Subject: **RCRA 3008(h) Administrative Order on Consent (RCRA-05-2010-0012) – Tecumseh Products Company**
Second Quarter 2012 Progress Report – MID 005-049-440

Dear Ms. Mullin:

Pursuant to Section VI of the above referenced Administrative Order on Consent (Consent Order) effective March 29, 2010, TRC Environmental Corporation (TRC), on behalf of the Respondent, Tecumseh Products Company (TPC) submits this Second Quarter 2012 Progress Report. This report describes activities related to the Consent Order completed by TPC during the second quarter 2012 and planned for completion in the near future. The organization of this document includes, as major headings, the items required under Sections V through VIII of the Consent Order.

V. Project Manager

- The TPC Project Manager is Graham Crockford of TRC.
- The USEPA Project Manager is Michelle Mullin.

VI. Work to be Performed – Remedial Investigation Report and Environmental Indicators Reports

1. A Description of activities related to the completion of the Remedial Investigation (RI) Report and the Environmental Indicator (EI) Reports:
    - **Investigation Activities**
        - **Characterize Releases at or from the Facility –** Results of the on-site investigations are presented in the following documents: Environmental Site Assessment for Tecumseh Products Company, Tecumseh, Michigan (ENVIRON, October 2007), Phase I

Environmental Site Assessment for the Tecumseh Products (Atwell-Hicks, October 2008), Phase II Environmental Site Assessment, Tecumseh Products Company (ATC, September 2009), the Current Conditions Report (RMT, September 2009), and the January 10, 2011 Technical Memorandum titled, "Summary of 2010 Soil and Groundwater Source Area Investigation Activities," which was submitted with the Fourth Quarter 2010 Quarterly Progress Report.

- **Define Appropriate Screening Criteria –** As described in the September 2009 Current Conditions Report (CCR) and the September 2011 Current Human Exposures Under Control Environmental Indicator Report (EI Report), the Michigan Department of Environmental Quality (MDEQ) Part 201 Criteria will typically be used to assess risk related to the ingestion of, or direct contact with, affected media. Currently, groundwater data indicate that groundwater in a well upgradient of the River Raisin (MW-31) has concentrations above generic Part 201 groundwater/surface water interface (GSI) criteria. A request for mixing zone-based GSI criteria has been submitted to MDEQ for review and determination. Screening levels for the volatilization to indoor air migration pathway were developed in accordance with both current regulation and state and federal guidance. These screening levels were updated in February 2012 to reflect recent changes in toxicity values. Revised calculation sheets were included in Appendix A of the First Quarter 2012 Quarterly Progress Report.
- **Define Any Unacceptable Risks to Human Health** – Current human exposure to affected media is described in the September 2011 EI Report.
  - **Groundwater** – As of November 2011, all properties within the area of affected groundwater were connected to the municipal water supply system. No private wells within this area are in use. A Groundwater Use Ordinance was passed in June 2011. This ordinance prohibits new private water wells within the area of affected groundwater and vicinity.
  - **Surface Water** – In March 2011, USEPA notified TPC that a "spring or artesian well that residents commonly drink from is located on the west bank of the River Raisin, on the north side of the old Blood Road Bridge." In December 2011, USEPA reiterated concerns regarding human exposures to affected surface water in a comment letter regarding the September 2011 EI Report. Investigation activities to address USEPA concerns were originally documented in the Second Quarter 2011 Progress Report, and were reiterated in the December 19, 2011 response to USEPA comments. In April 2011, TRC communicated with a local resident for help locating the spring and conducted site reconnaissance to locate and identify the alleged spring. The resident stated that persons may have drunk from the spring years ago, when he was a child, but that he was unaware of continued use. During site

reconnaissance near the old Blood Road Bridge, no well, fountain, or other devise to facilitate collection of seeping groundwater was identified, and the groundwater seep was of insufficient volume to reasonably fill a water bottle or cupped hands. As documented to in the September 2011 EI Report, current human exposure to affected surface water is under control; however to facilitate a favorable environmental indicators-groundwater stabilized determination in September 2012, TPC did agree, during the March 2012 project meeting with USEPA, to collect a sample for analysis of volatile organic compounds (VOCs) at this groundwater seep. This sample was collected in conjunction with the regular second quarter 2012 groundwater sample event. No VOCs were detected. Sample results are documented in the June 28, 2012 Technical Memorandum titled, "Second Quarter 2012 Groundwater Monitoring Event," which is included as Appendix A of this Report. A confirmation sample will be collected with the third quarter 2012 groundwater sample event.

- **Volatilization to Indoor Air** – An evaluation of the potential for off-site vapor intrusion at the site was provided in the September 2011 EI Report. This evaluation was supplemented with crawlspace and indoor air sample data collected in October and November 2011. These data were documented in the December 19, 2011 response to USEPA comments on the September 2011 EI Report. Recent changes in the trichloroethene (TCE) toxicity data have resulted in a reduction in TCE soil gas screening levels. With these reductions, several locations north of the site have exceeded the most-conservative residential SGSL for TCE during one or more sample event. During the March 2012 project meeting, TPC and USEPA agreed to an investigation/mitigation strategy to address these exceedences in 2012. Construction and installation activities associated with this investigation/mitigation strategy (i.e. soil vapor extraction system and additional soil gas sample points) were largely completed during the second quarter 2012. The first confirmation sample event was conducted in conjunction with the second quarter 2012 soil gas sample event at the end of June 2012. Laboratory results are pending, and will be reported in a technical memorandum once they are available.

– **Define Any Unacceptable Risks to the Environment –** The potential for unacceptable risk to the environment related to the discharge of affected groundwater to nearby surface water and wetlands was partially defined in the September 2009 CCR and the February 2010 Technical Memorandum titled "Status Update – Characterization of Volatile Organic Compounds in Groundwater." Further investigation was conducted between March 2010 and June 2010 to define the maximum extent of affected groundwater. The results of this investigation were included in a Technical

Memorandum titled "Summary of Groundwater Investigation Activities – March 2010 through June 2010, Former Tecumseh Products Company Site, Tecumseh, Michigan," which was submitted with the Second Quarter 2010 Progress Report. Currently, groundwater data indicate that groundwater in a well upgradient of the River Raisin (MW-31) has concentrations of TCE above generic Part 201 GSI criteria. A request for mixing zone-based GSI criteria has been submitted to MDEQ for review and determination. Mixing zone based GSI criteria typically range between ten times the generic GSI criterion (2,000 ug/L for TCE) and the MDEQ final acute value (3,500 ug/L for TCE). Therefore, the site-specific mixing zone based GSI criterion for TCE at the former TPC site is expected to be well above groundwater concentrations near the River Raisin (up to 340 ug/L at MW-31). TPC also agreed, during the March 2012 project meeting with USEPA, to collect a sample for analysis of volatile organic compounds (VOCs) at a groundwater seep located near monitoring well MW-31. No VOCs were detected. Sample results are documented in the June 28, 2012 Technical Memorandum titled, "Second Quarter 2012 Groundwater Monitoring Event," which is included as Appendix A of this Report. A confirmation sample will be conducted with the third quarter 2012 groundwater sample event.

