## STANFORD BULLETIN 2015-16

### **ACCREDITATION**

Stanford University is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges (WASC), 985 Atlantic Avenue, Suite 100, Alameda, CA 94501; (510) 748-9001. In addition, certain programs of the University have specialized accreditation. For information, contact the Office of the University Registrar.

### **STATEMENT OF NONDISCRIMINATORY POLICY**

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email). Stanford's Acting Title IX Coordinator, Cathy Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), [titleix@stanford.edu](mailto:titleix@stanford.edu) (email).

### **GOVERNING DOCUMENT/RESERVATION OF RIGHTS**

Every effort is made to ensure that the degree requirement and course information, applicable policies, and other materials contained in the Stanford Bulletin are accurate and current. The University reserves the right to make changes at any time without prior notice. The Bulletin in the form as it exists online at Stanford Bulletin web site and ExploreCourses web site is therefore the governing document, and contains the then currently applicable policies and information. The University no longer produces an official printed copy version of the Bulletin. Courses of Instruction are available at the Stanford Bulletin's ExploreCourses web site.

---

### **ADDITIONAL INFORMATION**

Additional information on Stanford University can be obtained through Stanford's web site at <http://www.stanford.edu>.

# ACADEMIC CALENDAR

## 2015-16

This calendar is also available at the University Registrar's web site (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). All dates are subject to change at the discretion of the University.

### Autumn Quarter 2015-16

Date(s)	Day/Time	Description
August 1	Sat	Axess opens for course enrollment.
August 24	Mon	1st-year M.D. instruction begins.
August 27	Thu	2nd-year M.D. instruction begins.
August 31	Mon	Law School instruction begins for 1st-year J.D. students.
September 11	Fri, 5:00 p.m.	At-status enrollment deadline in order to receive stipend or financial aid refund within the first week of term.
September 11	Mon	MBA first-year instruction begins.
September 15	Tue	New undergraduates arrive; Convocation. Undergraduate housing opens for new students.
September 17	Thu	Undergraduate housing opens for returning students.
September 21	Mon	First day of quarter; instruction begins.
September 21	Mon, 5:00 p.m.	Preliminary Study List deadline. Students must be a "at status"; i.e., students must have a study list with sufficient units to meet requirements for their status, whether full-time, 8-9-10 units (graduate students only), or approved Special Registration Status. The late study list fee is \$200.
September 21	Mon, 5:00 p.m.	Deadline to submit Leave of Absence for full refund.
September 21	Mon	Law School instruction begins for 2nd- & 3rd-year J.D. & advanced degree students.
September 24	Thu	Conferral of degrees, Summer Quarter, 2014-15
September 25	Fri	GSB course add/drop deadline (GSB courses only).
October 9	Fri, 5:00 p.m.	Final Study List deadline. Last day to add or drop a class; last day to adjust units on a variable-unit course. Last day for tuition reassessment for dropped courses or units. Students may withdraw from a course until the Course Withdrawal deadline and a "W" notation will appear on the transcript.
November 2	Mon, 5:00 p.m.	Term withdrawal deadline; last day to submit Leave of Absence to withdraw from the University with a partial refund.
November 13	Fri, 5:00 p.m.	Change of grading basis deadline, except GSB.
November 13	Fri, 5:00 p.m.	Course withdrawal deadline, except GSB, Law, and M.D.
November 13	Fri, 5:00 p.m.	Application deadline for Autumn Quarter degree conferral.
November 20	Fri	Last day of Law classes
November 23-27	Mon-Fri	Thanksgiving Recess (no classes).
November 30-December 6	Mon-Sun	End-Quarter Period.

December 4	Fri	Last day of classes (unless class meets on Sat.)
December 4	Fri	Last opportunity to arrange Incomplete in a course, at last class.
December 4	Fri, noon	University thesis, D.M.A. final project, or Ph.D. dissertation, last day to submit.
December 4	Fri, 5:00 p.m.	Late application deadline for Autumn Quarter degree conferral (\$50 fee).
December 4-11	Fri-Fri	Law School examinations.
December 7-11	Mon-Fri	End-Quarter examinations.
December 12	Sat, noon	Undergraduate housing closes for Winter Break.
December 15	Tue, 11:59 p.m.	Grades due.
January 7	Thu	Conferral of degrees, Autumn Quarter.

### Winter Quarter 2015-16

Date(s)	Day/Time	Description
October 25	Sun	Axess opens for course enrollment.
December 25	Fri	At-status enrollment deadline in order to receive stipend or financial aid refund within the first week of term.
January 2	Sat, 8:00 a.m.	Undergraduate housing opens for Winter Quarter.
January 4	Mon	First day of quarter; instruction begins for all students.
January 4	Mon, 5:00 p.m.	Preliminary Study List deadline. Students must be "at status"; i.e., students must have a study list with sufficient units to meet requirements for their status, whether full-time, 8-9-10 units (graduate students only), or approved Special Registration Status.
January 4	Mon, 5:00 p.m.	Deadline to submit Leave of Absence for full refund.
January 8	Fri	GSB course add/drop deadline (GSB courses only).
January 18	Mon	Martin Luther King, Jr., Day (holiday, no classes).
January 22	Fri, 5:00 p.m.	Final Study List deadline. Final day to add or drop a class; last day to adjust units on a variable-unit course. Last day for tuition reassessment for dropped courses or units. Students may withdraw from a course until the Course Withdrawal deadline and a "W" notation will appear on the transcript.
February 15	Mon	Presidents' Day (holiday, no classes; Law School does hold classes).
February 17	Wed, 5:00 p.m.	Term withdrawal deadline; last day to submit Leave of Absence to withdraw from the University with a partial refund.
February 26	Fri, 5:00 p.m.	Change of grading basis deadline, except GSB.
February 26	Fri, 5:00 p.m.	Course withdrawal deadline, except GSB, Law, and M.D.
February 26	Fri, 5:00 p.m.	Application deadline for Winter Quarter degree conferral.
March 7	Mon	Last day of Law classes.
March 7-13	Mon-Sun	End-Quarter Period.

March 11	Fri	Last day of classes (unless class meets on Sat.)
March 11	Fri	Last opportunity to arrange Incomplete in a course, at last class.
March 11	Fri, noon	University thesis, D.M.A. final project, Ph.D. dissertation, last day to submit.
March 11	Fri, 5:00 p.m.	Late application deadline for Winter Quarter degree conferral (\$50 fee).
March 11-18	Fri-Fri	Law School examinations.
March 14-18	Mon-Fri	End-Quarter examinations.
March 19	Sat	Undergraduate housing move-out (if depending Winter Quarter).
March 22	Tue, 11:59 p.m.	Grades due.
March 31	Thu	Conferral of degrees, Winter Quarter.

## Spring Quarter 2015-16

Date(s)	Day/Time	Description
February 7	Sun	Axess opens for course enrollment.
March 18	Fri	At-status enrollment deadline in order to receive stipend or financial aid refund within the first week of term.
March 26	Sat	Undergraduate housing move-in date for Spring Quarter.
March 28	Mon	First day of quarter; instruction begins.
March 28	Mon, 5:00 p.m.	Preliminary Study List deadline. Students must be "at status"; i.e., students must have a study list with sufficient units to meet requirements for their status, whether full-time, 8-9-10 units (graduate students only), or approved Special Registration Status.
March 28	Mon, 5:00 p.m.	Deadline to submit Leave of Absence for full refund.
March 31	Thu	GSB instruction begins (MBA and MSx courses only).
April 5	Tue	GSB course add/drop deadline (GSB courses only).
April 8	Fri, 5:00 p.m.	Application deadline for Spring Quarter degree conferral.
April 15	Fri, 5:00 p.m.	Final Study List deadline. Last day to add or drop a class; last day to adjust units on a variable-unit course. Last day for tuition reassessment for dropped courses or units. Students may withdraw from a course until the Course Withdrawal deadline and a "W" notation will appear on the transcript.
May 9	Mon, 5:00 p.m.	Term withdrawal deadline; last day to submit Leave of Absence to withdraw from the University with a partial refund.
May 20	Fri, 5:00 p.m.	Change of grading basis deadline, except GSB..
May 20	Fri, 5:00 p.m.	Course withdrawal deadline, except GSB, Law, and M.D.
May 27	Fri	Last day of Law classes.
May 30	Mon	Memorial Day (holiday, no classes).
May 27-June 2	Fri-Thu	End-Quarter Period.
May 31-June 4	Tue-Sat	Law School examinations.
June 1	Wed	Last day of classes.

June 1	Wed	Last opportunity to arrange Incomplete in a course, at last class.
June 1	Wed, noon	University thesis, D.M.A. final project, or Ph.D. dissertation, last day to submit.
June 1	Wed, 5:00 p.m.	Late application deadline for Spring Quarter degree conferral (\$50 fee).
June 2	Thu	Day before finals, no classes.
June 3-8	Fri-Wed	End-Quarter examinations.
June 9	Thu, noon	Grades for graduating students due.
June 10	Fri	Undergraduate housing move-out date (for all students not involved in Commencement).
June 11	Sat	Senior Class Day.
June 11	Sat	Baccalaureate Saturday.
June 12	Sun	Commencement. Conferral of degrees, Spring Quarter.
June 13	Mon	Undergraduate Housing move-out date (for graduates and others involved in Commencement with permission).
June 14	Tue, 11:59 p.m.	Grades for non-graduating students due.

## Summer Quarter 2015-16

Date(s)	Day/Time	Description
April 10	Sun	Axess opens for course enrollment.
June 10	Fri	At-status enrollment deadline in order to receive stipend or financial aid refund within the first week of term.
June 20	Mon	First day of quarter; instruction begins.
June 20	Mon, 5:00 p.m.	Preliminary Study List deadline.
June 20	Mon	Deadline to submit Leave of Absence for full refund.
July 1	Fri, 5:00 p.m.	Final Study List deadline. Final day to add or drop a class; last day to adjust units on a variable-unit course. Last day for tuition reassessment for dropped courses or units. Students may withdraw from a course until the Course Withdrawal deadline and a "W" notation will appear on the transcript.
July 4	Mon	Independence Day celebrated (holiday, no classes).
July 22	Fri, 5:00 p.m.	Term withdrawal deadline; last day to submit Leave of Absence to withdraw from the University with a partial refund.
July 29	Fri, 5:00 p.m.	Change of grading basis deadline.
July 29	Fri, 5:00 p.m.	Course withdrawal deadline.
July 29	Fri, 5:00 p.m.	Application deadline for Summer Quarter degree conferral.
August 6-11	Sat-Thu	End-Quarter Period.
August 11	Thu	Last day of classes.
August 11	Thu	Last opportunity to arrange Incomplete in a course, at last class.
August 12-13	Fri-Sat	End-Quarter examinations.
August 16	Tue, 11:59 p.m.	Grades due.
August 26	Fri, noon	University thesis, D.M.A. final project, or Ph.D. dissertation, last day to submit.
August 26	Fri, 5:00 p.m.	Late application deadline for Summer Quarter degree conferral (\$50 fee).

September 29 Thu Conferral of degrees, Summer Quarter.

## **Academic Calendar 2016-17**

First day of classes and last day of finals

- Autumn 2016-17: September 26 and December 16
- Winter 2016-17: January 9 and March 24
- Spring 2016-17: April 3 and June 14 (Commencement June 18)
- Summer 2016-17: June 26 and August 19

# STANFORD BULLETIN 2015-16

The Stanford Bulletin is Stanford University's official catalog of courses, degrees, policies, and University and degree requirements.

- **ExploreDegrees** publishes degree requirements, University requirements, and academic and nonacademic policies and regulations, as well as information on Stanford's schools, departments, and interdisciplinary programs.
- **ExploreCourses** publishes courses and class scheduling for the entire University.

Use the links in the Table of Contents on the left to navigate through the bulletin. Or use the search box to look for specific material.

- For degree requirements in the Graduate School of Business, see the GSB web site (<http://www.gsb.stanford.edu>).
- For M.D. programs in the School of Medicine, see the School of Medicine web site (<http://med.stanford.edu/education>).
- For Law degree programs, see the School of Law web site (<http://www.law.stanford.edu/program/degrees>).

The material presented here was initially published on August 1, 2015.

## Governing Document/Reservation of Rights

Every effort is made to ensure that the degree requirement and course information, applicable policies, and other materials contained in the Stanford Bulletin are accurate and current. The University reserves the right to make changes at any time without prior notice. The Bulletin in the form as it exists online at Stanford Bulletin (<http://bulletin.stanford.edu>) web site and ExploreCourses (<http://explorecourses.stanford.edu>) web site is therefore the governing document, and contains the then currently applicable policies and information. The University no longer produces an official printed copy version of the Bulletin.

Courses of Instruction are available at the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) web site.

Your feedback is valuable. Send email to [reg-webmaster@stanford.edu](mailto:reg-webmaster@stanford.edu).

## Stanford Bulletins from Earlier Years

See the Previous Stanford Bulletins (<http://exploreddegrees.stanford.edu/archive/#text>) page for Bulletins prior to the current year.

## Accreditation

Stanford University (<http://www.stanford.edu>) is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges (WASC), 985 Atlantic Avenue, Suite 100, Alameda, CA 94501; (510) 748-9001. In addition, certain programs of the University have specialized accreditation. For information, contact the Office of the University Registrar (<http://studentaffairs.stanford.edu/registrar>).

Stanford University is committed to complying with the following requirements enumerated by the Western Association of Schools and Colleges (WASC) in its accreditation process:

*"Core Commitment to Institutional Capacity*

"The institution functions with clear purposes, high levels of institutional integrity, fiscal stability, and organizational structures to fulfill its purposes.

*"Commitment to Educational Effectiveness*

"The institution evidences clear and appropriate educational objectives and design at the institutional and program level. The institution employs processes of review, including the collection and use of data, which ensure delivery of programs and learner accomplishments at a level of performance appropriate for the degree or certificate awarded."

For more information, see the University's WASC Accreditation (<http://wasc.stanford.edu>) web site.

Also, see President Hennessy's statement (<http://exploreddegrees.stanford.edu/%20https://sites.stanford.edu/wasc2011/system/files/Institutional%2520Stipulations.pdf>) (pdf) on Stanford's fulfillment of the Core Commitments to Institutional Capacity and Educational Effectiveness.

## Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email). Stanford's Title IX Coordinator, Cathy Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), [titleix@stanford.edu](mailto:titleix@stanford.edu) (email).

## Honor Code and Fundamental Standard

Student life at Stanford is governed by the Honor Code and the Fundamental Standard. More information on these policies is available from the Office of Community Standards (<https://communitystandards.stanford.edu>) and in the Student Affairs (p. ) section of this bulletin.

## Honor Code

"1. The Honor Code is an undertaking of the students, individually and collectively:

a. that they will not give or receive aid in examinations; that they will not give or receive unpermitted aid in class work, in the preparation of reports, or in any other work that is to be used by the instructor as the basis of grading;

b. that they will do their share and take an active part in seeing to it that others as well as themselves uphold the spirit and letter of the Honor Code.

2. The faculty on its part manifests its confidence in the honor of its students by refraining from proctoring examinations and from taking unusual and unreasonable precautions to prevent the forms of dishonesty mentioned above. The faculty will also avoid, as far as

practicable, academic procedures that create temptations to violate the Honor Code.

3. While the faculty alone has the right and obligation to set academic requirements, the students and faculty will work together to establish optimal conditions for honorable academic work."

## Fundamental Standard

"Students are expected to show both within and without the University such respect for order, morality, personal honor, and the rights of others as is demanded of good citizens. Failure to do this will be sufficient cause for removal from the University."

## Registrar's Office

The Stanford Bulletin is an online publication of the Office of the University Registrar (<http://registrar.stanford.edu>), Stanford University.

### Address:

Office of the University Registrar  
482 Galvez Mall, Suite 120  
Stanford University  
Stanford, California 94305-6032

Students with questions or issues should contact the Student Services Center (<http://studentservicescenter.stanford.edu>) or file a help ticket (<https://remedyweb.stanford.edu/helpsu/helpsu?pcat=ssc>) with Stanford's HelpSU system. Alumni, staff, or the general public may also file a help ticket (<https://remedyweb.stanford.edu/helpsu/helpsu?pcat=ssc>) to request the Registrar's Office assistance or to ask for information.

Additional information on Stanford University can be obtained through Stanford's (<http://www.stanford.edu>) web site.

Telephone number for all University departments: Area code: (650) 723-2300.

## Stanford's Mission

The Stanford University Founding Grant ([https://wasc.stanford.edu/system/files/FoundingGrant\\_2.pdf](https://wasc.stanford.edu/system/files/FoundingGrant_2.pdf)) (pdf), dated November 11, 1885, outlines the founding principles of the University. The Founding Grant describes the "Nature, Object, and Purposes of the Institution" founded by Leland Stanford and Jane Lathrop Stanford in these terms:

Its nature, that of a university with such seminaries of learning as shall make it of the highest grade, including mechanical institutes, museums, galleries of art, laboratories, and conservatories, together with all things necessary for the study of agriculture in all its branches, and for mechanical training, and the studies and exercises directed to the cultivation and enlargement of the mind;

Its object, to qualify its students for personal success, and direct usefulness in life;

And its purposes, to promote the public welfare by exercising an influence in behalf of humanity and civilization, teaching the blessings of liberty regulated by law, and inculcating love and reverence for the great principles of government as derived from the inalienable rights of man to life, liberty, and the pursuit of happiness.

Each of Stanford's seven schools has its own mission statement and those can be found by following the links below:

- School of Earth, Energy and Environmental Sciences Mission Statement (<http://pangea.stanford.edu/about>)

- Graduate School of Business Mission Statement (<http://www.gsb.stanford.edu/about/mission.html>)
- School of Humanities and Sciences Mission Statement (<http://www.stanford.edu/dept/humsci/external/about>)
- School of Engineering Mission Statement (<http://soe.stanford.edu/about>)
- School of Medicine Mission Statement (<http://med.stanford.edu/about/vision.html>)
- Graduate School of Education Mission Statement (<http://ed.stanford.edu/suse/aboutsuse/mission.html>)
- Stanford Law School Mission Statement (<http://www.law.stanford.edu/school>)

## A Brief History of Stanford

On October 1, 1891, more than 400 enthusiastic young men and women were on hand for opening day ceremonies at Leland Stanford Junior University. They came from all over: many from California, some who followed professors hired from other colleges and universities, and some simply seeking adventure in the West. They came to seize a special opportunity, to be part of the pioneer class in a brand new university. They stayed to help turn an ambitious dream into a thriving reality. As a pioneer faculty member recalled, "Hope was in every heart, and the presiding spirit of freedom prompted us to dare greatly."

For Leland and Jane Stanford on that day, the University was the realization of a dream and a fitting tribute to the memory of their only son, who died of typhoid fever weeks before his 16th birthday, at an age when many young men and women were planning their college education.

From the beginning, it was clear that Stanford would be different. It was coeducational at a time when single-sex colleges were the norm. It was non-sectarian when most private colleges were still affiliated with a church. And it offered a broad, flexible program of study while most schools insisted on a rigid curriculum of classical studies. Though there were many difficulties during the first months (housing was inadequate, microscopes and books were late in arriving from the East), the first year foretold greatness. As Jane Stanford wrote in the summer of 1892, "Even our fondest hopes have been realized."

What manner of people were this man and this woman who had the intelligence, the means, the faith, and the daring to plan a major university in Pacific soil, far from the nation's center of culture?

## Leland and Jane Stanford

Although he was trained as a lawyer, Leland Stanford came to California in 1852 to join his five brothers in their mercantile business in the gold fields; Jane Stanford followed in 1855. They established large-scale operations in Sacramento, where Mr. Stanford became a leading figure in California business and politics. One of the "Big Four" who built the western link of the first transcontinental railroad, he was elected Governor of California and later United States Senator. One of the founders of the Republican Party in California, he was an ardent follower of Abraham Lincoln and is credited with keeping California in the Union during the Civil War.

## The Case for a Liberal Education

Despite the enormous success they achieved in their lives, Governor and Mrs. Stanford had come from families of modest means and rose to prominence and wealth through a life of hard work. So it was natural that their first thoughts were to establish an institution where young men and women could "grapple successfully with the practicalities of life." As their thoughts matured, however, these ideas of "practical education" enlarged to the concept of producing cultured and useful citizens who were well prepared for professional success. In a statement

of the case for liberal education that was remarkable for its time, Leland Stanford wrote, "I attach great importance to general literature for the enlargement of the mind and for giving business capacity. I think I have noticed that technically educated boys do not make the most successful businessmen. The imagination needs to be cultivated and developed to assure success in life. A man will never construct anything he cannot conceive."

## Stanford Lands and Architecture

The campus occupies what was once Leland Stanford's Palo Alto Stock Farm and the favorite residence of the Stanford family. The Stanfords purchased an existing estate in 1876 and later acquired much of the land in the local watershed for their stock farm, orchards, and vineyards.

The name of the farm came from the tree El Palo Alto, a coast redwood (*Sequoia sempervirens*), that still stands near the northwest corner of the property on the edge of San Francisquito Creek. Many years ago, one of the winter floods that periodically rushed down the arroyo tore off one of its twin trunks, but half of the venerable old tree lives on, a gaunt and time-scarred monument. Named in 1769 by Spanish explorers, El Palo Alto has been the University's symbol and the centerpiece of its official seal.

The Stanfords gave their farm to the University in the Founding Grant of 1885. They personally financed the entire cost of the construction and operation of the University until 1903, when surviving founder Jane Stanford, who performed heroically in keeping the University functioning during difficult times following Leland Senior's death in 1893, turned over control to the Board of Trustees. The founding gift has been estimated at \$25 million, not including the land and buildings.

The general concept for the University grounds and buildings was conceived by Frederick Law Olmsted, the designer of Central Park in New York. A brilliant young Boston architect, Charles Allerton Coolidge, further developed the concept in the style of his late mentor, Henry Hobson Richardson. The style, called Richardsonian Romanesque, is a blend of Romanesque and Mission Revival architecture. It is characterized by rectilinear sandstone buildings joined by covered arcades formed of successive half-circle arches, the latter supported by short columns with decorated capitals.

More than one hundred years later, the University still enjoys 8,180 acres (almost 13 square miles) of grassy fields, eucalyptus groves, and rolling hills that were the Stanfords' generous legacy, as well as the Quadrangle of "long corridors with their stately pillars" at the center of campus. It is still true, as the philosopher William James said, during his stint as a visiting professor, that the climate is "so friendly . . . that every morning wakes one fresh for new amounts of work."

## Current Perspectives

In other ways, the University has changed tremendously on its way to recognition as one of the world's great universities. At the hub of a vital and diverse Bay Area, Stanford is less than an hour's drive or Caltrain trip south of San Francisco and just a few miles north of Silicon Valley, an area dotted with computer and high technology firms largely spawned by the University's faculty and graduates. On campus, students and faculty enjoy new libraries, modern laboratories, sports facilities, and comfortable residences. Contemporary sculpture, as well as pieces from the Iris and B. Gerald Cantor Center for Visual Arts (<http://museum.stanford.edu>) at Stanford University's extensive collection of sculpture by Auguste Rodin, can be found throughout the campus, providing unexpected pleasures at many turns.

The Cantor Center opened in January 1999. The center includes the historic Leland Stanford Junior Museum building, the Rodin Sculpture Garden and a new wing with spacious galleries, auditorium, cafe, and bookshop. At the Stanford University Medical Center (<http://stanfordmedicine.org>), world-renowned for its research, teaching, and patient care, scientists and physicians are searching for answers to fundamental questions about health and disease. Ninety miles down the coast, at Stanford's Hopkins Marine Station (<http://hopkins.stanford.edu>) on the Monterey Bay, scientists are working to better understand the mechanisms of evolution and ecological systems.

The University is organized into seven schools: Earth, Energy and Environmental Sciences, Education, Engineering, the Graduate School of Business, Humanities and Sciences, Law, and Medicine. In addition, there are more than 30 interdisciplinary centers, programs, and research laboratories (p. ) including: the Hoover Institution on War, Revolution and Peace (<http://www.hoover.org>); the Freeman Spogli Institute for International Studies (<http://fsi.stanford.edu>); the Woods Institute for the Environment (<http://woods.stanford.edu>); the SLAC National Accelerator Laboratory (<http://www.slac.stanford.edu>); and the Stanford Program for Bioengineering, Biomedicine, and Biosciences (Bio-X) (<http://biox.stanford.edu>), where faculty from many fields bring different perspectives to bear on issues and problems. Stanford's Bing Overseas Studies Program (<http://bosp.stanford.edu>) offers undergraduates in all fields remarkable opportunities for study abroad, with campuses in Australia, Barcelona, Beijing, Berlin, Cape Town, Florence, Kyoto, Madrid, Oxford, Paris, and Santiago.

## Stanford People

By any measure, Stanford's faculty, which numbers more than 2,000, is one of the most distinguished in the world. It includes 22 living Nobel laureates, 5 Pulitzer Prize winners, 20 National Medal of Science winners, 158 members of the National Academy of Sciences, 277 members of the American Academy of Arts and Sciences, 104 members of the National Academy of Engineering, and 32 members of the National Academy of Education. Yet beyond their array of honors, what truly distinguishes Stanford faculty is their commitment to sharing knowledge with their students. The great majority of professors teach undergraduates both in introductory lecture classes and in small freshman, sophomore, and advanced seminars.

Enrollment in Autumn Quarter 2014 totaled 16,136 of whom 7,018 were undergraduates and 9,118 were graduate students. Like the faculty, the Stanford student body is distinguished. Approximately 17 people apply to Stanford for every student who enters the freshman class. 112 Stanford students have been named Rhodes Scholars and 86 have been named Marshall Scholars. The six-year graduation rate for freshmen who entered Stanford University full-time in 2008 was 90.8 percent. Stanford awarded 5,015 degrees in 2013-14, of which 1,723 were baccalaureate and 3,292 were advanced degrees.

Stanford students also shine in an array of activities outside the classroom, from student government to music, theater, and journalism. Through the Haas Center for Public Service, students participate in dozens of community service activities, such as tutoring programs for children in nearby East Palo Alto, the Hunger Project, and the Arbor Free Clinic.

In the athletic arena, Stanford students have enjoyed tremendous success as well. Stanford fields teams in 36 Division I varsity sports. The Cardinal has won at least one national team championship 37 consecutive years, which leads the NCAA. Stanford has won the Director's Cup, which honors the most successful program in NCAA Division I sports, the last 18 years. Stanford scholar-athletes have earned 151 NCAA Postgraduate Scholarships—a national best.

Stanford graduates can be found in an extraordinary variety of places: in space (the late Sally Ride, '73, Ph.D. '78, was the first American woman in space); on the news (Ted Koppel, M.A. '62, created the successful program Nightline); Broadway (David Henry Hwang, '79, received a Tony Award for his celebrated work, *M. Butterfly*); in San Francisco live theater (Carey Perloff, '80, artistic director of the American Conservatory

Theater); at the helm of major corporations (Scott McNealy, '80, founded Sun Microsystems, Sergey Brin, M.S. '95, and Larry Page, M.S. '98, founded Google, and Chih-yuan (Jerry) Yang, '94, and David Filo, '90, founded Yahoo); and on the U.S. Supreme Court (two Stanford graduates, Anthony Kennedy, '58, and Stephen Breyer, '59, currently sit on the high court; Sandra Day O'Connor, '50, J.D. '52, recently retired from the high court, and William Rehnquist, '48, J.D. '52, served until his death in 2005).

## Looking Ahead

In her address to the Board of Trustees in July 1904, Jane Stanford said, "Let us not be afraid to outgrow old thoughts and ways, and dare to think on new lines as to the future of the work under our care." Her thoughts echo in the words of Stanford President John Hennessy, who said in his message in the 2002 Annual Report, "Our bold entrepreneurial spirit has its roots in the founders and our location in the pioneering West. In 1904, Jane Stanford defined the challenge for the young University ... Each generation at Stanford has taken this to heart and boldly launched new efforts, from the classroom to the laboratory ... We will continue to innovate and invest in the future ... The pioneering spirit that led the founders and early leaders to 'dare to think on new lines' continues to guide us."

## University Governance and Organization

Web Sites: <http://www.stanford.edu/about/administration/> and <http://facts.stanford.edu/administration/>

Stanford University is a trust with corporate powers under the laws of the State of California. The University is a tax-exempt entity under section 501(c)3 of the Internal Revenue Code. Under the provisions of the Founding Grant, the Board of Trustees (with a maximum membership of 38) is custodian of the endowment and all the properties of Stanford University. The board administers the invested funds, sets the annual budget and determines policies for operation and control of the university. Among the powers given to the trustees by the Founding Grant is the power to appoint a president. The board delegates broad authority to the president to operate the university and to the faculty on certain academic matters. The formal legal name is "The Board of Trustees of the Leland Stanford Junior University."

## Accreditation

Stanford University is accredited by the Accrediting Commission of Senior Colleges and Universities of the Western Association of Schools and Colleges. (<http://directory.wascsenior.org/stanford-university/#zoom=15&lat=3742964&lon=-12217294&layers=TF0BT>)

## Executive Officers

### Stanford Administration

- John Hennessy, President
- John Etchemendy, Provost
- David Demarest, Vice President for Public Affairs
- Vice President for Human Resources, Elizabeth Zacharias
- Randall S. Livingston, Vice President for Business Affairs and Chief Financial Officer
- William J. Madia, Vice President, SLAC National Accelerator Laboratory
- Robert Reidy, Vice President for Land, Buildings and Real Estate
- Martin Shell, Vice President for Development
- Howard Wolf, Vice President for Alumni Affairs and President, Stanford Alumni Association
- Debra Zumwalt, Vice President and General Counsel

## Executive Cabinet

- Ann Arvin, Vice Provost and Dean of Research
- Harry Elam, Vice Provost for Undergraduate Education
- Chi-Chang Kao, Director, SLAC National Accelerator Laboratory
- Patricia Gumport, Vice Provost for Graduate Education
- M. Elizabeth Magill, Dean, School of Law
- Pamela Matson, Dean, School of Earth, Energy and Environmental Sciences
- Lloyd Minor, Dean, School of Medicine
- Persis Drell, Dean, School of Engineering
- Thomas Gilligan, Director, Hoover Institution on War, Revolution and Peace
- Richard Saller, Dean, School of Humanities and Sciences
- Garth Saloner, Dean, Graduate School of Business
- Daniel Schwartz, Dean, Graduate School of Education

## The Board of Trustees

### Powers and Duties

The Board of Trustees is custodian of the endowment and all properties of the University. The Board administers the invested funds, sets the annual budget, and determines policies for the operation and control of the University. The powers and duties of the Board of Trustees derive from the Founding Grant, amendments, legislation, and court decrees. In addition, the Board operates under its own bylaws and a series of resolutions on major policy.

### Membership

Board membership is set at 38, including the President of the University who serves ex officio and with vote. Trustees serve a five-year term and are eligible for appointment to one additional five-year term. At the conclusion of that term, a Trustee is not eligible for reelection until after a lapse of one year. Eight of the Trustees are elected or appointed in accordance with the Rules Governing the Election or Appointment of Alumni Nominated Trustees. They serve a five-year term.

### Officers of the Board

The officers of the board are a chair, one or more vice chairs, a secretary, and an associate secretary. Officers are elected to one-year terms at the annual meeting in June, with the exception of the chair, who serves a two-year term. Their terms of office begin July 1.

### Committees

Standing committees of the Board are Academic Policy, Planning, and Management; Alumni and External Affairs; Audit and Compliance; Development; Finance; Land and Buildings; the Medical Center; and Trusteeship. Special committees include Athletics, Compensation, Investment Responsibility, and Litigation.

### Meetings

The Board generally meets five times each year.

### Members of the Board of Trustees as of March 2016

- Fred W. Alvarez, Partner, Jones Day, Palo Alto, CA
- Mary T. Barra, Chief Executive Officer, General Motors, Detroit, MI
- Robert M. Bass, President, Keystone Group LP, Fort Worth, TX
- Brook H. Byers, Partner, Kleiner Perkins Caufield & Byers, Menlo Park, CA
- Bret E. Comolli, Chairman, Asurion Corporation, Atherton, CA
- RoAnn Costin, President, Wilderness Point Investments, Cambridge, MA

- James G. Coulter, Founding Partner, TPG Capital, LP, San Francisco, CA
- Dipanjan Deb, CEO & Co-Founder, Francisco Partners, San Francisco, CA
- Steven A. Denning, Chairman, General Atlantic LLC, Greenwich, CT
- Angela S. Filo, Co-Founder, Yellow Chair Foundation, Palo Alto, CA
- Sakurako D. Fisher, San Francisco, CA
- Bradley A. Geier, Co-Managing Partner, Merlone Geier Partners, San Diego, CA
- John A. Gunn, Former Chairman and CEO, Dodge and Cox, San Francisco, CA
- Gail B. Harris, Retired Partner, Simpson Thacher & Bartlett LLP, New York, NY
- Christine U. Hazy, Co-Founder and Managing Director, Sketch Foundation, Los Angeles, CA
- John L. Hennessy, President, Stanford University, Stanford, CA
- Ronald B. Johnson, Founder & CEO, Enjoy, Menlo Park, CA
- Tonia G. Karr, San Francisco, CA
- Bernard Liautaud, General Partner, Balderton Capital, London, UK
- Christy O. MacLear, CEO, Robert Rauschenberg Foundation, New York, NY
- Susan R. McCaw, President, COM Investments, Santa Barbara, CA
- Lloyd M. Metz, Managing Director, ICV Partners, New York, NY
- Hamid R. Moghadam, Chairman & CEO, Prologis, Inc., San Francisco, CA
- Kenneth E. Olivier, Chairman Emeritus, Dodge and Cox, San Francisco, CA
- Ruth M. Porat, Chief Financial Officer, Alphabet Inc. and Google Inc., Mountain View, CA
- Laurene Powell Jobs, Founder/Chair, Emerson Collective, Palo Alto, CA
- Jeffrey S. Raikes, Co-Founder, The Raikes Foundation, Seattle, WA
- Mindy B. Rogers, Atherton, CA
- Victoria B. Rogers, President, Rose Hills Foundation, Pasadena, CA
- Kavitar Ram Shriram, Founder, Sheralo Ventures, Menlo Park, CA
- Ronald P. Spogli, Founding Partner, Freeman Spogli & Co., Los Angeles, CA
- Srinija Srinivasan, Palo Alto, CA
- Isaac Stein, President, Waverley Associates, Atherton, CA
- Thomas F. Steyer, Founder, NextGen Climate, San Francisco, CA
- Gene T. Sykes, Global Co-Head of M&A & Chairman, Goldman Sachs Group, Inc., Los Angeles, CA
- Vaughn C. Williams, Retired Partner, Skadden Arps Slate Meagher & Flom, New York, NY

## The President

The Founding Grant prescribes that the Board of Trustees shall appoint the President of the University and that the Board shall give to the President the following powers:

- To prescribe the duties of the professors and teachers.
- To prescribe and enforce the course of study and the mode and manner of teaching.
- Such other powers as will enable the President to control the educational part of the University to such an extent that the President may justly be held responsible for the course of study therein and for the good conduct and capacity of the professors and teachers.

The President is also responsible for the management of financial and business affairs of the University, including operation of the physical plant.

The President is responsible for the safety of the campus and may take reasonable steps to protect the University including, but not limited to, barring people from campus who disrupt the normal business operations of the University or who present a threat to the safety of the University community. In extraordinary circumstances, the President may permanently discontinue students who present a threat to the health and safety of the University community.

The President appoints the following, subject to confirmation by the Board: Provost, Vice President for Business Affairs and Chief Financial Officer, Chief Executive Officer of Stanford Management Company, Vice President for Alumni Affairs and President of Stanford Alumni Association, Vice President for Development, Vice President for Public Affairs, Vice President and General Counsel, Vice President for the SLAC National Accelerator Laboratory, and Vice President for Land, Buildings, and Real Estate.

For additional information, see the Office of the President web (<http://www.stanford.edu/dept/president>) site.

## Committees and Panels Appointed by the President

University Committees are appointed by and are primarily responsible to the President. Such committees deal with matters on which the responsibility for recommendation or action is clearly diffused among different constituencies of the University. In accordance with the Report on the Committee Structure of the University, Academic Council members are appointed to University Committees on nomination of the Senate Committee on Committees and student members on nomination of the Associated Students of Stanford University (ASSU) Committee on Nominations. The President takes the initiative in the appointment of staff members to such committees. Although immediately responsible to the President, University Committees may be called upon to report to the Senate of the Academic Council or the ASSU. Charges to such committees are set by the President on recommendation of the Committee on Committees and others. There are five University Committees, as follows:

- Advisory Panel on Investment Responsibility and Licensing (APIR-L)
- Committee on Athletics, Physical Education, and Recreation (C-APER)
- Committee on Environmental Health and Safety (C-EH&S)
- Committee on Faculty Staff Human Resources (C-FSHR)
- Panel on Outdoor Art (P-OA)

Additionally there are eleven standing administrative panels which are appointed by the Vice Provost and Dean of Research, and which report through him/her to the President:

- Administrative Panel on Biosafety
- Administrative Panel on Human Subjects in Medical Research-01
- Administrative Panel on Human Subjects in Medical Research-03
- Administrative Panel on Human Subjects in Medical Research-04
- Administrative Panel on Human Subjects in Medical Research-05
- Administrative Panel on Human Subjects in Medical Research-06
- Administrative Panel on Human Subjects in Medical Research-07
- Administrative Panel on Human Subjects in Medical Research-08
- Administrative Panel on Human Subjects in Non-Medical Research-02
- Administrative Panel on Laboratory Animal Care
- Administrative Panel on Radiological Safety

## The Provost

The Provost, as the chief academic and budget officer, administers the academic program (instruction and research in schools and other academic units) and University services in support of the academic

program (including budgeting and planning, land and buildings, libraries and information resources, and student affairs). In the absence or inability of the President to act, the Provost becomes the Acting President of the University. The Provost shares with the President conduct of the University's relations with other educational institutions, groups, and associations.

## Schools of the University

The program of instruction in the University is organized into seven schools:

- Graduate School of Business
- School of Earth, Energy and Environmental Sciences
- Graduate School of Education
- School of Engineering
- School of Humanities and Sciences
- Stanford Law School
- School of Medicine

The deans of the schools report to the Provost.

## The Academic Council

Stanford Academic Council (<http://academiccouncil.stanford.edu>) web site.

According to the Articles of Organization of the Faculty, originally adopted by the Board of Trustees in 1904 and revised in 1977, the powers and authority of the faculty are vested in the Academic Council consisting of:

1. the President of the University
2. tenure-line faculty: Assistant, Associate, and Full Professor
3. nontenure-line faculty: Associate and Full Professor followed by the parenthetical notation (Teaching), (Performance), (Applied Research), or (Clinical)
4. nontenure-line research faculty: Assistant Professor (Research), Associate Professor (Research), Professor (Research)
5. Senior Fellows in specified policy centers and institutes
6. certain specified officers of academic administration.

In the Spring of 1968, the Academic Council approved the charter for a Senate to be composed of 55 representatives elected by the Hare System of Proportional Representation and, as ex officio nonvoting members, deans of the academic schools and certain major officers of academic administration.

In the allocation of representation, each school constitutes a major constituency. The Senate may create from time to time other major constituencies as conditions warrant. Approximately one-half of the representatives are allocated to constituencies on the basis of the number of students in those constituencies and the remainder on the basis of the number of members of the Academic Council from each constituency.

## Committees of the Academic Council

Committees of the Academic Council are created by and responsible to the Senate of the Academic Council and are appointed by the Committee on Committees of the Senate. Such committees deal with academic policy matters on which the primary responsibility for action and decision lies with the Academic Council or, by delegation, the Senate. Pursuant to the Senate's acceptance on September 25, 1969 of the Report from the Committee on Committees on the Committee Structure of the University and subsequent Senate action, the Senate has established seven standing Committees of the Academic Council, as follows:

- Committee on Academic Computing and Information Systems (C-ACIS)
- Committee on Graduate Studies (C-GS)
- Committee on Libraries (C-Lib)
- Committee on Research (C-Res)
- Committee on Review of Undergraduate Majors (C-RUM)
- Committee on Undergraduate Admissions and Financial Aid (C-UAFA)
- Committee on Undergraduate Standards and Policy (C-USP)

The Senate has also created a Planning and Policy Board of the Senate to consider long-range strategic issues of concern to the faculty. Information regarding charges to these committees is available from the Office of the Academic Secretary to the University.

## Associated Students of Stanford University (ASSU)

Web Site: <http://assu.stanford.edu>

All registered undergraduates and graduate students are members of the ASSU. They are governed by the ASSU Constitution and Bylaws, which was last revised and approved by student vote in April 2013.

### Executive

The President and Vice President serve as the chief executives and representatives for the Association. The Financial Manager acts as business manager of the ASSU, CEO of Stanford Student Enterprises (SSE), and controller of the Students' Organizations Fund in which ASSU and student organization funds are deposited.

### Legislative

There are two legislative bodies, an Undergraduate Senate and a Graduate Student Council, that work together to determine the Association's budgetary, financial, investment, business, and operating policies. In addition, each entity provides funding for student organizations, participates in recommending student appointments to University Committees and advocates on behalf of its constituents. Each body has 15 elected representatives and an elected chair. Both meet regularly to conduct Association business and discuss and act on issues pertinent to student life at Stanford.

# UNIVERSITY REQUIREMENTS

## Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email). Stanford's Title IX Coordinator, Cathy Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), [titleix@stanford.edu](mailto:titleix@stanford.edu) (email).

## University Communication with Students

Stanford University uses electronic means (such as email, texts, and the Internet) as a primary method of communication and of providing billing, payment, and enrollment services. Signatures or acknowledgments provided by the student electronically to Stanford via Stanford systems and/or @stanford.edu email are valid and legally binding.

## Admission and Financial Aid

### Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email). Stanford's Title IX Coordinator, Cathy Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), [titleix@stanford.edu](mailto:titleix@stanford.edu) (email).

### Visas

In order to register as students, Stanford University requires that all those who are not U.S. citizens or U.S. registered permanent residents obtain and maintain an appropriate visa status for their stay in the United States. The types of student visas sponsored by Stanford include the following:

1. Student Visa (F-1), obtained with an I-20 Certificate of Eligibility issued by Stanford University. The graduate student on an F-1 visa must enroll in a full course of study. The accompanying spouse or child enters on an F-2 visa. F-2 visa holders may not hold employment

or engage in business under any circumstances. The F-2 spouse of an F-1 student may not engage in full-time study, and the F-2 child may only engage if the study is in an elementary or secondary school (kindergarten through twelfth grade). The F-2 spouse and child may engage in study that is avocational or recreational in nature.

2. Exchange Visitor Visa (J-1), obtained with a DS-2019 Certificate of Eligibility issued by Stanford University or a sponsoring agency. This visa is required for graduate students sponsored by certain agencies, foundations, and governments. In some cases, exchange visitors must leave the United States at the conclusion of their programs, may not change to non-student visa status, and may not apply for permanent residency in the United States until they have returned to their home countries for at least two years. The accompanying spouse or child of an exchange visitor enters on a J-2 visa and may, in some cases, obtain permission to work. J-2 dependents can apply for an Employment Authorization document from U.S. Citizenship and Immigration Services in order to be employed in the U.S. There is no regulatory restriction on study for J-2 dependents.

The Certificate of Eligibility (I-20/DS-2019) is issued to an admitted student after receipt of certification of adequate financial support. An F-1 student transferring from another U.S. school must obtain a new I-20 document from Stanford and complete a transfer process at the Bechtel International Center no later than 15 days after the effective date of the transfer. A J-1 student transferring from another U.S. school must obtain a new DS-2019 document from Stanford and complete a transfer process at the Bechtel International Center no later than 30 days after the effective date of the transfer.

For academic programs that require work authorization in the United States (such as to serve as a teaching assistant or research assistant), Stanford University reserves the right to rescind the admission and terminate the student status of any student who fails to timely obtain and maintain that work authorization status.

### Rescission

By applying for admission to Stanford University academic programs, applicants certify that the information they provide in their applications is complete, accurate, and their own work. As also noted in the application materials, Stanford reserves the right to withdraw an offer of admission under certain circumstances, including (but not limited to):

1. if there is a significant drop in academic performance, a failure to graduate (in the applicant's current program), or a failure to satisfy a prerequisite or condition of admission;
2. if there has been a misrepresentation in the application process or a breach of any of the terms of the application process; or
3. if the University learns that an individual has engaged in behavior prior to the first day of enrolled Stanford attendance that indicates a serious lack of judgment or integrity.

Indeed (and for example), Stanford may rescind an individual's admission at any time, including after attendance and after degree conferral, if it determines, for example, that an individual has been admitted to Stanford on the basis of having provided false information; has withheld requested information; or has engaged in behavior prior to the first day of enrolled Stanford attendance that indicates a serious lack of judgment or integrity.

The University reserves the right to require individuals to provide additional information (and/or authorization for the release of information) about any such matter, and to place a hold on registration and/or the conferral of a degree during the investigation into any such matter. Stanford also reserves the right in perpetuity to investigate the authenticity, accuracy, and authorship of materials submitted, information provided, and assertions made in connection with the application.

Similarly, Stanford University awards degrees on the basis of successful completion of all program requirements in accordance with Stanford's policies and procedures, including the Honor Code, requiring academic honesty and integrity. The University reserves the right to rescind any degree or honors designation (even after conferral) if the program requirements have not been so completed, and to place a hold on issuing a degree during the investigation into any such matter.

For academic programs that require work authorization in the United States (such as to serve as a teaching assistant or research assistant), Stanford University reserves the right to rescind the admission and terminate the student status of any student who fails to timely obtain and maintain that work authorization status.

## Holds

Students with unmet financial (or other University) obligations resulting in the placement of a hold on their registration cannot receive a transcript, statement of completion, degree certificate, or diploma until the hold is released; as a condition of attending Stanford, students accept this provision.

## Undergraduate Admission

Stanford's undergraduate community is drawn from throughout the United States and the world. It includes students whose abilities, intellectual interests, and personal qualities allow them to benefit from and contribute to the University's wide range of teaching and research programs in the humanities, natural sciences, social sciences, and engineering. The University admits students who derive pleasure from learning for its own sake; who exhibit energy, creativity, and curiosity; and who have distinguished themselves in and out of the classroom.

Stanford welcomes a diverse community that cuts across many dimensions. The University does not use quotas of any kind in its admission process: it does not favor particular schools or types of schools, nor any geographic region, nor does it have any racial, religious, ethnic, or gender-related quotas. The University believes that a student body that is both highly qualified and diverse in terms of culture, socioeconomic status, race, ethnicity, gender, work and life experiences, skills, and interests is essential to the educational process. Applications are encouraged from those who would take the initiative and responsibility for their own education and who would provide additional dimensions to the University and its programs.

In order to preserve the residential character of the University and to maintain a favorable student-faculty ratio, Stanford has a limited undergraduate enrollment. The anticipated size of the freshman class is approximately 1,600-1,700 students who are admitted for Autumn Quarter enrollment. Approximately 20-40 transfer students, entering either the sophomore or junior class, are also typically admitted for Autumn enrollment if space allows. Each year, the University receives many more applications from qualified students than there are places available.

Stanford is committed to meeting the University-computed financial need of each admitted student, and admission decisions are made without regard to the applicant's financial status, except in the case of international students who are neither U.S. citizens nor U.S. registered permanent residents.

Application procedures, requirements, and deadlines vary from year to year. See the Undergraduate Admission (<http://admission.stanford.edu>) web site for the most recent information and to begin an application online; or call the Office of Undergraduate Admission at (650) 723-2091.

## Nonmatriculated Study (Undergraduate)

Permission to enroll at Stanford as a nonmatriculated student during Autumn, Winter, and Spring quarters is not routinely approved except

under extenuating circumstances. Nonmatriculated students authorized to enroll at Stanford University are not admitted to any Stanford degree program and are permitted to register for a specific period, usually one, two, or three quarters. Financial assistance from Stanford University is not available. Permission to enroll as a nonmatriculated student does not imply subsequent admission as a matriculated student.

Nonmatriculated status is a privilege and not a right. The University reserves the right, at its discretion, to withhold registration from, or require withdrawal from the program by, any student or applicant. In addition, nonmatriculated status may be revoked at the University's discretion (and after consideration of such factors as the University considers relevant in the particular case) at the end of any quarter of enrollment.

Students interested in nonmatriculated status during the Autumn, Winter, and Spring quarters should contact the Office of the University Registrar, not the Office of Undergraduate Admission. Note: newly admitted Stanford students (that is, those admitted to a Stanford degree program) are not eligible to enroll for nonmatriculated study for any quarter, except with the permission of the Vice Provost for Undergraduate Education (or his or her designee) under extenuating circumstances.

## High School Nonmatriculated Students

Local high school students are eligible to be considered to attend Stanford as nonmatriculated students on a limited basis when they have exhausted all of the courses in a given discipline offered by their high school. Nonmatriculated high school students are permitted to enroll in one course per quarter and are required to pay the applicable tuition. Permission from the academic department and the University Registrar is required. The Language Center does not allow high school students to enroll in language courses during the academic year. High school students who are accepted to participate in High School Summer College may enroll in language courses as part of Summer Session, space permitting.

## Summer Session

Students wishing to enroll as nonmatriculated students during Summer Quarter should contact the Summer Session Office (<http://summer.stanford.edu>) for more information about the Summer Visitor Program (<http://summer.stanford.edu/programs/program/undergraduate-graduate-students-from-other-universities>). Admission to the Summer Visitor Program does not imply regular admission to Stanford for subsequent quarters or to one of Stanford's regular degree programs.

## Graduate Admission

### Matriculated Study (Graduate Students)

Applicants from colleges and universities of recognized standing who hold a U.S. bachelor's degree or its equivalent are eligible to be considered for admission for graduate study. Details regarding degrees offered in specific departments are given on the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site. The number of applicants who can be admitted for work in a particular field of study at any time is limited by the facilities and programs of the school or department and by the number of matriculated students who continue their work in that field.

As with its undergraduate program, Stanford believes that a graduate student body that is both highly qualified and diverse in terms of culture, socioeconomic status, race, ethnicity, gender, work and life experience, skills, and interests is essential to the graduate educational process. It particularly welcomes applications from African Americans, Latinos, and Native Americans, as well as from others whose backgrounds and experiences would add additional dimensions to the University's educational programs.

## Honors Cooperative Program

The Honors Cooperative Program (HCP) is a part-time graduate program offered by Stanford University. It allows working professionals, who may be eligible for tuition support through their employer, an opportunity to earn a graduate degree in any of the engineering programs, applied physics, statistics, or biomedical informatics, on a part-time basis.

Prospective HCP students apply to the department in which they would like to pursue a graduate degree through the normal graduate admissions process, and compete with all other applicants for admission to the program. Once admitted, HCP students arrange their part-time status and tuition payment options through the Stanford Center for Professional Development (SCPD). Courses are delivered online and broadcast locally. HCP students are also welcome to attend certain classes on campus, and some on-campus attendance may be required depending on the degree track.

To participate, HCP students must have the support of their employer as a participating company of the Stanford Center for Professional Development. For more information, see the Stanford Center for Professional Development (SCPD) (<http://scpd.stanford.edu>) web site, or phone (650) 725-3000.

## The Coterminal Degree Program

This program permits matriculated Stanford undergraduates to study for a Master of Arts (M.A.) or Master of Science (M.S.) degree while completing their bachelor's degree(s) in the same or a different department. Application policies and procedures are established by each master's department or program. Interested Stanford undergraduates should directly contact the department or program in which they wish to pursue a master's degree and must adhere to the application deadlines. Stanford undergraduates may also choose to apply to Stanford graduate degree programs through the standard graduate admissions process as described in the Graduate Admission (p. 13) section of this bulletin. Such applicants are not coterminal students and coterminal policies do not apply. For more information, see the Coterminal Degrees (p. 42) section of this bulletin.

## Application Process

Specific information regarding test requirements, other application procedures and requirements, and closing dates for filing applications and supporting credentials for admission and financial aid are listed on the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site.

Graduate fellowship funds and assistantships are generally committed in March for the entire period comprising Autumn, Winter, and Spring quarters of the next academic year. Awards are seldom made to students who enter the University in Winter, Spring, and Summer quarters; such applicants must meet the same financial aid application requirements as those entering in Autumn Quarter.

Applications are to be submitted electronically for graduate programs in the schools of Business, Earth Sciences, Education, Engineering, Humanities and Sciences, and the Biosciences (non-M.D. programs in Medicine). Application instructions may be found at the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site.

For admission to the following programs, apply directly via the web sites below.

### Business

Admission information is available for the M.B.A., MSx Program, and Ph.D. programs at the Stanford Graduate School of Business Admissions (<http://www.gsb.stanford.edu/admissions>) web site. All applications must be submitted electronically.

### Law

Applicants for the JD degree should see the Law School Admissions ([http://www.law.stanford.edu/program/degrees/jd/jd\\_application](http://www.law.stanford.edu/program/degrees/jd/jd_application)) web site. Applicants for LLM, JSM, JSD, and MLS degrees can find instructions at the Advanced Degree Programs (<http://www.law.stanford.edu/program/degrees/advanced/application>) web site. These applications are submitted to the Director of Admissions, School of Law, Stanford University, Stanford, CA 94305-8610. The Law School Admissions Test is required.

### M.D. Program

Applicants should see the M.D. admissions (<http://med.stanford.edu/md/admissions>) web site or, for additional information about the M.D. program, write to Stanford University School of Medicine, Office of M.D. Admissions, 251 Campus Drive, MSOB X3C01, Stanford, CA 94305-5404. The American Medical College Application Service (AMCAS) application is available at the AMCAS (<http://aamc.org>) web site. Applications and transcripts must be received by AMCAS by October 15. The Medical College Admissions Test is required.

## Rescission

By applying for admission to Stanford University academic programs, applicants certify that the information they provide in their applications is complete, accurate, and their own work. As also noted in the application materials, Stanford reserves the right to withdraw an offer of admission under certain circumstances, including (but not limited to):

1. if there is a significant drop in academic performance, a failure to graduate (in the applicant's current program), or a failure to satisfy a prerequisite or condition of admission;
2. if there has been a misrepresentation in the application process or a breach of any of the terms of the application process; or
3. if the University learns that an individual has engaged in behavior prior to the first day of enrolled Stanford attendance that indicates a serious lack of judgment or integrity.

Indeed (and for example), Stanford may rescind an individual's admission at any time, including after attendance and after degree conferral, if it determines, for example, that an individual has been admitted to Stanford on the basis of having provided false information; has withheld requested information; or has engaged in behavior prior to the first day of enrolled Stanford attendance that indicates a serious lack of judgment or integrity.

The University reserves the right to require individuals to provide additional information (and/or authorization for the release of information) about any such matter, and to place a hold on registration and/or the conferral of a degree during the investigation into any such matter. Stanford also reserves the right in perpetuity to investigate the authenticity, accuracy, and authorship of materials submitted, information provided, and assertions made in connection with the application.

Similarly, Stanford University awards degrees on the basis of successful completion of all program requirements in accordance with Stanford's policies and procedures, including the Honor Code, requiring academic honesty and integrity. The University reserves the right to rescind any degree or honors designation (even after conferral) if the program requirements have not been so completed, and to place a hold on issuing a degree during the investigation into any such matter.

For academic programs that require work authorization in the United States (such as to serve as a teaching assistant or research assistant), Stanford University reserves the right to rescind the admission and terminate the student status of any student who fails to timely obtain and maintain that work authorization status.

## Holds

Students with unmet financial (or other University) obligations resulting in the placement of a hold on their registration cannot receive a transcript, statement of completion, degree certificate, or diploma until the hold is released; as a condition of attending Stanford, students accept this provision.

## Nonmatriculated Study (Graduate Students)

Eligibility for consideration for nonmatriculated enrollment is restricted to two groups of applicants:

1. Stanford alumni who wish to return to Stanford to take courses that are prerequisites for Medical School admission, such as undergraduate Biology or Chemistry courses, are eligible to apply for nonmatriculated status. An application form, application fee, statement of purpose, and three letters of recommendation are required. The decision to admit or deny is made by the Director of Graduate Admissions on the basis of relevant factors, including at least a 3.0 GPA and positive letters of recommendation.
  - a. Applicants who graduated from other universities are not eligible to take the prerequisites for Medical School at Stanford.
2. Individuals who hold a bachelor's degree or equivalent and wish to take courses in a specific department that allows non-degree students are eligible to apply for nonmatriculated status. An application form, application fee, statement of purpose, original transcripts, and three letters of recommendation are required. The decision to admit or deny is made by the chair of the department in which they wish to take courses and conveyed in writing to the Graduate Admissions Office. Applicants are notified of the decision by Graduate Admissions in the Office of the University Registrar.

Students who are granted nonmatriculated status are charged the 8-10 unit rate for each quarter in which they are enrolled, and may enroll for a maximum of a total of one academic year. Nonmatriculated status is a privilege and not a right; the nonmatriculated status may be revoked at the University's discretion (and after consideration of such factors as the University considers relevant in the particular case) at the end of any quarter of enrollment.

Nonmatriculated students are not permitted to enroll in certain courses, such as those in the following departments or programs: film and broadcasting courses in Art; all courses in Computer Science, Economics, Electrical Engineering, International Policy Studies, and the School of Medicine. Nonmatriculated students must limit their enrollment to classes in the department in which they have been admitted. Nonmatriculated students receive academic credit for courses satisfactorily completed and may obtain an official transcript. As a general proposition, they may use University facilities and services. In classes of limited enrollment, students in degree programs have priority. Nonmatriculated students may apply for housing but have a low priority for assignment and are not guaranteed housing. No fellowships, assistantships, or Stanford loans are available for nonmatriculated students. Nonmatriculated students are not eligible for a leave of absence.

Nonmatriculated students who later apply for admission to a degree program must meet the standard admission requirements and should not anticipate special priority because of work completed as a nonmatriculated student. Students who are admitted to a degree program may apply a maximum of 15 units of nonmatriculated study toward the residency requirement for a master's degree and 30 units for the Engineer or Ph.D. degree, subject to the approval of the degree granting department.

