Overview

The 2010-2011 academic year marked the beginning of the 16th year of the Stanford Language Center. This annual report consists of sections highlighting performance data of Stanford students completing as well as continuing past the language requirement; information on teaching quality; and characteristics of the placement and assessment of incoming students for the current academic year (2011-2012).

Mission Statement and Program Structure

Language programs at Stanford University prepare students to have a foreign language capability that enhances their academic program and enables them to live, work, study, and research in a different country. Stanford students need to be able to initiate interactions with persons from other cultures but also to engage with them on issues of mutual concern.

In order to accomplish this goal for Stanford students, language programs are proficiency-oriented and standards-based. A proficiency orientation refers to emphasizing doing rather than knowing. We try to make sure that students learn to speak, listen, read, and write in ways that are immediately useful in a real world setting. Based in research and theory on language and on discourse functions, this orientation is adaptive, compensatory, and developmental, not additive. Standards-based refers to the National Standards on Foreign Language Learning that attend not only to linguistic dimensions, but also to connections that learners make between languages, cultures, and various academic areas; to comparisons between languages and cultures; and to a knowledge of communities that speak a particular language. Our programs are attentive to the pragmatics of each language and culture and respectful of the relationship between genre and function.

In first-year programs, we emphasize speaking and writing – forms that enable learners to produce language at the sentence level in order to interact with native speakers in an immediate time frame, often in service encounters. We also focus on reading and listening genres such as short news and weather reports; short film and book reviews; as well as straightforward expository prose, often descriptive in nature. These are forms that native speakers living within a culture encounter and use on a daily basis.

Second-year programs build on what is learned in first year by moving students from a sentence-based interpersonal level of language into a presentational, paragraph-based mode that expands the students' linguistic as well as interpretational repertoire. Students are asked to conduct research on topics of their academic or professional interest and are taught to present complexity and nuance. Materials encapsulate genres such as editorials,

politically-oriented news broadcasts, analytic essays, and short literary texts. Students use these materials as models for their writing so that they learn and cultivate a sophisticated language. Second-year programs are designed to enable students to study abroad or to continue with upper-level literature and culture classes.

Class attendance is critical given the focus on active language skills. Classes are taught in the language and elaborate explanations of grammatical points are left to the textbooks and online materials. Time on task is critical for learning so that if students are to become proficient, they must speak together and with their teacher; they must read things in common and discuss those readings; and they must articulate their reactions to their readings in writing. Materials are authentic, meaning that they are not constructed for learners. When Stanford students listen to audio or video, they are listening to language and observing videos that native speakers would encounter in their daily lives. These materials are rarely modified linguistically or glossed.

Quality of Stanford Language Programs

Performance Standards

As noted in previous reports, each language program at Stanford has articulated proficiency goals in all language skills. In brief, the goals for first-year instruction are an Intermediate Mid level of oral proficiency in the cognate languages (e.g., French, German, Italian, and Spanish) and Novice High in the non-cognate languages (e.g., Japanese and Chinese). Similar standards are set for reading and writing. These proficiency levels are based on the national scale called the Foreign Service Institute/American Council on the Teaching of Foreign Languages scale (FSI-ACTFL scale).

The scale has ten levels: Novice Low (NL), Novice Mid (NM), Novice High (NH); Intermediate Low (IL), Intermediate Mid (IM), Intermediate High (IH); Advanced Low (AL) Advanced Mid (AM), Advanced High (AH); and Superior (S). The Novice level entails word-level speech; Intermediate, sentence-level speech; Advanced and Superior, paragraph-level speech and beyond. To put this scale into context, studies done nation-wide indicate that language majors generally achieve an Intermediate Mid (IM) rating on oral proficiency interviews. In fact, according to the Foreign Service Institute, an IM in the cognate languages and an NH in the non-cognate languages are generally met after an average of 300-400 hours of instruction; Stanford courses meet 150 hours over the course of an academic year.

For several years, this Annual Report focused exclusively on oral proficiency ratings. This was the case for three reasons: first, because oral proficiency is the most difficult skill to acquire in a formal setting and is, therefore, worthy of significant attention; second, oral proficiency was the dimension of language study perceived as lacking by the wider university community at the founding of the Language Center; and third, a nationally recognized scale and a concomitant training program were available. This third reason enabled the Language Center to compare Stanford student performance across languages, programs, and institutions.