- **Determine the Stability of Contaminated Groundwater –** A quarterly groundwater monitoring program is underway to assess the stability of contaminated groundwater. Concentrations of chlorinated volatile organic compounds (CVOCs) at previously sampled locations are generally consistent with historic data. In June 2012, a report titled "Statistical Evaluation of Groundwater Stability; Former Tecumseh Products Company Site; Tecumseh, Michigan; RCRA-05-2010-0012" was submitted to USEPA for review and comment. For 322 of the 328 parameter-well combinations evaluated, the trend was downward or stable. This evaluation indicates that the plume is stable. The parameter-well combinations that had increasing concentrations represent local variability in groundwater flow and transport or increases in breakdown products of TCA and TCE caused by natural reductive dechlorination. This evaluation will be updated following the third quarter 2012 groundwater sample event.

- **Response and Mitigation Measures**
  - **Decommission Affected Private Wells –** Two off-site private wells with affected water were identified. The first was decommissioned in 2009 (parcel number 323-0330-00) and the second was decommissioned in November 2010 (parcel number 325-0322-00). Three other private wells that were used as a primary water source within the area of potentially affected groundwater were monitored in 2009 and 2010 to confirm that VOCs were not detected at those wells. In December 2011, following the passage of the Local Groundwater Use Ordinance described below, the remaining three private supply wells

which were used as a primary water source within the area of affected groundwater were also decommissioned.

- **Declaration of Restrictive Covenant –** As part of the Purchase Agreement between TPC and Tecumseh Bakery, LLC, a Declaration of Restrictive Covenant for the facility was recorded with the Lenawee County Resister of Deeds. This Restrictive Covenant restricts the installation and use of on-site wells (excluding monitoring wells or other wells installed as part of the environmental work) and restricts Residential and Commercial I land use as defined by the MDEQ at the facility. The License Agreement Regarding Environmental Work provides provisions for additional restrictions to be placed on the property as needed.
- **Local Groundwater Use Ordinance –** The City of Tecumseh and TPC worked with the MDEQ to develop a Groundwater Use Ordinance, which the City of Tecumseh passed on June 6, 2011. This ordinance restricts groundwater use within a restricted area, which includes the area of affected groundwater, as well as an approximately one block buffer zone around the area of affected groundwater. Groundwater use is restricted as follows:
  - The installation, development, maintenance, and use of private water wells is prohibited;
  - Connection to the municipal water supply is required; and
  - Existing private water wells must be abandoned.
- **Decommission Private Wells in the Vicinity of Affected Groundwater –** In conjunction with the preparation of the Groundwater Use Ordinance, TPC agreed to identify and abandon, with owner consent, private wells within the restricted zone. On March 25, 2011, RMT (now TRC), on behalf of TPC, mailed a letter to each of the property owners affected by the proposed ordinance. The letters included a well survey card. On May 12, 2011, June 30, 2011, and again on August 8, 2011, follow-up letters with additional copies of the well survey cards were sent to property owners that had not yet responded. A phone survey and/or a door-to-door survey were conducted by TPC at properties which did not return the well survey card. The well survey did not identify any additional wells that are used as a primary water source. At the three properties within the area of affected groundwater where private wells were used as the primary water source, TPC arranged for connection to the municipal water supply (November 2011) and decommissioned those wells (December 2011). In January 2012, the remaining property with a well that is in use as a primary water supply was connected to the municipal water supply; this well is within the restricted area, but outside the area of affected groundwater. In December 2011, TPC initiated communication with the remaining

private well owners regarding well abandonment at their properties. Well abandonment at these properties was completed in June 2012.

- **Mitigation of Indoor Air (On-Site) –** In February 2012, the site was purchased by Tecumseh Food Machinery & Engineering, LLC (TFME). TFME has dismissed on-site security. Currently the site is occupied by the new TFME site manager who works out of an office located in the old security area (S-Building), and two temporary TFME employees who are in the process of scrapping the equipment TFME has stored on site. A sub-slab depressurization/ventilation (SSDV) system was installed in S-Building in October 2011. TPC employees, who occupied the engineering area (Area H and Area J) under a lease with the new owners since December 2009, have completed their relocation to the new TPC facility, and no longer occupy the former TPC site.

  Currently TFME plans to separate P-Building and S-Building from the remainder of the plant, so that, that portion of the facility can be leased or sold as a separate parcel, and to demolish the remainder of the facility. A soil vapor extraction system to mitigate the volatilization to indoor air migration pathway in P-Building was installed during the second quarter 2012.

- **Mitigation of Indoor Air (Off-Site) –** SSDV system installation and/or crawlspace sampling activities were conducted in October 2011 and again in May 2012 at the five residential properties east of the site. In addition, a permeable reactive barrier (PRB) was installed downgradient of the southern source area, along the former TPC site property line in May 2011. This PRB is an interim, proactive, corrective measure designed to address the potential off-site vapor intrusion pathway, by treating shallow CVOC-affected groundwater before the groundwater migrates off-site.

- **Control Unacceptable Risks to the Environment –** At present no unacceptable risks to the environment have been identified.

- **Stabilize Migration of Contaminated Groundwater –** The determination of stability of the affected groundwater is ongoing. A monitoring well network has been installed, and quarterly monitoring is underway to determine stability. In June 2012, a report titled "Statistical Evaluation of Groundwater Stability; Former Tecumseh Products Company Site; Tecumseh, Michigan; RCRA-05-2010-0012" was submitted to USEPA for review and comment. For 322 of the 328 parameter-well combinations evaluated, the trend was downward or stable. This evaluation indicates that the plume is stable.

- **Reporting**

  - **Environmental Indicators Report: Current Human Exposures under Control –** TRC submitted the Current Human Exposures Under Control Environmental Indicators

Report (September 2011 EI Report) to USEPA for review on September 29, 2011. USEPA provided TPC with comments regarding the EI Report on December 5, 2011. TPC responded to the USEPA comments on December 19, 2011. On December 28, 2011, USEPA proposed an extension for USEPA to complete the CA-725 Form until December 12, 2012, so that confirmation indoor air/crawlspace sampling data from the residential properties east of the site (610 Mohawk, 704 Mohawk, 502 Mohawk, 505 South Maumee Street and 507 South Maumee Street) can be evaluated by USEPA. TPC will provide supplemental information as it becomes available in 2012 to support USEPA completion of the CA-725 Form.

- **Environmental Indicators Report: Groundwater Stabilized –** TRC will prepare the Groundwater Stabilized Environmental Indicators Report following completion of the tasks listed above which relate to the stabilization of groundwater contamination. This Groundwater Stabilized Environmental Indicators Report will be submitted to the USEPA no later than September 29, 2012.
- **Remedial Investigation Report –** TRC will prepare the Remedial Investigation Report following completion of remedial investigation activities which determine the nature and extent of any releases of hazardous waste and hazardous constituents at or from the facility. This Remedial Investigation Report will be submitted to the USEPA no later than September 29, 2012.