Application forms for nonmatriculated status during the regular academic year are available from Graduate Admissions (<https://studentaffairs.stanford.edu/gradadmissions/programs/nondegree>), Office of the University Registrar. Deadlines for applying are included with the forms and are generally required two months before the start of the quarter.

Applicants interested in nonmatriculated student status for the Summer Quarter only should explore the Summer Session website (<http://summer.stanford.edu>).

## Non-Degree-Granting Programs

Stanford University has established a limited number of formal non-degree-granting programs within individual departments. These include the Knight Fellowship Program for mid-career journalists (Communication Department), and the Stegner Fellows Program for selected authors (Creative Writing Program, within the English Department).

Individuals may apply to these programs directly. Application requirements, admissions decisions, tuition requirements and financial support are all handled by the specific program. Individuals who are admitted to these programs will be registered at Stanford as nonmatriculated graduate students in the appropriate program. Upon completion of their program, they will receive a transcript and certificate of program completion.

Individuals who commit violations of University policy, the Honor Code, or the Fundamental Standard are subject to termination. Individuals in non-degree granting programs are subject to removal or discipline according to the program's policies or practices, not through the Office of Community Standards.

## Stanford Center for Professional Development

Qualified individuals may pursue graduate and professional certificates or take individual graduate and professional courses through the Stanford Center for Professional Development. Nonmatriculated students taking individual graduate courses for credit, or towards earning a graduate certificate, are charged tuition on a per-unit basis. For more information on available courses, applications, and deadlines visit <http://scpd.stanford.edu> or phone (650) 725-3000.

## Postdoctoral Scholars

Postdoctoral scholars are trainees in residence at Stanford University pursuing advanced studies beyond the doctoral level in preparation for an independent career. Postdoctoral scholars are appointed for a limited period of time and may participate in Stanford research projects and/or may be supported by external awards or fellowships. In all cases, their appointment at Stanford is for the purpose of advanced studies and training under the sponsorship of a Stanford faculty member.

Postdoctoral appointments require initial full-time engagement in the designated research or study and are generally restricted to those who have earned a terminal degree such as Ph.D. or J.D. within the last three years or a medical degree such as M.D., M.B.B.S., or D.D.S. within the last six years. Requests for exceptions for individuals who are beyond these limits, or have not been actively engaged in research as their primary effort, must include a written statement from the sponsoring faculty member indicating what additional training outside the primary area of effort the individual plans to receive, and the reasons for which the exception is requested. Postdoctoral scholars are appointed at Stanford for fixed terms, typically one year but that may eventually total up to four years, and are subject to a strict five-year rule (that is, that the total postdoctoral appointment period is not to exceed a total of five years of postdoctoral research experience at all institutions combined). In cases of combined training, only the years of active research at the postdoctoral level are counted for salary and other purposes. Postdoctoral scholars who begin a second postdoctoral appointment in

a new field may have training extended to a maximum total of up to six years. Postdoctoral scholars may request temporary reductions in effort and pay due to temporary family or other conditions.

All postdoctoral scholars appointed at Stanford must be supported by Stanford grants and contracts, training grants, departmental or school fellowship funds, or external fellowships, or by a combination of these sources. Scholars may not be self-supporting. In addition, all postdoctoral scholars are eligible for a benefits package including medical, dental, life, and disability insurance. Postdoctoral scholars are normally appointed for 100% time.

Postdoctoral scholars must be registered at Stanford during every academic quarter of their appointment. Registration entails payment of a quarterly postdoctoral fee by the academic department or school appointing the scholar.

Prospective postdoctoral scholars should write directly to the department in which they wish to study or check for postdoctoral openings at <http://postdocs.stanford.edu/prospects/index.html>. For more information, see <http://postdocs.stanford.edu>.

## Visiting Student Researchers

In limited instances, it is to the benefit of Stanford faculty to permit graduate students who have not yet obtained a Ph.D. (or its foreign equivalent) to engage in research on the Stanford campus. This could include students from other universities who are engaged in graduate-level research in a field of interest to the faculty member, or students doing a research rotation as part of a larger research study or grant.

These students must be registered as Visiting Student Researchers if they are in residence at Stanford for more than 30 days; they may be registered as Visiting Student Researchers if they are in residence for fewer than 30 days in order to receive the services available to Visiting Student Researchers. Visiting Student Researcher appointments are limited to one year in duration. Invited persons must be qualified to conduct research at a level comparable to that of other Stanford graduate students, and the research must be of benefit to Stanford as well as to the visitor. Forms for the appointment of Visiting Student Researchers are submitted to Graduate Admissions, Office of the University Registrar by the department issuing the invitation.

Under limited circumstances, the faculty sponsor may request an extension of the Visiting Student Researcher's appointment beyond one year. Such extensions require the concurrence of the student's home institution. Extensions beyond the second year are extremely rare, and require approval in advance from the office of the Vice Provost for Graduate Education.

Visiting Student Researchers are charged a monthly Visiting Student Researcher fee for each month in which they hold this appointment at Stanford, including partial months. They may waive the University's student medical insurance plan only if they have comparable coverage with another carrier and submit proof of the comparable coverage prior to the term start date. Visiting Student Researchers are not entitled to any financial support from Stanford University. They may not be appointed to any assistantship positions nor hold any named Stanford fellowships. Funds intended for the support of matriculated Stanford students may not be used to support Visiting Student Researchers. Stanford cannot certify visiting researchers for deferment of U.S. educational loans.

Visiting Student Researchers are not permitted to enroll in or audit any courses, but in quarters in which they are registered as Visiting Student Researchers, they are eligible for the usual student benefits of nonmatriculated student status. Students in this status are eligible for graduate on-campus housing on a space-available basis. They are also eligible for participation in the programs offered by the Graduate Life Office (<http://studentaffairs.stanford.edu/glo>).

Visiting Student Researchers are subject to the rules and regulations of Stanford University. These include, but are not limited to:

- *Intellectual Property*—Visiting Student Researchers are required to sign an SU-18 Stanford Patent and Copyright Agreement.
- *The Honor Code and Fundamental Standard*—Visiting Student Researchers who commit violations of these behavioral standards as reasonably determined by the sponsoring department are subject to termination of their Stanford appointment; these cases do not proceed through the Office of Community Standards.
- *Required Training*—The faculty member who invited the Visiting Student Researcher is responsible to assure that they receive any required training in order to be able to carry out their research at Stanford, including appropriate privacy and data security training for the protection of personally identifying information and Stanford data, health and safety training, instruction in the protection of human subjects, or any other instruction required by the work that the student will do here.

Citizens of other countries who enter the United States to be Visiting Student Researchers at Stanford must have a DS-2019 Certificate (to apply for a J-1 visa) issued by the Bechtel International Center and must be registered each quarter, including Summer Quarter, to maintain their visa status.

See also the Graduate Academic Policies and Procedures Handbook, Activating Nonmatriculated Graduate Students (GAP 2.3 (<http://gap.stanford.edu/2-3.html>)) and the Research Policy Handbook, Section 10.7 (<http://doresearch.stanford.edu/policies/research-policy-handbook/non-faculty-research-appointments/procedures-appointing-visiting>).

## Students of New Faculty

Faculty who are being hired by Stanford University, and who are currently advising doctoral students in advanced stages of degree completion at their home university, may appoint one or more of these students as Students of New Faculty, a nonmatriculated graduate status, for the purpose of facilitating the completion of the student's doctoral research with their faculty adviser. To be eligible for this status, the student must:

- have completed at their home institution all degree requirements equivalent to those required for Stanford's TGR status (i.e., completed all curricular requirements, candidacy, and residency), and
- be in good academic standing at their home institution, and remain so while at Stanford, and
- demonstrate agreement to the terms and conditions for this appointment by signing the Students of New Faculty Representations.

Appointment of these students into nonmatriculated Stanford graduate status requires the approval of the incoming faculty member, that faculty member's Stanford department chair and school dean, and Stanford's office of the Vice Provost for Graduate Education, as well as of the appropriate office at the student's home institution.

Approval for these appointments is documented by means of an Affiliation Agreement between Stanford and the student's home institution, identifying the student(s) and describing the arrangements for their appointment at Stanford. Attachments to this agreement specify the timing of the appointment and the sources of financial support, if any, for each student.

Students are appointed into this status for one year at a time, up to a limit of three years. The Stanford department may request extensions beyond the third year. Approval for extensions requires the concurrence of the Stanford school dean's office and the Vice Provost for Graduate

Education, along with the appropriate office(s) at the student's home institution.

Students of New Faculty must enroll in the appropriate TGR course during each quarter of the academic year while they are at Stanford, and will be charged TGR tuition during each enrolled quarter. Summer enrollment is optional subject to the relevant policies of Stanford and of the home institution. Students of New Faculty may be appointed and paid as Research Assistants. For more information, see GAP 2.4 (<http://gap.stanford.edu/2-4.html>).

## Undergraduate Financial Aid

The University has a comprehensive need-based financial aid program for its undergraduates who meet various conditions set by federal and state governments, the University, and other outside agencies. Students are admitted without consideration of their financial circumstances, except in the case of international students.

In awarding its own funds, the University assumes that students and their parents accept the first and primary responsibility for meeting educational costs. Stanford's policy generally is to exclude undergraduates from being considered financially independent of their parents for University-administered scholarship aid unless a student is an orphan, a ward of the court, or at least 25 years of age. Spouses of married undergraduate students share in the responsibility to meet educational costs.

Stanford expects financial aid applicants to apply for and use resources from state, federal, and private funding sources, contribute from their earnings during nonenrollment periods (for example, summer), and use earnings from part-time employment during the academic year to meet educational expenses. If Stanford determines that an applicant and his or her family cannot meet these expenses, the University may offer financial aid funds to help meet these costs.

The amount of scholarship or grant funds offered to students is determined by the difference between the comprehensive cost of attendance (including tuition, fees, room, board and allowances for books, supplies, personal expenses, and travel) and the amount the student and parents can reasonably be expected to contribute toward educational costs based on family financial circumstances. Scholarships from outside sources may change the University's financial aid award. When a student receives outside scholarships, these funds reduce or eliminate the student's responsibility to contribute from job earnings. If the total in outside scholarships exceeds the student's responsibility, the University then reduces institutional scholarship, dollar for dollar, by any additional amount.

Students are considered for University scholarship eligibility during their first four years of undergraduate enrollment. The Financial Aid Office (FAO) considers applicants for University scholarship eligibility beyond the twelfth quarter only if enrollment is essential in order to complete the minimum requirements for the first baccalaureate degree or major. Students who enroll for a fifth year in pursuit of a coterminal program, a minor, a second major, a second degree, or the B.A.S. degree are not eligible for University scholarship consideration but may apply for student loans and federal grants. Eligibility for federal student aid is limited to the equivalent of 18 quarters of full-time undergraduate enrollment, including course work taken at other colleges and universities. Students must also maintain satisfactory academic progress to retain financial aid eligibility.

For additional detailed information, refer to the FAO (<http://financialaid.stanford.edu>) web site.

## Graduate Financial Aid

Graduate students at Stanford receive funding from a variety of sources. University fellowships, research assistantships, and teaching

assistantships are offered primarily to doctoral students. In some cases, master's students also may receive fellowships and assistantships. In addition, outside agencies provide fellowships to many graduate students at Stanford. Students without fellowships or assistantships, and those whose funding does not cover all of their costs, may need to use student loans, savings, other personal assets, a spouse's earnings, or parental support to meet their educational expenses.

## Veterans' Educational Benefits

The Office of the University Registrar serves as the liaison between the University, its students, and the various federal, state, and local agencies concerned with veterans' benefits. Stanford certifies enrollment for students in degree seeking programs and students in one of 24 VA approved certificate programs offered through the Stanford Center for Professional Development. Other non-matriculated and certificate programs are not eligible. All students eligible to receive veterans' benefits while attending the University are urged to complete arrangements with the appropriate agency in advance of enrollment.

Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student's degree program or courses beyond those required for a specific degree program are not certified. Undergraduates should meet with an advisor to develop a course enrollment plan. Graduate students should have their departments approve their study lists as meeting graduation requirements on a quarterly basis.

To comply with federal regulations concerning credit for previous training (38 CFR 21.4253), Stanford University is required to evaluate all previous education and training completed elsewhere to determine what credit, if any, should be granted to students eligible to receive Veterans Affairs (VA) educational benefits. Stanford is required to complete an evaluation; credit is granted when appropriate. Credit is evaluated toward the degree program registered with Veterans Affairs as determined by the Office of the University Registrar in conjunction with the relevant academic department(s) or program(s). All relevant policies regarding transfer credit apply. In addition, this evaluation occurs each time a student's degree program is changed.

Subject to current federal and University guidelines, students eligible for receipt of VA educational benefits have their prior education and training evaluated up to the credit limits outlined in the "Residency Policy for Graduate Student (p. 52)s" section of this bulletin. As an exception to that policy, students in master's programs in the schools of Earth Sciences, Education, Engineering, Humanities and Sciences, Law, Medicine, and Graduate Business are allowed a maximum of 6 transfer (quarter) units. Students should consult with the Office for Military Affiliated Communities (OMAC) (<https://military.stanford.edu/gi-bill-benefits>) for consideration of optimal use of educational benefits.

Stanford participates in the Yellow Ribbon provision of the Post 9/11 GI Bill (Ch. 33). If a matriculated student qualifies for Chapter 33 benefits at the 100% level, the student may be eligible to receive additional funding through the Yellow Ribbon Program. Under this program, Stanford provides an annual award of \$3,000 to undergraduate students to supplement the Chapter 33 base tuition benefit. The VA matches Stanford's Yellow Ribbon contribution, so the student receives a combined total of \$6,000 in additional funds. Certain matriculated graduate students may be eligible for the Yellow Ribbon provision, and the amount of institutional contribution varies by school and program at the graduate level.

See the Office for Military Affiliated Communities (OMAC) web site (<https://military.stanford.edu/gi-bill-benefits>) for additional information about veterans' educational benefits.

## Tuition, Fees, and Housing

### University Communication with Students

Stanford University uses electronic means (such as email, texts, and the Internet) as a primary method of communication and of providing billing, payment, and enrollment services. Signatures or acknowledgments provided by the student electronically to Stanford via Stanford systems and/or @stanford.edu email are valid and legally binding.

### Notification/Obligation to Read Email

For many University communications, email to a student's Stanford email account is the official form of notification to the student, and emails sent by University officials to such email addresses will be presumed to have been received and read by the student. Emails and forms delivered through a SUNet account by a student to the University may likewise constitute a formal communication, with the use of this password-protected account constituting the student's electronic signature.

### Obligation to Pay Charges

By accepting Stanford's offer of admission and enrolling in classes, each student accepts responsibility for paying all debts to the University, including tuition and fees, for which he or she is liable. An individual's registration as a Stanford student constitutes his or her agreement to make timely payment of all amounts due.

Regular quarterly tuition for the 2015-16 academic year, payable Autumn, Winter, and Spring quarters, is as follows:

Type	Fee
Undergraduate	\$15,243
Graduate 11-18 units	\$15,243
Graduate 8-10 units	\$9,910
Graduate Engineering 11-18 units	\$16,240
Graduate Engineering 8-10 units	\$10,560
Graduate School of Business, first year MBA	\$21,350
Graduate School of Business, second year MBA	\$20,625
School of Medicine (M.D. Program) 1	\$17,497
Stanford Law School	\$18,061
Law/Business Joint Program	\$18,956
Permit to Attend for Services Only (PSO)	\$4,611
Terminal Graduate Registration (TGR)	\$2,973
Medical School Research Rate	\$3,498

<sup>1</sup> Ph.D. students in the Biomedical Sciences and in the Graduate School of Business are assessed the regular graduate tuition rate.

For complete tuition information, see the Registrar's tuition ([https://studentaffairs.stanford.edu/registrar/students/tuition-fees\\_15-16](https://studentaffairs.stanford.edu/registrar/students/tuition-fees_15-16)) web site.

Regular tuition fees apply to the undergraduate Overseas Studies and Stanford in Washington programs.

A coterminal student is subject to graduate tuition assessment and adjustment policies once placed in the coterminal graduate tuition group. Coterminal students should see the student policies and procedures for tuition assessment, as described under in the "Coterminal Degrees (p. 42)" section of this bulletin.

Eligibility for registration at reduced tuition rates is described below. Tuition exceptions may also be made for illness, disability, pregnancy, new-parent relief, or other instances at the discretion of the University.

No reduction in tuition charges is made after the first two weeks of the quarter.

All students are advised, before registering at less than the regular full-tuition rate, to consider the effects of that registration on their degree progress and on their eligibility for financial aid and awards, visas, deferment of student loans, and residency requirements.

The University reserves the right to change at any time, without prior notice, tuition, room fees, board fees, or other charges.

### Undergraduate Student Tuition

During Autumn, Winter, and Spring quarters, undergraduates are expected to register at the regular full-tuition rate.

During Summer Quarter, Stanford undergraduates may register on a unit-basis (minimum 3 units). For Summer Quarter tuition rates and policies, see the Registrar's summer tuition ([https://studentaffairs.stanford.edu/registrar/students/summer-tuition\\_15-16](https://studentaffairs.stanford.edu/registrar/students/summer-tuition_15-16)) web site ([https://studentaffairs.stanford.edu/registrar/students/summer-tuition\\_14-15](https://studentaffairs.stanford.edu/registrar/students/summer-tuition_14-15)).

The following reduced-tuition categories can be requested by matriculated undergraduate students in the final stages of their degree program:

#### 1. Permit to Attend for Services Only (PSO)

Undergraduates completing honors theses, clearing incompletes, or requiring a registration status, and who meet the PSO conditions listed in the "Special Registration Statuses (Undergraduate) (p. 35)" section of this Bulletin, may petition for PSO status one time only in their terminal quarter.

#### 2. 13th Quarter

Undergraduates who meet the 13th Quarter conditions listed in the "Special Registration Statuses (Undergraduate) (p. 35)" section of this Bulletin may petition one time only to register for a minimum of eight units. For per-unit tuition rates, see the Registrar's tuition web site.

#### 3. Graduation Quarter

Undergraduates may petition to register for Graduation Quarter registration status in the quarter in which they are receiving a degree if they are not using any University resources (including housing), have completed all University requirements, and meet the Graduation Quarter conditions listed in the "Special Registration Statuses (Undergraduate) (p. 35)" section of this bulletin. Graduation Quarter may be permitted one time only. The tuition per quarter is \$150 in 2015-16.

Coterminal students are only eligible for the Graduation Quarter special registration status if they are applying to confer both the undergraduate and graduate degree in the same quarter.

### Graduate Student Tuition

Matriculated graduate students are expected to enroll for at least eight units during the Autumn, Winter, and Spring quarters. Schools and departments may set a higher minimum. During the Autumn, Winter, and Spring quarters, matriculated graduate students in most departments may register at the reduced 8-, 9-, or 10-unit tuition rate if their enrollment plans are accepted by their departments. Students in the Stanford Law School, the MBA program in the Graduate School of Business, or the M.D. program in the School of Medicine, should consult appropriate school officers about tuition reduction eligibility.

Graduate students who are enrolled in more than one graduate degree at Stanford, where each program charges a different tuition, are charged:

1. the tuition associated with a degree in the doctoral/professional category, if the other degree is in the master's category. Those degrees in the doctoral or professional category for tuition purposes are the Ph.D., D.M.A., J.S.D., M.D., and J.D. degrees. Those degrees in the master's category for tuition purposes are the Engineer, M.A., M.S., M.P.P., M.B.A., M.F.A., L.L.M., M.L.S., and J.S.M. degrees.
2. the higher tuition rate, if both degrees are in the same category.
3. a University-approved tuition rate if the student is in a special program for which specific tuition agreements have been approved by the Faculty Senate (e.g., all joint degree programs (JDs) or the Master of Science in Medicine program).

As a general proposition, during the Summer Quarter registration is not required by Stanford University and does not substitute for registration during the academic year. Students are required to be enrolled Summer Quarter if, during that quarter, they will meet any of the criteria listed in the "Enrollment Requirements (p. )" section of the "Graduate Degrees" section of this bulletin. Graduate students who do enroll Summer Quarter may reduce their enrollment to a minimum of one unit (charged on a per-unit basis, with a minimum tuition charge at the 1-3 unit rate) unless the terms of a fellowship or other financial support, or of their particular degree program, require a higher level of enrollment. TGR students who enroll in summer pay the TGR rate and must enroll in the required zero-unit course. Students in the schools of Law, Business, or the M.D. program should consult appropriate school officers regarding summer enrollment requirements. Students possessing an F1 or J1 student visa may be subject to additional course enrollment requirements in order to retain their student visas.

Honors Cooperative students register at the per-unit rate. Graduate students who are faculty spouses, regular Stanford employees, or full-time educators in the Bay Area may also register at the per-unit rate.

Nonmatriculated graduate students pay the same tuition rates as matriculated students, but must register for at least 8 units. Visiting Student Researchers pay a monthly fee; they may not enroll in or audit courses. Within certain restrictions, postdoctoral scholars may enroll in courses if the appropriate unit rate for tuition is paid.

The following reduced-tuition categories can be requested by matriculated graduate students in the final stages of their degree programs:

## 1. Terminal Graduate Registration (TGR)

Doctoral students, master's students, and students pursuing Engineer degrees who have completed all degree requirements other than the University oral exam and dissertation (doctoral students) or a required project or thesis (Engineer or master's students) and meet the conditions listed in the "TGR (p. )" section of this bulletin may request Terminal Graduate Registration tuition status.

Each quarter, TGR students must enroll in the 801 (for master's and Engineer students) or 802 (for doctoral students) course in their department for zero units, in the appropriate section for their adviser. TGR students register at a special tuition rate: \$2,973 per quarter in 2015-16. TGR students may enroll in up to 3 units of course work per quarter at this tuition rate. Within certain restrictions, TGR students may enroll in additional courses at the applicable unit rate. The additional courses cannot be applied toward degree requirements since all degree requirements must be complete in order to earn TGR status.

## 2. Graduate Tuition Adjustment

Graduate students who need only 3 to 7 remaining units to complete degree requirements or to qualify for TGR status may apply to register for one quarter only on a unit basis (3 to 7 units) to cover the deficiency. Students with disabilities covered under the Americans with Disabilities Act that have an approved reduced course load (RCL) recommended by the Office of Accessible Education (OAE) ([\[studentaffairs.stanford.edu/oae\]\(http://studentaffairs.stanford.edu/oae\)\) may also request a tuition adjustment for \*each\* quarter in which they take a RCL. For per-unit tuition rates, see the Registrar's tuition \(\[https://studentaffairs.stanford.edu/registrar/students/tuition-fees\\\_15-16\]\(https://studentaffairs.stanford.edu/registrar/students/tuition-fees\_15-16\)\) web site.](http://</a></p>
</div>
<div data-bbox=)

## 3. Graduation Quarter

Registration is required for the term in which a student submits a dissertation or has a degree conferred. Students who meet the conditions listed in the "Graduation Quarter (p. )" section of this bulletin are eligible to be assessed a special tuition rate of \$150 for the quarter in which they are receiving a degree.

## International Students

F-1 or J-1 visas are required by the U.S. Department of Homeland Security. International students must be registered as full-time students during the academic year. Summer Quarter registration is not required unless the I-20/DS-2019 notes the Summer Quarter as the start date. International graduate students comply with immigration regulations while enrolled for partial tuition if their Stanford fellowships or assistantships require part-time enrollment, if they are in TGR status, or if they are in the final quarter of a degree program. Nonmatriculated graduate students who are international students must register for at least 8 units.

## Application Fee

Contact the Undergraduate Admission Office (<http://admission.stanford.edu>) for information about the undergraduate application fee and the Graduate Admission (<http://gradadmissions.stanford.edu>) section of the Office of the University Registrar for the current graduate application fee. Application fees for the School of Law, the School of Medicine, and the Graduate School of Business vary by program. Fees are payable at the time of application and are not refundable.

## ASSU Fees

The Associated Students of Stanford University (ASSU) fees are established by student vote in Spring Quarter. Fees directly fund activities of student organizations and not operations of ASSU. The 2015-16 fees are:

- Undergraduates—\$166 per quarter
- Graduate Students—\$24 per quarter

ASSU fees are assessed in Autumn, Winter and Spring terms and can be waived subject to certain conditions. Waivers can be requested during the first two weeks of each quarter on the ASSU waiver (<http://waivers.stanford.edu>) web site. Waivers granted result in a credit to the student's University bill.

## Document Fee

Stanford charges a one-time Document Fee to all students admitted to new degree or non-degree programs. The fee is paid once only, regardless of the number of degrees a student may ultimately pursue. It covers the cost of a variety of University administrative services such as enrollment and degree certification, course drops and adds done in Axess before published deadlines, diplomas, and official transcripts and their production.

The document fee for students admitted to new degree or non-degree programs in 2015-16 is \$250.

## Campus Health Service Fee

All students enrolled on the main Stanford campus are required to pay the Campus Health Service Fee. The Campus Health Service Fee covers

most of the services provided by Vaden Health Center, including primary care medical visits, psychological evaluation and short-term therapy at Counseling and Psychological Services (CAPS), and health and wellness programs. The services provided by Vaden Health Center are not covered by Cardinal Care or a student's private health insurance. More information and answers to questions about the fee can be found at the Campus Health Service Fee (<http://vaden.stanford.edu/fees/campus-health-fee>) web site. The fee for 2015-16 is \$197 per quarter.

## Health Insurance

The University requires all registered students to carry medical insurance to provide coverage for services not provided by Vaden Health Center. Students are enrolled in and charged for the Stanford student health insurance plan, Cardinal Care, unless they have completed waiver procedures by the waiver deadline.

For complete information on health insurance, see the Vaden Health Center Insurance (<http://vaden.stanford.edu/insurance>) web site.

Those who carry medical insurance through an alternate carrier are generally eligible for waiver of the Stanford student health insurance plan. For information on waiver procedures, see the Vaden Health Center Insurance Waiver ([http://vaden.stanford.edu/insurance/using\\_your\\_own.html#wave](http://vaden.stanford.edu/insurance/using_your_own.html#wave)) web site.

## Special Fees

### New Student Orientation Fee

A fee is charged to all entering undergraduates for the costs of orientation, including room and board, and for the cost of class dues to provide funds for later activities of the class.

### Law Student Services Fee

A fee is charged each quarter to School of Law students for supplementary course materials.

### Graduate School of Business M.B.A. Course Reader Fee

A fee is charged each quarter to M.B.A. students in the Graduate School of Business to cover the cost of in-class handouts and licensing fees.

### Late Study List Fees

Charges are imposed for late submission of study lists. The amount is \$200.

### Laboratory Fee

Students in chemistry laboratory courses are charged a nonrefundable fee.

### Music Practice; Athletics, Physical Education, Recreation; and Dance

Courses for which special fees are charged are indicated in the notes of the scheduled class on Axess (<http://axess.stanford.edu>) or ExploreCourses (<http://explorecourses.stanford.edu>).

### Dissertation Fee

Each Ph.D. and D.M.A. candidate has the option to either submit electronically or on paper. Electronic submission is free. Students who choose to submit on paper are charged a fee to cover the cost of microfilming and binding the dissertation and the cost of publishing the abstract.

### International Scholar Service Fee

A one-time fee for visa authorization documents is charged to international postdoctoral and visiting scholars.

## Housing

University housing is available to enrolled Stanford degree-seeking undergraduates and graduate students as space permits and according to policies described on the R&DE Student Housing (<http://www.stanford.edu/dept/rde/cgi-bin/drupal/housing>) web site. Residential and Dining Enterprises (R&DE) Student Housing is responsible for: managing and maintaining student residences; assigning students to housing; and operating the regional housing front desks. Information on University housing assignments, options, policies, application procedures, and deadlines may be obtained on the R&DE Student Housing (<http://studenthousing.stanford.edu>) web site, by mail or in person at 482 Galvez Mall, Suite 110, Stanford University, Stanford, CA 94305-6034, by telephone at (650) 725-2810, or by email at [studenthousing@stanford.edu](mailto:studenthousing@stanford.edu) ([housingassignments@lists.stanford.edu](mailto:housingassignments@lists.stanford.edu)). Current and prospective students may also contact R&DE Student Housing by filing a HelpSU request. Information regarding off-campus housing may be obtained from Community Housing on the R&DE Student Housing (<http://offcampus.stanford.edu>) web site, by mail or in person at 482 Galvez Mall, Suite 110, Stanford University, Stanford, CA 94305-6034, by telephone at (650) 723-3906, or by email at [communityhousing@lists.stanford.edu](mailto:communityhousing@lists.stanford.edu). For other housing related information, email [studenthousing@lists.stanford.edu](mailto:studenthousing@lists.stanford.edu) or phone the main R&DE Student Housing office at (650) 725-1600.

The department of Residential Education (<http://www.stanford.edu/dept/resed>) (650-725-2800) and the Graduate Life Office (<http://www.stanford.edu/group/glo>) (650-723-1171) are responsible for residential staff, educational programs, counseling, and crisis intervention.

## Housing Rates

Complete information on housing is available on the R&DE Student Housing (<http://www.stanford.edu/dept/rde/cgi-bin/drupal/housing>) web site. Campus housing rates are generally below local area market rents.

- See Apply for Housing (<http://www.stanford.edu/dept/rde/cgi-bin/drupal/housing/apply/apply-housing>) to apply for upper class undergraduate, single graduate, couple without children, or student with children housing.
- Rates for 2015-16 are posted online:
  - Undergraduate residence rates chart (<https://web.stanford.edu/dept/rde/cgi-bin/drupal/housing/page/undergraduate-residences-rates-chart-2015-16>)
  - Graduate residence rates chart ([https://web.stanford.edu/dept/rde/cgi-bin/drupal/housing/sites/default/files/pdfs/2015-16\\_Grad\\_RatesChart.pdf](https://web.stanford.edu/dept/rde/cgi-bin/drupal/housing/sites/default/files/pdfs/2015-16_Grad_RatesChart.pdf))

All on-campus rates are per student and include utilities and coinless laundry. Room rates are charged quarterly on the University bill. Information on payment options and procedures is discussed in assignment information sent out by R&DE Student Housing and in the Payments section of the Stanford Bulletin.

## House Dues

A quarterly house dues fee for students is generally determined by the local residence staff and/or residents of each house and may be included with room and board charges on the University bill.

## Communications Fee

Students who live in housing are automatically assessed a communications fee on their University bill that covers in-room network connections and a land-line phone with basic telephone service.

## Undergraduate Residences

Approximately 96 percent of undergraduates live in University housing, not counting students studying abroad during the academic year. All freshmen and transfers (for their first year) are required to live in University residences for educational reasons and are automatically assigned housing following admission. Information on the housing assignment process is included on the Approaching Stanford (<http://approaching.stanford.edu>) page on R&DE Housing (<https://undergrad.stanford.edu/advising/student-guides/rde-student-housing>). Because freshmen must live in campus housing, losing eligibility for University housing also leads to a loss of student status until the student has returned to University housing unless an extraordinary exemption is granted from the Office of the Vice Provost for Undergraduate Education.

Residence assignments for continuing undergraduates are made on the basis of an annual lottery, called the Draw (<http://thedraw.stanford.edu>), and quarterly waiting lists. Undergraduates are guaranteed four years of University housing (two or three years for transfer students based on their entering class standing) if:

1. they are in compliance with the University housing agreement and University policies;
2. they apply by the appropriate Draw deadlines; and,
3. they are willing to live anywhere on campus.

Undergraduate residences include traditional residence halls, language and culture theme houses, cross-cultural theme houses, student-managed and cooperative houses, apartments, suites, fraternities, and sororities.

## Graduate Residences

Approximately 62 percent of matriculated graduate students live in R&DE Student Housing at Stanford. Residence assignments are made on the basis of an annual lottery and quarterly waiting lists. New matriculated students are guaranteed University housing if:

1. they are in compliance with the University housing agreement and University policies;
2. they apply by the first round application deadline for the Autumn term; and
3. they are willing to live in any residence for which they are eligible

At Stanford University, new matriculated students are students who are in a graduate program for the first time. Students starting a second graduate degree are not considered new students and therefore are not guaranteed housing.

Coterminal students who opt to live on campus are required to live in undergraduate housing for the duration of their four years of guaranteed undergraduate housing regardless of their student status. Once these four years have been used, students can apply in the annual Spring lottery for graduate housing, where they apply with a coterm priority. Coterminal students are not guaranteed housing and are assigned after all new first-year graduate students who are guaranteed housing, but before continuing graduate students.

Currently, continuing matriculated graduate students are provided five additional years of limited priority for housing after their first year. Limited priority years are not automatically cumulative, so students do not receive additional years of limited priority for subsequent degrees. Students who live in residences that are open year-round and who remain in continuous occupancy in their rooms or apartments may renew their contracts annually if they meet certain eligibility requirements. Students who live in residences that are open only during the academic year, or who want to change residences, re-enter the lottery each year. The number of years that students are able to renew housing is being reviewed and may be changed to accommodate the first-year guarantee.

Stanford also offers subsidized off-campus apartments as part of the first-year guarantee. Students apply for such subsidized off-campus apartments through the graduate housing application process.

Single graduate students may request assignment to furnished graduate apartments in a variety of configurations. Studios, efficiency two-bedroom units (shared kitchen and bath), junior studios (private bedroom and bath with shared kitchen), two-, three- and four-bedroom apartments are available.

Couples without children may request assignment to furnished studios or one-bedroom apartments. Couples housing is available to students who are married and to students who have a same-sex or opposite-sex domestic partner. At Stanford University, a domestic partnership is defined as an established, long-term partnership with an exclusive mutual commitment in which the partners share the necessities of life and ongoing responsibility for their common welfare.

Furnished one-, two-, and three-bedroom apartments are available for students with children, based on the number of dependents. Housing for students with children is available to married couples, domestic partners, and single parents who have dependent children living with them. Housing is not provided for extended families, including the parents and siblings of students, or live-in day care staff.

## Community Housing

Community Housing maintains computerized listings of private rooms, houses, and apartments in surrounding communities that are available to students who want to live off-campus. Students must make rental arrangements directly with landlords. An online listing service (<http://www.stanford.edu/dept/rde/cgi-bin/drupal/housing/community-housing/community-housing>) facilitates the process of making connections. Information on community housing may be obtained from the Community Housing web site (<http://offcampus.stanford.edu>), by mail or in person at 482 Galvez Mall, Suite 110, Stanford University, Stanford, CA 94305-6034, by telephone at (650) 723-3906, or by email at [communityhousing@lists.stanford.edu](mailto:communityhousing@lists.stanford.edu).

During mid-August to mid-September, temporary accommodations are available in student residence halls at a modest charge for students searching for off-campus housing for Autumn Quarter. Contact Stanford Conferences (<http://www.stanford.edu/dept/rde/cgi-bin/drupal/conferences>) for more information at (650) 725-1429.

Note that Stanford University does not investigate, endorse, or guarantee the accuracy of the information provided by any listing, or the condition of the accommodation. Furthermore, the University assumes no responsibility for housing arrangements made by persons using any of these services.

## Meal Plans

For information on meal plans, see the R&DE Stanford Dining web site (<http://dining.stanford.edu>) and its meal plan rate page (<https://rde.stanford.edu/dining/mealplans>).

Stanford University's Residential Education program promotes the philosophy that living and learning are integrated and that formal teaching, informal learning, and personal support in residences are integral to a Stanford education. Meals play a key role in this mission of community building, leading, and learning. Therefore, residents of specially designated University residence halls (Branner, Crothers/Crothers Memorial, Florence Moore, Lakeside, Manzanita, Ricker, Stern, Toyon, Wilbur, Yost, Murray, and EAST) are required to participate in a R&DE Stanford Dining meal plan. R&DE Stanford Dining is Committed to Excellence by providing Meal Plans that offer significant value, the highest quality, and maximum flexibility of dining across campus.

R&DE Stanford Dining serves 19 meals each week: breakfast, lunch and dinner, Monday through Friday, and brunch and dinner on the weekends. There are several meal plans to choose from: 19 meals/week, 14 meals/week plus Meal Plan Dollars, 10 meals/week plus Meal Plan Dollars, Yost/Murray/EAST 11 meals/week plus open kitchen and Meal Plan Dollars, and Apartment, 5 meals/week plus Meal Plan Dollars. The most popular meal plan is the 14 meals/week plus meal Plan Dollars.

Meal plans are billed on a quarterly basis, and the cost is determined by the number of service days in each quarter. Meal Plan Dollars provided as part of the 14 meal/week and 10 meal/week plans also vary, depending on the number of days in each quarter.

## Payments

By accepting Stanford's offer of admission and enrolling in classes, each student accepts responsibility for paying all debts to the University, including tuition and fees, for which he or she is liable. An individual's registration as a Stanford student constitutes his or her agreement to make timely payment of all amounts due.

Charges and credits from offices within the University are aggregated in a student's individual account and presented on the University bill. Student Financial Services sends the University bill electronically to students monthly via Stanford ePay. Students may designate 'Authorized Payers' via Stanford ePay to allow others to view the student account and make payment. Students and Authorized Payers may view the student account online 24 hours a day, seven days a week, via Stanford ePay (<https://sfs.stanford.edu/student-accounts/pay-your-bill>). Payments should be made online through Stanford ePay. If necessary, the student or Authorized Payer may print a bill or receipt from Stanford ePay.

A list of payment due dates throughout the academic year is available on the Student Financial Services website (<https://sfs.stanford.edu/student-accounts/pay-your-bill/dates-and-deadlines>). To avoid late payment penalties, online payments via Stanford ePay can be made up to midnight PST on the 15th of the month; mailed payments must be postmarked by 5:00 p.m. on the 15th of the month.

After the start of the term, adding units may result in additional tuition charges. Other fees, such as room damage repair charges, petition fees, late fees, lab fees, library fees, and other miscellaneous fees or charges are due on the 15th of the month after which they are billed.

Stanford offers an installment payment plan for undergraduates. See Installment Payment Plan (<https://sfs.stanford.edu/student-accounts/pay-your-bill/installment-payment-plan>) for information.

## Forms of Payment

Stanford's standard method of payment is the online service, Stanford ePay, which includes electronic check (eCheck) and an International Funds Transfer options. No fee is associated with ePay payments. International students wishing to pay in foreign currencies should consider using the International Funds Transfer option within ePay, which allows students to arrange for payment in foreign currencies via Western Union. This electronic option offers students favorable exchange rates and eliminates bank fees typically charged for wire transfer.

Alternative methods of payment are available if Stanford ePay is not possible. Stanford does not accept cash, credit cards or postdated checks for payments to the University bill.

See University Bill Payment Methods (<https://sfs.stanford.edu/student-accounts/pay-your-bill/methods-payment>) for information.

## Credit Balances

Stanford uses Direct Deposit to refund credit balances to students. See the Direct Deposit enrollment instructions (<https://sfs.stanford.edu/student-accounts/refunds/direct-deposit>) web site. Students are

expected to enroll in Direct Deposit at the beginning of their Stanford career or as soon as possible thereafter. Direct Deposits reach the bank within 24-48 hours of processing. Receipt of funds will not be delayed by mail time, lost checks, or the need to go to the bank as is the case with paper checks.

Generally credit balances resulting from financial aid are refunded automatically every Monday, Wednesday and Friday. Credit balances resulting from an overpayment of cash (e.g. ePayment, wire, check) remain on the student account to be applied to future charges. A refund of a cash overpayment may be provided at any time upon student request. Annually, in August, Student Financial Services will refund any remaining overpayment of cash from the prior academic year to the student.

## Account Fees and Actions

### Late Payment Fees

The University must receive the full amount due on or before the due date indicated on the bill. If full payment is not received by the due date, a late fee of 1% of the amount past due may be assessed. Anticipated aid (aid that has been accepted but not disbursed and is shown on the student account) reduces the total amount due prior to late fees being applied.

### Holds

Accounts that become past due more than 30 days are subject to financial holds. A financial hold blocks transcripts, diplomas, and enrollment eligibility.

### Insufficient Funds

A non-refundable \$25.00 administrative fee may be assessed for checks or eCheck payments returned due to insufficient funds. In addition, student accounts are subject to holds, and late payment penalties may apply.

### Delinquent Accounts

Delinquent accounts may be reported to one or more of the national credit reporting agencies. Severely delinquent accounts may be referred to a collection agency and/or placed in litigation in accordance with state and federal laws. Students with delinquent accounts may be held responsible for collection costs, attorney fees, and court costs. Stanford may consider past delinquent accounts in determining whether to provide Stanford loans.

## Refunds

Students who withdraw from the University before the end of a term may be eligible to receive refunds of portions of their tuition under certain limited circumstances.

See the Registrar's Tuition page for 2015-16 for a schedule of refunds ([https://studentaffairs.stanford.edu/registrar/students/tuition-fees\\_15-16](https://studentaffairs.stanford.edu/registrar/students/tuition-fees_15-16)).

## Annulled Registration

Students who take a leave of absence or summer annulment from the University voluntarily before the first day of instruction may have their registrations annulled. Tuition is refunded in full if the student never attended. Such students are not included in University records as having registered for the term and new students do not secure any privileges for admission for any subsequent quarter as returning students. A leave of absence or summer annulment does not automatically cancel health coverage (both Cardinal Care and the Campus Health Services Fee) unless the leave of absence or summer annulment is granted before the first day of instruction. Financial aid recipients should be aware that a proportion of any refund is returned to the various sources of aid.

## Cancellation of Registration or Suspension

Students who have their registrations canceled or are suspended from the University generally receive refunds on the same basis as those receiving leaves of absence unless otherwise specified. A student whose registration is canceled less than one week after the first day of instruction for an offense committed during a preceding quarter receives a full refund of tuition fees.

## Institutional Interruption of Instruction

It is the University's intention to avoid the necessity of taking the actions described in this paragraph. However, should the University determine that continuation of some or all academic and other campus activities is impracticable, or that their continuation involves a high degree of physical danger to persons or property, activities may be curtailed and students requested or required to leave the campus. In such an event, arrangements are made as soon as practical to offer students the opportunity to complete their courses, or substantially equivalent work, so that appropriate credit may be given. Alternatively, the University may determine that students receive refunds on the same basis as those receiving leaves of absence, or on some other appropriate basis.

## Leaves of Absence

A student in good standing who desires or is required to take a leave of absence from the University after the first day of instruction, but before the end of the first 60 percent of the quarter (term withdrawal deadline), may file a petition for a leave of absence and tuition refund. Graduate students submit the completed leave of absence form to the Student Services Center (<http://studentservicescenter.stanford.edu>). Undergraduates who wish to withdraw from the current quarter, or from a quarter for which they have registered in advance and do not wish to attend, must file a Leave of Absence Petition (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/leaveofabsence.pdf>) with and receive approval from the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall. A voluntary leave of absence after the first 60 percent of the quarter (term withdrawal deadline) is only granted for approved health and emergency reasons. For more information on leaves of absence, undergraduates should see the "Leaves of Absence and Reinstatement (Undergraduate) (p. 35)" section of this bulletin, and graduate students should see the "Leaves of Absence (Graduate) (p. 53)" section of this bulletin.

## Room and Meal Plan Refunds

Students assigned to a University residence are subject to the terms of the University Residence Agreement, and are required to live in University Housing for the full duration of their signed contract. The text of the University Residence Agreement is available at the Residence Agreement ([http://www.stanford.edu/dept/rde/shs/res\\_agree.htm](http://www.stanford.edu/dept/rde/shs/res_agree.htm)) web site.

Room refunds are made only when students move out of the residence system and graduate from or cease to be enrolled at the University. Eligibility for refunds is listed in the Residence Agreement. Termination of Occupancy is filed in Axxess. Filing a termination of occupancy form and moving out of Student Housing does not necessarily entitle a student to a refund. Students in greek letter houses are billed directly by the fraternity or sorority, and refunds are arranged between the student and the fraternity or sorority.

A meal plan refund is based on the date when a student moves out of University residence and is approved under conditions as specified in the Residence Agreement. If a student uses the meal plan after that date, an additional daily charge incurs.

Any decision to refund prepaid room and meal plan charges or to waive liability for deferred charges is made at the sole discretion of the University. Students with questions about refunds should contact

Housing Assignments for room refunds or the central office of Stanford Dining for residential meal plan refunds.

# Undergraduate Degrees and Programs

## Degree Requirements

### A Liberal Education

As do all major universities, Stanford provides the means for its undergraduates to acquire a liberal education, an education that broadens the student's knowledge and awareness in each of the major areas of human knowledge, that significantly deepens understanding of one or two of these areas, and that prepares him or her for a lifetime of continual learning and application of knowledge to career and personal life.

The undergraduate curriculum at Stanford allows considerable flexibility. It permits each student to plan an individual program of study that takes into account personal educational goals consistent with particular interests, prior experience, and future aims. All programs of study should achieve some balance between depth of knowledge acquired in specialization and breadth of knowledge acquired through exploration. Guidance as to the limits within which that balance ought to be struck is provided by the University's General Education Requirements and by the requirements set for major fields of study.

These educational goals are achieved through study in individual courses that bring together groups of students examining a topic or subject under the supervision of scholars. Courses are assigned credit units. To earn a bachelor's degree, the student must complete at least 180 allowable units and, in so doing, also complete the Writing Requirement, the General Education Requirements, the Language Requirement, and the requirements of a major.

The purpose of the Writing Requirement is to promote effective communication by ensuring that every undergraduate can write clear and effective English prose. Words are the vehicles for thought, and clear thinking requires facility in writing and speech.

The Language Requirement ensures that every student gains a basic familiarity with a foreign language. Foreign language study extends the student's range of knowledge and expression in significant ways, providing access to materials and cultures that otherwise would be out of reach.

The General Education Requirements provide guidance toward the attainment of breadth and stipulate that a significant share of a student's work must lie outside an area of specialization. These requirements ensure that every student is exposed to different ideas and different ways of thinking. They enable the student to approach and to understand the important ways of knowing how to assess their strengths and limitations, their uniqueness, and, no less important, what they have in common with others.

Depth, the intensive study of one subject or area, is provided through specialization in a major field. The major relates more specifically to a student's personal goals and interests than do the general requirements outlined above. Stanford's curriculum provides a wide range of standard majors through its discipline-oriented departments, a number of interdisciplinary majors in addition to department offerings, and the opportunity for students to design their own major programs.

Elective courses, which are not taken to satisfy requirements, play a special role in tailoring the student's program to individual needs. For most students, such courses form a large portion of the work offered

for a degree. Within the limitations of requirements, students may freely choose any course for which previous studies have prepared them.

This section provides more detailed descriptions of these various requirements and the rationales upon which they are based.

## Bachelor of Arts (B.A.), Bachelor of Science (B.S.)

Stanford University confers the degree of Bachelor of Arts (B.A.) or the degree of Bachelor of Science (B.S.) on those candidates who have been recommended by the Committee on Undergraduate Standards and Policy (C-USP), who have applied in advance for conferral of the degree, and who have fulfilled the following requirements:

1. A minimum of 180 units of allowable University work. (As described below, units above the allowable limits for activity courses and for courses taken on a satisfactory/no credit and credit/no credit basis cannot be counted towards the 180-unit minimum.)
2. The Writing, General Education, and Language Requirements (see below).
3. Curricular requirements of at least one major department or program and the recommendation of the department(s). (Descriptions of curricular and special degree requirements are included in each department's section of this bulletin.)
4. Students admitted as freshmen—A minimum of 135 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 135 units in resident work may petition for a waiver of the last quarter-in-residence requirement for up to 15 units through the Last Units Out of Residence ([http://studentaffairs.stanford.edu/sites/default/files/registrars/files/last\\_units\\_out\\_of\\_residence.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrars/files/last_units_out_of_residence.pdf)) petition.
5. Students admitted as transfers—A minimum of 90 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 90 units in resident work may petition for a waiver of the last quarter-in-residence requirement for up to 15 units through the Last Units Out of Residence ([http://studentaffairs.stanford.edu/sites/default/files/registrars/files/last\\_units\\_out\\_of\\_residence.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrars/files/last_units_out_of_residence.pdf)) petition.

Stanford confers the Bachelor of Science degree on candidates who fulfill these requirements in the School of Earth, Energy & Environmental Sciences, in the School of Engineering, or in the departments of Applied Physics, Biology, Chemistry, Mathematics, or Physics in the School of Humanities and Sciences. The University also awards B.S. degrees to candidates in the Program in Science, Technology, and Society; in the Program in Mathematical and Computational Science; in the Program in Symbolic Systems; and, when appropriate, in the Program for Individually Designed Majors. Candidates who fulfill these requirements in other schools or departments receive the Bachelor of Arts degree.

Students who complete the requirements for two or more majors, which ordinarily would lead to the same degree (B.A. or B.S.), should review "The Major" section of this bulletin to ensure that they have an understanding of the requirements for multiple or secondary majors.

## Bachelor of Arts and Science (B.A.S.)

The University confers the degree of Bachelor of Arts and Science (B.A.S.) on candidates who have completed the following:

1. with no overlapping courses, the curricular requirements of two majors which ordinarily would lead to different bachelor's degrees (that is, a Bachelor of Arts degree and a Bachelor of Science).
2. These students must have applied in advance for graduation with the B.A.S. degree instead of the B.A. or B.S. degree, been recommended by the Committee on Undergraduate Standards and Policy (C-USP),

3. Fulfilled a minimum of 180 units of University work described in point 1 of the "Bachelor of Arts (B.S.), Bachelor of Science (B.S.)" section.
4. The requirements of each major without applying any course towards the requirements of more than one major, according to "Multiple Majors" section of this bulletin. The Major-Minor and Multiple Major Course Approval Form ([http://studentaffairs.stanford.edu/sites/default/files/registrars/files/MajMin\\_MultMaj.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrars/files/MajMin_MultMaj.pdf)) is required for graduation for students with the B.A.S degree.
5. The Writing, General Education, and Language requirements.
6. Students admitted as freshmen—A minimum of 180 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 180 units in resident work may petition for a waiver of the last quarter-in-residence requirement for up to 15 units.
7. Students admitted as transfers—A minimum of 135 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 135 units in resident work may petition for a waiver of the last quarter-in-residence requirement.

Students who cannot meet the requirements for both majors without overlapping courses are not eligible for the B.A.S., but may apply to have a secondary major recorded on their transcripts. (See "The Major" in the "Undergraduate Degrees and Programs" section of this bulletin.)

## Dual Bachelor's Degrees (Concurrent B.A. and B.S.)

A Stanford undergraduate may work concurrently toward both a B.A. and a B.S. degree. To qualify for both degrees, a student must complete:

1. A minimum of 225 units of University work. Units above the allowable limits for activity courses and for courses taken on a satisfactory/no credit and credit/no credit basis cannot be counted towards the 225 minimum.
2. The requirements of each major without applying any course towards the requirements of more than one major, according to "Multiple Majors" section of this bulletin. The Major-Minor and Multiple Major Course Approval Form ([http://studentaffairs.stanford.edu/sites/default/files/registrars/files/MajMin\\_MultMaj.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrars/files/MajMin_MultMaj.pdf)) is required for graduation for students with dual degrees.
3. The Writing, General Education, and Language requirements.
4. The curricular requirements of two majors (one of which leads to a Bachelor of Arts degree and the other to a Bachelor of Science degree).
5. Students admitted as freshmen—A minimum of 180 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 180 units in resident work may petition for a waiver of the last quarter-in-residence requirement for up to 15 units.
6. Students admitted as transfers—A minimum of 135 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 135 units in resident work may petition for a waiver of the last quarter-in-residence requirement.

A student interested in dual bachelor's degrees should declare them in Axess no later than two quarters in advance of completing the program.

Students who do not meet the higher unit and residence requirements of the dual degree option may be eligible instead for the B.A.S. degree as described above.

## Second Bachelor's Degree

Stanford does not award a second Bachelor of Arts (B.A.) degree to an individual who already holds a Bachelor of Arts, nor a Bachelor of Science (B.S.) degree to an individual who already holds a Bachelor of Science degree. Nor does Stanford award a Bachelor of Arts and Sciences degree to the holder of either a B.A. or B.S.

However, the holder of a Bachelor of Arts degree from Stanford may apply to the C-USP Subcommittee on Academic Progress for admission to candidacy for a Bachelor of Science degree, and the holder of a Bachelor of Science degree from Stanford may apply for candidacy for a Bachelor of Arts degree. A recommendation of the major department for the second bachelor's degree must accompany the application. Generally, a holder of a B.A. or B.S. degree from Stanford may not apply for the Bachelor of Arts and Sciences degree, although a student may submit a petition for exception. The C-USP Subcommittee on Academic Progress determines whether the application for a second degree may be approved and/or the conditions a student must meet in order to be allowed to earn a second degree. The office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall, reviews these petitions. A student approved for this program may register as an undergraduate and is subject to the current rules and regulations affecting undergraduates. Requirements for a second Stanford bachelor's degree are the same as those described above for dual bachelor's degrees.

Approvals or denials of applications under this section are in the discretion of the University.

Finally, inquiries by students who have earned their bachelor's degree elsewhere for a second bachelor's degree at Stanford are not accepted.

## Coterminal Bachelor's and Master's Degrees

See the "Coterminal Degrees (p. 42)" section of this Bulletin.

## The Major

The primary purpose of the major is to encourage each student to explore a subject area in considerable depth. This in-depth study complements the breadth of study promoted by the General Education Requirements and, in many cases, by a student's choice of electives. Work in depth permits practice in critical analysis and the solving of problems. Because of its depth, such study also provides a sense of how knowledge grows and is shaped by time and circumstances.

The structure of a major should be a coherent reflection of the logic of the discipline it represents. Ideally, the student should be introduced to the subject area through a course providing a general overview, and upper-division courses should build upon lower-division courses. The course of study should, if feasible, give the student the opportunity and responsibility of doing original, creative work in the major subject. Benefits of the major program are greatest when it includes a culminating and synthesizing experience such as a senior seminar, an undergraduate thesis, or a senior project.

## Degree Requirements

Undergraduates must select a major by the end of their sophomore year. All undergraduate major programs listed in this bulletin, except for certain honors degree programs that require application and admission in advance, are open to all students. Students may use Axess to declare, drop, or change a major. In some departments or programs, though, a late change could easily result in extending the period of undergraduate study. Students who have applied to graduate or who wish to declare an individually designed major must use the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change\\_UG\\_program.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_UG_program.pdf)) to select or change a major. Students requiring assistance should contact the Student Services Center (<http://www.stanford.edu/group/studentservicescenter>). For academic advising regarding majors, students should consult the Office of Undergraduate Advising and Research (<http://undergrad.stanford.edu>) (UAR).

Check individual department or program listings in this bulletin for the undergraduate degrees offered and for specific major requirements. If an area of study has no baccalaureate degree, that discipline is not available as a regular undergraduate major.

Faculty set the minimum requirements for the major in each department. These requirements usually allow latitude for tailoring a major program to a student's specific educational goals. The responsibility for developing a major program within department or program requirements lies ultimately with the individual student working in consultation with the major adviser.

## Limits of the Major

In order to achieve the values of study in depth, a well-structured major should constitute at least one-third of a student's program (55-65 units). To ensure the values of breadth, a major should comprise no more than two-thirds of a student's program (115-125 units); and, to avoid intellectual parochialism, a major program should not require a student to take more than about one-third of his or her courses from within a single department.

Major requirements in cognate subjects essential to the structure of a given major should be counted as part of the major program in applying these guidelines. Department or school requirements designed to provide extra disciplinary breadth should not be counted.

For a limited number of qualified students, many departments and programs offer special programs leading to degrees with honors. A student may apply to the major department or program for acceptance into the honors program. Demands on the student may vary, but all honors programs encourage creative, independent work at an advanced level in addition to the major requirements.

The guidelines set forth here are deliberately general; implementation must take into account the specific needs of a student's program and the nature of the discipline or disciplines involved. The exercise of responsibility in achieving the desired educational balance belongs first with the student, who, after all, has the strongest interest in the value of his or her education. It belongs secondarily to departments and major programs, which must set the requirements of competence in the many majors offered.

## Multiple Majors

Although most students declare only one major, a student may formally declare more than one major within a single bachelor's degree (B.A., B.S., or B.A.S.) program. The student may do that either at the time of initial major declaration or, as may be more advisable given the planning required to complete more than one major, by amending the original declaration. The student's major departments or programs have access routinely to all information pertinent to that student's academic record (for example, course and grade information), and each is expected to provide advising and other assistance. Students may pick up appropriate information regarding major declarations from the Student Services Center (<http://www.stanford.edu/group/studentservicescenter>). To be awarded a bachelor's degree with multiple majors, the student must fulfill the following requirements:

1. Formally declare all majors through Axess to the Office of the University Registrar.
2. Satisfy the requirements of each major without applying any course towards the requirements of more than one major or any minor unless:
  - a. overlapping courses constitute introductory skill requirements (for example, introductory math or a foreign language);
  - b. overlapping courses enable the student to meet school requirements (for example, for two majors within the School of

Engineering). Currently, only the School of Engineering has school requirements for its undergraduate majors.

Students pursuing multiple majors must complete a multiple major program form indicating which courses they plan to apply toward each major and any minor(s). Departments must certify that the plan of study meets all requirements for the majors and any minor(s) without unallowable overlaps in course work; the School of Engineering Dean's office certifies this information in any case involving an Engineering major or minor. To facilitate advance planning, multiple major program forms are available at any time from the Registrar's forms web site (<http://studentaffairs.stanford.edu/registrar/forms>). The Major-Minor and Multiple Major Course Approval Form ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin\\_MultMaj.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf)) is required for graduation for students with multiple majors or a minor. The form should be submitted to the Student Services Center (<http://www.stanford.edu/group/studentservicescenter>) by the Final Study List deadline of the quarter of intended graduation.

If the pursuit of multiple majors (or joint majors or secondary majors, or minors) unduly delays an undergraduate's progress through Stanford, the University reserves the right to limit a student to a single major, and/or to confer a degree on a student who has completed all of the requirements for a degree even though the student has not applied to graduate; such an individual would then be subject to the University's usual rules and restrictions regarding future enrollment or registration.