In recent years, a national assessment for the development of writing proficiency was finalized and made available. This scale follows the general outline of the oral proficiency scale. It focuses on functional writing ability, measuring how well a person writes in a language by comparing the performance of specific writing tasks with the criteria stated in the ACTFL Proficiency Guidelines – Writing (Revised 2001). In parallel to the oral proficiency process, this scale also has a certification procedure attached to it, described below in the section on Teaching Effectiveness. The Language Center now routinely assesses both oral and writing proficiency.

Self-study

In Spring Quarter of each year, the Language Center initiates a self-study of language programs to document whether third quarter students, i.e., students completing one year of language study, do indeed meet the articulated standards. Oral proficiency data in French, German, Spanish, Italian, Chinese, Japanese, Korean, Russian, Portuguese, Hebrew and Arabic are collected via a Simulated Oral Proficiency Interview (SOPI) administered through CourseWork, Stanford's course management tool. **Appendix A** displays the oral proficiency ratings generated over the past sixteen academic years averaged in five-year segments, illustrating that the majority of students are indeed in or beyond expected ranges. Each program analyzes its performance data annually and discusses ways in which to bring ever more students to target levels and beyond.

As usual, the Asian language programs as well as the Portuguese program far exceeded their targeted objectives. All data indicate that Stanford programs are significantly ahead of the pace projected by the Foreign Service Institute. **Appendix A** also displays the oral proficiency ratings of second-year programs. We detect substantial advancement from first- to second-year. Italian and Portuguese students in particular seem to make remarkable strides.

Spring 2008 marked the beginning of our commitment to the formal assessment of writing using the Writing Proficiency Assessment (WPA). This process is corollary to the oral proficiency assessments we conduct. In Spring 2011, Arabic, Chinese, French, Hebrew, Italian, Japanese, Korean, Portuguese, Russian, and Spanish assessed first- and second-year students, while German evaluated students completing the first-year sequence. These writing assessment data are illustrated in **Appendix B**. The writing measure outcomes are consistent with the oral proficiency ratings across both years of instruction. Reliability estimates range from .78 to .93 in both oral and written measures.

Teaching Effectiveness

Each quarter for eleven years, the Language Center processed manually all language teaching evaluations. The evaluations were collected, the data loaded into spreadsheets and consolidated and reviewed each quarter. Further, the Director read all student comments on the evaluations (approximately 2000 each quarter). All instructors then received copies of their evaluations by the first day of the following quarter. This enabled instructors to modify and enhance their instruction from the first day of the following quarter.

With the advent of the electronically-delivered evaluations of teaching, teachers are now able to access their evaluations directly from the web. The Director of the Language Center continues to read each evaluation. As of Winter Quarter 2008, the online evaluation system has enabled the Language Center staff to collate student comments within language levels. References to specific individuals are removed and the collated comments are forwarded to language program coordinators. This system enables a quarterly curriculum review that has now been added to individual review.

Appendix C illustrates student responses to first-, second-, and third-year language teaching during academic year 2010-2011. The data are consistent across previous years' reports and point toward the genuine strengths in all language programs in the Division of Literatures, Cultures, and Languages. All 17 questions yield responses overwhelmingly in the "excellent" and "very good" categories. Students continue to like their instructors more than their courses and have particularly high praise for their instructors' knowledge; instructors' availability; and instructors' concern with student learning.

Further, all teaching staff (N=60) are evaluated on the contents of their teaching portfolio and receive a letter evaluating their performance with suggestions for the coming academic year.

Appendix D contains the Language Center lecturer roster for academic year 2011-2012 ($\geq 50\%$ FTE). The data show each lecturer's appointment year at Stanford University, educational accomplishments as well as ACTFL certifications. Thirty-eight full-time instructors (61%) have completed all oral proficiency interview training and have been certified; an additional eleven have begun the certification process. 95% of all Stanford language instructors (lecturers and graduate students) have participated in the initial stages of oral proficiency training and certification. It is rare in the United States to have even a handful of instructors have such training.

The certification process is rigorous, taking between six months and a year to complete. It involves several stages which train candidates to rate speech samples and perform oral proficiency interviews at various levels. Candidates first attend an intensive 2- or 4-day M/OPI workshop to learn and practice procedures for rating and interviewing. They then prepare and submit a round of practice interviews they themselves have performed; receive feedback on those interviews; prepare and submit a final round of interviews; and undergo an individual OPI to ascertain their own oral proficiency level at Advanced Mid or higher. Certification is granted based on rating reliability and interviewing technique. To put this in context, successful candidates typically need to perform three or four times the number of interviews than are needed for submission in order to produce interviews of sufficient quality.