2. Estimate of Percentage of Work Completed

- Work related to Remedial Investigation Report: 80% complete
- Work related to the Environmental Indicators Report – Current Human Exposures Under Control: 100% complete. TPC is performing confirmation sampling in 2012. USEPA has elected to review confirmation sampling prior to completing the CA-725 Form.
- Work related to the Environmental Indicators Report – Groundwater Stabilized: 90% complete

3. A Summary of Activities during the Reporting Period

- April 2012 – The "Workplan to Conduct a Pilot Study to Facilitate the Design and Installation of a Full-Scale Soil Vapor Extraction System: P-Building at 100 East Patterson Street" was submitted to USEPA.
- April 2012 – A right-of-way permit was obtained from the City of Tecumseh for the installation of additional monitoring points (temporary pressure points and soil gas sample points) in the city right-of-way.
- April 2012 – The second quarter groundwater sample event was conducted.

- April 2012 – Groundwater samples were collected at PRB monitoring locations.
- April 2012 – TRC completed a SSDV system inspection in S-Building in conjunction with the pilot SVE system step-rate tests. No changes were noted in system operation.
- April-May 2012 – The pilot SVE system was installed, system performance evaluation, and full-scale system design was conducted as described in the Workplan.
- May 2012 – TRC provided USEPA and the current site owner with letter report documenting the results of the February 2012 SSDV system performance evaluation including confirmation indoor air sample results for the SSDV system installed in S-Building in October 2011.
- May 2012 – TRC conducted a SSDV system performance evaluation at 704 Mohawk including indoor air and system effluent samples.
- May 2012 – TRC collected confirmation crawl space samples at the four residential properties east of the site where a SSDV system has not been installed.
- May 2012 – The "Full-Scale Soil Vapor Extraction System Design and Installation Workplan" was submitted to USEPA for review.
- May-June 2012 – Piping and extraction wells for the full-scale SVE system were installed, and step-rate tests were conducted as described in the Full-Scale SVE System Workplan.
- June 2012 – Permanent power was installed for the SVE system blower.
- June 2012 – A round of methane readings was collected at passive vents installed along the length of the PRB.
- June 2012 – Three replacement soil gas monitoring points and five new soil gas monitoring points were installed northeast, north and west of the site.
- June 2012 – The remaining private wells in the vicinity of affected groundwater were abandoned.
- June 2012 – TRC provided USEPA and the homeowner with results of the 704 Mohawk SSDV system inspection and performance evaluation, including indoor air sample results.
- June 2012– TRC provided USEPA and affected property owners with the results of crawlspace samples collected in May 2011.
- June 2012 – Groundwater isoconcentration maps were submitted to USEPA for review including supporting information, specifically, tabulated groundwater data including sample depth, sample date and VOC concentration and a complete set of soil boring logs and well construction forms.

- June 2012 – The Application for Mixing Zone-Based GSI Criteria was submitted to MDEQ for review and determination.
- June 2012 – A round of off-site soil gas samples was collected.
- April-June 2012 – TPC employees, who occupied the engineering area (Area H and Area J) under a lease with the new owners since December 2009, completed their relocation to a new facility. TPC employees no longer occupy the site.
- May-June 2012 – TRC updated groundwater stability calculations to include second quarter 2012 data and submitted a report titled "Statistical Evaluation of Groundwater Stability; Former Tecumseh Products Company Site; Tecumseh, Michigan; RCRA-05-2010-0012" to USEPA for review and comment.

4. A Summary of Contacts with Representatives of Local Community, Public Interest Groups, or State Government during the Reporting Period

- At the request of one property owner, TPC provided that owner with a copy of the First Quarter 2012 Progress Report.
- TRC communicated with the Tecumseh District Library personnel in order to update the public repository at the Tecumseh District Library in April 2012.
- In April 2012, TRC obtained a right-of-way permit from the City of Tecumseh for the installation of multi-level vacuum monitoring points and soil gas sample points.
- In May 2012, TRC communicated with the owner of a residential property east of the site regarding the regular quarterly SSDV system inspection.
- In May 2012, TRC communicated with property owners east of the site regarding crawl space sampling activities.
- In June 2012, TPC communicated with property owners to facilitate well abandonment at properties in the vicinity of affected groundwater.
- In June 2012, TRC submitted an Application for Mixing Zone-Based GSI Criteria to the MDEQ.

5. A Summary of Problems and Potential Problems Encountered During the Reporting Period

- See the Data Quality Assurance section in the attached technical memorandum (Appendix A).

6. Action Taken to Rectify Problems Identified Above

- See the Data Quality Assurance section in the attached technical memorandum (Appendix A).

7. Changes in Personnel during Reporting Period

- No project personnel have changed.

8. Projected Work for the Next Reporting Period

- Prepare an evaluation of the northeast clay layer's protectiveness with regard to the potential for vapor intrusion including soil boring logs, well construction forms, and second quarter 2012 soil gas sample results;
- Install the permanent blower for the full-scale soil vapor extraction system in P-Building and re-balance the system;
- Prepare a construction documentation report for the full-scale SVE system;
- Conduct a quarterly SSDV system performance evaluation at S-Building;
- Implement source area investigation activities to support preparation of the remedial investigation report;
- Collect the third quarter PRB groundwater samples;
- Evaluate and document the results of PRB groundwater data;
- Conduct a quarterly SSDV system performance evaluation at the residential property located at 704 Mohawk;
- Following receipt of well abandonment forms from the subcontractor, document private well abandonment within the area restricted by the City of Tecumseh's Groundwater Use Ordinance;
- Collect and analyze another round of off-site soil gas samples;
- Prepare and submit a figure illustrating the locations of major utilities around the site;
- Prepare and submit a summary of site specific groundwater contact criteria calculations for TCE;
- Conduct and evaluate the third quarter groundwater sampling event;
- Collect a confirmation sample from the groundwater seep located near the former Blood Road Bridge;
- Update the statistical evaluation of groundwater stability to include third quarter 2012 groundwater data;
- Prepare tables which compare the ATC Phase II investigation results to Part 201 criteria and Rule 57 water quality values;

- Following receipt of USEPA comments, finalize the Quality Assurance Project Plan (QAPP);
- Prepare and submit an Environmental Indicators – Groundwater Stabilized Report supporting completion of the of RCRA Form CA750, Documentation of Environmental Indicator Determination – Migration of Contaminated Groundwater Under Control, which will demonstrate compliance with paragraph 13(b) and applicable portions of paragraph 14 of the Administrative Order on Consent; and
- Prepare and submit a Remedial Investigation Report to USEPA.

VI. Work to be Performed – Final Corrective Measures Proposal

Preparation of the Final Corrective Measures Proposal will be initiated following completion of the Remedial Investigation Report and the Environmental Indicators Reports.

VI. Work to be Performed – Final Corrective Measures Implementation

Work related to the Final Corrective Measures Implementation will be initiated following USEPA's Final Decision.

VI. Work to be Performed – Establish Public Repository of Information

TPC established a public repository in the City Clerk's office at City Hall in August 2010. To address USEPA comments, the public repository was relocated to the Tecumseh District Library in November 2011. A notice sheet has been posted on the bulletin board at the Tecumseh District Library which lists and briefly describes the documents included in the public repository. TPC updates the public repository as appropriate.

VII. Access

No new access agreements were obtained during the Second Quarter 2012.

VIII. Cost Estimates and Assurances of Financial Responsibility

In accordance with the Consent Order, TPC submitted an annually updated cost estimate on January 30, 2012 and updated Financial Assurance documents on March 20, 2012.