When students cannot meet the requirements of multiple majors without overlaps, the secondary major (<http://stanford.edu/dept/registrar/bulletin/4894.htm>), may be relevant.

## Secondary Major

In some cases, students may complete course requirements for more than one major, but they may not meet the requirements outlined for the multiple major option. For example, the student may develop a course plan in which courses requisite for one major overlap with requirements for another. In these cases, the student may declare a secondary major which results in the transcript bearing an annotation that the course requirements for that major have also been met. Secondary majors are not listed on the diploma. Students declare secondary majors through the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change\\_UG\\_program.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_UG_program.pdf))

## Joint Major Program

A joint major differs from a multiple major in that 1-2 fewer optional courses are required for each major, while an integrative senior capstone experience is required for all students in the program. Fourteen joint major programs have been approved for a six-year pilot beginning in Autumn Quarter, 2014-15. See the "Joint Major (p. 26)" section of this bulletin for details.

## Foreign Language Proficiency

The notation "proficiency in (language)" appears on the official transcripts of those students whose levels of achievement are found by procedures established by the Language Center to be roughly equivalent to knowledge an excellent student can be expected to demonstrate late in the third quarter of the third year of study in that language.

## The Joint Major Program (JMP)

Effective Autumn Quarter 2014-15, the University offers a joint major program (JMP) aimed at integrating the Humanities and Computer Science while providing students with unique educational experiences. This experimental program was approved by the Academic Senate for a six-year pilot. All of these joint major programs involve Computer Science

along with one humanities major chosen from among ten approved majors.

Each of the new joint major programs leads to conferral of a B.A.S. (Bachelor of Arts and Sciences), and are distinct from multiple degrees in which a student may formally declare more than one major within a single bachelor's degree (B.A., B.S., or B.A.S.) program.

Effective Autumn Quarter 2015-16, the University added four joint major programs to the original ten joint major programs approved for 2014-15. The following fourteen programs are offered as of Autumn Quarter 2015-16 (each major is linked to the department's bulletin site with specific information for that major):

- Computer Science (p. 231) and Art Practice (p. 333)
- Computer Science (p. 231) and Classics (p. 380)
- Computer Science (p. 231) and Comparative Literature (p. 394)
- Computer Science (p. 231) and English (p. )
- Computer Science (p. 231) and French (p. 469)
- Computer Science (p. 231) and German Studies (p. 483)
- Computer Science (p. 231) and History (p. 500)
- Computer Science (p. 231) and Iberian and Latin American Cultures (p. 508)
- Computer Science (p. 231) and Italian (p. 469)
- Computer Science (p. 231) and Linguistics (p. 548)
- Computer Science (p. 231) and Music (p. 565)
- Computer Science (p. 231) and Philosophy (p. 576)
- Computer Science (p. 231) and Slavic Languages and Literatures (p. 632)
- Computer Science (p. 231) and Spanish (p. 508)

Only a limited number of joint majors have been approved by the Academic Senate. Assessment of the joint major program will continue throughout the duration of the six-year pilot, and decisions will be made about continuation, termination, and/or expansion of the program at the end of the pilot. The School of Humanities and Sciences is limiting participation in the pilot to Humanities departments that wish to propose a joint major with Computer Science. Only approved joint majors as listed in this bulletin are available. Other combinations of majors may be taken as a multiple major, but are not part of the joint major program with its special rules and requirements.

## Requirements for Joint Majors

Typically a student in a joint major program will have an adviser in each major.

Graduation with a joint major requires the completion of a minimum of 180 units, of which at least 135 must be completed at Stanford. The specific number of units required for each major is specific to that major. It is not possible to give a single absolute number of units that a student might require in order to graduate with a joint major.

A student who declares a joint major completes the degree requirements for each of the majors. However, each of the majors in a joint major program typically requires 1-2 fewer optional courses; see the "Joint Major" sections of the respective departments for details. This course reduction in the joint major program differs from a multiple major in which all courses in both majors must be completed.

Because the joint major programs are designed to allow a student to pursue a course of study leading to mastery in two fields by blending the intellectual traditions of two Stanford departments, students in a joint major program take a senior capstone experience such as a course or project that is integrative in nature. Although the integrative capstone experience may fulfill the requirement for a capstone experience for both

majors, the units may only be counted toward the required total units in one of the majors.

It is possible, with approval of both departments, to use one course to fulfill a requirement for each major in a joint major program. University policy prohibits double counting of courses in multiple programs except in specific cases such as introductory skill requirements or overlapping courses that enable a student to meet University requirements such as GERs. Therefore, when a single course fulfills requirements in both majors, a student may apply the units associated with the course to the total units requirement of only one of the majors and then must work with the other major to identify another course that would benefit the academic plan and whose associated units may be applied to that major's total units requirement.

## Declaring a Joint Major Program

To declare the joint major, students must first declare each major through Axess, and then submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (<https://stanford.box.com/change-UG-program>) The Major-Minor and Multiple Major Course Approval Form ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin\\_MultMaj.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf)) is required for graduation for students with a joint major.

## Dropping a Joint Major Program

To drop the joint major, students must submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (<https://stanford.box.com/change-UG-program>). Students may also consult the Student Services Center (<http://studentservicescenter.stanford.edu>) with questions concerning dropping the joint major.

## Transcript and Diploma

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major". The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major".

## Undergraduate Minor

Students completing a bachelor's degree may elect to complete one or more minors in addition to the major. Minors must be officially declared by students no later than the deadline for their application(s) to graduate, according to declaration procedures developed and monitored by the Registrar. Earlier deadlines for declaration of the minor may be set by the offering school or department. Satisfactory completion of declared minors is noted on the student's transcript after degree conferral.

A minor is a coherent program of study defined by the department or degree program. It may be a limited version of a major concentration or a specialized subset of a field. A minor consists of no fewer than six courses of 3 or more units to a maximum of 36 units of letter-graded work, except where letter grades are not offered. Departments and degree programs establish the structure and requirements of each minor in accordance with the policy above and within specific guidelines developed by the deans of schools. Programs which do not offer undergraduate degrees may also make proposals to their cognizant deans to establish a minor. Requirements for each minor are described in the individual department or program listings in this bulletin.

Students may not overlap (double-count) courses for completing major and minor requirements, unless:

1. Overlapping courses constitute introductory skill requirements (for example, introductory math or a foreign language), or
2. Overlapping courses enable the student to meet school requirements (for example, for a major within the School of Engineering and a minor within or outside of the School of Engineering). Currently,

only the School of Engineering has school requirements for its undergraduate majors.

Undergraduates use Axess to declare or drop a minor. The Major-Minor and Multiple Major Course Approval Form ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change\\_UG\\_program.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_UG_program.pdf)) is required for graduation for students with a minor. The form should be submitted to the Student Services Center (<http://www.stanford.edu/group/studentservicescenter>) by the final study list deadline of the quarter of intended graduation.

Students with questions about declaring minors or double-counting courses towards combinations of majors and/or minors should consult with the departments or programs involved or the Student Services Center. For academic advising regarding minors, students should consult the Undergraduate Advising and Research Office ([http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual)) (UAR).

## Baccalaureate Honors With Distinction

In recognition of high scholastic attainment, the University, upon recommendation of a major department or program, awards the Bachelor's Degree with Distinction. Distinction is awarded to 15% of the graduating class based on cumulative grade point averages. GPA for Distinction purposes is calculated through Winter Quarter for each graduating class. Distinction is awarded at the end of the Spring Quarter for graduates of the Spring Quarter and prior Summer, Autumn, Winter quarters. Students are notified of Distinction on their diploma. Students who are granted Distinction, and already received their diploma in a prior quarter, will be mailed an updated diploma. The Distinction notation will show on official transcripts after Spring Commencement.

Students are also urged to consider the departmental honors programs that may give depth to their major study and to consider, as well, how the interdisciplinary honors programs might contribute to the quality of their undergraduate education.

## Departmental Honors Programs

In recognition of successful completion of special advanced work, departments may recommend their students for honors in the major. Departmental honors programs demand independent creative work at an advanced level in addition to major requirements. If approved for departmental honors, the student should declare the Honors degree through Axess.

## Interdisciplinary Honors Programs

In recognition of successful completion of honors program requirements, the following interdisciplinary programs can recommend students majoring in any field for honors in their program:

- Arts (<http://artsinstitute.stanford.edu/programs/honors-in-the-arts-program>)
- Comparative Studies in Race and Ethnicity (<http://csre.stanford.edu/honors.php>)
- Democracy, Development, and the Rule of Law ([http://cddrl.stanford.edu/fellowships/cddrl\\_undergraduate\\_honors\\_program](http://cddrl.stanford.edu/fellowships/cddrl_undergraduate_honors_program)) (CDDRL)
- Education (<https://ed.stanford.edu/academics/undergraduate/honors>)
- Environmental Science, Technology, and Policy (<http://woods.stanford.edu/educating-leaders/education/goldman-honors-program>)
- Ethics in Society (<https://ethicsinsociety.stanford.edu/undergraduate-ethics/undergraduate-honors-program>)

- Feminist, Gender, and Sexuality Studies (<https://feminist.stanford.edu/undergraduates/honors-program>)
- International Security Studies ([http://cisac.stanford.edu/docs/undergraduate\\_honors\\_program](http://cisac.stanford.edu/docs/undergraduate_honors_program)) (CISAC)
- Latin American Studies (<http://las.stanford.edu/programs/undergraduate-honors>)
- Science, Technology, and Society (<https://sts.stanford.edu/major-sts/honors-program>)

The interdisciplinary honors programs are designed to complement study in a department major. The requirements for these honors programs are described in the department sections of this bulletin. If approved for interdisciplinary honors, the student should submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program form ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change\\_UG\\_program.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_UG_program.pdf)) to the Student Services Center (<http://www.stanford.edu/group/student-services-center>) to declare the Interdisciplinary Honors Program.

## General Education Requirements

Undergraduates admitted in 2013-14 and later, must fulfill the Ways of Thinking/Ways of Doing (Ways) General Education Requirements. Students admitted in earlier years should consult the "General Education Requirements through 2012-13" section below.

In order to graduate, undergraduates must complete the following General Education Requirements:

- Thinking Matters Requirement
- Ways of Thinking/Ways of Doing (Ways) Requirement
- Writing and Rhetoric Requirement
  - Program in Writing and Rhetoric (2 courses required, PWR 1 and PWR 2)
  - Writing in the Major
- Language Requirement

### Purpose

The General Education Requirements are an integral part of undergraduate education at Stanford. Their purpose is to introduce students to the intellectual life of the University, to foreground important questions, and to illustrate how they may be approached from multiple perspectives. They are intended to develop a broad set of essential intellectual and social competencies of enduring value no matter what field a student eventually pursues. Students have flexibility to select topics that appeal to them while building critical skills, exploring interests, forming relationships with faculty and peers, and forging connections between educational experiences in many spheres. Together with the major, the requirements serve as the nucleus around which students build their four years at Stanford.

General Education requirement courses must be taken for a letter grade and a minimum of 3 units of credit, with the exception of courses taken to fulfill the Language requirement, which may be taken for credit/no credit. Additionally, a course taken to satisfy the Creative Expression Way (WAY-CE) may be taken for a minimum of 2 units and/or may be taken satisfactory/no credit at the instructor's discretion.

### Transfer Credit for Ways

Transfer students admitted in 2015-16 or later must fulfill a portion of their general education breadth requirement, Ways of Thinking, Ways of Doing (Ways) at Stanford. Transfer students who matriculate with the following number of transfer units must complete the defined number of Ways courses as part of their undergraduate education.

Number of Transfer Units	Ways Course Requirement
90	5 courses certified in 5 different Ways
75-89	6 courses certified in 6 different Ways
60-74	7 courses certified in 7 different Ways
45-59	8 courses certified in 8 different Ways
44 or fewer	10 courses certified in 8 different Ways

- Excludes Advanced Placement (AP) or other external test units
- A minimum of 2 units is required to complete the Creative Expression (CE) Ways requirement. This may be fulfilled by taking one 2-unit minimum CE course, taking a 1-unit CE course twice, or taking two 1-unit CE courses in the same program such as Dance, Music, or TAPS.

Transfer students admitted in 2014-15 may request pre-approval for planned coursework taken at another accredited college or university be accepted to fulfill a Ways requirement. In such cases, the Office of Undergraduate Advising and Research facilitates the evaluation of the course materials. If faculty review determines that the work fulfills the WAYS requirement, transfer credit is issued once the course is completed, and official transcripts sent to the Office of the University Registrar. To request a Ways requirement through transfer work, the pre-approved course must be taken for a minimum of three quarter units, except for Creative Expression which is a minimum of two units, and be taken for a letter grade. All outstanding Ways transfer requests were completed in 2014-15, so no further action may be taken. For more information, see the Transfer Work (p. ) section of this Bulletin.

Matriculated students may fulfill a maximum of five Ways courses out of the 11 course breadth requirement from another accredited college or university; these courses may be certified in any of the eight Ways categories (i.e., up to two courses in WAY-A-II, SI, WAY-SMA; one course in WAY-AQR, WAY-ED, WAY-ER, WAY-FR; and 2 units in WAY-CE).

No more than 45 units in total transfer credit may count toward the undergraduate degree. The five course transfer limit is cumulative over a student's undergraduate career at Stanford. Effective Spring 2015, courses taken prior to matriculation are not eligible for Ways credit.

Courses taken at another accredited college or university must be pre-approved for Ways certification prior to enrollment in the course. Courses that have not been pre-approved prior to enrollment at another accredited college or university do not fulfill the Ways requirement. Matriculated students must submit their Ways pre-approval request(s) by the quarterly deadline in the quarter prior to the term in which they intend to enroll in the transfer course, and defined on the Ways (<https://undergrad.stanford.edu/programs/ways/getting-credit/ways-credit-classes-taken-other-us-universities>) site. The student is subject to a five course limit for Ways pre-approval requests per term.

To request a Ways requirement through transfer work, the pre-approved course must be taken for a minimum of three quarter units, except for Creative Expression which is a minimum of two units, and be taken for a letter grade.

Once Ways transfer credit has been posted to the student's record by the Office of the University Registrar, it is final and may not be changed.

### Transfer Credit for GERs:

Students subject to General Education Requirements (GERs) through 2012-13 may propose that work taken at another accredited college or university be accepted in fulfillment of a GER. In such cases, the Office of the University Registrar determines, after appropriate faculty consultation, whether the work is comparable to any of the specifically

certified courses or course sequences. To fulfill GER requirements through transfer work, the course must match a specific Stanford course that fulfills the same GER requirement, be a minimum of three quarter units, and be taken for a letter grade. For more information, see the Transfer Work (p. ) section of this Bulletin.

Students seeking transfer credit, please see the Transfer Credit Procedures (<https://studentaffairs.stanford.edu/registrar/students/transfer-credit/procedures>) on the Office of the Registrar site.

## Thinking Matters

Students are required to take one Thinking Matters (THINK) course during their freshman year. Most students take one stand-alone course selected from approximately eight courses offered each quarter.

- THINK courses for 2015-16

Alternatively, students may take one of three residence-based, year-long programs:

- Immersion in the Arts: Living in Culture (ITALIC (<http://explorecourses.stanford.edu/search?q=ITALIC&view=catalog&page=0&academicYear=20152016&collapse=&filter-coursestatus-Active=on&filter-departmentcode-ITALIC=on>))
- Science in the Making Integrated Learning Environment (SIMILE (<http://explorecourses.stanford.edu/search?q=SiMILE&filter-departmentcode-SiMILE=on&filter-coursestatus-Active=on&academicYear=20152016>))
- Structured Liberal Education (SLE (<http://explorecourses.stanford.edu/search?filter-departmentcode-SLE=on&q=SLE&filter-coursestatus-Active=on&filter-catalognumber-SLE=on&academicYear=20152016>))
  - Each of these also satisfies at least part of the Writing and Rhetoric Requirement as well as several Ways requirements.)

Another option, in Autumn Quarter only, allows students to enroll in Education as Self-Fashioning (ESF (<http://explorecourses.stanford.edu/search?q=ESF&filter-coursestatus-Active=on&filter-departmentcode-ESF=on&academicYear=20152016>)) that satisfies the Thinking Matters requirement as well as PWR 1.

## Ways of Thinking/Ways of Doing (WAYS)

Beginning 2013-14, entering first-year students must fulfill the Ways general education requirement which is a capacity-based approach to fostering breadth rather than a traditional discipline-based approach. Transfer students who entered in Autumn 2014-15 and later, must fulfill the Ways requirement as outlined in the "Credit Transfer" section above.

These courses provide students with educational breadth by giving instruction in essential skills and capacities in the areas of:

- WAY-A-II: Aesthetic and Interpretive Inquiry (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYAll=on&collapse=,5,&filter-coursestatus-Active=on>) (2 courses)
- WAY-AQR: Applied Quantitative Reasoning (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYAQR=on&collapse=,5,&filter-coursestatus-Active=on>)
- WAY-CE: Creative Expression (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYCE=on&collapse=,5,&filter-coursestatus-Active=on>) (2 units)
- WAY-ED: Engaging Diversity (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYED=on&collapse=,5,&filter-coursestatus-Active=on>)

- WAY-ER: Ethical Reasoning (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYER=on&collapse=,5,&filter-coursestatus-Active=on>)
- WAY-FR: Formal Reasoning (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYFR=on&collapse=,5,&filter-coursestatus-Active=on>)
- WAY-SI: Social Inquiry (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYSI=on&collapse=,5,&filter-coursestatus-Active=on>) (2 courses)
- WAY-SMA: Scientific Method and Analysis (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYSMA=on&collapse=,5,&filter-coursestatus-Active=on>) (2 courses)

Students are required to take eleven certified WAYS courses, with two courses in WAY-All, WAY-SI, and WAY-SMA, and one course in each of the remaining five Ways.

Although courses may be certified to fulfill two WAYS, you may only count a course toward one WAY in your program of study. Thinking Matters courses typically fulfill a WAY. Courses may also count both for major and General Education requirements.

## Changing from GERs to WAYS Breadth Requirement

Students admitted prior to Autumn Quarter 2013-14 are eligible to change to the new Ways breadth requirement. In order to change to the new Ways system, students must submit the GER to Ways General Education Requirement Change Request (<https://stanford.box.com/GER-Ways-Request>).

Students requesting a change to the new Ways requirement continue to fulfill the other general education requirements in effect at the time of matriculation; specifically, this includes Thinking Matters or IHUM as relevant to the term of matriculation, writing and rhetoric requirements, and the language requirement. Students who change to the new Ways breadth requirement may not revert to the old GER system.

Additional information on the WAYS requirement is available on the Stanford Undergrad (<https://undergrad.stanford.edu/programs/ways>) site.

## Language Requirement

To fulfill the Language Requirement, undergraduates are required to complete one year of college-level study or the equivalent in a foreign language. Students may fulfill the requirement in any one of the following ways:

1. Complete three quarters of a first-year, 4-5 units language course at Stanford or the equivalent at another recognized post-secondary institution subject to current University transfer credit policies. Language courses at Stanford may be taken with the Credit/No Credit grading basis, if so offered, to fulfill the requirement.
2. Score 4 or 5 on the Language Advanced Placement (AP) test in one of the following languages: Chinese, French, German, Japanese, Latin, or Spanish. Advanced Placement (AP) tests in foreign literature do not fulfill the requirement.
3. Achieve a satisfactory score on the SAT II Subject Tests in the following languages taken prior to college matriculation:

Test Subject	Score
Chinese	630
French	640
German	630
Latin	630
Spanish	630
Italian	630
Japanese	620

Korean	630
Hebrew	540

4. Take a diagnostic test in a particular language which either:
  - a. Places them out of the requirement, or
  - b. Diagnoses them as needing one, two, or three additional quarters of college-level study. In this case, the requirement can then be fulfilled either by passing the required number of quarters of college-level language study at Stanford or the equivalent elsewhere, or by retaking the diagnostic test at a later date and placing out of the requirement.

Written placements are offered online throughout the summer in Chinese, French, German, Italian, Japanese, Russian, Spanish, and Spanish for home background speakers.

For a full description of Language Center offerings, see the "Language Center" section of this bulletin under the school of Humanities and Sciences.

## Writing and Rhetoric Requirement

All instructors at Stanford University expect students to express themselves effectively in writing and speech. The Writing and Rhetoric requirement helps students meet those high expectations.

All candidates for the bachelor's degree, regardless of the date of matriculation, must satisfy the Writing and Rhetoric requirement. Transfer students are individually reviewed at the time of matriculation by the Office of the University Registrar's Degree Progress section and, if necessary, the Program in Writing and Rhetoric (PWR) as to their status with regard to the requirement.

The Writing and Rhetoric requirement includes courses at three levels. The first two levels are described in more detail below. Writing-intensive courses that fulfill the third level, the Writing in the Major (WIM) requirement, are designated under individual department listings.

All undergraduates must satisfy the first-level Writing and Rhetoric requirement (WR 1) in one of five ways:

1. PWR 1: a course emphasizing writing and research-based argument.
2. SLE: writing instruction in connection with the Structured Liberal Education program.
3. ESF: writing instruction in connection with the Education as Self-Fashioning Thinking Matters course.
4. ILEs: writing instruction in connection with either the SIMILE or ITALIC Integrated Learning Environment courses.
5. Transfer credit approved by the Office of the University Registrar for this purpose.

All undergraduates must satisfy the second-level Writing and Rhetoric Requirement (WR 2) in one of four ways:

1. PWR 2, a course emphasizing writing, research, and oral presentation of research.
2. SLE: writing and oral presentation instruction in connection with the Structured Liberal Education program.
3. A course offered through a department or program certified as meeting the WR 2 requirement by the Writing and Rhetoric Governance Board. These courses are designated as Write-2.
4. Transfer credit approved by the Office of the University Registrar for this purpose.

A complete listing of PWR 1 courses is available each quarter on the PWR (<https://undergrad.stanford.edu/programs/pwr>) web site, and at the PWR office in Sweet Hall, Third Floor. Complete listings of PWR 2 and Write-2 courses are available to students on the PWR (<https://>

[undergrad.stanford.edu/programs/pwr](https://undergrad.stanford.edu/programs/pwr)) web site the quarter before they are scheduled to complete the WR 2 requirement.

For a full description of the Program in Writing and Rhetoric (PWR), see the "Writing and Rhetoric (p. 91)" section of this bulletin under the Vice Provost of Undergraduate Education.

## General Education Requirements through 2012-13

Undergraduates fulfill their General Education Requirements through the policy in effect at the time of their admission to Stanford.

- Undergraduates who matriculated in Autumn 2012, follow the Thinking Matters requirement as described above and the GERs, including Language and Writing and Rhetoric requirements, as below.
- Undergraduates who matriculated in Autumn 2011 or earlier follow the freshman IHUM requirement rather than the Thinking Matters requirement and should consult the relevant Bulletin from the year in which they began study at Stanford ([http://www.stanford.edu/dept/registrar/bulletin\\_past](http://www.stanford.edu/dept/registrar/bulletin_past)) to determine the requirements applying to them. They follow the GER requirements, including Language and Writing and Rhetoric requirements, as below.
- Undergraduates who matriculated prior to Autumn 2003 should consult previous issues of the Stanford Bulletin to determine what requirements apply.

Students may elect to change to the new system described above. The following description applies to students under the GER policy effective through 2012-13.

### Purpose

The General Education Requirements are an integral part of undergraduate education at Stanford. Their purpose is:

1. to introduce students to a broad range of fields and areas of study within the humanities, social sciences, natural sciences, applied sciences, and technology; and
2. to help students prepare to become responsible members of society.

Whereas the concentration of courses in the major is expected to provide depth, the General Education Requirements have the complementary purpose of providing breadth to a student's undergraduate program. The requirements are also intended to introduce students to the major social, historical, cultural, and intellectual forces that shape the contemporary world.

Fulfillment of the General Education Requirements in itself does not provide a student with an adequately broad education any more than acquiring the necessary number of units in the major qualifies the student as a specialist in the field. The major and the General Education Requirements are meant to serve as the nucleus around which the student is expected to build a coherent course of study by drawing on the options available among the required and elective courses.

Information regarding courses that have been certified to fulfill the General Education Requirements, and regarding a student's status in meeting these requirements, is available at the Student Services Center. Course planning and advising questions related to the General Education Requirements should be directed to Undergraduate Advising and Research.

It is the responsibility of each student to ensure that he or she has fulfilled the requirements by checking in AxBSS. This should be done at least two quarters before graduation.

Students should be very careful to note which set of General Education Requirements apply to them. The date of matriculation at Stanford determines which requirements apply to an individual student.

## Area Requirements

### Disciplinary Breadth

This requirement is satisfied by completing five courses of which one course must be taken in each subject area.

Disciplinary Breadth gives students educational breadth by providing experience in the following areas. Each area is linked to a comprehensive list of courses on ExploreCourses.

- Engineering and Applied Science (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERDBEnrAppSci=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)
- Humanities (<https://explorecourses.stanford.edu/search?filter-term-Autumn=on&filter-term-Summer=on&page=0&q=%25&filter-ger-GERDBHum=on&filter-coursestatus-Active=on&view=catalog&filter-term-Spring=on&collapse=%2c5%2c&filter-term-Winter=on&catalog=71>)
- Mathematics (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERDBMath=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)
- Natural Sciences (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERDBNatSci=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)
- Social Sciences (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERDBSocSci=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)

### Education for Citizenship

This requirement is requirement satisfied by completing two courses in different subject areas; or completing two Disciplinary Breadth courses which also satisfy different Education for Citizenship subject areas.

Education for Citizenship provides students with some of the skills and knowledge that are necessary for citizenship in contemporary national cultures and participation in the global cultures of the 21st century.

Education for Citizenship is divided into four subject areas. Each area is linked to a comprehensive list of courses on ExploreCourses. Further explanation of the purposes of Education for Citizenship requirements follows below.

- Ethical Reasoning (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERCEthicReas=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)
- Global Community (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GEREGlobalCom=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)
- American Cultures (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GEREAmerCul=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)

term-Summer=on&filter-ger-GEREAmerCul=on&filter-coursestatus-Active=on&collapse=%2C5%2C)

- Gender Studies (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GEREGender=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)

### Ethical Reasoning

Courses introduce students to the pervasiveness, complexity, and diversity of normative concepts and judgments in human lives, discuss skeptical concerns that arise about normative practices, review ways in which people have engaged in ethical reflection, and consider ethical problems in light of diverse ethical perspectives.

### The Global Community

Courses address the problems of the emerging global situation. They may compare several societies in time and space or deal in depth with a single society, either contemporary or historical, outside the U.S. Challenges of note: economic globalization and technology transfer; migration and immigration; economic development, health; environmental exploitation and preservation; ethnic and cultural identity; and international forms of justice and mediation.

### American Cultures

Courses address topics pertaining to the history, significance, and consequences of racial, ethnic, or religious diversity in the culture and society of the U.S. Challenges of note: equity in education; employment and health; parity in legal and social forms of justice; preserving identity and freedom within and across communities.

### Gender Studies

Courses address gender conceptions, roles, and relations, and sexual identity in a contemporary or historical context; they critically examine interpretations of gender differences and relations between men and women. Challenge of note: changing sexual and physiological realities in contemporary and historical perspective.

Courses certified as meeting the General Education Requirements must be taken for a letter grade and a minimum of 3 units of credit. A single course may be certified as fulfilling only one subject area within the General Education Requirements; the one exception is that a course may be certified to fulfill an Education for Citizenship subject area in addition to a Disciplinary Breadth subject area.

### Notational Symbols

Courses that have been certified as meeting the requirements are identified throughout ExploreCourses with the notational symbols listed below.

Notational symbol	Area
Thinking Matters	
THINK	Freshman Year
Disciplinary Breadth	
DB-EnrAppSci	Engineering and Applied Sciences
DB-Hum	Humanities
DB-Math	Mathematics
DB-NatSci	Natural Sciences
DB-SocSci	Social Sciences
Education for Citizenship	
EC-AmerCul	American Cultures
EC-GlobalCom	Global Communities
EC-Gender	Gender Studies
EC-EthicReas	Ethical Reasoning

## Language Requirement

To fulfill the Language Requirement, undergraduates are required to complete one year of college-level study or the equivalent in a foreign language. Students may fulfill the requirement in any one of the following ways:

1. Complete three quarters of a first-year, 4-5 units language course at Stanford or the equivalent at another recognized post-secondary institution subject to current University transfer credit policies. Language courses at Stanford may be taken with the Credit/No Credit grading basis, if so offered, to fulfill the requirement.
2. Score 4 or 5 on the Language Advanced Placement (AP) test in one of the following languages: Chinese, French, German, Japanese, Latin, or Spanish. Advanced Placement (AP) tests in foreign literature do not fulfill the requirement.
3. Achieve a satisfactory score on the SAT II Subject Tests in the following languages taken prior to college matriculation:

Test Subject	Score
Chinese	630
French	640
German	630
Latin	630
Spanish	630
Italian	630
Japanese	620
Korean	630
Hebrew	540

4. Take a diagnostic test in a particular language which either:
  - a. Places them out of the requirement, or
  - b. Diagnoses them as needing one, two, or three additional quarters of college-level study. In this case, the requirement can then be fulfilled either by passing the required number of quarters of college-level language study at Stanford or the equivalent elsewhere, or by retaking the diagnostic test at a later date and placing out of the requirement.

Written placements are offered online throughout the summer in Chinese, French, German, Italian, Japanese, Russian, Spanish, and Spanish for home background speakers.

For a full description of Language Center offerings, see the "Language Center" section of this bulletin under the school of Humanities and Sciences.

## Writing and Rhetoric Requirement

All instructors at Stanford University expect students to express themselves effectively in writing and speech. The Writing and Rhetoric requirement helps students meet those high expectations.

All candidates for the bachelor's degree, regardless of the date of matriculation, must satisfy the Writing and Rhetoric requirement. Transfer students are individually reviewed at the time of matriculation by the Office of the University Registrar's Degree Progress section and, if necessary, the Program in Writing and Rhetoric (PWR) as to their status with regard to the requirement.

The Writing and Rhetoric requirement includes courses at three levels. The first two levels are described in more detail below. Writing-intensive courses that fulfill the third level, the Writing in the Major (WIM) requirement, are designated under individual department listings.

All undergraduates must satisfy the first-level Writing and Rhetoric requirement (WR 1) in one of five ways:

1. PWR 1: a course emphasizing writing and research-based argument.
2. SLE: writing instruction in connection with the Structured Liberal Education program.
3. ESF: writing instruction in connection with the Education as Self-Fashioning Thinking Matters course.
4. ILEs: writing instruction in connection with either the SIMILE or ITALIC Integrated Learning Environment courses.
5. Transfer credit approved by the Office of the University Registrar for this purpose.

All undergraduates must satisfy the second-level Writing and Rhetoric Requirement (WR 2) in one of four ways:

1. PWR 2, a course emphasizing writing, research, and oral presentation of research.
2. SLE: writing and oral presentation instruction in connection with the Structured Liberal Education program.
3. A course offered through a department or program certified as meeting the WR 2 requirement by the Writing and Rhetoric Governance Board. These courses are designated as Write-2.
4. Transfer credit approved by the Office of the University Registrar for this purpose.

A complete listing of PWR 1 courses is available each quarter on the PWR (<https://undergrad.stanford.edu/programs/pwr>) web site, and at the PWR office in Sweet Hall, Third Floor. Complete listings of PWR 2 and Write-2 courses are available to students on the PWR (<https://undergrad.stanford.edu/programs/pwr>) web site the quarter before they are scheduled to complete the WR 2 requirement.

For a full description of the Program in Writing and Rhetoric (PWR), see the "Writing and Rhetoric (p. 91)" section of this bulletin under the Vice Provost of Undergraduate Education.

## Credit

### Activity Courses

For undergraduates, a maximum of 8 units of credit earned in activity courses, regardless of the offering department or if accepted as transfer units, count towards the 180 (225 if dual degrees are being pursued) units required for the bachelor's degree. All activity courses are offered on a satisfactory/no credit basis.

### Courses Taken on Satisfactory/No Credit or Credit/No Credit Basis

A maximum of 36 units of credit (including activity courses) taken at Stanford or its overseas campuses for a "CR" or "S" grade may be applied towards the 180 (225 if dual degrees are being pursued) units required for the bachelor's degree. The maximum for transfer students is 27 units.

Departments may also limit the number of satisfactory or credit courses accepted towards the requirements for a major. Satisfactory/Credit courses applied towards a minor may be similarly limited. Courses not letter-graded are not accepted in fulfillment of the General Education Requirements. Writing in the Major courses are usually offered letter grade only. In those instances where the course is offered for a letter grade or CR/NC, the course must be taken for a letter grade to fulfill the Writing in the Major requirement.

### Internship Guidelines

Undergraduate internships should not by themselves carry any credit. However, an individual student may arrange with a faculty member for a research or other academic project to be based on the internship. Arrangements between students and faculty regarding credit are expected to be made well in advance of the internship. Credit should be arranged within departmental rules for directed reading or independent

study and should meet the usual department standards. No transfer credit is awarded for internships.

## Last Units out of Residence

Students may petition to complete their final 15 units out of residence to complete their degree requirements. The final 15 units of transfer credit must meet the criteria in the undergraduate "Transfer Work (<https://exploreddegrees-nextyear.stanford.edu/undergraduatedegreesandprograms/#transferworktext>)" section of this bulletin. Students must submit the Request for Last Units Out of Residence Petition (<http://studentaffairs.stanford.edu/registrar/forms>) to determine eligibility and to request pre-approval of the transfer work. A registration status is required to graduate. Students should select either the Graduation Quarter or the Permit for Services Only special registration status on the Last Units Out of Residence petition. Refer to the Special Registration Status section of the bulletin for a description of these statuses. An application to graduate should be submitted through Axess.

## Concurrent Enrollment (Undergraduate)

Undergraduates may enroll concurrently at Stanford and at another college or university. The following policies apply to concurrent enrollment:

1. Students may not exceed 20 quarter units between both schools. This is the same unit maximum for undergraduates at Stanford. (One semester credit or hour generally equals 1.5 quarter units.)
2. Satisfactory academic progress is determined only by Stanford courses and units. Transfer work completed at other institutions is not considered in this calculation.
3. Students are expected to submit a Request for Transfer Credit Evaluation ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/xfer\\_credit\\_request.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/xfer_credit_request.pdf)) for pre-approval of transfer credit prior to enrolling in the transfer institution.

## Advanced Placement

Stanford University allows up to 45 units of external credit (90 units for transfer students) toward graduation including work completed in high school as part of the College Board Advanced Placement curriculum. The awarding of such credit is based on Advanced Placement test scores and is subject to University and department approval.

The faculty of a given department determine whether any credit toward the 180-unit requirement can be based on achievement in the College Board Advanced Placement Program in their discipline. Stanford departments electing to accept the Advanced Placement (AP) credit are bound by these University policies:

1. Credit is usually granted for an AP score of 4 or 5. Usually, 10 quarter units are awarded (but occasionally fewer than 10). No more than 10 quarter units may be given for performance in a single examination.
2. Whether credit is to be given for an AP score of 3 is a matter for departmental discretion; up to 10 units may be awarded.
3. No credit may be authorized for an AP score lower than 3.

Performance on an AP exam can indicate the appropriate placement for continuing course work in that subject at Stanford. If students enroll in courses at Stanford for which they received equivalent AP credit, the duplicating AP credit will be removed. The chart below shows the current AP credit and placement policies.

A maximum of 45 quarter units of Advanced Placement (AP), transfer credit, and/or other external credit (such as International Baccalaureate) may be applied toward the undergraduate degree. More than 45 units of AP, transfer, and other external credit may appear on the Stanford University transcript; however, only 45 units can be applied to the minimum units required for the undergraduate degree. Once credit has been posted it cannot be removed from the student record. Stanford

University policies on AP and other external credit are subject to review and change on an annual basis. Subjects not listed on this chart are not eligible for AP credit at Stanford University. Students may only receive AP credit for the AP policies that were effective during their matriculation year at Stanford.

Further information is available from the Student Services Center (<http://studentaffairs.stanford.edu/studentervicescenter>) or on the Registrar's (<http://studentaffairs.stanford.edu/registrar/students/ap>) web site.

## AP Scores and Placement

Test Subject	Score	Placement	Quarter Units
Calculus AB (or AB subscore)	5	MATH 51, CME 100 (Engineering students)	10
Calculus AB (or AB subscore)	4	MATH 20 or 42	5
Calculus BC	4,5	MATH 51, CME 100 (Engineering students)	10
Calculus BC	3	MATH 20 or 42	5
Chemistry	5	CHEM 33 or above	5
Chinese (Language and Culture) <sup>1</sup>	5	Take placement exam if continuing in this language	10
Computer Science A	4,5	CS 106B or 106X	5
Computer Science AB	4,5	CS 106B, 106X, or 107	5
French (Language) <sup>1</sup>	5	Take placement exam if continuing in this language	10
German (Language) <sup>1</sup>	5	Take placement exam if continuing in this language	10
Italian (Language) <sup>1</sup>	5	Take placement exam if continuing in this language	10
Japanese (Language and Culture) <sup>1</sup>	5	Take placement exam if continuing in this language	10
Latin (Literature or Virgil) <sup>1</sup>	4,5	Take placement exam if continuing in this language	10
Physics B	5	PHYSICS 25	8
Physics B	4	PHYSICS 23 and 25	4
Physics C Mechanics only	4,5	PHYSICS 43 and 45 or PHYSICS 23 and 25	5
Physics C Mechanics only	3	PHYSICS 41,43 and 45 or PHYSICS 23 and 25	4
Physics C E&M only	4,5	PHYSICS 41 and 45 or PHYSICS 21 and 25	5
Physics C E&M only	3	PHYSICS 41,43 and 45 or PHYSICS 21 and 25	4
Physics C Both Parts	4,5	PHYSICS 45 or PHYSICS 25	10
Physics C Both Parts	3	PHYSICS 41,43 and 45 or PHYSICS 25	8

Spanish (Language) <sup>1</sup> 5	Take placement exam if continuing in this language	10
-----------------------------------	--	----

<sup>1</sup> A score of 4 or 5 on this test fulfills the Language Requirement. A score of 5 is required to receive 10 units of credit.

### International Baccalaureate (IB) Transfer Credit

Stanford University awards advanced placement credit for certain International Baccalaureate (IB) and international advanced placement subject examinations. The international test subjects must match the content of the College Board Advanced Placement test subjects that receive advanced placement credit. See the Registrar's web site for detailed information (<https://studentaffairs.stanford.edu/registrar/students/baccalaureate-credit>).

A maximum of 45 quarter units of transfer and test credit may be applied toward the undergraduate degree. Only higher level IB exams with scores of 5 or higher, in the subjects listed below, are eligible for credit. Subjects not listed on this chart are not eligible for IB credit. Scores of 5 or higher on language IB exams fulfill the language requirement. If Stanford courses are taken below the level of the placement course, the duplicating IB units will be removed. Students may not receive duplicate unit credit for AP and IB exams in the same discipline, and the duplicating unit credit may be removed from the student's record.

Test Subject	Score	Placement	Quarter Units
Chemistry	5	CHEM 35 or CHEM 135	10
Chinese A1*	5	Take placement exam if continuing in this language	10
Computer Science	4,5	CS 106B or 106X	5
French A1, A2, or B*	5	Take placement exam if continuing in this language	10
German A1, A2, or B*	5	Take placement exam if continuing in this language	10
Japanese A1*	5	Take placement exam if continuing in this language	10
Korean A1*	4,5	Take placement exam if continuing in this language	10
Mathematics	5	MATH 51	10
Physics	6 or higher	PHYSICS 25	8
Physics	5	PHYSICS 23, PHYSICS 25	4
Portuguese A1*	5	Take placement exam if continuing in this language	10
Russian B1*	5	Take placement exam if continuing in this language	10
Spanish A1, A2, or B*	5	Take placement exam if continuing in this language	10

<sup>1</sup> A score of 5 on this test fulfills the Language Requirement. A score of 5 is required to receive 10 units of credit.

## Undergraduate Transfer Work

Academic credit for work done elsewhere may be allowed toward a Stanford bachelor's degree under the following rules and conditions:

- Credit may be granted for work completed at institutions in the U.S. only if the institutions are accredited.
- Study in institutions outside the U.S., when validated by examination results, tutorial reports, or other official evidence of satisfactory work, may be credited toward a Stanford bachelor's degree, subject to the approval of the credit evaluator and the appropriate departments.
- Credit is officially allowed only after the student has been unconditionally admitted to Stanford.
- Credit is allowed for work completed at institutions in the U.S. only on the basis of an official transcript received by the Registrar at Stanford directly from the institution where the credit was earned.
- Credit from another institution may be transferred for courses which are substantially equivalent to those offered at Stanford University on the undergraduate level, subject to the approval of the credit evaluator. A maximum of 20 quarter units may represent courses which do not parallel specific undergraduate courses at Stanford, again, subject to the approval of the credit evaluator as to quality and suitability.
- Course work cannot duplicate, overlap, or regress previous work.
- Transfer course work cannot count towards secondary school diploma and/or graduation requirements.
- For students who want to fulfill general education requirements through transfer work and who are subject to the GER system in place prior to Autumn 2013-14, a proposed transfer course must match a specific Stanford course that fulfills the same GER requirement; it must be a minimum of 3 quarter units and have been taken for a letter grade.  
For students who want to fulfill general education requirements through transfer work and who are subject to the Ways of Thinking/Doing (WAYS) breadth requirement (2013-14 and later for incoming first-year students and 2014-15 only incoming transfer students), transfer courses are reviewed to determine if courses can be certified to fulfill WAYS requirements. Requests for fulfilling WAYS requirements in transfer require pre-approval prior to course enrollment and the pre-approval requests must be submitted by the quarterly deadline in the quarter prior to the term in which students intend to enroll in the transfer course, as defined on the WAYS (<https://undergrad.stanford.edu/programs/ways/getting-credit/ways-credit-classes-taken-other-us-universities>) site. Courses must be taken for a minimum of 3 quarter units (2 units in the case of Creative Expression only) and must be taken for a letter grade. For 2015-16 incoming transfer students, a proportion of their WAYS breadth requirement must be fulfilled at Stanford. Based on the number of qualified transfer units awarded at matriculation, students must complete a number of Ways courses to fulfill the WAYS requirement as outlined in the "Credit Transfer" section of the Bulletin.
- Transfer work can be used to satisfy a department major or minor requirement. The transfer work must first be officially accepted into the University through the Office of the University Registrar. Departments determine if approved transfer work can be used to satisfy a department major or minor requirement.
- The credit allowed at Stanford for one quarter's work may not exceed the number of units that would have been permissible for one quarter if the work had been done at Stanford; for work done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence.
- Credit is allowed at Stanford for work graded 'A,' 'B,' 'C,' or 'Pass' (where 'Pass' is equivalent to a letter grade of 'C' or above), but not for work graded 'D' or below.

12. No more than 45 (90 for transfer students) quarter units of credit for work done elsewhere may be counted toward a bachelor's degree at Stanford (including advanced placement test credit).
13. Credit earned in extension, correspondence, and online courses is transferable only if the university offering the courses allows that credit toward its own bachelor's degree. Such credit is limited to a maximum of 45 quarter units for extension courses, a maximum of 15 quarter units for correspondence and online study, and a maximum of 45 quarter units for the combination of extension, correspondence, and online courses.
14. Credit earned in military training and service is not transferable to Stanford, unless offered by an accredited college or university in the U.S. and evaluated as above by the credit evaluator.

## Special Registration Statuses (Undergraduate)

The following reduced-tuition categories can be requested by undergraduates in the final stages of their degree program:

### Permit to Attend for Services Only (PSO)

Undergraduates in their terminal quarter who are completing honors theses, clearing incomplete grades, or have completed all requirements and are requiring a registration status to utilize university resources, may petition one time only for PSO status. PSO does not permit any course enrollment. Students should apply to graduate through Axxess if applying for the PSO special registration status. The deadline for the completed PSO petition (<http://studentaffairs.stanford.edu/registrar/forms>) is the Preliminary Study List (<http://studentaffairs.stanford.edu/registrar/students/prelim-study-list>) deadline of the applicable quarter.

### 13th Quarter

Undergraduates who have completed at least twelve full-time quarters may petition to register for 13th Quarter registration status at a reduced tuition rate for their final quarter, but must register for at least eight units. Undergraduate dual degree students must complete at least fifteen full-time quarters before petitioning for reduced tuition in their final quarter. Students receiving financial aid should check with the Financial Aid Office for eligibility if they are seeking aid beyond 12 quarters of enrollment. Undergraduates should apply to graduate through Axxess if applying for the 13th-quarter special registration status.

### Graduation Quarter

Undergraduates may petition one time only for Graduation Quarter in their terminal quarter only if:

1. filing a Request for Last Units Out of Residence (<http://studentaffairs.stanford.edu/registrar/forms>) in order to complete up to 15 final units at another institution; or
2. returning from a discontinued status and filing a Request to Return and Register in Undergraduate Study ([http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uual/RR\\_petitions\\_returningtostanford.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uual/RR_petitions_returningtostanford.html)) in order to confer their degree; or
3. if all degree requirements, including honors theses, have been completed and student requires a registration status to graduate, but will not be using University resources or housing.

Coterminal students are only eligible for the Graduation Quarter special registration status if they are applying to confer both the undergraduate and graduate degree in the same quarter. Undergraduates may be eligible for Graduation Quarter status in these three situations only if the student has completed all graduation requirements and will not be utilizing University resources, including housing. The deadline for the completed Graduation Quarter petition (<http://studentaffairs.stanford.edu/registrar/>

forms) is the Preliminary Study List (<http://studentaffairs.stanford.edu/registrar/students/prelim-study-list>) deadline of the applicable quarter.

## Minimum Progress for Undergraduates

Undergraduates are expected to finish their degree requirements in a timely fashion. In addition to maintaining academic progress obligations, students are expected to take courses to progress towards a Bachelor of Arts or a Bachelor of Science. If after 12 quarters, an undergraduate is not on track to complete degree requirements and graduate within the next two quarters, the University may impose requirements with deadlines on a student's course of study. Further, if a student fails to meet those imposed requirements and/or has not after 18 quarters completed all degree requirements, the University may discontinue the student for failure to progress.

## Leaves of Absence and Reinstatement (Undergraduate)

A Leave of Absence allows a student to take a break from enrollment either before or after a quarter begins. There may also be conditions associated with a Leave, which are outlined in greater detail below. Undergraduates are admitted to Stanford University with the expectation that they complete their degree programs in a reasonable amount of time, usually within four years.

Leaves of absence for undergraduates may not exceed a cumulative total of two years (eight quarters including Summer Quarters).

Students on leave of absence are not registered at Stanford and, therefore, do not have the rights and privileges of registered students. They cannot fulfill any official department or University requirements during the leave period. Students on leave may complete course work for which an 'Incomplete' grade was awarded in a prior term (unless doing so places an undue burden on the part of an instructor, department, staff, or other university resource) and are expected to comply with the maximum one-year time limit for resolving incompletes; a leave of absence does not stop the clock on the time limit for resolving incompletes.

New freshmen and transfers are required to register in Autumn Quarter and may not take a leave of absence prior to their first quarter. However, new undergraduate students may request a deferment from the Office of Undergraduate Admission before the first day of Autumn Quarter. Under rare and exceptional circumstances, new freshmen and transfers may take a leave of absence during their first quarter with the permission of the Vice Provost for Undergraduate Education (or his or her designee). When circumstances arise which make it advisable or necessary for freshmen to take a leave of absence during any of their first three quarters, the student is required to wait until Autumn Quarter of the following academic year to return.

### Voluntary Leave

Students have the option of taking a voluntary leave of absence for up to one year, or four quarters, upon filing a Leave of Absence form with the Office of the University Registrar and receiving approval. Except where unexpected circumstances necessitate an immediate leave, students are expected to file for a voluntary leave of absence 30 days prior to the quarter in which the leave will begin. The leave may be extended for up to one additional year, or four quarters, provided the student files (before the end of the initial one-year leave) a Leave of Absence form (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/leaveofabsence.pdf>) for the leave extension with the Office of the University Registrar and receives approval. Leaves requested for a longer period than one year, or four quarters, are approved only in exceptional circumstances (for example, mandatory military service). Leaves of absence for undergraduate students may not exceed a cumulative total of two years (eight quarters including summer quarters).

Undergraduates who take an approved leave of absence while in good standing from a quarter for which they have registered in advance and do not wish to attend may enroll in the University for the subsequent quarter with the privileges of a continuing student. For undergraduates who wish to withdraw from the current quarter after the beginning of the term, courses in which the student was enrolled after the final study list deadline appear on the student's transcript and show the symbol 'W' (withdraw). For additional information regarding satisfactory academic progress, refer to the "Academic Progress" section of this bulletin. In either situation, the University may condition its approval of a petition for leave of absence on the student's meeting such requirements as the University deems appropriate in the individual case for the student to be eligible to return (such as, in the case of a leave for medical reasons, proof of treatment and/or an interview with a provider at Vaden Health Center (<http://vaden.stanford.edu>) or Counseling and Psychological Services (<http://vaden.stanford.edu/caps>) or its designee). Undergraduates who wish to withdraw from the current quarter, or from a quarter for which they have registered in advance and do not wish to attend, must file a Leave of Absence form (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/leaveofabsence.pdf>) with and receive approval from the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall.

Information on tuition refunds is available in the "Refunds (p. 22)" section of this bulletin. For a full refund, petitions must be received by the Office of the University Registrar no later than the first day of classes for the quarter.

## Mandatory Leave

A mandatory leave of absence can be imposed in circumstances in which a student:

- presents a substantial risk of harm to self or others or is failing to carry out substantial self-care obligations; or
- significantly disrupts the educational or other activities of the University community; or
- is unable to participate meaningfully in educational activities; or
- requires a level of care from the University community that exceeds the resources and staffing that the University can reasonably be expected to provide for the student's well-being.

Students whose circumstances warrant a review under the Dean's Mandatory Leave of Absence Policy, will be apprised, in writing, of University concerns by the Dean of Student Life and will be provided an opportunity to respond to concerns in writing or in person or via telephone before a review committee convened by the Dean of Student Life. Students placed on involuntary leave of absence can appeal an unfavorable decision to the Vice Provost for Student Affairs. The University can condition a student's return to registered student status on such requirements as the University deems appropriate in the individual case (such as, in the case of a leave for medical reasons, proof of treatment of an interview with a health care professional at Vaden Health Center (<http://vaden.stanford.edu>) or Counseling and Psychological Services (<http://vaden.stanford.edu/caps>) or its designee). The Dean of Student Life publishes the full Dean's Mandatory Leave of Absence Policy (<http://vp-studentaffairs.stanford.edu/policies/deans-leave-absence>) on its web site.

When a student is granted or placed on a leave of absence after the beginning of the term, courses in which the student was enrolled after the final study list deadline appear on the student's transcript and show the symbol 'W' (withdraw). For additional information regarding satisfactory academic progress, refer to the "Academic Progress" section of this bulletin. Information on tuition refunds is available in the "Refunds (p. 22)" section of this bulletin.

## Discontinuation and Reinstatement

A student's academic degree program may be discontinued if the student:

- fails to be enrolled by the study list deadline; or
- fails to be approved for a leave of absence by the start of the term; or
- voluntarily terminates undergraduate studies; or
- is dismissed for academic reasons; or
- is expelled from the University.

Students who fail to be either enrolled by the final study list deadline, or have exceeded their eight quarters of approved leave, or who fail to submit a Leave of Absence petition by the published deadline, must apply for reinstatement through the Request to Return and Register in Undergraduate Study. The University is not obliged to approve reinstatements of students. Applications for reinstatement are reviewed by the Vice Provost for Undergraduate Education and are subject to the approval of the Faculty Senate Committee on Undergraduate Standards and Policy or its designees. The Committee or its designees may determine whether the application for reinstatement will be approved or not, and/or the conditions a student must meet in order to be reinstated. Reinstatement decisions are in the discretion of the University and may be based on the applicant's status when last enrolled, activities while away from campus, the length of the absence, the perceived potential for successful completion of the program, as well as any other factors or considerations regarded as relevant to the Vice Provost for Undergraduate Education or the Committee.

Applications for reinstatement through the Request to Return and Register in Undergraduate Study, must be submitted eight weeks prior to the start of the term in which the student seeks to enroll in classes. Information and instructions may be obtained by contacting the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising Research (UAR), Sweet Hall.

Students who have been expelled from Stanford University are not permitted to apply for reinstatement.

Students who wish to terminate their study as undergraduates (e.g., for transfer to another institution) should submit a properly endorsed Request to Permanently Withdraw from Degree Program form ([https://studentaffairs.stanford.edu/sites/default/files/registrar/files/permanent\\_withdraw.pdf](https://studentaffairs.stanford.edu/sites/default/files/registrar/files/permanent_withdraw.pdf)) to the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall. In this instance, applications for reinstatement through the Request to Return and Register in Undergraduate Study are not appropriate. Any student wishing then to return to undergraduate study at Stanford is required to apply as a transfer student through the Office of Undergraduate Admission, and such re-admission is not guaranteed.

Leaves of absence and reinstatement of graduate students are addressed in the "Graduate Degrees (p. 45)" section of this bulletin.

## Conferral of Degrees

Upon recommendation to the Senate of the Academic Council by the faculty of the relevant departments or schools and the Committee on Undergraduate Standards and Policy, degrees are awarded four times each year, at the conclusion of Autumn, Winter, Spring, and Summer quarters. All diplomas, however, are prepared and distributed after degree conferral in accordance to the distribution dates listed on the Registrar's Office (<https://registrar.stanford.edu/students/diplomas>) web site.

Students must apply for conferral of an undergraduate or graduate degree by filing an Application to Graduate through Axxess by the deadline for each term. The deadlines are published in the Academic Calendar (<https://registrar.stanford.edu/resources-and-help/stanford-academic>)

calendar). A separate application must be filed for each degree program and for each conferral term.

Requests for conferral are reviewed by the Office of the University Registrar and the student's department, to verify completion of degree requirements. Registration is required in the conferral term. Students with unmet financial or other University obligations resulting in the placement of a hold on their registration cannot receive a transcript, statement of completion, degree certificate, or diploma until the hold is released. An academic record where no other degree objective is being pursued is permanently frozen after the final degree conferral, and all subsequent grade change requests or changes to the student record are not permitted.

Students are typically expected to apply to graduate during the term in which they expect to be awarded a degree. The University, however, reserves the right to confer a degree on a student who has completed all

of the requirements for a degree even though the student has not applied to graduate; such an individual would then be subject to the University's usual rules and restrictions regarding future enrollment or registration.

Students who wish to withdraw a request for conferral or make changes to the Application to Graduate should notify the Student Services Center (<https://studentservicescenter.stanford.edu>) in writing through the Withdrawal of Application to Graduate Form (<https://registrar.stanford.edu/resources-and-help/forms/graduation-and-commencement-forms>) by the late application to graduate deadline on the academic calendar. Students who withdraw their graduation applications or fail to meet degree requirements must reapply to graduate in a subsequent term.

Stanford University awards no honorary degrees.

## Undergraduate Major Unit Requirements

### Undergraduate Major Unit Requirements

The Writing in the Major (WIM) courses listed below reflect courses, offered in past or present years, which satisfy the WIM requirement for majors applying to graduate in the current academic year. Such WIM courses may or may not be offered in the current year. Consult the applicable department section of the Bulletin or ExploreCourses (<http://explorecourses.stanford.edu>) for more information.

#### School of Earth, Energy & Environmental Sciences

Major Department	Units required outside the dept./program	Units required within the dept./program	Total # of units	Notes/Special Requirements	WIM Course
Earth Systems	62-111	28	90-134	internship, senior capstone and project	BIOHOPK 44Y, BIOHOPK 172H, EARTHSYS 195, EARTHSYS 200

## Coterminal Master's Degrees

The coterminal degree program allows undergraduates to study for a Master of Arts (M.A.) or Master of Science (M.S.) degree while completing their bachelor's degree(s) in the same or a different department. To qualify for both degrees, a student must complete requirements for both the bachelor's degree (p. 24) and the master's degree (p. 46) as described under their respective sections of this bulletin.

### Application and Admission to a Coterminal Master's Program Eligibility

Undergraduates with strong academic records may apply for admission to a Stanford Master of Arts (M.A.) or Master of Science (M.S.) program that offers coterminal admission via the process outlined below. Any master's degree granting program may elect not to offer coterminal admission.

An undergraduate is eligible to apply for admission once all of the following conditions have been met:

- completion of six non-summer quarters at Stanford; or two non-summer quarters at Stanford for transfer students
- completion of 120 units toward graduation as shown on the undergraduate transcript, including transfer, Advanced Placement exam, and other external test credit
- declaration of an undergraduate major

Application deadlines vary by department and program, but in all cases the student must submit the application early enough to allow a departmental decision, and, if admitted, respond to the offer of admission

no later than the quarter prior to the anticipated date of conferral of the bachelor's degree.

Stanford undergraduates may also choose to apply to Stanford graduate degree programs through the standard graduate admissions process as described in the Graduate Admission (p. 13) section of this bulletin. Such applicants are not coterminal students and coterminal policies do not apply.

### Application

Applicants must meet the application requirements and deadlines established by the department or program to which they are applying. Applicants are only permitted to apply to one coterminal master's degree program per quarter, and may not apply to another coterminal master's degree program until the admissions process for the initial application has been completed, including the student's response to offer of admission, if admitted.

The bachelor's degree must be conferred before a student may apply to add an additional advanced degree program.

To apply for admission to a coterminal master's program, students must submit to the prospective graduate department or program the following:

- Application for Admission to Coterminal Master's Program (<http://registrar.stanford.edu/pdf/CotermApplic.pdf>) or online application, depending upon the department
- statement of purpose
- preliminary program proposal
- two letters of recommendation from Stanford professors
- a current Stanford transcript

Graduate Record Examination (GRE) scores and additional requirements may be specified by the prospective program, and may be found in this bulletin and on department web sites.

