lew Archer* novels. Topics include the independent female private eye and social changes that allowed her emergence; the definition of mystery and detective fiction to include

Sophocles' Oedipus Rex, Morrison's Song of Solomon, and Freud's theories; the enduring hold this genre has on imaginations; the fundamental concerns with justice and fear; and stimulation of the deep human fascination with the apparently inexplicable and the intellectual satisfaction of arriving at understanding. GER:DB-Hum

3-4 units, Sum (Staff)

#### ENGLISH 145G. American Fiction since 1945

A survey of the American novel and short story since WWII focusing on themes of mass media and mass marketing, technology and information, poverty and prosperity, race and ethnicity. Included are works by Flannery O'Connor, Thomas Pynchon, Philip Roth, Raymond Carver, Maxine Hong Kingston, Sandra Cisneros and others. GER:DB-Hum

5 units, Win (McGurl, M)

#### ENGLISH 146. Development of the Short Story: Continuity and Innovation

Exploration of the short story form's ongoing evolution as diverse writers address love, death, desire. Maupassant, D.H. Lawrence, Woolf, Flannery O'Connor, Hurston, and others. Required for Creative Writing emphasis. All majors welcome. GER:DB-Hum

5 units, Spr (Tallent, E)

#### ENGLISH 146C. Hemingway, Hurston, Faulkner, and Fitzgerald

(Same as AMSTUD 146C) While Hemingway and Fitzgerald were flirting with the expatriate avant-garde in Europe, Hurston and Faulkner were performing anthropological field-work in the local cultures of the American South. Focus on the tremendous diversity of concerns and styles of four writers who marked America's coming-of-age as a literary nation with their multifarious experiments in representing the regional and the global, the racial and the cosmopolitan, the macho and the feminist, the decadent and the impoverished. GER:DB-Hum, EC-AmerCul

5 units, Spr (Jones, G)

#### ENGLISH 150D. Women Poets

The development of women's poetry from the 17th to the 20th century. How these poets challenge and enhance the canon, amending and expanding ideas of tone, voice and craft, while revising societal expectations of the poet's identity. Poets include Katharine Philips, Letitia Barbauld, Elizabeth Barrett Browning, Charlotte Mew, Sylvia Plath, and Adrienne Rich. GER:DB-Hum

5 units, Win (Boland, E)

#### ENGLISH 150P. Going Long on the Short Poem

Why do we instinctively think of poems as short? Homer, Virgil, Chaucer, Milton, Pope, Wordsworth and T. S. Eliot wrote poems that are incredibly long. Taking a long view of short poetic forms in the Western tradition (from Callimachus to Elizabeth Bishop), we will assess the historical and artistic grounds for our inaccurate yet ineradicable sense that poem = short. By investigating the smallest unit that can still be called poem, we will test the concept of poem as such, asking what only a poem can do, what the point of a poem is. Why have great artists long chosen to go long on to invest in short, small forms, when such artists could, just as well, make something impressively big. GER:DB-Hum

5 units, Aut (Putnam, P)

#### ENGLISH 151A. T. S. Eliot and 20th Century Poetry

An intensive introduction to the full range of Eliot's work in poetry, drama, and prose criticism. Through close study of the most influential poetic and critic of his period we will also start to sketch out the formal shifts and thematic preoccupations of English poetry in the twentieth century. Major topics include: tradition and innovation; allusion; free verse and its alternatives; the city; wit and seriousness; time present and time past. GER:DB-Hum

5 units, Aut (Sullivan, H)

#### ENGLISH 151B. John Berryman's Dream Songs and His Archive

When John Berryman published the first volume of this Dream Songs in 1964, readers were baffled and intrigued by this stylistically radical work. Even his friend Robert Lowell was angered by the difficulty of this powerful, eccentric book, which won the Pulitzer Prize that year. Readings include The Dream Songs and works of some of the writers that formed Berryman's archive: Shakespeare, Freud, Hopkins, Yeats, Rilke, Frost, Hemingway, Williams, Lowell, Plath. GER:DB-Hum

5 units, Win (Fields, K)

#### ENGLISH 151C. Wastelands

Beginning with a sustained examination of T.S. Eliot's The Waste Land, this class will explore the trope of ecological and/or spiritual devastation as it enters into other modernist (Hemingway, Cather, Faulkner, O'Neill) and postmodernist (Ballard, Atwood, McCarthy) projects, tracing this theme to its culmination in the contemporary zombie apocalypse. GER:DB-Hum

5 units, Spr (McGurl, M)

#### ENGLISH 152A. Mutually Assured Destruction: American Culture and the Cold War

(Same as AMSTUD 152A) The temperature of the early Cold War years via readings of Soviet and U.S. propaganda; documentary film and film noir; fiction by Bellow, Ellison, O'Connor, and Mailer; social theory by Arendt, the New York Intellectuals, and the Frankfurt School; and political texts such as Kennan's Sources of Soviet Conduct, the Truman Doctrine speech, and the National Security Council Report 68. Major themes include the discourse of totalitarianism, MacCarthyism, strategies of containment, the nuclear threat, the figure of the outsider and the counterculture, and the cultural shift from sociological to psychological idioms. GER:DB-Hum

5 units, not given this year

#### ENGLISH 152D. DuBois and American Culture

(Same as AFRICAAM 152, AMSTUD 152D) His life and career. Focus on first half of his life from his Harvard doctoral dissertation to the end of the Harlem Renaissance in which he played a crucial role. Sources include his books on history and sociology, scholarly essays, novels, and journals that he edited. AAAS WIM course. GER:DB-Hum, EC-AmerCul

5 units, Spr (Elam, M)

#### ENGLISH 152G. Global Harlem Renaissance

(Same as AFRICAAM 152G, AMSTUD 152G) Examination of the explosion of African American artistic expression during 1920s and 30s New York known as the Harlem Renaissance. Amiri Baraka once referred to the Renaissance as a kind of vicious Modernism, as a BangClash that impacted and was impacted by political, cultural and aesthetic changes not only in the U.S. but Europe, the Caribbean and Latin America. Focus on the literature, graphic arts, and the music of the era in this global context. GER:DB-Hum, EC-AmerCul

5 units, not given this year

#### ENGLISH 160. Poetry and Poetics

Introduction to the reading of poetry, with emphasis on how the sense of poems is shaped through diction, imagery, and technical elements of verse. GER:DB-Hum, WIM

5 units, Aut (Rovee, C), Spr (Gigante, D)

#### ENGLISH 161. Narrative and Narrative Theory

An introduction to stories and storytelling--that is, to narrative. What is narrative? When is narrative fictional and when non-fictional? How is it done, word by word, sentence by sentence? Must it be in prose? Can it be in pictures? How has storytelling changed over time? Focus on various forms, genres, structures, and characteristics of narrative. GER:DB-Hum

5 units, Aut (Johnson, A), Win (Bender, J)

#### ENGLISH 162. Critical Methods

Introduction to the different intellectual models which help us explain and interpret literary texts, genres, and movements.

5 units, Aut (Evans, M), Win (Elam, M), Spr (Jockers, M)

#### ENGLISH 163. Shakespeare

Reading and discussion of six plays of Shakespeare GER:DB-Hum

5 units, Aut (Orgel, S)

#### ENGLISH 164. Senior Seminar

Small-class format focused on the close reading of literary texts and analysis of literary criticism. This class answers the questions: How do literary critics do what they do? What styles and gambits make criticism vibrant and powerful? Goal is to examine how one goes about writing a lucid, intelligent, and convincing piece of literary criticism based on original research. WIM

5 units, Aut (Putnam, P), Win (Castle, T), Spr (Jarvis, C)

#### ENGLISH 170H. Textual Selves: Identity in Literature

A series of case studies, ranging from Augustine's Confessions and Dante's Divine Comedy to Graham Greene's Quiet American and

Brecht's Galileo illustrating the way human identity has been represented in literary texts. GER:DB-Hum

5 units, Win (Evans, M)

**ENGLISH 171. History of the English Language**

(Same as LINGUIST 163) This course traces the history of the English language from its roots through its earliest written records into the present. It will trace the fundamental changes that English has undergone in terms of morphology, phonology, syntax, semantics, and vocabulary. It will also explore some of the social, cultural, and historical forces that affect language. The course emphasizes the pre-modern history of English. GER:DB-Hum

5 units, Spr (Karnes, M)

**ENGLISH 172D. Introduction to Comparative Studies in Race and Ethnicity**

(Same as CSRE 196C, PSYCH 155, SOC 146) How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. GER:DB-SocSci, EC-AmerCul

5 units, not given this year

**ENGLISH 172E. The Literature of the Americas**

(Same as AMSTUD 142, COMPLIT 142) This course offers a wide-ranging overview of the literatures of the Americas in comparative perspective, emphasizing continuities and crises that are common to North American, Central American, and South American literatures as well as the distinctive national and cultural elements of a diverse array of primary works. Topics include the definitions of such concepts as empire and colonialism, the encounters between worldviews of European and indigenous peoples, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, twentieth-century avant-gardes, and distinctive modern episodes; the Harlem Renaissance, the Beats, magic realism, Noigandres; in unaccustomed conversation with each other. GER:DB-Hum, EC-AmerCul

5 units, Win (Greene, R; Saldivar, R)

**ENGLISH 174H. The Triumph of the Normal: The English Novel from Bunyan to Orwell**

Unlike French, Russian, North- and Latin-American novels, with their often oppositional or marginal heroes, the English novel has given a central role to the figure of the normal hero/ine, in the double sense of normative and widespread. We will try to uncover the social logic behind this choice, and follow the parallel evolution of novelistic style towards normal language. GER:DB-Hum

5 units, Spr (Moretti, F)

**ENGLISH 181C. Shakespeare and Dickens**

An exploration in the problems and stakes of reading two central but historically-separated authors through one another. How theatrical are Dickens's novels and how much can we understand the theatrical, in Dickens, as a working-through of Shakespeare? How do the elements of performance manifest themselves in both? What substitutes for the role of narrator in Shakespearean drama? How can we understand these two authors as both paradigms of national writing -- defining normative British culture -- and as fundamentally eccentric? GER:DB-Hum

5 units, Win (Orgel, S; Woloch, A)

**ENGLISH 183C. Feminism and American Literature**

(Same as AMSTUD 183C, JEWISHST 153C) Exploration of the ways in which an eclectic group of American writers from the 19th century to the 20th have endeavored to enlarge the canvas on which women can paint their lives. Readings include stories, novels, journalism, poetry and drama that engage the social cultural, and political forces that can shape the kinds of futures students can imagine for themselves--forces that are further inflected by issues of race, ethnicity and class. GER:DB-Hum, EC-Gender

5 units, Win (Fishkin, S)

**ENGLISH 183E. First Person: Autobiography and Memoir**

Study of classic literary autobiographies and memoirs, including Gertrude Stein's *Autobiography Of Alice B. Toklas*; Ernest Hemingway's *A Moveable Feast*; and J.R. Ackerley's *My Father And Myself*, plus various more recent autobiographical experiments--e.g., graphic memoirs (Art Spiegelman's *Maus* and

Alison Bechdel's *Fun Home*) as well as certain recent autobiographical films such as *Capturing The Friedmans*. GER:DB-Hum

5 units, not given this year

**ENGLISH 184B. Text and Context in Humanities: Oedipus and His Vicissitudes**

(Same as HUMNTIES 100) Tales of Modernity from Sophocles, Freud, Chekhov, Babel, and Woolf. Introduction to cross-disciplinary approach in humanities through foundational texts in the modern tradition. The main focus is on Sigmund Freud's *Totem and Taboo* (1913), alongside his ancillary writings. Contemporary social thought and historical scholarship provide the context (Georg Simmel, Norbert Elias, Karl Schorske, John Murray Cuddihy) while works of imaginative literature (Sophocles, Anton Chekhov, Isaac Babel, and Virginia Woolf) illuminate the significance of the Oedipus myth for understanding the inter-generational conflict in antiquity and modernity. GER:DB-Hum

3 units, not given this year

**ENGLISH 185. Sex, Sacrifice, and Civilization: Baroque Opera and Tragedy**

The revival of ancient tragedy in the Baroque opera house. The central mysteries of tragedy: knowledge of suffering, necessity of sacrifice, pleasure of pathos. How tragic drama and opera used poetry, dance, and music to sway the passions and prompt reflection. Greek myths of Medea, Iphigenia, Alceste, Idomeneo. Plays by Euripides and Racine; operas by Mozart, Gluck, and Charpentier. GER:DB-Hum

4-5 units, not given this year

**ENGLISH 185F. Graphic Non-Fiction**

Survey of the fusion of a new genre (creative non-fiction) and a revitalized medium (graphic storytelling.) By reading journalism, biography, history, literary essay and memoir in graphic formats, we'll examine the results when serious artists and writers, often in collaboration, visually reinvent a genre. Sourced from the real world, the narratives we'll examine will have a power of human experience and historical significance that no fantasy or superhero character could ever hope to convey.

5 units, Aut (Johnson, A)

**ENGLISH 186. Tales of Three Cities: New York, Chicago, Los Angeles**

(Same as AMSTUD 186) How urban form and experience shape literary texts and how literary texts participate in the creation of place, through the literature of three American cities as they ascended to cultural and iconographical prominence: New York in the early to mid 19th century; Chicago in the late 19th and early 20th centuries; and Los Angeles in the mid to late 20th century. GER:DB-Hum

5 units, not given this year

**ENGLISH 190. Intermediate Fiction Writing**

May be taken twice for credit. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 90 or 91.

5 units, Aut (Clark, H), Win (Soileau, S), Spr (Clark, H)

**ENGLISH 190F. Fiction into Film**

Workshop. For screenwriting students. Story craft, structure, and dialogue. Assignments include short scene creation, character development, and a long story. How fictional works are adapted to screenplays, and how each form uses elements of conflict, time, summary, and scene. Priority to seniors and Film Studies majors. Prerequisite: 90.

5 units, Win (Tanaka, S)

**ENGLISH 190G. The Graphic Novel**

Interdisciplinary. Evolution, subject matter, form, conventions, possibilities, and future of the graphic novel genre. Guest lectures. Collaborative creation of a graphic novel by a team of writers, illustrators, and designers. Prerequisite: consent of instructor.

5 units, Aut (Tanaka, S; Hutchins, S), Win (Tanaka, S; Hutchins, S)

**ENGLISH 190T. Special Topics in Intermediate Fiction Writing**

Focus on a particular topic or process. Work includes aspects of reading short stories and novels, writing at least 30-50 pages of fiction, and responding to peers' work in workshop. May be repeated for credit. Prerequisite: 91 or 90.

5 units, Aut (Kealey, T), Spr (Antopol-Johnson, M; Horack, B)

### ENGLISH 190V. Reading for Writers

Taught by the Stein Visiting Fiction Writer. Prerequisite: 90.  
5 units, Spr (Verghese, A)

### ENGLISH 191. Intermediate Creative Nonfiction

Continuation of 91. Workshop. The application of advanced storytelling techniques to fact-based personal narratives, emphasizing organic writing, discovering audience, and publication. Guest lecturers, collaborative writing, and publication of the final project in print, audio, or web formats. Prerequisite: 91 or 90.

5 units, Aut (Kline, P), Win (Frisch, S), Spr (Hummel, M)

### ENGLISH 191T. Special Topics in Intermediate Creative Nonfiction

Workshop. Continuation of 91. Focus is on forms of the essay. Works from across time and nationality for their craft and technique; experimentation with writing exercises. Students read and respond to each other's longer nonfiction projects. May be repeated for credit. Prerequisite: 91 or 90.

5 units, Spr (Hutchins, S; Tanaka, S)

### ENGLISH 192. Intermediate Poetry Writing

May be taken twice. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 92.

5 units, Aut (Evans, J), Win (Ekiss, K), Spr (Perham, B)

### ENGLISH 192V. The Occasions of Poetry

Taught by the Mohr Visiting Poet. Prerequisite: 92.

5 units, Win (Gluck, L)

### ENGLISH 194. Individual Research

See section above on Undergraduate Programs, Opportunities for Advanced Work, Individual Research.

5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### ENGLISH 195W. Writing Center Peer Tutor Seminar

(Same as PWR 195) For students selected to serve as peer writing tutors in the Stanford Writing Center and/or at other campus sites. Readings on and reflection about writing processes, the dynamics of writing and tutoring situations, tutoring techniques, learning styles, diversity, and ethics. Observation of tutoring sessions, written responses to readings, and other written work.

3 units, Spr (Bleakney, J)

### ENGLISH 196A. Honors Seminar: Critical Approaches to Literature

Overview of literary-critical methodologies, with a practical emphasis shaped by participants' current honors projects. Restricted to students in the English Honors Program. Offered in conjunction with ENGLISH 196B. Honors Writing Workshop.

3 units, Aut (Rovee, C)

### ENGLISH 196B. Honors Essay Workshop

Required of English honors students.

2 units, Aut (Obenzinger, H)

### ENGLISH 197. Seniors Honors Essay

In two quarters.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

### ENGLISH 198. Individual Work

Undergraduates who wish to study a subject or area not covered by regular courses may, with consent, enroll for individual work under the supervision of a member of the department. 198 may not be used to fulfill departmental area or elective requirements without consent. Group seminars are not appropriate for 198.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### ENGLISH 198L. Individual Work: Levinthal Tutorial

Undergraduate writers work individually with visiting Stegner Fellows in poetry, fiction, and if available, nonfiction. Students design their own curriculum; Stegner Fellows act as writing mentors and advisers. Prerequisites: 90, 91, or 92; submitted manuscript.

5 units, Win (Staff), Spr (Staff)

### ENGLISH 199. Senior Independent Essay

Open, with department approval, to seniors majoring in non-Honors English who wish to work throughout the year on a 10,000 word critical or scholarly essay. Applicants submit a sample of their expository prose, proposed topic, and bibliography to the

Director of Undergraduate Studies before preregistration in May of the junior year. Each student accepted is responsible for finding a department faculty adviser. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

### ENGLISH 233. Baroque and Neobaroque

(Same as COMPLIT 233, SPANLIT 293E) The literary, cultural, and political implications of the 17th-century phenomenon formed in response to the conditions of the 16th century including humanism, absolutism, and early capitalism, and dispersed through Europe, the Americas, and Asia. If the Baroque is a universal code of this period, how do its vehicles, such as tragic drama, Ciceronian prose, and metaphysical poetry, converse with one another? The neobaroque as a complex reaction to the remains of the baroque in Latin American cultures, with attention to the mode in recent Brazilian literary theory and Mexican poetry.

5 units, not given this year

### ENGLISH 290. Advanced Fiction Writing

Workshop critique of original short stories or novel. Prerequisites: manuscript, consent of instructor, and 190-level fiction workshop.

5 units, Aut (Horack, B), Win (Tallent, E)

### ENGLISH 291. Advanced Creative Nonfiction

Continuation of 191. Workshop. The application of advanced storytelling techniques to fact-based personal narratives, emphasizing organic writing, discovering audience, and publication. Guest lecturers, collaborative writing, and publication of the final project in print, audio, or web formats. Prerequisite: ENGLISH 191.

5 units, Spr (Hummel, M)

### ENGLISH 292. Advanced Poetry Writing

Focus is on generation and discussion of student poems, and seeking published models for the work.

5 units, Spr (Evans, J)

### ENGLISH 299D. Tooling Up for Digital Humanities

(Same as ENGLISH 399D, HISTORY 299D, HISTORY 399D) What are the digital humanities? The twenty-first century presents new opportunities in the humanities, such as unprecedented access to millions upon millions of digitized sources along with powerful technological tools to study those sources. Yet it also raises new challenges, such as the responsible and effective use of technology, and defining the nature of digital scholarship and communication. This workshop offers an introduction to fundamental concepts, methods, and issues within the growing field of digital humanities, including managing your online identity, digitizing sources, managing databases, text mining, spatial analysis, visualization, and pedagogy.

1 unit, not given this year

## GRADUATE COURSES IN ENGLISH

Primarily for graduate students; undergraduates may enroll with consent of instructor.

### ENGLISH 201. The Bible and Literature

Differences in translations of the Bible into English. Recognizing and interpreting biblical allusion in texts from the medieval to modern periods. Readings from the Bible and from British, Canadian, American, and African American, and African literature in English.

5 units, Win (Parker, P)

### ENGLISH 209. Paleography of Medieval and Early Modern Manuscripts

(Same as RELIGST 204) Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures.

3-5 units, Win (Brown, G)

### ENGLISH 218. Beyond the Blank Slate: Topics in Cognitive Science and Literature

A close look at the current field of cognitive approaches to literary study, using both literary texts and key debates in cognition and

culture. Topics include: the narrative construction of reality; fiction, imagination, and play; art as a human universal; and the symbolic unconscious; the blank slates.

*5 units, Aut (Vermeule, B)*

**ENGLISH 230A. The Novel in Europe: The Age of Compromise, 1800-1848**

(Same as COMPLIT 230A) The novel after the French revolution and the industrial take-off. Novelistic form and historical processes of nation-building and the marriage market, political conservatism and the advent of fashion, aristocracy and bourgeoisie and proletariat... focusing on how stylistic choices and plot structures offer imaginary resolutions to social and ideological conflicts. Authors will include Austen, Scott, Shelley, Stendhal, Puskin, Balzac, Bronte.

*5 units, not given this year*

**ENGLISH 240. Sex and Violence in Jacobean Tragedy**

The reign of James I saw one of the greatest flourishes of tragedy in history, yet it was a tragedy of a distinctive character: violent, macabre, melancholy, obsessed with sex and death. We will study this repertoire in all its aesthetic, performative and social dimensions. Plays by Shakespeare, Webster, Middleton, Beaumont and Fletcher, Ford, and Shirley. Film adaptations and opportunities for performance projects.

*5 units, Spr (Hoxby, B)*

**ENGLISH 257. Journalism and Imaginative Writing in America**

(Same as AMSTUD 257, COMM 278) Walt Whitman spent twenty-five years as a journalist before publishing his first book of poems. Mark Twain was a journalist for twenty years before publishing his first novel. Topics include examination of how writers' backgrounds in journalism shaped the poetry or fiction for which they are best known; study of recent controversies surrounding writers who blurred the line between journalism and fiction. Writers include Whitman, Fanny Fern, Twain, Pauline Hopkins, Theodore Dreiser, Charlotte Perkins Gilman, Ernest Hemingway, Meridel LeSueur.

*5 units, not given this year*

**ENGLISH 261A. Geography, Time, and Trauma in Asian American Literature**

(Same as AMSTUD 261A, ASNAMST 187) The notion that homes can be stable locations for cultural, racial, ethnic, and similarly situated identity categories. The possibility that there really is no place like home for Asian American subjects. How geography, landscape, and time situate traumas within fictional Asian American narratives.

*5 units, not given this year*

**ENGLISH 261E. Mixed Race Literature in the U.S. and South Africa**

(Same as AFRICAAM 261E, AMSTUD 261E) As scholar Werner Sollors recently suggested, novels, poems, stories about interracial contacts and mixed race constitute an orphan literature belonging to no clear ethnic or national tradition. Yet the theme of mixed race is at the center of many national self-definitions, even in our U.S. post-Civil Rights and South Africa's post-Apartheid era. This course examines aesthetic engagements with mixed race politics in these trans- and post-national dialogues, beginning in the 1700s and focusing on the 20th and 21st centuries.

*5 units, not given this year*

**ENGLISH 261F. Gender and Sexuality in Asian American Literature**

(Same as AMSTUD 261F, ASNAMST 188) How writers and representations dialogue, challenge, resist, and complicate such formative constructions of gendered/sexual identities. How queer Asian Americans face multiple negations that include potential expulsion from their own families and from various communities. Authors include Bharati Mukherjee, Russell Leong, Suki Kim, Shawn Wong, Louis Chu, Lawrence Chua, Catherine Liu, Jessica Hagedorn, Timothy Liu, Shani Mootoo, David Mura, among others. Secondary readings will include literary criticism, feminist and queer theory.

*5 units, not given this year*

**ENGLISH 262C. African American Literature and the Retreat of Jim Crow**

(Same as AMSTUD 262C) After the unprecedented carnage of

WWII, the postwar era witnessed the slow decline of the segregated Jim Crow order and the onset of landmark civil rights legislation. What role did African American literature and culture play in this historical process? What does this shift in racial theory and praxis mean for black literary production; a tradition constituted by the experience of slavery and racial oppression? Focus on these questions against the backdrop of contemporaneous developments: the onset of the Cold War, decolonization and the formation of the Third World, and the emergence of the new liberalism.

*5 units, not given this year*

**ENGLISH 262D. African American Poetics**

(Same as AFRICAAM 262D, AMSTUD 262D) Examination of African American poetic expressive forms from the 1700s to the 2000s, considering the central role of the genre—from sonnets to spoken word, from blues poetry to new media performance—in defining an evolving literary tradition and cultural identity.

*5 units, not given this year*

**ENGLISH 262G. Globalization, Literature and the Environment**

How does the study of world literatures help us to understand the globalization process? Globalization is often associated with recent social and economic shifts, but many scholars argue that its structures derive from the history of colonialism. Turning to the natural world seems to provide a model to dismantle colonial and national boundaries and to speak in terms of shared planetary concerns such as global warming. Or does it? To examine these relations between globalization, empire, and ecology, we will turn to postcolonial writers in English from Africa, the Caribbean, South Asia, and the Pacific Islands and examine how they inscribe threats to the world environment. We will draw from diverse genres such as short stories, poetry, film, and the novel. Topics to be considered include indigenous and diasporic relationships to the land, plantation agriculture, gardening, nuclear militarization, oil drilling, and human and environmental sustainability.

*5 units, Spr (Staff)*

**ENGLISH 283A. The Paranoid Imagination**

Focus on paranoia as both an aesthetic concept and as metaphor for a suspicious mode of reading and interpreting literature. In addition to recent debates on paranoid reading (Jameson) versus reparative reading (Sedgwick), surface reading (Best and Marcus) versus symptomatic reading (Althusser), we will examine conspiracy as a formal problem in a number of postwar American novels, poems, and films. Authors include Pynchon, DeLillo, Gibson, Tiptree Jr. (Alice Sheldon), and Spahr.

*5 units, Win (Ngai, S)*

**ENGLISH 301. Medieval Literature: Theory and Practice**

Focus on medieval theories of composition and their practical applications beginning with rhetorical treatises that show how students were taught to read and write literature in the period and then focusing on literary texts that experiment, in form or content, with such prescriptions. Readings include works by Geoffrey of Vinsauf, John of Salisbury, Chaucer, Julian of Norwich, the Pearl-poet, and Langland.

*5 units, Spr (Karnes, M)*

**ENGLISH 303. Experiment and the Novel**

(Same as COMPLIT 353A) A double exploration of experiment in the novel from 1750 into the 19th century. Taking off from Zola's *The Experimental Novel*, consideration of the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the usual sense of departures from standard practice, consideration of works that seem to break away from techniques of realism devised prior to 1750. Possible texts by: Lennox, Sterne, Walpole, Goldsmith, Godwin, Lewis, Shelley, Hogg, Emily Bronte, and Diderot.

*5 units, not given this year*

**ENGLISH 303D. Thinking in Fiction**

(Same as COMPLIT 303D) Narrative and cognition in 18th-century fictional, philosophical, scientific, and cultural texts. Probable readings: Hobbes, Locke, Newton, Swift, Defoe, Hume, Lennox, Sterne, Adam Smith, Wollstonecraft, and Bentham.

*5 units, not given this year*

**ENGLISH 303F. Institutions of Enlightenment: The Invention of the Public Sphere**

(Same as COMPLIT 331C) This course treats the cultural foundations upon which the Enlightenment instituted a public sphere and constituted its relationship to the private (or intimate) sphere. The aim is to explore the invention and naturalization of some of the most fundamental institutions of the Enlightenment -- institutions such as the public, the private, the market, public opinion, literature, and even more basic categories such as the individual, society, culture, knowledge, and politics.

5 units, Aut (Bender, J)

**ENGLISH 305. 1900: Periodization and Literary History**

The decades around 1900 have been claimed as both a beginning and an end in literary history. For Frank Kermode, 1900 has the look of a year that ends a saeculum; for Yeats, it was the year that Victorianism had been defeated. By focusing on literature written between, roughly, 1880 and 1915, we will ask how important the century is to disciplinary practice, what it means to read a text as Victorian or modernist, and how period designations alter a critic's methods and concerns. Authors include Hopkins, James, Hardy.

5 units, Aut (Jarvis, C; Sullivan, H)

**ENGLISH 308B. Gilded Age American Literature**

Introduction to the creative innovations and the political tensions that stemmed from the formation of a multicultural society during the age of industrialization. We will attempt to place literary works in their historical and cultural contexts, while also surveying recent critical and theoretical developments in areas such as Realism, Naturalism, Regionalism, Minority and Race Studies, and so on.

5 units, Win (Jones, G)

**ENGLISH 310. The Transatlantic Renaissance**

(Same as COMPLIT 332) The emergence of a transatlantic culture in the early modern period. How is the Renaissance of Europe and England fashioned in a conversation with the cultural forms and material realities of the colonial Americas? And how do colonial writings expand and complicate the available understanding of the Renaissance? Readings in Columbus, More, Hakluyt, Spenser, Shakespeare, the Inca Garcilaso de la Vega.

5 units, Aut (Greene, R)

**ENGLISH 314. Epic and Empire**

(Same as COMPLIT 320A) Focus is on Virgil's Aeneid and its influence, tracing the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.

5 units, Spr (Parker, P)

**ENGLISH 334B. Concepts of Modernity 2: The Study of Culture in the Age of Globalization**

(Same as MTL 334B) A survey of 20th-century theory with focus on the concept of culture and methods of studying it from diverse disciplines including sociology, anthropology, history, literary and cultural studies. Discussions will emphasize modernization, postmodernization and globalization processes in their relations to culture broadly understood, cultures in their regional, national and diasporic manifestations, and cultures as internally differentiated (high and low culture, subcultures, media cultures).

5 units, Win (Moya, P)

**ENGLISH 344C. Shakespeare and Jonson from Stage to Book**

A comparative study of Shakespeare and Jonson from script and performance to book, from actors, playhouses and audiences to authors, editors and readers.

5-5 units, Win (Orgel, S)

**ENGLISH 345. Eighteenth-Century Satire**

A study of the masterpieces of satire from eighteenth-century Britain with some attention to classical sources and contemporary analogues. What role does satire play in contemporary American culture: when does speech become too hot to handle? Do we have a requirement that people mean what they say? What is the role of invective in public discourse? Authors include: Horace, Juvenal, Jonathan Swift, Alexander Pope, Samuel Johnson, Frances Burney, Voltaire, George Orwell.

5 units, Win (Vermeule, B)

**ENGLISH 356A. Emily Dickinson, American Artist**

Emily Dickinson (1830-1886) was not a lily-livered homebody, but rather one of the most daring, mischievous, and ambitious

artists that America has yet known. Aims of course are: with detailed attention to her poems and letters, investigation of the core themes and major artistic concerns of Dickinson's life-work, comparing them with those of her contemporaries, many of whom she read; assessment of the key phases of Dickinson's extensive influence on American poets and critics; and discovering why her work is currently at the heart of heated debates about right ways and wrong ways to read a poem.

5 units, Win (Putnam, P)

**ENGLISH 360C. Recuperative Criticism**

Consideration of a range of criticism which seeks to discover, rediscover or make the case for under-recognized, forgotten, out-of-fashion, peripheral, disorderly, too difficult, too popular, too old or too contemporary works of art. Is there a tradition or rules and patterns to such critical work, or should arguing for a new aesthetic object also entail new modes of argument itself? We will try to sketch out a genealogy and taxonomy for critical recuperation: its histories and chronology on the one hand; its forms, varieties and inner logic, on the other.

5 units, Spr (Woloch, A)

**ENGLISH 360D. Freud and Literary Criticism**

Examination of major writings by Freud with major ramifications for literary history and theory--The Interpretation of Dreams, The 'Dora' and other case histories; The Psychopathology of Everyday Life, The 'Uncanny,' and so on-- with an eye toward understanding his intellectual influence and his usefulness to practical criticism

5 units, Spr (Castle, T)

**ENGLISH 363. The Bourgeois**

(Same as COMPLIT 330) Goal is to define the ruling class of modern times. Social history (Weber, Hirschmann, Marx); literary texts (Defoe, Goethe, Gaskell); and Henrik Ibsen who produced an intransigent criticism of the bourgeois ethos.

5 units, not given this year

**ENGLISH 364. Style**

(Same as COMPLIT 364) The return of a term that was central in 20th-century criticism, and has all but disappeared in recent decades. Focus is on looking at concepts of style from various branches of linguistic and literary theory, and examination of some revealing examples in novels and films. Team taught with D.A. Miller from U.C. Berkeley.

5 units, not given this year

**ENGLISH 365C. American Literature and Fascism**

In 1928, Benito Mussolini, the rising fascist leader in Italy, published his Autobiography and arguably for the United States, where many observers regarded him and his political movement as an exciting new development. Why were Americans fascinated by Mussolini and fascism? How did the fascist phenomenon play out in the American context? Why were some prominent American modernist writers especially compelled by the promise of regeneration, spiritual renewal, and total commitment offered by fascism? And why, by contrast, did many American writers envision the prospect of a fascist Europe as a threat to global peace and freedom and as a struggle worth fighting for? This course will examine these and others questions via readings by Mussolini, T.S. Eliot, Ezra Pound, Ernest Hemingway, Hannah Arendt, Richard Wright, Roberto Bolaño, and Phillip Roth. Readings will also include a selection of historiographical and theoretical texts on fascism.

5 units, Aut (Rasberry, G)

**ENGLISH 366C. Literature At Scale**

The question of scale in literary and media-cultural analysis. What does it matter that poems and short stories are relatively small while novels are relatively big? Can we speak of the distribution of modern fiction along a quantitative stylistic continuum from minimalism (understatement) to miniaturism (condensation) to maximalism (elaboration)? Alongside these objective quantities of culture, we will also consider scale as a matter of critical perspective: given that the attention span of criticism is highly variable, what can a self-consciousness of the question of scale bring to our critical practice?

5 units, Win (McGurl, M)

**ENGLISH 372B. Milton and Blake**

Epic questions, epic books. Paradise Lost. The First Book of Urizen. Milton, a Prophecy. Some attention to the visual tradition

surrounding these works, with a focus on the materialization of vision.

5 units, *Spr (Gigante, D; Hoxby, B)*

**ENGLISH 373D. Shakespeare, Islam, and Others**

(Same as COMPLIT 311) Shakespeare and other early modern writers in relation to new work on Islam and the Ottoman Turk in early modern studies. *Othello*, *Twelfth Night*, *Titus Andronicus*, *The Merchant of Venice*, and other Shakespeare plays. Kyd's *Solyman and Perseda*, Daborne's *A Christian Turned Turk*, Massinger's *The Renegado*, Marlowe's *The Jew of Malta*, and literary and historical materials.

5 units, *not given this year*

**ENGLISH 384B. Romanticism and New Criticism**

20th Century New Criticism and its vexed attitude toward Romanticism. Methodologies, ideologies, and legacies of New Criticism. Its cohesiveness as a school of criticism and its relationship to the rise of English studies. Emphasis on New Critical treatments of Keats, Wordsworth, Coleridge, and Shelley.

5 units, *Spr (Rovee, C)*

**ENGLISH 390. Graduate Fiction Workshop**

For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.

3 units, *Aut (Tallent, E), Win (Wolff, T), Spr (Johnson, A)*

**ENGLISH 392. Graduate Poetry Workshop**

For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.

3 units, *Aut (Fields, K), Win (Boland, E), Spr (Di Piero, S)*

**ENGLISH 394. Independent Study**

Preparation for first-year Ph.D. qualifying examination.

1-10 units, *Sum (Staff)*

**ENGLISH 395. Ad Hoc Graduate Seminar**

Three or more graduate students who wish in the following quarter to study a subject or an area not covered by regular courses and seminars may plan an informal seminar and approach a member of the department to supervise it.

1-5 units, *Aut (Staff), Win (Staff), Spr (Staff)*

**ENGLISH 396. Introduction to Graduate Study for Ph.D.**

**Students**

Required for first-year graduate students in English. The major historical, professional, and methodological approaches to the study of literature in English.

5 units, *Aut (Saldivar, R)*

**ENGLISH 396L. Pedagogy Seminar I**

(Same as COMPLIT 396L) Required for first-year Ph.D students in English, Modern Thought and Literature, and Comparative Literature. Preparation for surviving as teaching assistants in undergraduate literature courses. Focus is on leading discussions and grading papers.

2 units, *Aut (Woloch, A)*

**ENGLISH 397A. Pedagogy Seminar II**

Apprenticeship for second-year graduate students in English, Modern Thought and Literature, and Comparative Literature who teach in the Program in Writing and Rhetoric. Each student is assigned as an apprentice to an experienced teacher and sits in on classes, conferences, and tutorials, with eventual responsibility for conducting a class, grading papers, and holding conferences. Meetings explore rhetoric, theories and philosophies of composition, and the teaching of writing. Each student designs a syllabus in preparation for teaching PWR 1.

1 unit, *Aut (Diogenes, M; Hunt, J; Bilsky, B)*

**ENGLISH 397W. What is the Future of English Studies?**

Course begins by tracing the rise of English as a university discipline and then considers what the future holds. We will attempt to answer a series of deceptively simple questions: what is reading? what is writing? what should be our objects of study? what methods should we use to study them? and how do we teach these texts most effectively?

3-5 units, *Aut (Lunsford, A)*

**ENGLISH 397X. The Teaching of Literature: How We Teach & Why**

(Same as EDUC 405X) This course is designed for graduate students in English and English Education who are interested in questions surrounding the teaching of literature at both the

secondary and collegiate level. The course weaves together theoretical considerations of the purposes for teaching literature, including assumptions about the kinds of readings and readers literature teachers are trying to create, with investigation of pedagogical practices.

2-4 units, *not given this year*

**ENGLISH 398. Research Course**

A special subject of investigation under supervision of a member of the department. Thesis work is not registered under this number.

1-18 units, *Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**ENGLISH 398L. Literary Lab**

Gathering and analyzing data, constructing hypotheses and designing experiments to test them, writing programs [if needed], preparing visuals and texts for articles or conferences. Requires a year-long participation in the activities of the Lab.

5 units, *Aut (Moretti, F; Jockers, M), Win (Moretti, F; Jockers, M), Spr (Moretti, F; Jockers, M)*

**ENGLISH 398R. Revision and Development of a Paper**

Students revise and develop a paper under the supervision of a faculty member with a view to possible publication.

4-5 units, *Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**ENGLISH 398W. Orals, Publication and Dissertation Workshop**

For third- and fourth-year graduate students in English. Strategies for studying for and passing the oral examination, publishing articles, and for writing and researching dissertations and dissertation proposals. May be repeated for credit.

2 units, *Aut (Woloch, A), Win (Woloch, A), Spr (Woloch, A)*

**ENGLISH 399. Thesis**

For M.A. students only. Regular meetings with thesis advisers required.

1-10 units, *Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**ENGLISH 399D. Tooling Up for Digital Humanities**

(Same as ENGLISH 299D, HISTORY 299D, HISTORY 399D) What are the digital humanities? The twenty-first century presents new opportunities in the humanities, such as unprecedented access to millions upon millions of digitized sources along with powerful technological tools to study those sources. Yet it also raises new challenges, such as the responsible and effective use of technology, and defining the nature of digital scholarship and communication. This workshop offers an introduction to fundamental concepts, methods, and issues within the growing field of digital humanities, including managing your online identity, digitizing sources, managing databases, text mining, spatial analysis, visualization, and pedagogy.

1 unit, *not given this year*

**ENGLISH 802. TGR Dissertation**

0 units, *Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

## ENGLISH FOR FOREIGN STUDENTS (EFLSLANG) COURSES

### UNDERGRADUATE COURSES IN ENGLISH FOR FOREIGN STUDENTS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**EFLSLANG 197. Directed Study**

1-3 units, *Aut (Hubbard, P), Win (Staff), Spr (Staff), Sum (Staff)*

**EFLSLANG 683P. Workshop in Pronunciation for International Students**

(1-2 units). Provides support in the development of clear, comprehensible English pronunciation. Includes attention to individual sounds as well as stress, rhythm, and intonation. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

1-2 units, *Sum (Staff)*

**EFLSLANG 683R. Workshop in Reading and Vocabulary for**

**International Students**

(1-2 units). Provides support in the development of English reading skills for academic purposes, including work on comprehension, speed, and critical interpretation, along with strategies for improving vocabulary. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

*1-2 units, Sum (Staff)*

**EFSLANG 683S. Workshop in Oral Communication for International Students**

(1-2 units) Provides support in the development of listening and speaking skills in English, including academic listening, small group discussion, oral presentation, and intercultural communication. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

*1-2 units, Sum (Staff)*

**EFSLANG 683W. Workshop in Written Communication for International Students**

(1-2 units). Provides support in the development of English writing skills for non-natives. Writing assignments are negotiated with the instructor and may include practice in composition, SAT or TOEFL writing, and writing university application essays and statements of purpose. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

*1-2 units, Sum (Staff)*

**GRADUATE COURSES IN ENGLISH FOR FOREIGN STUDENTS**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**EFSLANG 397. Directed Study**

*1-3 units, Aut (Hubbard, P), Win (Staff), Spr (Staff), Sum (Staff)*

**EFSLANG 688V. Intensive English and Academic Orientation for Stanford Visiting Scholars**

Goal is to improve English proficiency and introduce the university environment. Writing, pronunciation, listening, discussion, oral presentation, and spoken usage. Enrollment limited to 14.

*5 units, Sum (Staff)*

**EFSLANG 689E. Learning English on Your Own**

Independent English language learning. Learning strategies and objectives, setting and maintaining practice schedules, and evaluating progress. Focus is on exploiting web-based resources. Individual meetings.

*1 unit, Sum (Staff)*

**EFSLANG 689H. American Humor**

Analysis of jokes, humorous stories, and situations through modern media. Practice in advanced listening comprehension and English idioms.

*1 unit, Sum (Staff)*

**EFSLANG 689L. Living in the USA**

Life and relationships outside the University classroom. Goal is to familiarize international students with the cultural expectations and forms of language use in a variety of situations in the University community and in other social situations. Enrollment limited to 14.

*1 unit, Sum (Staff)*

**EFSLANG 689P. Pronunciation**

The sounds of English, and stress, intonation, and rhythm patterns important to natural-sounding speech. Enrollment limited to 14.

*2 units, Sum (Staff)*

**EFSLANG 689T. Interacting in California's Vineyard Culture**

Focuses on communicative skills in the context of California's renowned wine culture. Emphasis on the language of wine using appropriate terminology, and interacting knowledgeably with restaurant and retail wine staff. Topics include learning the fundamentals of vineyard techniques, varietal characteristics, tasting techniques, drinking and ordering etiquette. Course is co-

taught by a wine expert and an ESL instructor. Class consists of a short interactive lecture, a communicative activity such as role playing, and a tasting of four specially selected wines. Participants must be at least 21 years old. Fee.

*1 unit, Sum (Staff)*

**EFSLANG 689V. Vocabulary and Idiom**

Building vocabulary for academic success. Idiomatic language, and what idioms and metaphors reflect about American culture. Enrollment limited to 14.

*1 unit, Sum (Staff)*

**EFSLANG 689W. Working in the USA**

The language and culture of the workplace. Goal is to familiarize international students with the cultural expectations of situations in the business setting and in social situations related to business.

*1 unit, Sum (Staff)*

**EFSLANG 690A. Interacting in English**

Strategies for communicating effectively in social and academic settings. Informal and formal language used in campus settings, including starting and maintaining conversations, asking questions, making complaints, and contributing ideas and opinions. Simulations and discussions, with feedback on pronunciation, grammar, and usage. Enrollment limited to 14.

*1-3 units, Aut (Streichler, S), Win (Lockwood, R), Spr (Lockwood, R)*

**EFSLANG 690B. Academic Discussion**

Skills for effective participation in classroom settings, seminars, and research group meetings. Pronunciation, grammar, and appropriateness for specific tasks. Feedback on language and communication style. Enrollment limited to 14. May be repeated once for credit. Prerequisite: 690A or consent of instructor.

*1-3 units, Aut (Streichler, S), Win (Rylance, C), Spr (Lockwood, R)*

**EFSLANG 690C. Advanced Interacting in English**

Communication skills for extended discourse such as storytelling and presenting supported arguments. Development of interactive listening facility and overall intelligibility and accuracy. Goal is advanced fluency in classroom, professional and social settings. Identification of and attention to individual patterned errors. May be repeated once for credit. Prerequisite: 690B or consent of instructor. Enrollment limited to 14.

*1-3 units, Win (Lockwood, R)*

**EFSLANG 691. Oral Presentation**

For advanced graduate students. Practice in academic presentation skills; strategy, design, organization, and use of visual aids. Focus is on improving fluency and delivery style, with videotaping for feedback on language accuracy and usage. Enrollment limited to 14. May be repeated once for credit.

*1-3 units, Aut (Rylance, C), Win (Hubbard, P), Spr (Oman, A), Sum (Staff)*

**EFSLANG 692. Speaking and Teaching in English**

For non-native speakers who must teach in English. Focus is on developing clarity, intelligibility, and effectiveness through weekly presentations simulating actual teaching assistant responsibilities. Enrollment limited to 14. May be repeated once for credit.

*1-3 units, Aut (Mawson, C), Win (Streichler, S), Spr (Rylance, C)*

**EFSLANG 693A. Listening Comprehension**

Strategies for effective listening in an academic setting, focusing on identifying key ideas in lectures. Practice in understanding words and phrases commonly encountered in classroom settings. Computer-based exercises for comprehension of rapid, natural speech. Enrollment limited to 14.

*1-3 units, Aut (Lockwood, R)*

**EFSLANG 693B. Advanced Listening Comprehension, and Vocabulary Development**

Listening strategies and vocabulary for understanding English in academic and non-academic contexts. Discussion and interpretation of communicative intent. Computer-based and video exercises across a range of genres; individual project. May be repeated once for credit. Prerequisite: 693A or consent of instructor.

*1-3 units, Aut (Hubbard, P), Win (Hubbard, P), Spr (Hubbard, P)*

**EFSLANG 694. Communication Strategies in Professional Life**  
For advanced graduate students. Task-based practice of language appropriate for professional settings in industry and related teamwork. Simulation of the roles of manager, applicant, subordinate, and coworker. Prerequisite: 693A, or consent of instructor. Enrollment limited to 14.

*1-3 units, Aut (Rylance, C), Spr (Rylance, C)*

**EFSLANG 695A. Pronunciation and Intonation**

Recognition and practice of American English sounds, stress, and intonation patterns for greater comprehension and intelligibility. Analysis of problem areas. Biweekly tape assignments and tutorials. May be repeated once for credit. Enrollment limited to 14.

*1-3 units, Aut (Mawson, C), Win (Mawson, C), Spr (Mawson, C), Sum (Staff)*

**EFSLANG 695B. Advanced Pronunciation and Intonation**

Continuation of 695A, focusing on American English sounds, stress, rhythm, and intonation patterns. Emphasis is on self-monitoring, integrated with short presentations. Biweekly tape assignments and tutorials. Enrollment limited to 14. May be repeated for credit three times. Prerequisite: 695A.

*1-3 units, Aut (Oman, A), Win (Oman, A), Spr (Mawson, C)*

**EFSLANG 696. Understanding American Humor**

Recognizing rhetorical devices, jokes, and character types common to spoken humor in film and television programs. Crosscultural discussion. Prerequisites: 690B, 693B or consent of the instructor. Enrollment limited to 14.

*1-3 units, Spr (Streichler, S)*

**EFSLANG 697. Writing Fundamentals**

Focus is on improving grammatical accuracy and vocabulary, building fluency, and learning the structure and conventions of English correspondence, reports, and short academic papers. Enrollment limited to 14.

*1-3 units, Aut (Rylance, C), Win (Lockwood, R), Spr (Lockwood, R)*

**EFSLANG 698A. Writing Academic English**

Strategies and conventions for graduate writing. Emphasis is on fluency, organization, documentation, and appropriateness for writing tasks required in course work. Enrollment limited to 14. May be repeated once for credit.

*1-3 units, Aut (Kevech, A), Win (Lockwood, R), Spr (Rylance, C), Sum (Staff)*

**EFSLANG 698B. Advanced Graduate Writing**

Focus on clarity, accuracy, and appropriate style. For graduate students experienced in English writing and currently required to write for courses and research. Class meetings and individual conferences. Prerequisite: 698A. Enrollment limited to 14. May be repeated once for credit.

*1-3 units, Aut (Streichler, S), Win (Rylance, C), Spr (Streichler, S), Sum (Staff)*

**EFSLANG 698C. Writing and Presenting Research**

For advanced graduate students completing major research projects. Revising and editing strategies for preparing papers, conference abstracts, and poster presentations. Adapting content and style to different audiences. Students present their research with participant feedback. Enrollment limited to 14. May be repeated once for credit. Prerequisite: 698B and 691 or consent of instructor.

*1-3 units, Aut (Hubbard, P)*

## ENVIRONMENT AND RESOURCES (ENVRES) COURSES

### GRADUATE COURSES IN ENVIRONMENT AND RESOURCES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**ENVRES 200. Sustaining Action: Research, Analysis and Writing for the Public**

(Same as EARTHSYS 200) Preference to graduate students and senior undergraduates in environmental, natural and social

sciences, engineering, journalism. Students help produce and publish SAGE, an eco advice column, by choosing, researching, and answering questions about sustainable living submitted by Stanford alumni and the general public. Prerequisite: admission by application, available from instructor, thayden@stanford.edu, and due 9/21/11 (Aut) or 3/28/12 (Spr). (Meets Earth Systems WIM requirement).

*3 units, Aut (Hayden, T), Spr (Hayden, T)*

**ENVRES 210. Communication and Leadership Skills**

(Same as BIO 388) Focus is on delivering information to policy makers and the lay public. How to speak to the media, Congress, and the general public; how to write op-eds and articles; how to package ideas including titles, abstracts, and CVs; how to survive peer review, the promotion process, and give a job talk; and how to be a responsible science advocate.

*2 units, not given this year*

**ENVRES 215. Digital Storytelling for Researchers**

A starting point in multimedia storytelling for graduate students who are actively involved in research. Students gain project-based experience in still photography, audio podcasting, online slideshows and web video production and editing, enabling them to record and report their own research stories from the lab and field. Enrollment limited, consent of the instructor required.

*1-3 units, Win (Hayden, T)*

**ENVRES 220. Our Coastal Society: An interdisciplinary seminar on ocean/coastal themes**

Utilizing guest speaker presentations from various academic and non-academic organizations, this seminar will explore marine science and policy for the Pacific Coast that informs natural resource as well as conservation decision-making and future challenges. Topics to be covered may include tuna and shark research along the California coast, kelp forest ecosystems, fisheries management, marine spatial planning, legislative advances such as the Marine Life Protection Act (MLPA), climate change threats to our coast, the importance of the US west coast in the context of Pacific Ocean ecosystem health, and others. Students enrolled in the course will be expected to attend all classes, actively participate in discussion following the guest lecture, and submit a short summary of each presentation.

*1 unit, Win (Caldwell, M; Becker, A; Teneva, L)*

**ENVRES 225. E-IPER Current Topics Seminar**

For E-IPER Ph.D and Joint M.S. students only. Weekly presentations of E-IPER students' research and other program-related projects. Occasional guest speakers. Active participation including individual or team presentation and attendance required for credit. May be repeated once for credit.

*1 unit, Aut (Doyle, H), Win (Doyle, H), Spr (Doyle, H)*

**ENVRES 260. Global Water: Challenges and Opportunities**

Explores challenges in the global supply, quality, and accessibility of freshwater. Speakers from Stanford and outside organizations on key topics such as threats due to climate change, agriculture demands, challenges of urbanization, water and sanitation, as well as discussion of policy, market, technology, and other potential solutions. Weekly readings in advance of speaker. Active participation expected of all enrolled students; those enrolled for 2-3 units will have one or more additional written assignments and will facilitate one or more discussions.

*1-3 units, Spr (Staff)*

**ENVRES 270. Graduate Practicum in Environment and Resources**

Opportunity for E-IPER students to pursue areas of specialization in an institutional setting such as a laboratory, clinic, research institute, governmental agency, non-governmental organization, or multilateral organization. Meets US CIS requirements for off-campus employment with endorsement from designated school official.

*1-9 units, Aut (Vitousek, P), Win (Vitousek, P), Spr (Vitousek, P), Sum (Staff)*

**ENVRES 277C. Specialized Writing and Reporting: Environmental Journalism**

(Same as COMM 177C, COMM 277C) (Graduate students register for COMM / ENVRES 277C.) Practical, collaborative, writing-intensive course in science-based environmental journalism. Science and journalism students learn how to identify and write

engaging stories about environmental issues and science, how to assess the quality and relevance of environmental news, how to cover the environment and science beats effectively, and how to build bridges between the worlds of journalism and science. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: COMM 104, ENVRES 200 or consent of instructor. Admissions by application only, available from [thayden@stanford.edu](mailto:thayden@stanford.edu) and due 3/28/12.

4-5 units, *Spr* (Hayden, T)

#### **ENVRES 290. Capstone Project Seminar in Environment and Resources**

Required for E-IPER Joint M.S. students; optional for E-IPER Ph.D. students. Propose, conduct and publicly present final individual or team projects demonstrating the integration of professional (M.B.A., J.D., or M.D.) and M.S. in Environment and Resources degrees. Presentation and submission of final product required.

1-3 units, *Aut* (Vitousek, P; Standridge, N), *Spr* (Vitousek, P; Standridge, N)

#### **ENVRES 310. Environmental Forum Seminar**

Required core course for first year E-IPER Ph.D. students and all Joint M.S. students, other than Joint M.B.A./M.S. students; optional for joint M.B.A./M.S. students and other graduate students with consent of instructor. Conceptual frameworks, analytical approaches, validity of conclusions from an interdisciplinary perspective. Participants attend various environmentally-focused seminars on campus selected by faculty and students, followed by student-facilitated discussions.

1-2 units, *Aut* (Root, T; Curran, L)

#### **ENVRES 315. Environmental Research Design Seminar**

Required core course for first year E-IPER Ph.D. students; optional for Joint M.S. students; other graduate students with instructor's permission. Series of faculty presentations and student-led discussions on interdisciplinary research design as exemplars of the research design theories discussed in ENVRES 320. Designing Environmental Research. Topics parallel the ENVRES 320 syllabus. Corequisite: ENVRES 320.

1-2 units, *Win* (Staff)

#### **ENVRES 320. Designing Environmental Research**

Required core course restricted to first year E-IPER Ph.D. students. Research design options for causal inference in environmentally related research. Major philosophies of knowledge and how they relate to research objectives and design choices. Identification of critical elements within a broad range of research designs. Evaluation of the types of research questions for which different designs are suited, emphasizing fit between objectives, design, methods, and argument. Development of individual research design proposals, including description and justification understandable to a non-specialist.

3-4 units, *Win* (Davis, J)

#### **ENVRES 330. Research Approaches for Environmental Problem Solving**

Required core course for first year E-IPER Ph.D. students. How to develop and implement interdisciplinary research in environment and resources. Assignments include development of research questions, a preliminary literature review, and a summer funding proposal. Course is structured on peer critique and student presentations of work in progress. Corequisite: ENVRES 398 with a faculty member chosen to explore a possible dissertation topic.

3 units, *Spr* (Vitousek, P; Ardoin, N)

#### **ENVRES 380. Collaborating with the Future: Launching Large Scale Sustainable Transformations**

(Same as ME 380) This project-based d.school class combines Design Thinking Processes, Behavioral Sciences, and elements of Diffusion Theory. Tools and theories introduced in class will be used to structure large-scale transformations that simultaneously create value on environmental, societal, and economic fronts. We encourage students to use this class as a launching pad for real initiatives. Primarily meant for Graduate Students. (Especially qualified/motivated Seniors will be considered). Admission to the class is through an application process which ends on March 3. Please find instructions and applications at <https://dschool.stanford.edu/groups/largetransformations/>.

3-4 units, *Spr* (Banerjee, S; Staff, 1)

#### **ENVRES 398. Directed Individual Study in Environment and Resources**

Under supervision of an E-IPER affiliated faculty member on a subject of mutual interest. Joint M.S. students must submit an Independent Study Agreement for approval.

1-9 units, *Aut* (Staff), *Win* (Staff), *Spr* (Staff), *Sum* (Staff)

#### **ENVRES 399. Directed Research in Environment and Resources**

For advanced graduate students. Under supervision of an E-IPER affiliated faculty member. Joint M.S. students must submit an Independent Study Agreement for approval.

1-9 units, *Aut* (Staff), *Win* (Staff), *Spr* (Staff), *Sum* (Staff)

#### **ENVRES 410. Ph.D. Qualifying Tutorial**

For Ph.D. students only. Under supervision of an E-IPER affiliated faculty member.

1 unit, *Aut* (Staff), *Win* (Staff), *Spr* (Staff), *Sum* (Staff)

#### **ENVRES 538. Environmental Science for Managers and Policy Makers**

(Same as LAW 608, OIT 538.) Fundamental science of ecosystems, climate and energy systems by building decision-support models for managing these systems, development of widely-applicable skills in model representation in a spreadsheet, optimization, and Monte Carlo simulation. This course is open only to students in the E-IPER PhD program or Joint M.S. in Environment and Resources program and is required for Joint M.B.A. with M.S. in Environment and Resources students. ENVRES 538 does not assume knowledge of environment science or proficiency in quantitative analysis beyond admission requirements for the MBA program. GSB students should register under OIT 538. GSB students planning to apply to the E-IPER joint M.S. program should take either OIT 538 or 539 in their first year.

4 units, *Win* (Plambeck, E)

#### **ENVRES 539. Advanced Environmental Science for Managers and Policy Makers**

(Same as LAW 619 and OIT 539.) Fundamental science of ecosystems, climate and energy. Spreadsheet modeling, optimization, and Monte Carlo simulation applied to resource management and environmental policy. Accelerated version of ENVRES 538 for students with background in modeling. Allocates more class time to environmental/energy science and implications for management and policy, and less class time to fundamentals of modeling/optimization/simulation. This course is open only to students in the E-IPER Ph.D. program or Joint M.S. in Environment and Resources program. ENVRES 539 does not assume knowledge of environmental science or proficiency in quantitative analysis beyond admission requirements for the MBA program. GSB students should register under OIT 539. GSB students planning to apply to the E-IPER joint M.S. program should take either OIT 538 or 539 in their first year.

4 units, *Win* (Plambeck, E)

#### **ENVRES 540. Environmental Science for Managers II**

Introduction to renewable sources of electricity and fuel, and is required for Joint M.B.A. with M.S. in Environment and Resources students. GSB students should register under OIT 540. Students are strongly encouraged, but not required, to take OIT/ENVRES 538 or OIT/ENVRES 539 prior to taking this course.

1 unit, *Win* (Plambeck, E)

#### **ENVRES 801. TGR Project**

0 units, *Aut* (Staff), *Win* (Staff), *Spr* (Staff), *Sum* (Staff)

#### **ENVRES 802. TGR Dissertation**

0 units, *Aut* (Staff), *Win* (Staff), *Spr* (Staff), *Sum* (Staff)

# ENVIRONMENTAL EARTH SYSTEM SCIENCE (EESS) COURSES

## UNDERGRADUATE COURSES IN ENVIRONMENTAL EARTH SYSTEM SCIENCE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

### EESS 2. Earth System History

(Same as EARTHSYS 2) The evolution of Earth's systems from formation to the present. Couplings and relationships among biosphere, lithosphere, hydrosphere, and atmosphere. Topics include the evolution of life, origin of the oceans, atmosphere and continents, and changes in climate. Modern climate change and anthropogenic effects. GER: DB-NatSci

3 units, Win (Chamberlain, P)

### EESS 8. The Oceans: An Introduction to the Marine Environment

(Same as EARTHSYS 8) For non-majors and majors in earth science or environmental science. Students will learn about the major ocean ecosystems and how they function both naturally and under the influence of human activities. Emphasis will be placed on the dominant organisms of each ecosystem and how they interact with each other and their physical and chemical environment. The types of ecosystems discussed will include coral reefs, deep-sea hydrothermal vents, coastal upwelling systems, blue-water oceans, estuaries, near-shore dead zones, etc. The course will incorporate a mix of lectures, multi-media presentations, and group activities.

3 units, Spr (Arrigo, K)

### EESS 37N. Energy and the Environment on the Back of an Envelope

(Same as EARTHSYS 37N) Preference to freshmen. How quantitative understanding of the Earth helps inform decisions about energy supply. How can enough energy be provided to support future growth and development throughout the world without damaging the natural environment? Focus is on simple quantitative observations and calculations that facilitate evaluation of potential solutions to this problem; algebra only, no calculus. GER: DB-NatSci

3 units, not given this year

### EESS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration

(Same as EARTHSYS 38N, GES 38N) Preference to freshmen. The isolation of polar explorers under the harshest conditions on Earth, and the chronicles of their explorations and hardships dating to the 1500s for the Arctic and the 1700s for the Antarctic. Focus is on scientific and geographic achievements. Sources include *The Worst Journey in the World* by Apsley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Class jointly authors essay on themes from such literature. Optional field trip into the high Sierra in December. (Dunbar) GER: DB-NatSci

3 units, NEXTYEAR

### EESS 39N. The Carbon Cycle: Reducing Your Impact

(Same as EARTHSYS 39N) Preference to freshmen. Changes in the long- and short-term carbon cycle and global climate through the burning of fossil fuels since the Industrial Revolution. How people can shrink their carbon footprints. Long-term sources and sinks of carbon and how they are controlled by tectonics and short-term sources and sinks and the interaction between the biosphere and ocean. How people can shrink their carbon footprints. Held at the Stanford Community Farm. GER: DB-NatSci

3 units, not given this year

### EESS 41N. The Global Warming Paradox

(F,Sem) (Same as EARTHSYS 41N) Stanford Introductory Seminar. Preference to freshman. Focus is on the complex climate

challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Topics include: Earth's energy balance; detection and attribution of climate change; the climate response to enhanced greenhouse forcing; impacts of climate change on natural and human systems; and proposed methods for curbing further climate change. Sources include peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks.

3 units, Aut (Diffenbaugh, N)

### EESS 46N. Exploring the Critical Interface between the Land and Monterey Bay: Elkhorn Slough

(Same as EARTHSYS 46N) Preference to freshmen. Field trips to sites in the Elkhorn Slough, a small agriculturally impacted estuary that opens into Monterey Bay, a model ecosystem for understanding the complexity of estuaries, and one of California's last remaining coastal wetlands. Readings include Jane Caffrey's *Changes in a California Estuary: A Profile of Elkhorn Slough*. Basics of biogeochemistry, microbiology, oceanography, ecology, pollution, and environmental management.

3 units, alternate years, not given this year

### EESS 49N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay

(F,Sem) (Same as EARTHSYS 49N) Stanford Introductory Seminar. This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended.

3 units, Spr (Francis, C)

### EESS 56Q. Changes in the Coastal Ocean: The View From Monterey and San Francisco Bays

(S,Sem) (Same as EARTHSYS 56Q) Stanford Introductory Seminar. Preference to sophomores. Recent changes in the California current, using Monterey Bay as an example. Current literature introduces principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC. Optional field trip to MBARI and Monterey Bay. GER: DB-NatSci

3 units, Spr (Dunbar, R)

### EESS 57Q. Climate Change from the Past to the Future

(S,Sem) (Same as EARTHSYS 57Q) Stanford Introductory Seminar. Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.

3 units, Win (Chamberlain, P)

### EESS 61Q. Food and security

(S,Sem) (Same as EARTHSYS 61Q, INTNLREL 61Q) Stanford Introductory Seminar. The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

5 units, Aut (Naylor, R; Stedman, S)

### EESS 101. Environmental and Geological Field Studies in the Rocky Mountains

(Same as EARTHSYS 100, GES 101) Three-week, field-based

program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.

3 units, Aut (Chamberlain, P)

**EESS 105. Food and Community: New Visions for a Sustainable Future**

(Same as EARTHSYS 105) Service and research focused on providing healthy and environmentally friendly food for the under served in our community. Hands-on collaboration with the Stanford Glean student group, the Stanford Community Garden, and San Francisco nonprofits. Coverage of the broad spectrum from garden development to food dispersal to the needy. Design and implementation of projects that address an aspect of food and social justice, such as urban farming in low-income communities and sustainable food networks for the elderly. Service Learning Course (certified by Haas Center).

3-5 units, Aut (Chamberlain, P), Spr (Chamberlain, P)

**EESS 106. World Food Economy**

(Same as EARTHSYS 106, ECON 106) The interrelationships among food, populations, resources, and economic development. The role of agricultural and rural development in achieving economic and social progress in low-income nations. Emphasis is on public sector decision making as it relates to food policy.

5 units, Win (Naylor, R; Falcon, W)

**EESS 111. Biology and Global Change**

(Same as BIO 117, EARTHSYS 111) The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing. GER: DB-NatSci

4 units, Win (Vitousek, P; Arrigo, K)

**EESS 112. Human Society and Environmental Change**

(Same as EARTHSYS 112, HISTORY 103D) Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1A

4 units, Aut (Naylor, R; Frank, Z; Pizarro Gariazzo, R)

**EESS 117. Earth Sciences of the Hawaiian Islands**

(Same as EARTHSCI 117, EARTHSYS 117) Progression from volcanic processes through rock weathering and soil-ecosystem development to landscape evolution. The course starts with an investigation of volcanic processes, including the volcano structure, origin of magmas, physical-chemical factors of eruptions. Factors controlling rock weathering and soil development, including depth and nutrient levels impacting plant ecosystems, are explored next. Geomorphic processes of landscape evolution including erosion rates, tectonic/volcanic activity, and hillslope stability conclude the course. Methods for monitoring and predicting eruptions, defining spatial changes in landform, landform stability, soil production rates, and measuring biogeochemical processes are covered throughout the course. This course is restricted to students accepted into the Earth Systems of Hawaii Program.

4 units, alternate years, not given this year

**EESS 131. Communicating Environmental Research Using Narratives and Stories**

(Same as EESS 231, EARTHSYS 131, EARTHSYS 231) Creative strategies by which earth scientists can overcome impediments to scientific literacy. Construction of stories and narratives out of research. The role of imagination and cognitive perception in environmental issues. Barriers and problems that arise in risk and science awareness. Connections between environmentalism and environmental science. Environmental issues in fictional narratives. The responsible function for earth scientists in public debates. Reflections on the role of science in current and future issues likely to involve members outside of science. Priority given to students seeking degrees in the School of Earth Sciences.

1 unit, not given this year

**EESS 134. Stable Isotopes in Biogeochemistry**

(Same as EARTHSYS 134, EARTHSYS 234, EESS 234) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and rocks and minerals. GER: DB-NatSci

3 units, not given this year

**EESS 141. Remote Sensing of the Oceans**

(Same as EARTHSYS 141, EARTHSYS 241, EESS 241) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER: DB-NatSci

3-4 units, alternate years, not given this year

**EESS 143. Marine Biogeochemistry**

(Same as EARTHSYS 143, EARTHSYS 243, EESS 243) (Graduate students register for 243.) Processes that control the mean concentration and distribution of biologically utilized elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget. GER: DB-NatSci

3-4 units, Win (Arrigo, K)

**EESS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation**

(Same as EARTHSYS 146A, EARTHSYS 246A, EESS 246A, GEOPHYS 146A, GEOPHYS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

3 units, Win (Thomas, L; Diffenbaugh, N; Skinner, C), alternate years, not given next year

**EESS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation**

(Same as EARTHSYS 146B, EARTHSYS 246B, EESS 246B, GEOPHYS 146B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

3 units, Spr (Thomas, L; Diffenbaugh, N), alternate years, not given next year

**EESS 148. Introduction to Physical Oceanography**

(Same as CEE 164, CEE 262D) The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53). GER: DB-NatSci

4 units, Win (Fong, D)

**EESS 153. Soils and Nutrient Cycling in the Amazon Rainforest**

(Same as EARTHSYS 153, EARTHSYS 253, EESS 253) Focus is on Amazon soils as dynamic but also as a non-renewable natural resource, especially in the impoverished soils. Course will cover the importance of the soils in the Amazon region rain forest

ecosystem sustainability and the geographic distribution of the main soils classes in the Amazon region. Additional topics include the chemical and mineralogical characteristics of these soils classes and the factors influencing elemental cycling within the terrestrial Amazon rain forest ecosystem.

3 units, Win (Staff)

#### **EESS 155. Science of Soils**

(Same as EARTHSYS 155) Physical, chemical, and biological processes within soil systems. Emphasis is on factors governing nutrient availability, plant growth and production, land-resource management, and pollution within soils. How to classify soils and assess nutrient cycling and contaminant fate. Recommended: introductory chemistry and biology. GER: DB-NatSci

4 units, Spr (Fendorf, S)

#### **EESS 156. Soil and Water Chemistry**

(Same as EARTHSYS 156, EARTHSYS 256, EESS 256) (Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology. GER: DB-NatSci

1-4 units, Win (Fendorf, S)

#### **EESS 160. Statistical Methods for Earth and Environmental Sciences: General Introduction**

(Same as EARTHSYS 160) Extracting information from data using statistical summaries and graphical visualization, statistical measures of association and correlation, distribution models, sampling, error estimation and confidence intervals, linear models and regression analysis, introduction to time-series and spatial data with geostatistics, applications including environmental monitoring, natural hazards, and experimental design. GER:DB-Math

3 units, not given this year

#### **EESS 161. Statistical Methods for the Earth and Environmental Sciences: Geostatistics**

(Same as EARTHSYS 161, ENERGY 161) Statistical analysis and graphical display of data, common distribution models, sampling, and regression. The variogram as a tool for modeling spatial correlation; variogram estimation and modeling; introduction to spatial mapping and prediction with kriging; integration of remote sensing and other ancillary information using co-kriging models; spatial uncertainty; introduction to geostatistical software applied to large environmental, climatological, and reservoir engineering databases; emphasis is on practical use of geostatistical tools. GER: DB-NatSci

3-4 units, not given this year

#### **EESS 162. Remote Sensing of Land**

(Same as EARTHSYS 142, EARTHSYS 242, EESS 262) The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

4 units, Win (Lambin, E)

#### **EESS 164. Fundamentals of Geographic Information Science (GIS)**

(Same as EARTHSYS 144) Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments. GER: DB-NatSci

4 units, Aut (Thomas, N; Carbajales, P)

#### **EESS 173. Aquaculture and the Environment: Science, History, and Policy**

(Same as EARTHSYS 173, EARTHSYS 273, EESS 273) Can aquaculture feed billions of people without degrading aquatic

ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures.

3 units, Spr (Staff), alternate years, not given next year

#### **EESS 180B. Principles and Practices of Sustainable Agriculture**

(Same as EARTHSYS 180B) Field-based training in ecologically sound agricultural practices at the Stanford Community Farm. Weekly lessons, field work, and group projects. Field trips to educational farms in the area. Topics include: soils, composting, irrigation techniques, IPM, basic plant anatomy and physiology, weeds, greenhouse management, and marketing.

3-4 units, Aut (Archie, J), Spr (Archie, J)

#### **EESS 181. Concepts of Urban Agriculture**

(Same as EARTHSYS 181, EARTHSYS 281, EESS 281) For advanced undergraduates and graduate students from all fields. Seminar. Current status of and potential for global urban agriculture. Topics include: environmental and economic dimensions of urban food production and sourcing; city policy and land-use planning; and an ecosystem services approach to urban agriculture. Developed and developing world contexts. Two field trips to nearby cities; guest lectures; case studies; group projects. Attendance at first class is mandatory. Enrollment is limited. Enrollment permissions will be determined after first class meeting.

3 units, Win (Matson, P)

#### **EESS 182. Current Issues in Sustainable Agriculture**

(Same as EARTHSYS 182, EARTHSYS 282, EESS 282) Sustainability and ethics of animal production in the U.S. Demystification of the marketing of agricultural products. The past, present, and future of small family farms. Farm labor issues. Students lead discussions and write response papers.

2 units, not given this year

#### **EESS 183. Food Matters: Agriculture in Film**

(Same as EARTHSYS 183, EARTHSYS 283, EESS 283) Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

1 unit, Win (Staff)

#### **EESS 184. Climate and Agriculture**

(Same as EARTHSYS 184, EARTHSYS 284, EESS 284) The effects of climate change on global food and agricultural systems. Climate assessment and socioeconomic modeling approaches to quantify the impacts of climate on agro-ecosystems and society. Enrollment limited to 25; priority to graduate students, seniors, and juniors. Prerequisites: ECON 106/206.

3-4 units, Spr (Lobell, D)

#### **EESS 241. Remote Sensing of the Oceans**

(Same as EARTHSYS 141, EARTHSYS 241, EESS 141) How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features. GER: DB-NatSci

3-4 units, alternate years, not given this year

## **GRADUATE COURSES IN ENVIRONMENTAL EARTH SYSTEM SCIENCE**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **EESS 158. Geomicrobiology**

(Same as EESS 258, EARTHSYS 158, EARTHSYS 258) How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and

evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

3 units, Win (Francis, C)

### **EESS 201. Climate Change and the IPCC**

(Same as EARTHSYS 201) The Intergovernmental Panel on Climate Change has begun work on its 5th Assessment Report, due in 2014. The Working Group II (WGII) contribution to the AR5 will have an increased focus on assessing vulnerability, impacts, and adaptation in the context of multiple stresses, assessing a broader range of impacts, including impacts on oceans systems, approaches for effectively managing the risks of climate change in the context of multiple stresses, and providing more information on the costs of climate change for different sectors and regions. Examination of the IPCC assessment process, as well as the current research on the range of issues that will be covered in the WGII report presented by Stanford faculty and Bay Area scientists involved in WGII.

1-2 units, Aut (Matson, P)

### **EESS 208. Topics in Geobiology**

(Same as GES 208) Reading and discussion of classic and recent papers in the field of Geobiology. Co-evolution of Earth and life; critical intervals of environmental and biological change; geomicrobiology; paleobiology; global biogeochemical cycles; scaling of geobiological processes in space and time.

1 unit, Aut (Payne, J; Francis, C)

### **EESS 211. Fundamentals of Modeling**

(Same as EARTHSYS 211) Simulation models are a powerful tool for environmental research, if used properly. The major concepts and techniques for building and evaluating models. Topics include model calibration, model selection, uncertainty and sensitivity analysis, and Monte Carlo and bootstrap methods. Emphasis is on gaining hands-on experience using the R programming language. Prerequisite: asic knowledge of statistics.

3 units, Aut (Lobell, D)

### **EESS 215. Earth System Dynamics**

This is a graduate level course that examines the dynamics of the Earth System from an integrated perspective. Lectures introduce the physical, biogeochemical, ecological, and human dimensions of the Earth System, with emphasis on feedbacks, thresholds and tipping points. Human interactions with climate and land systems are emphasized in order to enable in-depth exploration of Earth System dynamics. Lab projects focus on a region of the globe for which rich coordinated data sources exist and complex Earth System dynamics dominate the environment

4 units, Spr (Difffenbaugh, N; Lambin, E; Field, C)

### **EESS 216. Terrestrial Biogeochemistry**

(Same as BIO 216) Nutrient cycling and the regulation of primary and secondary production in terrestrial, freshwater, and marine ecosystems; land-water and biosphere-atmosphere interactions; global element cycles and their regulation; human effects on biogeochemical cycles. Prerequisite: graduate standing in science or engineering; consent of instructor for undergraduates or coterminial students.

3 units, not given this year

### **EESS 217. Climate of the Cenozoic**

For upper-division undergraduate and graduate students. The paleoclimate of the Cenozoic and how climate changes in the past link to the carbon cycle. Topics include long- and short-term records of climate on continents and oceans, evidence for and causes of hyperthermal events, how the Earth's climate has responded in increased carbon dioxide in the atmosphere. Guest speakers, student presentations.

3 units, not given this year

### **EESS 220. Physical Hydrogeology**

(Same as CEE 260A) (Formerly GES 230.) Theory of underground water occurrence and flow, analysis of field data and aquifer tests, geologic groundwater environments, solution of field problems, and groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus.

4 units, Aut (Gorelick, S)

### **EESS 221. Contaminant Hydrogeology**

(Same as CEE 260C) (Formerly GES 231.) For earth scientists and

engineers. Environmental and water resource problems involving contaminated groundwater. The processes affecting contaminant migration through porous media including interactions between dissolved substances and solid media. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and optimal aquifer remediation. Prerequisite: GES 230 or CEE 260A or equivalent.

4 units, Win (Gorelick, S)

### **EESS 231. Communicating Environmental Research Using Narratives and Stories**

(Same as EESS 131, EARTHSYS 131, EARTHSYS 231) Creative strategies by which earth scientists can overcome impediments to scientific literacy. Construction of stories and narratives out of research. The role of imagination and cognitive perception in environmental issues. Barriers and problems that arise in risk and science awareness. Connections between environmentalism and environmental science. Environmental issues in fictional narratives. The responsible function for earth scientists in public debates. Reflections on the role of science in current and future issues likely to involve members outside of science. Priority given to students seeking degrees in the School of Earth Sciences.

1 unit, not given this year

### **EESS 234. Stable Isotopes in Biogeochemistry**

(Same as EARTHSYS 134, EARTHSYS 234, EESS 134) Light stable isotopes and their application to geological, ecological, and environmental problems. Isotopic systematics of hydrogen, carbon, nitrogen, oxygen, and sulfur; chemical and biogenic fractionation of light isotopes in the atmosphere, hydrosphere, and rocks and minerals.

3 units, not given this year

### **EESS 240. Advanced Oceanography**

For upper-division undergraduates and graduate students in the earth, biologic, and environmental sciences. Topical issues in marine science/oceanography. Topics vary each year following or anticipating research trends in oceanographic research. Focus is on links between the circulation and physics of the ocean with climate in the N. Pacific region, and marine ecologic responses. Participation by marine scientists from research groups and organizations including the Monterey Bay Aquarium Research Institute.

3 units, not given this year

### **EESS 242. Antarctic Marine Geology**

(Same as EARTHSYS 272) For upper-division undergraduates and graduate students. Intermediate and advanced topics in marine geology and geophysics, focusing on examples from the Antarctic continental margin and adjacent Southern Ocean. Topics: glaciers, icebergs, and sea ice as geologic agents (glacial and glacial marine sedimentology, Southern Ocean current systems and deep ocean sedimentation), Antarctic biostratigraphy and chronostratigraphy (continental margin evolution). Students interpret seismic lines and sediment core/well log data. Examples from a recent scientific drilling expedition to Prydz Bay, Antarctica. Up to two students may have an opportunity to study at sea in Antarctica during Winter Quarter.

3 units, NEXTYEAR

### **EESS 243. Marine Biogeochemistry**

(Same as EARTHSYS 143, EARTHSYS 243, EESS 143) (Graduate students register for 243.) Processes that control the mean concentration and distribution of biologically utilized elements and compounds in the ocean. Processes at the air-sea interface, production of organic matter in the upper ocean, remineralization of organic matter in the water column, and processing of organic matter in the sediments. Cycles of carbon, oxygen, and nutrients; the role of the ocean carbon cycle in interannual to decadal variability, paleoclimatology, and the anthropogenic carbon budget.

3-4 units, Win (Arrigo, K)

### **EESS 244. Marine Ecosystem Modeling**

Practical background necessary to construct and implement a 2-dimensional (space and time) numerical model of a simple marine ecosystem. Computer programming, model design and parameterization, and model evaluation. Students develop and

refine their own multi-component marine ecosystem model.

*3 units, alternate years, not given this year*

### **EESS 245. Advanced Biological Oceanography**

For upper-division undergraduates and graduate students. Themes vary annually but include topics such as marine bio-optics, marine ecological modeling, and phytoplankton primary production. Hands-on laboratory and computer activities, and field trips into local waters. May be repeated for credit.

*3-4 units, Aut (Arrigo, K)*

### **EESS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation**

(Same as EARTHSYS 146A, EARTHSYS 246A, EESS 146A, GEOPHYS 146A, GEOPHYS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

*3 units, Win (Thomas, L; Diffenbaugh, N; Skinner, C), alternate years, not given next year*

### **EESS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation**

(Same as EARTHSYS 146B, EARTHSYS 246B, EESS 146B, GEOPHYS 146B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

*3 units, Spr (Thomas, L; Diffenbaugh, N), alternate years, not given next year*

### **EESS 250. Elkhorn Slough Microbiology**

(Formerly GES 270.) The microbial ecology and biogeochemistry of Elkhorn Slough, an agriculturally-impacted coastal estuary draining into Monterey Bay. The diversity of microbial lifestyles associated with estuarine physical/chemical gradients, and the influence of microbial activity on the geochemistry of the Slough, including the cycling of carbon, nitrogen, sulfur, and metals. Labs and field work. Location: Hopkins Marine Station.

*3 units, Sum (Staff)*

### **EESS 253. Soils and Nutrient Cycling in the Amazon Rainforest**

(Same as EARTHSYS 153, EARTHSYS 253, EESS 153) Focus is on Amazon soils as dynamic but also as a non-renewable natural resource, especially in the impoverished soils. Course will cover the importance of the soils in the Amazon region rain forest ecosystem sustainability and the geographic distribution of the main soils classes in the Amazon region. Additional topics include the chemical and mineralogical characteristics of these soils classes and the factors influencing elemental cycling within the terrestrial Amazon rain forest ecosystem.

*3 units, Win (Staff)*

### **EESS 253S. Hopkins Microbiology Course**

(Same as BIO 274S, BIOHOPK 274, CEE 274S) (Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other

biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.

*9-12 units, Sum (Staff)*

### **EESS 256. Soil and Water Chemistry**

(Same as EARTHSYS 156, EARTHSYS 256, EESS 156) (Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

*1-4 units, Win (Fendorf, S)*

### **EESS 258. Geomicrobiology**

(Same as EESS 158, EARTHSYS 158, EARTHSYS 258) How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

*3 units, Win (Francis, C)*

### **EESS 259. Environmental Microbial Genomics**

The application of molecular and environmental genomic approaches to the study of biogeochemically-important microorganisms in the environment without the need for cultivation. Emphasis is on genomic analysis of microorganisms by direct extraction and cloning of DNA from natural microbial assemblages. Topics include microbial energy generation and nutrient cycling, genome structure, gene function, physiology, phylogenetic and functional diversity, evolution, and population dynamics of uncultured communities.

*1-3 units, alternate years, not given this year*

### **EESS 260. Advanced statistical methods for earth system analysis**

Introduction for graduate students to important issues in data analysis relevant to earth system studies. Emphasis on concepts and implementation (in R), rather than formal proofs. Likely topics include the bootstrap, non-parametric methods, regression in the presence of spatial and temporal correlation, measurement errors, extreme value distributions, and high-dimensional regressions. Topics subject to change each year. Prerequisites: Stats 110 or equivalent, EESS 211

*3 units, Win (Rajaratnam, B; Lobell, D)*

### **EESS 262. Remote Sensing of Land**

(Same as EARTHSYS 142, EARTHSYS 242, EESS 162) The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

*4 units, Win (Lambin, E)*

### **EESS 263. Topics in Advanced Geostatistics**

(Same as ENERGY 242) Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran.

*3-4 units, not given this year*

### **EESS 273. Aquaculture and the Environment: Science, History, and Policy**

(Same as EARTHSYS 173, EARTHSYS 273, EESS 173) Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon

farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures.

3 units, Spr (Staff), alternate years, not given next year

#### **EESS 281. Concepts of Urban Agriculture**

(Same as EARTHSYS 181, EARTHSYS 281, EESS 181) For advanced undergraduates and graduate students from all fields. Seminar. Current status of and potential for global urban agriculture. Topics include: environmental and economic dimensions of urban food production and sourcing; city policy and land-use planning; and an ecosystem services approach to urban agriculture. Developed and developing world contexts. Two field trips to nearby cities; guest lectures; case studies; group projects. Attendance at first class is mandatory. Enrollment is limited. Enrollment permissions will be determined after first class meeting.

3 units, Win (Matson, P)

#### **EESS 282. Current Issues in Sustainable Agriculture**

(Same as EARTHSYS 182, EARTHSYS 282, EESS 182) Sustainability and ethics of animal production in the U.S. Demystification of the marketing of agricultural products. The past, present, and future of small family farms. Farm labor issues. Students lead discussions and write response papers.

2 units, not given this year

#### **EESS 283. Food Matters: Agriculture in Film**

(Same as EARTHSYS 183, EARTHSYS 283, EESS 183) Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

1 unit, Win (Staff)

#### **EESS 284. Climate and Agriculture**

(Same as EARTHSYS 184, EARTHSYS 284, EESS 184) The effects of climate change on global food and agricultural systems. Climate assessment and socioeconomic modeling approaches to quantify the impacts of climate on agro-ecosystems and society. Enrollment limited to 25; priority to graduate students, seniors, and juniors. Prerequisites: ECON 106/206.

3-4 units, Spr (Lobell, D)

#### **EESS 301. Topics in Environmental Earth System Science**

Current topics, issues, and research related to interactions that link the oceans, atmosphere, land surfaces and freshwater systems. May be repeated for credit.

1 unit, Aut (Francis, C), Win (Chamberlain, P), Spr (Dunbar, R)

#### **EESS 318. Global Land Use Change to 2050**

An exploration of the fundamental drivers behind long term shifts in the demand for, and supply of, land for agriculture, forestry and environmental uses over the next four decades. Topics include trends in food and bioenergy demand, crop productivity on existing and potential croplands, water and climate constraints, non-extractive uses such as carbon sequestration, and the role of global trade and public policies. Students will lead discussions of weekly readings and perform simple numerical experiments to explore the role of individual drivers of long run global land use.

2 units, Win (Lobell, D)

#### **EESS 322A. Seminar in Hydrogeology**

Current topics. May be repeated for credit. Autumn Quarter has open enrollment, For Winter Quarter, consent of instructor is required.

1 unit, not given this year

#### **EESS 322B. Seminar in Hydrogeology**

Current topics. May be repeated for credit. Prerequisite: consent of instructor.

1 unit, Win (Gorelick, S)

#### **EESS 323. Stanford at Sea**

(Same as BIOHOPK 182H, BIOHOPK 323H, EARTHSYS 323) (Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration

with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.

16 units, alternate years, not given this year

#### **EESS 330. Advanced Topics in Hydrogeology**

Topics: questioning classic explanations of physical processes; coupled physical, chemical, and biological processes affecting heat and solute transport. May be repeated for credit.

1-2 units, Win (Staff)

#### **EESS 342. Geostatistics**

Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.

1-2 units, not given this year

#### **EESS 342B. Geostatistics**

Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.

1-2 units, not given this year

#### **EESS 342C. Geostatistics**

Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.

1-2 units, not given this year

#### **EESS 363F. Oceanic Fluid Dynamics**

(Same as CEE 363F) Dynamics of rotating stratified fluids with application to oceanic flows. Topics include: inertia-gravity waves; geostrophic and cyclogeostrophic balance; vorticity and potential vorticity dynamics; quasi-geostrophic motions; planetary and topographic Rossby waves; inertial, symmetric, barotropic and baroclinic instability; Ekman layers; and the frictional spin-down of geostrophic flows. Prerequisite: CEE 262A or a graduate class in fluid mechanics.

3 units, Spr (Thomas, L)

#### **EESS 385. Practical Experience in the Geosciences**

On-the-job training, that may include summer internship, in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets USCIS requirements for F-1 curricular practical training. May be repeated for credit.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EESS 398. Current Topics in Ecosystem Modeling**

1-2 units, not given this year

#### **EESS 400. Graduate Research**

May be repeated for credit. Prerequisite: consent of instructor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EESS 801. TGR Project**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **EESS 802. TGR Dissertation**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## ETHICS IN SOCIETY (ETHICSOC) COURSES

### UNDERGRADUATE COURSES IN ETHICS IN SOCIETY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **ETHICSOC 8SI. What Are They Thinking?**

How ethical is networking? Is there a difference between being a good Facebook friend and being a good friend? What should dating look like at Stanford? Is there really a hook-up culture on campus? How should parents fit in my life? Is it important to go into the lockstep march to adulthood immediately after college? Are you David Brooks' quintessential Organization Kid? Personal growth questions through discussion and dialogue. Student-initiated course. (AU)

1 unit, Aut (Sockness, B), Win (Sockness, B), Spr (Sockness, B)

#### **ETHICSOC 9SI. Civil Liberties and Critical Issues in American Society**

This class is a lecture series featuring guest speakers from various academic departments, the Stanford Law School, and public interest organizations from around the Bay Area. Issues that will

be addressed include prison reform, capital punishment, education reform, and other issues. Some of the speakers will include Professors Larry Marshall and Richard Ford of the Stanford Law School, as well as Richard Lee (Prop 19 advocate).

*1 unit, not given this year*

### **ETHICSOC 10. Ethics in Theory and Practice**

(Same as PHIL 22) Weekly talks by Stanford faculty on important questions of ethics that arise in private and public life. These questions arise in all disciplines and are central to many of the main problems confronting humanity today. Such questions include: what is our obligation to future generations? are there any human rights? what is the appropriate role of religion in politics? is capital punishment ever justified? what are the ethical obligations of a researcher? should the university teach moral values? what principles of justice should govern the distribution of K-12 education? Class meets Fridays from noon to 1:05. Format is an informal talk of about 35- 40 minutes, followed by discussion.

*1 unit, Aut (Sockness, B), Win (Sockness, B), Spr (Sockness, B)*

### **ETHICSOC 10SC. The Meaning of Life: Moral and Spiritual Inquiry through Literature**

Short novels and plays will provide the basis for reflection on ethical values and the purpose of life. Some of the works to be studied are F. Scott Fitzgerald's *The Great Gatsby*, George Bernard Shaw's *Major Barbara*, Hermann Hesse's *Siddhartha*, Jane Smiley's *Good Will*, Robert Bolt's *A Man for All Seasons*, and John Steinbeck's *Of Mice and Men*. We will read for plot, setting, character, and theme using a two-text method- looking at the narrative of the literary work and students' own lives-rather than either deconstructing the literature or relating it to the author's biography and psychology. The questions we will ask have many answers. Why are we here? How do we find meaningful work? What can death teach us about life? What is the meaning of success? What is the nature of true love? How can one find balance between work and personal life? How free are we to seek our own destiny? What obligations do we have to others? We will draw from literature set in the United States and elsewhere.

*2 units, not given this year*

### **ETHICSOC 20. Introduction to Moral Philosophy**

(Same as PHIL 2) What is the basis of moral judgment? What makes right actions right and wrong actions wrong? What makes a state of affairs good or worth promoting? What is it to have a good or virtuous character? Answers to classic questions in ethics through the works of traditional and contemporary authors. Fulfills the Philosophy ethical reasoning requirement. GER:DB-Hum, EC-EthicReas

*5 units, Win (Dannenberg, J)*

### **ETHICSOC 133. Ethics and Politics of Public Service**

(Same as CSRE 178, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133) Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. GER:DB-SocSci

*5 units, Win (Mitchell, T)*

### **ETHICSOC 136R. Introduction to Global Justice**

(Same as INTNLREL 136R, PHIL 76, POLISCI 136R, POLISCI 336) Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.

*5 units, Spr (Satz, D)*

### **ETHICSOC 157. Moral Foundations of Capitalism**

(Same as ETHICSOC 257) Preference to sophomores and juniors. An interdisciplinary examination of alternative and largely incompatible twentieth-century defenses of the morality of capitalism, with a concentration on economic, Objectivist, and

Christian arguments, considered historically, economically, politically, and philosophically. Readings from Adam Smith, Karl Marx, authors for and against slavery, John Maynard Keynes, Theodore Roosevelt, Herbert Hoover, Austrian School economists, Milton Friedman, Dinesh D'Souza, and George Gilder. A reading of Ayn Rand's *Atlas Shrugged*. A concluding application of studied theories to a few recent public policy issues. GER:DB-Hum

*5 units, Win (McCaskey, J)*

### **ETHICSOC 170. Ethical Theory**

(Same as PHIL 170, PHIL 270) Major strands in contemporary ethical theory. Readings include Bentham, Mill, Kant, and contemporary authors. GER:DB-Hum, EC-EthicReas

*4 units, Spr (Dannenberg, J)*

### **ETHICSOC 171. Justice**

(Same as IPS 208, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality. GER:DB-Hum, EC-EthicReas

*4-5 units, Aut (Dougherty, T)*

### **ETHICSOC 174A. Moral Limits of the Market**

(Same as PHIL 174A, PHIL 274A) Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases. GER:DB-Hum

*4 units, not given this year*

### **ETHICSOC 174L. Betrayal and Loyalty, Treason and Trust**

(Same as ETHICSOC 274L, PHIL 174L, PHIL 274L) The main topic of the seminar is Betrayal : its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve

*2 units, Win (Staff)*

### **ETHICSOC 175M. The Ethics of War**

(Same as PHIL 90B) Issues both in contemporary just war theory and political philosophy. Relevant questions include: Can conscription ever be justified? If not, is there anything wrong with targeting poor people as part of efforts to recruit a 'volunteer' military? If, during war itself, combatants act in ways prohibited by the moral requirements governing war's conduct, then does it make any moral difference whether they were acting as ordered? And how do we identify these moral requirements in the first place? For example, what distinguishes a legitimate target from an illegitimate one? What determines whether military action is disproportionate? What, if anything, is morally distinctive about terrorism? Explores the complexities behind these questions and others, with a view to evaluating the potential answers to them.

*4 units, not given this year*

### **ETHICSOC 176M. Equality and its Critics**

Ours is a deeply unequal society. What, if anything, is wrong with that? Focus is on contemporary theories of distributive justice, and in particular, egalitarian distributive theories. Questions include: What is the point of equality? How should we weigh the pursuit of equality against other values, like freedom, personal attachments, or utility? In what respect should people be equal? Do egalitarian

norms span the globe, or stop at water's edge? Readings include Rawls, Scanlon, G.A. Cohen, Nagel, and Elizabeth Anderson.

*4 units, not given this year*

**ETHICSOC 177M. Human Rights and Moral Question**

(Same as ETHICSOC 277M, PHIL 177M, PHIL 277M) The proliferation of human rights in the discourse of international justice has raised a number of important questions in both moral and legal theory. What are human rights? How should they be conceptualized? Who ought to bear the duties associated with them? Can their protection justify military interventions into sovereign states? This course will cover topics in moral and legal theory surrounding human rights. The course has three main focuses. The first concerns the question of what these rights are. The second focus is on the various substantive moral justifications for the protection of human rights. The third is on the moral issues raised by the dominance of human rights in international law and relations: can any rights be universal? How are these rights to be framed in the light of cross-cultural values and claims about cultural dominance? A theme throughout will be the connections between these questions. The way we answer the question of what human rights are, and how they c GER:EC-EthicReas

*4-5 units, Spr (Thomas, J)*

**ETHICSOC 178M. Justice and the Environment**

(Same as ETHICSOC 278M, PHIL 178M, PHIL 278M, POLISCI 134L) Explores the normative questions that arise in environmental policy debates, including arguments over pollution permit markets, conservation regulations, and global warming mitigation efforts. What are the morally relevant ways in which the environment is different from other economic resources? How should the environment be valued? What are our obligations to conserve for future generations? How should the burdens of conservation be distributed? Engages with a variety of philosophical traditions including utilitarianism, deep ecology, liberalism, and communitarianism. GER:EC-EthicReas

*5 units, Win (Mazor, J)*

**ETHICSOC 185M. Contemporary Moral Problems**

(Same as PHIL 72) As individuals and as members of societies, we make choices that can be assessed from the moral point of view. What choices should we make, and how should we make them? Is it ok to buy iThings when others lack basic nutrition? Does a preference for the taste of meat justify killing animals? When is deceptive seduction seriously wrong and when is it just sketchy? Topics include exploitation, poverty, sexual and reproductive autonomy, commercialization, homelessness, citizenship, education, stereotypes, affirmative action, and social responsibility. GER:EC-EthicReas

*4 units, Aut (Dougherty, T)*

**ETHICSOC 190. Ethics in Society Honors Seminar**

(Same as PHIL 178) For students planning honors in Ethics in Society. Methods of research. Students present issues of public and personal morality; topics chosen with advice of instructor.

*3 units, Win (Sockness, B)*

**ETHICSOC 198. Community Engagement Internship**

Restricted to Ethics in Society minors with the citizenship option. Opportunities for students to engage in community work via the Haas Center for Public Service. Students work with Haas Center staff to design an internship involving community-based research or supported by a Haas Center fellowship or community service work/study, or to serve for an academic year as a tutor in one of the Haas Center's several K-12 programs in East Palo Alto. May be repeated for credit.

*3-5 units, not given this year*

**ETHICSOC 199. Independent Studies in Ethics in Society**

May be repeated for credit.

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**ETHICSOC 200A. Ethics in Society Honors Thesis**

Limited to Ethics in Society honors students, who must enroll once in A and once in B.

*1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**ETHICSOC 200B. Ethics in Society Honors Thesis**

Limited to Ethics in Society honors students, who must enroll once in A and once in B.

*1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**ETHICSOC 232T. Theories of Civil Society, Philanthropy, and the Nonprofit Sector**

(Same as POLISCI 236) What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? How do nongovernmental organizations operate domestically and globally? The historical development and modern structure of civil society emphasizing philanthropy and the nonprofit sector. Readings in political philosophy, political sociology, and public policy.

*5 units, Spr (Staff)*

**GRADUATE COURSES IN ETHICS IN SOCIETY**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**ETHICSOC 257. Moral Foundations of Capitalism**

(Same as ETHICSOC 157) Preference to sophomores and juniors. An interdisciplinary examination of alternative and largely incompatible twentieth-century defenses of the morality of capitalism, with a concentration on economic, Objectivist, and Christian arguments, considered historically, economically, politically, and philosophically. Readings from Adam Smith, Karl Marx, authors for and against slavery, John Maynard Keynes, Theodore Roosevelt, Herbert Hoover, Austrian School economists, Milton Friedman, Dinesh D'Souza, and George Gilder. A reading of Ayn Rand's Atlas Shrugged. A concluding application of studied theories to a few recent public policy issues.

*5 units, Win (McCaskey, J)*

**ETHICSOC 274L. Betrayal and Loyalty, Treason and Trust**

(Same as ETHICSOC 174L, PHIL 174L, PHIL 274L) The main topic of the seminar is Betrayal. : its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve

**ETHICSOC 278M. Justice and the Environment**

(Same as ETHICSOC 178M, PHIL 178M, PHIL 278M, POLISCI 134L) Explores the normative questions that arise in environmental policy debates, including arguments over pollution permit markets, conservation regulations, and global warming mitigation efforts. What are the morally relevant ways in which the environment is different from other economic resources? How

should the environment be valued? What are our obligations to conserve for future generations? How should the burdens of conservation be distributed? Engages with a variety of philosophical traditions including utilitarianism, deep ecology, liberalism, and communitarianism.

*5 units, Win (Mazor, J)*

### **ETHICSOC 280. Transitional Justice, International Criminal Tribunals, and the International Criminal Court**

(Same as IPS 280) Historical backdrop of the Nuremberg and Tokyo Tribunals. The creation and operation of the Yugoslav and Rwanda Tribunals (ICTY and ICTR). The development of hybrid tribunals in East Timor, Sierra Leone, and Cambodia, including evaluation of their success in addressing perceived shortcomings of the ICTY and ICTR. Examination of the role of the International Criminal Court and the extent to which it will succeed in supplanting all other ad hoc international justice mechanisms and fulfill its goals. Analysis focuses on the politics of creating such courts, their interaction with the states in which the conflicts took place, the process of establishing prosecutorial priorities, the body of law they have produced, and their effectiveness in addressing the needs of victims in post-conflict societies.

*3-5 units, Spr (Cohen, D)*

## FAMILY MEDICINE (FAMMED) COURSES

### **UNDERGRADUATE COURSES IN FAMILY MEDICINE**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **FAMMED 199. Undergraduate Directed Reading and Research in Family and Community Medicine**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

*1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

### **GRADUATE COURSES IN FAMILY MEDICINE**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **FAMMED 210. The Healer's Art**

Explores the human dimensions of medicine, creating a firm foundation for meeting the challenging demands of medical training and practice. A unique curriculum developed by Dr. Rachel Naomi Remen at UCSF and now offered at 70 U.S. medical schools and worldwide. (For details/evaluations see [http://ishiprograms.org/programs-medical\\_educators.html](http://ishiprograms.org/programs-medical_educators.html)).

Medical students and faculty participate together in an innovative discovery model process that enables an in-depth sharing of experience, beliefs, aspirations and personal truths. Topics include deep listening, presence, acceptance, loss, grief, healing, relationship, encounters with awe and mystery, finding meaning, service, and self-care practices. No papers/exams. May be repeated for credit.

*1 unit, Aut (Feldstein, B; Schillinger, E)*

#### **FAMMED 213. Medical Tai Chi**

Tai chi as a recognized form of complimentary and alternative medicine. Intended to promote student health and well-being and to decrease stress, depression, and anxiety through the practice of tai chi. Weekly practices under the instruction of world-renowned 20th generation tai chi expert, Master Shu Dong Li. Includes analysis of the literature/research regarding health benefits of tai chi.

*1 unit, Aut (Schillinger, E; Subrahmanian, K), Win (Schillinger, E; Subrahmanian, K), Spr (Staff)*

#### **FAMMED 219. Mind-Body Medicine**

A small group experiential exploration of the interconnections among human capacities such as thought, emotion, belief, attitudes, and physical health. Review and practice of specific

skills (including mindfulness exercises, meditation, imagery, visualization, body awareness, autogenics, and biofeedback) to enhance self-awareness, self-expression, and stress management. Readings relevant to mind-body medicine made available. Anticipated benefits to class participants include discovering and mobilizing their capacity to participate in valuable and proven methods of self knowledge and stress reduction, while dealing with the frustrations and alienation that many students experience in medical school and beyond.

*1 unit, Win (Weinlander, E; Jones, E)*

#### **FAMMED 241. Assistantship in Family and Community Medicine**

An in-depth experience with a family physician preceptor following the first year of the pre-clinical curriculum. The student applies during the first year to participate in the summer following completion. Application is through the Center for Family and Community Medicine ([avjohn@stanford.edu](mailto:avjohn@stanford.edu)). Placements with family physicians' practices throughout California.

*6-12 units, Aut (Grudzen, M; Schillinger, E)*

#### **FAMMED 243. Introduction to Integrative Medicine**

(Same as ANES 243) Presentations by local, national, and international experts in various modalities of integrative medicine commonly used by patients in the US, including mind-body medicine (biofeedback, clinical hypnosis, meditation, yoga); traditional whole systems of medicine (traditional Chinese medicine, Ayurveda); biological therapies (botanical medicine, supplements, herbal medicine); manipulative therapies (chiropractic, massage); and acupuncture. Lectures focus on evidence supporting the potential value of various treatment modalities and explanations of both the traditional and proposed scientific mechanisms of actions. Most classes include an experiential portion.

*1 unit, NEXTYEAR*

#### **FAMMED 244. Ethnicity and Medicine**

(Same as HUMBIO 121E) Weekly lecture series. Linguistic, social class, and cultural factors that impact patient care. Culturally sensitive health care services and contemporary research issues involving minority and underserved populations. Topics include health care inequities and medical practices of African Americans, Asians, Latinos, Native Americans, immigrants, and refugees in both urban and rural settings. Only students taking the course for 3 units may earn a letter grade.

*1-3 units, Spr (Garcia, R)*

#### **FAMMED 245. Women and Health Care**

Lecture series. Topics of interest to women as health care consumers and providers. The historical role of women in health care; current and future changes.

*1 unit, Aut (Grudzen, M; Schillinger, E)*

#### **FAMMED 252. Medicine & Horsemanship: An Outdoor, Equine Assisted Learning Course for Doctor-Patient Relationship**

An outdoor experience working with horses to develop interpersonal skills for the clinician-patient and peer-peer relationship. A challenge throughout a clinical career is to conduct relationships with patients and colleagues in a manner that is professional, perceptive, confident, and authentic. Horses mirror and magnify our intentions and behaviors. Working with horses requires sensitivity to nonverbal cues, discrimination in the quality and amount of physical contact, and an awareness of one's emotional state, all important skills for relating to patients. Horses give non-judgmental feedback about our personal communication and leadership styles and our ability to operate from a place empathy and kindness. The course also teaches how to recognize subjectivity in judgment and how to overcome fear and immobility in the face of uncertainty. No riding is required and no previous horse experience is assumed. Open to anyone with direct patient care responsibility, space permitting. Limit

*1 unit, Aut (Kane, B; Schillinger, E)*

#### **FAMMED 280. Early Clinical Experience in Family and Community Medicine**

Provides an observational experience for pre-clinical students as determined by the instructor and student. Prerequisite: consent of instructor.

*1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**FAMMED 299. Directed Reading in Family and Community Medicine**

Students organize an individualized study program in family and community medicine. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**FAMMED 370. Medical Scholars Research**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**FAMMED 399. Graduate Research**

Students interested in conducting research in a specific area of family and community medicine undertake investigations sponsored by the faculty instructor. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## FEMINIST STUDIES (FEMST) COURSES

### UNDERGRADUATE COURSES IN FEMINIST STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**FEMST 101. Introduction to Feminist Studies**

(Same as AMSTUD 107, CSRE 108, HISTORY 107) Introduction to interdisciplinary feminist scholarship, which seeks to understand the creation, perpetuation, and critiques of gender inequalities. Topics include the historical emergence of feminist politics and contemporary analyses of work and family, health and sexuality, creativity, and politics. Close attention to the intersections of race, gender, ethnicity, and sexuality and to international, as well as U.S., perspectives. Students learn to think critically about gender in the past, present, and future. GER:DB-SocSci, EC-Gender

4-5 units, Aut (Freedman, E)

**FEMST 102. Contemporary Topics in Feminist & Queer Theories**

(Same as FEMST 202) Introduction to the points of overlap and departure in the development of feminist and queer theories. Interdisciplinary perspectives on gender and sexuality in relation to current discussions of race, class, ethnicity, citizenship, and ability. Topics include the production of femininity and masculinity, human-animal divisions, transgender subjectivities, diasporic sexualities, disability and sexuality, same-sex marriage. Course materials include theoretical texts as well as film, visual art, and literature. Preference to Feminist Studies majors.

4-5 units, not given this year

**FEMST 103. Feminist Theories and Methods Across the Disciplines**

(Same as FEMST 203, PHIL 153, PHIL 253) The interdisciplinary foundations of feminist thought. The nature of disciplines and of interdisciplinary work. Challenges of feminism for scholarship and research. GER:EC-Gender

4-5 units, Win (Longino, H)

**FEMST 104A. Junior Seminar and Practicum**

Preference to and required of Feminist Studies majors; others require consent of instructor. Feminist experiential learning projects related to critical studies in gender and sexuality. Identifying goals, grant proposal writing, and negotiating ethical issues in feminist praxis. Developing the relationship between potential projects and their academic focus in the major.

1 unit, Win (Coll, K)

**FEMST 104B. Senior Seminar and Practicum**

Required for Feminist Studies majors. Non-majors enrolled with consent of instructor. Students develop oral reports on their practicum and its relationship to their academic work, submit a report draft and revised written analysis of the practicum, and discuss applications of feminist scholarship. May be repeated once for credit.

2 units, Aut (Coll, K)

**FEMST 105. Honors Work**

(Staff)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**FEMST 108. Internship in Feminist Studies**

For non-majors. Supervised field, community, or lab experience in law offices, medical research and labs, social service agencies, legislative and other public offices, or local and national organizations that address issues related to gender and/or sexuality. One unit represents approximately three hours work per week. Required paper. May be repeated for credit. Service Learning Course (certified by Haas Center). Prerequisites: course in Feminist Studies, consent of program office, written consent of faculty sponsor, application.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**FEMST 120. Introduction to Queer Studies**

A historical overview of key theoretical developments in queer studies. Multidisciplinary perspective from a social constructionist approach to gender and sexual identity, which not only affects understandings of queer people, but straight as well. Examines how queer theory has been influential across disciplines and in popular culture, refining not only an understanding of gender and sexuality but also providing new critical perspectives for social theory more broadly. Engagement with contemporary debates and controversies in the public domain. GER:EC-Gender

4-5 units, NEXTYEAR

**FEMST 120. QUEER RAZA**

(Same as ILAC 287) Examination of cultural representations by U.S. Latin@s that explore the following questions: How is the mutual constitution of race/sex/class/gender theorized and represented? How is desire racialized? How is racial difference produced through sex acts and what is the function of sex in racial (self)formation? How to reconcile pleasure and desire with histories of imperialism and (neo)colonialism and other structures of power? How do these texts reinforce or contest stereotypes and the ideal bodies of national identity? How do these texts produce queerness as a web of social relations?

3-5 units, Win (Yarbro-Bejarano, Y)

**FEMST 138. Violence Against Women: Theory, Issues, and Prevention**

(Same as FEMST 238) Course offers an interdisciplinary feminist perspectives on the causes of gender violence, addresses multi-level approaches to ending gender violence and explores the relationship between violence against women and other forms of oppression such as racism, economic exploitation, heterosexism, and social class. Framework addresses institutional barriers maintaining this violence in our culture and how solutions must also be multidimensional. All students, women and men, are encouraged to become allies in this effort and will apply theoretical perspectives to campus service-learning projects. Limited enrollment. Prerequisite: consent of instructor. GER:EC-Gender

3-4 units, Aut (Baran, N)

**FEMST 139. Rereading Judaism in Light of Feminism**

(Same as JEWISHST 139) During the past three decades, Jewish feminists have asked new questions of traditional rabbinic texts, Jewish law, history, and religious life and thought. Analysis of the legal and narrative texts, rituals, theology, and community to better understand contemporary Jewish life as influenced by feminism. GER:EC-Gender

4-5 units, NEXTYEAR

**FEMST 140A. Destroying Dichotomies: Exploring Multiple Sex, Gender & Sexual Identities**

Examination of sex, gender, sexual identities & expressions through studying the LGBTQI (lesbian, gay, bisexual, transgender, queer, intersex) community using a sociological lens. Readings in feminist and queer theory, films, class presentations, and discussion. Thematic focus in valuing the diversity of human experience. Students will develop their skills in critical reading, writing and thinking about gender and sexuality.

3-5 units, Aut (Fogarty, A)

**FEMST 140C. Gender Transgression**

Exploration of gender as a category and (compulsory) identification. What happens when people challenge or refuse

gender categories and stereotypes? Participating in conversations initiated in queer and feminist theory, anthropology, history, science, and popular culture, we will examine how gender works and consider the experiences, writing, and art of people who challenge it. Course culminates in an ethnographic research project. GER:EC-Gender

4-5 units, OCCASIONAL

#### **FEMST 140D. LGBT History in the United States**

(Same as HISTORY 257C) An introductory course on LGBT social, cultural, and political history in the United States. This course explores how categories of sexuality have changed over time, with particular emphasis on the relationship among homosexuality, heterosexuality, and transgenderism. Students will analyze how the intersections of race, class, and sexuality influenced the constitution of these categories and the politics of social relations. Historical and literary sources will be used to examine changes in LGBT experiences and identities, primarily in the twentieth century.

4-5 units, Spr (Davies Henderson, A)

#### **FEMST 140H. New Citizenship: Grassroots Movements for Social Justice in the U.S.**

(Same as ANTHRO 169A, CHICANST 168, CSRE 168) Focus is on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis.

5 units, Win (Coll, K)

#### **FEMST 140M. Queer Popular Culture**

Major identity issues of our time are played out in popular culture. This course investigates topics of queer gender and sexuality, and intersecting identity issues, in mainstream and 'underground' American popular culture and its reception over the last fifty years. Using critical theory texts on capitalism and identity to analyze examples drawn from popular music, film, tv, journalism, fashion, advertising, and online culture, we will consider queer culture, political debates, and Americans' changing views on identity and life. Midterm and final project.

4-5 units, Spr (Goldin-Perschbacher, S)

#### **FEMST 140S. Sisterhood and Identity: The Histories, Stories & Rhetoric of Sororities**

Explore the history, development, critique and praise of sororities. How are they advertised? Who joins them? What are the advertised benefits? How are sorority members discussed by outsiders? How do stereotypes of sororities impact perceptions of individuals and particular sororities? To consider these questions, we'll look at historical documents and analyze how groups described themselves as they were establishing; to consider current views, we'll also analyze recent documents (websites, books, etc.). We'll use both to consider how the rhetorical messages created by and about sororities shape public perceptions as well as individuals' experiences.

1-2 units, Win (Hanlon-Baker, P)

#### **FEMST 140W. Black Women Playwrights, 1900-the present**

(Same as AFRICAAM 176H, DRAMA 176H, DRAMA 336) From the rave reviews garnered by Angelina Weld Grimke's lynching play, Rachel to recent work by Lynn Nottage on Rwanda, black women playwrights have addressed key issues in modern culture and politics. We will analyze and perform work written by black women in the U.S., Britain and the Caribbean in the 20th and 21st centuries. Topics include: sexuality, surrealism, colonialism, freedom, violence, colorism, love, history, community and more. Playwrights include: Angelina Grimke, Lorraine Hansberry, Winsome Pinnock, Adrienne Kennedy, Suzan-Lori Parks, Ntozake Shange, Pearl Cleage, Sarah Jones, Anna DeVeare Smith, Alice Childress, Lydia Diamond and Zora Neale Hurston.

4 units, Aut (Brody, J)

#### **FEMST 153. Women and the Creative Imagination**

(Same as FEMST 253) Examines the nature of artistic imagination, considering the relationship among muses, mentors and models for women engaged painting, music, theatre, film, creative writing, dance, etc We will study how gender relations and sexual identity

have affected women's art across various cultures, lands and times. We will critically examine gender roles in music, visual art and literature. Active student participation (in writing, discussion as well as in attendance at performances, exhibits and readings) is the heart of the class. GER:DB-Hum, EC-Gender, WIM

4-5 units, Aut (Miner, V)

#### **FEMST 166. Feminist Theories of Knowledge**

(Same as PHIL 184F, PHIL 284F) Feminist critique of traditional approaches in epistemology and alternative feminist approaches to such topics as reason and rationality, objectivity, experience, truth, the knowing subject, knowledge and values, knowledge and power. GER:DB-Hum, EC-Gender

4 units, not given this year

#### **FEMST 188N. Imagining Women: Writers in Print and in Person**

(S,Sem) Stanford Introductory Seminar. Gender roles, gender relations and sexual identity explored in contemporary literature and conversation with guest authors. Weekly meetings designated for book discussion and meeting with authors. Interest in writing and a curiosity about diverse women's lives would be helpful to students. Students will use such tools as close reading, research, analysis and imagination. Seminar requires strong voice of all participants. Oral presentations, discussion papers, final projects. GER:DB-Hum, EC-Gender

4-5 units, Win (Miner, V)

#### **FEMST 191Q. Writing Women's Lives**

(F,Dial) Stanford Introductory Dialogue. Creative writing through dialogue focusing on prose about the lives of women in different cultures and generations. Novels, short stories, and micro-narrative including fiction and memoir. Students produce work using research, memory, imagination, and metaphor.

2 units, Aut (Miner, V)

#### **FEMST 195. Directed Reading**

May be repeated for credit. (Staff)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **FEMST 260. Seminar in Women's Health: Women and Disabilities**

(Same as FEMST 360) Explores visible and invisible disabilities, women's psychological as well as physical health, issues of access, caretaking, self-definition and the diversity of disabled women's identities. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of physical assistance. Prerequisite: consent of instructor. GER:DB-SocSci, EC-Gender

5 units, Spr (Krieger, S)

## **GRADUATE COURSES IN FEMINIST STUDIES**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **FEMST 202. Contemporary Topics in Feminist & Queer Theories**

(Same as FEMST 102) Introduction to the points of overlap and departure in the development of feminist and queer theories. Interdisciplinary perspectives on gender and sexuality in relation to current discussions of race, class, ethnicity, citizenship, and ability. Topics include the production of femininity and masculinity, human-animal divisions, transgender subjectivities, diasporic sexualities, disability and sexuality, same-sex marriage. Course materials include theoretical texts as well as film, visual art, and literature. Preference to Feminist Studies majors.

4-5 units, not given this year

#### **FEMST 203. Feminist Theories and Methods Across the Disciplines**

(Same as FEMST 103, PHIL 153, PHIL 253) The interdisciplinary foundations of feminist thought. The nature of disciplines and of interdisciplinary work. Challenges of feminism for scholarship and research.

4-5 units, Win (Longino, H)

#### **FEMST 238. Violence Against Women: Theory, Issues, and Prevention**

(Same as FEMST 138) Course offers an interdisciplinary feminist

perspectives on the causes of gender violence, addresses multi-leveled approaches to ending gender violence and explores the relationship between violence against women and other forms of oppression such as racism, economic exploitation, heterosexism, and social class. Framework addresses institutional barriers maintaining this violence in our culture and how solutions must also be multidimensional. All students, women and men, are encouraged to become allies in this effort and will apply theoretical perspectives to campus service-learning projects. Limited enrollment. Prerequisite: consent of instructor.

*3-4 units, Aut (Baran, N)*

**FEMST 253. Women and the Creative Imagination**

(Same as FEMST 153) Examines the nature of artistic imagination, considering the relationship among muses, mentors and models for women engaged painting, music, theatre, film, creative writing, dance, etc We will study how gender relations and sexual identity have affected women's art across various cultures, lands and times. We will critically examine gender roles in music, visual art and literature. Active student participation (in writing, discussion as well as in attendance at performances, exhibits and readings) is the heart of the class.

*4-5 units, Aut (Miner, V)*

**FEMST 360. Seminar in Women's Health: Women and Disabilities**

(Same as FEMST 260) Explores visible and invisible disabilities, women's psychological as well as physical health, issues of access, caretaking, self-definition and the diversity of disabled women's identities. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of physical assistance. Prerequisite: consent of instructor.

*5 units, Spr (Krieger, S)*

## FILM STUDIES (FILMSTUD) COURSES

### UNDERGRADUATE COURSES IN FILM STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**FILMSTUD 4. Introduction to Film Study**

Formal, historical, and cultural issues in the study of film. Classical narrative cinema compared with alternative narrative structures, documentary films, and experimental cinematic forms. Issues of cinematic language and visual perception, and representations of gender, ethnicity, and sexuality. Aesthetic and conceptual analytic skills with relevance to cinema. GER:DB-Hum

*5 units, Win (Levi, P)*

**FILMSTUD 6. Introduction to Digital Media**

Media beyond the horizon of cinema and television present unique problems of definition and analysis. Taking the digital - information represented as discrete values - as a reasonable approximation of the mechanics and fantasies of computation, course surveys theoretical approaches to code, networks, and cyberculture. Taking familiar formations like web sites and video games as objects by which to learn how thinkers have understood and envisioned emerging media from the mid-20th century to the present. Students to develop own methodological tools for becoming more critical users of digital media.

*5 units, not given this year*

**FILMSTUD 7. Introduction to Television Studies**

Television is arguably the most influential and ubiquitous mass medium of the last half century. Because of its familiarity and popularity, it is also often the medium most overlooked, dismissed, and maligned. Drawing from the history of television and of television scholarship, this course builds a theoretical framework for understanding this pivotal cultural form. Course covers interdisciplinary approaches to studying TV texts, TV audiences, and TV industries, including questions of the boundaries of television (from independent and avant-garde video to convergence). In the process students develop methodological

tools as critical television viewers.

*5 units, not given this year*

**FILMSTUD 100A. History of World Cinema I, 1895-1929**

(Same as FILMSTUD 300A) From cinema's precursors to the advent of synchronized sound. GER:DB-Hum

*4 units, alternate years, not given this year*

**FILMSTUD 100B. History of World Cinema II, 1930-1959**

(Same as FILMSTUD 300B) The impact of sound to the dissolution of Hollywood's studio system. GER:DB-Hum

*4 units, Aut (Laderman, D)*

**FILMSTUD 100C. History of World Cinema III, 1960-Present**

(Same as FILMSTUD 300C) From the rise of the French New Wave to the present. GER:DB-Hum

*4 units, Spr (Ma, J)*

**FILMSTUD 101. Fundamentals of Cinematic Analysis**

(Same as FILMSTUD 301) The close analysis of film. Emphasis is on formal and narrative techniques in structure and style, and detailed readings of brief sequences. Elements such as cinematography, mise-en-scène, composition, sound, and performance. Films from various historical periods, national cinemas, directors, and genres. Prerequisite: FILMSTUD 4 or equivalent. Recommended: ARTHIST 1 or FILMSTUD 102. GER:DB-Hum, WIM

*4 units, Win (Ma, J)*

**FILMSTUD 102. Theories of the Moving Image**

(Same as FILMSTUD 302) Major theoretical arguments and debates about cinema: realism, formalism, poststructuralism, feminism, postmodernism, and phenomenology. Prerequisites: ARTHIST 1, FILMSTUD 4. GER:DB-Hum

*4 units, Spr (Levi, P)*

**FILMSTUD 113. Queer Film and Media**

(Same as FILMSTUD 313) According to identity politics, visibility is a key tactic in the fight for societal acceptance and civil rights. But how is sexuality visible? Course addresses this question by analyzing queer film and media since the 1970s, focusing primarily on explicit representations of GLBTQ characters and communities in US cinema, television, and cyberculture. Themes include positive images, AIDS, coming out, celebrity, and the gay market. Through queer theory and criticism, analysis of the contested relationships between spectators and texts, identity and commodities, realism and fantasy, activism and entertainment, desire and politics. GER:DB-Hum

*4 units, not given this year*

**FILMSTUD 114. Comics**

(Same as FILMSTUD 314) The modern medium of comics, a history that spans 150 years. The flexibility of the medium encountered through the genres of humorous and dramatic comic strips, superheroes, undergrounds, independents, journalism, and autobiography. Innovative creators including McCay, Kirby, Barry, Ware, and critical writings including McCloud, Eisner, Groenstee. Topics include text/image relations, panel-to-panel relations, the page, caricature, sequence, seriality, comics in the context of the fine arts, and relations to other media. GER:DB-Hum

*4 units, not given this year*

**FILMSTUD 115. Documentary Issues and Traditions**

(Same as FILMSTUD 315) Issues include objectivity/subjectivity, ethics, censorship, representation, reflexivity, responsibility to the audience, and authorial voice. Parallel focus on form and content. GER:DB-SocSci

*4 units, Aut (Krawitz, J)*

**FILMSTUD 116. International Documentary**

(Same as FILMSTUD 316) Historical, aesthetic, and formal developments of documentary through nonfiction films in Europe, Asia, Latin America, and Africa. GER:DB-Hum

*4 units, not given this year*

**FILMSTUD 118. The Road Movie**

(Same as FILMSTUD 318) No doubt influenced by classical Hollywood, the road movie emerges as a distinct genre in the late 1960s, celebrating youth culture rebellion through an independent, anti-genre film sensibility. The course addresses these and other angles of the road movie. How does the road movie express American cultural values and historical preoccupations? How does

the road movie uniquely articulate issues of violence, sexuality, mobility and technology? How do international road movies differ from American road movies?