If you have any questions regarding this progress report, or the attachments, please contact me at (734) 585-7813, or gcrockford@trcsolutions.com.

Sincerely,

TRC Environmental Corporation

Graham Crockford, C.P.G.
Project Manager

Appendix A
Summary of Second Quarter 2012 Groundwater Monitoring Event

Technical Memorandum

To:	Jason Smith, Tecumseh Products Company
From:	Stacy Metz and Graham Crockford, TRC
Subject:	Second Quarter 2012 Groundwater Monitoring Event RCRA 3008(h) Consent Order (RCRA-05-2010-0012) - Tecumseh Products Company
Date:	June 28, 2012
cc:	Roger Jackson, Tecumseh Products Company Douglas McClure, Conlin, McKenney and Philbrick, PC
Project No.:	004304.0001.0000, Phase 2

Tecumseh Products Company (TPC) retained TRC Environmental Corporation (TRC), Inc., to investigate soil and groundwater conditions at the former TPC site located in Tecumseh, Michigan. TRC has been assisting TPC with investigative activities in accordance with the RCRA Administrative Order on Consent ("AOC")(RCRA 05-2010-0012) for the site.

These investigation activities included the installation of 44 groundwater monitoring wells. Quarterly groundwater monitoring was initiated in December 2009. Quarterly sampling activities are conducted in accordance with the Quality Assurance Project Plan (QAPP) which was submitted to the United States Environmental Protection Agency (USEPA) for review in August 2010 and the Quarterly Sampling Plan described below. Quarterly monitoring was implemented to determine the nature and extent of volatile organic compounds (VOCs) in groundwater that exceed applicable and relevant Michigan Part 201 cleanup criteria and USEPA-approved groundwater screening levels for vapor intrusion, and to determine the stability of VOC concentrations in groundwater over time as required under paragraph 13(b) of the AOC.

Summary of the Quarterly Sampling Plan

The sampling plan is summarized below:

- Quarterly Monitoring
  - Collect static groundwater measurements at each of the groundwater monitoring wells. Note that monitoring well MW-09s was excavated during the installation of the permeable reactive barrier (PRB) in May 2011, and is no longer part of the monitoring program. Since that time, static water levels at monitoring wells PRB-01s and PRB-02s, which are part of

the PRB monitoring network, have been collected in conjunction with regular quarterly monitoring to help define groundwater elevations and flow direction along the eastern perimeter of the site.

- Collect static water levels at each of the two gauge point locations on the River Raisin.
- Use low-flow sampling techniques to collect groundwater samples at all groundwater monitoring well locations, except at monitoring wells MW-08s, MW-10d, and MW-16s. The following field parameters are measured during groundwater sample collection: pH, specific conductivity, redox potential, dissolved oxygen, turbidity and temperature. Groundwater samples are submitted to the analytical laboratory for VOCs analysis.
- Collect a surface water sample from the wetland area for VOCs analysis.

- Semi-Annual Monitoring (conducted during the second and fourth quarters)
  - Conduct all quarterly monitoring as described above.
  - At a subset of the groundwater monitoring wells (MW-01s, MW-03s, MW-04s, MW-06s, MW-10s, MW-14d, MW-17s, MW-18s, MW-19s, MW-19d, MW-21, MW-23, MW-24s, MW-24d, MW-27s, MW-27d, MW-32s, MW-33s, and MW-34s), collect samples for analysis of monitored natural attenuation (MNA) parameters: chloride, nitrate, sulfate and ferrous iron.
  - Previous semi-annual monitoring included the collection of drinking water samples from private wells identified in and around the area of VOC-affected groundwater for VOCs analysis. A groundwater use ordinance, restricting the use of private wells within the area of VOC-affected groundwater was passed by the City of Tecumseh during the second quarter of 2011. These wells were decommissioned in December 2011 and are no longer part of the monitoring program; properties not previously connected to municipal water were connected prior to well decommissioning in November 2011.

This sampling plan was developed to determine the nature and extent of groundwater contamination at and emanating from the facility, and also to assist in demonstrating stability of VOC concentrations in groundwater per paragraph 13(b) of the AOC. As such, sampling activities are conducted in accordance with the QAPP which was submitted to the USEPA for review in August 2010, and VOC data are evaluated based on level 4 data quality objectives. Once the stability of chlorinated VOCs in groundwater has been assessed using appropriate statistical methods, the sampling plan (*e.g.* sample locations, frequency, and data quality objectives) may be modified to reflect changing project objectives.

Summary of Field Activities

TRC conducted the second quarter sampling activities between April 2, 2012 and April 9, 2012 in accordance with the sampling plan described above. Samples were analyzed by TriMatrix Laboratories, Inc. (TriMatrix). Sample locations are shown on Figure 1. Static water elevations are provided in Table 1. Field-collected data (pH, specific conductivity, redox potential, dissolved oxygen, turbidity and temperature) are provided in Table 2. Laboratory analytical data are provided

in Attachment 1 (Second Quarter 2012 Analytical Data). A summary of detected VOCs is included as Table 3, and a summary of MNA parameters is included as Table 4.

Evaluation of Groundwater Chemical Data

Water chemistry data are summarized in Tables 2, 3, and 4. The constituents of concern at the site are chlorinated VOCs (CVOCs), specifically trichloroethene (TCE), 1,1,1-trichloroethane (TCA) and their breakdown products (cis-1,2-dichloroethene [cis-DCE] and vinyl chloride). The highest concentrations of TCE (>1,000 micrograms per liter [ug/L]) are found in the north at monitoring wells MW-4s and MW-32s and in the south at monitoring wells MW-34s and MW-1s and along the eastern site perimeter near the location of abandoned monitoring well MW-9s. The highest concentrations of TCA (>400 ug/L) are found at monitoring wells MW-1s and MW-34s in the south. The highest concentrations of degradation products (>1,000 ug/L) are found downgradient of the northern source area at monitoring wells MW-3s and MW-4s.

CVOC concentrations were compared to Michigan Department of Environmental Quality (MDEQ) Part 201 criteria (Remediation and Redevelopment Division, Operational Memorandum No. 1, January 23, 2006, as amended March 25, 2011) and groundwater screening levels (GWSLs) for vapor intrusion. Figure 2 shows the horizontal extent of VOCs above relevant Part 201 criteria. No new exceedences of Part 201 criteria or residential GWSLs were identified.

On June 21, 2012, TRC submitted a report titled "Statistical Evaluation of Groundwater Stability". This evaluation was prepared to support completion of RCRA Form CA750, Documentation of Environmental Indicator Determination – Migration of Contaminated Groundwater Under Control (Contaminated Groundwater Under Control EI Determination), for the former Tecumseh Products Company Site located in Tecumseh, Michigan, pursuant to the requirements of paragraph 13(b) of the AOC. The groundwater stability evaluation was conducted using quarterly groundwater monitoring data from 40 monitoring wells (previously 41 monitoring wells), including 14 upgradient/sidegradient wells, 12 on-site monitoring wells (including MW-09s which was excavated during installation of the permeable reactive barrier), and 15 downgradient wells. Groundwater chemistry data collected between March 2009 and April 2012 were used to conduct intra-well data comparisons and trend analysis for the evaluation of groundwater stability. A minimum of 8 sample events have been conducted at each monitoring location. Statistical evaluation and analysis was performed on compounds that have been detected above Michigan Part 201 residential drinking water criteria at one or more of the 41 monitoring locations: PCE, TCE, 1,1-DCE, cis-1,2-DCE, trans-1,2-DCE, vinyl chloride, 1,1,1-TCA, and 1,1-DCA.