Applications must be submitted no later than the quarter prior to the expected completion of the undergraduate degree. If admitted, students must also respond to an offer of admission no later than the quarter prior to the expected completion of their undergraduate degree. Students who accept an offer of admission and matriculate into a master's degree program via the coterminal program application process are assessed a \$125 application fee.

For University application forms, see the Registrar's Coterminal Forms (<https://registrar.stanford.edu/resources-and-help/forms/coterminal-forms>) web site.

## Admission

Each master's department or program is responsible for admissions decisions for coterminal applicants. After the student accepts the offer of admission, the program must admit the coterminal applicant and submit the completed and approved application for admission or online application, depending upon the department, to the Office of the University Registrar no later than the quarter prior to the expected completion of the undergraduate degree.

If the coterminal program permits deferral, students may defer matriculation into the coterminal program, and the first graduate quarter, to a later quarter as long their graduate career has not yet been activated, and if the later matriculation will still meet all University and departmental requirements for coterminal admission. Deferral is coordinated with the master's degree program, prior to the program submitting the completed application to the Office of the University Registrar. This may require postponement of conferral of the undergraduate degree.

## First Graduate Quarter

The first graduate quarter is the quarter in which the coterminal student first matriculates into the master's degree program. The first graduate quarter does not necessarily correspond to the first quarter in which a student enrolls in a course in the graduate career nor is it affected by course transfer; see Coterminal Course Transfer (p. 44).

Admitted students must have one quarter of overlap between the undergraduate and graduate careers prior to conferral of their undergraduate degree. For example, if the first graduate quarter in the coterminal master's program is Spring, then the earliest that the undergraduate degree can be conferred is at the completion of Spring quarter.

## Adding or Changing Master's Degree Programs

The bachelor's degree must be conferred before a student may apply to add an additional advanced degree program.

Coterminal students who wish to change from one master's degree to another before conferral of the bachelor's degree must submit an approved request to withdraw from the original degree program using the Request to Permanently Withdraw from Degree Program (<https://stanford.box.com/permanent-withdraw>) form, and a completed and approved application for admission to the new program in the same quarter. In this case, all courses, including any prior course transfer from the undergraduate career, remain in the graduate career. The new degree program may choose not to approve all courses towards the new master's degree program requirements. The student may elect to transfer courses back to the undergraduate career, if the bachelor's degree has not been conferred.

## Residency Requirement

Each type of degree offered at Stanford (for example, Bachelor of Arts, Master of Science) has a requirement, called residency for graduate degrees, based on the minimum number of academic units required for the degree. Requirements are described in the Bachelor of Arts (B.A.), Bachelor of Science (B.S.) (p. 24) and Residency Policy for Graduate Students (p. 52) sections of this bulletin. It is Stanford University's general policy that units are applicable toward only one degree, that is, units may not normally be duplicated or double-counted toward the residency requirement for more than one degree. Courses counted towards the undergraduate degree(s) and graduate degree(s) are separately recorded on the undergraduate and graduate transcripts respectively.

Students pursuing coterminal bachelor's and master's degrees are expected to meet the minimum requirements for each of the degrees, as follows:

- 180 units for the bachelor's degree plus 45 unduplicated units (or higher unit-requirement, as determined by the graduate program) for the master's degree
- Dual undergraduate degrees require 225 units for the bachelor's degree plus 45 unduplicated units (or higher unit-requirement, as determined by the graduate program) for the master's degree

For the 45 unit University minimum for the master's degree, all units must be in courses completed at Stanford and must be in courses at or above the 100-level and at least 50 percent of those must be courses designated primarily for graduate students (typically at least at the 200-level). Department specifications for the level of course work accepted for a particular master's degree program may be higher than the University's specifications. Students may not petition to change the course number for a completed course from the undergraduate to the graduate level.

To a limited extent, coterminal students are permitted to move courses taken in the undergraduate career to the graduate career as described in the "Coterminal Course Transfer (p. 44)" section in the Enrollment and Degree Progress tab of this section of the bulletin.

## Tuition and Tuition Groups

Coterminal students are assigned to either the undergraduate coterminal tuition group or the graduate coterminal tuition group, which dictates whether the student is charged undergraduate or graduate tuition. A student's tuition group also determines many of the applicable undergraduate and graduate policies and procedures, including degree progress standards, as well as access to some University services and benefits.

Coterminal students are not eligible for the Permit to Attend (PTA), Permit to Attend for Services Only (PSO), or 13th Quarter tuition rates. These are tuition rates that are available only to undergraduates or non-matriculated students. Graduation Quarter status is available for coterminal students only in the final quarter in which applications to graduate have been filed for both the bachelor's degree and master's degree programs in the same quarter, or for the final quarter of the master's degree program if the undergraduate degree(s) has been conferred.

Tuition and Fee information for 2015-16 is available on the Office of the University Registrar tuition web site (<https://registrar.stanford.edu/students/tuition-and-fees>).

## Undergraduate Coterminal Tuition Group

Coterminal students are normally placed in and remain in the undergraduate coterminal tuition group until the completion of 12 undergraduate full-tuition quarters, or until conferral of the undergraduate degree(s), if that happens earlier. For students with transfer credit (not

AP or other test credit), 15 transfer units equals one Stanford quarter. For students with Stanford Summer Session units, 15 units equals one Stanford quarter; units earned in multiple Summer Sessions are not added together in this calculation.

Students in the undergraduate coterminal tuition group are assessed the undergraduate tuition rate, and are subject to the 20 unit maximum enrollment per quarter. Students enrolled in over 20 units are subject to an enrollment hold effective the following quarter.

## Graduate Coterminal Tuition Group

Coterminal students are automatically moved from the undergraduate to the graduate coterminal tuition group in the 13th quarter (or 16<sup>th</sup> quarter for students with two undergraduate degrees) and are then assessed either the standard graduate tuition rate or the graduate Engineering tuition rate. Students are also moved to the graduate coterminal tuition group after the conferral of all undergraduate degrees.

Coterminal students may request to be moved to the graduate coterminal tuition group prior to the 13th quarter (or 16th quarter for students with two undergraduate degrees) in order to enroll for fewer units as permitted for graduate students, or to be eligible for a teaching (CA/TA) or research assistantship (RA) appointment. Students make this request to the Student Services Center through a HelpSU ticket (<https://helpsu.stanford.edu/helpsu/3.0/helpsu-form?pcat=StuAcct&dtag=10772>). Students may request to be moved to the graduate coterminal tuition group under the following conditions:

- Students must have completed 180 undergraduate units, including transfer, Advanced Placement exam, and other external test credit. Students with two undergraduate degrees must have completed 225 units.
- Once students have moved to the graduate coterminal tuition group, they may not move back to the undergraduate coterminal tuition group.

A coterminal student is subject to graduate tuition assessment and adjustment policies once placed in the coterminal graduate tuition group. They may register at the reduced 8-, 9-, or 10-unit tuition rate if their enrollment plans are accepted by the master's degree program. Students whose master's programs are in the School of Engineering are assessed the graduate Engineering rate; all students are assessed additional graduate or Engineering tuition on a per-unit basis beginning with the 19th unit, and are subject to the 24 unit maximum enrollment per quarter. Students holding a 20 hour (50%) teaching or research assistantship may not enroll in more than 10 total units.

Coterminal students are not eligible for reduced graduate tuition rates below 8 units during Autumn, Winter, and Spring quarters prior to conferral of the undergraduate degree.

## Enrollment and Degree Progress

Starting with the first graduate quarter, students have an active graduate career and an active undergraduate career. Students are responsible for enrolling in courses each quarter, and assigning them to the appropriate career. Courses assigned to the graduate career count towards the master's degree and courses assigned to the undergraduate career count towards the bachelor's degree. Students in the undergraduate coterminal tuition group may not enroll in more than a total of 20 units for the quarter across both careers. Students in the graduate coterminal tuition group may not enroll in more than a total of 24 units for the quarter across both careers. Students appointed to a 20-hour (50%) teaching and/or research assistantship may not enroll in more than 10 units.

## Academic Progress

Prior to the conferral of the undergraduate degree(s), a coterminal student's academic progress is monitored by the Undergraduate Advising

and Research Office (p. 95) (UAR, a unit of the office of the Vice Provost for Undergraduate Education) in conjunction with the student's advisers and the graduate program. After conferral of the undergraduate degree(s), the student's degree progress is monitored by the graduate adviser and graduate program.

All courses taken during a quarter, whether enrolled in the undergraduate or graduate career, are used to assess whether minimum academic progress standards, including number of units enrolled and number of units earned, have been met.

Students in the undergraduate coterminal tuition group are evaluated according to the undergraduate degree progress standards. These standards are described in the "Academic Progress (p. 66)" section of this bulletin.

Students in the graduate coterminal tuition group are evaluated according to the graduate degree progress standards. These standards are described in the "Minimum Progress Requirements for Graduate Students (p. 50)" section of this bulletin.

Students are expected to maintain an undergraduate grade point average (GPA) which meets the University's undergraduate standards, and a graduate GPA which meets University and program requirements for graduate progress. Courses which have been transferred from the undergraduate to the graduate career are calculated as part of the graduate GPA.

## Coterminal Course Transfer

After accepting admission to a master's degree program, coterminal students may request transfer of Stanford courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of the graduate program on a case by case basis. Approved course transfer requests require the review of the undergraduate major program(s). Unless a master's degree program specifies otherwise in this bulletin, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. Neither Summer Quarter nor quarters spent on approved leave of absence are included in the quarter-back count. In exceptional circumstances, a student may petition the exceptions committee of the Committee on Graduate Studies to transfer courses taken more than three quarters back. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Individual programs have the discretion to set their own policy regarding course transfer for their coterminal master's students, provided that no student counts a course taken earlier than the first quarter of sophomore year. The program's policy is stated in the relevant department or program section of this bulletin.

All course transfer requests must be submitted to the Student Services Center no later than the Final Study List Deadline of the intended bachelor's degree conferral quarter.

Course transfers between careers are not possible after the bachelor's degree has been conferred.

Undergraduate credit from transfer courses or tests may not be transferred to the graduate career.

## Advising, Program Proposal, and Time Limit

In the first graduate quarter, a coterminal student must be assigned an adviser in the master's program for assistance in planning a program of study to meet the requirements for the master's degree. The plan is outlined on the Program Proposal for a Master's Degree (<https://stanford.app.box.com/progpropma>), which is approved by the master's program by the end of the first graduate quarter. The preliminary program

proposal from the coterminal application may inform the Program Proposal, but does not satisfy this master's degree requirement.

The course of study for each student's master's degree should be outlined on the student's Program Proposal form. The decision as to which courses a program approves in the student's master's program proposal, including changes from the typical curriculum, is within the purview of the department or program. The conversation between the student and the student's graduate adviser is important in this regard.

The master's program proposal must meet University minimum requirements for the master's degree, including at least 45 units taken at Stanford, all courses at 100-level or above, 50% of units designated primarily for graduate students (typically 200-level or above). All courses must be in the graduate career.

All requirements for a master's degree must be completed within three years after the first graduate quarter. An extension requires review of academic performance by the department or program, and is within the discretion of the program. See policies in the "Master's Degrees (p. 46)" section of this bulletin.

## Leaves of Absence

Coterminal students who wish to take a leave of absence are subject to the Leave of Absence policies for undergraduate and graduate students, as described in the "Leaves of Absence and Reinstatement (Undergraduate) (p. 35)" and "Leaves of Absence (Graduate) (p. 53)" sections of this bulletin. Graduate students, including coterminal students, must obtain permission from the master's degree program. A coterminal student whose undergraduate degree has not been conferred must also obtain permission from the office of Undergraduate Advising and Research, and may not take a leave of absence unless approved for both the graduate and undergraduate leave. Coterminal students are permitted to request a leave of absence for the first quarter of the graduate program. Leaves of absence are granted for a maximum of one calendar year, or four quarters. An extension of leave, for a maximum of one year or four quarters, is approved only in unusual circumstances. Leaves of absence may not exceed a cumulative total of two years (8 quarters including summer quarters), including both undergraduate and graduate programs.

## Degree Conferral

Students must apply for conferral of each degree separately by filing an Application to Graduate in Axxess by the deadline for the expected graduation term(s). The deadlines are available in the Academic Calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). A separate application must be filed for both the undergraduate and graduate degree program in each respective conferral term(s). The master's degree must be conferred simultaneously with or after the bachelor's degree.

Coterminal students whose first graduate quarter occurred prior to Autumn 2015 are subject to coterminal policies as indicated in the previous version of this bulletin. See the Stanford Bulletin 2014-15 (<http://exploreddegrees.stanford.edu/archive/2014-15/cotermdegrees>).

Coterminal students whose first graduate quarter occur in Autumn 2015 and thereafter are subject to the coterminal policies for the academic year 2015-16 as indicated in this bulletin.

# Graduate Degrees

## General Requirements

For each Stanford advanced degree, there is an approved course of study that meets University and department requirements. The University's general requirements, applicable to all graduate degrees at Stanford, are described below. University requirements pertaining to only a subset of

advanced degrees are described in the "Degree-Specific Requirements, Master's Degrees" tab and "Degree-Specific Requirements, Doctoral Degrees" tab in this section of this bulletin.

See the "Graduate Programs" section of each department's listing for specific department degree requirements. Additional information on professional school programs is available in the bulletins of the Graduate School of Business, the School of Law, and the School of Medicine.

## Enrollment Requirements

Graduate education at Stanford is a full-time commitment requiring full-time enrollment, typically at least 8 units. For a complete definition of full-time enrollment, see the "Certification of Enrollment or Degrees (p. 65)" section of this bulletin. Unless permission is granted by the department (for example for field work) enrolled graduate students must maintain a significant physical presence on campus throughout each quarter a student is enrolled.

Requests to enroll for fewer than 8 units during the academic year are approved only in specific circumstances. Students enrolled in the Honors Cooperative or the Master of Liberal Arts programs are permitted part-time enrollment on a regular basis. Graduate students who need only a few remaining units to complete degree requirements or to qualify for TGR status, may register for one quarter on a unit basis (3 to 7 units) to cover the deficiency (see the "Graduate Tuition Adjustment (p. 18)" section of this bulletin). Students with disabilities covered under the Americans with Disabilities Act may enroll in a reduced course load (RCL) as recommended by the Office of Accessible Education (<https://oae.stanford.edu>) (OAE). Women students may request up to two quarters of part-time enrollment for an approved Childbirth Academic Accommodation; see the "Childbirth Accommodation Policy (p. )" section of this bulletin and the GAP 5.9, Childbirth Accommodation (<http://gap.stanford.edu/5-9.html>).

Graduate students must enroll in courses for all terms of each academic year (Autumn, Winter, and Spring quarters) from the admission term until conferral of the degree. The only exception to this requirement occurs when the student is granted an official leave of absence. Failure to enroll in courses for a term during the academic year without taking a leave of absence (p. 53) results in denial of further enrollment privileges unless and until reinstatement to the degree program is granted and the reinstatement fee paid. As a general proposition, registration in Summer Quarter is not required and does not substitute for registration during the academic year. Students possessing an F-1 or J-1 student visa may be subject to additional course enrollment requirements in order to retain their student visas.

In addition to the above requirement for continuous registration during the academic year, graduate students are required by the University to be registered:

1. In each term during which any official department or University requirement is fulfilled, including qualifying exams or the University oral exam. The period between the last day of final exams of one term and the day prior to the first day of the following term is considered an extension of the earlier term, with the option of considering the two weeks preceding the start of Autumn Quarter as part of Autumn Quarter (rather than as part of Summer Quarter). See details below.
2. In any term in which a University dissertation/thesis is submitted or at the end of which a graduate degree is conferred.
3. Normally, in any term in which the student receives financial support from the University.
4. In any term for which the student needs to use University facilities.
5. For international students, in any term of the academic year (summer may be excluded) for which they have non-immigrant status (i.e., a J-1 or F-1 visa).

Individual students may also find themselves subject to the registration requirements of other agencies (for example, external funding sources such as federal financial aid). Course work and research are expected to be done on campus unless the department gives prior approval.

Degree programs have the option to include the two weeks before the start of Autumn Quarter as part of Autumn Quarter for the purposes of completing milestones and departmental requirements. The following considerations apply to this exception:

1. The student must enroll in the subsequent Autumn Quarter in the applicable standard enrollment category prior to the completion of the milestone; a leave of absence is not permitted for that Autumn Quarter.
2. A student exercising this option will not be eligible for Graduation Quarter status until the following Winter Quarter at the earliest.
3. This exception is permitted only for milestones administered by the department, such as qualifying examinations or University oral examinations.
4. This exception does not apply to deadlines administered through Stanford University, such as filing the Application to Graduate, or Dissertation/Thesis submission.
5. Degree programs are not obligated to exercise this option solely because a student requests it.

## Degree-Specific Requirements (Master's Degrees)

### Master of Arts and Master of Science

In addition to completing the general requirements for advanced degrees and the specified program requirements, candidates for the degree of Master of Arts (M.A.) or Master of Science (M.S.) must outline an acceptable program of study on the Master's Degree Program Proposal and complete their degrees within the time limit for completion of the master's degree.

#### Master's Program Proposal

Students pursuing an M.A., M.F.A., M.S., or M.P.P. degree are required to submit an acceptable program proposal to their department during the first quarter of enrollment. Coterminal students must submit the proposal during the first quarter after admission to the coterminal program. The program proposal establishes a student's individual program of study to meet University and department degree requirements. Students must amend the proposal formally if their plans for meeting degree requirements change.

In reviewing the program proposal or any subsequent amendment to it, the department confirms that the course of study proposed by the student fulfills all department course requirements (for example, requirements specifying total number of units, course levels, particular courses, sequences, or substitutes). The department confirms that all other department requirements (for example, required projects, foreign language proficiency, or qualifying exams) are listed on the form and that all general University requirements (minimum units, residency, and so on) for the master's degree will be met through the proposed program of study. Students who fail to submit an acceptable proposal may be dismissed.

#### Time Limit for Completion of the Master's Degree

All requirements for a master's degree must be completed within three years after the student's first term of enrollment in the master's program (five years for Honors Cooperative students). Students pursuing a coterminal master's degree must complete their requirements within three years of the first graduate quarter.

The time limit is not automatically extended by a student's leave of absence. All requests for extension, whether prompted by a leave or some

other circumstance, must be filed by the student before the conclusion of the program's time limit. Departments are not obliged to grant an extension. The maximum extension is one additional year. Extensions require review of academic progress and any other factors regarded as relevant by the department, and approval by the department; such approval is at the department's discretion.

### Master of Public Policy

The degree of Master of Public Policy (M.P.P.) is a two-year program leading to a professional degree. Enrollment in the M.P.P. program is limited to candidates who have earlier been accepted to another Stanford graduate degree program and to recent (within three years) Stanford graduates. In addition to completing the general requirements for advanced degrees and the program requirements specified in the "Public Policy (p. 603)" section of this bulletin, candidates for the degree of Master of Public Policy (M.P.P.) must outline an acceptable program of study on the Master's Degree Program Proposal and complete their degrees within the time limit for completion of the master's degree.

### Master of Business Administration

The degree of Master of Business Administration (M.B.A.) is conferred on candidates who have satisfied the requirements established by the faculty of the Graduate School of Business and the general requirements for advanced degrees. Full particulars concerning the school requirements are found on the M.B.A. program web site of the Graduate School of Business (<http://www.gsb.stanford.edu/programs/mba>). The M.B.A. must be completed within the time limit for completion of the master's degree.

### Master of Fine Arts

In addition to completing the general requirements for advanced degrees and the program requirements specified in the "Art and Art History (p. 331)" section of this bulletin, candidates for the degree of Master of Fine Arts (M.F.A.) must outline an acceptable program of study on the Master's Degree Program Proposal and complete their degrees within the time limit for completion of the master's degree.

### Master of Liberal Arts

The Master of Liberal Arts (M.L.A.) program is a part-time interdisciplinary master's program in the liberal arts for returning adult students. In addition to completing the general requirements for advanced degrees, candidates for the degree of Master of Liberal Arts (M.L.A.) must complete their degrees within five years, an exception to the rule specified above.

### Engineer

In addition to completing the general requirements for advanced degrees and the requirements specified by their department, candidates for the degree of Engineer must be admitted to candidacy and must complete a thesis per the specifications below.

#### Candidacy

The Application for Candidacy for Degree of Engineer is an agreement between the student and the department on a specific program of study to fulfill degree requirements. Students must apply for candidacy by the end of the second quarter of the program. Honors Cooperative students must apply by the end of the fourth quarter of the program. Candidacy is valid for five calendar years.

#### Thesis

A University thesis is required for the Engineer degree. Students have the option of submitting the thesis electronically or via the paper process. Standards for professional presentation of the thesis have been established by the Committee on Graduate Studies. Directions for preparation of the thesis for electronic or paper submission are available at the Office of the University Registrar dissertation/thesis (<http://>

[studentaffairs.stanford.edu/registrar/students/dissertation-thesis](http://studentaffairs.stanford.edu/registrar/students/dissertation-thesis)) web site.

The deadline for submission of theses for degree conferral in each term is specified by the University academic calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). If submitting via the paper process, three copies of the thesis, bearing the approval of the adviser under whose supervision it was prepared, must be submitted to the Office of the University Registrar before the quarterly deadline listed on the University academic calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). A fee is charged for binding copies of the paper thesis. If submitting via the electronic process the signed thesis signature page and title page must be submitted to the Student Services Center (<https://studentservicescenter.stanford.edu>) and one final copy of the thesis must be uploaded, and approved by the Final Reader, on or before the quarterly deadline indicated in the University's academic calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). There is no fee charged for the electronic submission process.

Students must be registered or on graduation quarter in the term in which they submit the thesis; see "Graduation Quarter (p. )" section of this bulletin for additional information. At the time the thesis is submitted, an Application to Graduate must be on file, all department requirements must be complete, and candidacy must be valid through the term of degree conferral.

## Master of Legal Studies

The Master of Legal Studies degree (M.L.S.), a nonprofessional degree, is conferred upon candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the Stanford Law School over not less than one academic year and who otherwise have satisfied the requirements of the University and the Stanford Law School. The Stanford Law School Student web site (<http://www.law.stanford.edu/studentlife>) provides detailed information on degree requirements.

## Master of Laws

The degree of Master of Laws (L.L.M.) is conferred upon candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the Stanford Law School over not less than one academic year and who otherwise have satisfied the requirements of the University and the Stanford Law School.

The degree is designed for foreign graduate students trained in law and is available only to students with a primary law degree earned outside the United States. The L.L.M. program offers students a choice of three areas of specialization: Corporate Governance and Practice; Law, Science, and Technology; or International Economic Law, Business; and Policy. The Stanford Law School Student web site (<http://www.law.stanford.edu/studentlife>) provides detailed information on degree requirements.

## Master of the Science of Law

The degree of Master of the Science of Law (J.S.M.) is conferred upon candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the Stanford Law School over not less than one academic year and who otherwise have satisfied the requirements of the University and the Stanford Law School.

The degree is primarily designed for those qualified students who hold a J.D. or its equivalent and who are at the Stanford Law School for independent reasons (for example, as teaching fellows) and who wish to combine work toward the degree with their primary academic activities. Specially qualified lawyers, public officials, academics, and other professionals who have worked outside the United States may apply for the degree through the Stanford Program in International Legal Studies (SPILS). The Stanford Law School Student Life web site

(<http://www.law.stanford.edu/studentlife>) provides detailed information on degree requirements.

## Degree-Specific Requirements (Doctoral Degrees)

### Doctor of Jurisprudence

The degree of Doctor of Jurisprudence (J.D.) is conferred on candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the Stanford Law School over not less than three academic years and who otherwise have satisfied the requirements of the University and the Stanford Law School. The Stanford Law School web site (<http://www.law.stanford.edu/degrees>) provides detailed information on degree requirements.

### Doctor of the Science of Law

The degree of the Doctor of the Science of Law (J.S.D.) is conferred upon candidates who hold a J.D. or its equivalent, who complete one academic year in residence, and who, as a result of independent legal research, present a dissertation that is, in the opinion of the faculty of the Stanford Law School a contribution to knowledge. Such work and dissertation must conform to the rules of the Stanford Law School and the University for the dissertation and the University Oral Examination, as described in the "Doctor of Philosophy" section of this bulletin.

Candidacy is limited to students of exceptional distinction and promise. The Stanford Law School web site (<http://www.law.stanford.edu/degrees/jd>) provides detailed information on degree requirements.

### Doctor of Musical Arts

The degree of Doctor of Musical Arts (D.M.A.) is conferred on candidates who have satisfied the general requirements for advanced degrees, the program requirements specified in the "Music (<http://stanford.edu/dept/registrar/bulletin/7094.htm>)" section of this bulletin, and the candidacy requirement as described in the "Doctor of Philosophy" section.

### Doctor of Medicine

Candidates for the degree of Doctor of Medicine (M.D.) must satisfactorily complete the required curriculum in medicine. The requirements for the M.D. degree are detailed on the School of Medicine's web site (<http://med.stanford.edu/md>).

### Doctor of Philosophy

The degree of Doctor of Philosophy (Ph.D.) is conferred on candidates who have demonstrated to the satisfaction of their department or school substantial scholarship, high attainment in a particular field of knowledge, and the ability to do independent investigation and present the results of such research. They must satisfy the general requirements for advanced degrees, the program requirements specified by their departments, and the doctoral requirements described below. The option for a Ph.D. minor is also described below, though it is not a Ph.D. requirement.

## Candidacy

Admission to a doctoral degree program is preliminary to, and distinct from, admission to candidacy. Admission to candidacy for the doctoral degree is a judgment by the faculty in the department or school of the student's potential to successfully complete the requirements of the degree program. Students are expected to complete department qualifying procedures and apply for candidacy by the end of their second year in the Ph.D. program. Honors Cooperative students must apply by the end of their fourth year. A Pregnancy or Parental Leave of Absence automatically extends the pre-candidacy period by one year for a birth mother and three months (one quarter) for a non-birth parent.

Admission to candidacy for the doctoral degree is granted by the major department following a student's successful completion of qualifying procedures as determined by the department. Departmental policy determines procedures for subsequent attempts to become advanced to candidacy in the event that the student does not successfully complete the procedures. Failure to advance to candidacy results in the dismissal of the student from the doctoral program; see "Guidelines for Dismissal of Graduate Students for Academic Reasons (p. 50)" section of this bulletin.

The Application for Candidacy specifies a departmentally approved program of study to fulfill degree requirements, including required course work, language requirements, teaching requirements, dissertation (final project and public lecture-demonstration for D.M.A.), and University oral examination (for Ph.D.). Prior to candidacy, at least 3 units of work must be taken with each of four Stanford faculty members. To reiterate, however, a student will only be admitted to candidacy if, in addition to the student's fulfilling departmental prerequisites, the faculty makes the judgment that the student has the potential to successfully complete the requirements of the degree program.

If the Ph.D. student is pursuing a minor, approval by the department awarding the minor is also required on the Application for Candidacy.

### Time Limit for Completion of a Degree with Candidacy

Students are required to maintain active candidacy through conferral of the doctoral degree. All requirements for the degree must be completed before candidacy expires. Candidacy is valid for five years unless terminated by the department (for example, for unsatisfactory progress). The time limit is not automatically extended by a student's leave of absence. A Pregnancy or Parental Leave of Absence automatically extends the candidacy period by one year for a birth mother and three months (one quarter) for a non-birth parent.

Failure to make minimum progress or complete university, department, and program requirements in a timely or satisfactory manner may lead to dismissal; see Guidelines for Dismissal of Graduate Students for Academic Reasons (p. ) section of this bulletin.

All requests for extension, whether prompted by a leave or some other circumstance, must be filed by the student before the conclusion of the program's time limit. Departments are not obligated to grant an extension. Students may receive a maximum of one additional year of candidacy per extension. Extensions require review by the department of a dissertation progress report, a timetable for completion of the dissertation, any other factors regarded as relevant by the department, and approval by the department; such approval is at the department's discretion.

## Teaching and Research Requirements

A number of departments require their students to teach (serving as a teaching assistant) or assist a faculty member in research (serving as a research assistant) for one or more quarters as part of their doctoral programs. Detailed information is included in the department sections of this bulletin.

## Foreign Language Requirement

Some departments require a reading knowledge of one or more foreign languages as indicated in department sections of this bulletin. Fulfillment of language requirements must be endorsed by the chair of the major department.

## University Oral Examination

Passing a University oral examination is a requirement of the Ph.D. and J.S.D. degrees. The purpose of the examination is to test the candidate's command of the field of study and to confirm fitness for scholarly

pursuits. Departments determine when, after admission to candidacy, the oral examination is taken and whether the exam will be a test of knowledge of the field, a review of a dissertation proposal, or a defense of the dissertation. The chairperson of a Stanford oral examination is appointed for this examination only, to represent the interests of the University for a fair and rigorous process.

Students must be registered in the term in which the University oral examination is taken. The period between the last day of final exams of one term and the day prior to the first day of the following term is considered an extension of the earlier term. Candidacy must also be valid.

The University Oral Examination Committee consists of at least five Stanford faculty members: four examiners; and the committee chair from another department. All committee members are normally members of the Stanford University Academic Council, and the chair must be a member of the Stanford University Academic Council. Emeritus faculty are also eligible to serve as examiners or chair of the committee.

A petition for appointment of an examining committee member who is neither a current or emeritus member of the Academic Council may be approved by the chair of the department if that person contributes an area of expertise that is not readily available from the faculty and holds a Ph.D. or equivalent foreign degree. Exceptions for individuals whose terminal degree is not the Ph.D. or equivalent foreign degree may be granted by the Vice Provost for Graduate Education, upon the request of the student's department chair. The majority of the examiners must be current or emeritus Academic Council members; more specifically, one of four or five examiners or two of six or seven examiners may be appointed to the Oral Examination Committee by means of this petition.

The chair of the examining committee may not have a full or joint appointment in the adviser's or student's department, but may have a courtesy appointment in the department. The chair can be from the same department as any other member(s) of the examination committee and can be from the student's minor department provided that the student's adviser does not have a full or joint appointment in the minor department.

For Interdisciplinary Degree Programs (IDPs), the chair of the examining committee may not have a full or joint appointment in the primary adviser's major department and must have independence from the student and adviser.

The University Oral Examination form must be submitted to the department graduate studies administrator at least two weeks prior to the proposed examination date. The examination is conducted according to the major department's adopted practice, but it should not exceed three hours in length, and it must include a period of private questioning by the examining committee.

Responsibility for monitoring appointment of the oral examination chair rests with the candidate's major department. Although the department cannot require the candidate to approach faculty members to serve as chair, many departments invite students and their advisers to participate in the process of selecting and contacting potential chairs.

The candidate passes the examination if the examining committee casts four favorable votes out of five or six, five favorable votes out of seven, or six favorable votes out of eight. Five members present and voting constitute a quorum. If the committee votes to fail a student, the committee chair sends within five days a written evaluation of the candidate's performance to the major department and the student. Within 30 days and after review of the examining committee's evaluation and recommendation, the chair of the student's major department must send the student a written statement indicating the final action of the department.

## Dissertation

An approved doctoral dissertation is required for the Ph.D. and J.S.D. degrees. The doctoral dissertation must be an original contribution to scholarship or scientific knowledge and must exemplify the highest standards of the discipline. If it is judged to meet this standard, the dissertation is approved for the school or department by the doctoral dissertation reading committee. Each member of the reading committee signs the signature page of the dissertation to certify that the work is of acceptable scope and quality. These signatures must be in ink; proxy or electronic signatures are not permitted. One reading committee member, who must be a member of the Academic Council, reads the dissertation in its final form and certifies on the Certificate of Final Reading that department and University specifications have been met.

Dissertations must be in English. Approval for writing the dissertation in another language is normally granted only in cases where the other language or literature in that language is also the subject of the discipline. Such approval is routinely granted for dissertations in the Division of Literatures, Cultures, and Languages, in accordance with the policy of the individual department. Approval is granted by the school dean upon a written request from the chair of the student's major department. Dissertations written in another language must include an extended summary in English.

Students have the option of submitting the dissertation electronically or via the paper process. Directions for preparation of the dissertation for electronic or paper submission are available at the Office of the University Registrar dissertation (<http://studentaffairs.stanford.edu/registrar/students/dissertation-thesis>) web site. If submitting via the paper process, the signed dissertation copies and accompanying documents must be submitted to the Office of the University Registrar on or before the quarterly deadline indicated in the University's academic calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). A fee is charged for the microfilming and binding of the paper dissertation copies. If submitting via the electronic process the signed dissertation signature page and title page must be submitted to the Student Services Center (<https://studentservicescenter.stanford.edu>) and one final copy of the dissertation must be uploaded, and approved by the Final Reader, on or before the quarterly deadline indicated in the University's academic calendar (<http://www.stanford.edu/group/studentservicescenter>). There is no fee charged for the electronic submission process.

Students must either be registered or on graduation quarter in the term they submit the dissertation; see "Graduation Quarter" in the "Graduate Degrees" (<http://stanford.edu/dept/registrar/bulletin/4901.htm>) section of this Bulletin for additional information. At the time the dissertation is submitted, an Application to Graduate must be on file, all department requirements must be complete, and candidacy must be valid through the term of degree conferral.

### Doctoral Dissertation Reading Committee

The doctoral dissertation reading committee consists of the principal dissertation adviser and, typically, two other readers. The doctoral dissertation reading committee must have three members and may not have more than five members. All members of the reading committee approve the dissertation. At least one member must be from the student's major department. Normally, all committee members are members of the Stanford University Academic Council or are emeritus Academic Council members. The student's department chair may, in some cases, approve the appointment of a reader who is not a current or emeritus member of the Academic Council, if that person is particularly well qualified to consult on the dissertation topic and holds a Ph.D. or equivalent foreign degree. Exceptions for individuals whose terminal degree is not the PhD or equivalent foreign degree may be granted by the Vice Provost for Graduate Education, upon the request of the student's department chair. Former Stanford Academic Council members and non-

Academic Council members may thus, on occasion, serve on a reading committee. A non-Academic Council member (including former Academic Council members) may replace only one of three required members of dissertation reading committees. If the reading committee has four or five members, at least three members (comprising the majority) must be current or emeritus members of the Academic Council.

Any member of the Academic Council may serve as the principal dissertation adviser. If former Academic Council members, emeritus Academic Council members, or non-Academic Council members are to serve as the principal dissertation adviser, the appointment of a co-advisor who is currently on the Academic Council is required. This is to ensure representation for the student in the department by someone playing a major adviser role in completion of the dissertation. However, a co-advisor is not required during the first two years following retirement for emeritus Academic Council members who are recalled to active service.

The reading committee, as proposed by the student and agreed to by the prospective members, is endorsed by the chair of the major department on the Doctoral Dissertation Reading Committee form. This form must be submitted before approval of Terminal Graduate Registration (TGR) status or before scheduling a University oral examination that is a defense of the dissertation. The reading committee may be appointed earlier, according to the department timetable for doctoral programs. All subsequent changes to the reading committee must be approved by the chair of the major department. The reading committee must conform to University regulations at the time of degree conferral.

### Ph.D. Minor

Students pursuing a Ph.D. may pursue a minor in another department or program to complement their Ph.D. program. This option is not available to students pursuing other graduate degrees. Ph.D. candidates cannot pursue a minor in their own major department or program. In rare cases, a Ph.D. student may complete the requirements for more than one minor. In that case, 20 unduplicated units must be completed for each minor.

Only departments that offer a Ph.D. may offer a minor, and those departments are not required to do so. Interdisciplinary Ph.D. minors, administered by a designated academic department, may be approved by the Faculty Senate. The minor should represent a program of graduate quality and depth, including core requirements and electives or examinations. The department offering the minor establishes the core and examination requirements. Elective courses are planned by the students in conjunction with their minor and Ph.D. departments.

The minimum University requirement for a Ph.D. minor is 20 units of course work at the graduate level (typically courses numbered 200 and above). If a minor department chooses to require those pursuing the minor to pass the Ph.D. qualifying or field examinations, the 20-unit minimum can be reduced. All of the course work for a minor must be done at Stanford.

Units taken for the minor can be counted as part of the overall requirement for the Ph.D. of 135 units of graduate course work done at Stanford. Courses used for a minor may not be used also to meet the requirements for a master's degree.

An Application for Ph.D. Minor ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/app\\_phd\\_minor.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/app_phd_minor.pdf)) outlining a program of study must be approved by the major and minor departments and submitted to the Student Services Center. This form is submitted at the time of admission to candidacy and specifies whether representation from the minor department on the University oral examination committee is required.

## Joint Degree Programs

A Joint Degree Program (JDP) is a specified combination of degree programs or degree types in which a student is enrolled in two graduate degree programs concurrently. JDPs are developed and proposed by the relevant academic units with agreement of the deans of the schools affected.

An approved JDP includes a set of agreements between the participating programs and schools about matters such as admissions, advising, curricula, and tuition. In a JDP, a specified number of units may be double-counted toward the minimum University residency requirements for both degrees, reducing the total number of residency units required to complete both degrees. Students pursuing a Joint Degree that includes a Ph.D. may not also count a Stanford master's degree or transfer units towards residency for the Ph.D. degree. Application deadlines for each program or degree apply. Students must be admitted to the JDP no later than the study list deadline of the term prior to the term of expected degree conferral. In a JDP, both degrees are conferred concurrently since the units required for each degree are linked to the completion of both degrees. The sole exception is the J.D. degree which may be awarded prior to the second degree.

The following Joint Degree Programs, permitting students to complete requirements for two degrees with a reduced number of total residency units, are offered:

- Juris Doctor with a Master of Arts in Economics, Education, History, Public Policy, or the Division of International Comparative and Area Studies: African Studies, East Asian Studies, International Policy Studies, Latin American Studies, and Russian, East European and Eurasian Studies (J.D./M.A.)
- Juris Doctor with a Master of Science in Bioengineering, Computer Science, Electrical Engineering, Environment and Resources, Health Research and Policy, or Management Science and Engineering (J.D./M.S.)
- Juris Doctor with a Master of Public Policy (J.D./M.P.P.)
- Juris Doctor with a Doctor of Philosophy in Bioengineering, Economics, Environment and Resources, History, Management Science and Engineering, Philosophy, Political Science, Psychology, or Sociology (J.D./Ph.D.)
- Juris Doctor with a Master of Business Administration (J.D./M.B.A.)
- Master of Business Administration with a Master of Arts in Education (M.B.A./M.A.)
- Master of Business Administration with a Master of Science in Computer Science, Electrical Engineering, and Environment and Resources (M.B.A./M.S.)
- Master of Business Administration with a Master of Public Policy (M.B.A./M.P.P.)
- Master of Arts in Education or International Policy Studies with a Master of Public Policy (M.A./M.P.P.)
- Master of Science in Management Science and Engineering with a Master of Public Policy (M.S./M.P.P.)
- Doctor of Philosophy in Economics, Education, Management Science and Engineering, Psychology, Sociology, or Structural Biology with a Master of Public Policy (Ph.D./M.P.P.)
- Juris Doctor with a Doctor of Medicine (J.D./M.D.)
- Master of Public Policy with a Doctor of Medicine (M.P.P./M.D.)

Specific requirements for the joint degree programs are available from the participating departments and schools and at Registrar's (<http://studentaffairs.stanford.edu/registrar/students/jdp-information>) web site.

Creation of additional Joint Degree Programs that are combinations of J.D./M.A., J.D./M.S., and Ph.D./M.P.P. degrees have been authorized by the Faculty Senate. New JDPs from among these combinations may double-count up to 45 units towards residency requirements. JDPs from

these combinations are proposed by the coordinating programs and schools. Once approvals from the chairs of the programs and deans of the relevant schools are obtained, approval on behalf of the Committee on Graduate Studies is granted by the Office of the Vice Provost for Graduate Education, and final approval is granted by the Office of the University Registrar. JDPs combining other degree types or programs may be proposed, but require review by the Faculty Senate Committee on Graduate Studies and must be approved by the Faculty Senate.

## Minimum Progress Requirements for Graduate Students

The academic requirements for graduate students include completion of University, department, and program requirements, such as admission to candidacy, successful completion of qualifying exams, and so on in a timely and satisfactory manner. Graduate students must also meet the following standards of minimum progress as indicated by units and grades. (These standards apply to all advanced degree programs except the School of Business Ph.D., and the M.B.A., J.D., L.L.M., J.S.M., J.S.D., M.D., and M.L.A., which follow guidelines issued by the respective schools and are described in their respective school bulletins.)

Graduate students enrolled for 11 or more units must pass at least 8 units per term by the end of each term. Those registered for fewer than 11 units must pass at least 6 units per term by the end of each term, unless other requirements are specified in a particular case or for a particular program.

In addition, graduate students must maintain a 3.0 (B) grade point average overall in courses applicable to the degree.

Department requirements for minimum progress that set a higher standard for units to be completed, or a higher or lower standard for grade point average to be maintained, take precedence over the University policy; any such different standards must be published in the Stanford Bulletin.

Students identified as not meeting the requirements for minimum progress and timely and satisfactory completion of requirements are reviewed by their departments to determine whether the problem lies with administrative matters such as reporting of grades or with academic performance. Students have the opportunity to explain any special circumstances. Approval for continuation in the degree program is contingent on agreement by the student and department to a suitable plan to maintain appropriate progress in subsequent quarters. Dismissal of graduate students is addressed in separate guidelines.

Graduate students who have been granted Terminal Graduate Registration (TGR) status must enroll each term in the TGR course (801 for master's and Engineer programs or 802 for doctoral programs) in their department in the section appropriate for the adviser. An 'N' grade signifying satisfactory progress must be received each quarter to maintain registration privileges. An 'N-' grade indicates unsatisfactory progress. The first 'N-' grade constitutes a warning. A second consecutive 'N-' grade normally causes the department to deny the student further registration until a written plan for completion of degree requirements has been approved by the department. Subsequent 'N-' grades are grounds for dismissal from the program.

Students receiving federal student aid funds, including student loans, must maintain satisfactory academic progress standards that may be stricter than departmental standards. See the Financial Aid Office (<http://financialaid.stanford.edu>) web site for details.

## Graduate Unit Requirements

The University's expectation is that the units counted towards all graduate degrees are primarily in graduate courses. The University has set specific requirements for units applied to the minimum requirement

for the M.A., M.S., and M.F.A. degrees: All units must be in courses at or above the 100 level and at least 50 percent of those must be courses designated primarily for graduate students (typically at least the 200 level). Units earned in courses below the 100 level may not be counted towards the minimum unit requirement for the master's degree. Department specifications for the level of course work accepted for a particular master's degree program may be higher than the University's specifications.

## Changes of Degree Programs

Graduate students are admitted to Stanford for a specific degree program. Students who have attended Stanford for at least one term and who are currently enrolled may submit a Graduate Program Authorization Petition to make one of the following changes:

1. change to a new degree program in the same department;
2. change to a new degree program in a different department;
3. add a new degree program in the same or a different department to be pursued with the existing program. Coterminal students must have the bachelor's degree conferred before adding a second advanced degree program. Summer term enrollment is optional for students beginning a new degree program in the Autumn term provided that they have been enrolled the prior Spring term.

It is important that the attempt to add or change degree programs be made while enrolled. Otherwise, a new Application for Graduate Admission must be submitted and an application fee paid. The Graduate Program Authorization Petition is submitted electronically through Axxess to the department in which admission is requested. If applying for a higher degree program, students may also be required to submit other application materials such as GRE Subject Test scores, a statement of purpose, or new letters of recommendation. Decisions on the petitions are made by the programs or departments to which they are directed, and are at the discretion of those programs or departments.

International students changing departments or degree programs must also obtain the approval of the Foreign Student Adviser at the Bechtel International Center. If the requested change lengthens their stay, they also are required to submit verification of sufficient funding to complete the new degree program.

Students who wish to terminate study in a graduate program should submit a properly endorsed Request to Permanently Withdraw from Degree Program form (<http://studentaffairs.stanford.edu/registrar/forms/grad>) to the Student Services Center (<https://studentservicescenter.stanford.edu>). To return to graduate study thereafter, the student is required to apply for reinstatement (if returning to the same degree program) or admission (if applying to a different program). Both applications require payment of a fee.

## Guidelines for Dismissal of Graduate Students for Academic or Professional Reasons

Admission to graduate programs at Stanford is highly selective. It is anticipated that every admitted student will be able to fulfill the requirements for the advanced degree. This document provides guidelines to be used in the unusual circumstance that a department must consider dismissal of a graduate student for academic reasons. These guidelines apply to all advanced degree programs except those in the schools of Law and Business, the STEP program in the Graduate School of Education, and the M.D. program in the School of Medicine, which follow guidelines issued by the respective schools.

The principal conditions for continued registration of a graduate student are the timely and satisfactory completion of the University, department, and program requirements for the degree, fulfillment of

minimum progress requirements, and meeting standards of professional behavior. The guidelines that follow specify procedures for dismissal of graduate students who are not meeting these conditions. In such cases, a departmental committee (hereafter "the committee"), whether the department's committee of the faculty or other committee authorized to act on the department's behalf such as the departmental graduate studies committee, will:

1. Where possible and as early as possible, warn the student, in writing, of the situation and deficiency. A detailed explanation of the reason for the warning should be provided.
2. Consider extenuating circumstances communicated by the student.
3. Decide the question of dismissal by majority vote of the committee (with at least three faculty members participating in the committee's deliberation), and communicate the decision to the student in writing.
4. Place a summary of department discussions, votes, and decisions in the student's file.
5. Provide students the opportunity to examine their department files, if requested.
6. Provide students with information on their rights to appeal under the Student Academic Grievance Procedure. See the "Student Academic Grievance Procedure (p. 68)" section of this bulletin.

Careful records of department decisions safeguard the rights of both students and faculty.

## Guidelines for Addressing Graduate Student Professional Conduct

The success of any academic institution depends on a shared willingness to discharge the ethical obligations that bind students, staff and faculty together in a system of mutually supporting professional roles. Stanford University is no exception. (Administrative Guide, 1.1.1 Code of Conduct (<https://adminguide.stanford.edu/chapter-1/subchapter-1>)). The relevant ethical obligations are clearly defined for faculty in the Faculty Handbook: "In order to maintain the integrity of its teaching and research and to preserve academic freedom, Stanford University demands high standards of professional conduct from its faculty." (Faculty Handbook 4.3.A (<http://facultyhandbook.stanford.edu/ch4>)). The purpose of this policy is to similarly define the professionalism expectations for graduate students as they prepare to be responsible members of professional communities.

Graduate students are expected to meet standards of professional behavior, including: being present on campus to meet the academic and research expectations of the school or department; communicating in a timely, respectful and professional manner; complying with institutional policies and procedures; and participating appropriately in the program's community. Graduate students are expected to familiarize themselves with applicable University policy and degree program requirements. Failure to meet these standards may be grounds for dismissal.

Information about degree program requirements is available from departments; students are encouraged to consult with faculty and staff in those programs should they have questions about local requirements.

When the University has professionalism concerns about a graduate student, the University manages the concern utilizing the Guidelines for Dismissal of Graduate Students for Academic or Professional Reasons (above).

## Additional Specifics for Degrees with Candidacy Before Candidacy

The committee, before review for admission to candidacy, may vote to dismiss a student who is not making minimum progress or completing requirements in a timely and satisfactory way or meeting standards of professional behavior. Before considering dismissal, the committee should communicate with the student (which may include a meeting with

the student) concerning his or her academic or professional performance and how to correct deficiencies, where such deficiencies are deemed correctable.

### At the Review for Candidacy

In a review for admission to candidacy, if the committee votes not to recommend the student for admission to candidacy, the vote results in the dismissal of the student from the program. The department chair, or Director of Graduate Studies, or the student's adviser shall communicate the department's decision to the student in writing and orally. The student may submit a written request for reconsideration. The committee shall respond in writing to the request for reconsideration; it may decline to reconsider its decision.

### During Candidacy

When a student admitted to candidacy is not making minimum progress, or not meeting standards of professional performance, or not completing University, department, or program requirements in a timely and satisfactory manner, the student's adviser, the Director of Graduate Studies, or department chair, and other relevant faculty should meet with the student. A written summary of these discussions shall be sent to the student and the adviser and added to the student's department file. The summary should specify the student's academic or professional deficiencies, the steps necessary to correct them (if deemed correctable), and the period of time that is allowed for their correction (normally one academic quarter). At the end of the warning period, the committee should review the student's progress and notify the student of its proposed actions. If the student has corrected the deficiencies, he or she should be notified in writing that the warning has been lifted.

If the deficiencies are not deemed correctable by the committee (for example, the failure of a required course or examination, or a pattern of unsatisfactory behavior or performance) or if, at the end of the warning period, the student has not in the view of the committee corrected the deficiencies, the committee may initiate proceedings for dismissal. The student shall be notified, in writing, that the case of dismissal will be considered at an impending committee meeting. The student has the right to be invited to attend a portion of the scheduled meeting to present his or her own case; a student may also make this case to the committee in writing.

After full discussion at the committee meeting, the committee, without the student present, shall review the case and vote on the issue of dismissal. The student shall be sent a written summary of the discussion, including the committee's decision and the reasons for it. The student may submit a written request for reconsideration. The committee's response to the request for reconsideration shall be made in writing; it may decline to reconsider its decision.

## Pregnancy, Childbirth, and Adoption Accommodation Policy

Stanford prohibits discrimination on the basis of any characteristic protected by law including discrimination on the basis of pregnancy.

Stanford complies with requirements of California Education Code section 66281.7. Stanford has a Pregnancy, Childbirth and Adoption Accommodation Policy for graduate students, GAP 5.9 (<http://gap.stanford.edu/5-9.html.html>). It provides that pregnant graduate students be supported either by staying enrolled or taking a pregnancy leave of absence. The policy also provides childbirth accommodations for graduate students giving birth as well as support for non-birth parents who have recently experienced the birth of a child. Questions about the policy can be directed to the Office of the Vice Provost for Graduate Education (VPGE) (<http://vpge.stanford.edu>).

## Residency Policy for Graduate Students

Each type of graduate degree offered at Stanford (for example, Master of Science, Doctor of Philosophy) has a residency requirement based on the number of academic units required for the degree. These residency requirements and the maximum allowable transfer units for each degree type are listed below. Unless permission is granted by the department (for example, for field work) enrolled graduate students must maintain a significant physical presence on campus throughout each quarter a student is enrolled.

The unit requirements for degrees can represent solely course work required for the degree or a combination of course work, research, and a thesis or dissertation. Academic departments and schools offering degrees may establish unit requirements that are higher than the minimum University residency requirement, but they may not have a residency requirement that is lower than the University standard. In addition to the University's residency requirement based on a minimum number of units for each degree, the School of Medicine and the Graduate School of Business may establish residency requirements based on the number of quarters of full-time registration in which students are enrolled to earn a degree. However, in no case may a student earn fewer units than the University minimum for each degree. All residency requirements are published in the Stanford Bulletin. Students should consult the Stanford Bulletin or their academic department to determine if their degree program has residency requirements that exceed the minimum.

Students eligible for Veterans Affairs educational benefits should refer to the "Veterans' Educational Benefits (p. 57)" section of this bulletin.

It is Stanford University's general policy that units are applicable toward only one degree. Units may not normally be duplicated or double-counted toward the residency requirement for more than one degree, with the exception that up to 45 units of a Stanford M.A. or M.S. degree may be applied to the residency requirement for the Ph.D., D.M.A., or Engineer degrees. Other exceptions to this general policy for specified combinations of degree types, known as Joint Degree Programs, may be approved by agreement of the Faculty Senate and the deans of the schools affected, with review by the Committee on Graduate Studies.

Students pursuing a Joint Degree that includes a Ph.D. may not also count a Stanford master's degree or transfer units towards residency for the Ph.D. degree. See the "Joint Degree Programs" tab of this section of this bulletin for additional information.

Only completed course units are counted toward the residency requirement. Courses with missing, incomplete, in progress, or failing grades do not count toward the residency requirement. Courses from which a student has formally withdrawn do not count toward the residency requirement.

Terminal Graduate Registration (TGR) is available to graduate students who have met all of the conditions listed in the "TGR (p. )" section of this bulletin.

## University Minimum Residency Requirements for Graduate Degrees<sup>1</sup>

Degree Type	Minimum # of Units	Maximum Allowable External Transfer Units
M.A., M.S., M.F.A., M.L.A.	45	0 (see note 4)
Engineer (see note 2)	90	45
M.B.A., M.P.P. (see note 3)	90	0 (see note 4)
Ph.D., D.M.A. (see note 5)	135	45
M.D.	235	90
J.D. (see notes 6,7)	109	45

M.L.S., L.L.M., J.S.M. (see note 6)	35	0 (see note 4)
J.S.D. (see note 6)	44	0 (see note 4)

- <sup>1</sup> The University has authorized the granting of the M.A.T., Ed.S. and Ed.D degrees, but they are not being offered.
- <sup>2</sup> Up to 45 units completed at Stanford toward a M.A. or M.S. degree or accepted as transfer credit, but not both, in an Engineering discipline may be used toward the 90 unit residency requirement for the Engineer degree. At least 45 units of work at Stanford are necessary to complete the 90 residency units for the Engineer degree.
- <sup>3</sup> Enrollment in the M.P.P. degree program is limited to candidates who have earlier been accepted to another Stanford graduate degree program and to recent (within three years) Stanford graduates.
- <sup>4</sup> Students eligible for Veterans Affairs educational benefits should refer to the Veterans Benefits section of "Admissions and Financial Aid (p. 12)" in this bulletin.
- <sup>5</sup> Up to 45 units completed at Stanford toward a M.A. or M.S. degree or accepted as transfer credit, but not both, may be used toward the 135 unit residency requirement for the Ph.D. or D.M.A. degree. At least 90 units of work at Stanford are necessary to complete the 135 residency units for the Ph.D. or D.M.A. degree.
- <sup>6</sup> The Academic Senate approved these residency requirements on February 4, 2010, effective for the 2009-10 academic year.
- <sup>7</sup> J.D. students entering prior to the Autumn Quarter 2009-10 must take the equivalent of 86 semester units.

## University Minimum Residency Requirements for Graduate Degree Combinations

Students with multiple degree programs must complete the residency requirements for all their degrees types. Students enrolled in a Joint Degree Program should see the "Joint Degree Program (p. 49)" section of this Bulletin.

A table of these residency requirements is available on the Registrar's web site (<http://studentaffairs.stanford.edu/registrar/students/graduate-residency>); this table will be available on this page shortly.

## Graduate Residency Transfer Credit

After at least one quarter of enrollment, students pursuing an Engineer, D.M.A., or Ph.D. may apply for transfer credit for graduate work done at another institution. Engineer candidates who also earned their master's at Stanford are not eligible for transfer residency credit, nor are any master's degree students. Ph.D. or D.M.A. students may only apply a total of 45 units of transfer credit and credit earned for a Stanford master's degree toward the PhD residency total.

Students enrolled at Stanford who are going to study elsewhere during their degree program should obtain prior approval of any transfer credit sought before their departure.

The following criteria are used by the department in determining whether, in its discretion, it awards transfer credit for graduate-level work done at another institution:

1. Courses should have comparable Stanford counterparts that are approved by the student's department. A maximum of 12 units of courses with no Stanford counterparts and/or research units may be granted transfer credit.
2. The student must have been enrolled at the other institution in a student category which yields graduate credit. The maximum amount of credit given for extension and nonmatriculated (non-

degree) courses is 12 units. No transfer credit is given for online or correspondence work.

3. Courses must have been taken after the conferral of the bachelor's degree. The only exception is for work taken through programs structured like the Stanford coterminal bachelor's/master's program.
4. Courses must have been completed with a grade point average (GPA) of 3.0 (B) or better. Pass grades are accepted only for courses for which letter grades were not an option and for which the standard of passing is 'B' quality work.
5. Courses must have been taken at a regionally accredited institution in the U.S. or at an officially recognized institution in a foreign country. Courses taken at foreign universities must be at the level of study comparable to a U.S. graduate program.

The Application for Graduate Residency Credit is reviewed by the department and the Office of the University Registrar. For transfer credit done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence. One semester unit or hour usually equals 1.5 quarter units.

## Leaves of Absence (Graduate)

Students on leave of absence are not registered at Stanford and, therefore, do not have the rights and privileges of registered students. They cannot fulfill any official department or University requirements during the leave period.

Leaves do not delay candidacy or master's program expiration dates.

Students on leave may complete course work for which an 'Incomplete' grade was awarded in a prior term and are expected to comply with the maximum one-year time limit for resolving incompletes; a leave of absence does not stop the clock on the time limit for resolving incompletes. Students with extenuating circumstances that may warrant an exception to academic policy should discuss the need for an extension to the time limit with their adviser and the course instructor. Students may request an extension of the deadline for resolving an incomplete by submitting the Petition to Change Course Enrollment (Graduate Students) ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change\\_crse\\_enroll.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_crse_enroll.pdf)).

When a student is granted (or placed on) a leave of absence after the beginning of the term, courses in which the student was enrolled after the drop deadline appear on the student's transcript and show the symbol 'W' (Withdraw).

## Voluntary Leaves of Absence

Graduate students who do not meet the requirement for continuous registration during the academic year must obtain an approved leave of absence, in advance, for the term(s) they will not be registered. The leave of absence must be reviewed for approval by the chair or director of graduate studies of the student's major department and, if the student is in the United States on a foreign student visa, by the Bechtel International Center (<http://icenter.stanford.edu>). Except in the case of pregnancy or parental leaves, the granting of a leave of absence is at the discretion of the department and subject to review by the Office of the University Registrar. The University may condition its approval of a petition for leave of absence on the student's meeting such requirements as the University deems appropriate in the individual case for the student to be eligible to return (such as, in the case of a leave for medical reasons, proof of treatment and/or an interview with a health care professional at Vaden Health Center (<http://vaden.stanford.edu>) or Counseling and Psychological Services (<http://vaden.stanford.edu/caps>) or its designee).

