Victor W. Henderson, MD, MS, Professor of Health Research & Policy and of Neurology & Neurological Sciences, Stanford University; Director of the Stanford Alzheimer's Disease Research Center

course objectives

1. Discuss the current status of dementia research, including new findings related to the cause and prevention of AD.
2. Describe the rationale behind experimental therapeutic approaches in the Alzheimer's disease clinical spectrum and drug targets in clinical trials
3. Learn about a new model for medication safety and management.
4. Discuss approaches to inappropriate sexual behaviors in persons with dementia, including non-pharmacologic and pharmacologic method of treatments.
5. Communicate and demonstrate how music can be used to connect with and reanimate people living with dementia.
6. Learn about a new model of care for dementia targeting patients, caregivers and primary care providers to enhance quality of care, improve medication safety and optimize health outcomes with an interdisciplinary team augmented by innovative technology.
7. Highlight some opportunities and challenges of developing sustainable care for caregivers and promote capacity to experience positive aspects of caregiving.