For 322 of the 328 parameter-well combinations evaluated, the trend was downward or stable. Using Mann-Kendall trend analysis, statistically significant trends were identified for 21 parameter-well combinations: 6 upward trends and 15 downward trends. Using Sen's slope trend analysis, statistically significant trends were identified for 18 parameter-well combinations: 6 upward trends and 12 downward trends. All of the trends identified using Sen's slope trend tests were also identified using Mann-Kendall trend tests. This evaluation concludes that overall, the plume is stable.

The few parameter-well combinations that had increasing concentrations represent local variability in groundwater flow and transport or the represent increases in breakdown products of TCA and TCE caused by natural reductive dechlorination. See the "Statistical Evaluation of Groundwater Stability" Report for further information.

Groundwater Flow Rate and Direction

The groundwater elevation data collected in April 2012 were used to construct a groundwater contour map and to determine the direction of groundwater flow and hydraulic gradient within the unconsolidated sand underlying the site (Figure 3). Three years of quarterly water level data (March 2009 through April 2012) have been collected (Table 1), and the depth to groundwater and the direction of groundwater flow are generally consistent during this period. Groundwater flow at the former TPC site and surrounding study area is generally east toward the River Raisin, the nearest body of water, located 1,500 to 2,500 feet east of the site. The River Raisin is the regional discharge feature for groundwater beneath the former TPC site. A mean horizontal hydraulic gradient of 0.001 was measured across the former TPC property. Data from *in situ* hydraulic conductivity tests indicate that the hydraulic conductivity of the unconfined sand and gravel aquifer ranges from 0.014 to 0.077 centimeters per second (cm/s), consistent with a sand and gravel aquifer. Assuming a porosity of 0.3, the resultant estimated groundwater velocity ranges from 4.7×10^{-5} to 2.6×10^{-4} cm/s (48 to 265 feet per year).

The vertical hydraulic gradient in the upper sand/gravel aquifer was evaluated at eight of the ten nested well pairs (MW-10s/d, MW-12s/d, MW-19s/d, MW-20s/d, MW-24s/d, MW-27s/d, MW-28s/d, and MW-30s/d). Because water at monitoring well MW-14s is perched with an unsaturated zone between monitoring well MW-14s and monitoring well MW-14d, the vertical gradient at this nested well pair was not evaluated. At well pairs MW-19s/d, MW-24s/d, and MW-28s/d along the western (upgradient) portion of the site, the measured vertical hydraulic was essentially neutral (ranging from -0.0005 to 0.0033). Northeast of the site the hydraulic gradient varied from downward at well pairs MW-29s/d (-0.062) and MW-12s/d (-0.016) to near neutral at well pair MW-30s/d (0.0069). At well pairs MW-10s/d, MW-20s/d, and MW-27s/d east/southeast (downgradient) of the site, a downward hydraulic gradient ranging from (-0.20 to -0.68) was measured, with the downward hydraulic gradient increasing to the south. This significant vertical downward gradient in the upper sand/gravel aquifer east/southeast of the site is the result of a higher conductivity sand and gravel deposit that underlies the sand deposit and a significant change in surface topography.

The surface topography drops steeply downgradient of the site from an approximate elevation of 780 feet above mean sea level (ft MSL) to an approximate elevation of 750 ft MSL in the wetland area adjacent to the River Raisin. East of the site, in proximity to the change in surface elevation, the horizontal hydraulic gradient increases (Figure 3). East/southeast of the site, the presence of discontinuous gravel and/or sand with gravel units that are more conductive than the bulk of the sand aquifer facilitates the decrease in static water elevation. Vertical groundwater movement is impeded by the continuous clay layer underlying the gravel deposit.

VOCs in Surface Water

Water chemistry data for the wetland sample (WL-01) and the Blood Road bridge seep sample (SEEP) collected in April 2012 can be found in Attachment 1. No VOCs were detected at either surface water sample location.

Data Quality Assurance

Field Data

Field data were reviewed in accordance with the QAPP. TRC field personnel collected water levels and water quality data (pH, specific conductivity, redox potential, dissolved oxygen, turbidity and temperature) consistent with the quarterly sampling plan described above. No problems were noted. The data quality objectives for the field data were met, and the data are usable.

Laboratory Data

Forty-five water samples, including 3 duplicates, were collected by TRC between April 2, 2012 and April 9, 2012. Samples were analyzed by TriMatrix, located in Grand Rapids, Michigan for VOCs by USEPA Method 8260B following protocols specified in the QAPP. TRC performed data validation on the VOC laboratory data. Overall, the data quality objectives and laboratory completeness goals for the project were met, and the data are usable. The procedures specified in the methods were implemented, and the data package contained all of the deliverables necessary for validation of the analytical data. The complete laboratory data validation report is included in Attachment 2.

Notes:

Survey conducted to feet mean sea level by Midwestern Consultants, Inc. (2009 - 2010)

ft MSL - feet above mean sea level

ft BTOC - feet below top of casing

NI - Not installed at time of measurement

Dry - Insufficient groundwater present for measurement

NM - Not measured

* Measured depth to water is anomalous. Datum was not used.

Notes:

Survey conducted to feet mean sea level by Midwestern Consultants, Inc. (2009 - 2010)

ft MSL - feet above mean sea level

ft BTOC - feet below top of casing

NI - Not installed at time of measurement

Dry - Insufficient groundwater present for measurement

NM - Not measured

* Measured depth to water is anomalous. Datum was not used.

	1/10/2012	7.13	652	98	4.97	5.28	15.59
	4/4/2012	7.32	647	25	4.95	8.0	14.68

Notes:
S.U. = standard pH units
umhos/cm = micromhos per centimeter
mV = millivolts
mg/L = milligrams per liter
NTU = nephelometric turbidity units
°C = degrees Celsius
* = Dissolved oxygen measurement recorded in percent of saturation, not mg/L
NM = not measured

Table 3
Summary of Detected Volatile Organic Compounds in Groundwater
Former Tecumseh Products Company Site
Tecumseh, Michigan
Second Quarter 2012

Analyte		2-Butanone	Chloroethane	1,1-Dichloroethane	1,1-Dichloroethene[2]	cis-1,2-Dichloroethene	trans-1,2-Dichloroethene	Tetrachloroethene	1,1,1-Trichloroethane	Trichloroethene	Trichloro-fluoromethane	Vinyl Chloride

Notes:

Residential and Non-Residential Drinking Water (DW) Criteria, Groundwater Surface Water Interface (GSI) Criteria, and Groundwater Contact Criteria from MDEQ RRD Op Memo 1 Part 201 Generic Cleanup Criteria/Part 213 Risk Based Cleanup Levels, January 23, 2006, as amended March 25, 2011.