New graduate students may not take a leave of absence during their first quarter. However, new Stanford students may request a deferment from the department.

Coterminal students who wish to take a leave of absence are subject to the Leave of Absence policies for both undergraduate and graduate students, as described here and in the undergraduate Leaves of Absence and Reinstatement (p. 35) section of this Bulletin. A coterminal student whose undergraduate degree has not been conferred must obtain permission from the master's degree program and the office of Undergraduate Advising and Research, and may not take a leave of absence unless approved for both the graduate and undergraduate leave. Coterminal students are permitted to request a leave of absence for the first quarter of the graduate program.

Leaves of absence are granted for a maximum of one calendar year, or four quarters. Leaves requested for a longer period are approved only in exceptional circumstances (for example, mandatory military service). An extension of leave, for a maximum of one year or four quarters, is approved only in unusual circumstances. Extension requests must be made before the expiration of the original leave of absence. Leaves of absence for graduate students may not exceed a cumulative total of two years (eight quarters including summer quarters).

Any pregnant graduate student may request a Pregnancy Leave of Absence in order to suspend her student enrollment around the time of the birth. Alternatively, she may choose to remain enrolled and to request a Childbirth Accommodation. Non-birth parents may request a Parental Leave of Absence. Non-birth parents include: spouses/partners of women (who do not have to be Stanford students) anticipating or recently experiencing the birth of a child, parents who adopt a child, and parents by means of surrogacy.

In the case of Pregnancy and Parental Leaves of Absence, all provisions of the policy for Voluntary Leaves of Absence, defined above, will apply, except:

- Any matriculated pregnant student requesting a Pregnancy Leave of Absence will automatically be approved for a leave period of four quarters (12 months).
- Non-birth parents who request a Parental Leave of Absence will automatically be approved for a leave period of one academic quarter.
- Any student on a Pregnancy Leave of Absence in a degree program requiring candidacy, who has not yet been admitted to candidacy, will have the period of time in which to achieve candidacy automatically extended by 12 months (four quarters). If she has been admitted to candidacy, the candidacy period will be automatically extended by 12 months (four quarters). The 12-month extension of pre-candidacy or candidacy will be applicable whether the student takes a full year of leave or returns in less than one year.
- Any student on a Parental Leave of Absence in a degree program requiring candidacy, who has not yet been admitted to candidacy, will have the period of time in which to achieve candidacy automatically extended by three months (one quarter). If he or she has been admitted to candidacy, the candidacy period will be automatically extended by three months (one quarter).
- In the case where a Pregnancy or Parental Leave of Absence would extend the student's cumulative total beyond 8 quarters, that extension will be permitted so that the student may return to his or her program. The student will then be considered to have reached his or her maximum cumulative leave.

## Mandatory Leaves of Absence

A mandatory leave of absence can be imposed in circumstances in which a student:

- presents a substantial risk of harm to self or others or is failing to carry out substantial self-care obligations; or
- significantly disrupts the educational or other activities of the University community; or

- is unable to participate meaningfully in educational activities; or
- requires a level of care from the University community that exceeds the resources and staffing that the University can reasonably be expected to provide for the student's well-being.

Students whose circumstances warrant a review under the Dean's Leave of Absence Policy (<https://vp-studentaffairs.stanford.edu/policies/deans-leave-absence>) are apprised, in writing, of University concerns and are provided an opportunity to respond to concerns in writing or in person or via telephone before a review committee convened by the Dean of Student Life. Students placed on mandatory leave of absence can appeal an unfavorable decision to the Vice Provost for Student Affairs. The University can condition a student's return to registered student status on such requirements as the University deems appropriate in the individual case (such as, in the case of a leave for medical reasons, proof of treatment and/or an interview with a health care professional at Vaden Health Center (<http://vaden.stanford.edu>) or Counseling and Psychological Services (<http://vaden.stanford.edu/caps>) or its designee). The Dean of Student Life publishes the full Dean's Leave of Absence Policy (<https://vp-studentaffairs.stanford.edu/policies/deans-leave-absence>) on its web site. Information on tuition refunds is available in the "Refunds (p. 22)" section of this bulletin.

## Discontinuation and Reinstatement

A student's academic degree program may be discontinued if the student:

- fails to be enrolled by the study list deadline; or
- fails to be approved for a leave of absence by the start of the term; or
- voluntarily terminates graduate studies; or
- is dismissed from graduate studies for academic reasons; or
- is expelled from the University.

Students who fail to be either enrolled by the final study list deadline or approved for a leave of absence by the start of a term or after a voluntary withdrawal are required to apply for reinstatement (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/appgradreinststate.pdf>) through the Graduate Admissions office before they can return to the same degree program. Students whose master's program or doctoral candidacy has expired must petition to have extensions of their programs or candidacy approved by their departments before reinstatement may be approved.

The decision to approve or deny reinstatement is made by the student's department or program. Departments are not obliged to approve reinstatements of students. Reinstatement decisions are made at the discretion of the department or the program and may be based on the applicant's academic status when last enrolled, activities while away from campus, the length of the absence, the perceived potential for successful completion of the program, and the ability of the department to support the student both academically and financially, as well as any other factors or considerations regarded as relevant by the department or program.

Reinstatement information is available from the Graduate Admissions office (<https://gradadmissions.stanford.edu>). Successful applicants are billed. Department-approved reinstatement applications must be submitted prior to the first day of the term for which re-enrollment is requested if the student is registering for courses. International students must submit reinstatement applications early enough to allow time for I-20 or DS-2019 production, visa interview, etc.

In the rare circumstance where a student who had been dismissed for academic reasons wishes to return to the same degree program, and where reinstatement was not precluded at the time of the dismissal, the student should request reinstatement as described above. In this circumstance, the degree program may review such relevant information

as course work completed elsewhere or any other factors deemed to be appropriate for consideration.

Conditions for reinstatement may be established at the discretion of the program. The decision to approve or deny reinstatement is made by the department or program to which the student is seeking reinstatement, and is in its discretion. In addition, the department or program retains the right to condition reinstatement on such academic or other conditions as it deems appropriate.

Students who have been expelled from Stanford University are not permitted to apply for reinstatement.

## Terminal Graduate Registration (TGR)

Doctoral students who have been admitted to candidacy, completed all required courses and degree requirements other than the University oral exam and dissertation, completed 135 units or 10.5 quarters of residency (if under the old residency policy), and submitted a Doctoral Dissertation Reading Committee form, may request Terminal Graduate Registration status to complete their dissertations. Students pursuing Engineer degrees may apply for TGR status after admission to candidacy, completion of all required courses, and completion of 90 units or six quarters of residency (if under the old residency policy). Students enrolled in master's programs with a required project or thesis may apply for TGR status upon completion of all required courses and completion of 45 units. Students with more than one active graduate degree program must be TGR-eligible in all programs in order to apply for TGR status.

The TGR Final Registration status may also be granted for one quarter only to a graduate student who is returning after reinstatement, working on incompletes in his or her final quarter, or registering for one final term after all requirements are completed when Graduation Quarter is not applicable. TGR requirements above apply. Doctoral students under the term-based residency policy need nine quarters of residency to qualify for TGR Final Registration Status.

Each quarter, TGR students must enroll in the 801 (for master's and Engineer students) or 802 (for doctoral students) course in their department for zero units, in the appropriate section for their adviser. TGR students register at a special tuition rate. Students in TGR status enrolled in a course numbered 801 or 802 are certified as enrolled full time. TGR students may enroll in up to 3 units of course work per quarter at this tuition rate. Within certain restrictions, TGR students may enroll in additional courses at the applicable unit rate. The additional courses cannot be applied toward degree requirements since all degree requirements must be complete in order to earn TGR status. See the "Minimum Progress Requirements for Graduate Students (p. )" of this bulletin for information about satisfactory progress requirements for TGR students.

## Graduate Tuition Adjustment (Reduced Enrollment)

Requests to enroll for fewer than eight units during the academic year are approved only in specific circumstances. Graduate students who need fewer than 8 remaining units to complete degree requirements or to qualify for TGR status, may register for one quarter on a unit basis (3 to 7 units) to cover the deficiency. This status may be used only once during a degree program. Students with disabilities covered under the Americans with Disabilities Act may enroll in an approved reduced course load (RCL) as recommended by the Office of Accessible Education (OAE) (<https://oae.stanford.edu>). Women students may request up to two quarters of part-time enrollment for an approved Childbirth Academic Accommodation; see the "Childbirth Accommodation Policy (p. )" section of this bulletin and the GAP 5.9, Childbirth Accommodation (<http://gap.stanford.edu/5-9.html>).

All students requesting reduced enrollment need to complete and file the Request for Graduate Tuition Adjustment (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/tuitadjreq.pdf>) form.

## Graduation Quarter Status

Registration is required for the term in which a student submits a dissertation or has a degree conferred. Students who meet all the following conditions are eligible to be assessed a special tuition rate for the quarter in which they are receiving a degree:

1. All course work, degree requirements, oral exams, and residency requirements for all graduate degree programs, including joint degree programs, have been completed prior to the start of the requested Graduation Quarter.
2. A graduate or professional student must have been enrolled or have been on an approved leave of absence in the term immediately preceding the term chosen as the graduation quarter. Summer term enrollment is optional for students on graduation quarter in the Autumn term provided that they have been enrolled the prior Spring term.
3. The student has formally applied to graduate in Axess.
4. The student has only to submit the dissertation, project, or master's thesis by the deadline for submission in the term designated as the graduation quarter.
5. The student has filed all necessary forms regarding graduation quarter before the first day of the term chosen as graduation quarter.

Students on graduation quarter are registered at Stanford and, therefore, have the rights and privileges of registered students. Graduation Quarter status may be used only once during a degree program. There is a tuition rate of \$150 for the graduation quarter. Students in Graduation Quarter status and enrolled in a course numbered 801 or 802 are certified as enrolled full time.

## Conferral of Degrees

Upon recommendation to the Senate of the Academic Council by the faculty of the relevant departments or schools and the Committee on Graduate Studies, degrees are awarded four times each year, at the conclusion of Autumn, Winter, Spring, and Summer terms. All diplomas, however, are prepared and distributed after degree conferral in accordance to the distribution dates listed on the Registrar's Office (<http://studentaffairs.stanford.edu/registrar/students/diplomas>) web site.

Students must apply for conferral of a graduate degree by filing an Application to Graduate in Axess by the deadline for each term. The deadlines are available in the Academic Calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). A separate application must be filed for each degree program and for each conferral term.

Requests for conferral are reviewed by the Office of the University Registrar and the student's department to verify completion of degree requirements. Students must be registered in the term of degree conferral. Students with unmet financial obligations resulting in the placement of a hold on their registration cannot receive a transcript, statement of completion, degree certificate, or diploma until the hold is released by the Office of Student Financial Services. An academic record where no other degree objective is being pursued is permanently frozen after the final degree conferral, and all subsequent grade change requests or changes to the student record are not permitted.

Students are typically expected to apply to graduate during the term in which they expect to be awarded a degree. The University, however, reserves the right to confer a degree on a student who has completed all of the requirements for a degree even though the student has not applied

to graduate; such an individual would then be subject to the University's usual rules and restrictions regarding future enrollment or registration.

Students who wish to withdraw a request for conferral or make changes to the Application to Graduate should submit the Withdrawal of Application to Graduate form ([https://studentaffairs.stanford.edu/sites/default/files/registrar/files/withdraw\\_app\\_2\\_grad.pdf](https://studentaffairs.stanford.edu/sites/default/files/registrar/files/withdraw_app_2_grad.pdf)) to the Student Services Center (<https://studentservicescenter.stanford.edu>) by the late application to graduate deadline. Students who withdraw their graduation applications or fail to meet degree requirements must reapply to graduate in a subsequent term.

Stanford University awards no honorary degrees.

## Advising and Credentials

### Advising

By the start of their first term, students should be paired by the department with faculty advisers who assist them in planning a program of study to meet degree requirements. The department should also inform doctoral students in a timely fashion about procedures for selecting a dissertation adviser, reading committee members, and orals committee members. Departments should make every effort to assist doctoral students who are not yet admitted to candidacy in finding an appropriate adviser.

Students are obliged to follow department procedures for identifying advisers and committee members for their dissertation reading and university oral examinations.

Occasionally, a student's research may diverge from the area of competence of the adviser, or irreconcilable differences may occur between the student and the faculty adviser. In such cases, the student or the faculty adviser may request a change in assignment. If the department decides to grant the request, every reasonable effort must be made to pair the student with another suitable adviser. This may entail some modification of the student's research project.

In the rare case where a student's dissertation research on an approved project is in an advanced stage and the dissertation adviser is no longer available, every reasonable effort must be made to appoint a new adviser, usually from the student's reading committee. This may also require that a new member be added to the reading committee before the draft dissertation is evaluated, to keep the reconstituted committee in compliance with the University requirements for its composition.

### Teaching Credentials

Stanford University is accredited by the California Commission on Teacher Credentialing and the National Council for Accreditation of Teacher Education and is authorized to recommend candidates for credentials. The University offers a complete training program for both Single (Secondary) and Multiple Subject (Elementary) teaching credentials. Upon completion of a Stanford approved program, the credentials allow teachers to serve in California public schools.

Current Stanford undergraduates wishing to complete the requirements for a teaching credential should apply to the coterminal program at the Graduate School of Education (<https://ed.stanford.edu/admissions/coterminal>). All other applicants should apply directly to the Stanford Teacher Education Program (STEP) at the School of Education.

## Transfer Work

Stanford accepts a small number of undergraduate transfer students each year. Requirements for admission (<http://www.stanford.edu/dept/uga/application/transfer>) are described as part of the undergraduate application process and are listed on the Undergraduate Admission

web site. Stanford University has a designated adviser who coordinates support for transfer students.

In conjunction with appropriate review bodies, the Office of the University Registrar evaluates and records the amount of transfer credit and advanced placement test credit an undergraduate can apply toward graduation requirements. Stanford awards credit based on course work completed at U.S. colleges or universities accredited by a regional accrediting association; or course work completed at international colleges or universities of recognized standing. Credit may also be awarded for certain Advanced Placement programs, International Baccalaureate Program, GCE, French Baccalaureate, and the German Abitur examinations.

See the "Advanced Placement (p. 33)" section of this Bulletin for information concerning Stanford's policy on credit for Advanced Placement work. Details on how to request credit for advanced placement examinations are available at the Registrar's Advanced Placement site (<http://studentaffairs.stanford.edu/registrar/students/ap>).

## Undergraduate Transfer Work

Academic credit for work done elsewhere may be allowed toward a Stanford bachelor's degree under the following rules and conditions:

1. Credit may be granted for work completed at institutions in the U.S. only if the institutions are accredited.
2. Study in institutions outside the U.S., when validated by examination results, tutorial reports, or other official evidence of satisfactory work, may be credited toward a Stanford bachelor's degree, subject to the approval of the credit evaluator and the appropriate departments.
3. Credit is officially allowed only after the student has been unconditionally admitted to Stanford.
4. Credit is allowed for work completed at institutions in the U.S. only on the basis of an official transcript received by the Registrar at Stanford directly from the institution where the credit was earned.
5. Credit from another institution may be transferred for courses which are substantially equivalent to those offered at Stanford University on the undergraduate level, subject to the approval of the credit evaluator. A maximum of 20 quarter units may represent courses which do not parallel specific undergraduate courses at Stanford, again, subject to the approval of the credit evaluator as to quality and suitability.
6. Course work cannot duplicate, overlap, or regress previous work.
7. Transfer course work cannot count towards secondary school diploma and/or graduation requirements.
8. For students who want to fulfill general education requirements through transfer work and who are subject to the GER system in place prior to Autumn 2013-14, a proposed transfer course must match a specific Stanford course that fulfills the same GER requirement; it must be a minimum of 3 quarter units and have been taken for a letter grade.

For students who want to fulfill general education requirements through transfer work and who are subject to the Ways of Thinking/Doing (WAYS) breadth requirement (2013-14 and later for incoming first-year students and 2014-15 only incoming transfer students), transfer courses are reviewed to determine if courses can be certified to fulfill WAYS requirements. Requests for fulfilling WAYS requirements in transfer require pre-approval prior to course enrollment and the pre-approval requests must be submitted by the quarterly deadline in the quarter prior to the term in which students intend to enroll in the transfer course, as defined on the WAYS (<https://undergrad.stanford.edu/programs/ways/getting-credit/ways-credit-classes-taken-other-us-universities>) site. Courses must be taken for a minimum of 3 quarter units (2 units in the case of Creative Expression only) and must be taken for a letter grade.

For 2015-16 incoming transfer students, a proportion of their WAYS breadth requirement must be fulfilled at Stanford. Based on the number of qualified transfer units awarded at matriculation, students must complete a number of Ways courses to fulfill the WAYS requirement as outlined in the "Credit Transfer" section of the Bulletin.

9. Transfer work can be used to satisfy a department major or minor requirement. The transfer work must first be officially accepted into the University through the Office of the University Registrar. Departments determine if approved transfer work can be used to satisfy a department major or minor requirement.
10. The credit allowed at Stanford for one quarter's work may not exceed the number of units that would have been permissible for one quarter if the work had been done at Stanford; for work done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence.
11. Credit is allowed at Stanford for work graded 'A,' 'B,' 'C,' or 'Pass' (where 'Pass' is equivalent to a letter grade of 'C' or above), but not for work graded 'D' or below.
12. No more than 45 (90 for transfer students) quarter units of credit for work done elsewhere may be counted toward a bachelor's degree at Stanford (including advanced placement test credit).
13. Credit earned in extension, correspondence, and online courses is transferable only if the university offering the courses allows that credit toward its own bachelor's degree. Such credit is limited to a maximum of 45 quarter units for extension courses, a maximum of 15 quarter units for correspondence and online study, and a maximum of 45 quarter units for the combination of extension, correspondence, and online courses.
14. Credit earned in military training and service is not transferable to Stanford, unless offered by an accredited college or university in the U.S. and evaluated as above by the credit evaluator.

## Graduate Residency Transfer Credit

After at least one quarter of enrollment, students pursuing an Engineer, D.M.A., or Ph.D. may apply for transfer credit for graduate work done at another institution. Engineer candidates who also earned their master's at Stanford are not eligible for transfer residency credit, nor are any master's degree students. Ph.D. or D.M.A. students may only apply a total of 45 units of transfer credit and credit earned for a Stanford master's degree toward the PhD residency total.

Students enrolled at Stanford who are going to study elsewhere during their degree program should obtain prior approval of any transfer credit sought before their departure.

The following criteria are used by the department in determining whether, in its discretion, it awards transfer credit for graduate-level work done at another institution:

1. Courses should have comparable Stanford counterparts that are approved by the student's department. A maximum of 12 units of courses with no Stanford counterparts and/or research units may be granted transfer credit.
2. The student must have been enrolled at the other institution in a student category which yields graduate credit. The maximum amount of credit given for extension and nonmatriculated (non-degree) courses is 12 units. No transfer credit is given for online or correspondence work.
3. Courses must have been taken after the conferral of the bachelor's degree. The only exception is for work taken through programs structured like the Stanford coterminal bachelor's/master's program.
4. Courses must have been completed with a grade point average (GPA) of 3.0 (B) or better. Pass grades are accepted only for courses for which letter grades were not an option and for which the standard of passing is 'B' quality work.
5. Courses must have been taken at a regionally accredited institution in the U.S. or at an officially recognized institution in a foreign country. Courses taken at foreign universities must be at the level of study comparable to a U.S. graduate program.

The Application for Graduate Residency Credit is reviewed by the department and the Office of the University Registrar. For transfer credit done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence. One semester unit or hour usually equals 1.5 quarter units.

## Veterans and Military Benefits

The Office of the University Registrar serves as the liaison between the University, its students, and the various federal, state, and local agencies concerned with Veterans Affairs (VA) educational benefits and Department of Defense (DoD) tuition assistance.

Stanford University has made a good faith effort to comply with the Principles of Excellence established by Executive Order 13607. Stanford University participates in the Department of Defense Voluntary Education Partnership program so that eligible active duty service members are able to obtain Tuition Assistance from their military branch as administered by the Department of Defense. The Office of Military-Affiliated Communities in the Student Services Center (<http://www.stanford.edu/group/studentservicescenter>) serves as the first point of contact for veterans' educational benefits assistance and DoD tuition assistance.

Stanford certifies enrollment for veterans' educational benefits for students in degree seeking programs, and students in one of 23 VA approved certificate programs offered through the Stanford Center for Professional Development. Other non-matriculated and certificate programs are not eligible. All students eligible to receive veterans' benefits or DoD tuition assistance while attending the University are urged to complete arrangements with the appropriate agency in advance of enrollment.

Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student's degree program or courses beyond those required for a specific degree program are not certified. Undergraduates should meet with an adviser to develop a course enrollment plan. Graduate students should have their departments approve their study lists as meeting graduation requirements on a quarterly basis.

To comply with federal regulations concerning credit for previous training (38 CFR 21.4253), Stanford University is required to evaluate all previous education and training completed elsewhere to determine what credit, if any, should be granted to students eligible to receive Veterans Affairs educational benefits or DoD tuition assistance. Stanford is required to complete an evaluation; credit is granted when appropriate. Credit is evaluated toward the degree program registered with Veterans Affairs or DoD as determined by the Office of the University Registrar in conjunction with the relevant academic department(s) or program(s). All relevant policies regarding transfer credit apply. In addition, this evaluation occurs each time a student's degree program is changed. Subject to current federal and University guidelines, students eligible for receipt of VA educational benefits or DoD tuition assistance have their prior education and training evaluated up to the credit limits outlined in the "Residency Policy for Graduate Students (p. 45)" and "Undergraduate Degrees and Programs (p. 24)" sections of this bulletin. As an exception to that policy, students in master's programs in the schools of Earth Sciences, Education, Engineering, Humanities and Sciences, Law, Medicine, and Graduate Business are allowed a maximum of 6 transfer (quarter) units.

## VA Status

In order to activate students' VA educational benefits at Stanford the Office of the University Registrar requires that students submit the following forms:

- A copy of the Certificate of Eligibility distributed by the VA
- Veterans' Benefits - Statement of Rights and Responsibilities (online form)
- DD-214 (if applicable)
- Any official transcripts from other institutions

It is the students' responsibility to ensure that all forms are submitted to the Office of University Registrar in order to activate the student as VA benefits receiving student.

In order to comply with VA regulations, students are responsible for the following:

- Obtain official transcripts from all postsecondary institutions attended, whether VA benefits were received or not.
- Report any changes in enrollment status to the Office of the University Registrar.
- Report any changes that are made to a degree plan. Undergraduates declaring or making changes to their major(s), minor(s), honor(s), or degree program(s) in Axess and Graduates adding or removing degree programs through the Graduate Program Authorization Petition in Axess should submit a Student Services Center Help ticket (attention VA Certifying Official) to report degree plan change.
- General overpayments of VA benefits are the responsibility of the student, even if the payment was submitted directly to the school on the student's behalf.
- Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student's degree program or courses beyond those required for a specific degree program are not certified. Undergraduates should meet with their adviser to develop a course enrollment plan. Graduate students should have their departments approve their study lists as meeting graduation requirements on a quarterly basis.
- If concurrently enrolled with another college/university, notify both Stanford and the host institution.
- *Undergraduates only:* VA regulations require undergraduates to declare their major by the end of their sophomore year. Stanford cannot certify enrollment to the VA beyond sophomore year unless a major has been declared. Note that a student can change their major at any time.

## Certification

The Office of the University Registrar certifies enrollment to the VA Office quarterly, approximately one week after the Preliminary Study List Deadline. See the Stanford Academic Calendar for exact dates in each quarter.

After the Final Study List deadline, the Office of the University Registrar confirms that your enrollment has not changed in Axess. If enrollment has increased or decreased your enrollment certification is adjusted.

The Office of the University continues to certify the student to the VA until the student leaves the program or unless notified by the student and/or the VA to stop the process of certification.

General overpayments of VA benefits are the responsibility of the student. If the enrollment change has resulted in tuition overpayment, the student is responsible for paying the tuition and fees back to the VA. If the student is a Ch. 33 recipient and the enrollment change has resulted in tuition overpayment, a refund check will be issued by Stanford to the student. It remains the student's responsibility to provide tuition and fees

back to the VA. If the enrollment change has resulted in underpayment, the VA sends the difference in tuition fees to the student, excluding Ch. 33 recipients. If you are a Ch. 33 recipient, fees will be paid directly to the institution in a separate payment.

## Programs Subject to Restriction

Note that the following programs cannot be certified due to VA and federal regulations:

- *Certificate programs for non-matriculated students:* The VA defines "matriculated" as having been formally admitted to a college or university. Per the VA, educational benefits cannot be paid to "non-matriculated" college or university students. Hence, any certificate program that does not officially admit its students into Stanford University cannot be certified.
- *Visiting Students Programs:* Stanford cannot certify visiting students unless they meet one of the following conditions:

1. The student has an approved parent letter from the home institution which guarantees that the courses can be transferred back to original program.
2. The student is pending admission to a Stanford degree program and is required to take a prerequisite course(s). In that case the student can be certified for two terms.

- *Medical Residencies/Fellowship programs that are not certified by the ACGME:* these residencies are not allowed to be certified as on the job training. This is according to VA guidelines and the Federal Code of Regulations. See the School of Medicine for a full list of the fellowship/residency programs.

All students eligible to receive veterans' benefits while attending the University are urged to complete arrangements with the appropriate agency in advance of enrollment.

## Financial Aid

The Post-9/11 GI Bill, also known as Chapter 33, is the most commonly used VA educational benefits program at Stanford. This program provides funding for tuition, required fees, books and housing. The level of an individual student's Chapter 33 benefits is determined by the qualifying veteran's length of military service since 9/11/2001. For the 2015-16 academic year, the base benefit for tuition and fees is capped at \$21,084.89. Eligible students may also receive funds through the Yellow Ribbon Provision.

Most of the VA educational benefit programs pay benefits directly to students on a monthly basis. However, under the Post-9/11 GI Bill (Chapter 33), the VA sends tuition and fees benefits to Stanford, where the Financial Aid Office is responsible for applying the funds to the student account (university bill). Chapter 33 books and housing benefits are sent directly to students monthly. Students may need to apply the housing benefits to the university bill to pay for on-campus room and board.

## Yellow Ribbon Provision

Stanford elects on a yearly basis to participate in the Yellow Ribbon Program. Under this provision Stanford provides an annual contribution to supplement the Chapter 33 base tuition benefit. The VA matches Stanford's Yellow Ribbon contribution. For the 2015-16 academic year, Stanford's annual Yellow Ribbon contribution for undergraduate students is \$3,000, with the VA providing a matching amount of \$3,000. For graduate and professional students, the amount of Stanford's Yellow Ribbon contribution varies by school and program; see the Yellow Ribbon information on the University Registrar's web site.

## Undergraduates

Undergraduates may apply for need-based financial aid from Stanford to supplement VA educational benefits. If the financial aid application demonstrates financial need beyond the amount of expected VA benefits, the student will be awarded institutional aid to meet the additional need.

If the student will be receiving VA educational benefits transferred from a parent, the student will be treated as a dependent student for financial aid purposes. The student's parents' income and asset information will be considered in determining eligibility for need-based aid from Stanford. If the student is a veteran, the student will most likely be treated as an independent student and will not need to provide parent information. Receipt of VA educational benefits does not impact your eligibility for federal student loan programs.

VA educational benefits are treated like other outside awards in that they can reduce or replace the Student Responsibility portion of the aid package. VA benefits do not reduce or replace the Parent Contribution in the determination of eligibility for need-based Stanford aid.

## Graduate Students

Schools and departments are responsible for providing the Yellow Ribbon contribution for eligible graduate students. The Financial Aid Office will coordinate receipt of funds with responsible individuals in each school.

Receipt of VA educational benefits does not impact your eligibility for federal student loan programs.

## Veterans' Educational Benefits

The Office of the University Registrar serves as the liaison between the University, its students, and the various federal, state, and local agencies concerned with veterans' benefits. Stanford certifies enrollment for students in degree seeking programs and students in one of 24 VA approved certificate programs offered through the Stanford Center for Professional Development. Other non-matriculated and certificate programs are not eligible. All students eligible to receive veterans' benefits while attending the University are urged to complete arrangements with the appropriate agency in advance of enrollment.

Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student's degree program or courses beyond those required for a specific degree program are not certified. Undergraduates should meet with an advisor to develop a course enrollment plan. Graduate students should have their departments approve their study lists as meeting graduation requirements on a quarterly basis.

To comply with federal regulations concerning credit for previous training (38 CFR 21.4253), Stanford University is required to evaluate all previous education and training completed elsewhere to determine what credit, if any, should be granted to students eligible to receive Veterans Affairs (VA) educational benefits. Stanford is required to complete an evaluation; credit is granted when appropriate. Credit is evaluated toward the degree program registered with Veterans Affairs as determined by the Office of the University Registrar in conjunction with the relevant academic department(s) or program(s). All relevant policies regarding transfer credit apply. In addition, this evaluation occurs each time a student's degree program is changed.

Subject to current federal and University guidelines, students eligible for receipt of VA educational benefits have their prior education and training evaluated up to the credit limits outlined in the "Residency Policy for Graduate Student (p. 52)s" section of this bulletin. As an exception to that policy, students in master's programs in the schools of Earth Sciences, Education, Engineering, Humanities and Sciences, Law, Medicine, and Graduate Business are allowed a maximum of 6 transfer (quarter) units. Students should consult with the Office for Military

Affiliated Communities (OMAC) (<https://military.stanford.edu/gi-bill-benefits>) for consideration of optimal use of educational benefits.

Stanford participates in the Yellow Ribbon provision of the Post 9/11 GI Bill (Ch. 33). If a matriculated student qualifies for Chapter 33 benefits at the 100% level, the student may be eligible to receive additional funding through the Yellow Ribbon Program. Under this program, Stanford provides an annual award of \$3,000 to undergraduate students to supplement the Chapter 33 base tuition benefit. The VA matches Stanford's Yellow Ribbon contribution, so the student receives a combined total of \$6,000 in additional funds. Certain matriculated graduate students may be eligible for the Yellow Ribbon provision, and the amount of institutional contribution varies by school and program at the graduate level.

See the Office for Military Affiliated Communities (OMAC) web site (<https://military.stanford.edu/gi-bill-benefits>) for additional information about veterans' educational benefits.

## University Policies and Statements

### Compliance with University Policies/Registration Holds

Registration as a student constitutes a commitment by the student to abide by and accept University policies, rules, requirements, and regulations, even when such policies, rules, requirements, and regulations appear to conflict with ASSU policies or procedures. The policies, rules, requirements, and regulations that students must abide by include (but are not limited to) those concerning registration, academic performance, student conduct, Title IX, health and safety, housing, use of the libraries and computing resources, intellectual property (including completing and signing the SU-18), operation of vehicles on campus, University facilities, and the payment of fees and assessments. Some of these are set forth in this bulletin while others are available in relevant University offices.

Students should take responsibility for informing themselves of applicable University policies, rules, requirements, and regulations. A collection is available on the Stanford University policy (<http://www.stanford.edu/about/administration/policy>) web site. Many are also set forth in the Research Policy Handbook (<http://doresearch.stanford.edu>) and the Graduate Academic Policies and Procedures Handbook (the GAP handbook) (<http://gap.stanford.edu>).

The University reserves the right to withhold registration privileges or to cancel the registration of any student: who is not in compliance with its policies, rules, requirements, or regulations; or for reasons pertaining to academic performance, health and wellness, qualification to be a student, behavioral conduct, or the safety of the University community.

### University Communication with Students

Stanford University uses electronic means (such as email, texts, and the Internet) as a primary method of communication and of providing billing, payment, and enrollment services. Signatures or acknowledgments provided by the student electronically to Stanford via Stanford systems and/or @stanford.edu email are valid and legally binding.

### Notification/Obligation to Read Email

For many University communications, email to a student's Stanford email account is the official form of notification to the student, and emails sent by University officials to such email addresses will be presumed to have been received and read by the student. Emails and forms delivered through a SUNet account by a student to the University may likewise constitute a formal communication, with the use of this password-protected account constituting the student's electronic signature.

## Registration and Study Lists

The preliminary study list deadline is the first day of classes of each quarter during the academic year. As early as possible, but no later than this deadline, students (including those with TGR status) must submit to the Office of the University Registrar via Axess, a study list to enroll officially in classes for the quarter. Students are expected to be enrolled "at status" by the preliminary study list deadline; meaning that students must be enrolled in sufficient units to meet requirements for their status, whether full-time, or on approved special registration status. Students who enroll in more units than their anticipated tuition charge covers will be charged the additional tuition. They may not enroll in courses for zero units unless those courses, like TGR, are defined as zero-unit courses. Undergraduates are subject to academic load limits described in the "Amount of Work (p. 59)" section of this bulletin. Students will be charged a \$200 late study list fee for submitting their study lists after the quarterly deadline.

The University reserves the right to withhold registration from, and to cancel the advance registration or registration of, any student having unmet obligations to the University.

### Study List Changes

Students may add courses or units to their study lists through the end of the third week of classes. (Individual faculty may choose to close their classes to new enrollments at an earlier date.) Courses or units may be added only if the revised program remains within the normal load limits.

Courses or units may be dropped by students through the end of the third week of classes, without any record of the course remaining on the student's transcript. No drops are permitted after this point. The Final Study List deadline is the last day for tuition reassessment for dropped courses or units.

A student may withdraw from a course after the final study list deadline through the end of the eighth week of each quarter. In this case, a grade notation of 'W' (withdraw) is automatically recorded on the student's transcript for that course. There are no tuition reassessments for withdrawing from individual courses. Students who do not officially withdraw from a class by the end of the eighth week are assigned the appropriate grade or notation by the instructor to reflect the work completed.

Through the end of the eighth week of classes, students may choose the grading option of their choice in courses where an option is offered.

If the instructor allows a student to take an 'I' (incomplete) in the course, the student must make the appropriate arrangements for that with the instructor by the last day of classes.

The deadlines described above follow the same pattern each quarter but, due to the varying lengths of Stanford's quarters, they may not always fall in exactly the week specified. Students should consult the University's academic calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>) for the deadline dates each term. Other deadlines may apply in Law, Graduate School of Business, Medicine, and Summer Session.

### Repeated Courses

Students may not enroll in courses for credit for which they received either Advanced Placement (AP) or transfer credit. If students enroll in courses at Stanford for which they received equivalent AP unit credit, the duplicating AP unit credit will be removed.

Some Stanford courses may be repeated for credit; they are specially noted in this bulletin. Most courses may not be repeated for credit. Under the general University grading system, when a course which may not be

repeated for credit is retaken by a student, the following special rules apply:

1. A student may retake any course on his or her transcript, regardless of grade earned, and have the original grade, for completed courses only, replaced by the notation 'RP' (repeated course). When retaking a course, the student must enroll in it for the same number of units originally taken. When the grade for the second enrollment in the course has been reported, the units and grade points for the second course count in the cumulative grade point average in place of the grade and units for the first enrollment in the course. Because the notation 'RP' can only replace grades for completed courses, the notation 'W' cannot be replaced by the notation 'RP' in any case.
2. A student may not retake the same course for a third time unless he or she received a 'NC' (no credit) or 'NP' (not passed) when it was taken and completed the second time. Undergraduate students must file a petition for approval to take the course for a third time with the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall. When a student completes a course for the third time, grades and units for both the second and third completions count in the cumulative grade point average. The notation 'W' is not counted toward the three-retain maximum.

### Amount of Work

The usual amount of work for undergraduate students is 15 units per quarter; 180 units (225 for dual degree students) are required for graduation. Registration for fewer than 12 units is rarely permitted and may cause the undergraduate to be ineligible for certification as a full-time student. The maximum is 20 units (21 if the program includes a 1-unit activity course). Requests for exception to the maximum may be considered for compelling reasons, the approval of which may include conditions or restrictions. A past superior academic performance is not considered to be sufficient justification for exceeding the maximum. Petitions for programs of fewer than 12 or more than 20 units must be submitted to the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research, Sweet Hall, first floor. For additional information regarding satisfactory academic progress, refer to the "Academic Progress (p. 66)" section of this bulletin.

Matriculated graduate students are expected to enroll for at least eight units during the academic year; schools and departments may set a higher minimum. Petitions for programs of fewer than 8 must be signed by the student's department and submitted for consideration to the Office of the University Registrar. Graduate students are normally expected to enroll in no more than 24 units; registration for more than 24 units must be approved by the department. Under certain circumstances, graduate students may register on a part-time basis. See the "Tuition, Fees, and Housing (p. 18)" section of this bulletin.

Enrollment for coterminal students is determined by their tuition group. See Tuition (p. 43) in the "Coterminal Master's Degrees" section of this bulletin.

Undergraduates and graduate students with disabilities who may seek a reduced course load should contact the Office of Accessible Education (<http://studentaffairs.stanford.edu/oa>).

### Unit of Credit

*Guidance for faculty and instructors on how to comply with this policy is available on the Registrar's web site.*

Every unit for which credit is given is understood to represent approximately three hours of actual work per week for the average student. Thus, in lecture or discussion work, for 1 unit of credit, one hour per week may be allotted to the lecture or discussion and two hours for preparation or subsequent reading and study. Where the time is wholly

occupied with studio, field, or laboratory work, or in the classroom work of conversation classes, three full hours per week through one quarter are expected of the student for each unit of credit; but, where such work is supplemented by systematic outside reading or experiment under the direction of the instructor, a reduction may be made in the actual studio, field, laboratory, or classroom time as seems just to the department.

## Religious Holidays

Students planning not to attend class or take an exam because of a religious observance are expected to convey this information to instructors in advance. The Office for Religious Life makes available to faculty, staff, and students a list of significant religious observances at the beginning of each academic year. For further information, contact the Deans for Religious Life at (650) 723-1762 or see the Religious Life (<http://religiouslife.stanford.edu>) web site.

## Privacy of Students Records

### Notification of Rights Under FERPA

The Family Educational Rights and Privacy Act of 1974 (FERPA) affords students certain rights with respect to their education records. They are:

1. The right to inspect and review the student's education records within 45 days of the date the University receives a request for access.

The student should submit to the Registrar, Dean, chair of the department, or other appropriate University official, a written request that identifies the record(s) the student wishes to inspect. The University official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the University official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.

2. The right to request the amendment of the student's education records that the student believes are inaccurate, misleading, or otherwise in violation of the student's privacy rights under FERPA.
  - a. A student may ask the University to amend the record that he or she believes is inaccurate or misleading. The student should write the University official responsible for the record (with a copy to the University Registrar), clearly identify the part of the records he or she wants changed, and specify why it should be changed.
  - b. If the University decides not to amend the record as requested by the student, the University will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment.
  - c. Additional information regarding the hearing procedures is provided to the student when notified of the right to a hearing.
3. The right to consent to disclosures of personally identifiable information contained in the student's education records, except to the extent that FERPA authorizes disclosure without consent.

FERPA contains various exceptions to the general rule that the University should not disclose education records without seeking the prior written consent of the student. The following circumstances are representative of those in which education records (and information drawn from education records) may be disclosed without the student's prior written consent:

- a. Upon request, the University may release Directory Information (see the "Directory Information" section of this bulletin below).
- b. School officials who have a legitimate educational interest in a student's education record may be permitted to review it. A school official is: a person employed by the University in an administrative, supervisory, academic or research, or support staff position (including law enforcement unit personnel and health staff); a person or company with whom the University has contracted (such as an attorney, auditor, or collection agent); a

person serving on the Board of Trustees; or a student or volunteer serving on an official committee (or representing a recognized student group), such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks. A school official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her responsibility to Stanford or to the student.

- c. The University discloses education records without consent to officials of another school, in which a student seeks or intends to enroll, upon request of officials at that other school.
  - d. The University may choose to disclose education records (and information drawn from education records) to either supporting parent(s) or guardian(s) where the student is claimed as a dependent under the Internal Revenue Code.
  - e. The University may inform persons including either parent(s) or guardian(s) when disclosure of the information is necessary to protect the health or safety of the student or other persons.
  - f. For students under the age of 21, the University may notify either parent(s) or guardian(s) of a violation of any law or policy relating to the use of alcohol or controlled substances.
  - g. The University must provide records in response to lawfully issued subpoenas, or as otherwise compelled by legal process.
4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by the University to comply with the requirements of FERPA.

The name and address of the office that administers FERPA is:  
Family Policy Compliance Office, U.S. Department of Education, 400 Maryland Avenue, SW, Washington, DC 20202-4605.

### Sharing Information with Parents

Students are encouraged to maintain an ongoing, open dialogue with parents throughout their careers at Stanford about academic progress and personal development. Most student difficulties are resolved at Stanford without involving parents. The University does recognize, however, that there are some exceptional situations where parental involvement may be appropriate to assist a student through a difficult circumstance. Under those circumstances, Stanford may (but is not required to) choose to disclose information to parents if permitted by law.

Under the Family Educational Rights and Privacy Act (FERPA), Stanford is permitted to disclose information drawn from education records to parents if one or more parent claims the student as a dependent for federal tax purposes. Some laws, especially those relating to medical and mental health care, prohibit the disclosure of information without the student's consent, even where the student is a tax dependent.

### Directory Information

The University regards the following items of information as "directory information," that is, information that the University may make available to any person upon specific request (and without student consent):

- Name\*
- Email addresses
- Specific quarters or semesters of registration at Stanford
- Stanford degree(s) awarded and date(s)
- Major(s), minor(s), and field(s)
- University degree honors
- Student theses and dissertations
- Participation in officially recognized sports or activities\*
- Weight and height of members of athletic teams\*
- Institution attended immediately prior to Stanford
- ID card photographs

For more information, see Stanford's FERPA (<http://studentaffairs.stanford.edu/registrar/students/ferpa>) web page.

Students may prohibit the release of any of the items listed above (except those with an \*) by designating which items should not be released on the Privacy function of Axxess. Students may prohibit the release of all directory information listed above after an appointment with the Office of the University Registrar to discuss the ramifications of this action. Student theses and dissertations can be restricted through the publishing options and embargo settings students select during submission.

Students, faculty, and others with questions regarding student records should contact the Office of the University Registrar.

## Consent to Use of Photographic Images

Registration as a student and attendance at or participation in classes and other campus and University activities constitutes an agreement by the student to the University's use and distribution (both now and in the future) of the student's image or voice in photographs, video or audio capture, or electronic reproductions of such classes and other campus and University activities.

If any student in a class where such photographing or recording is to take place does not wish to have his or her image or voice so used, the student should raise the matter in advance with the instructor.

## Examinations

### Midterms

Classes that give midterm examinations outside of regular class hours must:

1. announce the date and time during the first week of the academic quarter, and
2. provide reasonable alternative times to those students who have another class or other University commitment at that time.

According to Honor Code interpretations and applications, different examinations may be given at these alternative times.

## End-Quarter Policy Statement

The End-Quarter Period is a time of reduced social and extracurricular activity preceding final examinations. Its purpose is to permit students to concentrate on academic work and to prepare for final examinations.

In Autumn, Winter, and Spring quarters, End-Quarter starts seven full days (to begin at 12:01 a.m.) prior to the first day of final exams. In Spring Quarter, final examinations begin on Friday; no classes are held on Thursday, the day before. In Summer Quarter, this consists of the weekend and the four class days preceding the final examinations, which take place on Friday and Saturday of the eighth week. (See the Time Schedule for dates.)

During the End-Quarter Period, classes are regularly scheduled and assignments made; this regular class time is used by instructors in whatever way seems best suited to the completion and summation of course material. Instructors should neither make extraordinary assignments nor announce additional course meetings in order to "catch up" in course presentations that have fallen behind. They are free, however, and even encouraged to conduct optional review sessions and to suggest other activities that might seem appropriate for students preparing for final examinations.

No graded homework assignments, mandatory quizzes, or examinations should be given during the End-Quarter Period except:

1. In classes where graded homework assignments or quizzes are routine parts of the instruction process.

2. In classes with laboratories where the final examination will not test the laboratory component. In such a case, the laboratory session(s) during the End-Quarter Period may be used to examine students on that aspect of the course.

Major papers or projects about which the student has had reasonable notice may be called due in the End-Quarter Period.

Take-home final examinations, given in place of the officially scheduled in-class examination, may be distributed in the End-Quarter Period. Although the instructor may ask students to return take-home examinations early in the final examination period, the instructor may not call them due until the end of the regularly scheduled examination time for that course. Such a policy respects the principle that students' final examinations are to be scheduled over a period of several days.

End-quarter examinations may not be held during this period. This policy preserves the instruction time for courses and protects the students' opportunities for extensive review and synthesis of their courses.

During the End-Quarter Period, no musical, dramatic, or athletic events involving student participation may be scheduled, unless approved as exceptions by the Committee on Undergraduate Standards and Policy (C-USP), nor may routine committee meetings be scheduled (such as those of the ASSU, the Senate of the Academic Council, or the committees of the President of the University) when such meetings normally would involve student participation.

Note—Students who believe that there are faculty who are violating End-Quarter policy should contact the Office of the University Registrar (<https://remedyweb.stanford.edu/helpsu/2.0/helpsu-form?pcat=Registrar>).

## End-Quarter Examinations

Examinations are part of the process of education at the same time that they are a means to measure the student's performance in course work. Their structure, content, frequency, and length are to be determined in accordance with the nature of the course and the material presented in it, subject only to the limitations contained herein.

Great flexibility is available regarding the types of examinations that an instructor may choose to employ. Examinations, including final examinations, may be, for example, in-class essay examinations, take-home essay examinations, objective examinations, oral examinations, or appropriate substitutes such as papers or projects. Instructors may use any type of examination, paper, or project, or any combination thereof, guided only by the appropriateness of the types of examinations, papers, or projects for the material upon which the student is being examined.

When the final examination is an in-class examination, the following regulations apply:

1. A three-hour period is reserved during examination week for the final examination in each course of more than 2 units. This examination period must be available for students, but not necessarily in its entirety, if an in-class examination is given. In courses with extraordinary meeting times, such that ambiguity might exist as regards the period reserved for the final examination, the schedule should be clarified and students informed no later than the end of the second week of the quarter.
2. Examinations in 1- or 2-unit courses must be completed by the end of the last class meeting before the End-Quarter Period, except in Summer Quarter when examinations must be completed during the last regularly scheduled class session.

When the final examination or its appropriate substitute is not an in-class examination (for example, when an instructor chooses to employ a take-

home examination, paper, or project in lieu of an in-class examination), the following regulations apply:

1. The schedule and format of the final examination or its appropriate substitute are made known not later than the end of the second week of the quarter and, if changed subsequently, may be only an option of the plan originally announced by the instructor.
2. Although the instructor may ask students to return take-home examinations early in the final examination period, the instructor may not call them due until the end of the regularly scheduled examination time for that course.

In submitting official Study Lists, students commit to all course requirements, including the examination procedures chosen and announced by the course instructor. In choosing courses, students should take cognizance of the official schedule of final examinations announced on the Registrar's (<http://studentaffairs.stanford.edu/registrar/final-exams>) web site. Students anticipating conflicts in final examination schedules should seek to resolve these with the instructors involved before the Preliminary Study List deadline at the beginning of the quarter. If accommodation cannot be made at that time, the student should revise his or her Study List before the Final Study List deadline at the end of the third week of the quarter in order to be able to meet the required final examination.

If unforeseen circumstances prevent the student from sitting for the regularly scheduled examination, instructors should make alternative arrangements on an individual basis. Such unforeseen circumstances include illness, personal emergency, or the student's required participation in special events (for example, athletic championships) approved as exceptions by the Committee on Undergraduate Standards and Policy (C-USP). Inquiries regarding these circumstances may be directed to the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR) (<https://undergrad.stanford.edu/advising/make-appointment>), Sweet Hall.

## Statement Concerning Early Examinations

Students are reminded that taking final examinations earlier than the scheduled time is a privilege, not a right. They should request this privilege only in the event of extraordinary circumstances.

Since the final examination schedule for each quarter (<http://studentaffairs.stanford.edu/registrar/final-exams>) is published annually on the Registrar's web site at the time of course selection and enrollment, students are expected to make their academic plans in light of known personal circumstances that may make certain examination times difficult for them.

In general, faculty members are discouraged from giving final examinations earlier than the published and announced times. If faculty nevertheless decide to administer early examinations, either the questions should be completely different from those on the regularly scheduled examination or the early examination should be administered in a highly controlled setting. An example of such a setting would be a campus seminar room where the examination questions would be collected along with students' work and students would be reminded of their Honor Code (<http://www.stanford.edu/dept/registrar/bulletin/79155.htm>) obligations not to share information about the examination contents. Giving students easy opportunities to abuse the integrity of an examination is unfair to honest students and inconsistent with the spirit of the Honor Code (<http://www.stanford.edu/dept/registrar/bulletin/79155.htm>).

Academic fields differ in the degree to which early examination requests present dilemmas for faculty. If, for example, an examination format consists of a small number of essay questions, where students would be greatly advantaged by knowing the question topics, faculty should be especially reluctant to allow early examinations unless they are willing to

offer totally different examinations or a different kind of academic task, for example, a final paper in lieu of an examination.

## Grading Systems

### General University Grading Systems

The general University grading system is applicable to all of Stanford University except the Graduate School of Business, the School of Law, and M.D. students in the School of Medicine. Note that the GPA (grade point average) and rank in class are not computed under the general University grading system. Stanford does use an internal-only GPA which is based on units completed up to the time of conferral of the first bachelor's degree. This information is used for internal purposes only (including academic progress) and is not displayed on the official transcript which is sent outside the University. Most courses are graded according to the general University grading system. However, courses offered through Law, Business, and Medicine are graded according to those schools' grading systems, even in cases where students in other programs are enrolled in their classes. Note also that, as to graduate students, there may be departmental requirements as to grades that must be maintained for purposes of minimum academic progress.

### Definition and Explanation of Grading Systems

All grades/notations for courses taken in 1995-96 or later are to be visible on student transcripts. Effective Summer Quarter 2008-09, the notation \* was changed to GNR (Grade Not Reported).

Grade	Description
A (+,-)	Excellent
B (+,-)	Good
C (+,-)	Satisfactory
D (+,-)	Minimal pass
NP	Not Passed
NC	No Credit (unsatisfactory performance, 'D+' or below equivalent, in a class taken on a satisfactory/no credit basis)
CR	Credit (student-elected satisfactory; A, B, or C equivalent)
S	No-option Satisfactory; A, B, or C equivalent
L	Pass, letter grade to be reported
W	Withdraw
N (-)	Continuing course
I	Incomplete
RP	Repeated Course
*	No grade reported (effective through Spring 2008-09).
GNR	Grade not reported (effective beginning Autumn Quarter 2009-10).

### Explanation

Grade	Description
NC	The notation 'NC' represents unsatisfactory performance in courses taken on a satisfactory/no credit basis. Performance is equivalent to letter grade 'D+' or below.
NP	The notation 'NP' is used by instructors in courses taken for a letter grade that are not passed.
CR	In a course for which some students receive letter grades, the 'CR' represents performance that is satisfactory or better when the student has elected the 'CR' grading option.

**S** For an activity course or a course in which the instructor elects to grade students only on a satisfactory/no credit basis, the 'S' represents performance that is satisfactory or better. For such a course, no letter grades may be assigned for satisfactorily completed work. It should be noted that the Registrar is unable to record course grades submitted when the instructor has not observed the required distinction between 'S' and 'CR.' The 'satisfactory' options are intended to relieve the pressure on students for achievement in grades. The 'satisfactory' options in no way imply fewer or different course work requirements than those required of students who elect evaluation with a letter grade. A department may limit the number of 'satisfactory' courses to count for a major program. No more than 36 units of Stanford course work (including activity courses) in which a 'CR' or 'S' was awarded can be applied toward the 180 (225 if dual degrees are being pursued) units required for a bachelor's degree. Transfer students are limited to 27 'CR' or 'S' units applied to the 180/225 minimum.

**L** The 'L' is a temporary notation that represents creditable completion of a course for which the student will receive a permanent letter grade before the start of the next quarter. The 'L' is given when the instructor needs additional time to determine the specific grade to be recorded, but it is not appropriate if additional work is expected to be submitted by the student. A student receives unit credit for work graded 'L.'

**N** The 'N' indicates satisfactory progress in a course that has not yet reached completion. Continuation courses need not continue at the same number of units, but the grade for all quarters of such a course must be the same.

**N-** The 'N-' grade indicates unsatisfactory progress in a continuing course. The first 'N-' grade constitutes a warning. The adviser, department chair, and student should discuss the deficiencies and agree on the steps necessary to correct them. A second consecutive 'N-' will normally cause the department to deny the student further registration until a written plan for the completion of the degree requirements has been submitted by the student and accepted by the department. Subsequent 'N-' grades are grounds for dismissal from the program.

**I** The 'I' is restricted to cases in which the student has satisfactorily completed a substantial part of the course work. No credit is given until the course is completed and a passing grade received. When a final grade is received, all reference to the initial 'I' is removed. 'I' grades must be changed to a permanent notation or grade within a maximum of one year. If an incomplete grade is not cleared at the end of one year, it is changed automatically by the Office of the University Registrar to an 'NP' (not passed) or 'NC' (no credit) as appropriate for the grading method of the course. Students must request an incomplete grade by the last class meeting. Faculty may determine whether to grant the request or not. Faculty are free to determine the conditions under which the incomplete is made up, including setting a deadline of less than one year (but not more than one year). A leave of absence does not stop the clock on the time limit for resolving incompletes. Graduate students with extenuating circumstances, that may warrant an exception to academic policy, should discuss the need for an extension to the time limit with their advisor and the course instructor. Students may request an extension of the deadline for resolving an incomplete by submitting the Petition to Change Course Enrollment (Graduate Students).

**RP** The notation 'RP' (meaning Repeated Course) replaces the original grade recorded for a course when a student retakes a course. (See the "Repeated Courses" section of this bulletin.)

**W** The notation 'W' (meaning Withdraw) is recorded when a student withdraws from a course.

**\*** The '\*' symbol appears when no grade has been reported to the Registrar for courses taken prior to 2001-02. The '\*' symbol remains on the transcript until a grade has been reported (effective through Spring 2008-09).

**GNR** The notation 'GNR' appears when no grade has been reported to the Registrar. The 'GNR' notation remains on the transcript until a grade has been reported. (Effective beginning Autumn Quarter 2009-10.)

## Reporting of Grades

All grades should be reported within 96 hours after the time and day reserved for the final examination, and in no case later than noon of the fourth day (including weekends) after the last day of the final examination period.

In the case of degree candidates in Spring Quarter, final grades should be reported by noon of the day following the end of the final examination period.

## Revision of End-Quarter Grades

When duly filed with the Office of the University Registrar, end-quarter grades are final and not subject to change by reason of a revision of judgment on the instructor's part; nor are grades to be revised on the basis of a second trial (for example, a new examination or additional work undertaken or completed after the end of the quarter). Changes may be made at any time to correct an actual error in computation or transcription, or where some part of the student's work has been unintentionally overlooked; that is, if the new grade is the one that would have been entered on the original report had there been no mistake in computing and had all the pertinent data been before the instructor, the change is a proper one.

If a student questions an end-quarter grade based on the grading of part of a specific piece of work (for example, part of a test) on the basis of one of the allowable factors mentioned in the preceding paragraph (for example, an error in computation or transcription, or work unintentionally overlooked, but not matters of judgment as mentioned below), the instructor may review the entire piece of work in question (for example, the entire test) for the purpose of determining whether the end-quarter grade was a proper one. In general, changing an end-quarter grade is permitted on the basis of the allowable factors already mentioned whether an error is discovered by the student or the instructor; however, changing a grade is not permitted by reason of revision of judgment on the part of the instructor.

In the event that a student disputes an end-quarter grade, the established grievance procedure should be followed (see the "Student Academic Grievance Procedure (<http://www.stanford.edu/dept/registrar/bulletin/4988.htm>)" section of this bulletin).

## Graduate School of Business Grades

All courses offered by the Graduate School of Business are graded according to the following five-level scheme:

Grade	Description
H	Honors. Work that is of truly superior quality.
HP	High Pass. A passing performance, and one that falls approximately in the upper quarter of passing grades.
P	Pass. A passing performance that falls in the center of the distribution of all passing grades.

LP	Low Pass. A passing performance that falls approximately in the lower quarter of passing grades.
U	Unsatisfactory. A failing performance. Work that does not satisfy the basic requirements of the course and is deficient in significant ways.
GNR	The notation 'GNR' appears when no grade has been reported to the Registrar. The 'GNR' notation remains on the transcript until a grade has been reported (effective Autumn Quarter 2009-10).

GSB courses may receive grades of "+" (Pass) for courses taken on a Pass-Fail basis, with "U" denoting a failing grade, "I" for Incomplete, and "N" for a continuing grade. The grade of N is recorded in a course that spans more than a single quarter, where the grade in an earlier quarter will be determined only later, after the entire course sequence is complete.

Prior to 2009-10, an asterisk (\*) notation was placed when no grade was reported.

For more information, see the GSB Grades web site (p. 63).

## Stanford Law School Grades

Effective Autumn Quarter 2009-10, units earned in the Stanford Law School are quarter units. Units earned in the Stanford Law School prior to 2009-10 were semester units. The following grading system became effective in Autumn Semester 2008-09. J.D. students who graduated in 2009 remained on the prior grading system but all other students shifted to the new grading system. For more information, see the Stanford Law School Handbook ([http://www.law.stanford.edu/experience/studentlife/SLS\\_Student\\_Handbook.pdf](http://www.law.stanford.edu/experience/studentlife/SLS_Student_Handbook.pdf)).

Grade	Description
H	Honors (exceptional work, significantly superior to the average performance at the school)
P	Pass (representing successful mastery of the course material)
R	Restricted credit (representing work that is unsatisfactory)
F	Fail (representing work that does not show minimally adequate mastery of the material)
MP	Mandatory pass (representing P or better work)
N	Continuing course
I	Incomplete
*	No grade reported
GNR	Grade not reported (effective Autumn Quarter 2009-10).