The American Council on the Teaching of Foreign Languages (ACTFL) has developed a similar certification process in writing, which trains candidates to identify and rate writing samples of various proficiency levels, through workshops and subsequent rounds of rating practice. The Language Center has already sponsored four such workshops and has several staff members currently pursuing this rater certification; twenty-one have completed the process and been certified as raters of writing proficiency. The writing certification is an add-on to the oral proficiency certification.

With the blessings of increased staffing, come the complications of getting teachers acclimated and comfortable in their new instructional setting. In order to meet this challenge, we created an induction program led by an experienced mentor, Lecturer in French, Marie Lasnier. All new staff members attended an intensive one-day orientation program and then met regularly with Dr. Lasnier throughout the academic year. In 2011-2012, there were eight new inductee teachers. We anticipate another eight new teachers in 2012-2013.

Enrollment and Student Self-Reports

Enrollment in language courses has historically been quite high despite Stanford's ostensible technical orientation. A high percentage of Stanford students enroll in language courses even though they have already fulfilled the requirement. This pattern does not seem to have changed.

Table 3 illustrates academic year 2010-2011 demographic data collected from language teaching evaluations. Students continue to report “interest” considerably more frequently than “requirement” as the reason for being in their class. Table 3 also provides some evidence as to which languages (i.e. Spanish and French) are used most often to fulfill the language requirement.

Table 4 illustrates the academic background of students in the language programs. First-year students are distributed fairly evenly across academic areas. The reports of second-year reveal Asian languages as growing in the number of students in Social Science as well as in Humanities and Engineering. In general, the second-year language programs meet the needs of more Social Science students and the third-year programs meet the needs of more Humanities students. These data reflect the larger student population in programs with second-year language requirements such as International Relations as well as majors enrollment in the various languages. The data help the Language Center to insure that the language programs are aligned with the needs and interests of students enrolled.

The Language Requirement

Placement and Assessment, Academic Year 2011-2012

The Language Center does significant planning based on input received from the language placement form in Approaching Stanford that all incoming students receive and are asked to complete. The Language Center asks students which languages they have studied; which language they intend to use to fulfill the language requirement; for a self-assessment of language abilities; and whether students would like additional information from various language programs. These data enable the Language Center to predict enrollment patterns (both at the program and course level) and to have better and appropriately informative communication with incoming students.

Table 5 provides information received from the 2011-2012 incoming students. The vast majority of students reported an interest in pursuing Spanish, followed by French, then Chinese. This pattern is virtually identical to previous academic years.

TABLE 5 -
Baseline data on incoming students 2011-2012

Language	Raw Number	Percentage
SPANISH	853	49%

Table 6 illustrates the distribution of on-line placement versus on-campus placement testing for Fall 2011. All students in need of placement were required to test on-line, leaving only the oral examination for the usual placement testing period. One thousand one hundred sixty-one (1,161) students completed the on-campus/oral portion of the examination and were placed officially or exited from the requirement before classes began in Fall 2011.

TABLE 6 - On-campus testing, September 21-23, 2011			
Language	Expected	Online Written	On Campus/Oral

	650	1326	1161

Table 7 recaps data concerning students who completed the language requirement through some form of testing. Seventy-five (75%) percent of incoming students exited from the language requirement in Fall 2011. These data include students entering Stanford as native speakers of a language other than English.

TABLE 7 - Students completing the language requirement through testing

At the request of C-US the Language Center began to probe in 1998-1999 the relationship between placing out of the language requirement and the oral proficiency standards set by the first-year requirement. In past academic years, using both random and non-random samples, all AP/SATII students who took a Simulated Oral Proficiency Interview achieved an acceptable oral proficiency rating. The 2010-2011 academic year was consistent with previous years. Most AP/SATII students are well beyond expected oral proficiency levels. These data are listed in **Appendix E**. The Language Center continues to be supportive of the use of AP/SATII scores for meeting the language requirement.

The Language Center has a significant amount of interaction with incoming Frosh beyond their online placement testing. **Appendix F** catalogues over eight thousand email exchanges throughout the summer of 2011, categorized by language of interest. Students receive information about majors and minors in the languages of their interest areas as well as information regarding overseas programs.