Groundwater Screening Levels (GWSLs) for Vapor Intrusion were calculated in accordance with the MDEQ Remediation and Redevelopment Division Program Redesign 2009 document titled *Background Document: Draft Proposed Vapor Intrusion Indoor Air Criteria (IAC), Soil Gas Criteria (SGC), and Groundwater Screening Levels (GW $_{VI}$ SLs) for Vapor Intrusion,* using both residential and non-residential exposure scenarios and the most recent chemical specific toxicity values accepted and/or published by the United States Environmental Protection Agency (USEPA) as of February 1, 2012.

ug/L = micrograms per liter

NC = No criteria

NA = Not analyzed

Bold font denotes concentrations detected above laboratory reporting limits

Denotes concentrations above one or more criteria

1) Criterion is not protective for surface water used as a drinking water source as described in footnote {X} of MDEQ Op Memo 1 Part 201, Attachment 1.
2) Compound may exhibit characteristic ignitability as defined in 40 C.F.R. § 261.21
3) The average temperature in this sample shipment exceeded the recommended temperature range. Sample results are approximate.
4) Quality control results for trichloroethene are outside the established control limits, the result is approximate.
5) Headspace present in the sample, results are approximate.

Notes:
Residential and Non-Residential Drinking Water (DW) Criteria, Groundwater Surface Water Interface (GSI) Criteria, and Groundwater Contact Criteria from MDEQ RRD Op Memo 1 Part 201 Generic Cleanup Criteria/Part 213 Risk Based Cleanup Levels, January 23, 2006, as amended March 25, 2011.
Groundwater Screening Levels (GWSLs) for Vapor Intrusion were calculated in accordance with the MDEQ Remediation and Redevelopment Division Program Redesign 2009 document titled *Background Document: Draft Proposed Vapor Intrusion Indoor Air Criteria (IAC), Soil Gas Criteria (SGC), and Groundwater Screening Levels (GW$_{VI}$ SLs) for Vapor Intrusion*, using both residential and non-residential exposure scenarios and the most recent chemical specific toxicity values accepted and/or published by the United States Environmental Protection Agency (USEPA) as of February 1, 2012.
ug/L = micrograms per liter
NC = No criteria
NA = Not analyzed
Bold font denotes concentrations detected above laboratory reporting limits
Denotes concentrations above one or more criteria
1) Criterion is not protective for surface water used as a drinking water source as described in footnote {X} of MDEQ Op Memo 1 Part 201, Attachment 1.
2) Compound may exhibit characteristic ignitability as defined in 40 C.F.R. § 261.21
3) The average temperature in this sample shipment exceeded the recommended temperature range. Sample results are approximate.
4) Quality control results for trichloroethene are outside the established control limits, the result is approximate.
5) Headspace present in the sample, results are approximate.

Notes:

Residential and Non-Residential Drinking Water (DW) Criteria, Groundwater Surface Water Interface (GSI) Criteria, and Groundwater Contact Criteria from MDEQ RRD Op Memo 1 Part 201 Generic Cleanup Criteria/Part 213 Risk Based Cleanup Levels, January 23, 2006, as amended March 25, 2011.

Groundwater Screening Levels (GWSLs) for Vapor Intrusion were calculated in accordance with the MDEQ Remediation and Redevelopment Division Program Redesign 2009 document titled *Background Document: Draft Proposed Vapor Intrusion Indoor Air Criteria (IAC), Soil Gas Criteria (SGC), and Groundwater Screening Levels (GW_{VI} SLs) for Vapor Intrusion,* using both residential and non-residential exposure scenarios and the most recent chemical specific toxicity values accepted and/or published by the United States Environmental Protection Agency (USEPA) as of February 1, 2012.

ug/L = micrograms per liter

NC = No criteria

NA = Not analyzed

Bold font denotes concentrations detected above laboratory reporting limits

Denotes concentrations above one or more criteria

1) Criterion is not protective for surface water used as a drinking water source as described in footnote {X} of MDEQ Op Memo 1 Part 201, Attachment 1.
2) Compound may exhibit characteristic ignitability as defined in 40 C.F.R. § 261.21
3) The average temperature in this sample shipment exceeded the recommended temperature range. Sample results are approximate.
4) Quality control results for trichloroethene are outside the established control limits, the result is approximate.
5) Headspace present in the sample, results are approximate.

Table 3
Summary of Detected Volatile Organic Compounds in Groundwater
Former Tecumseh Products Company Site
Tecumseh, Michigan
Second Quarter 2012

Analyte		2-Butanone	Chloroethane	1,1-Dichloroethane	1,1-Dichloroethene[2]	cis-1,2-Dichloroethene	trans-1,2-Dichloroethene	Tetrachloroethene	1,1,1-Trichloroethane	Trichloroethene	Trichloro-fluoromethane	Vinyl Chloride
Residential DW Criteria		13,000	430	880	7.0	70	100	5.0	200	5.0	2,600	2.0
Non-Residential DW Criteria		38,000	1,700	2,500	7.0	70	100	5.0	200	5.0	7,300	2.0

NC = No criteria
NA = Not analyzed
Bold font denotes concentrations detected above laboratory reporting limits
Denotes concentrations above one or more criteria
1) Criterion is not protective for surface water used as a drinking water source as described in footnote {X} of MDEQ Op Memo 1 Part 201, Attachment 1.
2) Compound may exhibit characteristic ignitability as defined in 40 C.F.R. § 261.21
3) The average temperature in this sample shipment exceeded the recommended temperature range. Sample results are approximate.
4) Quality control results for trichloroethene are outside the established control limits, the result is approximate.
5) Headspace present in the sample, results are approximate.

Table 3
Summary of Detected Volatile Organic Compounds in Groundwater
Former Tecumseh Products Company Site
Tecumseh, Michigan
Second Quarter 2012

Analyte		2-Butanone	Chloroethane	1,1-Dichloroethane	1,1-Dichloroethene[2]	cis-1,2-Dichloroethene	trans-1,2-Dichloroethene	Tetrachloroethene	1,1,1-Trichloroethane	Trichloroethene	Trichloro-fluoromethane	Vinyl Chloride

Notes:
Residential and Non-Residential Drinking Water (DW) Criteria, Groundwater Surface Water Interface (GSI) Criteria, and Groundwater Contact Criteria from MDEQ RRD Op Memo 1 Part 201 Generic Cleanup Criteria/Part 213 Risk Based Cleanup Levels, January 23, 2006, as amended March 25, 2011.
Groundwater Screening Levels (GWSLs) for Vapor Intrusion were calculated in accordance with the MDEQ Remediation and Redevelopment Division Program Redesign 2009 document titled *Background Document: Draft Proposed Vapor Intrusion Indoor Air Criteria (IAC), Soil Gas Criteria (SGC), and Groundwater Screening Levels (GW_{VI} SLs) for Vapor Intrusion,* using both residential and non-residential exposure scenarios and the most recent chemical specific toxicity values accepted and/or published by the United States Environmental Protection Agency (USEPA) as of February 1, 2012.
ug/L = micrograms per liter
NC = No criteria
NA = Not analyzed
Bold font denotes concentrations detected above laboratory reporting limits
Denotes concentrations above one or more criteria
1) Criterion is not protective for surface water used as a drinking water source as described in footnote {X} of MDEQ Op Memo 1 Part 201, Attachment 1.
2) Compound may exhibit characteristic ignitability as defined in 40 C.F.R. § 261.21
3) The average temperature in this sample shipment exceeded the recommended temperature range. Sample results are approximate.
4) Quality control results for trichloroethene are outside the established control limits, the result is approximate.
5) Headspace present in the sample, results are approximate.

