

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Aluminum, Dissolved for location A72

Antimony, Dissolved for location A72

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Arsenic, Dissolved for location A72

Barium, Dissolved for location A72

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Beryllium, Dissolved for location A72

Cadmium, Dissolved for location A72

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Calcium, Dissolved for location A72

Chromium, Dissolved for location A72

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Cobalt, Dissolved for location A72

Copper, Dissolved for location A72

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Iron, Dissolved for location A72

Lead, Dissolved for location A72

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Magnesium, Dissolved for location A72

Manganese, Dissolved for location A72

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Mercury, Dissolved for location A72

Molybdenum, Dissolved for location A72

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Nickel, Dissolved for location A72

Potassium, Dissolved for location A72

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Selenium, Dissolved for location A72

Silver, Dissolved for location A72

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Sodium, Dissolved for location A72

Thallium, Dissolved for location A72

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Vanadium, Dissolved for location A72

Zinc, Dissolved for location A72
