The Business Master File Statistics of Income (BMF SOI) extracts tax account and other data from the Business Master File (BMF) for the Statistics of Income Distributed Processing System (SOI DPS). This information is used by SOI for statistical reporting to Health and Human Services (HHS), Treasury, and Congressional committees.

B. PII DETAIL

- Does the system use, collect, receive, display, store, maintain, or disseminate IR Code 6103 taxpayer information; or any type of Sensitive but Unclassified (SBU) or Personally Identifiable Information (PII)? Yes
 - 6a. If **yes**, does the system use, collect, receive, display, store, maintain, or disseminate Social Security Numbers (SSN s) or tax identification numbers (i.e. last 4 digits, etc.)? Yes

If yes, check who the SSN (or tax identification number) is collected on.

Yes On Primary Yes On Spouse No On Dependent

If **yes**, check all types SSN s (or tax identification numbers) that apply to this system:

No Social Security Number (SSN)

No Individual Taxpayer Identification Number (ITIN)

No Taxpayer Identification Number for Pending U.S. Adoptions (ATIN)

No Practitioner Tax Identification Number (PTIN)

Describe the planned mitigation strategy and forecasted implementation date to mitigate or eliminate the use of SSN s (or tax identification numbers).

The Business Master File Statistics of Income (BMF SOI) system requires the use of EIN's because no other identifier can be used to uniquely identify a taxpayer for intergovernmental communications. There is no known mitigation strategy planned to eliminate the use of EINs for the system. The EIN is required for the use of this system. The EIN number is needed to research and locate records in response to the request. BMF SOI uses batch applications to extract taxpayer data from the BMF. This data is used as input into the Statistics of Income Distributed Processing System (SOI DPS).

Business Master File Statistics of Income (BMF SOI) extracts taxpayer data which could include names, address, social security numbers, tax account information etc. for Statistics of Income Distributed Processing System (SOI DPS) and various other projects within SOI. BMF SOI uses batch applications to extract taxpayer data (including PII) from the BMF from requirements that are developed by the business owner. SOI statistical gathering of return information for tax administration purposes.

8. How is the SBU/PII verified for accuracy, timeliness, and completeness? Explain how steps are taken to ensure that all information maintained by the system that is used by IRS to make any adverse determination about an individual's rights, benefits, and/or privileges is maintained with such accuracy, relevance, timeliness, and completeness as is reasonably necessary to assure fairness to the individual in the determination

There are several validation procedures to ensure that batches have run properly and contain properly formatted information; some of these are: - Control codes are used to verify complete files are transmitted - The Log Analysis and Reporting Services (LARS) system performs run-to-run balancing for each batch job run to ensure that no data is lost - Run to run balancing is used to verify that all files are processed through the complete input system and extract system as appropriate -Unit testing, system acceptability testing, and integration testing are used to ensure runs process data correctly -There are a series of tests performed on data such as the Compatibility Tests and the Final Integration tests to ensure the accuracy, timeliness and completeness of all Business Master File Statistics of Income (BMF SOI) processing. There are internal programming consistency checks and a record count to validate the data that is loaded into the SOI system is accurate. The data that SOI receives is from internal IRS systems which are deemed reliable and the data is validated for accuracy by the system sending the data as described in that system's PCLIA. Any determinations made are validated during the collection process and the taxpayer has appeal rights for any determinations made from the data.

- 21a. How is access to SBU/PII determined and by whom? The Business Master File Statistics of Income (BMF SOI) system utilizes the IRS On–Line application (OL-5081) application to document approvals for access to the IBM mainframe. Data access is granted on a need-to-know basis. A potential user must submit a request for access via IRS OL5081 to their local management for approval consideration. Users are not permitted access without a signed 5081 form from an authorized management official. Specific permissions (Read, Write, Modify, Delete, and/or Print) are defined on the OL5081 form and set (activated) by the System Administrator prior to the user being allowed access. User privileges and user roles determine the types of data that each user has access to. Management monitors system access and removes permissions when individuals no longer require access. Users are assigned to specific modules of the application and specific roles within the modules and accounts follow the principle of least privilege which provide them the least amount of access to PII data that is required to perform their business function after receiving appropriate approval. Data access is also Resource Access Control Facility (RACF) protected, and is granted on a need-to-know basis.