Petitions and Credit Transfers

The majority of Stanford students meet the language requirement either through testing or through placement and the completion of a third-quarter course in one of the languages that explicitly meets the language requirement, i.e., mainly those languages attached to academic programs in departments. In Fall 1997, the C-US gave the Language Center Director discretionary authority to decide on petitions filed outside the normal channels of the language requirement. No petitions were filed during 2010-2011.

The Language Center also approves credit transfers from other domestic and international institutions. **Table 8** illustrates the number of students requesting credit transfers. The number of students requesting credit transfers for Spanish has been reduced, and will presumably continue to decline given the popularity of the Madrid campus.

Language Center Honors

The Japanese American Association of Northern California and the Consulate General of Japan, as part of their activities to encourage the learning and use of the Japanese language, co-sponsored the 38th Annual Japanese Speech Contest in November 2011. Two students, RJ Wei Lim and Melvin Su, enrolled in the Japanese language program during the 2011 Fall quarter participated in the contest and were awarded first and third place winners, respectively.

Stanford students who received scholarships to study Arabic last year include Alison Stiner, Janessa Nickels, Andrew Clausen, Shadi Bushra, Katherine Cromack, Matthew Jhon Colford, A.J. Sugarman, Daniel Thomas Speckhard, Lina Maria Hidalgo, Cyana Chilton, Jasmine Deghan, Shira Shane, Sophia Paliza-Carre, and Andrew Clausen.

In German, Caroline Shen was awarded the prestigious Congress Bundestag Youth Exchange for Young Professionals scholarship. Wesley Dunnagan received a full-year scholarship to study the language at the Universitat der Kunste in Berlin.

Proficiency Notation for Undergraduates

Student interest in pursuing the Proficiency Notation in a foreign language has increased dramatically since the guidelines were codified and publicized more widely. This notation, which appears on the official transcript, recognizes a nationally-certified level of oral proficiency and equivalent written academic work. The Language Center supports undergraduates who pursue the notation by financing the required telephonic proficiency interview and computer-based writing assessment. Students in cognate languages must achieve minimally a rating of Advanced-Low in their oral and written proficiency; students in non-cognate languages, a rating of Intermediate-High. In Spring 2011, 13 students received proficiency notations in: Chinese (2), French (2), German (2), Italian (1), Russian (1) and Spanish (4), and Turkish (1). In this pool of students achieving the notation, 10 students were rated higher in their oral and written proficiency than the minimum standard we set.

Technology in the Language Center

The spring 2011 administration of the SOPIs to 762 students included 22 unique tests in 11 languages. As usual, the tests were completed with no major incidents. In addition, our bank of over 1000 unique SOPI items was finally completed in the fall, allowing for a much smoother transition into the testing period each year.

Over the course of the year, preparations were made to explore the possibility of running year-end writing tests on computers. A bank of 40 small notebook computers was purchased and a special image was installed that only allowed them to connect to CourseWork. After creating a secure site for each test, we ran a pilot administration for 155 students in 17 sections of 4 languages. As the pilot proceeded, improvements were made to the sites and the procedure, and a full administration for all European languages is planned for spring 2012, as well as limited pilots for several Asian languages. The experience gained through the administration of the online writing tests also led to several trial runs of online midterms and final exams. The use-cases were restricted to students who needed special accommodations for testing, but the results indicate that wider application is possible.

Moving away from using cassette recorders for placement testing has been a technology goal for several years. In order to achieve this, over 800 digital audio recorders were purchased and prepared for use with labels and plastic pouches. Test media was rewritten to include operating instructions for students, and raters were also given orientations for listening to responses. The system functioned with no major errors and program coordinators gave consistently positive feedback.

The number of Language Center CourseWork course sites increased roughly 10% from 463 in 2010 to 506 in 2011 as shown in **Table 9**.

The growth in the number of sites reflects instructors' continued reliance on CourseWork to efficiently and securely deliver course materials and assessments. Most instructors report that students have come to expect courses to be administered online in CourseWork, and it would be very difficult to keep all of the electronic resources and student submissions organized without it.

The Language Center's Academic Technology Specialist (ATS) continues to participate in two to three CourseWork meetings each week, in order to

facilitate the flow of information between instructors and the CourseWork team. He also participates in one to two meetings each week related to next-generation developments in Sakai, the source software for CourseWork, and presented the SOPI system at the annual Sakai conference in Los Angeles.