*4 units, not given this year*

**FILMSTUD 122. Kubrick**

(Same as FILMSTUD 322) Thematic and stylistic richness of the cinema of Stanley Kubrick. Methodological approaches to the subject. Emphasis is on questions of close textual analysis, authorship and genre, and critique of ideology. Focus is on *A Clockwork Orange*. Other films include: *2001: A Space Odyssey*, Barry Lyndon, *Killer's Kiss*, and *The Shining*.

*4 units, not given this year*

**FILMSTUD 130. American Independent Film**

(Same as FILMSTUD 330) Course explores the historical, aesthetic and social significance of the American independent film. The rise in popularity of American independent films since the 1980s proves that audiences do want to view innovative, sophisticated films. At the same time, film festival culture and Hollywood distribution companies have assimilated and packaged the "indie" film. Lecturers present a critical survey of the diverse range of American independent films, focusing on narrative experimentation from the 1960s through the 1990s.

*4 units, Win (Laderman, D)*

**FILMSTUD 131. CINEMATOGRAPH**

(Same as FILMSTUD 331, SLAVGEN 185, SLAVGEN 285) The term cinematography, which literally means inscribing motion, tends to lose the graphic part in modern use. However, several influential film-makers not only practiced the art of inscribing motion but also wrote texts discussing the aesthetic premises of cinematographic art. This course explores theories of cinema as propagated by the following film-makers: Vertov, Eisenstein, Godard, Bresson, Antonioni, Pasolini, Tarkovsky, Greenaway, and Lynch. Selected key texts will be supplemented by screenings of classic films, indicative of each director's work.

*3-5 units, Aut (Skakov, N)*

**FILMSTUD 132. East Asian Cinema**

(Same as FILMSTUD 332) Social, historical, and aesthetic dimensions of the cinemas of Japan, Hong Kong, Taiwan, mainland China, and Korea. Topics such as nation and gender, form and genre, and local and transnational conditions of practice and reception. Screenings include popular and art films from the silent to contemporary eras, including, Zhang Yimou, Wong Kar-wai, Hou Hsiao-hsien, Ozu Yasujiro, Kurosawa Akira, and Im Kwon-taek.

*4 units, not given this year*

**FILMSTUD 135. History of Video Art**

(Same as FILMSTUD 335) Focus is on artists who have contributed to the history of video art. Topics include: theoretical analyses of the medium; challenges to the performer-spectator dynamic (Dan Graham and Vito Acconci); feminist culture critique (Martha Rosler and Dara Birnbaum); closed-circuit installations and performances (Peter Campus and Joan Jonas); combinations of linguistic and bodily investigations (Bruce Nauman and Gary Hill); representations of girl culture (Sadie Benning); guerrilla television (TVTV and Ant Farm); image processing (Woody and Steina Vasulka); the turn toward cinematic installations (Stan Douglas and Douglas Gordon); and more recent trends (Cory Arcangel and Ryan Trecartin).

*4 units, not given this year*

**FILMSTUD 136. Gender and Sexuality in Chinese Cinema**

(Same as FILMSTUD 336) Representations of gender and sexuality in the cinemas of China, Taiwan, and Hong Kong, covering key periods and genres such as the golden age of Shanghai film, Hong Kong action pictures, opera films, post-socialist art films, and new queer cinema. Historical and contemporary perspectives on cinematic constructions of femininity, masculinity, and sexuality as they relate to issues of nationalism, modernity, globalization, and feminist and queer politics. Weekly screening required. GER:EC-Gender

*4 units, Spr (Ma, J)*

**FILMSTUD 137. European New Wave Cinemas**

(Same as FILMSTUD 337) an exploration of the major currents, movements, and schools in the European cinema of the post-war era from the late 1940s to the 1970s. A mixture of historical,

aesthetic, and theoretical concerns will inform the study of French New Wave, British Free Cinema, Italian cinema in the 1960s, the New German Cinema of the 1970s, and more. GER:DB-Hum

*4 units, not given this year*

**FILMSTUD 140. Film Aesthetics: Editing**

(Same as FILMSTUD 340) Practical and theoretical approaches to editing and montage. The role of editing in film meaning, and cognitive and emotional impact on the viewer. Developments in the history and theory of cinema including continuity system, Soviet montage, French new wave, postwar and American avant garde. Aesthetic functions, spectatorial effects, and ideological implications of montage. Film makers include Eisenstein, Godard, and Conner. GER:DB-Hum

*4 units, not given this year*

**FILMSTUD 145. Politics and Aesthetics in East European Cinema**

(Same as FILMSTUD 345) From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica. GER:DB-Hum

*4 units, not given this year*

**FILMSTUD 150. Cinema and the City**

(Same as FILMSTUD 350) Utopian built environments of vast perceptual and experiential richness in the cinema and city. Changing understandings of urban space in film. The cinematic city as an arena of social control, social liberation, collective memory, and complex experience. Films from international narrative traditions, industrial films, experimental cinema, documentaries, and musical sequences. Recommended: 4 or equivalent. GER:DB-Hum, EC-GlobalCom

*4 units, not given this year*

**FILMSTUD 153A. Transmedia TV**

(Same as FILMSTUD 353A) Beginning from theoretical questions about the structure of media texts and their production, distribution, reception, and regulation, this course analyzes how the collision of broadcast and broadband is reshaping the media landscape. Course investigates the definition of television and its articulation across multiple platforms, including streaming video, online tie-ins, fan remixes, and web shows. Such convergence involves both intensified corporate consolidation and intensified viewer participation. As the boundary between producers and consumers of entertainment breaks down, course explores renegotiating the possibilities of the TV experience.

*4 units, not given this year*

**FILMSTUD 156. Copy This Class (The Art of the Remix)**

(Same as FILMSTUD 356) Mashups, sampling, parodies, fan video, DIY media, memes: we are in the midst of an explosion in vernacular creativity that appropriates, celebrates, critiques, and transforms commercial entertainment. New digital technologies and Internet platforms support a developing ecology of remix forms with unprecedented reach, richness, and cultural influence. At the same time, the value and legitimacy of this popular production is hotly contested on the basis of artistic merit, traditional literacies, and intellectual property. Course analyzes and engages in contemporary remix culture via precursors like appropriation art and hip hop, exploring theoretical questions about originality, capitalism, law, and digital media. GER:DB-Hum

*4 units, not given this year*

**FILMSTUD 167. The Hollywood Musical**

(Same as AMSTUD 167, FILMSTUD 367) The sense of physical, emotional, aesthetic, and social liberation in this most colorful of film genres. Musicals as a place for the staging of issues of identity, including the impact of African American and Jewish culture, and issues of gay reception and interpretation. Attention to technologies of sound and color, the relation to vaudeville and Broadway, and ethnic and aesthetic diversity. Musicals as the epitome of filmic illusionism and the Hollywood studio system; the implications of their seduction of audiences; the meaning of spectacle, the centrality of performance. Busby Berkeley, Fred Astaire, Judy Garland, Bob Fosse, Stanley Donen, Gene Kelly,

Vincente Minnelli. GER:DB-Hum

4 units, not given this year

### **FILMSTUD 170. The Cinematic Century**

(Same as ARTHIST 170, ARTHIST 370) Few contemporary institutions and forms of representation have had a greater impact on the world than film. This class examines film history through institutions and practices as well as in formal developments in the medium in an international context but with an underlying interest in explaining the international forces that shaped Hollywood's rise. Through screenings of both documentary and fiction film, this class will suggest that the century just past be understood through the primary lens of the way cinema shaped its course.

4 units, Spr (Staff)

### **FILMSTUD 240A. History and Poetics of Cinematography**

The history of cinematographic devices and styles through the work of such cinematographers as Billy Bitzer, Eduard Tisse, Greg Toland, Kazuo Miyagawa, John Alton, James Wong Howe, Sergei Urusevskii, Raoul Coutard, and Jack Cardiff.

5 units, not given this year

### **FILMSTUD 250A. Politics of Representation**

Counterpoising viewpoints on media visibility drawn from identity politics and post-structuralist theory, course explores the questions entangled in negotiating a politics of representation: Can images show how things really are? Who is seen and who isn't? Can interpretation go beyond stereotypes? How are we situated as media content and consumers? Focusing primarily on gender, race, sexuality, and their intersections, course analyzes specific invocations of these categories in film, television, and cyberculture. Texts presenting opposing perspectives by theorists, critics, and activists to scaffold each example. Ultimate objective to explore how different media forms open or close possibilities for progressive representation, reception, and political change.

5 units, not given this year

### **FILMSTUD 251. Media in Transition**

In a culture obsessed with new media, we are bombarded with hype about the present as a revolutionary phase of convergence. But everything old was once new, and pioneering media of the past also had to negotiate existing technologies, ideologies, and fantasies. This seminar is organized around case studies of transitional media moments from the long 20th century, including proto-cinema, ham radio, early television, hypertext, and digital film. In exploring the material and discursive aspects of remediation through theoretical, historical, and media archaeological readings, we will ask: what is a medium and how do they emerge and evolve.

5 units, not given this year

### **FILMSTUD 279. Asian American Experiences and Documentary Practice**

(Same as ASNAMST 179, CSRE 179) Focus is on documentary cinema as a technology for understanding Asian Americans in the U.S. The social and historical context of the formation of the Asian American filmmaker, an authorial position that emerges in the 60s and 70s as part of the civil rights movement. Works include films by Loni Ding, Bob Nakamura and Curtis Choy; readings about the establishment of Asian American media industries and Asian American film criticism as a multi-genre. Social issue documentaries that represent new ethnographies of social experience including transnational adoption (Daughter From Danang), refugee experience (AKA Don Bonus), and sex tourism (The Women Outside). Readings include analyses of the implications of these works for cinema studies, ethnic studies, and the politics of film in everyday life. Experimental documentaries and their interrogation of the limits of the documentary form in representing identities and social problems. How does representation matter within and for Asian America GER:DB-Hum

5 units, not given this year

### **FILMSTUD 290. Movies and Methods**

Open to graduate students and advanced undergraduates (permission of instructor required); capstone course for majors (senior seminar). Topics vary year to year. Focus is on historiography and theory.

5 units, Aut (Levi, P)

### **FILMSTUD 297. Honors Thesis Writing**

May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

### **FILMSTUD 299. Independent Study: Film and Media Studies**

May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff)

## **GRADUATE COURSES IN FILM STUDIES**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

### **FILMSTUD 218. Sexual Ethics in Cinema**

Course focuses on romance, sex, desire and love in Hollywood and independent films. Examines various approaches to understanding the power of cinema to move and transform its subjects using film phenomenology and psychoanalysis approaches in the face-to-face encounter, haptic cinema and the shattering of the self and its assembly/reassembly--with attention to cultural, historical and social contexts framing the films' production and consumption. Advanced undergraduates and graduate students welcome.

5 units, not given this year

### **FILMSTUD 300A. History of World Cinema I, 1895-1929**

(Same as FILMSTUD 100A) From cinema's precursors to the advent of synchronized sound.

4 units, alternate years, not given this year

*4 units, not given this year*

#### **FILMSTUD 404. Postwar American Avant Garde Cinema**

History and theory of post-WW II American independent and experimental film. Emphasis is on issues of audiovisual form, structure, and medium specificity. Films and writings include Maya Deren, Stan Brakhage, Michael Snow, and Hollis Frampton.

*5 units, not given this year*

#### **FILMSTUD 406. Montage**

Graduate seminar in film aesthetics. Theoretical and practical approaches to editing/montage. Stylistic, semiotic, epistemological, and ideological functions of montage considered in film-historical contexts including: development of the continuity system of editing; flourishing of the Soviet montage school; and achievements of the post-war new waves. Filmmakers include D. W. Griffith, Sergei Eisenstein, Jean-Luc Godard, and Dusan Makavejev.

*5 units, not given this year*

#### **FILMSTUD 407. The Still Moving Image**

Tension and overlap between cinema and photography as technological media, beginning with Frankfurt school critiques of media theory, classical film, and photography theory through recent considerations of the post-cinematic age of digital and virtual images. How ideas of indexicality, medium specificity, memory, duration, narrativity, chance, stasis, repetition have informed accounts of the relationship of these media.

*5 units, Win (Ma, J)*

#### **FILMSTUD 410A. Documentary Perspectives I**

Restricted to M.F.A. documentary film students. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.

*4 units, Win (Samuelson, K)*

#### **FILMSTUD 410B. Documentary Perspectives II**

Restricted to M.F.A. documentary film students. Continuation of 410A. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.

*4 units, not given this year*

#### **FILMSTUD 411. Animation**

The fantasy of an image coming to life dates back centuries, and artists have long sought to imbue their images with liveliness, but it wasn't until the onset of the cinema that the fantasy was actualized. It is sometimes argued that animation is the ground against which cinema situates itself: the history of moving pictures begins with optical toys that greatly predate the invention of the cinema, and mainstream cinema is increasingly dominated by films that are computer animated, in whole or in part. This course seeks to delve into the implications of animation, considering its underlying fantasies (in art and literature), its particular phenomenologies, its relation to the uncanny, its status as a pure cinema, and its place in film theory. Different modes of production and style will be explored, including realist animation, abstract animation; animistic animation; animated drawings, objects, and puppets; CGI, and live/animation hybrids. Films will be drawn from a

*5 units, not given this year*

#### **FILMSTUD 430. Cinema and Ideology**

The relationship between cinema and ideology from theoretical and historical perspectives, emphasizing Marxist and psychoanalytic approaches. The practice of political filmmaking, and the cinema as an audiovisual apparatus and socio-cultural

institution. Topics include: dialectics; revolutionary aesthetics; language and power; commodity fetishism; and nationalism. Filmmakers include Dziga Vertov, Jean-Luc Godard, Bruce Conner, and Marco Ferreri. Theoretical writers include Karl Marx, Sergei Eisenstein, and Slavoj Zizek. Prerequisite: consent of instructor.

*5 units, Aut (Levi, P)*

#### **FILMSTUD 440. Sound Technology**

Development of sound technology and reproduction in context of modernity, with some emphasis on the crossings of sound and image in the history and theory of technological reproduction. Topics include phonography, recording, and mass culture (Adorno, Sterne, Thompson, Lastra); cinematic sound and music (Chion, Altman, Gorbman); filmic and compositional practices in the American avant-garde (Joseph, Kahn); acoustic ecology (Schafer). Weekly screenings or listenings.

*5 units, not given this year*

#### **FILMSTUD 441. Theories of Cinematic Spectacle**

How cinematic spectacle has been theorized; the adoption of new technologies such as sound, color, or special effects; theories of the sublime and the grotesque. Spectacle as a vehicle for propaganda or pedagogy, and its relation to narrative and gender. The role of spectacle in experimental cinema and its deconstruction by Godard and others. Recommended: 4 or equivalent.

*5 units, not given this year*

#### **FILMSTUD 620. Area Core Examination Preparation**

For Art History Ph.D. candidates. Prerequisite: consent of instructor.

*5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

#### **FILMSTUD 660. Independent Study**

For graduate students only. Approved independent research projects with individual faculty members.

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

#### **FILMSTUD 660E. Extended Seminar**

May be repeated for credit. (Staff)

*4 units, Aut (Staff), Win (Staff), Spr (Staff)*

## FILM, PRACTICE OF (FILMPROD) COURSES

### UNDERGRADUATE COURSES IN FILM, PRACTICE OF

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **FILMPROD 10AX. Filmmaking**

Fundamentals of digital video production. Process of expressing ideas in an audio-visual medium from the concept stage through post-production. Examples of narrative, documentary, and experimental work screened and discussed. Hands-on experience in directing, shooting, editing on Final Cut Pro, sound design, and a fuller understanding of film production.

*2 units, Aut (Krawitz, J)*

#### **FILMPROD 101. Screenwriting**

(Same as FILMPROD 301) Priority to Film and Media Studies majors. Craft, form, and approaches to writing for the screen. Prerequisites: 1) ENGLISH 90, 2) ENGLISH 190F or FILMPROD 104, and 3) consent of instructor.

*5 units, Spr (Tobin, A)*

#### **FILMPROD 103. Adaptation**

A close analysis of film adaptation, using various source materials to examine the demands form makes on content and the creative choices made in adaptation to film. Source materials will include plays, fiction, biography, history, graphic novels, and reference to video games and amusement park rides. A weekly film screening is a requirement of the course.

*4 units, Win (Tobin, A)*

#### **FILMPROD 104. Visual Writing**

A writing workshop that is an exploration of visual storytelling. Beginning with visual literacy, the class progresses from basic

cinematic techniques through scene exercises to revisions and ultimately to connecting scenes in order to build sequences of script pages. Open to all majors; may substitute for ENGL 190F prerequisite for FP101.

4 units, Win (Tobin, A)

**FILMPROD 105. Script Analysis**

(Same as FILMPROD 305) Analysis of screenplay and film from the writer's perspective, with focus on ideation, structure, and dramatic tension in narrative features. Sources include screenplays and screenings.

4 units, Aut (Tobin, A)

**FILMPROD 114. Introduction to Film and Video Production**

Hands-on. Techniques of film and video making including conceptualization, visualization, story structure, cinematography, sound recording, and editing.

5 units, Spr (Symons, J)

**GRADUATE COURSES IN FILM, PRACTICE OF**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**FILMPROD 301. Screenwriting**

(Same as FILMPROD 101) Priority to Film and Media Studies majors. Craft, form, and approaches to writing for the screen. Prerequisites: 1) ENGLISH 90, 2) ENGLISH 190F or FILMPROD 104, and 3) consent of instructor.

5 units, Spr (Tobin, A)

**FILMPROD 305. Script Analysis**

(Same as FILMPROD 105) Analysis of screenplay and film from the writer's perspective, with focus on ideation, structure, and dramatic tension in narrative features. Sources include screenplays and screenings.

4 units, Aut (Tobin, A)

**FILMPROD 400. Film/Video Writing and Directing**

Restricted to M.F.A. documentary students. Emphasis is on the development of the research, conceptualization, visualization, and preproduction skills required for nonfiction filmmaking. Prerequisite: consent of instructor.

4 units, Aut (Samuelson, K)

**FILMPROD 401. Nonfiction Film Production**

Restricted to M.F.A. documentary students. 16mm production techniques and concepts. Final project is a short black-and-white film with multitrack sound design. Prerequisite: consent of instructor.

4 units, Aut (Krawitz, J)

**FILMPROD 402. Digital Video**

Restricted to M.F.A. documentary students. Fundamentals of digital storytelling. Working with small format cameras, interviewing techniques, and nonlinear editing skills. Prerequisite: consent of instructor.

4 units, Win (Krawitz, J)

**FILMPROD 403. Advanced Documentary Directing**

Restricted to M.F.A. documentary students. Further examination of structure, emphasizing writing and directing nonfiction film. Prerequisite: consent of instructor.

4 units, Spr (Symons, J)

**FILMPROD 404. Advanced Film and Video Production**

Restricted to M.F.A. documentary students. Techniques of visual storytelling and observational shooting. Final quarter of professional training in 16mm motion picture production. Prerequisite: consent of instructor.

4 units, Spr (Samuelson, K)

**FILMPROD 405. Producing Practicum**

Restricted to M.F.A. documentary students. Advanced producing principles through the preproduction of the M.F.A. thesis project, including development of a professional film proposal. Practical training in fundraising. Prerequisite: consent of instructor.

4 units, Aut (Symons, J)

**FILMPROD 406A. Documentary M.F.A. Thesis Seminar I**

Restricted to M.F.A. documentary students. Production of film or video project. Focus is on shooting strategies, ethical challenges, and practical production issues. Prerequisite: consent of instructor.

4 units, Win (Samuelson, K)

**FILMPROD 406B. Documentary M.F.A. Thesis Seminar II**

Restricted to M.F.A. documentary students. Editing and post-production of film or video project. Emphasis is on aesthetic choices (structure, narration, music), distribution, contracts, and audience. Prerequisite: consent of instructor.

4 units, Spr (Krawitz, J)

**FRENCH GENERAL (FRENGEN)  
COURSES**

**UNDERGRADUATE COURSES IN FRENCH GENERAL**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**FRENGEN 146. Revolution! A Global History from 1640 to the Present**

(Same as HISTORY 104A) The modern world was born out of Revolution. To this day, dramatic political change is most often the result of Revolution. This course will explore how Revolution became a model for changing the course of history. From the English revolutions of the 1600's to the current upheavals in the Arab world, passing through the French, Russian, and Chinese revolutions, we will study how Revolution has been conceived, carried out, and re-invented around the world. GER:DB-Hum

4 units, Aut (Baker, K; Edelstein, D)

**FRENGEN 167. Social Animals, Social Revolutions and Social Networks**

(Same as BIO 167, CS 81G) We like to think of social networks as contemporary phenomena. But before Facebook, individuals organized themselves in social networks; before Twitter, revolutionaries used media to communicate and coordinate their messages. In fact, even animal societies are networked. Do all these social networks share certain properties? What can we learn by comparing them? These are some of the questions we will ask in this course, as we traverse the natural world and past societies before taking a fresh look at our modern social networks. GER:DB-NatSci

4 units, Spr (Gordon, D; Edelstein, D; Roberts, E)

**FRENGEN 172. Dream Visions: The Roman de la Rose**

(Same as FRENGEN 272, ITALGEN 172, ITALGEN 272) What truths are in dreams? How does the quest for a symbolic object embody a moral struggle? What motivates a personal search for divine love? Study of arguably the most influential work of the European Middle Ages, the Roman de la Rose of Guillaume de Lorris and Jean de Meun. Focus on the work as erotic, allegorical quest for the mystical Rose, and scholastic encyclopedia through close analysis, secondary readings, and study of manuscript illumination. Use of medieval and modern French edition.

3-5 units, not given this year

**FRENGEN 181. Philosophy and Literature**

(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, ITALGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum

4-5 units, Win (Staff)

**FRENGEN 192E. Images of Women in French Cinema: 1930-1990**

The myth of the feminine idol in French films in historical and cultural context. The mythology of stars as the imaginary vehicle

that helped France to change from traditional society to modern nation after 1945. Filmmakers include Renoir, Truffaut, and Nelly Kaplan. The evolution of the role of women in France over 60 years. Lectures in English; films in French with English subtitles. This course must be taken for either 3 units or 5 units; cannot be taken for 4 units. GER:DB-Hum, EC-Gender

3-5 units, Spr (Apostolides, J)

**FRENGEN 204. Songs of Love and War: Gender, Crusade, Politics**

Medieval love, satirical and Crusade lyrics in the Old Occitan, and Old French traditions. Focus on deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Also modern translation and reception of the troubadour tradition. Poets include Ovid, Bernart de Ventadorn, Bertran de Born, La Comtessa de Dia, Thibaut de Champagne, Sordello, Dante, Pound, and Neruda. GER:DB-Hum, EC-Gender

3-5 units, Win (Galvez, M)

**FRENGEN 268. INTERPRETATION AND THEORY**

(Same as DRAMA 167T, DRAMA 367) This course will present majors French authors whose work have help to create Literary and Drama Theory in America. Among the authors we will devote a special interest to the work of Roland Barthes, Jacques Derrida, Jacques Lacan, Luce Irigaray, Gilles Deleuze, Julia Kristeva, Jacques Rancière and Alain Badiou. Paralellism between the interpretation of drama and the interpretation of painting will constitute the core of this course.

5 units, Aut (Apostolides, J)

**GRADUATE COURSES IN FRENCH GENERAL**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**FRENGEN 219. The Renaissance Body**

The body as locus for desire, pleasure, disease, mortality, sexuality, and gender; and as canon of beauty and reflection of cosmic harmony. How literature responded to the development of an anatomical gaze in arts and medicine; how it staged the aesthetic, religious, philosophical, and moral issues related to such a promotion or deconstruction of the body. Does literature aim at representing the body, or use it as signifier for intellectual, emotional, and political ideas? Readings from Rabelais, Ronsard, Labé, Montaigne; medical texts and archival documents from <http://renaissancebodyproject.stanford.edu>.

3-5 units, not given this year

**FRENGEN 225. Introduction to Medieval French Literature**

Introduction to the premodern period of French literature through the interpretation of canonical works (La Chanson de Roland; Béroul and Thomas, Tristan; selected lais of Marie de France; selected romans of Chrétien de Troyes; Le Roman de la Rose). Special attention will be given to the socio-cultural contexts in which these works were composed and first received, and to the emergence of the concept of writing as a self-defining act. We will study Old French language and the material aspects of a medieval work.

3-5 units, Aut (Galvez, M)

**FRENGEN 237. Jean-Jacques Rousseau**

A comprehensive and yet focused introduction to the work and life of the French 18th-century philosophe who undoubtedly had the strongest impact on posterity (occasionally comparing Rousseau with two other key-figures of French Enlightenment, Voltaire and Denis Diderot). Special attention will be paid to Rousseau's reception history, both as the inventor of new concepts and discourses (eg. vertu persécutée) that have shaped our understanding of social life up until the present day, and on a new type of sensibilité mainly based on the capacity of compassion (pitié). This seminar, in its concluding sessions, will explore aspects of an aesthetic and political genealogy of our time.

3-5 units, Win (Gumbrecht, H)

**FRENGEN 242. Women Mystics from the Middle Ages to the Present**

(Same as ITALGEN 242) The predominantly female mystical experience or direct-embodied encounter with a spiritual reality

that is difficult, perhaps impossible, to reduce to words, or to explain rationally. Sources include European texts from the Middle Ages to the present by women and men who attempt to convey the experience metaphorically, to interpret it theologically and philosophically, and to transmit it actively to others.

3-5 units, not given this year

**FRENGEN 256E. Political Anthropology from Rousseau to Freud**

A confrontation between ways of accounting for society in an individualistic framework: the social contract; political economy; individualistic sociology; society as crowd; mass psychology; and sociopolitical institutions. Creating a typology of the ways in which a given anthropology constrains conceptions of the social and political order. Writers include Rousseau, Hume, Smith, Constant, Tocqueville, Marx, Durkheim, Weber, and Freud.

3-5 units, Win (Dupuy, J)

**FRENGEN 272. Dream Visions: The Roman de la Rose**

(Same as FRENGEN 172, ITALGEN 172, ITALGEN 272) What truths are in dreams? How does the quest for a symbolic object embody a moral struggle? What motivates a personal search for divine love? Study of arguably the most influential work of the European Middle Ages, the Roman de la Rose of Guillaume de Lorris and Jean de Meun. Focus on the work as erotic, allegorical quest for the mystical Rose, and scholastic encyclopedia through close analysis, secondary readings, and study of manuscript illumination. Use of medieval and modern French edition.

3-5 units, not given this year

**FRENGEN 278. European Nihilism**

(Same as ITALGEN 278) This course will probe the thought of nothingness in various European writers and thinkers. The main authors include Giacomo Leopardi, Nietzsche, Michelstader, Heidegger, Beckett, and Emile Cioran.

3-5 units, Win (Harrison, R)

**FRENGEN 288. Decadence and Modernism from Mallarme to Marinetti**

(Same as ITALGEN 288) How the notion of decadence, initially a term of derision, shapes and underlies the positive terms of symbolism and modernism. Readings include theories of decadence and examples of symbolist and modernist texts that attempt to exorcise decadent demons, such as lust, mysticism, and the retreat into artificiality. Authors include Huysmans, Poe, Mallarmé, Nietzsche, Nordau, d'Annunzio, Valry, Ungaretti, Marinetti, and Breton.

3-5 units, Aut (Wittman, L)

**FRENGEN 289. French and Italian Women Writers**

(Same as ITALGEN 289) How does women's writing evolve from the very early 20th century, when women's liberation movements first began and WW I brought major social changes, to the flowering of feminine writing in the 70s and beyond? What is the relationship between women writers and filmmakers, and feminism? Is it legitimate to consider women writers in a separate category? To what extent does a reevaluation of women writers mean reconsidering modern literary history? Authors and filmmakers include Aleramo, Yourcenar, de Beauvoir, Banti, Duras, Cavani.

3-5 units, not given this year

**FRENGEN 301E. New Methods and Sources in French and Italian Studies**

(Same as ITALGEN 301E) Based on student interest. Changes in research methods: the use of digitized texts, resources, and databases available through Stanford Libraries, gateways. Emphasis is on strategies for exploration of broad and specialized topics through new and traditional methods. Using a flexible schedule based on enrollment and the level of students, knowledge, may be offered in forms including a shortened version on the basics, independent study, or a syllabus split over two quarters. Unit levels adjusted accordingly.

1-4 units, Spr (Sussman, S)

**FRENGEN 334. Introduction to Multispecies Theory in the Humanities and Social Sciences**

(Same as ANTHRO 334A) This course will focus on such problems as: posthumanism and the emergence of non-anthropocentric human and social sciences, multispecism, in the re-thinking of disciplines, redefinition of the concept of life in

the human and social sciences by including non-human subjects, animals and plants as others, rethinking the category of the social as a collective of humans and non-humans, nonintentional agency (as well as understanding of vitalism and animism), animal holocaust, multispecies art and living organisms as media in art (bio-art), ethics of compassion and the problem of the dignity of the non-human (including recent interest in the dignity of plants).

*5 units, Spr (Domanska, E)*

### **FRENGEN 356. Theories of the Novel**

(Same as COMPLIT 322A) The novel as the literary genre most closely identified with the development of cultural modernity by literary historians and theorists. Critical models for defining the novel's poetics and cultural work. Critical readings such as texts by Lukacs, Bakhtin, Auerbach, Barthes, Armstrong, Gallagher, Bourdieu, Macherey, Jameson, Said and Spivak. Tutor texts such as Defoe's Robinson Crusoe, Flaubert's Madame Bovary, and Woolf's *To the Lighthouse*.

*3-5 units, not given this year*

### **FRENGEN 369. Introduction to Graduate Studies: Criticism as Profession**

(Same as COMPLIT 369, ITALGEN 369, GERLIT 369) Based on a survey of (and a conversation about) the history of academic Literary Criticism, and on presentation (and discussion) of contemporary theoretical positions, this seminar will try to enhance a reflection on the conditions, difficulties, and rewards of Literary Criticism as a profession and as an intellectual life form. Attention will be paid to the most relevant (and most pressing) institutional frame-conditions but this attention will not prevent us from trying to explore a (seldom used) potential of eccentricity and freedom that has always been inherent to (although sometimes dormant in) Literary Criticism.

*5 units, Aut (Gumbrecht, H)*

### **FRENGEN 395. Philosophical Reading Group**

(Same as COMPLIT 359A, ITALGEN 395) Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit.

*1 unit, Aut (Gumbrecht, H), Win (Gumbrecht, H)*

## FRENCH LANGUAGE (FRENLANG) COURSES

### **UNDERGRADUATE COURSES IN FRENCH LANGUAGE**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **FRENLANG 1. First-Year French, First Quarter**

Proficiency-based. Development of discourse appropriate in French and Francophone contexts.

*5 units, Aut (Hulstyn, M), Win (Howard, H), Spr (Howard, H)*

#### **FRENLANG 1A. Accelerated First-Year French, Part 1**

Completes first-year language sequence in two rather than three quarters. Recommended for students with previous knowledge of French who place into 1A on the placement test or who are familiar with another Romance language. 2A fulfills the University foreign language requirement. Prerequisite: French placement test and consent of instructor.

*5 units, Aut (Lasnier, M), Win (Lasnier, M)*

#### **FRENLANG 2. First-Year French, Second Quarter**

Continuation of 1. Proficiency-based. Development of discourse appropriate in French and Francophone contexts. Prerequisite 1 or equivalent.

*5 units, Aut (Kershaw, M), Win (Staff), Spr (Lasnier, M)*

#### **FRENLANG 2A. Accelerated First-Year French, Part 2**

Continuation of 1A. Completes first-year language sequence in two rather than three quarters. Recommended for students with previous knowledge of French who place into 1A on the placement test or who are familiar with another Romance language. Fulfills the University foreign language requirement. Prerequisite: 1A, or

French placement test and consent of instructor.

*5 units, Win (Kershaw, M), Spr (Kershaw, M)*

#### **FRENLANG 3. First-Year French, Third Quarter**

Continuation of 2. Proficiency-based. Development of discourse appropriate in French and Francophone contexts. Prerequisite: 2 or equivalent. Fulfills the language requirement.

*5 units, Aut (Shapirshteyn, V), Win (Lasnier, M), Spr (Staff)*

#### **FRENLANG 5A. Intensive First-Year French, Part A**

Same as FRENLANG 1. Accelerated. Written exercises, compositions, conversational practice, and daily work. Only Stanford graduate students restricted to 9 units may register for 205A,B,C.

*5 units, Sum (Staff)*

#### **FRENLANG 5B. Intensive First-Year French, Part B**

Same as FRENLANG 2. Continuation of 5A. Written exercises, compositions, conversational practice, and daily work. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Prerequisite 1 or 5A.

*5 units, Sum (Staff)*

#### **FRENLANG 5C. Intensive First-Year French, Part C**

Same as FRENLANG 3. Continuation of 5B. Written exercises, compositions, conversational practice, and daily work. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Fulfills the University language requirement. Prerequisite 2 or 5B.

*5 units, Sum (Staff)*

#### **FRENLANG 10. Beginning French Oral Communication**

For students who have completed 2 or equivalent. Emphasis is on speaking skills, vocabulary, and pronunciation. May be repeated once for credit.

*2 units, Aut (Dozer-Rabedeau, J), Win (Dozer-Rabedeau, J), Spr (Dozer-Rabedeau, J)*

#### **FRENLANG 15. Intermediate French Oral Communication**

For students who have completed the first-year language requirement. May be repeated once for credit.

*2 units, Aut (Dozer-Rabedeau, J), Win (Dozer-Rabedeau, J), Spr (Dozer-Rabedeau, J)*

#### **FRENLANG 15S. Intermediate Conversation: French in Everyday Life**

Same content as 15. May be repeated once for credit. Prerequisite: one year of college French or equivalent.

*3 units, not given this year*

#### **FRENLANG 20A. France and Francophonie**

Second-year French conversation based on themes from the regions of France and the Francophone world. Intermediate-level speaking skills and advanced-level functions. Topics include travel, food, and crosscultural comparisons. Students returning from study abroad programs are encouraged to enroll. May be repeated once for credit. Prerequisite: 22C or equivalent.

*2 units, Aut (Staff)*

#### **FRENLANG 20B. French Cinema**

Second-year French conversation based on films. Intermediate-level speaking skills and advanced-level functions. Themes include: French filmmakers, stars, and trends. Required film viewing in and outside class in French. May be repeated once for credit. Prerequisite: 22C or equivalent.

*2 units, Win (Staff)*

#### **FRENLANG 20C. Contemporary French Language**

Second-year French conversation. Intermediate-level speaking skills and advanced-level functions for formal and informal situations. Useful for students planning to travel or study abroad. May be repeated once for credit. Prerequisite: 22C or equivalent.

*2 units, Spr (Staff)*

#### **FRENLANG 21C. Second-Year French: Cultural Emphasis, First Quarter**

Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socio culturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: one year of college French or consent of coordinator.

*4-5 units, Aut (Lasnier, M), Win (Kershaw, M), Spr (Dozer-Rabedeau, J)*

**FRENLANG 22C. Second-Year French: Cultural Emphasis, Second Quarter**

Continuation of 21C. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socio culturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: 21C or consent of coordinator.

4-5 units, Aut (Howard, H), Win (Dozer-Rabedeau, J), Spr (Kershaw, M)

**FRENLANG 23C. Second-Year French: Cultural Emphasis, Third Quarter**

Continuation of 22C. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: 22C or consent of coordinator.

4-5 units, Aut (Dozer-Rabedeau, J), Win (Staff), Spr (Lasnier, M)

**FRENLANG 24C. Second-Year French: Literary Texts**

Proficiency oriented. Discussion, writing, reading, and listening comprehension based on literary texts. Prerequisite: 23.

3-4 units, not given this year

**FRENLANG 24R. Second-Year French: International Relations, Political Science, and Economics Emphasis**

Proficiency-based. Discussion, writing, reading, and listening comprehension based on political, economic, and social topics. Prerequisite: 23.

3-4 units, not given next year

**FRENLANG 60A. Beginning French Conversation**

(AU)

1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

**FRENLANG 60B. Intermediate French Conversation**

(AU) (Staff)

1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

**FRENLANG 60C. Advanced French Conversation**

(AU)

1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

**FRENLANG 60D. French Viticulture**

See <http://www.stanford.edu/class/frenlang60d/>. Prerequisite: 21 or older. (AU)

1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

**FRENLANG 60E. French Cooking**

(AU)

1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

**FRENLANG 60F. French Cinema**

May be repeated for credit. (AU)

1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

**FRENLANG 60G. French Poetry**

(AU)

1 unit, Aut (Staff), Win (Staff), Spr (Staff)

**FRENLANG 60N. French cheese**

1 unit, not given this year

**FRENLANG 60P. Advanced Viticulture**

Prerequisite: Completion of 60D. (AU)

1 unit, Win (de Castries, P), Spr (de Castries, P)

**FRENLANG 60T. Teaching French Conversation**

(AU)

1 unit, Aut (de Castries, P), Win (de Castries, P), Spr (de Castries, P)

**FRENLANG 120. Advanced French Oral Communication**

Speaking skills and functions including narration, description, supporting opinions, and hypothesizing about current events and issues in France. May be repeated once for credit. Prerequisites: 23C or equivalent, and consent of instructor.

3 units, Aut (Staff), Win (Staff), Spr (Staff)

**FRENLANG 121. Introduction to French Texts**

Readings of major literary figures and themes from medieval times to the present. Prerequisite: 23 or consent of coordinator. Recommended: 124.

3-4 units, not given this year

**FRENLANG 122. Introduction to French Culture and Civilization**

Discussion of French art, geography, history, political change, and social institutions. Prerequisite: 23 or equivalent.

3-4 units, not given this year

**FRENLANG 123. French Creative Writing**

Advanced. Model texts introduce students to genres and styles; review of grammar and vocabulary. Discussion of original writing by students. Prerequisite: 23 or equivalent.

3-4 units, not given this year

**FRENLANG 124. Mastering Advanced French Grammar: Grammar through Contemporary Literature and Culture**

Required for students majoring or minoring in French; recommended for students planning to take literature courses. Review of difficulties in French. Grammatical and logical analysis. Prerequisite: 23C or equivalent.

3-4 units, Aut (Kershaw, M), Win (Lasnier, M), Spr (Howard, H)

**FRENLANG 125. French Phonetics**

For majors and other students who plan to enroll in advanced courses. Study and practice of the French language sound system. Language lab. Prerequisite: 23 or equivalent.

3-4 units, not given this year

**FRENLANG 199. Language Specials**

Prerequisite: consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GRADUATE COURSES IN FRENCH LANGUAGE**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**FRENLANG 1G. Accelerated First-Year Business French, Part 1**

For GSB students only. Limited enrollment.

4 units, not given this year

**FRENLANG 2G. Accelerated First-Year Business French, Part 2**

For GSB students only. Limited enrollment.

4 units, not given this year

**FRENLANG 3G. Accelerated First-Year Business French, Part 3**

For GSB students only. Limited enrollment.

4 units, not given this year

**FRENLANG 205A. Intensive First-Year French for Stanford Grads, Part A**

FRENLANG 205A. Same as FRENLANG 1. For Stanford graduate students only. Accelerated. Written exercises, compositions, conversational practice, and daily work. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units.

3-5 units, Sum (Staff)

**FRENLANG 205B. Intensive First-Year French for Stanford Grads, Part B**

For Stanford graduate students only. Continuation of 205A. Accelerated. Written exercises, compositions, conversational practice, and daily work. Prerequisite 205B or equivalent. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units. Prerequisite 205A or equivalent.

3-5 units, Sum (Staff)

**FRENLANG 205C. Intensive First-Year French for Stanford Grads - Part C**

For Stanford graduate students only. Continuation of 205B. Accelerated. Written exercises, compositions, conversational practice, and daily work. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses

for a total of 9 units. Prerequisite 205B or equivalent.

3-5 units, *Sum (Staff)*

### **FRENLANG 250. Reading French**

For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year or reading proficiency in another Romance language.

4 units, *Win (Staff)*

### **FRENLANG 250S. Reading French**

For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year or reading proficiency in another Romance language.

2-4 units, *Sum (Staff)*

### **FRENLANG 394. Graduate Studies in French Conversation**

Prerequisite: consent of the instructor.

1-3 units, *Aut (Staff), Win (Staff), Spr (Staff)*

### **FRENLANG 395. Graduate Studies in French**

Prerequisite: consent of instructor.

2-5 units, *Aut (Staff), Win (Staff), Spr (Staff)*

## FRENCH LITERATURE (FRENLIT) COURSES

### **UNDERGRADUATE COURSES IN FRENCH LITERATURE**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **FRENLIT 38N. Coffee & Cigarettes: The Making of French Intellectual Culture**

(F,Sem) Stanford Introductory Seminar. Stanford Introductory Seminar. Preference to freshmen. This course will examine a quintessential French figure l'intellectuel from a long-term historical perspective. We will observe how this figure was shaped over time by such other cultural types as the writer, the artist, the historian, the philosopher, and the moralist. Proceeding in counter-chronological order, from the late 20th to the 16th century, we will read a collection of classic French works. As this course is a gateway for French studies, special emphasis will be placed on oral proficiency. Prerequisite: students must have two years of college-level French (or equivalent).

4 units, *Aut (Edelstein, D)*

#### **FRENLIT 122. Nation in Motion: Film, Race and Immigration in Contemporary French Cinema**

An examination of the current debates in France regarding national identity, secularism, and the integration of immigrants, notably from the former colonies. Course confronts films' and other media's visual and discursive rhetorical strategies used to represent ethnic or religious minorities, discrimination, citizens' resistance to government policies, inter-racial marriages, or women's rights within immigrant communities. By embodying such themes in stories of love, hardships, or solidarity, the motion pictures make the movements and emotions inherent to immigration tangible: to what effect? GER:DB-Hum

3-5 units, *Win (Alduy, C)*

#### **FRENLIT 124. Constructing the French**

How did language, history and the arts (short stories, plays, films, and paintings) help to legitimize and popularize different visions of French identity and culture (many of which are still influential today)? Topics include the Other, French republicanism, the myth of the Grand Siècle, collaboration during WWII, colonialism, and verlan. Authors include Montaigne, Montesquieu, Voltaire, Rostand, Vercors, Hugo, Camus and Sarkozy! Readings and discussions in French.

3-5 units, *Spr (Robert, Y)*

#### **FRENLIT 130. Introduction to Medieval and Renaissance**

### **French Literature**

Introduction to the Middle Ages and the Renaissance. The birth of a national literature and its evolution. Literature as addressing cultural, philosophical, and artistic issues which question assumptions on love, ethics, art, and the nature of the self. Readings: epics (La Chanson de Roland), medieval romances (Tristan, Chrétien de Troyes' Yvain), post-Petrarchan poetics (Du Bellay, Ronsard, Labé), and prose humanists (Rabelais, Montaigne). Prerequisite: FRENLANG 124 or consent of instructor. GER:DB-Hum, WIM

4 units, *Aut (Galvez, M)*

#### **FRENLIT 131. Absolutism, Enlightenment, and Revolution in 17th- and 18th-Century France**

The literature, culture, and politics of France from Louis XIV to Olympe de Gouges. How this period produced the political and philosophical foundations of modernity. Readings include Corneille, Molière, Racine, Lafayette, Voltaire, Diderot, Rousseau, Beaumarchais, and Gouges. Prerequisite: FRENLANG 124 or consent of instructor. GER:DB-Hum, WIM

4 units, *Win (Apostolides, J)*

#### **FRENLIT 132. Literature, Revolutions, and Changes in 19th- and 20th-Century France**

Major literary genres, and social and cultural contexts. Focus is on the emergence of new literary forms such as *surréalisme*, *nouveau roman*, and *nouveau théâtre*. Topics of colonization, decolonization, and feminism. Readings include Balzac, Baudelaire, Césaire, Colette, and Ionesco. Prerequisite: FRENLANG 124 or consent of instructor. GER:DB-Hum, WIM

4 units, *Spr (Staff)*

#### **FRENLIT 133. Literature and Society in Africa and the Caribbean**

(Same as COMPLIT 141) The course is reading, analysis and discussion of some of the most representative texts by 20th century Francophone writers from a variety of locations: the French Caribbean, Africa North and South of the Sahara. These works convey the changing aspects of Francophone Africa and the French Caribbean societies and cultures: from oral to written, colonization and changes, tradition competing with modernity, particularly for women, building new identities immigration narrative. The course aims to broaden knowledge of the Francophone societies and cultures, as well as improve skills in speaking and writing in French. Lectures and discussions are conducted in French, most required readings and background material are in French as well. Reading in fiction, poetry and theater include Laye Camara, Ferdinand Oyono, Maryse Condé, Aimé Césaire, Leila Sebbar, Mariama Ba, and others. Prerequisite: FRENLANG 124 or consent of instructor. GER:DB-Hum, EC-GlobalCom, WIM

4 units, *Win (Boyi, E)*

#### **FRENLIT 159. Confessions in 19th-Century French Literature**

Evolution of confessional mode in 19th-century first-person narrative. In what way the confessional mode of the Christian practice was preserved in literature and what changes it underwent in the narratives about the self. How did the religious crisis in 19th century France invest the literary confessions? The topics are confessors, conversion, sincerity, repentance, guilt. Authors include Saint Augustine, Rousseau, Musset, Constant, Sainte-Beuve, Fouché, Guizot, Lamartine, Verlaine, Nerval. Taught in French. GER:DB-Hum

3-5 units, *not given this year*

#### **FRENLIT 179. Le Roman au féminin: French Women Writers from the 90's and 00's**

From Marie Darrieussecq's *Truismes* (1996) to Christine Angot, Virginie Despentes, Nothomb, or Marie NDiaye, women writers have been regularly stealing the show since the 1990's. What does it say about the French society? What do they say about contemporary France, and how? Do they transgress literary genres, carving out new literary spaces for unspoken points of views, or are they transcending the notion of *écriture féminine* that might too conveniently reduce their scandalous novels to a label? Prerequisite: FRENLIT 130 (or higher) or consent of instructor. GER:DB-Hum

3-5 units, *Spr (Alduy, C)*

#### **FRENLIT 189A. Honors Research**

Senior honors students enroll for 5 units in Winter while writing

the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.

5 units, Win (Staff)

#### **FRENLIT 189B. Honors Research**

Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.

2 units, Spr (Staff)

#### **FRENLIT 190Q. Parisian Cultures of the 19th and Early 20th Centuries**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Political, social, and cultural events in Paris from the Napoleonic era and the Romantic revolution to the 30s. The arts and letters of bourgeois, popular, and avant garde cultures. Illustrated with slides. Prerequisite: students must have two years of college-level French (or equivalent).

4 units, Spr (Bertrand, M)

#### **FRENLIT 199. Individual Work**

Restricted to French majors with consent of department. Normally limited to 4-unit credit toward the major. May be repeated for credit.

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## **GRADUATE COURSES IN FRENCH LITERATURE**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **FRENLIT 219. The Renaissance Body**

The body as locus for desire, pleasure, disease, mortality, sexuality, and gender; and as canon of beauty and reflection of cosmic harmony. How literature responded to the development of an anatomical gaze in arts and medicine; how it staged the aesthetic, religious, philosophical, and moral issues related to such a promotion or deconstruction of the body. Does literature aim at representing the body, or use it as signifier for intellectual, emotional, and political ideas? Readings from Rabelais, Scève, Ronsard, Labé, d'Aubigné, Montaigne, and medical texts.

3-5 units, not given this year

#### **FRENLIT 222. The Political Unconscious of the Ancien Regime**

The lasting influence in Europe of absolutism. Topics include political theories, the importance of court life, art as a political tool, modifications in human sensibility, literature, and social transformations.

3-5 units, not given this year

#### **FRENLIT 225. Multicultural Moliere**

Molière's life and work as a point of departure for the notion of multiculturalism. Born in a bourgeois family, Molière was in contact with social milieux including the French peasantry for whom he wrote farces, and the court of Louis XIV for whom he provided spectacles at Versailles. Major plays, including Tartuffe, Le bourgeois gentilhomme, and Le malde imaginaire as the expression of the new court culture. Sociohistorical and contemporary literary approaches: Molière as the unifying artistic figure in a multicultural France.

3-5 units, not given this year

#### **FRENLIT 238. Jean-Paul Sartre and Simone de Beauvoir**

The course will examine the relation between the two thinkers, with special emphasis on the debate in France about the engaged intellectual. It will also explore the Sartre/Merleau-Ponty correspondence at the time of their quarrel around 1953, as well as the Sartre/Camus controversy. Readings include: Sartre's, Qu'est-ce que la littérature ?, Situations II, L'idiot de la famille; Beauvoir's, Le deuxième sexe, Mémoires d'une jeune fille rangée, Les Mandarins, La Force des choses; Merleau-Ponty's Sartre et l'ultra-bolchévisme, in Parcours deux; and Adorno's paper Engagement, in Notes to Literature.

3-5 units, Aut (Gayraud, A)

#### **FRENLIT 248. Literature, History, and Representation**

(Same as COMPLIT 250) Literary works as historical narratives; texts which envision ways of reconstructing or representing an ancient or immediate past through collective or individual narratives. Narration and narrator; relation between individual and

collective history; historical events and how they have shaped the narrative; master narratives; and alternative histories. Reading include Glissant, Césaire, Dadié, Cixous, Pérec, Le Clézio, Mokkedem, Benjamin, de Certeau, and White.

3-5 units, not given this year

#### **FRENLIT 256. Mind and Body in 20th-Century French Fiction**

How fiction articulates the tensions among the sensuous, the sensual, the embodied, and the aspiration to purity, abstraction, and transcendence. Focus is on questioning dichotomies such as nature/culture, masculine/feminine, sacred/profane, and written word/voice. Authors include Gide, Camus, Butor, Duras, and Tournier.

3-5 units, not given this year

#### **FRENLIT 263. French Theater Through the Ages**

Today's most admired French plays were often deeply controversial when first performed. In this course, we will study a selection of plays that elicited heated arguments, from quarrels in the press to all out war in the auditorium. This will allow us to explore issues unique to different literary movements, as well as trans-historical questions concerning the political and moral value of theater. Authors include Corneille, Molière, Beaumarchais, Chénier, Hugo, Jarry and Genet. Readings and discussions in French.

3-5 units, Win (Robert, Y)

#### **FRENLIT 267. National Literatures, Littérature-monde: A New Comparatism**

(Same as COMPLIT 267) This course will focus on the implications of a global francophonie, through discussion of texts produced in different francophone times and spaces. Among the topics to be explored: confrontation of inward/outward territories and the questions of otherness, identity and minority status, the relation between history and literature, transnationality, métissage of languages and transnationality. Readings include Montaigne and Calvin, Tzvetan Todorov, Lise Gauvin, Aimé Césaire, Bernard Dadié, Edouard Glissant, Leila Sebbar and others.

3-5 units, not given this year

#### **FRENLIT 276. From Romance to Novel: 17th-Century French Fiction**

Modern literary historians aren't the only ones to have had difficulty conceptualizing the novel without using romance as a foil: lexically, the opposition has been with us, in France and England, for a good three and a half centuries; the tension even generated, many say, the foundational Don Quixote. In this seminar, we will be both reviewing the critical literature on the topic and looking closely at three works from the French tradition that may--or may not--document the transition from romance to novel: d'Urfé's L'Astrée, Sorel's Le Berger extravagant, and Lafayette's La Princesse de Clèves,.

3-5 units, Spr (Staff)

#### **FRENLIT 278. Special Topics (Francophone Literature): From Exoticism to a Discourse of Auto-Representation**

(Same as AFRICAST 278, COMPLIT 278) Critical analysis of major issues relating to literatures in French language in and outside France. Focus is on exoticism and self-representation, with an emphasis on the evolution of mentalities, new sensitivities and the role of literature in developing individual or collective identity. Readings include Le Clézio, Memmi, Malouf, Lopes, Schwarz-Bart, Delaygue, Glissant, Todorov, Kane and others. Primary sources, secondary sources and film. Taught in French.

3-5 units, not given this year

#### **FRENLIT 280. Women in Print: Gender, Authorship, and Book Culture in Early Modern France**

The relationships between gender, concepts of authorship, and early modern book culture in Renaissance France. What rhetorical, commercial, or textual strategies were used by printers, publishers, and writers, male and female alike, to create a new commodity, the female-authored book, and a new notion, that of female author, at a time when the phrase was still an oxymoron. Readings from Marguerite de Navarre, Helisenne de Crenne, Pernelle du Guillet, Louise Labé, the Dame des Roches, and Marie de Gournay.

3-5 units, Aut (Alduy, C)

#### **FRENLIT 293A. Topics in French Literature and Philosophy**

Five-week course. May be repeated for credit.

2 units, Aut (Serres, M)

**FRENLIT 293B. Topics in French Literature and Philosophy**

Five-week course. May be repeated for credit.

2 units, Spr (Serres, M)

**FRENLIT 299. Individual Work**

May be repeated for credit.

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**FRENLIT 358. The Novel as/and Critical Discourse**

(Same as COMPLIT 348) Literature is the site of a multiplicity of knowledges. This course is an attempt to build a history of ideas in the Francophone world. We will be looking at narrative styles, as well as the ways in which the 20th century theoretical discourse among Francophone intellectuals is often embedded in the novel. The role of intellectuals in society will be discussed, with a focus on three major topics: identities, religion (Islam, Christianity, violence), and democracy. Reading includes Assia Djebar, Abdelwahab Meddeb, Henri Lopes, Amin Malouf, VY Mudimbe, Franz Fanon, Jean-Paul Sartre, Edward Said and others.

3-5 units, Win (Boyi, E)

**FRENLIT 399. Individual Work**

For students in French working on special projects or engaged in pre-dissertation research.

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**FRENLIT 802. TGR Dissertation**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## GENETICS (GENE) COURSES

### UNDERGRADUATE COURSES IN GENETICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**GENE 25SI. The Art and Science of Beer**

Colloquium-style lecture series. Topics include: basics of beer brewing, the science behind the brew, history of beer brewing, government regulation, regional traditions and techniques, American micro-brewing. Includes hands-on brewing experience.

1 unit, Spr (Staff)

**GENE 104Q. Law and the Biosciences**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Focus is on human genetics; also assisted reproduction and neuroscience. Topics include forensic use of DNA, genetic testing, genetic discrimination, eugenics, cloning, pre-implantation genetic diagnosis, neuroscientific methods of lie detection, and genetic or neuroscience enhancement. Student presentations on research paper conclusions.

3 units, Win (Greely, H)

**GENE 109Q. Genomics: A Technical and Cultural Revolution**

(Same as BIOMEDIN 109Q) Preference to sophomores. Concepts of genomics, high-throughput methods of data collection, and computational approaches to analysis of data. The social, ethical, and economic implications of genomic science. Students may focus on computational or social aspects of genomics.

3 units, not given this year

**GENE 199. Undergraduate Research**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### GRADUATE COURSES IN GENETICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**GENE 202. Human Genetics**

Utilizes lectures and small group discussions to design a working knowledge of human genetics as applicable to clinical medicine and research. Basic principles of inheritance, risk assessment, and population genetics, illustrated by using clinical examples drawn from diverse areas of medical genetics practice including prenatal, pediatric, adult and cancer genetics. Practical aspects of molecular and cytogenetic diagnostic methods emphasized. Existing and

emerging treatment strategies for single gene disorders also covered. Prerequisites: biochemistry; basic genetics.

4 units, Aut (Bernstein, J)

**GENE 203. Advanced Genetics**

(Same as BIO 203, DBIO 203) For graduate students in Bioscience programs; may be appropriate for graduate students in other programs. Focused on application of the genetics toolbox to problems in modern biology research. Topics covered include analytic methods, genetic manipulation, genome analysis, and human genetics. Lectures and faculty-led discussion sections with evaluation of papers. Students with minimal experience in genetics should prepare by working out problems in college level textbooks.

4 units, Aut (Stearns, T; Bustamante, C; Fire, A; Sidow, A)

**GENE 206. Epigenetics**

(Same as BIO 156, BIO 256, PATH 206) For graduate students in the Biosciences and upper level Biology undergraduates. Mechanisms by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. From the discovery of position-effect variegation in *Drosophila* in the 1920s to present-day studies of covalent modifications of histones and DNA methylation. Topics include: position effect, gene silencing, heterochromatin, centromere identity, genomic imprinting, histone code, variant histones, and the role of epigenetics in cancer. Prerequisite: BIO41 and BIO42, or GENE 203, or consent of instructor.

2 units, alternate years, not given this year

**GENE 209. Current Topics in Human, Population, and Statistical Genomics**

Intensive seminar/workshop. Topics, drawn from current and past literature, may include: assessing and population genetic analysis of genomic variation; genome-to-phenome mapping; reconstructing demographic history from genome sequence data; domestication genomics; host-pathogen genome evolution; detecting signatures of selection; experimental design in human genetics; linkage and association mapping; ethical and social issues in human, plant, and animal genetics research. Emphasis on analysis and logic or experimental and observational genomics research. Faculty-led discussion with evaluation of response papers, problem sets, and intensive course project. May be repeated for credit.

2 units, Win (Bustamante, C), Spr (Staff)

**GENE 210. Genomics and Personalized Medicine**

Principles of genetics underlying associations between genetic variants and disease susceptibility and drug response. Topics include: genetic and environmental risk factors for complex genetic disorders; design and interpretation of genome-wide association studies; pharmacogenetics; full genome sequencing for disease gene discovery; population structure and genetic ancestry; use of personal genetic information in clinical medicine; ethical, legal, and social issues with personal genetic testing. Hands-on workshop making use of personal or publicly available genetic data. 2 units lecture only; 3 units lecture and workshop. Prerequisite: GENE 202 or 203.

2-3 units, Spr (Staff)

**GENE 211. Genomics**

Genome evolution, organization, and function; technical, computational, and experimental approaches; hands-on experience with representative computational tools used in genome science; and a beginning working knowledge of PERL.

3 units, Win (Cherry, J; Sherlock, G)

**GENE 212. Introduction to Biomedical Informatics Research Methodology**

(Same as BIOE 212, BIOMEDIN 212, CS 272) Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Prerequisites: BIOMEDIN 210, 211, 214, 217 or consent of instructor.

3 units, Spr (Altman, R)

**GENE 214. Representations and Algorithms for**

**Computational Molecular Biology**

(Same as BIOE 214, BIOMEDIN 214, CS 274) Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.

3-4 units, Aut (Altman, R)

**GENE 215. Frontiers in Biological Research**

(Same as BIOC 215, DBIO 215) Literature discussion in conjunction with the Frontiers in Biological Research seminar series in which investigators present current work. Students and faculty meet beforehand to discuss papers from the speaker's primary research literature. Students meet with the speaker after the seminar to discuss their research and future direction, commonly used techniques to study problems in biology, and comparison between the genetic and biochemical approaches in biological research.

1 unit, Aut (Harbury, P; Villeneuve, A; Calos, M), Win (Harbury, P; Villeneuve, A; Calos, M)

**GENE 218. Computational Analysis of Biological Images**

(Same as PATH 218) Physical and computational tools for acquisition, processing, interpretation, and archiving of biological images. Emphasis is on digital microscopy.

2 units, not given this year

**GENE 221. Current Issues in Aging**

(Same as DBIO 221) Current research literature on genetic mechanisms of aging in animals and human beings. Topics include: mitochondria mutations, insulin-like signaling, sirtuins, aging in flies and worms, stem cells, human progeria, and centenarian studies. Prerequisite: GENE 203.

2 units, Spr (Staff), alternate years, not given next year

**GENE 222. Method and Logic in Experimental Genetics**

For graduate students only. How experimental strategies are applied to biological questions irrespective of discipline boundaries. Examples include purifying activities from complex mixtures, localizing molecules in space and time, discovering macromolecular interactions, inferences from sequence similarity, using structure to elucidate function, and applying genomics to biological problems. Weekly discussion of two representative papers selected by faculty and a student presentation of a third paper which illustrate principles of biochemistry and cell and molecular biology, and the historical context of important scientific advances.

3 units, Win (Baker, J; Pringle, J)

**GENE 233. The Biology of Small Modulatory RNAs**

(Same as MI 233, PATH 233) Open to graduate and medical students. Explores recent progress and unsolved questions in the field of RNA interference and microRNA biology. Students are required to read assigned primary literature before each class and actively participate in guided discussions on related technical and conceptual issues during class meetings. Assignments include critiques of assigned papers and developing a novel research proposal.

2 units, alternate years, not given this year

**GENE 234. Fundamentals of RNA Biology**

(Same as MI 234, PATH 234) For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students.

2 units, Aut (Fire, A; Chen, C)

**GENE 235. C. Elegans Genetics**

Genetic approaches to *C. elegans*, practice in designing experiments and demonstrations of its growth and anatomy.

Probable topics include: growth and genetics, genome map and sequence, mutant screens that start with a desired phenotype, reverse genetics and RNAi screens, genetic duplications, uses of null phenotype non-null alleles, genetic interactions and pathway analysis, and embryogenesis and cell lineage. Focus of action, mosaic analysis, and interface with embryological and evolutionary approaches.

2 units, alternate years, not given this year

**GENE 243. Intellectual Property: Scientific Evidence in Patent Litigation**

(Same as LAW 343) Open to clinical MD and graduate students. Explores the role of scientific experts in patent infringement litigation. In other areas of the law where scientific experts are used -- medical malpractice, environmental law, criminal law -- the science itself is often in dispute. In patent cases, however, the parties generally agree on the science. This affects the relationship between the lawyer and the expert and the substantive content of their interactions. Patent experts need to be able to explain science to the judge and jury. But they also must help the litigators choose which legal issues to press and which to concede, and to be aware of how the complications of the science might help, hurt, obscure or reveal how the law should be applied to the facts. The class examines judicial decisions and trial documents involving scientific evidence in patent litigation, followed by work in teams on final projects: simulations of expert testimony in a patent case. Simulati

3 units, Win (Morris, R)

**GENE 244. Introduction to Statistical Genetics**

Statistical methods for analyzing human genetics studies of Mendelian disorders and common complex traits. Probable topics include: principles of population genetics; epidemiologic designs; familial aggregation; segregation analysis; linkage analysis; linkage-disequilibrium-based association mapping approaches; and genome-wide analysis based on high-throughput genotyping platforms. Prerequisite: STATS 116 or equivalent or consent of instructor.

3 units, alternate years, not given this year

**GENE 245. Computational Algorithms for Statistical Genetics**

(Same as STATS 345) Computational algorithms for human genetics research. Topics include: permutation, bootstrap, expectation maximization, hidden Markov model, and Markov chain Monte Carlo. Rationales and techniques illustrated with existing implementations commonly used in population genetics research, disease association studies, and genomics analysis. Prerequisite: GENE 244 or consent of instructor.

2-3 units, alternate years, not given this year

**GENE 260. Supervised Study**

Genetics graduate student lab research from first quarter to filing of candidacy. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GENE 271. Human Molecular Genetics**

For genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows interested in the practice of medical genetics. Gene structure and function; the impact of mutation and polymorphism as they relate to developmental pathways and health and human disease; population based genetics; approaches to the study of complex genetic conditions; GWAS and genome sequencing technologies; gene therapy, proteomics, stem cell biology, and pharmacogenetics. Undergraduates require consent of instructor and a basic genetics course.

4 units, Aut (Kwan, A; Francke, U)

**GENE 272. Introduction to Medical Genetics**

For genetic counseling students, graduate students in human genetics, medical students, residents, and fellows; undergraduates with consent of instructor. Principles of medical genetics including taking a family history, modes of inheritance, and mathematical principles of medical genetics (Bayes theorem, population genetics). An additional problem set is required for 3 units.

2-3 units, Aut (Hudgins, L; Ormond, K)

**GENE 273. Introduction to Clinical Genetics Testing**

For genetic counseling students, graduate students in genetics, medical students, residents, and fellows; undergraduates with consent of instructor. Uses a combination of case based approach

and didactic lectures to introduce the laboratory concepts of cytogenetics and molecular genetics, and illustrate common genetic conditions that are diagnosed through such testing, introducing students to skills in case preparation, management and presentation. An additional problem set is required for 3 units.

2-3 units, Aut (Kwan, A; Hudgins, L)

**GENE 274A. A Case Based Approach to Clinical Genetics**

For genetic counseling students, graduate students in genetics, medical students, residents and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders.

2 units, Win (Hudgins, L; Kwan, A)

**GENE 274B. A Case Based Approach to Clinical Genetics**

For genetic counseling students, graduate students in genetics, medical students, residents, and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders.

2 units, Spr (Staff)

**GENE 275. Role Play and Genetic Counseling Observations**

Students role play aspects of genetic counseling sessions and learn through clinical observations. Observation includes genetic counseling sessions in prenatal, pediatric, and cancer settings.

2 units, Aut (Kwan, A; Ormond, K)

**GENE 276. Genetic Counseling Clinical Rotations**

For genetic counseling students only. Supervised clinical experiences. May be repeated for credit. Prerequisite: GENE 275.

4-7 units, Aut (Ormond, K; Kwan, A), Win (Ormond, K; Kwan, A), Spr (Ormond, K; Kwan, A), Sum (Ormond, K; Kwan, A)

**GENE 278. Prenatal Genetic Counseling**

Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial prenatal genetics rotation. Topics include prenatal genetic screening and diagnosis in the first and second trimesters, ultrasound, teratology, and genetic carrier screening.

1 unit, Aut (Ormond, K), Win (Ormond, K), Spr (Ormond, K), Sum (Ormond, K)

**GENE 279. Pediatric and Adult Genetic Counseling**

Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial general genetics rotation. Topics include: common genetic conditions; assessment of child development and medical history in the context of a genetic workup; dysmorphology; development of a differential diagnosis; and resources for case management and family support.

1 unit, Aut (Kwan, A), Win (Kwan, A), Spr (Kwan, A), Sum (Ormond, K)

**GENE 280. Metabolic Genetic Counseling**

Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their metabolic genetics rotation. Topics include: overview of metabolic diseases; common pathways; diagnosis, management, and treatment of metabolic disorders; and newborn screening.

1 unit, Aut (Kwan, A), Win (Kwan, A), Spr (Kwan, A), Sum (Ormond, K)

**GENE 281. Cancer Genetic Counseling**

Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial cancer genetics rotation. Topics include: cancer biology and cytogenetics; diagnosis and management of common cancer genetic syndromes; predictive testing; psychology of cancer genetic counseling; and topics recommended by ASCO guidelines.

1 unit, Aut (Ormond, K), Win (Ormond, K), Spr (Ormond, K), Sum (Ormond, K)

**GENE 282A. Genetic Counseling Research Seminar**

For genetic counseling students only. Facilitated discussions on identifying a topic and mentor for genetic counseling departmental research projects.

1 unit, Win (Ormond, K)

**GENE 282B. Genetic Counseling Research Seminar**

For genetic counseling students only. Lectures and facilitated discussions on research methodology for genetic counseling departmental research projects. Prerequisite: GENE 282A,

1 unit, Spr (Staff)

**GENE 283. Genetic Counseling Research**

Genetic counseling students conduct clinical research projects as required by the department for graduation. May be repeated for credit. Pre- or corequisite: GENE 282.

1-8 units, Aut (Ormond, K; Kwan, A), Win (Ormond, K; Kwan, A), Spr (Ormond, K; Kwan, A), Sum (Ormond, K; Kwan, A)

**GENE 284. Medical Genetics Seminar**

Presentation of research and cases. Students enrolling for 2 units also attend and report on external seminars. May be repeated for credit.

1-2 units, Aut (Kwan, A), Win (Kwan, A), Spr (Staff)

**GENE 285A. Genetic Counseling Seminar**

Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Winter: the impact of chronic illness and genetic disease in a developmental manner. Spring: applying therapeutic counseling approaches to the practice of genetic counseling. Undergraduates may enroll in Autumn Quarter with consent of instructor.

2-3 units, Aut (Ormond, K)

**GENE 285B. Genetics Counseling Seminar**

Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Winter: the impact of chronic illness and genetic disease in a developmental manner. Spring: applying therapeutic counseling approaches to the practice of genetic counseling. Prerequisite: GENE 285A.

2-3 units, Win (Ormond, K)

**GENE 285C. Genetic Counseling Seminar**

Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Winter: the impact of chronic illness and genetic disease in a developmental manner. Spring: applying therapeutic counseling approaches to the practice of genetic counseling. Prerequisite: 285 A/B.

2-3 units, Spr (Staff)

**GENE 286. Advanced Genetic Counseling Seminar**

For genetic counseling students only. Psychosocial issues associated with genetic counseling cases are discussed through presentation of cases that students have seen throughout their training. Professional development topics including: the expanding roles of genetic counselors; billing, reimbursement, and licensing; the role of genetic counseling in the changing healthcare system; the incorporation of genetics into all areas of medicine and public health; and implications of direct-to-consumer genetic testing. Must be taken for 3 quarters. Prerequisites: GENE 285 A,B,C and 276.

2 units, Aut (Ormond, K; Kwan, A)

**GENE 286B. Advanced Genetic Counseling Seminar**

Continuation of GENE 286A. For genetic counseling students only. Psychosocial issues associated with genetic counseling cases are discussed through presentations of cases that students have seen throughout their training. Professional development topics including: the expanding roles of genetic counselors; billing, reimbursement, and licensing; the role of genetic counseling in the changing healthcare system; the incorporation of genetics into all areas of medicine and public health; and implications of direct-to-consumer genetic testing. Prerequisites: GENE 285 A,B,C and 276.

2 units, Win (Ormond, K; Kwan, A)

**GENE 299. Directed Reading in Genetics**

Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GENE 399. Graduate Research**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

*1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GENE 801. TGR Project**

*0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GENE 802. TGR Dissertation**

*0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

## GEOLOGICAL AND ENVIRONMENTAL SCIENCES (GES) COURSES

### UNDERGRADUATE COURSES IN GEOLOGICAL AND ENVIRONMENTAL SCIENCES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**GES 1A. Introduction to Geology: The Physical Science of the Earth**

For non-majors or prospective majors in the Earth Sciences. Lectures, hands-on laboratories, and three one-day weekend field trips. Focus is on the physical and chemical processes of heat and mass transfer within the earth and its fluid envelopes, including deep-earth, crustal, surface, and atmospheric processes. Topics include the dynamics of and interactions between the inner earth, plate tectonics, surface processes, and atmospheric processes such as climate change and global warming. Only one of GES 1A, 1B, or 1C may be taken for credit. Prerequisites: MATH 19 or equivalent. GER: DB-NatSci

*5 units, Aut (Hilley, G)*

**GES 1BN. Introduction to Geology: California Desert Field Geology**

For non-majors and prospective majors or minors in the Earth Sciences. California's Death Valley and Owens Valley are used as natural laboratories for studying active geologic processes that shape Earth's surface (earthquakes, mountain building, volcanoes, glaciers) and for tracing a billion years of Earth history, climate change, and historic human impacts. Lectures on physical geology and hands-on laboratory exercises involving rock identification and interpreting topographic and geologic maps and remote sensing imagery provide the background necessary to appreciate the 6-day field trip to these desert areas during Spring Break. Camping and moderate hiking required. Only one of GES 1A, 1B, or 1C may be taken for credit. Recommended: high school chemistry. GER: DB-NatSci

*5 units, not given this year*

**GES 1C. Introduction to Geology: Dynamic Earth**

For non-majors or prospective majors in the Earth Sciences. Integrated lecture-lab includes hands-on activities and local field trips. Focus is on reading the dynamic geological landscape, with an emphasis on California-primarily Bay Area-geology. Topics include plate tectonics, earthquakes and volcanoes, Earth materials, geologic time, stream processes, and climate change over geologic time. Only one of GES 1A, 1B, or 1C may be taken for credit. GER: DB-NatSci

*4 units, Spr (Staff)*

**GES 4. Evolution and Extinction: Introduction to Historical Geology**

(Same as EARTHSYS 4) Introduction to the basic tools and principles geologists and paleontologists use to reconstruct the history of the Earth. Principles of stratigraphy, correlation, the geological timescale, the history of biodiversity, and the interpretation of fossils. The use of data from sedimentary geology, geochemistry, and paleontology to test theories for critical events in Earth history such as mass extinctions. Two half-day field trips. GER: DB-NatSci

*4 units, Win (Payne, J)*

**GES 5. Living on the Edge**

A weekend field trip along the Pacific Coast. Tour local beaches, geology, and landforms with expert guides from the Department of Geological and Environmental Sciences. Enjoy a BBQ dinner and stay overnight in cabins along the Santa Cruz coast. Get to know faculty and graduate students in the Earth Sciences. Requirements: One campus meeting and weekend field trip to Pacific Coast. Enrollment limited to 18. Freshman have first choice.

*1 unit, Aut (Miller, E)*

**GES 7A. An Introduction to Wilderness Skills**

Living, traveling, and working in the wilderness for those planning fieldwork in the back country. Local geology, environmental ethics, trip planning, first aid, and leadership techniques. Four mandatory weekend outings focus on back country travel, minimum impact camping, equipment use and maintenance, rock climbing, and navigation. 7A emphasizes wilderness travel and climbing. 7B emphasizes winter camping skills and back country skiing. Food, group, and major personal gear provided. Guest speakers. Fee. See <http://www.stanford.edu/class/ges7>, or email [oop-teachers@lists.stanford.edu](mailto:oop-teachers@lists.stanford.edu).

*1 unit, Aut (Bird, D)*

**GES 7B. An Introduction to Wilderness Skills**

Living, traveling, and working in the wilderness for those planning fieldwork in the backcountry. Local geology, environmental ethics, trip planning, first aid, and leadership techniques. Four mandatory weekend outings focus on backcountry travel, minimum impact camping, equipment use and maintenance, rock climbing, and navigation. 7A emphasizes wilderness travel and climbing. 7B emphasizes winter camping skills and backcountry skiing. Food, group, and major personal gear provided. Guest speakers. Fee. See <http://www.stanford.edu/class/ges7>, or email [oop-teachers@lists.stanford.edu](mailto:oop-teachers@lists.stanford.edu).

*1 unit, Win (Bird, D)*

**GES 7C. Advanced Wilderness Skills**

For students with prior backcountry experience. Backcountry skiing, mountaineering, climbing, first aid, and trip planning. Focus is on outdoor leadership experience and trip management techniques. Food, group, and major personal gear provided. Four mandatory weekend trips. Fee. See <http://www.stanford.edu/class/ges7/> for information or contact [oop-teachers@lists.stanford.edu](mailto:oop-teachers@lists.stanford.edu). Prerequisite: application.

*1 unit, Spr (Bird, D)*

**GES 8. Oceanography: An Introduction to the Marine Environment**

For non-majors and earth science and environmental majors. Topics: topography and geology of the sea floor; evolution of ocean basins; circulation of ocean and atmosphere; nature of sea water, waves, and tides; and the history of the major ocean basins. The interface between continents and ocean basins, emphasizing estuaries, beaches, and continental shelves with California margin examples. Relationships among the distribution of inorganic constituents, ocean circulation, biologic productivity, and marine environments from deep sea to the coast. One-day field trip to measure and analyze waves and currents. GER: DB-NatSci

*3 units, Sum (Staff)*

**GES 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration**

(Same as EARTHSYS 38N, EESS 38N) Preference to freshmen. The isolation of polar explorers under the harshest conditions on Earth, and the chronicles of their explorations and hardships dating to the 1500s for the Arctic and the 1700s for the Antarctic. Focus is on scientific and geographic achievements. Sources include *The Worst Journey in the World* by Apsley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Class jointly authors essay on themes from such literature. Optional field trip into the high Sierra in December. (Dunbar) GER: DB-NatSci

*3 units, NEXTYEAR*

**GES 39N. Forensic Geoscience: Stanford CSI**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Geological principles, materials, and techniques indispensable to modern criminal investigations. Basic earth materials, their origin and variability, and how they can be used as evidence in criminal cases and investigations such as artifact provenance and

environmental pollution. Sources include case-based, simulated forensic exercises and the local environments of the Stanford campus and greater Bay Area. Local field trips; research presentation and paper. GER: DB-NatSci

3 units, Spr (Maher, K)

#### GES 40N. Diamonds

Preference to freshmen. Topics include the history of diamonds as gemstones, prospecting and mining, and their often tragic politics. How diamond samples provide clues for geologists to understand the Earth's deep interior and the origins of the solar system. Diamond's unique materials properties and efforts in synthesizing diamonds. GER: DB-NatSci

3 units, alternate years, not given this year

#### GES 42N. Landscapes and Tectonics of the San Francisco Bay Area

Active faulting and erosion in the Bay Area, and its effects upon landscapes. Earth science concepts and skills through investigation of the valley, mountain, and coastal areas around Stanford. Faulting associated with the San Andreas Fault, coastal processes along the San Mateo coast, uplift of the mountains by plate tectonic processes, and landsliding in urban and mountainous areas. Field excursions; student projects.

4 units, not given this year

#### GES 43Q. Environmental Problems

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Components of multidisciplinary environmental problems and ethical questions associated with decision making in the regulatory arena. Students lead discussions on environmental issues such as groundwater contamination from point and nonpoint sources, cumulative watershed effects related to timber and mining practices, acid rain, and subsurface disposal of nuclear waste. GER: DB-NatSci

3 units, Win (Loague, K)

#### GES 50Q. The Coastal Zone Environment

Preference to sophomores. The oceanographic, geological, and biological character of coastal zone environments, including continental shelves, estuaries, and coastal wetlands, with emphasis on San Francisco Bay. Five required field trips examine estuarine and coastal environments, and agencies and facilities that manage these resources. Students present original research. Prerequisite: beginning course in Biology such as BIOSCI 51, Chemistry such as CHEM 30 or 31, Earth Sciences such as GES 1 or 2, or Earth Systems such as EARTHSYS 10. GER: DB-NatSci

3 units, not given this year

#### GES 55Q. The California Gold Rush: Geologic Background and Environmental Impact

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Topics include: geologic processes that led to the concentration of gold in the river gravels and rocks of the Mother Lode region of California; and environmental impact of the Gold Rush due to population increase, mining operations, and high concentrations of arsenic and mercury in sediments from hard rock mining and milling operations. Recommended: introductory geology. GER: DB-NatSci

3 units, Win (Bird, D)

#### GES 90. Introduction to Geochemistry

The chemistry of the solid earth and its atmosphere and oceans, emphasizing the processes that control the distribution of the elements in the earth over geological time and at present, and on the conceptual and analytical tools needed to explore these questions. The basics of geochemical thermodynamics and isotope geochemistry. The formation of the elements, crust, atmosphere and oceans, global geochemical cycles, and the interaction of geochemistry, biological evolution, and climate. Recommended: introductory chemistry. GER: DB-NatSci

3-4 units, Win (Stebbins, J)

#### GES 101. Environmental and Geological Field Studies in the Rocky Mountains

(Same as EARTHSYS 100, EESS 101) Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such

as acid mine drainage and changing land-use patterns.

3 units, Aut (Chamberlain, P)

#### GES 102. Earth Materials: Introduction to Mineralogy

The minerals and materials that comprise the earth and their uses in modern society. How to identify, classify, and interpret rock-forming minerals. Emphasis is on information provided by common minerals about the nature of the Earth's interior and processes such as magmatism and metamorphism that operate there, as well as the major processes of weathering and erosion that link plate tectonics to earth cycles. Prerequisite: introductory geology course. Recommended: introductory chemistry. GER: DB-NatSci

3 units, Aut (Brown, G; Mao, W)

#### GES 102L. Introductory Mineralogy Laboratory

One weekly 3-hour laboratory to identify and interpret rock-forming minerals, industrially important minerals, and gems. Introduction to the use of hand lens, petrographic microscope and x-ray diffraction. Prerequisite: GES102 taken concurrently.

1 unit, Aut (Brown, G; Mao, W)

#### GES 103. Earth Materials: Rocks in Thin Section

Use of petrographic microscope to identify minerals and common mineral associations in igneous, metamorphic, and sedimentary rocks. Crystallization histories, mineral growth and reaction relations, deformation textures in metamorphic rocks, and provenance of siliciclastic rocks. Prerequisite 102.

3 units, Win (Miller, E)

#### GES 104. Earth Materials: Introduction to Petrology

The origin of different rock types as a function of geologic and plate tectonic setting. How mineral and energy resources occur in rocks. Prerequisite: introductory geology course. Recommended: GES102.

3 units, Spr (Mahood, G; Warren, J)

#### GES 104L. Introductory Petrology Laboratory

One weekly 3-hour laboratory on how to identify igneous, metamorphic, and sedimentary rocks, and interpret their mode and conditions of formation using hand lens and petrographic microscope. Prerequisite: GES 102L; GES103; GES104 taken concurrently.

1 unit, Spr (Mahood, G; Warren, J)

#### GES 105. Introduction to Field Methods

Two-week, field-based course in the White Mountains of eastern California. Introduction to the techniques for geologic mapping and geologic investigation in the field: systematic observations and data collection for lithologic columns and structural cross-sections. Interpretation of field relationships and data to determine the stratigraphic and deformational history of the region. Prerequisite: GES 1. Recommended: GES 102.

3 units, Aut (Grove, M; Miller, E)

#### GES 107. Journey to the Center of the Earth

(Same as GES 207, GEOPHYS 184, GEOPHYS 274) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter.

3 units, Win (Lawrence, J; Mao, W)

#### GES 110. Structural Geology and Tectonics

Theory, principles, and practical techniques to measure, describe, analyze, and interpret deformation-related structures on Earth. Collection of fault and fold data in the field followed by lab and computer analysis; interpretation of geologic maps and methods of cross-section construction; structural analysis of fault zone and metamorphic rocks; measuring deformation; regional structural styles and associated landforms related to plate tectonic convergence, rifting, and strike-slip faulting; the evolution of mountain belts and formation of sedimentary basins. Prerequisite: GES 1, calculus. Recommended: 102. GER: DB-NatSci

3-5 units, Spr (Miller, E)

#### GES 111. Fundamentals of Structural Geology

(Same as CEE 195) Techniques for mapping using GPS and differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow;

measurement and analysis of stress; elastic deformation and properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisites: GES 1, MATH 51, 52

3 units, Win (Pollard, D)

#### GES 115. Engineering Geology and Global Change

(Same as CEE 196) The application of geology and global change to the planning, design, and operation of engineering projects. Case histories taught in a seminar setting and field trips emphasize the impact of geology and global change on both individual engineering works and the built environment by considering Quaternary history and tectonics, anthropogenic sea level rise, active geologic processes, engineering properties of geologic deposits, site exploration, and professional ethics. Prerequisite: GES 1 or consent of instructor. GER: DB-NatSci

3 units, Spr (Holzer, T)

#### GES 119. A Solar System Odyssey: Introduction to Planetary Geology

How could planetary bodies such as Earth, Moon and Mars form so close together, with such similar starting products have such drastically different outcomes? Did Mars ever have standing water? Does Europa have a subsurface ocean teeming with life? In this course, you will study the formation and evolution of planets and moons, and how differences such as mass and composition have led to a diverse selection of terrain. Through our exploration of selected topics in planetary geology (volcanism, cratering, tectonics), we will actively debate contemporary controversies in planetary geology. GES 1 required or permission of the instructor.

3 units, Aut (Lawrence, K)

#### GES 120. Planetary and Early Biological Evolution Seminar

(Same as GES 220) Interdisciplinary. For upper division science undergraduates and graduate students. Synthesis of biology, geology, physics, and chemistry. Recent approaches for identifying traces of past life on Earth. How to look for life on other planets such as Mars, Europa, and Titan. May be repeated for credit.

2-3 units, not given this year

#### GES 121. What Makes a Habitable Planet?

(Same as GES 221) Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets, geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.

3 units, not given this year

#### GES 122. Planetary Systems: Dynamics and Origins

(Students with a strong background in mathematics and the physical sciences should register for 222.) Motions of planets and smaller bodies, energy transport in planetary systems, composition, structure and dynamics of planetary atmospheres, cratering on planetary surfaces, properties of meteorites, asteroids and comets, extrasolar planets, and planetary formation. Prerequisite: some background in the physical sciences, especially astronomy, geophysics, or physics.

3-4 units, Aut (Marley, M; Lissauer, J)

#### GES 123. Paleobiology

(Same as EARTHSYS 122) Introduction to the fossil record with emphasis on marine invertebrates. Major debates in paleontological research. The history of animal life in the oceans. Topics include the nature of the fossil record, evolutionary radiations, mass extinctions, and the relationship between biological evolution and environmental change. Fossil taxa through time. Exercises in phylogenetics, paleoecology, biostratigraphy, and statistical methods. GER: DB-NatSci

4 units, alternate years, not given this year

#### GES 130. Soil Physics and Hydrology

The occurrence, distribution, circulation, and reaction of water at the surface and within the near surface. Topics: precipitation, evapotranspiration, infiltration and vadose zone, groundwater, surface water and streamflow generation, and water balance estimates. Current and classic theory in soil physics and hydrology. Urban, rangeland, and forested environments. GER: DB-NatSci

3 units, Aut (Loague, K)

#### GES 131. Hydrologically-Driven Landscape Evolution

Materials of the Earth and hydrologically driven landscape processes. Topics: hillslope hydrology, weathering of rocks and soils, erosion, flow failures, mass wasting, and conceptual models of landscape evolution. Current and classic theory in geomorphology. GER: DB-NatSci

3 units, Win (Loague, K)

#### GES 150. Senior Seminar: Issues in Earth Sciences

Focus is on written and oral communication in a topical context. Topics from current frontiers in earth science research and issues of concern to the public. Readings, oral presentations, written work, and peer review.

3 units, Aut (Bird, D)

#### GES 151. Sedimentary Geology and Petrography: Depositional Systems

Topics: weathering, erosion and transportation, deposition, origins of sedimentary structures and textures, sediment composition, diagenesis, sedimentary facies, tectonics and sedimentation, and the characteristics of the major siliciclastic and carbonate depositional environments. Lab: methods of analysis of sediments in hand specimen and thin section. Field trips. Prerequisites: 1, 102, 103. GER: DB-NatSci

4 units, alternate years, not given this year

#### GES 163. Introduction to Isotope Geochemistry

(Same as GES 263) Stable, cosmogenic, and radiogenic isotopes; processes that govern isotopic variations. Application of isotopes to geologic, biologic, and hydrologic questions. Major isotopic systems and their applications. Simple modeling techniques used in isotope geochemistry.

3 units, Aut (Maher, K)

#### GES 170. Environmental Geochemistry

(Same as EARTHSYS 170) Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor. GER: DB-NatSci

4 units, Win (Brown, G)

#### GES 171. Geochemical Thermodynamics

Introduction to the application of chemical principles and concepts to geologic systems. The chemical behavior of fluids, minerals, and gases using simple equilibrium approaches to modeling the geochemical consequences of diagenetic, hydrothermal, metamorphic, and igneous processes. Topics: reversible thermodynamics, solution chemistry, mineral-solution equilibria, reaction kinetics, and the distribution and transport of elements by geologic processes. Prerequisite: GES 102. GER: DB-NatSci

3 units, Aut (Bird, D)

#### GES 180. Igneous Processes

For juniors, seniors and beginning graduate students in Earth Sciences. Structure and physical properties of magmas; use of phase equilibria and mineral barometers and thermometers to determine conditions of magmatic processes; melting and magmatic lineages as a function of tectonic setting; processes that control magma composition including fractional crystallization, partial melting, and assimilation; petrogenetic use of trace elements and isotopes. Labs emphasize identification of volcanic and plutonic rocks in thin section and interpretation of rock textures. Prerequisite 102, 103, or consent of instructor.

4 units, Spr (Stebbins, J)

#### GES 181. Metamorphic Processes

For juniors, seniors, and beginning graduate students in Earth Sciences. Thermodynamics and phase equilibria of multiple component systems; use of phase equilibria to determine pressure and temperature of metamorphic assemblages; geochronology of metamorphic rocks; heat flow in the lithosphere; links between

tectonics and metamorphism; and the role of heat and mass transfer in the Earth's crust and mantle. Labs emphasize identification of metamorphic rocks and minerals for common pelitic and basic rocks and interpretation of rock textures. May be taken for 3 units without lab. Prerequisites: 102, 103, or consent of instructor. GER: DB-NatSci

*3-5 units, not given this year*

#### **GES 182. Field Seminar on Continental-Margin Volcanism**

For juniors, seniors, and graduate students in the earth sciences and archeology. One weekend-long, and two one-day field trips to study Cenozoic volcanism associated with subduction and with passage of the Mendocino Triple Junction off the west coast of California: Mt. Lassen/Mt. Shasta/Modoc plateau; Clear Lake/Sonoma volcanics; Pinnacles National Monument. Andesite and basalt lavas, cinder cones, mixed magmas, blast deposit, debris avalanches, volcanic mudflows, hydrologic controls of springs in volcanic terrains, hydrothermal alteration and modern geothermal systems, Hg mineralization, obsidian source. Recommended: 1 or equivalent.

*2 units, Aut (Mahood, G)*

#### **GES 183. California Desert Geology**

Field seminar. Six-day field trip over Spring Break to Mojave Desert, Death Valley, and Owens Valley. Basin-and-range faulting, alluvial fans, playas, sand dunes, metamorphic rocks, granites of the Sierra Nevada, obsidian lava flows and the deposits of major explosive eruptions, hot springs and ore deposits, and desert landscapes. Camping and moderate hiking. Recommended: introductory geology.

*1 unit, not given this year*

#### **GES 184. Field Seminar on Eastern Sierran Volcanism**

For nonmajors and prospective majors in the earth sciences and archaeology. Four-day trip over Memorial Day weekend to study silicic and mafic volcanism in the eastern Sierra Nevada: basaltic lavas and cinder cones erupted along normal faults bounding Owens Valley, Long Valley caldera, postcaldera rhyolite lavas, hydrothermal alteration and hot springs, Holocene rhyolite lavas of the Inyo and Mono craters, subaqueous basaltic and silicic eruptions of Mono Basin, floating pumice blocks. If snow-level permits, silicic volcanism associated with the Bodie gold district. Recommended: 1 or equivalent.

*1 unit, Spr (Mahood, G)*

#### **GES 185. Volcanology**

For juniors, seniors, and beginning graduate students in earth sciences. Eruptive processes that create volcanic deposits and landforms; relation to physical properties of magmas. Volcanic hazards and the effects of eruptions on climate; volcanic-hosted geothermal systems and mineral resources. Required 4-day field trip over Memorial Day weekend to study silicic and mafic volcanism in the eastern Sierra Nevada. Those taking the class for 4 units will complete a 3-hour weekly lab involving hand specimen and thin section identification and interpretation, which emphasizes recognizing types of lavas and products of explosive eruptions. Prerequisite: 1, for those taking the course for 3 units; 103 and 104 or equivalent for those taking the course for 4 units. GER: DB-NatSci

*3-4 units, Win (Mahood, G)*

#### **GES 186. Geoarchaeology**

For juniors, seniors, and beginning graduate students with interests in archaeology or geosciences. Geological concepts, techniques, and data in the study of artifacts and the interpretation of the archaeological record. Topics include: sediments and soils; sedimentary settings of site formation; postdepositional processes that disturb sites; paleoenvironmental reconstruction of past climates and landscapes using plant and animal remains and isotopic studies; raw materials (minerals, metals, stone, shells, clay, building materials) and methods used in sourcing; estimating age based on stratigraphic and radiometric techniques. Weekly lab; weekend field trip to local archaeological/geological site. GER: DB-NatSci

*5 units, not given this year*

#### **GES 190. Research in the Field**

Two to three-week long courses that provide students with the opportunity to collect data in the field as part of a team-based investigation of research questions or topics under the expert

guidance of knowledgeable faculty and graduate students. Topics and locations vary. May be taken multiple times for credit. Prerequisites: GES 1, GES 102, GES 105.

*2-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

#### **GES 191. GES Field Trips**

Four- to seven-day field trips to locations of geologic and environmental interest. Includes trips offered during Thanksgiving and Spring breaks. May be repeated for credit. See <http://pangea.stanford.edu/GES/undergraduates/courses/>.

*1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

#### **GES 192. Undergraduate Research in Geological and Environmental Sciences**

Field-, lab-, or literature-based. Faculty supervision. Written reports. May be repeated for credit.

*1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

#### **GES 197. Senior Thesis**

For seniors who wish to write a thesis based on research in 192 or as a summer research fellow. May not be repeated for credit; may not be taken if enrolled in 199.

*3-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

#### **GES 198. Special Problems in Geological and Environmental Sciences**

Reading and instruction under faculty supervision. Written reports. May be repeated for credit.

*1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

#### **GES 199. Honors Program**

Research on a topic of special interest. See Undergraduate Honors Program above. May be repeated for credit.

*1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

## **GRADUATE COURSES IN GEOLOGICAL AND ENVIRONMENTAL SCIENCES**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **GES 207. Journey to the Center of the Earth**

(Same as GES 107, GEOPHYS 184, GEOPHYS 274) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter.

*3 units, Win (Lawrence, J; Mao, W)*

#### **GES 208. Topics in Geobiology**

(Same as EESS 208) Reading and discussion of classic and recent papers in the field of Geobiology. Co-evolution of Earth and life; critical intervals of environmental and biological change; geomicrobiology; paleobiology; global biogeochemical cycles; scaling of geobiological processes in space and time.

*1 unit, Aut (Payne, J; Francis, C)*

#### **GES 209. Microstructures**

Microstructures in metamorphic rocks reveal temperature, pressure, and rates of deformation in the crust and variations in its thermo-mechanical behavior. Topics include the rheology of rocks and minerals, strain partitioning, shear zones and brittle-ductile transition in the crust, mechanisms of foliation and lineation development, preferred crystallographic fabrics, and geochronologic methods useful for dating deformation. Labs involve microstructure analysis of suites of rocks from classic localities. 5 units for extra project.

*3-5 units, Aut (Miller, E; Warren, J)*

#### **GES 210. Geologic Evolution of the Western U.S. Cordillera**

The geologic and tectonic evolution of the U.S. Cordillera based on its rock record through time. This region provides good examples of large-scale structures and magmatic activity generated during crustal shortening, extension, and strike-slip faulting and affords opportunity to study crustal-scale processes involved in mountain building in context of plate tectonic motions.

*2-3 units, not given this year*

#### **GES 211. Topics in Regional Geology and Tectonics**

May be repeated for credit.

*2-3 units, Aut (Miller, E), Win (Miller, E), Spr (Miller, E)*

**GES 212. Topics in Tectonic Geomorphology**

For upper-division undergraduates and graduate students. Topics vary and may include coupling among erosional, tectonic, and chemical weathering processes at the scale of orogens; historical review of tectonic geomorphology; hillslope and fluvial process response to active uplift; measures of landscape form and their relationship to tectonic uplift and bedrock lithology. May be repeated for credit.

*2 units, not given this year*

**GES 213. Topics in Sedimentary Geology**

For upper division undergraduates and graduate students. Topics vary each year but the focus is on current developments and problems in sedimentary geology, sedimentology, and basin analysis. These include issues in deep-water sediments, their origin, facies, and architecture; sedimentary systems on the early Earth; and relationships among tectonics, basin development, and basin fill. May be repeated for credit.

*2 units, by arrangement*

**GES 214. Topics in Paleobiology**

For upper division undergraduates and graduate students. Topics vary each year; focus is on paleontological, sedimentological, and geochemical approaches to the history of life. Topics may include: mass extinction events; evolutionary radiations; the history of global biodiversity; links between evolutionary histories of primary producers and consumers; and the quality of the fossil record. Term paper. May be repeated for credit.

*2 units, OCCASIONAL*

**GES 215. Structural Geology and Rock Mechanics**

(Same as CEE 297R, GEOPHYS 251) Quantitative field and laboratory data integrated with solutions to boundary value problems of continuum mechanics to understand tectonic processes in Earth's crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis, conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties; brittle deformation including fracture and faulting; model development and methodology. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.

*4 units, Aut (Pollard, D)*

**GES 216. Rock Fracture Mechanics**

Principles and tools of elasticity theory and fracture mechanics are applied to the origins and physical behaviors of faults, dikes, joints, veins, solution surfaces, and other natural structures in rock. Field observations, engineering rock fracture mechanics, and the elastic theory of cracks. The role of natural fractures in brittle rock deformation, and fluid flow in the earth's crust with applications to crustal deformation, structural geology, petroleum geology, engineering, and hydrogeology. Prerequisite: 215 or equivalent.

*3-5 units, alternate years, not given this year*

**GES 217. Faults, Fractures, and Fluid Flow**

Process-based approach to rock failure; the microstructures and overall architectures of the failure products including faults, joints, solution seams, and types of deformation bands. Fluid flow properties of these structures are characterized with emphasis on sealing and transmitting of faults and their role in hydrocarbon flow, migration, and entrapment. Case studies of fracture characterization experiments in aquifers, oil and gas reservoirs, and waste repository sites. Guest speakers; weekend field trip. Prerequisite: first-year graduate student in Earth Sciences.

*3 units, alternate years, not given this year*

**GES 220. Planetary and Early Biological Evolution Seminar**

(Same as GES 120) Interdisciplinary. For upper division science undergraduates and graduate students. Synthesis of biology, geology, physics, and chemistry. Recent approaches for identifying traces of past life on Earth. How to look for life on other planets such as Mars, Europa, and Titan. May be repeated for credit.

*2-3 units, not given this year*

**GES 221. What Makes a Habitable Planet?**

(Same as GES 121) Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets,

geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.

*3 units, not given this year*

**GES 222. Planetary Systems: Dynamics and Origins**

(For students with a strong background in mathematics and the physical sciences; other should register for 122.) Motions of planets, moons, and small bodies; energy transport in planetary systems; meteorites and the constraints they provide on the formation of the solar system; asteroids and Kuiper belt objects; comets; planetary rings; planet formation; and extrasolar planets. In-class presentation of student papers.

*3-4 units, Aut (Marley, M; Lissauer, J)*

**GES 223. Planetary Systems: Atmospheres, Surfaces, and Interiors**

Focus is on physical processes, such as radiation transport, atmospheric dynamics, thermal convection, and volcanism, shaping the interiors, surfaces, and atmospheres of the major planets in the solar system. How these processes manifest themselves under various conditions in the solar system. Case study of the surface and atmosphere of Mars. Application of comparative planetary science to extrasolar planets and brown dwarfs. In-class presentation of student papers.

*3 units, by arrangement*

**GES 224. Modeling Transport and Transformations in the Environment**

An introduction to geochemical and reactive transport modeling using Geochemist's Workbench and other appropriate models. Students required to participate in a weekend-long short course at the beginning of the quarter. Throughout the quarter the students will use the principles and tools presented in the class to develop and analyze an environmental problem as part of a simulated consulting exercise. Topics covered include contaminant transport, mineral dissolution/precipitation and aquifer microbiology. Prerequisites: Either EESS 221 (CEE 260C) or EESS 220 (CEE 260A) and either GES 90, 170, or 171, or permission from instructors.

*2-3 units, alternate years, not given this year*

**GES 237. Surface and Near-Surface Hydrologic Response**

(Same as CEE 260B) Quantitative review of process-based hydrology and geomorphology. Introduction to finite-difference and finite-element methods of numerical analysis. Topics: biometeorology, unsaturated and saturated subsurface fluid flow, overland and open channel flow, and physically-based simulation of coupled surface and near-surface hydrologic response. Links hydrogeology, soil physics, and surface water hydrology.

*3 units, Aut (Loague, K)*

**GES 238. Soil Physics**

Physical properties of the soil solid phase emphasizing the transport, retention, and transformation of water, heat, gases, and solutes in the unsaturated subsurface. Field experiments.

*3 units, alternate years, not given this year*

**GES 240. Geostatistics for Spatial Phenomena**

(Same as ENERGY 240) Probabilistic modeling of spatial and/or time dependent phenomena. Kriging and cokriging for gridding and spatial interpolation. Integration of heterogeneous sources of information. Multiple-point geostatistics and training image-based stochastic imaging of reservoir/field heterogeneities. Introduction to GSLIB and SGEMS software. Case studies from the oil and mining industry and environmental sciences. Prerequisites: introductory calculus and linear algebra, STATS 116, GES 161, or equivalent.

*2-3 units, Win (Journal, A)*

**GES 246. Reservoir Characterization and Flow Modeling with Outcrop Data**

(Same as ENERGY 146, ENERGY 246) Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip.

*3 units, Aut (Graham, S; Tchelepi, H; Mukerji, T; Boucher, A)*

**GES 249. Petroleum Geochemistry in Environmental and Earth Science**

How molecular fossils in crude oils, oil spills, refinery products, and human artifacts identify their age, origin, and environment of formation. The origin and habitat of petroleum, technology for its analysis, and parameters for interpretation, including: origins of molecular fossils; function, biosynthesis, and precursors; tectonic history related to the evolution of life, mass extinctions, and molecular fossils; petroleum refinery processes and the kinds of molecular fossils that survive; environmental pollution from natural and anthropogenic sources including how to identify genetic relationships among crude oil or oil spill samples; applications of molecular fossils to archaeology; worldwide petroleum systems through geologic time.

3 units, alternate years, not given this year

**GES 250. Sedimentation Mechanics**

The mechanics of sediment transport and deposition and the origins of sedimentary structures and textures as applied to interpreting ancient rock sequences. Dimensional analysis, fluid flow, drag, boundary layers, open channel flow, particle settling, erosion, sediment transport, sediment gravity flows, soft sediment deformation, and fluid escape. Field trip required.

4 units, alternate years, not given this year

**GES 251. Sedimentary Basins**

Analysis of the depositional framework and tectonic evolution of sedimentary basins. Topics: tectonic and environmental controls on facies relations, synthesis of basin development through time in terms of depositional systems and tectonic settings. Weekend field trip required. Prerequisites: 110, 151.

3 units, Aut (Graham, S)

**GES 252. Sedimentary Petrography**

Siliciclastic sediments and sedimentary rocks. Research in modern sedimentary mineralogy and petrography and the relationship between the composition and texture of sediments and their provenance, tectonic settings, and diagenetic histories. Topics vary yearly. Prerequisite: 151 or equivalent.

4 units, alternate years, not given this year

**GES 253. Petroleum Geology and Exploration**

The origin and occurrence of hydrocarbons. Topics: thermal maturation history in hydrocarbon generation, significance of sedimentary and tectonic structural setting, principles of accumulation, and exploration techniques. Prerequisites: 110, 151. Recommended: GEOPHYS 223.

3 units, alternate years, not given this year

**GES 254. Carbonate Sedimentology**

Processes of precipitation and sedimentation of carbonate minerals with emphasis on marine systems. Topics include: geographic and bathymetric distribution of carbonates in modern and ancient oceans; genesis and environmental significance of carbonate grains and sedimentary textures; carbonate rocks and sediments as sources of geochemical proxy data; carbonate diagenesis; changes in styles of carbonate deposition through Earth history; carbonate depositional patterns and the global carbon cycle. Lab exercises emphasize petrographic and geochemical analysis of carbonate rocks including map and outcrop scale, hand samples, polished slabs, and thin sections.

3-4 units, Spr (Payne, J)

**GES 255. Basin and Petroleum System Modeling**

For advanced undergraduates or graduate students. Students use stratigraphy, subsurface maps, and basic well log, lithologic, paleontologic, and geochemical data to construct 1-D, 2-D, and 3-D models of petroleum systems that predict the extent of source-rock thermal maturity, petroleum migration paths, and the volumes and compositions of accumulations through time (4-D). Recent software such as PetroMod designed to reconstruct basin geohistory. Recommended: 251 or 253.

3 units, alternate years, not given next year

**GES 256. Quantitative Methods in Paleobiology**

Introduction to statistical methods relevant to the analysis of paleobiological data. Methods include principles of inference, linear and logistic regression, principal components analysis, time-series, and re-sampling methods. Paleobiological problems include assessment of spatial and temporal patterns in biodiversity, selectivity of extinction and origination, and evolutionary trends.

Readings, examples, and problems from the primary literature. Term paper. Prerequisite: Previous course in paleobiology or permission of the instructor.

3 units, OCCASIONAL

**GES 257. Clastic Sequence Stratigraphy**

Sequence stratigraphy facilitates integration of all sources of geologic data, including seismic, log, core, and paleontological, into a time-stratigraphic model of sediment architecture. Tools applicable to regional and field scales. Emphasis is on practical applications and integration of seismic and well data to exploration and field reservoir problems. Examples from industry data; hands-on exercises.

3 units, Spr (McHargue, T)

**GES 258. Introduction to Depositional Systems**

The characteristics of the major sedimentary environments and their deposits in the geologic record, including alluvial fans, braided and meandering rivers, aeolian systems, deltas, open coasts, barred coasts, marine shelves, and deep-water systems. Emphasis is on subdivisions; morphology; the dynamics of modern systems; and the architectural organization and sedimentary structures, textures, and biological components of ancient deposits.

3 units, Aut (Lowe, D)

**GES 259. Stratigraphic Architecture**

The stratigraphic architecture of deposits associated with a spectrum of depositional environments, using outcrop and subsurface data. Participants read and discuss selected literature.

1 unit, Aut (McHargue, T)

**GES 260. Laboratory Methods in Organic Geochemistry**

Knowledge of components in geochemical mixtures to understand geological and environmental samples. The presence and relative abundance of these compounds provides information on the biological source, depositional environment, burial history, biodegradation, and toxicity of organic materials. Laboratory methods to detect and quantify components of these mixtures. Methods for separation and analysis of organic compounds in geologic samples: extraction, liquid chromatography, absorption by zeolites, gas chromatography and gas chromatography-mass spectrometry. Student samples considered as material for analysis. Prerequisite: GES 249 or consent of instructor.

2-3 units, not given this year

**GES 261. Physics and Chemistry of Minerals and Mineral Surfaces**

The concepts of symmetry and periodicity in crystals; the physical properties of crystals and their relationship to atomic-level structure; basic structure types; crystal chemistry and bonding in solids and their relative stability; the interaction of x-rays with solids and liquids (scattering and spectroscopy); structural variations in silicate glasses and liquids; UV-visible spectroscopy and the color of minerals; review of the mineralogy, crystal chemistry, and structures of selected rock-forming silicates and oxides; mineral surface and interface geochemistry.

4 units, Spr (Brown, G)

**GES 262. Thermodynamics and Disorder in Minerals and Melts**

The thermodynamic properties of crystalline, glassy, and molten silicates and oxides in light of microscopic information about short range structure and ordering. Measurements of bulk properties such as enthalpy, density, and their pressure and temperature derivatives, and structural determination by spectroscopies such as nuclear magnetic resonance and Mössbauer. Basic formulations for configurational entropy, heats of mixing in solid solutions, activities; and the energetics of exsolution, phase transitions, and nucleation. Quantitative models of silicate melt thermodynamics are related to atomic-scale views of structure. A general view of geothermometry and geobarometry. Prerequisites: introductory mineralogy and thermodynamics.

3 units, alternate years, not given this year

**GES 263. Introduction to Isotope Geochemistry**

(Same as GES 163) Stable, cosmogenic, and radiogenic isotopes; processes that govern isotopic variations. Application of isotopes to geologic, biologic, and hydrologic questions. Major isotopic systems and their applications. Simple modeling techniques used in isotope geochemistry.

3 units, Aut (Maher, K)

**GES 264. Mathematical Modeling in Biogeochemistry**

The basics of translating a conceptual model into a numerical model is presented. Emphasis on building models, box modeling, methods of solving models. Lab exercises draw from examples in biogeochemistry, including modeling global biogeochemical cycles, sediment biogeochemistry, and microbial processes.

3 units, not given this year

**GES 267. Solution-Mineral Equilibria: Theory**

Procedures for calculating and evaluating the thermodynamic properties of reversible and irreversible reactions among rock-forming minerals and aqueous solutions in geologic systems. Emphasis is on the generation and utility of phase diagrams depicting solution-mineral interaction relevant to phase relations associated with weathering diagenetic, hydrothermal, and metamorphic processes, and the prediction of temperature, pressure, and the chemical potential of thermodynamic components compatible with observed mineralogic phase relations in geologic outcrops. Individual research topics. Prerequisite: 171.

3 units, OCCASIONAL

**GES 272. Biomineralization**

The functional properties of many animal and plant skeletons are dependent largely on mineralization. The relationship between mineralization processes and adaptation for all the animal phyla is reviewed. The sedimentologic contribution of mineralized skeletons, especially in carbonate reefs and pelagic sedimentation is considered. Synthesis of organic matrix and the composite nature of many animal and plant skeletons, and their development and morphogenesis are described. The mechanisms of crystal nucleation and growth are considered. The macroevolutionary history of biomineralization, and mass extinctions and the diversification of well skeletonized groups in the geologic record are considered.

3 units, not given this year

**GES 273. Isotope Geochemistry Seminar**

Current topics including new analytical techniques, advances in isotopic measurements, and new isotopic approaches and systems.

1-3 units, Win (Maher, K)

**GES 275. Electron Probe Microanalytical Techniques**

The practical and theoretical aspects of x-ray generation and detection, and the behavior of electron beams and x-rays in solids. The basic principles needed to quantitatively analyze chemically complex geological materials. Operation of the JEOL 733 electron microprobe and associated computer software for quantitatively analyzing materials. X-ray chemical mapping. Enrollment limited to 8.

2-3 units, Win (Jones, R)

**GES 277. Flood Basalts and Mass Extinctions**

Recent work in geochronology and paleobiology supports the temporal coincidence of the eruption of continental flood basalts with mass extinction in the marine and terrestrial realms. The mechanisms and timescale of flood basalt eruptions, their likely environmental and biological consequences, and the evidence for flood basalt eruptions as the triggers of many mass extinction events. Sources include recent primary literature.

3 units, OCCASIONAL

**GES 281. Principles of 40Ar/39Ar Thermochronometry**

The 40Ar/39Ar method is based upon the K-Ar decay scheme and allows high precision geochronology and thermochronology to be performed with K-bearing minerals. Provides a detailed exploration of the method including all practical considerations and laboratory procedures for standardization and instrument calibration. A laboratory component allows practical experience in making measurements and interpreting results.

3-4 units, Spr (Grove, M)

**GES 282. Interpretative Methods in Detrital Geochronology**

Over the past decade, the number of studies that make use of isotopic provenance data has sky-rocketed. This type of data is now routinely used throughout the geosciences to solve a broad range of geologic problems. This seminar examines the state-of-the-art of existing interpretative methods for detrital geo/thermochronology data in provenance studies and critically examines their strengths and weaknesses. While this course will touch upon sampling approaches analytical aspects of data collection, focus is primarily upon data interpretation.

1-5 units, not given this year

**GES 283. Thermochronology and Crustal Evolution**

Thermochronology analyzes the competition between radioactive in-growth and temperature-dependant loss of radiogenic isotopes within radioactive mineral hosts in terms of temperature-time history. Coupled with quantitative understanding of kinetic phenomena and crustal- or landscape-scale interpretational models, thermochronology provides an important source of data for the Earth Sciences, notably tectonics, geomorphology, and petrogenesis. Focus on recent developments in thermochronology, specifically analytical and interpretative innovations developed over the past decade. Integrates the latest thermochronology techniques with field work in a small-scale research project focused upon crustal evolution.

4 units, Win (Grove, M)

**GES 284. Field Seminar on Eastern Sierran Volcanism**

For graduate students in the earth sciences and archaeology. Four-day trip over Memorial Day weekend to study silicic and mafic volcanism in the eastern Sierra Nevada: basaltic lavas and cinder cones erupted along normal faults bounding Owens Valley, Long Valley caldera, postcaldera rhyolite lavas, hydrothermal alteration and hot springs, Holocene rhyolite lavas of the Inyo and Mono craters, subaqueous basaltic and silicic eruptions of Mono Basin, floating pumice blocks. If snow-level permits, silicic volcanism associated with the Bodie gold district. Recommended: 1 or equivalent.

1 unit, Spr (Mahood, G)

**GES 285. Igneous Petrogenesis**

Radiogenic isotopes, stable isotopes, and trace elements applied to igneous processes; interaction of magmas with mantle and crust; convergent-margin magmatism; magmatism in extensional terrains; origins of rhyolites; residence times of magmas and magma chamber processes; granites as imperfect mirrors of their source regions; trace element modeling of igneous processes; trace element discriminant diagrams in tectonic analysis; phase equilibria of partial melting of mantle and crust; geothermometry and geobarometry. Topics emphasize student interest. Prerequisite: 180 or equivalent.

4 units, alternate years, not given this year

**GES 290. Departmental Seminar in Geological and Environmental Sciences**

Current research topics. Presentations by guest speakers from Stanford and elsewhere. May be repeated for credit.

1 unit, Win (Maher, K; Mao, W), Spr (Maher, K; Mao, W)

**GES 291. GES Field Trips**

Field trips for teaching and research purposes. Trips average 5-10 days. Prerequisite: consent of instructor.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GES 292. Directed Reading with Geological and Environmental Sciences Faculty**

May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GES 299. Field Research**

Two-three week field research projects. Written report required. May be repeated three times.

2-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GES 310. Climate Change, Climate Variability, and Landscape Development**

The impact of long-term climate change on erosional processes and the evolution of Cenozoic landscapes. Climate data that highlight recurring climate variability on inter-annual to decadal timescales. The behavior of climate on multi-decadal to tectonic timescales over which significant changes in topography take place. The effects of climate change and variability on landscape development, sedimentary environments, and the deposits of these events. May be repeated for credit.

1 unit, not given this year

**GES 311. Interpretation of Tectonically Active Landscapes**

Focuses on interpreting various topographic attributes in terms of horizontal and vertical tectonic motions. Topics include identification, mapping, and dating of geomorphic markers, deducing tectonic motions from spatial changes in landscape steepness, understanding processes that give rise to different

landscape elements, interrogating the role of climate and lithology in producing these landscape elements, and understanding relationships between tectonic motions, surface topography, and the spatial distribution of erosion. Consists of two one hour lectures per week and one laboratory section that help students gain proficiency in Quaternary mapping and interpretation of topographic metrics.

*3 units, alternate years, not given this year*

**GES 315. Literature of Structural Geology**

Classic studies and current journal articles. May be repeated for credit.

*1 unit, Aut (Pollard, D), Win (Pollard, D)*

**GES 325. The Evolution of Body Size**

(Same as BIO 325) Preference to graduate students and upper-division undergraduates in GES and Biology. The influence of organism size on evolutionary and ecological patterns and processes. Focus is on integration of theoretical principles, observations of living organisms, and data from the fossil record. What are the physiological and ecological correlates of body size? Is there an optimum size? Do organisms tend to evolve to larger size? Does productivity control the size distribution of consumers? Does size affect the likelihood of extinction or speciation? How does size scale from the genome to the phenotype? How is metabolic rate involved in evolution of body size? What is the influence of geographic area on maximum body size?

*2 units, Win (Haaly, E; Payne, J)*

**GES 328. Seminar in Paleobiology**

For graduate students. Current research topics including paleobotany, vertebrate and invertebrate evolution, paleoecology, and major events in the history of life on Earth.

*1 unit, not given this year*

**GES 336. Stanford Alpine Project Seminar**

Seminar on the geology of the Himalaya, Tibetan plateau, and India. Weekly student presentations on continental collision tectonics, structure, petrology, geomorphology, culture, and other topics of interest. Students create a guidebook of geologic stops in advance of field trip to northwestern India in summer 2011. May be repeated for credit.

*1 unit, Aut (Staff), Win (Staff), Spr (Staff)*

**GES 340. Volatiles in the Mantle**

Seminar to review and discuss current research in mineral physics, seismology, geochemistry and geodynamics on understanding the distribution, form, and role of volatiles in Earth's mantle.

*1-3 units, not given this year*

**GES 355. Advanced Stratigraphy Seminar and Field Course**

Student-led presentations; poster-sized display on assigned topic; field trip.

*1-3 units, OCCASIONAL*

**GES 381. Igneous Petrology and Petrogenesis Seminar**

Topics vary by quarter. May be repeated for credit.

*1-2 units, Spr (Mahood, G)*

**GES 382. Mantle Geochemistry**

The mantle is the largest geochemical reservoir on Earth and is fundamental to a variety of plate tectonic processes, from convection to the generation of crust. This course reviews current knowledge of the mantle based on the geochemistry of rocks derived from the upper mantle. Focus is on ocean ridge, subduction zone and hotspot processes. The tools used for studying the mantle, such as radiogenic isotopes, trace elements, diffusion and partition coefficients, melting equations, and isotope evolution models, will be explored in detail. Pre-requisites: basic geology, petrology and chemistry or consent of the instructor.

*1-3 units, Win (Warren, J)*

**GES 384. Volcanology Seminar**

Specialized and advanced topics vary by offering. May be repeated for credit.

*1-2 units, OCCASIONAL*

**GES 385. Practical Experience in the Geosciences**

On-the-job training in the geosciences. May include summer internship; emphasizes training in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets USCIS requirements for F-1 curricular practical training. (Staff)

*1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GES 399. Advanced Projects**

Graduate research projects that lead to reports, papers, or other products during the quarter taken. On registration, students designate faculty member and agreed-upon units.

*1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GES 400. Graduate Research**

Faculty supervision. On registration, students designate faculty member and agreed-upon units.

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GES 801. TGR Project**

*0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GES 802. TGR Dissertation**

*0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

## GEOPHYSICS (GEOPHYS) COURSES

### UNDERGRADUATE COURSES IN GEOPHYSICS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**GEOPHYS 20Q. Predicting Volcanic Eruptions**

Preference to sophomores. The physics and chemistry of volcanic processes and modern methods of volcano monitoring. Volcanoes as manifestations of the Earth's internal energy and hazards to society. How earth scientists better forecast eruptive activity by monitoring seismic activity, bulging of the ground surface, and the discharge of volcanic gases, and by studying deposits from past eruptions. Focus is on the interface between scientists and policy makers and the challenges of decision making with incomplete information. Field trip to Mt. St. Helens, site of the 1980 eruption.

*3 units, NEXTYEAR*

**GEOPHYS 50N. Planetary Habitability, World View, and Sustainability**

(F,Sem) Stanford Introductory Seminar. Astrobiology and societal sustainability draw from most fields of physical and biological science. Class follows a historical format on the start of major scientific fields, and relates these sciences to the popular world view and the effect of world view on achieving sustainability. Simple experiments to see key results in a hands-on manner; how to improve experiments. How lack of insight in addition to the lack of equipment and computational methods limited the progress of science. Discussion of current astrobiology and sustainability topics in the popular press. Students pairs lead discussions on topics. Offered occasionally.

*3 units, Spr (Staff)*

**GEOPHYS 60N. Man versus Nature: Coping with Disasters Using Space Technology**

(F,Sem) (Same as EE 60N) Stanford Introductory Seminar. Preference to freshman. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliterate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. How spaceborne imaging technology makes it possible to respond quickly and mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. Offered every year, winter quarter. GER:DB-EngrAppSci

*4 units, Win (Zebker, H)*

**GEOPHYS 100. Directed Reading**

(Staff)

*1-2 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GEOPHYS 104. The Water Course**

(Same as EARTHSYS 104) The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water; taste tests of water from around the world. Current U.S. and

world water supply issues. Offered occasionally. GER: DB-NatSci  
3 units, not given this year

### **GEOPHYS 110. Earth on the Edge: Introduction to Geophysics**

Introduction to the foundations of contemporary geophysics. Topics drawn from four broad themes in: whole Earth geodynamics, geohazards, natural resources, and environment/sustainability. In each case the focus is on how the interpretation of a variety of geophysical measurements (e.g., gravity, seismology, heat flow, magnetism, electromagnetics, and geodesy) can be used to provide fundamental insight into the behavior of the Earth's complex geosystems. Prerequisite: CME 100 or MATH 51, or co-registration in either. Offered every year, autumn quarter. GER: DB-NatSci

3 units, Aut (Beroza, G; Lawrence, K)

### **GEOPHYS 112. Exploring Geosciences with MATLAB**

How to use MATLAB as a tool for research and technical computing, including 2-D and 3-D visualization features, numerical capabilities, and toolboxes. Practical skills in areas such as data analysis, regressions, optimization, spectral analysis, differential equations, image analysis, computational statistics, and Monte Carlo simulations. Emphasis is on scientific and engineering applications. Offered every year, autumn quarter.

1-3 units, Aut (Mukerji, T)

### **GEOPHYS 113. Earthquakes and Volcanoes**

(Same as EARTHSYS 113) Earthquake location, magnitude and intensity scales, seismic waves, styles of eruptions and volcanic hazards, tsunami waves, types and global distribution of volcanoes, volcano forecasting. Plate tectonics as a framework for understanding earthquake and volcanic processes. Forecasting; earthquake resistant design; building codes; and probabilistic hazard assessment. For non-majors and potential earth scientists. Offered every year, spring quarter. GER:DB-EngrAppSci

3 units, Spr (Beroza, G)

### **GEOPHYS 120. Ice, Water, Fire**

Introductory application of continuum mechanics to ice sheets and glaciers, water waves and tsunamis, volcanoes, and fluid flow in porous media. Emphasis on underlying physical processes and mathematical description using balance of mass and momentum, combined with constitutive equations for fluids and solids. Prerequisites: CME 100 or MATH 52 and PHYSICS 41. Offered every year, winter quarter. GER: DB-NatSci

3 units, Win (Dunham, E)

### **GEOPHYS 130. Introductory Seismology**

Introduction to seismology including: elasticity and the wave equation, P, S, and surface waves, dispersion, ray theory, reflection and transmission of seismic waves, seismic imaging, large-scale Earth structure, earthquake location, earthquake statistics and forecasting, magnitude scales, seismic source theory. Offered every year, Autumn quarter. (Beroza, G) GER: DB-NatSci

3 units, Aut (Beroza, G)

### **GEOPHYS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation**

(Same as EARTHSYS 146A, EARTHSYS 246A, EESS 146A, EESS 246A, GEOPHYS 246A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

3 units, Win (Thomas, L; Diffenbaugh, N; Skinner, C), alternate years, not given next year

### **GEOPHYS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation**

(Same as EARTHSYS 146B, EARTHSYS 246B, EESS 146B, EESS 246B, GEOPHYS 246B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and

biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

3 units, Spr (Thomas, L; Diffenbaugh, N), alternate years, not given next year

### **GEOPHYS 150. Geodynamics: Our Dynamic Earth**

In this course we cover the dynamic forces acting upon the Earth. We will investigate how geophysical forces effect the bending of tectonic plates, the flow of heat, sea level topography, the breaking point of rocks, porous flow, and how faults store and release energy. Math 52 or CME 102, GP 107 or permission from instructor. Offered every year, spring quarter. GER: DB-NatSci

3 units, Spr (Lawrence, J)

### **GEOPHYS 160. Introduction to SES Computing (ISESC)**

For beginning undergraduates and graduate students in the School of Earth Sciences. Computer concepts. What are computers and networks, and how do they work? Web page authoring. Introduction to scientific programming. Free computing tools for plotting data. Computer resources available to students in the school. An online repository of source codes useful for and developed by SES students, faculty, and staff. Specialists from around the school provide practical instruction and concrete examples of how to achieve basic computing needs. 2 units requires a class project: code development to be uploaded to the course's code repository. Offered every year, autumn quarter.

2-3 units, Aut (Lawrence, J)

### **GEOPHYS 162. Laboratory Methods in Geophysics**

Lab. Types of equipment used in experimental rock physics. Principles and measurements of geophysical properties such as porosity, permeability, acoustic wave velocity, and resistivity through lectures and laboratory experiments. Training in analytical project writing skills and understanding errors for assessing accuracy and variability of measured data. Students may investigate a scientific problem to support their own research. Offered every other year, spring quarter.