Notes:

Residential and Non-Residential Drinking Water (DW) Criteria, Groundwater Surface Water Interface (GSI) Criteria, and Groundwater Contact Criteria from MDEQ RRD Op Memo 1 Part 201 Generic Cleanup Criteria/Part 213 Risk Based Cleanup Levels, January 23, 2006, as amended March 25, 2011.

Groundwater Screening Levels (GWSLs) for Vapor Intrusion were calculated in accordance with the MDEQ Remediation and Redevelopment Division Program Redesign 2009 document titled *Background Document: Draft Proposed Vapor Intrusion Indoor Air Criteria (IAC), Soil Gas Criteria (SGC), and Groundwater Screening Levels (GW$_{VI}$ SLs) for Vapor Intrusion,* using both residential and non-residential exposure scenarios and the most recent chemical specific toxicity values accepted and/or published by the United States Environmental Protection Agency (USEPA) as of February 1, 2012.

ug/L = micrograms per liter

NC = No criteria

NA = Not analyzed

Bold font denotes concentrations detected above laboratory reporting limits

Denotes concentrations above one or more criteria

1) Criterion is not protective for surface water used as a drinking water source as described in footnote {X} of MDEQ Op Memo 1 Part 201, Attachment 1.
2) Compound may exhibit characteristic ignitability as defined in 40 C.F.R. § 261.21
3) The average temperature in this sample shipment exceeded the recommended temperature range. Sample results are approximate.
4) Quality control results for trichloroethene are outside the established control limits, the result is approximate.
5) Headspace present in the sample, results are approximate.

Table 3
Summary of Detected Volatile Organic Compounds in Groundwater
Former Tecumseh Products Company Site

Notes:

Residential and Non-Residential Drinking Water (DW) Criteria, Groundwater Surface Water Interface (GSI) Criteria, and Groundwater Contact Criteria from MDEQ RRD Op Memo 1 Part 201 Generic Cleanup Criteria/Part 213 Risk Based Cleanup Levels, January 23, 2006, as amended March 25, 2011.

Groundwater Screening Levels (GWSLs) for Vapor Intrusion were calculated in accordance with the MDEQ Remediation and Redevelopment Division Program Redesign 2009 document titled *Background Document: Draft Proposed Vapor Intrusion Indoor Air Criteria (IAC), Soil Gas Criteria (SGC), and Groundwater Screening Levels (GW_{VI} SLs) for Vapor Intrusion*, using both residential and non-residential exposure scenarios and the most recent chemical specific toxicity values accepted and/or published by the United States Environmental Protection Agency (USEPA) as of February 1, 2012.

ug/L = micrograms per liter

NC = No criteria

NA = Not analyzed

Bold font denotes concentrations detected above laboratory reporting limits

Denotes concentrations above one or more criteria

1) Criterion is not protective for surface water used as a drinking water source as described in footnote {X} of MDEQ Op Memo 1 Part 201, Attachment 1.
2) Compound may exhibit characteristic ignitability as defined in 40 C.F.R. § 261.21
3) The average temperature in this sample shipment exceeded the recommended temperature range. Sample results are approximate.
4) Quality control results for trichloroethene are outside the established control limits, the result is approximate.
5) Headspace present in the sample, results are approximate.

Notes:
Residential and Non-Residential Drinking Water (DW) Criteria, Groundwater Surface Water Interface (GSI) Criteria, and Groundwater Contact Criteria from MDEQ RRD Op Memo 1 Part 201 Generic Cleanup Criteria/Part 213 Risk Based Cleanup Levels, January 23, 2006, as amended March 25, 2011.
Groundwater Screening Levels (GWSLs) for Vapor Intrusion were calculated in accordance with the MDEQ Remediation and Redevelopment Division Program Redesign 2009 document titled *Background Document: Draft Proposed Vapor Intrusion Indoor Air Criteria (IAC), Soil Gas Criteria (SGC), and Groundwater Screening Levels (GW$_{VI}$ SLs) for Vapor Intrusion,* using both residential and non-residential exposure scenarios and the most recent chemical specific toxicity values accepted and/or published by the United States Environmental Protection Agency (USEPA) as of February 1, 2012.
ug/L = micrograms per liter
NC = No criteria
NA = Not analyzed
Bold font denotes concentrations detected above laboratory reporting limits
Denotes concentrations above one or more criteria
1) Criterion is not protective for surface water used as a drinking water source as described in footnote {X} of MDEQ Op Memo 1 Part 201, Attachment 1.
2) Compound may exhibit characteristic ignitability as defined in 40 C.F.R. § 261.21
3) The average temperature in this sample shipment exceeded the recommended temperature range. Sample results are approximate.
4) Quality control results for trichloroethene are outside the established control limits, the result is approximate.
5) Headspace present in the sample, results are approximate.

2. GROUND TOPOGRAPHY BASED OFF 7.5 MINUTE U.S.G.S TOPOGRAPHIC QUADRANGLE MAP AND GROUND SURVEY DATA.
3. MW-14S IS SCREENED IN A DIFFERENT, PERCHED, WATER BEARING UNIT THAN THE OTHER SHALLOW MONITORING WELLS ON-SITE. THE GROUNDWATER ELEVATION MEASURED AT MW-14D WAS USED TO DEVELOP GROUNDWATER CONTOURS, BECAUSE MW-14D IS SCREENED IN THE DEEPER WATER BEARING UNIT WHICH IS HYDRAULICALLY CONNECTED TO THE SITE.

Second Quarter 2012 Analytical Data

April 19, 2012

TRC Companies. - Ann Arbor Office
Attn: Ms. Stacy Metz
1540 Eisenhower Place
Ann Arbor, MI 48108

Project: Tecumseh Products

Dear Ms. Stacy Metz,

Enclosed is a copy of the laboratory report for the following work order(s) received by TriMatrix Laboratories:

Work Order	Received	Description
1204040	04/03/2012	Laboratory Services
1204065	04/04/2012	Laboratory Services
1204149	04/06/2012	Laboratory Services
1204228	04/11/2012	Laboratory Services

This report relates only to the sample(s) as received. Test results are in compliance with the requirements of the National Environmental Laboratory Accreditation Program (NELAP) and/or one of the following certification programs:

ACLASS DoD-ELAP/ISO17025 (#ADE-1542); Arkansas DEP (#10-046-0); Florida DEP (#E87622-24); Georgia EPD (#E87622-24); Illinois DEP (#002841); Kansas DPH (#E-10302); Kentucky DEP (#0021); Louisiana DEP (#03068); Michigan DPH (#0034); Minnesota DPH (#367345); New York ELAP (#44950); North Carolina DNRE (#659); Texas CEQ (#T104704495-11-1); Virginia DCLS (#1239); Wisconsin DNR (#999472650); USDA Soil Import Permit (#P330-09-00163).

Any qualification or narration of results, including sample acceptance requirements and test exceptions to the above referenced programs, is presented in the Statement of Data Qualifications section of this report. Estimates of analytical uncertainties and certification documents for the test results contained within this report are available upon request.