The grading systems employed at the Stanford Law School September 2001 through Spring 2009 were as follows. Under the numerical system (with letter equivalents), the range of satisfactory grades ran from 4.3 to 2.5 as outlined in the following distribution. Below the grade of 2.5 was one level of restricted credit (2.2) and one level of failure (2.1). The number grades with letter equivalents were as follows:

Numbering	Grade
4.3-4.2	A+
4.1-3.9	A
3.8-3.5	A-
3.4-3.2	B+
3.1-2.9	B
2.8-2.5	B-
2.2	Restricted Credit
2.1	Failure

On this old system, students could elect to take a limited number of courses on a credit/restricted credit/no credit system (K/RK/NK). 'K' was awarded for work that was comparable to numerical grades 4.3 to 2.5, 'RK' for Restricted Credit-level work (2.2), and 'NK' for Failure-level work (2.1). A limited number of courses were offered on a mandatory credit (KM)/no credit (NK) basis.

'N' is a temporary notation used in a continuing course; it is replaced with a final grade upon completion of the course series.

## School of Medicine Grades

In general, the following grades are used in reporting on the performance of students in the M.D. program:

Grade	Description
Pass (+)	Indicates that the student has demonstrated to the satisfaction of the department or teaching group responsible for the course that the student has mastered the material taught in the course.
Fail (-)	Indicates that the student has not demonstrated to the satisfaction of the department or teaching group responsible for the course that the student has mastered the material taught in the course.
Incomplete (I)	Indicates that extenuating medical or personal circumstances have prevented the student from completing the course requirements. This grade is given when requested by the student with the prior approval of an Advising Dean in the School of Medicine.
Continuing (N)	Indicates that the course has not concluded and the student is continuing the course.
Exempt (Ex)	Indicates a course that is exempted by examination. No units are awarded.
GNR	The notation 'GNR' appears when no grade has been reported to the Registrar. The 'GNR' notation remains on the transcript until a grade has been reported (effective Autumn Quarter 2009-10).

In general, a 'Fail' grade can be cleared by repeating and passing the particular course or by other arrangement prescribed by the department or teaching group. An 'Incomplete' grade can be made up in a manner specified by the department or teaching group within a reasonable time; if the deficiency is not made up within the specified time, the 'Incomplete' grade becomes a 'Fail' grade. The opportunity to clear a 'Fail' grade or an 'Incomplete' grade cannot be extended to individuals who are not registered or eligible to register as students in the M.D. program. For more specific information, see the Assessment of Student Academic Performance (<http://med.stanford.edu/md/curriculum/assessment-grading.html>) web site.

## Records

### Transcripts

Transcripts of Stanford records are issued by the Office of the University Registrar upon the student's request when submitted in writing or via the online Axxess system. There is no charge for official transcripts. The courses taken in one quarter do not appear on any student's transcript until after the final study list deadline. The University reserves the right to withhold transcripts or records of students with unmet obligations to the University.

### Certification of Enrollment or Degrees

The Office of the University Registrar can provide written confirmation of registration, enrollment, or degree status upon request by the student. The printed certification can be used whenever enrollment or degree verification is required for car insurance, loan deferments, medical coverage, scholarship purposes, and so on. Using Axxess, students are

able to print an official certification at no charge. Certification of full- or part-time enrollment cannot be provided until after the study list is filed for the quarter in question.

Degrees are conferred quarterly, but diplomas are issued in accordance to the distribution dates listed on the Registrar's Office (<http://studentaffairs.stanford.edu/registrar/students/diplomas>) web site. After conferral, the degree awarded to a student can be verified by contacting the Office of the University Registrar for an official transcript, or official degree certification form. Requests for transcripts or degree certifications must be made by the student in writing or through Axess.

Stanford University has authorized the National Student Clearinghouse (NSC) to act as its agent for purposes of third party enrollment and degree verification. The NSC will be able to verify degrees and enrollment for only those students who have not placed a privacy block on their academic record. The student's name when enrolled, Social Security Number or Student ID, and date of birth will be required for identification purposes and enrollment or degree verification. All third parties should contact the National Student Clearinghouse by phone or visit their web site for current enrollment and degree verification information, instructions, and fees.

As a general proposition, full-time enrollment for undergraduates is considered to be enrollment in a minimum of 12 units of course work per quarter at Stanford. Work necessary to complete units from previous quarters does not count toward the 12 units necessary for full-time status in the current quarter. Enrollment in 8 to 11 units is considered half-time enrollment. Enrollment in 1 to 7 units is considered less-than-half-time, or part-time enrollment. During Summer Quarter, all graduate students who hold appointments as research or teaching assistants are considered to be enrolled on at least a half-time basis.

For students with disabilities taking a reduced course load, contact the Office of Accessible Education (<http://studentaffairs.stanford.edu/oe>) for additional information.

All undergraduates validly registered at Stanford are considered to be in good standing for the purposes of enrollment certification.

Stanford uses the following definitions (in units) to certify the enrollment status of graduate and professional students each quarter:

Status	Graduate	Business (M.B.A./ Sloan)	Law	Medicine (M.D.)
Full time:	8 or more	11 or more	9 or more	9 or more
Half time:	6 or 7	6-10	6-8	6-8
Part time:	5 or fewer	5 or fewer	5 or fewer	5 or fewer

TGR students enrolled in a course numbered 801 or 802 are certified as full time. Graduate students on an approved Graduation Quarter status are certified as full time.

As a general proposition, only information classified by the University as directory information (see the "Directory Information (p. )" section of this bulletin) can be confirmed to inquirers other than the student.

## H-1B Degree Certification

As the H-1B application deadline is April 1 and Winter Quarter degree conferral does not occur until after this date (or just before), the Office of the University Registrar provides an H-1B Degree Certification Letter for eligible students graduating Winter Quarter who are applying for the H-1B visa and have completed all school/department and University degree requirements.

Students conferring degrees in all terms except Winter Quarter should request an official transcript in their student Axess account after the degree conferral date of their graduation term. The official transcript

indicates the results of all work completed and degrees awarded. Students can also request an official degree certification via Axess, or by completing a Degree Certification Request form. See Certifications and Verifications (<http://studentaffairs.stanford.edu/registrar/students/certifications>) for details on requesting degree verification.

An Enrollment Verification is included with the H-1B Degree Certification Letter. The Enrollment Certification states a student's enrollment history, current program of study, major, expected degree, and expected degree conferral date. This document bears the University seal and signature of the University Registrar. For more information see the Office of the University Registrar H-1B Certification Letter (<http://exploreddegrees.stanford.edu/academicpoliciesandstatements/x-webdoc://D3A5CCDC-66E3-45EE-8E78-2D47E9234AF2/studentaffairs.stanford.edu/registrar/students/h-1b>) web site.

Bechtel International Center organizes H-1B workshops which students are encouraged to attend if they have any questions regarding H-1B issues.

## Posthumous Degrees

Stanford will consider granting a posthumous degree in instances in which a student was in good standing and had completed at least 90% of all graduation requirements at the time of death. Requests must be approved by the chair of the major department or the dean of a professional school and the University Registrar. Requests should be addressed to the University Registrar and generally should take place within 12 months of the student's death.

## Academic Progress

Undergraduates must maintain a minimum 2.0 cumulative GPA and a quantitative unit requirement for satisfactory academic progress. In addition, a minimum 2.0 cumulative GPA is required for conferral of a baccalaureate degree.

Undergraduates normally are expected to plan their academic programs so that they can complete 180 units in four years (twelve quarters), including the requirements for a major and the General Education (p. 28), Writing and Rhetoric (p. ), and Language (p. ) Requirements. Satisfactory academic progress is, on average, 45 units per academic year for four years leading to at least 180 units, a cumulative grade point average of at least 2.0, and a baccalaureate degree.

While undergraduates are expected to register for a minimum of 12 units, they are required to earn at least 9 units each quarter (by the end of the final exam period) and at least 36 units in their most recent three quarters of Stanford enrollment (by the end of the third final exam period). In addition, students are expected to maintain a cumulative grade point average of at least 2.0. Transfer work completed at other institutions is not considered in this calculation.

A student earning fewer than 9 units per quarter or fewer than 36 units in three quarters, or earning less than a 2.0 cumulative grade point average, is placed on probation. (For students with disabilities taking a reduced course load, contact the Office of Accessible Education (<http://studentaffairs.stanford.edu/oe>) for additional information.) Additionally, a student may be placed directly on provisional registration or suspension (both further defined in this section) without first being placed on probation if the student had a prior probation status. Students on probation (p. ) or provisional registration (p. ) status are required to earn a minimum of 12 units of new course work per quarter (by the end of the final quarter examination period for each quarter) in each quarter for three consecutive quarters, and achieve and maintain a cumulative grade point average of at least 2.0 to attain a satisfactory academic progress status. The C-USP Subcommittee on Academic Progress may stipulate otherwise by acting upon a request for fewer units (i.e. reduced course load).

A Stanford Summer Session quarter counts toward the three consecutive quarter requirement if 11 or more units are earned.

Full-time enrollment is considered to be enrollment in a minimum of 12 units of course work per quarter at Stanford. Under extenuating circumstances, students may submit a request to the C-USP Subcommittee on Academic Progress to take fewer units. As a general proposition, work necessary to complete units from previous quarters does not count toward the 12 units necessary for full-time enrollment in the current quarter. All students registering for fewer than 12 units should consider the effects of that registration on their degree progress, visas, residency requirements, varsity athlete status, and their eligibility for financial aid and awards as well as eligibility for or deferment of student loans.

All undergraduates validly registered at Stanford are considered to be in good standing for the purposes of enrollment certification and athletic participation.

Units are granted for courses completed with grades 'A,' 'B,' 'C,' 'D,' 'Satisfactory' ('CR' or 'S'), and 'L.' Courses graded 'N' are counted provisionally as units earned, provided the student enrolls in the continuing segment of that course the following quarter. When the course is completed satisfactorily, the student receives the units for which he or she enrolled. No units are granted for a course in which the student receives an 'I' or a 'GNR' ('GNR' replaced the '\*' effective Autumn Quarter 2009-10) until the course is completed satisfactorily and the final grade reported. No units are granted for a course in which the student receives a 'W'. (See the "Grading Systems (p. 63)" section of this bulletin).

Students who receive all 'W's as the result of a Leave of Absence (either voluntary or involuntary) are subject to Academic Progress policies.

The C-USP Subcommittee on Academic Progress, in its discretion, is empowered to place conditions on students with an academic progress status (e.g., probation, provisional registration, etc.) with regard to enrollment and participation in programs and activities. In addition, students on probation require approval in advance from Undergraduate Advising and Research ([http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP/advising/MakeAdvisingAppointment.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP/advising/MakeAdvisingAppointment.html)), Residential Education (<http://studentaffairs.stanford.edu/resed>), and the Overseas Studies Program (<http://bossp.stanford.edu>) office or Stanford in Washington Program (<http://siw.stanford.edu>) office or Stanford in New York ([http://exploreddegrees.stanford.edu/undergraduateeducation/stanford\\_in\\_new\\_york](http://exploreddegrees.stanford.edu/undergraduateeducation/stanford_in_new_york)) or Stanford at Sea (<http://stanford.sea.edu>) in order to participate in Stanford's Overseas Studies Program or Stanford in Washington Program or Stanford in New York or Stanford at Sea; while students on other statuses (e.g., provisional registration, etc.) are ineligible to participate in these programs.

Degree Progress standards for coterminal students are described in the coterminal bachelor's and master's degrees section of the Bulletin.

Students receiving federal student aid funds must maintain satisfactory academic progress standards that may be stricter than those outlined here. See the Financial Aid Office web site (<http://financialaid.stanford.edu>) for details.

## Probation

A student who fails to earn at least 36 units of work in his or her most recent three quarters of enrollment at the University (by the end of the third final exam period), or who fails to earn by the end of the final examination period at least 9 quarter units of work in his or her most recent quarter of enrollment at the University, or who has a cumulative grade point average of less than 2.0, may be placed on probation.

A student shall be removed from probation after three consecutive subsequent quarters of enrollment at the University if, in each quarter,

he or she earns a minimum of 12 units of new course work by the end of the final examination period and achieves and maintains a cumulative grade point average of at least 2.0. A student may also be removed from probation at the discretion of the C-USP Subcommittee on Academic Progress or its designees as a result of a review of individual records.

## Provisional Registration

A student who, while on probation, fails in any quarter of registration to earn a minimum of 12 units of new course work by the end of the final examination period or fails to achieve and maintain a cumulative grade point average of at least 2.0, may be placed on provisional registration status. In addition, and on occasion, a student may also be placed directly on provisional registration without first being placed on probation if the student has had a prior probation status.

Provisional registration status requires that the student earn a minimum of 12 units of new course work per quarter (by the end of the final quarter examination period for each quarter) in each quarter for three consecutive quarters, and achieve and maintain a cumulative grade point average of at least 2.0 to attain a satisfactory academic progress status.

A student shall be removed from provisional registration after three consecutive subsequent quarters of enrollment at the University if, in each quarter, he or she earns a minimum of 12 units of new course work by the end of the final examination period and achieves and maintains a cumulative grade point average of at least 2.0. A student may also be removed from provisional registration at the discretion of the C-USP Subcommittee on Academic Progress or its designees as a result of a review of individual records.

## Suspension

A student who, while on provisional registration, fails to earn a minimum of 12 units of new course work by the end of the final examination period, or who fails to achieve and maintain a cumulative grade point average of at least 2.0, may be suspended. In addition, and on occasion, a student may also be suspended directly from probation; or may be suspended without first being placed on probation or provisional registration if the student has had a prior probation status.

While students suspended for the first time are suspended for one year, students suspended a subsequent time may be suspended for up to three years.

Students suspended for one year are not eligible to enroll for four quarters (including Summer Quarter) following the quarter in which the suspension was issued. Students suspended for up to three years are not eligible to enroll for up to twelve quarters (including Summer Quarter) following the quarter in which the suspension was issued.

As well, until re-enrollment, students who are suspended are ineligible for the privileges associated with registration, privileges that include living in University housing, participating in voluntary student organizations, and involvement in any activity for which enrollment is a requirement.

C-USP, in its discretion, may impose conditions on the suspension and in regard to return from a suspension.

## Reconsideration of Academic Suspension

Students who receive an academic suspension and believe they have information that presents relevant and compelling material previously unknown to the subcommittee or its designees, such that reconsideration for immediate continuation of their studies without a break in enrollment is suitable, should meet with a professional adviser from the office of Undergraduate Advising and Research (UAR) in VPUE to discuss their circumstances. Students with such relevant circumstances may submit a Request for Reconsideration of Academic Suspension. Granting such requests is at the discretion of the subcommittee or its designees, and may be based on factors or considerations regarded as relevant including

the demonstrated or perceived likelihood for immediate academic success. Requests for reconsideration submitted after the deadline are not accepted. A student may also grieve an academic suspension under the Student Academic Grievance Procedure (p. 68).

Students are expected to complete their academic suspension in full. An academic suspension may not be substituted, in part or in whole, by a Leave of Absence.

## Returning from Suspension

Students are required to submit a properly endorsed application for reinstatement to request reenrollment after the suspension period has been completed. Instructions including deadlines for requesting to return should be obtained from the Office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall. The C-USP Subcommittee on Academic Progress, or those designated by the subcommittee, acts upon all requests concerning academic progress and its statuses, including requests to return after academic suspension. The subcommittee or its designees may determine whether the application for reinstatement to return will be approved or not, and/or the conditions a student must meet in order to return. Request to return decisions are at the discretion of the University and may be based on activities while away from campus, the perceived potential for successful completion of the program, as well as any other factors or considerations regarded as relevant to the Vice Provost for Undergraduate Education or the subcommittee or its designees.

Questions concerning academic progress or requests to return should be directed to the office of Undergraduate Advising and Research (UAR), Sweet Hall.

Students returning from suspension should also contact appropriate campus offices, such as Housing and Financial Aid, regarding those deadlines and procedures.

## Notification (Academic Progress)

Written notification that a student is on probation, provisional registration, or suspension is sent to the student, to the student's academic adviser, and to other relevant university offices and individuals as soon as possible after the close of the quarter. Students also receive written notification of the outcome of their Petition to Appeal Academic Suspension or request to return after suspension. Current student status, such as whether a student is enrolled or not, is considered Directory Information for FERPA purposes at Stanford, and Stanford may provide either parent(s) or guardian(s) written notification of a change in student status. Provided that a student consents, or the student is a dependent for income tax purposes, Stanford may also provide either parent(s) or guardian(s) written notification that the student is on probation, provisional registration, suspension, or leave of absence (either voluntary or involuntary). Other FERPA exceptions may also apply.

## Student Academic Grievance Procedure

The following policy is subject to periodic review and modification.

1. Coverage
  - a. Any Stanford undergraduate or graduate student who believes that he or she has been subjected to an improper decision on an academic matter is entitled to file a grievance to obtain an independent review of the allegedly improper decision, followed by corrective action if appropriate. A grievance is a complaint in writing made to an administrative officer of the University concerning an academic decision, made by a person or group of persons acting in an official University capacity, that directly and adversely affects the student as an individual in his or her academic capacity.
  - b. This grievance procedure applies only in those cases involving a perceived academic impropriety arising from a decision

taken by: (1) an individual instructor or researcher; (2) a school, department, or program; (3) a committee charged to administer academic policies of a particular school, department, or program; or (4) the University Registrar, the Vice Provost for Undergraduate Education, the C-USP Subcommittee on Academic Progress, or a Senate committee or subcommittee charged to administer academic policies of the Senate of the Academic Council. This procedure does not apply to: (1) complaints expressing dissatisfaction with a University policy of general application challenged on the grounds that the policy is unfair or inadvisable; (2) individual school, department, or program academic policies, as long as those policies are not inconsistent with general University policy; (3) matters proceeding through the Office of Judicial Affairs; or (4) involuntary leave decisions.

- c. Individuals should be aware that the University Ombuds Office is available to all Stanford students, faculty, and staff to discuss and advise on any matter of University concern and frequently helps expedite resolution of such matters. Although it has no decision-making authority, the University Ombuds Office has wide powers of inquiry, including into student complaints against instructors.
2. Grievance and Appeal Procedures
    - a. Informal Attempts at Resolution: the student first should discuss the matter, orally or in writing, with the individual(s) most directly responsible. If no resolution results, the student should then consult with the individual at the next administrative level, for example, the chair or director of the relevant department or program, or, for those cases in which there is none, with the school dean. At this stage, the department chair or program director, if any, may inform the dean that the consultation is taking place and may solicit his or her advice on how to ensure that adequate steps are taken to achieve a fair result. Efforts should be made to resolve the issues at an informal level without the complaint escalating to the status of a formal grievance.
    - b. The Filing of the Grievance:
      - i. If informal means of resolution prove unsatisfactory, the student should set forth in writing a statement of the decision that constitutes the subject matter of the dispute, the grounds on which it is being challenged, and the reasons why the grievant believes that the decision was improperly taken. The statement should also include a description of the remedy sought and the informal efforts taken to date to resolve the matter. It is at this point that the complaint becomes a formal grievance. The written grievance should specifically address the matters set forth in the Standards for Review, as stated in Section 4 below. The grievance should include an allegation of any adverse effects on the grievant, known to the grievant at the time of filing.
      - ii. The grievance document should be submitted to the dean of the school in which the grievance arose; for a grievance concerning a decision of the University Registrar, the Vice Provost for Undergraduate Education, or of a Senate committee or subcommittee, the procedures set forth herein for grievances and appeals shall be modified as stated in Section 3 below. A grievance must be filed in a timely fashion, that is, no later than 30 days after the end of the academic quarter in which the adverse decision occurred or should reasonably have been discovered. Except in extraordinary circumstances, delay in filing a grievance will constitute grounds for rejection of the grievance.
    - c. The Response to the Grievance:
      - i. The relevant dean will consider the grievance. The dean may attempt to resolve the matter informally or make whatever disposition of the grievance that he or she deems appropriate. The dean may, in appropriate cases, remand the

- grievance to a lower administrative level (including to the level at which the grievance arose) for further consideration.
- ii The dean may also refer the grievance, or any issue therein, to any person (the "grievance officer") who will consider the matter and report to the dean as the latter directs. The dean will inform the grievant (and the party against whose decision the grievance has been filed) in writing of any referral of the matter and will specify the matters referred, the directions to the person or persons to whom the referral is made (including the time frame within which the person is to report back to the dean), and the name of that person.
  - iii In undertaking the review, the dean or the grievance officer may request a response to the issues raised in the grievance from any individuals believed to have information considered relevant, including faculty, staff, and students.
  - iv Should attempts to resolve the matter informally not be successful, the dean will decide the grievance, and will notify the grievant (and the party against whose decision the grievance has been filed) in writing of the disposition made of the grievance and the grounds for the disposition at the earliest practicable date after his or her receipt of the grievance.
  - v Normally, no more than 60 days should elapse between the filing of a grievance and the disposition by the dean. If, because of absence of key persons from the campus or other circumstances or exigencies (including those due to breaks in the academic calendar), the dean decides that disposition on that schedule is not possible, he or she shall inform the grievant (and the party against whose decision the grievance has been filed) of that in writing, giving the grounds therefore and an estimate of when a disposition can be expected. During summers and the winter closure, this time frame will nearly always be extended.
- d. The Filing of an Appeal:
- i If the grievant is dissatisfied with the disposition of the grievance at the decanal level, either on substantive or on procedural grounds, he or she may appeal in writing to the Provost.
  - ii The appeal must specify the particular substantive or procedural bases of the appeal (that is, the appeal must be made on grounds other than general dissatisfaction with the disposition) and must be directed only to issues raised in the grievance as filed or to procedural errors in the grievance process itself, and not to new issues. The appeal must contain the following:
    1. A copy of the original grievance and any other documents submitted by the grievant in connection therewith.
    2. A copy of the determination made by the dean on that grievance.
    3. A statement of why the reasons for the determination of the dean are not satisfactory to the grievant. This statement should specifically address the matters set forth in the Standards for Review in Section 4 below.
  - iii The grievant will file his or her appeal at the earliest practicable date after the grievant's receipt of the determination by the dean. Normally, no more than 30 days should elapse between the transmittal of the dean's decision on the grievance and the filing of the appeal. Except in extraordinary circumstances, delay in filing an appeal will constitute grounds for rejection of the appeal.
- e. The Response to the Appeal:
- i The Provost may attempt to resolve the matter informally, or refer the appeal, or any issue thereof, to any person (the "grievance appeal officer") who shall consider the matter and report to the Provost as the latter directs. The Provost may also, in appropriate cases, remand the matter to a lower administrative level (including to the level at which the grievance arose) for further consideration.
  - ii The Provost will inform the grievant (and the party against whose decision the grievance has been filed) in writing of any referral of the matter and will specify the matters referred, the directions to the person to whom the referral is made (including the time frame within which the person is to report back to the Provost), and the name of that person.
  - iii Should attempts be made to resolve the matter informally not be successful, the Provost will decide the appeal, and will notify the grievant (and the party against whose decision the grievance has been filed) in writing of the disposition made of the grievance and the grounds for the disposition at the earliest practicable date after his or her receipt of the appeal. The decision of the Provost shall be final, unless the grievant requests a further appeal to the President pursuant to subsection 2f below, and the President agrees to entertain this further appeal.
  - iv Normally no more than 45 days should elapse between the filing of the appeal and the disposition by the Provost. If, because of absence of key persons from the campus or other circumstances or exigencies (including those due to breaks in the academic calendar), the Provost judges that disposition on that schedule is not possible, he or she will inform the grievant (and the party against whose decision the grievance has been filed) of the fact in writing, giving the grounds therefore and an estimate of when a disposition can be expected. During summers and the winter closure, this time frame will nearly always be extended.
- f. The Request to the President: if the student is dissatisfied with the disposition of the appeal by the Provost, he or she may write to the President of the University giving reasons why he or she believes the grievance result to be wrong (following the general format set forth in subsection 2d.2 above). No more than 30 days should elapse between the transmittal of the Provost's disposition and the written statement to the President urging further appeal. In any case, the President may agree or decline to entertain this further appeal. If the President declines to entertain the further appeal, the decision of the Provost is final. If the President decides to entertain the further appeal, he or she will follow the general procedures set forth in Section 2e above, and the decision of the President will be final.
3. Grievances Concerning Decisions of the University Registrar, the Vice Provost for Undergraduate Education, or of a Senate Committee or Subcommittee
- a. For a grievance concerning a decision of the University Registrar, the Vice Provost for Undergraduate Education, the C-USP Subcommittee on Academic Progress, or of a Senate committee or subcommittee, the grievant will file his or her grievance with the Provost, rather than with the dean, and the Provost will handle that grievance in accordance with the procedures set forth in Section 2c above.
  - b. There is no appeal of the Provost's disposition of that grievance, except as may be available under Section 2f above.
4. Standards for Review and Procedural Matters
- a. The review of grievances or appeals will usually be limited to the following considerations:
    - i Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?

- ii Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?
  - iii Given the proper facts, criteria, and procedures, was the decision one which a person in the position of the decision maker might reasonably have made?
- b. The time frames set forth herein are guidelines. They may be extended by the relevant administrative officer in his or her discretion for good cause.
  - c. Questions concerning the filing and appeal of grievances should be directed to the Office of the Provost.

## Stanford University ID Number

The Stanford University ID Number is assigned to each student's academic record for unique identification. It is printed on the Stanford University ID card and on documents distributed by the Office of the University Registrar and other administrative offices. It is a violation of University policy to use another's Stanford University ID Number to misrepresent yourself in any way; such use can result in loss of student privileges or other disciplinary action.

### SUNet ID

The SUNet ID provides access to the Stanford University Network (SUNet) and its services, and identifies authorized users of these services. Each member of the Stanford electronic community creates a unique SUNet ID and SUNet ID password for him/herself. SUNet IDs provide:

- Axxess services
- Email service
- Storage space within Stanford's distributed file system
- Usenet newsgroups
- World wide web services, including serving of personal web pages on the Leland system and access to Stanford Web Resources

The SUNet ID together with SUNet ID password may serve in place of a signature on electronic forms. The SUNet ID password must remain confidential; it is a violation of University policy to permit another person to use your SUNet ID or password. It is a violation of University policy to use another's SUNet ID or SUNet ID password to misrepresent yourself in any way; such use can result in loss of student privileges or other disciplinary action.

### Identification Cards

The ID card serves as an identification card, an electronic key, and a debit card, allowing cardholders to use services for which they have privileges, to enter certain facilities, and to make purchases.

ID cards are available to registered students, faculty, academic staff, and regular staff. Students obtain their ID cards at the Student Services Center, Tresidder Union, 459 Lagunita Drive, 2nd Floor (650) 498-CARD). Faculty and staff obtain ID cards at George Forsythe Hall, 275 Panama Street, Room 190 (650-498-CARD).

Courtesy ID cards are available for spouses and domestic partners of the Stanford professoriate, academic staff, regular staff, and students. These cards may be obtained from the Stanford Card ID Office at Forsythe Hall. The spouse/partner courtesy ID card enables use of some campus services during terms for which the student is registered.

Visiting Scholars who are on campus for a minimum of one quarter and contribute to Stanford's mission by teaching or collaborating on Stanford research also receive ID cards and campus privileges during their stay on

campus. These cards may be obtained from the Stanford Card ID Office at Forsythe Hall.

Library access and borrowing privileges are reserved for the Stanford professoriate, academic staff, regular staff, students, and others associated with the University with a need for such access.

ID cards bear a photograph of the cardholder. This photograph is maintained in an online database and, as stated in the "Directory Information (p. )" section of this bulletin, is available for classroom, student residence, and other use upon specific request and without student consent unless the student has designated that the photograph not be released. Photographs can be designated as private using the Privacy function of Axxess.

Misuse of the ID card may result in discipline or administrative action.

For more information, see the Campus Card Service (<http://campuscard.stanford.edu>) web site. For the complete policy on Stanford Identification Cards, see the Administrative Guide, 28-4 ([http://adminguide.stanford.edu/28\\_4.pdf](http://adminguide.stanford.edu/28_4.pdf)) (pdf).

## Auditing

No person shall attend any class unless he or she is a fully registered student enrolled in the course or meets the criteria for auditors. Auditors are not permitted in courses that involve direct participation such as language or laboratory science courses, field work, art courses with studio work, or other types of individualized instruction (i.e., labs, seminars, case study, language, and activity courses are not permitted). Auditors are expected to be observers rather than active participants in the courses they attend, unless the instructors request attendance on a different basis. Stanford does not confer credit for auditing, nor is a permanent record kept of courses audited. Students who have been suspended are not permitted to audit.

Auditors may not join classes for the first time after the University's final study list deadline. Auditors are not eligible for other University services or privileges including housing, health insurance (Cardinal Care), Vaden clinical services, and the University health plan. The University Registrar reviews for approval any other services or privileges that may be sought.

The Auditor status is available to Stanford faculty or staff members for no fee. Otherwise, the Permit to Attend ([https://studentaffairs.stanford.edu/registrar/students/tuition-fees\\_15-16](https://studentaffairs.stanford.edu/registrar/students/tuition-fees_15-16)) fee is assessed. The Application for Auditor or Permit to Attend (PTA) Status (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/PTA-Auditor.pdf>) is required. In all cases of auditing, the instructor, department administrator, and the Office of the University Registrar's prior approvals are required. Further information is available from the Office of the University Registrar or the Student Services Center (<http://studentservicescenter.stanford.edu>).

## Nonacademic Regulations

### Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity

and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email). Stanford's Title IX Coordinator, Cathy Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), [titleix@stanford.edu](mailto:titleix@stanford.edu) (email).

## ADA (Americans with Disabilities Act)/ Section 504 Grievance Procedure (Student)

For information more generally concerning policies and procedures for students with disabilities, see the Diversity & Access Office (<http://www.stanford.edu/dept/diversityaccess>) web site, or the ADA/Section 504 Compliance Officer, Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford CA, 94305-8230, (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email); see also the Office for Accessible Education (OAE) (<http://studentaffairs.stanford.edu/oae>) web site.

### Policy

The following is the policy:

#### I. Policy

Stanford University, in compliance with state and federal laws and regulations, including the Americans with Disabilities Act of 1990 (ADA; as amended 2008) and Section 504 of the Rehabilitation Act of 1973 (Section 504), does not discriminate on the basis of disability in administration of its education-related programs and activities, and has an institutional commitment to provide equal educational opportunities for disabled students who are otherwise qualified.

Students who believe they have been subjected to unlawful discrimination on the basis of disability, or have been denied access to services or accommodations required by law, have the right to use this grievance procedure.

#### II. Applicability

As a general proposition, the grievance procedure set forth below is applicable to undergraduate and graduate students of the University. In general, it is designed to address disputes concerning the following:

1. Disagreements regarding a requested service, accommodation, or modification of a University practice or requirement;
2. Inaccessibility of a program or activity;
3. Harassment or discrimination on the basis of disability;
4. Violation of privacy in the context of disability.

As a general proposition, this grievance procedure supplants the Student Academic Grievance Procedure (p. 68) and the Student Non-Academic Grievance Procedure (p. ) (both of which are set forth in this bulletin) for disability-related grievances. Questions of applicability will be decided by the Director of the Diversity and Access Office.

#### III. Compliance Officers

Stanford University's Compliance Officers are responsible for administering this grievance procedure as well as ensuring compliance with applicable laws. The Director of the Diversity and Access Office is the designated ADA / Section 504 Compliance Officer. That office is located in the Mariposa House, 585 Capistrano Way, Stanford, CA 94305-8230, 650-725-0326 (Voice), 650-723-1216 (TTY), 650-723-1791 (Fax), email: [disability.access@stanford.edu](mailto:disability.access@stanford.edu).

Additional Compliance Officers may be designated from time to time by the Provost from those faculty and staff members knowledgeable

concerning disability issues and the legal mandates of state and federal disability statutes.

#### IV. Informal Resolution

Prior to initiating the formal complaint procedure set forth below, the student should, in general, first discuss the matter orally or in writing with the individual(s) most directly responsible. If no resolution results, or if direct contact is inappropriate under the circumstances, the student should then consult with the Compliance Officer at the Diversity and Access Office who will attempt to facilitate a resolution. (The informal resolution process may involve consultation with the Associate Vice Provost for Student and Academic Services and University Registrar.)

If the Compliance Officer is not successful in quickly achieving a satisfactory resolution (that is, generally within seven calendar days), the Compliance Officer will inform the student of his or her efforts and the student's right to file a formal complaint.

#### V. Formal Complaint

If the procedure set forth above for informal resolution does not yield a successful resolution, then the student may file a formal complaint in the following manner:

1. When to File Complaint: Complaints must be filed as soon as possible, but in no event later than 10 days after the end of the quarter in which the concern arose.
2. What to File: a complaint must be in writing and include the following:
  - a. The grievant's name, address, email address and phone number;
  - b. A full description of the problem;
  - c. A description of what efforts have been made to resolve the issue informally;
  - d. A statement of the remedy requested.
3. Where to File Complaint: the complaint is to be filed with the Compliance Officer at the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford CA 94305-8230, 650-725-0326 (Voice), 650-723-1216 (TTY), 650-723-1791 (Fax), email: [disability.access@stanford.edu](mailto:disability.access@stanford.edu).
4. Notice of Receipt: upon receipt of the complaint, the Compliance Officer reviews the complaint for timeliness and appropriateness for this grievance procedure, and provides the grievant with written notice acknowledging its receipt.
5. Investigation: the Compliance Officer will promptly initiate an investigation and may refer the matter (or any part of it) to a grievance officer or other designee, who will look into and/or address the matter as the Compliance Officer directs. In undertaking the investigation, the Compliance Officer or grievance officer may interview, consult with, and/or request a written response to the issues raised in the grievance from any individual the grievance officer believes to have relevant information, including faculty, staff, and students.
6. Representation: the grievant and the party against whom the grievance is directed each have the right to have a representative. The party shall indicate whether he or she is to be assisted by a representative and, if so, the name of that representative. For purposes of this procedure, an attorney is not an appropriate representative.
7. Findings and Notification: upon completion of the investigation, the grievance officer will prepare and transmit to the student, and to the party against whom the grievance is directed, a final report containing a summary of the investigation, written findings, and a proposed disposition. This transmission will be expected within 60 calendar days of the filing of the formal complaint. The deadline may be extended by the Compliance Officer for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure. The final report may also be provided, where appropriate, to any

University officer whose authority will be needed to carry out the proposed disposition or to determine whether any personnel action is appropriate.

8. Final Disposition: the disposition proposed by the Compliance Officer will be put into effect promptly. The grievant or any party against whom the grievance or the proposed disposition is directed may appeal. The appeal to the Provost (as set forth below) will not suspend the implementation of the disposition proposed by the grievance officer, except in those circumstances where the Provost decides that good cause exists making the suspension of implementation appropriate.

## VI. Urgent Matters

Whenever the application of any of the time deadlines or procedures set forth in this grievance procedure creates a problem due to the nature of the complaint, the urgency of the matter, or the proximity of the upcoming event, the Compliance Officer will, at the request of the grievant, determine whether an appropriate expedited procedure can be fashioned.

## VII. Remedies

Possible remedies under this grievance procedure include corrective steps, actions to reverse the effects of discrimination or to end harassment, and measures to provide a reasonable accommodation or proper ongoing treatment. As stated above, a copy of the Compliance Officer's report may, where appropriate, be sent to University officer(s) to determine whether any personnel action should be pursued.

## VIII. Appeal

Within ten calendar days of the issuance of the final report, the grievant or the party against whom the grievance is directed may appeal to the Provost the grievance officer's determination.

An appeal is taken by filing a written request for review with the Compliance Officer at the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford CA 94305-8230; (650) 723-0755 (Voice), (650) 723-1216 (TTY), (650) 723-1791 (Fax), email: [disability.access@stanford.edu](mailto:disability.access@stanford.edu).

The written request for review must specify the particular substantive and/or procedural basis for the appeal, and must be made on grounds other than general dissatisfaction with the proposed disposition. Furthermore, the appeal must be directed only to issues raised in the formal complaint as filed or to procedural errors in the conduct of the grievance procedure itself, and not to new issues.

The Compliance Officer will forward the appeal to the Provost, and also provide copies to the other party or parties. If the grievance involves a decision that is being challenged, the review by the Provost or his or her designee usually will be limited to the following considerations:

1. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?
2. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?
3. Given the proper facts, criteria, and procedures, was the decision a reasonable one?

A copy of the Provost's written decision will be expected within 30 calendar days of the filing of the appeal and will be sent to the parties, the Compliance Officer and, if appropriate, to the University officer whose authority will be needed to carry out the disposition. The deadline may be extended by the Provost for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure. The decision of the Provost on the appeal is final.

## Title IX of the Education Amendments of 1972

It is the policy of Stanford University to comply with Title IX of the Education Amendment of 1972 and its regulations, which prohibit unlawful discrimination on the basis of sex. The Title IX Compliance Officer is Rosa Gonzalez, the Director of the Diversity and Access Office, who has been appointed to coordinate the University's efforts to comply with the law. Anyone who believes that Stanford is not in compliance with Title IX and its regulations should contact the Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford, CA 94305-8230, (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email). (See also the following section for addressing Title IX Concerns relating to sexual harassment.)

## Title IX Concerns Relating to Sexual Harassment and the Violence Against Women Reauthorization Act of 2013

Cathy Glaze has been appointed Stanford's interim Title IX Coordinator to respond to matters of sexual assault, relationship (dating) violence and stalking (prohibited conduct). The Title IX Coordinator serves as a resource to review allegations of prohibited conduct and may provide interim accommodations relating to housing, academics, or no-contact letters while a matter is being reviewed. When prohibited conduct has been confirmed by a preponderance of the evidence, the Title IX Coordinator will provide long term accommodations and services to students to address the effects of sexual harassment and sexual violence. The Title IX Student Policy ([https://titleix.stanford.edu/sites/default/files/title\\_ix\\_student\\_policy\\_ay\\_2013-14\\_faculty\\_staff\\_may\\_2014\\_final\\_0.pdf](https://titleix.stanford.edu/sites/default/files/title_ix_student_policy_ay_2013-14_faculty_staff_may_2014_final_0.pdf)) provides the grievance procedure and appeal mechanism to review the University's actions relating to a Title IX concern involving Prohibited Conduct; see the Title IX web site (<https://titleix.stanford.edu>) for additional information. Additional resources are available the Sexual Assault Support and Resources (<https://notalone.stanford.edu>) web site. Ms. Glaze's contact information is [titleix@stanford.edu](mailto:titleix@stanford.edu); (650) 497-4955. An individual may contact the U.S. Department of Education, Office for Civil Rights (OCR). See also Administrative Guide Memos 2.1.2 Recruiting and Hiring of Regular Staff (<https://adminguide.stanford.edu/chapter-2/subchapter-1/policy-2-1-2>), 1.7.1 Sexual Harassment (<https://adminguide.stanford.edu/chapter-1/subchapter-7/policy-1-7-1>), 1.7.2, Consensual Sexual or Romantic Relationships (<https://adminguide.stanford.edu/chapter-1/subchapter-7/policy-1-7-2>), and 1.7.3, Sexual Misconduct and Sexual Assault (<https://adminguide.stanford.edu/chapter-1/subchapter-7/policy-1-7-3>).

## Title VI of the Civil Rights Act of 1964

It is the policy of Stanford University to comply with Title VI of the Civil Rights Act of 1964 and its regulations, which prohibit unlawful discrimination on the basis of race, color, and national origin. The Title VI Compliance Officer is the Director of the Diversity and Access Office, who has been appointed to coordinate the University's efforts to comply with the law. Anyone who believes that Stanford is not in compliance with Title VI and its regulations should contact the Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email). Grievance procedures to address complaints of discrimination on the basis of race, color, and national origin are set forth in the "Student Non-Academic Grievance Procedure (p. )." See also Administrative Guide Memo 2.2.1 General Personnel Policies (<https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-1>).

## Grievances

A Stanford undergraduate or graduate student who believes that he or she has been subject to an improper decision on an academic matter may file a grievance pursuant to the Student Academic Grievance Procedure (p. 68). For other types of grievances, students should review the section that follows on the Student Non-Academic Grievance Procedure (p. ), and consult concerning applicable procedures with the Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email).

### California Dept of Consumer Affairs Complaint Procedure

An individual may contact the Bureau for Private Postsecondary Education for review of a complaint. The bureau may be contacted online (<http://www.bppe.ca.gov>) or at 2535 Capitol Oaks Drive, Suite 400, Sacramento, CA 95833; phone: (916) 431-6924; fax: (916) 263-1897.

## Student Non-Academic Grievance Procedure

### Policy

The following is the policy:

1. Applicability
    - a. It is perhaps inevitable in any university that some students may at times feel improperly treated, and that concerns about unfairness (including potential discrimination and harassment) may also at times arise.
 

In this regard (and although this grievance procedure is not limited to concerns of discrimination), Stanford University's Nondiscrimination Policy provides in part: "Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. "
    - b. At Stanford, there are a number of grievance procedures through which students can raise and seek redress for what they believe to be unfair, improper or discriminatory decisions, actions, or treatment. For example:
      - i If the matter involves an academic decision, the Student Academic Grievance Procedure may be the applicable procedure.
      - ii If the matter involves a disability-related concern, the Student ADA/Section 504 Grievance Procedure may be applicable.
      - iii If the matter involves a student-athlete and his or her sport, the Student-Athlete Grievance Procedure may be applicable.
    - c. The purpose of the Student Non-Academic Grievance Procedure is to provide a process for students to seek resolution of disputes and grievances that may not fall within the scope of one of the other grievance processes, including those which may arise in a student's capacity as a student-employee.
    - d. As a general proposition, this procedure is available to undergraduates and graduate students at Stanford University.
- It is designed to address individual decisions or individual actions that affect the grievant personally in his or her capacity as a student, but it does not apply to matters proceeding through the Office of Judicial Affairs or through the Dean's leave policy. This is likewise not a grievance procedure to address the concerns of student groups. Similarly and as a general proposition, dissatisfaction with a departmental, school, or University policy or practice of broad or general application is not grounds for a grievance under this procedure; the Director of the Diversity and Access Office (hereafter "the Director") may, in his or her discretion, entertain such a grievance in exceptional circumstances, such as where (for example) the policy or practice is alleged to be contrary to law. In the same way, the Director may entertain a grievance under this procedure brought by an individual who is not an undergraduate or graduate student, in an appropriate case or as required by law.
- e. The Director is responsible for administering this Student Non-Academic Grievance Procedure.
    - i The Director may be contacted at: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email), <http://www.stanford.edu/dept/ocr>.
    - ii The Director in his or her sole discretion can decide whether to refer a grievance brought under this procedure to another grievance process. In cases involving allegations of sexual harassment in particular, the Director may wish to consult with the Director of the Sexual Harassment Policy Office as to the most appropriate way to proceed; see Section 5.d below. In cases involving student employment, the Director may wish to consult with the University's Department of Human Resources.
2. Informal Resolution
    - a. As a general proposition (and although particular circumstances may warrant an exception), the student should first discuss the problem and seek a solution with the individual(s) most directly involved.
    - b. If no resolution results (or if circumstances make discussion inappropriate with the person most directly involved), the student should then consult with the individual at the next (higher) administrative level in the department, school, residence or University administrative unit. Serious efforts should be made to resolve the issue locally at an informal level without resort to a formal grievance; such efforts may continue even after the formal process is underway.
  3. Formal Grievance
    - a. If informal means of resolution prove inadequate, the student should set forth in writing the substance of the complaint, the grounds for it and the evidence on which it is based, and the efforts taken to date to resolve the matter. It is at this stage that the complaint becomes a formal grievance.
    - b. The grievance document should be submitted to the Director. A grievance should be filed in a timely fashion, i.e., normally no later than thirty days after the end of the academic quarter in which the action that is the subject of the grievance occurred. Except in extraordinary circumstances, delay in filing a grievance will be grounds for rejection of that grievance.

- c. The Director will promptly initiate a review, which should normally be completed within sixty days. The Director may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance officer or other designee, who will look into and/or address the matter as the Director directs. The Director may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.
- d. In undertaking this review, either the Director, his or her designee, or the grievance officer may request a response to the issues raised in the grievance from any individuals believed to have information the reviewer considers relevant, including faculty, staff and students.
- e. The Director (or his or her designee) will issue his or her decision in writing, and take steps to initiate such corrective action as is called for (if any). Conduct meriting discipline will be brought to the attention of the appropriate disciplinary process.

#### 4. Appeal

- a. If the student is dissatisfied with the disposition by the Director (or his or her designee), he or she may appeal to the Provost (Office of the President and Provost, Building 10, Stanford, CA 94305-2061; phone 650-725-4075; fax 650-725-1347). The appeal should be filed in writing with the Provost within ten days of the issuance of the decision by the Director (or his or her designee); a delay in filing the appeal may be grounds for rejection of that appeal.
- b. The Provost may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance appeal officer, who will review the matter at the Provost's direction. The Provost may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.
- c. The Provost should normally complete his or her review of the appeal and issue his or her decision in writing within forty-five days. That decision is final.

#### 5. General Provisions

- a. **Time Guidelines**—The time frames set forth herein are guidelines. They may be extended by the Director or Provost, as applicable, in his or her discretion for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure.
- b. **Advisers**—A student initiating or participating in a grievance under this procedure may be accompanied by an adviser in any discussion with the Director, the Provost or their designees, or a grievance or grievance appeal officer under this procedure; any adviser must be a current Stanford faculty, staff member or student.
- c. **Ombuds**—Students should be aware that the University Ombuds (<http://www.stanford.edu/dept/ocr/ombuds>) is available to discuss and advise on any matters of University concern and frequently help expedite resolution of such matters. Although it has no decision making authority, the Ombuds' Office has wide powers of inquiry.
- d. **Sexual Harassment and Sexual Misconduct and Sexual Assault**—For information and resources concerning sexual harassment, students should refer to the web page of the Sexual Harassment Policy Office at <http://harass.stanford.edu>. For information and resources concerning sexual assault and relationship

abuse, students should refer to the web page of the Sexual Violence Advisory Board at <http://www.stanford.edu/group/svab/help.shtml>.

- e. **No retaliation**—Stanford University prohibits retaliation or reprisals against individuals based on their pursuit in good faith of a grievance under this procedure, or their participation in good faith in the grievance process.
- f. **Standards for Review**—If the grievance involves a decision that is being challenged, the review by the Director, as well as the review by the Provost on appeal, usually will be limited to the following considerations:
  - i. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?
  - ii. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?
  - iii. Given the proper facts, criteria, and procedures, was the decision one which a person in the position of the decision maker might reasonably have made?

## Age Discrimination Act of 1975

The following is the policy:

### 1. Policy

It is the policy of Stanford University to comply with the Age Discrimination Act of 1975 and its regulations, which prohibit unlawful discrimination on the basis of age. The Age Discrimination Act Compliance Officer is the Director of the Diversity and Access Office ("the Director"), who has been appointed to coordinate the University's efforts to comply with the law. Anyone who believes that Stanford is not in compliance with the Age Discrimination Act and its regulations ("the Act") should contact the Director at the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email).

### 2. Grievance Procedure

- a. An individual who believes that Stanford is not acting in compliance with the Act and who wishes to file a grievance should set forth in writing the substance of his or her complaint, the grounds for it and the evidence on which it is based, and the efforts (if any) taken to date to resolve the matter. It is at this stage that the complaint becomes a formal grievance.
- b. The grievance document should be submitted to the Director. A grievance should be filed in a timely fashion, i.e., normally no later than thirty days after the end of the academic quarter in which the action that is the subject of the grievance occurred. Except in extraordinary circumstances, delay in filing a grievance will be grounds for rejection of that grievance.
- c. The Director will promptly initiate a review, which should normally be completed within sixty days. The Director may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance officer or other designee, who will look into and/or address the matter as the Director directs. The Director may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.

- d. In undertaking this review, either the Director, his or her designee, or the grievance officer may request a response to the issues raised in the grievance from any individuals believed to have information the reviewer considers relevant, including faculty, staff and students.
- e. The Director (or his or her designee) will issue his or her decision in writing, and take steps to initiate such corrective action as is called for (if any).

### 3. Appeal

- a. If the grievant is dissatisfied with the disposition by the Director (or his or her designee), he or she may appeal to the Provost (Office of the President and Provost, Building 10, Stanford, CA 94305-2061; phone 650-725-4075; fax 650-725-1347). The appeal should be filed in writing with the Provost within ten days of the issuance of the decision by the Director (or his or her designee); a delay in filing the appeal may be grounds for rejection of that appeal.
- b. The Provost may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance appeal officer, who will review the matter at the Provost's direction. The Provost may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.
- c. The Provost should normally complete his or her review of the appeal and issue his or her decision in writing within forty-five days. That decision is final.

### 4. General Provisions

- a. Time Guidelines—The time frames set forth herein are guidelines. They may be extended by the Director or Provost, as applicable, in his or her discretion for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure.
- b. No Retaliation—Stanford University prohibits retaliation or reprisals against individuals based on their pursuit in good faith of a grievance under this procedure, or their participation in good faith in the grievance process.
- c. Standards for Review—If the grievance involves a decision that is being challenged, the review by the Director, as well as the review by the Provost on appeal, usually will be limited to the following considerations:
  - i. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?
  - ii. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?
  - iii. Given the proper facts, criteria, and procedures, was the decision one which a person in the position of the decision maker might reasonably have made?

## Ownership and Use of Stanford Name and Trademarks

Stanford registered marks, as well as other names, seals, logos, and other symbols and marks that are representative of Stanford, may be used solely with permission of Stanford. Merchandise bearing Stanford's names and marks, such as t-shirts, glassware, and notebooks, must be licensed. For complete text of the currently applicable policy, including the University officers authorized to grant permission to use the Stanford name and marks, see Administrative Guide Memo 1.5.4 Ownership and Use of Stanford Name and Trademarks (<https://adminguide.stanford.edu/chapter-1/subchapter-5/policy-1-5-4>).

## Copyright

Copyright laws protect original works of authorship and give the owners of copyrights the exclusive right to do and to authorize others to do certain things in regard to a copyrighted work, including: make copies, distribute the work, display or perform the work publicly, and create derivative works. Copyright laws apply to nearly all forms of captured content, including traditional works like books, photographs, music, drama and sculpture. The laws also adapt to changes in technologies, and include in their scope modern forms of works like motion pictures, web sites, electronic media, software, multimedia works and some databases. Registration is not required to obtain a copyright, so if in doubt, assume a copyright applies.

Unless an exception to the copyright owner's exclusive rights applies, you must obtain permission from the copyright owner to copy, distribute, display or perform a copyrighted work in any medium for any purpose. Be especially mindful of copyright principles when using the Internet. Just because a work is posted on the Internet does not mean that the owner of the copyright has given you permission to use it. In general, do not post material onto the Internet without copyright clearance.

Stanford University Libraries have licenses with many publishers, which permit copying of materials in accordance with the educational, research or administrative functions of the University. In addition, there are four major exceptions to the copyright owner's exclusive rights, which (if applicable) permit limited use without permission. These are: the fair use exception, the library exception, the face-to-face teaching exception, and the distance-learning exception. For a more detailed explanation of these exceptions, the copyright laws and Stanford's copyright policies, please review the University's Copyright Reminder ([http://www.sul.stanford.edu/libraries\\_collections/copyright\\_reminders](http://www.sul.stanford.edu/libraries_collections/copyright_reminders)) web site. It is each person's responsibility to be aware of and abide by copyright law; violation may result in civil or criminal liability, and constitutes grounds for University discipline, up to and including discharge, dismissal and expulsion.

## Peer-to-Peer File Sharing

The use of file-sharing networks and software to download and share copyrighted works like software, music, movies, television programs, and books can violate copyright laws. Both the person who makes an illegal copy of a copyrighted work available and the person who receives or downloads an illegal copy have violated the law and Stanford policies. Many file-sharing programs have default settings that share copyrighted files, such as music and movies, through the Internet. Before enabling any of these programs students, faculty, or staff must read the fine print, make sure to understand the program itself, and only use such programs lawfully. Under the Digital Millennium Copyright Act (DMCA), copyright owners are entitled to notify Internet service providers, such as Stanford, that IP addresses linked to the Stanford network are sharing copies of music, movies, or other content without authorization. The law requires the University to respond to such complaints by eliminating access to the infringing materials. Stanford will disconnect students who fail to respond to a DMCA complaint promptly. Furthermore, the University also will suspend or terminate computer access to the

Stanford network, including termination of the SUNet ID, to members of the community who continue to violate copyright laws. Finally, the University will take action through the student, employee, or faculty disciplinary processes if necessary. Beyond University consequences, copyright holders may file civil lawsuits against copyright infringers seeking extensive monetary damages. If compelled by a lawful subpoena, Stanford may be required to identify students, faculty, staff, or others who have violated copyright law. For more information about file-sharing, refer to Residential Computing's online resource, File-Sharing and Copyright Law (<http://rescomp.stanford.edu/info/dmca>) web site.

## Recording Lectures

Except with permission from the Office of Accessible Education (<http://studentaffairs.stanford.edu/oe>) or the instructor in question, students may not audio- or video-record lectures. Even with permission, students may only use such recordings for personal use; no posting or further distribution or use is permitted.

## Domestic Partners

In October 1990, Stanford University adopted a domestic partners policy. This policy, which implements the University's nondiscrimination policy, makes services that have historically been available to married students available on an equal basis to students with same-sex or opposite-sex domestic partners. These services include access to student housing, a courtesy card that provides access to University facilities, and the ability to purchase medical care at Vaden Health Service. A domestic partnership is defined as an established long-term partnership with an exclusive mutual commitment in which the partners share the necessities of life and ongoing responsibility for their common welfare.

## Sexual Harassment and Consensual Sexual or Romantic Relationships

For the complete text of the currently applicable version of this policy, see Administrative Guide Memo 2.2.4 Sexual Harassment and Consensual Sexual or Romantic Relationships (<https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-4>). It is also available from the Sexual Harassment Policy Office (<http://harass.stanford.edu>) homepage.

### Summary

Stanford University strives to provide a place of work and study free of sexual harassment, intimidation or exploitation. Where sexual harassment is found to have occurred, the University will act to stop the harassment, prevent its recurrence, and discipline and/or take other appropriate action against those responsible.

### Policy

The following is quoted from the policy:

#### 1. In General

- a. **Applicability and Sanctions for Policy Violations**—This policy applies to all students, faculty and staff of Stanford University, as well as to others who participate in Stanford programs and activities. Its application includes Stanford programs and activities both on and off-campus, including overseas programs. Individuals who violate this policy are subject to discipline up to and including discharge, expulsion, and/or other appropriate sanction or action.
- b. **Respect for Each Other**—Stanford University strives to provide a place of work and study free of sexual harassment, intimidation or exploitation. It is expected that students, faculty, staff and

other individuals covered by this policy will treat one another with respect.

- c. **Prompt Attention**—Reports of sexual harassment are taken seriously and will be dealt with promptly. The specific action taken in any particular case depends on the nature and gravity of the conduct reported, and may include intervention, mediation, investigation and the initiation of grievance and disciplinary processes as discussed more fully below. Where sexual harassment is found to have occurred, the University will act to stop the harassment, prevent its recurrence, and discipline and/or take other appropriate action against those responsible.
- d. **Confidentiality**—The University recognizes that confidentiality is important. Sexual harassment advisers and others responsible to implement this policy will respect the confidentiality and privacy of individuals reporting or accused of sexual harassment to the extent reasonably possible. Examples of situations where confidentiality cannot be maintained include circumstances where the University is required by law to disclose information (such as in response to legal process) and when disclosure is required by the University's outweighing interest in protecting the rights of others.
- e. **Protection Against Retaliation**—Retaliation and/or reprisals against an individual who in good faith reports or provides information in an investigation about behavior that may violate this policy are against the law and will not be tolerated. Intentionally making a false report or providing false information, however, is grounds for discipline.
- f. **Relationship to Freedom of Expression**—Stanford is committed to the principles of free inquiry and free expression. Vigorous discussion and debate are fundamental to the University, and this policy is not intended to stifle teaching methods or freedom of expression generally, nor will it be permitted to do so. Sexual harassment, however, is neither legally protected expression nor the proper exercise of academic freedom; it compromises the integrity of the University, its tradition of intellectual freedom and the trust placed in its members.

#### 2. What Is Sexual Harassment?

Unwelcome sexual advances, requests for sexual favors, and other visual, verbal or physical conduct of a sexual nature constitute sexual harassment when:

- a. It is implicitly or explicitly suggested that submission to or rejection of the conduct will be a factor in academic or employment decisions or evaluations, or permission to participate in a University activity; or
- b. The conduct has the purpose or effect of unreasonably interfering with an individual's academic or work performance or creating an intimidating or hostile academic, work or student living environment.

Determining what constitutes sexual harassment depends upon the specific facts and the context in which the conduct occurs. Sexual harassment may take many forms—subtle and indirect, or blatant and overt. For example,

- i It may be conduct toward an individual of the opposite sex or the same sex.
- ii It may occur between peers or between individuals in a hierarchical relationship.
- iii It may be aimed at coercing an individual to participate in an unwanted sexual relationship or it may have the

effect of causing an individual to change behavior or work performance.

- iv It may consist of repeated actions or may even arise from a single incident if sufficiently egregious.

- c. The University's Policy on Sexual Assault (see Guide Memo 23.3, Sexual Assault ([http://adminguide.stanford.edu/23\\_3.pdf](http://adminguide.stanford.edu/23_3.pdf))) may also apply when sexual harassment involves physical contact.

### 3. What To Do About Sexual Harassment

Individuals seeking further information are directed to the following resources:

- The Sexual Harassment Policy Office (Mariposa House, 585 Capistrano Way, Room 208-209, Stanford University, Stanford, CA, 94305-8230; (650) 723-1583; email: [harass@stanford.edu](mailto:harass@stanford.edu) for information, consultation, advice, or to lodge a complaint. Note that anonymous inquiries can be made to the SHPO by phone during business hours.
- The Sexual Harassment Policy Office web page at <http://harass.stanford.edu>.
- Any designated Sexual Harassment Adviser or resource person listed in 3.a or 5.a.