2-3 units, not given this year

### **GEOPHYS 170. Global Tectonics**

The architecture of the Earth's crust; regional assembling of structural or deformational features and their relationship, origin and evolution. The plate-tectonic cycle: rifting, passive margins, sea-floor spreading, subduction zones, and collisions. Case studies. Offered every other year, autumn quarter.

3 units, alternate years, not given this year

### **GEOPHYS 171. Tectonics Field Trip**

Long weekend field trip to examine large-scale features in the crust. Destinations may include the San Andreas fault, Mendocino Triple Junction, Sierra Nevada, and western Basin and Range province. Offered every other year, spring quarter.

1-3 units, alternate years, not given this year

### **GEOPHYS 181. Fluids and Flow in the Earth: Computational Methods**

(Same as GEOPHYS 200) Interdisciplinary problems involving the state and movement of fluids in crustal systems, and computational methods to model these processes. Examples of processes include: nonlinear, time-dependent flow in porous rocks; coupling in porous rocks between fluid flow, stress, deformation, and heat and chemical transport; percolation of partial melt; diagenetic processes; pressure solution and the formation of stylolites; and transient pore pressure in fault zones. MATLAB, Lattice-Boltzmann, and COMSOL Multiphysics. Term project. No experience with COMSOL Multiphysics required. Offered every other year, winter quarter.

3 units, alternate years, not given this year

### **GEOPHYS 182. Reflection Seismology**

(Same as GEOPHYS 222) The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration. Offered every other year, autumn quarter. GER: DB-NatSci

3 units, Aut (Levin, S)

### **GEOPHYS 183. Reflection Seismology Interpretation**

(Same as GEOPHYS 223) The structural and stratigraphic

interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit. Prerequisite: 222, or consent of instructor. Offered every other year, spring quarter.

1-4 units, *Spr* (Klemperer, S; Graham, S)

**GEOPHYS 184. Journey to the Center of the Earth**

(Same as GES 107, GES 207, GEOPHYS 274) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter.

3 units, *Win* (Lawrence, J; Mao, W)

**GEOPHYS 185. Rock Physics for Reservoir Characterization**

(Same as GEOPHYS 260) How to integrate well log and laboratory data to determine and theoretically generalize rock physics transforms between sediment wave properties (acoustic and elastic impedance), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios. Offered every other year, spring quarter.

3 units, *alternate years, not given this year*

**GEOPHYS 186. Tectonophysics**

(Same as GEOPHYS 290) The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere. Exercises: lithospheric temperature and strength profiles, calculation of seismic strain from summation of earthquake moment tensors, slip on faults in 3D, and stress triggering and inversion of stress from earthquake focal mechanisms. Offered every other year, winter quarter.

3 units, *alternate years, not given this year*

**GEOPHYS 187. Environmental Soundings Image Estimation**

(Same as GEOPHYS 211) Imaging principles exemplified by means of imaging geophysical data of various uncomplicated types (bathymetry, altimetry, velocity, reflectivity). Adjoints, back projection, conjugate-gradient inversion, preconditioning, multidimensional autoregression and spectral factorization, the helical coordinate, and object-based programming. Common recurring issues such as limited aperture, missing data, signal/noise segregation, and nonstationary spectra. See <http://sep.stanford.edu/sep/prof/>. Offered every year, autumn quarter.

3 units, *Aut* (Claerbout, J)

**GEOPHYS 190. Near-Surface Geophysics**

Introduction to the integration of geophysical field measurements and laboratory measurements for imaging and characterizing the top 100 meters of Earth. Examples will focus on applications related to water resource management. The link between the measured geophysical properties of rocks, soils, and sediments, and their material properties. Forward modeling and inversion of geophysical data sets. Each week includes two hours of lectures; plus one two-hour lab that involves acquisition of field or lab data, or computer modeling/analysis of data. Pre-requisite: CME 100 or Math 51, or co-registration in either. Offered every year, spring quarter. GER:DB-EngrAppSci

3 units, *Spr* (Knight, R)

**GEOPHYS 196. Undergraduate Research in Geophysics**

Field-, lab-, or computer-based. Faculty supervision. Written reports.

1-10 units, *Aut* (Staff), *Win* (Staff), *Spr* (Staff), *Sum* (Staff)

**GEOPHYS 197. Senior Thesis in Geophysics**

For seniors writing a thesis based on Geophysics research in 196 or as a summer research fellow.

3-5 units, *Aut* (Staff), *Win* (Staff), *Spr* (Staff), *Sum* (Staff)

**GEOPHYS 199. Senior Seminar: Issues in Earth Sciences**

Focus is on written and oral communication in a topical context. Topics from current frontiers in earth science research and issues of concern to the public. Readings, oral presentations, written work, and peer review. For 2010-11, enroll in GES 150. Offered every year, autumn quarter.

3 units, *Aut* (Staff)

## GRADUATE COURSES IN GEOPHYSICS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**GEOPHYS 198. Honors Program**

Experimental, observational, or theoretical honors project and thesis in geophysics under supervision of a faculty member. Students who elect to do an honors thesis should begin planning it no later than Winter Quarter of the junior year. Prerequisites: department approval.

1-3 units, *Aut* (Staff), *Win* (Staff), *Spr* (Staff), *Sum* (Staff)

**GEOPHYS 200. Fluids and Flow in the Earth: Computational Methods**

(Same as GEOPHYS 181) Interdisciplinary problems involving the state and movement of fluids in crustal systems, and computational methods to model these processes. Examples of processes include: nonlinear, time-dependent flow in porous rocks; coupling in porous rocks between fluid flow, stress, deformation, and heat and chemical transport; percolation of partial melt; diagenetic processes; pressure solution and the formation of stylolites; and transient pore pressure in fault zones. MATLAB, Lattice-Boltzmann, and COMSOL Multiphysics. Term project. No experience with COMSOL Multiphysics required. Offered every other year, winter quarter.

3 units, *alternate years, not given this year*

**GEOPHYS 201. Frontiers of Geophysical Research at**

**Stanford: Faculty Lectures**

Required for new students entering the department. Second-year and other graduate students may attend either for credit or as auditors. Department faculty and senior research staff introduce the frontiers of research problems and methods being employed or developed in the department and unique to department faculty and students: what the current research is, why the research is important, what methodologies and technologies are being used, and what the potential impact of the results might be. Offered every year, autumn quarter.

1 unit, *Aut* (Beroza, G)

**GEOPHYS 202. Reservoir Geomechanics**

Basic principles of rock mechanics and the state of stress and pore pressure in sedimentary basins related to exploitation of hydrocarbon and geothermal reservoirs. Mechanisms of hydrocarbon migration, exploitation of fractured reservoirs, reservoir compaction and subsidence, hydraulic fracturing, utilization of directional and horizontal drilling to optimize well stability. Offered every other year, winter quarter.

3 units, *Win* (Zoback, M)

**GEOPHYS 210. Basic Earth Imaging**

Echo seismogram recording geometry, head waves, moveout, velocity estimation, making images of complex shaped reflectors, migration by Fourier and integral methods. Anti-aliasing. Dip moveout. Computer labs. See <http://sep.stanford.edu/sep/prof/>. Offered every year, autumn quarter.

3-4 units, *Aut* (Claerbout, J; Clapp, R)

**GEOPHYS 211. Environmental Soundings Image Estimation**

(Same as GEOPHYS 187) Imaging principles exemplified by means of imaging geophysical data of various uncomplicated types (bathymetry, altimetry, velocity, reflectivity). Adjoints, back projection, conjugate-gradient inversion, preconditioning, multidimensional autoregression and spectral factorization, the helical coordinate, and object-based programming. Common recurring issues such as limited aperture, missing data, signal/noise segregation, and nonstationary spectra. See <http://sep.stanford.edu/sep/prof/>. Offered every year, autumn quarter.

3 units, *Aut* (Claerbout, J)

**GEOPHYS 222. Reflection Seismology**

(Same as GEOPHYS 182) The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration. Offered every other year, autumn quarter.

3 units, *Aut* (Levin, S)

**GEOPHYS 223. Reflection Seismology Interpretation**

(Same as GEOPHYS 183) The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit. Prerequisite: 222, or consent of instructor. Offered every other year, spring quarter.

1-4 units, Spr (Klemperer, S; Graham, S)

**GEOPHYS 224. Seismic Reflection Processing**

Workshop in computer processing of seismic reflection data. Students individually process a commercial seismic reflection profile from field tapes to migrated stack, using interactive software on a workstation. Prerequisite: consent of instructor.

2 units, alternate years, not given this year

**GEOPHYS 240. Borehole Seismic Modeling and Imaging**

Seismic imaging between boreholes for applications to subsurface characterization, reservoir imaging, and reservoir monitoring. Topics include data acquisition, data analysis, data processing and imaging. Inversion models for transmitted, reflected, and diffracted waves for imaging velocity, attenuation, and anisotropy in heterogeneous media. Use of field datasets and field applications. Prerequisites: 160 or equivalent; familiarity with Matlab or other programming language. Offered every other year, spring quarter.

3 units, Spr (Harris, J)

**GEOPHYS 241A. Seismic Reservoir Characterization**

(Same as ENERGY 141, ENERGY 241) (Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112

3-4 units, Spr (Mukerji, T)

**GEOPHYS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation**

(Same as EARTHSYS 146A, EARTHSYS 246A, EESS 146A, EESS 246A, GEOPHYS 146A) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

3 units, Win (Thomas, L; Diffenbaugh, N; Skinner, C), alternate years, not given next year

**GEOPHYS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation**

(Same as EARTHSYS 146B, EARTHSYS 246B, EESS 146B, EESS 246B, GEOPHYS 146B) Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A/246A or CEE 164/262D or consent of instructor.

3 units, Spr (Thomas, L; Diffenbaugh, N), alternate years, not given next year

**GEOPHYS 251. Structural Geology and Rock Mechanics**

(Same as CEE 297R, GES 215) Quantitative field and laboratory data integrated with solutions to boundary value problems of continuum mechanics to understand tectonic processes in Earth's crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping, differential geometry

to characterize structures, dimensional analysis and scaling relations, kinematics of deformation and flow, traction and stress analysis, conservation of mass and momentum in a deformable continuum, linear elastic deformation and elastic properties, brittle deformation including fracture and faulting, model development and methodology. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.

4 units, Aut (Pollard, D)

**GEOPHYS 255. Report on Energy Industry Training**

On-the-job-training for master's and doctoral degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignment, and key results. May be repeated for credit. Prerequisite: written consent of adviser.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GEOPHYS 257. Introduction to Computational Earth Sciences**

Techniques for mapping numerically intensive algorithms to modern high performance computers such as the Center for Computational Earth and Environmental Science's (CEES) high productivity technical computing (HPTC). Topics include: debugging, performance analysis, and concepts of parallel programming; efficient serial and parallel programs; OpenMP; and MPI. Exercises using SMP and cluster computers. See <http://pangea.stanford.edu/research/cees/>. Recommended: familiarity with MATLAB, C, or Fortran. May be repeated for credit. Offered every other year, winter quarter.

2-4 units, not given this year

**GEOPHYS 258. Scientific Data Processing**

(Same as EE 257) Assimilation, processing, and modeling of large observational data sets. Solution of scientific and engineering problems, especially those requiring large amounts of data. Inverse methods and transform domain analysis for indirect measurements, implemented on digital computers using scientific languages. Large-scale computing, including hardware architectures, input/output and data bus bandwidth, programming efficiency, parallel programming techniques. Student projects involve analyzing real data by implementing an observational system such as tomography for medical and Earth observation uses, radar and matched filtering, multispectral/multitemporal studies, or migration processing. Prerequisites: Programming with high level language. Recommended: EE261, EE178/278A, ME300 or equivalent.

3-4 units, not given this year

**GEOPHYS 260. Rock Physics for Reservoir Characterization**

(Same as GEOPHYS 185) How to integrate well log and laboratory data to determine and theoretically generalize rock physics transforms between sediment wave properties (acoustic and elastic impedance), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios. Offered every other year, spring quarter.

3 units, alternate years, not given this year

**GEOPHYS 262. Rock Physics**

Properties of and processes in rocks as related to geophysical exploration, crustal studies, and tectonic processes. Emphasis is on wave velocities and attenuation, hydraulic permeability, and electrical resistivity in rocks. Application to in situ problems, using lab data and theoretical results. Offered every year, autumn quarter.

3 units, Aut (Mavko, G)

**GEOPHYS 265. Imaging Radar and Applications**

(Same as EE 355) Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: surface deformation, polarimetry and target discrimination, topographic mapping surface displacements, velocities of ice fields. Prerequisites: EE261. Recommended: EE254, EE278B, EE279.

3 units, not given this year

**GEOPHYS 270. Electromagnetic Properties of Geological Materials**

Laboratory observations and theoretical modeling of the electromagnetic properties and nuclear magnetic resonance response of geological material. Relationships between these properties and water-saturated materials properties such as composition, water content, surface area, and permeability. Offered occasionally.

2-3 units, not given this year

**GEOPHYS 274. Journey to the Center of the Earth**

(Same as GES 107, GES 207, GEOPHYS 184) The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter.

3 units, Win (Lawrence, J; Mao, W)

**GEOPHYS 280. 3-D Seismic Imaging**

The principles of imaging complex structures in the Earth subsurface using 3-D reflection seismology. Emphasis is on processing methodologies and algorithms, with examples of applications to field data. Topics: acquisition geometries of land and marine 3-D seismic surveys, time vs. depth imaging, migration by Kirchhoff methods and by wave-equation methods, migration velocity analysis, velocity model building, imaging irregularly sampled and aliased data. Computational labs involve some programming. Lab for 3 units. Offered every year, winter quarter.

2-3 units, Win (Biondi, B)

**GEOPHYS 281. Geophysical Inverse Problems**

Concepts of inverse theory, with application to geophysics. Inverses with discrete and continuous models, generalized matrix inverses, resolving kernels, regularization, use of prior information, singular value decomposition, nonlinear inverse problems, back-projection techniques, and linear programming. Application to seismic tomography, earthquake location, migration, and fault-slip estimation. Prerequisite: MATH 103. Offered every other year, autumn quarter.

3 units, alternate years, not given this year

**GEOPHYS 284. Hydrogeophysics**

The use of geophysical methods for imaging and characterizing the top 100 meters of Earth for hydrogeologic applications. Includes material properties, forward modeling, data acquisition, inversion, and integration with other forms of measurement. Each week includes three hours of lectures; plus one three-hour lab that involves acquisition of data at campus or nearby sites, or computer modeling of data. Offered occasionally.

3 units, OCCASIONAL

**GEOPHYS 286. Global Seismology**

This course investigates how waves propagate through the whole Earth. This course examines the questions "How do body waves and surface waves behave within the Earth?" and "What does that tell us about the Earth?" The course delves into both theory and how we apply that theory to understand seismic observations. Requirements: Math 52 or CME 102, GP130 or permission from instructor.

3 units, Win (Lawrence, J)

**GEOPHYS 287. Earthquake Seismology**

Seismic wave propagation in layered media, ray theory, Green's functions, seismic moment tensors, representation theorem, finite-source effects, kinematics and dynamics of earthquakes, and engineering aspects of seismology. Prerequisites: GEOPHYS 130 or equivalent. Offered every other year, spring quarter.

3-5 units, alternate years, not given this year

**GEOPHYS 288A. Crustal Deformation**

Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Deformation, stress, and conservation laws. Dislocation models of strike slip and dip slip faults, in 2 and 3 dimensions. Crack models, including boundary element methods. Dislocations in layered and elastically heterogeneous earth models. Models of volcano deformation, including sills, dikes, and magma chambers. Offered every other year, autumn quarter.

3-5 units, Aut (Segall, P), not given next year

**GEOPHYS 288B. Crustal Deformation**

Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Viscoelasticity, post-seismic rebound, and viscoelastic magma chambers. Effects of surface topography and earth curvature on surface deformation. Gravity changes induced by deformation and elastogravitational coupling. Poro-elasticity, coupled fluid flow and deformation. Earthquake nucleation and rate-state friction. Models of earthquake cycle at plate boundaries. Offered every other year, winter quarter.

3-5 units, Win (Segall, P), not given next year

**GEOPHYS 290. Tectonophysics**

(Same as GEOPHYS 186) The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere. Exercises: lithospheric temperature and strength profiles, calculation of seismic strain from summation of earthquake moment tensors, slip on faults in 3D, and stress triggering and inversion of stress from earthquake focal mechanisms. Offered every other year, winter quarter.

3 units, alternate years, not given this year

**GEOPHYS 385A. Reflection Seismology**

Research in reflection seismology and petroleum prospecting. May be repeated for credit.

1-5 units, Aut (Biondi, B; Clapp, R), Win (Biondi, B; Clapp, R), Spr (Biondi, B; Clapp, R), Sum (Staff)

**GEOPHYS 385B. Environmental Geophysics**

Research on the use of geophysical methods for near-surface environmental problems. May be repeated for credit.

1-5 units, Aut (Knight, R), Win (Knight, R), Spr (Knight, R), Sum (Staff)

**GEOPHYS 385D. Theoretical Geophysics**

Research on physics and mechanics of earthquakes, volcanoes, ice sheets, and glaciers. Emphasis is on developing theoretical understanding of processes governing natural phenomena.

1-5 units, Aut (Dunham, E), Win (Dunham, E), Spr (Dunham, E), Sum (Staff)

**GEOPHYS 385E. Tectonics**

Research on the origin, major structures, and tectonic processes of the Earth's crust. Emphasis is on use of deep seismic reflection and refraction data. May be repeated for credit.

1-5 units, Aut (Klemperer, S; Sleep, N), Win (Klemperer, S; Sleep, N), Spr (Klemperer, S; Sleep, N), Sum (Staff)

**GEOPHYS 385J. Global Seismic Techniques, Theory, and Application**

Topics chosen from surface wave dispersion measurement, 1D inversion techniques, regional tomographic inversion, receiver functions, ray theory in spherical geometry, seismic attenuation, seismic anisotropy, seismic focusing, reflected phases, stacking, and interpretations of seismic results in light of other geophysical constraints. May be repeated for credit.

1-5 units, Aut (Lawrence, J), Win (Lawrence, J), Spr (Lawrence, J), Sum (Staff)

**GEOPHYS 385K. Crustal Mechanics**

Research in areas of petrophysics, seismology, in situ stress, and subjects related to characterization of the physical properties of rock in situ. May be repeated for credit.

1-5 units, Aut (Zoback, M), Win (Zoback, M), Spr (Zoback, M), Sum (Staff)

**GEOPHYS 385L. Earthquake Seismology, Deformation, and Stress**

Research on seismic source processes, crustal stress, and deformation associated with faulting and volcanism. May be repeated for credit.

1-5 units, Aut (Beroza, G; Segall, P; Zoback, M), Win (Beroza, G; Segall, P; Zoback, M), Spr (Beroza, G; Segall, P; Zoback, M), Sum (Staff)

**GEOPHYS 385S. Wave Physics**

Theory, numerical simulation, and experiments on seismic and electromagnetic waves in complex porous media. Applications from Earth imaging and in situ characterization of Earth properties, including subsurface monitoring. Presentations by faculty, research staff, students, and visitors. May be repeated for credit.

1-5 units, Aut (Harris, J), Win (Harris, J), Spr (Harris, J), Sum (Staff)

### GEOPHYS 385V. Poroelasticity

Research on the mechanical properties of porous rocks: dynamic problems of seismic velocity, dispersion, and attenuation; and quasi-static problems of faulting, fluid transport, crustal deformation, and loss of porosity. Participants define, investigate, and present an original problem of their own. May be repeated for credit.

1-5 units, Aut (Mavko, G), Win (Mavko, G), Spr (Mavko, G), Sum (Staff)

### GEOPHYS 385Z. Radio Remote Sensing

Research applications, especially crustal deformation measurements. Recent instrumentation and system advancements. May be repeated for credit.

1-5 units, Aut (Zebker, H), Win (Zebker, H), Spr (Zebker, H), Sum (Staff)

### GEOPHYS 400. Research in Geophysics

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### GEOPHYS 801. TGR Project

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### GEOPHYS 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## GERMAN GENERAL (GERGEN) COURSES

### UNDERGRADUATE COURSES IN GERMAN GENERAL

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### GERGEN 38A. Introduction to Germanic Languages

(Same as GERLIT 138) The oldest attested stages of the Germanic language family, including Gothic, Old Norse, Old Saxon, Old English, Old Frisian, Old Low Franconian (Old Dutch), and Old High German. The linguistic interrelationships, prehistory, Germanic tribal groupings, and literature. GER:DB-Hum

4 units, not given this year

#### GERGEN 104N. Resistance Writings in Nazi Germany

(F,Sem) Stanford Introductory Seminar. Freshman and Sophomore Preference. This course focuses on letters and diaries written by resisters to the Nazi regime, in particular, Dietrich Bonhoeffer, Hans and Sophie Scholl, and James von Moltke. The course includes one resistance novel Every man dies alone by Hans Fallada. GER:DB-Hum

3 units, Win (Bernhardt, E)

#### GERGEN 122Q. The Culture of Pessimism in 19th- and 20th-Century Europe

European culture long relied on a narrative of inexorable human progress. Starting in the 19th century, this triumphalist narrative was shadowed by another tradition that rejected such trust in progress. The pessimistic tradition in Europe in literature, philosophy, the study of history, anthropology, and psychology; the distinction between pessimism in the fields of morality, culture, and intellectual life. Authors include Giacomo Leopardi, Arthur Schopenhauer, Lautréamont, T. S. Eliot, and Sigmund Freud. GER:DB-Hum

3-5 units, not given this year

#### GERGEN 128N. Medicine, Modernism, and Mysticism in Thomas Mann's the Magic Mountain

(F,Sem) Stanford Introductory Seminar. Published in 1924, the Magic Mountain is a novel of education, tracing the intellectual growth of a budding engineer through a maze of intellectual encounters during a seven-year sojourn in a sanatorium set high in the Swiss Alps. It engages with the key themes of modernism: the relativity of time, the impact of psychoanalysis, the power of myth, and an extended dispute between an optimistic belief in progress and a pessimistic vision of human nature. Through its detailed discussion of disease (tuberculosis) this remarkable text connects

the study of medicine to the humanities. GER:IHUM-3

4 units, Spr (Berman, R)

#### GERGEN 129. German Cinema

(Same as GERGEN 229) History of German cinema in the Weimar Republic, Nazi era, and the immediate aftermath of WWII. German thought, political valences, and social potential as portrayed in film.

5 units, not given next year

#### GERGEN 141. Fables of Retreat

Modern anti-heroes who assert themselves through feats of reduction and retreat. Writers include Rousseau, Tieck, Emerson, Thoreau, Melville, Dostoevsky, and Kafka.

3-5 units, not given this year

#### GERGEN 148. A Brief History of Misogyny

(Same as GERGEN 248) Genealogy of philosophical misogyny in 19th- and 20th-century German thought from German idealism. Authors include Schopenhauer, Nietzsche, Weininger, and the George circle. In English. GER:DB-Hum, EC-Gender

3-5 units, not given this year

#### GERGEN 160. Interiors and Interiority in the 19th Century

Interiority and the interior as focal points of 19th-century Europe. Domestic space, and its political dimensions and structures of feeling in 19th-century German literature, from the romance to the detective novel. Ideology of domesticity in German music, design, architecture, visual art, and science of the period. In German. GER:DB-Hum

4 units, not given this year

#### GERGEN 161. Wagnerian Echos: A Cultural History from Modernism to Popular Culture

(Same as MUSIC 150G) The afterlives of mythological themes from the operas and music dramas of Richard Wagner (The Flying Dutchman, Tannhäuser, Lohengrin, Ring Cycle, Parsifal) in literature, modernist aesthetics, fascist politics, film, philosophy, and contemporary media. GER:DB-Hum

3-5 units, not given this year

#### GERGEN 168A. Freud and the Enterprise of Psychoanalysis

(Same as GERGEN 268A) This seminar explores psychoanalysis at the juncture of its multiple meanings: as a therapeutic practice; as a theory of the functioning of the human mind; as a method of textual interpretation; as a cultural critique and a genealogy attempting to account for the origins of morality, religion, art, and other social institutions. In addition to Freud's major works, readings include short writings by Nietzsche, Ferenczi, Lacan, Laplanche, Kristeva, and Irigaray. GER:DB-Hum

3-5 units, Win (Douvaldzt, C)

#### GERGEN 170A. Postwar: German Culture after World War II

(Same as GERGEN 270A) How did German culture react to WW II, the Holocaust, and the exile of Germans from E. Europe? Questions of representations, political debate, and the future of Germany in Europe. German cinema, architecture, and art related to the subject. Readings include: Adorno, Grass, Habermas, Kluge, Bachmann, Jelinek, and Beyer. Recommended: German, but not required.

3-5 units, not given this year

#### GERGEN 170Q. Prussia: Culture and Literature

(S,Sem) Stanford Introductory Seminar. This course traces the history and culture of a country that disappeared not too long ago, but about which most of us tend to know very little. On February 27, 1947, the Allied Control Council issues its decree no. 46, which dissolved Prussia in the interest of maintaining world peace and security and the restoration of political life in Germany on a democratic basis. Prussia, the Council continued, has since forever been a carrier of militarism and reaction in Germany. Many of the stereotypical images of Germany and German-ness, and certainly most negative images of Germany, from the spiked helmet to the iron cross, the Red Baron and the Blitzkrieg, are bound up with Prussia, its military and its ruling class. Prussia's militaristic culture not only brought on a series of increasingly brutal wars, while also often being a beacon of Enlightenment and religious tolerance; it brought together Germany's most traditional backwater with its most p

3-5 units, Spr (Daub, A)

**GERGEN 174. Automatons, Puppets, and Cyborgs**

(Same as GERGEN 274) Technological visions of the human from Romanticism through the present. How has human function been reconceptualized over the past 200 years? Nineteenth-century machinic figures as frightening but offering new social possibilities; the new human type of the early twentieth century; and contemporary explorations of the posthuman. Topics include work by Hoffmann, Kleist, Brecht, Lang, Junger, Kraftwerk, and Chaos Computer Club. In English.

3-5 units, *Aut (Elswit, K)*

**GERGEN 177. Performing Mother Courage, Performing History**

(Same as GERGEN 277) Bertolt Brecht's 1939 play *Mother Courage and her Children* opens us to ask how performances enact history, act upon it, and offer access. The first unit historicizes *Mother Courage* through primary texts and secondary sources. The second thinks critically about archiving and how we ask cultural artifacts to stand for particular times and places. The third turns to reinventions of *Mother Courage* and the potential future of the past. Written and practical work. In English. GER:DB-Hum

3-5 units, *Spr (Elswit, K)*

**GERGEN 181. Philosophy and Literature**

(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, FRENGEN 181, ITALGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum

4-5 units, *Win (Staff)*

**GERGEN 183. Scenarios of Dissolution in the Modern Novel**

(Same as GERGEN 283) How do novels capture chaos? 20th-century novels responding to catastrophes such as: the disintegration of the Austro-Hungarian monarchy (Musil, Roth); demise of the Third Reich (Mann); chaotic forces in an oppressive order (Bulgakov); corrosion of imperial confidence through fear of barbarian invaders (Coetzee); and transformation of masses into a mob destroying the body politic from within (Krasznahorkai). GER:DB-Hum

4 units, *not given this year*

**GERGEN 201. Conservative Revolution**

(Same as COMPLIT 234) An examination of conservative critiques of modernity in the early 20th century, including topics such as German nationalism, the war experience, responses to democracy, anti-liberalism, cultural pessimism in the decline of the West, crises of authority, technology, geopolitics, existentialism, and tradition. Readings from authors such as Oswald Spengler, Thomas Mann, Carl Schmitt, Ernst Jünger, Hugo von Hofmannsthal, Rudolf Borchardt. Consideration of conservative exile authors such as Leo Strauss and Hannah Arendt. Readings in either English or German. GER:DB-Hum

3-5 units, *Aut (Berman, R)*

**GERGEN 205. Technologies of the Self**

Important moments in the history of the discursive and rhetorical construction of the subject. Emphasis is on tensions between uniqueness and exemplariness, chronology and repetition, narrative and archive, and aesthetics and ethics of retrospection. Works by Augustine, Teresa of Avila, Montaigne, Rousseau, Goethe, Nietzsche, Joyce, Gide, Sartre, Leiris, and Barthes. Theoretical and critical essays including by Lejeune, Starobinski, De Man, Derrida, Marin, Koerner, Foucault, and Beaujour. GER:DB-Hum

3-5 units, *not given this year*

**GERGEN 212. The Invention of Experience**

Experience viewed as a source of orientation irreducible to discursive knowledge in the 19th century. The encounter with art as the paradigm of experience; lived vs. cumulative experience; the

modern crisis of experience; experiential openness and the authority conferred by experience. If it is neither pleasure nor knowledge sought in art, could it be experience? Role of Goethe in the cult of experience (Faust I, *Elective Affinities*). Montaigne, Hegel, Emerson, Rilke, Benjamin, Koselleck, and Gadamer. GER:DB-Hum

3-5 units, *not given this year*

**GERGEN 221. Memory in the Modernist Novel**

Preference to freshmen. The art of memory as one of the main characteristics of modernity. The relationship between memory and modernism through major narrative texts: Rainer Maria Rilke's *The Notebooks of Malte Laurids Brigger*; James Joyce's *A Portrait of the Artist as a Young Man*; and Marcel Proust's *Combray*. How memory is represented in the novels, and its role in the perception of external reality. How memory helps to constitute personal identity. The metaphors used to define memory. Readings include theoretical and critical essays, and primary texts. GER:DB-Hum, DB-Hum

4 units, *not given this year*

**GERGEN 221A. Modernism and the Jewish Voice in Europe**

(Same as COMPLIT 247, SLAVGEN 221) Some of the most haunting literary voices of the 20th century emerged from the Jewish communities of Eastern and Central Europe. The Jewishness of the modernists is thematized, asking whether it contributed to shared attitudes toward text, history, or identity. Their works are situated in specific linguistic traditions: Yiddish, Hebrew, Russian, Polish, or German. Primary readings from Ansky, Bialik, Mandelstam, Babel, Schulz, Kafka, Celan; secondary readings in history, E. European literature, and theory, including Marx, Freud, Benjamin, and Arendt. GER:DB-Hum

3-4 units, *not given this year*

**GERGEN 267. Freud and the Apostle Paul**

(Same as GERGEN 367) Intersections between Freud's psychoanalysis of society and Paul's political theology. Emphasis is on the issues of law, love, justice, community, and language. Readings include Freud and Paul, and theoretical essays by Taubes, Badiou, Santner, Agamben, Assmann, Zizek, and Boyarin. GER:DB-Hum

3-5 units, *not given this year*

**GRADUATE COURSES IN GERMAN GENERAL**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**GERGEN 206. Narrative, Visuality, Memory**

(Same as GERGEN 306) Moments in the history of the relationship between the verbal and the visual: the classical *ars memoriae*; the ekphrasis debates of the 18th century; the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winckelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, Joyce, and Proust.

3-5 units, *not given this year*

**GERGEN 229. German Cinema**

(Same as GERGEN 129) History of German cinema in the Weimar Republic, Nazi era, and the immediate aftermath of WWII. German thought, political valences, and social potential as portrayed in film.

5 units, *not given next year*

**GERGEN 230. Truth in Art**

Does art disclose an ultimate truth or does it help people avoid, endure, or affirm a truth which would otherwise be hard to bear? How modern thinking about art is defined by the tension between the idea that pleasure in art is disinterested and outside striving for true knowledge or ethical orientation and the idea that art offers some kind of deeper insight into people's place in the world. How these tensions play out in Kant, Schopenhauer, Nietzsche, Heidegger, and Adorno. In English.

3-5 units, *not given this year*

**GERGEN 248. A Brief History of Misogyny**

(Same as GERGEN 148) Genealogy of philosophical misogyny in 19th- and 20th-century German thought from German idealism. Authors include Schopenhauer, Nietzsche, Weininger, and the

George circle. In English.

3-5 units, not given this year

**GERGEN 257. Art in Public Spaces: Berlin 1980-2000**

(Same as ARTHIST 457) Before and after the re-unification a great number of artistic projects reflect the problems of political memorial culture in Germany. The seminar will deal with art works in public spaces, mostly in Berlin, by German and international artists, from drop sculptures; and the decoration programs of Federal buildings up to the Holocaust Memorial.

3-5 units, not given this year

**GERGEN 268A. Freud and the Enterprise of Psychoanalysis**

(Same as GERGEN 168A) This seminar explores psychoanalysis at the juncture of its multiple meanings: as a therapeutic practice; as a theory of the functioning of the human mind; as a method of textual interpretation; as a cultural critique and a genealogy attempting to account for the origins of morality, religion, art, and other social institutions. In addition to Freud's major works, readings include short writings by Nietzsche, Ferenczi, Lacan, Laplanche, Kristeva, and Irigaray.

3-5 units, Win (Dowaldzi, C)

**GERGEN 270A. Postwar: German Culture after World War II**

(Same as GERGEN 170A) How did German culture react to WW II, the Holocaust, and the exile of Germans from E. Europe? Questions of representations, political debate, and the future of Germany in Europe. German cinema, architecture, and art related to the subject. Readings include: Adorno, Grass, Habermas, Kluge, Bachmann, Jelinek, and Beyer. Recommended: German, but not required.

3-5 units, not given this year

**GERGEN 274. Automats, Puppets, and Cyborgs**

(Same as GERGEN 174) Technological visions of the human from Romanticism through the present. How has human function been reconceptualized over the past 200 years? Nineteenth-century machinic figures as frightening but offering new social possibilities; the new human type of the early twentieth century; and contemporary explorations of the posthuman. Topics include work by Hoffmann, Kleist, Brecht, Lang, Junger, Kraftwerk, and Chaos Computer Club. In English.

3-5 units, Aut (Elswit, K)

**GERGEN 277. Performing Mother Courage, Performing History**

(Same as GERGEN 177) Bertolt Brecht's 1939 play Mother Courage and her Children opens us to ask how performances enact history, act upon it, and offer access. The first unit historicizes Mother Courage through primary texts and secondary sources. The second thinks critically about archiving and how we ask cultural artifacts to stand for particular times and places. The third turns to reinventions of Mother Courage and the potential future of the past. Written and practical work. In English.

3-5 units, Spr (Elswit, K)

**GERGEN 281. Hegel's Aesthetics**

This course will consider G.W.F. Hegel's voluminous Aesthetics in its totality, while placing the work into the wider context of Hegel's mature system. Part of the course will be devoted to considering Hegel's legacy in nineteenth and twentieth century aesthetics, both within the Hegelian tradition and outside of it. All readings and class discussions in English

3-5 units, Aut (Daub, A)

**GERGEN 283. Scenarios of Dissolution in the Modern Novel**

(Same as GERGEN 183) How do novels capture chaos? 20th-century novels responding to catastrophes such as: the disintegration of the Austro-Hungarian monarchy (Musil, Roth); demise of the Third Reich (Mann); chaotic forces in an oppressive order (Bulgakov); corrosion of imperial confidence through fear of barbarian invaders (Coetzee); and transformation of masses into a mob destroying the body politic from within (Krasznahorkai).

4 units, not given this year

**GERGEN 291A. Oedipus, Hamlet, Moses: Archetypes of the Hero**

Texts that provided psychoanalysis with its foundational myths. Oedipus, Moses, and Hamlet as archetypes of the hero related to moments of emerging modernity: from mythos to logos, polytheism to monotheism, and action to thought. The interplay

among knowledge, recognition, and desire; the role of sameness and alterity in the constitution of personal, familial, and national identities; and the relation between violence and the construction of history. Readings include: Exodus, Sophocles, Shakespeare, Freud, Aeschylus, Euripides, Cavafy, Hofmannsthal, and Wolf; theoretical and critical essays by Laplanche, Lyotard, Lacan, de Certeau, Kofman, Assmann, Said, and Cavell.

3-5 units, not given this year

**GERGEN 306. Narrative, Visuality, Memory**

(Same as GERGEN 206) Moments in the history of the relationship between the verbal and the visual: the classical ars memoriae; the ekphrasis debates of the 18th century; the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winckelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, Joyce, and Proust.

3-5 units, not given this year

**GERGEN 367. Freud and the Apostle Paul**

(Same as GERGEN 267) Intersections between Freud's psychoanalysis of society and Paul's political theology. Emphasis is on the issues of law, love, justice, community, and language. Readings include Freud and Paul, and theoretical essays by Taubes, Badiou, Santner, Agamben, Assmann, Zizek, and Boyarin.

3-5 units, not given this year

## GERMAN LANGUAGE (GERLANG) COURSES

### UNDERGRADUATE COURSES IN GERMAN LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**GERLANG 1. First-Year German, First Quarter**

Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken.

5 units, Aut (Hartman, S), Win (Strachota, K), Spr (Nissler, P)

**GERLANG 2. First-Year German, Second Quarter**

Continuation of 1. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken. Prerequisite 1 or consent of instructor.

5 units, Aut (Pohlmann, J), Win (Hartman, S), Spr (Staff)

**GERLANG 3. First-Year German, Third Quarter**

Continuation of 2. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken. Fulfills the University language requirement. Prerequisite: placement test, 2 or consent of instructor.

5 units, Aut (Youngs, E), Win (Pohlmann, J), Spr (Staff)

**GERLANG 5A. Intensive First-Year German, Part A**

Part A and Part B equivalent of 1,2,3 combined. Only Stanford graduate students restricted to 9 units may register for 205A,B.

5 units, Sum (Staff)

**GERLANG 5B. Intensive First-Year German, Part B**

Continuation of 5A. Part A and Part B equivalent of 1,2,3 combined. Only Stanford graduate students restricted to 9 units may register for 205A,B. Prerequisite 5A or equivalent. Fulfill the University Foreign Language Requirement.

5 units, Sum (Staff)

**GERLANG 10. Elementary German for Seniors and Graduate Students**

Intensive. For students who need to acquire reading ability in German for the Ph.D. or for advanced research in their own field. 250 fulfills Ph.D. reading exam.

4 units, Win (Petig, W), Sum (Staff)

**GERLANG 11P. Individually Programmed Beginning German**

For those who wish to complete more or fewer than 5 units a quarter, have scheduling conflicts, or prefer to work independently.

Self-paced work with text and tapes; instructor available for consultation on a regular basis. 3-unit minimum for beginners. Conversational practice available for additional unit. May be repeated for credit.

*1-12 units, Aut (Strachota, K), Win (Strachota, K), Spr (Staff)*

**GERLANG 20A. Beginning German Conversation**  
(AU)

*1 unit, Aut (Pohlmann, J), Win (Balint, L), Spr (Staff)*

**GERLANG 20B. Intermediate German Conversation**  
(AU)

*1 unit, Aut (Pohlmann, J), Win (Balint, L), Spr (Staff)*

**GERLANG 20C. Advanced German Conversation**  
(AU)

*1 unit, Aut (Pohlmann, J), Win (Balint, L), Spr (Staff)*

**GERLANG 20E. Fun Facts about Europe**  
(AU) (Staff)

*1 unit, Win (Balint, L)*

**GERLANG 20K. Küche Mitt (German Cooking Class)**  
(AU)

*1 unit, Aut (Pohlmann, J), Win (Balint, L), Spr (Staff)*

**GERLANG 20M. Mitt Movie Series**  
(AU)

*1 unit, Aut (Pohlmann, J), Win (Staff), Spr (Staff)*

**GERLANG 20P. Theme Projects**  
(AU)

*1 unit, Aut (Pohlmann, J), Win (Balint, L), Spr (Balint, L)*

**GERLANG 20T. Teaching German Conversation**  
(AU)

*1 unit, Aut (Pohlmann, J), Win (Balint, L), Spr (Balint, L)*

**GERLANG 21. Intermediate German I**

Reading short stories, and review of German structure. Discussions in German, short compositions, videos. Prerequisite: placement test, 3 or consent of instructor.

*4 units, Aut (Neely, F), Win (Staff)*

**GERLANG 21S. Intermediate German**

Reading short stories, and review of German structure. Discussions in German, short compositions, videos. Prerequisite: one year of college German; or two years high school German or equivalent, or AP German.

*4 units, Sum (Staff)*

**GERLANG 21W. Intermediate German I: German for Business and International Relations**

Equivalent to 21, but focus is on business and the political and economic geography of Germany. CDs and videos. For students planning to do a business internship in a German-speaking country. Prerequisite: placement test, 3 or consent of instructor.

*4 units, not given this year*

**GERLANG 22. Intermediate German II**

Continuation of 21, with greater emphasis on reading and writing skills. Literary texts of major 20th-century writers in historical context. Prerequisite: placement test, 21 or consent of instructor.

*4 units, Aut (Staff), Win (Petig, W), Spr (Staff)*

**GERLANG 22W. Intermediate German II: German for Business and International Relations**

Equivalent to 22, but continuation of 21W. Recommended for students planning to do a business internship in a German-speaking country. Prerequisite: placement test, 21, 21W or consent of instructor.

*4 units, Win (Staff)*

**GERLANG 23. One Hundred German Years**

Hundert deutsche Jahre - Hones German language skills while introducing the history and culture of Germany as experienced by ordinary people over the course of the 20th century. Themes include Germans and money, foreigners, Hitler, the Wall, food, etc. Video series, parallel readings, discussion in German, writing, advanced usage. Prerequisite: placement test, 22, 22W or consent of instructor.

*4 units, Aut (Strachota, K)*

**GERLANG 23C. Second Year German, Third Quarter**  
Continuation of 22.

*4 units, Win (Staff), Spr (Staff)*

**GERLANG 99. Language Specials**

Prerequisite: consent of instructor.

*1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GERLANG 105. Advanced Business German**

For students planning to work in a German-speaking country and for preparation of the International Business German exams. Case studies of typical business situations with accompanying videos, listening comprehension exercises, and class simulations. Business correspondence and reports in German. Prerequisite: placement test, 22 or consent of instructor.

*4 units, Spr (Petig, W)*

**GERLANG 110. German Newspapers**

For intermediate and advanced students. Articles from current newspapers and magazines, reading comprehension strategies with online news updates, and vocabulary. Writing practice if desired. May be repeated once for credit

*3-4 units, not given this year*

**GERLANG 111. Television News from Germany**

For intermediate and advanced students. Current news reports and features for listening comprehension and vocabulary. Extra listening, speaking, or writing practice for fourth unit.

*3-4 units, not given this year*

**GERLANG 199. Individual Reading**

Prerequisite: consent of instructor.

*1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

## GRADUATE COURSES IN GERMAN LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**GERLANG 205A. Intensive First-Year German for Stanford Grads**

Same as GERLANG 5A. For Stanford graduate students only. Stanford graduate students restricted to 9 units may take 205A and B for a total of 9 units.

*4-5 units, Sum (Staff)*

**GERLANG 205B. Intensive First-Year German for Stanford Grads**

Same as GERLANG 5B. For Stanford graduate students only. Continuation of 205A. Stanford graduate students restricted to 9 units may take 205A and B for a total of 9 units.

*4-5 units, Sum (Staff)*

**GERLANG 210. Elementary German for Graduate Students**

Restricted to Stanford graduate students. Prerequisite: consent of instructor.

*3-4 units, Sum (Staff)*

**GERLANG 250. Reading German**

For undergraduates and graduate students with a knowledge of German who want to acquire reading proficiency. Readings from scholarly works and professional journals. Recommended for students who need to pass the Ph.D. reading exam. Prerequisite: one year of German, or 10, or equivalent.

*4 units, Spr (Staff)*

**GERLANG 395. Graduate Studies in German**

Prerequisite: consent of instructor.

*2-5 units, Aut (Staff), Win (Staff), Spr (Staff)*

**GERLANG 399. Independent Study**

Prerequisite: consent of instructor.

*1-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

## GERMAN LITERATURE (GERLIT) COURSES

### UNDERGRADUATE COURSES IN GERMAN LITERATURE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**GERLIT 16N. Music, Myth, and Modernity: Wagner's Ring Cycle and Tolkien's Lord of the Rings**

(Same as MUSIC 16N) Preference to freshmen. Roots of Wagner's operatic cycle and Tolkien's epic trilogy in a common core of Norse, Germanic, and Anglo-Saxon mythology. The role of musical motive and characterization in Wagner's music dramas and the film version of Tolkien's trilogy. Music as a key element in the psychological, political, and cultural revision of ancient myth in modern opera and film. GER:DB-Hum, EC-GlobalCom

3 units, not given this year

**GERLIT 118. Introduction to the Germanic Languages**

(Same as GERLIT 218) A comparative survey of the seven oldest Germanic languages (Gothic, Old Norse, Old Saxon, Old English, Old Frisian, Old Low Franconian, Old High German). Lectures on comparative linguistics, runology, old Germanic poetry, historical syntax and more.

3-5 units, Spr (Robinson, O)

**GERLIT 120. Law, Justice, and the Literary Imagination**

Have law and poetry risen from the same bed, as Jakob Grimm suggested in his essay *Von der Poesie im Recht*? Are there intrinsic connections between the legal and the literary? We will explore the ways in which narrative and drama articulate the relationship between law and justice, and represent the crises of the legal system. The course aims at enhancing reading fluency and textual analysis skills. Readings include texts by Schiller, Kleist, Kafka, Wedekind, and Brecht. Taught in German.

4 units, Win (Douvaldzi, C)

**GERLIT 120Q. Is God Dead?**

(Same as COMPLIT 50Q) A consideration of Nietzsche's claim that God is dead in relation to other texts of German literature and philosophy. The status of religious faith in relation to modernity and secularization; religion and science; culture and faith. Readings in German include selections from sacred and liturgical texts; fictional depictions of religious experience; religion in poetry; German theories of religion. Authors to be studied include Rilke, Hesse, Weiss, Schöder, Buber, Sachs, Haecker, Weber, Taubes, Ratzinger. GER:DB-Hum

3-5 units, not given this year

**GERLIT 121. THE VIENNESE COFFEEHOUSE**

This seminar examines the cultural and literary significance of *fin de siècle* Vienna's most enduring symbol: the Coffeehouse. What was the function of the café in aesthetic, literary and political debates central to Vienna at the turn of the century? How did coffeehouse and newspaper culture influence developments in modernist prose? Texts by Hermann Bahr, Arthur Schnitzler, Karl Kraus, Peter Altenberg, Felix Salten, Sigmund Freud, Egon Friedell and Alfred Polgar, in English translation, original German texts available upon request.

3-5 units, not given this year

**GERLIT 123N. The Brothers Grimm and Their Fairy Tales**

(F,Sem) Stanford Introductory Seminar. Historical, biographical, linguistic, and literary look at the Kinder- and Hausmärchen of Jacob and Wilhelm Grimm. Readings from the fairy tales, plus materials in other media such as film and the visual arts. Four short essays, one or two oral reports. In German. GER:DB-Hum

4 units, Aut (Robinson, O)

**GERLIT 124. Introduction to German Poetry**

(Same as GERLIT 224) Introduction to the reading and interpretation of lyrical poetry from the 18th century to present. Major poets writing in German including Gryphius, Goethe, Hölderlin, Novalis, Eichendorff, Heine, Rilke, Lasker-Schüler, Trakl, Benn, Celan, Brecht, Enzensberger, and Falkner. Close reading technique. Interpretive tools and theoretical concepts. Poetic form, voice, figural language, and the interaction of sensory registers. In German. GER:DB-Hum

4 units, not given this year

**GERLIT 127. Uncanny Literature in the Nineteenth Century**

From ghost children and animated statues, the walking dead to machine women and doppelgangers, 19th-century German literature teems with things that go bump in the night. The history of this tradition of fantastic literature in Germany, its origins, main authors, and defining features. Authors include E.T.A. Hoffmann, Wilhelm Hauff, Friedrich Schiller, Joseph von Eichendorff and Jeremias Gotthelf. Readings and writing in German. GER:DB-

Hum

4 units, not given this year

**GERLIT 127A. The German Ballad**

This course charts the history of the German ballad, from Goethe and Schiller, to Romantic and Realist poets - additional reading will attempt to contextualize the German ballad in the European context. Musical ballads and song arrangements will also be considered. GER:DB-Hum

3-5 units, Spr (Daub, A)

**GERLIT 130. Brecht and Modern Aesthetics**

Bertolt Brecht's poetic and dramatic works, and analysis of his contribution to modern paradigms of poetic and dramatic practice. Readings in German include poetry, dramas such as *Baal*, *Im Dickicht der Städte*, *Die Dreigroschenoper*, *Aufstieg und Fall der Stadt Mahagonny*, *Mutter Courage und ihre Kinder*, and theoretical writings on lyric poetry and drama.

3-3 units, not given this year

**GERLIT 131. Goethe: Poetic Vision and Vocation in the Age of Reason**

Introduction to Goethe's major works, reading across genres of poetry, drama, the novel, and autobiography; critical writings on art, nature, and aesthetics. Central trends in Goethe's thought; the interrelatedness of poetic vision and philosophical thinking in his works. Goethe in relation to other intellectual and philosophical movements of the period, including romanticism. GER:DB-Hum

3-5 units, Aut (Cammin, R)

**GERLIT 131A. Immigrant/Minority Literature and the Emergence of Multiculturalism in Germany**

Immigrant culture and literature in Germany across genres, including stories, drama, memoirs, and film. What do immigrants in Germany write about? What role does immigrant literary culture play in the formation of notions of cultural difference and dialogue? How do the dynamics of ethnic and cultural diversity influence concepts and notions of culture and nationhood in Germany? GER:DB-Hum

3 units, not given this year

**GERLIT 132. Nineteenth-Century Literature and Culture**

A study of literary movements in their philosophical and historical contexts. Romanticism, Realism, Naturalism. What changes defined German culture between the age of Napoleon to the eve of the First World War? How did Germany become a unified nation? The influence of thinkers such as Marx, Nietzsche and Freud. Taught in German.

4 units, Win (Berman, R)

**GERLIT 133Q. Modernism and Fiction**

Preference to sophomores. Innovative ideas and narrative forms in German modernism. International and specifically German features. Problems of narration. Texts such as Musil's *Törless*, Mann's *Tod in Venedig*, Kafka's *Die Verwandlung*, and Broch's *Passenow*. Close reading technique. Prerequisite: reading knowledge of German. GER:DB-Hum

4 units, not given this year

**GERLIT 134. FREUD'S VIENNA**

This course explores the intersections between literature, art, politics, psychoanalysis, and philosophy in turn of the century Vienna. Works by Hofmannsthal, Schnitzler, Bahr, Musil, Roth, Kraus, and Freud; shorter selections from Brentano, Herzl, Kraft-Ebbing, Loos, Mach, and Wittgenstein. (Replaces GerLit 133 for 2011/12) GER:DB-Hum

3-5 units, Spr (Douvaldzi, C)

**GERLIT 135. Outsiders and Outcasts: introduction to German Prose Fiction**

Close reading and discussion of literary works by Hebel, Tieck, Kleist, Hoffmann, Heine, Keller, Storm, R. Walser, and Kafka. Attention paid to writers' divergent responses to the artistic, ethical, and political challenges of modernity. Readings, discussion, and writing assignments in German; length of assignments adjusted to students' linguistic competence. Prerequisite: German language sequence at Stanford or equivalent. GER:DB-Hum

4 units, not given this year

**GERLIT 136. Berlin Topographies in the 20th Century**

Development of Berlin's spatial imaginaries from the boulevards

of the late 19th century to the Weimar Republic's urban agendas, and to the repeated reconstructions by the Nazis, the GDR and Berlin Republic. Sources: Walter Benjamin, Siegfried Kracauer, Berthold Brecht, Peter Weiss, Mascha Kaleko, Peter Schneider, Blixa Bargeld, Wolf Biermann, Christoph Hein, Monika Maron, Thomas Hettche, and Wim Wenders. In German. GER:DB-Hum  
4 units, not given this year

**GERLIT 138. Introduction to Germanic Languages**

(Same as GERGEN 38A) The oldest attested stages of the Germanic language family, including Gothic, Old Norse, Old Saxon, Old English, Old Frisian, Old Low Franconian (Old Dutch), and Old High German. The linguistic interrelationships, prehistory, Germanic tribal groupings, and literature. GER:DB-Hum

4 units, not given this year

**GERLIT 139. Love, Marriage and Passion in German Literature of the 19th and 20th Centuries**

(Same as GERLIT 339) The thesis that love relationships, in shifting social, cultural, and communication contexts, reflect and determine the dominant value system of a society. How the concepts of romantic, passionate, and pragmatic love evolved and competed with one another in texts by Goethe, Schlegel, Keller, Sacher-Masoch, Fontane, and Böll. In German. GER:DB-Hum

3-5 units, not given this year

**GERLIT 148. Heart to Heart: Theories of Expression at the Turns of Two Centuries**

(Same as GERLIT 248) Paradigms of expression around 1800 and 1900, from *Empfindsamkeit* (sensitivity) to German Expressionism. The heart that overflows into speech in the works of Klopstock, Goethe, Tieck, and Kleist, and the reformulation a century later of this idea as *avant garde* practice and modernist credo. Readings of poets, philosophers, and artists on relationships between inside and out, heart and voice, emotion and language, and self and art. Discussion in English. GER:DB-Hum

3-5 units, not given this year

**GERLIT 150C. Postwar German Culture and Thought: 1945 to the Present**

(Same as GERLIT 250C) How German culture and thought confronted the legacy of National Socialism, German guilt, and the possibility of a new beginning. German culture and the memory of communism (the German Democratic Republic) after 1989. Fiction of Thomas Mann, Gunter Grass, Alexander Kluge, and Hans Ulrich Treichel; poetry of Paul Celan and Ingeborg Bachmann; philosophical essays of Martin Heidegger, Theodor Adorno, Jürgen Habermas; films of Rainer Werner Fassbinder, Florian Henkel (The Life of Others), and Oliver Hirschbiegel (Downfall).

3-5 units, not given this year

**GERLIT 151. German Underworlds**

(Same as GERLIT 251) German theories about what lies beneath: is it hell or the subterranean foundations that keep the world from collapsing? Cosmic architecture and the question of the inferno in Kant, Novalis, Wagner, Marx, Freud, Kafka, and the films of Fritz Lang.

3-5 units, not given this year

**GERLIT 163. Readings in 19th-Century German Literature**

(Same as GERLIT 263) Works by Goethe, Tieck, Kleist, Hoffmann, Heine, Büchner, Grillparzer, Droste-Hülshoff, Stifter, and Keller. Their divergent responses to artistic, ethical, and political challenges of modernity. Prerequisite: GERLANG 3 or equivalent. In German. GER:DB-Hum

4 units, not given this year

**GERLIT 189A. Honors Research**

Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.

5 units, *Win (Staff)*

**GERLIT 189B. Honors Research**

Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.

2 units, *Spr (Staff)*

**GERLIT 190. German Capstone: Reading Franz Kafka**

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. WIM

3-5 units, *Win (Eshel, A)*

**GERLIT 197. Theories of Art after Idealism**

(Same as GERLIT 297) Key responses to the failure of idealism to integrate artistic creation and aesthetic experience into a philosophical system. Works by Schopenhauer, Kierkegaard, Nietzsche, Dilthey, and Lukács.

3-5 units, not given this year

**GERLIT 199. Independent Reading**

36 hours of reading per unit, weekly conference with instructor. May be repeated for credit. Prerequisite: consent of instructor.

1-10 units, *Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GERLIT 206. Narrative, Visuality, Memory**

(Same as GERLIT 306) Moments in the history of the relationship between verbal and visual: the classical *ars memoriae*; the ekphrasis debates of the 18th century; and the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winkelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, and Proust. GER:DB-Hum

3-5 units, not given this year

**GERLIT 210. Dionysus - Mythology and Poetry of a Nietzschean Inspiration**

(Same as COMPLIT 256A, COMPLIT 356A, GERLIT 310) The Greek god Dionysus became, like Apollo, the symbol of poetic imagination. In the modern era he substituted the Apolline tradition, while Apollo assumed the characteristics of Dionysus. We will examine this central poctological motif in texts by authors including Euripides, Keats, Nietzsche, Pound, and Eliot. Open to advanced undergraduates.

3-5 units, *Aut (Bohrer, C)*

**GERLIT 223. Literary Diaries of Classic Modernity**

(Same as COMPLIT 223) Focus is on self-analysis in works of key modern writers. Since Montaigne's *Essais* and Rousseau's *Confessions*, analysis of the self has been a central topic for modern literature. Texts include Baudelaire's *Intimate Journals*, Kafka's *Diaries*, Gide's *Journals*, Woolf's *Moments of Being*, Benjamin's *Berlin Childhood*, and Pavese's *Diaries*. Analysis of the self as polarizing between the imagination of a utopian childhood and self-deprivation.

3-5 units, not given this year

**GERLIT 241. Deutsche Geistesgeschichte I: German Aesthetic Thought, 1790-1872**

The seminal tradition of writing about art including the German idealists (Kant, Schelling, Hegel, and Schiller), romantics (Schlegel, Novalis, and Hoffmann), and Schopenhauer, Kierkegaard, and Nietzsche. In English. GER:DB-Hum

4 units, not given this year

**GRADUATE COURSES IN GERMAN LITERATURE**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**GERLIT 217. Hölderlin's Poetry**

(Same as COMPLIT 217) A discussion of key poems by Friedrich Hölderlin with regard to themes including the utopian fatherland as mythological landscape; the idea of the Greek gods; the concept of poetry as event; and the emphatic now. The seminar also explores the relationship between the philosophy of history and poetic metaphor.

3-5 units, not given this year

**GERLIT 218. Introduction to the Germanic Languages**

(Same as GERLIT 118) A comparative survey of the seven oldest Germanic languages (Gothic, Old Norse, Old Saxon, Old English, Old Frisian, Old Low Franconian, Old High German). Lectures on comparative linguistics, runology, old Germanic poetry, historical syntax and more.

3-5 units, *Spr (Robinson, O)*

**GERLIT 219. German Utopias and Dystopias in the 20th Century**

This course investigates the fraught relationship of Geist and politics in 20th century visions of a utopian republic of letters, mostly from Germany's conservative intellectuals: The George-circle's idea of a "secret Germany," the "conservative revolution" of Hugo von Hofmannsthal, Mann's Reflections of a Non-Political Man are the most influential such attempts at an aesthetic politics. Other texts instead interrogate and at times parody their attempts, for instance Hesse's Glass Bead Game and Arno Schmidt's Egghed Republic.

*3-5 units, not given this year*

**GERLIT 224. Introduction to German Poetry**

(Same as GERLIT 124) Introduction to the reading and interpretation of lyrical poetry from the 18th century to present. Major poets writing in German including Gryphius, Goethe, Hölderlin, Novalis, Eichendorff, Heine, Rilke, Lasker-Schüler, Trakl, Benn, Celan, Brecht, Enzensberger, and Falkner. Close reading technique. Interpretive tools and theoretical concepts. Poetic form, voice, figural language, and the interaction of sensory registers. In German.

*4 units, not given this year*

**GERLIT 232. Realistic Fictions**

(Same as COMPLIT 239) Realistic narratives in nineteenth-century literature. Structures of representation, temporality, and closure. Realism, history and political economy. Realism, modernism, and twentieth-century revisions. Texts by authors such as Keller, Stifter, Fontane, Seghers, Lukacs, and Adorno.

*3-5 units, not given this year*

**GERLIT 234. The Bildungsroman and Other Biographical Fictions**

Life hermeneutics practiced in the psychological novel, Bildungsroman, and autobiography. Intersections and contrasts among these genres. The origins of the notion of progress and its fictional translations; possibilities of historical and fictional closure; and the emergence of the novel's protagonist as a disciplinary subject. Authors include Augustine, Rousseau, Goethe, Moritz, and Keller.

*3-5 units, Spr (Douvaldizi, C)*

**GERLIT 246. Memory, History, and the Contemporary Novel**

(Same as COMPLIT 221, JEWISHST 241) How the watershed events of the 20th century, the philosophic linguistic turn, and the debate regarding the end of history left their mark on the novel. How does the contemporary novel engage with the past? How does its interest in memory and history relate to late- or postmodern culture of time or to political and ethical concerns? Novels by Toni Morrison, W. G. Sebald, J. M. Coetzee, Kazuo Ishiguro, and A. B. Yehoshua; theoretical works by Nietzsche, Freud, Heidegger, Hannah Arendt, Walter Benjamin, Fredric Jameson, Paul Ricoeur, Avishai Margalit, and Walter Benn Michaels.

*3-5 units, Spr (Eshel, A)*

**GERLIT 248. Heart to Heart: Theories of Expression at the Turns of Two Centuries**

(Same as GERLIT 148) Paradigms of expression around 1800 and 1900, from Empfindsamkeit (sensitivity) to German Expressionism. The heart that overflows into speech in the works of Klopstock, Goethe, Tieck, and Kleist, and the reformulation a century later of this idea as avant garde practice and modernist credo. Readings of poets, philosophers, and artists on relationships between inside and out, heart and voice, emotion and language, and self and art. Discussion in English.

*3-5 units, not given this year*

**GERLIT 250A. Modern Drama**

Problems of drama as genre, especially in relationship to problems of modernism. Transitions from classical and popular theater. New structures of action and conflict; epic theater; competition with film; transformed theatrical practices. Authors: Nestroy, Hauptmann, Hofmannsthal, Brecht, and Horvath. (Satisfied by enrollment in GERLIT 369 in 2008-09.)

*3-5 units, not given this year*

**GERLIT 250B. German Romanticism and Its Repercussions**

Works by Novalis, the Schlegel brothers, Tieck, Wackenroder, Hoffmann, Klingemann. Theory of the subject; transformative politics and conservative-religious retreat into inwardness; the

fragment form and the novel; reflection, play, irony; the productive self-movement of language; the hieroglyph of nature; animating effects of Romantic desire and its impasses; interactions among literature, music, and painting. Ambivalent and critical responses to Romanticism (Hegel, Heine, Nietzsche) and recent revivals (Benjamin, Lacoue-Labarthe, Nancy, and Frank). Readings in German, discussion in English.

*3-5 units, not given this year*

**GERLIT 250C. Postwar German Culture and Thought: 1945 to the Present**

(Same as GERLIT 150C) How German culture and thought confronted the legacy of National Socialism, German guilt, and the possibility of a new beginning. German culture and the memory of communism (the German Democratic Republic) after 1989. Fiction of Thomas Mann, Gunter Grass, Alexander Kluge, and Hans Ulrich Treichel; poetry of Paul Celan and Ingeborg Bachmann; philosophical essays of Martin Heidegger, Theodor Adorno, Jürgen Habermas; films of Rainer Werner Fassbinder, Florian Henkel (The Life of Others), and Oliver Hirschbiegel (Downfall).

*3-5 units, not given this year*

**GERLIT 251. German Underworlds**

(Same as GERLIT 151) German theories about what lies beneath: is it hell or the subterranean foundations that keep the world from collapsing? Cosmic architecture and the question of the inferno in Kant, Novalis, Wagner, Marx, Freud, Kafka, and the films of Fritz Lang.

*3-5 units, not given this year*

**GERLIT 255. Middle High German**

Introduction to medieval German language and culture. Readings include Hartmann von Aue and Gottfried von Strassburg; genres include Minnesang, epic, and romance. Grammar review; emphasis is on rapid and accurate reading.

*3-5 units, not given this year*

**GERLIT 256. Old High German**

Introduction to the grammar and the texts of the earliest attested stage of high German

*3-4 units, not given this year*

**GERLIT 258. German Dialects**

A survey of major dialects of the German speaking areas. Lectures on comparative linguistics, the history and nature of German dialect geography, sociolinguistic approaches. Prerequisite: GERLANG 3 or equivalent

*4 units, Win (Robinson, O)*

**GERLIT 262. Theodor Storm and the Problem of Poetic Realism**

The short fiction of nineteenth-century realism in relation to genre, audience, and cultural change. Survey of Storm's oeuvre and its development. Questions of narrative form, lyrical mood, memory and plot. Reception in social theory and cinema.

*3-5 units, Win (Berman, R)*

**GERLIT 263. Readings in 19th-Century German Literature**

(Same as GERLIT 163) Works by Goethe, Tieck, Kleist, Hoffmann, Heine, Büchner, Grillparzer, Droste-Hülshoff, Stifter, and Keller. Their divergent responses to artistic, ethical, and political challenges of modernity. Prerequisite: GERLANG 3 or equivalent. In German.

*4 units, not given this year*

**GERLIT 272. Modern German Poetry: Rilke, George, Trakl**

This course explores three seminal German poets of the early 20th century, Rainer Maria Rilke, Stefan George, and Georg Trakl. While focused on their work, the course will all also explore each poet's intellectual and social context, their relationship to the tradition, and their poetic politics. This course is taught entirely in German

*3-5 units, Win (Staff)*

**GERLIT 297. Theories of Art after Idealism**

(Same as GERLIT 197) Key responses to the failure of idealism to integrate artistic creation and aesthetic experience into a philosophical system. Works by Schopenhauer, Kierkegaard, Nietzsche, Dilthey, and Lukács.

*3-5 units, not given this year*

**GERLIT 298. Individual Work**

Open only to German majors and to students working on special projects, including written reports for internships. Honors students use this number for the honors essay. May be repeated for credit.

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GERLIT 306. Narrative, Visuality, Memory**

(Same as GERLIT 206) Moments in the history of the relationship between verbal and visual: the classical *ars memoriae*; the ekphrasis debates of the 18th century; and the emergence of a new visuality and mnemonic art as structuring principles for modernist narrative. Authors include Plato, Aristotle, Cicero, Augustine, Winkelmann, Lessing, Diderot, Goethe, Moritz, Flaubert, Rilke, and Proust.

*3-5 units, not given this year*

**GERLIT 310. Dionysus - Mythology and Poetry of a Nietzschean Inspiration**

(Same as COMPLIT 256A, COMPLIT 356A, GERLIT 210) The Greek god Dionysus became, like Apollo, the symbol of poetic imagination. In the modern era he substituted the Apolline tradition, while Apollo assumed the characteristics of Dionysus. We will examine this central poetological motif in texts by authors including Euripides, Keats, Nietzsche, Pound, and Eliot. Open to advanced undergraduates.

*3-5 units, Aut (Bohrer, C)*

**GERLIT 339. Love, Marriage and Passion in German Literature of the 19th and 20th Centuries**

(Same as GERLIT 139) The thesis that love relationships, in shifting social, cultural, and communication contexts, reflect and determine the dominant value system of a society. How the concepts of romantic, passionate, and pragmatic love evolved and competed with one another in texts by Goethe, Schlegel, Keller, Sacher-Masoch, Fontane, and Böll. In German.

*3-5 units, not given this year*

**GERLIT 369. Introduction to Graduate Studies: Criticism as Profession**

(Same as COMPLIT 369, FRENGEN 369, ITALGEN 369) Based on a survey of (and a conversation about) the history of academic Literary Criticism, and on presentation (and discussion) of contemporary theoretical positions, this seminar will try to enhance a reflection on the conditions, difficulties, and rewards of Literary Criticism as a profession and as an intellectual life form. Attention will be paid to the most relevant (and most pressing) institutional frame-conditions but this attention will not prevent us from trying to explore a (seldom used) potential of eccentricity and freedom that has always been inherent to (although sometimes dormant in) Literary Criticism.

*5 units, Aut (Gumbrecht, H)*

**GERLIT 399. Independent Study**

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GERLIT 400. Dissertation Research**

For graduate students in German working on dissertations only.

*1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GERLIT 802. TGR Dissertation**

*0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

## HEALTH RESEARCH AND POLICY (HRP) COURSES

### UNDERGRADUATE COURSES IN HEALTH RESEARCH AND POLICY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**HRP 89Q. Introduction to Cross Cultural Issues in Medicine**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Introduction to social factors that impact health care delivery, such as ethnicity, immigration, language barriers, and patient service expectations. Focus is on developing a framework to understand culturally unique and non-English speaking populations in the health care system. GER:EC-AmerCul

*3 units, Win (Corso, I)*

**HRP 199. Undergraduate Research**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

*1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

## GRADUATE COURSES IN HEALTH RESEARCH AND POLICY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**HRP 206. Meta-research: Appraising Research Findings, Bias, and Meta-analysis**

(Same as MED 206, STATS 211) Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics.

*3 units, Win (Olkin, I; Ioannidis, J)*

**HRP 207. Introduction to Concepts and Methods in Health Services and Policy Research I**

Primarily for medical students in the Health Services and Policy Research scholarly concentration. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines.

*2 units, Aut (Haberland, C)*

**HRP 208. Introduction to Concepts and Methods in Health Services and Policy Research II**

Primarily for medical students in the Health Services and Policy Research scholarly concentration; continuation of 207. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines. Recommended: 207.

*2 units, Win (Haberland, C)*

**HRP 209. FDA's Regulation of Health Care**

(Same as LAW 458) Open to law and medical students; other graduate students by consent of instructor. The FDA's regulatory authority over drugs, biologics, medical devices, and dietary supplements. The nature of the pharmaceutical, biotech, medical device, and nutritional supplement industries.

*2-3 units, not given this year*

**HRP 210. Health Law and Policy**

(Same as Law 313) Open to law, medicine, business, and graduate students. Focus is on the physician/patient relationship, medical ethics, and public health law.

*3 units, Spr (Staff)*

**HRP 211. Law and the Biosciences**

(Same as LAW 368) Legal, social, and ethical issues arising from advances in neuroscience, including effects upon law and society through improvements in predicting illnesses and behaviors, reading minds through neuroimaging, understanding responsibility and consciousness, treating criminal behavior, and cognitive enhancement. May be repeated for credit.

*3 units, not given this year*

**HRP 212. Cross Cultural Medicine**

Developing interviewing and behavioral skills needed to facilitate culturally relevant health care across all population groups. Discussions focus on explicit and implicit cultural influences operating in formal and informal medical contexts.

*3 units, Spr (Staff)*

**HRP 214. Scientific Writing**

Step-by-step through the process of writing and publishing a scientific manuscript. How to write effectively, concisely, and clearly. Preparation of an actual scientific manuscript. Students are encouraged to bring a manuscript on which they are currently working to develop and polish throughout the course.

*2-3 units, Win (Sainani, K)*

**HRP 215. Scientific Writing for Basic and Translational Scientists**

Teaches students in the basic sciences how to write clearly, concisely, and effectively. Focuses on the process of writing and publishing a scientific manuscript. 3 unit option requires work on a manuscript. Not intended for epidemiology graduate students.

2-3 units, Aut (Sainani, K)

**HRP 216. Analytical and Practical Issues in the Conduct of Clinical and Epidemiologic Research**

Topics include: advanced aspects of study design and data analyses; development of health measurement instruments; methods of summarizing literature and quantifying effect sizes; and multivariable nature of health events in human populations. 3 units requires a term paper. Prerequisites: 225, and 258 or 261, or consent of instructor.

2-3 units, Spr (Staff)

**HRP 220. BIOTECHNOLOGY LAW AND POLICY**

(Same as LAW 440) Open to all law or medical students; other graduate students by consent of the instructor. Focuses on the biotechnology industry, with some discussion of the med tech or medical device industry and the pharmaceutical industry. The life cycle of a biotech firm, from a good idea to a start-up company to FDA approval and beyond. Guest speakers. In addition to a final exam, students are required to participate in a group project during the term, making law and business recommendations about a biotech firm.

3 units, Spr (Staff)

**HRP 221. Law and the Biosciences: Genetics**

(Same as LAW 480) Open to all law or medical students; other graduate students by consent of the instructor. Ethical, legal, and social issues arising primarily from advances in knowledge of human genetics. May also include a section on stem cell research.

3 units, Spr (Staff)

**HRP 223. Epidemiologic Analysis: Data Management and Statistical Programming**

The skills required for management and analysis of biomedical data. Topics include importing and exporting data from multiple database systems, visualizing and cleaning data, data management for multicenter projects, and data security. Introduction to applied statistical programming relevant to epidemiologic and clinical research. No previous programming experience required.

2-3 units, Aut (Balise, R)

**HRP 225. Design and Conduct of Clinical and Epidemiologic Studies**

Intermediate-level. The skills to design, carry out, and interpret epidemiologic studies, particularly of chronic diseases. Topics: epidemiologic concepts, sources of data, cohort studies, case-control studies, cross-sectional studies, sampling, estimating sample size, questionnaire design, and the effects of measurement error. Prerequisite: A basic/introductory course in statistics or consent of instructor.

3-4 units, Aut (Popat, R)

**HRP 226. Advanced Epidemiologic and Clinical Research Methods**

The principles of measurement, measures of effect, confounding, effect modification, and strategies for minimizing bias in clinical and epidemiologic studies. Prerequisite: 225 or consent of instructor.

3-4 units, Win (Popat, R)

**HRP 228. Genetic Epidemiology**

Provides framework for physicians, epidemiologists, and other scientists to interpret the literature and incorporate genetic information into human disease research. Topics include: common genetic measures, approaches to finding disease genes, study design and analysis issues, genome-wide association studies, and applications of new genomic technologies. Includes reading seminal papers in genetic epidemiology.

2 units, alternate years, not given this year

**HRP 230. Cancer Epidemiology**

Descriptive epidemiology and sources of incidence/mortality data; the biological basis of carcinogenesis and its implications for epidemiologic research; methodological issues relevant to cancer research; causal inference; major environmental risk factors;

genetic susceptibility; cancer control; examples of current research; and critique of the literature. 3 units requires paper or project. Prerequisite: 225, or consent of instructor.

2-3 units, alternate years, not given this year

**HRP 231. Epidemiology of Infectious Diseases**

Principles of the transmission of the infectious agents (viruses, bacteria, rickettsiae, mycoplasma, fungi, and protozoan and helminth parasites). The role of vectors, reservoirs, and environmental factors. Pathogen and host characteristics that determine the spectrum of infection and disease. Endemicity, outbreaks, and epidemics of selected infectious diseases. Principles of control and surveillance.

3 units, Win (Maldonado, Y; Parsonnet, J)

**HRP 236. Epidemiology Research Seminar**

Weekly forum for ongoing epidemiologic research by faculty, staff, guests, and students, emphasizing research issues relevant to disease causation, prevention, and treatment. May be repeated for credit.

1 unit, Aut (Henderson, V), Win (Sieh, W), Spr (Staff)

**HRP 238. Genes and Environment in Disease Causation: Implications for Medicine and Public Health**

(Same as HUMBIO 159) The historical, contemporary, and future research and practice among genetics, epidemiology, clinical medicine, and public health as a source of insight for medicine and public health. Genetic and environmental contributions to multifactorial diseases; multidisciplinary approach to enhancing detection and diagnosis. The impact of the Human Genome Project on analysis of cardiovascular and neurological diseases, and cancer. Ethical and social issues in the use of genetic information. Prerequisite: basic course in genetics; for undergraduates, Human Biology core or equivalent or consent of instructor.

2-3 units, not given this year

**HRP 239. Understanding Statistical Models and their Social Science Applications**

(Same as EDUC 260X, STATS 209) Critical examination of statistical methods in social science applications, especially for cause and effect determinations. Topics: path analysis, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, longitudinal data, mediating and moderating variables. See <http://www-stat.stanford.edu/~rag/stat209>. Prerequisite: intermediate-level statistical methods

3 units, Win (Rogosa, D)

**HRP 240. Rethinking Global Health**

(Same as MED 230) Challenges for those seeking to improve global health include contending with: a dynamic balance between infectious and chronic non-communicable disease that differs across and within countries; issues relating to the proximate and more removed causes of disease and illness, including nutrition, infrastructure, governance, economic development, and environmental changes; diverse proposed responses with arguments for particular courses of action appealing to cost-effectiveness, egalitarian, and rights-based principles. The course goal is to begin to make sense of these challenging issues, requiring data and evidence derived via multiple methodologies, critical thinking, and sound reasoning. Prerequisite: a course dealing with global health, such as HUMBIO 129S, or consent of instructor.

3 units, Spr (Staff)

**HRP 241. Measuring Global Health**

(Same as MED 231) Open to MD, graduate, and undergraduate students. Assessing the global burden of disease, its distribution among and within countries, its causes, and appropriate interventions requires rigorous quantitative approaches. This course develops skills in these areas by critically examining questions like: How do we know who is sick and where? How are risk factors incorporated into our projections of future disease trends? How do we combine mortality and morbidity in a meaningful way? What works for improving health efficiently? Workshops build familiarity with relevant data and their analysis. Prerequisite: Course in statistics, biostatistics, econometrics, or equivalent.

4 units, Spr (Bendavid, E; Goldhaber-Fiebert, J)

**HRP 251. Design and Conduct of Clinical Trials**

The rationale for phases 1-3 clinical trials, the recruitment of subjects, techniques for randomization, data collection and endpoints, interim monitoring, and reporting of results. Emphasis is on the theoretical underpinnings of clinical research and the practical aspects of conducting clinical trials.

3 units, Spr (Staff)

**HRP 252. Outcomes Analysis**

(Same as BIOMEDIN 251) Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics.

3 units, Spr (Staff)

**HRP 256. Economics of Health and Medical Care**

(Same as BIOMEDIN 156, BIOMEDIN 256, ECON 126) Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; socioeconomic status and epidemiology; economics of obesity. Graduate students with research interests should take ECON 248. Prerequisites: ECON 50 and ECON 102A or Stats 116 or the equivalent. Recommended: ECON 51.

5 units, Aut (Bhattacharya, J)

**HRP 258. Introduction to Probability and Statistics for Clinical Research**

Open to medical and graduate students; required of medical students in the Clinical Research Scholarly Concentration. Tools to evaluate medical literature. Topics include random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals, correlation, regression, analysis of variance, and survival analysis.

3 units, Spr (Staff)

**HRP 259. Introduction to Probability and Statistics for Epidemiology**

Topics: random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals. Correlation, regression, analysis of variance, and nonparametric tests. Introduction to least squares and maximum likelihood estimation. Emphasis is on medical applications. Differential between 3 and 4 units is the amount of out-of-class work required.

3-4 units, Aut (Sainani, K)

**HRP 260A. Workshop in Biostatistics**

(Same as STATS 260A) Applications of statistical techniques to current problems in medical science.

1-2 units, Aut (Olshen, R; Sabatti, C)

**HRP 260B. Workshop in Biostatistics**

(Same as STATS 260B) Applications of statistical techniques to current problems in medical science.

1-2 units, Win (Olshen, R; Sabatti, C)

**HRP 260C. Workshop in Biostatistics**

(Same as STATS 260C) Applications of statistical techniques to current problems in medical science.

1-2 units, Spr (Staff)

**HRP 261. Intermediate Biostatistics: Analysis of Discrete Data**

(Same as BIOMEDIN 233, STATS 261) Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference.

3 units, Win (Sainani, K)

**HRP 262. Intermediate Biostatistics: Regression, Prediction, Survival Analysis**

(Same as STATS 262) Methods for analyzing longitudinal data. Topics include Kaplan-Meier methods, Cox regression, hazard

ratios, time-dependent variables, longitudinal data structures, profile plots, missing data, modeling change, MANOVA, repeated-measures ANOVA, GEE, and mixed models. Emphasis is on practical applications. Prerequisites: basic ANOVA and linear regression.

3 units, Spr (Staff)

**HRP 263. Advanced Decision Science Methods and Modeling in Health**

(Same as MED 263) Advanced methods currently used in published model-based cost-effectiveness analyses in medicine and public health, both theory and technical applications. Topics include: Markov and microsimulation models, model calibration and evaluation, and probabilistic sensitivity analyses. Prerequisites: a course in probability, a course in statistics or biostatistics, a course on cost-effectiveness such as HRP 392, a course in economics, and familiarity with decision modeling software such as TreeAge.

3 units, Spr (Staff)

**HRP 268. Genetics and Reproductive Technologies**

(Same as LAW 568) Examines the complex interrelationship among legal, political, ethical, and social issues shaping the intersection of genetics, reproductive technologies and reproductive rights. Issues discussed may include, but are not limited to: the commercialization and sale of reproductive materials like sperm, ovum, and surrogacy services; genetic technologies, prenatal genetic screening, and diagnostic testing of offspring; criminalization of reproductive decision-making such as sex-selection and genetic enhancement; stem cells, cloning, and abortion; DNA databanks and collection of genetic information; in vitro fertilization and other emerging reproductive technologies.

2 units, Aut (Farahany, N)

**HRP 274. Design for Service Innovation**

(Same as MED 274) (Same as OIT 344) Open to graduate students from all schools and departments. An experiential course in which students work in multidisciplinary teams to design new services (including, but not limited to, web services) to address the needs of an underserved population of users. Students learn to identify the key needs of the target population and to design services to address these needs. Projects in 2012 will focus on services for young adult survivors of severe childhood diseases such as cystic fibrosis, rheumatoid arthritis, major cardiac repairs, organ transplants, genetic metabolic disorders, and cancer. The first wave of survivors is reaching young adulthood (ages 18-25). Many aspects of the young adult world are not yet user-friendly for them: applying to and entering college, adherence to required medication and diet, prospects for marriage and parenthood, participation in sports, driving, drinking, drugs, and more. The aspiration is to develop services to improve these young

4 units, Spr (Staff)

**HRP 280. Spanish for Medical Students**

(Same as SPANLANG 121M) First quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on taking the medical history. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.

2 units, Aut (Corso, J)

**HRP 281. Spanish for Medical Students**

(Same as SPANLANG 122M) Second quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on performing a physical examination. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge.

2 units, Win (Corso, J)

**HRP 282. Spanish for Medical Students**

(Same as SPANLANG 123M) Third quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on different specialties and medical conditions. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken

independently, depending on the level of prior knowledge.

2 units, Spr (Staff)

**HRP 283. Health Services Research Core Seminar**

Presentation of research in progress and tutorials in the field of health services research.

1 unit, Aut (Haberland, C), Win (Haberland, C), Spr (Staff)

**HRP 290. Advanced Medical Spanish Oral Communication**

Enrollment limited to medical students. Designed to further develop linguistic skills, covering all medical specialties according to student needs. Sessions also include topics on patient education and diseases, such as diabetes, asthma, TB, and CVDs.

2 units, Aut (Corso, I), Win (Corso, I), Spr (Staff)

**HRP 296. Current Topics in Bioethics**

(Same as LAW 596) Explores the ethical, legal, and public policy issues arising from recent advances in biomedicine and the biosciences. Approaches to bioethical reasoning including casuistry, social justice, resource allocation, and individual rights in areas such as refusal of treatment conception. Topics include: the use of forensic genetics in criminal law, neuroscience and national security, race and ethnicity in genetic research, experimentation on human subjects and prisoners, privacy of medical and genetic information in the information age, synthetic biology, and do-it-yourself medical and genetic testing. No prior knowledge in science, medicine, philosophy or related disciplines is required.

3 units, Spr (Staff)

**HRP 299. Directed Reading in Health Research and Policy**

Epidemiology, health services research, preventive medicine, medical genetics, public health, economics of medical care, occupational or environmental medicine, international health, or related fields. May be repeated for credit. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**HRP 351. Health Care Technology: From Innovators to Providers to Patients**

(Same as GSBGEN 351) How health care businesses use biotechnology, medical technology and information technology to improve patient outcomes and manage costs. New technologies commercialized by innovator biotech and pharmaceutical companies, device manufacturers, diagnostics developers, and health IT companies, and adopted by hospitals and physicians in patient care and paid for by third-party payers. Case studies: how innovators finance and manage new product development; clinical trial management and gaining regulatory approval; strategies to drive product adoption; business models to drive innovation; clinical and business models for adopting new technology; organizational change; criteria for reimbursement and coverage decisions; selective provider network design to manage added costs; and IT-intensive business models. Guest speakers and panels.

4 units, not given this year

**HRP 370. Medical Scholars Research**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

4-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**HRP 391. Health Care Regulation, Finance and Policy**

(Same as PUBLPOL 231) (SAME AS LAW 348, MGTECON 331) Provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. Potential topics include: health reform, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), medical malpractice and quality regulation, pharmaceuticals, the corporate practice of medicine, regulation of fraud and abuse, and international comparisons.

3 units, Win (Bundorf, M; Kessler, D)

**HRP 392. Analysis of Costs, Risks, and Benefits of Health Care**

(Same as BIOMEDIN 432) (Same as MGTECON 332) For graduate students. How to do cost/benefit analysis when the output is difficult or impossible to measure. How do M.B.A. analytic tools apply in health services? Literature on the principles of cost/benefit analysis applied to health care. Critical review of actual studies. Emphasis is on the art of practical application.

4 units, Aut (Owens, D; Goldhaber-Fiebert, J)

**HRP 399. Graduate Research**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**HRP 801. TGR Project**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**HRP 802. TGR Dissertation**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## HISTORY (HISTORY) COURSES

### UNDERGRADUATE COURSES IN HISTORY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**HISTORY 4N. A World History of Genocide**

(F,Sem) Stanford Introductory Seminar. Reviews the history of genocide from ancient times until the present. Defines genocide, both in legal and historical terms, and investigates its causes, consequences, and global dimensions. Issues of prevention, punishment, and interdiction. Main periods of concern are the ancient world, Spanish colonial conquest; early modern Asia; settler genocides in America, Australia, and Africa; the Armenian genocide and the Holocaust; genocide in communist societies; and late 20th century genocide. GER:DB-SocSci

3-5 units, Win (Naimark, N)

**HISTORY 5S. Disciplining the Colonial Body: Violence, Sex, and Resistance in Europe's Empires, 1830-2011**

How did Europe maintain control over its vast empires? Explores how colonial institutions, law, hierarchies of race, class, and sex, and the practice of sciences like anthropology functioned as tools of imperial control. We will use primary sources such as novels, films, maps, memoirs, legal documents, and personal correspondence, as well as theorists of power such as Foucault and Said, to study the effects of imperial violence and control, resistance to it, and its continued importance in contemporary society.

5 units, Spr (Slobodkin, Y), ONCEONLY

**HISTORY 8N. How We Remember the Past: Historical, Legal and Artistic Interpretation**

(F,Sem) Stanford Introductory Seminar. Examines the similarities and differences between three different methods to remember (and interpret) the past: historical research, legal proceedings, and culture (mainly literature, cinema and the plastic arts). Looking at theoretical debates first, a historical specific example next (Spanish civil war and dictatorship, 1936-1975), we will ask under which circumstances is each method used to remember the past, and how do the results vary? Why do certain societies prefer one method to others? Does this preference depend on what is being recorded, on the availability of sources, on the conditions of those engaged in examining the past, their aim at doing so, etc.? The goal is not to learn about a specific event, time or place, but to think about the past in pluralistic ways. Students will each choose an example of their own to analyze and share with the class. Examples can refer to any moment in the past, or any region or human group as long as the student GER:DB-Hum

4-5 units, Aut (Herzog, T)

**HISTORY 9. Human Rights and Humanitarianism: A Global History**

(SAME AS HISTORY 109. History majors and others taking 5 units, enroll in HISTORY 109.) Do human beings have certain inalienable rights? Are we obliged to help those in need? Examines the historical origins as well as the political, social, economic, legal, and cultural contexts of ideas about human rights and humanitarianism from the time of the Old Testament to the International Criminal Court. Class time will blend short lectures with town hall style discussions of subjects including slavery, torture, colonialism, genocide, and the work of NGO's.

3 units, Win (Daughton, J)

**HISTORY 10A. Europe from Antiquity to 1500**

(Same as History 110A. History majors and others taking 5 units, register for 110A.) Focus is on religion and politics. Issues include: the rise of Christianity and its impact on Rome; transformations of Catholicism and its institutions including the impact of barbarian tribes and the struggle between church and state; antisemitism, heresy, Crusades, and inquisition; courtly love; and scholasticism. GER:DB-Hum

*3 units, Aut (Miner, J)*

**HISTORY 10B. Early Modern Europe**

(Same as HISTORY 110B. History majors and others taking 5 units, register for 110B.) Survey of early modern European history from the Reformation through the Enlightenment. Topics include sovereignty and the state, courtly life and manners, science and technology, the print and military revolutions, piety and religious practice, popular culture and village life, women and gender, witchcraft and sexual deviance, the rise of international trade, the history of consumption and material things, encounters with non-Western peoples and colonialism, and scholarship and the republic of letters. GER:DB-SocSci, EC-GlobalCom

*3 units, Win (Fredona, R)*

**HISTORY 10C. Introduction to Modern Europe**

(SAME as HISTORY 110C. History majors and others taking 5 units, register for 110C.) From the late 18th century to the present. How Europeans responded to rapid social changes caused by political upheaval, industrialization, and modernization. How the experience and legacy of imperialism and colonialism both influenced European society and put in motion a process of globalization that continues to shape international politics today.

*3 units, Spr (Daughton, J)*

**HISTORY 11N. The Roman Empire: Its Grandeur and Fall**

(Same as CLASSHIS 24N) Preference to Freshmen. Prerequisite: IHUM 69A. Explore themes on the Roman Empire and its decline from the 1st through the 5th centuries C.E.. What was the political and military glue that held this diverse, multi-ethnic empire together? What were the bases of wealth and how was it distributed? What were the possibilities and limits of economic growth? How integrated was it in culture and religion? What were the causes and consequences of the conversion to Christianity? Why did the Empire fall in the West? How suitable is the analogy of the U.S. in the 21st century? GER:IHUM-3

*4 units, not given this year*

**HISTORY 11SC. How Is a Buddhist**

Buddhism as a system of thought, a culture, a way of life, a definition of reality, a method for investigating it, and a mental, physical, and social practice. Buddhism as a total phenomenon. Readings, films, music, and art. How Buddhist practices constitute the world of the Buddhist.

*2 units, not given this year*

**HISTORY 13N. Slavery and Rebellion in Ancient Rome: Spartacus in Legend and History**

(F,Sem) (Same as CLASSHIS 23N) Stanford Introductory Seminar. Preference to freshmen. Spartacus and his army of slaves resisted the power of the Roman legions for two years and became the stuff of legend. Introduction to Roman history. Slavery in ancient Rome in its psychological, social, and economic dimensions. Causes of Spartacus' rebellion; how the traumatic end of the rebellion gave rise to a legend popularized in Stanley Kubrick's 1960 film.

*3 units, Aut (Saller, R)*

**HISTORY 13S. The Politics of Food in Early Modern England**

A chronological and thematic look at the century of revolutions in England via case studies surrounding the purchase, consumption, and production of food, as well as culinary puns, metaphors, and allusions. Charts England's transition from an early modern monarchy and economy; through the Civil War and Interregnum of the 1640s and 1650s, when royalists, Ranters, and radicals contended over the nature of the ideal society; to the 1690s, when the Glorious Revolution ushered in a modernized commercialized society.

*5 units, Spr (Chou, C), ONCEONLY*

**HISTORY 22S. Big Brother is Watching: The History of the Communist Secret Police**

Who were the secret police, and what was their role in communist

states and societies? How did they understand their most important tasks: political repression, surveillance, and preventative policing? Examines the secret police in the Eastern Bloc from the Bolshevik Cheka to the East German Stasi. Sources include interviews with secret police agents, photographs taken with hidden cameras, victims' memoirs, films, court records, and literature. Topics include totalitarianism, defection, surveillance technologies, interrogations, communist culture, and state enemies.

*5 units, Aut (Pucci, M), ONCEONLY*

**HISTORY 22SC. A Tale of Two Cities: London and San Francisco**

San Francisco and London are two of the world's best-loved and most-visited cities. They have certain things in common: both are ports, situated on the edge of continents; both are major commercial and cultural centres; and both have been shaped by immigration. Their differences are more obvious than their similarities, however, and these differences are to a large extent explained by their very different histories. London was founded by the Romans and was, for a period in its recent history, the capital of an Empire on which the sun famously never set; San Francisco did not emerge as a city until well into the 19th century and even now has something of the character of a city state rather than a national or state capital. Though often considered one of the most European of American cities, San Francisco is in fact laid out on the typically American grid plan; the planning of London is, by contrast, chaotic, reflecting its long evolution and the lack of any effective central plan.

*2 units, not given this year*

**HISTORY 30C. Culture and Society in Reformation England**

(Same as History 130C. History majors and others taking 5 units, register for 130C.) Focuses on the appeal of both Reformed and Catholic ideas in the political and cultural contexts of early modern Europe. Topics include: the Lutheran revolt; the spread of Protestant ideas; Calvin's Geneva; the English Reformation; Tridentine reform and the Jesuits; toleration and the underground churches; wars and religious violence; and the making of European confessional identities. Sources include sermons, religious polemic, autobiographies, graphic prints, poetry, and music.

*3 units, not given this year*

**HISTORY 30Q. English Society Through Fiction**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. England from the eighteenth century to the twentieth century through the reading of seven novels ranging from Henry Fielding's Joseph Andrews, to Evelyn Waugh's A Handful of Dust. Focus is on the novels themselves and the historical context of the novels to acquire a knowledge of British history over two hundred years. GER:DB-Hum

*4 units, Spr (Stansky, P)*

**HISTORY 31. Science, Technology and Art: The Worlds of Leonardo da Vinci**

(Same as ARTHIST 113, ARTHIST 113A, HISTORY 131) (Same as HISTORY 31. History majors and others taking 5 units, register for 131.) What did Leonardo actually know? How did he acquire that knowledge? Explores Leonardo's interests and accomplishments in such fields as painting, architecture, engineering, physics, mathematics, geology, anatomy, and physiology, and more generally the nature of Renaissance science, art, and technology. Considers the relationship between the society of fifteenth century Italy and the work of the man from Vinci: why did this world produce a Leonardo? How might we use him to understand creativity, innovation, and invention in the Renaissance and beyond? What was his legacy and how did he become a myth? Designed both for students interested in the history of science, medicine, and technology and for students interested in the history and art of Renaissance Italy. GER:DB-Hum

*3-5 units, not given this year*

**HISTORY 32A. Enlightenment and the Arts**

(Same as HISTORY 132A. History majors and others taking 5 units, enroll in 132A.) Novels, poetry, music, paintings, and architecture, and what they reveal about the society that produced them.

*3 units, Spr (Lougee Chappell, C)*

**HISTORY 33A. Blood and Roses: The Age of the Tudors**

(Same as HISTORY 133A. History majors and others taking 5

units, register for 133A.) English society and state from the Wars of the Roses to the death of Elizabeth. Political, social, and cultural upheavals of the Tudor period and the changes wrought by the Reformation. The establishment of the Tudor monarchy; destruction of the Catholic church; rise of Puritanism; and 16th-century social and economic changes. GER:DB-Hum

*3 units, not given this year*

**HISTORY 33B. Revolutionary England: The Stuart Age**

(Same as HISTORY 133B. History majors and others taking 5 units, register for 133B.) From the accession of King James I in 1603 to the death of Queen Anne in 1714: a brutal civil war, the execution of one anointed king, and the deposition of another. Topics include the causes and consequences of the English Revolution, the origins of Anglo-American democratic thought, the rise and decline of Puritanism, and the emergence of England as an economic and colonial power. (Como)

*3 units, not given this year*

**HISTORY 33S. The France of Louis XIV**

Louis XIV's reign as the foundation of France's modern global eminence despite the imposition of governing practices that undermined France's chance of effective modernization. Sources include 17th-century documents and a computer simulation in game format to define the problems faced by the Sun King and his contemporaries in an era of economic, political, and social change. GER:DB-Hum

*5 units, not given this year*

**HISTORY 34A. European Witch Hunts**

(Same as HISTORY 134A. History majors and others taking 5 units, register for 134A.) After the Reformation, in the midst of state building and scientific discovery, Europeans conducted a series of deadly witch hunts, violating their own laws and procedures in the process. What was it about early modernity that fueled witch hunting? Witch trials and early modern demonology as well as historians' interpretations of events to seek answers to this question. GER:DB-Hum

*3 units, Spr (Stokes, L)*

**HISTORY 36N. Gay Autobiography**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Gender, identity, and solidarity as represented in nine autobiographies: Isherwood, Ackerley, Duberman, Monette, Louganis, Barbin, Cammermeyer, Gingrich, and Lorde. To what degree do these writers view sexual orientation as a defining feature of their selves? Is there a difference between the way men and women view identity? What politics follow from these writers' experiences? GER:DB-Hum, EC-Gender

*4 units, Spr (Robinson, P)*

**HISTORY 38A. Germany and the World Wars, 1870-1990**

(Same as HISTORY 138A. Majors and others taking 5 units, enroll in 138A.) Germany's history from Bismarck's wars of unification through the end of the Cold War. The radicalizing relationship between international conflict, social upheaval, and state transformation with a focus on the clashes of the Second Empire, the road to WW I, interwar instability, the rise of Nazism, WW II, the Holocaust, the division of communist E. and capitalist W. Germany, and the fall of the Iron Curtain.

*3 units, not given this year*

**HISTORY 39. Modern Britain and the British Empire**

(Same as HISTORY 139. History majors and others taking 5 units, register in 139.) From American Independence to the latest war in Iraq. Topics include: the rise of the modern British state and economy; imperial expansion and contraction; the formation of class, gender, and national identities; mass culture and politics; the world wars; and contemporary racial politics. Focus is on questions of decline, the fortunes and contradictions of British liberalism in an era of imperialism, and the weight of the past in contemporary Britain. GER:EC-GlobalCom

*3 units, Win (Satia, P)*

**HISTORY 40. World History of Science, Technology and Medicine: From Prehistory to the Scientific Revolution**

(Same as HISTORY 140. History majors and others taking 5 units, register for 140.) The earliest developments in science, the prehistoric roots of technology, the scientific revolution, and global voyaging. Theories of human origins and the oldest known tools and symbols. Achievements of the Mayans, Aztecs, and

native N. Americans. Science and medicine in ancient Greece, Egypt, China, Africa, and India. Science in medieval and Renaissance Europe and the Islamic world including changing cosmologies and natural histories. Theories of scientific growth and decay; how science engages other factors such as material culture and religions. GER:DB-SocSci

*3 units, Win (Proctor, R)*

**HISTORY 41A. The Emergence of Medicine: The Middle Ages and Renaissance**

(Same as HISTORY 141A. History majors and others taking 5 units, register for 141A.) How did medicine emerge as a distinctive body of knowledge and a profession? The history of medicine from ca. 1000 to 1750. Topics: new ways of examining and treating the body; the religious and cultural significance of disease; the development of hospitals; and the rise of public health systems. Comparison of the status of medicine in Europe and the Islamic world. The work of key figures such as Vesalius and Harvey. GER:DB-SocSci

*3 units, not given this year*

**HISTORY 41Q. Mad Women: Women and Mental Illness in U.S. History**

(S,Sem) Stanford Introductory Seminar. Explores how gender and historical context have shaped the experience and treatment of mental illness in U.S. history. Why have women been the witches and hysterics of the past, and why have there historically been more women than men among the mentally ill? Topics include the relationship between historical ideas of femininity and insanity, the ways that notions of gender influence the definition and treatment of mental disorder, and the understanding of the historically embedded nature of medical ideas, diagnoses, and treatments. GER:DB-SocSci

*3 units, Aut (Horn, M)*

**HISTORY 41S. Speed and Power and Work by the Hour: The Revolution of Western Industry**

What was revolutionary about the Industrial Revolution? Did eighteenth and nineteenth century Europeans and Americans recognize radical changes in the way they personally lived? Or, are such historical phenomena only appreciated in hindsight? Examines the scope and meaning of the Industrial Revolution culturally, economically, and technically through paintings, news articles, novels, photographs, technical treatises, and production statistics from the era in question. Might today's techno cultural changes be interpreted in the future as revolutionary?

*5 units, Aut (Harris, B)*

**HISTORY 42. Darwin in the History of Life**

(Same as HISTORY 142. History majors and others taking 5 units, register for 142.) Origins and impact of evolutionary theory from the nineteenth century to the present. Early theories of fossils, the discovery of deep time and uniformitarian geology, debates over evolution vs. extinction, the origin of life, and human origins; the rise of anthropology and racial theory; the changing challenge of creationism, the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evodevo, neocatastrophism, and the new technological frontier of biomimicry. GER:DB-SocSci

*3 units, Spr (Proctor, R)*

**HISTORY 44Q. The History of Women and Gender in Science, Medicine, and Engineering**

(S,Sem) Stanford Introductory Seminar. Preference to freshmen. Section 1 focuses on the history of women in science, medicine, and engineering. Section 2 looks at transforming research institutions so that both men and women can flourish. Section 3 explores how sex and gender analysis can enhance creativity. We discuss concrete examples of how taking gender into account has yielded new research results. Stanford University currently has a multiple year collaboration with the European Commission for Gendered Innovations, and this class will be part of that project. This course fulfills the second level Writing and Rhetoric Requirement (WRITE 2) and will emphasize oral and multimedia presentation. GER:DB-Hum, EC-Gender

*4-5 units, Win (Schiebinger, L)*

**HISTORY 45B. Africa in the Twentieth Century**

(Same as HISTORY 145B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from

when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels, plays, polemics, and autobiographies written by Africans. GER:DB-SocSci, EC-GlobalCom

3 units, Spr (Roberts, R)

#### **HISTORY 47. History of South Africa**

(Same as AFRICAAM 47) (Same as HISTORY 147. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis. GER:DB-SocSci

3 units, Aut (Campbell, J)

#### **HISTORY 47S. Saints and Sorcerer-Kings: History and the Epic in West Africa**

Combining historical memory with myth and folklore, West African historical epics tell the stories of fallen empires, great cities besieged by heroic warriors, conquering holy men, tyrants and sorcerers. What can these oral traditions tell us about West African history? How should we read them against other forms of evidence? Readings will include translations of epic poetry, medieval travelers' accounts and West African chronicles, tomb inscriptions, and other sources.

5 units, Aut (McPherson, W)

#### **HISTORY 48N. African History through Literature and Film**

Literary and cinematic works as a window into the history of sub-Saharan Africa.; and the difficulty of using artistic works as historical sources, the value of art as representation and artifact of the past. Premodern traditions of political narrative; art in the era of the slave trade; the impact of colonialism on African intellectuals; the political uses of art by nationalists; and the struggle to represent rapidly changing social and culture norms. GER:DB-Hum

4-5 units, not given this year

#### **HISTORY 48Q. South Africa: Contested Transitions**

(S,Sem) (Same as AFRICAAM 48Q) Stanford Introductory Seminar. Preference to sophomores. The inauguration of Nelson Mandela as president in May 1994 marked the end of an era and a way of life for S. Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. Who advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet. GER:DB-Hum, EC-GlobalCom

3 units, Win (Samoff, J)

#### **HISTORY 49C. THE SLAVE TRADE**

(Same as HISTORY 149C. History majors and others taking 5 units, enroll in 149C.) Slave trades and forms of slavery in W. Africa from 1000 to 1885; impacts on lives, social organization, and political structures. Slavery in Islam, the slave market in the Mediterranean and Middle East, and the Saharan slave trade. Slavery within Africa, growth of the Atlantic trade, the Middle Passage, and war and trade that produced slaves. Impact of the Industrial Revolution and European abolition movements on the use of slaves and warfare in Africa. The relationship between slaving and the European conquest of Africa.

3 units, not given this year

#### **HISTORY 50A. Colonial and Revolutionary America**

(Same as HISTORY 150A. History majors and others taking 5 units, register for 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution. GER:DB-SocSci, EC-AmerCul

3 units, Aut (Winterer, C)

#### **HISTORY 50B. 19th Century America**

(Same as AFRICAAM 50B) (Same as HISTORY 150B. History majors and others taking 5 units, register in 150B.) Territorial expansion, social change, and economic transformation. The

causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture. GER:DB-SocSci, EC-AmerCul

3 units, Win (White, R)

#### **HISTORY 50C. The United States in the Twentieth Century**

(Same as HISTORY 150C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the changing status of women since WW II; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War. GER:DB-SocSci, EC-AmerCul

3 units, Spr (Camarillo, A)

#### **HISTORY 52S. Working for the Man: Historical Approaches to Workers and Business in American History, 1815-1940**

How historians have investigated and interpreted workers and business in 19th and 20th century U.S. Explores subfields of labor/working class history and business history and ponders how to bring them together. Themes include the ideal worker, the modern business enterprise, unions, technology and work, the role of the state, and the interaction of work, class, and culture. Primary sources include diaries, letters, newspaper and magazine articles, advertisements, photos, films, oral histories, and legal, government, and corporate documents.

5 units, Win (Marine-Street, N), ONCEONLY

#### **HISTORY 53S. Race Riots and Rebellions in 20th Century Urban America**

Race riots and rebellions are central to the story of urban America. The causes and outcomes of race riots and rebellions offer insight into the key themes, debates, and topics in U.S. Urban History. Topics include the Great Migration, immigration, lynching, racial violence, urbanization, civil rights, urban unrest, demographics, and race relations.

5 units, Win (Nichols, C), ONCEONLY

#### **HISTORY 54. American Intellectual and Cultural History to the Civil War**

(Same as HISTORY 154. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include texts and images. GER:DB-Hum, EC-AmerCul

3 units, Spr (Winterer, C)

#### **HISTORY 54N. African American Women's Lives**

(Same as AFRICAAM 54N) Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality. GER:DB-Hum, EC-Gender

4-5 units, not given this year

#### **HISTORY 54S. Prohibition in America**

A case study in the interplay between law, society, and culture in 20th century U.S. history. Topics include the women's temperance movement, the Anti-Saloon League, the 18th Amendment and Volstead Act, Jazz Age night life, Al Capone and the war on crime, policing and civil liberties, the repeal of Prohibition, and origins of the War on Drugs. Sources include Supreme Court opinions, literary novels, mug shots, government reports, oral histories, autobiographies, political cartoons, pamphlets, photographs, and Hollywood films.

5 units, Spr (Mayeux, S), ONCEONLY

**HISTORY 55S. Real Men and Dragon Ladies: Race and Sexuality in America, 1662-1965**

(Same as CSRE 55S) How do race and sexuality mutually construct each other throughout American history? How do historians use primary sources to make historical arguments? Examines a variety of primary sources, including political pamphlets, legal documents, illustrations, and film. The historical trajectory we will follow examines the creation and elaboration of racial and sexual categories, from colonial slave codes and 19th century miscegenation law, through modern urban culture and the GI Bill.

5 units, Aut (Heinz, A), ONCEONLY

**HISTORY 56N. Celluloid America: Explorations in Film and History**

(F,Sem) Stanford Introductory Seminar. Explores the history and culture of the United States through film, examining both the history of this quintessentially American medium and the ways in which American history has been represented in movies. Topics include the invention of the moving picture technology, the creation of cinema language, the rise and fall of the Hollywood studio system, the emergence and evolution of film genres (westerns, romantic comedies, film noir, science fiction, Blaxploitation, etc.) the quest for overseas markets for American movies, race and film, and the future of movies in the digital age. Includes weekly class discussions and required screenings. Students will also complete short papers as well as final research projects on topics of their own choosing. GER:DB-Hum

3 units, Win (Campbell, J)

**HISTORY 57. The Constitution: A Short History**

(Same as POLISCI 128F) (Same as HISTORY 157. History majors and others taking 5 units, enroll in 157.) A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime. GER:DB-SocSci, EC-AmerCul

3 units, Win (Rakove, J)

**HISTORY 59. Introduction to Asian American History**

(Same as ASNAMST 59) (Same as HISTORY 159. History majors and others taking 5 units, register for 159.) The historical experience of people of Asian ancestry in the U.S. Immigration, labor, community formation, family, culture and identity, and contemporary social and political controversies. Readings: interpretative texts, primary material, and historical fiction. GER:DB-SocSci, EC-AmerCul

3 units, Aut (Chang, G)

**HISTORY 64C. From Freedom to Freedom Now!: African American History, 1865-1965**

(Same as AFRICAAM 64C) (Same as HISTORY 164C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music. GER:DB-SocSci, EC-AmerCul

3 units, not given this year

**HISTORY 70. Culture, Politics, and Society in Latin America**

(Same as HISTORY 170B. History majors and others taking 5 units, enroll in HISTORY 170B.) The course of Latin American history from the colonial era to the present day. Key issues such as colonialism, nationalism, democracy, and revolution will be examined critically in light of broad comparative themes in Latin American and world history. Sources include writings in the social sciences as well as primary documents, fiction, and film. GER:DB-SocSci, EC-GlobalCom

3 units, Aut (Iber, P)

**HISTORY 70A. Colonial Latin America**

(Same as HISTORY 170. History majors and others taking 5 units, register for 170.) 16th-19th centuries. Indigenous cultures. The

arrival of Europeans and its impact on native and European societies. Culture, religion and institutions, and everyday life. The independence period and the formation of new nations. Readings include primary and secondary sources. GER:DB-SocSci, EC-GlobalCom

3 units, Spr (Tortorici, Z)

**HISTORY 75. MODERN MEXICO**

(Same as HISTORY 175. History majors and others taking 5 units, enroll in HISTORY 175.) Mexico has produced the world's richest man and wrenching poverty, tremendous drug-related violence and some of the world's best-respected poets and writers. Explores how all this has been possibly by looking at the politics, culture, and economy of Mexico from the time of Porfirio Diaz and the twentieth century's first great modern revolution to the present. Focusing on the problems of democracy and inequality, the course will draw from the social sciences, journalism, fiction, and film. GER:DB-SocSci

3 units, Spr (Iber, P)

**HISTORY 82C. The Making of the Islamic World, 600-1300**

(Same as HISTORY 182C. Majors and other taking 5 units, register for 182C.) The History of Islam and Muslim peoples from 600-1300. Topics include Muhammad and his community; the early Arab conquests and empires; sectarian movements; formation of Islamic belief, thought, legal culture and religious institutions; transregional Sufi and learned networks; family and sexuality; urban, rural and nomadic life; non-Muslim communities; the development of Mediterranean and Indian Ocean trade; relations with Byzantium, the Latin West, China; the Crusades and the Mongols.

3 units, Win (Yaycioglu, A)

**HISTORY 82N. Modern Islamic Movements**

(F,Sem) Stanford Introductory Seminar. Muslim political mobilization in local and global settings. Topics include: Pan-Islam, the Muslim Brothers, Khomeinism, Hezbollah, al-Qaeda, the Taliban, and the geopolitics of social movements. GER:DB-Hum

3 units, Win (Crews, R)

**HISTORY 84N. The American Empire in the Middle East since the Cold War: Afghanistan, Iraq, and Israel/Palestine**

(F,Sem) Stanford Introductory Seminar. What were the traditional objectives of U.S. policy in the Middle East since the end of WW II? What forces shaped U.S. policy towards the Middle East? Did those interests and the means employed to pursue them change substantially after the demise of the Soviet Union? What has been the impact of U.S. policy on the region itself? The three principal cases to be examined are Afghanistan, Iraq, and Israel/Palestine. GER:DB-SocSci, EC-GlobalCom

4-5 units, Aut (Beinin, J)

**HISTORY 85B. Jews in the Modern World**

(Same as HISTORY 185B. History majors and others taking 5 units, register for 185B.) Topics include the restructuring of Jewish existence during the Enlightenment and legal emancipation at the end of the 18th century in W. Europe; the transformation of Jewish life in E. Europe under the authoritarian Russian regime; colonialism in the Sephardic world; new ideologies (Reform Judaism and Jewish nationalisms); the persistence and renewal of antisemitism; the destruction of European Jewry under the Nazis; new Jewish centers in the U.S.; and the State of Israel.

3 units, Aut (Zipperstein, S)

**HISTORY 91C. Early Imperial China**

(Same as HISTORY 191C. History majors and others taking 5 units, register for 191C.) The first millennium of imperial China, what endured over the centuries, and the major changes that took place in the political, social, and intellectual realms. Topics include the evolving geographic and environmental background, cities, the countryside, kinship, relations with the outer world, religion, philosophy, and literature. Also examines the nature of empire as a distinctive political form. GER:DB-Hum

3 units, not given this year

**HISTORY 91D. China: The Northern and Southern Dynasties**

(Same as HISTORY 191D. History majors and others taking 5 units, register for 191D.) Examines one of the most dynamic periods of Chinese history with the emergence of the institutional religions (Buddhism and Daoism), the development of the garden

as an art form, the rise of landscape as a theme of verse and art, the invention of lyric poetry, and the real beginnings of the southward spread of Chinese civilization. GER:DB-Hum

*3 units, not given this year*

**HISTORY 91N. Mao Zedong: The Man Who Would Become China**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. His life, including early anthropological work, reinterpretation of Marxism, ascendance to power in the Chinese Communist Party, theory of guerilla warfare, socioeconomic vision in the early People's Republic, the Great Leap Forward, deification during the Cultural Revolution, and repercussions of his death in 1976. No prior knowledge of Chinese history is necessary. GER:DB-SocSci

*3-5 units, Spr (Mullaney, T)*

**HISTORY 92A. The Historical Roots of Modern East Asia**

(Same as HISTORY 392E) Focus is on China and Japan before and during their transition to modernity. The populous, urbanized, economically advanced, and culturally sophisticated Ming empire and Muromachi shogunate in the 16th century when Europeans first arrived. How the status quo had turned on its head by the early 20th century when European and American steamships dominated the Pacific, China was in social and political upheaval, and Japan had begun its march to empire. GER:DB-SocSci, EC-GlobalCom

*4-5 units, not given this year*

**HISTORY 93. Late Imperial China**

(Same as HISTORY 193.) History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism. GER:DB-Hum

*3 units, Spr (Sommer, M)*

**HISTORY 94B. Japan in the Age of the Samurai**

(Same as HISTORY 194B.) History majors and others taking 5 units, register for 194B.) From the Warring States Period to the Meiji Restoration. Topics include the three great unifiers, Tokugawa hegemony, the samurai class, Neoconfucian ideologies, suppression of Christianity, structures of social and economic control, frontiers, the other and otherness, castle-town culture, peasant rebellion, black marketing, print culture, the floating world, National Studies, food culture, samurai activism, black ships, unequal treaties, anti-foreign terrorism, restorationism, millenarianism, modernization as westernization, Japan as imagined community. GER:DB-Hum

*3 units, not given this year*

**HISTORY 94S. Rebels, Boxers and Bandits: Violent Resistance in Late Imperial China**

In the mid-19th century a man claiming to be Jesus Christ's younger brother led a rebellion that killed 20 million. In 1900, the Boxers United in Righteousness staged a bloody uprising. Bandits, something in Western women's clothing, raided across the country. How did these rebels, Boxers and bandits see themselves? How were they represented by others? What were their relations to the state? Do they mean anything? Are they important?

*5 units, not given this year*

**HISTORY 95. Modern Korean History**

(Same as HISTORY 195.) History majors and others taking 5 units, register for 195.) Themes include status, gender, and monarchy in the Choson dynasty; intellectual life and social transformation in the 19th century; the rise of Korean nationalism; Japan's colonial rule and Korean identities; culture, economy, and society in colonial Korea; the Korean War, and the different state building processes in North and South after the Korean War. GER:DB-Hum, EC-GlobalCom

*3 units, not given this year*

**HISTORY 95C. Modern Japanese History**

(Same as History 195C.) History majors and others taking 5 units, register for 195C.) Japan from the Tokugawa to the Heisei periods, including Japan's emergence from civil war into a two century long Great Peace, rapid modernization and imperial expansion from the end of the nineteenth century, war in Asia and the Pacific in the mid-twentieth century, and the postwar economic miracle and its aftermath. Emphasizes not a peculiarly Japanese story that

happened to unfold in an era we call modern, but rather a peculiarly modern story as it unfolded in a place we call Japan. GER:DB-SocSci, EC-GlobalCom

*3 units, Aut (Di Marco, F)*

**HISTORY 95S. Chinese Capitalism in Historical Perspective: Commerce and Society in Early Modern China, 1600-1840**

Explores key themes in China's political and moral economy from the 17th century to the Opium War, and investigates the interplay of geography, sociopolitical structure, ideology, and culture in early modern Chinese commercial development. Offers an in depth introduction to a primary question in Chinese history and global history, why did China not follow the path of the West in early modern times? Sources include traditional Chinese writings on economy, Confucian classics, legal documents, contracts, and fictional writings.

*5 units, Win (Qiao, Z), ONCEONLY*

**HISTORY 96. The Idea of India**

(Same as HISTORY 196.) History majors and others taking 5 units, register for 196.) History and politics of the Indian subcontinent across two centuries of transformation. Topics: interactions among colonial power, nationalism, and modern institutions; S. Asia at the crossroads of world history in an age of empire, capitalism, and war; history and memory through political traditions, social movements, and religious experiences that shaped S. Asian modernity; from Edmund Burke to Gandhi; East India Company's statemaking to origins of nationality; Tagore to Iqbal; peasants and rebels to liberals and revolutionaries; decolonization and Partition. GER:DB-SocSci, EC-GlobalCom

*3 units, not given this year*

**HISTORY 98. The History of Modern China**

(Same as HISTORY 198.) History majors and others taking 5 units, register for 198.) Major historical transformations including the decline of the last imperial dynasty, the formation of the first Chinese republic, WW II, the rise of Communism, China under Mao, post-Mao reforms, and the Beijing Olympics of 2008. GER:DB-SocSci

*3 units, Win (Mullaney, T)*

**HISTORY 98B. The Construction of Modern China in Time and Space**

(SAME as HISTORY 198B.) History majors and others taking 5 units, register for HISTORY 198B.) An analysis of modern China through sequentially examining the diverse regions that constitute it. Beginning from the geographic structures that divided the regions, and those that drew them together it will then study each region under several major rubrics: (1) their economic, cultural, and demographic characteristics; (2) the time and manner in which they were incorporated into China (3) their long-term environmental development (water control, deforestation, desertification, etc.); and (4) how the above features shape many of the issues and tensions that define contemporary China.