April 19, 2012

TRC Companies. - Ann Arbor Office
Attn: Ms. Stacy Metz
1540 Eisenhower Place
Ann Arbor, MI 48108

Project: Tecumseh Products

Dear Ms. Stacy Metz,

Enclosed is a copy of the laboratory report for the following work order(s) received by TriMatrix Laboratories:

Work Order	Received	Description
1204039	04/03/2012	Laboratory Services
1204066	04/04/2012	Laboratory Services
1204101	04/05/2012	Laboratory Services

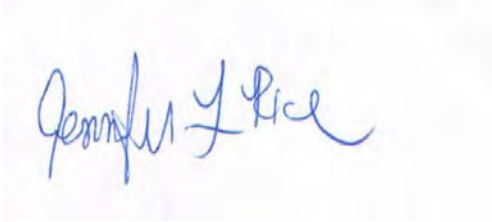
This report relates only to the sample(s) as received. Test results are in compliance with the requirements of the National Environmental Laboratory Accreditation Program (NELAP) and/or one of the following certification programs:

ACLASS DoD-ELAP/ISO17025 (#ADE-1542); Arkansas DEP (#10-046-0); Florida DEP (#E87622-24); Georgia EPD (#E87622-24); Illinois DEP (#002841); Kansas DPH (#E-10302); Kentucky DEP (#0021); Louisiana DEP (#03068); Michigan DPH (#0034); Minnesota DPH (#367345); New York ELAP (#44950); North Carolina DNRE (#659); Texas CEQ (#T104704495-11-1); Virginia DCLS (#1239); Wisconsin DNR (#999472650); USDA Soil Import Permit (#P330-09-00163).

Any qualification or narration of results, including sample acceptance requirements and test exceptions to the above referenced programs, is presented in the Statement of Data Qualifications section of this report. Estimates of analytical uncertainties and certification documents for the test results contained within this report are available upon request.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,



Jennifer L. Rice
Project Chemist

STATEMENT OF DATA QUALIFICATIONS

Physical/Chemical Parameters by EPA/APHA/ASTM Methods

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample result is considered estimated.

Analysis: SM 4500-NO3 F 20th

Sample/Analyte:			
	1204039-01	MW-24s	Nitrogen, Nitrate

Qualification: Ferrous iron is unstable and easily changes to the ferric form in solutions in contact with air. Determination should be done in the field at the time of collection. Because analysis was performed in the lab, the reported value may not be representative.

Analysis: SM 3500-Fe B 20th

Sample/Analyte:			
	1204039-01	MW-24s	Iron, Ferrous
	1204039-02	MW-24d	Iron, Ferrous
	1204039-03	MW-17s	Iron, Ferrous
	1204039-04	MW-10s	Iron, Ferrous
	1204039-05	Dup-01	Iron, Ferrous
	1204039-06	MW-14d	Iron, Ferrous
	1204066-01	MW-27s	Iron, Ferrous
	1204066-02	MW-27d	Iron, Ferrous
	1204066-03	MW-18s	Iron, Ferrous
	1204066-04	MW-19d	Iron, Ferrous
	1204066-05	Dup-02	Iron, Ferrous
	1204066-06	MW-19s	Iron, Ferrous
	1204066-07	MW-6s	Iron, Ferrous
	1204066-08	MW-23	Iron, Ferrous
	1204101-01	MW-33s	Iron, Ferrous
	1204101-02	MW-32s	Iron, Ferrous
	1204101-03	MW-34s	Iron, Ferrous
	1204101-04	MW-3s	Iron, Ferrous
	1204101-05	MW-1s	Iron, Ferrous
	1204101-06	MW-21	Iron, Ferrous
	1204101-07	MW-4s	Iron, Ferrous

☐ _____

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form. If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.

Attachment 2
Data Validation Report

Laboratory Data Validation

April 2012 Groundwater Monitoring Event
Former Tecumseh Products Company Site
Tecumseh, Michigan

Forty groundwater samples, two surface water samples, and three field duplicates were collected between April 2nd and 9th, 2012, in addition to five trip blanks and two equipment rinsate blanks. These samples were analyzed by Trimatrix Laboratories, located in Grand Rapids, Michigan. The samples were analyzed for volatile organic analytes by USEPA Method 8260B following protocols specified in the Quality Assurance Project Plan (QAPP) for the former Tecumseh Products Company (TPC) site in Tecumseh, Michigan. TRC performed a validation of the laboratory data. The following sections summarize the data validation procedure and the results of the validation.

Validation Procedure

The analytical data were validated using the USEPA National Functional Guidelines for Organic Data Review (USEPA, 2008). The data validation included a review of the spike, duplicate, and blank results from the laboratory, as well as verification that the sample holding times were met. TRC reviewed additional QC information to check for appropriate matrix performance using the analytical method specified by the laboratory. The procedures TRC used to evaluate data in general included the following items:

- Checked technical holding times for analyses and sample receipt temperature;
- Reviewed QC data for blanks, matrix spikes, laboratory duplicates, and laboratory control samples;
- Determined field precision from blind field duplicate data; and
- Assessed the usability of the data.

The data validation report addresses the following items:

- Usability of the data if QC results suggest potential problems with all or some of the data;
- Potential sample contamination due to blank contributions; and
- Actions regarding specific QC criteria exceedences.

TRC reviewed internal standard areas and retention times, method blanks, project-specific matrix spike and matrix spike duplicate (MS/MSD) recoveries, field and laboratory duplicate relative percent differences (RPDs), Laboratory Control Sample (LCS) recoveries, holding times, and temperature.

Findings

The data quality objectives and laboratory completeness goals for the project were met, and the data are usable. The procedures specified in the methods were implemented, and the data packages were found to contain all of the deliverables necessary for validation of the analytical data. The discussion that follows describes the QA/QC results and evaluation.

- The laboratory met technical holding times for all samples. Samples were sent to the lab in four shipments. The sample temperatures met QC limits upon receipt in all shipments.
- Surrogate recoveries met QC limits.
- Internal standard areas and retention times were reviewed and found to be within acceptable QC limits.
- The laboratory performed an LCS with each analytical batch. LCS recoveries were within the laboratory control limits.
- Contaminants were not detected in the trip blanks or in the equipment rinsate blanks. Contaminants were not detected in the method blanks, with the following exceptions:
    - 2-Methylnaphthalene was detected in batches 1204387 and 1204663 at 9.6 µg/L and 8.8 µg/L, respectively. 2-Methylnaphthalene was not detected in any sample from either batch; therefore, no flags were assigned.
    - Iodomethane was detected in batch 1204787 at 4.3 µg/L. Iodomethane was not detected in any sample from that batch; therefore, no flags were assigned.
- Three field duplicate samples were collected. DUP-01 corresponded with sample MW-14d, DUP-02 corresponded with sample MW-19s, and DUP-03 corresponded with sample MW-21. No constituents were detected in DUP-01/MW-14d; therefore RPDs were not calculated from that data set. Calculated RPDs for the remaining samples were within QC limits. There were no laboratory duplicates.
- MS/MSD analyses were performed at a frequency of at least one per twenty samples in three batches. MS/MSD analyses were performed on samples MW-27s, MW-31, and MW-20s. Recoveries and RPDs were within QC limits for each MS/MSD.
