

Large-scale neural modeling

Kwabena Boahen
Stanford Bioengineering
boahen@stanford.edu

Goal: Link structure to function
through multi-level
computational models.

We're acquiring brain data at an unprecedented rate

Dendritic recording

Hausser et al 1997

Serial Scanning EM

Denk et al 2005

Ca⁺⁺ imaging

Reid et al 2005

Now all we have to is connect the dots...

Multi-level modeling

The problem is one of scale

- ❖ 7 levels of investigation
- ❖ 10 orders of magnitude

Option 1: **Experiment**

- ❖ Difficult to control

Option 2: **Theory**

- ❖ Ignores details

Option 3: **Simulation**

- ❖ Include all details
 - Complements theory
- ❖ Control all parameters
 - Complements experiment

Levels of Investigation

Churchland &
Sejnowski 1992

A QUANTITATIVE DESCRIPTION OF MEMBRANE CURRENT AND ITS APPLICATION TO CONDUCTION AND EXCITATION IN NERVE

By A. L. HODGKIN AND A. F. HUXLEY

From the Physiological Laboratory, University of Cambridge

(Received 10 March 1952)

This article concludes a series of papers concerned with the flow of electric current

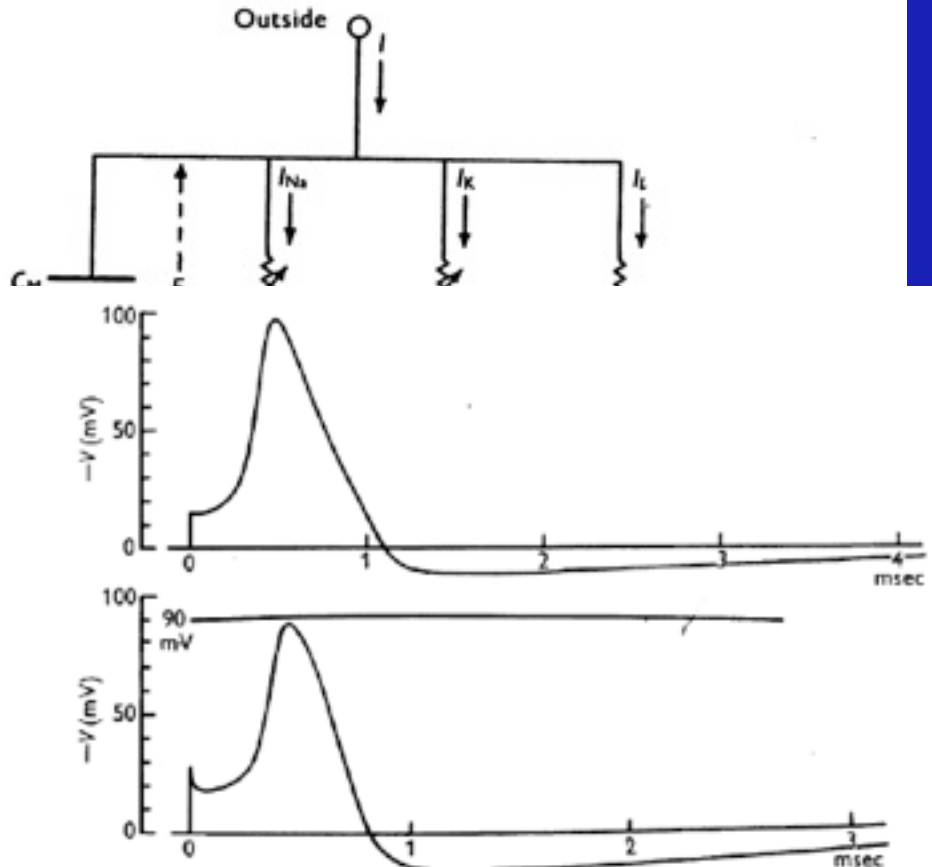

Fig. 1. E
 R_K

Fig. 14. Upper curve: solution of eqn. (26) for initial depolarization of 15 mV, calculated for 18.5° C. Lower curve: tracing of membrane action potential recorded at 20.5° C (axon 11). Vertical scales are similar. Horizontal scales differ by a factor appropriate to the temperature difference.