*3 units, Aut (Lewis, M)*

**HISTORY 102. The History of the International System since 1914**

After defining the characteristics of the international system at the beginning of the twentieth century, this course reviews the primary developments in its functioning in the century that followed. Topics include the major wars and peace settlements; the emergence of Nazism and Communism; the development of the Cold War and nuclear weapons; the rise of China, India, and the EU; and the impact of Islamic terrorism. The role of international institutions and international society will also be a focus as will the challenge of environment, health, poverty, and climate issues to the functioning of the system. GER:DB-SocSci, EC-GlobalCom

*5 units, Spr (Naimark, N)*

**HISTORY 103D. Human Society and Environmental Change**

(Same as EARTHSYS 112, EESS 112) Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1A

*4 units, Aut (Naylor, R; Frank, Z; Pizarro Gariazzo, R)*

**HISTORY 103E. History of Nuclear Weapons**

(Same as POLISCI 116) The development of nuclear weapons and policies. How existing nuclear powers have managed their relations with each other. How nuclear war has been avoided so far

and whether it can be avoided in the future. GER:DB-SocSci  
5 units, Spr (Holloway, D)

**HISTORY 104A. Revolution! A Global History from 1640 to the Present**

(Same as FRENGEN 146) The modern world was born out of Revolution. To this day, dramatic political change is most often the result of Revolution. This course will explore how Revolution became a model for changing the course of history. From the English revolutions of the 1600's to the current upheavals in the Arab world, passing through the French, Russian, and Chinese revolutions, we will study how Revolution has been conceived, carried out, and re-invented around the world. GER:DB-Hum  
4 units, Aut (Baker, K; Edelstein, D)

**HISTORY 105. Gandhi, King, and Nonviolence**

(Same as RELIGST 118) Lives, times, theory, and practice of Mohandas Gandhi and Martin Luther King, Jr.; their significance to issues of violence and nonviolence today. GER:DB-Hum  
4 units, not given this year

**HISTORY 106A. Global Human Geography: Asia and Africa**

Global patterns of demography, economic and social development, geopolitics, and cultural differentiation, covering E. Asia, S. Asia, S.E. Asia, Central Asia, N. Africa, and sub-Saharan Africa. Use of maps to depict geographical patterns and processes. GER:DB-SocSci, EC-GlobalCom  
5 units, Aut (Lewis, M)

**HISTORY 106B. Global Human Geography: Europe and Americas**

Patterns of demography, economic and social development, geopolitics, and cultural differentiation. Use of maps to depict geographical patterns and processes. GER:DB-SocSci, EC-GlobalCom  
5 units, Win (Lewis, M)

**HISTORY 106C. Global Historical Geography**

The sweep of human history through the medium of maps. The rise, expansion, and fall of kingdoms, empires, and other states; the spread of major religions; the paths of explorers, conquerors, and diseases; and the development and intensification of trade networks. Overview of the prehistoric period and ancient times, but focus is on the modern world. GER:DB-SocSci  
5 units, not given this year

**HISTORY 107. Introduction to Feminist Studies**

(Same as AMSTUD 107, CSRE 108, FEMST 101) Introduction to interdisciplinary feminist scholarship, which seeks to understand the creation, perpetuation, and critiques of gender inequalities. Topics include the historical emergence of feminist politics and contemporary analyses of work and family, health and sexuality, creativity, and politics. Close attention to the intersections of race, gender, ethnicity, and sexuality and to international, as well as U.S., perspectives. Students learn to think critically about gender in the past, present, and future. GER:DB-SocSci, EC-Gender  
4-5 units, Aut (Freedman, E)

**HISTORY 108. Century of Violence: Mass Violence in the Twentieth Century to the Present**

Explores the evolution, varieties and logic of mass violence in modern history. Examines social, political, ethno national, revolutionary and religious violence, and efforts to curtail them. Begins with the emergence of genocide as an international issue; proceeds with colonial genocides in late 19th century Africa, and moves to the Armenian genocide in the Ottoman Empire; Nazi and Nazi inspired racial murder; Communist induced mass violence in the Soviet Union and Asia; ethnic cleansing in former Yugoslavia; the recent genocides in Rwanda and Sudan; and attempts to confront genocides and crimes against humanity in international courts and institutions. Students may not receive credit for both IHUM 4B and HISTORY 108. GER:DB-SocSci  
5 units, Aut (Weiner, A)

**HISTORY 109. Human Rights and Humanitarianism: A Global History**

(SAME AS HISTORY 9. History majors and others taking 5 units, enroll in HISTORY 109.) Do human beings have certain inalienable rights? Are we obliged to help those in need? Examines the historical origins as well as the political, social, economic, legal, and cultural contexts of ideas about human rights and humanitarianism from the time of the Old Testament to the

International Criminal Court. Class time will blend short lectures with town hall style discussions of subjects including slavery, torture, colonialism, genocide, and the work of NGO's. GER:DB-Hum

5 units, Win (Daughton, J)

**HISTORY 110A. Europe from Late Antiquity to 1500**

(Same as HISTORY 10A. History majors and others taking 5 units, register for 110A.) Focus is on religion and politics. Issues include: the rise of Christianity and its impact on Rome; transformations of Catholicism and its institutions including the impact of barbarian tribes and the struggle between church and state; antisemitism, heresy, Crusades, and inquisition; courtly love; and scholasticism. GER:DB-Hum  
5 units, Aut (Miner, J)

**HISTORY 110B. Early Modern Europe**

(Same as HISTORY 10B. History majors and others taking 5 units, register for 110B.) Survey of early modern European history from the Reformation through the Enlightenment. (Same as HISTORY 110B. History majors and others taking 5 units, register for 110B.) Survey of early modern European history from the Reformation through the Enlightenment. Topics include sovereignty and the state, courtly life and manners, science and technology, the print and military revolutions, piety and religious practice, popular culture and village life, women and gender, witchcraft and sexual deviance, the rise of international trade, the history of consumption and material things, encounters with non-Western peoples and colonialism, and scholarship and the republic of letters. GER:DB-SocSci, EC-GlobalCom  
5 units, Win (Fredona, R)

**HISTORY 110C. Introduction to Modern Europe**

(SAME AS HISTORY 10C. History majors and others taking 5 units, register for 110C.) From the late 18th century to the present. How Europeans responded to rapid social changes caused by political upheaval, industrialization, and modernization. How the experience and legacy of imperialism and colonialism both influenced European society and put in motion a process of globalization that continues to shape international politics today. GER:DB-Hum  
5 units, Spr (Daughton, J)

**HISTORY 120B. The Russian Empire**

From Peter the Great to the Bolsheviks. Russia as an empire; its varied regions, including the Caucasus, Central Asia, Ukraine, Poland, and the Baltics. Focus is on the politics and cultures of empire. Sources include novels, political tracts, paintings, music, and other primary sources. GER:DB-Hum  
5 units, not given this year

**HISTORY 120C. 20th-Century Russian and Soviet History**

The Soviet polity from the 1917 Revolution to its collapse in 1991. Essentials of Marxist ideology; the Russian Empire in 1917. Causation in history; interpretations of the Revolution; state building in a socialist polity; social engineering through collectivization of agriculture, force-paced industrialization, and cultural revolution; terror as concept and practice; nationality policies in a multiethnic socialist empire; the routinization, decline, and collapse of the revolutionary ethos; and the legacy of the Soviet experiment in the new Russia. GER:DB-Hum  
5 units, not given this year

**HISTORY 125. Dark Century: Eastern Europe After 1900**

Major historical trends in 20th-century E. European history. Empires and national movements. The creation of independent Eastern Europe after WW I; social movements and the emergence of dictatorships and fascism in the inter-war period. WW II, Stalinism, and destalinization in contemporary E. Europe. GER:DB-SocSci, EC-GlobalCom  
5 units, Win (Jolluck, K)

**HISTORY 130A. The Rise of Scientific Medicine in the United States, 1825-Present**

Explores the history of medical institutions, ideas and practices in the United States from the early nineteenth century to the present. How are ideas of illness and health historically rooted and socially constructed? How did scientific and medical discoveries lead to the risk of scientific medicine, and how were these innovations adopted within the American cultural landscape? Topics include the transformation of therapeutics and technologies, medicine and

the scientific ideal in the U.S., gender and race and medicine, the history of public health, and the professionalization and specialization of American medical practice. GER:DB-SocSci  
4-5 units, Spr (Horn, M)

**HISTORY 131. Science, Technology and Art: The Worlds of Leonardo da Vinci**

(Same as ARTHIST 113, ARTHIST 113A, HISTORY 31) (Same as HISTORY 31. History majors and others taking 5 units, register for 131.) What did Leonardo actually know? How did he acquire that knowledge? Explores Leonardo's interests and accomplishments in such fields as painting, architecture, engineering, physics, mathematics, geology, anatomy, and physiology, and more generally the nature of Renaissance science, art, and technology. Considers the relationship between the society of fifteenth century Italy and the work of the man from Vinci: why did this world produce a Leonardo? How might we use him to understand creativity, innovation, and invention in the Renaissance and beyond? What was his legacy and how did he become a myth? Designed both for students interested in the history of science, medicine, and technology and for students interested in the history and art of Renaissance Italy. GER:DB-Hum

3-5 units, not given this year

**HISTORY 132. Ordinary Lives: A Social History of the Everyday in Early Modern Europe**

What war meant for foot soldiers and the peasants across whose fields they marched. Ordinary people's lives in the eras of Machiavelli, Shakespeare, the Reformation, and the scientific revolution. Topics include: birth, marriage, and death; city life and peasant culture; lay encounters with religious and intellectual ideas; war and crime; and gender and sexuality. GER:DB-Hum

5 units, not given this year

**HISTORY 132A. Enlightenment and the Arts**

(Same as HISTORY 32A. History majors and others taking 5 units enroll in 132A.) Gateway course for the History, Literature, and the Arts track of the History major. Novels, poetry, music, paintings, and architecture, and what they reveal about the society that produced them. GER:DB-Hum

5 units, Spr (Lougee Chappell, C)

**HISTORY 133A. Blood and Roses: The Age of the Tudors**

English society and state from the Wars of the Roses to the death of Elizabeth. Political, social, and cultural upheavals of the Tudor period and the changes wrought by the Reformation. The establishment of the Tudor monarchy; destruction of the Catholic church; rise of Puritanism; and 16th-century social and economic changes. GER:DB-Hum

5 units, not given this year

**HISTORY 133B. Revolutionary England: The Stuart Age**

(Same as HISTORY 33B. History majors and others taking 5 units, register for 133B.) From the accession of King James I in 1603 to the death of Queen Anne in 1714: a brutal civil war, the execution of one anointed king, and the deposition of another. Topics include the causes and consequences of the English Revolution, the origins of Anglo-American democratic thought, the rise and decline of Puritanism, and the emergence of England as an economic and colonial power. (Como) GER:DB-Hum

5 units, not given this year

**HISTORY 134A. The European Witch Hunts**

(Same as HISTORY 34A. History majors and others taking 5 units, register for 134A.) After the Reformation, in the midst of state-building and scientific discovery, Europeans conducted a series of deadly witch hunts, violating their own laws and procedures in the process. What was it about early modernity that fueled witch hunting? Examines witch trials and early modern demonology as well as historians' interpretations of events to seek answers to this question. GER:DB-Hum

5 units, Spr (Stokes, L)

**HISTORY 135. History of European Law, Medieval to Contemporary**

(Same as HISTORY 335) From the fall of the Roman Empire to the establishment of the EU. How law changed over time. Sources and nature of law, organization of legal systems, and relationships between law and society, law and lawmaker, law and the legal professions. GER:DB-SocSci

4-5 units, Win (Herzog, T)

**HISTORY 137A. Europe, 1945-2002**

Europe's transformation from the end of WW II to an expanded EU. Political, cultural, economic, and social history. Topics: postwar reconstruction, Cold War, consumer versus socialist culture, collapse of Communism, postcommunist integration. GER:DB-SocSci

5 units, not given this year

**HISTORY 138A. Germany and the World Wars, 1870-1990**

(Same as HISTORY 38A. Majors and others taking 5 units, enroll in 138A.) Germany's history from Bismarck's wars of unification through the end of the Cold War. The radicalizing relationship between international conflict, social upheaval, and state transformation with a focus on the clashes of the Second Empire, the road to WW I, interwar instability, the rise of Nazism, WW II, the Holocaust, the division of communist E. and capitalist W. Germany, and the fall of the Iron Curtain. GER:DB-SocSci

5 units, not given this year

**HISTORY 139. Modern Britain and the British Empire**

(Same as HISTORY 39. History majors and others taking 5 units, register in 139.) From American Independence to the latest war in Iraq. Topics include: the rise of the modern British state and economy; imperial expansion and contraction; the formation of class, gender, and national identities; mass culture and politics; the world wars; and contemporary racial politics. Focus is on questions of decline, the fortunes and contradictions of British liberalism in an era of imperialism, and the weight of the past in contemporary Britain. GER:DB-Hum, EC-GlobalCom, EC-GlobalCom

5 units, Win (Satia, P)

**HISTORY 140. World History of Science: From Prehistory to the Scientific Revolution**

(Same as HISTORY 40. History majors and others taking 5 units, register for 140.) The earliest developments in science, the prehistoric roots of technology, the scientific revolution, and global voyaging. Theories of human origins and the oldest known tools and symbols. Achievements of the Mayans, Aztecs, and native N. Americans. Science and medicine in ancient Greece, Egypt, China, Africa, and India. Science in medieval and Renaissance Europe and the Islamic world including changing cosmologies and natural histories. Theories of scientific growth and decay; how science engages other factors such as material culture and religions. GER:DB-SocSci

5 units, Win (Proctor, R)

**HISTORY 140A. The Scientific Revolution**

What do people know and how do they know it? What counts as scientific knowledge? In the 16th and 17th centuries, understanding the nature of knowledge engaged the attention of individuals and institutions including Copernicus, Galileo, Descartes, Newton, the early Royal Society, and less well-known contemporaries. New meanings of observing, collecting, experimenting, and philosophizing, and political, religious, and cultural ramifications in early modern Europe. GER:DB-Hum

5 units, not given this year

**HISTORY 141A. The Emergence of Medicine: The Middle Age and the Renaissance**

(Same as HISTORY 41A. History majors and others taking 5 units, register for 141A.) How did medicine emerge as a distinctive body of knowledge and a profession? The history of medicine from ca. 1000 to 1750. Topics: new ways of examining and treating the body; the religious and cultural significance of disease; the development of hospitals; and the rise of public health systems. Comparison of the status of medicine in Europe and the Islamic world. The work of key figures such as Vesalius and Harvey. GER:DB-SocSci

5 units, not given this year

**HISTORY 142. Darwin in the History of Life**

(Same as HISTORY 42. History majors and others taking 5 units, register for 142.) Origins and impact of evolutionary theory from the nineteenth century to the present. Early theories of fossils, the discovery of deep time and uniformitarian geology, debates over evolution vs. extinction, the origin of life, and human origins; the rise of anthropology and racial theory; the changing challenge of creationism, the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evo-

devo, neocatastrophism, and the new technological frontier of biomimicry. GER:DB-SocSci

5 units, Spr (Proctor, R)

**HISTORY 144. Gender in Science, Medicine and Engineering**  
(Same as HISTORY 344) Men's and women's roles in science, medicine, and engineering over the past 200 years with a focus on the present. What are the efforts underway globally to transform science, medicine, and engineering into fields where women can flourish? How have science and medicine studied and defined males and females? Can gender analysis spark creativity in human knowledge? GER:DB-SocSci, EC-Gender

4-5 units, not given this year

**HISTORY 145A. Africa Until European Conquest**

Episodes in African history from the earliest records up until European partition of the continent, focusing on how knowledge about the natural, social, and spiritual worlds was linked to the exercise of power. The effects of technological innovations on states and other forms of social complexity; use of religious beliefs and practices to legitimate or critique authority. The effects of slave trades and imperial conquest on these forms of authority. GER:DB-Hum, EC-GlobalCom

5 units, not given this year

**HISTORY 145B. Africa in the 20th Century**

(Same as HISTORY 45B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels, plays, polemics, and autobiographies written by Africans. GER:DB-SocSci, EC-GlobalCom

5 units, Spr (Roberts, R)

**HISTORY 147. History of South Africa**

(Same as AFRICAAM 147) (Same as HISTORY 47. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis. GER:DB-SocSci

5 units, Aut (Campbell, J)

**HISTORY 149C. The Slave Trade**

(Same as HISTORY 49C. History majors and others taking 5 units, enroll in 149C.) Slave trades and forms of slavery in W. Africa from 1000 to 1885; impacts on lives, social organization, and political structures. Slavery in Islam, the slave market in the Mediterranean and Middle East, and the Saharan slave trade. Slavery within Africa, growth of the Atlantic trade, the Middle Passage, and war and trade that produced slaves. Impact of the Industrial Revolution and European abolition movements on the use of slaves and warfare in Africa. The relationship between slaving and the European conquest of Africa. GER:DB-SocSci

5 units, not given this year

**HISTORY 150A. Colonial and Revolutionary America**

(Same as AMSTUD 150A) (Same as HISTORY 50A. History majors and others taking 5 units, register for HISTORY 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution. GER:DB-SocSci, EC-AmerCul

5 units, Aut (Winterer, C)

**HISTORY 150B. 19th-Century America**

(Same as AFRICAAM 150B, AMSTUD 150B) (Same as HISTORY 50B. History majors and others taking 5 units, register for 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture. GER:DB-SocSci, EC-AmerCul, WIM

5 units, Win (White, R)

**HISTORY 150C. The United States in the Twentieth Century**

(Same as AMSTUD 150C) (Same as HISTORY 50C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the changing status of women since WW II; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War. GER:DB-SocSci, EC-AmerCul

5 units, Spr (Camarillo, A)

**HISTORY 154. American Intellectual and Cultural History to the Civil War**

(Same as AMSTUD 154) (Same as HISTORY 54. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include texts and images. GER:DB-Hum, EC-AmerCul

5 units, Spr (Winterer, C)

**HISTORY 157. The Constitution: A Brief History**

(Same as POLISCI 128S) (Same as HISTORY 57. History majors and others taking 5 units, register for 157.) A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime. GER:DB-SocSci, EC-AmerCul

5 units, Win (Rakove, J)

**HISTORY 158. The United States Since 1945**

Focus is on foreign policy and politics with less attention to social and intellectual history. Topics include nuclear weapons in WW II, the Cold War, the Korean and Vietnam wars, Eisenhower revisionism, the Bay of Pigs and Cuban missile crisis, civil rights and the black freedom struggle, the women's movement, the Great Society and backlash, welfare policy, conservatism and liberalism, the 60s anti-war movement, Watergate and the growth of executive power, Iran-Contra and Reagan revisionism, Silicon Valley, the Gulf War, the Clinton impeachment controversy, 2004 election, and 9/11 and Iraq war. GER:DB-SocSci, EC-AmerCul

4-5 units, not given this year

**HISTORY 159. Introduction to Asian American History**

(Same as AMSTUD 159) (Same as HISTORY 59. History majors and others taking 5 units, register for 159.) The historical experience of people of Asian ancestry in the U.S. Immigration, labor, community formation, family, culture and identity, and contemporary social and political controversies. Readings: interpretative texts, primary material, and historical fiction. (Chang)

5 units, Aut (Chang, G)

**HISTORY 161. WOMEN IN MODERN AMERICA**

(Same as AMSTUD 161, CSRE 162) Considers the political, economic, and social development of women in the United States during a long twentieth century. How have women been shaped or constrained by gendered conceptions of work, reproduction, education, family, and culture? Have all women reacted similarly to wars and depression or domestic and foreign policy? Through personal narratives and historical accounts, the course will answer these questions, observing how women negotiated gender, race, sexuality, and class difference to achieve greater opportunity and citizenship rights. GER:DB-SocSci, EC-Gender

4-5 units, Spr (Sbardellati, L)

**HISTORY 163. A History of North American Wests**

The history, peoples, and natural systems of a region that has never been contained within a single empire or nation state, but has been united by the movement of peoples, species, and things. Topics include smallpox, horses, gold, salmon, rivers, coal, and oil.

GER:DB-SocSci

*5 units, not given this year*

**HISTORY 164C. From Freedom to Freedom Now: African American History, 1865-1965**

(Same as AMSTUD 164C.) (Same as HISTORY 64C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music. GER:DB-SocSci, EC-AmerCul

*5 units, not given this year*

**HISTORY 165. Mexican American History through Film**

Focus is on the 20th century. Themes such as immigration, urbanization, ethnic identity, the role of women, and the struggle for civil rights. GER:DB-Hum, EC-AmerCul

*4-5 units, not given this year*

**HISTORY 166. Introduction to African American History: The Modern African American Freedom Struggle**

(Same as AFRICAAM 166, AMSTUD 166) Focus is on political thought and protest movements after 1930. Individuals who have shaped and been shaped by modern African American struggles for freedom and justice. Sources include audiovisual materials. Research projects required for fifth unit. GER:DB-SocSci, EC-AmerCul

*4-5 units, not given this year*

**HISTORY 166B. Immigration Debates in America, Past and Present**

(Same as CSRE 166B, HISTORY 366B) Examines the ways in which the immigration of people from around the world and migration within the United States shaped American nation-building and ideas about national identity in the twentieth century. Focuses on how conflicting ideas about race, gender, ethnicity, and citizenship with respect to particular groups led to policies both of exclusion and integration. Part One begins with the ways in which the American views of race and citizenship in the colonial period through the post-Reconstruction Era led to the passage of the Chinese Exclusion Act in 1882 and subsequently to broader exclusions of immigrants from other parts of Asia, Southern and Eastern Europe, and Mexico. Explores how World War II and the Cold War challenged racial ideologies and led to policies of increasing liberalization culminating in the passage of the 1965 Immigration Act, which eliminated quotas based on national origins and opened the door for new waves of immigrants, especially from Asia and Latin America. GER:DB-SocSci

*3-5 units, Win (McKibben, C), Sum (Staff)*

**HISTORY 168. American History in Film: Since World War II**

U.S. society, culture, and politics since WW II through feature films. Topics include: McCarthyism and the Cold War; ethnicity and racial identity; changing sex and gender relationships; the civil rights and anti-war movements; and mass media. Films include *The Best Years of Our Lives*, *Salt of the Earth*, *On the Waterfront*, *Raisin in the Sun*, *Medium Cool*, and *Broadcast News*. GER:DB-Hum

*3-4 units, Sum (Staff)*

**HISTORY 169. The Environmental History of North America**

(Same as EARTHSYS 145) Concentrates on anthropogenic environmental change and its consequences for both the natural environment and human society. Human alteration of the continent began well before the arrival of Europeans, and many developments usually considered as only human history are embedded in a wider environmental history. Begins with the Columbian Exchange and the demographic disaster that followed and ends with global climate change. GER:DB-SocSci

*4-5 units, Spr (White, R)*

**HISTORY 170. Colonial Latin America**

(Same as HISTORY 70A. History majors and others taking 5 units, register for 170.) 16th-19th centuries. Indigenous cultures. The arrival of Europeans and its impact on native and European societies. Culture, religion and institutions, and everyday life. The independence period and the formation of new nations. Readings

include primary and secondary sources. GER:DB-SocSci, EC-GlobalCom

*5 units, Spr (Tortorici, Z)*

**HISTORY 170B. Culture, Society and Politics in Latin America**

(Same as HISTORY 70. History majors and others taking 5 units, enroll in HISTORY 170B.) The course of Latin American history from the colonial era to the present day. Key issues such as colonialism, nationalism, democracy, and revolution will be examined critically in light of broad comparative themes in Latin American and world history. Sources include writings in the social sciences as well as primary documents, fiction, and film.

*5 units, Aut (Iber, P)*

**HISTORY 175. Modern Mexico**

(Same as HISTORY 75. History majors and others taking 5 units, enroll in HISTORY 175.) Mexico has produced the world's richest man and wrenching poverty, tremendous drug-related violence and some of the world's best-respected poets and writers. Explores how all this has been possibly by looking at the politics, culture, and economy of Mexico from the time of Porfirio Diaz and the twentieth century's first great modern revolution to the present. Focusing on the problems of democracy and inequality, the course will draw from the social sciences, journalism, fiction, and film. GER:DB-SocSci

*3 units, Spr (Iber, P)*

**HISTORY 181B. Formation of the Contemporary Middle East**

(Formerly 187B.) The history of the Middle East since WW I, focusing on the eastern Arab world, Egypt, the Fertile Crescent, and the Arabian Peninsula, with attention to Turkey, Iran, and Israel. GER:DB-SocSci, EC-GlobalCom

*5 units, Spr (Beinin, J)*

**HISTORY 182C. The Making of the Islamic World, 600-1300**

(Same as HISTORY 82C. Majors and other taking 5 units, register for 182C.) The History of Islam and Muslim peoples from 600-1300. Topics include Muhammad and his community; the early Arab conquests and empires; sectarian movements; formation of Islamic belief, thought, legal culture and religious institutions; transregional Sufi and learned networks; family and sexuality; urban, rural and nomadic life; non-Muslim communities; the development of Mediterranean and Indian Ocean trade; relations with Byzantium, the Latin West, China; the Crusades and the Mongols. GER:DB-SocSci

*5 units, Win (Yaycioglu, A)*

**HISTORY 183. Modern Iran**

Topics include: the Safavid and Qajar empires, European imperialism in Iran, the Iranian revolutions, Khomeinism, the Islamic Republic, recent film and literature, and the politics of Ahmadinejad. GER:DB-Hum

*5 units, Aut (Crews, R)*

**HISTORY 185B. Jews in the Modern World**

(Same as HISTORY 385C, JEWISHST 185B) (Same as HISTORY 85B. History majors and others taking 5 units, register for 185B.) Topics include the restructuring of Jewish existence during the Enlightenment and legal emancipation at the end of the 18th century in W. Europe; the transformation of Jewish life in E. Europe under the authoritarian Russian regime; colonialism in the Sephardic world; new ideologies (Reform Judaism and Jewish nationalisms); the persistence and renewal of antisemitism; the destruction of European Jewry under the Nazis; new Jewish centers in the U.S.; and the State of Israel. GER:DB-Hum, EC-GlobalCom

*5 units, Aut (Zipperstein, S)*

**HISTORY 187D. Zionism and Its Critics**

(Same as JEWISHST 187D) Zionism from its genesis in the 1880s up until the establishment of the state of Israel in May, 1948, exploring the historical, ideological and political dimensions of Zionism. Topics include: the emergence of Zionist ideology in connection to and as a response to challenges of modernity; emancipation; Haskalah (Jewish enlightenment); other national and ideological movements of the period; the ideological crystallization of the movement; and the immigration waves to Palestine.

*4-5 units, not given this year*

**HISTORY 191C. Early Imperial China**

(Same as HISTORY 91C. History majors and others taking 5 units, register for 191C.) The first millennium of imperial China, what endured over the centuries, and the major changes that took place in the political, social, and intellectual realms. Topics include the evolving geographic and environmental background, cities, the countryside, kinship, relations with the outer world, religion, philosophy, and literature. Also examines the nature of empire as a distinctive political form. GER:DB-Hum

*5 units, not given this year*

**HISTORY 191D. China: The Northern and Southern Dynasties**

(Same as HISTORY 91D. History majors and others taking 5 units, register for 191D.) Examines one of the most dynamic periods of Chinese history with the emergence of the institutional religions (Buddhism and Daoism), the development of the garden as an art form, the rise of landscape as a theme of verse and art, the invention of lyric poetry, and the real beginnings of the southward spread of Chinese civilization. GER:DB-Hum

*5 units, not given this year*

**HISTORY 192. China: The Early Empires**

How China was transformed as a consequence of its political unification by the Qin dynasty. The geographical reorganization of China in the process of unification. The changing nature of rulership, cities, rural society, military organization, kinship structure, religion, literary practice, law, and relations to the outside world. The nature of empire as a political system. GER:DB-Hum

*3-5 units, not given this year*

**HISTORY 193. Late Imperial China**

(Same as HISTORY 93. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism. GER:DB-Hum

*5 units, Spr (Sommer, M)*

**HISTORY 194B. Japan in the Age of the Samurai**

(Same as HISTORY 94B. History majors and others taking 5 units, register for 194B.) From the Warring States Period to the Meiji Restoration. Topics include the three great unifiers, Tokugawa hegemony, the samurai class, Neoconfucian ideologies, suppression of Christianity, structures of social and economic control, frontiers, the other and otherness, castle-town culture, peasant rebellion, black marketing, print culture, the floating world, National Studies, food culture, samurai activism, black ships, unequal treaties, anti-foreign terrorism, restorationism, millenarianism, modernization as westernization, Japan as imagined community. GER:DB-Hum

*5 units, not given this year*

**HISTORY 195. Modern Korean History**

(Same as HISTORY 95. History majors and others taking 5 units, register for 195.) Themes include status, gender, and monarchy in the Choson dynasty; intellectual life and social transformation in the 19th century; the rise of Korean nationalism; Japan's colonial rule and Korean identities; culture, economy, and society in colonial Korea; the Korean War, and the different state building processes in North and South after the Korean War. GER:DB-Hum, EC-GlobalCom, EC-GlobalCom

*5 units, not given this year*

**HISTORY 195C. Modern Japanese History**

(Same as HISTORY 95C. History majors and others taking 5 units, register for 195C.) Japan from the Tokugawa to the Heisei periods, including Japan's emergence from civil war into a two century long Great Peace, rapid modernization and imperial expansion from the end of the nineteenth century, war in Asia and the Pacific in the mid-twentieth century, and the postwar economic miracle and its aftermath. Emphasizes not a peculiarly Japanese story that happened to unfold in an era we call modern, but rather a peculiarly modern story as it unfolded in a place we call Japan. GER:DB-SocSci, EC-GlobalCom

*5 units, Aut (Di Marco, F)*

**HISTORY 197. Southeast Asia: From Antiquity to the Modern****Era**

The history of S.E. Asia, comprising Indonesia, the Philippines, Malaysia, Singapore, Thailand, Vietnam, Burma, Cambodia, and Laos, from antiquity to the present. The spread of Indian cultural influences, the rise of indigenous states, and the emergence of globally linked trade networks. European colonization, economic transformation, the rise of nationalism, the development of the modern state, and the impact of globalization. GER:DB-Hum

*5 units, not given this year*

**HISTORY 198. The History of Modern China**

(Same as HISTORY 98. History majors and others taking 5 units, register for 198.) Major historical transformations including the decline of the last imperial dynasty, the formation of the first Chinese republic, WW II, the rise of Communism, China under Mao, post-Mao reforms, and the Beijing Olympics of 2008. GER:DB-SocSci, DB-SocSci, EC-GlobalCom

*5 units, Win (Mullaney, T)*

**HISTORY 198B. The Construction of Modern China through Space and Time**

(SAME as HISTORY 98B. History majors and others taking 5 units, register for HISTORY 198B.) An analysis of modern China through sequentially examining the diverse regions that constitute it. Beginning from the geographic structures that divided the regions, and those that drew them together it will then study each region under several major rubrics: (1) their economic, cultural, and demographic characteristics; (2) the time and manner in which they were incorporated into China (3) their long-term environmental development (water control, deforestation, desertification, etc.); and (4) how the above features shape many of the issues and tensions that define contemporary China. GER:DB-SocSci

*5 units, Aut (Lewis, M)*

**HISTORY 198G. Beijing, Shanghai, and the Structure of China**

China's modern history through the rivalry of its two most important cities. The course begins in the nineteenth century, contrasting Beijing, the classic imperial capital and a foreign foundation paradoxically celebrated as the embodiment of traditional China, with Shanghai, a treaty port and demographic/economic center of China, but identified as a foreign city. After following the cities' history through the warlord period, the Shanghai decade of Nationalist rule, and the Japanese occupation, the course examines the two cities' developments under Mao and Deng. The course concludes with a look at their current relations and roles, and the transformed nature of China's cities.

*3-5 units, Sum (Staff)*

**HISTORY 201. Introduction to Public History in the U.S., 19th Century to the Present**

(Same as HISTORY 301) Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions. Service Learning Course (certified by Haas Center). GER:DB-SocSci

*4-5 units, Aut (McKibben, C)*

**HISTORY 201D. The Changing Face of War: An Introduction to Military History**

(Same as HISTORY 301D) Introduces students to the rich history of military affairs and, at the same time, examines the ways in which we think of change and continuity in military history. How did war evolve from ancient times, both in styles of warfare and perceptions of war? What is the nature of the relationship between war and society? Is there such a thing as a Western way of war? What role does technology play in transforming military affairs? What is a military revolution and can it be manufactured or induced? Chronologically following the evolution of warfare from Ancient Greece to present day so-called new wars, we will continuously investigate how the interdependencies between technological advances, social change, philosophical debates and economic pressures both shaped and were influenced by war. GER:DB-SocSci

*4-5 units, Win (Staff)*

**HISTORY 202. International History and International Relations Theory**

(Same as HISTORY 306E, POLISCI 216E, POLISCI 316) The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system. GER:DB-SocSci

5 units, *Win (Holloway, D)*

**HISTORY 202G. Peoples, Armies and Governments of the Second World War**

(Same as HISTORY 302G) Clausewitz conceptualized war as always consisting of a trinity of passion, chance, and reason, mirrored, respectively, in the people, army and government. Following Clausewitz, this course examines the peoples, armies, and governments that shaped World War II. Analyzes the ideological, political, diplomatic and economic motivations and constraints of the belligerents and their resulting strategies, military planning and fighting. Explores the new realities of everyday life on the home fronts and the experiences of non-combatants during the war, the final destruction of National Socialist Germany and Imperial Japan, and the emerging conflict between the victors. How the peoples, armies and governments involved perceived their possibilities and choices as a means to understand the origins, events, dynamics and implications of the greatest war in history. GER:DB-SocSci

4-5 units, *Spr (Staff)*

**HISTORY 203E. Global Catholicism**

Explores the rise of Catholicism as a global phenomenon, and investigates its multiple transformations as it spread to the Americas, Asia, and Africa. Topics will include the Reformation, Tridentine reform and the Jesuits, the underground churches in England and the Dutch Republic, the missions to Asia, the Spanish conquest of Latin America, conversion and indigenous religions, missionary imperialism and new religious movements in the non-European world.

5 units, *Aut (Sena, M)*

**HISTORY 204B. History without Documents**

(Same as HISTORY 304B) Can history be written about places and times for which are no written sources, or for people in literate societies who left no written traces? Practical training in historical methods for non-documentary sources, including oral traditions and history, archaeology, ecological sources, historical linguistics, ethnography, rituals, myths, songs, and art. GER:DB-Hum

4-5 units, *Aut (Hanretta, S)*

**HISTORY 204E. Origins of Totalitarianism**

(Same as HISTORY 307E) Modern revolutionary and totalitarian politics. Sources include monographs on the medieval, Reformation, French Revolutionary, and Great War eras. Topics: the essence of modern ideology, the concept of the body national, state terror, charismatic leadership, gender assignments, private and public spheres, and identities. GER:DB-SocSci, EC-GlobalCom

4-5 units, *Win (Weiner, A)*

**HISTORY 204F. The Modern Tradition of Non-Violent Resistance**

(Same as AFRICAAM 204F, CSRE 104F) During the twentieth century, peasants and menial laborers who comprised the majority of humanity launched liberation movements to secure citizenship rights. Mohandas K. Gandhi, Martin Luther King, Jr., and Nelson Mandela are among the leaders whose ideas continue to influence contemporary movements for global peace with social justice in a sustainable environment.

5 units, *not given this year*

**HISTORY 204G. War, Culture, and Society in the Modern Age**

(Same as HISTORY 304G) How Western societies and cultures have responded to modern warfare. The relationship between its destructive capacity and effects on those who produce, are subject to, and must come to terms with its aftermath. Literary representations of WW I; destructive psychological effects of modern warfare including those who take pleasure in killing; changes in relations between the genders; consequences of

genocidal ideology and racial prejudice; the theory of just war and its practical implementation; and how wars are commemorated. GER:DB-SocSci

5 units, *not given this year*

**HISTORY 205A. The History of Information**

(Same as HISTORY 305A) Examines the history of information from multiple perspectives such as the changing conceptions of facticity and evidence cross-culturally as well as a range of information technologies, from moveable type printing and telegraphy to text messaging and Twitter. Other topics include the ways in which information is shaped by the languages in which it is recorded, stored, and transmitted, and also the ways in which information infrastructures influence what is forgotten and lost. GER:DB-Hum

4-5 units, *Spr (Mullaney, T)*

**HISTORY 206. History and Geography of Contemporary Global Issues**

The historical background and geographical context of contemporary global issues and events. Texts are a world atlas and regular reading of The New York Times and The Economist. Topics vary according to what is happening in the world. Student presentations. GER:DB-SocSci

5 units, *Aut (Lewis, M)*

**HISTORY 207. Biography and History**

(Same as HISTORY 308) The relationship between biographical and historical writing, primarily in Europe and America. Problems of methodology, evidence, dispassion, and empathy. Texts: biographies, critical literature on biographical work, and novels (A. S. Byatt's *Possession*, Bernard Malamud's *Dubin's Lives*) that illuminate the intellectual underpinnings of biographical labor. GER:DB-Hum

4-5 units, *not given this year*

**HISTORY 207C. The Global Early Modern**

(Same as HISTORY 307C) In what sense can we speak of globalization before modernity? What are the characteristics and origins of the economic system we know as capitalism? When and why did European economies begin to diverge from those of other Eurasian societies? With these big questions in mind, the primary focus will be on the history of Europe and European empires, but substantial readings deal with other parts of the world, particularly China and the Indian Ocean.

4-5 units, *not given this year*

**HISTORY 208. Private Lives, Public Stories: Autobiography in Women's History**

Changing contexts of women's lives and how women's actions have shaped and responded to those contexts. GER:DB-Hum, EC-Gender

5 units, *not given this year*

**HISTORY 208A. Science and Law in History**

(Same as HISTORY 308A) How the intertwined modern fields of science and law, since the early modern period, together developed central notions of fact, evidence, experiment, demonstration, objectivity, and proof. GER:DB-SocSci

4-5 units, *not given this year*

**HISTORY 208B. Women Activists' Response to War**

(Same as HISTORY 308B) Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina. GER:DB-Hum, EC-Gender

4-5 units, *not given this year*

**HISTORY 208C. History of Death and Dying**

The changing realities of, attitudes towards and ways of coping with death drawing on examples from Europe, Africa, the Caribbean, Latin America and the United States. The role of death in shaping the modern world via the global slave trades, imperial conquest, pandemics, wars and genocides. Changing rituals relating to death, intellectual and philosophical debates about the personal and social meanings of death, and the political and personal consequences of particular ways and patterns of dying.

5 units, *Aut (Hanretta, S)*

**HISTORY 208S. Facing the Past: The Politics of Retrospective Justice**

Forms of injustice in history including slavery, genocide, ethnic cleansing, mass rape, forced religious conversion, and torture of prisoners. Mechanisms developed over the last century to define, deter, and alleviate the effects of such offenses, including war crimes tribunals, truth commissions, national apologies, and monetary reparations. Case studies chart the international field of retrospective justice, exploring the legal, political, and moral implications of confronting traumatic pasts. GER:DB-SocSci

5 units, Win (Campbell, J)

**HISTORY 209C. Liberalism and Violence**

What place does violence have in modern political thought? Liberalism eschews violence, yet condones moral war. Marxism justifies revolutionary violence. Anticolonialism invokes insurgency. Gandhi seeks truth in nonviolent suffering. Can modern politics and life be grasped without reference to violence? How is violence related to law and justice? Is there a theology of violence? Liberalism and its critics: Agamben, Arendt, Benjamin, Derrida, Fanon, Foucault, Gandhi, Heidegger, Nietzsche, Schmitt, and Sorel. Biopolitics, civil society, friend/enemy, sovereignty, terror, and strikes. GER:EC-EthicReas

5 units, not given this year

**HISTORY 209D. Postcolonialism and Universalism**

(Same as HISTORY 309A) Key texts and motifs from postcolonial theory: empire, class, exile, suffering, textuality, archive in juxtaposition to 20th-century philosophical questions about universal history and the relevance of humanist inquiry.

4-5 units, not given this year

**HISTORY 209S. Research Seminar for Majors**

Required of History majors. How to conduct original, historical research and analysis, including methods such as using the libraries and archives at Stanford and elsewhere, and working collaboratively to frame topics, identify sources, and develop analyses. Autumn quarter focuses on European Lit and Arts; winter quarter on U.S. History and Colonialism; spring quarter on modern Europe, ancient China and early modern Europe.

5 units, Aut (Campbell, J), Win (Hanretta, S), Spr (Hobbs, A)

**HISTORY 210. The History of Occupation, 1914-2010**

(Same as HISTORY 310) Examines the major cases of occupation in the twentieth century, from the first World War until the present, and issues of similarities, differences, and implications for contemporary policy making. Topics include European and Asian cases emerging from World War I and World War II, the Israeli occupation of the West Bank; the Soviet and American occupations of Afghanistan; and the American occupation of Iraq. Discussions will revolve around the problems, efficacy, and effects of occupation in historical perspective. GER:DB-SocSci

4-5 units, Win (Naimark, N)

**HISTORY 211C. Saints in the Middle Ages**

Saints were indispensable heroes in the Middle Ages. Explores what specific functions they served in medieval society, and how those roles changed over a millennium. Critical and curious readings of both primary documents and scholarly research will address questions such as what is a saint; what makes a saint; and how can the politicized literary texts that narrated their lives be used as historical documents. Topics include saints and their hagiographers, miracles, relics, marian devotion, profiling the Holy, and gendered sanctity. GER:DB-Hum

5 units, Aut (Kreiner, J)

**HISTORY 211D. Law and Society in Medieval Italy**

(Same as HISTORY 311D) Traces the historical development of law and legal institutions in medieval Italy. Focuses on the interdependence of jurisprudence, legal practice, and social forces. Topics include legal reasoning, citizenship, servitude and dependence, family and kinship, property and inheritance, women and gender, crime and deviance, faction and vendetta.

4-5 units, Win (Fredona, R)

**HISTORY 212G. Economy and Society in Precapitalist Europe**

(Same as HISTORY 312G) What today we might classify as a strictly economic concern, the distribution and circulation of resources, was in the Middle Ages inseparable from ideas about social organization and cultural value. Examines how deeply the economy was connected in material and intellectual ways to

government, religion, and culture in Europe from the fourth to the fourteenth centuries; how those economic structures have been represented and debated in modern scholarship; and how the history of premodern economies might inform the study of capitalism. Topics include the problem of poverty; forms and scales of exchange; slavery and serfdom; visible wealth; warrior, cleric, peasant, medieval microfinance, taxation and representation, and feudal logic. GER:DB-SocSci

4-5 units, Spr (Kreiner, J)

**HISTORY 214D. Mediterranean Crossroads: Power, Culture, and Religion in Medieval Sicily**

Sicily in the Middle Ages was a Mediterranean crossroads, a dynamic and diverse kingdom in which Muslim and Christian, Viking and African, European and Eastern Cultures all came together. Explores the life and times of Frederick II (1194-1250). He claimed universal authority as a Christian emperor, yet ruled multireligious Sicily as king. He promoted crusading, yet was accused of being a heretic and a crypto Muslim. He spoke six languages and actively patronized the arts and sciences. Topics include: structures and influences that made such a figure possible; how he managed the tensions of governing a diverse and disparate empire; how religion and cultural production created and maintained his authority; how contemporaries and later generations reacted to this enigmatic emperor; why has he continued to generate such polarizing reactions; and how did Frederick become a figure revered by Nazis and multiculturalists alike.

5 units, Spr (Miner, J)

**HISTORY 220G. Demons, Witches, and Priests: Religion and Popular Culture in Russia**

(Same as HISTORY 320G) 19th and early 20th centuries. Peasants, parish priests, witches, possessed persons, cults and sects, old believers, saints, and women's religious communities. Nominally Christian, and members of the Orthodox Church, Russians embraced beliefs and customs that combined teaching from Church and folk traditions. GER:DB-Hum

4-5 units, Win (Kollmann, J)

**HISTORY 221A. Men, Women, and Power in Early Modern Russia, 1500-1800**

Social values, gender relations, and social change in an era of rapid change; challenges to established norms by new constructions of deviance (witchcraft, religious reform, and revolt) and new standards of civility; encounters with non-Russians and the construction of national consciousness. Social values as political ethos: patrimonial autocracy and the reality of female rule in the late 17th and 18th century. GER:DB-Hum, DB-Hum, EC-Gender

5 units, not given this year

**HISTORY 221B. The Woman Question in Modern Russia**

Russian radicals believed that the status of women provided the measure of freedom in a society and argued for the extension of rights to women as a basic principle of social progress. The social status and cultural representations of Russian women from the mid-19th century to the present. The arguments and actions of those who fought for women's emancipation in the 19th century, theories and policies of the Bolsheviks, and the reality of women's lives under them. How the status of women today reflects on the measure of freedom in post-Communist Russia. GER:DB-SocSci, EC-Gender

5 units, not given this year

**HISTORY 221D. Historiography of the Soviet Union**

(Same as HISTORY 321C) Major schools of interpretation of the Soviet phenomenon through works representative of a specific school, in chronological order, from the first major interpretation of the Soviet polity by Trotsky to postmodernist theories. GER:DB-SocSci

4-5 units, Aut (Weiner, A)

**HISTORY 222. Honor, Law, and Modernity**

How Europe evolved from medieval to modern; focus is on standards for conflict resolution emphasizing insults to honor. How attitudes towards the self and society, and the state's relationship to individuals, changed from the 16th to 18th centuries in Europe and Russia. Traditional concepts of honor and patterns of settling disputes contrasted to early modern concepts of honor, private life, civility, and crime and punishment. GER:DB-Hum

5 units, not given this year

**HISTORY 223. Art and Ideas in Imperial Russia**

(Same as HISTORY 323) Poetry, novels, symphonic music, theater, opera, painting, design, and architecture: what they reveal about the politics and culture of tsarist Russia. GER:DB-Hum

4-5 units, not given this year

**HISTORY 224A. The Soviet Civilization**

(Same as HISTORY 424A) Socialist visions and practices of the organization of society and messianic politics; the Soviet understanding of mass violence, political and ethnic; and living space. Primary and secondary sources. Research paper or historiographical essay. GER:DB-SocSci

4-5 units, not given this year

**HISTORY 224B. Modern Afghanistan**

(Same as HISTORY 324B) Politics, society, and culture in Afghanistan from the 19th century to the present. Topics include state building, tribal politics, Islamic law, geopolitics, the Taliban, and the post-Taliban disorder. GER:DB-SocSci

4-5 units, Win (Crews, R)

**HISTORY 225C. Leaders and Leadership in Soviet and Post-Soviet Russia**

(Same as HISTORY 325C) Analyzes the role of the supreme leader in the Soviet and post-Soviet systems; the role of personality and career trajectories in the making of Soviet leaders; leadership style, authority building, and power base; the problem of succession; and the impact and legacies of various leaders on the political system and culture. GER:DB-SocSci

4-5 units, Spr (Weiner, A)

**HISTORY 227. East European Women and War in the 20th Century**

(Same as HISTORY 327) Thematic chronological approach through conflicts in the region: the Balkan Wars, WW I, WW II, and the recent wars in the former Yugoslavia. The way women in E. Europe have been involved in and affected by these wars compared to women in W. Europe in the two world wars. Women's involvement in war as members of the military services, the backbone of underground movements, workers in war industries, mothers of soldiers, subjects and supporters of war aims and propaganda, activists in peace movements, and objects of wartime destruction, dislocation, and sexual violation. GER:DB-SocSci, EC-Gender

4-5 units, Aut (Jolluck, K)

**HISTORY 228. Circles of Hell: Poland in World War II**

(Same as HISTORY 328) The experience and representation of Poland's wartime history from the Nazi-Soviet Pact of 1939 to the aftermath of Yalta in 1945. Nazi and Soviet ideology and practice regarding the Poles and the ways Poles responded, resisted, and survived. The self-characterization of Poles as innocent victims, and their involvement or complicity in the Holocaust, thus engaging in a current debate in Polish society. GER:DB-SocSci

5 units, not given this year

**HISTORY 229. Poles and Jews**

(Same as HISTORY 329, JEWISHST 289, JEWISHST 389) Focus is on the period since WW I. The place of the Jews in interwar Poland, WW II, surviving Jews after the war, Polish memorialization of the Holocaust, the reality and mythology of Jews in the communist apparatus, the manipulation of anti-Semitism by the communist government, and post-communist movement toward reconciliation. Memory and national mythology emphasizing Polish wartime behavior and the relationship of Jews to communism. The sources and uses of stereotypes, and the state of Polish-Jewish relations today. GER:DB-Hum, DB-Hum, EC-GlobalCom

4-5 units, Win (Jolluck, K)

**HISTORY 230A. The Witness in Modern History: Memoir, Reportage, Image**

The rise of the witness as icon and debates about its reliability as a historical source. The power of eyewitness accounts to convict accused criminals, inspire indignation about war and genocide, and attract attention to humanitarian crises. Their notorious unreliability due to exaggeration and misapprehension. Sources include reportage, photography, and documentary film. Case studies include criminal cases, war, poverty, and natural disasters. GER:DB-Hum

5 units, not given this year

**HISTORY 230D. Europe in the World, 1789-Present**

(Same as HISTORY 330D) The European conquest of parts of Africa, Asia, and the South Pacific by European merchants, missionaries, armies, and administrators had significant, and often cataclysmic, effects on indigenous political alliances, cultural practices, and belief systems. But were the effects of expansion entirely one-sided? What impact did the experiences of colonialism have on European politics, culture, and Europe's relations with the rest of the world? Explores how interaction between Europe and the rest of the world redefined the political, racial, sexual, and religious boundaries of both Europe and its colonies and gave rise to the more globalized society we live in today.

4-5 units, not given this year

**HISTORY 230F. Self-Policing, Denunciation, and Surveillance in Modern Europe**

(Same as HISTORY 330F) How individual actions impact state machineries of power. The motives, pressures, and consequences of everyday collaboration from the French Revolution to Nazi Germany and Soviet bloc police states; popular outrage over such practices in the aftermath of these regimes. The phenomenon of anticipatory compliance, as people tended to perceive less freedom of action than actually existed, and the reciprocal intensification of real and imagined restrictions. The malleability of personal values and interests as represented in diaries, memoirs, secondary sources, and film; variety of individual and national responses.

4-5 units, not given this year

**HISTORY 232A. Power, Art, and Knowledge in Renaissance Italy**

(Same as HISTORY 332A) Provides a fundamental understanding of the cultural and political imagination of the Italian Renaissance, with particular emphasis on Florence between 1300 and 1600 CE. Topics include political and social upheavals, radical shifts in religious practice and devotion, the commercial revolution in trade and banking, the rediscovery of classical philosophy and style, and the flowering of the literary and visual arts. GER:DB-Hum

4-5 units, Aut (Fredona, R)

**HISTORY 232D. Rome: The City and the World, 1350-1750**

(Same as HISTORY 332D) What lies beyond the ruins of an ancient city? The history of Rome from the Renaissance to the age of the grand tour. Topics include: the political, diplomatic, and religious history of the papacy; society and cultural life; the everyday world of Roman citizens; the relationship between the city and the surrounding countryside; the material transformation of Rome as a city; and its meaning for foreigners. GER:DB-Hum

4-5 units, not given this year

**HISTORY 233. Reformation, Political Culture, and the Origins of the English Civil War**

(Same as HISTORY 333) English political and religious culture from the end of the Wars of the Roses to the Civil War of the 1640s. Themes include the growth of the size and power of the state, Reformation, creation of a Protestant regime, transformation of the political culture of the ruling elite, emergence of Puritanism, and causes of the Civil War. GER:DB-Hum

4-5 units, not given this year

**HISTORY 233A. From Bacon to Hegel: Introduction to Early Modern Intellectual History**

(Same as HISTORY 333A) Over the past three centuries, European culture, society and politics have experienced a series of dramatic transformations, changes that unleashed a myriad of intellectual theories and debates. From politics and science to justice and religion, new ideas altered all fields of European thought, as intellectuals sought to understand the turmoil around them. Examines the rise of scientific thought and utopias, the emergence of new visions of politics, the differences between key Enlightenment thinkers, the development of Romanticism, Liberalism, Hegelianism, and more. Readings include Bacon, Descartes, Hobbes, Vico, Voltaire, Rousseau, Burke, Tocqueville and others. GER:DB-Hum

4-5 units, Aut (Dubnov, A)

**HISTORY 233B. Early Modern Sexualities**

(Same as HISTORY 333B) History of sexuality in early modern Europe. Normative sexuality, heterosexual transgressions, and minority sexualities. Theoretical approaches to and debates about

the history of sexuality, in particular prior to the 19th century. Tools for critiquing the heteronormativity of early modern sources and for reading those sources for evidence of sexual diversity. Readings include monographs and primary sources. GER:DB-SocSci, EC-Gender

*4-5 units, not given this year*

#### **HISTORY 233C. Two British Revolutions**

(Same as HISTORY 333C) Current scholarship on Britain, 1640-1700, focusing on political and religious history. Topics include: causes and consequences of the English civil war and revolution; rise and fall of revolutionary Puritanism; the Restoration; popular politics in the late 17th century; changing contours of religious life; the crisis leading to the Glorious Revolution; and the new order that emerged after the deposing of James II. GER:DB-Hum

*4-5 units, not given this year*

#### **HISTORY 233E. From the Left Hegelians to Freud:**

##### **Introduction to Late Modern Intellectual History**

(Same as HISTORY 333E) Ever since the Napoleonic Wars, European culture, society and politics have experienced a series of dramatic transformations, changes that unleashed a myriad of intellectual theories and debates. Focuses on the nineteenth century, the age of grand theories such as Liberalism, Positivism, Nationalism, Socialism, and Marxism and examines them historically. Readings include French Utopian Socialists and members of the Russian intelligentsia, J.S. Mill, Marx, Durkheim, Weber, Freud, and others. GER:DB-Hum

*4-5 units, Win (Dubnov, A)*

#### **HISTORY 233F. Political Thought in Early Modern Britain**

1500 to 1700. Theorists include Hobbes, Locke, Harrington, the Levellers, and lesser known writers and schools. Foundational ideas and problems underlying modern British and American political thought and life. GER:DB-Hum

*5 units, not given this year*

#### **HISTORY 233G. Catholic Politics in Europe, 1789-1992**

What led to the creation of a specifically Catholic mass politics? How did these parties and movements interact with the Vatican and the wider Church? What accounts for political Catholicism's involvement in clerical-fascist states and its important role in shaping the EU? Sources focus on monographs. Research paper using primary sources. GER:DB-SocSci

*5 units, not given this year*

#### **HISTORY 233K. The Invention of the Modern Republic**

(Same as HISTORY 333K) Examines the history of republican thinking in the Atlantic World from the Renaissance to the French Revolution.

*4-5 units, not given this year*

#### **HISTORY 236. The Ethics of Imperialism**

Can a commitment to liberty, progress, and universal rights be reconciled with imperialism? The ethical underpinnings of empire; how modern Europeans provided ethical and political justifications for colonial expansion. How European ideals were used to defend and justify inequality, violence, and genocide. The ethics of American-driven globalization and humanitarianism. Texts include primary sources, philosophical treatises, and historical studies. GER:DB-Hum

*5 units, not given this year*

#### **HISTORY 236B. The Idea of Society**

(Same as HISTORY 336B) Classic texts in social theory from the seventeenth century to the present. Readings include Locke, Smith, Hegel, Comte, and Durkheim, and Weber. GER:DB-Hum

*4-5 units, Win (Baker, K; Sheehan, J)*

#### **HISTORY 236D. Cold War Europe**

(Same as HISTORY 336D) Much more than a military and diplomatic confrontation, the Cold War was lived experience in Europe - shaping politics, society, culture and personal identity. Beginning at the end of World War II, traces the continent's division into eastern and western blocs, and ends with the fall of the Iron Curtain. Sources include memoirs, propaganda, novels, and film, as well as new scholarship on the Cold War. GER:DB-Hum

*4-5 units, Spr (Sheffer, E)*

#### **HISTORY 237. The Holocaust**

(Same as HISTORY 337, JEWISHST 183, JEWISHST 383) The

emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry. GER:DB-Hum

*4-5 units, Aut (Zipperstein, S)*

#### **HISTORY 239D. Capital and Empire**

(Same as HISTORY 339D) Can empire be justified with balance sheets of imperial crimes and boons, a calculus of racism versus railroads? The political economy of empire through its intellectual history from Adam Smith to the present; the history of imperial corporations from the East India Company to Wal-mart; the role of consumerism; the formation of the global economy; and the relationship between empire and the theory and practice of development. GER:DB-SocSci

*4-5 units, Spr (Satia, P)*

#### **HISTORY 239F. Empire and Information**

(Same as HISTORY 339F) How do states see? How do they know what they know about their subjects, citizens, economies, and geographies? How does that knowledge shape society, politics, identity, freedom, and modernity? Focus is on the British imperial state activities in S. Asia and Britain: surveillance technologies and information-gathering systems, including mapping, statistics, cultural schemata, and intelligence systems, to render geographies and social bodies legible, visible, and governable. GER:DB-Hum, EC-GlobalCom

*4-5 units, not given this year*

#### **HISTORY 239H. Colonialism and Empire in Modern Europe**

To better understand the history of modern Europe within a global context, explores the following questions: What impact did more than a century of colonialism have on the social lives, cultural attitudes, political loyalties, and intellectual world views of European women and men during the nineteenth century? What accounts for the resiliency of empire during a period of rapid global change that witnessed the rise of modern democracy, economic liberalism, ethnic nationalism, and international socialism? GER:DB-SocSci

*5 units, not given this year*

#### **HISTORY 242G. Einstein: Science, Technology, and Culture**

(Same as HISTORY 342G) Explores how Albert Einstein, a theoretical physicist who dealt with highly abstruse matters, could come to be named the Person of the Century. In addition to the specifics of Einstein's life and work, topics will include the origins and reception of scientific ideas, the nature of scientific revolutions, science in popular culture, nationalism vs. internationalism in science, science and war, debates over the nature of reality, and the quest for the theory of everything. GER:DB-Hum

*4-5 units, Win (Lagerstrom, L)*

#### **HISTORY 243C. 18th-Century Colonial Science and Medicine**

(Same as HISTORY 343C) Explores the global exchange of knowledge, technologies, plants, peoples, disease, and medicines. Colonial sciences and medicines were important militarily and strategically for positioning emerging nation states in global struggles for land and resources. Considers primarily French, British, and Dutch in the West Indies, but also takes examples from Iberian, Jesuit, and other traditions in China and India. Readings treat science and medicine in relation to voyaging, colonialism, slavery, plants, and environmental exchange. GER:DB-SocSci

*4-5 units, Spr (Schiebinger, L)*

#### **HISTORY 243G. Tobacco and Health in World History**

(Same as HISTORY 343G) GER:DB-SocSci

*4-5 units, Aut (Proctor, R)*

#### **HISTORY 243J. Climate Change in the West: A History of the Future**

(Same as EARTHSYS 143J) Global warming is changing the American West. But this region is no stranger to environmental change and human adaption to harsh environments. How can history create more clear thinking about the current crisis and choices for the future? The long history of climate change in the West, as well as current warming, through scientific research, historical sources, environmental histories, and visions for the future, including plans for mitigation and adaption, scientific

predictions, and science fiction.

*5 units, not given this year*

**HISTORY 243S. Human Origins: History, Evidence, and Controversy**

(Same as HISTORY 443A) Research seminar. Debates and controversies include: theories of human origins; interpretations of fossils, early art, and the oldest tools; the origin and fate of the Neanderthals; evolutionary themes in literature and film; visual rhetoric and cliché in anthropological dioramas and phyletic diagrams; the significance of hunting, gathering, and grandmothing; climatological theories and neocatastrophic geologies; molecular anthropology; the impact of racial theories on human origins discourse. Background in human evolution not required. GER:DB-SocSci

*4-5 units, not given this year*

**HISTORY 244C. The History of the Body in Science, Medicine, and Culture**

(Same as HISTORY 444C) The human body as a natural and cultural object, historicized. The crosscultural history of the body from the 18th century to the present. Topics include: sciences of sex and race; medical discovery of particular body parts; human experimentation, foot binding, veiling, and other bodily coverings; thinness and obesity; notions of the body politic. GER:DB-SocSci, EC-Gender

*4-5 units, not given this year*

**HISTORY 245E. Health and Society in Africa**

(Same as HISTORY 347E) The history of disease, therapeutic and diagnostic systems, and the definition of health in precolonial, colonial, and postcolonial Africa. The social and political histories of specific epidemics, including sleeping sickness, influenza, TB, mental illness, and AIDS. The colonial contexts of epidemics and the social consequences of disease. GER:DB-SocSci, EC-GlobalCom

*4-5 units, not given this year*

**HISTORY 245G. Law and Colonialism in Africa**

(Same as HISTORY 348D) Law in colonial Africa provides an opportunity to examine the meanings of social, cultural, and economic change in the anthropological, legal, and historical approaches. Court cases as a new frontier for the social history of Africa. Topics: meanings of conflicts over marriage, divorce, inheritance, property, and authority. GER:DB-SocSci

*4-5 units, Spr (Roberts, R)*

**HISTORY 248S. African Societies and Colonial States**

(Same as HISTORY 448A) The encounter between African societies and European colonialism in the colony or region of their choice. Approaches to the colonial state; tours of primary source collections in the Hoover Institution and Green Libraries. Students present original research findings and may continue research for a second quarter. GER:DB-SocSci

*4-5 units, not given this year*

**HISTORY 250A. History of California Indians**

(Same as CSRE 117S, NATIVEAM 117S) Demographic, political, and economic history of California Indians, 1700s-1950s. Processes and events leading to the destruction of California tribes, and their effects on the groups who survived. Geographic and cultural diversity. Spanish, Mexican, and Anglo-American periods. The mission system. GER:EC-AmerCul

*5 units, not given this year*

**HISTORY 251C. The American Enlightenment**

(Same as AMSTUD 251C) Eighteenth century America was like a laboratory for exciting new social, political, religious, scientific, and artistic theories that we collectively call the Enlightenment. With readings in original texts and studies of material culture, examines ways in which eighteenth century Americans applied Enlightenment thinking to some of the most important problems and questions of their time. What was the best kind of government, and how could this be known? Was the new world of America fundamentally different or the same as Europe, and did animals, plants, and people improve or worsen there? What creatures (children, apes, women, slaves) were considered unreasonable in the Age of Reason, and why? What was the place of religion and passion in the Age of Reason? GER:DB-Hum

*5 units, not given this year*

**HISTORY 253D. Approaches to American Legal History**

(Same as POLISCI 226U) Legal history, once primarily devoted to exploring legal doctrines and key judicial opinions and thus of interest mainly to legal scholars and lawyers, now resembles historical writing more generally; the study of legal ideas and practices is increasingly integrated with social, intellectual, cultural, and political history. Recent writings in American legal history; how the field reflects developments in historical writing; and how the use of legal materials affects understanding of American history.

*5 units, Win (Rakove, J)*

**HISTORY 254. Popular Culture and American Nature**

Despite John Muir, Aldo Leopold, and Rachel Carson, it is arguable that the Disney studios have more to do with molding popular attitudes toward the natural world than politicians, ecologists, and activists. Disney as the central figure in the 20th-century American creation of nature. How Disney, the products of his studio, and other primary and secondary texts see environmentalism, science, popular culture, and their interrelationships. GER:DB-Hum

*5 units, Aut (White, R)*

**HISTORY 255. Martin Luther King, Jr.: The Social Gospel and the Struggle for Justice**

The religious and political thought of Martin Luther King, Jr., using the documentary resources of the King Institute at Stanford. His social gospel Christianity and prophetic message of radical social transformation. Readings include the forthcoming *The Papers of Martin Luther King, Jr., Volume VI: Advocate of the Social Gospel*. GER:DB-Hum

*5 units, not given this year*

**HISTORY 255D. Racial Identity in the American Imagination**

(Same as AFRICAAM 255, AMSTUD 255D, CSRE 255D, HISTORY 355D) Major historical transformations shaping the understanding of racial identity and how it has been experienced, represented, and contested in American history. Topics include: racial passing and racial performance; migration, immigration, and racial identity in the urban context; the interplay between racial identity and American identity; the problems of class, gender, and sexuality in the construction of racial identity. Sources include historical and legal texts, memoirs, photography, literature, film, and music. GER:DB-SocSci, EC-AmerCul

*4-5 units, Win (Hobbs, A)*

**HISTORY 256. U.S.-China Relations: From the Opium War to Tiananmen**

(Same as HISTORY 356) The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past. GER:DB-SocSci, EC-GlobalCom

*4-5 units, not given this year*

**HISTORY 257C. LGBT History in the United States**

(Same as FEMST 140D) An introductory course on LGBT social, cultural, and political history in the United States. This course explores how categories of sexuality have changed over time, with particular emphasis on the relationship among homosexuality, heterosexuality, and transgenderism. Students will analyze how the intersections of race, class, and sexuality influenced the constitution of these categories and the politics of social relations. Historical and literary sources will be used to examine changes in LGBT experiences and identities, primarily in the twentieth century.

*4-5 units, Spr (Davies Henderson, A)*

**HISTORY 258. Topics in the History of Sexuality: Sexual Violence**

(Same as AMSTUD 258, CSRE 192E, HISTORY 358) Recent historical interpretations of sexual violence, with particular attention to the intersections of gender and race in the construction of rape, from early settlement through the twentieth century. Topics include the legal prosecution of rape in Early America; the racialization of rape in the U.S.; lynching and anti-lynching in the U.S.; and feminist responses to sexual violence. GER:DB-SocSci, EC-Gender

*4-5 units, not given this year*

**HISTORY 258G. Women and Race in the American West, 1849-1950**

(Same as CSRE 133) The western myth of the lone white cowboy gives little insight into women and people of color. However, race and gender are crucial to the U.S. West's history, creating complex identities and social structures. The course examines lives of women of diverse races, in addition to the mythology surrounding icons such as pioneer mothers or Sacagawea. Using literature, art work, and film, along with works by historians, to analyze the intersection of race and and the relation between history and myth.

5 units, Win (Frink, B)

**HISTORY 259A. Poverty and Homelessness in America**

Service learning. Students participate in a two quarter internship at a local shelter for homeless individuals or families. Readings include historical, social science, and social commentary literature. Service Learning Course (certified by Haas Center). GER:DB-SocSci

4-5 units, not given this year

**HISTORY 260. California's Minority-Majority Cities**

(Same as CSRE 260, HISTORY 360) Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. Service Learning Course (certified by Haas Center). GER:DB-SocSci, EC-AmerCul

4-5 units, Spr (McKibben, C)

**HISTORY 261. Race, Gender, and Class in Jim Crow America**

How African American life and labor were redefined from 1890-1954. Topics include family life, work, leisure patterns, transnational relations, cultural expressions emphasizing literature and music, resistance and social activism. Primary sources including visual materials, literature, and film; historical interpretations of the period. GER:DB-SocSci

5 units, not given this year

**HISTORY 262G. The Pivotal Decade in U.S. History: 1960's or 1970's?**

(Same as HISTORY 362G) Which had more lasting impact, the civil war of the 1960s or the conservative revolt of the 1970s? Should the 1970s supersede the 1960s as a pivotal moment when something happened of considerable importance to historians? Considers this debate of the decades comparatively and thematically, addressing topics including civil rights, foreign policy, electoral politics, popular culture, law, economics, labor, and social movement organizing. GER:DB-SocSci

4-5 units, Aut (Sbardellati, L)

**HISTORY 263G. History Through a Life: The Allure of American Biography**

(Same as HISTORY 363G) Considers the possibilities and limitations of exploring U.S. history through the genre of biography. Is a single life too narrow to explain why and how pivotal events in U.S. history, such as war, economic depression, social revolution, unfold? Or can one life illuminate the complexity of historical shifts? Readings will span U.S. history, exploring topics such as labor and racial civil rights, science and culture, women and sexuality, transnationalism and diplomacy, law and presidential politics. The craft of biography will be considered alongside biographical subjects. GER:DB-Hum

4-5 units, Spr (Sbardellati, L)

**HISTORY 265. Writing Asian American History**

(Same as HISTORY 365) Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper. GER:DB-SocSci, EC-AmerCul

5 units, not given this year

**HISTORY 268E. American Foreign Policy and International History since 1941**

(Same as AMSTUD 268E, HISTORY 368E) Major events and interpretations from WW II to the war in Iraq. Issues of race, expansionism and power; nuclear weapons; and war. GER:DB-SocSci

4-5 units, Spr (Bernstein, B)

**HISTORY 272B. Frontiers of Iberian and Latin American****Culture and History**

(Same as HISTORY 372B, ILAC 272B, ILAC 372B) Analyzes the construction and deconstruction of communities and their internal and external frontiers in Iberia and Ibero-America from the early modern period to the early twentieth century by observing both historical and cultural artifacts (historical documents, novels, bibliography, etc.). Topics: the coming of nations, the making of state (or national) territory, the role assigned or taken on by immigrants, minorities and, in the American case, natives, and the persistence of areas now called borderlands or of groups now assigned to such (indeterminate) locations. GER:DB-SocSci

3-5 units, Aut (Surwillo, L; Herzog, T)

**HISTORY 273. The European Expansion**

(Same as HISTORY 373A) The relationship between European monarchies and their colonial domains from the 16th-18th centuries. Reasons for expansion, methods, and results. Case studies include the Spanish, Portuguese, Dutch, French, and English domains in Africa, Asia, and the Americas. Readings include primary and secondary sources.

4-5 units, not given this year

**HISTORY 273G. Geographical Imagination & the Making of Brazil & the Hispanic-American States, 1750-1850**

Explores the connections between geographical representation and the emergence of new independent states in South America by probing the importance of colonial geographic narratives in the making of independent, post-colonial identities. Focusing mainly on Brazil, but also comparing and contrasting Brazil to other Ibero-American republics, we will study maps not only as significant pieces of imperial and patriotic discourse, but also as visual and material objects that allow us to understand the diverse perceptions of territory of different agents and groups such as native peoples, maroon societies, settlers, missionaries, traders, bureaucrats, and nationalists. Topics include the continuities and discontinuities of territory, the influence of enlightened ideals, and the idealization of Amerindians as elements of the landscape. Provides a case study of how politics, printed culture, and the representation of native peoples were intertwined during a period of global imperial transformati GER:DB-SocSci

5 units, Win (Staff)

**HISTORY 275G. Religion in Colonial Latin America and the Iberian World**

(Same as HISTORY 375G) Examines the spiritual conquest of Latin America, the gap between ideal and lived behavior, and the nature of personal/shared experiences of piety by looking at instances of forced conversion, catechism and sacraments, mysticism and apparitions, funerary rituals, baroque piety, witchcraft, and ideas about marriage, sexuality, and religious tolerance. GER:DB-Hum

4-5 units, Aut (Tortorici, Z)

**HISTORY 276E. Gender and Sexuality in Early Modern Iberian World**

(Same as HISTORY 376E) Examines major theoretical approaches, methodological developments, and debates that have shaped the history of sexuality. We will use criminal/Inquisition cases and confessional manuals to better understand gender and sexuality in the early modern Iberian world. Focuses on European/African/indigenous conceptions of gender, marriage and bigamy, witchcraft and popular religious practices, convent life and mysticism, abortion and infanticide, gendered violence, solicitation, sodomy and bestiality, and the punishments meted out for illicit acts. GER:DB-Hum

4-5 units, Spr (Tortorici, Z)

**HISTORY 279. Latin American Development: Economy and Society, 1800-2000**

(Same as HISTORY 379) The newly independent nations of Latin America began the 19th century with economies roughly equal to, or even ahead of, the U.S. and Canada. What explains the economic gap that developed since 1900? Why are some Latin American nations rich and others poor? Marxist, dependency, neoclassical, and institutionalist interpretive frameworks. The effects of globalization on Latin American economic growth, autonomy, and potential for social justice. GER:DB-SocSci, EC-GlobalCom

4-5 units, not given this year

**HISTORY 281. Economic and Social History of the Modern Middle East**

(Same as HISTORY 381) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market are combined with possible case studies of Egypt, Iraq, and Palestine. GER:DB-SocSci

4-5 units, Aut (Beinin, J)

**HISTORY 281A. Twentieth-Century Iraq: A Political and Social History**

The colonial experience, creation of the modern Iraqi state, and transition to military dictatorship. Political movements, religious and tribal elements, and their relation to the state. Geopolitical context. GER:DB-SocSci

5 units, not given this year

**HISTORY 281B. Modern Egypt**

(Same as HISTORY 381B) From the mid-nineteenth century to the present. Topics: European imperialism, the political economy of cotton, rise of nationalism, gender and the nation, minorities, the coup of 1952, positive neutralism and the Cold War, and the neo-liberal reconstruction of Egypt. GER:DB-SocSci

4-5 units, Spr (Beinin, J)

**HISTORY 282. The United States and the Middle East since 1945**

(Same as HISTORY 382) Since the end of WW II, U.S. interests in the Middle East have traditionally been defined as access to oil at a reasonable price, trade and markets, containing the influence of the Soviet Union, and the security of Israel. Is this the full range of U.S. interests? How has the pursuit of these interests changed over time? What forces have shaped U.S. policy? What is the impact of U.S. policy on the region itself? GER:DB-SocSci, EC-GlobalCom

4-5 units, not given this year

**HISTORY 283. The New Global Economy, Oil, and Islamic Movements in the Middle East**

(Same as HISTORY 383) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market combined with case studies of Egypt, Iraq, and Palestine. GER:DB-SocSci

4-5 units, not given this year

**HISTORY 284F. Empires, Markets and Networks: Early Modern Islamic World and Beyond, 1500-1800**

(Same as HISTORY 384F) Focuses on political regimes, economic interactions and sociocultural formations in the early modern Balkans and Middle East to Central and South Asia. Topics include complex political systems of the Ottoman, Safavid and Mughal empires; experiences of various Muslim, Christian, Jewish and Hindu, as well as urban, rural and nomadic communities; consolidation of transregional commerce and cultural exchange; incorporation of the Islamic world in the global economy; transimperial networks of the Muslim and Non-Muslim merchants, scholars and sufis. GER:DB-SocSci

4-5 units, Spr (Yaycioglu, A)

**HISTORY 287D. Tel Aviv: Site, Symbol, City**

(Same as HISTORY 387D, JEWISHST 287D, JEWISHST 387D) Tel Aviv, the first Israeli/Hebrew city, from a cultural history perspective combining high and low cultural artifacts, examining the symbolic constructions of the city as a site of Hebrew modernism and postmodernism. Topics include: the utopian origins behind the establishment of Tel Aviv in Zionist texts; artists, poets, and writers in Tel Aviv's coffee houses; as the capital of Bauhaus architecture; the emergence of Israeli pop culture in Tel Aviv of the late 60s and 70s; the effects of contemporary globalization and the reconstruction of Tel Aviv as the symbolic site of Israeli post-nationalism. Sources include art, cinema, and literature, pop music and archival materials from Green Library's Eliasaf Robinson Collection. Hebrew reading knowledge, although helpful, is not required. GER:DB-Hum

4-5 units, Spr (Dubnov, A)

**HISTORY 287E. Jewish Intellectuals and the Crisis of Modernity**

(Same as HISTORY 387E, JEWISHST 287E, JEWISHST 387E)

Intellectual responses of Jewish political thinkers, historians and authors to the age of extremes. Readings include Theodor Adorno, Herbert Marcuse, Eric Fromm, Hannah Arendt, Leo Strauss, Karl Popper, Isaiah Berlin, Tony Judt, and George Steiner. Analyses of enlightenment, nationalism, socialism and totalitarianism; their life stories, and their direct and indirect role in creating a transatlantic political discourse in postwar years. Contextualizes historically the fundamental features of Jewish intellectual activity after 1945. No prior knowledge of political science, philosophy and/or Jewish studies is required. GER:DB-Hum

4-5 units, Spr (Dubnov, A)

**HISTORY 287S. Research Seminar in Middle East History**

(Same as HISTORY 481, JEWISHST 287S, JEWISHST 481) Student-selected research topics. GER:DB-SocSci

4-5 units, not given this year

**HISTORY 288. Palestine and the Arab-Israeli Conflict**

(Same as HISTORY 388, IPS 388, JEWISHST 288, JEWISHST 388) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Beinin) GER:DB-Hum

4-5 units, not given this year

**HISTORY 290G. Dilemmas of Modernity in Twentieth Century Japan**

(Same as HISTORY 390G) Introduction to the historiography of twentieth century Japan and thereby a basis for further research. Explores the Japanese experience of the twentieth century in its local and regional context and explains Japan as a compelling case study of both the broader logic and process of modernization and the tensions endemic to modernity that are thereby produced.

4-5 units, Spr (Di Marco, F)

**HISTORY 291A. Archaeology and Modernity in Asia: The Excavation of Ancient Civilizations in Modern Times**

(Same as HISTORY 391A) The interplay in Asia between antiquity and modernity, civilization and nation state, and national versus colonial science. The recent excavation of artifacts and places associated with Asian civilization such as the terracotta warriors in China and Angkor Wat in Cambodia. How Asian states have grappled with modernity and colonialism as they simultaneously dug up their ancient pasts. GER:DB-SocSci

4-5 units, not given this year

**HISTORY 291B. The City in Imperial China**

(Same as HISTORY 391B) The evolution of cities in the early imperial, medieval, and early modern periods. Topics include physical structure, social order, cultural forms, economic roles, relations to rural hinterlands, and the contrast between imperial capitals and other cities. Comparative cases from European history. Readings include primary and secondary sources, and visual materials.

3-5 units, not given this year

**HISTORY 291D. Colonialism and Collaboration in East Asia**

(Same as HISTORY 391D) The roles and problems of collaboration in the rise, sustenance, and fall of empires. Themes include conceptual definitions of collaboration and empire, collaboration of traditional elites, accommodation of religious communities, assimilation and collaboration, local intermediaries, and class and empire. Regional focus is East Asia; also cases from other colonial situations. GER:DB-SocSci

4-5 units, not given this year

**HISTORY 291E. Maps, Borders, and Conflict in East Asia**

(Same as HISTORY 391E) The nature of borders and border conflicts in N.E. Asia from the 17th to the early 20th century. Focus is on contact zones between China, Russia, Korea, and Japan. The geopolitical imperatives that drove states to map their terrain in variable ways. Cultural, diplomatic, and imperial contexts. European pressures and contributions to E. Asian cartography; the uses of maps in surveillance, diplomacy, identity, and war. Student projects focus on a contested border zone. GER:DB-SocSci

4-5 units, not given this year

**HISTORY 292. The Two Koreas**

(Same as HISTORY 392) Examines major themes and scholarly works to understand the origins, outbreak, and consequences of the Korean War. One focus will be the division of Korea into ROK and DPRK and their subsequent developments. Themes include

World War II in East Asia; Korean communist movements during Japanese colonial rule; the Cold War in East Asia; the roles of the US, China, and USSR in the Korean War; the ideas of key North and South Korean leaders, and the consolidation of the two Koreas after the Korean War. GER:DB-SocSci

4-5 units, not given this year

#### **HISTORY 292D. Japan in Asia, Asia in Japan**

(Same as HISTORY 392D) How Japan and Asia mutually shaped each other in the late 19th and 20th centuries. Focus is on Japanese imperialism in Asia and its postwar legacies. Topics include: pan-Asianism and orientalism; colonial modernization in Korea and Taiwan; collaboration and resistance; popular imperialism in Manchuria; total war and empire; comfort women and the politics of apology; the issue of resident Koreans; and economic and cultural integration of postwar Asia. GER:DB-SocSci, DB-SocSci, EC-GlobalCom

4-5 units, not given this year

#### **HISTORY 292F. Traditional Korea: History and Culture**

(Same as HISTORY 392F) Korea before 1800 and how iconic features of Korean tradition were created and reinvented. Themes include Korea's ancient kingdoms, the aristocracy and military in the Koryo dynasty, the print culture and Korean alphabet, ideologies and religions, the social status system and the life of women, the kingship and court culture of the Choson dynasty, and Korea's place in premodern East Asia. The modern and contemporary debates.

4-5 units, not given this year

#### **HISTORY 293B. Homosexuality in Historical and Comparative Perspective**

(Same as HISTORY 393B) Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S. GER:EC-Gender

4-5 units, not given this year

#### **HISTORY 293D. Empire and Cosmopolitanism: Traveling Ideas in Global Political Thought**

(Same as HISTORY 393D) GER:DB-SocSci

4-5 units, not given this year

#### **HISTORY 295F. Race and Ethnicity in East Asia**

(Same as ASNAMST 295F, HISTORY 395F) Historical, cultural, political and theoretical perspectives. Commonly misunderstood as an ethnically homogeneous country, the People's Republic of China is home to 55 officially recognized minority groups, many of whom inhabit the strategic border regions of the country. How similar assumptions of ethnic and racial homogeneity in Taiwan, Japan, and Korea are being reexamined by scholars in disciplines including anthropology, history, and political science. GER:DB-SocSci

4-5 units, Aut (Mullaney, T)

#### **HISTORY 295J. Chinese Women's History**

The lives of women in the last 1,000 years of Chinese history. Focus is on theoretical questions fundamental to women's studies. How has the category of woman been shaped by culture and history? How has gender performance interacted with bodily disciplines and constraints such as medical, reproductive, and cosmetic technologies? How relevant is the experience of Western women to women elsewhere? By what standards should liberation be defined? GER:DB-Hum, EC-Gender

5 units, Win (Sommer, M)

#### **HISTORY 296. Communism and Revolution in China**

From the formation of the Chinese Communist Party (CCP) in 1921 through the 1949 founding of the People's Republic of China (PRC). Topics include: early theories of socialism in China; the relationship between Chinese communism and the Communist International and Soviet Union; agrarian reformulation of communism by Mao; the communist-nationalist civil war; the Communist Revolution of 1949; and the consolidation of communist power in the PRC. GER:DB-Hum

5 units, not given this year

#### **HISTORY 298E. China-Taiwan-U.S. Triangular Relations from WW II through the Cold War**

(Same as HISTORY 398E) The historical origins and evolution of

the complex relations between China, Taiwan, and the U.S. Topics include Stilwell and his conflict with Chiang Kai-shek, the Chinese Civil War, the loss of China or the lost chance in China, the 228 Incident, the Korean War, Taiwan's undetermined status, Kinmen Bombardment, contests over China's UN seat, Nixon's visit to China, Taiwan's economic take-off and democratization under Chiang Ching-kuo. Emphasis is on extensive reading of declassified archival sources and new interpretations. GER:DB-SocSci

4-5 units, Aut (Staff)

#### **HISTORY 299A. Senior Research I**

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

#### **HISTORY 299B. Senior Research II**

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

#### **HISTORY 299C. Senior Research III**

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

#### **HISTORY 299D. Tooling Up for Digital Humanities**

(Same as ENGLISH 299D, ENGLISH 399D, HISTORY 399D) What are the digital humanities? The twenty-first century presents new opportunities in the humanities, such as unprecedented access to millions upon millions of digitized sources along with powerful technological tools to study those sources. Yet it also raises new challenges, such as the responsible and effective use of technology, and defining the nature of digital scholarship and communication. This workshop offers an introduction to fundamental concepts, methods, and issues within the growing field of digital humanities, including managing your online identity, digitizing sources, managing databases, text mining, spatial analysis, visualization, and pedagogy.

1 unit, not given this year

#### **HISTORY 299H. Junior Honors Colloquium**

Required of junior History majors planning to write a History honors thesis during senior year. Meets twice during quarter, including the first Friday class day of the quarter.

1 unit, Win (Sommer, M)

#### **HISTORY 299M. Undergraduate Directed Research: Martin Luther King, Jr., Research and Education Institute**

May be repeated for credit.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

#### **HISTORY 299S. Undergraduate Directed Research and Writing**

May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **HISTORY 299W. Undergraduate Directed Writing**

May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **HISTORY 299X. Design and Methodology for International Field Research**

(Same as HISTORY 399A) Problems involved in research abroad: ethical issues; safety; security and conduct; human subjects protocol. Methodologies of research: interviewing, networking, case studies, participant observation, large surveys.

1 unit, Spr (Kollmann, N; Roberts, R)

## **GRADUATE COURSES IN HISTORY**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **HISTORY 158B. History of Education in the United States**

(Same as AMSTUD 201, EDUC 201) How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching. (SSPEP)

3-5 units, not given this year

#### **HISTORY 158C. History of Higher Education in the U.S.**

(Same as AMSTUD 165, EDUC 165, EDUC 265) Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing

organization of colleges and universities. (SSPEP-APA)

*3-5 units, Win (Labaree, D)*

**HISTORY 237B. Teaching the Unteachable: Teaching and Representing the Holocaust**

(Same as EDUC 253X) Theodore Adorno asked whether it was possible to write poetry after Auschwitz; whatever the answer, each year witnesses exponential growth in state-sponsored mandates to teach the Holocaust. How and to what end does catastrophe become curriculum? How to assess what students learn from these efforts. The Nazis' efforts to teach for hate, and contemporary parallels. Historical and educational sources, especially films and memoirs.

*3-5 units, not given this year*

**HISTORY 255E. Education, Race, and Inequality in African American History, 1880-1990**

(Same as CSRE 216X, EDUC 216X) Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

*3-5 units, not given this year*

**HISTORY 258D. School: What Is It Good For?**

(Same as EDUC 207X) Focus is on authors who establish claims that the purposes, functions, impacts, and social roles of schooling promote human capital, citizenship, social reproduction, values transmission, social mobility, class equality, racial equality, social stratification, disciplinary power, and the pursuit of individual interests. Historical and sociological approaches.

*3-4 units, Win (Labaree, D)*

**HISTORY 258E. History of School Reform: Origins, Policies, Outcomes, and Explanations**

(Same as EDUC 220D) Required for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. (SSPEP/APA)

*3-5 units, Aut (Labaree, D)*

**HISTORY 258F. Education Schools: Historical and Sociological Perspectives**

(Same as EDUC 231X) The lowly status of the education school in the United States is the issue that defines the starting point of this course. Topics include an exploration the historical development of this institution, its major social function, and the interaction between the two. The course touches on a variety of scholarly domains, including the history of education, sociology of education, higher education, and educational policy.

*3-4 units, alternate years, not given this year*

**HISTORY 272A. Spanish Nationalist Discourses from Franco to Zapatero: What does 'plural Spain' mean?**

(Same as ILAC 204) Spanish nationalism and 'patriotic affirmation' discourses existing in contemporary Spain. Since the end of Francoism, Spanish nationalism has existed in a de-articulated and diffuse way, rather as a reaction against the challenge of stateless nationalisms than as a substantive doctrine. However, since the mid-1980s there has been a recovery of Spanish nationalist discourse, often labeled as 'Constitutional patriotism', whose main point is the insistence on History as the founding basis for the legitimization of the present Spanish polity, as well as the vindication of the 1978 Constitution as the end-point of decentralization.

*3-5 units, not given this year*

**HISTORY 301. Introduction to Public History in the U.S., 19th Century to the Present**

(Same as HISTORY 201) Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions. Service Learning Course (certified by Haas Center).

*4-5 units, Aut (McKibben, C)*

**HISTORY 301D. The Changing Face of War: An Introduction**

**to Military History**

(Same as HISTORY 201D) Introduces students to the rich history of military affairs and, at the same time, examines the ways in which we think of change and continuity in military history. How did war evolve from ancient times, both in styles of warfare and perceptions of war? What is the nature of the relationship between war and society? Is there such a thing as a Western way of war? What role does technology play in transforming military affairs? What is a military revolution and can it be manufactured or induced? Chronologically following the evolution of warfare from Ancient Greece to present day so-called new wars, we will continuously investigate how the interdependencies between technological advances, social change, philosophical debates and economic pressures both shaped and were influenced by war.

*4-5 units, Win (Staff)*

**HISTORY 302G. Peoples, Armies and Governments of the Second World War**

(Same as HISTORY 202G) Clausewitz conceptualized war as always consisting of a trinity of passion, chance, and reason, mirrored, respectively, in the people, army and government. Following Clausewitz, this course examines the peoples, armies, and governments that shaped World War II. Analyzes the ideological, political, diplomatic and economic motivations and constraints of the belligerents and their resulting strategies, military planning and fighting. Explores the new realities of everyday life on the home fronts and the experiences of non-combatants during the war, the final destruction of National Socialist Germany and Imperial Japan, and the emerging conflict between the victors. How the peoples, armies and governments involved perceived their possibilities and choices as a means to understand the origins, events, dynamics and implications of the greatest war in history.

*4-5 units, Spr (Staff)*

**HISTORY 304. Approaches to History**

Required of first-year History Ph.D. students.

*4-5 units, Aut (Baker, K)*

**HISTORY 304B. History without Documents**

(Same as HISTORY 204B) Can history be written about places and times for which are no written sources, or for people in literate societies who left no written traces? Practical training in historical methods for non-documentary sources, including oral traditions and history, archaeology, ecological sources, historical linguistics, ethnography, rituals, myths, songs, and art.

*4-5 units, Aut (Hanretta, S)*

**HISTORY 304G. War, Culture, and Society in the Modern Age**

(Same as HISTORY 204G) How Western societies and cultures have responded to modern warfare. The relationship between its destructive capacity and effects on those who produce, are subject to, and must come to terms with its aftermath. Literary representations of WW I; destructive psychological effects of modern warfare including those who take pleasure in killing; changes in relations between the genders; consequences of genocidal ideology and racial prejudice; the theory of just war and its practical implementation; and how wars are commemorated.

*5 units, not given this year*

**HISTORY 305. Graduate Workshop in Teaching**

Required of first-year History Ph.D. students. Perspectives on pedagogy for historians: course design, lecturing, leading discussion, evaluation of student learning, use of technology in teaching lectures and seminars. Addressing today's classroom: sexual harassment issues, integrating diversity, designing syllabi to include students with disabilities.

*1 unit, Spr (Kollmann, N)*

**HISTORY 305A. The History of Information**

(Same as HISTORY 205A) Examines the history of information from multiple perspectives such as the changing conceptions of facticity and evidence cross-culturally as well as a range of information technologies, from moveable type printing and telegraphy to text messaging and Twitter. Other topics include the ways in which information is shaped by the languages in which it is recorded, stored, and transmitted, and also the ways in which information infrastructures influence what is forgotten and lost.

*4-5 units, Spr (Mullaney, T)*

**HISTORY 306. Beyond Borders: Approaches to Transnational History**

This core colloquium for the Transnational, International, and Global (TIG) field will introduce students to the major historiographical trends, methodological challenges, and theoretical approaches to studying and writing transnational histories.

*4-5 units, Win (Frank, Z; Daughton, J)*

**HISTORY 306D. World History: Graduate Colloquium**

How do historians engage the global scale in the classroom as well as in research? The world history canon including Toynbee, McNeill, Braudel, Wolf, and Wallerstein; contrasting approaches, recent research, and resources for teaching. Recommended: concurrent enrollment in HISTORY 306K.

*4 units, Spr (Wigen, K; Lewis, M)*

**HISTORY 306E. International History and International Relations Theory**

(Same as HISTORY 202, POLISCI 216E, POLISCI 316) The relationship between history and political science as disciplines. Sources include studies by historians and political scientists on topics such as the origins of WW I, the role of nuclear weapons in international politics, the end of the Cold War, nongovernmental organizations in international relations, and change and continuity in the international system.

*5 units, Win (Holloway, D)*

**HISTORY 306F. Identities and Identification in the Atlantic World**

How identities and processes of identification changed in Europe, Africa, and the Americas during the early modern period and as a result of the engagement of the inhabitants of these three continents in the Atlantic world.

*4-5 units, not given this year*

**HISTORY 306G. Colonial Law**

Examines the relationship between law and colonialism in Latin America, Africa and Asia during both the early modern and the modern period. By reading some of the seminal works that have been published on this issue, we will seek to understand how law both facilitated and limited colonialism and how colonialism, in turn, had modified the legal systems that had existed previously. Attention will also be given to law as an acculturating agent and to the legal arena as a sphere for conflict resolution, negotiation, and identity formation.

*4-5 units, not given this year*

**HISTORY 306K. World History Pedagogy Workshop**

Students draft a syllabus and create a curriculum module for use in a world history lecture course. Corequisite: HISTORY 306D, recommended.

*1 unit, Spr (Wigen, K; Lewis, M)*

**HISTORY 307A. Legal History Workshop**

(Same as LAW 372.) Faculty and students from the Law school and the History department discuss research in the field of legal history. Guest speakers. Secondary literature relevant to the speaker's research. Undergraduates require consent of instructors.

*4-5 units, Win (Herzog, T; Gordon, R)*

**HISTORY 307C. The Global Early Modern**

(Same as HISTORY 207C) In what sense can we speak of globalization before modernity? What are the characteristics and origins of the economic system we know as capitalism? When and why did European economies begin to diverge from those of other Eurasian societies? With these big questions in mind, the primary focus will be on the history of Europe and European empires, but substantial readings deal with other parts of the world, particularly China and the Indian Ocean.

*4-5 units, not given this year*

**HISTORY 307E. Origins of Totalitarianism**

(Same as HISTORY 204E) Modern revolutionary and totalitarian politics. Sources include monographs on the medieval, Reformation, French Revolutionary, and Great War eras. Topics: the essence of modern ideology, the concept of the body national, state terror, charismatic leadership, gender assignments, private and public spheres, and identities.

*4-5 units, Win (Weiner, A)*

**HISTORY 308. Biography and History**

(Same as HISTORY 207) The relationship between biographical and historical writing, primarily in Europe and America. Problems of methodology, evidence, dispassion, and empathy. Texts: biographies, critical literature on biographical work, and novels (A. S. Byatt's *Possession*, Bernard Malamud's *Dubin's Lives*) that illuminate the intellectual underpinnings of biographical labor.

*4-5 units, not given this year*

**HISTORY 308A. Science and Law in History**

(Same as HISTORY 208A) How the intertwined modern fields of science and law, since the early modern period, together developed central notions of fact, evidence, experiment, demonstration, objectivity, and proof.

*4-5 units, not given this year*

**HISTORY 308B. Women Activists' Response to War**

(Same as HISTORY 208B) Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina.

*4-5 units, not given this year*

**HISTORY 309A. Postcolonialism and Universalism**

(Same as HISTORY 209D) Key texts and motifs from postcolonial theory: empire, class, exile, suffering, textuality, archive in juxtaposition to 20th-century philosophical questions about universal history and the relevance of humanist inquiry.

*4-5 units, not given this year*

**HISTORY 309E. History Meets Geography**

Focus is on developing competence in GIS computer applications and applying it to historical problems. Previous experience with GIS not required. Recommended: complete the GIS tutorial in Branner Library before the course starts.

*4-5 units, not given this year*

**HISTORY 309F. Historical Geography Colloquium: Maps in the Early Modern World**

The significance of cartographic enterprise across the early modern world. Political, economic, and epistemological imperatives that drove the proliferation of nautical charts, domain surveys, city plans, atlases, and globes; the types of work such artifacts performed for their patrons, viewers, and subjects. Contributions of indigenous knowledge to imperial maps; the career of the map in commerce, surveillance, diplomacy, conquest, and indoctrination. Sources include recent research from Asia, Europe, and the Americas.

*4-5 units, not given this year*

**HISTORY 310. The History of Occupation, 1914-2010**

(Same as HISTORY 210) Examines the major cases of occupation in the twentieth century, from the first World War until the present, and issues of similarities, differences, and implications for contemporary policy making. Topics include European and Asian cases emerging from World War I and World War II, the Israeli occupation of the West Bank; the Soviet and American occupations of Afghanistan; and the American occupation of Iraq. Discussions will revolve around the problems, efficacy, and effects of occupation in historical perspective.

*4-5 units, Win (Naimark, N)*

**HISTORY 311D. Law and Society in Medieval Italy**

(Same as HISTORY 211D) Traces the historical development of law and legal institutions in medieval Italy. Focuses on the interdependence of jurisprudence, legal practice, and social forces. Topics include legal reasoning, citizenship, servitude and dependence, family and kinship, property and inheritance, women and gender, crime and deviance, faction and vendetta.

*4-5 units, Win (Fredona, R)*

**HISTORY 312G. Economy and Society in Precapitalist Europe**

(Same as HISTORY 212G) What today we might classify as a strictly economic concern, the distribution and circulation of resources, was in the Middle Ages inseparable from ideas about social organization and cultural value. Examines how deeply the economy was connected in material and intellectual ways to government, religion, and culture in Europe from the fourth to the fourteenth centuries; how those economic structures have been

represented and debated in modern scholarship; and how the history of premodern economies might inform the study of capitalism. Topics include the problem of poverty; forms and scales of exchange; slavery and serfdom; visible wealth; warrior, cleric, peasant, medieval microfinance, taxation and representation, and feudal logic.

4-5 units, Spr (Kreiner, J)

**HISTORY 313. Graduate Core Colloquium: Religion and the Narration of the Medieval Past, 1000-1500**

Examines reigning interpretations of the transformations of the central Middle Ages and the transition to the Early Modern world in light of recent work on religion. How well do these broad syntheses accommodate new understandings of the institutions, material culture, movements, and spiritualities of western Christianity? Attention will also be given to religious dissidence and interactions with other religious traditions in medieval Europe and the Mediterranean.

4-5 units, Aut (Miller, M)

**HISTORY 319B. Secularity**

Classic theories of secularity. Is a secular world possible? How does, historically seen, the notion of the secular emerge, impose itself, and get challenged? Readings include Max Weber, E. Durkheim, R.A. Markus, Carl Schmitt, and Hans Blumenberg, and studies bearing on the Middle Ages, English monastic secularization, the French Revolution, and 20th-century political religions.

4-5 units, not given this year

**HISTORY 320G. Demons, Witches, and Priests: Religion and Popular Culture in Russia**

(Same as HISTORY 220G) 19th and early 20th centuries. Peasants, parish priests, witches, possessed persons, cults and sects, old believers, saints, and women's religious communities. Nominally Christian, and members of the Orthodox Church, Russians embraced beliefs and customs that combined teaching from Church and folk traditions.

4-5 units, Win (Kollmann, J)

**HISTORY 321A. Classics of Russian Historiography**

Main trends of Russian intellectual history as seen through major historians' treatment of Muscovy: Romanticism, Slavophilism, Hegelianism, Populism, Social Democracy, New Idealism, and Marxism-Leninism.

4-5 units, not given this year

**HISTORY 321B. Imperial Russian Historiography**

4-5 units, not given this year

**HISTORY 321C. Historiography of the Soviet Union**

(Same as HISTORY 221D) Major schools of interpretation of the Soviet phenomenon through works representative of a specific school, in chronological order, from the first major interpretation of the Soviet polity by Trotsky to postmodernist theories.

4-5 units, Aut (Weiner, A)

**HISTORY 322. Early Modern Russia in European Context**

4-5 units, not given this year

**HISTORY 323. Art and Ideas in Imperial Russia**

(Same as HISTORY 223) Poetry, novels, symphonic music, theater, opera, painting, design, and architecture: what they reveal about the politics and culture of tsarist Russia.

4-5 units, not given this year

**HISTORY 323B. Research Methodologies in Early Modern Russian History**

4-5 units, not given this year

**HISTORY 324B. Modern Afghanistan**

(Same as HISTORY 224B) Politics, society, and culture in Afghanistan from the 19th century to the present. Topics include state building, tribal politics, Islamic law, geopolitics, the Taliban, and the post-Taliban disorder.

4-5 units, Win (Crews, R)

**HISTORY 324F. The Caucasus and the Muslim World**

The linkages connecting the societies of the Caucasus to Muslim communities in Iran, Russia, the Ottoman Empire and Turkey, S. Asia, and the Middle East.

4-5 units, not given this year

**HISTORY 325C. Leaders and Leadership in Soviet and Post-**

**Soviet Russia**

(Same as HISTORY 225C) Analyzes the role of the supreme leader in the Soviet and post-Soviet systems; the role of personality and career trajectories in the making of Soviet leaders; leadership style, authority building, and power base; the problem of succession; and the impact and legacies of various leaders on the political system and culture.

4-5 units, Spr (Weiner, A)

**HISTORY 326. Graduate Colloquium on Modern Eastern Europe**

Readings and discussion of the recent historiography of Eastern Europe. Explores new trends and developments and considers topics still awaiting research.

4-5 units, Spr (Jolluck, K)

**HISTORY 326C. Graduate Colloquium on Balkan History**

Designed for History Ph.D. students to develop competence in the history and historiography of the modern Balkans, from the French Revolution to the present. Areas of study include the influence of empires on the region, the rise of nationalism and nation states, the dilemmas of independence, the emergence and decline of communism in the region, and the recurrence of war and ethnic conflict.

4-5 units, not given this year

**HISTORY 327. East European Women and War in the 20th Century**

(Same as HISTORY 227) Thematic chronological approach through conflicts in the region: the Balkan Wars, WW I, WW II, and the recent wars in the former Yugoslavia. The way women in E. Europe have been involved in and affected by these wars compared to women in W. Europe in the two world wars. Women's involvement in war as members of the military services, the backbone of underground movements, workers in war industries, mothers of soldiers, subjects and supporters of war aims and propaganda, activists in peace movements, and objects of wartime destruction, dislocation, and sexual violation.

4-5 units, Aut (Jolluck, K)

**HISTORY 328. Circles of Hell: Poland in World War II**

(Same as HISTORY 228) The experience and representation of Poland's wartime history from the Nazi-Soviet Pact of 1939 to the aftermath of Yalta in 1945. Nazi and Soviet ideology and practice regarding the Poles and the ways Poles responded, resisted, and survived. The self-characterization of Poles as innocent victims, and their involvement or complicity in the Holocaust, thus engaging in a current debate in Polish society.

5 units, not given this year

**HISTORY 329. Poles and Jews**

(Same as HISTORY 229, JEWISHST 289, JEWISHST 389) Focus is on the period since WW I. The place of the Jews in interwar Poland, WW II, surviving Jews after the war, Polish memorialization of the Holocaust, the reality and mythology of Jews in the communist apparatus, the manipulation of anti-Semitism by the communist government, and post-communist movement toward reconciliation. Memory and national mythology emphasizing Polish wartime behavior and the relationship of Jews to communism. The sources and uses of stereotypes, and the state of Polish-Jewish relations today.

4-5 units, Win (Jolluck, K)

**HISTORY 330. Core Colloquium on Early Modern Europe: Ancien Regime**

Topics in the social, political, and religious history of Western Europe, 1550-1789, with an emphasis on France. May be repeated for credit.

4-5 units, not given this year

**HISTORY 330A. Core Colloquium on Early Modern Europe**

Historiographical survey from the Renaissance to the Enlightenment. Topics include the Reformations, European expansion, state and nation building, invention and scientific discovery, intellectual history, and gender. In-depth reviews determined by student interests.

4-5 units, not given this year

**HISTORY 330D. Europe in the World, 1789-Present**

(Same as HISTORY 230D) The European conquest of parts of Africa, Asia, and the South Pacific by European merchants, missionaries, armies, and administrators had significant, and often

cataclysmic, effects on indigenous political alliances, cultural practices, and belief systems. But were the effects of expansion entirely one-sided? What impact did the experiences of colonialism have on European politics, culture, and Europe's relations with the rest of the world? Explores how interaction between Europe and the rest of the world redefined the political, racial, sexual, and religious boundaries of both Europe and its colonies and gave rise to the more globalized society we live in today.

*4-5 units, not given this year*

**HISTORY 330F. Self-Policing, Denunciation, and Surveillance in Modern Europe**

(Same as HISTORY 230F) How individual actions impact state machineries of power. The motives, pressures, and consequences of everyday collaboration from the French Revolution to Nazi Germany and Soviet bloc police states; popular outrage over such practices in the aftermath of these regimes. The phenomenon of anticipatory compliance, as people tended to perceive less freedom of action than actually existed, and the reciprocal intensification of real and imagined restrictions. The malleability of personal values and interests as represented in diaries, memoirs, secondary sources, and film; variety of individual and national responses.

*4-5 units, not given this year*

**HISTORY 331B. Core Colloquium on Modern Europe: The 19th Century**

The major historical events and historiographical debates of the long 19th century from the French Revolution to WW I.

*4-5 units, not given this year*

**HISTORY 331C. Core Colloquium on Modern Europe**

The historiography of 20th-century Europe. Topics include WW I, the Russian Revolution, National Socialism, and the EU.

*4-5 units, Win (Satia, P)*

**HISTORY 331D. Core Colloquium on Modern Europe: Intellectual History**

*4-5 units, not given this year*

**HISTORY 332A. Power, Art, and Knowledge in Renaissance Italy**

(Same as HISTORY 232A) Provides a fundamental understanding of the cultural and political imagination of the Italian Renaissance, with particular emphasis on Florence between 1300 and 1600 CE. Topics include political and social upheavals, radical shifts in religious practice and devotion, the commercial revolution in trade and banking, the rediscovery of classical philosophy and style, and the flowering of the literary and visual arts.

*4-5 units, Aut (Fredona, R)*

**HISTORY 332D. Rome: The City and the World, 1350-1750**

(Same as HISTORY 232D) What lies beyond the ruins of an ancient city? The history of Rome from the Renaissance to the age of the grand tour. Topics include: the political, diplomatic, and religious history of the papacy; society and cultural life; the everyday world of Roman citizens; the relationship between the city and the surrounding countryside; the material transformation of Rome as a city; and its meaning for foreigners.

*4-5 units, not given this year*

**HISTORY 332F. The Scientific Revolution**

What do people know and how do they know it? What counts as scientific knowledge? In the 16th and 17th centuries, understanding the nature of knowledge engaged the attention of individuals and institutions including Copernicus, Galileo, Descartes, Newton, the early Royal Society, and less well-known contemporaries. New meanings of observing, collecting, experimenting, and philosophizing, and political, religious, and cultural ramifications in early modern Europe.

*4-5 units, Aut (Riskin, J)*

**HISTORY 332G. When Worlds Collide: The Trial of Galileo**

In 1633, the Italian mathematician Galileo was tried and condemned for advocating that the sun, not the earth, was the center of the cosmos. The Catholic Church did not formally admit that Galileo was right until 1992. Examines the many factors that led to the trial of Galileo and looks at multiple perspectives on this signal event in the history of science and religion. Considers the nature and definition of intellectual heresy in the sixteenth and early seventeenth centuries, and examines the writings of Galileo's infamous predecessor Giordano Bruno (burned at the stake in

1600). Looks closely at documents surrounding the trial and related literature on Renaissance and Reformation Italy in order to understand the perspectives of various participants in this famous event. Focal point of seminar involves the examination of the many different histories that can be produced from Galileo's trial. What, in the end, were the crimes of Galileo?

*4-5 units, not given this year*

**HISTORY 333. Reformation, Political Culture, and the Origins of the English Civil War**

(Same as HISTORY 233) English political and religious culture from the end of the Wars of the Roses to the Civil War of the 1640s. Themes include the growth of the size and power of the state, Reformation, creation of a Protestant regime, transformation of the political culture of the ruling elite, emergence of Puritanism, and causes of the Civil War.

*4-5 units, not given this year*

**HISTORY 333A. From Bacon to Hegel: Introduction to Early Modern Intellectual History**

(Same as HISTORY 233A) Over the past three centuries, European culture, society and politics have experienced a series of dramatic transformations, changes that unleashed a myriad of intellectual theories and debates. From politics and science to justice and religion, new ideas altered all fields of European thought, as intellectuals sought to understand the turmoil around them. Examines the rise of scientific thought and utopias, the emergence of new visions of politics, the differences between key Enlightenment thinkers, the development of Romanticism, Liberalism, Hegelianism, and more. Readings include Bacon, Descartes, Hobbes, Vico, Voltaire, Rousseau, Burke, Tocqueville and others.

*4-5 units, Aut (Dubnov, A)*

**HISTORY 333B. Early Modern Sexualities**

(Same as HISTORY 233B) History of sexuality in early modern Europe. Normative sexuality, heterosexual transgressions, and minority sexualities. Theoretical approaches to and debates about the history of sexuality, in particular prior to the 19th century. Tools for critiquing the heteronormativity of early modern sources and for reading those sources for evidence of sexual diversity. Readings include monographs and primary sources.

*4-5 units, not given this year*

**HISTORY 333C. Two British Revolutions**

(Same as HISTORY 233C) Current scholarship on Britain, 1640-1700, focusing on political and religious history. Topics include: causes and consequences of the English civil war and revolution; rise and fall of revolutionary Puritanism; the Restoration; popular politics in the late 17th century; changing contours of religious life; the crisis leading to the Glorious Revolution; and the new order that emerged after the deposing of James II.

*4-5 units, not given this year*

**HISTORY 333E. From the Left Hegelians to Freud: Introduction to Late Modern Intellectual History**

(Same as HISTORY 233E) Ever since the Napoleonic Wars, European culture, society and politics have experienced a series of dramatic transformations, changes that unleashed a myriad of intellectual theories and debates. Focuses on the nineteenth century, the age of grand theories such as Liberalism, Positivism, Nationalism, Socialism, and Marxism and examines them historically. Readings include French Utopian Socialists and members of the Russian intelligentsia, J.S. Mill, Marx, Durkheim, Weber, Freud, and others.

*4-5 units, Win (Dubnov, A)*

**HISTORY 333K. The Invention of the Modern Republic**

(Same as HISTORY 233K) Examines the history of republican thinking in the Atlantic World from the Renaissance to the French Revolution.

*4-5 units, not given this year*

**HISTORY 335. History of European Law, Medieval to Contemporary**

(Same as HISTORY 135) From the fall of the Roman Empire to the establishment of the EU. How law changed over time. Sources and nature of law, organization of legal systems, and relationships between law and society, law and lawmaker, law and the legal professions.

*4-5 units, Win (Herzog, T)*

**HISTORY 336. Modern France**

(Daughton)

*4-5 units, not given this year***HISTORY 336B. The Idea of Society**

(Same as HISTORY 236B) Classic texts in social theory from the seventeenth century to the present. Readings include Locke, Smith, Hegel, Comte, and Durkheim, and Weber.

*4-5 units, Win (Baker, K; Sheehan, J)***HISTORY 336D. Cold War Europe**

(Same as HISTORY 236D) Much more than a military and diplomatic confrontation, the Cold War was lived experience in Europe - shaping politics, society, culture and personal identity. Beginning at the end of World War II, traces the continent's division into eastern and western blocs, and ends with the fall of the Iron Curtain. Sources include memoirs, propaganda, novels, and film, as well as new scholarship on the Cold War.

*4-5 units, Spr (Sheffer, E)***HISTORY 336E. Violence in History and Theory**

Methodological challenges associated with defining and analyzing violence in late-19th- and 20th-century contexts. How people witnessed, coped with, and survived violent episodes. Cases of state violence, ethnic and religious conflict, warfare, genocide, and decolonization. The notion of everyday suffering in the contemporary world. Sources include anthropology, sociology, and history.

*4-5 units, not given this year***HISTORY 337. The Holocaust**

(Same as HISTORY 237, JEWISHST 183, JEWISHST 383) The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.

*4-5 units, Aut (Zipperstein, S)***HISTORY 337C. Street History: Learning the Past in School and Out**

(Same as EDUC 356) Interdisciplinary. Since Herodotus, history and memory have competed to shape minds: history cultivates doubt and demands interpretation; memory seeks certainty and detests that which thwarts its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to the process?

*3-5 units, not given this year***HISTORY 338A. Graduate Colloquium in Modern British History, Part I**

Influential approaches to problems in British, European, and imperial history. The 19th-century British experience and its relationship to Europe and empire. National identity, the industrial revolution, class formation, gender, liberalism, and state building. Goal is to prepare specialists and non-specialists for oral exams.

*4-5 units, not given this year***HISTORY 338B. Modern Britain, Part II**

Themes include empire and racism, the crisis of liberalism, the rise of the welfare state, national identity, the experience of total war, the politics of decline, and modernity and British culture.

*4-5 units, not given this year***HISTORY 339D. Capital and Empire**

(Same as HISTORY 239D) Can empire be justified with balance sheets of imperial crimes and boons, a calculus of racism versus railroads? The political economy of empire through its intellectual history from Adam Smith to the present; the history of imperial corporations from the East India Company to Wal-mart; the role of consumerism; the formation of the global economy; and the relationship between empire and the theory and practice of development.

*4-5 units, Spr (Satia, P)***HISTORY 339F. Empire and Information**

(Same as HISTORY 239F) How do states see? How do they know what they know about their subjects, citizens, economies, and geographies? How does that knowledge shape society, politics, identity, freedom, and modernity? Focus is on the British imperial state activities in S. Asia and Britain: surveillance technologies and information-gathering systems, including mapping, statistics,

cultural schemata, and intelligence systems, to render geographies and social bodies legible, visible, and governable.

*4-5 units, not given this year***HISTORY 339H. Modern European History in a Global Age**

How scholars can write the history of modern Europe in a way that integrates global and transnational perspectives. Discussed the methodological challenges and merits of various approaches and reviews relevant theoretical and interdisciplinary models for how this can best be done. Topics include globalization, migration, internationalism, colonialism, post-colonialism, modern warfare, and the media.

*4-5 units, not given this year***HISTORY 341A. The Emergence of Medicine: The Middle Ages and the Renaissance**

How did medicine emerge as a distinctive body of knowledge and a profession? The history of medicine from ca. 1000 to 1750. Topics: new ways of examining and treating the body; the religious and cultural significance of disease; the development of hospitals; and the rise of public health systems. Comparison of the status of medicine in Europe and the Islamic world. The work of key figures such as Vesalius and Harvey. Students are required to attend the concurrent lectures of HISTORY 141A.

*4-5 units, not given this year***HISTORY 342. Darwin in the History of Life**

Origins and impact of evolutionary theory from the nineteenth century to the present. Early theories of fossils, the discovery of deep time and uniformitarian geology, debates over evolution vs. extinction, the origin of life, and human origins; the rise of anthropology and racial theory; the changing challenge of creationism, the abuse of evolution in eugenics and Nazi racial hygiene; and new discoveries in the realm of extreme life, evo-devo, neocatastrophism, and the new technological frontier of biomimicry. Attendance at the lectures of HISTORY 142 is required.

*4-5 units, Spr (Proctor, R)***HISTORY 342G. Einstein: Science, Technology, and Culture**

(Same as HISTORY 242G) Explores how Albert Einstein, a theoretical physicist who dealt with highly abstruse matters, could come to be named the Person of the Century. In addition to the specifics of Einstein's life and work, topics will include the origins and reception of scientific ideas, the nature of scientific revolutions, science in popular culture, nationalism vs. internationalism in science, science and war, debates over the nature of reality, and the quest for the theory of everything.

*4-5 units, Win (Lagerstrom, L)***HISTORY 343C. 18th-Century Colonial Science and Medicine**

(Same as HISTORY 243C) Explores the global exchange of knowledge, technologies, plants, peoples, disease, and medicines. Colonial sciences and medicines were important militarily and strategically for positioning emerging nation states in global struggles for land and resources. Considers primarily French, British, and Dutch in the West Indies, but also takes examples from Iberian, Jesuit, and other traditions in China and India. Readings treat science and medicine in relation to voyaging, colonialism, slavery, plants, and environmental exchange.

*4-5 units, Spr (Schiebinger, L)***HISTORY 343G. Tobacco and Health in World History**

(Same as HISTORY 243G)

*4-5 units, Aut (Proctor, R)***HISTORY 344. Gender in Science, Medicine and Engineering**

(Same as HISTORY 144) Men's and women's roles in science, medicine, and engineering over the past 200 years with a focus on the present. What are the efforts underway globally to transform science, medicine, and engineering into fields where women can flourish? How have science and medicine studied and defined males and females? Can gender analysis spark creativity in human knowledge?

*4-5 units, not given this year***HISTORY 345A. Africa in the Era of the Slave Trade**

The slave trade, including the trans-Saharan, Indian Ocean, and trans-Atlantic trades, constituted nearly a millennium of interaction with the wider world and set in motion transformations in African societies, politics, and cultures. Topics include the debates about slavery in Africa, the impact of the slave trade on African

societies, state formation, economic change, religious change, and household change in the period before the scramble for Africa in the late 19th century.

*4-5 units, Win (Roberts, R)*

**HISTORY 345B. African Encounters with Colonialism**

*4-5 units, not given this year*

**HISTORY 346. The Dynamics of Change in Africa**

(Same as AFRICAST 301A, POLISCI 246P, POLISCI 346P) Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.

*4-5 units, Win (Weinstein, J)*

**HISTORY 347E. Health and Society in Africa**

(Same as HISTORY 245E) The history of disease, therapeutic and diagnostic systems, and the definition of health in precolonial, colonial, and postcolonial Africa. The social and political histories of specific epidemics, including sleeping sickness, influenza, TB, mental illness, and AIDS. The colonial contexts of epidemics and the social consequences of disease.

*4-5 units, not given this year*

**HISTORY 348D. Law and Colonialism in Africa**

(Same as HISTORY 245G) Law in colonial Africa provides an opportunity to examine the meanings of social, cultural, and economic change in the anthropological, legal, and historical approaches. Court cases as a new frontier for the social history of Africa. Topics: meanings of conflicts over marriage, divorce, inheritance, property, and authority.

*4-5 units, Spr (Roberts, R)*

**HISTORY 351A. Core in American History, Part I**

*4-5 units, not given this year*

**HISTORY 351B. Core in American History, Part II**

*4-5 units, Aut (Winterer, C)*

**HISTORY 351C. Core in American History, Part III**

*4-5 units, not given this year*

**HISTORY 351D. Core in American History, Part IV**

*4-5 units, Win (White, R)*

**HISTORY 351E. Core in American History, Part V**

Required of all first-year United States History Ph.D. students.

*4-5 units, Spr (Camarillo, A)*

**HISTORY 351F. Core in American History, Part VI**

Required of all first-year Ph.D. students in U.S. History.

*4-5 units, not given this year*

**HISTORY 352B. History of American Law**

(Same as LAW 318.) Modern history of American law, legal thought, legal institutions and the legal profession. Topics include law and regulation of corporate organizations and labor relations in the age of enterprise, law of race relations in the South and North, development of classical legalism, critiques of classical legalism, modern administrative state, organized legal profession, New Deal legal thought and legislation, legal order of the 50s, expansion of enterprise liability, civil rights movements from 1940, rights revolution of the Warren Court and Great Society.

*5 units, Spr (Friedman, L)*

**HISTORY 353D. Approaches to American Legal History**

(Same as LAW 651.) Legal history may once have been primarily devoted to exploring legal doctrines and key judicial opinions, and thus to be of interest mainly to legal scholars and lawyers. Now, the best writing in legal history resembles historical writing more generally, and the study of legal ideas and practices is increasingly integrated with social, intellectual, cultural, and political history. Examines recent writings in American legal history, ranging broadly across time and space to ask how the field reflects developments in historical writing more generally, and how the use of legal materials affects our understanding of major aspects of American history.

*4-5 units, not given this year*

**HISTORY 355D. Racial Identity in the American Imagination**

(Same as AFRICAAM 255, AMSTUD 255D, CSRE 255D, HISTORY 255D) Major historical transformations shaping the understanding of racial identity and how it has been experienced, represented, and contested in American history. Topics include: racial passing and racial performance; migration, immigration, and racial identity in the urban context; the interplay between racial identity and American identity; the problems of class, gender, and sexuality in the construction of racial identity. Sources include historical and legal texts, memoirs, photography, literature, film, and music.

*4-5 units, Win (Hobbs, A)*

**HISTORY 356. U.S.-China Relations: From the Opium War to Tiananmen**

(Same as HISTORY 256) The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past.

*4-5 units, not given this year*

**HISTORY 358. Topics in the History of Sexuality: Sexual Violence**

(Same as AMSTUD 258, CSRE 192E, HISTORY 258) Recent historical interpretations of sexual violence, with particular attention to the intersections of gender and race in the construction of rape, from early settlement through the twentieth century. Topics include the legal prosecution of rape in Early America; the racialization of rape in the U.S.; lynching and anti-lynching in the U.S.; and feminist responses to sexual violence.

*4-5 units, not given this year*

**HISTORY 360. California's Minority-Majority Cities**

(Same as CSRE 260, HISTORY 260) Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. Service Learning Course (certified by Haas Center).

*4-5 units, Spr (McKibben, C)*

**HISTORY 362G. The Pivotal Decade in U.S. History: 1960's or 1970's?**

(Same as HISTORY 262G) Which had more lasting impact, the civil war of the 1960s or the conservative revolt of the 1970s? Should the 1970s supersede the 1960s as a pivotal moment when something happened of considerable importance to historians? Considers this debate of the decades comparatively and thematically, addressing topics including civil rights, foreign policy, electoral politics, popular culture, law, economics, labor, and social movement organizing.

*4-5 units, Aut (Sbardellati, L)*

**HISTORY 363G. History Through a Life: The Allure of American Biography**

(Same as HISTORY 263G) Considers the possibilities and limitations of exploring U.S. history through the genre of biography. Is a single life too narrow to explain why and how pivotal events in U.S. history, such as war, economic depression, social revolution, unfold? Or can one life illuminate the complexity of historical shifts? Readings will span U.S. history, exploring topics such as labor and racial civil rights, science and culture, women and sexuality, transnationalism and diplomacy, law and presidential politics. The craft of biography will be considered alongside biographical subjects.

*4-5 units, Spr (Sbardellati, L)*

**HISTORY 365. Writing Asian American History**

(Same as HISTORY 265) Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper.

*5 units, not given this year*

**HISTORY 366B. Immigration Debates in America, Past and Present**

(Same as CSRE 166B, HISTORY 166B) Examines the ways in which the immigration of people from around the world and migration within the United States shaped American nation-

building and ideas about national identity in the twentieth century. Focuses on how conflicting ideas about race, gender, ethnicity, and citizenship with respect to particular groups led to policies both of exclusion and integration. Part One begins with the ways in which the American views of race and citizenship in the colonial period through the post-Reconstruction Era led to the passage of the Chinese Exclusion Act in 1882 and subsequently to broader exclusions of immigrants from other parts of Asia, Southern and Eastern Europe, and Mexico. Explores how World War II and the Cold War challenged racial ideologies and led to policies of increasing liberalization culminating in the passage of the 1965 Immigration Act, which eliminated quotas based on national origins and opened the door for new waves of immigrants, especially from Asia and Latin America

*3-5 units, Win (McKibben, C), Sum (Staff)*

**HISTORY 368E. American Foreign Policy and International History since 1941**

(Same as AMSTUD 268E, HISTORY 268E) Major events and interpretations from WW II to the war in Iraq. Issues of race, expansionism and power; nuclear weapons; and war.

*4-5 units, Spr (Bernstein, B)*

**HISTORY 370. Graduate Colloquium on Colonial Latin American History**

Sixteenth to nineteenth centuries. Indigenous cultures. The arrival of Europeans and its impact on native and European societies. Culture, religion and institutions, and everyday life. The independence period and the formation of new nations.

*4-5 units, not given this year*

**HISTORY 371. Graduate Colloquium: Explorations in Latin American Social History**

(Same as HISTORY 470) How to use primary sources such as government records, estate inventories, and parish records for social history.

*4-5 units, not given this year*

**HISTORY 372B. Frontiers of Iberian and Latin American Culture and History**

(Same as HISTORY 272B, ILAC 272B, ILAC 372B) Analyzes the construction and deconstruction of communities and their internal and external frontiers in Iberia and Ibero-America from the early modern period to the early twentieth century by observing both historical and cultural artifacts (historical documents, novels, bibliography, etc.). Topics: the coming of nations, the making of state (or national) territory, the role assigned or taken on by immigrants, minorities and, in the American case, natives, and the persistence of areas now called borderlands or of groups now assigned to such (indeterminate) locations.

*3-5 units, Aut (Surwillo, L; Herzog, T)*

**HISTORY 373A. The European Expansion**

(Same as HISTORY 273) The relationship between European monarchies and their colonial domains from the 16th-18th centuries. Reasons for expansion, methods, and results. Case studies include the Spanish, Portuguese, Dutch, French, and English domains in Africa, Asia, and the Americas. Readings include primary and secondary sources.

*4-5 units, not given this year*

**HISTORY 375G. Religion in Colonial Latin America and the Iberian World**

(Same as HISTORY 275G) Examines the spiritual conquest of Latin America, the gap between ideal and lived behavior, and the nature of personal/shared experiences of piety by looking at instances of forced conversion, catechism and sacraments, mysticism and apparitions, funerary rituals, baroque piety, witchcraft, and ideas about marriage, sexuality, and religious tolerance.

*4-5 units, Aut (Tortorici, Z)*

**HISTORY 376E. Gender and Sexuality in Early Modern Iberian World**

(Same as HISTORY 276E) Examines major theoretical approaches, methodological developments, and debates that have shaped the history of sexuality. We will use criminal/Inquisition cases and confessional manuals to better understand gender and sexuality in the early modern Iberian world. Focuses on European/African/indigenous conceptions of gender, marriage and bigamy, witchcraft and popular religious practices, convent life

and mysticism, abortion and infanticide, gendered violence, solicitation, sodomy and bestiality, and the punishments meted out for illicit acts.

*4-5 units, Spr (Tortorici, Z)*

**HISTORY 378A. The Logic of Authoritarian Government, Ancient and Modern**

(Same as POLISCI 346S) If authoritarianism is less economically efficient than democracy, and if authoritarianism is a less stable form of political organization than democracy, then why are there more authoritarian governments than democracies? To address this paradox, focus is on theoretical and empirical literature on authoritarian governments, and related literatures on the microeconomic analysis of property rights and credible commitments.

*5 units, not given this year*

**HISTORY 378E. Political Economy of Development**

(Same as POLISCI 440B) Required of Political Science Ph.D. students with comparative politics as a first or second concentration; others by consent of the instructor. The origins of political and economic institutions and their impact on long run outcomes for growth and democracy. Emphasis is on the analysis of causal models, hypothesis testing, and the quality of evidence.

*5 units, Win (Haber, S)*

**HISTORY 379. Latin American Development: Economy and Society, 1800-2000**

(Same as HISTORY 279) The newly independent nations of Latin America began the 19th century with economies roughly equal to, or even ahead of, the U.S. and Canada. What explains the economic gap that developed since 1900? Why are some Latin American nations rich and others poor? Marxist, dependency, neoclassical, and institutionalist interpretive frameworks. The effects of globalization on Latin American economic growth, autonomy, and potential for social justice.

*4-5 units, not given this year*

**HISTORY 381. Economic and Social History of the Modern Middle East**

(Same as HISTORY 281) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market are combined with possible case studies of Egypt, Iraq, and Palestine.

*4-5 units, Aut (Beinin, J)*

**HISTORY 381B. Modern Egypt**

(Same as HISTORY 281B) From the mid-nineteenth century to the present. Topics: European imperialism, the political economy of cotton, rise of nationalism, gender and the nation, minorities, the coup of 1952, positive neutralism and the Cold War, and the neo-liberal reconstruction of Egypt.

*4-5 units, Spr (Beinin, J)*

**HISTORY 382. The United States and the Middle East since 1945**

(Same as HISTORY 282) Since the end of WW II, U.S. interests in the Middle East have traditionally been defined as access to oil at a reasonable price, trade and markets, containing the influence of the Soviet Union, and the security of Israel. Is this the full range of U.S. interests? How has the pursuit of these interests changed over time? What forces have shaped U.S. policy? What is the impact of U.S. policy on the region itself?

*4-5 units, not given this year*

**HISTORY 383. The New Global Economy, Oil, and Islamic Movements in the Middle East**

(Same as HISTORY 283) The integration of the Middle East into the world capitalist market on a subordinate basis and the impact on economic development, class formation, and politics. Alternative theoretical perspectives on the rise and expansion of the international capitalist market combined with case studies of Egypt, Iraq, and Palestine.

*4-5 units, not given this year*

**HISTORY 384F. Empires, Markets and Networks: Early Modern Islamic World and Beyond, 1500-1800**

(Same as HISTORY 284F) Focuses on political regimes, economic interactions and sociocultural formations in the early modern

Balkans and Middle East to Central and South Asia. Topics include complex political systems of the Ottoman, Safavid and Mughal empires; experiences of various Muslim, Christian, Jewish and Hindu, as well as urban, rural and nomadic communities; consolidation of transregional commerce and cultural exchange; incorporation of the Islamic world in the global economy; transimperial networks of the Muslim and Non-Muslim merchants, scholars and sufis.

*4-5 units, Spr (Yaycioglu, A)*

**HISTORY 385A. Core in Jewish History, 17th-19th Centuries**  
(Same as JEWISHST 385A)

*4-5 units, Aut (Rodrigue, A)*

**HISTORY 385B. Core in Jewish History, 20th Century**  
(Same as JEWISHST 385B)

*4-5 units, Win (Zipperstein, S)*

**HISTORY 385C. Jews in the Modern World**

(Same as HISTORY 185B, JEWISHST 185B) (Same as HISTORY 85B.) History majors and others taking 5 units, register for 185B.) Topics include the restructuring of Jewish existence during the Enlightenment and legal emancipation at the end of the 18th century in W. Europe; the transformation of Jewish life in E. Europe under the authoritarian Russian regime; colonialism in the Sephardic world; new ideologies (Reform Judaism and Jewish nationalisms); the persistence and renewal of antisemitism; the destruction of European Jewry under the Nazis; new Jewish centers in the U.S.; and the State of Israel.