The following are the primary methods for dealing with sexual harassment at Stanford. They are not required to be followed in any specific order. However, early informal methods are often effective in correcting questionable behavior.

- a. Consultation—Consultation about sexual harassment is available from the Sexual Harassment Policy Office, Sexual Harassment Advisers (including residence deans), human resources officers, employee relations specialists, counselors at Counseling and Psychological Services (CAPS) or the Help Center, chaplains at Memorial Church, ombudspersons and others. A current list of Sexual Harassment Advisers is available from the Sexual Harassment Policy Office and at <http://harass.stanford.edu/SHadvisers.html>. Consultation is available for anyone who wants to discuss issues related to sexual harassment, whether or not "harassment" actually has occurred, and whether the person seeking information is a complainant, a person who believes his or her own actions may be the subject of criticism (even if unwarranted), or a third party.

Often there is a desire that a consultation be confidential or "off the record." This can usually be achieved when individuals discuss concerns about sexual harassment without identifying the other persons involved, and sometimes even without identifying themselves. Confidential consultations about sexual harassment also may be available from persons who, by law, have special professional status, such as:

- i Counselors at Counseling and Psychological Services (CAPS), <http://caps.stanford.edu>
- ii Counselors at the Help Center, <http://www.stanford.edu/dept/helpcenter>
- iii Chaplains at Memorial Church
- iv The University Ombudsperson, <http://www.stanford.edu/dept/ombuds>

In these latter cases, the level of confidentiality depends on what legal protections are held by the specific persons

receiving the information and should be addressed with them before specific facts are disclosed. For more information see <http://harass.stanford.edu/confidential.html>.

For further information on confidentiality, see Section 1(d) above.

- b. Direct Communication—An individual may act on concerns about sexual harassment directly, by addressing the other party in person or writing a letter describing the unwelcome behavior and its effect and stating that the behavior must stop. A Sexual Harassment Adviser can help the individual plan what to say or write, and likewise can counsel persons who receive such communications. Reprisals against an individual who in good faith initiates such a communication violate this policy.
- c. Third Party Intervention—Depending on the circumstances, third party intervention in the workplace, student residence or academic setting may be attempted. Third party intervenors may be the Sexual Harassment Advisers, human resources professionals, the ombudspersons, other faculty or staff, or sometimes mediators unrelated to the University.

When third party intervention is used, typically the third party (or third parties) will meet privately with each of the persons involved, try to clarify their perceptions and attempt to develop a mutually acceptable understanding that can insure that the parties are comfortable with their future interactions. Other processes, such as a mediated discussion among the parties or with a supervisor, may also be explored in appropriate cases.

Possible outcomes of third party intervention include explicit agreements about future conduct, changes in workplace assignments, substitution of one class for another, or other relief, where appropriate.

- d. Formal Grievance, Appeal, and Disciplinary Processes—Grievance, appeal, or disciplinary processes may be pursued as applicable.
  - i Grievances and Appeals—The applicable procedure depends on the circumstances and the status of the person bringing the charge and the person against whom the charge is brought. Generally, the process consists of the individual's submission of a written statement, a process of fact-finding or investigation by a University representative, followed by a decision and, in some cases, the possibility of one or more appeals, usually to Stanford administrative officers at higher levels. The relevant procedure (see below) should be read carefully, since the procedures vary considerably.

If the identified University fact-finder or grievance officer has a conflict of interest, an alternate will be arranged, and the Director of the Sexual Harassment Policy Office or the Director of Employee and Labor Relations can help assure that this occurs.

In most cases, grievances and appeals must be brought within a specified time after the action complained of. While informal resolution efforts will not automatically extend the time limits for filing a grievance or appeal, in appropriate circumstances the complainant and the other relevant parties may mutually agree in writing to extend the time for filing a grievance or appeal.

A list of the established grievance and appeal procedures is located at [http://hrweb.stanford.edu/elr/policies/list\\_grievance\\_procedures.html](http://hrweb.stanford.edu/elr/policies/list_grievance_procedures.html). Copies may also be obtained from the Sexual Harassment Policy Office, <http://www.stanford.edu/group/SexHarass>.

Copies of the following may be obtained from Employee and Labor Relations, 651 Serra Street:

1. "Solving Workplace Problems at Stanford: Understanding the Staff Dispute Resolution Policy" (also at <http://hrweb.stanford.edu/forms/staffresolution.pdf>.)
2. "Solving Workplace Problems at Stanford: Information for Academic Staff – Librarians and Academic Staff – Research Associates"
3. "The Dispute Resolution Process (A User's Guide)"

ii **Disciplinary Procedures**—In appropriate cases, disciplinary procedures may be initiated. The applicable disciplinary procedure depends on the status of the individual whose conduct is in question. For example, faculty are subject to the Statement on Faculty Discipline (<http://www.stanford.edu/dept/provost/faculty/policies/handbook/ch4.html#statementonfacultydiscipline>), and students to the Fundamental Standard. For additional information related to student disciplinary procedures, see the Office of Community Standards (<http://studentaffairs.stanford.edu/communitystandards>).

The individuals referenced in this section are available to discuss these options and differing methods for dealing with sexual harassment.

#### 4. Procedural Matters

- a. **Investigations**—If significant facts are contested, an investigation may be undertaken. The investigation will be conducted in a way that respects, to the extent possible, the privacy of all of the persons involved. In appropriate cases, professional investigators may be asked to assist in the investigation. The results of the investigation may be used in the third party intervention process or in a grievance or disciplinary action.
- b. **Recordkeeping**—The Sexual Harassment Policy Office will track reports of sexual harassment for statistical purposes and report at least annually to the University President concerning their number, nature and disposition.

The Sexual Harassment Policy Office may keep confidential records of reports of sexual harassment and the actions taken in response to those reports, and use them for purposes such as to identify individuals or departments likely to benefit from training so that training priorities can be established. No identifying information will be retained in cases where the individual accused was not informed that there was a complaint.

- c. **Indemnification and Costs**—The question sometimes arises as to whether the University will defend and indemnify a Stanford employee accused of sexual harassment. California law provides, in part, "An employer shall indemnify [its] employee for all that the employee necessarily expends or loses in direct consequence of the discharge of his [or her] duties as such." The issue of indemnification depends on the facts and circumstances of each situation. Individuals who violate this policy, however, should be aware that they and/or their schools, institutes, or other units may be required to pay or contribute to any judgments, costs and expenses incurred as a result of behavior that is wrongful and/or contrary to the discharge of the employee's duties. In general, see Administrative Guide Memo 2.4.6 Indemnification (<https://adminguide.stanford.edu/chapter-2/subchapter-4/policy-2-4-6>).

#### 5. Resources for Dealing with Sexual Harassment

- a. **Advice**—Persons who have concerns about sexual harassment should contact the Sexual Harassment Policy Office, any Sexual Harassment Adviser at <http://harass.stanford.edu/SHadvisers.html> or one of the other individuals listed below. Reports should be made as soon as possible: the earlier the report, the easier it is to investigate and take appropriate remedial action. When reports are long delayed, the University will try to act to the extent it is reasonable to do so, but it may be impossible to achieve a satisfactory result after much time has passed.

Likewise, anyone who receives a report or a grievance involving sexual harassment should promptly consult with the Sexual Harassment Policy Office or with a Sexual Harassment Adviser.

There are a number of individuals specially trained and charged with specific responsibilities in the area of sexual harassment. In brief, they are:

- i **Sexual Harassment Advisers** (<http://harass.stanford.edu/SHadvisers.html>) serve as resources to individuals who wish to discuss issues of sexual harassment, either because they have been harassed or because they want information about the University's policy and procedures. There is usually at least one Adviser assigned to each of the schools at the University and to each large work unit; most of the residence deans also have been appointed as Sexual Harassment Advisers. Advisers are also authorized to receive complaints.

- ii **The Director of the Sexual Harassment Policy Office** is responsible for the implementation of this policy. The Director's Office also provides advice and consultation to individuals when requested; receives complaints and coordinates their handling; supervises the other Advisers; encourages and assists prevention education for students, faculty and staff; keeps records showing the disposition of complaints; and generally coordinates matters arising under this policy. Because education and awareness are the best ways to prevent sexual harassment; developing awareness, education and training programs and publishing informational material are among the most important functions of the Sexual Harassment Policy Office (<http://harass.stanford.edu>).

- iii **As stated above, individuals with concerns about sexual harassment may also discuss their concerns informally with psychological counselors (for example through CAPS or the HELP Center), chaplains (through the Memorial Chapel), or the University ombudsperson. For more information, see <http://harass.stanford.edu/resources.html>.**

- b. **External Reporting**—Sexual harassment is prohibited by state and federal law. In addition to the internal resources described above, individuals may pursue complaints directly with the government agencies that deal with unlawful harassment and discrimination claims, e.g., the U.S. Equal Employment Opportunity Commission (EEOC), the Office for Civil Rights (OCR) of the U.S. Department of Education, and the State of California Department of Fair Employment and Housing (DFEH). These agencies are listed in the Government section of the telephone book. A violation of this policy may exist even where the conduct in question does not violate the law.

#### 6. Consensual Sexual or Romantic Relationships

- a. **In General**—There are special risks in any sexual or romantic relationship between individuals in inherently unequal positions,

and parties in such a relationship assume those risks. In the University context, such positions include (but are not limited to) teacher and student, supervisor and employee, senior faculty and junior faculty, mentor and trainee, adviser and advisee, teaching assistant and student, coach and athlete, and the individuals who supervise the day-to-day student living environment and student residents. Because of the potential for conflict of interest, exploitation, favoritism, and bias, such relationships may undermine the real or perceived integrity of the supervision and evaluation provided, and the trust inherent particularly in the teacher-student context. They may, moreover, be less consensual than the individual whose position confers power or authority believes. The relationship is likely to be perceived in different ways by each of the parties to it, especially in retrospect.

Moreover, such relationships may harm or injure others in the academic or work environment. Relationships in which one party is in a position to review the work or influence the career of the other may provide grounds for complaint by third parties when that relationship gives undue access or advantage, restricts opportunities, or creates a perception of these problems. Furthermore, circumstances may change, and conduct that was previously welcome may become unwelcome. Even when both parties have consented at the outset to a romantic involvement, this past consent does not remove grounds for a charge based upon subsequent unwelcome conduct.

Where such a relationship exists, the person in the position of greater authority or power will bear the primary burden of accountability, and must ensure that he or she—and this is particularly important for teachers—does not exercise any supervisory or evaluative function over the other person in the relationship. Where such recusal is required, the recusing party must also notify his or her supervisor, department chair or dean, so that such chair, dean or supervisor can exercise his or her responsibility to evaluate the adequacy of the alternative supervisory or evaluative arrangements to be put in place. Staff members may notify their local human resources officers. To reiterate, the responsibility for recusal and notification rests with the person in the position of greater authority or power. Failure to comply with these recusal and notification requirements is a violation of this policy, and therefore grounds for discipline. The University has the option to take any action necessary to insure compliance with the spirit of this recusal policy, including transferring either or both employees in order to minimize disruption of the work group. In those extraordinarily rare situations where it is programmatically infeasible to provide alternative supervision or evaluation, the cognizant Dean or Director must approve all evaluative and compensation actions.

- b. With Students—At a university, the role of the teacher is multifaceted, including serving as intellectual guide, counselor, mentor and adviser; the teacher's influence and authority extend far beyond the classroom. Consequently and as a general proposition, the University believes that a sexual or romantic relationship between a teacher and a student, even where consensual and whether or not the student would otherwise be subject to supervision or evaluation by the teacher, is inconsistent with the proper role of the teacher, and should be avoided. The University therefore very strongly discourages such relationships.

7. Policy Review and Evaluation—This policy went into effect on October 6, 1993, and was amended on November 30, 1995, and on May 30, 2002. It is subject to periodic review, and any comments or suggestions should be forwarded to the Director of the Sexual Harassment Policy Office.

## Resources

The following is a summary of resources concerning sexual harassment available to members of the Stanford Community:

A brochure containing the policy, a list of current sexual harassment advisers, confidential resources, and other helpful information is available online at the Sexual Harassment Policy Office (<http://harass.stanford.edu>) web site, and in printed form from the Sexual Harassment Policy Office at Mariposa House, 585 Capistrano Way, Room 208-209, Stanford University, Stanford, CA, 94305-8230; (650) 723-1583; email: [harass@stanford.edu](mailto:harass@stanford.edu). Copies of the University policy on sexual assault, which complements this sexual harassment policy, as well as all other documents mentioned in this section, are also available at the Sexual Harassment Policy Office.

All faculty, staff, and students who have questions regarding this policy and its enforcement can consult with a Sexual Harassment Adviser or can be directed to the local Personnel Officer or Regional Human Resources Manager. Faculty members should contact their dean or department chair, and students should contact the Director of the Sexual Harassment Policy Office or the Dean of Student Affairs.

Sexual Harassment Policy Office—telephone: (650) 723-1583; email: [harass@stanford.edu](mailto:harass@stanford.edu).

*Director:* Laraine Zappert (Clinical Professor, Psychiatry and Behavioral Sciences)

*Assistant Director:* Nanette Andrews

## Sexual Misconduct and Sexual Assault

The University's Policy on Sexual Misconduct and Sexual Assault is published in complete form in the Administrative Guide Memo 2.2.4 Sexual Harassment and Consensual Sexual or Romantic Relationships (<https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-4>).

### Summary

The following summarizes the policy on Sexual Assault and provides information on resources available to members of the Stanford community.

### Policy

Under Title IX, sexual violence (sexual misconduct and sexual assault) is a severe form of sexual harassment. Sexual misconduct and sexual assault are unacceptable and is not tolerated at Stanford University. All University employees (including student residence staff employees) have a duty to report claims of sexual misconduct or sexual assault to Cathy Glaze, interim Title IX Coordinator at (650) 497-4955 (voice), [titleix@stanford.edu](mailto:titleix@stanford.edu), <https://titleix.stanford.edu/>. For students, report claims to the Title IX Coordinator or the Office of Sexual Assault and Relationship Abuse (SARA) at (650) 725-1056 or [saraoffice@stanford.edu](mailto:saraoffice@stanford.edu).

The University urges an individual who has been subjected to sexual misconduct or sexual assault to make an official report. A report of the matter will be dealt with promptly. Confidentiality will be maintained to the extent possible.

The University is committed to providing information regarding on- and off-campus services and resources to all parties involved.

Students, faculty and staff found to be in violation of this policy will be subject to discipline up to and including termination, expulsion or other appropriate institutional sanctions; affiliates and program participants may be removed from University programs and/or prevented from returning to campus.

A comprehensive web site dedicated to sexual violence awareness, prevention and support can be found at Office of Sexual Assault & Relationship Abuse Education & Response (SARA) (<http://studentaffairs.stanford.edu/sara>). The site contains a list of resources and describes reporting options.

## Definitions

### *What is Sexual Misconduct?*

Sexual misconduct is the commission of an unwanted sexual act, whether by an acquaintance or by a stranger, that occurs without indication of consent.

### *What is Sexual Assault?*

Sexual assault is the actual, attempted or threatened unwanted sexual act, whether by an acquaintance or by a stranger, accomplished (1) against a person's will by means of force (express or implied), violence, duress, menace, fear or fraud, or (2) when a person is incapacitated or unaware of the nature of the act, due to unconsciousness, sleep and/or intoxicating substances.

### *What is Consent?*

Consent is informed, freely given, and mutually understood. Consent requires an affirmative act or statement by each participant. If coercion, intimidation, threats and/or physical force are used, there is no consent. If a person is mentally or physically incapacitated or impaired so that the person cannot understand the fact, nature or extent of the sexual situation, there is no consent; this includes conditions due to alcohol or drug consumption or being asleep or unconscious. Whether one has taken advantage of a position of influence over another may be a factor in determining consent.

## Notification

With the consent of the victim, allegations of sexual assault received by University offices or personnel shall be communicated promptly to the Department of Public Safety, 711 Serra Street, telephone 9-911 for emergency response or (650) 723-9633 during normal business hours.

### Emergency Services Available to Victims

Victims of sexual assault are urged to seek immediate attention from emergency police, medical, and counseling services. On the Stanford campus and in the immediate vicinity, the following provide 24-hour response and will arrange for police assistance, medical assistance, emotional support services, and advocacy and support:

- "911" Emergency Network: dial 9-911 from University phones or 911 from outside phones
- Santa Clara Valley Medical Center, 751 South Bascom Avenue, San Jose, telephone (408) 885-5000
- YWCA Stanford Hotline, for students, telephone (650) 725-9955
- Stanford Hospital and Clinics, 300 Pasteur Drive, Stanford, telephone (650) 723-5111
- Residence and Graduate Life Deans, page through 723-8222, extension 25085

## Non-Emergency Resources

Office of Sexual Assault & Relationship Abuse Education & Response (SARA) (725-1056) provides comprehensive and consistent response to incidents of sexual and relationship violence to the campus community. SARA provides case consultation to students and staff, case management for reported assaults and information and referrals to services on and off campus. The office also assists with educational

outreach and training to increase awareness, sensitivity, and community accountability in the prevention of these acts. Online information is available at the Sexual Assault & Relationship Abuse Education & Response (SARA) (<http://studentaffairs.stanford.edu/sara.html>) web site.

Additional resources for students are available at Vaden Health Service at (650) 723-3785, including short-term counseling, referral to long-term therapy, follow-up pregnancy testing, and testing and treatment for sexually transmitted diseases. Additional services for faculty and staff are available at the University's HELP Center, Galvez House (723-4577), including general counseling, information, support, and referral. The University ombuds (723-3682) is available to all in the Stanford community for general counseling, advice, and advocacy. Cathy Glaze, interim Title IX Coordinator, Mariposa House, 585 Capistrano Way, Stanford University, Stanford CA, 94305-8230, (650) 497-4955, (650) 497-9257, [titleix@stanford.edu](mailto:titleix@stanford.edu), <https://titleix.stanford.edu/>, is available to assist students to address the effects of sexual harassment and sexual violence

## Confidentiality of Information

The University will make reasonable and appropriate efforts to preserve an individual's privacy and protect the confidentiality of information. However, because of laws relating to reporting and other state and federal laws, the University cannot guarantee confidentiality to those who report incidents of sexual violence except where those reports are privileged communications with those in legally protected roles (set forth below). The professional being consulted should, if possible, make these limits clear before any disclosure of facts.

An individual can speak confidentially with certain individuals in legally protected roles. They include sexual assault counselors such as those at the YWCA Sexual Assault Center at Stanford, the Help Center, Counseling and Psychological Services (CAPS) and clergy. Exceptions to maintaining confidentiality are set by law; for example, physicians and nurses who treat any physical injury sustained during a sexual assault are required to report it to law enforcement. In addition, physicians, nurses, psychologists, psychiatrists, teachers and social workers must report a sexual assault committed against a person under age 18.

Information shared with other individuals is not legally protected from being disclosed. Considerations with respect to a complainant's request for confidentiality include factors such as the University's ability to respond effectively, to prevent further harassment or to ensure the safety of the University community. For example, an advisor, the Dean of Student Life, a Residence Dean or a Resident Assistant may need to inform other individuals to protect their safety or rights, in fairness to the persons involved, or in response to legal requirements. As required by law, all disclosures to any University employee of an on-campus sexual assault must be reported for statistical purposes only (without personal identifiers) to the Stanford University Department of Public Safety, which has the responsibility for tabulating and annually publishing sexual assault and other crime statistics. Such reports are for statistical purposes and do not include individual identities.

State law permits law enforcement authorities to keep confidential the identity of a person officially reporting a sexual assault. The Stanford University Department of Public Safety policy is to maintain such confidentiality. However, if the District Attorney files a criminal charge, confidentiality might not be maintained.

If a complaint is filed with the Office of Judicial Affairs then the accused student must be provided with the name of the alleged victim and witnesses, if applicable. However, accommodations can be made to protect the victim's privacy, as described on the website for the Office of Judicial Affairs.

## Information about Options

The University offices responding to allegations of sexual misconduct or sexual assault will inform affected individuals, at a minimum, of the options of: criminal prosecution, civil prosecution, the disciplinary process, the appropriate Title IX grievance procedure, alternative housing assignments, and academic assistance alternatives.

## Political Activities

For the complete text of the currently applicable version of this policy, see Administrative Guide Memo 1.5.1 Political Activities (<https://adminguide.stanford.edu/chapter-1/subchapter-5/policy-1-5-1>).

### Summary

The following summarizes the policy on Political Activities:

Stanford University, as a charitable entity, is subject to federal, state, and local laws and regulations regarding political activities: campaign activities, lobbying, and the giving of gifts to public officials.

While all members of the University community are naturally free to express their political opinions and engage in political activities to whatever extent they wish, it is very important that they do so only in their individual capacities and avoid even the appearance that they are speaking or acting for the University in political matters.

In the limited circumstances where individuals must speak or act on behalf of the University in the political arena, they must do so in accordance with the provisions of this Guide Memo.

### Policy

The following is quoted from the policy:

#### 1. Summary of Legal Requirements and Restrictions

- a. Campaign Activities: contributions of money, goods, or services to candidates for political office and in support of or opposition to ballot measure campaigns are subject to a wide variety of political laws. Depending on the jurisdiction and the campaign, political contributions may be prohibited or limited and, in nearly all cases, are subject to a complicated series of disclosure rules. Because of the University's tax-exempt status, the University is legally prohibited from endorsing candidates for political office or making any contribution of money, goods, or services to candidates. It is important, therefore, that no person inadvertently cause the University to make such a contribution.
- b. Lobbying: lobbying can generally be described as any attempt to influence the action of any legislative body (for example, Congress, state legislatures, county boards, city councils, and their staffs) or any federal, state, or local government agency. Laws regulating lobbying exist at the federal, state, and local levels but can differ widely in scope, depending on the jurisdiction. Some laws, for example, only regulate lobbying of the legislative branch. Others, however, also cover lobbying of administrative agencies and officers in the executive branch (for example, lobbying for federally-funded grants). To one degree or another, however, most lobbying laws require registration and reporting by individuals engaged in attempts to influence governmental action.

Tax-exempt organizations are permitted to lobby, and the University engages in lobbying on a limited number of issues, mostly those affecting education, research, and related activities. There is usually some threshold of time or money spent on lobbying that triggers registration and reporting requirements. Regardless of thresholds, however, no University employee—other than the following individuals, on matters under their

jurisdiction—may lobby on behalf of the University without specific authorization:

- President
- Provost
- Deans of the Seven Schools
- Vice Provost and Dean of Research
- Vice President for Business Affairs and Chief Financial Officer
- Executive Director of Human Resources
- Director of the Stanford Linear Accelerator Center
- Director of the Hoover Institution
- General Counsel
- Vice President for Public Affairs

The Vice Provost and Dean of Research may grant permission to faculty members to lobby on behalf of the University for specific purposes. The Director of Government and Community Relations may grant permission to staff members to lobby on behalf of the University for specific purposes. All lobbying on behalf of the University should be coordinated with the Director of Government and Community Relations.

- c. Giving of Gifts to Public Officials and Staff: almost all jurisdictions have strict rules on the extent to which gifts and honoraria may be given to public officials (both elected and non-elected officials and, often, staff). In some cases gifts and honoraria are prohibited; in others they are limited; and in most cases they are subject to detailed disclosure. In addition, in some jurisdictions such as California, gifts to both state and local public officials can result in a public official's disqualification from participation in any governmental action affecting the interests of the donor. Meals, travel, and entertainment are the most common types of gifts, but gift rules can also apply in cases where public officials attend a reception or receive tickets to sporting or other events.

As a non-profit organization, the University generally does not give gifts to public officials and, in those limited cases where it does give such gifts, it must do so in accordance with all applicable laws and regulations. Therefore, any University employee who, on behalf of the University, wishes to make a gift to a public official must receive prior approval from the Director of Government and Community Relations before making such a gift.

- d. Reporting of Political Activities: the University must report most of its political activities above certain thresholds. Therefore, any University employee engaging in such activities on behalf of the University should carefully review the remainder of this Guide Memo and should discuss the relevant activities in advance with the Director of Government and Community Relations.

#### 2. Prohibited and Restricted Political Activities

- a. In General:
  - i No person may, on behalf of the University, engage in any political activity in support of or opposition to any candidate for elective public office (including giving or receiving funds or endorsements), nor shall any University resources be used for such purpose.

- ii No person may, on behalf of the University, lobby (or use University resources to lobby) any federal, state, or local legislative or administrative official or staff member unless specifically authorized to do so. Any lobbying activity, even when authorized, must be conducted in compliance with this Guide Memo, other applicable University policies, and applicable law.
- iii No person may, on behalf of the University, give a gift (or use any University resources to give a gift) to any federal, state, or local official or staff member, except in compliance with this Guide Memo, other applicable University policies, and applicable law.
- iv No person supporting candidates for public office or engaging in other political activities may use University space or facilities or receive University support, except in the limited ways described in section 3A, below.
- v No person may use for lobbying activities federally-funded contract or grant money received by the University.

Even the foregoing activities that are only restricted, rather than prohibited, may be subject to limitations imposed by law. Therefore, any person engaging in the activity, or contemplating doing so, should consult with the Director of Government and Community Relations.

- b. Guidelines for Avoiding Prohibited Partisan Political Activities: the following guidelines should assist in preventing the involvement or apparent involvement of the University in political activities in support of or opposition to any candidate for elective public office, that is, partisan political activities. Except in the limited circumstances set forth in section 3.b., below:
  - i Use of Name and Seal: neither the name nor seal of the University or of any of its schools, departments, or institutions should be used on letters or other materials intended for partisan political purposes.
  - ii Use of Address and Telephones: no University office should be used as a return mailing address for partisan political mailings, and telephone service that is paid by the University, likewise, should not be used for partisan political purposes. (Obviously, a student's dormitory room and telephone service that are personal to the student may be used for these purposes.)
  - iii Use of Title: the University title of a faculty or staff member or other person should be used only for identification and should be accompanied by a statement that the person is speaking as an individual and not as a representative of the University.
  - iv Use of Services and Equipment: University services, such as Interdepartmental Mail; equipment, such as duplicating machines, computers, and telephones; and supplies should not be used for partisan political purposes.
  - v Use of Personnel: no University employee may, as part of his or her job, be requested to perform tasks in any way related to partisan political purposes.

### 3. Permissible Activities

- a. In General: as noted above, the federal, state, and local laws which limit the partisan political activities that can take place in University facilities and with University support in no way inhibit the expression of personal political views by any individual in the University community. Nor do they forbid faculty, students, or

staff from joining with others in support of candidates for office or in furtherance of political causes. There is no restriction on discussion of political issues or teaching of political techniques. Academic endeavors which address public policy issues are in no way affected.

Because the University encourages freedom of expression, political activities which do not reasonably imply University involvement or identification may be undertaken so long as regular University procedures are followed for use of facilities. Examples of permissible activities are:

- i Use of areas, such as White Plaza, for tables, speeches, and similar activities.
- ii Use of auditoriums for speeches by political candidates, but subject to rules of the Internal Revenue Service, the Federal Election Commission, and the California Fair Political Practices Commission, and other applicable laws. Arrangements must be made with University Events and Services. (See also Guide Memo 82.1, Public Events (<http://adminguide.stanford.edu/82.1.pdf>), for more information.)

To reiterate, because tax and political compliance laws impose restrictions, and even prohibitions, on certain political activities and on the use of buildings and equipment at a non-profit institution such as the University, any such activities must be in compliance with these legal requirements.

Individuals taking political positions for themselves or groups with which they are associated, but not as representatives of the University, should clearly indicate, by words and actions, that their positions are not those of the University and are not being taken in an official capacity on behalf of the University.

- b. Limited University Political Activities: limited activities relating to specific federal, state, or local legislation or ballot initiatives are permissible where (1) the subject matter is directly related to core interests of the University's activities; (2) the President has determined that the University should take a position; and (3) the individuals who speak or write on the University's behalf are specifically authorized to do so.

- 4. Responsibility for Interpretation: the Director of Government and Community Relations, in consultation with the General Counsel, is the administrative officer responsible for interpretation and application of the above guidelines. Questions on whether planned student activities are consistent with the University's obligations should be directed to the Dean of Students, who will consult with the Director of Government and Community Relations and/or the General Counsel. All other questions on whether planned activities are consistent with the University's obligations should be addressed directly to the Director of Government and Community Relations or the General Counsel.

## Campus Disruptions

The University's policy on campus disruption applies to students, faculty, and staff. It is published in its complete form on the Office of the General Counsel ([http://www.stanford.edu/dept/legal/su\\_links.html](http://www.stanford.edu/dept/legal/su_links.html)) web site.

### Policy

The following is quoted from the policy:

Because the rights of free speech and peaceable assembly are fundamental to the democratic process, Stanford firmly supports the rights of all members of the University community to express their views or to protest against actions and opinions with which they disagree.

All members of the University also share a concurrent obligation to maintain on the campus an atmosphere conducive to scholarly pursuits, to preserve the dignity and seriousness of University ceremonies and public exercises, and to respect the rights of all individuals.

The following regulations are intended to reconcile these objectives.

It is a violation of University policy for a member of the faculty, staff, or student body to:

1. prevent or disrupt the effective carrying out of a University function or approved activity, such as lectures, meetings, interviews, ceremonies, the conduct of University business in a University office, and public events.
2. obstruct the legitimate movement of any person about the campus or in any University building or facility.

Members of the faculty, staff, and student body have an obligation to leave a University building or facility when asked to do so in the furtherance of the above sections by a member of the University community acting in an official role and identifying himself or herself as such; members of the faculty, staff, or student body also have an obligation to identify themselves, when requested to do so by such a member of the University community who has reasonable grounds to believe that the person(s) has violated section (1) or (2) of this policy and who has so informed the person(s).

The policy has been applied to the following actions: refusal to leave a building which has been declared closed; obstructing the passage into or out of buildings by sitting in front of doorways; preventing University employees from entering their workplace; preventing members of a class from hearing a lecture or taking an examination, or preventing the instructor from giving a lecture, by means of shouts, interruptions, or chants; refusing to leave a closed meeting when unauthorized to attend; and intruding upon or refusing to leave a private interview.

It should be understood that while the above are examples of extraordinarily disruptive behavior, the application of the Policy also takes situational factors into consideration. Thus, for example, conduct appropriate at a political rally might constitute a violation of the Policy on Campus Disruption if it occurred within a classroom.

Students found responsible for violating the Fundamental Standard in connection with this policy are subject to University discipline.

## Use of the Main Quadrangle and Memorial Court Policy

The following is quoted from the policy:

The Main Quadrangle and Memorial Court are part of Stanford University's academic preserve due to their locations at the heart of the campus. To protect and enhance their historic status, University policy limits activities primarily to established or traditional ceremonies and events.

To schedule an event, approval must be obtained in advance from the Office of Stanford Events (see below). Unscheduled events, protests, or activities are prohibited.

Requests for waivers to this policy must be submitted in advance and in writing to the Office of Stanford Events. Exceptions may be granted only in extraordinary cases.

## Resources

The following is a summary of resources available:

For instructions on use of the Main Quadrangle/Memorial Court, contact the Office of Special Events and Protocol (OSEP) at (650) 724-1387, or at the OSEP (<https://osep.stanford.edu>) web site.

Note: White Plaza is made available to Stanford students, faculty, and staff for events other than scheduled "established or traditional ceremonies and events" including those that may involve amplified sound. For further information on the use of such other venues, students should contact Student Activities and Leadership (SAL) at (650) 723-2733, or at the SAL (<http://studentaffairs.stanford.edu/sal>) web site. Faculty and staff should contact the Office of Special Events and Protocol (OSEP) (<https://osep.stanford.edu>).

## Oval Policy

The Oval is considered to be the initial and official visual entrance to the Stanford University campus. Given this historic and aesthetic status, it is in the best interests of the University community and visiting members of the public to maintain its open and pristine space, to help preserve its natural beauty and environmental integrity. The Oval also presents the formal academic image of the University, leading directly to departments, classrooms and other academic space, and faculty and graduate student offices, and thus is subject to the University's Noise Policy.

The University prohibits formal or informal events of any kind to take place in the Oval. Gatherings of Stanford students, faculty, and staff such as demonstrations, rallies, or dances may take place in White Plaza, which can be reserved through the Office of Student Activities. Weddings also are not allowed in the Oval but are in certain circumstances allowed in Memorial Church (refer to Memorial Church wedding ceremony guidelines (<http://www.stanford.edu/group/religiouslife/servicesWeddings.html>)).

The Oval is considered a pedestrian zone and appropriate use of its space includes walking, running, reading, relaxing, and other limited recreational use of the lawn area (such as quiet, very small picnics and Frisbee), unless or until such use damages or otherwise harms the property.

Cooking food or use of any grill/barbecue or open flame is strictly prohibited. Fireworks or the use of other incendiary devices represent a safety hazard to the area and are therefore prohibited. Amplified sound from items such as boom boxes, musical instruments, or the use of bullhorns or amplified speakers is also prohibited. Only authorized Stanford service vehicles are permitted inside the Oval areas.

As the official entrance to the University, the Oval offers public access to general parking spaces in the marked areas surrounding the outer perimeter of the Oval; drivers are expected to obey all traffic signs and limitations. Buses are subject to additional restrictions.

For further information regarding this policy, contact the Executive Director of Special Events and Protocol, 724-1387 or see the Office of Special Events & Protocol (<http://osep.stanford.edu/policies/oval.html>) web site.

## White Memorial Plaza

White Plaza is a Stanford University space available for programs, speeches, rallies, information tables, banners and posters. It is considered a "free speech area" on campus. Students should follow the policy outlined on the Student Activities and Leadership (<https://sal.stanford.edu/plan-event/venues/outdoor-spaces/white-memorial-plaza>) web site to engage in student programmatic activity. Due to Stanford's non-profit status, for-profit commercial activity or corporate promotion of any kind is strictly regulated.

White Plaza is in the center of campus, so event planners should take particular care to avoid disruptive impact on classes, business, or events in the surrounding buildings. Events in White Plaza must be organized by University entities (student groups, departments, and programs) and require prior approval from Student Activities and Leadership (SAL) (<https://sal.stanford.edu>).

## Noise and Amplified Sound Policy

The following is quoted from the policy:

Stanford is not only an academic institution but a residential community as well. It is the responsibility of all faculty, students, and staff to moderate noise especially during an event or activity held on campus. Supporting the mission of the University and respecting those who are studying, researching, or otherwise carrying out academic-related activities is a Stanford priority. The campus must require a conducive atmosphere to ensure these endeavors are accomplished and supported. Disturbing noise in or around a residence or other campus buildings which infringe on the rights of other residents or members of the University community is considered a violation of this policy. As part of the event planning process, the event sponsor must obtain all appropriate approvals regarding the use of amplified sound during an event or activity.

In addition to University policy on noise and amplified sound, the County of Santa Clara also has a county ordinance on sound and all members of the Stanford community and visitors to campus are subject to and must comply with this order. For more information, see the Santa Clara Ordinance Code, Control of Noise and Vibration ([https://www.municode.com/library/ca/santa\\_clara\\_county/codes/code\\_of\\_ordinances?nodeId=TITBRE\\_DIVB11ENHE\\_CHVIIIICONOVI](https://www.municode.com/library/ca/santa_clara_county/codes/code_of_ordinances?nodeId=TITBRE_DIVB11ENHE_CHVIIIICONOVI)) web site.

### Resources

Information regarding whether and how the use of amplified sound is permitted is available from the following sources, which must be consulted for prior approval:

1. The Office of Student Activities: phone: 723-2733, or see <http://studentaffairs.stanford.edu/sal/policies/noise>
2. Registrar's Scheduling Office: email [reg-events@stanford.edu](mailto:reg-events@stanford.edu), or see <http://studentaffairs.stanford.edu/registrar/faculty/events>.
3. Office of Special Events and Protocol (OSEP) at (650) 724-1387, or see <http://stanfordevents.stanford.edu>.

## No Camping

Camping (that is, staying outside overnight on University property) is not permitted without University permission. Permission is granted through the Office of the Provost or the Provost's designee.

## Prohibition of the Possession of Dangerous Weapons on Campus

The University's policy prohibiting weapons on campus is published in its complete form on the Office of Community Standards web site.

### Policy

The following is quoted from the policy:

Except for authorized academic purposes, the knowing possession by any student on any Stanford campus of the following is prohibited: firearms, explosives, ammunition, or any instrument or weapon of the

kind commonly known as blackjack, slingshot, billy club, sandclub, sandbag, or metal knuckles.

Notwithstanding the paragraph above, a student who is a resident of a Stanford campus may store a weapon on such campus if both of the following conditions are met:

1. The student has complied with all state and federal regulations regarding the use and possession of said weapon, or, in the case of a foreign campus, with the laws of the country in which the campus is located.
2. The student stores such weapons with the Stanford Department of Public Safety (SDPS) or, in the case of a foreign campus, in a facility provided by the director of such campus.

Students may remove their weapons from storage only in accordance with regulations established by the SDPS or by the director of the foreign campus at which the weapon is stored. A student who is a resident of a Stanford campus may bring any of the above weapons on campus for purposes of storage only if the student has previously notified the SDPS of the intention to do so, but in no event more than six hours after arrival on the campus. When the student removes the weapon from storage, it must be taken off campus as soon as is practicable, but in no event more than one hour after such removal.

The term "Stanford campus" shall include all the lands and facilities of Leland Stanford Junior University, whether owned or leased, and whether located in the United States or abroad.

## Student Alcohol Policy

This document clarifies the University's expectations and approach related to the use of alcohol by students. The University's Controlled Substances and Alcohol Policy is also applicable. The full text is contained in the Controlled Substance and Alcohol ([http://adminguide.stanford.edu/23\\_6.pdf](http://adminguide.stanford.edu/23_6.pdf)) policy.

### Preamble

The Fundamental Standard has set the standard of conduct for students at Stanford since 1896. It states: "Students at Stanford are expected to show both within and without the University such respect for order, morality, personal honor and the rights of others as is demanded of good citizens." Implicit in the Standard is the understanding that students are responsible for making their own decisions and accepting the consequences of those decisions.

The University is committed to the health, safety and well-being of each member of the Stanford community. In order to further student learning, development and success and to promote the University's academic mission, Stanford fosters an environment of personal and collective responsibility and respectful citizenship. This means that all members of the university community—students, faculty and staff—have a role in safeguarding a healthy learning environment free of the consequences of alcohol misuse. The University also strives to create a culture that supports students who do not use alcohol and students who use alcohol in a safe, legal and responsible fashion.

### Legal Background

Members of the Stanford community are expected to abide by all federal, state and local laws, including those governing alcohol consumption and distribution. Under California law, it is illegal for anyone under the age of 21 to purchase alcohol or to possess alcohol in a public space. It is also illegal for anyone to furnish alcohol to an individual under the age of 21. Other state laws governing the use of alcohol are listed below.

While it is not the responsibility of most Stanford officials to enforce state law, it is the responsibility of the University's Department of Public

Safety, and accordingly they enforce all state alcohol laws when they encounter violations. All community members should understand the law and, as individuals, ensure that they themselves do not violate it.

In addition, it is the responsibility of all community members to ensure that the University does not, through their actions, violate the law. Accordingly, official University functions, including events held by registered student groups, are not allowed to provide alcohol to those under 21, and no University funds may be used to purchase alcohol for that purpose. Violations of this requirement can result in both criminal prosecution and University administrative action, including dismissal from the University.

## Responsible Alcohol Use

Stanford students are expected to behave responsibly, both in the classroom and outside, both on campus and off. In particular, the University does not tolerate reckless drinking and its consequent harmful behaviors. The University is especially concerned about the misuse of distilled alcohol products ("hard alcohol"), and the dangers that arise from that misuse.

All students should understand the physical and behavioral effects of alcohol misuse, and should avoid such misuse themselves. In addition, they are expected to do their part to ensure the safety of fellow students whom they perceive to be engaged in reckless drinking behavior or to be suffering from its consequences.

The University provides educational resources to assure that students understand the effects of alcohol misuse and know how to respond when they perceive others to be engaged in dangerous behavior.

Reckless drinking and encouraging reckless drinking are violations of University policy, and may be subject to disciplinary action. Extreme or repeated violations may result in dismissal from the University.

More generally, students are expected to make legal, healthy, responsible choices concerning their personal use of alcohol and the University supports them in this endeavor through education and other resources. The University sponsors activities and programs focused on students who choose not to drink or to drink lightly, as well as resources and services to assist students who need help for themselves or others related to alcohol use.

## Authority, Application, and Enforcement

Responsibility for application of the Student Alcohol Policy resides with the Vice Provost for Student Affairs. The Office of Alcohol Policy and Education reports to the Vice Provost for Student Affairs and is expected to coordinate and implement alcohol programs. (The University's Controlled Substances and Alcohol Policy is also applicable. The full text is contained at the Controlled Substances and Alcohol web site (<https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-8>).

The Stanford University Department of Public Safety enforces federal, state and local laws among students, other community members, guests and visitors.

## Alcohol Policy Violations

The Office of Alcohol Policy and Education will work with the following offices to address violations of the University's alcohol policy as determined by the specifics of each situation.

- The Office of Residential Education (<http://studentaffairs.stanford.edu/resed>) for undergraduate students, residential groups, fraternities and sororities
- Graduate Life Office (GLO) (<http://glo.stanford.edu>) for graduate students

- Student Activities and Leadership (SAL) (<http://studentaffairs.stanford.edu/sal>) for voluntary student organizations
- Department of Athletics, Physical Education and Recreation (DAPER) (<http://www.gostanford.com/school-bio/stan-administration.html>) for student athletes and athletic groups
- Such other offices as are appropriate under particular circumstances

Violations may be referred to the Office of Judicial Affairs (<http://judicialaffairs.stanford.edu>) (for individual students) and the Organization Conduct Board (<http://studentaffairs.stanford.edu/studentlife/ocb>) (for student groups). The Dean of Student Life (<http://studentaffairs.stanford.edu/studentlife>) may take action as well in certain circumstances.

## Getting Help: Resources Available to Students

Students have access to a variety of University resources (<http://alcohol.stanford.edu/resources.html>).

## Additional University Regulations

- Students living in University residences sign a residence agreement ([http://www.stanford.edu/dept/rde/shs/res\\_agree.htm](http://www.stanford.edu/dept/rde/shs/res_agree.htm)) that outlines housing policies and expectations for conduct. Violations of the residence agreement can lead to loss of housing. [[http://www.stanford.edu/dept/rde/shs/res\\_agree.htm](http://www.stanford.edu/dept/rde/shs/res_agree.htm)]
- All parties must be registered with the University, and availability of alcohol is regulated by party planning guidelines coordinated by the Office of Student Activities and Leadership. [<http://studentaffairs.stanford.edu/sal/planning/party>]

Other restrictions apply to particular circumstances

- Frosh Housing—Alcoholic beverages are prohibited at all-frosh house events in common area spaces.
- University Funds and the Purchase of Alcohol—No University funds or funds collected by the University may be used in a way that violates the alcohol policy. In student residences, house funds (funds collected by Student Financial Services or other University offices) may not be used to buy alcohol. Any decision to use student-collected funds to buy alcohol must be made lawfully, thoughtfully, fairly and in a way that respects the views of all students. Students must not be required to contribute to the purchase of alcohol.
- Dining Hall—Students may not possess or consume alcoholic beverages in Stanford Dining Halls during meal times and food service. University Dining staff can deny admission, access or meal service to anyone who is believed to be intoxicated by the Dining Management staff.
- White Plaza—Alcoholic beverages in White Plaza are prohibited.
- End of Quarter Period and Finals Week—No registered parties (with or without alcohol) can occur during the End of the Quarter Period (dead week) or Finals Week.
- Athletic Facilities—No alcohol is permitted inside Stanford athletic facilities public spaces during athletic events.
- Stanford Conferences and University Facilities—The University requires that event sponsors and student groups wishing to offer alcoholic beverages at their programs and events operate within state and local laws as provided by the Department of Alcohol and Beverage Control (ABC). Alcohol service is not allowed in classrooms.
- Admit Weekend—Stanford students are prohibited from providing, serving or in anyway making alcohol available to any prospective

fresh (ProFro). All student groups/organizations and residences may host only alcohol-free parties or events during Admit Weekend. This specifically means that no alcohol is to be present, served or consumed at any student group/organization and/or dorm function during Admit Weekend.

- New Student Orientation (NSO) Period—At no time should any Stanford student provide, serve or in any way make alcohol available to any new, incoming undergraduate student (freshman or transfer). All undergraduate student groups/organizations and residences will host only alcohol-free parties or events during Orientation. This specifically means that no alcohol is to be present, served, or consumed at any student group/organization and/or dorm function during NSO.

## California State Laws

Students should be familiar with California laws governing the consumption of alcohol. The following summarizes those laws most relevant to individuals.

- It is illegal for persons under the age of 21 to possess an alcoholic beverage in any public place or any place open to the public (CA Business and Professions Code 25662).
- Any person who furnishes, gives or sells any alcoholic beverage to someone under the age of 21 is guilty of a misdemeanor (CA Business and Professions Code 25658(a)).
- Any person under the age of 21 who attempts to purchase an alcoholic beverage is guilty of an infraction (CA Business and Professions Code 25658.5).
- Any person under the influence of alcohol in a public place and unable to exercise care for one's own safety or that of others is guilty of a misdemeanor (CA Penal Code 647(f)).
- It is illegal for persons to operate a motor vehicle while under the influence of alcohol or other intoxicants or with a blood alcohol level of .08% or higher (CA Vehicle Code Section 23152). NOTE: A golf cart is a motor vehicle.
- It is unlawful for a person under the age of 21 years who has 0.05 percent or more, by weight, of alcohol in his or her blood to drive a vehicle (CA Vehicle Code Section 23140(a)).
- It is illegal for a person under the age of 21 to drive a vehicle when he or she has a blood alcohol concentration (BAC) of .01% or higher (CA Vehicle Code Section 23136).
- It is a misdemeanor to ride a bicycle under the influence of alcohol, drugs or both (CA Vehicle Code Section 21200.5).
- It is an infraction to possess an open container of an alcoholic beverage while in a motor vehicle (CA Vehicle Code Section 23223).
- It is an infraction for an owner or driver of a motor vehicle to allow an open container of alcohol in the passenger area (CA Vehicle Code Section 23225).

## Hazing Policy

Hazing is not permitted at Stanford University. No individual, recognized student organization, club, team, or any other Stanford-affiliated student group is permitted to plan, engage in, or condone hazing, on or off the Stanford campus.

## Definition of Hazing at Stanford University

Hazing includes any activity done in connection with a student organization, regardless of whether the organization is officially

recognized at Stanford, that causes or is reasonably likely to cause another student to suffer bodily danger, physical harm, or significant personal degradation or humiliation, even if no bodily danger, physical harm, or significant degradation or humiliation in fact results. Hazing might occur during initiation or pre-initiation into a student organization, but is not limited to these time frames. Any individual who plans or intentionally assists in hazing activity has engaged in hazing, regardless of whether that individual is present when the hazing activity occurs.

## Consequences of a Violation

Stanford University expects its students to conduct themselves in socially responsible and respectful ways. Thus, participation in hazing, either as an individual or as part of any student group, may result in serious individual and organizational consequences including, but not limited to: disciplinary action up to and including expulsion; permanent loss of organizational recognition; and loss of eligibility to remain a member of any club, team, or other Stanford-affiliated student group. Consent, implied or expressed, is not a defense to any complaint or charge alleging a hazing violation.

A number of University offices may take institutional action, including: the Organizational Conduct Board; Judicial Affairs; or other University offices, such as the Vice Provost for Student Affairs or the Department of Athletics.

## Applications

Stanford's hazing policy is distinct from and broader than California Penal Code section 245.6, which prohibits: "any method of initiation or preinitiation into a student organization or student body, whether or not the organization or body is officially recognized by an educational institution, which is likely to cause serious bodily injury to any former, current, or prospective student of any school, community college, college, university or other educational institution in this state." A violation of Penal Code Section 245.6 that does not result in serious bodily injury is punishable as a misdemeanor, while a violation that results in death or injury is punishable as a felony or a misdemeanor.

Nothing in this hazing policy prevents Stanford from taking institutional action against hazing activity that falls outside the narrower definition of Penal Code section 245.6.

Stanford's hazing policy is not intended to prohibit student recruitment or new or continuing member activities that are positive and educational in nature, designed to instill a group ethos or unity. Its intent is to deter those behaviors that cause or are likely to cause danger, harm or humiliation to another student.

Stanford's hazing policy is not intended to apply to customary athletic events or other similar institutionally-approved contests or competitions.

Questions should be directed to the Office of Student Activities, (650) 723-2733.

## Smoke-Free Environment

The University's policy on a smoke-free environment is published in its complete form in the Administrative Guide Memo 2.2.6 Smoke-Free Environment (<https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-6>).

## Applicability

Applies to all academic and administrative units of Stanford University, including SLAC and all campus student housing. This policy does not supersede more restrictive policies that may be in force to comply with federal, state, or local laws or ordinances. The President must approve more restrictive policies not required by law.

## 1. Policy

It is the policy of Stanford University that all smoking, including but not limited to tobacco products and the use of electronic smoking devices, is prohibited in enclosed buildings and facilities and during indoor or outdoor events on the campus.

## 2. Definition

"Smoke-free" refers to an environment that is free of smoke from, among other things, tobacco products and/or vapors from electronic smoking devices.

## 3. Guidelines

### a. Smoking-Prohibited Areas

Specifically, smoking is prohibited in classrooms and offices, all enclosed buildings and facilities, in covered walkways, in University vehicles, during indoor or outdoor athletic events, during other University sponsored or designated indoor or outdoor events and in outdoor areas designated by signage as "smoking prohibited" areas.

- Ashtrays will not be provided in any enclosed University building or facility.
- "Smoking Prohibited" signs will be posted.

### b. Outdoor Smoking Areas

Except where otherwise posted as a "smoking prohibited area," smoking is generally permitted in outdoor areas, except during organized events. Outdoor smoking in non-prohibited areas must be at least 30 feet away from doorways, open windows, covered walkways, and ventilation systems to prevent smoke from entering enclosed buildings and facilities. To accommodate faculty, staff, and students who smoke, Vice Presidents, Vice Provosts, and Deans may designate certain areas of existing courtyards and patios as smoking areas, and must provide ashtrays. The specific academic or administrative unit(s) will be responsible for absorbing all costs associated with providing designated smoking areas and ashtrays.

## 4. Enforcement

This policy relies on the consideration and cooperation of smokers and non-smokers. It is the responsibility of all members of the University community to observe and follow this policy and its guidelines.

### a. Smoking Cessation Information

Smoking cessation programs are available for faculty and staff through the Center for Research in Disease Prevention, Health Improvement Program (HIP). Students may contact the Health Promotion Program (HPP) through the Student Health Center for smoking cessation information or programs.

### b. Repeated Violations

Faculty, staff and, students repeatedly violating this policy may be subject to appropriate action to correct any violation(s) and prevent future occurrences.

## 5. Implementation and Distribution

This policy will be disseminated to all faculty, staff and students and to all new members of the University Community.

## Visitor Policy/University Statement on Privacy

Stanford University has an interest in ensuring that the privacy of its students, faculty, and staff is respected, and that no activities interfere with education, research, or residential life.

The University is private property; however, some areas of the campus typically are open to visitors. These areas include White Plaza, public

eating areas (such as those at Tresidder Union), outdoor touring areas, and locations to which the public has been invited by advertised notice (such as for public educational, cultural, or athletic events). Even in these locations, visitors must not interfere with the privacy of students, faculty, and staff, or with educational, research, and residential activities. The University may revoke at any time permission to be present in these, or any other areas. Visitors should not be in academic or residential areas unless they have been invited for appropriate business or social purposes by the responsible faculty member, student, or staff member.

No commercial activity, including taking photos or similar audio or visual recordings that are sold to others or otherwise used for commercial purposes, may occur on the campus or in University programs without the University's permission. Requests for permission should be submitted to the Director of University Communications or, as appropriate, the Dean of Students, the Department of Athletics, or the Office of Public Events. Recognized student groups and official units of the University will be granted such permission so long as they do not violate privacy or property interests of others; so long as any sale of their products is predominantly on campus to students, faculty, and staff; and so long as they comply with applicable University policies and procedures.

Violators of this policy may be subject to criminal and/or civil liability, as well as University disciplinary action.

## Computer and Network Usage

For a complete text of the currently applicable version of this policy, see Administrative Guide Memo 6.2.1 Computer and Network Usage Policy (<https://adminguide.stanford.edu/chapter-6/subchapter-2/policy-6-2-1>).

## Policy

The following is quoted from the policy:

Users of Stanford network and computer resources have a responsibility not to abuse the network and resources. This policy provides guidelines for the appropriate and inappropriate use of information technologies.

## Summary

The following summarizes the policy on Computer and Network Usage:

In particular, the policy provides that users of University information resources must respect software copyrights and licenses, respect the integrity of computer-based information resources, refrain from seeking to gain or permitting others to gain unauthorized access, including by sharing passwords, and respect the rights of other computer users.

This policy covers appropriate use of computers, networks, and information contained therein. As to political, personal and commercial use, the University is a non-profit, tax-exempt organization and, as such, is subject to specific federal, state, and local laws regarding sources of income, political activities, use of property, and similar matters. It also is a contractor with government and other entities, and thus must assure proper use of property under its control and allocation of overhead and similar costs. For these reasons, University information resources must not be used for partisan political activities where prohibited by federal, state, or other applicable laws, and may be used for other political activities only when in compliance with federal, state, and other laws, and in compliance with applicable University policies. Similarly, University information resources should not be used for personal activities not related to appropriate University functions, except in a purely incidental manner. In addition, University information resources should not be used for commercial purposes, except in a purely incidental manner or except as permitted under other written policies of the University or with the written approval of a University officer having the authority to give such approval. Any such commercial use should be properly related to University activities, take into account proper cost allocations for government and other overhead determinations, and provide for appropriate reimbursement to the University for taxes and other costs

the University may incur by reason of the commercial use. Users also are reminded that the .edu domain on the Internet has rules restricting or prohibiting commercial use, and thus activities not appropriately within the .edu domain and which otherwise are permissible within the University computing resources should use one or more other domains, as appropriate.

The University's Information Security Officer is authorized in appropriate circumstances to inspect or monitor private data (including email), such as when there is a reasonable cause to suspect improper use of computer or network resources.

For further information on the topic of peer-to-peer file sharing, see the section above on Copyright.

## Stanford University Online Accessibility Policy

Stanford University will make Stanford Websites and web#based applications accessible to its students, faculty, staff and participants in the University's programs and activities who have disabilities. All personnel who are involved in the procurement, preparation and maintenance of University Websites and web#based applications should adopt this goal, with the assistance of campus resources dedicated to supporting web accessibility. Stanford Websites and web#based applications must either conform to WCAG 2.0 Level AA (<http://www.w3.org/TR/WCAG20>) or their content and functionality be made available to Users on request (such as by a student request to the Office of Accessible Education) in an equally effective and accessible alternative manner.

### Applicability

Stanford's online accessibility policy applies to all Stanford academic and administrative units that create and maintain web sites and web#based applications used in the programs and activities of the University. See the Stanford University Online Accessibility Policy (<http://ucomm.stanford.edu/policies/accessibility-policy>) web site for the full policy.

### Definitions

#### Stanford Website

Any website or web#based application within the Stanford University (stanford.edu) domain used in the programs or activities of the University.

#### Users

Stanford Website users are defined as current Stanford students and applicants for admission, Stanford staff and faculty, and participants in the University's programs and activities.

#### Accessible

Refers to the concept that people with disabilities are able to independently and timely access and use a product or system, including with the benefit of assistive technologies. Assistive technologies include adaptive hardware and/or software and other devices that are used to increase, maintain, or improve the functional capabilities of individuals with disabilities.

#### Stanford Online Accessibility Program ("SOAP") Office

The SOAP Office (<http://soap.stanford.edu>) provides resources and services for Stanford web designers, developers and content creators to assist them in producing accessible materials. Services include Website accessibility testing and guidance regarding universal design and web standards compliance. The SOAP Office is also the campus resource designated to facilitate online accessibility for Users. To report and seek assistance on web accessibility issues, Users may contact the SOAP

Office by email at [web-accessibility@stanford.edu](mailto:web-accessibility@stanford.edu) or submit a HelpSU ticket through the SOAP Office website.

#### Office of Accessible Education ("OAE")

The Office of Accessible Education (<http://oae.stanford.edu>) is the campus office designated to work with Stanford students with disabilities. OAE provides support services, accommodations, and programs to remove barriers to full participation of students with disabilities in the programs or activities of the University.

#### Diversity and Access Office ("D&A")

The Diversity and Access Office (<http://diversityandaccess.stanford.edu>) oversees compliance with state and federal anti#discrimination laws including the Americans with Disabilities Act and Section 504 of the Rehabilitation Act. D&A provides disability#related access information, and assists faculty, staff and other non#student participants in University programs and activities with disabilities who may need accommodations and/or auxiliary aids to obtain equal access to Stanford facilities, programs and activities. D&A also oversees the ADA/Section 504 Grievance Procedure for students who believe they have been subjected to unlawful discrimination based on a disability or denied access to services or accommodations which the ADA and/or Section 504 require Stanford to provide. Read more about the ADA/Section 504 Grievance Procedure (p. ).

### Accessibility Standard

Stanford University has adopted the Worldwide Web Consortium Web Content Accessibility Guidelines (<http://www.w3.org/TR/WCAG20>) version 2.0, Level AA Conformance (WCAG 2.0 Level AA) as its goal for accessible Stanford Websites. The guidelines and success criteria of WCAG 2.0 Level AA are organized around the following four principles which lay the foundation for users with disabilities to access and use web content. For a Stanford Website to be accessible under these principles, its content must be:

1. Perceivable – Information and user interface components must be presentable to users in ways they can perceive.
2. Operable – User interface components and navigation must be operable.
3. Understandable – Information and the operation of user interface must be understandable.
4. Robust – Content must be robust enough that it can be interpreted reliably by a wide variety of user agents, including assistive technologies.

