Which proposal type should I use?

Typical scenarios:

- You are submitting a proposal for a new project where a SPO# doesn't already exist.

- The original proposal submission will not be funded because it was rejected by the sponsor or withdrawn by Stanford and you are submitting the proposal again for re-consideration.

- You have a partially-funded award and the sponsor requires that you submit an institutionally-endorsed progress report to the sponsor in order to receive funding for the next budget period.
- You have a PHS-sponsored award or subcontract that requires an annual FCOI certification.

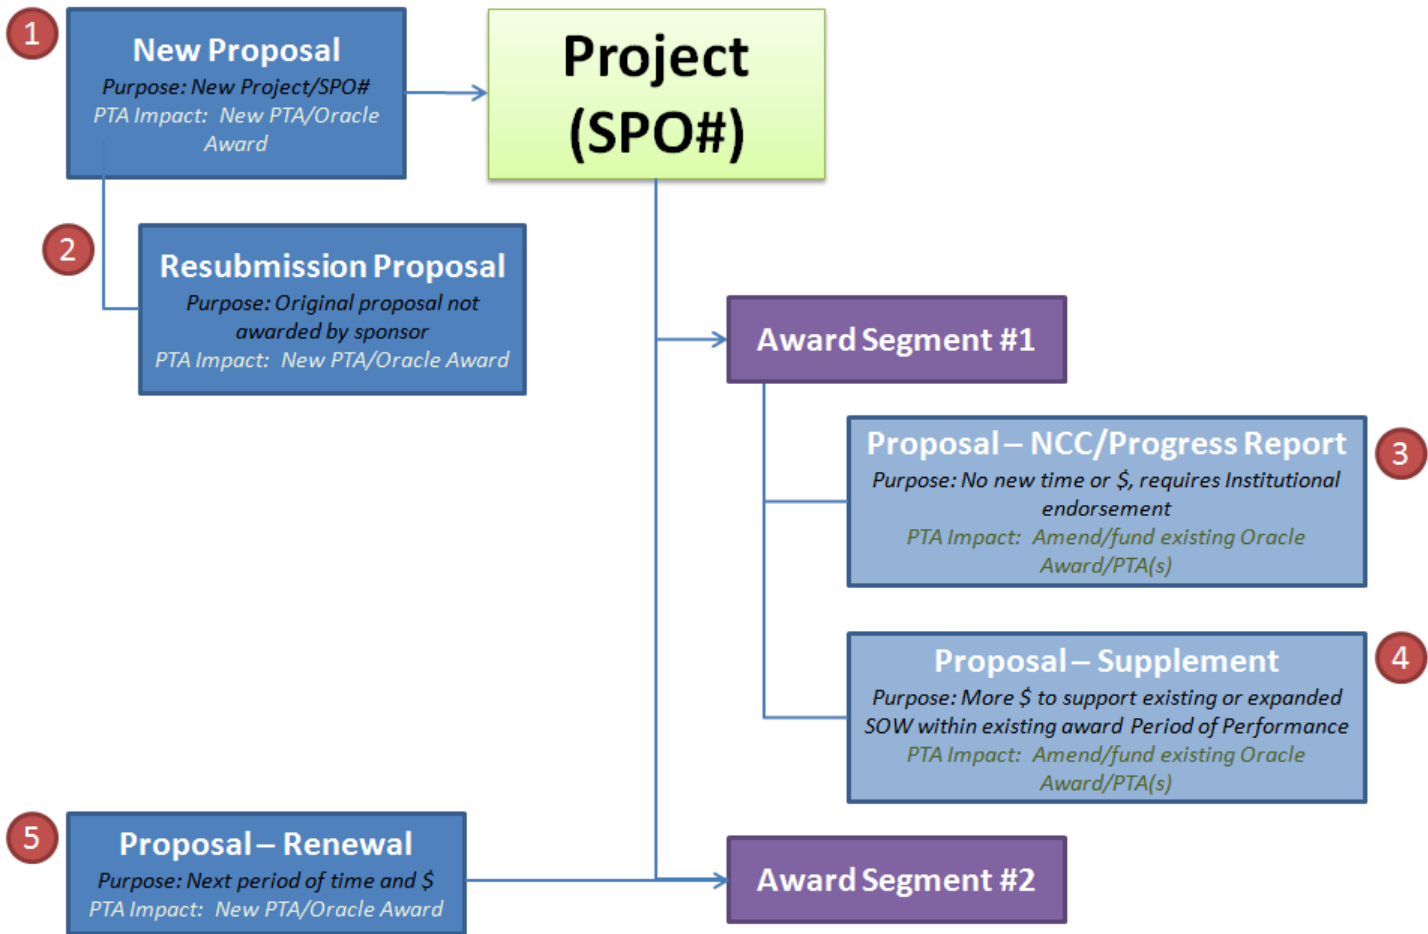

- You have an existing award and you are requesting more funding to support the existing Scope of Work.
- You have an existing award and you are requesting more funding to support an expansion of the Scope of Work.

- You have an award where you want to request the next period of time and money for the next segment of work.

SeRA Project Configuration

Proposal Types & Typical PTA Impacts

But remember.... PTA configuration is also driven by the terms of the award

Use **Initiate New Proposal** when you want to start a proposal transaction for a **new project**. Do not click here if you are submitting a proposal related to an existing project.