*5 units, Aut (Zipperstein, S)*

**HISTORY 387D. Tel Aviv: Site, Symbol, City**

(Same as HISTORY 287D, JEWISHST 287D, JEWISHST 387D) Tel Aviv, the first Israeli/Hebrew city, from a cultural history perspective combining high and low cultural artifacts, examining the symbolic constructions of the city as a site of Hebrew modernism and postmodernism. Topics include: the utopian origins behind the establishment of Tel Aviv in Zionist texts; artists, poets, and writers in Tel Aviv's coffee houses; as the capital of Bauhaus architecture; the emergence of Israeli pop culture in Tel Aviv of the late 60s and 70s; the effects of contemporary globalization and the reconstruction of Tel Aviv as the symbolic site of Israeli post-nationalism. Sources include art, cinema, and literature, pop music and archival materials from Green Library's Eliasaf Robinson Collection. Hebrew reading knowledge, although helpful, is not required.

*4-5 units, Spr (Dubnov, A)*

**HISTORY 387E. Jewish Intellectuals and the Crisis of Modernity**

(Same as HISTORY 287E, JEWISHST 287E, JEWISHST 387E) Intellectual responses of Jewish political thinkers, historians and authors to the age of extremes. Readings include Theodor Adorno, Herbert Marcuse, Eric Fromm, Hannah Arendt, Leo Strauss, Karl Popper, Isaiah Berlin, Tony Judt, and George Steiner. Analyses of enlightenment, nationalism, socialism and totalitarianism; their life stories, and their direct and indirect role in creating a transatlantic political discourse in postwar years. Contextualizes historically the fundamental features of Jewish intellectual activity after 1945. No prior knowledge of political science, philosophy and/or Jewish studies is required.

*4-5 units, Spr (Dubnov, A)*

**HISTORY 388. Palestine and the Arab-Israeli Conflict**

(Same as HISTORY 288, IPS 388, JEWISHST 288, JEWISHST 388) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Beinin)

*4-5 units, not given this year*

**HISTORY 390. Han Chinese and the Global White: The Production of Ethnoracial Majorities, East and West**

*4-5 units, not given this year*

**HISTORY 390A. Major Topics in Modern Chinese History: Qing/Republican Transition**

Continuities and discontinuities in society, economy, politics, culture, and thought during the transition from the Qing dynasty to the republic. May be repeated for credit.

*4-5 units, not given this year*

**HISTORY 390G. Dilemmas of Modernity in Twentieth**

**Century Japan**

(Same as HISTORY 290G) Introduction to the historiography of twentieth century Japan and thereby a basis for further research. Explores the Japanese experience of the twentieth century in its local and regional context and explains Japan as a compelling case study of both the broader logic and process of modernization and the tensions endemic to modernity that are thereby produced.

*4-5 units, Spr (Di Marco, F)*

**HISTORY 391A. Archaeology and Modernity in Asia: The Excavation of Ancient Civilizations in Modern Times**

(Same as HISTORY 291A) The interplay in Asia between antiquity and modernity, civilization and nation state, and national versus colonial science. The recent excavation of artifacts and places associated with Asian civilization such as the terracotta warriors in China and Angkor Wat in Cambodia. How Asian states have grappled with modernity and colonialism as they simultaneously dug up their ancient pasts.

*4-5 units, not given this year*

**HISTORY 391B. The City in Imperial China**

(Same as HISTORY 291B) The evolution of cities in the early imperial, medieval, and early modern periods. Topics include physical structure, social order, cultural forms, economic roles, relations to rural hinterlands, and the contrast between imperial capitals and other cities. Comparative cases from European history. Readings include primary and secondary sources, and visual materials.

*3-5 units, not given this year*

**HISTORY 391C. Early Imperial China**

The first millennium of imperial China, what endured over the centuries, and the major changes that took place in the political, social, and intellectual realms. Topics include the evolving geographic and environmental background, cities, the countryside, kinship, relations with the outer world, religion, philosophy, and literature. Also examines the nature of empire as a distinctive political form.

*4-5 units, not given this year*

**HISTORY 391D. Colonialism and Collaboration in East Asia**

(Same as HISTORY 291D) The roles and problems of collaboration in the rise, sustenance, and fall of empires. Themes include conceptual definitions of collaboration and empire, collaboration of traditional elites, accommodation of religious communities, assimilation and collaboration, local intermediaries, and class and empire. Regional focus is East Asia; also cases from other colonial situations.

*4-5 units, not given this year*

**HISTORY 391E. Maps, Borders, and Conflict in East Asia**

(Same as HISTORY 291E) The nature of borders and border conflicts in N.E. Asia from the 17th to the early 20th century. Focus is on contact zones between China, Russia, Korea, and Japan. The geopolitical imperatives that drove states to map their terrain in variable ways. Cultural, diplomatic, and imperial contexts. European pressures and contributions to E. Asian cartography; the uses of maps in surveillance, diplomacy, identity, and war. Student projects focus on a contested border zone.

*4-5 units, not given this year*

**HISTORY 392. The Two Koreas**

(Same as HISTORY 292) Examines major themes and scholarly works to understand the origins, outbreak, and consequences of the Korean War. One focus will be the division of Korea into ROK and DPRK and their subsequent developments. Themes include World War II in East Asia; Korean communist movements during Japanese colonial rule; the Cold War in East Asia; the roles of the US, China, and USSR in the Korean War; the ideas of key North and South Korean leaders, and the consolidation of the two Koreas after the Korean War.

*4-5 units, not given this year*

**HISTORY 392B. Law and Society in Late Imperial China**

Connections between legal and social history. Ideology and practice, center and periphery, and state-society tensions and interactions. Readings introduce the work of major historians on concepts and problems in Ming-Qing history.

*4-5 units, not given this year*

**HISTORY 392D. Japan in Asia, Asia in Japan**

(Same as HISTORY 292D) How Japan and Asia mutually shaped

each other in the late 19th and 20th centuries. Focus is on Japanese imperialism in Asia and its postwar legacies. Topics include: pan-Asianism and orientalism; colonial modernization in Korea and Taiwan; collaboration and resistance; popular imperialism in Manchuria; total war and empire; comfort women and the politics of apology; the issue of resident Koreans; and economic and cultural integration of postwar Asia.

*4-5 units, not given this year*

**HISTORY 392E. The Historical Roots of Modern East Asia**

(Same as HISTORY 92A) Focus is on China and Japan before and during their transition to modernity. The populous, urbanized, economically advanced, and culturally sophisticated Ming empire and Muromachi shogunate in the 16th century when Europeans first arrived. How the status quo had turned on its head by the early 20th century when European and American steamships dominated the Pacific, China was in social and political upheaval, and Japan had begun its march to empire.

*4-5 units, not given this year*

**HISTORY 392F. Traditional Korea: History and Culture**

(Same as HISTORY 292F) Korea before 1800 and how iconic features of Korean tradition were created and reinvented. Themes include Korea's ancient kingdoms, the aristocracy and military in the Koryo dynasty, the print culture and Korean alphabet, ideologies and religions, the social status system and the life of women, the kingship and court culture of the Choson dynasty, and Korea's place in premodern East Asia. The modern and contemporary debates.

*4-5 units, not given this year*

**HISTORY 393. Frontier Expansion and Ethnic Statecraft in the Qing Empire**

The legacy of the Qing dynasty in the territorial boundaries claimed by the People's Republic of China including the frontier zones that lie outside China proper. How the Qing acquired and ruled its frontier territories. Growth and migration of the Han Chinese population. How the dynasty's Manchu rulers managed ethnic difference. Consequences of Qing expansionism and ethnic statecraft for subject peoples and for the dynasty itself. At what point and by what processes did the Qing become China.

*4-5 units, Spr (Sommer, M)*

**HISTORY 393A. State, Society, and Economy in Qing Dynasty China**

Historical scholarship on China during the Qing period, including the gentry, civil examinations, and the debate about social mobility; merchants, cities, and the debate about civil society/public sphere; taxation, local security, and famine relief; heterodoxy, collective violence, and rebellion; and rival approaches (neo-Malthusian, neo-conservative, and neo-Marxist) to understanding the high Qing economy.

*4-5 units, not given this year*

**HISTORY 393B. Homosexuality in Historical and Comparative Perspective**

(Same as HISTORY 293B) Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S.

*4-5 units, not given this year*

**HISTORY 393C. Late Imperial China**

A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

*4-5 units, Spr (Sommer, M)*

**HISTORY 393D. Empire and Cosmopolitanism: Traveling Ideas in Global Political Thought**

(Same as HISTORY 293D)

*4-5 units, not given this year*

**HISTORY 395B. Early Modern Japan: Revisiting the Cultural Turn**

*4-5 units, Aut (Wigen, K)*

**HISTORY 395F. Race and Ethnicity in East Asia**

(Same as ASNAMST 295F, HISTORY 295F) Historical, cultural,

political and theoretical perspectives. Commonly misunderstood as an ethnically homogeneous country, the People's Republic of China is home to 55 officially recognized minority groups, many of whom inhabit the strategic border regions of the country. How similar assumptions of ethnic and racial homogeneity in Taiwan, Japan, and Korea are being reexamined by scholars in disciplines including anthropology, history, and political science.

*4-5 units, Aut (Mullaney, T)*

**HISTORY 395J. Gender and Sexuality in Chinese History**

*4-5 units, not given this year*

**HISTORY 396D. Modern Japan**

Introduces students to the major historical problems and historiographic trends in the study of modern Japan from the Meiji period to the present. Themes include approaches to late Meiji culture and politics, the formation of imperial subjects and citizens, agrarian society and politics, gender in modern Japan, empire and modernity, total war and transwar state and society, U.S. occupation, and postwar Japan.

*4-5 units, not given this year*

**HISTORY 398. History of Modern China**

Major historical transformations including the decline of the last imperial dynasty, the formation of the first Chinese republic, WW II, the rise of Communism, China under Mao, post-Mao reforms, and the Beijing Olympics of 2008.

*4-5 units, Win (Mullaney, T)*

**HISTORY 398E. China-Taiwan-U.S. Triangular Relations from WW II through the Cold War**

(Same as HISTORY 298E) The historical origins and evolution of the complex relations between China, Taiwan, and the U.S. Topics include Stilwell and his conflict with Chiang Kai-shek, the Chinese Civil War, the loss of China or the lost chance in China, the 228 Incident, the Korean War, Taiwan's undetermined status, Kinmen Bombardment, contests over China's UN seat, Nixon's visit to China, Taiwan's economic take-off and democratization under Chiang Ching-kuo. Emphasis is on extensive reading of declassified archival sources and new interpretations.

*4-5 units, Aut (Staff)*

**HISTORY 399A. Design and Methodology for International Field Research**

(Same as HISTORY 299X) Problems involved in research abroad: ethical issues; safety; security and conduct; human subjects protocol. Methodologies of research: interviewing, networking, case studies, participant observation, large surveys.

*1 unit, Spr (Kollmann, N; Roberts, R)*

**HISTORY 399D. Tooling Up for Digital Humanities**

(Same as ENGLISH 299D, ENGLISH 399D, HISTORY 299D) What are the digital humanities? The twenty-first century presents new opportunities in the humanities, such as unprecedented access to millions upon millions of digitized sources along with powerful technological tools to study those sources. Yet it also raises new challenges, such as the responsible and effective use of technology, and defining the nature of digital scholarship and communication. This workshop offers an introduction to fundamental concepts, methods, and issues within the growing field of digital humanities, including managing your online identity, digitizing sources, managing databases, text mining, spatial analysis, visualization, and pedagogy.

*1 unit, not given this year*

**HISTORY 399W. Graduate Directed Reading**

*1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**HISTORY 401A. Spatial History: Concepts, Methods, Problems**

Technical training in GIS, with modules taught by Stanford Spatial History Lab staff; conceptual work in the use of these techniques in spatial historical analysis. Students develop their own spatial history projects and produce beta versions of dynamic visualizations.

*4-5 units, Win (Frank, Z)*

**HISTORY 401B. Spatial History, Part II**

Prerequisite: 401A.

*4-5 units, not given this year*

**HISTORY 406. Graduate Research Seminar on Colonial Law**

Prerequisite: HISTORY 306G.

4-5 units, not given this year

**HISTORY 414A. Medieval History**

4-5 units, not given this year

**HISTORY 414B. Medieval History**

4-5 units, not given this year

**HISTORY 421A. Early Modern Russia**

4-5 units, not given this year

**HISTORY 422A. Research Seminar on the History of the Russian Empire**

4-5 units, not given this year

**HISTORY 422B. Research Seminar in Imperial Russia**

4-5 units, not given this year

**HISTORY 424A. The Soviet Civilization**

(Same as HISTORY 224A) Socialist visions and practices of the organization of society and messianic politics; the Soviet understanding of mass violence, political and ethnic; and living space. Primary and secondary sources. Research paper or historiographical essay.

4-5 units, not given this year

**HISTORY 424C. The End of Communism in Europe**

Causes, course, and consequences.

4-5 units, not given this year

**HISTORY 430A. Graduate Research Seminar: Early Modern Europe**

Students will begin a research project on any aspect of early modern European history, 1400-1800, by taking HISTORY 430A in winter quarter as the first quarter of this two-quarter sequence. Enrollment by permission of instructor.

3-5 units, not given this year

**HISTORY 430C. Graduate Research Seminar: Controversies and Sensationalism in Early Modern Print**

Focuses on early modern print sources. In addition to the regular holdings of the library, students will have access to the microfilm collection entitled Witchcraft in Europe and America.

4-5 units, Win (Stokes, L)

**HISTORY 430D. Graduate Research Seminar: Controversies and Sensationalism in Early Modern Print**

Prerequisite: HISTORY 430C.

4-5 units, Spr (Stokes, L)

**HISTORY 433A. European History**

4-5 units, Aut (Sheffer, E)

**HISTORY 433B. European History**

Prerequisite: HISTORY 433A.

4-5 units, Win (Sheffer, E)

**HISTORY 438. European History Workshop**

All European history graduate students in residence register for this weekly workshop, at which dissertation chapters and prospectuses, papers, and grant proposals by students and faculty are read and discussed.

1 unit, Spr (Robinson, P)

**HISTORY 439A. Graduate Research Seminar: Modern Britain and the British Empire**

4-5 units, not given this year

**HISTORY 439B. Graduate Research Seminar: Modern Britain and the British Empire II**

4-5 units, not given this year

**HISTORY 443A. Human Origins: History, Evidence, and Controversy**

(Same as HISTORY 243S) Research seminar. Debates and controversies include: theories of human origins; interpretations of fossils, early art, and the oldest tools; the origin and fate of the Neanderthals; evolutionary themes in literature and film; visual rhetoric and cliché in anthropological dioramas and phyletic diagrams; the significance of hunting, gathering, and grandmothering; climatological theories and neocatastrophic geologies; molecular anthropology; the impact of racial theories on human origins discourse. Background in human evolution not required.

4-5 units, not given this year

**HISTORY 444C. The History of the Body in Science,**

**Medicine, and Culture**

(Same as HISTORY 244C) The human body as a natural and cultural object, historicized. The crosscultural history of the body from the 18th century to the present. Topics include: sciences of sex and race; medical discovery of particular body parts; human experimentation, foot binding, veiling, and other bodily coverings; thinness and obesity; notions of the body politic.

4-5 units, not given this year

**HISTORY 445A. Research Seminar in African History**

Primary sources such as government records and missionary archives. Students present work in progress. Prerequisite: consent of instructor.

4-5 units, not given this year

**HISTORY 445B. Research Seminar in African History**

Primary sources such as government records and missionary archives. Students present work in progress. Prerequisite: consent of instructor.

4-5 units, not given this year

**HISTORY 446A. Grad Research Seminar: African Nationalism, Pan-Africanism & Beyond**

African intellectual, political, social and cultural institutions confronting issues of sovereignty, authority, heterarchy, and power during the 19th and 20th centuries.

4-5 units, Win (Hanretta, S)

**HISTORY 446B. Grad Research Seminar: African Nationalism, Pan-Africanism and Beyond**

Prerequisite: 446A and consent of instructor.

4-5 units, Spr (Hanretta, S)

**HISTORY 448A. African Societies and Colonial States**

(Same as HISTORY 248S) The encounter between African societies and European colonialism in the colony or region of their choice. Approaches to the colonial state; tours of primary source collections in the Hoover Institution and Green Libraries. Students present original research findings and may continue research for a second quarter.

4-5 units, not given this year

**HISTORY 452A. Graduate Research Seminar: American Cultural and Intellectual History, 1750-1900**

Major methods and issues. Goal is to produce a research paper based on primary sources suitable for inclusion in a doctoral dissertation or submission to a peer-reviewed scholarly journal. Topics include: compiling primary and secondary source bibliographies; primary and secondary source issues; and how to articulate an argument. Students produce a prospectus by the end of Winter Quarter. Spring Quarter meetings to discuss outlines, drafts, and problems, culminating in presentation of papers in scholarly conference format.

4-5 units, Win (Winterer, C)

**HISTORY 452B. Graduate Research Seminar: American Cultural and Intellectual History, Part 2**

Prerequisite: HISTORY 452A

4-5 units, Spr (Winterer, C)

**HISTORY 461A. Research Seminar on the Histories of Women, the Family, and Sexuality**

Research design, research methods, and historical writing on topics in the histories of women, the family, or sexuality in the U.S. Prepares graduate students for dissertation work. Workshop model involves exchanging preliminary prospectus, outline, writing sample, and draft for peer responses. Article-length original paper based on primary sources, to be completed by the end of Spring Quarter.

4-5 units, not given this year

**HISTORY 461B. Research Seminar on the Histories of Women, the Family, and Sexuality, Part II**

Prerequisite: 461A.

4-5 units, not given this year

**HISTORY 464E. Research in History and Social Science Education**

(Same as EDUC 496) For doctoral students. Literature on historical learning and teaching and corresponding social sciences research designs, assessment, and curriculum evaluation.

3-5 units, not given this year

**HISTORY 470. Graduate Colloquium: Explorations in Latin American Social History**

(Same as HISTORY 371) How to use primary sources such as government records, estate inventories, and parish records for social history.

4-5 units, not given this year

**HISTORY 470A. Graduate Research Seminar: Latin American Social History**

Students will write a seminar paper. Prerequisite: HISTORY 371.

4-5 units, not given this year

**HISTORY 481. Research Seminar in Middle East History**

(Same as HISTORY 287S, JEWISHST 287S, JEWISHST 481) Student-selected research topics.

4-5 units, not given this year

**HISTORY 481A. Research Seminar in Middle East History**

4-5 units, Sum (Staff)

**HISTORY 486. Research Seminar in History of the Ottoman Empire**

Focuses on some of the major debates and themes of Ottoman studies under the light of current scholarship, major reference sources, and primary material in multiple genres (archival, literary, visual, etc.) and multiple languages (Turkish, Arabic, Greek, etc.) of the Ottoman world. Students are expected to write research seminar papers based on primary sources.

4-5 units, Spr (Yaycioglu, A)

**HISTORY 486A. Graduate Research Seminar in Jewish History**

(Same as JEWISHST 486A)

4-5 units, Win (Zipperstein, S)

**HISTORY 486B. Graduate Research Seminar in Jewish History**

(Same as JEWISHST 486B) Prerequisite: HISTORY 486A.

4-5 units, Spr (Zipperstein, S)

**HISTORY 495A. Qing Legal Documents**

How to use Qing legal documents for research. Winter: sample documents that introduce the main genres including: the Qing code and commentaries; magistrates' handbooks and published case collections; and case records from Chinese archives. Spring: class meets occasionally; students complete research papers. Prerequisite: advanced reading ability in Chinese.

4-5 units, not given this year

**HISTORY 497A. Maps and Gazetteers as Sources for East Asian History**

For graduate students of early modern or modern East Asia. Includes weekend workshop on Chinese historical GIS with Harvard's Peter Bol. Students work with the Stanford Spatial History Lab to develop analytical techniques. Prerequisite: background in GIS.

4-5 units, not given this year

**HISTORY 497B. Maps and Gazetteers as Sources for East Asian History, Part 2**

Prerequisite: HISTORY 497A.

4-5 units, not given this year

**HISTORY 498C. Japanese Colonial Archives**

First part of a two quarter sequence. Graduate seminar on conducting research in modern Japanese history. Focus is on Japanese imperialism and colonialism in Asia, especially Korea. Different types of archives, from national and research libraries to online databases, and methods of research including oral history. Primary sources include government publications, classified police records, and media sources.

4-5 units, not given this year

**HISTORY 499X. Graduate Research**

Units by arrangement. May be repeated for credit.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**HISTORY 802. TGR Dissertation**

Units by arrangement.

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## HISTORY AND PHILOSOPHY OF SCIENCE (HPS) COURSES

### UNDERGRADUATE COURSES IN HISTORY AND PHILOSOPHY OF SCIENCE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**HPS 60. Introduction to Philosophy of Science**

(Same as PHIL 60) 20th-century views on the nature of scientific knowledge. Logical positivism and Popper; the problem of induction; Kuhn, Feyerabend, and radical philosophies of science; subsequent attempts to rebuild moderate empiricist and realist positions. GER:DB-Hum

5 units, Win (Ryckman, T)

**HPS 61. Science, Religion, and the Birth of Modern Philosophy**

(Same as PHIL 61) Galileo's defense of the Copernican world-system that initiated the scientific revolution of the 17th century, led to conflict between science and religion, and influenced the development of modern philosophy. Readings focus on Galileo and Descartes. GER:DB-Hum

5 units, not given this year

**HPS 154. The History of Scientific Methods, Pythagoras to Popper**

(Same as PHIL 163H) History of scientific methods and associated science from ancient Greece to the 20th century. Case studies include Pythagoras, Plato, and Euclid; Aristotle; medieval science; scientific Renaissance of the 1540s; methodological clashes involving the Church, Galileo, Bacon, and Descartes; Newton; Faraday; Darwin; rise of statistical methods; beginnings of modern physics; Popper. The mutual influences of method and practice. What does and does not qualify as science. Recommended: background in history, philosophy, or a technical field such as mathematics, science, or engineering. GER:DB-Hum

4 units, Spr (McCaskey, J)

**HPS 158. The Social History of Mental Illness**

An Exploration of the variety of meanings of mental illness in the past, and the diagnostic, therapeutic, cultural and policy challenges historically posed by mental illness. The course focuses on the U.S. but is not limited to it. How has mental illness been defined in history? How has the mind been medicalized and managed? Topics include the rise of institutions for the mentally ill, the growth of the psychiatric profession and the relationship between psychiatry, deviance and anti-psychiatry, and gender and psychiatric norms. GER:DB-SocSci

5 units, Win (Horn, M)

**HPS 199. Directed Reading**

(Staff)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### GRADUATE COURSES IN HISTORY AND PHILOSOPHY OF SCIENCE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**HPS 299. Graduate Individual Work**

May be repeated for credit. (Staff)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## HUMAN BIOLOGY (HUMBIO) COURSES

### UNDERGRADUATE COURSES IN HUMAN BIOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**HUMBIO 2A. Genetics, Evolution, and Ecology**

Introduction to the principles of classical and modern genetics, evolutionary theory, and population biology. Topics: micro- and macro-evolution, population and molecular genetics, biodiversity, and ecology, emphasizing the genetics and ecology of the evolutionary process and applications to human populations. Required evening midterm, Monday, 7-9:00 PM. See syllabus for date. GER: DB-NatSci

5 units, Aut (Boggs, C; Durham, W; Francke, U)

**HUMBIO 2B. Culture, Evolution, and Society**

Introduction to the evolutionary study of human diversity. Hominid evolution, the origins of social complexity, social theory, and the emergence of the modern world system, emphasizing the concept of culture and its influence on human differences. Required evening midterm for 2B, Monday, 7-9:00 PM. See syllabus for date. GER:DB-SocSci

5 units, Aut (Klein, R; Wolf, A)

**HUMBIO 3A. Cell and Developmental Biology**

The principles of the biology of cells: principles of human developmental biology, biochemistry of energetics and metabolism, the nature of membranes and organelles, hormone action and signal transduction in normal and diseased states (diabetes, cancer, autoimmune diseases), drug discovery, immunology, and drug addiction. Prerequisite: college chemistry or completion of the HumBio chemistry lecture series during the fall quarter. Required evening midterm for 3A, Monday, 7-9:00 PM. See syllabus for date. GER: DB-NatSci

5 units, Win (Fuller, M; Kaiser, A; Nusse, R; Scott, M; Talbot, W)

**HUMBIO 3B. Behavior, Health, and Development**

Research and theory on human behavior, health, and life span development. How biological factors and cultural practices influence cognition, emotion, motivation, personality, and health in childhood, adolescence, and adulthood. Required evening midterm, Monday, 7-9:00 PM. See syllabus for date. GER:DB-SocSci

5 units, Win (Lyons, D; Fernald, A)

**HUMBIO 3Y. Practicum in Child Development**

Practical experience at Bing Nursery School for 3.5 hours per week. Pre- or corequisite: 3B. (AU)

1 unit, Win (Peters, M)

**HUMBIO 4A. The Human Organism**

Organ system physiology: the principles of neurobiology and endocrinology, and the functions of body organs. The mechanisms of control, regulation, and integration of organ systems function. GER: DB-NatSci

5 units, Spr (Fernald, R; Heller, C)

**HUMBIO 4B. Environmental and Health Policy Analysis**

Connections among the life sciences, social sciences, public health, and public policy. The economic, social, and institutional factors that underlie environmental degradation, the incidence of disease, and inequalities in health status and access to health care. Public policies to address these problems. Topics include pollution regulation, climate change policy, biodiversity protection, health care reform, health disparities, and women's health policy GER:DB-SocSci

5 units, Spr (Goulder, L; Baker, L)

**HUMBIO 6. Human Origins**

(Same as ANTHRO 6, ANTHRO 206) The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them. GER: DB-NatSci

5 units, not given this year

**HUMBIO 21. Introduction to Brain and Behavior**

(Same as BIO 20) Evolutionary principles to understand how the brain regulates behavior physiologically, and is also influenced by behavioral interactions. Topics include neuron structure and function, transmission of neural information, anatomy and physiology of sensory and motor systems, regulation of body states, the biological basis of learning and memory, and behavioral abnormalities. GER: DB-NatSci

3 units, alternate years, not given this year

**HUMBIO 27. Traditional Chinese Medicine**

The philosophy and history behind traditional Chinese medicine. Concepts such as Qi, Yin/Yang, meridians, Chinese organs, and the 5 elements. How these concepts are applied through techniques such as acupuncture, herbal medicine, Qi gong, and massage. How traditional Chinese medicine is understood from a scientific standpoint. Political and socioeconomic implications. Observation of an acupuncturist. Readings on the integration of Eastern and Western medicine and on traditional Chinese medicine.

1 unit, Spr (Golianu, B)

**HUMBIO 82A. Qualitative Research Methodology**

Goal is to develop knowledge and skills for designing and conducting qualitative research studies including purposes, conceptual contexts, research questions, methods, validity issues, and interactions among these facets. Each student designs a qualitative research study.

3 units, Win (Wolf, J), Spr (Wolf, J)

**HUMBIO 82B. Advanced Data Analysis in Qualitative Research**

For students writing up their own qualitative research. Students prepare a complete draft presenting their own qualitative research study including results, with reports drafted section by section, week by week. Class provides feedback, guidance, support.

3 units, Aut (Wolf, J)

**HUMBIO 82Q. The Omnivore's Dilemma - Or Is It?**

(S,Sem) Stanford Introductory Seminar. The omnivore's dilemma-making the right food choices from the vast number possible. The health implications of our food choices. Why we make these choices- the positive and negative influences of the food industry, research in nutritional science, and public health policies and the resulting confusion about what we should eat. Discussion-based class with readings including In Defense of Food by M. Pollan and primary reference materials. Introduction to the scientific literature in human nutrition.

3 units, Aut (Endemann, G)

**HUMBIO 87Q. Women and Aging**

(S,Sem) (Same as MED 87Q) Stanford Introductory Seminar. Preference to sophomores. Biology, clinical issues, social and health policies of aging; relationships, lifestyles, and sexuality; wise women and grandmothers. Sources include scientific articles, essays, poetry, art, and film. Service-learning experience with older women. Service Learning Course (certified by Haas Center). GER:EC-Gender

5 units, Spr (Winograd, C)

**HUMBIO 90Q. Contemporary Issues in Human Experimentation**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. The guiding principles currently used to protect human subjects in terms of informed consent and protection of privacy; ethical issues relating to compensatory mechanisms for inherent risks; historical perspective and the development of the current mechanisms to safeguard the privacy and integrity of the individual; examples of use/abuse of human experimentation during medieval, Nazi, and modern times. Guest speakers currently performing human experiments or involved in approving such experimentation.

3 units, Aut (Constantinou, C)

**HUMBIO 91Q. Neuroethology: The Neural Control of Behavior**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Animal behavior offers insights about evolutionary adaptations. The origins of the study of animal behavior and its development to the present. Discussion of original research papers. The use and misuse of parallels between animal and human behavior. Possible field trip to observe animals in their natural habitat. GER: DB-NatSci

3 units, Aut (Fernald, R)

**HUMBIO 96Q. Injustice, Advocacy and Courage: The Path of Everyday Heroes**

(S,Sem) Stanford Introductory Seminar. This course will study the paradigms of people of courage, action and energy who have fought against injustice by advocating for causes against great odds and at personal risk. The focus will be on everyday people who have taken action, often at great personal risk, not for ambition, but because of their convictions and steadfast commitment to their

beliefs.

3 units, Win (Abrams, W)

**HUMBIO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine**

(S,Sem) (Same as ORTHO 97Q) Stanford Introductory Seminar. Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.

3 units, Aut (Matheson, G), Win (Matheson, G), Spr (Matheson, G)

**HUMBIO 99Q. Becoming a Doctor: Readings from Medical School, Medical Training, Medical Practice**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. For students considering medicine as a career. Goal is to acquaint students with medical school, training in medicine and surgery, and the practice of medicine and surgery. Topics include: how to pick a medical school and a residency; how medicine affects family life, especially children; the differences between surgical and medical specialties; the advantages and disadvantages among academic/teaching, pure research, group practice, HMO, hospital staff, or private practice; malpractice concerns; and financial considerations.

3 units, Aut (Zaroff, L)

**HUMBIO 111. Human Dimensions of Global Environmental Change: Resilience, Vulnerability, and Environmental Justice**

(Same as ANTHRO 173) The complexity of social and political issues surrounding global environmental change. Emphasis is on synergies precipitated by human-induced climatic change. Case studies and scenarios to explore the vulnerability and resilience in households, communities, regions, and nationstates most affected by extreme weather conditions. Their concerns, livelihood changes, and diverse responses of rural smallholders, indigenous communities, the state, and local and regional migrants. Central theme is environmental justice.

3 units, not given this year

**HUMBIO 112. Conservation Biology**

(Same as BIO 144) Principles and application of the science of preserving biological diversity. Topics: sources of endangerment of diversity; the Endangered Species Act; conservation concepts and techniques at the population, community, and landscape levels; reserve design and management; conflict mediation. 4 units if taken with a field trip and discussion component. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. GER: DB-NatSci

3-4 units, Win (Boggs, C; Launer, A)

**HUMBIO 113. The Biologies of Humans and Plants**

The biological interdependence of humans and plants, particularly the ways in which people have imposed selection pressures and ecological change on one another. Topics include: evolution and basic plant structure; plant characteristics and genetic variants allowing domestication; effects of plant domestication on human biology; plants in traditional and contemporary diets; and human influences on plant biology through genetic manipulation and environmental change. Class meetings center on discussing journal articles.

3 units, Aut (Preston, K)

**HUMBIO 114. Environmental Change and Emerging Infectious Diseases**

(Same as ANTHRO 177, ANTHRO 277) The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV. GER:DB-SocSci

3-5 units, Aut (Durham, W; Jones, J)

**HUMBIO 116. Controlling Climate Change in the 21st Century**

(Same as EARTHSYS 147, EARTHSYS 247) Global climate change science, impacts, and response strategies. Topics: scientific understanding of the climate system; modeling future climate change; global and regional climate impacts and vulnerability; mitigation and adaptation approaches; the international climate policy challenge; and decarbonization of energy and transportation systems. GER: DB-NatSci

3 units, not given this year

**HUMBIO 117. Conservation Medicine in Practice**

(Same as ANTHRO 117A) Examination of the interconnectedness of the environment and human and animal health. Investigation of the 'One World-One Health' paradigm, by examining issues such as climate change and human health, ecological perturbation and infectious diseases, and the importance of new conceptual approaches to combat disease emergence and spread. Seminars, from experts working in government, NGOs, public health, medicine and academia, will emphasize the importance of interdisciplinary approaches (medicine, epidemiology, anthropology, ecology, environmental science) in understanding health scenarios, and also upon the importance of using science and policy to improve public health.

4 units, Spr (Salkeld, D)

**HUMBIO 118. Theory of Ecological and Environmental Anthropology**

(Same as ANTHRO 90C) Dynamics of culturally inherited human behavior and its relationship to social and physical environments. Topics include a history of ecological approaches in anthropology, subsistence ecology, sharing, risk management, territoriality, warfare, and resource conservation and management. Case studies from Australia, Melanesia, Africa, and S. America. GER:DB-SocSci

5 units, Win (Bird, D)

**HUMBIO 119. Demography: Health, Development, Environment**

(Same as BIO 102) Demographic methods and their application to understanding and projecting changes in human infant, child, and adult mortality and health, fertility, population, sex ratios, and demographic transitions. Progress in human development, capabilities, and freedoms. Relationships between population and environment. Prerequisites: numeracy and basic statistics; Biology or Human Biology core; or consent of instructor. GER:DB-SocSci

3 units, Spr (Tuljapurkar, S)

**HUMBIO 120. Health Care in America: An Introduction to U.S. Health Policy**

Health policy and health care delivery from a historical and a current policy perspective. Introduces cost, quality, and access as measures of health system performance. Considers institutional aspects of health care reform.

4 units, Aut (Barr, D)

**HUMBIO 120A. AMERICAN HEALTH POLICY**

Issues in health care reform and the policy making process, the evolution of current systems, and theories underlying efforts for change. The national search for solutions to the problems of the uninsured, and the feasibility, options, and ramifications of alternative proposals for health care reform. Student presentations. Prerequisite: Human Biology core or equivalent, Human Biology 120, or consent of instructor.

3 units, Spr (Barr, D)

**HUMBIO 121. Critical Issues in Child Health**

Integrated picture of the physical and psychosocial health factors that result in a healthy child building on principles taught in the Human Biology core. Students apply basic human physiology to the physiology of the child to develop perspective on global pediatric health challenges and how the cultural context influences and defines the child living within it.

4 units, Aut (Adam, M), Spr (Adam, M)

**HUMBIO 121E. Ethnicity and Medicine**

(Same as FAMMED 244) Weekly lecture series. Linguistic, social class, and cultural factors that impact patient care. Culturally sensitive health care services and contemporary research issues involving minority and underserved populations. Topics include health care inequities and medical practices of African Americans,

Asians, Latinos, Native Americans, immigrants, and refugees in both urban and rural settings. Only students taking the course for 3 units may earn a letter grade.

*1-3 units, Spr (Garcia, R)*

**HUMBIO 122. Beyond Health Care: Seeking Health in Society** (Same as PEDS 222) Available evidence at the national and cross-country level linking social welfare interventions and health outcomes. If and how non-health programs and policies could have an impact on positive health outcomes. Evaluation of social programs and policies that buffer the negative health impact of economic instability and unemployment among adult workers and their children. Examination of safety nets, including public health insurance, income maintenance programs, and disability insurance. Prerequisites: HUMBIO 4B or equivalent, and background in research methods and statistics.

*3 units, Aut (Rodriguez, E)*

**HUMBIO 122M. Challenges of Human Migration: Health and Health Care of Migrants and Autochthonous Populations** (Same as PEDS 212) An emerging area of inquiry. Topics include: global migration trends, health Issues/aspects of migration, healthcare and the needs of immigrants in the US, and migrants as healthcare providers: a new area of inquiry in the US. Class is structured to include: lectures lead by the instructor and possible guest speakers; seminar, discussion and case study sessions led by students.

*3 units, Spr (Rodriguez, E)*

**HUMBIO 122S. Social Class, Race, Ethnicity, and Health**

Examines health disparities in the U.S., looking at the patterns of those disparities and their root causes. Explores the intersection of lower social class and ethnic minority status in affecting health status and access to health care. Compares social and biological conceptualizations of race and ethnicity. GER:DB-SocSci, EC-AmerCul

*4 units, Win (Barr, D)*

**HUMBIO 123. Obesity in America: Clinical and Public Health Implications**

Interdisciplinary clinical, research, and policy approaches. The prevalence, predictors, and consequences of obesity and diabetes; biological and physiological mechanisms; clinical treatments including medications and surgery; and the relevance of behavioral, environmental, economic, and policy approaches to obesity prevention and control. Prerequisite: Human Biology core or equivalent, or consent of instructor.

*3-4 units, Win (Stafford, R; Rosas, L)*

**HUMBIO 124. Fat Nutrition and Current Health Concerns**

Relationships between dietary fats and heart disease, cancer, obesity, diabetes, and fitness. Proposed benefits of omega-3 fats and antioxidants. Historical and economic influences on fat nutrition. Prerequisite: 3A; pre- or corequisite: 4A; preference to students who have completed 4A. Recommended: 130.

*4 units, Spr (Endemann, G)*

**HUMBIO 125. Current Controversies in Women's Health**

(Same as OBGYN 256) Interdisciplinary. Focus is on the U.S. Topics include: health research; bioethical, legal, and policy issues; scientific and cultural perspectives; social influences; environmental and lifestyle effects on health; and issues related to special populations. Guest lecturers; student debates. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER:EC-Gender

*2-3 units, Spr (Jacobson, M; Stefanick, M)*

**HUMBIO 126. Promoting Health Over the Life Course: Multidisciplinary Perspectives**

Disease prevention and health promotion topics pertinent to different stages of the life span emphasizing healthy lifestyle and reducing risk factors in both individuals and communities. Focus is on scientific investigation, the application of behavioral science to risk reduction strategies, and the importance of health promotion as a social and economic imperative. Topics include: epidemiology of chronic diseases; social determinants of health, behavior change; obesity, nutrition, and stress; young adult, mid-life and aging health issues; health care delivery and public health system; workplace wellness programs; and environmental and international issues. Prerequisite: Human Biology core or equivalent, or consent of instructor.

*3 units, Aut (Stefanick, M; Alles, W)*

**HUMBIO 127A. Community Health: Assessment and Planning I**

Major determinants of health in a community. Working with community partners to identify health issues and plan programs and policies to prevent disease and promote health. Service learning component involving students in community health assessment techniques. Final grade given upon completion of HUMBIO 127B. Service Learning Course (certified by Haas Center). Prerequisite: 4B or equivalent, or consent of instructor.

*4 units, alternate years, not given this year*

**HUMBIO 127B. Community Health: Assessment and Planning II**

Continuation of 127A. Service learning course with emphasis on conducting community health assessment and planning projects in collaboration with community-based organizations. Service Learning Course (certified by Haas Center). Prerequisite: 4B or equivalent, 127A, or consent of instructor.

*4 units, alternate years, not given this year*

**HUMBIO 128. Community Health Psychology**

(Same as PSYCH 101) Social ecological perspective on health emphasizing how individual health behavior is shaped by social forces. Topics include: biobehavioral factors in health; health behavior change; community health promotion; and psychological aspects of illness, patient care, and chronic disease management. Prerequisites: HUMBIO 3B or PSYCH 1, or equivalent.

*4 units, Win (Heaney, C)*

**HUMBIO 129. Critical Issues in International Women's Health**

Women's lives, from childhood through adolescence, reproductive years, and aging. Economic, social, and human rights factors, and the importance of women's capacities to have good health and manage their lives in the face of societal pressures and obstacles. Emphasis is on life or death issues of women's health that depend on their capacity to negotiate or feel empowered, including maternal mortality, violence, HIV/AIDS, reproductive health, and sex trafficking. Organizations addressing these issues. A requirement of this class is participation in public blogs. Prerequisites: Human Biology core or equivalent or consent of instructor. GER:EC-Gender

*4 units, Aut (Murray, A), Win (Murray, A)*

**HUMBIO 129P. International Health Policy: Comparative Health Care Systems**

Together we will learn how six advanced, capitalist countries developed near-universal health care systems, and how they have been coping with the pressures of costs, aging, and chronicity. My perspective is ironic and anthropological. Each is a tribal nation with deeply held convictions about justice and rationing, dark moments of history, rhetorics, and actual organization & financing of services, not unlike the 7th tribal nation that surrounds and frames our study. These days, countries who outperform the U.S. ironically strain to be more American without compromising equity, efficiency, and budget limits.

*3 units, Aut (Light, D)*

**HUMBIO 129S. Global Public Health**

The class is an introduction to the fields of international public health and global medicine. It focuses on resource poor areas of the world and explores major global health problems and their relation to policy, economic development and human rights. The course is intended for students interested in global health, development studies, or international relations, and provides opportunities for in-depth discussion and interaction with experts in the field.

*4 units, Win (Wise, P)*

**HUMBIO 130. Human Nutrition**

The study of food, and the nutrients and substances therein. Their action, interaction, and balance in relation to health and disease. Emphasis is on the biological, chemical, and physiological processes by which humans ingest, digest, absorb, transport, utilize, and excrete food. Dietary composition and individual choices are discussed in relationship to the food supply, and to population and cultural, race, ethnic, religious, and social economic diversity. The relationships between nutrition and disease; ethnic diets; vegetarianism; nutritional deficiencies;

nutritional supplementation; phytochemicals. Prerequisite: Human Biology core or consent of instructor.

4 units, Spr (Gardner, C)

### **HUMBIO 132. Functional Anatomy of Exercise**

Interdisciplinary: physiology, pathology, and biomechanics. Anatomy of the body's major joints in the context of exercise and movement emphasizing adaptations that occur with intensity and nature of exercise, age, and disease. Students will work in cooperative groups in the Stanford Human Performance Lab to conduct projects and experiments relating to biomechanics, exercise physiology, and anatomy of the athlete. Enrollment limited to 40. Prerequisites: HumBio 139 or consent of instructor.

4 units, Spr (Garza, D)

### **HUMBIO 133. Human Physiology**

(Same as BIO 112, BIO 212) The functioning of organ systems emphasizing mechanisms of control and regulation. Topics: structure and function of endocrine and central nervous systems, cardiovascular physiology, respiration, salt and water balance, exercise, and gastrointestinal physiology. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology or Human Biology core. GER: DB-NatSci

4 units, Win (Garza, D)

### **HUMBIO 135. Exercise Physiology**

How body systems respond to the stress of acute exercise and adapt to chronic exercise training. How the cardiovascular system adapts to optimize oxygen delivery and utilization, how muscles generate force and hypertrophy in response to training, how metabolic/biochemical pathways are regulated to support the increased energy demand of exercise. Theories on the causes of fatigue and muscle soreness, and on what limits human performance. Applied topics such as the effects of aging, gender, and environmental conditions (high altitude, heat, cold) on exercise capacity will also be discussed. Prerequisite: Human Biology core, Biology core, or equivalent, or consent of instructor.

4 units, Aut (Friedlander, A)

### **HUMBIO 135S. Applied Topics in Exercise Physiology and Metabolism**

Focus on scientific research related to exercise physiology, sports performance, impacts of aging and environmental physiology. Discussions of controversial topics in physiology and interpretation of conflicting data. Student presentations. Summary paper. A requirement of this class is participation in public blogs. Enrollment limited to 10. If class is full, contact instructor for application. Prerequisites: HB135 or consent of instructor.

3 units, Spr (Friedlander, A)

### **HUMBIO 139. Sports Medicine**

Sports, exercise, health, and medicine throughout the human performance continuum. Exercise as therapy; injuries and illnesses that result from sports and exercise; and the use of technology in modern sports science. Sources include physiology, nutrition, and biomechanics. Medical problems exacerbated or caused by exercise and sport; maximizing performance in elite athletes; and population-based issues such as exercise and its relationship to health, drugs in sport, and aging. Prerequisite: Biology or Human Biology core, or consent of instructor. GER: DB-NatSci

4 units, Aut (Garza, D)

### **HUMBIO 140. Sex Differences in Human Physiology and Disease**

(Same as OBGYN 240, MED 240) Chromosomal and hormonal influences on cells, tissues, and organs that underlie the development of reproductive organs and sexual dimorphism of the neuroendocrine system. Effects of endogenous and exogenous sex hormones and environmental factors that differ between men and women on the musculoskeletal, neurological, cardiovascular, and immunological systems over the lifecourse, from conception to puberty, through reproductive phases (including changes during the menstrual cycle up to and beyond menopause in women and with aging in men). Transgender health issues. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor GER:EC-Gender

2-3 units, Win (Stefanick, M)

### **HUMBIO 142. Adolescent Development**

Underlying changes and their consequences in everyday functioning. Physical, cognitive, social, and sexual development;

how these changes influence the emerging sense of identity, autonomy, and intimacy. Contexts in which adolescents move such as family, friends and peers, school, and workplace. Focus is on normal development of boys and girls; attention to problem outcomes including eating disorders, depression, and teen pregnancy. Prerequisite: 3B or PSYCH 1, or consent of instructor.

4 units, NEXTYEAR

### **HUMBIO 142M. Special Topics in Adolescent Mental Health**

Includes the study of aspects of common disorders seen in adolescent populations, such as prevalence, developmental course, gender differences, theoretical explanations, and therapeutic interventions. Topics will include mood/anxiety disorders, eating disorders, learning disabilities and ADHD, sexual risk behaviors, developmental disorders, substance abuse, and self-harm. Goals of this course include getting students to think critically about the unique mental health needs of adolescents, collaborating on devising ways to improve the way our society meets those needs, and strengthening writing and communication skills applicable to this area of inquiry.

4 units, Aut (Medoff, L), alternate years, not given next year

### **HUMBIO 143. Adolescent Sexuality**

Developmental perspective. Issues related to scientific, historical, and cultural perceptions; social influences on sexual development; sexual risk; and the limitations and future directions of research. Sexual identity and behavior, sexually transmitted diseases including HIV, pregnancy, abortion, gay and lesbian youth, sex education and condom availability in schools, mass media, exploitative sexual activity, and difficulties and limitations in studying adolescent sexuality. Legal and policy issues, gender differences, and international and historical trends. Prerequisite: Human Biology core or equivalent, or consent of instructor.

4 units, Win (Medoff, L)

### **HUMBIO 144. Boys' Psychosocial Development**

(Same as EDUC 143) From early childhood through adolescence. Emphasis is on how boys' lives and experiences are embedded within their interpersonal relationships and social and cultural contexts. Interdisciplinary approach including perspectives from fields such as psychology, sociology, anthropology, family studies, and education. Prerequisite: Human Biology core, or Developmental Psychology, or consent of instructor. GER:EC-Gender

4 units, Spr (Chu, J)

### **HUMBIO 145L. The Biology and Evolution of Language**

(Same as ANTHRO 171, ANTHRO 271) Lecture course surveying the biology, linguistic functions, and evolution of the organs of speech and speech centers in the brain, language in animals and humans, the evolution of language itself, and the roles of innateness vs. culture in language. Suitable both for general education and as preparation for further studies in anthropology, biology, linguistics, medicine, psychology, and speech & language therapy. Anthropology concentration: CS, EE. No prerequisites. GER: DB-NatSci

4-5 units, Win (Fox, J)

### **HUMBIO 146. Culture and Madness: Anthropological Approaches to Psychiatric Illness**

(Same as ANTHRO 181, ANTHRO 281) Interdisciplinary. Culture and social context on the identification, course, and outcome of psychiatric illness. What is known from psychiatry about the nature of illness as a biomedical process and from anthropology about the life course of illness within particular settings. Prerequisite: Human Biology core or equivalent or consent of instructor.

3-5 units, Aut (Luhmann, T)

### **HUMBIO 146D. Developmental Disabilities: From Biology to Policy**

(Same as PEDS 246) Changes in science and societal attitudes have resulted in an increased prevalence of individuals with disabilities in our communities. This course focuses on Down syndrome, cerebral palsy, Fragile X, and autism. Topics include medical and social definitions of disability; the impact of attitudes, beliefs, and values; advances in biological sciences that may lead to novel therapies to improve functioning; and federal policies, laws, and regulations such as IDEA that increase opportunities for community participation. A field experience complements

classroom discussion. Prerequisite: HUMBIO core or equivalent, and consent of instructor.

3 units, Win (Feldman, H)

#### **HUMBIO 148. Kinship and Marriage**

The course compares selected societies in Africa, Asia, and South Asia with the aim of discovering the nature of human kinship systems. GER:DB-SocSci, EC-Gender

4 units, Win (Wolf, A)

#### **HUMBIO 148W. Women, Fertility, and Work**

(Same as ANTHRO 151, ANTHRO 251) How do choices relating to bearing, nursing, and raising children influence women's participation in the labor force? Cultural, demographic, and evolutionary explanations, using cross-cultural case studies. Emphasis is on understanding fertility and work in light of the options available to women at particular times and places. GER:DB-SocSci, EC-Gender

5 units, not given this year

#### **HUMBIO 149. Psychological and Educational Resilience Among Children and Youth**

(Same as EDUC 256) Theoretical, methodological, and empirical issues pertaining to the psychological and educational resilience of children and adolescents. Overview of the resilience framework, including current terminology and conceptual and measurement issues. Adaptive systems that enable some children to achieve successful adaptation despite high levels of adversity exposure. How resilience can be studied across multiple levels of analysis, ranging from cell to society. Individual, family, school, and community risk and protective factors that influence children's development and adaptation. Intervention programs designed to foster resilient adaptation in disadvantaged children's populations.

4 units, not given this year

#### **HUMBIO 149L. Longevity**

(Same as NENS 202, PSYCH 102) Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists. GER:DB-SocSci

4 units, Win (Carstensen, L.; Rando, T)

#### **HUMBIO 150A. Assisted Reproductive Technologies**

(Same as DBIO 202, OBGYN 202) Primary and current literature in basic and clinical science aspects of assisted reproductive technologies (ART), and demonstrations of current ART techniques including in vitro fertilization and embryo culture, and micromanipulation procedures such as intracytoplasmic sperm injection and embryo biopsy and cryopreservation. Class only may be taken for 1 unit. 2 units includes papers and attendance at clinical demonstrations. 3 units includes a term paper. Recommended: DBIO 201, or consent of instructors.

1-3 units, Win (Staff)

#### **HUMBIO 151. Introduction to Epidemiology**

Principles of epidemiology: the distribution and determinants of disease; the control of health problems; and the medical detective work required to understand disease outbreaks. Case studies from developed and developing countries to explore the use of epidemiological techniques in describing disease dynamics of human, emerging and zoonotic (animal to human) diseases such as SARS, plague, HIV, and influenza; the impacts of changes in policy, law, and behavior on disease control and eradication, such as hepatitis vaccination; and modern challenges in epidemiology such as global disease transmission, environmental change, and bioterrorism threats.

4 units, Aut (Salkeld, D)

#### **HUMBIO 152. Viral Lifestyles**

Contemporary topics related to microorganism. Relevance of microorganisms to disciplines beyond molecular biology and medicine. Public health implications of human/viral interactions, and the human behaviors that bring about such interactions. The ecological role played by viruses and their role in environmental health. Prerequisite: familiarity with biological systems, evolutionary biology, and microbiology.

3 units, not given this year

#### **HUMBIO 153. Parasites and Pestilence: Infectious Public Health Challenges**

Parasitic and other pestilence of public health importance.

Pathogenesis, clinical syndromes, complex life cycles, and the interplay among environment, vectors, hosts, and reservoirs in historical context. Public health policy initiatives aimed at halting disease transmission. World Health Organization tropical disease targets including river blindness, sleeping sickness, leishmaniasis, schistosomiasis, mycobacterial disease (tuberculosis and leprosy), malaria, toxoplasmosis, dracunculiasis, and intestinal helminthes. Guest lecturers with expertise in disease control. Prerequisite: Human Biology core or equivalent, or consent of instructor.

4 units, Win (Smith, D)

#### **HUMBIO 154. Cancer Epidemiology**

Epidemiological methods relevant to human research in cancer. The concepts of risk; case control, cohort, and cross-sectional studies; clinical trials; bias; confounding; interaction; screening; and causal inference. Social, political, economic, and ethical controversies surrounding cancer screening, prevention, and research. Prerequisite: Human Biology core or equivalent, or consent of instructor.

4 units, Win (Fisher, P)

#### **HUMBIO 155B. The Vaccine Revolution**

(Same as MI 115B) Advanced seminar. Human aspects of viral disease, focusing on recent discoveries in vaccine development and emerging infections. Journal club format: students choose articles from primary scientific literature, write formal summaries, and synthesize them into a literature review. Emphasis is on analysis, experimental design, and interpretation of data. Oral presentations. Enrollment limited to 10. Prerequisites: HUMBIO 155H, MI 155V.

6 units, Aut (Siegel, R)

#### **HUMBIO 155H. Humans and Viruses I**

(Same as MI 155H) Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis is on host pathogen interactions and policy issues. Topics: polio and vaccination, smallpox and eradication, yellow fever and history, influenza and genomic diversity, rubella and childhood infections, adenovirus and viral morphology, ebola and emerging infection, lassa fever and immune response.

6 units, Aut (Siegel, R)

#### **HUMBIO 156. Global HIV/AIDS**

(Same as MED 256) Public health, policy, and research issues. Identify resources at Stanford, and from government, NGOs, and pharmaceutical, advocacy, and international organizations. Sources include biomedical, social, and behavioral sciences. Emphasis on student projects which feature methodologies in the development and design of Operational Research and Implementation Science in AIDS/TB and Malaria in response to PEPFAR and Global Fund programs. Guest lectures. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER: DB-NatSci, EC-GlobalCom

3 units, Aut (Katzenstein, D)

#### **HUMBIO 156A. Human Developmental Biology and Medicine**

(Same as DBIO 156) The biological, medical, and social aspects of normal and abnormal human development. Topics: in vitro fertilization and embryo transfer; gene and cell therapy; gametogenesis; pattern formation in the nervous system and limb development; gene and grand multiple pregnancies; prematurity, in utero effects of teratogens; sex determination and differentiation; growth control; gigantism and dwarfism; neural tube defects; cardiac morphogenesis; progress in the developmental biology of humans. Limited enrollment. Prerequisites: Human Biology or Biology core, or consent of instructor.

3-4 units, NEXTYEAR

#### **HUMBIO 157. The Biology of Stem Cells**

(Same as DBIO 257) The role of stem cells in human development and potential for treating disease. Guest lectures by biologists, ethicists, and legal scholars. Prerequisites: 2A,B, or consent of instructor.

3 units, not given this year

#### **HUMBIO 158. The Human Genome and Disease**

(Same as BIO 109A, BIO 209A) The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications.

Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. Students with a major, minor or cotermin in Biology: 109A/209A or 109B/209B may count toward degree program but not both. GER: DB-NatSci  
3 units, Win (Heller, R)

**HUMBIO 158G. Genomics, Bioinformatics and Medicine**

(Same as BIOC 158, BIOC 258) Molecular basis of inherited human disease. Diagnostics approaches: simple Mendelian diseases and complex, multifactorial diseases. Genomics: functional genomics, epigenetics, gene expression, SNPs, copy number and other structural genomic variations involved in disease. Novel therapeutic methods: stem cell therapy, gene therapy and drug developments that depend on the knowledge of genomics. Personal genomics, pharmacogenomics, clinical genomics and their role in the future of preventive medicine. Prerequisites: BIO 41 or HUMBIO 2A or consent of instructor. Those with credit in BIOC 118 not eligible to enroll. Course webpage: <http://biochem158.stanford.edu/>

4 units, Aut (Brutlag, D)

**HUMBIO 159. Genes and Environment in Disease Causation: Implications for Medicine and Public Health**

(Same as HRP 238) The historical, contemporary, and future research and practice among genetics, epidemiology, clinical medicine, and public health as a source of insight for medicine and public health. Genetic and environmental contributions to multifactorial diseases; multidisciplinary approach to enhancing detection and diagnosis. The impact of the Human Genome Project on analysis of cardiovascular and neurological diseases, and cancer. Ethical and social issues in the use of genetic information. Prerequisite: basic course in genetics; for undergraduates, Human Biology core or equivalent or consent of instructor.

2-3 units, not given this year

**HUMBIO 160. Human Behavioral Biology**

(Same as BIO 150, BIO 250) Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness. GER: DB-NatSci

5 units, Spr (Sapolsky, R), alternate years, not given next year

**HUMBIO 161. The Neurobiology of Sleep**

(Same as BIO 149, BIO 249) Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16. GER: DB-NatSci

4 units, Win (Heller, C), alternate years, not given next year

**HUMBIO 162. Clinical Neuroscience in Women's Health**

Mental health from the perspectives of neuroscience, psychology, human physiology, and feminist studies. Major depression, bipolar, and obsessive compulsive disorders; how the female reproductive system affects the clinical presentation and course of these disorders. Eating disorders, substance abuse and dependence, and sexual trauma within a biopsychosocial model. Pharmacologic and therapeutic treatment of illnesses. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER:EC-Gender

4 units, not given this year

**HUMBIO 163. Neural Systems and Behavior**

(Same as BIO 163, BIO 263) The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: BIO 42, HUMBIO 4A. GER: DB-NatSci

4 units, Aut (Fernald, R), alternate years, not given next year

**HUMBIO 166. Food and Society: Exploring Eating Behaviors in Social, Environmental, and Policy Context**

The class examines the array of forces that affect the foods human beings eat, and when, where, and how we eat them, including

human labor, agriculture, environmental sustainability, politics, animal rights/welfare, ethics, policy, culture, economics, business, law, trade, and ideology, and psychology. The class addresses the impact of current policies and actions that might be taken to improve human nutrition and health; macro-scale influences on food, nutrition, and eating behavior.

4 units, Win (Robinson, T; Gardner, C)

**HUMBIO 167. The Art of Vision**

This course concerns eyes and art. It asks how eyes are built, how they process visual information, and how they are affected by diseases that are major problems in our society. These topics are illustrated through fine art and famous artists, and we explore the implications of both normal and abnormal vision for art. There are short diversions into animal eyes and the role of vision in music, literature, and sports. GER: DB-NatSci

3 units, Win (Marmor, M)

**HUMBIO 170. Justice, Policy, and Science**

The role of science in civil rights, justice, policy, criminal justice, evidence, education, and disabled rights.

5 units, NEXTYEAR

**HUMBIO 171. The Death Penalty: Human Biology, Law, and Policy**

Combines academic study with student participation in forensic research and case investigation, including DNA evidence, psychological and physiological development, mental and physical disabilities, and witness interviews. The philosophy, structure, and application of capital punishment in the U.S. Goal is to examine and challenge the issues involved in the death penalty from the perspective of involvement in a real case. Course not taught from a preconceived belief or political or philosophical agenda except to involve students in an intellectual challenge of policy and philosophy. Prerequisite: Human Biology core or equivalent, or consent of instructor.

3 units, Spr (Abrams, W)

**HUMBIO 172B. Children, Youth, and the Law**

How the legal rights of children and adolescents in America are defined, protected, and enforced through the legal process within the context of their developmental needs and competing societal interests. Topics: origins and definitions of children's rights; adoption; custody; the juvenile justice system; education; informed consent; health care; protection from harm and child welfare; due process; and privacy and freedom of expression. Interactive, using hypotheticals for discussion and analysis. A and B alternate annually; students may take one or both. Prerequisite: Human Biology core or equivalent, or consent of instructor.

5 units, Aut (Abrams, W)

**HUMBIO 173. Science, Innovation and the Law**

The interaction of science, business and law: how scientific ideas are protected by law; the rights of those who invent, develop, and finance scientific discovery; and how ideas are commercialized and brought to market. What kinds of research, discovery, and innovation are protected; who has rights that can be protected; what kinds of rights can be protected, and the kinds of protections that apply; how inventions are commercialized; and the success and failure of businesses based on scientific discovery. Prerequisite: Human Biology core or equivalent, or consent of instructor.

3 units, NEXTYEAR

**HUMBIO 174. Foundations of Bioethics**

Classic articles, legal cases, and foundational concepts. Theoretical approaches derived from philosophy. The ethics of medicine and research on human subjects, assisted reproductive technologies, genetics, cloning, and stem cell research. Ethical issues at the end of life. Prerequisite: Human Biology core or equivalent, or consent of instructor. GER:EC-EthicReas

3 units, Win (Magnus, D)

**HUMBIO 175. Health Care as Seen Through Medical History, Literature, and the Arts**

The differences between disease as pathology and as the patient's experience. Topics include: patient-doctor relationships; medical technology; the changing focus on illness; gender issues; love, sex, and illness; mental illness; sick children; and death and dying. Limited enrollment.

3 units, Aut (Zaroff, L)

**HUMBIO 175S. Novels and Theater of Illness**

Illness and disease through novels and plays by authors including Shakespeare, Miller, Sophocles, Hemingway, and Camus. How sickness involves the patient, family, community, and state. Limited enrollment.

3 units, Spr (Zaroff, L)

**HUMBIO 178. Ethics and Politics of Public Service**

(Same as CSRE 178, ETHICSOC 133, PHIL 175A, PHIL 275A, POLISCI 133) Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. GER:DB-SocSci

5 units, Win (Mitchell, T)

**HUMBIO 179. Spirituality and Healing**

(Same as ANTHRO 115) This course considers the puzzle of symbolic healing. How have societies without the resources of modern medicine approached healing? Why do these rituals have common features around the world? We explore shamanism, spirit possession, prayer, and the role of placebos in modern biomedicine. Students will do ethnographic work and practical explorations along with more traditional scholarly approaches to learning.

3-5 units, not given this year

**HUMBIO 180. Human Osteology**

(Same as ANTHRO 175, ANTHRO 275) The human skeleton. Focus is on identification of fragmentary human skeletal remains. Analytical methods include forensic techniques, archaeological analysis, paleopathology, and age/sex estimation. Students work independently in the laboratory with the skeletal collection. GER:DB-NatSci

5 units, Spr (Klein, R; Codding, B)

**HUMBIO 182. Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years**

(Same as ANTHRO 18, ARCHLGY 12, EARTHSYS 21) Fossil, genetic and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. This class introduces students to the data and issues regarding human dispersal, migration and colonization of continents and islands around the world. We explore problems related to the timing and cause of colonizing events, and investigate questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and our contemporary environmental crisis. GER:DB-SocSci

3-5 units, Aut (Bird, D)

**HUMBIO 183. Astrobiology and Space Exploration**

Evolution in the context of space and time, focusing on the emergence of life in a planetary context on Earth and possibly elsewhere. The evolution of intelligence and the search for it elsewhere. The biological, psychological, sociological, and philosophical issues of human space exploration. Integrates information from astronautics, astrophysics, biochemistry, chemistry, evolutionary biology, geology, paleontology, physiology, psychology, and sociology. Guest lectures by scientists and astronauts from NASA, SETI, Stanford, and other universities. Prerequisite: two college-level science courses such as Human Biology core, or consent of instructor. GER: DB-NatSci

3-4 units, Win (Rothschild, L)

**HUMBIO 185. Vertebrate Biology**

(Same as BIOE 161) Study of structure, function, evolution and behavior of vertebrate animals. Consideration of vertebrate origins and examination of classes of vertebrates. Physiology, morphology, behaviors and evolutionary relationships are treated in each vertebrate group, as these relate to overall evolutionary trends within vertebrates. Topics: swimming behaviors in sharks and bony fishes, olfaction and vision in fishes, sex determination in amphibians, reptiles, birds and mammals, navigation in sea

turtles and birds, evolution and biomechanics of flight in pterosaurs birds and bats, vocalization in whales and birds, temperature adaptation in reptiles, birds and mammals.

3 units, Win (Porzig, E)

**HUMBIO 187. Human Diversity: A Linguistic Perspective**

(Same as ANTHRO 123A) The diversity and distribution of human language and its implications for the origin and evolution of the human species. The origin of existing languages and the people who speak them. Where did current world languages come from and how can this diversity be used to study human prehistory? Evidence from related fields such as archaeology and human genetics. Topics: the origin of the Indo-European languages, the peopling of the Americas, and evidence that all human languages share a common origin. GER:DB-SocSci, EC-GlobalCom

3 units, Spr (Ruhlen, M)

**HUMBIO 193. Research in Human Biology**

Independent research conducted under faculty supervision, in junior or senior year, normally but not necessarily in pursuit of an honors project. May be taken for a maximum 3 quarters of credit. Prerequisite: Faculty approval; application available in student services office.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

**HUMBIO 194. Honors**

Completion of the honors project, normally taken in the student's final quarter. First component: the honors thesis, a final paper providing evidence of rigorous research, fully referenced, and written in an accepted scientific style. Second component: participation in the honors symposium, including a 10-minute oral presentation followed by a brief question and answer session. Prerequisites: 193 or 199, and acceptance into the honors program.

1-10 units, Aut (Staff), Win (Staff), Spr (Staff)

**HUMBIO 197. Human Biology Internship**

Limited to and required of Human Biology majors. A supervised field, community, or lab experience of student's choosing, pre-approved by Human Biology faculty and student advisers, and initiated at least three quarters prior to graduation. Participation in a poster session on the internship experience is required during the first quarter that the student is in residence at Stanford after completion of the internship. May be repeated for credit. Prerequisite: Human Biology core.

1-4 units, Aut (Staff), Win (Boggs, C), Spr (Staff)

**HUMBIO 198. Senior Tutorial in Human Biology**

Reading for Human Biology majors in exceptional circumstances and under sponsorship of Human Biology associated faculty. Students must apply through Human Biology student services before registering. Reading list, paper, and evaluation required. May be repeated for credit.

1-5 units, Aut (Boggs, C), Win (Boggs, C), Spr (Staff)

**HUMBIO 199. Directed Reading/Special Projects**

Human Biology majors must obtain a sponsor from the Human Biology associated faculty or the Academic Council. Non-majors and students who have not declared must obtain a sponsor only from the Human Biology associated faculty. Students must complete application in student services office.

1-4 units, Aut (Staff), Win (Staff), Spr (Staff)

**HUMBIO 200. Teaching of Human Biology**

For upper division undergraduates and graduate students. Practical experience in teaching Human Biology or serving as an assistant in a lecture course. May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

## HUMANITIES AND SCIENCES (HUMSCI) COURSES

### UNDERGRADUATE COURSES IN HUMANITIES AND SCIENCES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**HUMSCI 190. Individually Designed Major Honor's Thesis**

May be repeated for credit. (Staff)

*1-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GRADUATE COURSES IN HUMANITIES AND SCIENCES**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**HUMSCI 201. Graduate Environment of Support**

Psychosocial, financial, and career issues in adapting graduate students to Stanford; how these issues relate to diversity, resources, policies, and procedures. Discussions among faculty, advanced graduate students, campus resource people, and the dean's office. (Thomas)

*1 unit, Aut (Thomas, A)*

**IBERIAN AND LATIN AMERICAN STUDIES (ILAC) COURSES****UNDERGRADUATE COURSES IN IBERIAN AND LATIN AMERICAN STUDIES**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**ILAC 101N. THE POWER OF IMAGE**

(F,Sem) Stanford Introductory Seminar. Provides critical language and tools for analyzing visual culture, specifically art by Americans of Mexican descent. Emphasis on the three central aspects of visual studies: the image, the viewer, and the social relations governing the production, distribution and consumption of images. Focus on the power of image to shape who we are and how we think, and the capacity of viewers to interpret images in ways inflected by their social positioning.

*3-5 units, Spr (Yarbro-Bejarano, Y)*

**ILAC 105N. Madness and Modernity in Cervantes' Don Quixote**

In 2002, a panel of writers from over 50 countries named Miguel de Cervantes's *Don Quixote* the most meaningful book of all time. Along with Dante's *Commedia* and Shakespeare's *Hamlet*, it was chosen by the same panel as one of the three greatest works of the Western canon. Such praise from one's peers is no small achievement for an author who spent more time in prison than in school, and it speaks to the lasting impact of a 400-year-old work aimed as much at confounding as delighting its readers. In this course, students will engage in a close reading and discussion of this modern classic, examining both its many meanings and the ways in which it works to elude meaning altogether. GER: IHUM-3

*3-5 units, Spr (Barletta, V)*

**ILAC 106N. Contemporary Latin American Literature in Translation**

(F,Sem) Stanford Introductory Seminar. What is contemporary in Latin American literature? Which books are translated into English, and why? What to make of the gap between their publication in Spanish and their reception in the United States? The course invites students to think and write about these issues in light of translation and globalization theories. Works include a representative selection of recent fiction by Aira, Bellatin, Bolano, and Vallejo, as well as films by Schroeder and Ospina. Readings in English; Spanish originals available.

*3-5 units, Win (Hoyos, H)*

**ILAC 112Q. Latin American Cities Through Literature and Film**

A study of urban issues in Latin American cities, such as Buenos Aires, Montevideo, Lima, Medellin, Quito, Mexico City, Santiago, La Paz and Sao Paulo using literary works and films, using literary works and films. Books and films by Javier Vásconez, Mario Benedetti, Sebastián Cordero, Alicia Scherson, Antonio Serrano, Gisela Kozak, Francisco Lombardi, Veronica Chen, Fernando Vallejo, Barbet Schroeder, Walter Salles, and Roman Chabaud, Santiago Roncagliolo among others.

*3-5 units, not given this year*

**ILAC 114N. Lyric Poetry**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. For students with at least two years of language preparation. Focus is on principal elements and expressive devices of lyric poetry: multi-dimensional use of language, denotation, connotation, image, metaphor, symbol, paradox, irony, meaning, idea, rhythm, and meter. Readings include the best of major poets of Spain and Latin America: Becquer, Rosalía de Castro, Ruben Dari-o, Unamuno, Antonio Machado, Garca Lorca, Neruda, and Gabriela Mistral Bilingual in English and Spanish with an emphasis on Spanish.

*3-5 units, Aut (Predmore, M)*

**ILAC 117N. Film, Nation, Latinidad**

(Same as CHICANST 117N, CSRE 117N) Examination of films from Spain, Mexico, and Latina/o USA that expand, trouble, contest, parody, or otherwise interrogate notions of national identity. Filmmakers may include Lourdes Portillo, Alejandro Gonzalez Inrritu, John Sayles, Maria Novaro, Pedro Almodvar, and Gregory Nava.

*3-4 units, not given this year*

**ILAC 118N. Slavery and Freedom, Madness and Reason in Brazil; the Fiction of Machado de Assis**

(F,Sem) Stanford Introductory Seminar. Praised by Woody Allen and Salman Rushdie as the greatest Brazilian novelist of the 19th Century, Machado de Assis (1839-1908) became a recent pop star of world literature. To Harold Bloom he is a kind of miracle, as the grandson of freed slaves in Brazil, who deserved to be included in Bloom's book *Genius: A Mosaic of One Hundred Exemplary Creative Minds*. In his texts, a paradoxical combination of guilt and innocence, jealous and love challenges the reader to make risk choices wisely. This course presents Machado de Assis masterpieces: the novels, *The Posthumous Memoirs of Bras Cubas* (1881), and *Dom Casmurro* (1900), the short novel *The Alienist* (1882) and a selection of his short stories. Key critical concepts and an overview of his reception in Brazil and in the US will support our discussions. GER: IHUM-3

*3-5 units, Spr (Librandi Rocha, M)*

**ILAC 120. Introduction to Literary and Scholarly Research**

Strategies and tactics for research and writing in the humanities; focus is on the Spanish-speaking world. How to write a research proposal; how to conduct research online and in the library; annotated bibliographies; bibliographical essays; rhetorical strategies; and common logical fallacies. (Meets Writing-in-the-Major requirement) WIM

*3-5 units, Win (Surwillo, L)*

**ILAC 121. NARRATIVES OF AFFECT**

A growing number of contemporary Latin American novels and films focus on precarious forms of life and narratives of care, beyond the disciplinary discourses of medicine and psychiatry. This course takes stock of these narratives to explore the literary dimension of care. Parting from theorizations of affect, we explore varieties of emotions, modes of care, and caring identities, as well as the emphasis on human-animal and human-plant relations. Authors and film directors may include: Mario Bellatin, Alejandro Zambra, Alan Pauls, Sergio Chejchec, Lina Meruane, Diamela Eltit, Mario Cohn, Gaston Dupratt, Lucrecia Martel. Taught in Spanish

*3-5 units, Win (Briceno, X)*

**ILAC 130. Introduction to Iberia: Cultural Perspectives**

The historical dynamics, linguistic plurality, and social complexity of the Iberian world. Topics include: empire, independence Civil war; republicanism; the crisis at the end of the century: the year 98; the civil war; dictatorships, Franco, and Salazar. Major figures include Larra, Esproceda, Bequer, Rosala de Castro, Verdaguera, Galdos, Maragall, Unamuno, Valle-Inclan, Machado, and Lorca. GER: DB-Hum

*3-5 units, Spr (Surwillo, L)*

**ILAC 131. Introduction to Latin America: Cultural Perspectives**

Major theoretical debates about the construction of Latin American identities, from the 19th century to the present. Readings by writers, poets, philosophers, and historians, including Rodo, Retamar, O'Gorman, Vasconcelos, Henrquez-Urea, Ramos, Paz, Carpentier, Lezama Lima, Borges, and Fuentes. GER: DB-Hum

3-5 units, *Win* (Librandi Rocha, M)

### ILAC 136. Modern Iberian Literatures

Survey on modern Iberian literatures (Spanish, Catalan, Basque, Galician and Portuguese) through major canonical authors. Community building, tolerance, the ethics of memory, the value of human purpose as a tool for survival are some of the issues explored in key works by Eca de Queiros, Miguel de Unamuno, García Lorca, Fernando Pessoa, Antonio Machado, Merce Rodoreda, Maria Angels Anglada, Ramon Sainzarboritoria and Manuel Rivas. SPANLANG 13 or equivalent, SPANLANG 102 Recommended GER:DB-Hum

3-5 units, *Aut* (Resina, J)

### ILAC 155. A Reader of Early Modern Spain

(Same as ILAC 255) Cervantes was an astute reader of the literature, culture, and politics of his age. This class is both a study of sixteenth and early seventeenth-century Iberia seen through Cervantes the reader and an introduction to early modern reading practices, methods of manuscript and book production, and histories of textual reception and circulation. Although readings include selections from Cervantes's works, the course examines lyric poetry, popular prose, political treatises, literary criticism, and drama from other early modern authors as well. GER:DB-Hum

3-5 units, *Spr* (Kimmel, S)

### ILAC 157. Medieval and Early Modern Iberian Literatures

This survey of the literatures and cultures of medieval and early modern Iberia covers different kinds of literary texts, including lyric and epic poetry, frame tales, Renaissance prose, and Baroque drama, as well as selections from Muslim, Jewish, and Christian philosophical and theological works. Though the focus is on close reading and analytical skills in Spanish, the class also serves as an introduction to the linguistic hodgepodge that is Iberian history from the eighth through the seventeenth century. GER:DB-Hum

3-5 units, *Aut* (Kimmel, S)

### ILAC 158. New Lat American Short Stories and Films (1980-2009): a Survey

(Same as ILAC 258, ILAC 278B) The short story is one of the most popular literary forms and in Latin America it enjoyed the double tradition of its vernacular origins and the influence of European models. Focus will be in the modern short story from the Sixties to the present with attention on works by Borges, Garro, Cortazar, Poniatowska, Fuentes, Onetti, Somers, Benedetti, Arreola, along with a parallel examination of short films, some of them adaptations of short stories. ILAC 278B approved in place of ILAC 278 or 278A.

3-5 units, *Aut* (Ruffinelli, J)

### ILAC 161. Modern Latin American Literature

From independence to the present. Topics include romantic allegories of the nation; modernism and postmodernism; avant-garde poetry; regionalism versus cosmopolitanism; indigenous and indigenist literature; magical realism and the literature of the boom; Afro-Hispanic literature; and testimonial narrative. Authors may include: Boli-var, Bello, Gomez de Avellaneda, Isaacs, Sarmiento, Machado de Assis, Dario, Marti-, Agustini, Vallejo, Huidobro, Borges, Cortizar, Neruda, Guillon, Rulfo, Ramos, Garci-a Marquez, Lispector, Bolano. GER:DB-Hum

3-5 units, *Win* (Briceno, X)

### ILAC 189A. Honors Research

Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.

5 units, *Win* (Staff)

### ILAC 189B. Honors Research

Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.

2 units, *Spr* (Staff)

### ILAC 193. The Cinema of Pedro Almodovar

Pedro Almodovar is one of the most recognizable auteur directors in the world today. His films express a hybrid and eclectic visual style and the blurring of frontiers between mass and high culture. Special attention is paid to questions of sexuality and the centering of usually marginalized characters. This course studies Pedro Almodovar's development from his directorial debut to the present,

from the shocking value of the early films to the award-winning mastery of the later ones. Prerequisite: ability to understand spoken Spanish. Readings in English. Midterm and final paper can be in English. Majors should write in Spanish. GER:DB-Hum

3-5 units, *Spr* (Resina, J)

### ILAC 193Q. Spaces and Voices of Brazil through Film

(S.Sem) (Same as PORTLANG 193Q) Stanford Introductory Seminar. The manners in which a country is perceived and defines itself is a result of many complex forces, and involves the reproduction of social relations and complex social constructions both on the part of those who live there and those who see it from a distance. The perceptions of what Brazil is and what defines the country has changed throughout times, but has conserved some clear pervasive defining traits. This course is an introduction to the history, culture, politics and artistic production of Brazil as seen through feature films, documentaries and some complementary readings. Movies include, among others, Banana is my Business, Black Orpheus, Olga, They Don't Use Black-Tie, City of God, Central Station, Gaijin, and Four Days in September-among others. In English. GER:DB-Hum, EC-GlobalCom

3-4 units, *Aut* (Wiedemann, L)

### ILAC 197. Brazilian Culture in a Comparative Latin American Perspective

Brazilian modernization and cultural dynamism in the second half of the 20th century. Concrete poetry and its relation to the construction of Brasilia, the bossa nova movement, and tropicalism. Comparative studies in the global art context. Authors include: Haroldo de Campos, Augusto de Campos, Decio Pignatari, Eugen Gomringer, Severo Sarduy, Octavio Paz, Ramón Xirau, Max Bense, and Charles Bernstein. Texts in English, Spanish, and Portuguese.

3-5 units, *not given this year*

### ILAC 199. Individual Work

Open only to students in the department, or by consent of instructor.

1-12 units, *Aut* (Staff), *Win* (Staff), *Spr* (Staff), *Sum* (Staff)

### ILAC 201. Gender, Body, Nation, & the Interpretation of Contemporary Catalan Literature & Art

The notions of gender, body, and nation are adequate interpretive tools in order to read the otherization processes that affect Catalan cultural identity as portrayed in contemporary literature and art. In this seminar we will review, in the first place, a number of critical contributions dealing with Post-Franco cultural identity construction, such as Josep-Anton Fernández's *Another Country* and his contributions to *Calçasses, gallines i maricons*, which link sexual and national subordination; Katryn Cramer's *Language, the Novelist and National Identity in Post-Franco Catalonia*, which explores the ties between language and national identity; and Stewart King and Irene Boada's essays on the possibility of using postcolonial criticism in reading the Catalan scenario. Secondly, in light of the concepts of body, gender, and nation we will analyze a number of literary and artistic productions belonging to different fields: a) prose (a selection of short stories by Carme Riera and Quim Monzó)

3-5 units, *Aut* (Pons Jaume, M)

### ILAC 204. Spanish Nationalist Discourses from Franco to Zapatero: What does 'plural Spain' mean?

(Same as HISTORY 272A) Spanish nationalism and 'patriotic affirmation' discourses existing in contemporary Spain. Since the end of Francoism, Spanish nationalism has existed in a de-articulated and diffuse way, rather as a reaction against the challenge of stateless nationalisms than as a substantive doctrine. However, since the mid-1980s there has been a recovery of Spanish nationalist discourse, often labeled as 'Constitutional patriotism', whose main point is the insistence on History as the founding basis for the legitimation of the present Spanish polity, as well as the vindication of the 1978 Constitution as the end-point of decentralization.

3-5 units, *not given this year*

### ILAC 214. Crypto-Muslim Culture in Early Modern Spain

(Same as RELIGST 220B) What is known about the secret religious practice and culture of the Moriscos, Spain's large minority community of Muslim converts to Christianity (1500-1609)? What role did their handwritten literature (largely Islamic

texts written in Castilian but copied out in Arabic script) play in the formation and maintenance of their culture? What can these Crypto-Muslim communities teach us regarding the place of Muslim culture in Western Europe today? The course will be taught in English; knowledge of Spanish and/or Arabic script is useful but not necessary.

3-5 units, not given this year

#### **ILAC 215. PORTUGAL, EMPIRE, AND ISLAM**

(Same as ILAC 278C) Focus is on literature related to Portugal's early modern empire in Muslim Africa and Asia. Readings in Portuguese. Authors include Luis de Camoes, Gomes Eanes de Zurara, Miguel de Castanhoso, Frenao Mendes Pinto, and Joao de Barros. ILAC 278C approved in place of ILAC 278 or 278A

3-5 units, Win (*Barletta, V*)

#### **ILAC 229. The work of Luis Martín Santos in Mid-Twentieth Century Spain**

(Same as COMPLIT 218) First published in 1962, *Tiempo de Silencio* is the only book that the young psychiatrist Luis Martín Santos finished during his lifetime, and, although largely overlooked (even in Spain) until the present day, one of the great European novels of the 20th century. It brings to a complex convergence the evocation of Spain's decadent and run-down post-Civil War society with high-modernist literary procedures and (an implicit parody of) phenomenological analysis.

3-5 units, not given this year

#### **ILAC 237. Viewing Modern Barcelona**

An overview of Barcelona's modern history since the 19th century expansion through the 1992 Olympics to the 21st century's challenges of globalization. At the crossroads of an active traffic of goods, people, and cultures, this cosmopolitan city in Spain is also the capital of Catalonia, home of a millennial European culture. This interdisciplinary seminar will acquaint students with salient aspects of the history of this city, its role in Spain's modernization and democratization as well as its tensions with the state. Attention will be given to city planning, the architecture of Gaudi-, Picasso's, Miro's and Dali-'s art, the politics of bilingualism and literature about the city. (Taught in English.)

3-5 units, Aut (*Resina, J*)

#### **ILAC 240E. Borges and Philosophy**

Analysis of the Argentine author's literary renditions of philosophical ideas. Topics may include: time, free will, infinitude, authorship and self, nominalism vs. realism, empiricism vs. idealism, skepticism, peripheral modernities, postmodernism, and Eastern thought. Close reading of short stories, poems, and essays from Labyrinths paired with selections by authors such as Augustine, Berkeley, James, and Lao Tzu. The course will be conducted in English; Spanish originals will be available. Satisfies the capstone seminar requirement for the major in Philosophy and Literature. GER:DB-Hum

3-5 units, not given this year

#### **ILAC 242. POETRY WORKSHOP IN SPANISH**

Latin American and Spanish poetry approached through elements of craft. Assignments are creative in nature and focus on lyric subgenres (e.g. ode, elegy, prose poetry) and formal elements of poetry (e.g. meter, rhythm, rhetorical figures, and tropes). Students write original poems over the course of the quarter. No previous experience with creative writing is required. Authors include Dari-o, Machado, Jimenez, Vallejo, Huidobro, Salinas, Pales Matos, Lorca, Alexandre, Cernuda, Neruda, Gironde. Course is offered every other year. Enrollment limited. Prerequisite: 100-level course taught in Spanish or equivalent. Enrollment limited to 10 students.

3-5 units, Spr (*Santana, C*)

#### **ILAC 247E. Magical Realism and Globalization**

Is magical realism a genre, a style, a politics, or a label for elaborate fiction from the Third World? Seminal works and their role in the 20th century. Topics include: postcolonial discourse, myth and truth, tradition versus modernity, and realism versus fantasy. Novels, plays, and short stories by García Márquez, Rushdie, and Morrison; films by Schlöndorff and Begnigni; essays by Roh and Carpentier. GER:DB-Hum

3-5 units, not given this year

#### **ILAC 250. Latin America at the End of the Cold War**

Systematic study of the cultural transformations in Latin America

before and after the fall of the Berlin Wall. Comparisons between works that respond to the defining moments of the conflict (Neruda, Cardinal) and texts that reflect on its later, residual stage. Fiction: *Sin remedio* by Antonio Caballero, *Literatura nazi en América* by Roberto Bolaño, and *Pasado Perfecto* by Leonardo Padura. Film: *Hijos de la guerra fría* by Gonzalo Justiniano. Theoretical readings by Jorge Castañeda, Michael Reid, and Jean Franco.

3-5 units, not given this year

#### **ILAC 259. Military, Intelligentsia, Las Madres of Plaza de Mayo & Tlatelolco: Film & Politics 1968-2009**

An examination of how contemporary Latin American cinema (in documentaries and feature films) has focused on several historical pockets of the Continent: the Dirty War, the Falkland Islands war, the Tlatelolco Massacre, the Vladivideos and corruption in Peru, the Disappeared, as part of the historical reconstruction of the recent past. Films: *La deuda interna*, *Rojo Amanecer*, *La historia oficial*, *Por esos ojos*, *La noche de los lápices*, *Mariposa Negra*, *Cautiva*, *Hijos/Figli* and others.

3-5 units, not given this year

#### **ILAC 262. The Literature of Elena Poniatowska**

Detailed reading of the major works of Elena Poniatowska, one of the most innovative and important Mexican women writers in the XX and XXI centuries. She has developed the testimonial journalistic genre and the literary novel as expressions of society. Readings include: *La noche de Tlatelolco* (1971) to *El tren pasa primero* (2006, Romulo Gallegos Prize) and *Leonora* (Biblioteca Breve Award, 2011). Elena Poniatowska will visit Stanford to celebrate her 80th birthday. Taught in Spanish.

3-5 units, Win (*Ruffinelli, J*)

#### **ILAC 264. VISIONS OF THE ANDES**

(Same as ILAC 364) What visions and images of the Andes circulate in Latin American literature? How are they constructed? How is their value accrued? The course explores the visual economy of the Andes in representative literary texts of the 20th century, vis-a-vis critical discourses about Andean culture. Topics: visual culture and identity, iconography and the word/image tension, nature vs. culture, debates on utopia, indigenismo, mestizaje, and hibridez. Authors may include: Pablo Neruda, Gabriela Mistral, Martí-n Chambi, Jose Carlos Mariategui, Cesar Vallejo, Jose Maria Arguedas, Mario Vargas Llosa, Raul Salmon, Aurelio Arturo.

3-5 units, Aut (*Briceno, X*)

#### **ILAC 271. Brazilian Presence: Landscape, Life and Literature**

This course explores Brazil's literature and its representation of the country's diverse regional cultures and ecology. The course offers an in-depth discussion of Brazilian society, presenting fundamental texts that portray Brazilian landscape with its diverse eco-regions, people and culture. The program includes major authors such as Euclides da Cunha and his description of the Amazon in the early 1900s; the travels of anthropologist Claude Levi-Strauss and his contact with Caduveo, Nhambiquara, Bororo and Tupi indigenous tribes; Mario de Andrade's novel, *Macunaima* and its ironical representation of Brazilian identity and miscegenation; Guimarães Rosa's short stories that show the imagery of the sertao and its people (the sertanejo culture); Milton Hatoum's novel, *The Brothers*, and its impressive portrayal of Manaus city in the 20th Century as an unstable world seen through the lens of Lebanese immigrants. These central books will be discussed together with critical essays about some i GER:EC-GlobalCom

3-5 units, Spr (*Librandi Rocha, M*)

#### **ILAC 272B. Frontiers of Iberian and Latin American Culture and History**

(Same as HISTORY 272B, HISTORY 372B, ILAC 372B) Analyzes the construction and deconstruction of communities and their internal and external frontiers in Iberia and Ibero-America from the early modern period to the early twentieth century by observing both historical and cultural artifacts (historical documents, novels, bibliography, etc.). Topics: the coming of nations, the making of state (or national) territory, the role assigned or taken on by immigrants, minorities and, in the American case, natives, and the persistence of areas now called borderlands or of groups now assigned to such (indeterminate) locations. GER:DB-SocSci

3-5 units, Aut (*Surwillo, L; Herzog, T*)

**ILAC 272E. Clarice Lispector: the Style of Ecstasy**

An exploration of the presence, both in the mystic and in the erotic sense, of the feeling of ecstasy in Clarice Lispector's texts (novels, short stories, chronicles). Ecstasy favors a non-conceptual approach to writing and reading and an effect of delight that can be only communicated by words that mimitizes music and visual arts. Theoreticians of ecstasy, eroticism and epiphany: G. Bataille, H. Cixous, Jean-Luc Nancy; Gumbrecht, Lyotard. Course taught English with readings in English and Portuguese.

3-5 units, not given this year

**ILAC 278. Senior Seminar: Early 20th Century Iberian Poets**

Major works of Antonio Machado, Juan Ramón Jiménez, and Federico García Lorca will be examined, with special emphasis on the historical context of the first three decades of the 20th century and their contributions to the development of 20th century Spanish lyric poetry. GER:DB-Hum

3-5 units, not given this year

**ILAC 278B. New Lat American Short Stories and Films (1980-2009): a Survey**

(Same as ILAC 158, ILAC 258) The short story is one of the most popular literary forms and in Latin America it enjoyed the double tradition of its vernacular origins and the influence of European models. Focus will be in the modern short story from the Sixties to the present with attention on works by Borges, Garro, Cortazar, Poniatowska, Fuentes, Onetti, Somers, Benedetti, Arreola, along with a parallel examination of short films, some of them adaptations of short stories. ILAC 278B approved in place of ILAC 278 or 278A.

3-5 units, Aut (Ruffinelli, J)

**ILAC 278C. PORTUGAL, EMPIRE, AND ISLAM**

(Same as ILAC 215) Focus is on literature related to Portugal's early modern empire in Muslim Africa and Asia. Readings in Portuguese. Authors include Luis de Camoes, Gomes Eanes de Zurara, Miguel de Castanhoso, Frenao Mendes Pinto, and Joao de Barros. ILAC 278C approved in place of ILAC 278 or 278A

3-5 units, Win (Barletta, V)

**ILAC 280. Latin@ Literature**

(Same as CHICANST 200, CSRE 200, ILAC 382) Texts by U.S. Latin@s of Mexican, Puerto Rican, Cuban, and Dominican descent. Examines how these writers' shared history of Spanish colonization and U.S. imperialism has resulted in differing representations of home and homeland, nation, diaspora, history, and memory. Explores how racialization informs the production of gendered identities as well as sexualities. Analysis of the formal conventions of fiction, poetry, drama, memoir, and film.

3-5 units, Win (Yarbro-Bejarano, Y)

**ILAC 287. QUEER RAZA**

(Same as FEMST 120) Examination of cultural representations by U.S. Latin@s that explore the following questions: How is the mutual constitution of race/sex/class/gender theorized and represented? How is desire racialized? How is racial difference produced through sex acts and what is the function of sex in racial (self)formation? How to reconcile pleasure and desire with histories of imperialism and (neo)colonialism and other structures of power? How do these texts reinforce or contest stereotypes and the ideal bodies of national identity? How do these texts produce queerness as a web of social relations?

3-5 units, Win (Yarbro-Bejarano, Y)

**ILAC 332. Race and Slavery in Nineteenth Century Spanish Empire**

An analysis of the literature written in Spain during the nineteenth and twentieth centuries dealing with the empire post 1808. Authors discussed include Blanco White, Baroja, Avellaneda, and Rusiñol, among others

3-5 units, not given this year

**GRADUATE COURSES IN IBERIAN AND LATIN AMERICAN STUDIES**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**ILAC 212. Cuban Cinema since the Revolution**

Since 1959, Cuba has developed a unique style of social, political and Cultural Revolution that has lasted 50 years, which calls for an

analysis and discussion of Cuban cinema as an expression, and a mirror of society, as well as a tool for social transformation. Films: Now! Lucia, Memories of Underdevelopment, Portrait of Teresa, and The Days of Water, Strawberry and Chocolate, among others. In the documentary genre the focus will be in films made about Ernesto Che Guevara. Taught in Spanish.

3-5 units, Win (Ruffinelli, J)

**ILAC 218. Anticlericalism in the Iberian Novel of XIX**

The rapid social and cultural changes in which 19th-century novelists wrote; the anti-clerical stance as marker of society's attempts to modernize. Why were monks and priests reviled by many Spanish novelists? How and why did they re-write Spanish history around these figures? What was the role of the church and religious men in modern society? Questions of individualism, property, and labor in novels by major Iberian prose realists. In Spanish.

3-5 units, not given this year

**ILAC 222. The Problem of Two Spains: Literature and Society in 19th-Century Spain**

Representative literary figures including Larra, Espronceda, Zorrilla, Rosalía de Castro, Bécquer, and Galdós. Modern lyric poetry and the modern realist novel against the background of Napoleonic invasions, the loss of overseas colonies, two Carlist civil wars, and frustrated attempts to establish the First Spanish Republic.

3-5 units, not given this year

**ILAC 224. Literature and the Spanish Civil War**

This course will deal with the significance of the Spanish Civil War in Iberian, European, and world history, through the literary works (poetry, theater, and novel) of major Spanish and Latin American writers. The war is anticipated in the poetry of Antonio Machado and in the theater of Garci-a Lorca, dealt with directly in the poetry of Alberti and Hernandez, and of Neruda (Chile), Vallejo (Peru), and N. Guillen (Cuba), and treated in the aftermath during the Franco dictatorship in the novels of Cela and Sender.

3-5 units, Win (Predmore, M)

**ILAC 225E. Theater, Society, and Politics in 20th-Century Spain**

Ramón del Valle-Inclán and Federico García Lorca. The avant garde nature of their major plays and their engagement with social and political issues of the times including feudalism, the emerging liberal state, women's protest, class struggle, and civil war. Symbolism, expressionism, and realism.

3-5 units, not given this year

**ILAC 239. BORGES AND TRANSLATION**

Borges's creative process and practice as seen through the lens of translation. How do Borges's texts articulate the relationships between reading, writing, and translation? Topics include authorship, fidelity, irreverence, and innovation. Readings will draw on Borges's short stories, translations, and essays. Prerequisite: 100-level course in Spanish or permission of instructor.

3-5 units, Win (Santana, C)

**ILAC 255. A Reader of Early Modern Spain**

(Same as ILAC 155) Cervantes was an astute reader of the literature, culture, and politics of his age. This class is both a study of sixteenth and early seventeenth-century Iberia seen through Cervantes the reader and an introduction to early modern reading practices, methods of manuscript and book production, and histories of textual reception and circulation. Although readings include selections from Cervantes's works, the course examines lyric poetry, popular prose, political treatises, literary criticism, and drama from other early modern authors as well.

3-5 units, Spr (Kimmel, S)

**ILAC 258. New Lat American Short Stories and Films (1980-2009): a Survey**

(Same as ILAC 158, ILAC 278B) The short story is one of the most popular literary forms and in Latin America it enjoyed the double tradition of its vernacular origins and the influence of European models. Focus will be in the modern short story from the Sixties to the present with attention on works by Borges, Garro, Cortazar, Poniatowska, Fuentes, Onetti, Somers, Benedetti, Arreola, along with a parallel examination of short films, some of them adaptations of short stories. ILAC 278B approved in place of

ILAC 278 or 278A.

3-5 units, *Aut (Ruffinelli, J)*

**ILAC 299. Individual Work**

Open to department advanced undergraduates or graduate students by consent of professor. May be repeated for credit.

1-12 units, *Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**ILAC 301. 19th Century Iberian Political Thought**

This seminar will study the main trends in Spanish political and cultural thinking in the 19th century and its reflection in literary culture. From Antonio Capmany's anti-Napoleonic *Centinela contra franceses* to the moderantismo represented by Jaume Balmaes and the conservatism of Donoso Cortes, to the federalism of Pi y Margall, the *¿Iberianism of Oliveira Martins*, the particularism of Valenti Almirall, the regeneracionismo of Joaquín Costa, and the emergence of modern nationalism with Ganivet and Unamuno. Readings will include contemporary historiographic reflections on the 19th-century consolidation of the nation state and the invention of national traditions. Taught in Spanish

3-5 units, *Win (Resina, J)*

**ILAC 313. Centers and Peripheries in Contemporary Catalan Culture**

This seminar will deal with the concepts of center and periphery in contemporary Catalan culture. We will analyze the specificity of canon-formation processes in the Catalan literary system (e.g. the contacts and frictions with the Spanish/Iberian framework or the biased reception of the North American debate on literary canon [Bloom et al.]). Centrality and periphericity will be examined in a variety of fields and artistic productions: a) geography (insularity as condition, limit and motif in Blai Bonet's novel *El mar* and in Miquel Barceló's paintings and writings); b) experimental literature (objectual and visual poetry as suburbia of the lyrical genre); and c) transmediality (Ventura Pons's *Amic/Amat* both as a film adaptation of Josep M. Benet i Jornet's *Testament* and as an independent work). This course will be taught in Spanish. Written assignments can be submitted in Catalan, English or Spanish.

3-5 units, *Aut (Pons Jaume, M)*

**ILAC 316. Realism and Surrealism in the Cinema of Luis Bunuel**

Surrealism, realism, dark comedy, film genres transformed by Spanish director, Luis Bunuel in Spain, France and Mexico during the second half of the XX century. An examination of Bunuel's work from his Surrealist beginnings (*L'Age d'Or*, *Un Chien Andalou*), subsequent realistic films in Mexico (*Los Olvidados*, *Nazarin*), and a mixture of Surrealism and Realism (*Viridiana*, *Exterminating Angel*, *Simon del Desierto*), as well his work with dark comedy (*Archibaldo de la Cruz*, *Belle de Jour*, *Le charme discret de la bourgeoisie*). In Spanish.

3-5 units, *Spr (Ruffinelli, J)*

**ILAC 319. Performance Spaces in Spanish Theater**

Students in this course will read theater works from the Spanish repertoire across several centuries with critical attention to the architectural and theoretical spaces in which they were and are performed.

3-5 units, *Win (Surwillo, L)*

**ILAC 323. Renaissance/Early Modern Seminar**

Focus is on how authors and readers from this period theorize various historical processes: the rise of European imperialism; religious conflicts and revolutions; new understandings of the self and the world; and the rise of the novel. Authors: Boccaccio, Machiavelli, Martorell, Rabelais, Camões, Cervantes, Montaigne, and Shakespeare.

3-5 units, *Win (Barletta, V)*

**ILAC 330. Josep Pla: From Journalism to Literature**

In the 1920s and 30s journalism gave the tone to a normalized Catalan culture, whose distinctive traits were a cosmopolitan outlook and a high degree of professionalism. It is in this context that the works of journalist Josep Pla grow from an underbrush of quality journalism that, long neglected, throws light on the social and political situation of the time and constitutes an unsurpassed civilizational referent for today's culture wars. Some of the journalists studied are Josep Pla, Eugeni d'Ors, Eugeni Xammar, and Gaziol. Readings in Catalan will be available in Spanish, but

students are responsible for ordering the texts in the preferred version.

3-5 units, *not given this year*

**ILAC 336. Early 20th-Century Peninsular Spanish Poetry**

Poetry in restoration Spain, 1871-1930, against the background of the democratic tradition of Spanish liberalism. Emphasis is on stylistic analysis and concepts such as the generation of 1898, modernism, Krausism, pure poetry, and symbolic systems.

3-5 units, *not given this year*

**ILAC 340. The Crowded Solitude of Juan Rulfo: his Writing, his Photography, his Children, his Legacy**

A study of Mexican writer Juan Rulfo's literary work and photography as well as the film adaptations of his work, his portrayal in documentaries authored by his son Juan Carlos Rulfo and his literary legacy among young writers who have continue his work, like Elmer Mendoza's *Cóbrase Caro* and Susana Pagano's *Y si yo fuera Susana San Juan?*

3-5 units, *not given this year*

**ILAC 344. Theorizing the Novel after 1989**

Issues of literary historiography, canon formation, and cultural relevance through a detailed study of selected works, criticism, and theory from the last two decades. Topics may include: postnationalism, cultural synchronization, fiction as commodity, revisions of dictatorship, new media ecologies, anxiety of influence, meaning-making communities, and relations to visual culture. Readings by Latin American authors: Bolaño, Vallejo, Eltit, Bellatin and Fuguet. Critical texts by Richard, Sarlo, Rancière, and Casanova.

3-5 units, *not given this year*

**ILAC 349. LITERARY THEORY**

(Same as COMPLIT 349, DLCL 349, SLAVLIT 349) Advanced survey course of key schools in literary theory, from formalism onwards. Emphasis is on the discussion of primary sources. Topics include structuralism, ideology critique, psychoanalysis, reception aesthetics, deconstruction, feminism, and post-colonialism. Readings by Barthes, Bakhtin, Benjamin, Borges, Derrida, de Man, Foucault, Freud, Iser, Lacan, Shklovsky, and Spivak, among others.

3-5 units, *Aut (Hoyos, H; Skakov, N)*

**ILAC 349. LITERARY THEORY**

(Same as COMPLIT 349, DLCL 349, SLAVLIT 349) Advanced survey course of key schools in literary theory, from formalism onwards. Emphasis is on the discussion of primary sources. Topics include structuralism, ideology critique, psychoanalysis, reception aesthetics, deconstruction, feminism, and post-colonialism. Readings by Barthes, Bakhtin, Benjamin, Borges, Derrida, de Man, Foucault, Freud, Iser, Lacan, Shklovsky, and Spivak, among others.

3-5 units, *Aut (Staff)*

**ILAC 364. VISIONS OF THE ANDES**

(Same as ILAC 264) What visions and images of the Andes circulate in Latin American literature? How are they constructed? How is their value accrued? The course explores the visual economy of the Andes in representative literary texts of the 20th century, vis-a-vis critical discourses about Andean culture. Topics: visual culture and identity, iconography and the word/image tension, nature vs. culture, debates on utopia, indigenismo, mestizaje, and hibridez. Authors may include: Pablo Neruda, Gabriela Mistral, Martí-n Chambi, Jose Carlos Mariategui, Cesar Vallejo, Jose Maria Arguedas, Mario Vargas Llosa, Raul Salmon, Aurelio Arturo.

3-5 units, *Aut (Briceno, X)*

**ILAC 369. LISTENING TO LITERATURE**

How does fictional prose dialogue and incorporate musical paradigms in its creation? How can one describe the voice of a fictional character and of a literary style? How could novels be described in analogy with musical and audition patterns? Theories of literacy and orality will be connected to the sense of hearing, aurality, and auditivity. Possible authors: Claude Levi Strauss, Derrida, Barthes, Lyotard, W. Ong, Way Chee Dimock, Carpentier, Cortazar, Rosa, Lispector, Chatwin, Italo Calvino. Readings in English, French, Spanish and Portuguese (or in translation)

3-5 units, *Win (Librandi Rocha, M)*

**ILAC 370E. Machado de Assis: Mimesis, Memory and money Machinations**

Machado de Assis's paradoxes: the greatest author of the 19th Century and his oblique and peripheral perspective. The ruins and rebuilds of memory: Memórias Póstumas de Brás Cubas and Memorial de Aires; Jealously view and its mimesis in Dom Casmurro; his short stories and Rio de Janeiro's 19th century's sociability. The economy in his chronicles. Recent critical readings and editions. Course taught English with readings in English and Portuguese.

3-5 units, not given this year

**ILAC 372B. Frontiers of Iberian and Latin American Culture and History**

(Same as HISTORY 272B, HISTORY 372B, ILAC 272B) Analyzes the construction and deconstruction of communities and their internal and external frontiers in Iberia and Ibero-America from the early modern period to the early twentieth century by observing both historical and cultural artifacts (historical documents, novels, bibliography, etc.). Topics: the coming of nations, the making of state (or national) territory, the role assigned or taken on by immigrants, minorities and, in the American case, natives, and the persistence of areas now called borderlands or of groups now assigned to such (indeterminate) locations.

3-5 units, Aut (Surwillo, L; Herzog, T)

**ILAC 380E. Critical Concepts in Chicana/o Literature**

(Same as CHICANST 201C, CSRE 201C) Interrogation of the critical discourses that have configured and reconfigured the canon of Chicana/o literature over the last thirty years. Close textual readings of primary texts, mainly narrative, within the development of Chicana/o literary and cultural criticism. Construction of narrative genealogies and foundational texts. Impact of the publication of late-nineteenth or pre-movement novels and Chicana feminist/lesbian/queer critiques. Consideration of alternative paradigms such as positioning Chicana/o literature within a U.S. Latina/o literary imaginary, and the shift of critical discourse in the field of visual art from a paradigm of resistance and affirmation to one of post Chicano.

3-5 units, not given this year

**ILAC 382. Latin@ Literature**

(Same as CHICANST 200, CSRE 200, ILAC 280) Texts by U.S. Latin@s of Mexican, Puerto Rican, Cuban, and Dominican descent. Examines how these writers' shared history of Spanish colonization and U.S. imperialism has resulted in differing representations of home and homeland, nation, diaspora, history, and memory. Explores how racialization informs the production of gendered identities as well as sexualities. Analysis of the formal conventions of fiction, poetry, drama, memoir, and film.

3-5 units, Win (Yarbro-Bejarano, Y)

**ILAC 389E. Race / Sex / Gender in Cultural Representations**

Critical theory and cultural representations in a variety of media that address issues surrounding the representation of race, gender, sexuality and politics. How is desire racialized? How is racial difference produced through sex as a material practice and what is the function of sex in racial (self)formation? How do we reconcile questions of pleasure and desire and the structures of power? How do these texts reinforce or contest stereotypes and the ideal bodies of national identity? Is it desirable to envision a bridging of queer communities of color, or a transnational, transfronterizo or global network?

3-5 units, Spr (Yarbro-Bejarano, Y)

**ILAC 399. Individual Work**

For Spanish and Portuguese department graduate students only. Prerequisite: consent of instructor.

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**ILAC 802. TGR Dissertation**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## IBERIAN LANGUAGES (IBERLANG) COURSES

### UNDERGRADUATE COURSES IN IBERIAN LANGUAGES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**IBERLANG 7. First-Year Basque Language and Culture, First Quarter**

Speaking, reading, writing, and listening. Authentic and classroom materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which Basque is spoken.

5 units, Aut (Lopez de Luzuriaga Martinez, J)

**IBERLANG 8. First-Year Basque Language and Culture, Second Quarter**

Continuation of 7. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which Basque is spoken. Prerequisite: 7 or equivalent.

5 units, Win (Lopez de Luzuriaga Martinez, J)

**IBERLANG 9. First-Year Basque Language and Culture, Third Quarter**

Continuation of 8. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which Basque is spoken. Prerequisite: 8 or equivalent. Completion of 9 fulfills the University language requirement.

5 units, Spr (Lopez de Luzuriaga Martinez, J)

### GRADUATE COURSES IN IBERIAN LANGUAGES

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**IBERLANG 395. Graduate Studies in Iberian**

2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

## IMMUNOLOGY (IMMUNOL) COURSES

### UNDERGRADUATE COURSES IN IMMUNOLOGY

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**IMMUNOL 185. Brain and the Immune System**

(Same as IMMUNOL 285) For advanced undergraduates, coterminial students, and graduate students. Molecular and cellular interactions between the nervous and immune systems. Focus is on the role of immune molecules in neural development, the bi-directional mechanisms by which the brain and immune system communicate with each other, and the role of the immune system in the diseased and infected brain. Topics include: molecular basis of fever, stress and inflammation, gender differences in autoimmune diseases, inflammation in neurodegenerative diseases, central nervous system infections, and the immune system in psychiatric disorders. Expert guest lectures, weekly discussion sections, and student presentations. Prerequisite: Biological Sciences or Human Biology core.

3 units, not given this year

**IMMUNOL 199. Undergraduate Research**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## GRADUATE COURSES IN IMMUNOLOGY

Primarily for graduate students; undergraduates may enroll with consent of instructor.

### IMMUNOL 201. Advanced Immunology I

(Same as MI 211) For graduate students, medical students and advanced undergraduates. Topics include the innate and adaptive immune systems; genetics, structure, and function of immune molecules; lymphocyte activation and regulation of immune responses. Prerequisites: undergraduate course in Immunology and familiarity with experimental approaches in biochemistry, molecular biology, and cell biology.

3 units, Win (Chien, Y)

### IMMUNOL 202. Advanced Immunology II

(Same as MCP 202) Readings of immunological literature. Classic problems and emerging areas based on primary literature. Student and faculty presentations. Prerequisite: IMMUNOL 201/MI 211.

3 units, Spr (Staff)

### IMMUNOL 203. Advanced Immunology III

Key experiments and papers in immunology. Student presentations and interviews with faculty regarding their experimental process and scientific papers. Prerequisite: IMMUNOL 201/MI 211 or IMMUNOL 202/MCP 202.

3 units, Sum (Utz, P)

### IMMUNOL 204. Innate Immunology

(Same as MI 104, MI 204) Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants.

3 units, Spr (Staff)

### IMMUNOL 205. Immunology in Health and Disease

Concepts and application of adaptive and innate immunology and the role of the immune system in human diseases. Case presentations of diseases including autoimmune diseases, infectious disease and vaccination, hematopoietic and solid organ transplantation, genetic and acquired immunodeficiencies, hypersensitivity reactions, and allergic diseases. Problem sets based on lectures and current clinical literature. Laboratory in acute and chronic inflammation.

2-4 units, Win (Lewis, D)

### IMMUNOL 209. Translational Immunology

(Open to medical students in the Immunology concentration, graduate students, undergraduates by consent of instructor) Journal style format focusing on current basic immunology research and how it is translated into immunotherapies and clinical trials. Topics include hematopoiesis, transplantation, tolerance, immune monitoring, vaccination, autoimmunity and antibodies, rheumatoid arthritis, chronic pulmonary disease, and asthma. May be repeated for credit.

1 unit, Aut (Miklos, D), Win (Miklos, D), Spr (Staff)

### IMMUNOL 210. Immunology Research Seminars for Medical Students

Required for medical students selecting the Immunology Concentration. Attendance at a minimum of ten seminars related to immunology outside of required medical school classes. A one-page essay on each seminar, what was presented and how it relates to a clinical immunologic problem, is required.

2 units, Aut (Miklos, D), Win (Miklos, D), Spr (Staff)

### IMMUNOL 211. Clinical Research Design and Development Using Immunomodulatory Agents

For advanced undergraduates, coterminal students, medical students, and graduate students. Immunomodulatory agents have improved outcomes in human disease such as autoimmunity, cancer, allergies, asthma, and transplantation. The agents that immunomodulate have been developed from discovery of targets in basic immunology. Objectives: 1) how to design phase I (safety and proof of concept studies) based on animal models of new targets for immunomodulatory agents, including concepts such as endpoints, translational biomarker studies, immunological monitoring, power size calculations, and basic statistics applied to clinical trial design; 2) to understand regulatory (FDA) pathways

and institutional policies to obtain approval of clinical studies; 3) to become familiar with patent law for applying for composition of matter and methods of use for discovery of targets for immunomodulatory agents. Prerequisite: Biology or Human Biology core for undergraduates.

2 units, not given this year

### IMMUNOL 212. Granulocyte Biology in Human Disease

For advanced undergraduates, coterminal students, medical students, and graduate students. Objectives: 1) to learn the basic functions and activation pathways of major granulocytes in humans (neutrophils, eosinophils, basophils and mast cells); 2) to understand the pathology in human diseases primarily associated with disorders in neutrophils, eosinophils, basophils, or mast cells; 3) to compare and contrast each granulocyte type and its response to therapies used in clinical medicine. Expert guest lectures, weekly discussion sections, and an emphasis on science communication and science writing. Prerequisite: Biology or Human Biology core for undergraduates.

2 units, alternate years, not given this year

### IMMUNOL 215. Principles of Biological Technologies

(Same as MI 215) The principles underlying novel as well as commonly utilized techniques to answer biological questions. Lectures and primary literature critiques on topics such as fluorescence microscopy, including applications such as FRET and single-cell analysis; human and murine genetic analysis; FACS; proteomics and analysis of noncoding RNAs. Class participation is emphasized. Prerequisite: biochemistry. Required of first-year graduate students in Microbiology and Immunology and the Immunology program.

3 units, Spr (Staff)

### IMMUNOL 231. Medicine for Innovators and Entrepreneurs

(Same as PEDS 231) Interdisciplinary, project-based course in which bioscience, bioinformatics, biodesign, bioengineering students learn concepts and principles to understand human disease and work together to propose solutions to medical problems. Diabetes mellitus is used as a paradigm for understanding human disease. Guest medical school and outside faculty. Field trips to Stanford clinics and biotechnology companies. Prerequisite: college level biology.

3-4 units, not given this year

### IMMUNOL 260. HIV: The Virus, the Disease, the Research

(Same as MED 260) Open to medical students, graduate students in biological sciences, undergraduates with strong biological background. Topics: immunopathogenesis immune deficits, opportunistic infections including TB, and malignancies; genomics viral genetic analyses that have traced the origin of HIV-1 and HIV-2 to primates, dated the spread of infection in humans, and characterized the evolution of the virus within infected individuals; antiretroviral drug development identification of drug targets, structure-based drug design, overcoming drug resistance, pivotal clinical trials, and role of community activism; clinical management solutions in high- and low-income countries; vaccine development learning from past failures and the future of engineering the human immune response. 4 units includes a final project assigned in consultation with the instructor to fit the individual student's background and area of HIV interest.

3-4 units, Spr (Staff)

### IMMUNOL 275. Tumor Immunology

(Same as CBIO 275) Focuses on the ability of innate and adaptive immune responses to recognize and control tumor growth. Topics include: tumor antigens, tumor immunosurveillance and immunoediting, tumor immunotherapy, cancer vaccines and dendritic cell therapy. Tracks the historical developments of our understanding of modulating tumor immune response and discusses their relative significance in the light of current research findings. Prerequisite: for undergraduates, human biology or biology core.

3 units, Aut (Rothbard, J; Engleman, E)

### IMMUNOL 280. Early Clinical Experience in Immunology

Clinical observation experience for medical students in the Immunology Scholarly Concentration. At the end of the observation period, which may span over one to two quarters, the student submits a case observation paper to his/her faculty sponsor. Prerequisite: IMMUNOL 205.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **IMMUNOL 285. Brain and the Immune System**

(Same as IMMUNOL 185) For advanced undergraduates, coterminal students, and graduate students. Molecular and cellular interactions between the nervous and immune systems. Focus is on the role of immune molecules in neural development, the bi-directional mechanisms by which the brain and immune system communicate with each other, and the role of the immune system in the diseased and infected brain. Topics include: molecular basis of fever, stress and inflammation, gender differences in autoimmune diseases, inflammation in neurodegenerative diseases, central nervous system infections, and the immune system in psychiatric disorders. Expert guest lectures, weekly discussion sections, and student presentations. Prerequisite: Biological Sciences or Human Biology core.

3 units, not given this year

### **IMMUNOL 290. Teaching in Immunology**

Practical experience in teaching by serving as a teaching assistant in an immunology course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student. May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **IMMUNOL 299. Directed Reading in Immunology**

Prerequisite: consent of instructor.

1-18 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **IMMUNOL 305. Immunology Journal Club**

Required of first- to fourth-year graduate students. Graduate students present and discuss recent papers in the literature. May be repeated for credit.

1 unit, Aut (Steinman, L; Martinez, O), Win (Steinman, L; Martinez, O), Spr (Staff)

### **IMMUNOL 311. Seminar in Immunology**

Enrollment limited to Ph.D., M.D./Ph.D., and medical students whose scholarly concentrations are in Immunology. Current research topics.

1 unit, Aut (Steinman, L; Fathman, C), Win (Steinman, L; Fathman, C), Spr (Staff)

### **IMMUNOL 311A. Discussions in Immunology**

Students discuss papers of speakers in 311, and meet with the speakers. Corequisite: 311.

1 unit, Aut (Steinman, L; Fathman, C), Win (Steinman, L; Fathman, C), Spr (Staff)

### **IMMUNOL 315. Special Topics in Immunology**

Format for 2010-11 is a two-quarter lecture series comprising an intensive study of human and mouse immunology. Topics over include: innate and adaptive immunity; antibodies and antigens; histocompatibility complex; lymphocyte development and the rearrangement and expression of antigen receptor genes; T-cell, B-cell activation and antibody production; immunological tolerance; cytokines; immunities; transplantation; diseases caused by immune responses; congenital and acquired immunodeficiencies.

1 unit, Aut (Butte, M), Win (Butte, M)

### **IMMUNOL 399. Graduate Research**

For Ph.D., M.D./Ph.D. students, and medical students whose scholarly concentrations are in Immunology.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **IMMUNOL 801. TGR Project**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### **IMMUNOL 802. TGR Dissertation**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## INSTITUTE FOR INTERNATIONAL STUDIES (FREEMAN SPOGLI) (IIS) COURSES

### **UNDERGRADUATE COURSES IN INSTITUTE FOR INTERNATIONAL STUDIES (FREEMAN SPOGLI)**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **IIS 199. Interschool Honors Program in International Security Studies**

Students from different schools meet in a year-long seminar to discuss, analyze, and conduct research on international security. Combines research methods, policy evaluation, oral presentation, and preparation of an honors thesis by each student. May be repeated for credit.

1-5 units, Aut (Blacker, C; Crenshaw, M), Win (Crenshaw, M; Blacker, C), Spr (Blacker, C; Crenshaw, M)

## INTERDISCIPLINARY STUDIES IN HUMANITIES (HUMNTIES) COURSES

### **UNDERGRADUATE COURSES IN INTERDISCIPLINARY STUDIES IN HUMANITIES**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **HUMNTIES 100. Text and Context in Humanities: Oedipus and His Vicissitudes**

(Same as ENGLISH 184B) Tales of Modernity from Sophocles, Freud, Chekhov, Babel, and Woolf. Introduction to cross-disciplinary approach in humanities through foundational texts in the modern tradition. The main focus is on Sigmund Freud's Totem and Taboo (1913), alongside his ancillary writings. Contemporary social thought and historical scholarship provide the context (Georg Simmel, Norbert Elias, Karl Schorske, John Murray Cuddihy) while works of imaginative literature (Sophocles, Anton Chekhov, Isaac Babel, and Virginia Woolf) illuminate the significance of the Oedipus myth for understanding the inter-generational conflict in antiquity and modernity. GER:DB-Hum

3 units, not given this year

## INTERNATIONAL POLICY STUDIES (IPS) COURSES

### **GRADUATE COURSES IN INTERNATIONAL POLICY STUDIES**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **IPS 201. Managing Global Complexity**

Is international relations theory valuable for policy makers? The first half of the course will provide students with a foundation in theory by introducing the dominant theoretical traditions and insights in international relations. The second half of the course focuses on several complex global problems that cut across policy specializations and impact multiple policy dimensions. Students will assess the value of major theories and concepts in international relations for analyzing and addressing such complex

global policy issues.

3 units, Win (Gould, E)

### IPS 202. Topics in International Macroeconomics

Topics: standard theories of open economy macroeconomics, exchange rate regimes, causes and consequences of current account imbalances, the economics of monetary unification and the European Monetary Union, recent financial and currency crises, the International Monetary Fund and the reform of the international financial architecture.

5 units, Aut (Aturupane, C)

### IPS 203. Issues in International Economics

Topics in international trade and international trade policy: trade, growth and poverty, the World Trade Organization (WTO), regionalism versus multilateralism, the political economy of trade policy, trade and labor, trade and the environment, and trade policies for developing economies. Prerequisite: ECON 165, ECON 166.

5 units, Win (Aturupane, C)

### IPS 204A. Microeconomics

(Same as PUBLPOL 301A) Microeconomic concepts relevant to decision making. Topics include: competitive market clearing, price discrimination; general equilibrium; risk aversion and sharing, capital market theory, Nash equilibrium; welfare analysis; public choice; externalities and public goods; hidden information and market signaling; moral hazard and incentives; auction theory; game theory; oligopoly; reputation and credibility. Prerequisites: ECON 50 and MATH 51 or equiv.

4 units, Aut (Bulow, J)

### IPS 204B. Cost-Benefit Analysis and Evaluation

(Same as PUBLPOL 301B) Relationship between microeconomic analysis and public policy making. Economic rationales for policy interventions. Economic models of politics and application to policy making. Relationship of income distribution to policy choice. Welfare evaluation of public and private decisions. Education policy, social security, and health care. Prerequisites: PUBLPOL 301A (for graduate students) or ECON 50, and 102B (for undergraduates).

4-5 units, Spr (Ishii, J)

### IPS 207. Governance, Corruption, and Development

The role of governance in the growth and development experience of countries with a focus on the economics of corruption. Topics covered: the concept and measurement of governance; theory and evidence on the impact of corruption on growth and development outcomes, including investment, financial flows, human capital accumulation, poverty and income inequality; the link between governance and financial crises with a focus on the recent global crisis; the cultural, economic, and political determinants of corruption; and policy implications for improving governance. Prerequisite: ECON 50.

3-5 units, Spr (Aturupane, C)

### IPS 207A. Judgment and Decision Making

(Same as PUBLPOL 305A) (Same as LAW 333.) Theories and research on heuristics and biases in human inference, judgment, and decision making. Experimental and theoretical work in prospect theory emphasizing loss and risk aversion. Challenges that psychology offers to the rationalist expected utility model; attempts to meet this challenge through integration with modern behavioral economics. Decision making biases and phenomena of special relevance to public policy such as group polarization, group think, and collective action.

4 units, Win (Brest, P)

### IPS 208. Justice

(Same as ETHICSOC 171, PHIL 171, PHIL 271, POLISCI 3P, POLISCI 136S) Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include protecting religious liberty, financing schools and elections, regulating markets, assuring access to health care, and providing affirmative action and group rights. Issues of global justice including human rights and global inequality.

4-5 units, Aut (Dougherty, T)

### IPS 209. Practicum

(Same as PUBLPOL 309) Applied policy exercises in various fields. Multidisciplinary student teams apply skills to a

contemporary problem in a major policy exercise with a public sector client such as a government agency. Problem analysis, interaction with the client and experts, and presentations. Emphasis is on effective written and oral communication to lay audiences of recommendations based on policy analysis.

1-10 units, Aut (Nation, J), Win (Nation, J)

### IPS 209A. IPS Master's Thesis

For IPS M.A. students only (by petition). Regular meetings with thesis advisers required.

1-10 units, Aut (Staff), Win (Staff)

### IPS 210. The Politics of International Humanitarian Action

The relationship between humanitarianism and politics in international responses to civil conflicts and forced displacement. Focus is on policy dilemmas and choices, and the consequences of action or inaction. Case studies include northern Iraq (Kurdistan), Bosnia, Rwanda, Kosovo, and Darfur.