In order to assure that all instructors and TAs have equal access to the online tools available at Stanford, an online tutorial for CourseWork was administered over the summer. The tutorial stepped users through both the student experience and the teacher experience, giving them the opportunity to submit both text and audio responses in their target languages. Tasks were available in CourseWork, instructions were available on a separate website, and 14 help sessions were scheduled in the Language Lab. Over 90% of all teaching staff completed the tutorial, most without any need for assistance. The ATS continues to devote roughly 50% of his time to CourseWork related matters.

The Digital Language Lab, where SOPI exit assessments, as well as most formative assessments, take place, continues to play an integral part in facilitating pedagogy at the Language Center. The enhanced classrooms alone provide an enriched learning experience for hundreds of students each quarter, hosting as many as 30 class meetings per week. In addition, data indicates that just under 700 students visit the drop-in area of the Lab two to three times per quarter to complete formative assessments as well as other language-related tasks. In anticipation of the demolition of Meyer Library, all services housed there, including the Language Lab, will be moving to GSB South sometime in the summer of 2014. While plans have not been finalized, it is anticipated that Lab facilities will be somewhat expanded, in addition to a general increase in the number of spaces for assessment.

For the last few years, online placement testing has been run on servers that were kept in a small room in Building 30. In order to improve both the security and the reliability of these tests, they were moved to new servers in one of the university's data centers. The transition was completed in the fall, allowing for gradually increasing usage before the main testing period in the summer of 2012.

Finally, two very recent advances have been announced which will allow for several much anticipated changes to begin. First, the Information Security Office recently announced that student data is now classified as "Confidential", rather than "Restricted", thus permitting storage of student work on a wider range of services. Instructors will now be able to take advantage of blogs and wikis hosted by IT services, provided that they take appropriate measures to prevent public access, rather than being restricted to CourseWork. In addition, the CourseWork team has successfully upgraded their pilot of the video streaming service Kaltura, to allow for unrestricted use in course sites. The English for Foreign Students program ran a successful trial of this service with their summer intensive program, and it appears that it will finally allow instructors to integrate video into their courses in a much more seamless way.

Study of Undergraduate Education at Stanford (SUES) Recommendations

The Study of Undergraduate Education at Stanford (SUES) report maintains the language requirement in its present form and recommends two directions to enhance the already successful and popular language learning initiatives at Stanford. First, SUES urges attempts to increase the number of students pursuing the Advanced Proficiency Notation. The Language Center will try to increase communication about the availability of the Advanced Proficiency Notation. In addition, faculty in the Division of Literatures, Cultures, and Languages have already begun the discussion of requiring majors to sit for the two examinations that constitute the notation. Each of these efforts will move toward greater numbers of students pursuing the notation.

Implementing SUES' second recommendation, increasing opportunities for more advanced language study, is dependent, according to the SUES report, upon the notion that total fewer requirements mean students might have more space for continuing the study of foreign languages at the advanced literature and culture level. To take advantage of this greater flexibility in the undergraduate curriculum, a greater number of literature courses taught in the language will be a positive step in the direction of developing and sustaining student proficiency. Finally, the September Studies program will enable faculty to offer immersion experiences to students that should also lead to a greater enrollment in majors-level courses. Offering students more opportunities to use their foreign languages actively at a higher and more sophisticated level should become a driver in upper-level courses.

Budget Update and Stewardship

Because of increased student demand, the Language Center has filled new full time positions in Arabic, Hindi, French, and Portuguese. In the queue for additional new positions are English for Foreign Students and Persian. We have now made up all losses from the 2009 financial debacle.

With the bettering economy, the Language Center is also able to focus more directly on Special Languages through its endowment from the John Roberts Hale Chair. The gift money available will be directed toward languages in which there is presently significant interest and enrollment. As a first step, Vietnamese and Navajo will benefit from offering instructors in those languages full time year to year contracts. Further, the Brazilian Consulate has offered us a two-year term Portuguese language instructor. The Hale Funds will be used to match this offer in order to make the instructor 100% FTE.

