

# Vasopressin research treatment trial for social deficits in children with autism

Stanford University researchers are currently recruiting children with autism spectrum disorders to participate in a research study which tests the effects of intranasal vasopressin on social functioning.

In order to participate in this research study your child must:

- \* Be diagnosed with an autism spectrum disorder*
- \* Be between the ages of 6 and 12 years*
- \* Be willing to take a vasopressin nasal spray for at least 4 weeks and provide blood samples*
- \* Be willing to participate in behavioral and cognitive testing*
- \* Have no serious medical problems*

You will also receive generalized results regarding your child's cognitive and behavioral assessments.

**For more information, call (650) 736-1235.**