3-5 units, Aut (Morris, E)

### IPS 211. The Transition from War to Peace: Peacebuilding Strategies

How to find sustainable solutions to intractable internal conflicts that lead to peace settlements. How institutions such as the UN, regional organizations, and international financial agencies attempt to support a peace process. Case studies include Bosnia, East Timor, Kosovo, Burundi, Liberia, and Afghanistan.

3-5 units, Spr (Morris, E)

### IPS 213. International Mediation and Civil Wars

This graduate seminar will examine international mediation efforts to achieve negotiated settlements for civil wars over the last two decades. Contending approaches to explain the success or failure of international mediation efforts will be examined in a number of cases from Africa (Sudan, Sierra Leone, Burundi), the Balkans (Bosnia, Macedonia), and Asia (Cambodia, Indonesia/Aceh).

3-5 units, Win (Morris, E)

### IPS 219. Intelligence and National Security

How intelligence supports U.S. national security and foreign policies. How it has been used by U.S. presidents to become what it is today; organizational strengths and weaknesses; how it is monitored and held accountable to the goals of a democratic society; and successes and failures. Current intelligence analyses and national intelligence estimates are produced in support of simulated policy deliberations.

3-4 units, Aut (Fingar, T)

### IPS 221. International Political Economy and International Organizations: Theory and Practice

(Same as POLISCI 214G) What is the appropriate balance between government regulation and market freedom? Introduction to important theoretical and policy debates in international political economy. Topics include: political economy of trade; exchange rate policy; the liberalization of trade and finance; the global move to openness; development, debt and aid; and the role of international organizations. Discussion of application of academic insights to key policy debates, including whether governments should offset the welfare costs of globalization, whether the IMF and World Bank should be reformed to meet the needs of the 21st century, and how the international community should respond to financial crises. Students will research, write and orally present policy briefs on specific policy questions.

3-5 units, Win (Gould, E)

### IPS 221A. Globalization and Its Discontents: An Introduction to International Political Economy

What is globalization? Its impacts on different countries and population including those that multilateral organizations such as the World Bank, International Monetary Fund, and World Trade Organization have on the economic policies of member states and the functioning of the global economy. Topics include: political economy of trade; exchange rate policy; the liberalization of trade and finance; the global move to openness; development, debt and aid; and the role of international organizations.

3-5 units, not given this year

### IPS 222. Economic Development

General theories of economic development with focus on development policies. Topics include: agriculture, industrialization, role of financial development, income distribution, human resource development, international relations,

and economic aid.

*5 units, not given this year*

**IPS 230. Democracy, Development, and the Rule of Law**

(Same as INTNLREL 114D, POLISCI 114D, POLISCI 314D) Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts.

*5 units, Aut (Diamond, L; Stoner-Weiss, K)*

**IPS 233. Public Policy and South Asian Development**

Trends in socioeconomic conditions in South Asia from independence to present and the policies that influenced them. Topics: theoretical framework of the relationship between forms of governance and development; governance choices in South Asia, particularly democracy and federalism; and influence of political governance, national identity, and socioeconomic institutions on development. Review of case studies, including the Kerala development experience, India's IT industry, Bangladesh's microfinance initiative, and Sri Lanka's education system.

*3-5 units, not given this year*

**IPS 241. International Security in a Changing World**

(Same as POLISCI 114S) The major international and regional security problems in the modern world. Interdisciplinary faculty lecture on the political and technical issues involved in nuclear proliferation, terrorism and homeland security, civil wars and insurgencies, and future great power rivalries.

*5 units, Win (Crenshaw, M)*

**IPS 244. U.S. Policy toward Northeast Asia**

Case study approach to the study of contemporary U.S. policy towards Japan, Korea, and China. Historical evolution of U.S. foreign policy and the impact of issues such as democratization, human rights, trade, security relations, military modernization, and rising nationalism on U.S. policy. Case studies include U.S.-Japan trade tensions, anti-Americanism in Korea, and cross-straits relations between China and Taiwan.

*5 units, Win (Armacost, M; Fingar, T; Straub, W; Sneider, D)*

**IPS 246. China on the World Stage**

China's reemergence as a global player is transforming both China and the international system. Other nations view China's rise with a mixture of admiration, anxiety, and opportunism. Some welcome China's rise as a potential counterweight to US preeminence; others fear the potential consequences of Sino-American rivalry and erosion of the US-led international system that has fostered unprecedented peace and prosperity. This course provides an overview of China's engagement with countries in all regions and on a wide range of issues since it launched the policy of opening and reform in 1978. The goal is to provide a broad overview and systematic comparisons across regions and issues, and to examine how China's global engagement has changed over time.

*3-5 units, Win (Fingar, T)*

**IPS 250. International Conflict: Management and Resolution**

(Same as PSYCH 383) (Same as LAW 656) Interdisciplinary. Theoretical insights and practical experience in resolving intergroup and international conflicts. Sources include social psychology, political science, game theory, and international law. Personal, strategic, and structural barriers to solutions. How to develop a vision of a mutually bearable shared future, trust in the enemy, and acceptance of loss that a negotiated settlement may produce. Spoilers who seek to sabotage agreements. Advantages and disadvantages of unilateral versus reciprocal measures. Themes from the Stanford Center of International Conflict and Negotiation (SCICN). Prerequisite for undergraduates: consent of instructor.

*3 units, Win (Weiner, A)*

**IPS 250A. International Conflict Resolution Colloquium**

(Same as PSYCH 283) (Same as LAW 611.) Sponsored by the Stanford Center on International Conflict and Negotiation (SCICN). Conflict, negotiation, and dispute resolution with emphasis on conflicts and disputes with an international dimension, including conflicts involving states, peoples, and

political factions such as the Middle East and Northern Ireland. Guest speakers. Issues including international law, psychology, and political science, economics, anthropology, and criminology.

*1 unit, Win (Weiner, A)*

**IPS 262. Contemporary Issues in Nuclear Energy Policy**

Current nuclear energy trends related to economic growth and carbon-free energy production to reduce global warming. Topics include: trends, promise, and perils; environment; proliferation; and international security. Policy considerations for nuclear safety and safeguards, environmentally responsible management from raw uranium to spent fuel, international security and nonproliferation, economic competition with other energy sources, domestic and foreign politics, and international law and treaties. International guest expert lecturers.

*5 units, not given this year*

**IPS 263. Energy and Climate Cooperation in the Western Hemisphere**

(Same as EARTHSYS 132, EARTHSYS 232, INTNLREL 146A) Current political dynamics in major western hemisphere fossil fuel producers in N. America, the Andean region, the Southern Cone of S. America, and Trinidad and Tobago. The potential for developing sustainable alternative energy resources in the western hemisphere for export particularly biofuels, and its impact on agricultural policy, environmental protection, and food prices. The feasibility of creating regional energy security rings such as the proposed N. American Energy Security and Prosperity Partnership.

*4 units, not given this year*

**IPS 264. Behind the Headlines: An Introduction to Modern Afghanistan, Pakistan and India**

Introduction to history and contemporary politics of South Asia. Analyzes history and current state of India, Afghanistan and Pakistan: historical forces that shaped the region (diverse religions and ethnicities, geography, and colonialism), the rise of the Taliban and Al Qaeda in Afghanistan; Pakistan's government, military, and mullahs; the economic and political rise of India; and the U.S. intervention in Afghanistan, US relationship with Pakistan, and its policy shift toward India.

*3-5 units, Aut (Manuel, A)*

**IPS 270. The Geopolitics of Energy**

This course examines how the interplay of political, economic, and technological forces may reshape future energy production and consumption. Building upon international political economy theory, we will address questions such as: What policies are energy importers pursuing to ensure reliable, plentiful and cheap energy supply? What are the socioeconomic and political challenges and strategic options energy exporters face? How can technological breakthroughs in alternative energy and carbon policies affect the distribution of power between traditional energy exporters and importers?

*3-5 units, Win (Staff)*

**IPS 280. Transitional Justice, International Criminal Tribunals, and the International Criminal Court**

(Same as ETHICSOC 280) Historical backdrop of the Nuremberg and Tokyo Tribunals. The creation and operation of the Yugoslav and Rwanda Tribunals (ICTY and ICTR). The development of hybrid tribunals in East Timor, Sierra Leone, and Cambodia, including evaluation of their success in addressing perceived shortcomings of the ICTY and ICTR. Examination of the role of the International Criminal Court and the extent to which it will succeed in supplanting all other ad hoc international justice mechanisms and fulfill its goals. Analysis focuses on the politics of creating such courts, their interaction with the states in which the conflicts took place, the process of establishing prosecutorial priorities, the body of law they have produced, and their effectiveness in addressing the needs of victims in post-conflict societies.

*3-5 units, Spr (Cohen, D)*

**IPS 298. Practical Training**

Students obtain internship in a relevant research or industrial activity to enhance their professional experience consistent with their degree program and area of concentration. Prior to enrolling students must get internship approved by associate director. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. Meets

the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own internship. Limited to International Policy Studies students only. May be repeated for credit.

1-3 units, Sum (Staff)

### IPS 299. Directed Reading

IPS students only. May be repeated for credit.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### IPS 300. Issues in International Policy Studies

Presentations of techniques and applications of international policy analysis by students, faculty, and guests, including policy analysis practitioners.

1 unit, Aut (Stoner-Weiss, K)

### IPS 314S. Decision Making in U.S. Foreign Policy

(Same as POLISCI 314S) Priority to IPS students. Formal and informal processes involved in U.S. foreign policy decision making. The formation, conduct, and implementation of policy, emphasizing the role of the President and executive branch agencies. Theoretical and analytical perspectives; case studies.

5 units, Spr (Blacker, C)

### IPS 388. Palestine and the Arab-Israeli Conflict

(Same as HISTORY 288, HISTORY 388, JEWISHST 288, JEWISHST 388) 1882 to the present. Comparison of representative expressions of competing historical interpretations. U.S. policy towards the conflict since 1948. (Beinin)

4-5 units, not given this year

### IPS 802. TGR Dissertation

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## INTERNATIONAL RELATIONS (INTNLREL) COURSES

### UNDERGRADUATE COURSES IN INTERNATIONAL RELATIONS

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### INTNLREL 1. Introduction to International Relations

(Same as POLISCI 1) Approaches to the study of conflict and cooperation in world affairs. Applications to war, terrorism, trade policy, the environment, and world poverty. Debates about the ethics of war and the global distribution of wealth. GER:DB-SocSci

5 units, Spr (Fearon, J)

#### INTNLREL 10SI. The International Responsibility to Protect

This Student-Initiated Course focuses on the main issues and themes surrounding international responses to mass atrocities and genocide. We will explore the events and international norms that led to the creation of The Responsibility to Protect Doctrine, the main thematic dilemmas surrounding international action, and a brief history of international responses to past genocides. The objective of this course is to give each student a better idea of what the realistic possibilities are for international action on grave human rights violations of this kind.

1-2 units, Win (Stedman, S)

#### INTNLREL 61Q. Food and security

(S,Sem) (Same as EARTHSYS 61Q, EESS 61Q) Stanford Introductory Seminar. The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

5 units, Aut (Naylor, R; Stedman, S)

#### INTNLREL 110C. America and the World Economy

(Same as POLISCI 110C, POLISCI 110X) Examination of contemporary US foreign economic policy. Areas studied: the changing role of the dollar; mechanism of international monetary management; recent crises in world markets including those in

Europe and Asia; role of IMF, World Bank and WTO in stabilizing world economy; trade politics and policies; the effects of the globalization of business on future US prosperity. GER:DB-SocSci

5 units, Aut (Goldstein, J)

#### INTNLREL 110D. War and Peace in American Foreign Policy

(Same as POLISCI 110D, POLISCI 110Y) (Students not taking this course for WIM, register for 110Y.) The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period. GER:DB-SocSci, DB-SocSci

5 units, Win (Schultz, K)

#### INTNLREL 114D. Democracy, Development, and the Rule of Law

(Same as IPS 230, POLISCI 114D, POLISCI 314D) Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts. GER:DB-SocSci

5 units, Aut (Diamond, L; Stoner-Weiss, K)

#### INTNLREL 115. Development Issues in South Asia

1) Study of socio-economic trends from independence up to the present time in South Asia. 2) The complex interactions between development, and political governance, national identity and socio-economic institutions. 3) Case studies of exemplary outcomes: the Kerala development experience, India's IT industry. Bangladesh's microfinance initiative and education in Sri Lanka. 4) Student assessment will be based on class presentation and paper.

5 units, Spr (Dossani, R)

#### INTNLREL 122A. The Political Economy of the European Union

EU institutions, the legislative process, policies, relations with the U.S., and enlargement and the future of the EU. History and theories of EU integration. Democratic accountability of the institutions, and the emerging party system. Principal policies in agriculture, regional development, the internal market, single currency, and competition. Emphasis is on policies that affect the relations with the U.S. including trade and security. Results of the EU's constitutional convention.

5 units, Win (Crombez, C)

#### INTNLREL 136R. Introduction to Global Justice

(Same as ETHICSOC 136R, PHIL 76, POLISCI 136R, POLISCI 336) Recent work in political theory on global justice. Topics include global poverty, human rights, fair trade, immigration, climate change. Do developed countries have a duty to aid developing countries? Do rich countries have the right to close their borders to economic immigrants? When is humanitarian intervention justified? Readings include Charles Beitz, Thomas Pogge, John Rawls.

5 units, Spr (Satz, D)

#### INTNLREL 140A. International Law and International Relations

What is the character of international legal rules? Do they matter in international politics, and if so, to what degree? The foundational theories, principles, and sources of public international law. Prominent theories of international relations and how they address the role of law in international politics. Practical problems such as human rights, humanitarian intervention, and enforcement of criminal law. International law as a dynamic set of rules, at times influenced by power, at other times constraining it, but always essential to studying international relations. WIM

5 units, Aut (Lutomski, P)

#### INTNLREL 140C. The U.S., U.N. Peacekeeping, and Humanitarian War

The involvement of U.S. and the UN in major wars and international interventions since the 1991 Gulf War. The UN Charter's provisions on the use of force, the origins and evolution of peacekeeping, the reasons for the breakthrough to peacemaking and peace enforcement in the 90s, and the ongoing debates over the legality and wisdom of humanitarian intervention. Case studies

include Croatia and Bosnia, Somalia, Rwanda, Kosovo, East Timor, and Afghanistan.

5 units, Spr (Patenaude, B)

**INTNLREL 141A. Camera as Witness: International Human Rights Documentaries**

Rarely screened documentary films, focusing on global problems, human rights issues, and aesthetic challenges in making documentaries on international topics. Meetings with filmmakers. GER:DB-Hum

5 units, Aut (Bojic, J)

**INTNLREL 146A. Energy and Climate Cooperation in the Western Hemisphere**

(Same as EARTHSYS 132, EARTHSYS 232, IPS 263) Current political dynamics in major western hemisphere fossil fuel producers in N. America, the Andean region, the Southern Cone of S. America, and Trinidad and Tobago. The potential for developing sustainable alternative energy resources in the western hemisphere for export particularly biofuels, and its impact on agricultural policy, environmental protection, and food prices. The feasibility of creating regional energy security rings such as the proposed N. American Energy Security and Prosperity Partnership.

4 units, not given this year

**INTNLREL 147. The Political Economy of the Southern Cone of South America**

Argentina, Brazil, Paraguay, Uruguay, Bolivia, and Chile. Post-WW II political economy developments and political relations. Impacts of military rule from the 60s into the 80s. Regional and international political developments that led to MERCOSUR in 1991, and subsequent expansion.

5 units, Spr (Staff)

**INTNLREL 148. Economic Integration of the Americas**

Current attempts at economic integration throughout the Western Hemisphere, including the Andean Community, the Caribbean Common Market (CARICOM), the Latin American Integration Association (ALADI), MERCOSUR, the North American Free Trade Area (NAFTA), and the Central American Integration System (SICA). Emphasis is on practical applications of integration efforts and nuts-and-bolts issues of how integration efforts function.

5 units, Win (O'Keefe, T)

**INTNLREL 149. The Economics and Political Economy of the Multilateral Trade System**

The historical development of the multilateral trade system, the current agenda of the World Trade Organization, and prospects for trade liberalization. Emphasis is on the economic rationale for multilateral trade rules, the political problems facing countries in supporting further liberalization, and the challenges to the legitimacy of WTO procedures and practices. Issues include the greater participation of developing countries, the impact of new members, and the relationship between the WTO and other multilateral bodies. Guest speakers; student research paper presentations.

5 units, Win (Josling, T)

**INTNLREL 165A. Globalization, governance and human rights**

Globalization is associated with a downward spiral of human rights. Yet, paradoxically, more countries now subscribe to human rights treaties than ever before. The class discusses different aspects of globalization drawing on theories from sociology, political science, cultural anthropology and law. In examining the economic, political and cultural aspects of globalization, the class shows the tensions within globalization and their paradoxical effects on human rights. The course outlines different global governance mechanism aimed at improving human rights. These include governmental treaties, international NGOs advocacy work and corporate Codes of Conduct and their effects on human rights. The effects of the United Nations International Labour Organization on labor related human rights, such as child labor and discrimination, serve as examples. Integrating social sciences theories with empirical research, this course provides an overview of the debates surrounding the causes and eff

5 units, Spr (Abu Sharkh, M)

**INTNLREL 170. ENERGY AND CLIMATE**

The seminar provides an interdisciplinary introduction to the

technology, economics, and international politics of energy and climate. We investigate specific energy technologies and discuss their impact on geopolitics, the environment and mitigating the effects of climate change. What is the role of energy in national security? What will climate change mean for our energy mix? How do developing countries view energy and climate change? What is the proper balance between regulation and free market operation in energy markets?

5 units, Win (Rosencranz, A)

**INTNLREL 191. IR Journal**  
(Staff)

1 unit, Aut (Schultz, K), Win (Schultz, K), Spr (Schultz, K)

**INTNLREL 197. Directed Reading in International Relations**

Open only to declared International Relations majors. (Staff)

1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**INTNLREL 198. Senior Thesis**

Open only to declared International Relations majors with approved senior thesis proposals.

2-10 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**INTNLREL 200A. International Relations Honors Field Research**

For juniors planning to write an honors thesis during senior year. Initial steps to prepare for independent research. Professional tools for conceptualizing a research agenda and developing a research strategy. Preparation for field research through skills such as data management and statistics, references and library searches, and fellowship and grant writing. Creating a work schedule for the summer break and first steps in writing. Prerequisite: acceptance to IR honors program.

3 units, Spr (Gould, E)

**INTNLREL 200B. International Relations Honors Seminar**

Second of two-part sequence. For seniors working on their honors theses. Professional tools, analysis of research findings, and initial steps in writing of thesis. How to write a literature review, formulate a chapter structure, and set a timeline and work schedule for the senior year. Skills such as data analysis and presentation, and writing strategies. Prerequisites: acceptance to IR honors program, and 199 or 200A.

3 units, Aut (Gould, E)

**INTNLREL 206. Palestinian Nationalism, Past and Present**

The Palestinian national movement and its role in the Arab-Israeli conflict. The roots of the movement in the Ottoman Empire, its growth through the British Mandate, the 1948 and 1967 wars, the Intifada, and the Israeli-Palestinian peace process. Emphasis is on components which contributed to or delayed the growth of a distinct Palestinian identity, including Zionism.

5 units, not given this year

**INTNLREL 207. Tribe, State, and Society in the Modern Middle East**

The staying power of tribal identities and values in the Middle East. Examples include the Iraqi Sunni tribal insurgency against the U.S. The role of tribes in the formation of Middle Eastern states and how tribal values continue to impact social, political, and economic issues today.

5 units, not given this year

## INTRODUCTION TO THE HUMANITIES (IHUM) COURSES

### UNDERGRADUATE COURSES IN INTRODUCTION TO THE HUMANITIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**IHUM 2. Epic Journeys, Modern Quests**

First of a two quarter sequence. Through the metaphor of the journey, epic poems externalize the human quest for identity and self-definition: as the epic hero crosses the physical world and descends into the underworld, to visit the dead and seek counsel from them, he gradually comes closer to himself. The different goals of such journeys and the evolution of the epic hero as he

struggles to reach his destination, with attention to how exile and alienation, the encounter with ancestors, the female voice, and divine guidance define the trajectories traced by the various epics in question. The diminished importance of the dead and the increased emphasis on the power of the living in various literary genres. How concepts of humanity and society are defined by the sense of rupture with the past, including a heightened importance given to innovation, the present, the living, and the everyday that contrasts with the formative power of the afterlife, tradition, and the dead. GER:IHUM-2

*4 units, Win (Harrison, R; Wittman, L)*

### **IHUM 3. Epic Journeys, Modern Quests**

Second of a two quarter sequence. Through the metaphor of the journey, epic poems externalize the human quest for identity and self-definition: as the epic hero crosses the physical world and descends into the underworld, to visit the dead and seek counsel from them, he gradually comes closer to himself. The different goals of such journeys and the evolution of the epic hero as he struggles to reach his destination, with attention to how exile and alienation, the encounter with ancestors, the female voice, and divine guidance define the trajectories traced by the various epics in question. GER:IHUM-3

*4 units, Spr (Edelstein, D; Landy, J)*

### **IHUM 10A. Philosophical Perspectives on Science**

First in a two quarter sequence. A humanistic perspective views science itself as an essential part of human culture and explores the many relationships between scientific activity and religion, philosophy, society, politics, and the arts. Exploration of these relationships from a philosophical point of view, across a large part of the development of Western science from ancient Greece and the medieval period, through the scientific revolution of the 16th and 17th centuries, and up to recent times. GER:IHUM-2

*4 units, Win (Friedman, M)*

### **IHUM 10B. Philosophical Perspectives on Science**

Second in a two quarter sequence. A humanistic perspective views science itself as an essential part of human culture and explores the many relationships between scientific activity and religion, philosophy, society, politics, and the arts. Exploration of these relationships from a philosophical point of view, across a large part of the development of Western science from ancient Greece and the medieval period, through the scientific revolution of the 16th and 17th centuries, and up to recent times. GER:IHUM-3

*4 units, Spr (Daube, M)*

### **IHUM 11A. Making of the Modern World: Europe and Latin America**

First in a two quarter sequence. How did the modern world come to be? The emergence of modernity from 1300 to the present. Demographic and religious transformations in Europe; the development of ideologies, social formations, and political institutions as they eventually crossed the Atlantic and were modified in the Americas; 20th-century social revolution and authoritarianism throughout Latin America. Students build an understanding of the modern world and engage with the creative/destructive tensions inherent in this long transformation. Readings include classics of imaginative literature, political thought, and historical criticism. Theorists who have confronted and analyzed the problem of the origins of capitalist modernity, such as Adam Smith, Karl Marx, Max Weber. Records of ordinary life, such as parish registers, wills and diaries illustrate changes in social and economic existence. Sources include materials drawn from literature, philosophy, economic and social theory, and pri GER:IHUM-2

### **IHUM 23A. The Fate of Reason**

Two quarter sequence. Every day, each one of us faces problems about what to believe and how to act. Socrates began the tradition of philosophy by insisting that answers to these problems ought to be guided by reason; that if we could only believe and act more rationally, our lives would be better for us overall. This course explores the fate of Socrates' proposal. Some of our authors defend the power of reason to improve our lives. Others insist that purely rational principles demand too much of us, or else are insufficient to help us act well or reach important insights. Many writers focus on working out the proper relation between reason and the passions, or emotions. We will trace the fate of reason in several cultural traditions, thereby exploring the fundamental basis for our commitments about how to live, and for our most important beliefs about God, ourselves, the world, and our place within it. GER:IHUM-2

*4 units, not given this year*

### **IHUM 25A. Art and Ideas**

First in a two quarter sequence. Arts and Ideas will explore a broad sampling of cultural practices; primarily dance and theater; that use the human body as an art medium. From the critical perspectives of dance and drama history and theory, we will examine both established and emerging works. The focus will be on developing perceptual and interpretive skills for understanding how the performing arts have functioned historically and critically as key indexes to and challenging templates of cultural understanding. How can we come to read the body as an art medium? What kinds of knowledge can a highly disciplined moving body reveal? What does it mean to re-present life through performance historically? How does a live performance work to construct the spectator who views it? How do we come to know ourselves through both watching and participating in performance? From romantic ballet and realist drama to the present; including examples such as the Harlem Renaissance, the early-20 GER:IHUM-2

### **IHUM 28A. Poetic Justice: Order and Imagination in Russia**

Russia is where the most beautiful dreams and the ugliest nightmares of other places come true. There the doctrines of Christianity, Marxism, and now free-market capitalism, born elsewhere, have developed in fantastic ways, and borrowed artistic forms, from the novel to the ballet, have reached a new level. This

course traces Russian culture over a millennium, focusing on the tensions that developed there between beauty and power, self and other, past and future. We start the winter with Biblical stories, folktales about princes and peasants, medieval icons and saints' lives, then turn to masterpieces of nineteenth-century literature. Alexander Pushkin transforms the bloody history of the Pugachev rebellion into a novella about disguise, power and love. Nikolai Gogol imagines an uneasy world where your own nose could leave your body to become your rival. Fedor Dostoevsky, in *The Brothers Karamazov*, questions why we trust the state, the church, the family, and language itself. Le GER:IHUM-2

4 units, Win (Safran, G)

#### **IHUM 28B. Poetic Justice: Order and Imagination in Russia**

Two quarter sequence. The difference between justice and law in 19th- and 20th-century Russian writers. Focus is on the notion of poetic justice: the artistic representation of order whether divine, natural, or human. Goal is to heighten awareness of familiar narratives, mythologies, ideas, and images, and to convey a sense of a long-established national culture with its own dynamic vision. GER:IHUM-3

4 units, Spr (Skakov, N)

#### **IHUM 34A. A Life of Contemplation or Action? Debates in Western Literature and Philosophy**

First in a two quarter sequence. Which is preferable: a life of thought or a life of action? Are the two necessarily in conflict, or is it possible to reconcile them? This course focuses on literary treatments of the ongoing debate over the active life versus the contemplative life, as it is carried out in texts from the classical to the modern eras. While the debate itself is perennial, it takes on different forms and implications as it moves across changing literary, historical and philosophical contexts. The winter quarter will consider the debate as it is defined by classical authors, early Christian thinkers, and medieval mystical and literary texts, and is redefined in the Renaissance by humanist and posthumanist treatments of it. The spring quarter will consider the role of contemplation in an increasingly market-driven and secular world. GER:IHUM-2

#### **IHUM 51. Transformations: The Intersection of High Art and Contemporary Culture**

Othello, Zarathustra, and enlightenment humanism from initial occurrences through moments of reemergence in the 20th-century Western imagination. Transformations across media and contributions to modern constructions of the self and the human condition. GER:IHUM-1

4 units, Aut (Hinton, S; Stephens, S)

#### **IHUM 57. Humans and Machines**

How is a living, thinking human being like, or not like, a machine? This might seem like a new question for the Information Age, yet it has been a preoccupation of our civilization for centuries. From the culmination of the Scientific Revolution in the seventeenth century, philosophers, physiologists, engineers, authors, political actors and artists of every kind have taken humanity's measure by comparing humans with machines. Our course follows this tradition. Together, we ask a number of questions about what it means to think of the human mind, body, and society as types of machines. How has the machine served as a metaphor for the

cosmos and culture? How do we interact with machines, and how have machines influenced literature, performance, and the arts? What separates us from our machines, and are we really as separate as we think we are? We explore the shifting boundary lines between the mechanical and the human by considering how humanity has created or imagined machines and our GER:IHUM-1  
4 units, Aut (Lowood, H; Bailenson, J)

#### **IHUM 58. Technological Visions of Utopia**

Throughout history, philosophers have speculated about the nature of the "good society" and how to achieve it. Although earlier writers had offered their own views, Sir Thomas More gave a name to this ideal society that has now become part of common language: utopia. In the almost 500 years since More's Utopia appeared, changes in society—including enormous advances in science and technology—have opened up new possibilities for the utopian society that More and his predecessors could not have envisioned. At the same time, science and technology also entail risks that suggest more dystopian scenarios—in their most extreme form, threats to humanity's very survival. This course looks at several works that consider how literary visions of society have evolved with the progress of science and technology. The Readings begin with More and continue forward to the much more technologically determined visions of the late 20th century. The course also considers one cinematic treatment of techn GER:IHUM-1

#### **IHUM 70. Word and Image**

Is a picture really worth a thousand words? This familiar phrase, which began to appear frequently in the U.S. press around 1920, is particularly worth pondering in our image-saturated era, when an image shown for a few seconds can sell a product, seal an election, result in death threats, or shift public opinion. What roles do pictures and words play in our perception and understanding of the world, in how we learn, enjoy, remember, and experience emotions? What is the relationship of an image or a word to that which it represents? These and similar questions are raised today in many different places: in journalism as much as in cognitive science, in science as much as in literature, on the internet and in the criminal justice system. How images argue, prove, convince - and how they argue, prove and convince differently from the written or spoken word - are central questions asked in this course. It is a question that, with differing degrees of urgency, has concerned those that GER:IHUM-1

#### **IHUM 72. The Poet Re-making the World**

Can poetry change the world? In this course we will show how poetry has proved itself to be a resilient aesthetic form at the intersection of the personal and the political. We will follow the poem as it is written by men and women facing wars, imprisonment, journeys, social upheavals and the intense fragmentation of their worlds. Through reading works from different historical, cultural and poetic traditions, we explore the question of whether something as individual as subjective artistic experience can help us cope with social and political events that threaten suffering and destruction. The course uncovers the adventures of the individual poet: a young man caught in the trenches of the First World War; a Japanese haiku master and inspired wanderer of the 17th century; an American Beat, Jack Kerouac; a poet from St Louis who went to England and changed the course of 20th century poetry; an English woman trapped in the conventions of her time; a contemporary US soldier in Iraq. Th GER:IHUM-1

4 units, Aut (Boland, E; Carter, S)

#### **IHUM 73A. Ultimate Meanings: Decoding Religious Stories from around the World**

Is there more to life than survival, or does it have some higher purpose? Why is there suffering, death, and evil in the world, and is there some way to overcome them? Religious communities often answer such questions through the art of story-telling, through history, myth, biography and other forms of distilling human experience into narrative. These stories have shaped the world we live in, helping people to cope with difficult aspects of experience, influencing the way we love, suffer and die, inspiring the imagination, and helping to ignite conflict and violence. This course introduces you to some of the great stories of the world's religions; the sacred narratives of Buddhism, Judaism, Christianity and Islam. We will read these stories to learn something about the religious cultures that produced them, and how they have shaped human experience. In the winter quarter, students will be introduced to stories drawn primarily from the Buddhist tradition in the many forms which it developed GER:IHUM-2

4 units, Win (Harrison, P)

#### **IHUM 73B. Ultimate Meanings: Decoding Religious Stories from around the World**

Is there more to life than survival, or does it have some higher purpose? Why is there suffering, death, and evil in the world, and is there some way to overcome them? Religious communities often answer such questions through the art of story-telling, through history, myth, biography and other forms of distilling human experience into narrative. These stories have shaped the world we live in, helping people to cope with difficult aspects of experience, influencing the way we love, suffer and die, inspiring the imagination, and helping to ignite conflict and violence. In the winter quarter, students will be introduced to stories drawn primarily from the Buddhist tradition in the many forms which it developed GER:IHUM-3

4 units, Spr (Weitzman, S)

**IHUM 74A. The Problem of Europe**

This course explores how a small peninsula regularly torn by civil, ethnic, and national discord became an unlikely center of global political power, economic wealth, and intellectual invention. It considers how Europeans, from the end of the Middle Ages to the present day, have understood and responded to the myriad challenges associated with modernity; responses that have run the gamut from renaissance and enlightenment to inquisition and holocaust. Through engagement with key political and philosophical texts, as well as novels, poetry, and films, students will discuss how Europeans have tried to resolve, with mixed results, fundamental problems associated with religious plurality, political revolution, the changing role of the state and nation, industrialization, imperialism, and globalization.

4 units, Win (Staff)

**IHUM 74B. The Problem of Europe**

This course explores how a small peninsula regularly torn by civil, ethnic, and national discord became an unlikely center of global political power, economic wealth, and intellectual invention. It considers how Europeans, from the end of the Middle Ages to the present day, have understood and responded to the myriad challenges associated with modernity; responses that have run the gamut from renaissance and enlightenment to inquisition and holocaust. Through engagement with key political and philosophical texts, as well as novels, poetry, and films, students will discuss how Europeans have tried to resolve, with mixed results, fundamental problems associated with religious plurality, political revolution, the changing role of the state and nation, industrialization, imperialism, and globalization.

4 units, Spr (Staff)

**IHUM 75. Can the People Rule?**

This course will examine basic questions about the ideas of popular (or republican or democratic) government that developed in the century and a half after the Glorious Revolution, and do so primarily by focusing on the American founding era and its aftermath. Using two European authorities who operated under monarchical regimes but sympathized with projects for popular government, John Locke and Alexis de Tocqueville, we'll discuss the possibilities and limits of the republican system that Americans began fashioning after 1776, using the three central segments of the course to focus on specific aspects of the American experiment, from the decision to establish republican governments in 1776, to the reconsideration of that experiment in 1787-1788, and the development of the special doctrine of judicial review under the aegis of the Constitution.

4 units, Aut (Rakove, J)

**IHUM 76. Voyagers and Visionaries**

In this course we will examine five moments of intellectual encounter among the far-flung civilizations of the Eastern Hemisphere in the premodern and early modern eras. The texts we will investigate are landmark works of cultural translation and ethnographic analysis, penned by scholar-travelers from across the Old World. In addition to reading works by two Western analysts of the East, you will be introduced to early Chinese and Persian appraisals of India, as well as a North African encounter with sub-Saharan Africa. Each of our chosen works shows a self-critical mind at work; each represents a lifetime of empirical research, drawing on firsthand experience of foreign lands as well as careful interrogation of prior accounts; and each went on to become an influential classic in a distinctive intellectual tradition. Using methods from intellectual history and cultural geography, we will focus on reconstructing the worldviews and geographical imaginations that inform each text. Hi

4 units, Aut (Wigen, K; Parker, G)

**IHUM 77. What is a Classic?**

The goal of this sequence is to provide Stanford freshman with structured access to great works of literature. The core question is: Why (and how) should we read classics today? Part of this process involves engaging them in an interrogation of the very notion of classic literature. One standard understanding of classic involves the claim that a certain work surpasses its original context and speaks to later generations. Whether or not that definition suffices, the course will ask students to read literature of the past (whether distant or less distant) and to ask why and how we still read such works. A major topic of the sequence is therefore the durability of

literary works and the explanations offered up to explain that durability. While some students in What is a Classic may choose to major in a literary field, our goal is not primarily recruitment but rather to provide all participating students, whatever their eventual major choice, with the concepts and skills to rem

4 units, Win (Gumbrecht, H)

**INTRODUCTORY SEMINARS****AERONAUTICS AND ASTRONAUTICS INTRODUCTORY COURSES****AA 113N. Structures: Why Things Don't (and Sometimes Do) Fall Down**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. How structures created by nature or built by human beings keep things up and keep things in. Topics: nature's structures from microorganisms to large vertebrae; buildings from ancient dwellings to modern skyscrapers; spacecraft and airplanes; boats from ancient times to America's Cup sailboats, and how they win or break; sports equipment; and biomedical devices including bone replacements and cardiovascular stents. How composite materials are used to make a structure light and strong. GER:DB-EngrAppSci

3 units, Win (Springer, G)

**AA 116N. Electric Automobiles and Aircraft**

(S,Sem) (Same as EE 25Q) Stanford Introductory Seminar. Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption. It has crucial impacts on climate change, air pollution, resource depletion, and national security. Students wishing to address these issues will need to reconsider how we move, finding sustainable transportation solutions. This course will provide an introduction to the issue, covering the past and present of transportation and its impacts; examining alternative fuel proposals; and digging deeper into the most promising option: battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Two fun opportunities for hands-on experiences with electric cars. Prerequisites: Introduction to calculus and Physics AP or elementary mechanics. GER:DB-EngrAppSci

3 units, Win (Cox, D; Enge, P)

**AFRICAN AND AFRICAN AMERICAN STUDIES INTRODUCTORY COURSES****AFRICAAM 16N. African Americans and Social Movements**

(F,Sem) (Same as CSRE 16N, SOC 16N) Stanford Introductory Seminar. Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women's right, LGBT rights, environmental movement, and contemporary political conservatism. GER:DB-SocSci

3 units, Aut (Fields, C)

**AFRICAAM 48Q. South Africa: Contested Transitions**

(S,Sem) (Same as HISTORY 48Q) Stanford Introductory Seminar. Preference to sophomores. The inauguration of Nelson Mandela as president in May 1994 marked the end of an era and a way of life for S. Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. Who advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet. GER:DB-Hum, EC-GlobalCom

3 units, Win (Samoff, J)

**AFRICAAM 56N. Mixed Race in the New Millennium: Crossings of Kin, Faith & Culture**

(F,Sem) (Same as CSRE 56N, ENGLISH 56N) Stanford Introductory Seminar. Preference to freshmen. How literature, theater, graphic art and popular culture shape understandings of contemporary mixed race identity and other complex experiences of cultural hybridity. Course explores implications for racial identity, art, and politics for the new millennium. GER:DB-Hum

3 units, Win (Elam, M)

## AMERICAN STUDIES INTRODUCTORY COURSES

### AMSTUD 25N. Understanding the Sixties

(F,Sem) (Same as SOC 25N) Stanford Introductory Seminar. Preference to freshmen. The tendency of critics to view the 60s through ideological lenses as either the best or worst of times has made a balanced perspective difficult to achieve. Goal is to provide a sociological explanation for the political and cultural turbulence that marked the era. The confluence of demographic, political, economic, and cultural trends that date back to at least the 30s. The ambiguous legacy of the 60s. Using the 60s to shed light on the 80s and 90s. Enrollment limited to 16. GER:DB-SocSci

3 units, Win (Staff)

### AMSTUD 51N. Comparative Fictions of Ethnicity

(S,Sem) (Same as COMPLIT 51N, CSRE 51N) Stanford Introductory Seminar. We may know who we are, but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of the Self? After all, don't we tell stories in response to the question, who are you? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question--Does this universal issue (who am I) become skewed differently when we add a qualifier before it, like ethnic? GER:DB-Hum

5 units, Win (Palumbo-Liu, D)

### AMSTUD 68N. Mark Twain and American Culture

(F,Sem) (Same as ENGLISH 68N) Stanford Introductory Seminar. Preference to freshmen. Mark Twain has been called our Rabelais, our Cervantes, our Homer, our Tolstoy, our Shakespeare. Ernest Hemingway maintained that all modern American literature comes from one book by Mark Twain called *The Adventures of Huckleberry Finn*. President Franklin D. Roosevelt got the phrase *New Deal* from A Connecticut Yankee in King Arthur's Court. Class discussions will focus on how Twain's work illuminates and complicates his society's responses to such issues as race, technology, heredity versus environment, religion, education, and what it means to be American. GER:DB-Hum

4 units, Aut (Fishkin, S)

### AMSTUD 114N. Visions of the 1960s

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Introduction to the ideas, sensibility, and, to a lesser degree, the politics of the American 60s. Topics: the early 60s vision of a beloved community; varieties of racial, generational, and feminist dissent; the meaning of the counterculture; and current interpretive perspectives on the 60s. Film, music, and articles and books. GER:DB-Hum, EC-AmerCul

5 units, Aut (Gillam, R)

## ANTHROPOLOGY INTRODUCTORY COURSES

### ANTHRO 21N. The Anthropology of Globalization

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Anthropological approach to how cultural change, economic restructuring, and political mobilization are bound up together in the process of globalization. GER:DB-SocSci

4 units, Aut (Ebron, P)

### ANTHRO 26N. Hauntings, Visions, and Prophecy

(F,Sem) Stanford Introductory Seminar. This course explores the conditions under which people have experiences that they identify as  $\zeta$ supernatural $\zeta$ : experiences of something that is not physically present. We will explore the cultural and psychological dimensions of this very real phenomenon. We will not, however, make ontological judgments about whether something which is experienced as externally present is in fact externally present: in other words, this is a class about culture and psychology, not about metaphysics. We will do experimental work, using our selves and fellow classmates, as subjects, to understand who, when and how people have experiences that they deem  $\zeta$ super $\zeta$ natural.

3-5 units, Win (Luhmann, T)

### ANTHRO 27N. Ethnicity and Violence: Anthropological Perspectives

(F,Sem) Stanford Introductory Seminar. Ethnicity is one of the most compelling and most modern ways in which people - in the midst of considerable global and local uncertainty - all across the world imagine and narrate themselves. This seminar will take an anthropological look at both the modernity and the compulsions of ethnic allegiance, and, why struggles over ethnic identity are so frequently violent. Our questions will be both historical  $\zeta$  how, why and when did people come to think of themselves as possessing different ethnic identities - and contemporary  $\zeta$  how are these identities lived, understood, narrated, and transformed and what is the consequence of such ethnicisation. We follow this through anthropological perspectives which ask persistently how people themselves locally narrate and act upon their experiences and histories. Through this we will approach some of the really big and yet everyday questions that many of us around the world face: how do we relate to ourselves and to those

3-5 units, Aut (Thiranagama, S)

### ANTHRO 30Q. The Big Shift: An Anthropological Approach to Wealth, Migration, and the New Margins of America

(S,Sem) Stanford Introductory Seminar. Is the middle class shrinking? How do people who live at the extremes of American society- the super rich, the working poor and those who live on the margins, imagine and experience the good life? How do we understand phenomena such as gang cultures, addiction and the realignment of white consciousness? This class uses the methods and modes of ethnographic study in an examination of American culture. Ethnographic materials range from an examination of the new American wealth boom of the last 20 years (Richistan by Robert Frank) to the extreme and deadly world of the invisible underclass of homeless addicts on the streets of San Francisco (Righteous Dopefiend by Phillippe Bourgois and Jeff Schonberg). The experiences of Hispanic immigrants and the struggle to escape gang life in Los Angeles are highlighted in the story of Homeboy Industries a job creation program initiated by a priest working in LA's most deadly neighborhoods (G-Dog and the Homeboys by

4 units, Aut (Wilcox, M)

## APPLIED PHYSICS INTRODUCTORY COURSES

### APPPHYS 78Q. Tools of Nanotechnology

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Topics include: current and future applications of nanotechnology, nanofabrication tools, nanoscale characterization and manipulation tools, scanning probe microscopy (SPM), Stanford nanotechnology research examples, hands-on activities, research lab tours. Prerequisite: high school physics. GER:DB-EngrAppSci

3 units, Aut (Beetz, T)

### APPPHYS 79N. Energy Options for the 21st Century

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Choices for meeting the future energy needs of the U.S. and the world. Basic physics of energy sources, technologies that might be employed, and related public policy issues. Trade-offs and societal impacts of different energy sources. Policy options for making rational choices for a sustainable world energy economy. GER:DB-EngrAppSci

3 units, Aut (Fox, J; Geballe, T)

## ART HISTORY INTRODUCTORY COURSES

### ARTHIST 260Q. Art, War and Politics in the Modern Period

(S,Sem) Stanford Introductory Seminar. Considers the pivotal relationship between war, politics and the visual arts from the beginnings of the French Revolution in 1789 to the end of the Vietnam War in 1975, exploring how iconic works of modernism have both shaped and reflected public discourse on war, whether in support of such campaigns or in opposition to them. Topics: the power of visual representation to capture the trauma of the battlefield; propaganda and the art of persuasion; how developments in modern art are implicated in the evolution of modern warfare and vice-versa. Case studies include: Francisco de Goya's wrenching portrayal of the Napoleonic Wars, *The Third of May* (1808); Pablo Picasso's monument to the murderous bombing of a Basque town during the Spanish Civil War, *Guernica* (1937);

and the surprising history of Abstract Expressionism, the CIA and the cold war. Sophomore seminar; enrollment restricted and by application only. GER:DB-Hum

3 units, Win (Lee, P)

### **ARTHIST 232Q. Place: Making Space Now**

(S,Sem) (Same as CEE 32Q) Stanford Introductory Seminar. This seminar argues that architects are ultimately placemakers, and questions what that means in the contemporary world. Part I investigates the meaning of the word place. Additional background for understanding contemporary place making will include a critique of the history of modern place-making through an examination of modern form. Part II examines two traditional notions of place by scale: from home to the city. What elements give these conceptions of space a sense of place? To answer this question, themes such as memory, mapping, and boundary, among others, will be investigated. Part III presents challenges to the traditional notions of place discussed in Part II. Topics addressed include: What does it mean to be out of place? What sense of place does a nomad have, and how is this represented? What are the non-places and how can architects design for these spaces? Part IV addresses the need to re-conceptualize contemporary space

3 units, Spr (Barton, J; Beischer, T)

## **BIOCHEMISTRY INTRODUCTORY COURSES**

### **BIOC 118Q. Genomics and Medicine**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Knowledge gained from sequencing human genomes and implications for medicine and biomedical research. Novel diagnoses and treatment of diseases, including stem cells, gene therapy and rational drug design. Personal genomics and how it is used to improve health and well being. Social and ethical implications of genetic information such as privacy, discrimination and insurability. Course Webpage:

<http://biochem118.stanford.edu/>. GER:DB-EngrAppSci

3 units, Win (Brutlag, D)

## **BIOENGINEERING INTRODUCTORY COURSES**

### **BIOE 70Q. Medical Device Innovation**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Survey of innovative technologies and medical devices used in multiple medical specialties. Guest lecturers include Stanford Medical School physicians, entrepreneurs, and venture capitalists. Focus on how to identify clinical needs and design device solutions to address those needs. Fundamentals of starting a company. Field trips to local medical device companies and design house. No previous engineering training required.

3 units, Spr (Mandato, J; Pierce, R)

## **BIOLOGY INTRODUCTORY COURSES**

### **BIO 4N. Personalized Genomic Medicine**

(F,Sem) Stanford Introductory Seminar. Exploration of the exciting new field of personalized genomic medicine. Personalized medicine is based on the idea that each person's unique genome sequence can be used to predict risk of acquiring specific diseases, and to make more informed medical choices. Learn about the fascinating science behind these approaches; where they are heading in the future; and the ethical implications such technology presents. Lectures will be augmented with hands-on experience in exploring and analyzing a real person's genome. GER: DB-NatSci

3 units, Aut (Fraser, H)

### **BIO 8N. Human Evolution**

(F,Sem) Stanford Introductory Seminar. A survey of the anatomical and behavioral evidence for human evolution and of the increasingly important information from molecular genetics. Emphasis on the split between the human and chimpanzee lines 6-7 million years ago, the appearance of the australopithecines 4.1 million years ago, the emergence of the genus *Homo* about 2.5 million years ago, the spread of *Homo* from Africa 1.7-1.6 million years ago, the subsequent divergence of *Homo* into different species on different continents, and the expansion of fully modern humans (*Homo sapiens*) from Africa about 50,000 years ago to

replace the Neanderthals and other non-modern Eurasians. GER: DB-NatSci

3 units, Win (Klein, R)

### **BIO 12N. Sensory Ecology of Marine Animals**

(F,Sem) Stanford Introductory Seminar. Animals living in the oceans experience a highly varied range of environmental stimuli. An aquatic lifestyle requires an equally rich range of sensory adaptations, including some that are totally foreign to us. In this course we will examine sensory system in marine animals from both an environmental and behavioral perspective and from the point of view of neuroscience and information systems engineering.

3 units, Spr (Thompson, S)

### **BIO 13N. Environmental Problems and Solutions**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Students do independent investigations of current environmental problems, analyzing differing views of them and discussing possible solutions. Each student gives seminar presentations and leads seminar discussions. Short, documented position papers are written for policy makers. GER: DB-NatSci

3 units, Spr (Ehrlich, P)

### **BIO 15N. Environmental Literacy**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Lack of public understanding of the details of most environmental problems is cited as a cause of environmental deterioration. Good citizenship requires literacy about the elements of the scientific and decision making processes that accompany most environmental issues: what can happen, what are the odds, how can the credibility of sources of expertise be assessed, which components of environmental debates deal with factual and theoretical issues, and which are political value judgments? GER: DB-NatSci

3 units, Aut (Root, T)

### **BIO 16N. Island Ecology**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. How ecologists think about the world. Focus is on the Hawaiian Islands: origin, geology, climate, evolution and ecology of flora and fauna, and ecosystems. The reasons for the concentration of threatened and endangered species in Hawaii, the scientific basis for their protection and recovery. How knowledge of island ecosystems can contribute to ecology and conservation biology on continents. GER: DB-NatSci

3 units, Spr (Vitousek, P)

### **BIO 22N. Infection, Immunity, and Global Health**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. The causes and prevention of infectious diseases, focusing on the interplay between pathogens and the immune system that determines the outcome of the disease. Introduction to microbiology, immunology, and epidemiology. Diseases of the past and present, including TB, malaria, AIDS, and Ebola. The roles of biological, environmental, and societal factors in disease emergence, spread, and prevention. Primary scientific literature, student-led discussions, and research projects. Prerequisite: biology background, preferably introductory college courses (e.g., 41, 42, or HUMBIO 2A, 3A. GER: DB-NatSci

3 units, Spr (Jones, P)

### **BIO 25Q. The Molecular Basis of Genetic Disease**

(F,Dial) Stanford Introductory Dialogue. Preference to sophomores. Focus is on two genetic diseases resulting from the production of protein molecules that are unable to fold into their native conformations, called conformational diseases: cystic fibrosis and amyotrophic lateral sclerosis or Lou Gehrig's disease. Hypotheses and controversies surrounding the molecular basis of these disorders, and implications for novel therapeutics. Readings from research literature. GER: DB-NatSci

3 units, Spr (Kopito, R)

### **BIO 26N. Maintenance of the Genome**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The precious blueprint for life is entrusted to the genomic DNA molecules in all living cells. Multiple strategies have evolved to prevent the deleterious consequences from endogenous DNA alterations and damage from radiation or genotoxic chemicals in the environment. In this seminar you will learn about the remarkable systems that scan cellular DNA for alterations and make repairs to ensure genomic stability. Deficiencies in DNA

repair have been implicated in many hereditary diseases involving developmental defects, premature aging, and/or predisposition to cancer. An understanding of DNA repair mechanisms is important for advances in the fields of cancer biology, neurobiology, and gerontology. Background readings, introductory lectures, student presentations, short term paper. GER: DB-NatSci

3 units, Aut (Hanawalt, P)

### **BIO 27N. Nature and Nurture in Brain Development**

(F,Sem) Stanford Introductory Seminar. Preference to sophomores. Examination of the roles of genes and the environment in shaping brain wiring and behavior, using readings of papers from the primary scientific literature as examples of how the developing nervous system integrates information from both the genetic blueprint and external experience in forming neural connections. GER: DB-NatSci

3 units, Win (McConnell, S)

### **BIO 30N. Extinctions in Near Time: Biodiversity loss since the Pleistocene**

(F,Sem) Stanford Introductory Seminar. The transition 11,700 years ago from the Pleistocene glacial period into the Holocene interglacial witnessed the expansion of humans around the world, climatic warming and the demise of many large vertebrate species. Since that time extinctions have continued on land and in the sea, culminating with the biodiversity crisis we are experiencing today. We will explore these prehistoric extinctions: Who? When? Where? and Why? in order to learn more about our planet's future. GER: DB-NatSci

3 units, Aut (Hadly, E)

### **BIO 33N. Conservation Science and Practice**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Interdisciplinary. The science and art of conservation today. The forces that are driving change in Earth's atmosphere, lands, waters, and variety of life forms. Which broad dimensions of the biosphere, and which elements of ecosystems, most merit protection? The prospects for, and challenges in, making conservation economically attractive and commonplace. Field trip; project. GER: DB-NatSci

3 units, Spr (Daily, G)

### **BIO 34N. Hunger**

(F,Sem) Stanford Introductory Seminar. The biology of hunger and satiety, disease states that disrupt normal responses to hunger and satiety, starvation responses and adaptations to starvation in a variety of organisms, food production and distribution mechanisms, historic famines and their causes, the challenges of providing adequate food and energy for the Earth's growing population, local and global efforts to alleviate hunger, and hunger in fiction. GER: DB-NatSci

3 units, Aut (Barton, K)

### **BIO 38N. Photosynthesis: From Basic Mechanisms to Biofuels**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Photosynthetic processes in terrestrial and aquatic environments. Biological and chemical ways that have been developed to capture the energy of sunlight; how this light energy can be converted to usable forms of energy, including biofuels; and potential impacts of anthropogenic energy generation on the health of the planet. GER: DB-NatSci

3 units, Win (Grossman, A)

### **BIO 39N. Networks in Biology**

(F,Sem) Stanford Introductory Seminar. Networks are everywhere, including friendship links on Facebook, airline routes, power grids, and the Internet. Biology is no exception. Examples include food chains, protein interaction maps, and metabolic pathways. Despite their ubiquitousness, the study of networks in the real world only started about a decade ago. Exploration of the types of networks in biology and the approaches people use in studying them. Discussions and presentations of original research papers. GER: DB-NatSci

3 units, Spr (Rhee, S), alternate years, not given next year

## **CHEMICAL ENGINEERING INTRODUCTORY COURSES**

### **CHEMENG 35N. Renewable Energy for a Sustainable World**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen.

An overall world energy assessment, projections, and technologies. How to assess good and bad potential impacts of leading renewable energy candidates: benefit versus impact ratio using quantitative cradle-to-grave approach. Technologies suitable for near-term application in developing economic systems. Governmental policies, governmental versus private sector investments, raw materials supply issues, and impact of cultural influences on technology choices and speed of implementation. GER:DB-EngrAppSci

3 units, Aut (Swartz, J)

### **CHEMENG 60Q. Environmental Regulation and Policy**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. How environmental policy is formulated in the U.S. How and what type of scientific research is incorporated into decisions. How to determine acceptable risk, the public's right to know of chemical hazards, waste disposal and clean manufacturing, brownfield redevelopment, and new source review regulations. The proper use of science and engineering including media presentation and misrepresentation, public scientific and technical literacy, and emotional reactions. Alternative models to formulation of environmental policy. Political and economic forces, and stakeholder discussions. GER:DB-EngrAppSci

3 units, Aut (Robertson, C; Libicki, S)

### **CHEMENG 70Q. Masters of Disaster**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. For students interested in science, engineering, politics, and the law. Learn from past disasters to avoid future ones. How disasters can be tracked to failures in the design process. The roles of engineers, artisans, politicians, lawyers, and scientists in the design of products. Failure as rooted in oversight in adhering to the design process. Student teams analyze real disasters and design new products presumably free from the potential for disastrous outcomes. GER:DB-EngrAppSci

3 units, Aut (Robertson, C; Moalli, J)

### **CHEMENG 80Q. Art, Chemistry, and Madness: The Science of Art Materials**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Chemistry of natural and synthetic pigments in five historical palettes: earth (paleolithic), classical (Egyptian, Greco-Roman), medieval European (Middle Ages), Renaissance (old masters), and synthetic (contemporary). Composite nature of paints using scanning electron microscopy images; analytical techniques used in art conservation, restoration, and determination of provenance; and inherent health hazards. Paintings as mechanical structures. Hands-on laboratory includes stretching canvas, applying gesso grounds, grinding pigments, preparing egg tempera paint, bamboo and quill pens, gilding and illumination, and papermaking. GER:DB-EngrAppSci

3 units, Spr (Frank, C; Loesch-Frank, S)

## **CHEMISTRY INTRODUCTORY COURSES**

### **CHEM 24N. Nutrition and History**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Intended to broaden the introductory chemistry experience. The biochemical basis of historically important nutritional deficiencies (vitamins, minerals, starvation, metabolic variants that predispose to disease) and environmental toxins is related to physiological action and the sociological, political, and economic consequences of its effect on human populations. Prerequisite: high school chemistry. Recommended: 31A,B, or 31X, or 33.

3 units, Spr (Huestis, W)

### **CHEM 25N. Science in the News**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Possible topics include: diseases such as avian flu, HIV, and malaria; environmental issues such as climate change, atmospheric pollution, and human population; energy sources in the future; evolution; stem cell research; nanotechnology; and drug development. Focus is on the scientific basis for these topics as a basis for intelligent discussion of societal and political implications. Sources include the popular media and scientific media for the nonspecialist, especially those available on the web.

3 units, Aut (Andersen, H)

### **CHEM 25Q. Science-in-Theatre: A New Genre?**

(S,Sem) (Same as DRAMA 25N) Stanford Introductory Seminar.

Preference to sophomores. How scientists acquire their rules, mores, and idiosyncrasies through a form of intellectual osmosis in a mentor-disciple relationship. Scientists represented as Frankensteins or nerds, rather than normal. Why more intellectually challenging plays have appeared on the Anglo-American theatre scene where scientific behavior and even science are presented accurately. Students engage in a playwriting experiment.

3 units, Win (Djerassi, C)

#### **CHEM 26N. The What, Why, How and wow's of Nanotechnology**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Introduction to nanotechnology with discussion of basic science at the nanoscale, its difference from molecular and macroscopic scales, and implications and applications. Developments in nanotechnology in the past two decades, from imaging and moving single atoms on surfaces to killing cancer cells with nanoscale tools and gadgets. GER: DB-NatSci

3 units, Spr (Dai, H)

#### **CHEM 34XN. General Chemistry Laboratory**

(F,Sem) Stanford Introductory Seminar. Introduction to chemical laboratory practice. Topics include preparation of compounds and characterization of their properties by modern spectroscopic techniques. Corequisite: Chemistry 31X or the equivalent. Limited to 12 students; enrollment by consent of the instructor.

1 unit, Aut (Cox, C; Fayer, M)

### **CHICANA/O STUDIES INTRODUCTORY COURSES**

#### **CHICANST 14N. Growing Up Bilingual**

(F,Sem) (Same as CSRE 14N, EDUC 114N) Stanford Introductory Seminar. This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.

3 units, Win (Valdes, G)

#### **CHICANST 160N. Latino/Latina Performance in the United States**

(F,Sem) (Same as CSRE 160N, DRAMA 17N) Stanford Introductory Seminar. Preference to freshmen. This course will introduce works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course's conclusion, each student will create and perform in a staged reading of an original performance piece. GER:DB-Hum, EC-AmerCul

3 units, Win (Moraga, C)

### **CHINESE GENERAL INTRODUCTORY COURSES**

#### **CHINGEN 70N. Marvelous Creatures: Animals and Humans in Chinese Literature**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Read novels and short stories as well as view films that feature an array of marvelous creatures from late imperial times to the contemporary era. What animal imageries and metaphors can reveal about the Chinese and how they relate to the natural, supernatural, and human worlds across the centuries. GER:DB-Hum, EC-GlobalCom

3-4 units, Spr (Lee, H)

### **CIVIL AND ENVIRONMENTAL ENGINEERING INTRODUCTORY COURSES**

#### **CEE 31Q. Accessing Architecture Through Drawing**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Drawing architecture provides a deeper understanding of the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment. GER:DB-EngrAppSci

4 units, Aut (Barton, J), Win (Barton, J)

#### **CEE 32Q. Place: Making Space Now**

(S,Sem) (Same as ARTHIST 232Q) Stanford Introductory Seminar. This seminar argues that architects are ultimately placemakers, and questions what that means in the contemporary world. Part I investigates the meaning of the word place. Additional background for understanding contemporary place making will include a critique of the history of modern place-making through an examination of modern form. Part II examines two traditional notions of place by scale: from home to the city. What elements give these conceptions of space a sense of place? To answer this question, themes such as memory, mapping, and boundary, among others, will be investigated. Part III presents challenges to the traditional notions of place discussed in Part II. Topics addressed include: What does it mean to be out of place? What sense of place does a nomad have, and how is this represented? What are the non-places and how can architects design for these spaces? Part IV addresses the need to reconceptualize contemporary s

3 units, Spr (Barton, J; Beischer, T)

#### **CEE 50N. From the Foothills to the Bay**

(F,Sem) Stanford Introductory Seminar. Stanford University sits on the shores of one of the world's great estuaries, the San Francisco Bay/Delta, the connection of the inland river systems of the Central Valley to the Pacific Ocean. This course is intended to provide an introduction to the San Francisco Bay/Delta including its history, current scientific understanding of its physical and ecological functioning, descriptions and underpinnings of engineering manipulations of the system, and the intersection of science and engineering with policies designed to manage its resources. Because of the important effects that water resources development, most notably upstream diversions, have had on the system, Bay-Delta science, engineering and policy are completely intertwined with the management of the water supply of California. Thus, we will also examine relevant issues in California water that touch on the Bay Delta including an overall description of California hydrology, the State and Federal wa

3 units, Spr (Monismith, S)

#### **CEE 80N. The Art of Structural Engineering**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The history of modern bridges, buildings, and other large-scale structures. Students learn about modern structures, the social context in which they are built and their symbolic value. Principles of structural engineering and calculating efficiency and safety taught through case studies. Field trip to Bay Area landmark and hands-on exercises including building and testing a model bridge. Students from all backgrounds welcome. GER:DB-EngrAppSci

4 units, Win (Billington, S)

### **CLASSICS ART/ARCHAEOLOGY INTRODUCTORY COURSES**

#### **CLASSART 21Q. Eight Great Archaeological Sites in Europe**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Focus is on excavation, features and finds, arguments over interpretation, and the place of each site in understanding the archaeological history of Europe. Goal is to introduce the latest archaeological and anthropological thought, and raise key questions about ancient society. The archaeological perspective foregrounds interdisciplinary study: geophysics articulated with art history, source criticism with analytic modeling, statistics interpretation. A web site with resources about each site, including

plans, photographs, video, and publications, is the basis for exploring. GER:DB-Hum

3-5 units, Aut (Shanks, M), Spr (Shanks, M)

## CLASSICS GENERAL INTRODUCTORY COURSES

### CLASSGEN 6N. Antigone: From Ancient Democracy to Contemporary Dissent

(F,Sem) (Same as DRAMA 12N) Stanford Introductory Seminar. Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of Antigone by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta. GER:DB-Hum, EC-Gender

4 units, Aut (Rehm, R; Miller, D)

### CLASSGEN 24N. Sappho: Erotic Poetess of Lesbos

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Sappho's surviving fragments in English; traditions referring to or fantasizing about her disputed life. How her poetry and legend inspired women authors and male poets such as Swinburne, Baudelaire, and Pound. Paintings inspired by Sappho in ancient and modern times, and composers who put her poetry to music. GER:DB-Hum, EC-Gender

4-5 units, Spr (Peponi, A)

### CLASSGEN 37N. Socrates: Philosopher and Trickster

(F,Sem) Stanford Introductory Seminar. Socrates claimed that he was not wise but always seeking for wisdom. Socrates aimed to achieve ethical knowledge. What kind of knowledge is this? We examine Greek myth, religion, and society in order to locate Socrates' philosophy in its cultural context. We investigate the trial and death of Socrates, his philosophic method, and his cunning philosophic strategies. We read Plato's dialogues, Greek tragedies and comedies to understand this cagey and complex philosopher. GER:DB-Hum, EC-EthicReas

3-5 units, Win (Nightingale, A)

## CLASSICS HISTORY INTRODUCTORY COURSES

### CLASSHIS 23N. Slavery and Rebellion in Ancient Rome: Spartacus in Legend and History

(F,Sem) (Same as HISTORY 13N) Stanford Introductory Seminar. Preference to freshmen. Spartacus and his army of slaves resisted the power of the Roman legions for two years and became the stuff of legend. Introduction to Roman history. Slavery in ancient Rome in its psychological, social, and economic dimensions. Causes of Spartacus' rebellion; how the traumatic end of the rebellion gave rise to a legend popularized in Stanley Kubrick's 1960 film.

3 units, Aut (Saller, R)

### CLASSHIS 26N. From Community to Empire: Understanding the Premodern State

(F,Sem) Stanford Introductory Seminar. As Rousseau observed, man was born free, and everywhere he is in chains. How did this happen? Bringing together theoretical models from the social sciences and historical evidence from all over the world, this course explores the emergence, evolution and character of the state as a fundamental type of human organization that has shaped our existence for thousands of years. GER:IHUM-3

3-4 units, Spr (Scheidel, W)

## COMMUNICATION INTRODUCTORY COURSES

### COMM 130N. The idea of a free press

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. An examination of the meaning of freedom of the press, tied to but not bound by various Supreme Court rulings on the scope and purpose of the First Amendment's speech and press clauses. Discussions will include a look at the recent and rapid computerization of communication and what it portends for the future of a free press.

3-4 units, Spr (Glasser, T)

## COMPARATIVE LITERATURE INTRODUCTORY COURSES

### COMPLIT 10N. Shakespeare and Performance in a Global Context

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The problem of performance including the performance of gender through the plays of Shakespeare. In-class performances by students of scenes from plays. The history of theatrical performance. Sources include filmed versions of plays, and readings on the history of gender, gender performance, and transvestite theater. GER:DB-Hum, EC-Gender

3 units, Spr (Parker, P)

### COMPLIT 11Q. Shakespeare, Playing, Gender

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Focus is on several of the best and lesser known plays of Shakespeare, on theatrical and other kinds of playing, and on ambiguities of both gender and playing gender. GER:DB-Hum, EC-Gender

3 units, Win (Parker, P)

### COMPLIT 51N. Comparative Fictions of Ethnicity

(S,Sem) (Same as AMSTUD 51N, CSRE 51N) Stanford Introductory Seminar. We may know who we are, but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of the Self? After all, don't we tell stories in response to the question, who are you? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question--Does this universal issue (who am I) become skewed differently when we add a qualifier before it, like ethnic? GER:DB-Hum

5 units, Win (Palumbo-Liu, D)

### COMPLIT 110N. Du Fu: The Case for Chinese Poetry

(F,Sem) Stanford Introductory Seminar. When one asks: what is a classic? one expects the title of a big novel as the response. This course argues the case for the classical Chinese poetry of the author who has the rightful claim of the greatest poet in Chinese history, Du Fu (712-770). We will look at how poetry focuses on the chemistry of language - the ways words can be put together just so to create specific catalytic conversations of meaning; the engineering of language - the ways specific structures build on and create certain distributions of energy and mass. We will learn to appreciate Du Fu's wit, compassion, learnedness and critical powers and to appreciate as well how poetry can illustrate the evocative and expressive power of language. GER:IHUM-3

4 units, Spr (Palumbo-Liu, D)

## COMPARATIVE MEDICINE INTRODUCTORY COURSES

### COMPMED 81N. Comparative Anatomy and Physiology of Mammals

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Emphasis is on a comparative approach to anatomy and physiology of a wide range of mammals, the unique adaptations of each species in terms of its anatomical, and behavioral characteristics, and how these species interact with human beings and other animals. Dissection required. Class size is limited to 16. GER: DB-NatSci

3 units, Win (Bouley, D)

### COMPMED 84Q. Globally Emerging Zoonotic Diseases

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Infectious diseases impacting veterinary and human health around the world today. Mechanisms of disease, epidemiology, and underlying diagnostic, treatment and control principles associated with these pathogens.

3 units, Spr (Felt, S)

### COMPMED 87Q. Introduction to the Mouse in Biomedical Research

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Focus is on the laboratory mouse, one of the most widely used

models for biomedical research. Topics include the natural history and origin of the laboratory mouse; characteristics of commonly used strains; mouse anatomy, physiology, and husbandry; common mouse diseases and their effects on research; coat color genetics; and genetically engineered mouse technology. Demonstrations and hands-on experience with necropsy, mouse handling, and research techniques.

3 units, Aut (Nagamine, C)

## COMPARATIVE STUDIES IN RACE AND ETHNICITY INTRODUCTORY COURSES

### CSRE 14N. Growing Up Bilingual

(F,Sem) (Same as CHICANST 14N, EDUC 114N) Stanford Introductory Seminar. This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.

3 units, Win (Valdes, G)

### CSRE 16N. African Americans and Social Movements

(F,Sem) (Same as AFRICAAM 16N, SOC 16N) Stanford Introductory Seminar. Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women's right, LGBT rights, environmental movement, and contemporary political conservatism. GER:DB-SocSci

3 units, Aut (Fields, C)

### CSRE 28N. The Cultural Shaping of Mental Health and Illness

(F,Sem) (Same as PSYCH 28N) Stanford Introductory Seminar. This seminar examines how our cultural ideas and practices shape our conceptions, perceptions, experiences, and treatment of emotional wellness and distress. We will read and discuss empirical research and case studies from psychology, anthropology, sociology, and medicine. Course requirements include weekly reading and thought papers, weekly discussion, and a final research project and presentation.

3 units, Win (Tsai, J)

### CSRE 45Q. Understanding Race and Ethnicity in American Society

(S,Sem) (Same as SOC 45Q) Stanford Introductory Seminar. Preference to sophomores. Historical overview of race in America, race and violence, race and socioeconomic well-being, and the future of race relations in America. Enrollment limited to 16. GER:DB-SocSci

5 units, Aut (Snipp, C)

### CSRE 51N. Comparative Fictions of Ethnicity

(S,Sem) (Same as AMSTUD 51N, COMPLIT 51N) Stanford Introductory Seminar. We may know who we are, but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of the Self? After all, don't we tell stories in response to the question, who are you? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question--Does this universal issue (who am I) become skewed differently when we add a qualifier before it, like ethnic? GER:DB-Hum

5 units, Win (Palumbo-Liu, D)

### CSRE 56N. Mixed Race in the New Millennium: Crossings of Kin, Faith & Culture

(F,Sem) (Same as AFRICAAM 56N, ENGLISH 56N) Stanford Introductory Seminar. Preference to freshmen. How literature, theater, graphic art and popular culture shape understandings of contemporary mixed race identity and other complex experiences of cultural hybridity. Course explores implications for racial identity, art, and politics for the new millennium. GER:DB-Hum

3 units, Win (Elam, M)

### CSRE 160N. Latino/Latina Performance in the United States

(F,Sem) (Same as CHICANST 160N, DRAMA 17N) Stanford Introductory Seminar. Preference to freshmen. This course will

introduce works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course's conclusion, each student will create and perform in a staged reading of an original performance piece. GER:DB-Hum, EC-AmerCul

3 units, Win (Moraga, C)

## COMPUTER SCIENCE INTRODUCTORY COURSES

### CS 21N. Can Machines Know? Can Machines Feel?

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Can mental attitudes attributed to people and sometimes to animals, including knowledge, belief, desire, and intention, also be ascribed to machines? Can light sensors have a belief? Can a pool cleaning robot or tax-preparation software have an intention? If not, why not? If yes, what are the rules of such ascription, and do they vary between human beings and machines? Sources include philosophy, neuroscience, computer science, and artificial intelligence. Topics: logic, probability theory, and elements of computation. Students present a paper. GER:DB-EngrAppSci

3 units, Aut (Shoham, Y)

### CS 26N. Motion Planning for Robots, Digital Actors, and Other Moving Objects

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Motion planning theory and computational approaches: how to represent, simulate, and plan motions in a computer. Intriguing algorithms, representations, and applications: terminology and concepts for reading motion planning research literature. Problems include: how a robot arm manipulates parts without colliding with its environment; how many maneuvers are required to park a car in a tight spot; how characters in computer games avoid running into obstacles; how molecules change shapes to perform biological functions; how to assemble a product from individual parts; how a multi-limbed robot can navigate on rough terrain; how robots can perform surgical procedures. Prerequisite: some computer programming experience in any language. GER:DB-EngrAppSci, DB-EngrAppSci

3 units, Win (Latombe, J)

### CS 45N. Computers and Photography: From Capture to Sharing

(F,Sem) Stanford Introductory Seminar. Preference to freshmen with experience in photography and use of computers. Elements of photography, such as lighting, focus, depth of field, aperture, and composition. How a photographer makes photos available for computer viewing, reliably stores them, organizes them, tags them, searches them, and distributes them online. No programming experience required. Digital SLRs and editing software will be provided to those students who do not wish to use their own.

3-4 units, Aut (Garcia-Molina, H)

### CS 47N. Computers and the Open Society

(F,Sem) Stanford Introductory Seminar. How online technologies change our lives and the social structure that we live in. Course emphasizes critical analyses of current trends i.e. blogging, social networks, and instant mobile communication. Readings include case studies and analyses of basic principles i.e. privacy, equity and sustainability. Guest speakers who have participated in development of computers and the net will share their experiences and enter into debates on current issues. Students work individually and in small groups to research issues, develop the capacity for critical thinking about them, and use the results as the basis for writing and discussions both in class and on-line.

3 units, Aut (Winograd, T)

### CS 73N. The Business of the Internet

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Issues in Internet history, technology, and public policy are discussed as well as the Internet's impact on commerce, education, government, and health care. Writing for the web. Participants develop a substantial website. GER:DB-EngrAppSci

3 units, Spr (Wiederhold, G; Barr, A; Tessler, S)

**CS 74N. Digital Dilemmas**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Issues where policy decision making requires understanding computer and communications technology. Technology basics taught in non-technology terms. Topics include consumer privacy, government surveillance, file sharing and intellectual property, and electronic voting. GER:DB-EngrAppSci

3 units, Spr (Dill, D)

**CS 75N. Cell Phones, Sensors, and You**

(F,Sem) Stanford Introductory Seminar. Focuses on the role of cell phones as the first prevalent wearable sensors that gather information about you that can be both useful and potentially harmful. Topics include the state of technology, sociological and privacy implications, potential governmental regulation, etc. Addresses omniscient big brother technology including radar guns and the recording devices that led to the Watergate scandal. Students will gather and compile information on topics and come to class ready to discuss and debate with formulated opinions. GER:DB-EngrAppSci

3 units, Spr (Fedkiw, R)

**DRAMA INTRODUCTORY COURSES****DRAMA 10N. Arts and Ideas: 20th Century Art in Conflict**

(F,Sem) Stanford Introductory Seminar. The second quarter of Art & Ideas builds on the examples of Modernism students in Arts and Ideas studied in the first quarter. The Frosh Seminar 20th-Century Art in Conflict will focus on drama and film that experiments with new possibilities of form, shaping the direction of later artistic practice. We will trace how the political and aesthetic concerns of the 20th century reflect and exploit new technologies, both in theater and film, altering the position and function of author, actor, director, and audience. GER:IHUM-3

4 units, Spr (Rehm, R)

**DRAMA 11N. Dramatic Tensions: Theater and the Marketplace**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Tension between artistic and commercial forces in modern theater; the conflicted state of the art form. Sources include major and emerging contemporary figures in commercial, fringe, and nonprofit theater in the U.S. and UK. Visits with writers, directors, and dramaturges. GER:DB-Hum

4 units, Win (Freed, A)

**DRAMA 12N. Antigone: From Ancient Democracy to Contemporary Dissent**

(F,Sem) (Same as CLASSGEN 6N) Stanford Introductory Seminar. Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of Antigone by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta. GER:DB-Hum, EC-Gender

4 units, Aut (Rehm, R; Miller, D)

**DRAMA 13N. Law and Drama**

(F,Sem) Stanford Introductory Seminar. Preference to Freshmen. Beyond the obvious traits that make a good (court room) drama, theater and jurisprudence have much more in common. Just as drama is engaged not only in entertainment but also in examination of social conventions and mechanisms, so law is not only concerned with dispensing justice but with shaping and maintaining a viable human community. In this class we will read and discuss a series of plays in which court proceedings are at the center of dramatic action and concluding with an investigation of the new genre of documentary drama.

4 units, Aut (Jakovljevic, B)

**DRAMA 17N. Latino/Latina Performance in the United States**

(F,Sem) (Same as CHICANST 160N, CSRE 160N) Stanford Introductory Seminar. Preference to freshmen. This course will introduce works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing

some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course's conclusion, each student will create and perform in a staged reading of an original performance piece. GER:DB-Hum, EC-AmerCul

3 units, Win (Moraga, C)

**DRAMA 25N. Science-in-Theatre: A New Genre?**

(S,Sem) (Same as CHEM 25Q) Stanford Introductory Seminar. Preference to sophomores. How scientists acquire their rules, mores, and idiosyncrasies through a form of intellectual osmosis in a mentor-disciple relationship. Scientists represented as Frankensteins or nerds, rather than normal. Why more intellectually challenging plays have appeared on the Anglo-American theatre scene where scientific behavior and even science are presented accurately. Students engage in a playwriting experiment.

3 units, Win (Djerassi, C)

**DRAMA 180Q. Noam Chomsky: The Drama of Resistance**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Chomsky's ideas and work which challenge the political and economic paradigms governing the U.S. Topics include his model for linguistics; cold war U.S. involvements in S.E. Asia, the Middle East, Central and S. America, the Caribbean, and Indonesia and E. Timor; the media, terrorism, ideology, and culture; student and popular movements; and the role of resistance. GER:DB-Hum

4 units, Aut (Rehm, R; Miller, D)

**EARTH SYSTEMS INTRODUCTORY COURSES****EARTHSYS 41N. The Global Warming Paradox**

(F,Sem) (Same as EESS 41N) Stanford Introductory Seminar. Preference to freshman. Focus is on the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Topics include: Earth's energy balance; detection and attribution of climate change; the climate response to enhanced greenhouse forcing; impacts of climate change on natural and human systems; and proposed methods for curbing further climate change. Sources include peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks.

3 units, Aut (Diffenbaugh, N)

**EARTHSYS 49N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay**

(F,Sem) (Same as EESS 49N) Stanford Introductory Seminar. This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended.

3 units, Spr (Francis, C)

**EARTHSYS 56Q. Changes in the Coastal Ocean: The View From Monterey and San Francisco Bays**

(S,Sem) (Same as EESS 56Q) Stanford Introductory Seminar. Preference to sophomores. Recent changes in the California current, using Monterey Bay as an example. Current literature introduces principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC. Optional field trip to MBARI and Monterey Bay. GER: DB-NatSci

3 units, Spr (Dunbar, R)

**EARTHSYS 57Q. Climate Change from the Past to the Future**

(S,Sem) (Same as EESS 57Q) Stanford Introductory Seminar. Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios

of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.

3 units, Win (Chamberlain, P)

### **EARTHSYS 61Q. Food and security**

(S,Sem) (Same as EESS 61Q, INTNLREL 61Q) Stanford Introductory Seminar. The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

5 units, Aut (Naylor, R; Stedman, S)

## **ECONOMICS INTRODUCTORY COURSES**

### **ECON 11N. Understanding the Welfare System**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Welfare reform legislation and the devolution revolution. The transfer of responsibility for antipoverty programs to the states. How recent reforms change the welfare system and who is likely to be affected. Food stamps, AFDC, TANF, SSI, and Medicaid. Income transfer programs such as earned income tax credit and income taxes, and labor market regulations such as minimum wages and overtime rules. Economic principles to understand the effectiveness of these programs and their consequences on the behavior of families. Pre- or corequisite: ECON 1. Recommended: basic understanding of labor markets, taxes, and transfers.

2 units, Aut (MaCurdy, T)

### **ECON 17N. Energy, the Environment, and the Economy**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The relationship between environmental quality and production and consumption of energy. Can environmentally-friendly energy production and consumption compete with conventional sources? How to estimate and compare environmental impact costs of nonrenewable sources such as fossil fuels and nuclear power versus renewable sources such as solar and wind power. Implicit subsidies in conventional energy sources and the environmental costs of these subsidies. Regulatory and legal barriers to more environmentally friendly energy sources.

2 units, Spr (Wolak, F)

## **EDUCATION INTRODUCTORY COURSES**

### **EDUC 114N. Growing Up Bilingual**

(F,Sem) (Same as CHICANST 14N, CSRE 14N) Stanford Introductory Seminar. This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.

3 units, Win (Valdes, G)

### **EDUC 131Q. Is Nationalism Dying?**

(F,Dial) Stanford Introductory Dialogue. The 19th century has been depicted as the age of nationalism. The nation-state as a blueprint and mass schooling as a nation-state project emerged and diffused. The transformation of transnational masses into national citizens is a core dynamic of this seminar, with special attention to how schools functioned as laboratories for nationalism. Readings will include Benedict Anderson's *Imagined Communities*, and selected chapters from Eugene Weber's *Peasants to Frenchmen* and from Michael Schudson's *The Good Citizen*. In recent decades, questions have been raised about nationalism and the role of schools in promoting nationalism. Some of these questions emphasize a cosmopolitan narrative that valorizes humanity, while others have stressed multiculturalism and the valorization of diversity. These questions are anchored in a human rights discourse that leads to the second core dynamic of this seminar: the

rise of a human rights regime, in particular its education

3 units, Win (Ramirez, F)

## **ELECTRICAL ENGINEERING INTRODUCTORY COURSES**

### **EE 17N. Engineering the Micro and Nano Worlds: From Chips to Genes**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The first part is hands-on micro- and nano-fabrication including the Stanford Nanofabrication Facility (SNF) and the Stanford Nanocharacterization Laboratory (SNL) and field trips to local companies and other research centers to illustrate the many applications; these include semiconductor integrated circuits ('chips'), DNA microarrays, microfluidic bio-sensors and microelectromechanical systems (MEMS). The second part is to create, design, propose and execute a project. Most of the grade will be based on the project. By the end of the course you will, of course, be able to read critically a New York Times article on nanotechnology. More importantly you will have experienced the challenge (and fun) of designing, carrying out and presenting your own experimental project. As a result you will be better equipped to choose your major. This course can complement (and differs from) the seminars offered by Profs Philip Wong and Hari Manohar GER:DB-EngrAppSci

3 units, Spr (Pease, R)

### **EE 19N. The Internet: how it works and the services it offers**

(F,Sem) Stanford Introductory Seminar. The Internet is a universal communication system that spans the entire globe and enables a wide range of services. It is very loosely managed, yet it works very well. The goal of this seminar is two-fold: (i) to describe how the Internet infrastructure works (its underlying functions and protocols) and (ii) to explore the many services that it offers (web browsing, social networking, VoIP, IPTV, etc.) Students will work in groups of two on projects related to Internet functions and services. GER:DB-EngrAppSci

3 units, Win (Tobagi, F)

### **EE 21N. What is Nanotechnology?**

(F,Sem) Stanford Introductory Seminar. Nanotechnology is an often used word and it means many things to different people. Scientists and Engineers have some notion of what nanotechnology is, societal perception may be entirely different. In this course, we start with the classic paper by Richard Feynman (*There's Plenty of Room at the Bottom*), which laid down the challenge to the nanotechnologists. Then we discuss two classic books that offer a glimpse of what nanotechnology is: *Engines of Creation: The Coming Era of Nanotechnology* by Eric Drexler, and *Prey* by Michael Crichton. Drexler's thesis sparked the imagination of what nano machinery might do, whereas Crichton's popular novel channeled the public's attention to this subject by portraying a disastrous scenario of a technology gone astray. We will use the scientific knowledge to analyze the assumptions and predictions of these classic works. We will draw upon the latest research advances to illustrate the possibilities and impossibilities. GER:DB-EngrAppSci

3 units, Win (Wong, P)

### **EE 22N. Medical Imaging Systems**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The technology of major imaging modalities used for disease diagnosis: x-ray, ultrasound, and magnetic resonance; their history, societal impact, and clinical applications. Field trips to a medical center and an imaging research lab. Term paper and presentation. Prerequisites: high school physics and calculus. GER:DB-EngrAppSci

3 units, Win (Nishimura, D)

### **EE 25Q. Electric Automobiles and Aircraft**

(S,Sem) (Same as AA 116N) Stanford Introductory Seminar. Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption. It has crucial impacts on climate change, air pollution, resource depletion, and national security. Students wishing to address these issues will need to reconsider how we move, finding sustainable transportation solutions. This course will provide an introduction to the issue, covering the past and present of transportation and its impacts; examining alternative fuel

proposals; and digging deeper into the most promising option: battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Two fun opportunities for hands-on experiences with electric cars. Prerequisites: Introduction to calculus and Physics AP or elementary mechanics. GER:DB-EngrAppSci

3 units, Win (Cox, D; Enge, P)

### EE 26N. Green Electronics

(F,Sem) Stanford Introductory Seminar. Many green technologies including hybrid cars, photovoltaic energy systems, efficient power supplies, and energy-conserving control systems have at their heart intelligent, high-power electronics. This freshman seminar examines the technology at the heart of the green-tech revolution and uses green-tech examples to teach the engineering principles of modeling, optimization, analysis, simulation, and design. The class will include a hands-on lab, readings, and discussion. Preference given to Freshman. GER:DB-EngrAppSci

3 units, Win (Dally, W)

### EE 27N. Electronics Rocks

(F,Sem) Stanford Introductory Seminar. Electronics pervades our lives, yet we often feel obliged to let a device function as it was intended. This course is about not being intimidated by voiding a warranty and modding some commercial gadget and about being confident enough to build something cool from scratch. To get there, we will study the basics of how things work and learn how to hack/mod and scratch build. Students will be mentored and encouraged to work, in teams, to play with interesting electronics and ultimately to develop a creative final project. GER:DB-EngrAppSci

3 units, Win (Kovacs, G)

### EE 28N. What Is Information?

(F,Sem) Stanford Introductory Seminar. Information is everywhere in our lives, from speaking and writing to web pages and social networking, but what is it actually? How do we define it? Is it physical? Can we measure it? Does it obey scientific laws? How do we send it, store it, access it and manipulate it? Are there limits to it? Will information technology save the planet or destroy it? This freshman seminar will examine the history, science, technology and future of information.

3 units, Spr (Miller, D)

### EE 60N. Man versus Nature: Coping with Disasters Using Space Technology

(F,Sem) (Same as GEOPHYS 60N) Stanford Introductory Seminar. Preference to freshman. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliterate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. How spaceborne imaging technology makes it possible to respond quickly and mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. Offered every year, winter quarter. GER:DB-EngrAppSci

4 units, Win (Zebker, H)

## ENGINEERING INTRODUCTORY COURSES

### ENGR 159Q. Japanese Companies and Japanese Society

(S,Sem) (Same as MATSCI 159Q) Stanford Introductory Seminar. Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. GER:DB-SocSci

3 units, Spr (Sinclair, R)

## ENGLISH INTRODUCTORY COURSES

### ENGLISH 36N. Lord Byron: Mad, Bad, and Dangerous to Know

(F,Sem) Stanford Introductory Seminar. The poetry, literary legacy, and significance of Lord Byron, a towering figure of European Romanticism. Emphasis on formal, aesthetic, and

stylistic elements of the poetry, with additional topics to include modern celebrity, literary marketplace, scandal, and romantic heroism. GER:DB-Hum

3 units, Aut (Rovee, C)

### ENGLISH 56N. Mixed Race in the New Millennium: Crossings of Kin, Faith & Culture

(F,Sem) (Same as AFRICAAM 56N, CSRE 56N) Stanford Introductory Seminar. Preference to freshmen. How literature, theater, graphic art and popular culture shape understandings of contemporary mixed race identity and other complex experiences of cultural hybridity. Course explores implications for racial identity, art, and politics for the new millennium. GER:DB-Hum

3 units, Win (Elam, M)

### ENGLISH 62N. Eros in Modern American Poetry

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Anne Carson, treating love from Sappho to Socrates, shows how the Greeks derived their philosophy from the erotic poetic tradition. Readings include: Carson's poetry which locates erotic desire in the larger context of the desire for knowledge; classic Japanese haiku masters such as Basho; and William Carlos Williams, Louise Bogan, and C.K. Williams. GER:DB-Hum

3 units, Win (Fields, K)

### ENGLISH 64N. Growing Up in America

(F,Sem) (Same as PSYCH 29N) Stanford Introductory Seminar. Preference to freshmen. To what extent is it possible to describe an American experience? How are different people included in or excluded from the imagined community that is America? How do a person's race, class, gender and sexuality affect his or her experience of belonging to this country? These are just some of the questions we will consider as we familiarize ourselves with the great diversity of childhood and young adult experiences of people who have grown up in America. We will read and discuss narratives written by men and women, by urban, suburban, and rural Americans, and by Asian Americans, African Americans, Syrian Americans, Native Americans, Latina/os, and European Americans. Throughout the course, we will explore how these writers write the self in literature. GER:DB-Hum, EC-AmerCul

3 units, Spr (Markus, H; Moya, P)

### ENGLISH 65N. Contemporary Women Fiction Writers

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Novels and story collections addressing childhood, coming of age, and maturity; love, sexuality, orientation; the experience of violence and the politics, domestic and global, of women's lives. Texts include Gordimer, Eisenberg, Latiolais, Munro, O'Brien, and others. GER:DB-Hum

3 units, Aut (Tallent, E)

### ENGLISH 68N. Mark Twain and American Culture

(F,Sem) (Same as AMSTUD 68N) Stanford Introductory Seminar. Preference to freshmen. Mark Twain has been called our Rabelais, our Cervantes, our Homer, our Tolstoy, our Shakespeare. Ernest Hemingway maintained that all modern American literature comes from one book by Mark Twain called *The Adventures of Huckleberry Finn*. President Franklin D. Roosevelt got the phrase New Deal from A Connecticut Yankee in King Arthur's Court. Class discussions will focus on how Twain's work illuminates and complicates his society's responses to such issues as race, technology, heredity versus environment, religion, education, and what it means to be American. GER:DB-Hum

4 units, Aut (Fishkin, S)

### ENGLISH 77N. Living in the Past: Italy in the Anglo-American Imagination

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. A survey of the way in which British and American authors from Milton to Hellenga have portrayed Italian character and culture. Recommended as an ideal orientation course for students planning to attend the Bing Overseas Study Program in Florence. GER:DB-Hum

3 units, Aut (Evans, M)

### ENGLISH 80Q. All the World's a Stage: Dramatic Realism on the Threshold of the Modern World

(S,Sem) Stanford Introductory Seminar. Witness the relationship between heightened dramatic realism ---or empiricism---and unprecedented historical, scientific, religious and cultural changes occurring in the Early Modern world, a defining moment in

explorations of uncharted realms of the self, the world, the universe, and artistic form. Readings include Shakespeare's *Othello* and *As You Like It*; John Donne's dramatic poetry; Marlowe's *Doctor Faustus*; and Beckett's *Waiting for Godot*. We will examine how these and other texts--point their readers and viewers toward the modern world through cognitive innovations in the art of perspective. Selected art, film adaptations, and modern literature to be included.

4-5 units, *Win (Brooks, H)*

#### **ENGLISH 87N. The Graphic Novel: Word, Image, Sound, Silence**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Traces the history of graphic narrative from its beginnings to contemporary times. Students will read a number of graphic narratives, carry out research on some aspect of these narratives, and write an essay, which will then be reworked and remediated into an oral presentation with multimedia support. Fulfills the WRITE 2 requirement GER:DB-Hum

4-5 units, *Aut (Lunsford, A)*

### **ENVIRONMENTAL EARTH SYSTEM SCIENCE INTRODUCTORY COURSES**

#### **EESS 41N. The Global Warming Paradox**

(F,Sem) (Same as EARTHSYS 41N) Stanford Introductory Seminar. Preference to freshman. Focus is on the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Topics include: Earth's energy balance; detection and attribution of climate change; the climate response to enhanced greenhouse forcing; impacts of climate change on natural and human systems; and proposed methods for curbing further climate change. Sources include peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks.

3 units, *Aut (Diffenbaugh, N)*

#### **EESS 49N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay**

(F,Sem) (Same as EARTHSYS 49N) Stanford Introductory Seminar. This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended.

3 units, *Spr (Francis, C)*

#### **EESS 56Q. Changes in the Coastal Ocean: The View From Monterey and San Francisco Bays**

(S,Sem) (Same as EARTHSYS 56Q) Stanford Introductory Seminar. Preference to sophomores. Recent changes in the California current, using Monterey Bay as an example. Current literature introduces principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC. Optional field trip to MBARI and Monterey Bay. GER: DB-NatSci

3 units, *Spr (Dunbar, R)*

#### **EESS 57Q. Climate Change from the Past to the Future**

(S,Sem) (Same as EARTHSYS 57Q) Stanford Introductory Seminar. Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies.

3 units, *Win (Chamberlain, P)*

#### **EESS 61Q. Food and security**

(S,Sem) (Same as EARTHSYS 61Q, INTNLREL 61Q) Stanford Introductory Seminar. The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.

5 units, *Aut (Naylor, R; Stedman, S)*

### **FEMINIST STUDIES INTRODUCTORY COURSES**

#### **FEMST 188N. Imagining Women: Writers in Print and in Person**

(S,Sem) Stanford Introductory Seminar. Gender roles, gender relations and sexual identity explored in contemporary literature and conversation with guest authors. Weekly meetings designated for book discussion and meeting with authors. Interest in writing and a curiosity about diverse women's lives would be helpful to students. Students will use such tools as close reading, research, analysis and imagination. Seminar requires strong voice of all participants. Oral presentations, discussion papers, final projects. GER:DB-Hum, EC-Gender

4-5 units, *Win (Miner, V)*

#### **FEMST 191Q. Writing Women's Lives**

(F,Dial) Stanford Introductory Dialogue. Creative writing through dialogue focusing on prose about the lives of women in different cultures and generations. Novels, short stories, and micro-narrative including fiction and memoir. Students produce work using research, memory, imagination, and metaphor.

2 units, *Aut (Miner, V)*

### **FRENCH LITERATURE INTRODUCTORY COURSES**

#### **FRENLIT 38N. Coffee & Cigarettes: The Making of French Intellectual Culture**

(F,Sem) Stanford Introductory Seminar. Stanford Introductory Seminar. Preference to freshmen. This course will examine a quintessential French figure *l'intellectuel* from a long-term historical perspective. We will observe how this figure was shaped over time by such other cultural types as the writer, the artist, the historian, the philosopher, and the moralist. Proceeding in counter-chronological order, from the late 20th to the 16th century, we will read a collection of classic French works. As this course is a gateway for French studies, special emphasis will be placed on oral proficiency. Prerequisite: students must have two years of college-level French (or equivalent).

4 units, *Aut (Edelstein, D)*

#### **FRENLIT 190Q. Parisian Cultures of the 19th and Early 20th Centuries**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Political, social, and cultural events in Paris from the Napoleonic era and the Romantic revolution to the 30s. The arts and letters of bourgeois, popular, and *avant garde* cultures. Illustrated with slides. Prerequisite: students must have two years of college-level French (or equivalent).

4 units, *Spr (Bertrand, M)*

### **GENETICS INTRODUCTORY COURSES**

#### **GENE 104Q. Law and the Biosciences**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Focus is on human genetics; also assisted reproduction and neuroscience. Topics include forensic use of DNA, genetic testing, genetic discrimination, eugenics, cloning, pre-implantation genetic diagnosis, neuroscientific methods of lie detection, and genetic or neuroscience enhancement. Student presentations on research paper conclusions.

3 units, *Win (Greely, H)*

## GEOLOGICAL AND ENVIRONMENTAL SCIENCES INTRODUCTORY COURSES

### GES 39N. Forensic Geoscience: Stanford CSI

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Geological principles, materials, and techniques indispensable to modern criminal investigations. Basic earth materials, their origin and variability, and how they can be used as evidence in criminal cases and investigations such as artifact provenance and environmental pollution. Sources include case-based, simulated forensic exercises and the local environments of the Stanford campus and greater Bay Area. Local field trips; research presentation and paper. GER: DB-NatSci

3 units, Spr (Maher, K)

### GES 43Q. Environmental Problems

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Components of multidisciplinary environmental problems and ethical questions associated with decision making in the regulatory arena. Students lead discussions on environmental issues such as groundwater contamination from point and nonpoint sources, cumulative watershed effects related to timber and mining practices, acid rain, and subsurface disposal of nuclear waste. GER: DB-NatSci

3 units, Win (Loague, K)

### GES 55Q. The California Gold Rush: Geologic Background and Environmental Impact

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Topics include: geologic processes that led to the concentration of gold in the river gravels and rocks of the Mother Lode region of California; and environmental impact of the Gold Rush due to population increase, mining operations, and high concentrations of arsenic and mercury in sediments from hard rock mining and milling operations. Recommended: introductory geology. GER: DB-NatSci

3 units, Win (Bird, D)

## GEOPHYSICS INTRODUCTORY COURSES

### GEOPHYS 50N. Planetary Habitability, World View, and Sustainability

(F,Sem) Stanford Introductory Seminar. Astrobiology and societal sustainability draw from most fields of physical and biological science. Class follows a historical format on the start of major scientific fields, and relates these sciences to the popular world view and the effect of world view on achieving sustainability. Simple experiments to see key results in a hands-on manner; how to improve experiments. How lack in insight in addition to the lack of equipment and computational methods limited the progress of science. Discussion of current astrobiology and sustainability topics in the popular press. Students pairs lead discussions on topics. Offered occasionally.

3 units, Spr (Staff)

### GEOPHYS 60N. Man versus Nature: Coping with Disasters Using Space Technology

(F,Sem) (Same as EE 60N) Stanford Introductory Seminar. Preference to freshman. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliterate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. How spaceborne imaging technology makes it possible to respond quickly and mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. Offered every year, winter quarter. GER:DB-EngrAppSci

4 units, Win (Zebker, H)

## GERMAN GENERAL INTRODUCTORY COURSES

### GERGEN 104N. Resistance Writings in Nazi Germany

(F,Sem) Stanford Introductory Seminar. Freshman and Sophomore Preference. This course focuses on letters and diaries written by resisters to the Nazi regime, in particular, Dietrich Bonhoeffer, Hans and Sophie Scholl, and James von Moltke. The course includes one resistance novel Every man dies alone by Hans

Fallada. GER:DB-Hum

3 units, Win (Bernhardt, E)

### GERGEN 128N. Medicine, Modernism, and Mysticism in Thomas Mann's the Magic Mountain

(F,Sem) Stanford Introductory Seminar. Published in 1924, the Magic Mountain is a novel of education, tracing the intellectual growth of a budding engineer through a maze of intellectual encounters during a seven-year sojourn in a sanatorium set high in the Swiss Alps. It engages with the key themes of modernism: the relativity of time, the impact of psychoanalysis, the power of myth, and an extended dispute between an optimistic belief in progress and a pessimistic vision of human nature. Through its detailed discussion of disease (tuberculosis) this remarkable text connects the study of medicine to the humanities. GER:IHUM-3

4 units, Spr (Berman, R)

### GERGEN 170Q. Prussia: Culture and Literature

(S,Sem) Stanford Introductory Seminar. This course traces the history and culture of a country that disappeared not too long ago, but about which most of us tend to know very little. On February 27, 1947, the Allied Control Council issues its decree no. 46, which dissolved Prussia in the interest of maintaining world peace and security and the restoration of political life in Germany on a democratic basis. Prussia, the Council continued, has since forever been a carrier of militarism and reaction in Germany. Many of the stereotypical images of Germany and German-ness, and certainly most negative images of Germany, from the spiked helmet to the iron cross, the Red Baron and the Blitzkrieg, are bound up with Prussia, its military and its ruling class. Prussia's militaristic culture not only brought on a series of increasingly brutal wars, while also often being a beacon of Enlightenment and religious tolerance; it brought together Germany's most traditional backwater with its most p

3-5 units, Spr (Daub, A)

## GERMAN LITERATURE INTRODUCTORY COURSES

### GERLIT 123N. The Brothers Grimm and Their Fairy Tales

(F,Sem) Stanford Introductory Seminar. Historical, biographical, linguistic, and literary look at the Kinder- and Hausmarchen of Jacob and Wilhelm Grimm. Readings from the fairy tales, plus materials in other media such as film and the visual arts. Four short essays, one or two oral reports. In German. GER:DB-Hum

4 units, Aut (Robinson, O)

## HEALTH RESEARCH AND POLICY INTRODUCTORY COURSES

### HRP 89Q. Introduction to Cross Cultural Issues in Medicine

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Introduction to social factors that impact health care delivery, such as ethnicity, immigration, language barriers, and patient service expectations. Focus is on developing a framework to understand culturally unique and non-English speaking populations in the health care system. GER:EC-AmerCul

3 units, Win (Corso, I)

## HISTORY INTRODUCTORY COURSES

### HISTORY 4N. A World History of Genocide

(F,Sem) Stanford Introductory Seminar. Reviews the history of genocide from ancient times until the present. Defines genocide, both in legal and historical terms, and investigates its causes, consequences, and global dimensions. Issues of prevention, punishment, and interdiction. Main periods of concern are the ancient world, Spanish colonial conquest; early modern Asia; settler genocides in America, Australia, and Africa; the Armenian genocide and the Holocaust; genocide in communist societies; and late 20th century genocide. GER:DB-SocSci

3-5 units, Win (Naimark, N)

### HISTORY 8N. How We Remember the Past: Historical, Legal and Artistic Interpretation

(F,Sem) Stanford Introductory Seminar. Examines the similarities and differences between three different methods to remember (and interpret) the past: historical research, legal proceedings, and culture (mainly literature, cinema and the plastic arts). Looking at

theoretical debates first, a historical specific example next (Spanish civil war and dictatorship, 1936-1975), we will ask under which circumstances is each method used to remember the past, and how do the results vary? Why do certain societies prefer one method to others? Does this preference depend on what is being recorded, on the availability of sources, on the conditions of those engaged in examining the past, their aim at doing so, etc.? The goal is not to learn about a specific event, time or place, but to think about the past in pluralistic ways. Students will each choose an example of their own to analyze and share with the class. Examples can refer to any moment in the past, or any region or human group as long as the student GER:DB-Hum

4-5 units, *Aut (Herzog, T)*

**HISTORY 13N. Slavery and Rebellion in Ancient Rome: Spartacus in Legend and History**

(F,Sem) (Same as CLASSHIS 23N) Stanford Introductory Seminar. Preference to freshmen. Spartacus and his army of slaves resisted the power of the Roman legions for two years and became the stuff of legend. Introduction to Roman history. Slavery in ancient Rome in its psychological, social, and economic dimensions. Causes of Spartacus' rebellion; how the traumatic end of the rebellion gave rise to a legend popularized in Stanley Kubrick's 1960 film.

3 units, *Aut (Saller, R)*

**HISTORY 30Q. English Society Through Fiction**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. England from the eighteenth century to the twentieth century through the reading of seven novels ranging from Henry Fielding's Joseph Andrews, to Evelyn Waugh's A Handful of Dust. Focus is on the novels themselves and the historical context of the novels to acquire a knowledge of British history over two hundred years. GER:DB-Hum

4 units, *Spr (Stansky, P)*

**HISTORY 36N. Gay Autobiography**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Gender, identity, and solidarity as represented in nine autobiographies: Isherwood, Ackerley, Duberman, Monette, Louganis, Barbin, Cammermeyer, Gingrich, and Lorde. To what degree do these writers view sexual orientation as a defining feature of their selves? Is there a difference between the way men and women view identity? What politics follow from these writers' experiences? GER:DB-Hum, EC-Gender

4 units, *Spr (Robinson, P)*

**HISTORY 41Q. Mad Women: Women and Mental Illness in U.S. History**

(S,Sem) Stanford Introductory Seminar. Explores how gender and historical context have shaped the experience and treatment of mental illness in U.S. history. Why have women been the witches and hysterics of the past, and why have there historically been more women than men among the mentally ill? Topics include the relationship between historical ideas of femininity and insanity, the ways that notions of gender influence the definition and treatment of mental disorder, and the understanding of the historically embedded nature of medical ideas, diagnoses, and treatments. GER:DB-SocSci

3 units, *Aut (Horn, M)*

**HISTORY 44Q. The History of Women and Gender in Science, Medicine, and Engineering**

(S,Sem) Stanford Introductory Seminar. Preference to freshmen. Section 1 focuses on the history of women in science, medicine, and engineering. Section 2 looks at transforming research institutions so that both men and women can flourish. Section 3 explores how sex and gender analysis can enhance creativity. We discuss concrete examples of how taking gender into account has yielded new research results. Stanford University currently has a multiple year collaboration with the European Commission for Gendered Innovations, and this class will be part of that project. This course fulfills the second level Writing and Rhetoric Requirement (WRITE 2) and will emphasize oral and multimedia presentation. GER:DB-Hum, EC-Gender

4-5 units, *Win (Schiebinger, L)*

**HISTORY 48Q. South Africa: Contested Transitions**

(S,Sem) (Same as AFRICAAM 48Q) Stanford Introductory Seminar. Preference to sophomores. The inauguration of Nelson

Mandela as president in May 1994 marked the end of an era and a way of life for S. Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. Who advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet. GER:DB-Hum, EC-GlobalCom

3 units, *Win (Samoff, J)*

**HISTORY 56N. Celluloid America: Explorations in Film and History**

(F,Sem) Stanford Introductory Seminar. Explores the history and culture of the United States through film, examining both the history of this quintessentially American medium and the ways in which American history has been represented in movies. Topics include the invention of the moving picture technology, the creation of cinema language, the rise and fall of the Hollywood studio system, the emergence and evolution of film genres (westerns, romantic comedies, film noir, science fiction, Blaxploitation, etc.) the quest for overseas markets for American movies, race and film, and the future of movies in the digital age. Includes weekly class discussions and required screenings. Students will also complete short papers as well as final research projects on topics of their own choosing. GER:DB-Hum

3 units, *Win (Campbell, J)*

**HISTORY 82N. Modern Islamic Movements**

(F,Sem) Stanford Introductory Seminar. Muslim political mobilization in local and global settings. Topics include: Pan-Islam, the Muslim Brothers, Khomeinism, Hezbollah, al-Qaeda, the Taliban, and the geopolitics of social movements. GER:DB-Hum

3 units, *Win (Crews, R)*

**HISTORY 84N. The American Empire in the Middle East since the Cold War: Afghanistan, Iraq, and Israel/Palestine**

(F,Sem) Stanford Introductory Seminar. What were the traditional objectives of U.S. policy in the Middle East since the end of WW II? What forces shaped U.S. policy towards the Middle East? Did those interests and the means employed to pursue them change substantially after the demise of the Soviet Union? What has been the impact of U.S. policy on the region itself? The three principal cases to be examined are Afghanistan, Iraq, and Israel/Palestine. GER:DB-SocSci, EC-GlobalCom

4-5 units, *Aut (Beinin, J)*

**HISTORY 91N. Mao Zedong: The Man Who Would Become China**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. His life, including early anthropological work, reinterpretation of Marxism, ascendance to power in the Chinese Communist Party, theory of guerilla warfare, socioeconomic vision in the early People's Republic, the Great Leap Forward, deification during the Cultural Revolution, and repercussions of his death in 1976. No prior knowledge of Chinese history is necessary. GER:DB-SocSci

3-5 units, *Spr (Mullaney, T)*

**HUMAN BIOLOGY INTRODUCTORY COURSES**

**HUMBIO 82Q. The Omnivore's Dilemma - Or Is It?**

(S,Sem) Stanford Introductory Seminar. The omnivore's dilemma-making the right food choices from the vast number possible. The health implications of our food choices. Why we make these choices- the positive and negative influences of the food industry, research in nutritional science, and public health policies and the resulting confusion about what we should eat. Discussion-based class with readings including In Defense of Food by M. Pollan and primary reference materials. Introduction to the scientific literature in human nutrition.

3 units, *Aut (Endemann, G)*

**HUMBIO 87Q. Women and Aging**

(S,Sem) (Same as MED 87Q) Stanford Introductory Seminar. Preference to sophomores. Biology, clinical issues, social and health policies of aging; relationships, lifestyles, and sexuality; wise women and grandmothers. Sources include scientific articles, essays, poetry, art, and film. Service-learning experience with older women. Service Learning Course (certified by Haas Center).

GER:EC-Gender  
5 units, Spr (Winograd, C)

### **HUMBIO 90Q. Contemporary Issues in Human Experimentation**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. The guiding principles currently used to protect human subjects in terms of informed consent and protection of privacy; ethical issues relating to compensatory mechanisms for inherent risks; historical perspective and the development of the current mechanisms to safeguard the privacy and integrity of the individual; examples of use/abuse of human experimentation during medieval, Nazi, and modern times. Guest speakers currently performing human experiments or involved in approving such experimentation.  
3 units, Aut (Constantinou, C)

### **HUMBIO 91Q. Neuroethology: The Neural Control of Behavior**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Animal behavior offers insights about evolutionary adaptations. The origins of the study of animal behavior and its development to the present. Discussion of original research papers. The use and misuse of parallels between animal and human behavior. Possible field trip to observe animals in their natural habitat. GER: DB-NatSci  
3 units, Aut (Fernald, R)

### **HUMBIO 96Q. Injustice, Advocacy and Courage: The Path of Everyday Heroes**

(S,Sem) Stanford Introductory Seminar. This course will study the paradigms of people of courage, action and energy who have fought against injustice by advocating for causes against great odds and at personal risk. The focus will be on everyday people who have taken action, often at great personal risk, not for ambition, but because of their convictions and steadfast commitment to their beliefs.  
3 units, Win (Abrams, W)

### **HUMBIO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine**

(S,Sem) (Same as ORTHO 97Q) Stanford Introductory Seminar. Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.  
3 units, Aut (Matheson, G), Win (Matheson, G), Spr (Matheson, G)

### **HUMBIO 99Q. Becoming a Doctor: Readings from Medical School, Medical Training, Medical Practice**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. For students considering medicine as a career. Goal is to acquaint students with medical school, training in medicine and surgery, and the practice of medicine and surgery. Topics include: how to pick a medical school and a residency; how medicine affects family life, especially children; the differences between surgical and medical specialties; the advantages and disadvantages among academic/teaching, pure research, group practice, HMO, hospital staff, or private practice; malpractice concerns; and financial considerations.  
3 units, Aut (Zaroff, L)

## **IBERIAN AND LATIN AMERICAN STUDIES INTRODUCTORY COURSES**

### **ILAC 101N. THE POWER OF IMAGE**

(F,Sem) Stanford Introductory Seminar. Provides critical language and tools for analyzing visual culture, specifically art by Americans of Mexican descent. Emphasis on the three central aspects of visual studies: the image, the viewer, and the social relations governing the production, distribution and consumption of images. Focus on the power of image to shape who we are and how we think, and the capacity of viewers to interpret images in ways inflected by their social positioning.  
3-5 units, Spr (Yarbro-Bejarano, Y)

### **ILAC 106N. Contemporary Latin American Literature in Translation**

(F,Sem) Stanford Introductory Seminar. What is contemporary in Latin American literature? Which books are translated into English, and why? What to make of the gap between their publication in Spanish and their reception in the United States? The course invites students to think and write about these issues in light of translation and globalization theories. Works include a representative selection of recent fiction by Aira, Bellatin, Bolano, and Vallejo, as well as films by Schroeder and Ospina. Readings in English; Spanish originals available.  
3-5 units, Win (Hoyos, H)

### **ILAC 114N. Lyric Poetry**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. For students with at least two years of language preparation. Focus is on principal elements and expressive devices of lyric poetry: multi-dimensional use of language, denotation, connotation, image, metaphor, symbol, paradox, irony, meaning, idea, rhythm, and meter. Readings include the best of major poets of Spain and Latin America: Becquer, Rosalia de Castro, Ruben Dari-o, Unamuno, Antonio Machado, Garca Lorca, Neruda, and Gabriela Mistral Bilingual in English and Spanish with an emphasis on Spanish.  
3-5 units, Aut (Predmore, M)

### **ILAC 118N. Slavery and Freedom, Madness and Reason in Brazil; the Fiction of Machado de Assis**

(F,Sem) Stanford Introductory Seminar. Praised by Woody Allen and Salman Rushdie as the greatest Brazilian novelist of the 19th Century, Machado de Assis (1839-1908) became a recent pop star of world literature. To Harold Bloom he is a kind of miracle, as the grandson of freed slaves in Brazil, who deserved to be included in Bloom's book *Genius: A Mosaic of One Hundred Exemplary Creative Minds*. In his texts, a paradoxical combination of guilt and innocence, jealous and love challenges the reader to make risk choices wisely. This course presents Machado de Assis masterpieces: the novels, *The Posthumous Memoirs of Bras Cubas* (1881), and *Dom Casmurro* (1900), the short novel *The Alienist* (1882) and a selection of his short stories. Key critical concepts and an overview of his reception in Brazil and in the US will support our discussions. GER: IHUM-3  
3-5 units, Spr (Librandi Rocha, M)

### **ILAC 193Q. Spaces and Voices of Brazil through Film**

(S,Sem) (Same as PORTLANG 193Q) Stanford Introductory Seminar. The manners in which a country is perceived and defines itself is a result of many complex forces, and involves the reproduction of social relations and complex social constructions both on the part of those who live there and those who see it from a distance. The perceptions of what Brazil is and what defines the country has changed throughout times, but has conserved some clear pervasive defining traits. This course is an introduction to the history, culture, politics and artistic production of Brazil as seen through feature films, documentaries and some complementary readings. Movies include, among others, *Banana is my Business*, *Black Orpheus*, *Olga*, *They Don't Use Black-Tie*, *City of God*, *Central Station*, *Gaijin*, and *Four Days in September*-among others. In English. GER: DB-Hum, EC-GlobalCom  
3-4 units, Aut (Wiedemann, L)

## **INTERNATIONAL RELATIONS INTRODUCTORY COURSES**

### **INTNLREL 61Q. Food and security**

(S,Sem) (Same as EARTHSYS 61Q, EESS 61Q) Stanford Introductory Seminar. The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security.  
5 units, Aut (Naylor, R; Stedman, S)

## ITALIAN GENERAL INTRODUCTORY COURSES

### ITALGEN 52N. *Life is a Play: Identity, Persona, and Improvisation in Luigi Pirandello*

(F,Sem) Stanford Introductory Seminar. Stanford Introductory Seminar. Preference to freshmen. For Pirandello (1867-1936; Nobel Prize, 1934), to suddenly realize your entire life has been a performance is a moment of utmost horror, comedy, and opportunity for self-awareness. In a quintessentially modern fashion, he claims that the performance cannot be stopped, that authenticity is a mirage, and that learning to laugh at oneself is the only liberation. Materials include Pirandello's existential theater within the theater, his novels, and their film adaptations, which we will study in their cultural context. GER:IHUM-3

3-5 units, Spr (Wittman, L)

## ITALIAN LITERATURE INTRODUCTORY COURSES

### ITALLIT 45N. *Italianità: Photography / Literature / Film*

(F,Sem) Stanford Introductory Seminar. Stanford Introductory Seminar. Preference to freshmen. Introduction to the question of Italianità, or Italian-ness, through the intersection of photography with modern Italian literature and cinema. Includes an exploration of alternative identities and visual culture in Italy. Excerpts from seminal pieces of Italian literature, women writers, hybrid works such as phototexts, and Italian films. A gateway course to a major or minor in Italian studies and forum for improving written and oral proficiency. Lecture, discussions and readings in Italian. Prerequisite: students must have two years of college-level Italian (or equivalent).

4 units, Aut (Carey, S)

## JAPANESE GENERAL INTRODUCTORY COURSES

### JAPANGEN 82N. *Joys and Pains of Growing Up and Older: Secret Lives of Old People in Japan*

(F,Sem) Stanford Introductory Seminar. Lives of older individuals, their responses to changing social and physical realities and self image, particularly through verbal communication. Special focus on Japan, which is the world's fastest growing elderly population, as a point of comparison in terms of culture, including issues of gender. Introduction to recent multidisciplinary studies on aging and concepts such as frame analysis as a tool to interpret verbal interactions. Through qualitative cross-generational and cross-cultural examinations of lives and verbal representations of old people, students will gain a deeper understanding of the complex human quality of older people and of the relevance of elders' lives to their own. GER:DB-Hum

3 units, Win (Matsumoto, Y)

## JEWISH STUDIES INTRODUCTORY COURSES

### JEWISHST 15N. *Travels through the Afterlife*

(F,Sem) (Same as RELIGST 15N) Stanford Introductory Seminar. Since the beginning of civilization, humans have refused to believe that physical death is the end of life and have sought in various ways to travel into the afterlife. We cannot know what lies beyond death, but there are other kinds of insights to be learned from these otherworldly journeys. The first part of the course will explore the origins and history of the afterlife, going back in time to ancient Egypt, Mesopotamia, Israel, Greece, and medieval Europe to survey these cultures' view of death and what lies beyond it. The second part of the course will investigate what has happened to belief in the afterlife in modern American culture. Our ultimate goal is to confront one of the most difficult aspects of life--our fear of death and oblivion--and also to explore the power of thought and imagination to move beyond the confines of mortality. GER:DB-Hum

4 units, Win (Weitzman, S)

## LAW, NONPROFESSIONAL INTRODUCTORY COURSES

### LAWGEN 103Q. *Depth Psychology*

(S,Sem) Stanford Introductory Seminar. Powerful unconscious forces impact human and social life. Depth psychology, founded by Sigmund Freud, Carl Jung, Wilhelm Reich, and others, studies these forces and how they shape inner life, personal relationships, religion, politics, art, and many other domains. The course draws from the founders, particularly Jung, and then goes on to include materials from modern theorists, primarily neo-Jungian. The starting point is how the unconscious and conscious mind interact in the individual person's life. We consider the implications of this interaction for psychotherapy and pathology as well as for ordinary life. On the social side, several sessions focus on religion and, to a lesser extent, mythology from a depth psychology perspective. The inquiry is open-ended throughout, encouraging personal reflection and engagement.

3 units, Aut (Strnad, J)

### LAWGEN 113Q. *Law and the Changing American Family*

(S,Sem) Stanford Introductory Seminar. This course will examine the many unprecedented changes in American family patterns during the past half century. Particular attention will be given to the role of law as it reflects and facilitates these developments. Topics to be covered include: same-sex marriage, no fault divorce, reproductive technologies, adoption, interracial relationships and mixed race families, the decline in marriage, and the changing economic positions of men and women.

3 units, Win (Banks, R)

## LINGUISTICS INTRODUCTORY COURSES

### LINGUIST 62N. *The Language of Food*

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The relationship between food and language around the globe. The vocabulary of food and prepared dishes, and crosslinguistic similarities and differences, historical origins, forms and meanings, and relationship to cultural and social variables. The structure of cuisines viewed as meta-languages with their own vocabularies and grammatical structure. The language of menus; their historical development and crosslinguistic differences.

3 units, Win (Jurafsky, D)

### LINGUIST 83N. *Translation*

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. What is a translation? The increased need for translations in the modern world due to factors such as tourism and terrorism, localization and globalization, diplomacy and treaties, law and religion, and literature and science. How to meet this need; different kinds of translation for different purposes; what makes one translation better than another; why some texts are more difficult to translate than others. Can some of this work be done by machines? Are there things that cannot be said in some languages? GER:DB-SocSci

3 units, Aut (Kay, M)

## MANAGEMENT SCIENCE AND ENGINEERING INTRODUCTORY COURSES

### MS&E 22Q. *The Flaw of Averages*

(S,Sem) Stanford Introductory Seminar. Uncertain assumptions in business and public policy are often replaced with single best guess or average numbers. This leads to a fallacy as fundamental as the belief that the earth is flat, which I call the Flaw of Averages. It states, in effect, that: plans based on average assumptions are wrong on average. This class will discuss mitigations of the flaw of averages using simulation and other methods from probability management.

3 units, Aut (Savage, S)

### MS&E 92Q. *International Environmental Policy*

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Science, economics, and politics of international environmental policy. Current negotiations on global climate change, including actors and potential solutions. Sources include briefing materials used in international negotiations and the U.S. Congress.

3 units, Win (Weyant, J)

### MS&E 93Q. Nuclear Weapons, Energy, Proliferation, and Terrorism

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. What are nuclear weapons; what do they do? How are they different from other weapons? What drives proliferation of nuclear weapons? Why do countries want them? Can they be eliminated? What about Iran and North Korea? What role does nuclear energy play? Can it help combat global climate change? What are the risks of nuclear terrorism? Recommended: a course in international relations, engineering, or physical science. GER:DB-EngrAppSci, DB-EngrAppSci

3 units, Spr (Hecker, S)

### MS&E 94Q. The Public Use and Misuse of Mathematics: How to Interpret Numbers as Used by Media and Politicians

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. How to unearth and interpret relevant math to illuminate underlying political and economic issues. How to interpret public budgets, whether jury pool selection is biased, estimate pollution risks, and when to believe poll results and statistical relationships; how to deal with rare but high-consequence eventualities such as terrorism, a nuclear meltdown, or a possible pandemic. How to determine how much to pay to reduce carbon emissions, when a medicine should be withdrawn, and what is a useful forecast.

3 units, Spr (May, M)

## MATERIALS SCIENCE AND ENGINEERING INTRODUCTORY COURSES

### MATSCI 159Q. Japanese Companies and Japanese Society

(S,Sem) (Same as ENGR 159Q) Stanford Introductory Seminar. Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. GER:DB-SocSci

3 units, Spr (Sinclair, R)

## MATHEMATICS INTRODUCTORY COURSES

### MATH 87Q. Mathematics of Knots, Braids, Links, and Tangles

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Types of knots and how knots can be distinguished from one another by means of numerical or polynomial invariants. The geometry and algebra of braids, including their relationships to knots. Topology of surfaces. Brief summary of applications to biology, chemistry, and physics.

3 units, Win (Wieczorek, W)

## MECHANICAL ENGINEERING INTRODUCTORY COURSES

### ME 14N. How Stuff Is Made

(F,Sem) Stanford Introductory Seminar. The design and engineering of products and processes, such as machining, fabric, food, and electrical goods. Tradeoffs in choice of materials, features, and process selection. Final project: students research and redesign the engineering and manufacturing aspects of a product and its processes with an eye toward sustainability. Includes several field trips to manufacturing facilities. GER:DB-EngrAppSci

3 units, Aut (Pruitt, B)

### ME 18Q. Teamology: Creative Teams and Individual Development

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Roles on a problem solving team that best suit individual creative characteristics. Two teams are formed for teaching experientially how to develop less conscious abilities from teammates creative in those roles. Reinforcement teams have members with similar personalities; problem solving teams are composed of people with maximally different personalities.

3 units, Aut (Wilde, D)

### ME 25N. Global Warming and Climate Change: Fact or

### Fiction

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Scientific arguments concerning debates between the view that anthropogenic activities are not causing global warming versus the view that these activities are responsible for a global warming that results in significant climate change. Consequences of increased demand for energy. Prerequisites: high school physics, chemistry, and biology.

3 units, Win (Bowman, C)

### ME 26N. Think Like a Designer

(F,Sem) Stanford Introductory Seminar. Introduces students to techniques designers use to create highly innovative solutions across domains. The project-based class will emphasize approaches to problem identification and problem solving. Topics include need-finding, structured brainstorming, synthesis, rapid prototyping, and visual communication; field trips to a local design firm, a robotics lab, and a machining lab. A secondary goal of the seminar is to introduce students to the pleasures of creative design and hands-on development of tangible solutions.

3 units, Aut (Banerjee, S)

## MEDICINE INTRODUCTORY COURSES

### MED 70Q. Cancer and the Immune System

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Myths and facts surrounding the idea that the immune system is capable of recognizing malignant cells. The biological basis and function of effector arms of the immune system; how these mechanisms may be used to investigate the biological basis and potential therapy of cancer. How the immune system functions.

3 units, Win (Negrin, R)

### MED 86Q. Seeing the Heart

(F,Dial) Stanford Introductory Dialogue. Introduction to biomedical technology, science, clinical medicine, and public policy through cardiovascular imaging. Invasive and noninvasive techniques to detect early stage heart disease and to see inside the heart and blood vessels. Topics include: common forms of heart disease, how they develop, and why they affect so many people; imaging technologies such as ultrasound, CT, MRI, PET, and optical; a cost-effective public screening program. Field trips to Stanford Medical Center imaging centers.