Fulbright Foreign Language Teaching Assistant Orientation

The Language Center hosted another extremely successful orientation for international language teaching assistants on August 14-19, 2011. Fifty students from twenty-four countries participated in the five day orientation. Sessions for the FLTAs were offered by the following Language Center teaching staff members: Elizabeth Bernhardt, Connie Rylance, Andrea Kevech, Ken Romeo, Eva Prionas, Joan Molitoris, Salem Aweiss, Ali Miano, Eugenia Khassina, Paul Nissler, Miranda Kershaw, Nina Lin, Hee-Sun Kim, and Joseph Kautz and ably assisted by the Language Center staff, Tracey Riesen, Amy Keohane, and Monica Brillantes.

The orientation was attended by Marsha Frith (Assistant Director, Institute of International Education) and by Shelby Lewis (Board Director, Bureau of Educational and Cultural Affairs, U.S. Department of State). Ms. Frith noted in her feedback:

I want to offer my sincere thanks on behalf of the Institute of International Education and the U.S. Department of State for the stellar orientation organized by Stanford University. We recognize the time and effort needed to organize this event each year, and truly appreciate the excellence with which every detail is carried out. The Fulbright FLTAs that attended the orientation at Stanford were provided vital information on teaching methodology, practical skills for adapting socially and utilizing technology in the classroom; among other topics.

Director Lewis concluded:

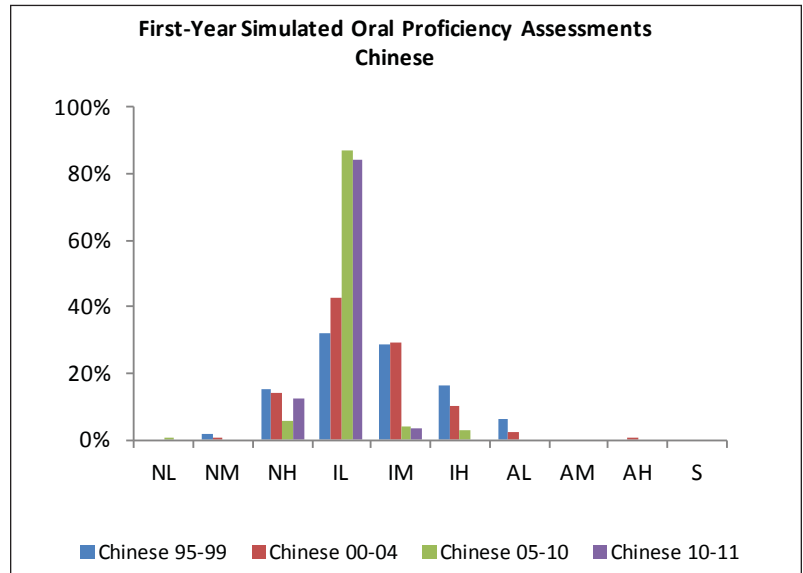

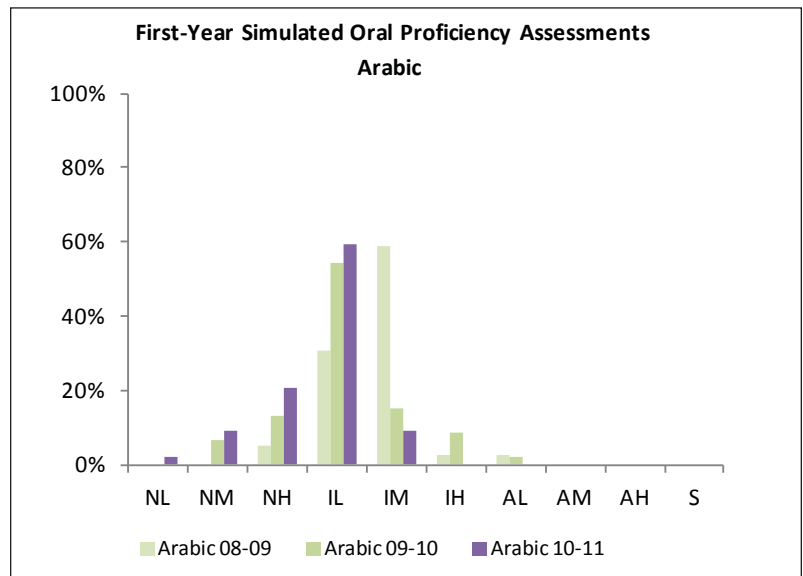

Let me end by saying thank you, again, for the warm and generous hospitality extended to me and the FLTAs and for your ongoing commitment to the Fulbright Program. It is unlikely that the standard set by Stanford University will be bested in the foreseeable future.