2 units, Win (McConnell, M)

### MED 87Q. Women and Aging

(S,Sem) (Same as HUMBIO 87Q) Stanford Introductory Seminar. Preference to sophomores. Biology, clinical issues, social and health policies of aging; relationships, lifestyles, and sexuality; wise women and grandmothers. Sources include scientific articles, essays, poetry, art, and film. Service-learning experience with older women. Service Learning Course (certified by Haas Center). GER:EC-Gender

5 units, Spr (Winograd, C)

### MED 88Q. Dilemmas in Current Medical Practice

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Social, political, scientific, and economic forces influencing medical practice. Spiraling costs, impaired access to health care, and disillusionment toward the health care system. Attempts by government and medical insurers to control costs through managed care and health maintenance organizations. Medical education and how it has affected the practice of medicine. Alternative health care, preventive medicine, and the doctor-patient relationship. The paradox of health in America: why do so many people who are healthy feel unhealthy? Mandatory observation of instructors in their medical practices.

3 units, Aut (Croke, J; Jones, E)

### MED 108Q. Human Rights and Health

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. History of human-rights law. International conventions and treaties on human rights as background for social and political changes that could improve the health of groups and individuals. Topics such as: regional conflict and health, the health status of refugees and internally displaced persons; child labor; trafficking in women and children; HIV/AIDS; torture; poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Possible optional opportunities to observe at community sites where human rights

and health are issues. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva. PowerPoint presentation on topic of choice required.  
3 units, Spr (Laws, A)

## **MICROBIOLOGY AND IMMUNOLOGY INTRODUCTORY COURSES**

### **MI 70Q. Photographing Nature**

(S,Sem) Stanford Introductory Seminar. Utilizes the idiom of photography to learn about nature, enhance observation, and explore scientific concepts. Builds upon the pioneering photographic work of Eadward J. Muybridge on human and animal locomotion. A secondary goal is to learn the grammar, syntax, composition, and style of nature photography to enhance the use of this medium as a form of scientific communication and also to explore the themes of change across time and space. Scientific themes to be explored include: taxonomy, habitat preservation, climate change; species diversity; survival and reproductive strategies; ecological niches and coevolution, carrying capacity and sustainability, population densities, predation, and predator-prey relationships, open-space management, the physics of photography. Extensive use of field trips and class critique.

3 units, Aut (Siegel, R)

## **MUSIC INTRODUCTORY COURSES**

**MUSIC 11N. A View from the Podium: The Art of Conducting**  
(F,Sem) Stanford Introductory Seminar. How a conductor interprets music, realizes a personal vision through the rehearsal process, and communicates with orchestra and audience. Conducting as based on human communication skills. How to apply these lessons to other fields of endeavor. GER:DB-Hum  
3 units, Aut (Cai, J)

### **MUSIC 13N. South Asian Regional and Popular Music on the Move**

(F,Sem) Stanford Introductory Seminar. Introduction to regional and popular musical styles of India and Pakistan, including Marathi kirtan, Punjabi bhangra, Manganiyar music of Rajasthan, Bhojpuri wedding songs, Tamil drum ensembles, Baul music of Bengal, Sufi qawwali, and Hindi film music, and explores how these musics are woven into the fabric of social life in South Asia and its diaspora. How people perform music to: articulate relationship to the divine; make social commentary; effect political change; bring families together; celebrate rites of passage; and, cope with rapid socio-economic changes. GER:DB-Hum  
3 units, Aut (Schultz, A)

### **MUSIC 13Q. Classical Music and Politics: Western Music in Modern China**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Social history, cultural studies, China studies, international relations, and music. From the Italian Jesuit, Matteo Ricci who presented a clavichord to the Chinese emperor to the emergence of a modern generation of Chinese musicians. GER:DB-Hum, EC-GlobalCom  
3 units, Spr (Cai, J)

### **MUSIC 15N. The Aesthetics of Data**

(F,Sem) Stanford Introductory Seminar. Focus on visual and auditory display of data, specifically, the importance of aesthetic principles in effective data display, and the creative potential of scientific, biological, environmental and other data as inspiration for artistic expression. GER:DB-Hum  
3 units, Win (Berger, J)

### **MUSIC 17Q. Perspectives in North American Taiko**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Taiko, or Japanese drum, is a newcomer to the American music scene. Emergence of the first N. American taiko groups coincided with increased Japanese American activism, and to some it is symbolic of Japanese American identity. N. American taiko is associated with Japanese American Buddhism. Musical, cultural, historical, and political perspectives of taiko. Hands-on drumming. Japanese music and Japanese American history, and relations among performance, cultural expression, community, and identity.

GER:DB-Hum, EC-AmerCul  
4 units, Win (Sano, S; Uyechi, L)

### **MUSIC 34N. Performing America: The Broadway Musical from Little Johnny Jones to American Idiot**

(F,Sem) Stanford Introductory Seminar. 20th C. musical comedy in dialogue with American culture at large. How themes, characters, stories, and songs of the Broadway musical reflect, and construct, ideas of American identity over the last hundred years. Intersections with jazz, movies, rock, and popular song. Social themes of race, class, gender roles, and sexual identity. Works of Gershwin, Cole Porter, Irving Berlin, Rodgers and Hammerstein, and Lerner and Lowe. Includes opportunities to perform, arrange, direct scenes, as well as to attend one or more local productions. GER:DB-Hum

3-4 units, Spr (Staff)

### **MUSIC 36N. Humor in Music**

(F,Sem) Stanford Introductory Seminar. Through theoretical readings the course will touch on psychological and neurological bases of humor, explore contingent, tactical, modal, and ontological difficulties in the apprehension of humor, and address ethical issues surrounding humor in music. In addition to in-class listening and screening sessions, analytic discussions will be led by students who will find and present examples of humor in music. Students will also be invited to compose original humorous song lyrics and to create collaborative works of musical humor. GER:DB-Hum

3 units, Aut (Applebaum, M)

## **NEUROLOGY AND NEUROLOGICAL SCIENCES INTRODUCTORY COURSES**

### **NENS 67N. Intracellular Trafficking and Neurodegeneration**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Cell structures and functions, the intracellular trafficking system that maintains exchanges of materials and information inside cells, and clinical features and pathologies of neurodegenerative diseases. Techniques for examining cellular and subcellular structures, especially cytoskeletons; functional insights generated from structural explorations. Prerequisite: high school biology.

3 units, Spr (Yang, Y)

## **NEUROSURGERY INTRODUCTORY COURSES**

### **NSUR 70Q. Experimental Stroke**

(F,Dial) Stanford Introductory Dialogue. Preference to sophomores. How stroke is studied in the laboratory; advances in stroke research over the last two decades; and future directions. Topics include: cellular and molecular mechanisms of neuronal death and survival in the brain after stroke, including necrosis, apoptosis, inflammation, and cell signaling pathways; experimental tools for stroke treatment, such as gene therapy, cell therapy, hypothermia, preconditioning, postconditioning, and other pharmacological treatments; the gap and barrier between laboratory research and clinical translation.

2 units, Spr (Zhao, H)

## **ORTHOPEDIC SURGERY INTRODUCTORY COURSES**

### **ORTHO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine**

(S,Sem) (Same as HUMBIO 97Q) Stanford Introductory Seminar. Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.

3 units, Aut (Matheson, G), Win (Matheson, G), Spr (Matheson, G)

## **PATHOLOGY INTRODUCTORY COURSES**

### **PATH 103Q. Lymphocyte Migration**

(F,Dial) Stanford Introductory Dialogue. Preference to sophomores. Lymphocytes migrate from blood vessels into tissues to participate in immune surveillance and the development of inflammation. The lymphocyte and blood vessel endothelia molecules that control lymphocyte migration, and are implicated in the development of human diseases such as asthma, type 1 diabetes, and multiple sclerosis are discussed.

*1 unit, Aut (Michie, S)*

## **PEDIATRICS INTRODUCTORY COURSES**

### **PEDS 65N. Understanding Children's Health Disparities**

(F,Sem) Stanford Introductory Seminar. The social and economic factors that affect children and their health status. The principal sources of disparities in the health of children in the U.S. are not biologic, but social and economic. Topics include ethnic, cultural, and behavioral factors that affect children's health, both directly and indirectly; lack of health insurance; and current proposals for health care reform, focusing specifically on how they will impact existing health disparities among children.

*3 units, Win (Barr, D)*

### **PEDS 65Q. Understanding Children's Health Disparities**

(S,Sem) Stanford Introductory Seminar. The social and economic factors that affect children and their health status. The principal sources of disparities in the health of children in the U.S. are not biologic, but social and economic. Topics include ethnic, cultural, and behavioral factors that affect children's health, both directly and indirectly; lack of health insurance; and current proposals for health care reform, focusing specifically on how they will impact existing health disparities among children. Includes instruction addressing written assignments and required oral presentations.

*3 units, Aut (Barr, D)*

## **PHILOSOPHY INTRODUCTORY COURSES**

### **PHIL 7N. What is Truth**

(F,Sem) Stanford Introductory Seminar. This question can be answered precisely in some important cases. We begin with the language of propositional logic where truth is defined by simple tables. This is already sufficient for description of many important problems and leads to a famous (\$1 000 000) problem  $P=NP$ . We use Sudoku puzzles for illustration. Close connection between propositional truth and proof is established by the resolution method forming a basis of most automated theorem provers. The language of predicate logic covers much more and illustrates the notion of completeness. Register machines provide connection with computations and lead to a fundamental classification of problems of truth with respect to decidability. The language of arithmetic exhibits a new phenomenon of incompleteness that changed significant part of philosophy in 20-th century. GER:DB-Hum

*3 units, Spr (Mints, G)*

### **PHIL 11N. Skepticism**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Historical and contemporary philosophical perspectives on the limits of human knowledge of a mind-independent world and causal laws of nature. The nature and possibility of a priori knowledge. GER:DB-Hum

*3 units, Win (De Pierris, G)*

### **PHIL 15N. Freedom, Community, and Morality**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Does the freedom of the individual conflict with the demands of human community and morality? Or, as some philosophers have maintained, does the freedom of the individual find its highest expression in a moral community of other human beings? Readings include Camus, Mill, Rousseau, and Kant. GER:DB-Hum, EC-EthicReas

*3 units, Aut (Friedman, M)*

## **PHYSICS INTRODUCTORY COURSES**

### **PHYSICS 18N. Revolution in Concepts of the Cosmos**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The evolution of concepts of the cosmos and its origin, from the

Copernican heliocentric model to the current view based on Hubble's discovery of expansion of the Universe. Recent cosmological observations and the relevance of laboratory experiments in particle physics. One night of observations at the Stanford Observatory. GER: DB-NatSci

*3 units, Win (Roodman, A)*

### **PHYSICS 43N. Understanding Electromagnetic Phenomena**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Expands on the material presented in 43; applications of concepts in electricity and magnetism to everyday phenomena and to topics in current physics research. Corequisite: 43 or advanced placement.

*1 unit, Spr (Cabrera, B)*

### **PHYSICS 45N. Advanced Topics in Light and Heat**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Expands on the subject matter presented in 45 to include optics and thermodynamics in everyday life, and applications from modern physics and astrophysics. Corequisite: 45 or advanced placement.

*1 unit, Aut (Romani, R)*

### **PHYSICS 70N. Modern Physics in Your Life**

(S,Sem) Stanford Introductory Seminar. How does modern physics intersect with your everyday life? Topics may include the quantum nature of light, atomic physics and an introduction to semiconductor physics, applications to light sources (incandescent, fluorescent, light-emitting diodes, lasers) and light sensors (photodiodes and solar cells), introduction to nuclear physics (e.g., fission, fusion, interaction of radiation with matter). Co- or pre-requisite: Physics 70, Physics 65, or similar high-school physics preparation.

*1 unit, Aut (Raghu, S)*

### **PHYSICS 80N. The Technical Aspects of Photography**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen and sophomores with some background in photography. How cameras record photographic images on film and electronically. Technical photographic processes to use cameras effectively. Camera types and their advantages, how lenses work and their limitations, camera shutters, light meters and the proper exposure of film, film types, depth of focus, control of the focal plane and perspective, and special strategies for macro and night photography. View cameras and range finder technical cameras. Students take photographs around campus. Prerequisite: high school physics.

*3 units, Spr (Osheroff, D)*

### **PHYSICS 83N. Physics in the 21st Century**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Current topics at the frontier of modern physics. Topics include subatomic particles and the standard model, symmetries in nature, extra dimensions of space, string theory, supersymmetry, the big bang theory of the origin of the universe, black holes, dark matter, and dark energy of the universe. Why the sun shines. Cosmology and inflation. GER: DB-NatSci

*3 units, Aut (Kallosh, R)*

### **PHYSICS 87N. The Physics of One: Nanoscale Science and Technology**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Contemporary interdisciplinary research in nanoscience and nanotechnology; the manipulation of nature's fundamental building blocks. Accomplishments and questions engendered by knowledge at the discrete limit of matter. Prerequisite: high school physics. GER: DB-NatSci

*3 units, Spr (Goldhaber-Gordon, D)*

## **POLITICAL SCIENCE INTRODUCTORY COURSES**

### **POLISCI 15N. Explaining Ethnic Violence**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Over the last twenty years, more than one third of all countries had a violent civil conflict ongoing in which at least 1,000 people had died. More than half of these conflicts killed tens of thousands and produced massive refugee flows, and some caused mass starvation. Analysts describe the violence in many of these conflicts as ethnic and the parties to the violence as ethnic groups. In ordinary language, however, the term ethnic violence can be used to refer to

an extraordinary range of phenomena, from certain barroom brawls to the Nazi genocide. This course begins with an examination of the meaning of ethnic violence and related terms like ethnic group. We will consider case histories of three large-scale civil conflicts commonly described as ethnic. These case materials will then be used to work through a range of possible explanations, from the individual psychology of ethnic violence to various political, military, GER:DB-SocSci

5 units, Win (Fearon, J)

#### **POLISCI 24N. The Politics of Communication**

(F,Sem) Stanford Introductory Seminar. This course will explore how elected officials present and explain their work to constituents and how this communication shapes American politics. Elected officials use press releases, newsletters, press conferences, and public events to connect with their constituents. While almost none of this communication is formally required, it can have important consequences on what elected officials do in office and how constituents perceive their representatives' activities. We will explore the strategies elected officials use when communicating with constituents and identify the consequences of these strategies on the process of representation. GER:DB-SocSci

3 units, Win (Grimmer, J)

#### **POLISCI 24Q. Law and Order**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. The role of law in promoting social order. What is the rule of law? How does it differ from the rule of men? What institutions best support the rule of law? Is a state needed to ensure that laws are enforced? Should victims be allowed to avenge wrongs? What is the relationship between justice and mercy? GER:DB-SocSci

3 units, Aut (Rutten, A)

#### **POLISCI 25N. The US Congress in Historical and Comparative Perspective**

(F,Sem) Stanford Introductory Seminar. This course traces the development of legislatures from their medieval European origins to the present, with primary emphasis on the case of the U.S. Congress. Students will learn about the early role played by assemblies in placing limits on royal power, especially via the power of the purse. About half the course will then turn to a more detailed consideration of the U.S. Congress's contemporary performance, analyzing how that performance is affected by procedural legacies from the past that affect most democratic legislatures worldwide. GER:DB-SocSci

3 units, Spr (Cox, G)

#### **POLISCI 26N. American Transportation Politics**

(F,Sem) Stanford Introductory Seminar. Politics has been defined as who gets what, when, and how. In the process of resolving this question, the political process also ends up deciding who goes where, and how. This course will draw upon American debates over transportation policy to guide an exploration of major research themes in American politics. We'll examine how American transportation controversies from debates over 19th century canal financing to the 21st-century fight over high-speed rail have cast into relief the major problems that shape decision making in a representative democracy. GER:DB-SocSci

3 units, Aut (Nall, C)

#### **POLISCI 43N. Oil, Regime Change, and Conflict**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Relationships among dependence on oil export, democratization and authoritarian rule, and rising conflict. Case studies including Venezuela, Nigeria, Iran, Iraq, Chad, and Indonesia. The resource curse: the impact of oil on a country's political economy. The relationship between such economic dependence and regime type. Why oil exporting countries are more prone to conflict and civil war than other countries. Research paper. GER:DB-SocSci

5 units, Win (Karl, T)

## **PORTUGUESE LANGUAGE INTRODUCTORY COURSES**

#### **PORTLANG 193Q. Spaces and Voices of Brazil through Film**

(S,Sem) (Same as ILAC 193Q) Stanford Introductory Seminar. The manners in which a country is perceived and defines itself is a result of many complex forces, and involves the reproduction of social relations and complex social constructions both on the part of those who live there and those who see it from a distance. The

perceptions of what Brazil is and what defines the country has changed throughout times, but has conserved some clear pervasive defining traits. This course is an introduction to the history, culture, politics and artistic production of Brazil as seen through feature films, documentaries and some complementary readings. Movies include, among others, Banana is my Business, Black Orpheus, Olga, They Don't Use Black-Tie, City of God, Central Station, Gaijin, and Four Days in September-among others. In English. GER:DB-Hum, EC-GlobalCom

3-4 units, Aut (Wiedemann, L)

## **PSYCHIATRY INTRODUCTORY COURSES**

#### **PSYC 76Q. Temperament and Creativity in Mood Disorders**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Western cultural notions of mad geniuses and artistic temperaments. How many individuals who suffer from depression, bipolar disorder, and related problems are nonetheless productively creative. Current psychological and neurobiological research, and assessment of mood, temperament, and creativity. Emphasis is on written and oral communications and multimedia presentations. Write 2. Prerequisite: PWR 1.

4 units, Win (Ketter, T)

#### **PSYC 77Q. Deviants in Literature**

(S,Sem) Stanford Introductory Seminar. Many literary works are enhanced by, in fact demand, a psychological perspective to achieve a fully informed reading. In *The Devils* Dostoevsky uses the issues and process of anarchy as a platform on which to develop some of the most unforgettable characters in literary history. *Death in Venice* contains among its many themes the darker dynamic of paraphilia. *Guilt* searches for a validating crime in Kafka's *The Penal Colony*. *Capote* uses a journalistic style to manage horrible fact during *In Cold Blood*. *Conrad* shows that telling a story of the journey outward is more nearly an analysis of the journey inward in *Heart of Darkness*. *Albee's Zoo Story* asks whether the man on the street is prepared to confront his own worst nightmare. Close reading of works such as these presents opportunities to learn about character pathology and to expand traditional approaches to literary criticism by applying a psychological perspective.

3 units, Aut (Van Natta, J)

#### **PSYC 78Q. Mental Health in Collegiate Athletes**

(S,Sem) Stanford Introductory Seminar. Developmental, psychological, social, and performance issues in collegiate sports. Topics include transition to Stanford, time management, optimizing mental fitness, coping with injuries.

3 units, Win (Steiner, H)

#### **PSYC 81Q. Fate of Orphans and Vulnerable Children in Sub Saharan Africa: The HIV/AIDS Pandemic**

(S,Sem) Stanford Introductory Seminar. The complicated forces, shaped by geopolitical history and current events, that frame all social programs, the care of orphans in the context of the AIDS pandemic in particular; history of the care of orphans; developmental effects of deprivation of care and nurturing. Guest speakers.

2 units, Win (Solvason, H; Reicherter, D)

#### **PSYC 111Q. Madness and the Womb: Medical and Artistic Approaches to Mental Illness in Women Through the Ages**

(S,Sem) Stanford Introductory Seminar. Historical and current concepts of mental illness in women. Premenstrual dysphoric disorder (PMS), postpartum depression, menopausal mood disorders, and eating disorders. Historical biopsychosocial approach. Readings include women's diaries and advice books, physicians' casebooks, and 19th- and 20th-century medical texts. Guest speakers from art and literature departments. Literary and artistic images, and the social and cultural contexts of these disorders during the last 300 years.

3 units, Win (Williams, K)

## **PSYCHOLOGY INTRODUCTORY COURSES**

#### **PSYCH 7Q. Language Understanding by Children and Adults**

(S,Sem) Stanford Introductory Seminar. How do we first learn to find meaning in strings of speech sounds? Understanding spoken

language requires the rapid integration of acoustic information with linguistic knowledge and with conceptual knowledge based on experience with how things happen in the world. Topics include research on early development of language understanding and laboratory methods of how young children make sense of speech. Observations of preschool children and visits to Stanford laboratories. Might be repeatable for credit.

3 units, Aut (Fernald, A)

### PSYCH 11N. Origin of Mental Life

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Mental life in infancy; how thinking originates. How do babies construe the objects, events, people, and language that surround them? Recent advances in psychological theory, hypotheses, and evidence about how the infant human mind develops. GER:DB-SocSci

3 units, Spr (Markman, E)

### PSYCH 12N. Self Theories

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The impact of people's belief in a growing versus fixed self on their motivation and performance in school, business, sports, and relationships. How such theories develop and can be changed. GER:DB-SocSci

3 units, Aut (Dweck, C)

### PSYCH 26N. Language Acquisition: Exploring the Minds of Children

(F,Sem) Stanford Introductory Seminar. Language is an extraordinary competence distinguishing humans from other species, yet there is debate about the role of biology in guiding language acquisition. Does language development follow an innate *bioprogram*, or does it build on more general cognitive abilities, influenced by early experience? Topics include biological and experiential influences on the emergence of linguistic ability as children learn a first language. Discussions of theory and research, visits to Stanford laboratories and observations of very young language learners.

3 units, Win (Fernald, A)

### PSYCH 28N. The Cultural Shaping of Mental Health and Illness

(F,Sem) (Same as CSRE 28N) Stanford Introductory Seminar. This seminar examines how our cultural ideas and practices shape our conceptions, perceptions, experiences, and treatment of emotional wellness and distress. We will read and discuss empirical research and case studies from psychology, anthropology, sociology, and medicine. Course requirements include weekly reading and thought papers, weekly discussion, and a final research project and presentation.

3 units, Win (Tsai, J)

### PSYCH 29N. Growing Up in America

(F,Sem) (Same as ENGLISH 64N) Stanford Introductory Seminar. Preference to freshmen. To what extent is it possible to describe an American experience? How are different people included in or excluded from the imagined community that is America? How do a person's race, class, gender and sexuality affect his or her experience of belonging to this country? These are just some of the questions we will consider as we familiarize ourselves with the great diversity of childhood and young adult experiences of people who have grown up in America. We will read and discuss narratives written by men and women, by urban, suburban, and rural Americans, and by Asian Americans, African Americans, Syrian Americans, Native Americans, Latina/os, and European Americans. Throughout the course, we will explore how these writers write the self in literature. GER:DB-Hum, EC-AmerCul

3 units, Spr (Markus, H; Moya, P)

## RELIGIOUS STUDIES INTRODUCTORY COURSES

### RELIGST 11N. The Meaning of Life: Philosophical, Aesthetic, and Religious Perspectives

(F,Sem) Stanford Introductory Seminar. Raise ultimate questions about life. Yes, the unexamined life is not worth living, but also the un-lived life is not worth examining. Students and professor examine their own lives in the light of questions that the readings and lectures bring up: 1. The big picture: Is there such a thing as the meaning of life? 2. What is entailed in making personal-

existential sense of one's own life? 3. What constitutes the good life, lived in society? 4. How can a university education bear upon the search for a meaningful life? 5. What methods for or approaches to life can one learn from studies in the humanities? After introductory lectures, the seminar studies a series of artworks, poems, diverse texts, and a film, all of which bear on the questions mentioned above -- works such: 1. Plato's Allegory of the Cave, from The Republic 2. Manet's A bar at the Folies Bergere 3. A comparison/contrast of Monet's early (1862) Still Life and van Gogh's late (18

3 units, Win (Sheehan, T)

### RELIGST 12N. Perspectives on the Good Life

(F,Sem) Stanford Introductory Seminar. The question is how to approach and evaluate different perspectives on the good life, especially when those perspectives are beautifully, and elusively, presented to us as texts. We will consider both classic and modern writers, from the West and from China; some are explicitly religious, some explicitly secular; some literary, some philosophical. Most of the class will revolve around our talk with each other, interpreting and questioning relatively short texts. The works we will read  $\frac{1}{2}$  by Dante, Dickenson, Zhuangzi, Shklar, and others - are not intended to be representative of traditions, of eras, or of disciplines. They do, however, present a range of viewpoint and of style that will help frame and re-frame our views on the good life. They will illustrate and question the role that great texts can play in a modern 'art of living.' Perhaps most important, they will develop and reward the skills of careful reading, attentive listening, and thoughtful disc GER:DB-Hum

3-4 units, Aut (Yearley, L)

### RELIGST 15N. Travels through the Afterlife

(F,Sem) (Same as JEWISHST 15N) Stanford Introductory Seminar. Since the beginning of civilization, humans have refused to believe that physical death is the end of life and have sought in various ways to travel into the afterlife. We cannot know what lies beyond death, but there are other kinds of insights to be learned from these otherworldly journeys. The first part of the course will explore the origins and history of the afterlife, going back in time to ancient Egypt, Mesopotamia, Israel, Greece, and medieval Europe to survey these cultures' view of death and what lies beyond it. The second part of the course will investigate what has happened to belief in the afterlife in modern American culture. Our ultimate goal is to confront one of the most difficult aspects of life--our fear of death and oblivion--and also to explore the power of thought and imagination to move beyond the confines of mortality. GER:DB-Hum

4 units, Win (Weitzman, S)

## SCIENCE, TECHNOLOGY, AND SOCIETY INTRODUCTORY COURSES

### STS 101Q. Technology in Contemporary Society

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Introduction to the STS field. The natures of science and technology and their relationship, what is most distinctive about these forces today, and how they have transformed and been affected by contemporary society. Social, cultural, and ethical issues raised by recent scientific and technological developments. Case studies from areas such as information technology and biotechnology, with emphasis on the contemporary U.S. Unexpected influences of science and technology on contemporary society and how social forces shape scientific and technological enterprises and their products. Enrollment limited to 12. GER:DB-SocSci

4 units, Aut (McGinn, R)

## SLAVIC GENERAL INTRODUCTORY COURSES

### SLAVGEN 77Q. Russia's Weird Classic: Nikolai Gogol

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. The work and life of Nikolai Gogol, the eccentric founder of Fantastic Realism. The relationship between romanticism and realism in Russian literature, and between popular Ukranian culture and high Russian and W. European traditions in Gogol's oeuvre. The impact of his work on 20th-century modernist literature, music, and art, including Nabokov, literature of the

absurd, Shostakovich, Meyerhold, and Chagall. GER:DB-Hum  
3-4 units, *Win (Fleishman, L)*

**SLAVGEN 78N. Poetry to Prose: The Birth of the Great Russian Novel in Alexander Pushkin's Eugene Onegin**

(F,Sem) Stanford Introductory Seminar. This course will be devoted to a close reading and detailed discussion of Alexander Pushkin's masterpiece, Eugene Onegin, in the context of nineteenth-century Russian and continental literary history. We will discuss major theoretical and literary-historical questions: What is realism in literature? How does it differ from other literary epochs, movements and styles? What is the novel and how does it relate to other genres? In what way does the novel in verse differ from the novel in prose? We will also explore the relationships between the narrator and the author and between the narrator and the characters in the text. Through examination of the constituent elements of verse language, we will see Pushkin's inventive contributions to world literature. GER:IHUM-3  
4 units, *Spr (Fleishman, L)*

**SOCIOLOGY INTRODUCTORY COURSES**

**SOC 15N. The Transformation of Socialist Societies**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The impact of societal organization on the lives of ordinary people in socialist societies and in the new societies arising through the processes of political, economic, and social transformation. Do the concepts of democratization and marketization suffice to characterize ongoing changes? Enrollment limited to 16. GER:DB-SocSci, EC-GlobalCom  
3 units, *Win (Tuma, N)*

**SOC 16N. African Americans and Social Movements**

(F,Sem) (Same as AFRICAAM 16N, CSRE 16N) Stanford Introductory Seminar. Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women's right, LGBT rights, environmental movement, and contemporary political conservatism. GER:DB-SocSci  
3 units, *Aut (Fields, C)*

**SOC 25N. Understanding the Sixties**

(F,Sem) (Same as AMSTUD 25N) Stanford Introductory Seminar. Preference to freshmen. The tendency of critics to view the 60s through ideological lenses as either the best or worst of times has made a balanced perspective difficult to achieve. Goal is to provide a sociological explanation for the political and cultural turbulence that marked the era. The confluence of demographic, political, economic, and cultural trends that date back to at least the 30s. The ambiguous legacy of the 60s. Using the 60s to shed light on the 80s and 90s. Enrollment limited to 16. GER:DB-SocSci  
3 units, *Win (Staff)*

**SOC 45Q. Understanding Race and Ethnicity in American Society**

(S,Sem) (Same as CSRE 45Q) Stanford Introductory Seminar. Preference to sophomores. Historical overview of race in America, race and violence, race and socioeconomic well-being, and the future of race relations in America. Enrollment limited to 16. GER:DB-SocSci  
5 units, *Aut (Snipp, C)*

**SPECIAL LANGUAGE PROGRAM INTRODUCTORY COURSES**

**SPECLANG 198Q. Modern Greece in Film and Literature**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Cultural and literary highlights. Filmmakers include Kakoyannis, Dassen, Boulmetis, Angelopoulos, and Scorsese; readings from Eugenides, Gage, Kavafis, Kazantzakis, Samarakis, Seferis, and Elytis. GER:DB-Hum, DB-Hum, EC-GlobalCom  
3-5 units, *Aut (Prionas, E)*

**STATISTICS INTRODUCTORY COURSES**

**STATS 47N. Breaking the Code?**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. Cryptography and its counterpart, cryptanalysis or code breaking. How the earliest cryptanalysts used statistical tools to decrypt messages by uncovering recurring patterns. How such frequency-analysis tools have been used to analyze biblical texts to produce a

Bible code, and to detect genes in the human genome. Overview of codes and ciphers. Statistical tools useful for code breaking. Students use simple computer programs to apply these tools to break codes and explore applications to various kinds of data. GER:DB-Math

3 units, *Aut (Holmes, S)*

**STEM CELL BIOLOGY AND REGENERATIVE MEDICINE INTRODUCTORY COURSES**

**STEMREM 83Q. The Stem Cell: Biological, Social, and Practical Aspects of Stem Cell Research**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Ethical, legal, social, and economic dimensions of stem cell research such as the discovery of human embryonic stem cells and the international landscape of public policy. How stem cells work, their role in the upkeep of the human body, and current and future uses in medicine. Issues at the intersection of science and society such as human-animal hybrids, notions of justice in intellectual property law, distribution of health care, and the major ethical frameworks defining the debate. Prerequisite: AP Biology  
3 units, *Spr (Scott, C)*

**SURGERY INTRODUCTORY COURSES**

**SURG 68Q. Current Concepts in Transplantation**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Biological aspects of cell and organ transplantation, including issues that arise in the media. Diseases for which transplantation is a treatment, the state of the art in human transplantation, transplantation of animal tissue into humans (xenotransplantation), development of new tissue and organs in the laboratory (tissue engineering and cloning), and development of drugs and biological strategies to promote long-term survival of the tissue or organ (tolerance). How to write a scientific abstract, critique scientific literature, and research and present topics in contemporary transplantation.  
3 units, *Spr (Martinez, O; Krams, S)*

**SURG 70Q. Surgical Anatomy of the Hand: From Rodin to Reconstruction**

(F,Dial) Stanford Introductory Dialogue. The surgical anatomy of the hand is extremely complex in terms of structure and function. Exploration of the anatomy of the hand in different contexts: its representation in art forms, the historical development of the study of hand anatomy, current operative techniques for reconstruction, advances in tissue engineering, and the future of hand transplantation.  
2 units, *Win (Chang, J)*

**ITALIAN GENERAL (ITALGEN) COURSES**

**UNDERGRADUATE COURSES IN ITALIAN GENERAL**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**ITALGEN 41N. Imagining Italy**

Preference to freshmen. Literary responses to Italy by writers in English during the past hundred years and how they continue to construct myths of Italy. How these myths have been transformed into commodities in consumer culture, making Italy a profitable fiction. Authors include Hawthorne, Howells, James, Wharton, Forster, Unsworth, Hellenga, and Mayes. GER:DB-Hum  
3-4 units, *not given this year*

**ITALGEN 52N. Life is a Play: Identity, Persona, and Improvisation in Luigi Pirandello**

(F,Sem) Stanford Introductory Seminar. Stanford Introductory Seminar. Preference to freshmen. For Pirandello (1867-1936; Nobel Prize, 1934), to suddenly realize your entire life has been a performance is a moment of utmost horror, comedy, and

opportunity for self-awareness. In a quintessentially modern fashion, he claims that the performance cannot be stopped, that authenticity is a mirage, and that learning to laugh at oneself is the only liberation. Materials include Pirandello's existential theater within the theater, his novels, and their film adaptations, which we will study in their cultural context. GER:IHUM-3

3-5 units, *Spr (Wittman, L)*

#### **ITALGEN 149. New Frontiers in Italian Cinema**

A new generation of Italian filmmakers who examine the contradictory encounters between Italians and the migrant others in contemporary Italy. Critical texts from film studies, gender studies, ethnic and cultural studies, psychoanalysis, and history. I English; films, in Italian with English subtitles, by Amelio, Ozpetek, Munzi, Garrone, Melliti, Tornatore, and Giordana. GER:DB-Hum

3-5 units, *not given this year*

#### **ITALGEN 153. Dante in the Modern Imagination**

Dante's Divine Comedy and its grip on the 20th-century imagination. How is Dante co-opted by modern literary tradition? To what extent is Dante a poet of modernity? Emphasis is first on Dante's texts, then on modern literary reinterpretations of them. Authors include Dante, Cavalcanti, Levi, Pound, Eliot, Beckett, Birk and Sanders. Course in English with optional discussion section in Italian.

4 units, *Spr (Coggeshall, E)*

#### **ITALGEN 172. Dream Visions: The Roman de la Rose**

(Same as FRENGEN 172, FRENGEN 272, ITALGEN 272) What truths are in dreams? How does the quest for a symbolic object embody a moral struggle? What motivates a personal search for divine love? Study of arguably the most influential work of the European Middle Ages, the Roman de la Rose of Guillaume de Lorris and Jean de Meun. Focus on the work as erotic, allegorical quest for the mystical Rose, and scholastic encyclopedia through close analysis, secondary readings, and study of manuscript illumination. Use of medieval and modern French edition.

3-5 units, *not given this year*

#### **ITALGEN 181. Philosophy and Literature**

(Same as CLASSGEN 81, COMPLIT 181, ENGLISH 81, FRENGEN 181, GERGEN 181) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. GER:DB-Hum

4-5 units, *Win (Staff)*

## **GRADUATE COURSES IN ITALIAN GENERAL**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **ITALGEN 242. Women Mystics from the Middle Ages to the Present**

(Same as FRENGEN 242) The predominantly female mystical experience or direct-embodied encounter with a spiritual reality that is difficult, perhaps impossible, to reduce to words, or to explain rationally. Sources include European texts from the Middle Ages to the present by women and men who attempt to convey the experience metaphorically, to interpret it theologically and philosophically, and to transmit it actively to others.

3-5 units, *not given this year*

#### **ITALGEN 245. Contemporary Italian Cinema: Politics & Spectacle**

Introduction to Italian films from the past twenty years. Emphasis on the sexual, political and cultural politics of late-twentieth and twenty-first century Italy. Analysis of variations in cinematic style and in thematic content in works by Marco Bellocchio, Marco Tullio Giordana, Daniele Luchetti, Matteo Garrone, and Paolo

Sorrentino. Critical texts from film and cultural studies. English; films in Italian with English subtitles; readings in English. Mandatory evening film screenings.

3-5 units, *Spr (Carey, S)*

#### **ITALGEN 259. Tasso and the Italian Baroque**

An in-depth reading of Torquato Tasso's *Gerusalemme liberata* in the cultural and political context of the Counter-Reformation. Conducted in English; requires advanced reading knowledge of Italian.

3-5 units, *Spr (Springer, C)*

#### **ITALGEN 264E. Petrarch and Petrarchism**

(Same as COMPLIT 216) The works of Petrarch (1304-1374), acknowledged as the founder of Renaissance humanism, and a bibliophile, collector of manuscripts, and devotee of erudition. How he dedicated his life to harmonizing the Christian faith with classical learning. Sources include his Latin moral works, epistles, and treatises on illustrious men, and the *Triumphs* and *Canzoniere*.

5 units, *not given this year*

#### **ITALGEN 266. Fascism and Culture**

In this seminar we will examine several aspects of cultural life under Italian fascism, both in terms of primary materials (literary, cinematic, and architectural), and with respect to the rich historiography and analysis of these materials. Our questions will range from 'what defined Italian fascism? to 'how did artistic and cultural production function under Mussolini, and what do we need to know in order to decipher it in context?', and beyond that, to 'how has fascist-era cultural production been appropriated, disavowed, and otherwise (mis)understood in the decades since the end of fascism?'. Materials will include works (in Italian) by Silone, Gramsci, Moravia, Carlo Levi, Rosetta Loy, and Antonio Pennacchi, as well as secondary sources (in Italian and English) by Emilio Gentile, R.J.B. Bosworth, Schnapp, Stone, Ben-Ghiat, Fogu, and Falasca-Zamponi.

3-5 units, *Aut (Fuller, M)*

#### **ITALGEN 272. Dream Visions: The Roman de la Rose**

(Same as FRENGEN 172, FRENGEN 272, ITALGEN 172) What truths are in dreams? How does the quest for a symbolic object embody a moral struggle? What motivates a personal search for divine love? Study of arguably the most influential work of the European Middle Ages, the Roman de la Rose of Guillaume de Lorris and Jean de Meun. Focus on the work as erotic, allegorical quest for the mystical Rose, and scholastic encyclopedia through close analysis, secondary readings, and study of manuscript illumination. Use of medieval and modern French edition.

3-5 units, *not given this year*

#### **ITALGEN 278. European Nihilism**

(Same as FRENGEN 278) This course will probe the thought of nothingness in various European writers and thinkers. The main authors include Giacomo Leopardi, Nietzsche, Michelstader, Heidegger, Beckett, and Emile Cioran.

3-5 units, *Win (Harrison, R)*

#### **ITALGEN 288. Decadence and Modernism from Mallarme to Marinetti**

(Same as FRENGEN 288) How the notion of decadence, initially a term of derision, shapes and underlies the positive terms of symbolism and modernism. Readings include theories of decadence and examples of symbolist and modernist texts that attempt to exorcise decadent demons, such as lust, mysticism, and the retreat into artificiality. Authors include Huysmans, Poe, Mallarmé, Nietzsche, Nordau, d'Annunzio, Valry, Ungaretti, Marinetti, and Breton.

3-5 units, *Aut (Wittman, L)*

#### **ITALGEN 289. French and Italian Women Writers**

(Same as FRENGEN 289) How does women's writing evolve from the very early 20th century, when women's liberation movements first began and WW I brought major social changes, to the flowering of feminine writing in the 70s and beyond? What is the relationship between women writers and filmmakers, and feminism? Is it legitimate to consider women writers in a separate category? To what extent does a reevaluation of women writers mean reconsidering modern literary history? Authors and filmmakers include Aleramo, Yourcenar, de Beauvoir, Banti, Duras, Cavani.

3-5 units, not given this year

### **ITALGEN 301E. New Methods and Sources in French and Italian Studies**

(Same as FRENGEN 301E) Based on student interest. Changes in research methods: the use of digitized texts, resources, and databases available through Stanford Libraries; gateways. Emphasis is on strategies for exploration of broad and specialized topics through new and traditional methods. Using a flexible schedule based on enrollment and the level of students; knowledge, may be offered in forms including a shortened version on the basics, independent study, or a syllabus split over two quarters. Unit levels adjusted accordingly.

1-4 units, Spr (Sussman, S)

### **ITALGEN 369. Introduction to Graduate Studies: Criticism as Profession**

(Same as COMPLIT 369, FRENGEN 369, GERLIT 369) Based on a survey of (and a conversation about) the history of academic Literary Criticism, and on presentation (and discussion) of contemporary ;theoretical; positions, this seminar will try to enhance a reflection on the conditions, difficulties, and rewards of Literary Criticism as a profession ; and as an intellectual life form. Attention will be paid to the most relevant (and most pressing) institutional frame-conditions ; but this attention will not prevent us from trying to explore a (seldom used) potential of eccentricity and freedom that has always been inherent to (although sometimes dormant in) Literary Criticism.

5 units, Aut (Gumbrecht, H)

### **ITALGEN 395. Philosophical Reading Group**

(Same as COMPLIT 359A, FRENGEN 395) Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit.

1 unit, Aut (Gumbrecht, H), Win (Gumbrecht, H)

## ITALIAN LANGUAGE (ITALLANG) COURSES

### **UNDERGRADUATE COURSES IN ITALIAN LANGUAGE**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **ITALLANG 1. First-Year Italian, First Quarter**

All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. requirement.

5 units, Aut (Montanari, D), Win (Tempesta, G), Spr (McCarty, A)

#### **ITALLANG 1A. Accelerated First-Year Italian, Part 1**

Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. Prerequisite: advanced-level proficiency in another Romance language Prerequisite placement test or consent of instructor.

5 units, Aut (Baldocchi, M), Win (Cellinese, A)

#### **ITALLANG 2. First-Year Italian, Second Quarter**

Continuation of 1. All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. Prerequisite: placement test, 2 or consent of instructor.

5 units, Aut (Baldocchi, M), Win (Staff), Spr (Tempesta, G)

#### **ITALLANG 2A. Accelerated First-Year Italian, Part 2**

Continuation of 1A. Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. Prerequisite: placement test, 1A or consent of

instructor.. Fulfills the University language requirement.

5 units, Win (Baldocchi, M), Spr (Ferrando, S)

#### **ITALLANG 3. First-Year Italian, Third Quarter**

Continuation of 2. All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. Prerequisite: placement test 2 or consent of instructor.. Fulfills the University language requirement.

5 units, Aut (Tempesta, G), Win (Alberti, G), Spr (Staff)

#### **ITALLANG 5A. Intensive First-Year Italian, Part A**

Same as ITALLANG 1. Accelerated. Covers 1 quarter of Italian. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C.

5 units, Sum (Staff)

#### **ITALLANG 5B. Intensive First-Year Italian, Part B**

Same as ITALLANG 2. Continuation of 5A. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Prerequisite 1 or 5A.

5 units, Sum (Staff)

#### **ITALLANG 5C. Intensive First-Year Italian, Part C**

Same as ITALLANG 3.. Continuation of 5B. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Prerequisite 2 or 5B. Fulfills the University language requirement.

5 units, Sum (Staff)

#### **ITALLANG 15S. Intermediate Italian Oral Conversation**

May be repeated once for credit.

3 units, not given this year

#### **ITALLANG 20. Intermediate Oral Communication: Italy Today**

Second-year conversational and presentational skills developed through exposure to based on movie clips, slide shows, and other authentic multimedia materials. Guest lectures on Italian culture including opera, pop music, wine, and food culture. Preview of the Florentine experience with Florence returnees sharing their experiences in Italy. Prerequisite: 2A, 3 or consent of instructor.

3 units, Aut (Cellinese, A), Win (Tempesta, G), Spr (Tempesta, G)

#### **ITALLANG 21. Second Year Italian, First Quarter**

Second-Year Italian, First Quarter - Sequence integrating culture and language in the development of socioculturally appropriate discourse. Authentic materials include news and film clips, video and audio files, and short stories. Reading, writing, listening, and speaking competence based on cross cultural understanding. Prerequisite: placement test, 3 or consent of instructor.

3-4 units, Aut (Aquilanti, A)

#### **ITALLANG 21A. Accelerated Second-Year Italian, Part 1**

For students going to Florence. Completes second-year sequence in two rather than three quarters. Prerequisite: placement test, 2A,3 or consent of instructor.

4-5 units, Aut (McCarty, A), Win (McCarty, A), Spr (McCarty, A)

#### **ITALLANG 22. Second-Year Italian, Second Quarter**

Sequence integrating culture and language in the development of socioculturally appropriate discourse. Authentic materials include news and film clips, video and audio files, and short stories. Reading, writing, listening, and speaking competence based on cross-cultural understanding. Prerequisite: placement test, 21 or equivalent consent of instructor.

3-4 units, Win (Cellinese, A)

#### **ITALLANG 22A. Accelerated Second-Year Italian, Part 2**

Continuation of 21A or 21F (for Florence returnees). Part A of a second-year sequence in two rather than three quarters. Satisfies the foreign language requirement for International Relations

majors. Prerequisite: placement test, 21A or 21F.

4-5 units, *Aut (Baldocchi, M), Win (Baldocchi, M), Spr (Baldocchi, M)*

### ITALLANG 23. Second-Year Italian, Third Quarter

Continuation of 22. Sequence integrating culture and language in the development of socioculturally appropriate discourse. Authentic materials include news and film clips, video and audio files, and short stories. Reading, writing, listening, and speaking competence based on cross cultural understanding. Prerequisite: placement test, 22 or equivalent. Satisfies the foreign language requirement for International Relations majors.

3-4 units, *Spr (Baldocchi, M)*

### ITALLANG 99. Language Specials

Prerequisite: consent of instructor.

1-5 units, *Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

### ITALLANG 101. Advanced Oral Communication: Italian Opera

For Florence returnees or those who have completed second-year Italian. Use of opera excerpts by Leoncavallo, Puccini, Rossini, and Verdi to improve communication skills and review language functions. Emphasis is on presentation, conversation, and debate. Prerequisites: second-year Italian or equivalent.

3 units, *Aut (Cellinese, A)*

### ITALLANG 102. Advanced Oral Communication: Modern Cinema

For Florence returnees or those who have completed second-year Italian. Use of movie sequences by Italian film directors such as Benigni, Moretti, Salvatores, Soldini, and Tornatore to improve communication skills and review language functions. Emphasis is on presentation, conversation, and debate. Prerequisite: placement test, 101 or consent of instructor.

3 units, *not given this year*

### ITALLANG 103. Advanced Oral Communication: Italian Classic Cinema

For Florence returnees or those who have completed second-year Italian. Use of classical movie sequences by Italian film directors such as Antonioni, De Sica, Fellini, Rossellini, and Visconti to improve communication skills and review language functions. Emphasis is on presentation, conversation, and debate. Prerequisites: second-year Italian or consent of instructor.

3 units, *Aut (Cellinese, A)*

### ITALLANG 113. Italian Cultural Studies

Literary texts, news reports, comic books, film reviews, music lyrics, and sociological surveys used to examine Italy's language, culture, and society today. Advanced grammatical analysis and reading comprehension. Prerequisite: second-year Italian or equivalent.

3-4 units, *not given this year*

### ITALLANG 114. Advanced Stylistics and Composition

Goal is advanced proficiency in written Italian. Textual and grammatical analysis of literary and non-literary texts, oral reports, translations, and writing assignments. Prerequisite: second-year Italian or equivalent.

3-4 units, *Win (Baldocchi, M)*

### ITALLANG 115. Academic and Creative Writing

Continuation of 114. Academic prose: formal structures and academic terminology. Creative prose: short stories, expressive language, and when and how to break the rules for effect. Prerequisite: second-year Italian or equivalent.

3-4 units, *Spr (Baldocchi, M)*

### ITALLANG 126. Italy and Italians Today

May be repeated for credit.

2 units, *Aut (Aquilanti, A), Win (Aquilanti, A), Spr (Aquilanti, A)*

## GRADUATE COURSES IN ITALIAN LANGUAGE

Primarily for graduate students; undergraduates may enroll with consent of instructor.

### ITALLANG 205A. Intensive First-Year Italian for Stanford Grads, Part A

Same as ITALLANG 5A. Accelerated. Emphasis is on the development of authentic discourse. Online activities,

conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C or 2 of the courses for a total of 9 units.

3-5 units, *Sum (Staff)*

### ITALLANG 205B. Intensive First-Year Italian for Stanford Grads, Part B

Same as ITALLANG 5B. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C or 2 of the courses for a total of 9 units Prerequisite 205A or equivalent.

3-5 units, *Sum (Staff)*

### ITALLANG 205C. Intensive First-Year Italian for Stanford Grads, Part C

Same as ITALLANG 5C. Accelerated. Emphasis is on the development of authentic discourse. Online activities, conversational practice, and interpretation and production of oral and written materials. Only Stanford graduate students restricted to 9 units may register for 205A,B,C or 2 of the courses for a total of 9 units Prerequisite 205B or equivalent.

3-5 units, *Sum (Staff)*

### ITALLANG 250. Reading Italian

For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year of Italian or reading proficiency in another Romance language.

3 units, *Spr (Staff)*

### ITALLANG 394. Graduate Studies in Italian Conversation

Prerequisite: consent of instructor. (Staff)

1-3 units, *Aut (Staff), Win (Staff), Spr (Staff)*

### ITALLANG 395. Graduate Studies in Italian

Prerequisite: consent of instructor. (Staff)

2-5 units, *Aut (Staff), Win (Staff), Spr (Staff)*

## ITALIAN LITERATURE (ITALLIT) COURSES

### UNDERGRADUATE COURSES IN ITALIAN LITERATURE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

### ITALLIT 45N. Italianità: Photography / Literature / Film

(F,Sem) Stanford Introductory Seminar. Stanford Introductory Seminar. Preference to freshmen. Introduction to the question of Italianità, or Italian-ness, through the intersection of photography with modern Italian literature and cinema. Includes an exploration of alternative identities and visual culture in Italy. Excerpts from seminal pieces of Italian literature, women writers, hybrid works such as phototexts, and Italian films. A gateway course to a major or minor in Italian studies and forum for improving written and oral proficiency. Lecture, discussions and readings in Italian. Prerequisite: students must have two years of college-level Italian(or equivalent).

4 units, *Aut (Carey, S)*

### ITALLIT 127. Inventing Italian Literature: Dante, Boccaccio, Petrarca

The origins of Italian literature. Poetry such as 13th-century love lyrics, Dante's Vita Nuova, and Petrarca's Canzoniere; prose such as stories from Boccaccio's Decameron. Prerequisite: ITALLANG 22A or equivalent. GER:DB-Hum, WIM

4 units, *Aut (Springer, C)*

### ITALLIT 128. The Italian Renaissance and the Path to Modernity

The literature, art, and history of the Renaissance and beyond. Readings from the 15th through 18th centuries include Moderata

Fonte, Machiavelli, Ariosto, Tasso, Galileo, and Goldoni. Prerequisite: ITALLANG 22A or equivalent. GER:DB-Hum, WIM

4 units, Win (Springer, C)

#### **ITALLIT 129. Modern Italian History and Literature**

The history of the Italian nation and national literary identity in the 19th and 20th centuries. The relationship between literary texts and their historical context from the Risorgimento to the Resistance. Focus is on the romantic lyric, futurism, fascism, and the changing status of women. Authors include Foscolo, Leopardi, D'Annunzio, Aleramo, Marinetti, Pirandello, Ungaretti, and Montale. Prerequisite: ITALLANG 22A or equivalent. GER:DB-Hum, WIM

4 units, Spr (Staff)

#### **ITALLIT 189A. Honors Research**

Senior honors students enroll for 5 units in Winter while writing the honors thesis, and may enroll in 189B for 2 units in Spring while revising the thesis. Prerequisite: DLCL 189.

5 units, Win (Staff)

#### **ITALLIT 189B. Honors Research**

Open to juniors with consent of adviser while drafting honors proposal. Open to senior honors students while revising honors thesis. Prerequisites for seniors: 189A, DLCL 189.

2 units, Spr (Staff)

#### **ITALLIT 199. Individual Work**

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## **GRADUATE COURSES IN ITALIAN LITERATURE**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **ITALLIT 260. «Noi credevamo»: Images of the Italian Risorgimento**

Senso by Boito and Visconti, Nievo's Confessioni, the new interpretations of the historian Alberto Maria Banti, Mario Martone's Noi credevamo, Umberto Eco's Il cimitero di Praga.

3-5 units, Win (Ceserani, R)

#### **ITALLIT 285. Identity in Modern Italian Fiction**

The quest for a modern identity in the 20th-century Italian novel. The construction of subjectivity as it relates to changes brought about by modernity in Italy, such as mass culture, nationalism, industrialization, feminism, war, secularization, migration, and ethnic diversity. Fiction by Svevo, Pirandello, Calvino, Banti, and Tabucchi. In Italian.

3-5 units, Win (Wittman, L)

#### **ITALLIT 299. Individual Work**

1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **ITALLIT 399. Individual Work**

For graduate students working on a special project or predissertation research. May be repeated for credit.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **ITALLIT 802. TGR Dissertation**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## **JAPANESE GENERAL (JAPANGEN) COURSES**

### **UNDERGRADUATE COURSES IN JAPANESE GENERAL**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **JAPANGEN 51. Japanese Business Culture**

(Same as JAPANGEN 251) Japanese group dynamics in industrial and corporate structures, negotiating styles, decision making, and crisis management. Strategies for managing intercultural differences.

3-5 units, Win (Dasher, R)

#### **JAPANGEN 60. Asian Art and Culture**

(Same as ARTHIST 2) The religious and philosophical ideas and social attitudes of India, China, and Japan and how they are expressed in architecture, painting, woodblock prints, sculpture, and in such forms as garden design and urban planning. GER:DB-Hum, EC-GlobalCom

5 units, Win (Vinograd, R)

#### **JAPANGEN 75N. Around the World in Seventeen Syllables:**

##### **Haiku in Japan, the U.S., and the Digital World**

Preference to freshmen. Origins of the haiku form in Japan, its place in the discourse of Orientalism during the 19th and early 20th centuries in the West, its appropriation by U.S. devotees of Zen and the beat poets after WW II, and its current transformation into a global form through the Internet. GER:DB-Hum

3-4 units, not given this year

#### **JAPANGEN 79. Japanese Ghosts: The Supernatural in**

##### **Japanese Art and Entertainment**

(Same as JAPANGEN 179) The complex meanings of ghosts in Japanese culture. Representations of the supernatural in images, drama, oral narratives, prose, film, comics and animation at different moments in Japanese history. GER:DB-Hum, EC-GlobalCom

4 units, not given this year

#### **JAPANGEN 82N. Joys and Pains of Growing Up and Older:**

##### **Secret Lives of Old People in Japan**

(F,Sem) Stanford Introductory Seminar. Lives of older individuals, their responses to changing social and physical realities and self image, particularly through verbal communication. Special focus on Japan, which is the world's fastest growing elderly population, as a point of comparison in terms of culture, including issues of gender. Introduction to recent multidisciplinary studies on aging and concepts such as frame analysis as a tool to interpret verbal interactions. Through qualitative cross-generational and cross-cultural examinations of lives and verbal representations of old people, students will gain a deeper understanding of the complex human quality of older people and of the relevance of elders' lives to their own. GER:DB-Hum

3 units, Win (Matsumoto, Y)

#### **JAPANGEN 84. Aristocrats, Warriors, Sex Workers, and**

##### **Barbarians: Lived Life in Early Modern Japanese Painting**

Changes marking the transition from medieval to early modern Japanese society that generated a revolution in visual culture, as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch. GER:DB-Hum

4 units, not given this year

#### **JAPANGEN 92. Traditional East Asian Culture: Japan**

Required for Chinese and Japanese majors. Introduction to Japanese culture in historical context. Previous topics include: shifting paradigms of gender relations and performance, ancient mythology, court poetry and romance, medieval war tales, and the theaters of Noh, Bunraku, and Kabuki. GER:DB-Hum, EC-GlobalCom

5 units, Win (Takeuchi, M)

#### **JAPANGEN 121. Translating Japan, Translating the West**

(Same as JAPANGEN 221) Translation lies at the heart of all intercultural exchange. This course introduces students to the specific ways in which translation has shaped the image of Japan in the West, the image of the West in Japan, and Japan's self-image in the modern period. What texts and concepts were translated by each side, how, and to what effect? No prior knowledge of Japanese language necessary. GER:DB-Hum

3-4 units, Aut (Levy, I)

#### **JAPANGEN 124. Manga as Literature**

Analysis of representative manga as narratives that combine verbal and visual elements, with attention to historical and cultural background. Representative manga by Tezuka Osamu, Tatsumi Yoshihiro, Koike Kazuo, Taniguchi Jiro, Natsume Ono, Kono Fumiyo, and others. All readings in English. GER:DB-Hum

3-5 units, Spr (Carter, S)

#### **JAPANGEN 137. Classical Japanese Literature in Translation**

(Same as JAPANGEN 237) Prose, poetry, and drama from the 10th-19th centuries. Historical, intellectual, and cultural context.

Works vary each year. May be repeated for credit with consent of instructor. GER:DB-Hum, DB-Hum

*4 units, not given this year*

**JAPANGEN 138. Survey of Modern Japanese Literature in Translation**

(Same as JAPANGEN 238) Required for Japanese majors. Japanese literature since 1868. Authors include Futabatei Shimei, Higuchi Ichiyo, Natsume Soseki, and Yoshimoto Banana. GER:DB-Hum, EC-GlobalCom

*3-4 units, Spr (Reichert, J)*

**JAPANGEN 141. Japanese Performance Traditions**

(Same as JAPANGEN 241) Major paradigms of gender in Japanese performance traditions from ancient to modern times, covering Noh, Kabuki, Bunraku, and Takarazuka. GER:DB-Hum

*3-4 units, Spr (Levy, I)*

**JAPANGEN 148. Modern Japanese Narratives: Literature and Film**

(Same as JAPANGEN 248) Central issues in modern Japanese visual and written narrative. Focus is on competing views of modernity, war, and crises of individual and collective identity and responsibility. Directors and authors include Kurosawa, Mizoguchi, Ozu, Ogai, Akutagawa, Tanizaki, Abe, and Oe. GER:DB-Hum, EC-GlobalCom

*3-5 units, not given this year*

**JAPANGEN 149. Screening Japan: Issues in Crosscultural Interpretation**

(Same as JAPANGEN 249) Is the cinematic language of moving images universal? How have cultural differences, political interests, and genre expectations affected the ways in which Japanese cinema makes meaning across national borders? Sources include the works of major Japanese directors and seminal works of Japanese film criticism, theory, and scholarship in English. No Japanese language skills required. GER:DB-Hum

*3-4 units, not given this year*

**JAPANGEN 160. Early Modern Japan: The Floating World of Chikamatsu**

(Same as JAPANGEN 260) Early modern Japan as dramatized in the puppet theater of Chikamatsu Monzaemon (1653-1725), Japan's leading dramatist, who depicted militarization, commercialization, and urbanization in the Tokugawa period (1603-1868). Emperors, shogun, daimyo, samurai, merchants, monks, geisha, and masterless ronin in his bunraku plays as denizens of a floating world. Themes of loyalty, love, heroism, suicide, and renunciation in the early modern world. In English.

*4 units, not given this year*

**JAPANGEN 179. Japanese Ghosts: The Supernatural in Japanese Art and Entertainment**

(Same as JAPANGEN 79) The complex meanings of ghosts in Japanese culture. Representations of the supernatural in images, drama, oral narratives, prose, film, comics and animation at different moments in Japanese history. GER:DB-Hum, EC-GlobalCom

*4 units, not given this year*

**JAPANGEN 185. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868**

(Same as ARTHIST 187, ARTHIST 387) Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan. GER:DB-Hum, EC-GlobalCom

*4 units, not given this year*

**JAPANGEN 186. Theme and Style in Japanese Art**

(Same as ARTHIST 186, ARTHIST 386, JAPANGEN 286) Monuments in traditional Japanese architecture, sculpture, garden design, painting, prints, and pots, through the 19th century. Chronological framework emphasizes the role of these objects play in visualizing the ideals of the society they represent. GER:DB-Hum

*4 units, Aut (Takeuchi, M)*

**JAPANGEN 187. Romance, Desire, and Sexuality in Modern Japanese Literature**

(Same as JAPANGEN 287) Constructions of romance, desire, and sexuality such as sexual connoisseurship, love suicide, and nanshoku in Edo Japan. How these paradigms are reconfigured by modern writers. Readings: Saikaku, Chikamatsu, Ichiyo, Soseki, Tanizaki, and Mishima. GER:DB-Hum, EC-Gender

*3-4 units, Aut (Reichert, J)*

**JAPANGEN 198. Senior Colloquium in Japanese Studies**

(Same as KORGEN 198) Research, write, and present capstone essay or honors thesis.

*1 unit, Win (Matsumoto, Y)*

**GRADUATE COURSES IN JAPANESE GENERAL**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**JAPANGEN 200. Directed Reading in Asian Languages**

For Japanese literature. Prerequisite: consent of instructor. (Staff)

*1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**JAPANGEN 201. Teaching Japanese Humanities**

Prepares graduate students to teach humanities at the undergraduate level. Topics include syllabus development and course design, techniques for generating discussion, effective grading practices, and issues particular to the subject matter.

*1 unit, not given this year*

**JAPANGEN 220. The Situation of the Artist in Traditional Japan**

(Same as ARTHIST 485) Topics may include: workshop production such as that of the Kano and Tosa families; the meaning of the signature on objects including ceramics and tea wares; the folk arts movement; craft guilds; ghost painters in China; individualism versus product standardization; and the role of lineage. How works of art were commissioned; institutions supporting artists; how makers purveyed their goods; how artists were recognized by society; the relationship between patrons, desires and artists; modes of production.

*5 units, not given this year*

**JAPANGEN 221. Translating Japan, Translating the West**

(Same as JAPANGEN 121) Translation lies at the heart of all intercultural exchange. This course introduces students to the specific ways in which translation has shaped the image of Japan in the West, the image of the West in Japan, and Japan's self-image in the modern period. What texts and concepts were translated by each side, how, and to what effect? No prior knowledge of Japanese language necessary.

*3-4 units, Aut (Levy, I)*

**JAPANGEN 237. Classical Japanese Literature in Translation**

(Same as JAPANGEN 137) Prose, poetry, and drama from the 10th-19th centuries. Historical, intellectual, and cultural context. Works vary each year. May be repeated for credit with consent of instructor.

*4 units, not given this year*

**JAPANGEN 238. Survey of Modern Japanese Literature in Translation**

(Same as JAPANGEN 138) Required for Japanese majors. Japanese literature since 1868. Authors include Futabatei Shimei, Higuchi Ichiyo, Natsume Soseki, and Yoshimoto Banana.

*3-4 units, Spr (Reichert, J)*

**JAPANGEN 241. Japanese Performance Traditions**

(Same as JAPANGEN 141) Major paradigms of gender in Japanese performance traditions from ancient to modern times, covering Noh, Kabuki, Bunraku, and Takarazuka.

*3-4 units, Spr (Levy, I)*

**JAPANGEN 248. Modern Japanese Narratives: Literature and Film**

(Same as JAPANGEN 148) Central issues in modern Japanese visual and written narrative. Focus is on competing views of modernity, war, and crises of individual and collective identity and responsibility. Directors and authors include Kurosawa, Mizoguchi, Ozu, Ogai, Akutagawa, Tanizaki, Abe, and Oe.

*3-5 units, not given this year*

**JAPANGEN 249. Screening Japan: Issues in Crosscultural Interpretation**

(Same as JAPANGEN 149) Is the cinematic language of moving images universal? How have cultural differences, political interests, and genre expectations affected the ways in which Japanese cinema makes meaning across national borders? Sources include the works of major Japanese directors and seminal works of Japanese film criticism, theory, and scholarship in English. No Japanese language skills required.

*3-4 units, not given this year*

**JAPANGEN 251. Japanese Business Culture**

(Same as JAPANGEN 51) Japanese group dynamics in industrial and corporate structures, negotiating styles, decision making, and crisis management. Strategies for managing intercultural differences.

*3-5 units, Win (Dasher, R)*

**JAPANGEN 260. Early Modern Japan: The Floating World of Chikamatsu**

(Same as JAPANGEN 160) Early modern Japan as dramatized in the puppet theater of Chikamatsu Monzaemon (1653-1725), Japan's leading dramatist, who depicted militarization, commercialization, and urbanization in the Tokugawa period (1603-1868). Emperors, shogun, daimyo, samurai, merchants, monks, geisha, and masterless ronin in his bunraku plays as denizens of a floating world. Themes of loyalty, love, heroism, suicide, and renunciation in the early modern world. In English.

*4 units, not given this year*

**JAPANGEN 286. Theme and Style in Japanese Art**

(Same as ARTHIST 186, ARTHIST 386, JAPANGEN 186) Monuments in traditional Japanese architecture, sculpture, garden design, painting, prints, and pots, through the 19th century. Chronological framework emphasizes the role of these objects play in visualizing the ideals of the society they represent.

*4 units, Aut (Takeuchi, M)*

**JAPANGEN 287. Romance, Desire, and Sexuality in Modern Japanese Literature**

(Same as JAPANGEN 187) Constructions of romance, desire, and sexuality such as sexual connoisseurship, love suicide, and nanshoku in Edo Japan. How these paradigms are reconfigured by modern writers. Readings: Saikaku, Chikamatsu, Ichiyo, Soseki, Tanizaki, and Mishima.

*3-4 units, Aut (Reichert, J)*

**JAPANGEN 287A. The Japanese Tea Ceremony: The History, Aesthetics, and Politics Behind a National Pastime**

(Same as ARTHIST 287A) The tea ceremony, a premodern multimedia phenomenon, integrates architecture, garden design, ceramics, painting, calligraphy, and treasured objects into a choreographed ritual wherein host, objects, and guests perform roles on a tiny stage. Aesthetic, philosophical, and political dimensions. The evolution of tea taste including its inception in Zen monasteries, use for social control during the 16th century, the development of a class of tea connoisseurs, and 20th-century manipulation by the emerging industrialist class.

*5 units, Spr (Takeuchi, M)*

## JAPANESE LANGUAGE (JAPANLNG) COURSES

### UNDERGRADUATE COURSES IN JAPANESE LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**JAPANLNG 4A. First -Year Japanese Language Essentials, First Quarter**

(Formerly JAPANLNG 7A.) For students who want to build communication skills in limited time. Online listening exercises, audiovisual materials, kanji exercises. See [http://japanese.stanford.edu/?page\\_id=73](http://japanese.stanford.edu/?page_id=73).

*3 units, Aut (Yasumoto Magnani, E)*

**JAPANLNG 4B. First-Year Japanese Language Essentials,**

**Second Quarter**

(Formerly JAPANLNG 8A.) Continuation of 4A. For students who want to build communication skills in limited time. Online listening exercises, audiovisual materials, kanji exercises. Prerequisite JAPANLNG 4A or consent of instructor. See [http://japanese.stanford.edu/?page\\_id=73](http://japanese.stanford.edu/?page_id=73).

*3 units, Win (Yasumoto Magnani, E)*

**JAPANLNG 4C. First-Year Japanese Language Essentials, Third Quarter**

(Formerly JAPANLNG 9A.) Continuation of 4B. For students who want to build communication skills in limited time. Online listening exercises, audiovisual materials, kanji exercises. Prerequisite JAPANLNG 4B or consent of instructor. See [http://japanese.stanford.edu/?page\\_id=73](http://japanese.stanford.edu/?page_id=73).

*3 units, Spr (Yasumoto Magnani, E)*

**JAPANLNG 5. Intensive First-Year Japanese Language**

Equivalent to 7, 8, and 9 combined. See [http://japanese.stanford.edu/?page\\_id=323](http://japanese.stanford.edu/?page_id=323). Same as 305.

*12-15 units, Sum (Staff)*

**JAPANLNG 7. First-Year Japanese Language, Culture, and Communication, First Quarter**

(Formerly JAPANLNG 7B.) First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. 300 kanji characters. See [http://japanese.stanford.edu/?page\\_id=5](http://japanese.stanford.edu/?page_id=5).

*5 units, Aut (Lipton, H; Yasumoto Magnani, E)*

**JAPANLNG 8. First-Year Japanese Language, Culture, and Communication, Second Quarter**

(Formerly JAPANLNG 8B.) Continuation of 7. First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. Prerequisite: placement test, 7 or consent of instructor. 300 kanji characters. [http://japanese.stanford.edu/?page\\_id=5](http://japanese.stanford.edu/?page_id=5).

*5 units, Win (Lipton, H)*

**JAPANLNG 9. First-Year Japanese Language, Culture, and Communication, Third Quarter**

(Formerly JAPANLNG 9B.) Continuation of 8. First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. Fulfills University Foreign Language Requirement. Prerequisite: placement test, 8 or consent of instructor. 300 kanji characters. [http://japanese.stanford.edu/?page\\_id=5](http://japanese.stanford.edu/?page_id=5).

*5 units, Spr (Lipton, H)*

**JAPANLNG 11A. Intermediate Japanese Conversation, First Quarter**

(Formerly JAPANLNG 27.) Develops oral proficiency through simple sentence patterns, audio materials, and oral presentations. For the practical use of Japanese. Prerequisite: 3, 9, or consent of instructor.

*2 units, Aut (Busbin, K)*

**JAPANLNG 11B. Intermediate Japanese Conversation, Second Quarter**

(Formerly JAPANLNG 28.) Continuation of 11A. Develops oral proficiency through simple sentence patterns, audio materialstapes, and oral presentations. For the practical use of Japanese. Prerequisite: 11A or consent of the instructor.

*2 units, Win (Busbin, K)*

**JAPANLNG 11C. Intermediate Japanese Conversation, Third Quarter**

(Formerly JAPANLNG 29.) Continuation of 11B. Develops oral proficiency through simple sentence patterns, audio materials, and oral presentations. For the practical use of Japanese. Prerequisite: 11B or consent of instructor.

*2 units, Spr (Busbin, K)*

**JAPANLNG 14A. Second-Year Japanese Language Essentials, First Quarter**

(Formerly JAPANLNG 17A.) Continuation of 4C. For students who want to build communication skills in limited time. Prerequisite: 4C or consent of instructor. [http://japanese.stanford.edu/?page\\_id=89](http://japanese.stanford.edu/?page_id=89).

*3 units, Aut (Fu, M)*

**JAPANLNG 14B. Second-Year Japanese Language Essentials,**

**Second Quarter**

(Formerly JAPANLNG 18A.) Continuation of 14A. For students who want to build communication skills in limited time. Prerequisite: 14A or consent of instructor. [http://japanese.stanford.edu/?page\\_id=89](http://japanese.stanford.edu/?page_id=89)  
3 units, Win (Yasumoto Magnani, E)

**JAPANLNG 14C. Second-Year Japanese Language Essentials, Third Quarter**

(Formerly JAPANLNG 19A.) Continuation of 14B. For students who want to build communication skills in limited time. Prerequisite: 14B or consent of instructor. [http://japanese.stanford.edu/?page\\_id=89](http://japanese.stanford.edu/?page_id=89).  
3 units, Spr (Fu, M)

**JAPANLNG 15A. Accelerated Japanese, Part 1**

Recommended for students with previous knowledge of Japanese who place into 15A on the placement test. The completion of 15A and 15B (offered in the subsequent quarter) fulfills the University foreign language requirement. Prerequisite: Japanese placement test. See [http://japanese.stanford.edu/g/?page\\_id=259](http://japanese.stanford.edu/g/?page_id=259).  
5 units, Win (Staff)

**JAPANLNG 15B. Accelerated Japanese, Part 2**

Continuation of 15A. Second half of the two-quarter sequence. Recommended for students with previous knowledge of Japanese who place into 15B on the placement test or who have completed 15A. Completion of 15B fulfills the University foreign language requirement. Prerequisite: 15A or Japanese placement test. See [http://japanese.stanford.edu/g/?page\\_id=259](http://japanese.stanford.edu/g/?page_id=259).  
5 units, Spr (Staff)

**JAPANLNG 17. Second-Year Japanese Language, Culture, and Communication, First Quarter**

(Formerly JAPANLNG 17B.) Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: 9 or consent of instructor. See [http://japanese.stanford.edu/?page\\_id=23](http://japanese.stanford.edu/?page_id=23)  
5 units, Aut (Lowdermilk, M; Yamamoto, C)

**JAPANLNG 18. Second-Year Japanese Language, Culture, and Communication, Second Quarter**

Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: 17 or consent of instructor. See [http://japanese.stanford.edu/?page\\_id=23](http://japanese.stanford.edu/?page_id=23).  
5 units, Win (Lowdermilk, M)

**JAPANLNG 19. Second-Year Japanese Language, Culture, and Communication, Third Quarter**

Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. (Formerly JAPANLNG 18B.) Prerequisite: 18 or consent of instructor. [http://japanese.stanford.edu/?page\\_id=23](http://japanese.stanford.edu/?page_id=23).  
5 units, Spr (Lowdermilk, M)

**JAPANLNG 20. Intensive Second-Year Japanese**

JAPANLNG 20: Intensive Second-Year Japanese Equivalent to 17,18,19 combined. Prerequisite: 9 or consent of instructor. Same as 320. See [http://japanese.stanford.edu?page\\_id=323](http://japanese.stanford.edu?page_id=323).  
12-15 units, Sum (Staff)

**JAPANLNG 31A. Intermediate to Advanced Conversation, First Quarter**

Oral proficiency through role play, oral presentations, and discussion. Recommended for those who have participated in Kyoto SCTI program May be taken concurrently with 17, 18, and 19. Prerequisite: 9K, or consent of instructor. [http://japanese.stanford.edu/?page\\_id=421](http://japanese.stanford.edu/?page_id=421).  
2 units, Aut (Tomiyama, Y)

**JAPANLNG 31B. Intermediate to Advanced Conversation, Second Quarter**

Continuation of 31A. (Oral proficiency through role play, oral presentations, and discussion. Recommended for those who have participated in Kyoto SCTI program May be taken concurrently with 17, 18, and 19. Prerequisite: 31A or consent of instructor. [http://japanese.stanford.edu/?page\\_id=421](http://japanese.stanford.edu/?page_id=421).  
2 units, Win (Tomiyama, Y)

**JAPANLNG 31C. Intermediate to Advanced Conversation, Third Quarter**

(Continuation of 31B. Oral proficiency through role play, oral presentations, and discussion. Recommended for those who have participated in Kyoto SCTI program May be taken concurrently with 17, 18, and 19. Prerequisite: 32B or consent of instructor. [http://japanese.stanford.edu/?page\\_id=421](http://japanese.stanford.edu/?page_id=421)  
2 units, Spr (Tomiyama, Y)

**JAPANLNG 99. Language Specials**

Prerequisite: consent of instructor. (Staff)  
1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**JAPANLNG 104A. Japanese for Professionals, First Quarter**

Recommended for students who have the basic grammatical foundation (equivalent to completion of 14C or 9), and are ready to develop further communication skills in a limited time not only in their field of interest but also in a professional environment. Prerequisite: 14C, 9 or consent of instructor. See [http://japanese.stanford.edu/?page\\_id=223](http://japanese.stanford.edu/?page_id=223).  
3 units, Aut (Knickerbocker, N)

**JAPANLNG 104B. Japanese for Professionals, Second Quarter**

Continuation of 104A. Recommended for students who have the basic grammatical foundation, and are ready to develop further communication skills in a limited time not only in their field of interest but also in a professional environment. Prerequisite: 104A or consent of instructor. See [http://japanese.stanford.edu/?page\\_id=223](http://japanese.stanford.edu/?page_id=223).  
3 units, Win (Staff)

**JAPANLNG 104C. Japanese for Professionals, Third Quarter**

Continuation of 104B. Recommended for students who have the basic grammatical foundation, and are ready to develop further communication skills in a limited time not only in their field of interest but also in a professional environment. Prerequisite: 104B or consent of instructor. See [http://japanese.stanford.edu/?page\\_id=223](http://japanese.stanford.edu/?page_id=223).  
3 units, Spr (Staff)

**JAPANLNG 111. Business Japanese, First Quarter**

Topics include cultural attitudes and approaches, work ethic, the stock market, import-export trade. Business letters, job interviews, and resume writing. May be repeated for credit. In Japanese. Prerequisite: 23, 29, or 19, or consent of instructor.  
3 units, not given this year

**JAPANLNG 111A. Advanced Japanese Conversation, First Quarter**

(Formerly JAPANLNG 121.) Focus is on improving speaking skills to narrate and describe things in detail. Audiovisual materials and oral presentations. Prerequisite: 19K, 31C, or consent of instructor. [http://japanese.stanford.edu/?page\\_id=417](http://japanese.stanford.edu/?page_id=417).  
2 units, Aut (Lipton, H)

**JAPANLNG 111B. Advanced Japanese Conversation, Second Quarter**

(Formerly JAPANLNG 122.) Continuation of 111A. Focus is on improving speaking skills to narrate and describe in detail. Audiovisual materials and oral presentations. Prerequisite: 19K, 31C, or consent of instructor Prerequisite: 111A or consent of instructor. [http://japanese.stanford.edu/?page\\_id=417](http://japanese.stanford.edu/?page_id=417).  
2 units, Win (Yasumoto Magnani, E)

**JAPANLNG 111C. Advanced Japanese Conversation, Third Quarter**

(Formerly JAPANLNG 123.) Continuation of 111B. Focus is on improving speaking skills to narrate and describe in detail. Audiovisual materials and oral presentations. Prerequisite: 111B, or consent of instructor. [http://japanese.stanford.edu/?page\\_id=417](http://japanese.stanford.edu/?page_id=417).  
2 units, Spr (Lowdermilk, M)

**JAPANLNG 112. Business Japanese, Second Quarter**

Continuation of 111. Topics include cultural attitudes and approaches, work ethic, the stock market, import-export trade. Business letters, job interviews, and resume writing. May be repeated for credit. In Japanese. Prerequisite: 111 or consent of instructor.

3 units, not given this year

**JAPANLNG 113. Business Japanese, Third Quarter**

Continuation of 112. Topics include cultural attitudes and approaches, work ethic, the stock market, import-export trade. Business letters, job interviews, and resume writing. May be repeated for credit. In Japanese. Prerequisite: 112, or consent of instructor.

3 units, not given this year

**JAPANLNG 114F. Japanese Through Film, Part 1**

Contemporary Japanese culture through Japanese films, documentaries, news, and TV dramas. Structured for students with a strong desire to advance their Japanese communication skills quickly and who have limited class preparation time. In-depth discussion and exploration of current issues, cultural icons, idiomatic expressions and nonverbal social cues. Prerequisite: 19 or consent of instructor. See

[http://japanese.stanford.edu/?page\\_id=255](http://japanese.stanford.edu/?page_id=255).

4 units, Win (Nakamura, K)

**JAPANLNG 115F. Japanese Through Film, Part 2**

Continuation of 114F. Contemporary Japanese culture through Japanese films, documentaries, news, and TV dramas. Structured for students with a strong desire to advance their Japanese communication skills quickly and who have limited class preparation time. In-depth discussion and exploration of current issues, cultural icons, idiomatic expressions and nonverbal social cues. Prerequisite: 114F, 117 or consent of instructor.

4 units, Spr (Staff)

**JAPANLNG 117. Third-Year Japanese Language, Culture, and Communication, First Quarter**

(Formerly JAPANLNG 127B.) Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite 19, or consent of instructor. See

[http://japanese.stanford.edu/?page\\_id=39](http://japanese.stanford.edu/?page_id=39).

5 units, Aut (Nakamura, K; Tomiyama, Y)

**JAPANLNG 118. Third-Year Japanese Language, Culture, and Communication, Second Quarter**

(Formerly JAPANLNG 128B.) Continuation of 117. Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: 117 or consent of instructor. See

[http://japanese.stanford.edu/?page\\_id=39](http://japanese.stanford.edu/?page_id=39).

5 units, Win (Tomiyama, Y)

**JAPANLNG 119. Third-Year Japanese Language, Culture, and Communication, Third Quarter**

(Formerly JAPANLNG 129B.) Continuation of 118. Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: 118 or consent of instructor. See

[http://japanese.stanford.edu/?page\\_id=39](http://japanese.stanford.edu/?page_id=39) Prerequisite: 5 units, Spr (Nakamura, K)

**GRADUATE COURSES IN JAPANESE LANGUAGE**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**JAPANLNG 32G. Accelerated Beginning Business Japanese II**

For GSB students only. Limited enrollment.

4 units, not given this year

**JAPANLNG 33G. Accelerated Beginning Business Japanese III**

For GSB students only. Limited enrollment.

4 units, not given this year

**JAPANLNG 200. Directed Reading**

Prerequisite: 213 and consent of instructor.

1-5 units, Aut (Staff), Win (Staff), Spr (Staff)

**JAPANLNG 211. Advanced Japanese, First Quarter**

Structure of Japanese, writings in different genres and styles, using such knowledge in writing, and expressing opinions on a variety of topics. Original writings, including fiction, essays, newspaper, and journal articles. Recommended taken in sequence. Prerequisite: 119 or consent of instructor. See

[http://japanese.stanford.edu/?page\\_id=263](http://japanese.stanford.edu/?page_id=263).

3-5 units, Aut (Nakamura, K)

**JAPANLNG 212. Advanced Japanese, Second Quarter**

Continuation of 211 Structure of Japanese, writings in different genres and styles, using such knowledge in writing, and expressing opinions on a variety of topics. Original writings, including fiction, essays, newspaper, and journal articles. Recommended taken in sequence. Prerequisite: 211 or consent of instructor. See

[http://japanese.stanford.edu/?page\\_id=263](http://japanese.stanford.edu/?page_id=263).

3-5 units, Win (Nakamura, K)

**JAPANLNG 213. Advanced Japanese, Third Quarter**

Continuation of 212. Structure of Japanese, writings in different genres and styles, using such knowledge in writing, and expressing opinions on a variety of topics. Original writings, including fiction, essays, newspaper, and journal articles. Recommended taken in sequence. Prerequisite: 212 or consent of instructor. See

[http://japanese.stanford.edu/?page\\_id=263](http://japanese.stanford.edu/?page_id=263).

3-5 units, Spr (Nakamura, K)

**JAPANLNG 305. Intensive First-Year Japanese for Stanford Graduate Students**

Equivalent to 3 quarters of JAPANLNG 395 combined. Same as JAPANLNG5. Stanford Grads only. See

[http://japanese.stanford.edu/?page\\_id=323](http://japanese.stanford.edu/?page_id=323). Sum

6-15 units, Sum (Staff)

**JAPANLNG 320. Intensive Second-Year Japanese for Stanford Graduate Students**

Equivalent to 3 quarters of JAPANLNG 395 combined. Same as 20. Stanford Grads only. See

[http://japanese.stanford.edu/?page\\_id=323](http://japanese.stanford.edu/?page_id=323).

6-15 units, Sum (Staff)

**JAPANLNG 394. Graduate Studies in Japanese Conversation**

Prerequisite: consent of instructor. (Staff)

1-3 units, Aut (Staff), Win (Staff), Spr (Staff)

**JAPANLNG 395. Graduate Studies in Japanese**

Prerequisite: consent of instructor. (Staff)

2-5 units, Aut (Staff), Win (Staff), Spr (Staff)

**JAPANESE LITERATURE (JAPANLIT) COURSES**

**UNDERGRADUATE COURSES IN JAPANESE LITERATURE**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**JAPANLIT 146. Introduction to Premodern Japanese**

(Same as JAPANLIT 246) Readings from Heian, Kamakura, Muromachi, and early Edo periods with focus on grammar and reading comprehension. Prerequisite: JAPANLNG 129B or 103, or equivalent.

3-5 units, not given this year

**JAPANLIT 157. Points in Japanese Grammar**

(Same as JAPANLIT 257) Meaning and grammatical differences of similar expressions, and distinctions that may not be salient in English. Prerequisite: JAPANLNG 18B or 22, or equivalent. GER:DB-SocSci

3-4 units, not given this year

**JAPANLIT 170. The Tale of Genji and Its Historical Reception**

(Same as JAPANLIT 270) Approaches to the tale including 12th-

century allegorical and modern feminist readings. Influence upon other works including poetry, Noh plays, short stories, modern novels, and comic book (manga) retellings. Prerequisite for graduate students: JAPANLNG 129B or 103, or equivalent. GER:DB-Hum

*4 units, not given this year*

**JAPANLIT 189A. Honors Research**

*2-5 units, Aut (Staff), Spr (Staff)*

**JAPANLIT 189B. Honors Research**

Open to senior honors students to write thesis.

*5 units, Win (Staff)*

**JAPANLIT 199. Individual Reading in Japanese**

Asian Languages majors only. May be repeated for credit. Prerequisites: JAPANLNG 129B or 103, and consent of instructor.

*1-4 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**GRADUATE COURSES IN JAPANESE LITERATURE**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**JAPANLIT 200. Directed Reading in Japanese**

*1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**JAPANLIT 201. Proseminar: Introduction to Graduate Study in Japanese**

Bibliographical and research methods; major trends in literary and cultural theory and critical practice. May be repeated once for credit. Prerequisite: JAPANLNG 103 or 129B, or consent of instructor.

*2-5 units, Win (Levy, I)*

**JAPANLIT 202. Bibliographic and Research Methods in Japanese**

The use of library and online resources for the study of Japanese literature, language, and culture. Prerequisite: JAPANLNG 103 or 129B, or consent of instructor.

*1-3 units, not given this year*

**JAPANLIT 235. Academic Readings in Japanese I**

Strategies for reading academic writings in Japanese. Readings of scholarly papers and advanced materials in Japanese in students' research areas in the humanities and social sciences. Prerequisites: JAPANLNG 103, 129B, or equivalent; and consent of instructor.

*2-4 units, not given this year*

**JAPANLIT 236. Academic Readings in Japanese II**

Strategies for reading academic writings in Japanese. Readings of scholarly papers and advanced materials in Japanese in students' research areas in the humanities and social sciences. May be taken independently of 264. May be repeated for credit. Prerequisites: JAPANLNG 103, 129B, or equivalent; and consent of instructor.

*2-4 units, not given this year*

**JAPANLIT 246. Introduction to Premodern Japanese**

(Same as JAPANLIT 146) Readings from Heian, Kamakura, Muromachi, and early Edo periods with focus on grammar and reading comprehension. Prerequisite: JAPANLNG 129B or 103, or equivalent.

*3-5 units, not given this year*

**JAPANLIT 247. Readings in Premodern Japanese**

Edo and Meiji periods with focus on grammar and reading comprehension. May be repeated for credit. Prerequisite: 246 or equivalent.

*2-5 units, Aut (Reichert, J)*

**JAPANLIT 257. Points in Japanese Grammar**

(Same as JAPANLIT 157) Meaning and grammatical differences of similar expressions, and distinctions that may not be salient in English. Prerequisite: JAPANLNG 18B or 22, or equivalent.

*3-4 units, not given this year*

**JAPANLIT 260. Japanese Poetry and Poetics**

Heian through Meiji periods with emphasis on relationships between the social and aesthetic. Works vary each year. This year's genre is the diary. Prerequisites: 246, 247, or equivalent.

*2-4 units, Win (Carter, S)*

**JAPANLIT 266. Introduction to Sino-Japanese**

Readings in Sino-Japanese (kambun) texts of the Heian,

Kamakura, and Muromachi periods, with focus on grammar and reading comprehension. Prerequisite: 246 or equivalent.

*3-5 units, Aut (Carter, S)*

**JAPANLIT 267. Readings in Sino-Japanese**

Readings in Sino-Japanese (kambun) texts of the Edo and Meiji periods, with focus on grammar and reading comprehension. Prerequisite: 264 or equivalent.

*2-4 units, not given this year*

**JAPANLIT 270. The Tale of Genji and Its Historical Reception**

(Same as JAPANLIT 170) Approaches to the tale including 12th-century allegorical and modern feminist readings. Influence upon other works including poetry, Noh plays, short stories, modern novels, and comic book (manga) retellings. Prerequisite for graduate students: JAPANLNG 129B or 103, or equivalent.

*4 units, not given this year*

**JAPANLIT 276. Modern Japanese Short Stories**

This course explores the postwar Japanese short story. We will read representative works by major authors, such as Ishikawa Jun, Hayashi Fumiko, Abe Kobe and Murakami Haruki. Attention will be devoted to both accurate reading of the Japanese prose and more general discussion of the literary features of the texts.

*2-4 units, not given this year*

**JAPANLIT 279. Research in Japanese Linguistics**

Introduction to graduate research in Japanese linguistics. Fields of research, methods and bibliographical background. Conduct a pilot research project in a chosen area. May be repeated for credit. Prerequisite: JAPANLNG 119 or consent of instructor.

*2-4 units, Spr (Staff)*

**JAPANLIT 281. Japanese Pragmatics**

Sociocultural and discourse factors reflected in the choice of linguistic forms, and their theoretical implications. Prerequisites: one year of Japanese and a course in linguistics, or two years of Japanese, or consent of instructor.

*2-4 units, Spr (Matsumoto, Y)*

**JAPANLIT 287. Pictures of the Floating World: Images from Japanese Popular Culture**

(Same as ARTHIST 287) Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (ehon) and popular broadsheets (kawaraban). How a society constructs itself through images. The borders of the acceptable and censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles. Prerequisites: 2, 186, 187, 188.

*5 units, not given this year*

**JAPANLIT 292. Acquisition of Japanese as a Second Language**

(Same as EDUC 292A) Provides students with a broad overview of second language acquisition (SLA) research and introduces recent SLA studies on Japanese as a second language.

*2-4 units, Aut (Ishida, M)*

**JAPANLIT 298. The Theory and Practice of Japanese Literary Translation**

Theory and cultural status of translation in modern Japanese and English. Comparative analysis of practical translation strategies. Final project is a literary translation of publishable quality. Prerequisite: fourth-year Japanese or consent of instructor.

*2-5 units, not given this year*

**JAPANLIT 299. Master's Thesis or Translation**

A total of 5 units, taken in one or more quarters. (Staff)

*1-5 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**JAPANLIT 350. Japanese Historical Fiction**

Authors include Mori Ogai, Akutagawa Ryunosuke, Tanizaki Jun'ichiro, Enchi Fumiko, Shiba Ryotaro, Fujisawa Shuhei, and Hiraiwa Yumie. Genre theory, and historical and cultural context. Works vary each year. May be repeated for credit.

*3-5 units, not given this year*

**JAPANLIT 377. Seminar: Structure of Japanese**

Linguistic constructions in Japanese. Topics vary annually. In 2009-10, focus is on noun-modifying constructions in Japanese from multiple perspectives including syntax, semantics,

pragmatics, and acquisition. Contrasts with similar constructions in other languages. Typological implications. Prerequisites: courses in Japanese linguistics, consent of instructor.

*2-4 units, not given this year*

**JAPANLIT 381. Topics in Pragmatics and Discourse Analysis**

Naturally occurring discourse (conversational, narrative, or written) and theoretical implications. Discourse of different age groups, expressions of identity and persona, and individual styles. May be repeated for credit.

*2-4 units, not given this year*

**JAPANLIT 395. Early Modern Japanese Literature**

May be repeated for credit. Prerequisite: 247.

*2-4 units, not given this year*

**JAPANLIT 396. Love and Revolution in a Translated Modernity**

Works and topics vary each year. May be repeated for credit. Prerequisite: fourth-year Japanese or consent of instructor.

*2-5 units, Spr (Levy, I)*

**JAPANLIT 396. Modern Japanese Literature**

May be repeated for credit. Prerequisite: JAPANLNG 213.

*2-5 units, Win (Reichert, J)*

**JAPANLIT 399. Dissertation Research**

For doctoral students in Japanese working on dissertations.

*1-12 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**JAPANLIT 400. Advanced Language Training**

For students at the Yokohama Center. For more information, see the Inter-University Center for Japanese Studies in Yokohama at <http://stanford.edu/dept/IUC/>.

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff)*

**JAPANLIT 801. TGR Project**

*0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**JAPANLIT 802. TGR Dissertation**

*0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

## JEWISH STUDIES (JEWISHST) COURSES

### UNDERGRADUATE COURSES IN JEWISH STUDIES

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**JEWISHST 15A. The Bible and Archaeology**

(Same as CLASSGEN 15, RELIGST 15A) An introduction to how archaeology has been used to illumine the Bible and biblical history. Did Abraham exist? Was there an Exodus? Did Joshua really conquer Canaan? What does archaeology reveal about ancient Israel beyond what is recorded in the Bible? This course will address such questions as it seeks to introduce biblical archaeology to students with no prior introduction to either the Bible or to archaeology.

*4 units, Spr (Lederman, Z)*

**JEWISHST 15N. Travels through the Afterlife**

(F,Sem) (Same as RELIGST 15N) Stanford Introductory Seminar. Since the beginning of civilization, humans have refused to believe that physical death is the end of life and have sought in various ways to travel into the afterlife. We cannot know what lies beyond death, but there are other kinds of insights to be learned from these otherworldly journeys. The first part of the course will explore the origins and history of the afterlife, going back in time to ancient Egypt, Mesopotamia, Israel, Greece, and medieval Europe to survey these cultures' view of death and what lies beyond it. The second part of the course will investigate what has happened to belief in the afterlife in modern American culture. Our ultimate goal is to confront one of the most difficult aspects of life--our fear of death and oblivion--and also to explore the power of thought and imagination to move beyond the confines of mortality. GER:DB-Hum

*4 units, Win (Weitzman, S)*

**JEWISHST 16SI. Religion and Spirituality: LGBTQ**

**Perspectives,**

(Same as RELIGST 16SI) Many lesbian, gay, bisexual, transgender, and queer (LGBTQ) people today are finding that mainstream religious institutions do not meet their unique spiritual needs, and they are looking elsewhere to create meaningful spiritual lives. Examine various ways that LGBTQ people are creating and practicing religion and spirituality in the United States. Explore the diversity of American LGBTQ religious and spiritual traditions, both within and beyond the boundaries of traditional religions. Religious and spiritual practices created by and for LGBTQ people and communities, rather than the responses of religious institutions towards the reality of LGBTQ people in their midst. Students will be required to attend an LGBTQ worship service in a tradition of their choice. By the end of the course, students will have a better understanding of, and appreciation for, the diversity of religious and spiritual traditions within LGBTQ communities.

*1-2 units, not given this year*

**JEWISHST 50A. Reading Hebrew, First Quarter**

(Same as AMELANG 50A) Introduction to Hebrew literature through short stories and poetry by notable Israeli writers. In Hebrew. Prerequisite: one year of Hebrew or equivalent.

*2-4 units, not given this year*

**JEWISHST 95. How to Read the Bible**

(Same as RELIGST 95) What does the Bible mean? Seeks to help students answer this question for themselves by introducing some of the many ways in which the Bible has been read over the ages. The focus will be the book of Genesis, but the real subject is the history of biblical interpretation; how Genesis has been understood by theologians, writers, artists, scholars and others; and the ultimate goal is not merely to engage the Bible itself but to gain a better appreciation of the act of reading, why people read differently and the consequences of that difference for religious history. GER:DB-Hum

*4 units, not given this year*

**JEWISHST 101A. Beginning Hebrew, First Quarter**

(Same as AMELANG 128A)

*5 units, Aut (Porat, G; Greif, E)*

**JEWISHST 101B. Beginning Hebrew, Second Quarter**

(Same as AMELANG 128B)

*5 units, Win (Greif, E; Keydar, R)*

**JEWISHST 101C. Beginning Hebrew, Third Quarter**

(Same as AMELANG 128C)

*5 units, Spr (Porat, G; Greif, E)*

**JEWISHST 102. Land and Literature**

(Same as AMELANG 127) Israel has captured the imagination of writers throughout the generations. It has been portrayed as promised land, holy land, homeland, empty land, occupied land, and land of dreams. Ideological views and political events have shaped writers' conception of Israel. Readings include poems, prose, and theoretical texts about place and literature. No knowledge of Hebrew required. GER:DB-Hum, EC-GlobalCom

*4 units, not given this year*

**JEWISHST 102A. Intermediate Hebrew, First Quarter**

(Same as AMELANG 129A)

*4 units, Aut (Shemtov, V)*

**JEWISHST 102B. Intermediate Hebrew, Second Quarter**

(Same as AMELANG 129B)

*4 units, Win (Shemtov, V)*

**JEWISHST 102C. Intermediate Hebrew, Third Quarter**

(Same as AMELANG 129C)

*4 units, Spr (Porat, G)*

(Same as AMELANG 130A)

*1-4 units, not given this year*

**JEWISHST 104. Hebrew Forum**

(Same as AMELANG 131) Intermediate and advanced level. Bi-weekly Hebrew discussion on contemporary issues with Israeli guest speakers. Vocabulary enhancement. Focus on exposure to academic Hebrew.

*2-4 units, Aut (Shemtov, V)*

**JEWISHST 104A. Beginning Yiddish, First Quarter**

(Same as AMELANG 140A) Reading, writing, and speaking.  
4 units, Aut (Levitow, J)

**JEWISHST 104B. Beginning Yiddish, Second Quarter**

(Same as AMELANG 140B) Reading, writing, and speaking.  
4 units, Win (Levitow, J)

**JEWISHST 104C. Beginning Yiddish, Third Quarter**

(Same as AMELANG 140C) Reading, writing, and speaking.  
4 units, Spr (Levitow, J)

**JEWISHST 107A. Biblical Hebrew, First Quarter**

(Same as AMELANG 170A, RELIGST 170A) Establish a basic familiarity with the grammar and vocabulary of Biblical Hebrew and will begin developing a facility with the language. This course requires no prior knowledge of Hebrew and will begin with learning the alphabet. By the end of the quarter, students will be able to translate basic biblical texts, will be familiar with common lexica and reference grammars, and will have sufficient foundational knowledge to enable them to continue expanding their knowledge either in a subsequent course or own their own.

2-4 units, Aut (Weitzman, S; DeBold, R)

**JEWISHST 107B. Biblical Hebrew, Second Quarter**

(Same as AMELANG 170B) Continuation of 170A  
2-4 units, Spr (Porat, G)

**JEWISHST 107C. Biblical Hebrew, Third Quarter**

(Same as AMELANG 170C) Continuation of 170B.  
2-4 units, Spr (Staff)

**JEWISHST 120. Genesis and Gender: Male and Female in Judaism, Christianity, and Islam**

(Same as RELIGST 130) What does it mean to be a man or a woman? And what role have classical and religious traditions played in shaping understandings of gender differences? Investigation of the construction of gender identities, roles, and differences in Greek and Roman sources and three monotheistic faiths. Interpretation and retellings of the story of Adam and Eve in the Bible and the Qur'an, commentaries, lives and practices of religious communities, religious iconography down to the present.

GER:DB-Hum, EC-Gender

4 units, not given this year

**JEWISHST 122B. Early Christianity, Early Judaism, and Gender**

(Same as CLASSGEN 134, RELIGST 132B) An exploration of gender in Early Christianity and Early Judaism. Possible topics include: an examination of Pre-Christian writings which are indicative of the foundational social contexts in which early Christian and Jewish writers operated; how women's preaching was portrayed in Paul's letters and the implications for what was actually going on in the community in Corinth; later interpretations of Paul's attitudes towards women and marriage, which diverge between a pro-marriage and further restrictive understanding of women's involvement in the Church in the pastorals (1 and 2 Timothy and Titus) and a pro-ascetic, cross-dressing, understanding of greater women's freedom in the Acts of Paul and Thecla; female Christian martyrs who had visions of themselves as men entering battle and male Rabbis who understood themselves as female virgins and who hid in whorehouses to avoid martyrdom; and a survey of early Rabbinic laws pertaining to men and women and what they reveal about early Jew

GER:DB-Hum  
4 units, Win (Copeland, K)

**JEWISHST 132D. Sociology of Judaism and Jewish Identity**

(Same as RELIGST 112D, SOC 112D) Examines the place of the Jewish people in society throughout various locales and historical periods to understand how interactions among Jews and with other groups have shaped Jewish identities. Topics include modernism, the Holocaust, Israel/nationhood, race/ethnicity, intermarriage, and assimilation. Uses theoretical, empirical, and historical material from multiple social scientific fields of study and explores the study of Judaism from several major sociological lenses.

5 units, Sum (Staff)

**JEWISHST 139. Rereading Judaism in Light of Feminism**

(Same as FEMST 139) During the past three decades, Jewish feminists have asked new questions of traditional rabbinic texts, Jewish law, history, and religious life and thought. Analysis of the legal and narrative texts, rituals, theology, and community to better

understand contemporary Jewish life as influenced by feminism.  
GER:EC-Gender

4-5 units, NEXTYEAR

**JEWISHST 148. Writing Between Languages: The Case of Eastern European Jewish Literature**

(Same as JEWISHST 248, SLAVLIT 198, SLAVLIT 298) Eastern European Jews spoke and read Hebrew, Yiddish, and their co-territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well.

GER:DB-Hum

3-5 units, Spr (Safran, G)

**JEWISHST 153C. Feminism and American Literature**

(Same as AMSTUD 183C, ENGLISH 183C) Exploration of the ways in which an eclectic group of American writers from the 19th century to the 20th have endeavored to enlarge the canvas on which women can paint their lives. Readings include stories, novels, journalism, poetry and drama that engage the social cultural, and political forces that can shape the kinds of futures students can imagine for themselves--forces that are further inflected by issues of race, ethnicity and class.

GER:DB-Hum, EC-Gender

5 units, Win (Fishkin, S)

**JEWISHST 182A. In Search of David and Solomon**

(Same as CLASSGEN 182, CLASSGEN 282, JEWISHST 382A, RELIGST 182A, RELIGST 382A) In recent years, the existence of King David and Solomon has become a hotly contested subject, with some scholars questioning whether they were real-life historical figures and others claiming to have found evidence that corroborates their existence. Drawing on the most recent archaeological research, this course will involve students in the quest for the historical David and Solomon as a way to introduce them to the challenges of using the Bible as an historical source.

4 units, Spr (Lederman, Z)

**JEWISHST 183. The Holocaust**

(Same as HISTORY 237, HISTORY 337, JEWISHST 383) The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.

GER:DB-Hum

4-5 units, Aut (Zipperstein, S)

**JEWISHST 185B. Jews in the Modern World**

(Same as HISTORY 185B, HISTORY 385C) (Same as HISTORY 85B. History majors and others taking 5 units, register for 185B.) Topics include the restructuring of Jewish existence during the Enlightenment and legal emancipation at the end of the 18th century in W. Europe; the transformation of Jewish life in E. Europe under the authoritarian Russian regime; colonialism in the Sephardic world; new ideologies (Reform Judaism and Jewish nationalisms); the persistence and renewal of antisemitism; the destruction of European Jewry under the Nazis; new Jewish centers in the U.S.; and the State of Israel.

GER:DB-Hum, EC-GlobalCom

5 units, Aut (Zipperstein, S)

**JEWISHST 187D. Zionism and Its Critics**

(Same as HISTORY 187D) Zionism from its genesis in the 1880s up until the establishment of the state of Israel in May, 1948, exploring the historical, ideological and political dimensions of Zionism. Topics include: the emergence of Zionist ideology in connection to and as a response to challenges of modernity; emancipation; Haskalah (Jewish enlightenment); other national and ideological movements of the period; the ideological crystallization of the movement; and the immigration waves to Palestine.

4-5 units, not given this year

**JEWISHST 199B. Directed Reading in Yiddish, Second Quarter**

For intermediate or advanced students. May be repeated for credit.

1-5 units, Win (Staff)

**JEWISHST 221C. Aramaic Jewish texts**

(Same as JEWISHST 321C, RELIGST 221C, RELIGST 321C) Reading of Aramaic Jewish texts with special focus on grammar and syntax. Foundations of classical Aramaic, the two major dialects of rabbinic Aramaic, the Palestinian (Galilean) and the Babylonian. Readings from Midrash, Piyyut, Talmud and Geonic materials and attempt to follow the development of the language through time. The course is intended for students with substantial knowledge of Hebrew. GER:DB-Hum

2-5 units, not given this year

**JEWISHST 225. Research Methods and Resources in Jewish Studies**

(Same as JEWISHST 325, RELIGST 265, RELIGST 365) Enhance students' research skills in the interdisciplinary field of Jewish Studies, emphasizing electronic reference sources, but also archival resources and print publications. Coverage includes: Basic reference sources in Jewish Studies, History and bibliography of the Hebrew book, Hebrew Bible, Talmud, Religious studies (post-Talmudic), Jewish philosophy, Jewish history (by period; by region), Jewish languages, Hebrew literature, Yiddish literature, Zionism and Israel, Sephardic Jewry, women, Holocaust, miscellaneous topics (art, music, folklore and ethnography, sociology, genealogy, geography, pseudonyms, honorifics, abbreviations). Class sessions will also include special workshops on Hebrew / Yiddish / Ladino romanization (transliteration/transcription).

1-3 units, not given this year

**JEWISHST 226B. Judaism and Christianity in the Mediterranean World: Contact, Competition, and Conflict**

(Same as CLASSGEN 126, CLASSGEN 226, JEWISHST 326B, RELIGST 226B, RELIGST 326B) Jewish beginnings of Christianity in the first century C.E.; process of differentiation between various Jewish and Christian groups; effect of Roman-Jewish wars on Jewish and Christian identity formation; Jewish Christians, Christian Jews, and other heretics; rise of the discourse of orthodoxy and heresy; the emergence of the Adversus Iudaeos tradition; theology as a realm of mutual attraction and conflict. Readings include Epistles of Paul in the New Testament, Christian authors from Justin through Augustine, excerpts from Rabbinic Texts (Mishnah, Midrash and Talmud), along with current literature on religion, ethnicity, and identity in the Roman world. GER:DB-Hum

5 units, not given this year

**JEWISHST 226C. Mystics and Merry-makers: Innovations in Modern Judaism**

(Same as JEWISHST 326C, RELIGST 226C, RELIGST 326C) How does a tradition many thousands of years old make a space for itself in the dynamic landscape of contemporary America? Judaism has continually adapted to its surroundings, and in the twentieth century new movements have reconstructed, revised, and renewed Jewish practice. A space within has been claimed by a series of previously disenfranchised Jews including women, queer Jews, and Jews of color. Examine some of the most innovative of these changes from Jewish feminism to the Chabad Hasidic revival. GER:DB-Hum

3-4 units, not given this year

**JEWISHST 226D. Jewish-Christian Relations in Antiquity**

(Same as CLASSGEN 126B, RELIGST 226D) Constructions of identity, community, ethnicity: these considerations frame the investigation of ancient Christian rhetoric and theology contra Iudaeos. This historical project will be set within the larger intellectual and cultural context of a) learned Graeco-Roman traditions of ethnic stereotyping; b) forensic rhetoric; and c) philosophical paideia; and these traditions will be considered within their larger social context of the Mediterranean city (I-III). Specifically, various Christian, and especially Latin traditions contra Iudaeos (IV-VI) will be studied.

1-2 units, not given this year

**JEWISHST 228. King Solomon and the Search for Wisdom**

(Same as JEWISHST 328, RELIGST 282, RELIGST 382) What is wisdom according to the Bible? The course addresses this question by surveying various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon's role in Jewish,

Christian and Islamic tradition.

4 units, not given this year

**JEWISHST 287D. Tel Aviv: Site, Symbol, City**

(Same as HISTORY 287D, HISTORY 387D, JEWISHST 387D) Tel Aviv, the first Israeli/Hebrew city, from a cultural history perspective combining high and low cultural artifacts, examining the symbolic constructions of the city as a site of Hebrew modernism and postmodernism. Topics include: the utopian origins behind the establishment of Tel Aviv in Zionist texts; artists, poets, and writers in Tel Aviv's coffee houses; as the capital of Bauhaus architecture; the emergence of Israeli pop culture in Tel Aviv of the late 60s and 70s; the effects of contemporary globalization and the reconstruction of Tel Aviv as the symbolic site of Israeli post-nationalism. Sources include art, cinema, and literature, pop music and archival materials from Green Library's Eliasaf Robinson Collection. Hebrew reading knowledge, although helpful, is not required. GER:DB-Hum

4-5 units, Spr (Dubnov, A)

**JEWISHST 287E. Jewish Intellectuals and the Crisis of Modernity**

(Same as HISTORY 287E, HISTORY 387E, JEWISHST 387E) Intellectual responses of Jewish political thinkers, historians and authors to the age of extremes. Readings include Theodor Adorno, Herbert Marcuse, Eric Fromm, Hannah Arendt, Leo Strauss, Karl Popper, Isaiah Berlin, Tony Judt, and George Steiner. Analyses of enlightenment, nationalism, socialism and totalitarianism; their life stories, and their direct and indirect role in creating a transatlantic political discourse in postwar years. Contextualizes historically the fundamental features of Jewish intellectual activity after 1945. No prior knowledge of political science, philosophy and/or Jewish studies is required. GER:DB-Hum

4-5 units, Spr (Dubnov, A)

**JEWISHST 287S. Research Seminar in Middle East History**

## KOREAN LANGUAGE (KORLANG) COURSES

### UNDERGRADUATE COURSES IN KOREAN LANGUAGE

Primarily for undergraduates; graduate students may enroll with consent of adviser.

#### **KORLANG 1. First-Year Korean, First Quarter**

Communication skills, vocabulary, and grammar patterns. Culturally appropriate conduct relevant to contexts such as greetings, gestures, and body language.

5 units, Aut (Kim, H)

#### **KORLANG 1H. Beginning Korean for Heritage Learners, First Quarter**

For students with previous knowledge of Korean or a strong background in listening and speaking. Focus is on reading, writing, and spelling rather than speaking and listening. Sources include textbook, workbook, and digitized listening materials. Prerequisite: consent of instructor.

3 units, Aut (Kim, H)

#### **KORLANG 2. First-Year Korean, Second Quarter**

Continuation of 1. Communication skills, vocabulary, and grammar patterns. Culturally appropriate conduct relevant to contexts such as greetings, gestures, and body language. Prerequisite: placement test, 1 or consent of instructor.

5 units, Win (Kim, H)

#### **KORLANG 2H. Beginning Korean for Heritage Learners, Second Quarter**

Continuation of 1H. For students with previous knowledge of Korean or a strong background in listening and speaking. Focus is on reading, writing, and spelling rather than speaking and listening. Sources include textbook, workbook, and digitized listening materials. Prerequisite: 1H or consent of instructor.

3 units, Win (Kim, H)

#### **KORLANG 3. First-Year Korean, Third Quarter**

Continuation of 2. Communication skills, vocabulary, and grammar patterns. Culturally appropriate conduct relevant to contexts such as greetings, gestures, and body language. Prerequisite: placement test, 2 or consent of instructor. Fulfills the University language requirement.

5 units, Spr (Kim, H)

#### **KORLANG 3H. Beginning Korean for Heritage Learners, Third Quarter**

Continuation of 2H. For students with previous knowledge or a strong background in listening and speaking. Focus is on reading, writing, and spelling rather than speaking and listening. Sources include textbook, workbook, and digitized listening materials. Prerequisite: 2H or consent of instructor.

3 units, Spr (Kim, H)

#### **KORLANG 21. Second-Year Korean, First Quarter**

More complex sentences and grammatical patterns. Conversation in daily situations such as making a polite request or suggestion, reading simple texts, and Korean culture. Prerequisite: placement test, 3 or consent of instructor.

4-5 units, Aut (Staff)

#### **KORLANG 22. Second-Year Korean, Second Quarter**

Continuation of 21. More complex sentences and grammatical patterns. Conversation in daily situations such as making a polite request or suggestion, reading simple texts, and Korean culture. Prerequisite: placement test, 21 or consent of instructor.

4-5 units, Win (Kim, H)

#### **KORLANG 23. Second-Year Korean, Third Quarter**

Continuation of 22. More complex sentences and grammatical patterns. Conversation in daily situations such as making a polite request or suggestion, reading simple texts, and Korean culture. Prerequisite: placement test, 22 or consent of instructor.

4-5 units, Spr (Kim, S)

#### **KORLANG 101. Third-Year Korean, First Quarter**

Materials about Korean culture and society. Proficiency in interpersonal, interpretive, and presentational communication. Vocabulary, reading, and aural/oral skills. Prerequisite: placement test, 23 or consent of instructor.

3-4 units, Aut (Staff)

#### **KORLANG 102. Third-Year Korean, Second Quarter**

Continuation of 101. Materials about Korean culture and society. Proficiency in interpersonal, interpretive, and presentational communication. Vocabulary, reading, and aural/oral skills. Prerequisite: placement test, 101 or consent of instructor.

3-4 units, Win (Staff)

#### **KORLANG 103. Third-Year Korean, Third Quarter**

Continuation of 102. Materials about Korean culture and society. Proficiency in interpersonal, interpretive, and presentational communication. Vocabulary, reading, and aural/oral skills. Prerequisite: placement test, 102 or consent of instructor.

3-4 units, Spr (Kim, S)

**KORLANG 110. Korean Pronunciation and Intonation**

Goal is intelligibility and fluency. Lab assignments. Prerequisite: 3 or consent of instructor.

*1-2 units, not given this year*

**KORLANG 111. Medical Korean, First Quarter**

Medical vocabulary; cultural attitude. Video clips, technical journal and prescription reading, and class simulations. Prerequisite: 23 or consent of instructor.

*2-3 units, not given this year*

**KORLANG 112. Medical Korean, Second Quarter**

Medical vocabulary; cultural attitude. Video clips, technical journal and prescription reading, and class simulations. Prerequisite: 23 or consent of instructor.

*2 units, not given this year*

**KORLANG 120A. Korean Culture**

Examination of Korean culture and society to develop fluency and vocabulary through newspapers and short essays. May be repeated for credit. Prerequisites: 103 and consent of instructor.

*1-3 units, not given this year*

**KORLANG 120B. Korean Culture**

Examination of Korean culture and society to develop fluency and vocabulary through newspapers and short essays. May be repeated for credit. Prerequisites: 103 and consent of instructor.

*1-2 units, not given this year*

**KORLANG 120C. Korean Culture**

Examination of Korean culture and society to develop fluency and vocabulary through newspapers and short essays. May be repeated for credit. Prerequisites: 103 and consent of instructor.

*1-2 units, not given this year*

**KORLANG 120K. Korean Language and Culture through Drama and Film**

Korean culture and society through contemporary Korean drama and films. Advanced vocabulary, grammar, and idiomatic expressions. Prerequisite: placement test, 103 or consent of instructor.

*3-4 units, not given this year*

**KORLANG 130. Reading Korean**

Contemporary literature and academic texts. Prerequisite: 103 or consent of instructor.

*3-4 units, not given this year*

**KORLANG 141. Business Korean**

Business-related vocabulary and cultural etiquette. Business letters, mock interviews, and resumes. May be repeated for credit. Prerequisite: 103 or consent of instructor.

*3-4 units, not given this year*

**GRADUATE COURSES IN KOREAN LANGUAGE**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**KORLANG 200. Directed Reading in Korean**

Prerequisite: consent of instructor. (Staff)

*1-5 units, Aut (Staff), Win (Staff), Spr (Staff, 1), Sum (Staff)*

**KORLANG 395. Graduate Studies in Korean**

Prerequisite: consent of instructor.

*1-5 units, Aut (Staff), Win (Staff), Spr (Staff)*

**LATIN AMERICAN STUDIES (LATINAM) COURSES****UNDERGRADUATE COURSES IN LATIN AMERICAN STUDIES**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**LATINAM 197. Directed Individual Research**

For students engaged in interdisciplinary work that cannot be arranged by department. May be repeated for credit. Prerequisite: consent of instructor.

*1-10 units, Aut (Staff), Win (Staff), Spr (Staff)*

**LATINAM 198. Honors Thesis**

Restricted to those writing an honors thesis in Latin American Studies.

*1-10 units, Aut (Staff), Win (Staff), Spr (Staff)*

**LATINAM 200. Seminar on Contemporary Issues in Latin American Studies**

Guest scholars present analyses of major Latin American themes.

*1 unit, Aut (Dirzo, R), Win (Dirzo, R), Spr (Dirzo, R)*

**GRADUATE COURSES IN LATIN AMERICAN STUDIES**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**LATINAM 398. Master's Thesis**

Restricted to students writing a master's thesis in Latin American Studies. May be repeated for credit.

*1-10 units, Aut (Staff), Win (Staff), Spr (Staff)*

**LATINAM 801. TGR Project**

*0 units*

**LAW, NONPROFESSIONAL (LAWGEN) COURSES****UNDERGRADUATE COURSES IN LAW, NONPROFESSIONAL**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**LAWGEN 102Q. Pre-field Course for Alternative Spring Break**

Pre-field course for undergraduates participating in the Alternative Spring Break program.

*1 unit*

**LAWGEN 103Q. Depth Psychology**

(S,Sem) Stanford Introductory Seminar. Powerful unconscious forces impact human and social life. Depth psychology, founded by Sigmund Freud, Carl Jung, Wilhelm Reich, and others, studies these forces and how they shape inner life, personal relationships, religion, politics, art, and many other domains. The course draws from the founders, particularly Jung, and then goes on to include materials from modern theorists, primarily neo-Jungian. The starting point is how the unconscious and conscious mind interact in the individual person's life. We consider the implications of this interaction for psychotherapy and pathology as well as for ordinary life. On the social side, several sessions focus on religion and, to a lesser extent, mythology from a depth psychology perspective. The inquiry is open-ended throughout, encouraging personal reflection and engagement.

*3 units, Aut (Strnad, J)*

**LAWGEN 110Q. Criminal Justice and the Criminal Courts**

Preference to sophomores. This course is an introduction to the American criminal justice system, through the lens of the criminal courts. The course focuses on the structures and theories at play in the criminal court system, emphasizing court procedures, structures, constitutional guarantees, and the trial process. It examines the roles of individual agents - the police, prosecutors, defense attorneys, judges, probation officers, and corrections officials.

*3 units, not given this year*

**LAWGEN 111Q. Introduction to International Human Rights**

This course will study the main international human rights declarations, treaties, covenants, committees, courts and tribunals. It will look at the effect of nation states, regional bodies, and key economic and military organizations upon human rights. Categories of rights -- civil, political, social, economic and cultural -- will be analyzed, with a particular focus on the rights of women and children, and the right to culture.

*3 units*

**LAWGEN 113Q. Law and the Changing American Family**

(S,Sem) Stanford Introductory Seminar. This course will examine the many unprecedented changes in American family patterns during the past half century. Particular attention will be given to the role of law as it reflects and facilitates these developments. Topics to be covered include: same-sex marriage, no fault divorce, reproductive technologies, adoption, interracial relationships and mixed race families, the decline in marriage, and the changing economic positions of men and women.

3 units, Win (Banks, R)

**GRADUATE COURSES IN LAW, NONPROFESSIONAL**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**LAWGEN 206Q. Thinking Like a Lawyer**

(Same as GSBGEN 382). Open to all non-law graduate students at the University, this course provides students an analytical framework for understanding the core concepts of the law and familiarizes students with how lawyers analyze and structure their work. The course is taught by Dean Larry Kramer, Vice Dean Mark Kelman and Law School faculty in their areas of expertise, with one to two classes devoted to each topic. It introduces students to some of the foundational principles of law and reviews topics such as contracts, litigation, intellectual property, securities and employment law.

3-4 units, Win (Staff)

**LAWGEN 209Q. Community Police Academy**

The Stanford Department of Public Safety (SUDPS) has a long history of providing a wide variety of services to the Stanford community. The Community Police Academy is a combination of classroom instruction and hands-on activities that provides participants the opportunity to experience life as a police officer. This class is designed to expand the participant's knowledge of the duties, responsibilities, decisions and constraints that face law enforcement officers today. The goal of the Community Police Academy is to demystify public safety, build trust and develop partnerships between the Department of Public Safety and the Stanford community. While this course is open to all students throughout the University, the units will not accrue to Law Degree Candidates for credit toward a degree in Law (JD, JSM, JSD, or LLM). Prerequisites: minimum 18 years of age; valid driver's license; pass basic background check.

1 unit, Win (Wilson, L; Hernandez, J)

**LINGUISTICS (LINGUIST) COURSES****UNDERGRADUATE COURSES IN LINGUISTICS**

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**LINGUIST 1. Introduction to Linguistics**

The cognitive organization of linguistic structure and the social nature of language use. Why language learning is difficult. Why computers have trouble understanding human languages. How languages differ from one another. How and why speakers of the same language speak differently. How language is used strategically. GER:DB-SocSci

4 units, Aut (Eckert, P; Sag, I; Gafter, R; Spencer, J), Spr (Pereltsvaig, A)

**LINGUIST 5N. What's Your Accent? Investigations in Acoustic Phonetics**

Preference to freshmen. Phonetic variation across accents of English; experimental design; practical experience examining accents of seminar participants; acoustic analysis of speech using Praat. GER:DB-SocSci

3 units, not given this year

**LINGUIST 36. The Arabic Language and Culture**

(Same as AMELANG 36, LINGUIST 270) Arabic language from

historical, social, strategic, and linguistic perspectives. History of the Arabic language and the stability of classical Arabic over the last 15 centuries. Why the functionality of classical Arabic has not changed as Latin, Old English, and Middle English have. Social aspects of the Arabic language, Ferguson's notion of diglossia. The main varieties of Arabic, differences among them, and when and where they are spoken. Role of Arabic and culture in current world politics, culture, and economy. Linguistic properties of Arabic such as root-based morphology, lexical ambiguity, and syntactic structure relating it to current linguistic theories.

3 units, not given this year

**LINGUIST 62N. The Language of Food**

(F,Sem) Stanford Introductory Seminar. Preference to freshmen. The relationship between food and language around the globe. The vocabulary of food and prepared dishes, and crosslinguistic similarities and differences, historical origins, forms and meanings, and relationship to cultural and social variables. The structure of cuisines viewed as meta-languages with their own vocabularies and grammatical structure. The language of menus; their historical development and crosslinguistic differences.

3 units, Win (Jurafsky, D)

**LINGUIST 65. African American Vernacular English**

(Same as AFRICAAM 21, LINGUIST 265) The English vernacular spoken by African Americans in big city settings, and its relation to Creole English dialects spoken on the S. Carolina Sea Islands (Gullah), in the Caribbean, and in W. Africa. The history of expressive uses of African American English (in soundin' and rappin'), and its educational implications. Service Learning Course (certified by Haas Center). GER:DB-SocSci, EC-AmerCul

3-5 units, Win (Rickford, J)

**LINGUIST 66. Vernacular English and Reading**

(Same as LINGUIST 266) Discusses some of the literature on the relation between use of vernacular English varieties (e.g. African American Vernacular English, Chicano English) and the development of literacy (especially in Standard English). But our primary focus is on improving the reading skills of African American and Latino students in local schools through the Reading Road program developed at the University of Pennsylvania. Students must commit to tutoring one or more elementary students weekly, using the program. L65 AAVE recommended, but not required.

4-5 units, Spr (Rickford, J)

**LINGUIST 83N. Translation**

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. What is a translation? The increased need for translations in the modern world due to factors such as tourism and terrorism, globalization and globalization, diplomacy and treaties, law and religion, and literature and science. How to meet this need; different kinds of translation for different purposes; what makes one translation better than another; why some texts are more difficult to translate than others. Can some of this work be done by machines? Are there things that cannot be said in some languages? GER:DB-SocSci

3 units, Aut (Kay, M)

**LINGUIST 90. Teaching Spoken English**

Practical approach to teaching English to non-native speakers. Teaching principles and the features of English which present difficulties. Preparation of lessons, practice teaching in class, and tutoring of non-native speaker.

3-4 units, Spr (Romeo, K)

**LINGUIST 105. Phonetics**

(Same as LINGUIST 205A) The study of speech sounds: how to produce them, how to perceive them, and their acoustic properties. The influence of production and perception systems on sound change and phonological patterns. Acoustic analysis and experimental techniques. Lab exercises. Prerequisite: 110 or equivalent, or consent of instructor. GER:DB-SocSci

4 units, Spr (Podesva, R)

**LINGUIST 106. Introduction to Speech Perception**

Basics of acoustic phonetics and audition. What do listeners perceive when they perceive speech. Examine current research including: the categorical perception of speech, cross-language speech perception, infant speech perception. Theoretical questions

of interest to speech perception researchers and experimental methods used in the field.

*4 units, not given this year*

**LINGUIST 110. Introduction to Phonetics and Phonology**

Differences in the sounds of the world's languages and how these sounds are made by the human vocal tract. Theories that account for cross-linguistic similarities in the face of differences. GER:DB-SocSci

*4 units, Win (Anttila, A)*

**LINGUIST 112. Seminar in Phonology**

(Same as LINGUIST 212A) Topics vary each year. Previous topics include variation in the phonology of words according to their contexts within larger expressions and the place of these phenomena in a theory of grammar. May be repeated for credit.

*2-4 units, not given this year*

**LINGUIST 116. Morphology**

A survey of words including their structures, pronunciations, meanings, and syntactic possibilities in a wide sampling of languages to provide a laboratory for investigating the nature of morphology.

*4 units, not given this year*

**LINGUIST 120. Introduction to Syntax**

Grammatical constructions, primarily English, and their consequences for a general theory of language. Practical experience in forming and testing linguistic hypotheses, reading, and constructing rules. GER:DB-SocSci

*4 units, Aut (Wasow, T)*

**LINGUIST 121. Crosslinguistic Syntax**

A data-driven introduction to the methods of syntactic analysis, and their results. Emphasis is on understanding how languages are systematically alike and different in their basic sentence structure. Focuses on building up syntactic argumentation skills via the collective development of a partial formal theory of sentence structure, which attempts to model native speaker knowledge. Draws on data from a diverse array of the world's languages, including but not limited to English.

*3-4 units, Spr (Gribanov, V)*

**LINGUIST 124. Introduction to Lexical Function Grammar**

(Same as LINGUIST 224) Presentation of a formal model of grammar designed to allow precise, computationally tractable descriptions of cross-linguistic variation in syntactic structure. Concentration on the formal properties of the model, its flexibility in teasing out language specific and possibly universal characteristics of natural languages and the place of syntax as a component within a larger linguistic architecture. Prerequisite: 120 or consent of instructor

*2-4 units, not given this year*

**LINGUIST 125. Seminar in Syntax: Choosing a Variant**

(Same as LINGUIST 225) Cases where two or more expressions serving as alternatives seem to be in free variation, differing at most in stylistic value. The semantic, discourse function, syntactic, prosodic, and processing factors that favor the choice of one variant over the other. May be repeated for credit.

*2-4 units, not given this year*

**LINGUIST 130A. Introduction to Semantics and Pragmatics**

(Same as LINGUIST 230A) Linguistic meaning and its role in communication. Topics include ambiguity, vagueness, presupposition, intonational meaning, and Grice's theory of conversational implicature. Applications to issues in politics, the law, philosophy, advertising, and natural language processing. Those who have not taken logic, such as PHIL 150 or 151, should also enroll in 130C. Pre- or corequisite: 120, consent of instructor, or graduate standing in Linguistics. GER:DB-SocSci

*4 units, Win (Potts, C)*

**LINGUIST 130B. Introduction to Lexical Semantics**

Issues in the study of word meaning. Focus is on the core semantic properties and internal organization of the four major word categories in natural languages: nouns, verbs, adjectives, and prepositions. GER:DB-SocSci

*4 units, not given this year*

**LINGUIST 130C. Logic Laboratory**

Typically taken in conjunction with 130A/230A.

*1 unit, Win (Staff)*

**LINGUIST 140. Language Acquisition I**

(Same as LINGUIST 240) Processes of language acquisition in early childhood; stages in development; theoretical issues and research questions. Practical experience in data collection. GER:DB-SocSci

*4 units, Aut (Clark, E)*

**LINGUIST 141. Language and Gesture**

History of work on gesture, gestural systems associated with particular languages/cultures, and with specific activities - music, sports, traffic management, stock exchanges, etc. Examine gesture developmentally and how gesture is represented in painting and animation.

*3 units, Spr (Clark, E)*

**LINGUIST 142. Heritage Languages**

(Same as LINGUIST 242) The linguistic and cultural properties of Heritage languages, which are partially acquired and supplanted by a dominant language in childhood. Topics: Syntactic, phonological and morphological properties of heritage languages, implications from experimental HL research for language universals, cultural vs. linguistic knowledge, the role of schooling in HL competence, influence of the dominant language on the HL, and pedagogical issues for HL learners in the classroom. GER:DB-SocSci

*3-4 units, not given this year*

**LINGUIST 143. Sign Languages**

The linguistic structure of sign languages. How sign languages from around the world differ, and what properties they share. Accents and dialects in sign languages. How sign languages are similar to and different from spoken languages. How and why sign languages have emerged.

*4 units, not given this year*

**LINGUIST 144. Introduction to Cognitive and Information Sciences**

(Same as PHIL 190, PSYCH 132, SYMSYS 100) The history, foundations, and accomplishments of the cognitive sciences, including presentations by leading Stanford researchers in artificial intelligence, linguistics, philosophy, and psychology. Overview of the issues addressed in the Symbolic Systems major. GER:DB-SocSci

*4 units, Spr (Goodman, N)*

**LINGUIST 150. Language in Society**

How language and society affect each other. Class, age, ethnic, and gender differences in speech. Prestige and stigma associated with different ways of speaking and the politics of language. The strategic use of language. Stylistic practice; how speakers use language to construct styles and adapt their language to different audiences and social contexts. GER:DB-SocSci, WIM

*4 units, Win (Eckert, P)*

**LINGUIST 152. Sociolinguistics and Pidgin Creole Studies**

(Same as LINGUIST 252) Introduction to pidgins and creoles, organized around the main stages in the pidgin-creole life cycle: pidginization, creolization, and decreolization. Focus is on transformations in the English language as it was transported from Britain to Africa, Asia, the Caribbean, and the Pacific. Resultant pidginized and creolized varieties such as Nigerian Pidgin English, Chinese Pidgin English, New Guinea Tok Pisin, Suriname Sranan, and the creole continua of Guyana, Jamaica, and Hawaii. Also French, Dutch, Portugese, Chinook, Motu, and Sango.

*2-4 units, not given this year*

**LINGUIST 153. Language, Power & Politics**

The integral role language plays in politics; how power operates in linguistic practices and political interaction. Critical examination of how language is used to articulate, maintain and subvert relations of power in society, emphasizing language in the media, the political rhetoric associated with war, and the construction of 'truth' in politics. The role of ethnographic analysis in aiding sociolinguistic understandings of how social actors use and (re)interpret political language.

*3-4 units, not given this year*

**LINGUIST 154. Sociolinguistics of Language Contact**

(Same as LINGUIST 254) The role of contact between speakers of different languages in processes of language borrowing, convergence, and shift. Attending both to linguistic aspects and social contexts, examine: second-language acquisition, bilingualism, code-switching, lexical and grammatical borrowing,

first language attrition, language death, and the creation of new contact varieties such as jargons, mixed languages, pidgins, and creoles. Prerequisite: background in linguistics, at least one course in linguistics.

*2-4 units, not given this year*

**LINGUIST 155. Hip Hop, Youth Identities, and the Politics of Language**

(Same as AFRICAAM 121X, AMSTUD 121X, ANTHRO 121A, CSRE 121X, EDUC 121X) Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

*3-4 units, Spr (Alim, H)*

**LINGUIST 156. Language and Gender**

The role of language in the construction of gender, the maintenance of the gender order, and social change. Field projects explore hypotheses about the interaction of language and gender. No knowledge of linguistics required. GER:DB-SocSci, EC-Gender

*4 units, Spr (Eckert, P; Gafter, R)*

**LINGUIST 157. Sociophonetics**

(Same as LINGUIST 257) The study of phonetic aspects of sociolinguistic variation and the social significance of phonetic variation. Acoustic analysis of vowels, consonants, prosody, and voice quality. Hands-on work on collaborative research project. Prerequisite: 110 or equivalent, or consent of instructor.

*4 units, Spr (Podesva, R)*

**LINGUIST 160. Introduction to Language Change**

Principles of historical linguistics; the nature of language change. Kinds and causes of change, variation and diffusion of changes through populations, differentiation of dialects and languages, determination and classification of historical relationships among languages, rates of change, the reconstruction of ancestral languages and intermediate changes, parallels with cultural and genetic evolutionary theory, and implications of variation and change for the description and explanation of language in general. Prerequisite: introductory course in linguistics or evolutionary theory. GER:DB-SocSci

*4 units, Spr (Kiparsky, P)*

**LINGUIST 163. History of the English Language**

(Same as ENGLISH 171) This course traces the history of the English language from its roots through its earliest written records into the present. It will trace the fundamental changes that English has undergone in terms of morphology, phonology, syntax, semantics, and vocabulary. It will also explore some of the social, cultural, and historical forces that affect language. The course emphasizes the pre-modern history of English. GER:DB-Hum

*5 units, Spr (Karnes, M)*

**LINGUIST 167. Languages of the World**

The diversity of human languages, their sound systems, vocabularies, and grammars. Tracing historical relationships between languages and language families. Parallels with genetic evolutionary theory. Language policy, endangered languages and heritage languages. Classification of sign languages. GER:DB-SocSci

*3-4 units, Aut (Pereltsvaig, A)*

**LINGUIST 173. The Structure of Russian**

(Same as LINGUIST 273) A synchronic overview of contemporary standard Russian, including its sound system, word formation and grammatical structure. Emphasis is on problems presented by Russian for current linguistic theory. The acquisition of Russian as a first language.

*2-4 units, not given this year*

**LINGUIST 174. Linguistic Field Methods**

(Same as ANTHRO 30, LINGUIST 274A) Practical training in the collection and analysis of linguistic data from native speakers of a language largely unknown to the investigator. Documentation of endangered languages. Research goals, field trip preparation, ethics (including human subjects, cooperation with local investigators, and governmental permits), working in the

community, technical equipment, and analytical strategies. Emphasis is on the use of recording devices and computers in collection and analysis. Prerequisite: introductory course in linguistics.

*3-5 units, not given this year*

**LINGUIST 174. Linguistic Field Methods**

(Same as ANTHRO 71, LINGUIST 274) Workshop applying methods for gathering and analyzing linguistic data in the field, i.e., from consultants who are native speakers of a language essentially unknown to the investigator. Principles of language documentation. Students will do local field projects and work on these both in and out of class. Format involves lectures, discussion, working with native speakers, and student presentations. Topics include: choosing a language; planning the project; computerized collection, storage, and analysis of linguistic data; field recording equipment; interviews and elicitation; diagnostic vocabulary lists and grammatical schedules; field study of everyday communication and discourse; area surveys and the ethnography of communication; ethics, reflexivity, and bias; working with human subjects and governments. Prerequisite: a course in linguistics or in anthropological field methods.

*5 units, Spr (Fox, J)*

**LINGUIST 180. From Languages to Information**

(Same as CS 124, LINGUIST 280) Automated processing of less structured information: human language text and speech, web pages, social networks, genome sequences, with goal of automatically extracting meaning and structure. Methods include: string algorithms, automata and transducers, hidden Markov models, graph algorithms, XML processing. Applications such as information retrieval, text classification, social network models, machine translation, genomic sequence alignment, word meaning extraction, and speech recognition. Prerequisite: CS103, CS107, CS109.

*3-4 units, Win (Jurafsky, D)*

**LINGUIST 181. Grammar Engineering**

(Same as LINGUIST 281) Hands-on techniques for implementation of linguistic grammars, drawing on grammatical theory and engineering skills. The implementation of constraints in morphology, syntax, and semantics, working within a unification-based lexicalist framework. Focus is on developing small grammars for English and at least one other language. Prerequisite: basic syntactic theory or 120. No programming skills required.

*1-4 units, not given this year*

**LINGUIST 182. Computational Theories of Syntax**

(Same as LINGUIST 282) Salient features of modern syntactic theories, including HPSG, LFG, and TAG, motivated by computational concerns. Impact of work within these frameworks on the design of algorithms in computational linguistics, and its influence in both linguistics and computer science. Topics include: notions of unification; unification algorithms and their relation to linguistic theory; agenda-driven chart processing for analysis and synthesis; the interface with morphology, the lexicon, and semantics; and applications, notably machine translation.

*3-4 units, not given this year*

**LINGUIST 185. Writing Systems in a Digital World**

(Same as LINGUIST 284A) Writing systems and their behaviors. Classification of scripts as alphabetic, syllabic, and ideographic; what features typically belong to each group. What can be considered an ideal script. Topics include: why Japanese writing is considered a complex system; the influence of Indian writing on other syllabic scripts; how writing systems extend their reach to new languages; linguistic insights by studying this process; the Unicode standard; and font technology. Recommended: basic phonetics.

*2-3 units, not given this year*

**LINGUIST 188. Natural Language Understanding**

(Same as CS 224U, LINGUIST 288) Machine understanding of human language. Computational semantics (determination of word sense and synonymy, event structure and thematic roles, time, aspect, causation, compositional semantics, scopal operators), and computational pragmatics and discourse (coherence, coreference resolution, information packaging, dialogue structure). Theoretical issues, online resources, and relevance to applications including question answering and summarization. Prerequisites: one of

LINGUIST 180 / CS 124 / CS 224N,S: and logic such as LINGUIST 130A or B, CS 157, or PHIL150).

3-4 units, Win (MacCartney, W; Potts, C)

**LINGUIST 191. Linguistics and the Teaching of English as a Second/Foreign Language**

(Same as LINGUIST 291) Methodology and techniques for teaching languages, using concepts from linguistics and second language acquisition theory and research. Focus is on teaching English, but most principles and techniques applicable to any language. Optional 1-unit seminar in computer-assisted language learning. GER:DB-SocSci

4-5 units, Win (Hubbard, P; Rylance, C)

**LINGUIST 192. Language Testing**

(Same as LINGUIST 292) Measurement of production and reception of spoken and written language. Cross-disciplinary comparison of assessments in educational, clinical, and engineering contexts.

2-4 units, Spr (Staff)

**LINGUIST 197. Undergraduate Research Seminar**

Research goals and methods in linguistics and related disciplines. Students work on a small project to define a focus for their linguistic studies and prepare for honors research. Presentations; final paper.

2 units, Win (Gribanov, V)

**LINGUIST 198. Honors Research**

1-15 units, Win (Staff), Spr (Staff)

**LINGUIST 199. Independent Study**

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**GRADUATE COURSES IN LINGUISTICS**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

**LINGUIST 200. Foundations of Linguistic Theory**

Theories that have shaped contemporary linguistics; recurrent themes and descriptive practice.

4 units, not given this year

**LINGUIST 205A. Phonetics**

(Same as LINGUIST 105) The study of speech sounds: how to produce them, how to perceive them, and their acoustic properties. The influence of production and perception systems on sound change and phonological patterns. Acoustic analysis and experimental techniques. Lab exercises. Prerequisite: 110 or equivalent, or consent of instructor.

4 units, Spr (Podesva, R)

**LINGUIST 205B. Advanced Phonetics**

Prerequisite: LINGUIST 205A.

2-4 units, not given this year

**LINGUIST 207. Seminar in Phonetics**

Topics vary. Current topic is phonetic variation in speech perception. Previous topics include ow variation is accommodated in current models of speech perception, and how perceptual models need to be altered to accommodate phonetic variation encountered by listeners. May be repeated for credit.

2-4 units, not given this year

**LINGUIST 210A. Phonology**

Introduction to phonological theory and analysis based on cross-linguistic evidence. Topics: phonological representations including features, syllables, metrical structure; phonological processes including assimilation and dissimilation; and phonological typology and universals; optimality theory.

4 units, Aut (Anttila, A)

**LINGUIST 210B. Advanced Phonology**

A comparison of Stratal OT, Transderivational OT, and rule-based approaches, primarily on the empirical basis of stress, syllable structure, and prosodic organization.

4 units, Win (Kiparsky, P)

**LINGUIST 211. Metrics**

Principles of versification from a linguistic point of view. Traditional and optimality-theoretic approaches. The canonical system of English metrics, and its varieties and offshoots. The typology of metrical systems and its linguistic basis. The ideology of normative prosodic discourse in relation to changing poetic

practice.

1-4 units, Aut (Kiparsky, P)

**LINGUIST 212. Seminar in Phonology**

Topics vary each year. Current topic is stress. Previous topics include variation in the phonology of words according to their contexts within larger expressions and the place of these phenomena in a theory of grammar. May be repeated for credit.

2-4 units, Spr (Anttila, A)

**LINGUIST 212A. Seminar in Phonology**

(Same as LINGUIST 112) Topics vary each year. Previous topics include variation in the phonology of words according to their contexts within larger expressions and the place of these phenomena in a theory of grammar. May be repeated for credit.

2-4 units, not given this year

**LINGUIST 212B. Seminar in Phonology**

May be repeated for credit.

1-4 units, not given this year

**LINGUIST 213. Corpus Phonology**

An introduction to constructing and using phonologically annotated corpora to test phonological hypotheses. Hands-on experience in corpus manipulation and phonological modeling.

2-4 units, not given this year

**LINGUIST 214. Phonology Workshop**

May be repeated for credit.

1-2 units, not given this year

**LINGUIST 216. Morphology**

How morphology fits into the lexicon and how the lexicon fits into grammar. Inflection and word-formation: blocking, productivity, analogy. Morphological categories. The interaction of morphology with phonology within the lexicon: level-ordering, prosodic morphology. Review of English morphology and analysis of representative material from languages with richer morphologies.

2-4 units, Spr (Kiparsky, P)

**LINGUIST 217. Morphosyntax**

The role of morphology in grammar: how word structure serves syntax in the expression of meaning. Lexical semantics, Theta-roles, argument structure, and grammatical relations. Licensing: case, agreement, word order, and their interaction.

2-4 units, not given this year

**LINGUIST 218. Seminar on Morphological Theories**

Word formation and the lexicon: empirical generalizations and theoretical approaches. Lexicalist and Distributed Morphology. How words are built and interpreted: constituency and headedness, morpheme order and scope, the mirror principle, bracketing paradoxes, the hierarchy of functional categories. Paradigms, blocking, gaps, periphrasis, syncretism. Locality, head movement vs. selection, constraints on allomorphy, incorporation, polysynthesis, cliticization and prosodic re-ordering phenomena.

2-4 units, not given this year

**LINGUIST 219. Frequency and the Grammar of Alternations**

Variationist, and psycholinguistic studies of how syntactic alternations (for example, the English dative, genitive, and passive) develop in time and space.

1-4 units, not given this year

**LINGUIST 221A. Foundations of English Grammar**

A systematic introduction to the formal analysis of English grammar using the framework of head-driven phrase structure grammar (HPSG). Topics: feature structure modeling, lexical and phrasal organization in terms of type hierarchies and constraint inheritance, clausal types, patterns of complementation, the auxiliary system, extraction dependencies, wh-constructions, and the syntax-semantics interface.

1-4 units, not given this year

**LINGUIST 221B. Studies in Universal Grammar**

Focus is on grammatical analysis of individual languages. Builds directly on the theoretical foundations presented in 221A. Topics vary each year.

1-4 units, not given this year

**LINGUIST 222A. Foundations of Syntactic Theory I**

The roles of the verb and the lexicon in the determination of sentence syntax and their treatment in modern grammatical theories. Empirical underpinnings of core phenomena, including

the argument/adjunct distinction, argument structure and argument realization, control and raising, operations on argument structure and grammatical function changing rules. Motivations for a lexicalist approach rooted in principles of lexical expression and subcategorization satisfaction. Prerequisite: 120 or permission of instructor.

*3-4 units, Aut (Gribanov, V)*

#### **LINGUIST 222B. Foundations of Syntactic Theory II**

The nature of unbounded dependency constructions and their treatment in modern grammatical theories. Filler-gap dependencies, island constraints, and the relation between grammar and processing. Prerequisite: 222A.

*2-4 units, Win (Sag, I)*

#### **LINGUIST 223. Introduction to Minimalist Syntax**

Introduces the basics of Minimalist architecture and structure-building operations, with attention to the communication of syntax with the phonological and semantic interfaces. Topics include phrase structure, locality and phases, phrasal and head movement, functional categories, and features. A previous graduate-level syntax course, or permission of the instructor required.

*2-4 units, not given this year*

#### **LINGUIST 224. Introduction to Lexical Function Grammar**

(Same as LINGUIST 124) Presentation of a formal model of grammar designed to allow precise, computationally tractable descriptions of cross-linguistic variation in syntactic structure. Concentration on the formal properties of the model, its flexibility in teasing out language specific and possibly universal characteristics of natural languages and the place of syntax as a component within a larger linguistic architecture. Prerequisite: 120 or consent of instructor

*2-4 units, not given this year*

#### **LINGUIST 224A. From Text to Natural Logic**

Integration of syntax and semantics using LFG (Lexical Functional Grammar) and CCG (Combinatory Categorical Grammar) as syntactic frameworks and Natural Logic as the semantic approach. Most of natural language semantics aims to specify the meaning of linguistic expressions in model-theoretic terms but formulas of first- or higher-order logics do not come with any effective procedures for reasoning that is required for drawing inferences or answering questions given some natural language input. Natural Logic is a cover term for a family of formal approaches to semantics and textual inferencing as currently practiced by computational linguists. They have in common a proof theoretical rather than a model-theoretic focus and an overriding concern with feasibility. Prerequisite: one syntax or one semantics course.

*2-4 units, Spr (Staff)*

#### **LINGUIST 224B. Advanced Topics in Lexical Functional Grammar**

May be repeated for credit.

*1-4 units, not given this year*

#### **LINGUIST 225. Seminar in Syntax: Choosing a Variant**

(Same as LINGUIST 125) Cases where two or more expressions serving as alternatives seem to be in free variation, differing at most in stylistic value. The semantic, discourse function, syntactic, prosodic, and processing factors that favor the choice of one variant over the other. May be repeated for credit.

*2-4 units, not given this year*

#### **LINGUIST 225A. Seminar in Syntax: Ellipsis**

Diverse kinds of elliptical utterances. The fundamental problems in grammatical analysis of ellipsis (primary focus: English). The clarification of key data relating to current theoretical controversies. May be repeated for credit.

*2-4 units, Spr (Sag, I)*

#### **LINGUIST 225B. SEMINAR IN SYNTAX: Phonology/Syntax Interface**

How syntax conditions phonology and how phonology conditions syntax. The role of the prosodic hierarchy and cyclic structure-building in mediating syntax-phonology interactions. Topics include: linearization, sentential stress, ellipsis, focus, word order, second-place effects. May be repeated for credit.

*2-4 units, Win (Gribanov, V)*

#### **LINGUIST 226. Construction Grammar**

An introduction to Sign-based Construction Grammar (SBCG), an

alternative to derivational (movement-based) theories of grammar that synthesizes ideas developed in Berkeley Construction Grammar and Head-Driven Phrase Structure Grammar. How SBCG can provide a comprehensive and precise account of complex data sets without appeal to the complex structures commonly assumed to be projected from empty elements, and without extravagant assumptions about the biological endowment for language. The relation between grammar design and both language processing and language learning. Prerequisite: Some background in syntax.

*2-4 units, Aut (Sag, I)*

#### **LINGUIST 227C. Projects in Syntax**

Group research projects using quantitative syntactic data from texts, recordings, experiments, or historical records. Skills in extracting, graphically exploring, and analyzing naturalistic syntactic data, and in presenting results. May be repeated for credit. Prerequisite: 229A, B, or D, or equivalent.

*2-4 units, not given this year*

#### **LINGUIST 229A. Laboratory Syntax I**

Critiques of the empirical foundations of syntax. The roles of introspective, usage-based, experimental, and typological evidence. Modern methods of data collection and analysis used in syntax. Hands-on, practical work with data sets. May be repeated for credit.

*1-4 units, not given this year*

#### **LINGUIST 229B. Laboratory Syntax II**

Hands-on use of methods for handling syntactic data, including corpus work on ecologically natural data and controlled experimental paradigms. Explanatory models of syntactic processing and their relation to theories of grammar. May be repeated for credit.

*1-4 units, not given this year*

#### **LINGUIST 229C. Laboratory Syntax III**

Hands-on use of methods for handling syntactic data, including corpus work on ecologically natural data and controlled experimental paradigms. Explanatory models of syntactic processing and their relation to theories of grammar. May be repeated for credit.

*1-4 units, not given this year*

#### **LINGUIST 229D. Empirical Syntax Research Seminar**

Recent work in syntax that employs data-rich methods like corpora and laboratory studies, emphasizing research by seminar participants. May be repeated for credit.

*1-2 units, not given this year*

#### **LINGUIST 230A. Introduction to Semantics and Pragmatics**

(Same as LINGUIST 130A) Linguistic meaning and its role in communication. Topics include ambiguity, vagueness, presupposition, intonational meaning, and Grice's theory of conversational implicature. Applications to issues in politics, the law, philosophy, advertising, and natural language processing. Those who have not taken logic, such as PHIL 150 or 151, should also enroll in 130C. Pre- or corequisite: 120, consent of instructor, or graduate standing in Linguistics.

*4 units, Win (Potts, C)*

#### **LINGUIST 230B. Advanced Semantics and Pragmatics**

Expands on 130A/230A. Detailed study of selected topics in formal semantics and pragmatics. Prerequisites: LINGUIST 130A/230A or permission from instructor.

*2-4 units, Spr (Potts, C)*

#### **LINGUIST 232A. Lexical Semantics**

Introduction to issues in word meaning, focused primarily around verbs. Overview of the core semantic properties of verbs and the organization of the verb lexicon. Approaches to lexical semantic representation, including semantic role lists, proto-roles, and causal and aspectual theories of event conceptualization.

*2-4 units, Aut (Levin, B)*

#### **LINGUIST 232B. Seminar in Lexical Semantics: Aspect**

Current topic: survey of research on various topics in aspect. May be repeated for credit.

*1-4 units, Win (Levin, B)*

#### **LINGUIST 234. Discourse Analysis**

The organization of language above the sentence level, and the manifestation of language in context. Practical experience in

working with discourse data.

*4 units, not given this year*

**LINGUIST 235. Semantic Fieldwork**

Techniques for evidence from less well-studied languages within formal semantic theory. Semantic phenomena, and techniques for investigating them, including scope, quantifiers, pronouns, focus, tense, aspect, mood, evidentiality, and information structure. Practical work on a language.

*2-4 units, not given this year*

**LINGUIST 236. Seminar in Semantics: Context Dependence in Language and Communication**

Exploring the role of context in language learning and language understanding using methods and results from cognitive psychology, language acquisition, and linguistics. Topics include discourse coherence and anaphora, conversational implicature, word learning, on-line sentence comprehension, and the influence of sociolinguistic variables. May be repeated for credit.

*3 units, Spr (Potts, C; Frank, M)*

**LINGUIST 237. Seminar in Semantics: Semantics of Questions and Commands**

Semantics of interrogatives and imperatives; propositional semantics of declaratives. Research emphasizing the meaning of questions. May be repeated for credit.

*1-4 units, not given this year*

**LINGUIST 239. Semantics Research Seminar**

Presentation of ongoing research in semantics. May be repeated for credit.

*1-2 units, not given this year*

**LINGUIST 240. Language Acquisition I**

(Same as LINGUIST 140) Processes of language acquisition in early childhood; stages in development; theoretical issues and research questions. Practical experience in data collection.

*4 units, Aut (Clark, E)*

**LINGUIST 241. Language Acquisition II**

Pragmatics and acquisition. May be repeated for credit.

*1-4 units, Win (Clark, E)*

**LINGUIST 242. Heritage Languages**

(Same as LINGUIST 142) The linguistic and cultural properties of Heritage languages, which are partially acquired and supplanted by a dominant language in childhood. Topics: Syntactic, phonological and morphological properties of heritage languages, implications from experimental HL research for language universals, cultural vs. linguistic knowledge, the role of schooling in HL competence, influence of the dominant language on the HL, and pedagogical issues for HL learners in the classroom.

*3-4 units, not given this year*

**LINGUIST 245. Experimental Design for Linguistics**

Hypothesis formation, confound avoidance, power, general methods, and analysis of results. Students complete a pilot experiment; write-up; peer review; presentation.

*4 units, not given this year*

**LINGUIST 249. Language Processing**

Understanding spoken or written language requires the rapid, incremental processing of novel compositional structures, as well as the integration of the incoming language stream with multiple sources of information, such as the prior discourse, physical context, social information, etc. How are humans able to efficiently accomplish this task? To address this question, this course will consider principles of sentence and discourse processing that guide language understanding and features of sentence & discourse structure that facilitate comprehension. Specific topics are likely to include reference processing, memory & forgetting, individual differences in comprehension ability, the role of context, and computational models of language comprehension.

*2-4 units, Aut (Hofmeister, P)*

**LINGUIST 250. Sociolinguistic Theory and Analysis**

Methods of modeling the patterned variation of language in society. Emphasis is on variation, its relation to social structure and practice, and its role in linguistic change. Intersection between quantitative and qualitative analysis, combining insights of sociology and linguistic anthropology with quantitative linguistic data. Prerequisite: graduate standing in Linguistics or consent of

instructor.

*2-4 units, Aut (Rickford, J)*

**LINGUIST 251. Sociolinguistic Field Methods**

Strengths and weaknesses of the principal methods of data collection in sociolinguistics.

*4 units, not given this year*

**LINGUIST 252. Sociolinguistics and Pidgin Creole Studies**

(Same as LINGUIST 152) Introduction to pidgins and creoles, organized around the main stages in the pidgin-creole life cycle: pidginization, creolization, and decreolization. Focus is on transformations in the English language as it was transported from Britain to Africa, Asia, the Caribbean, and the Pacific. Resultant pidginized and creolized varieties such as Nigerian Pidgin English, Chinese Pidgin English, New Guinea Tok Pisin, Suriname Sranan, and the creole continua of Guyana, Jamaica, and Hawaii. Also French, Dutch, Portuguese, Chinook, Motu, and Sango.

*2-4 units, not given this year*

**LINGUIST 253. Race, Ethnicity, and Language**

(Same as ANTHRO 320A, EDUC 389X) This seminar explores the linguistic construction of race and ethnicity across a wide variety of contexts and communities. Throughout the course, we will take a comparative perspective and highlight how different racial/ethnic formations participate in similar, yet different, ways of doing race through language, interaction and culture. Readings draw heavily from perspectives in (linguistic) anthropology and sociolinguistics.

*3-4 units, Win (Alim, H)*

**LINGUIST 253A. Workshop on Race, Ethnicity, and Language in Schools**

(Same as EDUC 301X) The Workshop on Race, Ethnicity, and Language in Schools is a new School of Education initiative that examines the profound and enduring relationships between race, ethnicity, and language in education in the U.S. and elsewhere. The seminar brings together an interdisciplinary group of leading scholars and graduate students in language in education to address the role of race and ethnicity in a host of complex and controversial language educational issues that cut across the areas of practice, policy, and pedagogy.

*1-4 units, Spr (Alim, H)*

**LINGUIST 254. Sociolinguistics of Language Contact**

(Same as LINGUIST 154) The role of contact between speakers of different languages in processes of language borrowing, convergence, and shift. Attending both to linguistic aspects and social contexts, examine: second-language acquisition, bilingualism, code-switching, lexical and grammatical borrowing, first language attrition, language death, and the creation of new contact varieties such as jargons, mixed languages, pidgins, and creoles. Prerequisite: background in linguistics, at least one course in linguistics.

*2-4 units, not given this year*

**LINGUIST 255. Seminar in Sociolinguistics: California Dialectology**

Topics vary by quarter. Current topic is based on sociolinguistic interviews gathered in the first two field seasons of the Voices of California project. May be repeated for credit.

*2-5 units, Aut (Eckert, P)*

**LINGUIST 257. Sociophonetics**

(Same as LINGUIST 157) The study of phonetic aspects of sociolinguistic variation and the social significance of phonetic variation. Acoustic analysis of vowels, consonants, prosody, and voice quality. Hands-on work on collaborative research project. Prerequisite: 110 or equivalent, or consent of instructor.

*4 units, Spr (Podesva, R)*

**LINGUIST 258. Analysis of Variation**

The quantitative study of linguistic variability in time, space, and society emphasizing social constraints in variation. Hands-on work with variable data. Prerequisites: 105/205 and 250, or consent of instructor.

*1-4 units, Win (Podesva, R)*

**LINGUIST 259. Topics in Sociolinguistics**

Topics vary by quarter. Current topic is language attitudes. Repeatable for credit

*2-4 units, Spr (Rickford, J)*

**LINGUIST 260A. Historical Morphology and Phonology**

Sound change and analogical change in the perspective of linguistic theory. Internal and comparative reconstruction.

*4 units, not given this year*

**LINGUIST 260B. Historical Morphosyntax**

Morphological and syntactic variation and change. Reanalysis, grammaticalization. The use of corpora and quantitative evidence.

*2-4 units, not given this year*

**LINGUIST 262. Constructionalization**

Discussion of recent proposals about how to enhance work on grammaticalization and lexicalization by adopting a construction grammar perspective.

*2-4 units, not given this year*

**LINGUIST 265. African American Vernacular English**

(Same as AFRICAAM 21, LINGUIST 65) The English vernacular spoken by African Americans in big city settings, and its relation to Creole English dialects spoken on the S. Carolina Sea Islands (Gullah), in the Caribbean, and in W. Africa. The history of expressive uses of African American English (in soundin' and rappin'), and its educational implications. Service Learning Course (certified by Haas Center).

*3-5 units, Win (Rickford, J)*

**LINGUIST 266. Vernacular English and Reading**

(Same as LINGUIST 66) Discusses some of the literature on the relation between use of vernacular English varieties (e.g. African American Vernacular English, Chicano English) and the development of literacy (especially in Standard English). But our primary focus is on improving the reading skills of African American and Latino students in local schools through the Reading Road program developed at the University of Pennsylvania. Students must commit to tutoring one or more elementary students weekly, using the program. L65 AAVE recommended, but not required.

*4-5 units, Spr (Rickford, J)*

**LINGUIST 270. The Arabic Language and Culture**

(Same as AMELANG 36, LINGUIST 36) Arabic language from historical, social, strategic, and linguistic perspectives. History of the Arabic language and the stability of classical Arabic over the last 15 centuries. Why the functionality of classical Arabic has not changed as Latin, Old English, and Middle English have. Social aspects of the Arabic language, Ferguson's notion of diglossia. The main varieties of Arabic, differences among them, and when and where they are spoken. Role of Arabic and culture in current world politics, culture, and economy. Linguistic properties of Arabic such as root-based morphology, lexical ambiguity, and syntactic structure relating it to current linguistic theories.

*3 units, not given this year*

**LINGUIST 271. Structure of Basque**

Introduction to key topics in Basque morphology, syntax, semantics and how they bear on current theoretical debates. Topics covered may include basic clause structure and word order, case-marking and ergativity, the expression of motion and location.

*2-4 units, Spr (Levin, B)*

**LINGUIST 272. Structure of Finnish**

Central topics in Finnish phonology/morphology and syntax/semantics and how they bear on current theoretical debates. Topics: stress; vowel harmony; clause structure; case; aspect; word order.

*2-4 units, not given this year*

**LINGUIST 273. The Structure of Russian**

(Same as LINGUIST 173) A synchronic overview of contemporary standard Russian, including its sound system, word formation and grammatical structure. Emphasis is on problems presented by Russian for current linguistic theory. The acquisition of Russian as a first language.

*2-4 units, not given this year*

**LINGUIST 274. Linguistic Field Methods**

(Same as ANTHRO 71, LINGUIST 174) Workshop applying methods for gathering and analyzing linguistic data in the field, i.e., from consultants who are native speakers of a language essentially unknown to the investigator. Principles of language documentation. Students will do local field projects and work on these both in and out of class. Format involves lectures, discussion,

working with native speakers, and student presentations. Topics include: choosing a language; planning the project; computerized collection, storage, and analysis of linguistic data; field recording equipment; interviews and elicitation; diagnostic vocabulary lists and grammatical schedules; field study of everyday communication and discourse; area surveys and the ethnography of communication; ethics, reflexivity, and bias; working with human subjects and governments. Prerequisite: a course in linguistics or in anthropological field methods.

*5 units, Spr (Fox, J)*

**LINGUIST 274A. Linguistic Field Methods**

(Same as ANTHRO 30, LINGUIST 174) Practical training in the collection and analysis of linguistic data from native speakers of a language largely unknown to the investigator. Documentation of endangered languages. Research goals, field trip preparation, ethics (including human subjects, cooperation with local investigators, and governmental permits), working in the community, technical equipment, and analytical strategies. Emphasis is on the use of recording devices and computers in collection and analysis. Prerequisite: introductory course in linguistics.

*3-5 units, not given this year*

**LINGUIST 274B. Field Methods II**

Continuation of 274A, with a focus on phonetic topics in a targeted language. Prerequisite: 274A or consent of instructor.

*2-4 units, not given this year*

**LINGUIST 275. Research Projects Practicum**

Forum for students with ongoing linguistic research projects, intended to provide participants with feedback on issues of study design, data collection and analysis. Some sessions will provide brief introductions to specific topics in research methodology, chosen based on student interest.

*1-2 units, Win (Bresnan, J)*

**LINGUIST 276. Corpus Methods in Syntax/Phonology**

Exploring theoretical questions in phonology, syntax, and their interaction, using annotated corpora. Hands-on experience in corpus work and linguistic modeling.

*2-4 units, Win (Staff)*

**LINGUIST 277. Laboratory Methods in Psycholinguistics**

Issues that commonly arise in the design and implementation of linguistic experiments and in the statistical analysis of empirical results. Topics in experimental design include selection of stimuli, blocking, and power analysis and sample size calculation. How to fit and interpret statistical models using the multilevel regression and Bayesian inference, as implemented in software packages R and Bugs. Topics include interpretation of model coefficients for fixed and random effects, collinearity, model criticism, as well as comparison and reporting of models. Theoretical issues worked out at lab sessions using examples from experiments and corpus studies, including those provided by students.

*2-4 units, not given this year*

**LINGUIST 278. Programming for Linguists**

Computer programming techniques for collecting and analyzing data in linguistic research. Introduction to the UNIX, regular expressions, and Python scripting. Hands-on experience gathering, formatting, and manipulating corpus, field, and experimental data, combining data from multiple sources, and working with existing tools. Knowledge of computer programming not required.

*1-4 units, not given this year*

**LINGUIST 280. From Languages to Information**

(Same as CS 124, LINGUIST 180) Automated processing of less structured information: human language text and speech, web pages, social networks, genome sequences, with goal of automatically extracting meaning and structure. Methods include: string algorithms, automata and transducers, hidden Markov models, graph algorithms, XML processing. Applications such as information retrieval, text classification, social network models, machine translation, genomic sequence alignment, word meaning extraction, and speech recognition. Prerequisite: CS103, CS107, CS109.

*3-4 units, Win (Jurafsky, D)*

**LINGUIST 281. Grammar Engineering**

(Same as LINGUIST 181) Hands-on techniques for implementation of linguistic grammars, drawing on grammatical

theory and engineering skills. The implementation of constraints in morphology, syntax, and semantics, working within a unification-based lexicalist framework. Focus is on developing small grammars for English and at least one other language. Prerequisite: basic syntactic theory or 120. No programming skills required.

*1-4 units, not given this year*

**LINGUIST 282. Computational Theories of Syntax**

(Same as LINGUIST 182) Salient features of modern syntactic theories, including HPSG, LFG, and TAG, motivated by computational concerns. Impact of work within these frameworks on the design of algorithms in computational linguistics, and its influence in both linguistics and computer science. Topics include: notions of unification; unification algorithms and their relation to linguistic theory; agenda-driven chart processing for analysis and synthesis; the interface with morphology, the lexicon, and semantics; and applications, notably machine translation.

*3-4 units, not given this year*

**LINGUIST 283. Basic Algorithms for Computational Linguistics**

Foundational algorithms of non-statistical computational linguistics, including string searching, suffix trees and suffix arrays, finite-state technology for phonology, morphology and dictionary access, classical back-tracking programs for sentence analysis, the use of charts in parsing, generation and translation. Students complete a programming project in one of these areas.

*2-4 units, Win (Kay, M)*

**LINGUIST 284. Natural Language Processing**

(Same as CS 224N) Methods for processing human language information and the underlying computational properties of natural languages. Syntactic and semantic processing from linguistic and algorithmic perspectives. Focus is on modern quantitative techniques in NLP: using large corpora, statistical models for acquisition, translation, and interpretation; and representative systems. Prerequisites: CS124 or CS121/221.

*3-4 units, Aut (Manning, C)*

**LINGUIST 284A. Writing Systems in a Digital World**

(Same as LINGUIST 185) Writing systems and their behaviors. Classification of scripts as alphabetic, syllabic, and ideographic; what features typically belong to each group. What can be considered an ideal script. Topics include: why Japanese writing is considered a complex system; the influence of Indian writing on other syllabic scripts; how writing systems extend their reach to new languages; linguistic insights by studying this process; the Unicode standard; and font technology. Recommended: basic phonetics.

*2-3 units, not given this year*

**LINGUIST 285. Speech Recognition and Synthesis**

(Same as CS 224S) Automatic speech recognition, speech synthesis, and dialogue systems. Focus is on key algorithms including noisy channel model, hidden Markov models (HMMs), Viterbi decoding, N-gram language modeling, unit selection synthesis, and roles of linguistic knowledge. Prerequisite: programming experience. Recommended: CS 221 or 229.

*2-4 units, not given this year*

**LINGUIST 286. Information Retrieval and Web Search**

(Same as CS 276) Text information retrieval systems; efficient text indexing; Boolean, vector space, and probabilistic retrieval models; ranking and rank aggregation; evaluating IR systems. Text clustering and classification: classification algorithms, latent semantic indexing, taxonomy induction; Web search engines including crawling and indexing, link-based algorithms, and web metadata. Prerequisites: CS 107, CS 109, CS 161.

*3 units, Spr (Nayak, P; Manning, C)*

**LINGUIST 287. Extracting Social Meaning and Sentiment**

(Same as CS 424P) Methods for extracting social meaning (speaker perspectives, emotions and attitudes) from text and speech. Topics include sentiment analysis and summarization, detection of deception, sarcasm, emotion, and personality. Analysis of meaning-bearing characteristics of the speaker and topic, including text, discourse, prosodic and other cues. Prerequisite: CS 124 or 221 or 229 or permission of instructors.

*3 units, not given this year*

**LINGUIST 288. Natural Language Understanding**

(Same as CS 224U, LINGUIST 188) Machine understanding of

human language. Computational semantics (determination of word sense and synonymy, event structure and thematic roles, time, aspect, causation, compositional semantics, scopal operators), and computational pragmatics and discourse (coherence, coreference resolution, information packaging, dialogue structure). Theoretical issues, online resources, and relevance to applications including question answering and summarization. Prerequisites: one of LINGUIST 180 / CS 124 / CS 224N,S: and logic such as LINGUIST 130A or B, CS 157, or PHIL150).

*3-4 units, Win (MacCartney, W; Potts, C)*

**LINGUIST 289. Topics in Computational Linguistics: History of Computational Linguistics**

Intellectual history of computational linguistics and natural language processing, together with related aspects of dialogue and speech processing, using primary sources. Reading of seminal early papers, interviews with historical figures, with the goal of understanding the origins and intellectual development of the field. Prerequisites: at least one of LING 180, 281, 283, 284, 286, or 288.

*3-4 units, not given this year*

**LINGUIST 291. Linguistics and the Teaching of English as a Second/Foreign Language**

(Same as LINGUIST 191) Methodology and techniques for teaching languages, using concepts from linguistics and second language acquisition theory and research. Focus is on teaching English, but most principles and techniques applicable to any language. Optional 1-unit seminar in computer-assisted language learning.

*4-5 units, Win (Hubbard, P; Rylance, C)*

**LINGUIST 292. Language Testing**

(Same as LINGUIST 192) Measurement of production and reception of spoken and written language. Cross-disciplinary comparison of assessments in educational, clinical, and engineering contexts.

*2-4 units, Spr (Staff)*

**LINGUIST 293. Research Seminar in Applied Linguistics**

(Same as EDUC 435X) For graduate students in the schools of Education and Humanities and Sciences who are engaged in research pertaining to applied linguistic topics in original research. Topics: language policies and planning, language and gender, writing and critical thinking, foreign language education, and social applications of linguistic science. (SSPEP)

*1-4 units, not given this year*

**LINGUIST 294. Linguistic Research Discussion Group**

Restricted to first-year Linguistics Ph.D. students.

*1 unit, Aut (Levin, B)*

**LINGUIST 390. M.A. Project**

*1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**LINGUIST 394. TA Training Workshop**

For second-year graduate students in Linguistics

*1 unit, Aut (Levin, B)*

**LINGUIST 395. Research Workshop**

Restricted to students in the doctoral program. Student presentations of research toward qualifying papers.

*1-2 units, Spr (Levin, B; Sag, I)*

**LINGUIST 395C. Research Workshop III**

Restricted to students in the doctoral program. Student presentations of research toward qualifying papers.

*1-2 units, Sum (Staff)*

**LINGUIST 396. Research Projects in Linguistics**

Mentored research project for first-year graduate students in linguistics.

*2-3 units, Aut (Staff), Win (Staff)*

**LINGUIST 397. Directed Reading**

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**LINGUIST 398. Directed Research**

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

**LINGUIST 399. Dissertation Research**

*1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)*

# MANAGEMENT SCIENCE AND ENGINEERING (MS&E) COURSES

## UNDERGRADUATE COURSES IN MANAGEMENT SCIENCE AND ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

### MS&E 22Q. The Flaw of Averages

(S,Sem) Stanford Introductory Seminar. Uncertain assumptions in business and public policy are often replaced with single best guesses or average numbers. This leads to a fallacy as fundamental as the belief that the earth is flat, which I call the Flaw of Averages. It states, in effect, that plans based on average assumptions are wrong on average. This class will discuss mitigations of the flaw of averages using simulation and other methods from probability management.

3 units, Aut (Savage, S)

### MS&E 41. Financial Literacy

Practical knowledge about personal finance and money management including budgeting, pay checks, credit cards, banking, insurance, taxes, and saving. Class especially appropriate for those soon to be self-supporting. Limited enrollment.

1 unit, Win (Morrison, M), Spr (Morrison, M)

### MS&E 52. Introduction to Decision Making

Experienced management consultants share lessons and war stories. Case studies, disguised examples from real engagements, and movie clips illustrate theories and concepts of decision analysis. Student teams critique decisions made in actual organizations. Topics include what makes a good decision, how decisions can be made better, framing and structuring techniques, modeling and analysis tools, biases and probability assessment, evaluation and appraisal methods, decision psychology, creativity and organizational leadership, and effective presentation styles. Not intended for MS&E majors.

3 units, Sum (Staff)

### MS&E 92Q. International Environmental Policy

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. Science, economics, and politics of international environmental policy. Current negotiations on global climate change, including actors and potential solutions. Sources include briefing materials used in international negotiations and the U.S. Congress.

3 units, Win (Weyant, J)

### MS&E 93Q. Nuclear Weapons, Energy, Proliferation, and Terrorism

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. What are nuclear weapons; what do they do? How are they different from other weapons? What drives proliferation of nuclear weapons? Why do countries want them? Can they be eliminated? What about Iran and North Korea? What role does nuclear energy play? Can it help combat global climate change? What are the risks of nuclear terrorism? Recommended: a course in international relations, engineering, or physical science. GER:DB-EngrAppSci, DB-EngrAppSci

3 units, Spr (Hecker, S)

### MS&E 94Q. The Public Use and Misuse of Mathematics: How to Interpret Numbers as Used by Media and Politicians

(S,Sem) Stanford Introductory Seminar. Preference to sophomores. How to unearth and interpret relevant math to illuminate underlying political and economic issues. How to interpret public budgets, whether jury pool selection is biased, estimate pollution risks, and when to believe poll results and statistical relationships; how to deal with rare but high-consequence eventualities such as terrorism, a nuclear meltdown, or a possible pandemic. How to determine how much to pay to reduce carbon emissions, when a medicine should be withdrawn, and what is a useful forecast.

3 units, Spr (May, M)

### MS&E 101. Undergraduate Directed Study

Subject of mutual interest to student and faculty member. Prerequisite: faculty sponsor.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

### MS&E 107. Interactive Management Science

(Same as MS&E 207) Analytical techniques such as linear and integer programming, Monte Carlo simulation, forecasting, decision analysis, and Markov chains in the environment of the spreadsheet. Probability management. Materials include spreadsheet add-ins for implementing these and other techniques. Emphasis is on building intuition through interactive modeling, and extending the applicability of this type of analysis through integration with existing business data structures. GER:DB-EngrAppSci

3 units, Aut (Savage, S)

### MS&E 108. Senior Project

Restricted to MS&E majors in their senior year. Students carry out a major project in groups of four, applying techniques and concepts learned in the major. Project work includes problem identification and definition, data collection and synthesis, modeling, development of feasible solutions, and presentation of results. Service Learning Course (certified by Haas Center).

5 units, Win (Brandeau, M; Carlson, R; Eesley, C; Katila, R; Shachter, R)

### MS&E 111. Introduction to Optimization

(Same as ENGR 62) Formulation and analysis of linear optimization problems. Solution using Excel solver. Polyhedral geometry and duality theory. Applications to contingent claims analysis, production scheduling, pattern recognition, two-player zero-sum games, and network flows. Prerequisite: MATH 51. GER:DB-EngrAppSci

4 units, Aut (Van Roy, B), Spr (Goel, A)

### MS&E 112. Mathematical Programming and Combinatorial Optimization

(Same as MS&E 212) Combinatorial and mathematical programming (integer and non-linear) techniques for optimization. Topics: linear program duality and LP solvers; integer programming; combinatorial optimization problems on networks including minimum spanning trees, shortest paths, and network flows; matching and assignment problems; dynamic programming; linear approximations to convex programs; NP-completeness. Hands-on exercises. Prerequisites: CS 106A or X; ENGR 62 or MATH 103. GER:DB-EngrAppSci

3 units, Win (Saber, A)

### MS&E 120. Probabilistic Analysis

Concepts and tools for the analysis of problems under uncertainty, focusing on model building and communication: structuring, processing, and presentation of probabilistic information. Examples from legal, social, medical, and physical problems. Spreadsheets illustrate and solve problems as a complement to analytical closed-form solutions. Topics: axioms of probability, probability trees, random variables, distributions, conditioning, expectation, change of variables, and limit theorems. Prerequisite: MATH 51. Recommended: knowledge of spreadsheets. GER:DB-EngrAppSci

5 units, Aut (Shachter, R)

### MS&E 121. Introduction to Stochastic Modeling

Stochastic processes and models in operations research. Discrete and continuous time parameter Markov chains. Queuing theory, inventory theory, simulation. Prerequisite: 120 or Statistics 116. GER:DB-EngrAppSci

4 units, Win (Chang, D)

### MS&E 130. Information Networks and Services

Architecture of the Internet and performance engineering of computer systems and networks. Switching, routing and shortest path algorithms. Congestion management and queueing networks. Peer-to-peer networking. Wireless and mobile networking. Information service engineering and management. Search engines and recommendation systems. Reputation systems and social networking technologies. Security and trust. Information markets. Select special topics and case studies. Prerequisites: 111, 120, and CS 106A. GER:DB-EngrAppSci

3 units, Spr (Bambos, N)

**MS&E 134. Organization Change and Information Systems**

(Same as MS&E 234) Leading organizational change and Information Systems. Case method discussions and lectures. Themes include: real-time enterprise; reengineering; organization transformation, cross-functional teams, IT development, and leading IT. Course includes a group project that is defined and approved during the first two weeks of class. Limited enrollment. Prerequisites: CS 106A, 180, or equivalents.

3 units, Win (Tabrizi, B)

**MS&E 140. Accounting for Managers and Entrepreneurs**

(Same as MS&E 240) Non-majors and minors who have taken or are taking elementary accounting should not enroll. Introduction to accounting concepts and the operating characteristics of accounting systems. The principles of financial and cost accounting, design of accounting systems, techniques of analysis, and cost control. Interpretation and use of accounting information for decision making. Designed for the user of accounting information and not as an introduction to a professional accounting career.

3-4 units, Aut (Stanton, F), Win (Stanton, F), Sum (Staff)

**MS&E 142. Introductory Financial Analysis**

Evaluation and management of money, complicated by temporary distributions and uncertainty. The time-value of money and its impact on economic decisions (both personal and corporate) with the introduction of interest rate (constant or varying over time); several approaches critically examined and made consistent as suitable metrics of comparison. The concept of investment diversification in the presence of uncertainty; portfolio selection and efficient frontier analysis leading to the formulation of the Capital Asset Pricing Model; practical implementation of the concepts, including comparison of loan (e.g., house and auto) terms, credit card financial terms, interest rate term structure and its relationship to rate-of-return analysis, and graphical presentation of uncertain investment alternatives; and current economic news of interest. Critical thinking, discussion, and interaction, using group and computer labs assignments. Prerequisites: differential calculus and probability.

3 units, Aut (Chiu, S)

**MS&E 146. Corporate Financial Management**

Key functions of finance in both large and small companies, and the core concepts and key analytic tools that provide their foundation. Making financing decisions, evaluating investments, and managing cashflow, profitability and risk. Designing performance metrics to effectively measure and align the activities of functional groups and individuals within the firm. Structuring relationships with key customers, partners and suppliers. Prerequisite: 142 or 245G or equivalent.

3 units, Win (Johnson, B)

**MS&E 152. Introduction to Decision Analysis**

(Same as MS&E 152W) How to make good decisions in a complex, dynamic, and uncertain world. People often make decisions that on close examination they regard as wrong. Decision analysis uses a structured conversation based on actional thought to obtain clarity of action in a wide variety of domains. Topics: distinctions, possibilities and probabilities, relevance, value of information and experimentation, relevance and decision diagrams, risk attitude. Students seeking to fulfill the Writing in the Major requirement should register for MS&E 152W. GER:DB-EngrAppSci

3-4 units, Spr (Shachter, R)

**MS&E 152W. Introduction to Decision Analysis**

(Same as MS&E 152) How to make good decisions in a complex, dynamic, and uncertain world. People often make decisions that on close examination they regard as wrong. Decision analysis uses a structured conversation based on actional thought to obtain clarity of action in a wide variety of domains. Topics: distinctions, possibilities and probabilities, relevance, value of information and experimentation, relevance and decision diagrams, risk attitude. Students seeking to fulfill the Writing in the Major requirement should register for MS&E 152W. GER:DB-EngrAppSci, WIM

3-4 units, Spr (Shachter, R)

**MS&E 175. Innovation, Creativity, and Change**

Problem solving in organizations; creativity and innovation skills; thinking tools; creative organizations, teams, individuals, and

communities. Limited enrollment. (Katila)

3-4 units, Win (Katila, R)

**MS&E 178. The Spirit of Entrepreneurship**

Is there more to entrepreneurship than inventing the better mouse trap? This course uses the speakers from the Entrepreneurial Thought Leader seminar (MS&E472) to drive research and discussion about what makes an entrepreneur successful. Topics include venture financing, business models, and interpersonal dynamics in the startup environment. Students meet before and after MS&E 472 to prepare for and debrief after the sessions. Enrollment limited to 50 students.

3 units, Aut (Roizen, H), Win (Roizen, H), Spr (Staff)

**MS&E 180. Organizations: Theory and Management**

For undergraduates only; preference to MS&E majors. Classical and contemporary organization theory; the behavior of individuals, groups, and organizations. Limited enrollment. Students must attend first session.

4 units, Aut (Eisenhardt, K), Spr (Staff)

**MS&E 181. Issues in Technology and Work for a Postindustrial Economy**

How changes in technology and organization are altering work and lives. Approaches to studying and designing work. How understanding work and work practices can assist engineers in designing better technologies and organizations. Topics include job design, distributed and virtual organizations, the blurring of boundaries between work and family life, computer supported cooperative work, trends in skill requirements and occupational structures, monitoring and surveillance in the workplace, downsizing and its effects on work systems, project work and project-based lifestyles, the growth of contingent employment, telecommuting, electronic commerce, and the changing nature of labor relations. Enrollment limited to 50 students. Preference to MS&E, STS, and CEE seniors, followed by MS&E, STS, and CEE juniors.

3 units, Spr (Barley, S)

**MS&E 185. Global Work**

Issues, challenges, and opportunities facing workers, teams, and organizations working across national boundaries. Topics include geographic distance, time zones, language and cultural differences, technologies to support distant collaboration, team dynamics, and corporate strategy. Limited enrollment.

4 units, Aut (Siino, R), Spr (Siino, R)

**MS&E 189. Social Networks - Theory, Methods, and Applications**

Introduces students to the theoretical, substantive, and methodological foundations of social networks. The social network paradigm seeks to explain how social relations facilitate and constrain an actor's opportunities, behaviors, and cognitions. Topics include: network concepts and principles; network data collection, measurement, and analysis; and applications in management, engineering, and related disciplines.

3 units, Aut (Lifschitz, A)

**MS&E 190. Methods and Models for Policy and Strategy Analysis**

Guest lectures by departmental practitioners. Emphasis is on links among theory, application, and observation. Environmental, national security, and health policy; marketing, new technology, and new business strategy analyses. Comparisons between domains and methods.

3 units, not given this year

**MS&E 193. Technology and National Security**

(Same as MS&E 193W, MS&E 293) The interaction of technology and national security policy from the perspective of history to implications for the new security imperative, homeland defense. Key technologies in nuclear and biological weapons, military platforms, and intelligence gathering. Policy issues from the point of view of U.S. and other nations. The impact of terrorist threat. Guest lecturers include key participants in the development of technology and/or policy. Students seeking to fulfill the WIM requirement should register for 193W.

3 units, Aut (Hecker, S; Perry, W)

**MS&E 193W. Technology and National Security**

(Same as MS&E 193, MS&E 293) The interaction of technology and national security policy from the perspective of history to

implications for the new security imperative, homeland defense. Key technologies in nuclear and biological weapons, military platforms, and intelligence gathering. Policy issues from the point of view of U.S. and other nations. The impact of terrorist threat. Guest lecturers include key participants in the development of technology and/or policy. Students seeking to fulfill the WIM requirement should register for 193W. WIM

3 units, Aut (Hecker, S; Perry, W)

#### **MS&E 197. Ethics and Public Policy**

(Same as PUBLPOL 103B, STS 110) Ethical issues in science- and technology-related public policy conflicts. Focus is on complex, value-laden policy disputes. Topics: the nature of ethics and morality; rationales for liberty, justice, and human rights; and the use and abuse of these concepts in policy disputes. Case studies from biomedicine, environmental affairs, technical professions, communications, and international relations. GER:DB-Hum, EC-EthicReas, WIM

5 units, Win (McGinn, R)

#### **MS&E 198. Applied Modeling of Energy and Environmental Markets**

Economic principles in models of energy and environmental markets. Spreadsheet examples for developing insights and communicating with decision makers. Market-clearing conditions, controlling emissions through fees, diffusion of new technologies, resource depletion, cartel behavior, and model evaluation. Prerequisites: ECON 50 and spreadsheets, or consent of instructor.

1 unit, not given this year

## **GRADUATE COURSES IN MANAGEMENT SCIENCE AND ENGINEERING**

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **MS&E 201. Dynamic Systems**

Goal is to think dynamically in decision making, and recognize and analyze dynamic phenomena in diverse situations. Concepts: formulation and analysis; state-space formulation; solutions of linear dynamic systems, equilibria, dynamic diagrams; eigenvalues and eigenvectors of linear systems, the concept of feedback; nonlinear dynamics, phase plane analysis, linearized analysis, Liapunov functions, catastrophe theory. Examples: grabber-holder dynamics, technology innovation dynamics, creation of new game dynamics in business competition, ecosystem dynamics, social dynamics, and stochastic exchange dynamics. Prerequisite: MATH 51 or equivalent.

3-4 units, Spr (Tse, E)

#### **MS&E 205. Product and Systems Development**

(Same as AA 253) Modern approaches to aerospace design development for life cycle value. Concepts of air and space systems development in a systems context. Stakeholder value issues and requirements through manufacturing and delivery. Processes and practices for functional analysis, concept and architecture development, trades, domain criteria, interfaces, and verification and validation. Reliability, risk, and safety. Value stream analysis, integrated product and process development, key characteristics, and hardware/software integration aimed at information systems. Tools involve quality function deployment, design structure matrices, and decision mechanisms.

3 units, Spr (Weiss, S)

#### **MS&E 206. Art of Mathematical Modeling**

Practicum. Students build mathematical models of real-life, ill-framed problems. Emphasis is on framing the issues, articulating modeling components logically (drawing from student's mathematical background), and analyzing the resulting model. Hands-on modeling. Project work in small groups. Prerequisites: basic analysis, calculus and algebra, and probability theory. Recommended: decision analysis, optimization and dynamic systems.

3-4 units, Spr (Kieffel, H)

#### **MS&E 207. Interactive Management Science**

(Same as MS&E 107) Analytical techniques such as linear and integer programming, Monte Carlo simulation, forecasting, decision analysis, and Markov chains in the environment of the spreadsheet. Probability management. Materials include

spreadsheet add-ins for implementing these and other techniques. Emphasis is on building intuition through interactive modeling, and extending the applicability of this type of analysis through integration with existing business data structures.

3 units, Aut (Savage, S)

#### **MS&E 208A. Practical Training**

MS&E students obtain employment in a relevant industrial or research activity to enhance professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. Master's students are limited to one quarter of practical training. B.S. and Ph.D. students may take each of A, B, and C once.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **MS&E 208B. Practical Training**

MS&E students obtain employment in a relevant industrial or research activity to enhance professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. Master's students are limited to one quarter of practical training. B.S. and Ph.D. students may take each of A, B, and C once.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **MS&E 208C. Practical Training**

MS&E students obtain employment in a relevant industrial or research activity to enhance professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. Master's students are limited to one quarter of practical training. B.S. and Ph.D. students may take each of A, B, and C once.

1 unit, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **MS&E 211. Linear and Nonlinear Optimization**

Optimization theory and modeling. The role of prices, duality, optimality conditions, and algorithms in finding and recognizing solutions. Perspectives: problem formulation, analytical theory, computational methods, and recent applications in engineering, finance, and economics. Theories: finite dimensional derivatives, convexity, optimality, duality, and sensitivity. Methods: simplex and interior-point, gradient, Newton, and barrier. Prerequisite: MATH 51.

3-4 units, Aut (Ye, Y)

#### **MS&E 212. Mathematical Programming and Combinatorial Optimization**

(Same as MS&E 112) Combinatorial and mathematical programming (integer and non-linear) techniques for optimization. Topics: linear program duality and LP solvers; integer programming; combinatorial optimization problems on networks including minimum spanning trees, shortest paths, and network flows; matching and assignment problems; dynamic programming; linear approximations to convex programs; NP-completeness. Hands-on exercises. Prerequisites: CS 106A or X; ENGR 62 or MATH 103.

3 units, Win (Saber, A)

#### **MS&E 220. Probabilistic Analysis**

Concepts and tools for the analysis of problems under uncertainty, focusing on model building and communication: the structuring, processing, and presentation of probabilistic information. Examples from legal, social, medical, and physical problems. Spreadsheets illustrate and solve problems as a complement to analytical closed-form solutions. Topics: axioms of probability, probability trees, random variables, distributions, conditioning, expectation, change of variables, and limit theorems. Prerequisite: MATH 51. Recommended: knowledge of spreadsheets.

3-4 units, Aut (Chiu, S)

#### **MS&E 221. Stochastic Modeling**

Focus is on time-dependent random phenomena. Topics: discrete and continuous time Markov chains, renewal processes, queuing

theory, and applications. Emphasis is on building a framework to formulate and analyze probabilistic systems. Prerequisite: 220 or consent of instructor.

3 units, Win (Johari, R)

### MS&E 223. Simulation

Discrete-event systems, generation of uniform and non-uniform random numbers, Monte Carlo methods, programming techniques for simulation, statistical analysis of simulation output, efficiency-improvement techniques, decision making using simulation, applications to systems in computer science, engineering, finance, and operations research. Prerequisites: working knowledge of a programming language such as C, C++, Java, or FORTRAN; probability; and statistical methods.

3 units, Spr (Haas, P)

### MS&E 233. Networked Markets

An introduction to economic analysis for modern online services and systems. Topics include: Examples of networked markets. Online advertising. Recommendation and reputation systems. Pricing digital media. Network effects and network externalities. Social learning and herd behavior. Markets and information. Prerequisites: Math 51 and probability at the level of MS&E 220 or equivalent. No prior economics background will be assumed; requisite concepts will be introduced as needed.

3 units, Spr (Johari, R)

### MS&E 234. Organization Change and Information Systems

(Same as MS&E 134) Leading organizational change and Information Systems. Case method discussions and lectures. Themes include: real-time enterprise; reengineering; organization transformation, cross-functional teams, IT development, and leading IT. Course includes a group project that is defined and approved during the first two weeks of class. Limited enrollment. Prerequisites: CS 106A, 180, or equivalents.

3 units, Win (Tabrizi, B)

### MS&E 236. Game Theory with Engineering Applications

Strategic interactions among multiple decision makers emphasizing applications to engineering systems. Topics: efficiency and fairness; collective decision making and cooperative games; static and dynamic noncooperative games; and complete and incomplete information models. Competition: Bertrand, Cournot, and Stackelberg models. Mechanism design: auctions, contracts. Examples from engineering problems. Prerequisites: MATH 51 and exposure to probability such as 120 or EE 178. Recommended: 211, concurrent enrollment in 241 or ECON 202.

3 units, Win (Erhun Oguz, F), alternate years, not given next year

### MS&E 236H. Game Theory with Engineering Applications

Advanced and mathematically more rigorous version of MS&E 236. Strategic interactions among multiple decision makers emphasizing applications to engineering systems. Topics: efficiency and fairness; collective decision making and cooperative games; static and dynamic noncooperative games; and complete and incomplete information models. Competition: efficient markets; Bertrand, Cournot, and Stackelberg models. Mechanism design: auctions, contracts. Examples from engineering problems. Prerequisites: mathematical maturity; MATH 51; probability at the level of 220, STATS 116, or equivalent. Recommended: 211, concurrent enrollment in 241 or ECON 202.

3 units, alternate years, not given this year

### MS&E 237. The Social Data Revolution: Data Mining and Electronic Business

Hands-on exploration of current and emergent data sources and their impact on individuals, business and society: recommendation engines, reputation systems, social network analysis, and engagement metrics. Guest speakers, homework assignments and group projects (e.g., Twitter and Facebook apps) combine data strategy, machine learning, modern and traditional marketing, behavioral economics, and incentive design. Cases include Amazon.com, BestBuy, MySpace, Lufthansa, and startups. Prerequisites: intellectual curiosity, entrepreneurial spirit, some programming experience (details at weigend.com/teaching), and willingness to implement in the real world.

3 units, not given this year

### MS&E 238. Leading Trends in Information Technology

Focuses on new trends and disruptive technologies in IT. Emphasis

on the way technologies create a competitive edge and generate business value. Broad range of views presented by guest speakers, including top level executives of technology companies, and IT executives (e.g. CIOs) of Fortune 1000 companies. Special emphasis in technologies such as Virtualization, Cloud Computing, Security, Mobility and Unified Communications.

3 units, Sum (Staff)

### MS&E 239. Computational Advertising

Computational, economic, and optimization issues in online advertising, in contexts including web search, social networks, web surfing, and online multimedia. Overview of scientific and engineering issues arising in building online advertising platforms for Internet advertising formats, as well as ad pricing, ad auctions, and ad optimization. Research frontiers of this young discipline. Limited enrollment. Prerequisites: elementary probability and linear algebra.

3 units, Aut (Broder, A; Josifovski, V)

### MS&E 240. Accounting for Managers and Entrepreneurs

(Same as MS&E 140) Non-majors and minors who have taken or are taking elementary accounting should not enroll. Introduction to accounting concepts and the operating characteristics of accounting systems. The principles of financial and cost accounting, design of accounting systems, techniques of analysis, and cost control. Interpretation and use of accounting information for decision making. Designed for the user of accounting information and not as an introduction to a professional accounting career.

3-4 units, Aut (Stanton, F), Win (Stanton, F), Sum (Staff)

### MS&E 241. Economic Analysis

Principal methods of economic analysis of the production activities of firms, including production technologies, cost and profit, and perfect and imperfect competition; individual choice, including preferences and demand; and the market-based system, including price formation, efficiency, and welfare. Practical applications of the methods presented. See 341 for continuation of 241. Recommended: 211, ECON 50.

3-4 units, Win (Sweeney, J)

### MS&E 242. Investment Science

Theory and application of modern quantitative investment analysis from an engineering perspective. How investment concepts are used to evaluate and manage opportunities, portfolios, and investment products including stocks, bonds, mortgages, and annuities. Topics: deterministic cash flows (term structure of interest rates, bond portfolio immunization, project optimization); mean-variance theory (Markowitz model, capital asset pricing); and arbitrage pricing theory. Group project. Prerequisites: 120, MATH 51, or equivalents. Recommended: 111, 140, knowledge of spreadsheets. Limited enrollment.

3 units, Aut (Infanger, G; Luenberger, D)

### MS&E 242H. Investment Science Honors

Concepts of modern quantitative finance and investments. Basic concepts under certainty including arbitrage, term structure of interest rates, and bond portfolio immunization. A situation of uncertainty in one period. Topics: arbitrage; theorems of asset pricing; pricing measures; derivative securities; applications and estimating of financial risk measures; mean-variance portfolio analysis; and equilibrium and the capital asset pricing model. Group projects involving financial market data. Enrollment limited. Prerequisites: basic probability, statistics, and economics such as MS&E 120, 121, MATH 51, or equivalents. No prior knowledge of finance required.

3 units, Aut (Giesecke, K)

### MS&E 242S. Investment Science

Emphasis is on a cash flow approach. Topics include deterministic cash flow analysis (time value of money, present value, internal rate of return, taxes, inflation), fixed income securities, duration and bond portfolio immunization, term structure of interest rates (spot rates, discount factors, forward rates), Fisher-Weill duration and immunization, capital budgeting, dynamic optimization problems, investments under uncertainty, mean-variance portfolio theory, capital asset pricing, and basic options theory. Goal is to create a link between engineering analysis and business decision making.

3 units, Sum (Staff)

**MS&E 243. Energy and Environmental Policy Analysis**

Concepts, methods, and applications. Energy/environmental policy issues such as automobile fuel economy regulation, global climate change, research and development policy, and environmental benefit assessment. Group project. Prerequisite: MS&E 241 or ECON 50, 51.

3 units, Spr (Sweeney, J)

**MS&E 245G. Finance for Non-MBAs**

(Same as ECON 135) For graduate students and advanced undergraduates. The foundations of finance; applications in corporate finance and investment management. Financial decisions made by corporate managers and investors with focus on process valuation. Topics include criteria for investment decisions, valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the valuation of derivative securities. Corporate financial instruments including debt, equity, and convertible securities. Equivalent to core MBA finance course, FINANCE 220. Prerequisites: ECON 51, or ENGR 60, or equivalent; ability to use spreadsheets, and basic probability and statistics concepts including random variables, expected value, variance, covariance, and simple estimation and regression.

3-5 units, Aut (Perez-Gonzalez, F), Win (Admati, A)

**MS&E 247G. International Financial Management**

With a daily volume of more than \$1.8tr the foreign exchange market is by far the largest financial market in the world. It is also one of the most important ones as it is impossible to avoid exchange rate risk in the global economy. We will examine various aspects of the foreign exchange market. First, we will examine the role of governments and central banks. We will then focus on the markets for spot exchange, currency forwards, options, swaps, international bonds, and international equities. For each of these markets, the valuation of instruments traded in these markets and, through cases, the application of these instruments to managing exposure to exchange rates, financing in international capital markets, and international capital budgeting. It is strongly recommended that students take Finance for Non-MBAs (FINANCE 221/MS&E 245G/ECON 135) as a pre- or co-requisite to this course. MS&E 242/242S/242H or MATH 238/STATS 250 are also acceptable.

4 units, not given this year

**MS&E 247S. International Investments**

International financial markets, their comparative behavior and interrelations. Focus is on assets traded in liquid markets: currencies, equities, bonds, swaps, and derivatives. Topics: institutional arrangements, taxation and regulation, international arbitrage and parity conditions, valuation of target firms for cross-border acquisitions, direct foreign investment, international diversification and portfolio management, derivative instruments and dynamic investment strategies, international performance analysis, international capital flows and financial crises, and topics of current relevance and importance.

3 units, Sum (Staff)

**MS&E 248. Economics of Natural Resources**

Intertemporal economic analysis of natural resource use, particularly energy, and including air, water, and other depletable mineral and biological resources. Emphasis is on an integrating theory for depletable and renewable resources. Stock-flow relationships; optimal choices over time; short- and long-run equilibrium conditions; depletion/extinction conditions; market failure mechanisms (common-property, public goods, discount rate distortions, rule-of-capture); policy options. Prerequisite: 241 or ECON 51.

3-4 units, Aut (Giraudet, L)

**MS&E 249. Economic Growth and Development**

What generates economic growth. Emphasis is on theory accompanied by intuition, illustrated with country cases. Topics: the equation of motion of an economy; optimal growth theory; calculus of variations and optimal control approaches; deriving the Euler and Pontryaguine equations from economic reasoning. Applications: former planned economies in Russia and E. Europe; the present global crisis: causes and consequences; a comparative study of India and China. The links between economic growth and civilization; the causes of the rise and decline of civilizations; lessons for the future. Intended for graduate students. Prerequisite: multivariable calculus.

3 units, Sum (Staff)

**MS&E 250A. Engineering Risk Analysis**

(Same as PUBLPOL 355) The techniques of analysis of engineering systems for risk management decisions involving trade-offs (technical, human, environmental aspects). Elements of decision analysis; probabilistic risk analysis (fault trees, event trees, systems dynamics); economic analysis of failure consequences (human safety and long-term economic discounting); and case studies such as space systems, nuclear power plants, and medical systems. Public and private sectors. Prerequisites: probability, decision analysis, stochastic processes, and convex optimization.

3 units, NEXTYEAR

**MS&E 250B. Project Course in Engineering Risk Analysis**

Students, individually or in groups, choose, define, formulate, and resolve a real risk management problem, preferably from a local firm or institution. Oral presentation and report required. Scope of the project is adapted to the number of students involved. Three phases: risk assessment, communication, and management. Emphasis is on the use of probability for the treatment of uncertainties and sensitivity to problem boundaries. Limited enrollment. Prerequisites: MS&E 250A and consent of instructor.

3 units, NEXTYEAR

**MS&E 251. Stochastic Decision Models**

Efficient formulation and computational solution of sequential decision problems under uncertainty. Markov decision chains and stochastic programming. Maximum expected present value and rate of return. Optimality of simple policies: myopic, linear, index, acceptance limit, and (s,S). Optimal stationary and periodic infinite-horizon policies. Applications to investment, options, overbooking, inventory, production, purchasing, selling, quality, repair, sequencing, queues, capacity, transportation. MATLAB is used. Prerequisites: probability, linear programming.

3 units, Spr (Van Roy, B)

**MS&E 252. Decision Analysis I: Foundations of Decision Analysis**

Coherent approach to decision making, using the metaphor of developing a structured conversation having desirable properties, and producing actionable thought that leads to clarity of action. Socratic instruction; computational problem sessions. Emphasis is on creation of distinctions, representation of uncertainty by probability, development of alternatives, specification of preference, and the role of these elements in creating a normative approach to decisions. Information gathering opportunities in terms of a value measure. Relevance and decision diagrams to represent inference and decision. Principles are applied to decisions in business, technology, law, and medicine. See 352 for continuation.

3-4 units, Aut (Howard, R)

**MS&E 254. The Ethical Analyst**

The ethical responsibility for consequences of professional analysts who use technical knowledge in support of any individual, organization, or government. The means to form ethical judgments; questioning the desirability of physical coercion and deception as a means to reach any end. Human action and relations in society in the light of previous thought, and research on the desired form of social interactions. Attitudes toward ethical dilemmas through an explicit personal code.

1-3 units, Spr (Staff)

**MS&E 255. Decision Systems I**

(Formerly MS&E 451.) Professional tools and techniques for designing decision systems that help when facing decisions such as buying a car, bidding on the Internet, hiring NFL players, making charitable donations, or choosing medical treatment. Demonstrations; small project. Topics: automatic decision diagram formulation, decision-class analysis, and dynamic sensitivity analysis. No programming required. Recommended: 252 or equivalent.

2-3 units, not given this year

**MS&E 256. Technology Assessment and Regulation of Medical Devices**

(Formerly 475.) Regulatory approval and reimbursement for new medical technologies as a key component of product commercialization. The regulatory and payer environment in the

U.S. and abroad, and common methods of health technology assessment. Framework to identify factors relevant to adoption of new medical devices, and the management of those factors in the design and development phases. Case studies; guest speakers from government (FDA) and industry.

1-3 units, Spr (Pietzsch, J)

#### **MS&E 260. Introduction to Operations Management**

Operations management focuses on the effective planning, scheduling, and control of manufacturing and service entities. This course introduces students to a broad range of key issues in operations management. Topics include determination of optimal facility location, production planning, optimal timing and sizing of capacity expansion, and inventory control. Prerequisites: basic probability and optimization.

3-4 units, Aut (Erhun Oguz, F), Sum (Staff)

#### **MS&E 261. Inventory Control and Production Systems**

Topics in the planning and control of manufacturing systems. The functions of inventory, determination of order quantities and safety stocks, alternative inventory replenishment systems, item forecasting, production-inventory systems, materials requirements planning (MRP), just-in-time systems, master and operations scheduling, supply chain management, and service operations. Limited enrollment. Prerequisite: 120, or STATS 116, or equivalent.

3 units, Win (Hausman, W)

#### **MS&E 262. Supply Chain Management**

Definition of a supply chain; coordination difficulties; pitfalls and opportunities in supply chain management; inventory/service tradeoffs; performance measurement and incentives. Global supply chain management; mass customization; supplier management. Design and redesign of products and processes for supply chain management; tools for analysis; industrial applications; current industry initiatives. Enrollment limited to 50. Prerequisite: 260 or 261.

3 units, Spr (Hausman, W)

#### **MS&E 264. Sustainable Product Development and Manufacturing**

Strategies and techniques for development of sustainable products and manufacturing processes. Topics: strategic decisions in new product development when environmental and resource externalities are accounted for; effect of regulatory requirements on ability of a firm to achieve its business objectives; contributions of sustainable products/processes to the firm's competitive advantage and operational efficiency and to enabling entrepreneurial opportunities; industrial ecology and life cycle analysis techniques in integrating traditional product development requirements with those of the environment and society. Maybe repeatable for credit once.

3-4 units, Aut (Rafinejad, D)

#### **MS&E 265. Supply Chain Logistics**

Student teams redesign the manufacturing and distribution system of a medium-sized manufacturer. Focus is on the transportation system, inventory policies for a regional warehouse, design of a national distribution system, improvements of work flow, and layout of the manufacturing plant. The redesign is at a detailed operational level consistent with a strategy of integrating the functions of manufacturing and distribution. Analytical and game software is used. Knowledge of inventory theory, linear/integer programming, economic analysis, and applied probability is required. Emphasis is on group learning. Limited enrollment. Prerequisites: senior or graduate standing, 111, 260, ECON 50, or consent of instructor.

4 units, alternate years, not given this year

#### **MS&E 266. Management of New Product Development**

Techniques of managing or leading the process of new product development that have been found effective. Emphasis is placed on how much control is desirable and how that control can be exercised in a setting where creativity has traditionally played a larger role than discipline. Topics: design for manufacturability, assessing the market, imposing discipline on the new product development process, selecting the appropriate portfolio of new product development projects, disruptive technology, product development at internet speed, uncertainty in product development, role of experimentation in new product development, creating an

effective development organization, and developing products to hit cost targets.

3 units, Win (Rafinejad, D)

#### **MS&E 268. Operations Strategy**

The development and implementation of the operations functional strategy. The integration of operations strategy with business and corporate strategies of a manufacturing-based firm. Topics: types and characteristics of manufacturing technologies, quality management, capacity planning and facilities choice, organization and control of operations, and operations' role in corporate strategy. Prerequisites: 260 or 261, or equivalent experience.

3 units, Spr (Staff)

#### **MS&E 270. Strategy in Technology-Based Companies**

For graduate students only. Introduction to the basic concepts of strategy, with emphasis on high technology firms. Topics: competitive positioning, resource-based perspectives, co-opetition and standards setting, and complexity/evolutionary perspectives. Limited enrollment.

3-4 units, Aut (Eisenhardt, K)

#### **MS&E 271. Global Entrepreneurial Marketing**

Skills needed to market new technology-based products to customers around the world. Case method discussions. Cases include startups and global high tech firms. Course themes: marketing toolkit, targeting markets and customers, product marketing and management, partners and distribution, sales and negotiation, and outbound marketing. Team-based take-home final exam. Limited enrollment.

3-4 units, Win (Kosnik, T; Novitsky, D; Ramfelt, L; Smith, L),  
Spr (Kosnik, T; Novitsky, D; Ramfelt, L; Smith, L)

#### **MS&E 273. Technology Venture Formation**

Open to graduate students interested in high-technology entrepreneurship. Examines key components of starting a venture-scale high-tech business: Opportunity Assessment, Market Sizing, Go to Market and Distribution Strategy, R&D and Ops Plans, Venture Capital, Legal considerations and Team building. Teaching team includes serial entrepreneurs and venture capitalists. Student teams write and present a business plan to top tier venture capitalists. In addition to class attendance, teams must interact with mentors and teaching team at least once per week for 60 minutes. Enrollment limited. Recommended: 270, 271, or equivalent.

3-4 units, Aut (Lyons, M; MacLean, A)

#### **MS&E 274. Dynamic Entrepreneurial Strategy**

Primarily for graduate students. How entrepreneurial strategy focuses on creating structural change or responding to change induced externally. Grabber-holder dynamics as an analytical framework for developing entrepreneurial strategy to increase success in creating and shaping the diffusion of new technology or product innovation dynamics. Topics: First mover versus follower advantage in an emerging market; latecomer advantage and strategy in a mature market; strategy to break through stagnation; and strategy to turn danger into opportunity. Modeling, case studies, and term project.

3 units, Win (Tse, E)

#### **MS&E 276. Entrepreneurial Management and Finance**

For graduate students only with a preference for engineering and science majors. Emphasis on managing high-growth ventures, especially those based on technology products and services. Students develop a set of skills and approaches to becoming effective entrepreneurial managers. Topics include turning opportunities into reality, raising capital and financial management, venture operations and organizational administration, handling growth and adversity. Limited enrollment. Prerequisites: 240 and 242, or equivalents.

3 units, Spr (Byers, T)

#### **MS&E 277. Creativity and Innovation**

Factors that promote and inhibit creativity of individuals, teams, and organizations. Creativity tools, assessment metrics, and exercises; workshops, field trips, and case studies. Each student completes an individual creativity portfolio and participates in a long-term team project. Enrollment limited to 32. See <http://creativity.stanford.edu>.

4 units, Spr (Seelig, T)

**MS&E 280. Organizational Behavior: Evidence in Action**

Organization theory; concepts and functions of management; behavior of the individual, work group, and organization. Emphasis is on cases and related discussion. Enrollment limited; priority to MS&E students.

3-4 units, Win (Sutton, R)

**MS&E 283. Scaling up Excellence in Organizations**

A problem for every manager is to make 'good' behaviors spread quickly and to shrink 'undesirable' behaviors quickly. This course provides you practical frameworks to accomplish these managerial goals. We will examine issues such as scaling Idea generation, scaling knowledge sharing, scaling the adoption of ideas across firms, scaling change in global firms. We will be using a newly written series of cases for this course and also draw on guest speakers.

4 units, Win (Rao, H; Sutton, R)

**MS&E 289. Designing for Sustainable Abundance**

Hands-on, team-based, multidisciplinary class, uses radically human-centered approach to tackle sustainability challenges in areas like food and transportation. Teams develop solutions that improve environmental and economic sustainability as well as physical and emotional well-being. Students benefit from close interaction with the teaching team, support from project sponsors, and the varied perspectives of numerous guest speakers. Application required. Limited enrollment. Design Institute class; see <http://dschool.stanford.edu>.

3-4 units, Win (Dunn, D; Waisberg, N)

**MS&E 292. Health Policy Modeling**

Primarily for master's students; also open to undergraduates and doctoral students. The application of mathematical, statistical, economic, and systems models to problems in health policy. Areas include: disease screening, prevention, and treatment; assessment of new technologies; bioterrorism response; and drug control policies.

3 units, Win (Brandeau, M)

**MS&E 293. Technology and National Security**

(Same as MS&E 193, MS&E 193W) The interaction of technology and national security policy from the perspective of history to implications for the new security imperative, homeland defense. Key technologies in nuclear and biological weapons, military platforms, and intelligence gathering. Policy issues from the point of view of U.S. and other nations. The impact of terrorist threat. Guest lecturers include key participants in the development of technology and/or policy. Students seeking to fulfill the WIM requirement should register for 193W.

3 units, Aut (Hecker, S; Perry, W)

**MS&E 294. Climate Policy Analysis**

Design and application of formal analytical methods in climate policy development. Issues include instrument design, technology development, resource management, multiparty negotiation, and dealing with complexity and uncertainty. Links among art, theory, and practice. Emphasis is on integrated use of modeling tools from diverse methodologies and requirements for policy making application. Recommended: background in economics, optimization, and decision analysis.

3 units, Win (Weyant, J)

**MS&E 295. Energy Policy Analysis**

Design and application of formal analytical methods for policy and technology assessments of energy efficiency and renewable energy options. Emphasis is on integrated use of modeling tools from diverse methodologies and requirements for policy and corporate strategy development. Recommended: background in economics, optimization, and decision analysis.

3 units, alternate years, not given this year

**MS&E 299. Voluntary Social Systems**

Ethical theory, feasibility, and desirability of a social order in which coercion by individuals and government is minimized and people pursue ends on a voluntary basis. Topics: efficacy and ethics; use rights for property; contracts and torts; spontaneous order and free markets; crime and punishment based on restitution; guardian-ward theory for dealing with incompetents; the effects of state action-hypothesis of reverse results; applications to help the needy, armed intervention, victimless crimes, and environmental protection; transition strategies to a voluntary society.

1-3 units, Win (Howard, R)

**MS&E 300. Ph.D. Qualifying Tutorial or Paper**

Restricted to Ph.D. students assigned tutorials as part of the MS&E Ph.D. qualifying process. Enrollment optional.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**MS&E 301. Dissertation Research**

Prerequisite: doctoral candidacy.

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**MS&E 310. Linear Programming**

Formulation of standard linear programming models. Theory of polyhedral convex sets, linear inequalities, alternative theorems, and duality. Variants of the simplex method and the state of art interior-point algorithms. Sensitivity analyses, economic interpretations, and primal-dual methods. Relaxations of harder optimization problems and recent convex conic linear programs. Applications include game equilibrium facility location. Prerequisite: MATH 113 or consent of instructor.

3 units, Aut (Ye, Y)

**MS&E 311. Optimization**

Applications, theories, and algorithms for finite-dimensional linear and nonlinear optimization problems with continuous variables. Elements of convex analysis, first- and second-order optimality conditions, sensitivity and duality. Algorithms for unconstrained optimization, and linearly and nonlinearly constrained problems. Modern applications in communication, game theory, auction, and economics. Prerequisites: MATH 113, 115, or equivalent.

3 units, Win (Ye, Y)

**MS&E 312. Advanced Methods in Numerical Optimization**

(Same as CME 334) Topics include interior-point methods, relaxation methods for nonlinear discrete optimization, sequential quadratic programming methods, optimal control and decomposition methods. Topic chosen in first class; different topics for individuals or groups possible. Individual or team projects. May be repeated for credit.

3 units, Aut (Murray, W)

**MS&E 313. Vector Space Optimization**

Optimization theory from the unified framework of vector space theory: treating together problems of mathematical programming, calculus of variations, optimal control, estimation, and other optimization problems. Emphasis is on geometric interpretation. Duality theory. Topics: vector spaces including function spaces; Hilbert space and the projection theorem; dual spaces and the separating hyperplane theorem; linear operators and adjoints; optimization of functionals, including theory of necessary conditions in general spaces, and convex optimization theory; constrained optimization including Fenchel duality theory. Prerequisite: MATH 115.

3 units, alternate years, not given this year

**MS&E 314. Linear and Conic Optimization with Applications**

(Same as CME 336) Linear, semidefinite, conic, and convex nonlinear optimization problems as generalizations of classical linear programming. Algorithms include the interior-point, barrier function, and cutting plane methods. Related convex analysis, including the separating hyperplane theorem, Farkas lemma, dual cones, optimality conditions, and conic inequalities. Complexity and/or computation efficiency analysis. Applications to combinatorial optimization, sensor network localization, support vector machine, and graph realization. Prerequisite: MS&E 211 or equivalent.

3 units, alternate years, not given this year

**MS&E 315. Numerical Optimization**

(Same as CME 304) Solution of nonlinear equations; unconstrained optimization; linear programming; quadratic programming; global optimization; general linearly and nonlinearly constrained optimization. Theory and algorithms to solve these problems. Prerequisite: background in analysis and numerical linear algebra.

3 units, Win (Murray, W)

**MS&E 316. Discrete Mathematics and Algorithms**

(Same as CME 305) Topics: enumeration such as Cayley's theorem and Prufer codes, SDR, flows and cuts (deterministic and randomized algorithms), probabilistic methods and random graphs, asymptotics (NP-hardness and approximation algorithms). Topics

illustrated with EE, CS, and bioinformatics applications. Prerequisites: MATH 51 or 103 or equivalents.

3 units, Win (Saber, A)

### MS&E 317. Algorithms for Modern Data Models

(Same as CS 263) We traditionally think of algorithms as running on data available in a single location, typically main memory. In many modern applications including web analytics, search and data mining, computational biology, finance, and scientific computing, the data is often too large to reside in a single location, is arriving incrementally over time, is noisy/uncertain, or all of the above. Paradigms such as map-reduce, streaming, sketching, Distributed Hash Tables, Bulk Synchronous Processing, and random walks have proved useful for these applications. This course will provide an introduction to the design and analysis of algorithms for these modern data models. Prerequisite: Algorithms at the level of CS 261.

3 units, Aut (Goel, A)

### MS&E 318. Large-Scale Numerical Optimization

(Same as CME 338) The main algorithms and software for constrained optimization emphasizing the sparse-matrix methods needed for their implementation. Iterative methods for linear equations and least squares. The simplex method. Basic factorization and updates. Interior methods. The reduced-gradient method, augmented Lagrangian methods, and SQP methods. Prerequisites: Basic numerical linear algebra, including LU, QR, and SVD factorizations, and an interest in MATLAB, sparse-matrix methods, and gradient-based algorithms for constrained optimization. Recommended: MS&E 310, 311, 312, 314, or 315; CME 108, 200, 302, 304, 334, or 335.

3 units, Spr (Saunders, M)

### MS&E 319. Approximation Algorithms

Combinatorial and mathematical programming techniques to derive approximation algorithms for NP-hard optimization problems. Possible topics include: greedy algorithms for vertex/set cover; rounding LP relaxations of integer programs; primal-dual algorithms; semidefinite relaxations. May be repeated for credit. Prerequisites: 112 or CS 161.

3 units, alternate years, not given this year

### MS&E 321. Stochastic Systems

Topics in stochastic processes, emphasizing applications. Markov chains in discrete and continuous time; Markov processes in general state space; Lyapunov functions; regenerative process theory; renewal theory; martingales, Brownian motion, and diffusion processes. Application to queueing theory, storage theory, reliability, and finance. Prerequisites: 221 or STATS 217; MATH 113, 115. (Glynn)

3 units, Win (Glynn, P)

### MS&E 322. Stochastic Calculus and Control

Ito integral, existence and uniqueness of solutions of stochastic differential equations (SDEs), diffusion approximations, numerical solutions of SDEs, controlled diffusions and the Hamilton-Jacobi-Bellman equation, and statistical inference of SDEs. Applications to finance and queueing theory. Prerequisites: 221 or STATS 217; MATH 113, 115.

3 units, Win (Glynn, P)

### MS&E 323. Stochastic Simulation

Emphasis is on the theoretical foundations of simulation methodology. Generation of uniform and non-uniform random variables. Discrete-event simulation and generalized semi-Markov processes. Output analysis (autoregressive, regenerative, spectral, and stationary times series methods). Variance reduction techniques (antithetic variables, common random numbers, control variables, discrete-time, conversion, importance sampling). Stochastic optimization (likelihood ratio method, perturbation analysis, stochastic approximation). Simulation in a parallel environment. Prerequisite: MS&E 221 or equivalent.

3 units, not given this year

### MS&E 325. Topics in Stochastic Optimization

Algorithms for optimization problems with inputs from a known probability distribution or a known class of probability distributions. Topics: Markov decision processes; optimization with sparse priors; multi-armed bandit problems and the Gittins' index; regret bounds for multi-armed bandit problems; stochastic knapsack and the adaptivity gap; budgeted learning; adversarial

queueing theory; stochastic scheduling and routing; stochastic inventory problems; multi-stage and multi-objective stochastic optimization. Prerequisites: MS&E 221 or equivalent; and MS&E 212 or CS 261 or equivalent.

3 units, alternate years, not given this year

### MS&E 332. Security and Risk in Computer Networks

Risk management of large scale computing and networking systems with respect to security, data integrity, performance collapse, and service disruption. Qualitative and analytical basis for assessment, modeling, control, and mitigation of network risks. Stochastic risk models. Contact process. Random fields on networks. Virus and worm propagation dynamics and containment. Denial of service attacks. Intruder detection technologies. Distributed network attacks and countermeasures. Disaster recovery networks. Network protection services and resource placement. Autonomic self-defending networks. Economics of risk management. Emphasis is on analytics and quantitative methods.

3 units, not given this year

### MS&E 334. Computation of Equilibria

Topics: Sperner's lemma, fixed point theorems, and existence of Nash and Market equilibria. Alternate convex and linear complementarity program formulations. Combinatorial algorithms. Complexity classes related to fixed points theorems and reductions to equilibrium problems. Similar solutions in cooperative game theory and fair division.

3 units, not given this year

### MS&E 335. Queueing and Scheduling in Processing Networks

Advanced stochastic modeling and control of systems involving queueing and scheduling operations. Stability analysis of queueing systems. Key results on single queues and queueing networks. Controlled queueing systems. Dynamic routing and scheduling in processing networks. Applications to modeling, analysis and performance engineering of computing systems, communication networks, flexible manufacturing, and service systems. Prerequisite: 221 or equivalent.

3 units, Aut (Bambos, N)

### MS&E 336. Topics in Game Theory with Engineering Applications

Seminar. Recent research applying economic methods to engineering problems. Recent topics include: incentives in networked systems; mechanism design in engineered systems; and dynamics and learning in games. Prerequisites: mathematics at the level of MATH 115; game theory at the level of 246 or ECON 203; probability at the level of 220; optimization at the level of 211. May be repeated for credit.

3 units, Spr (Johari, R)

### MS&E 337. Information Networks

(Same as CME 337) Network structure of the Internet and the web. Modeling, scale-free graphs, small-world phenomenon. Algorithmic implications in searching and inter-domain routing; the effect of structure on performance. Game theoretic issues, routing games, and network creation games. Security issues, vulnerability, and robustness. Prerequisite: basic probability and graph theory.

3 units, Spr (Saber, A), alternate years, not given next year

### MS&E 338. Advanced Topics in Information Science and Technology

Advanced material in this area is sometimes taught for the first time as a topics course. Prerequisite: consent of instructor.

3 units, Win (Van Roy, B)

### MS&E 339. Approximate Dynamic Programming

Approximation algorithms for large-scale dynamic programming. Real-time dynamic programming and reinforcement learning algorithms. Generalizations of value iteration, policy iteration, and linear programming approaches. Recent research topics. Prerequisite: 251, 351, CS 221, CS 228, or CS 229.

3 units, not given this year

### MS&E 342. Advanced Investment Science

Topics: forwards and futures contracts, continuous and discrete time models of stock price behavior, geometric Brownian motion, Ito's lemma, basic options theory, Black-Scholes equation, advanced options techniques, models and applications of stochastic interest rate processes, and optimal portfolio growth. Computational issues and general theory. Teams work on

independent projects. Prerequisite: 242.

3 units, Win (Luenberger, D)

#### **MS&E 347. Credit Risk: Modeling and Management**

Credit risk modeling, valuation, and hedging emphasizing underlying economic, probabilistic, and statistical concepts. Point processes and their compensators. Structural, incomplete information and reduced form approaches. Single name products: corporate bonds, equity, equity options, credit and equity default swaps, forwards and swaptions. Multiname modeling: index and tranche swaps and options, collateralized debt obligations. Implementation, calibration and testing of models. Industry and market practice. Data and implementation driven group projects that focus on problems in the financial industry. Prerequisites: stochastic processes at the level of MSE 321, 322 or equivalent, and financial engineering at the level of MSE 342, MATH 180, MATH 240, FINANCE 622 or equivalent

3 units, Spr (Giesecke, K)

#### **MS&E 348. Optimization of Uncertainty and Applications in Finance**

How to make optimal decisions in the presence of uncertainty, solution techniques for large-scale systems resulting from decision problems under uncertainty, and applications in finance. Decision trees, utility, two-stage and multi-stage decision problems, approaches to stochastic programming, model formulation; large-scale systems, Benders and Dantzig-Wolfe decomposition, Monte Carlo sampling and variance reduction techniques, risk management, portfolio optimization, asset-liability management, mortgage finance. Projects involving the practical application of optimization under uncertainty to financial planning.

3 units, Win (Infanger, G)

#### **MS&E 349. Capital Deployment**

Methods for efficiently allocating capital among alternatives, constructing business plans, determining the value of risky projects, and creating alternatives that enhance value. Prerequisites: 242, 342.

3 units, not given this year

#### **MS&E 351. Dynamic Programming and Stochastic Control**

Markov population decision chains in discrete and continuous time. Risk posture. Present value and Cesaro overtaking optimality. Optimal stopping. Successive approximation, policy improvement, and linear programming methods. Team decisions and stochastic programs; quadratic costs and certainty equivalents. Maximum principle. Controlled diffusions. Examples from inventory, overbooking, options, investment, queues, reliability, quality, capacity, transportation. MATLAB. Prerequisites: MATH 113, 115; Markov chains; linear programming.

3 units, NEXTYEAR

#### **MS&E 352. Decision Analysis II: Professional Decision Analysis**

How to organize the decision conversation, the role of the decision analysis cycle and the model sequence, assessing the quality of decisions, framing decisions, the decision hierarchy, strategy tables for alternative development, creating spare and effective decision diagrams, biases in assessment, knowledge maps, uncertainty about probability. Sensitivity analysis, approximations, value of revelation, joint information, options, flexibility, bidding, assessing and using corporate risk attitude, risk sharing and scaling, and decisions involving health and safety. See 353 for continuation. Prerequisite: 252.

3-4 units, Win (Howard, R)

#### **MS&E 353. Decision Analysis III: Frontiers of Decision Analysis**

The concept of decision composite; probabilistic insurance and other challenges to the normative approach; the relationship of decision analysis to classical inference and data analysis procedures; the likelihood and exchangeability principles; inference, decision, and experimentation using conjugate distributions; developing a risk attitude based on general properties; alternative decision aiding practices such as analytic hierarchy and fuzzy approaches. Student presentations on current research. Goal is to prepare doctoral students for research. Prerequisite: 352.

3 units, Spr (Staff)

#### **MS&E 355. Influence Diagrams and Probabilistic Networks**

Network representations for reasoning under uncertainty: influence diagrams, belief networks, and Markov networks. Structuring and assessment of decision problems under uncertainty. Learning from evidence. Conditional independence and requisite information. Node reductions. Belief propagation and revision. Simulation. Linear-quadratic-Gaussian decision models and Kalman filters. Dynamic processes. Bayesian meta-analysis. Prerequisites: 220, 252, or equivalents, or consent of instructor.

3 units, Win (Shachter, R), alternate years, not given next year

#### **MS&E 362. Advanced Models in Production and Operations**

The design and operation of production-inventory systems. Topics include production scheduling, capacity planning, sequencing, assembly-line balancing, dynamic scheduling, and multigoal optimizations. Readings primarily from journal articles. Prerequisite: 260.

3 units, alternate years, not given this year

#### **MS&E 364. Multi-echelon Inventory Models**

Theoretical treatment of control problems arising in inventory management, production, and distribution systems. Inventory control for single and multi-location systems. Emphasis is on operating characteristics, performance measures, and optimal operating and control policies. Dynamic programming and applications in inventory control. Prerequisite: STATS 217 or equivalent, linear programming.

3 units, alternate years, not given this year

#### **MS&E 365. Advanced Models in Operations Management**

Primarily for doctoral students. Content varies. Topics based on recent literature and working papers. May be repeated for credit. Prerequisite: MS&E 246.

3 units, Spr (Erhun Oguz, F)

#### **MS&E 371. Innovation and Strategic Change**

Doctoral research seminar, limited to Ph.D. students. Current research on innovation strategy. Topics: scientific discovery, innovation search, organizational learning, evolutionary approaches, and incremental and radical change. Topics change yearly. Recommended: course in statistics or research methods.

2-3 units, Win (Katila, R)

#### **MS&E 372. Entrepreneurship Doctoral Research Seminar**

Classic and current research on entrepreneurship. Limited enrollment, restricted to PhD students. Prerequisites: SOC 363 or equivalent, and permission of instructor.

1-3 units, alternate years, not given this year

#### **MS&E 374. Dynamic Corporate Strategy**

Restricted to Ph.D. students. Research on the creation and shaping of disruptive industry dynamics and how companies can formulate and implement strategies to excel in such changing environments. Dynamic system model approach; case studies. Prerequisites: 201 or equivalent, 274.

3 units, alternate years, not given this year

#### **MS&E 375. Research on Entrepreneurship**

Restricted to Ph.D. students. Organization theory, economics, and strategy perspectives. Limited enrollment. Prerequisites: SOC 360 or equivalent, and consent of instructor.

3 units, Aut (Eisenhardt, K)

#### **MS&E 376. Strategy Doctoral Research Seminar**

Classic and current research on business and corporate strategy. Limited enrollment, restricted to PhD students. Prerequisites: SOC 363 or equivalent, and permission of instructor.

3 units, not given this year

#### **MS&E 380. Doctoral Research Seminar in Organizations**

Limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.

3 units, Aut (Sutton, R)

#### **MS&E 381. Doctoral Research Seminar in Work, Technology, and Organization**

Enrollment limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.

2-3 units, Win (Barley, S)

#### **MS&E 383. Doctoral Seminar on Ethnographic Research**

For graduate students; upper-level undergraduates with consent of

instructor. Ethnosemantic interviewing and participant observation. Techniques for taking, managing, and analyzing field notes and other qualitative data. 15 hours per week outside class collecting and analyzing own data. Methods texts and ethnographies offer examples of how to analyze and communicate ethnographic data. Prerequisite: consent of instructor. (Barley)

3 units, not given this year

#### **MS&E 384. Groups and Teams**

Research on groups and teams in organizations from the perspective of organizational behavior and social psychology. Topics include group effectiveness, norms, group composition, diversity, conflict, group dynamics, temporal issues in groups, geographically distributed teams, and intergroup relations.

3 units, not given this year

#### **MS&E 389. Seminar on Organizational Theory**

(Same as EDUC 375A, SOC 363A) The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.

5 units, Aut (Powell, W)

#### **MS&E 390. Doctoral Research Seminar in Health Systems Modeling**

Restricted to PhD students, or by consent of instructor. Doctoral research seminar covering current topics in health policy, health systems modeling, and health innovation. May be repeated for credit.

1-3 units, Aut (Brandeau, M), Win (Brandeau, M), Spr (Brandeau, M)

#### **MS&E 408. Directed Reading and Research**

Directed study and research on a subject of mutual interest to student and faculty member. Prerequisite: faculty sponsor. (Staff)

1-15 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

#### **MS&E 444. Investment Practice**

Theory of real options, soft derivatives, and related ideas. Problems from financial engineering and risk management. Examples from industry. Small group projects formulate and design solutions to actual industry problems. Enrollment limited to 30.

3-4 units, Spr (Giesecke, K)

#### **MS&E 445. Projects in Wealth Management**

Recent theory and standard practice in portfolio design for institutions, individuals, and funds. Student projects and case studies derived from the financial industry.

3-4 units, Spr (Woehrmann, P)

#### **MS&E 446. Policy and Economics Research Roundtable (PERR)**

Research in progress or contemplated in policy and economics areas. Emphasis depends on research interests of participants, but is likely to include energy, environment, transportation, or technology policy and analysis. May be repeated for credit.

1 unit, Aut (Sweeney, J), Win (Sweeney, J), Spr (Sweeney, J)

#### **MS&E 450. Lessons in Decision Making**

Entrepreneurs, senior management consultants, and executives from Fortune 500 companies share real-world stories and insights from their experience in decision making.

1 unit, Spr (Staff)

#### **MS&E 452. Decision Analysis Projects: Helping Real Leaders Make Real Decisions**

A virtual consulting firm directed by professional decision analysts who offer advice and guidance as student teams help local organizations make a current business strategy or public policy decision. Projects for businesses, governments, or other institutions typically include start-up venture funding, R&D portfolio planning, new product or market entry, acquisition or partnering, cost reduction, program design, or regulatory policy decisions. Emphasis is on developing clarity of action and delivering insights to clients. Satisfies MS&E project course requirement. Prerequisite: 252. Recommended: 352.

3 units, Spr (Robinson, B)

#### **MS&E 453. Decision Analysis Applications: Business Strategy and Public Policy**

How decision analysis is used to make decisions in organizations. Who applies these methods to what decisions, and when, where, and why. Case studies: entrepreneurial ventures, consulting

projects, litigation, chip manufacturing, consumer electronics, Corvette design, blockbuster movies, R&D priorities, real estate portfolios, HIV/HCV drug trial design, cancer diagnostics, Mars contamination, oil E&P, economics and energy pricing, nuclear waste, climate change, marine resources, bioterrorism preparedness, nuclear weapons control, effective interactions, and ethics. Corequisite: MS&E 252 recommended.

2-3 units, Aut (Robinson, B)

#### **MS&E 454. Decision Analysis Seminar**

Current research and related topics presented by doctoral students and invited speakers. May be repeated for credit. Prerequisite: 252.

1 unit, Aut (Howard, R), Win (Howard, R), Spr (Shachter, R)

#### **MS&E 464. Global Project Coordination**

Students engage in projects that are global in nature, and related to the planning, design, and operations of supply chains, marketing, manufacturing, and product development. Project teams from Stanford and an overseas university work on common projects using telephones, faxes, email, Internet, video conferences, and face-to-face meetings. As part of the project, students travel to Hong Kong. Applications due in November. See <http://www.stanford.edu/class/msande464/>.

3-4 units, not given this year

#### **MS&E 472. Entrepreneurial Thought Leaders' Seminar**

Entrepreneurial leaders share lessons from real-world experiences across entrepreneurial settings. ETL speakers include entrepreneurs, leaders from global technology companies, venture capitalists, and best-selling authors. Half-hour talks followed by half hour of class interaction. Required web discussion. May be repeated for credit.

1 unit, Aut (Seelig, T; Kosnik, T), Win (Byers, T; Seelig, T; Kosnik, T), Spr (Byers, T; Seelig, T; Kosnik, T)

#### **MS&E 485A. Introduction to Crosscultural Design**

Preparation for 485B. Workshop and initial project work in teams.

1-2 units, not given this year

#### **MS&E 485B. Crosscultural Design**

The design of products and services for a global world. How to design products or services to be used across cultures; how to design for a culture other than one's own; and how the process of design is approached in different cultures. Prerequisite: 485A.

3-4 units, not given this year

#### **MS&E 491. Clean Energy Development**

'Clean energy' refers to low-depleting and low-polluting energy, such as solar, wind and biomass. Project course for advanced undergraduate and graduate students with an interest in clean energy and entrepreneurship, and with a commitment to strong analytic and communication skills. Student teams conceive, prepare and present a business plan for a real or realistic clean energy development - an individual project or an entire company - of their choice. Class sessions devoted primarily to information and guidance necessary for student team projects. Mix of presentations, discussions and guest lectures. Grades based on student team performance in developing and presenting a business concept and plan.

3 units, Spr (Borison, A; Hamm, G)

#### **MS&E 802. TGR Dissertation**

0 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## MASTER OF LIBERAL ARTS (MLA) COURSES

### GRADUATE COURSES IN MASTER OF LIBERAL ARTS

Primarily for graduate students; undergraduates may enroll with consent of instructor.

#### **MLA 9. European Thought and Culture in the 19th Century**

Major European thinkers and writers and their intellectual significance from the Enlightenment to modernism. Works by Voltaire, Austen, Wordsworth, Marx, Nietzsche, and Freud.

4 units, not given this year

**MLA 100E. MLA Natural Science Elective**

1-2 units, Aut (Paulson, L), Win (Paulson, L), Spr (Paulson, L), Sum (Staff)

**MLA 101A. Foundations I**

Required of and limited to first-year MLA students. First of three quarter foundation course. Introduction to the main political, philosophical, literary, and artistic trends that inform the liberal arts vision of the world and that underlie the MLA curriculum.

4 units, Aut (Steidle, E)

**MLA 101B. Foundations II: the Middle Ages and Renaissance.**

Required of and limited to first-year MLA students. Second of three quarter foundation course. Introduction to the main political, philosophical, literary, and artistic trends that inform the liberal arts vision of the world and that underlie the MLA curriculum.

4 units, Win (Steidle, E)

**MLA 101C. Foundations III: the Enlightenment through Modernism**

Required of and limited to first-year MLA students. First of three quarter foundation course. Introduction to the main political, philosophical, literary, and artistic trends that inform the liberal arts vision of the world and that underlie the MLA curriculum.

4 units, Spr (Junkerman, C)

**MLA 102. An Introduction to Interdisciplinary Graduate Study**

Limited to and required of second-year MLA students. Historical, literary, artistic, medical, and theological issues are covered. Focus is on skills and information needed to pursue MLA graduate work at Stanford: writing a critical, argumentative graduate paper; conducting library research; expectations of seminar participation. Readings include Homer, Thucydides, Camus, Mann, Kushner, and sacred, scientific, and historical writings.

4 units, Aut (Paulson, L)

**MLA 262. The Economics of Life and Death**

4 units, not given this year

**MLA 268. Fin-de-Siecle Vienna**

The cultural and political life of fin-de-siècle Vienna with particular attention to revolutionary ideas that came to expression in its art, architecture, music, and political ideologies.

4 units, Spr (Harvey, V)

**MLA 269. The Meaning of Life: Moral and Spiritual Inquiry through Literature**

4 units, Aut (McLennan, W)

**MLA 274. From Slavery to Obama**

4 units, Aut (Jones, C)

**MLA 275. Shakespeare in Performance**

4 units, Sum (Staff)

**MLA 278. James Joyce's Ulysses**

4 units, Win (Chace, W)

**MLA 279. When Worlds Collide: The Trial of Galileo**

4 units, Win (Findlen, P)

**MLA 280. British and American Fiction in the 19th and early 20th Century**

4 units, Win (Gelpi, B; Gelpi, A)

**MLA 281. The Arts as History: Britain 1900-1956**

4 units, Spr (Stansky, P)

**MLA 282. Indigenous Peoples and Environmental Problems**

4 units, Spr (Durham, W; Hunt, C)

**MLA 283. Three 20th-century Minds: Eliot, Pound, and Yeats**

This course considers three revolutionary thinkers as they each came to terms with what they saw as the encroaching chaos of the early 20th century.

4 units, Sum (Staff)

**MLA 284. Problems in American Foreign Policy**

This seminar examines in depth the problems facing American diplomacy. These include the several crises in the Middle East and relations with the Muslim World; the recent world economic recession; nuclear proliferation; problems and prospects in the relationship(s) with America's allies; persistent difficulties with and the possible promise of relations with China and Russia.

4 units, Sum (Staff)

**MLA 300. Oxford Summer Programme**

2-4 units, Sum (Staff)

**MLA 398. MLA Thesis in Progress**

Group meetings provide peer critiques, motivations, and advice under the direction of the Associate Dean.

0 units, Aut (Paulson, L), Win (Paulson, L), Spr (Paulson, L), Sum (Staff)

**MLA 399. MLA Thesis Final Quarter**

Students write a 75-100 page thesis that evolves out of work they pursued during their MLA studies.

6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

## MATERIALS SCIENCE AND ENGINEERING (MATSCI) COURSES

### UNDERGRADUATE COURSES IN MATERIALS SCIENCE AND ENGINEERING

Primarily for undergraduates; graduate students may enroll with consent of adviser.

**MATSCI 10SC. Diamonds from Peanut Butter: Material Technologies and Human History**

Technological importance of materials in history is captured in names: the Stone Age, Bronze Age, Iron Age, and now the Information Age or the Silicon Age. How materials have played, and continue to play, pivotal roles in the development of new technologies.

2 units, not given this year

**MATSCI 11SC. Energy Technologies for a Sustainable Future**

Wondering what the buzz is about sustainability, renewable energy, and clean fuels? Meeting the world's growing energy needs in a sustainable fashion is one of the most pressing problems of our time. This class will introduce the scope of the energy problem and define some of the options for sustainable energy. We will look into the scientific basis of sustainable energy technologies, such as solar cells, which convert the energy of the sun directly into electricity, and fuel cells, which convert chemical energy directly into electricity. Other topics will include biofuels, i.e., fuel derived from plant matter, and clean fuels such as hydrogen. The course will emphasize the fundamental science behind the devices and highlight some of the cutting-edge technological issues that are currently being explored. Assigned reading will include books on global energy issues as well as technical reading on the science and engineering of sustainable energy technologies. We will visit several local

2 units, not given this year

**MATSCI 81N. Bioengineering Materials to Heal the Body**

Preference to freshmen. How scientists and engineers are designing new materials for surgeon to use in replacing body parts such as heart tissue or the spinal cord. How cells, in the body and transplanted stem cells, communicate with implanted materials. Real-world examples of materials developed for tissue engineering and regenerative medicine therapies. Students identify a clinically important disease or injury that requires a better material, research approaches to the problem, and debate possible engineering solutions. GER:DB-EngrAppSci

3 units, not given this year

**MATSCI 100. Undergraduate Independent Study**

Independent study in materials science under supervision of a faculty member.

1-3 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**MATSCI 150. Undergraduate Research**

Participation in a research project.

3-6 units, Aut (Staff), Win (Staff), Spr (Staff), Sum (Staff)

**MATSCI 151. Microstructure and Mechanical Properties**

(Same as MATSCI 251) Primarily for students without a materials background. Mechanical properties and their dependence on microstructure in a range of engineering materials. Elementary

deformation and fracture concepts, strengthening and toughening strategies in metals and ceramics. Topics: dislocation theory, mechanisms of hardening and toughening, fracture, fatigue, and high-temperature creep. Prerequisite: ENGR 50 or equivalent. GER:DB-EngrAppSci

3-4 units, Aut (Dauskardt, R)

#### **MATSCI 152. Electronic Materials Engineering**

Materials science and engineering for electronic device applications. Kinetic molecular theory and thermally activated processes; band structure and electrical conductivity of metals and semiconductors; intrinsic and extrinsic semiconductors; diffusion; elementary p-n junction theory; operating principles of metal-oxide-semiconductor field effect transistors. Semiconductor processing including crystal growth, oxidation kinetics, ion implantation, thin film deposition, etching, and photolithography. Prerequisite: ENGR 50 or equivalent. GER:DB-EngrAppSci

4 units, Spr (Dionne, J)

#### **MATSCI 153. Nanostructure and Characterization**

The structure of materials at the nanoscale is in most cases the same crystalline form as the natural phase. Structures of materials such as semiconductors, ceramics, metals, and nanotubes; classification of these materials according to the principles of crystallography. Primary methods of structural characterization, X-ray diffraction, and electron microscopy; their applications to study such nanostructures. GER:DB-EngrAppSci

4 units, Win (Earhart, C)

#### **MATSCI 154. Solid State Thermodynamics**

The principles of thermodynamics and relationships between thermodynamic variables. Equilibrium in thermodynamic systems. Thermodynamics of multicomponent systems. GER:DB-EngrAppSci

4 units, Aut (Barnett, D)

#### **MATSCI 155. Nanomaterials Synthesis**

The science of synthesis of nanometer scale materials. Examples including solution phase synthesis of nanoparticles, the vapor-liquid-solid approach to growing nanowires, formation of mesoporous materials from block-copolymer solutions, and formation of photonic crystals. Relationship of the synthesis phenomena to the materials science driving forces and kinetic mechanisms. Materials science concepts including capillarity, Gibbs free energy, phase diagrams, and driving forces. GER:DB-EngrAppSci

4 units, Spr (Clemens, B)

#### **MATSCI 156. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution**

(Same as MATSCI 256) Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. GER:DB-EngrAppSci

3-4 units, Aut (Clemens, B)

#### **MATSCI 157. Quantum Mechanics of Nanoscale Materials**

Introduction to quantum mechanics and its application to the properties of materials. The Schrödinger equation, uncertainty principle, bound states and periodic potentials, angular momentum, quantum statistics, and perturbation theory. Applications to electronic band structure in semiconductors, metals, and nanostructures; vibrational properties of solids; light/matter interaction and lasers; bonding; magnetic materials; nanotechnology. Prerequisites: working knowledge of calculus and high school physics. GER:DB-EngrAppSci

4 units, Win (Lindenberg, A)

#### **MATSCI 159Q. Japanese Companies and Japanese Society**

(S,Sem) (Same as ENGR 159Q) Stanford Introductory Seminar. Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. GER:DB-SocSci

3 units, Spr (Sinclair, R)

#### **MATSCI 160. Nanomaterials Laboratory**

Preference to sophomores and juniors. Hands-on approach to synthesis and characterization of nanoscale materials. How to make, pattern, and analyze the latest nanotech materials, including nanoparticles, nanowires, and self-assembled monolayers. Techniques such as soft lithography, self-assembly, and surface functionalization. The VLS mechanism of nanowire growth, nanoparticle size control, self-assembly mechanisms, and surface energy considerations. Laboratory projects. Enrollment limited to 24. GER:DB-EngrAppSci

4 units, Spr (Melosh, N)

#### **MATSCI 161. Nanocharacterization Laboratory**

(Same as MATSCI 171) Nanocharacterization techniques, such as: optical and electron microscopy, x-ray photoelectron spectroscopy and atomic force microscopy, will be explained in class and used in lab to determine structure of materials and understand why they have certain properties. This WIM class includes instruction on writing, statistics, generating effective plots with curve fits, using databases to find information and giving oral scientific presentations. Prerequisite: ENGR 50 or equivalent. (75 min. lecture + 3 hr. lab most weeks.) GER:DB-EngrAppSci, WIM

3-4 units, Spr (McGehee, M)

#### **MATSCI 162. X-Ray Diffraction Laboratory**

(Same as MATSCI 172) Experimental x-ray diffraction techniques for microstructural analysis of materials, emphasizing powder and single-crystal techniques. Diffraction from epitaxial and polycrystalline thin films, multilayers, and amorphous materials using medium and high resolution configurations. Determination of phase purity, crystallinity, relaxation, stress, and texture in the materials. Advanced experimental x-ray diffraction techniques: reciprocal lattice mapping, reflectivity, and grazing incidence diffraction. Enrollment limited to 20. GER:DB-EngrAppSci

3-4 units, Win (Vailionis, A)

#### **MATSCI 163. Mechanical Behavior Laboratory**

(Same as MATSCI 173) Experimental techniques for the study of the mechanical behavior of engineering materials in bulk and thin film form, including tension testing, nanoindentation, and wafer curvature stress analysis. Metallic and polymeric systems. Prerequisite: ENGR 50. GER:DB-EngrAppSci

3-4 units, Aut (Earhart, C)

#### **MATSCI 164. Electronic and Photonic Materials and Devices Laboratory**

Lab course. Current electronic and photonic materials and devices. Device physics and micro-fabrication techniques. Students design, fabricate, and perform physical characterization on the devices they have fabricated. Established techniques and materials such as photolithography, metal evaporation, and Si technology; and novel ones such as soft lithography and organic semiconductors. Prerequisite: 152 or 199 or consent of instructor. GER:DB-EngrAppSci, WIM

4 units, Aut (Salleo, A)

#### **MATSCI 190. Organic and Biological Materials**

(Same as MATSCI 210) Unique physical and chemical properties of organic materials and their uses. The relationship between structure and physical properties, and techniques to determine chemical structure and molecular ordering. Examples include liquid crystals, dendrimers, carbon nanotubes, hydrogels, and biopolymers such as lipids, protein, and DNA. Prerequisite: Thermodynamics and ENGR 50 or equivalent. GER:DB-EngrAppSci

3-4 units, Spr (Heilshorn, S)

#### **MATSCI 192. Materials Chemistry**

(Same as MATSCI 202) Chemical principles of materials: atomic and molecular bonding; acid and base chemistry; redox and electrochemistry; colloidal and surface chemistry; materials synthesis; and nanoscale chemistry. GER:DB-EngrAppSci

3-4 units, Aut (Dionne, J)

#### **MATSCI 193. Atomic Arrangements in Solids**

(Same as MATSCI 203) Atomic arrangements in perfect and imperfect solids, especially important metals, ceramics, and semiconductors. Elements of formal crystallography, including development of point groups and space groups. GER:DB-EngrAppSci

3-4 units, Aut (Reed, E)

**MATSCI 194. Thermodynamics and Phase Equilibria**

(Same as MATSCI 204) The principles of heterogeneous equilibria and their application to phase diagrams. Thermodynamics of solutions; chemical reactions; non-stoichiometry in compounds; first order phase transitions and metastability; thermodynamics of surfaces, elastic solids, dielectrics, and magnetic solids. GER:DB-EngrAppSci

3-4 units, Win (Salleo, A)

**MATSCI 195. Waves and Diffraction in Solids**

(Same as MATSCI 205) The elementary principals of x-ray, vibrational, and electron waves in solids. Basic wave behavior including Fourier analysis, interference, diffraction, and polarization. Examples of wave systems, including electromagnetic waves from Maxwell's equations. Diffracted intensity in reciprocal space and experimental techniques such as electron and x-ray diffraction. Lattice vibrations in solids, including vibrational modes, dispersion relationship, density of states, and thermal properties. Free electron model. Basic quantum mechanics and statistical mechanics including Fermi-Dirac and Bose-Einstein statistics. Prerequisite: 193/203 or consent of instructor. GER:DB-EngrAppSci

3-4 units, Win (Clemens, B)

**MATSCI 196. Imperfections in Solids**

(Same as MATSCI 206) Atomic and molecular scale defects and their importance to the physical and mechanical properties of bulk and nanoscale materials. Point defects and dislocations in crystals. Imperfections in amorphous solids. Structure and properties of interfaces. Prerequisite: 193/203. GER:DB-EngrAppSci

3-4 units, Win (Staff)

**MATSCI 197. Rate Processes in Materials**