### Implementation Guidelines

1. All personnel responsible for existing Stanford Websites must use good faith efforts, subject to the requirements and exceptions of the applicable laws, to bring those Websites into conformance with WCAG Level 2.0 AA.
2. New Stanford Website development and purchases, including development and purchases for major revisions and updates of existing Stanford Websites, should conform to WCAG 2.0 Level AA.
3. Vendors seeking to develop or provide Websites or web-based applications for Stanford are to demonstrate that their products satisfy WCAG 2.0 Level AA Success Criteria, unless undue burden or fundamental alteration can be demonstrated (see below). Preferred standards for demonstrating satisfaction of WCAG 2.0 Level AA Success Criteria, and accessibility language for Stanford Website vendor contracts, as well as for other types of Electronic Information Technology vendor contracts, may be obtained from University Procurement (Purchasing and Payment Services) (<http://web.stanford.edu/group/fms/fingate/contact/#procure>) or from the SOAP Office (<https://soap.stanford.edu>).
4. Each Stanford Website should contain "Accessibility" contact information for the site's webmaster and/or the SOAP Office. The contact information may take a variety of forms, such as an email

address, a link to a HelpSU page, or a contact form on the site. The recommended location for this information is the Website's "Contact" or "About Us" page.

5. The SOAP Office will continue to test Stanford Websites for accessibility and report accessibility issues to the webmaster for that website.
6. OAE will continue to seek input from Stanford students regarding accessibility issues.
7. Conformance to WCAG 2.0 Level AA guidelines may be an undue burden due to the nature of the content, the purpose of the resource, the lack of accessible solutions, or an unreasonably high administrative or financial cost necessary to make the resource meet that goal. However, these difficulties do not relieve University programs or activities from meeting applicable legal obligations to provide reasonable accommodations to Users in regard to access to the content and services provided on Stanford Websites. Managers of University programs and activities must be prepared to provide content and/or services in a suitable alternative format (e.g., electronic text file or audio description) or manner upon request (such as by a student to the OAE).

## Implementation Assistance

Guidelines and best practices are available from the SOAP Office (<http://soap.stanford.edu>). In addition, on-campus assistance is available for designing and implementing websites that meet accessibility guidelines and for evaluating the accessibility of existing sites and those under development. If such assistance is needed, visit the SOAP web site (<http://soap.stanford.edu>) or email the SOAP Office at [web-accessibility@stanford.edu](mailto:web-accessibility@stanford.edu).

## Responding to Accessibility Issues

Recognizing the ongoing evolution of current web content and technologies, the designated webmaster for a particular site, upon being made aware of an accessibility issue on that site, should proceed as follows:

- Acknowledge receipt of the issue in writing (via email) to the User raising the issue, with a copy to the SOAP Office.
- Open an accessibility case for recording the issue and resulting action taken.
- Verify that the issue is an authentic accessibility issue.
- Treat all issues as important. Address any time-sensitive need of the User promptly (generally within a period of no greater than two business days), unless technology or work involved requires more effort, in which case the User will be promptly notified in writing of expected delivery.

Upon receiving a report of an accessibility issue, the SOAP Office shall notify the site's webmaster, as well as OAE (for reports from students) or D&A (for reports from non-students.) If the SOAP Office, in consultation with the site's webmaster, determines that the information or service provided on the Stanford Website cannot be made accessible, or that doing so would constitute an undue burden or fundamental alteration, OAE or D&A will engage in an interactive process with the User about alternative methods for providing the information or service and will provide an equally effective alternative format or service. In the event that an alternative format or service cannot be provided or the user is not satisfied with the results, he or she may contact the ADA/Section 504 Compliance Officer at D&A by telephone at (650) 723-0755 or by email at [equalopportunity@stanford.edu](mailto:equalopportunity@stanford.edu) for assistance in resolving the issue.

For questions about the policy, please contact the SOAP Office (<https://soap.stanford.edu/about/contact>).

## Protection of Sensitive Data

Stanford University maintains sensitive non-public data protected by laws and agreements, including Social Security numbers, financial information, health information, and student records. It is incumbent on every member of the Stanford community with access to such data to be familiar with and abide by Stanford's data classifications requirements provided at the Data Classification, Access, Transmittal and Storage ([http://www.stanford.edu/group/security/securecomputing/dataclass\\_chart.html](http://www.stanford.edu/group/security/securecomputing/dataclass_chart.html)) web site. Members of the Stanford community should also familiarize themselves with applicable laws and University policies on privacy as provided by the University, including Administrative Guide Memos 6.3.1 Information Security (<https://adminguide.stanford.edu/chapter-6/subchapter-3/policy-6-3-1>), 6.4.1 Identification and Authentication Systems (<https://adminguide.stanford.edu/chapter-6/subchapter-4/policy-6-4-1>), 6.6.1 Information Security Incident Response (<https://adminguide.stanford.edu/chapter-6/subchapter-6/policy-6-6-1>), and 3.4.2 Card and Payment Account Acceptance and Processing (<https://adminguide.stanford.edu/chapter-3/subchapter-4/policy-3-4-2>). For information on best practices for securing mobile computing devices, see the Guidelines for Securing Mobile Computing Devices ([http://www.stanford.edu/group/security/securecomputing/mobile\\_devices.html](http://www.stanford.edu/group/security/securecomputing/mobile_devices.html)) web site.

## Campus Safety and Criminal Statistics

Stanford University complies with the Jeanne Clery Disclosure of Campus Security Policy and Crime Statistics Act. A copy of Stanford's policies and statistics under this act are posted on the Department of Public Safety (<http://stanford.edu/group/SUDPS/safety-report.shtml>) web site. A paper copy can be obtained by calling the Stanford Department of Public Safety at (650) 723-9633.

# UNDERGRADUATE EDUCATION

Established in 1995, the Office of the Vice Provost for Undergraduate Education (VPUE) comprises the Bing Overseas Studies Program, Residential Programs, Stanford Introductory Studies, and Undergraduate Advising and Research. VPUE fosters innovation, integration, and pedagogical advancement of the Stanford undergraduate journey. Working with our partners, we prepare Stanford students to be engaged citizens with the creative confidence to tackle the world's most complex challenges.

VPUE programs for first- and second-year students include New Student Orientation/Approaching Stanford, the Leland Scholars Program, Thinking Matters, Program in Writing and Rhetoric, Introductory Seminars, and Sophomore College. Programs for more advanced students include the Bing Overseas Studies Program, Writing in the Major, Undergraduate Research, Arts Intensive, Leadership Intensive, and Bing Honors College. Undergraduate Advising and the Hume Center for Writing and Speaking serve undergraduates throughout their time at Stanford. The office of the VPUE works closely with the office of the Vice Provost for Student Affairs and the Admissions Office. The Vice Provost for Undergraduate Education reports to the Provost.

Policies governing undergraduate education are formulated by Faculty Senate committees and voted into legislation by the Faculty Senate. The Committee on Undergraduate Standards and Policy (C-USP) addresses such topics as general education requirements, grading, awards, advising, and teaching evaluation. The Committee on Review of Undergraduate Majors (C-RUM) oversees the initiation and review of undergraduate degree programs. Committee members include the Vice Provost for Undergraduate Education or his delegated staff (ex-officio) and representatives from the faculty at large, administration (such as the Office of the University Registrar), and students. The Associated Students of Stanford University (ASSU) nominations committee selects student members. The VPUE also maintains, by rule of the Faculty Senate, the Thinking Matters Governance Board, the Writing and Rhetoric Governance Board, and the Breadth Governance Board to oversee these university degree requirements. Finally, the Undergraduate Advisory Council (UGAC) was established by the provost in 1996 to serve as the main faculty advisory body for the Vice Provost for Undergraduate Education.

*Freeman-Thornton Vice Provost for Undergraduate Education:* Harry J. Elam, Jr.  
Olive H. Palmer Professor in the Humanities

*Senior Associate Vice Provost for Undergraduate Education:* Liz Hadly  
Professor of Biology

*Associate Vice Provost for Undergraduate Education:* Sharon Palmer

*Associate Vice Provost for Finance and Administration:* Charles Litchfield

## Stanford Introductory Studies

### Stanford Introductory Studies

*Program Directors:* Marvin Diogenes, Ellen Woods  
Offices: Sweet Hall  
Email: stanfordintrostudies@stanford.edu  
Web Site: <https://undergrad.stanford.edu/programs>

Stanford Introductory Studies (SIS) offers courses taught by faculty from across the seven Schools of the University and by SIS Lecturers. Some of these courses satisfy University Requirements (THINK, WAYS, and the Writing and Rhetoric Requirement) while others are electives especially designed for first- and second-year students including Introductory Seminars. Special residential programs such as Structured Liberal

Education, Science in the Making (SIMILE), Immersion in the Arts—Living in Culture (ITALIC), and September Studies (Leland Scholars, Sophomore College, Leadership Intensive, Arts Intensive, and Bing Honors College) expand SIS curricular opportunities for students. The Hume Center for Writing and Speaking, which manages writing and oral communication services such as tutorials and workshops for all students, is also part of SIS.

## Thinking Matters

*Faculty Director:* Russell A. Berman, Comparative Literature and German Studies

*Director, Stanford Introductory Studies for Thinking Matters :* Ellen Woods

*Associate Director:* Parna Sengupta

*Affiliated Faculty:* Steven Block (Applied Physics), Chris Bobonich (Philosophy), James Campbell (History), Shelley Correll (Sociology), Cari Costanzo (Anthropology), Adrian Daub (German Studies), Jenna Davis (Civil and Environmental Engineering), Larry Diamond (Hoover Institution), James Fergusson (Anthropology), Russ Fernald (Biology), James Fishkin (Communication), Shelley Fisher Fishkin (English), Margot Gerritsen (Energy Resources Engineering), Peter Graham (Physics), Allyson Hobbs (History), Susan Holmes (Statistics), Adam Johnson (English), Dan Jurafsky (Linguistics), Michelle Karnes (English), Joseph Lipsick (School of Medicine), Tanya Luhrmann (Anthropology), David Lummus (French and Italian), David Magnus (School of Medicine), Pamela Matson (Dean of the School of Earth Sciences), Yoshiko Matsumoto (Linguistics), Peter Michelson (Physics), Ian Morris (Classics), Josiah Ober (Political Science), Sarah Olgilvie (Linguistics), Vijay Pande (Chemistry), Thomas Ryckman (Philosophy), Scott Sagan (Political Science), Jane Shaw (Dean of the School of Religious Studies), Jan Skotheim (Biology), Kathryn Starkey (German Studies), Elaine Treharne (English), Abraham Verghese (School of Medicine), Blakey Vermeule (English), Allen Weiner (School of Law), Amir Weiner (History).

*Lecturers:* Kassahun Betre, Dave Blome, Rahul Chaudhri, Anna Corwin, Brian Coyne, Rob Furrow, Kjerstin Gruys, Angela Harris, Sarah Hillenbrand, Lauren Hirshberg, Raymond Kania, Zenia Kish, Karola Kreitmair, Andy Lyons, Nicole Martinez, Kara McCormack, Pete Mohanty, Kate Leila Norako, Michael Park, Sarah Perkins, Karen Powoznik, Jehnna Ronan, Stephen Speiss, Bronwen Tate, Ruth Tennen, Dan Va de Mark, Ian Zuckerman.

Offices: Sweet Hall, Second Floor  
Mail code: 3068  
Phone: (650) 723-0944  
Email: [thinkingmatters@stanford.edu](mailto:thinkingmatters@stanford.edu)  
Web Site: <https://undergrad.stanford.edu/programs/thinking-matters>

Thinking Matters courses are listed under the subject code THINK (<https://explorecourses.stanford.edu/search?q=THINK&view=catalog&filter-term-Winter=on&filter-term-Summer=on&filter-catalognumber-THINK=on&filter-term-Autumn=on&filter-term-Spring=on&page=0&filter-coursestatus-Active=on&filter-departmentcode-THINK=on&collapse=&academicYear=20152016>) on the Stanford Bulletin's ExploreCourses web site .

Thinking Matters offers courses that satisfy the one quarter freshman requirement. Taught by faculty from a wide range of disciplines and fields, the Thinking Matters (THINK) requirement helps students develop the ability to ask rigorous and genuine questions that can lead to scientific experimentation or literary interpretation or social policy analysis. Through the study of these questions and problems, students develop critical skills in interpretation, reasoning, and analysis as well as enhance capacities for writing and discussion. The THINK requirement may be satisfied in one of three ways:

1. Thinking Matters courses:
  - a one quarter, 4-unit course taught by Academic Council faculty.
2. Education as Self-Fashioning courses: ESF
  - a one quarter (Autumn), 7-unit course that satisfies both the Thinking Matters Requirement and the first-year Writing Requirement. For information on the program, faculty, and instructors, see the "ESF (p. 93)" section of this bulletin.
3. Integrated Learning Environments: ITALIC, and SLE
  - a three quarter, residence-based learning experience, which satisfies the THINK requirement, two of the University Writing and Rhetoric requirements, and selected General Education Requirements. For information regarding the three residence-based programs, faculty, and instructors, see the "ILE (<http://exploreddegrees.stanford.edu/resprog/#text>)" section of this bulletin.

Offices: Sweet Hall, Third Floor  
 Mail Code: 94305-3069  
 Phone: (650) 723-2631  
 Email: [pwrcourses@stanford.edu](mailto:pwrcourses@stanford.edu)  
 Web Site: <http://pwr.stanford.edu>

Courses offered by the Program in Writing and Rhetoric are listed under the subject code PWR on the Stanford Bulletin's ExploreCourses web site. Courses offered by the Oral Communication Program within PWR are listed under the subject code ORALCOMM. Please see below for more information about the Oral Communication Program.

The Program in Writing and Rhetoric (PWR) designs and teaches courses that meet the Writing and Rhetoric requirement for undergraduates at Stanford as well as intermediate and advanced writing and rhetoric classes. For more information on the requirement, see the "Writing and Rhetoric Requirement" page on the PWR website.

PWR courses engage students in rhetorical analysis of texts and research-based argument. Students in PWR courses learn and practice time-tested rhetorical principles to gain increasing control over the intellectual and stylistic elements of their writing; they learn to analyze the persuasive strategies of others and to apply those insights to their own writing.

Toward these ends, PWR 1 focuses on elements of academic argument: understanding a writer's stance; developing an argumentative thesis; discovering, developing, and deploying cogent proofs; making appropriate organizational and stylistic choices; and understanding the expectations of varied audiences. The course emphasizes research-based writing, including the effective use of primary and secondary sources and data based on fieldwork. Students enrolled in PWR 1 carry out significant research and use it as the basis for a persuasive research-based argument.

PWR 2 further develops students' skills in writing and oral presentation of research, emphasizing the ongoing development of content, organization, and style. The course addresses the dynamic interdependence of writing and speaking, as well as the importance of visual and multimedia elements in the effective presentation of research. Students enrolled in PWR 2 have opportunities to draft and revise written assignments and oral presentations as well as opportunities to present the results of scholarly inquiry, with an emphasis on how to work purposefully and well with a variety of presentation media.

As a general rule, students complete a minimum of three major assignments in both PWR 1 and 2. Written assignments vary from 5 to 15 pages in length, and students work intensively on revising each piece of writing. Oral presentation assignments vary from 3 to 10 minutes in duration, and students have an opportunity to rehearse and revise major presentations. All assignments involve analyzing a range of texts as well as identifying, evaluating, and using multiple sources in support of research-based arguments. In-class work focuses on how to read with an increasingly critical eye, how to utilize a range of generative writing and revision activities, and how to identify, evaluate, integrate, and cite sources effectively.

Writing and Rhetoric classes enroll no more than 15 students; all classes are conducted as seminars in which participation is crucial. In-class activities include close reading of and responding to the writing of peers; these workshops are augmented by a minimum of three individual or small group conferences with the PWR instructor during the quarter.

## Courses

The Writing and Rhetoric requirement includes courses at three levels.

1. The first-level course, taken in the first year, can be satisfied by courses in PWR or Integrated Learning Environments (Structural Liberal Education (SLE) and Immersion in the Arts: Living in Culture

## Thinking Matters Courses Offered in 2015-16

- All Thinking Matters Courses (<https://undergrad.stanford.edu/programs/thinking-matters/courses/thinking-matters-course-listings>) Offered in 2015-16 on the Thinking Matters web site
- Autumn Quarter on ExploreCourses (<https://explorecourses.stanford.edu/search?q=THINK&view=catalog&page=0&academicYear=20152016&filter-term=Autumn=on&filter-coursestatus=Active=on&collapse=&filter-catalognumber=THINK=on>)
- Winter Quarter on ExploreCourses (<https://explorecourses.stanford.edu/search?q=THINK&view=catalog&page=0&academicYear=20152016&filter-term=Winter=on&filter-coursestatus=Active=on&collapse=&filter-catalognumber=THINK=on&filter-catalognumber=THINK=on>)
- Spring Quarter on ExploreCourses (<https://explorecourses.stanford.edu/search?q=THINK&view=catalog&page=0&academicYear=20152016&filter-term=Spring=on&filter-coursestatus=Active=on&collapse=&filter-catalognumber=THINK=on&filter-catalognumber=THINK=on>)

## Program in Writing and Rhetoric (PWR)

*Faculty Director:* Professor Adam Banks

*Director, Stanford Introductory Studies for PWR:* Marvin Diogenes

*Associate Director:* Christine Alfano

*Director, Hume Center for Writing & Speaking:* Julia Bleakney

*Associate Director, Hume Center for Writing & Speaking:* Sarah Pittock

*Director, Oral Communication Program:* Doree Allen

*Director, Stanford Storytelling Project:* Jonah Willihnganz

*Lecturers:* Christine Alfano, Paul Bator, Shaleen Brawn, Russ Carpenter, Erica Cirillo-McCarthy, Maxe Crandall, Kevin DiPirro, Erik Ellis, Norah Fahim, Megan Formato, Thomas Freeland (Oral Comm), Wendy Goldberg, Arturo Heredia, Shannon Hervey, Donna Hunter, Kelda Jamison, Jennifer Johnson, Chris Kamrath, Valerie Kinsey, Clara Lewis, Helen Lie, Kimberly Moekle, Gabrielle Moyer, Alyssa O'Brien, John Peterson, Sarah Pittock, Emily Polk, Alya Raphael (Oral Comm), Becky Richardson, Carolyn Ross, Kim Savelson, Susan Schuyler-Olmsted, Selby Schwartz, Ruth Starkman, Jennifer Stonaker, Mary Stroud, Kathleen Tarr, Angela Becerra Vidergar, Ann Watters, Ben Wiebracht, Irena Yamboliev

*Fellows:* Jesse Davie-Kessler, Sarah Ives, Kiersten Jakobsen, Hanna Janiszewska, Raechel Lee, Lindsey Mantoan, Ethan Plaut, Trisha Stan, Robert Stephan, Eric Vanden Bussche

(ITALIC)) or by completion of the Education as Self-Fashioning (ESF) course; the curriculum emphasizes analysis and research-based argument.

2. The second-level course, to be completed by the end of the sophomore year, is a writing and oral/multimedia presentation course taught by the Program in Writing and Rhetoric and by other programs and departments. (Also, completion of Structured Liberal Education fulfills this requirement.) Courses taught outside of PWR may include experience in visual, oral, and/or multimodal communication. Some Introductory Seminars certified by the Writing and Rhetoric Governance Board satisfy the second-level Writing and Rhetoric Requirement (WRITE 2). Courses offered as Introductory Seminars require an additional application form; see the Introductory Seminars web site (<https://undergrad.stanford.edu/programs/introsems>).
3. The third-level course is a Writing in the Major (WIM) course taught in each major, providing students with systematic opportunities to develop skills for writing in their chosen fields. A list of certified WIM courses may be found in the table of "Undergraduate Major Unit Requirements (p. 37)" of this bulletin. WIM course descriptions may be found under individual department and program sections.

The sequence of required courses provides a coordinated approach responsive to how students mature as writers, researchers, and presenters during their undergraduate years. At each level, students develop greater sophistication in conducting inquiry and producing scholarly work in progressively more specific disciplinary contexts.

Before the term in which students enroll in the first two levels of the requirement, they review course descriptions on the PWR Courses webpage. After reviewing the offerings, students submit a list of top choices, and the PWR office assigns students to courses based on these preferences.

Students wishing to pursue advanced work in Writing and Rhetoric may enroll in electives offered by PWR. Topics vary; further information may be found in the PWR section of the Stanford Bulletin's ExploreCourses web site or on the PWR advanced courses web page. PWR also offers courses culminating in a Notation in Science Communication. For more information, visit the webpage.

## Hume Center for Writing and Speaking

Location: Building 250  
Mail Code: 2085  
Phone: (650) 723-0045  
Email: [humecenter@stanford.edu](mailto:humecenter@stanford.edu)  
Web Site: <http://hume.stanford.edu>

The Hume Center for Writing and Speaking (Hume Center) works with all Stanford writers to help them develop rich and varied abilities in every aspect of writing and oral communication. In one-to-one sessions, Hume writing consultants help students get started on assignments; address and overcome writer's block or performance anxiety; learn strategies for revising and editing; and understand academic conventions in their fields. Hume emphasizes support for students' writing, oral presentations, and multimedia compositions for PWR, Thinking Matters, and Introductory Seminars while also serving all Stanford undergraduates through individual and group tutorials, workshops, and seminars. The Hume Center also works with students in Writing in the Major (WIM) courses and students writing Honors theses. Other events hosted by the Center include performances for Parents Weekend and Admit Weekend. For further details, see the Hume Center for Writing and Speaking web site.

## Oral Communication Program

Email: [speakinghelp@stanford.edu](mailto:speakinghelp@stanford.edu)  
Web Site: <http://speakinghelp.stanford.edu>

The Oral Communication Program provides opportunities for undergraduates and graduate students to develop or improve their oral communication skills. Courses and workshops offer a comprehensive approach to speech communication, including training in the fundamental principles of public speaking and the effective delivery of oral presentations. The goal is to enhance students' general facility and confidence in oral expression. The program also provides innovative discipline-based instruction to help students refine their personal speaking styles in small groups and classroom settings.

## Student Writing and Oral Communication Tutors

Students with a passion for public speaking are encouraged to apply to writing or oral communication tutors (OCTs); the application process takes place each January, and for those students chosen to serve as writing tutors or OCTs, we offer a required training practicum in Spring Quarter.

## PWR Courses Offered in 2015-16

- PWR 1 Courses
  - Autumn Quarter ([https://explorecourses.stanford.edu/search?q=pwr\\*&view=catalog&filter-component-SEM=on&filter-term-Autumn=on&filter-ger-Writing1=on&page=0&filter-coursestatus-Active=on&collapse=%2c5%2c6%2c&academicYear=20152016](https://explorecourses.stanford.edu/search?q=pwr*&view=catalog&filter-component-SEM=on&filter-term-Autumn=on&filter-ger-Writing1=on&page=0&filter-coursestatus-Active=on&collapse=%2c5%2c6%2c&academicYear=20152016))

## Oral Communication Courses Offered in 2015-16

- Oral Communication Courses
  - Autumn Quarter
  - Winter Quarter
  - Spring Quarter ([https://explorecourses.stanford.edu/search?q=oralcomm\\*&view=catalog&filter-term-Spring=on&page=0&filter-coursestatus-Active=on&collapse=%2c5%2c6%2c&academicYear=20152016](https://explorecourses.stanford.edu/search?q=oralcomm*&view=catalog&filter-term-Spring=on&page=0&filter-coursestatus-Active=on&collapse=%2c5%2c6%2c&academicYear=20152016))
  - Summer Quarter (<https://explorecourses.stanford.edu/search?q=oralcomm&view=catalog&filter-term-Summer=on&page=0&filter-coursestatus-Active=on&collapse=%2c5%2c6%2c&academicYear=20152016>)

## Advanced PWR Courses

Prerequisites: PWR 1 and PWR 2.

		Units
PWR 194SB	Topics in Writing and Rhetoric: Rhetoric of Science	4
PWR 194DH	Topics in Writing and Rhetoric: Empathy: A Rhetorical Tool In The Fight For Social Change?	4
PWR 194KD	Topics in Writing and Rhetoric: Technology and Human Values	4
PWR 91KS	Intermediate Writing: Design Thinking and Science Communication	4
PWR 91NSC	Intermediate Writing: Introduction to Science Communication	4
PWR 91EP	Intermediate Writing: Communicating Climate Change: Navigating the Stories from the Frontlines	4
PWR 5	Independent Writing	1-5
PWR 6	Writing Workshop	1-3

q=ESF&view=catalog&page=0&academicYear=20152016&filter-term=Autumn=on&filter-coursestatus=Active=on&collapse=&filter-catalognumber=ESF=on) (click link to see Autumn course offerings)

## Introductory Seminars

*Faculty Director:* Russell Berman, Comparative Literature and German Studies

*Director, Stanford Introductory Studies for Introductory Seminars:* Ellen Woods

*Senior Associate Director:* Lee West

*Associate Director:* Joyce Moser

Faculty: More than 200 faculty from the Schools of Humanities and Sciences; Engineering; Law; Earth, Energy & Environmental Sciences; and the Graduate Schools of Business and Education

Offices: Second Floor, Sweet Hall

Mail Code: 3069

Phone: (650) 724-2405

Email: [introsems@stanford.edu](mailto:introsems@stanford.edu)

Web Site: <http://introsems.stanford.edu>

The Introductory Seminars program offers more than 200 small classes for first- and second-year students taught by faculty from across the seven Schools of the University. Professors teach subjects drawn from their research and scholarship and engage students in deep investigation of important questions and issues. Seminars require little or no formal background, and welcome freshmen and sophomores to Stanford's intellectual community.

Most seminars satisfy the WAYs Breadth Requirements, and several meet the second-level Writing and Rhetoric Requirement. All seminars foster close faculty-student relationships through the study of topics of mutual interest. To make the best matches between faculty and students with a shared interest in a topic, students write brief statements of interest for faculty to read as part of the application process. Seminars that are not filled by application are open for enrollment in Axess with preference to freshmen and sophomores.

Freshmen and sophomores may rank up to three seminars per quarter, but there is no limit on the total number of seminars a student can take. For information about application and enrollment, see the Introductory Seminars web site. Application deadlines for each quarter are at 5PM on:

- Autumn Quarter: September 1, 2015
- Winter Quarter: October 12, 2015
- Spring Quarter: January 25, 2016

### Introductory Seminars Courses Offered in 2015-16

Mail code: 3069

Phone: (650) 724-4667

## Education as Self-Fashioning

*Director:* Dan Edelstein (French and Italian)

*Faculty:* Dan Edelstein (French and Italian), Ronald Egan (East Asian Languages and Cultures) Robert Harrison (French and Italian), Blair Hoxby (English), Andrea Nightingale (Classics),

*Writing Instructor:* Yafang Bao, Meli Li Inouye, Bilianna Kassabova, Valerie Kinsey, Rebecca Richardson, Boris Shoshitaishvili, Elizabeth Ten-Hove.

Offices: Sweet Hall, Second Floor

Mail Code: 94305-3068

Phone: (650) 723-0944

Email: [thinkingmatters@stanford.edu](mailto:thinkingmatters@stanford.edu)

Web Site: <https://undergrad.stanford.edu/programs/education-self-fashioning-esf>

Education as Self-Fashioning (ESF) is a unique opportunity offered only in the autumn quarter, since its aim is to introduce entering students to a liberal education. The six courses provide you with an opportunity to work closely with a faculty member in a seminar-style setting while simultaneously completing your first-year writing requirement. In ESF, we consider writings about education by intellectuals working in various fields, with the aim of articulating different ways that education can be used to structure one's thinking, one's self, and ultimately one's life as a whole. You will grapple with this issue in dialogue with fellow students and faculty from across a wide range of disciplines — from the humanities and social sciences through the natural sciences and mathematics.

The ESF program satisfies both the Thinking Matters and the PWR1 requirement. ESF is a set of linked seminars related to the general theme expressed in the course title. Six seminars, each with a different focus, meet separately as discussion classes led by the faculty; all ESF students also come together for a plenum session or large lecture each week. Each seminar coordinates writing instruction with the course theme in specially designated writing sections.

The three components of ESF are described below. ESF counts as a 7-unit course.

1. A seminar with a faculty member that meets once per week for at least 75 minutes.
2. A section with a writing instructor that meets for sessions of 110 minutes twice per week.
3. A lecture series that will meet once-a-week featuring prominent intellectuals. These lectures are required for students enrolled in ESF.

### ESF Courses Offered in Autumn 2015-16

- All ESF Courses Offered in 2015-16 (<https://explorecourses.stanford.edu/search?>

Email: [sophcollege@stanford.edu](mailto:sophcollege@stanford.edu)  
 Web Site: <http://soco.stanford.edu>

Sophomore College (SoCo) offers rising sophomores who share a passion for an area of study an opportunity to meet daily in seminar-size classes with Stanford faculty for lecture and discussion; students may also work in labs, participate in community-based learning, go on field trips, and engage in a range of other activities that facilitate in-depth mentoring relationships. Held before the start of students' sophomore year, this residential program encourages academic and social connections and transforms classes into intellectual communities, helping participants establish rich relationships with peers and faculty that extend beyond graduation. Seminars are for 2 credits; the Sophomore College program fee covers tuition, room, board, books, and class-required travel arranged by the program. Financial Assistance is available. You can view the on-line catalog and learn more about SoCo at the Sophomore College (<https://undergrad.stanford.edu/programs/sophomore-college>) web site.

## Arts Intensive

Offices: Sweet Hall, Third Floor  
 Mail code: 3069  
 Phone: (650) 724-4667  
 Email: [artsintensive@stanford.edu](mailto:artsintensive@stanford.edu)  
 Web Site: <http://artsintensive.stanford.edu>

The Arts Intensive (AI) Program offers rising sophomores, juniors, and seniors the opportunity to study intensively with Stanford arts faculty and small groups of other Stanford students. The Arts Intensive program takes place over three weeks in September before the start of Autumn Quarter.

Arts Intensive courses engage students in the theory and practice of a particular artistic discipline. Courses often include field trips, workshops, film screenings, studio sessions, or other arts events in the afternoons, evenings, and on weekends. Courses are taught by Stanford arts faculty and often include contributions from professional visiting artists. Arts Intensive students live together in a Stanford residence during the program, making for a rich immersion into a creative community. This unique opportunity allows students to focus on their art practice without the constraints of other coursework. Enrollment is by application and takes place in Spring Quarter for the upcoming September program. Each Arts Intensive course enrolls 10 to 20 students and offers 2 units of academic credit. For more information or to apply, see the Arts Intensive (<http://artsintensive.stanford.edu>) web site.

## Bing Honors College

Offices: Hume Center for Writing and Speaking (Building 250)  
 Mail code: 2085  
 Phone: (650) 723-0045  
 Email: [binghonorscollege@stanford.edu](mailto:binghonorscollege@stanford.edu)  
 Web Site: Bing Honors College ([http://www.stanford.edu/dept/undergrad/cg-bin/drupal\\_ual/00\\_honors\\_BingHonors.html](http://www.stanford.edu/dept/undergrad/cg-bin/drupal_ual/00_honors_BingHonors.html))

Bing Honors College brings students working on the early phases of their honors theses back to campus in early September, and gives them three weeks before the start of Autumn Quarter during which they can think, read, plan, research, and write.

With the support of faculty leaders and graduate students from participating departments and programs, students work on what they need, such as narrowing down a topic, improving research skills, making a timeline, writing a literature review, starting a chapter, collecting or sorting data, etc. This opportunity to focus solely on their theses helps the students to begin their senior year with a sense of direction and intellectual purpose, a commitment to their scholarship, and concrete progress on their projects. The College provides room and board. It also

sponsors cross-disciplinary forums, such as writing workshops and faculty-led research panels, as well as residential activities and a closing celebratory event for all the students and their faculty leaders.

If you are a prospective honors student interested in joining Bing Honors College, please contact your department to find out whether it is participating. If your department is not participating but your adviser is willing to nominate you, the College will try to place you with a BHC leader who will provide you with the necessary support and guidance.

## Overseas Studies

### Bing Overseas Studies Program

The Bing Overseas Studies Program (BOSP) provides opportunities for Stanford students to broaden their undergraduate education through study in another country and exposure to its culture. Regular quarter-length programs in Australia, Beijing, Berlin, Cape Town, Florence, Istanbul, Kyoto, Madrid, Oxford, Paris, and Santiago offer courses in social and natural sciences, humanities, engineering, and earth sciences with full Stanford credit. Many courses also count toward major requirements and/or fulfill University breadth requirements. Students may enroll for one or more quarters at most locations. Academic or paid internships are available at certain program locations. Research opportunities are available in various formats at different centers. Community-engaged learning and community-based research opportunities are available in Cape Town. Minimum academic and language prerequisites are specific to each program. See the BOSP (<http://bosp.stanford.edu>) web site for information on these prerequisites.

While studying overseas through BOSP, students remain registered at Stanford and pay regular tuition, along with an overseas fee, which is based on Stanford on-campus room and board rates. Regular financial aid applies, and may be adjusted to cover additional costs. At many centers, students live in a homestay or a dormitory setting with local and other students.

In addition to the programs offered through BOSP for enrolled Stanford students, the University is a member of the Consortium for Advanced Studies in Barcelona (CASB) and the Kyoto Consortium for Japanese Studies (KCJS), where students may enroll while remaining registered at Stanford. Overseas Studies also offers three-week faculty-led overseas seminars in various locations during Summer Quarter, a faculty-initiated program in Oaxaca, Mexico focusing on community health, and occasional other such programs in various locations.

Located on the ground floor of Sweet Hall, Overseas Studies has full-time staff members and student advisors to assist in advising and planning for overseas study. Course information, while accurate at the time of publication, is subject to change. Consult the BOSP (<http://bosp.stanford.edu>) web site for updated information.

## Locations

Courses offered by the Overseas Studies Program are listed on the Stanford Bulletin's (<http://explorecourses.stanford.edu>) ExploreCourses (<http://explorecourses.stanford.edu>) web site under subject codes beginning with OSP. Each BOSP location has its own subject code. Those subject codes, by location, are:

- Australia [OSPAU STL]
- Barcelona (Consortium for Advanced Studies ) [OSPBARCL]
- Beijing [OSPBEIJ]
- Berlin [OSPB ER]
- Cape Town [OSPCPTWN]
- Florence [OSPF LOR]

- Istanbul [OSPISTAN] (<https://explorecourses.stanford.edu/search?view=catalog&catalog=&page=0&q=OSPISTAN&filter-catalognumber=OSPISTAN=on>)
- Kyoto [OSPKYOTO]
- Kyoto Consortium for Japanese Studies [OSPKYOCT]
- Madrid [OSPMADRD]
- Oxford [OSPOXFRD]
- Paris [OSPPARIS]
- Santiago [OSPSANTG].

## Program Director

*Program Director:* Ramón Saldivar

## Stanford Program in Australia

*Director:* Ian Tibbetts, School of Biological Sciences, University of Queensland

*Faculty-in-Residence:* Kevin Arrigo

*Program Faculty:* Claire Baker, Catherine Lovelock, Brian McIntosh, Christopher Salisbury, Selina Ward

## Stanford Program in Beijing

*Director:* Mingzheng Shi

*Faculty-in-Residence:* Andrew Walder, Xueguang Zhou

*Program Faculty:* Li Chen, Wenxiang Gong, Anshan Li, Kun Li, Liyan Qin, Chenshan Tian, Suolao Wang, Yan Wang, Pei Zhang, Shiqui Zhang, Xiaoyou Zhu

## Stanford Program in Berlin

*Director:* Karen Kramer

*Faculty-in-Residence:* Clyde Tatum, Charlotte Fonrobert, Stephen Hinton

*Program Faculty:* Maria Biege, Diana Boebe, Ulrich Brückner, Adrian Grunert, Martin Jander, Wolf-Dietrich Junghanns, Ingo Klein, Sylvia Kloetzer, Matthias Pabsch, Sylke Tempel, Jochen Wohlfeil

## Stanford Program in Cape Town

*Director:* Trudy Meehan

*Faculty-in-Residence:* Catherine Heaney, Robert Siegel, Stephen Stedman

*Program Faculty:* Mohamed Adhikari, Adelene Africa, June Bam, Ronelle Carolissen, Diane Cooper, Adam Haupt, Stephan Klingebiel, Ruenda Loots, Wamuwi Mbao, Luke Metelerkamp, Sophie Oldfield, John Parkington, Jeremy Sarkin, Diana Sanchez, Chris Saunders, Nolubabalo Tyam, Quentin Williams

## Stanford Program in Florence

*Director:* Ermelinda Campani

*Faculty-in-Residence:* Jonathan Berger, Talya Berger, Pamela Karlan, Hazel Markus, Paula Moya

*Program Faculty:* Elena Baracani, Alba Cappellieri, Veronica De Romanis, Paolo Galluzzi, Massimo Martignoni, Anthony Molho, Michele Papa, Domenico Pellegrini-Giampietro, Fiorenza Quercioli, Filippo Rossi, Monica Toraldo di Francia, Augusto Valeriani, Timothy Verdon

## Stanford Program in Istanbul

*Program Faculty:* Birgul Arslan, Asli Niyazioglu, Didem Pekün, Alexis Rappas, Murat Somer

## Stanford Program in Kyoto

*Director:* Mike Hugh

*Program Faculty:* Matthew Sommer, Allison Okamura

*Program Faculty:* William Bradley, Yuko Kawahara, Catherine Ludvik, Yasue Numaguchi, Setsuko Onodera, Akiko Shimizu, Philip Sugai, Kiyoko Tanaka, Hiroko Tayama, Megumi Tsuchida, Rie Tsujino, Haruka Ueda, Douglas Woodruff

## Stanford Program in Madrid

*Director:* Pedro Perez-Leal

*Faculty-in-Residence:* H. Samy Alim, Adrian Lew, Jorge Ruffinelli

*Program Faculty:* María Almudena Ariza Armada, Francisco Javier Bobillo de la Peña, Alberto Bosco, Miguel Buñuel, María Teresa Cambor Portilla, Pablo Campos Calvo Sotelo, Andrés Díez Herrero, Julia Doménech López, Sylvia Hilton, Sheila Klaiber, Miguel Larrañaga Zulueta, Pablo de Lora Deltoro, Laura Luceño Casals, Eduardo Manzano Moreno, Antonio Muñoz Carrión, Laura Murcia Cánovas, Alicia Pérez, Miguel Requena Díez de Revenga, Liliana Suárez Navaz, Oscar Sánchez Fuster, Isidro Yerba Prada

## Stanford Program in Oxford

*Director:* Geoffrey Tyack

*Faculty-in-Residence:* Rona Giffard, Simon Jackman, Daniel Lassiter

*Program Faculty:* Anna Beer, James Forder, Matthew Landrus, Robert McMahon, Amanda Palmer, Scot Peterson, Emma Plaskitt

## Stanford Program in Paris

*Director:* Estelle Halévi

*Faculty-in-Residence:* Stephen Cooper, Joseph Lipsick, Deborah Stipek

*Program Faculty:* Nadine Airut, Laurie Boussaguet, Peter Brooks, Cecile Cotté, Susan Cure, Jean-Marie Fessler, Benedicte Gady, Brigitte Gallini, Patrick Guédon, Tiphaine Karsenti, Eloi Laurent, Florence Leca, Jacques Le Cacheux, Giovanni Lévi, Elizabeth Molkou, Gregoire Quenault, Marie-Christine Ricci, Klaus-Peter Sick, Sylvie Strudel, Fabrice Virgili, Oscar Villegas-Paez

## Stanford Program in Santiago

*Director:* Iván Jaksic

*Faculty-in-Residence:* Ximena Briceno, Hectór Hoyos, Helen Longino, Valerie Miner

*Program Faculty:* Mabel Abad, César Alborno, Andrés Bobbert, Germán Correa, Rolf Lüders, Sergio Missana, Cristian Muñoz, Alvaro Palma, Iván Poduje, Hernan Pons, Sharon Reid, Emilio Rivano

## Undergraduate Advising and Research

### Undergraduate Advising and Research

Central UAR Office: Sweet Hall, first floor  
Phone: (650) 723-2426

Fax: (650) 725-1436  
 Web Site: <http://undergrad.stanford.edu>  
 Email: [advising@stanford.edu](mailto:advising@stanford.edu) ([vpue-advising@stanford.edu](mailto:vpue-advising@stanford.edu)), [vpue-research@stanford.edu](mailto:vpue-research@stanford.edu)  
 Appointments: (650) 723-2426

Undergraduate Advising and Research upholds the mission, standards, and requirements of the University, introduces students to the full intellectual richness of undergraduate study at Stanford, supports students in their academic and intellectual pursuits, and instills within them a sense of identity within and belonging to our community of scholars at Stanford. UAR is responsible for facilitating new students' transition to Stanford, academic advising, academic policy and progress, and undergraduate research opportunities.

## Transitioning New Students

UAR is responsible for the Approaching Stanford program, which guides new students through the process of coming to Stanford from their admission to the University until the first day of class. This process culminates in New Student Orientation which is required for all new freshmen and transfer students. See the Approaching Stanford (<https://approaching.stanford.edu>) web site for additional information.

## Freshman and Transfer Student Policies

Stanford values the transition process as the foundation for thriving both academically and personally in our community. The following policies support this principle and apply to freshmen and new transfer students:

- All freshmen and new transfer students are required to attend New Student Orientation and must be in residence by 5:00 p.m. on the first day of NSO, Tuesday, September 15, 2015.
- Freshmen and new transfer students are required to live on campus in University housing for three consecutive quarters in their first year. Should behavior warrant a first-year student's removal from the residences, that student cannot enroll in classes until he or she has returned to the residential community.
- When circumstances arise which make it advisable for a freshman to take a leave absence at any time during the first year, he or she is required to wait until Autumn Quarter of the following year to return to Stanford.
- Freshmen and new transfer students cannot enroll in the Summer Quarter prior to their first year unless they are participating in a VPUE-sponsored program. Exceptions are very rarely granted.

## Advising

UAR pairs each freshman with two advisers: a pre-major adviser and a UAR academic advising director. Freshmen are matched with their pre-major advisers (faculty and academic staff) according to their preliminary academic interests and residence. Pre-major advisers are well suited to help students understand the University and are the first of many mentors students find at Stanford. The UAR academic advising directors in the undergraduate residences complement the role of the assigned pre-major advisers with a comprehensive understanding of the curriculum. They advise students broadly on their courses of study and long-term goals and can answer questions about academic policy. The UAR advising staff also includes professional advisers in Sweet Hall who specialize in research, fellowships, and pre-professional and coterminal advising, as well as advisers in the Athletics Academic Resource Center (<https://undergrad.stanford.edu/advising/about-advising/advising-student-athletes>) (AARC), who support varsity athletes.

See the Advising web site (<https://undergrad.stanford.edu/advising>) for more information about academic advising, programming, and support for undergraduates.

## Academic Policy

UAR oversees the implementation of University academic policies, including petitions for exceptions to academic policy and monitoring students' academic progress. There are professional advisers in Sweet Hall who specialize in supporting students who are on academic probation, provisional registration, or suspension. For more information about academic policies that UAR advisers and academic advising directors help students navigate, see the Academic Policies (<https://undergrad.stanford.edu/planning/academic-policies>) web site.

## Undergraduate Research and Fellowships

UAR encourages undergraduates to work with faculty on independent projects in research, the arts, and senior synthesis. UAR facilitates these close relationships by providing advising and funding to undergraduates across all disciplines and at all stages of developing an idea into a research project. See the Research and Independent Projects (<https://undergradresearch.stanford.edu>) web site for more information. For current deadlines, grant types, and program details, see the Student Grants (<https://studentgrants.stanford.edu>) page. Faculty or departments interested in applying for funding to support undergraduates in their working groups can learn more on the For Faculty (<https://undergrad.stanford.edu/opportunities/research/faculty>) page.

Together with advisers at the Overseas Resource Center (<http://stanford.edu/dept/icenter/orc>) and the Haas Center for Public Service (<http://haas.stanford.edu>), UAR advisers help prepare students to compete for nationally competitive fellowships. UAR also administers the campus nomination process for several U.S.-based fellowships. See the Fellowships (<https://undergrad.stanford.edu/opportunities-research/fellowships>) web site for more information on fellowship opportunities.

UAR offers workshops and individual consultations on planning for graduate or professional studies (e.g., business, education, law, and medicine) and on general application procedures, including how to write personal statements, how to solicit letters of recommendation, and how to prepare for interviews. See the Planning for Graduate and Professional School (<https://undergrad.stanford.edu/opportunities-research/steps-planning-graduate-and-professional-school>) web site for more information.

## Center for Teaching and Learning

*The Center for Teaching and Learning is now part of the newly established office of the Vice Provost for Teaching and Learning (<https://vptl.stanford.edu>). Additional information is also available at the Teaching Commons (<https://teachingcommons.stanford.edu>) web site. This organizational change will soon be reflected in this Bulletin, and this legacy section will remain in place until that change has been made.*

## Center for Teaching and Learning

The Center for Teaching and Learning is a University-wide resource whose vision is that everyone at Stanford will know how learning works and will translate that knowledge into research-based, daily practice and public dialog. The Center supports faculty, lecturers, teaching assistants, and students with courses and other resources designed to enhance teaching excellence and/or learning skills while also providing a source of motivation, inspiration, and guided self-reflective growth.

## CTL Resources for Teaching

CTL provides the Stanford community with services and resources on effective teaching. The center's goals are to:

- engender and disseminate knowledge and understanding of the newest research on student learning

- network and support instructors seeking to share ideas and community around teaching
- stimulate faculty involvement in the scholarship of teaching and learning
- identify and involve successful faculty, lecturers, and TAs who are willing to share their talents with others
- provide those who are seeking to improve their teaching with the means to do so
- acquaint the Stanford community with important innovations and new technologies for teaching
- prepare new faculty and TAs for their responsibilities
- contribute to the professional development of teaching assistants
- expand awareness of the role of teaching at research universities
- increase the rewards for superior teaching.

Resources available to faculty, lecturers, and TAs include: classroom observation and video recording, microteaching (simulated practice teaching), and consultation; small group and other forms of mid-quarter evaluation; workshops, lectures, and teaching orientations; online teaching resources, and a library of teaching materials. CTL works with individuals, groups, and departments on their specific needs, including support of teaching events, retreats, and the design of effective TA training programs.

All these resources and more are available at <http://teachingcommons.stanford.edu>.

For questions or requests, email [TeachingCenter@stanford.edu](mailto:TeachingCenter@stanford.edu).

## CTL Resources for Learning

CTL provides academic coaching for graduate students and undergraduates who want to enhance their study approaches and learning strategies. Through courses, individual counseling, and workshops, CTL helps students build skills that are the foundation for continual improvement and lifelong learning. Students benefit from developing and applying individually crafted strategies that build on their existing strengths. Time management, test preparation, note taking, reading comprehension and retention, and procrastination are common topics for discussion. For more information, visit Academic Skills Coaching (<https://undergrad.stanford.edu/tutoring-support/academic-skills-coaching>).

Free tutoring is available to undergraduates in many subjects; see <http://tutoring.stanford.edu> for details on where and when tutors can be found, what to expect, and how to apply to work as a tutor.

*Associate Vice Provost for Undergraduate Education and Director:* Robyn Wright Dunbar

*Senior Associate Director:* Vera Safa Michalchik

*Associate Directors:* Jennifer Randall Crosby, Mariatte Denman, Adina Glickman

*Directors of Community Engaged Learning:* Suzanne Gaulocher, Luke Terra, Sarah Truebe

*Assistant Director:* Tim Randazzo

*Faculty Fellows:* Sarah Billington, Michele Elam

*Faculty Advisers:* Robert Calfee, Tom Ehrlich, Sheri Sheppard, Lee Shulman

## ROTC

### Reserve Officers' Training Corps (ROTC) Cross-Enrollment Agreements for ROTC

Stanford has cross-enrollment agreements for the Reserve Officers' Training Corps (ROTC) with the Navy and Marine Corps ROTC program at the University of California at Berkeley, the Army ROTC program at Santa Clara University, and the Air Force ROTC program at San Jose State University. These agreements allow Stanford students to engage in military training while working on their degrees from Stanford. Courses taken in ROTC programs are offered by and through UC Berkeley, Santa Clara, and San Jose State. Most courses count for academic or activity credit and count toward the 12-unit requirement for full-time registration status and satisfactory academic progress requirements for Stanford undergraduates.

Normally, students who participate in ROTC training complete a four-year course of instruction at the respective institution that consists of two years of basic courses during the freshmen and sophomore years, and an advanced course of instruction during the junior and senior years. Students who accept ROTC scholarships are generally subject to a service obligation, depending on the regulations of the particular service.

Stanford students who are enrolled in ROTC programs under the cross-enrollment agreements are eligible to compete for various scholarships that provide up to full tuition and a monthly stipend. Students normally compete for national scholarships as high school seniors, although current Stanford students may be eligible to enroll in ROTC on a non-scholarship basis. Non-scholarship ROTC students are eligible to compete for scholarships, and individual services may offer additional scholarship programs to current qualifying undergraduate and graduate students. Interested students should contact the appropriate military branch at the host institution to obtain information on these programs and to initiate application procedures.

Students who satisfactorily complete an ROTC program and are awarded a Stanford degree qualify for a commission as a Second Lieutenant in the U.S. Army, an Ensign in the U.S. Navy, a Second Lieutenant in the U.S. Marines, or a Second Lieutenant in the U.S. Air Force.

For additional questions concerning the ROTC programs, Stanford students should consult with one of the host units.

### Academic Credit

All three service programs have a mandatory lab course each quarter which carries 1 unit of activity credit for satisfactory completion of work. Although there is no limitation on the number of activity classes in which a student may enroll, no more than 8 units of these activity classes (and/or other university activity classes) may be applied toward undergraduate graduation requirements (see the Undergraduate Degrees (p. 32) section of this bulletin).

Upper level ROTC academic courses carry two units of credit for satisfactory completion of work and are graded on a credit/no credit basis. No more than 36 units without a letter grade may be applied toward undergraduate graduation requirements (see the Undergraduate Degrees (p. 32) section of this bulletin).

## Air Force ROTC

*Commanding Officer:* Lieutenant Colonel Michael E. Pecher

Air Force ROTC courses are offered at San Jose State University. See also the SJSU website (<http://www.sjsu.edu/afrotc>).

Courses in the freshman year focus on the foundation of the United States Air Force and introduce students to the Air Force and AFROTC.

Topics include the characteristics, missions, and organization of the Air Force, the qualities of an officer and professionalism, career opportunities, military customs and courtesies, and communication skills.

Courses in the sophomore year focus on the evolution of the United States air and space power. Students study air and space power through historical analysis and examine the capabilities, function, and doctrinal employment of aerospace forces. The course emphasizes oral and written communication skills.

Courses in the junior year focus on Air Force leadership studies. Topics include leadership, management fundamentals, professional knowledge, Air Force personnel system, ethics, and communications. Students apply knowledge and skills required of junior Air Force officers through case studies, practical exercises, and seminar discussion.

Senior year courses cover two subjects, national security affairs and preparation for active duty. Students learn about national security process, international and regional relations, advanced leadership ethics, Air Force doctrine with focus on the military as a profession, military justice, civilian control of the military, and current issues affecting the military. Preparation for active duty focuses on the role of the Air Force officer in contemporary society emphasizing skills to facilitate a smooth transition from civilian to military life.

The leadership laboratory is required for all students every quarter. Students participate in hands-on exercises to learn drill and ceremony; Air Force customs and courtesies; leadership and followership skills; and they hear from guest speakers on a variety of Air Force topics.

## Army ROTC

*Commanding Officer:* Lieutenant Colonel John Tiedeman

Some Army ROTC courses are offered at Santa Clara University and some are offered on Stanford's campus. See also the Army ROTC web site (<http://www.scu.edu/rotc>).

Freshman year courses introduce students to leadership and personal development and provide foundations for leadership. Course topics include personal challenges and competencies for effective leadership, goal setting, time management, physical fitness, and stress management related to leadership and officership. Students develop a personal fitness program under the guidance of an Army master fitness trainer. In addition, they learn leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback, and effective writing skills in the context of practical and interactive exercises.

Army courses taught in the sophomore year look at leadership through a variety of lenses using case study and interactive exercises. Topics include creative and innovative leadership strategies and styles, challenges of leading in contemporary operational environments along with crosscultural challenges, and team leading procedures.

In the junior year, students learn adaptive team leadership and situational leadership. They develop skills including decision making, persuading, and motivating team members when under fire in small-unit tactical operations scenarios.

Courses for seniors provide capstone leadership instruction and experiences in a practical and current event driven context. Students plan, execute, and assess complex operations, function as a member of staff, and provide leadership performance feedback to subordinates. They use case studies, scenarios, and exercises to prepare for their first unit assignment and the transition to commissioned officer in a modern world.

All students are also required to take a military history course focused on leadership. This course may be taken any year. The leadership laboratory is required for all students every quarter. In addition, students complete a four-day weekend field training exercise away from the University in the Autumn and Spring quarters, and a formal military dinner during an evening in the Winter Quarter.

## Naval ROTC

*Executive Officer:* Captain William Koyama

Naval ROTC courses are offered at the University of California at Berkeley. See also the Naval ROTC web site.

Courses in the freshman year introduce students to the Navy and Marine Corps and to the NROTC program. They also study sea power from a historical and United States centered perspective.

In the sophomore year, students take their first leadership class with a focus on management and their first navigation class with a focus on the fundamentals of nautical navigation. Courses include case studies, student presentations, and practical exercises.

Juniors study introductory naval engineering with a focus on ship systems and modern weapons systems. Example topics include gas turbine propulsion systems, nuclear reactors, and radar and sonar theory.

During their senior year, students study advanced leadership topics within an ethics framework and advanced navigation and naval operations.

Students pursuing a commission in the Marine Corps do not take the two engineering courses or the two navigation courses. Marine option students take two Marine Corps specific courses that examine the history of littoral warfare and the evolution of warfare.

All students are required to take the weekly professional development laboratory course (drill) at UC Berkeley every quarter.

# GRADUATE EDUCATION

The Vice Provost for Graduate Education (VPGE) works collaboratively to ensure that every graduate student has the best possible education. VPGE's initiatives and resources enrich students' academic experiences at Stanford, advancing diversity, preparing leaders, and positioning Stanford at the forefront of innovation in graduate education. VPGE serves Stanford's doctoral, master's, and professional degree students from all seven Stanford schools. VPGE plays a leadership role in initiating and managing policies and programs that enhance and complement the offerings of the departments and programs that have primary responsibility for organizing and delivering graduate education.

In addition to providing University-wide graduate policy direction, the VPGE office has five primary areas of program activity: administering University-wide graduate fellowship programs; advancing graduate student diversity; providing professional development programs and events; promoting interdisciplinary and cross-school learning; and encouraging innovation in graduate programs. The Vice Provost for Graduate Education reports to the Provost.

## Graduate Policy

The Faculty Senate Committee on Graduate Studies (C-GS) formulates policy concerning the substance and process of graduate education as well as the evaluation and recording of graduate achievement, and reviews the implementation of such policy. The committee also monitors the academic quality and effectiveness of the University's graduate interdisciplinary and joint degree granting programs. Committee members include the Vice Provost for Graduate Education or her delegated staff (ex officio) and representatives from the faculty at large, administration such as the Office of the University Registrar, and students. The Graduate Student Council and the Nominations Committee of the Associated Students of Stanford University (ASSU) choose student members.

VPGE recommends, promulgates, and interprets University policies related to graduate education. VPGE oversees administrative and financial systems related to graduate student support, including policies related to requirements for research and teaching assistantships, and minimum compensation levels for those positions. For other policies related to graduate admissions and degree requirements, see relevant sections of this bulletin.

## Honor Code and Fundamental Standard

The Honor Code and Fundamental Standard establish the conditions for academic work at Stanford and represent an agreement between students and faculty about their responsibilities for learning and teaching. The Interpretations and applications of the Honor Code, the Student Judicial Charter of 1997, the Student Conduct Penalty Code, statistics, and other documents are available at the Office of Community Standards (<http://studentaffairs.stanford.edu/communitystandards>) web site.

## Research Policies for Graduate Students

Graduate education and research are interrelated enterprises. Many Stanford graduate students conduct research under the guidance and sponsorship of Stanford faculty members. The Dean of Research has primary responsibility for oversight of the research enterprise. Several policies in that arena are particularly relevant to graduate students. These include:

### Academic Authorship

Guidelines related to academic authorship, such as the allocation of responsibility and credit for scholarly publications. For complete text of the guidelines, see Research Policy Handbook memo 1.5, On Academic

Authorship (<http://doresearch.stanford.edu/policies/research-policy-handbook/conduct-research/academic-authorship>).

### Intellectual Property

Policies on copyrights and patents resulting from University work. Graduate students and postdoctoral scholars, as well as all faculty, staff, and visitors engaged in research, must sign the Stanford University Patent and Copyright Agreement (SU-18). For complete text of the currently applicable versions of these policies, see Research Policy Handbook chapter 9, Intellectual Property (<http://doresearch.stanford.edu/policies/research-policy-handbook/intellectual-property>).

### Openness in Research

Policy on openness in research, such as the principle of freedom of access by all interested persons to the underlying data, processes, and final results of research. Stanford University does not accept funding for research projects that require secrecy. For complete text of the currently applicable version of this policy, see Research Policy Handbook memo 1.4, Openness in Research (<http://doresearch.stanford.edu/policies/research-policy-handbook/conduct-research/openness-research>).

### Relationships between Students and Outside Organizations

Summary of policies on the establishment of relationships between students and outside entities, such as private companies or nonprofit organizations, as part of or outside the student's academic program at Stanford. This covers open versus proprietary nature of the work, ownership of intellectual property, and possible conflicts of commitment and interest. For complete text of the currently applicable versions of these policies, see Research Policy Handbook memo 10.6, Relationships Between Students (Including Postdoctoral Scholars) and Outside Entities (<http://doresearch.stanford.edu/policies/research-policy-handbook/non-faculty-research-appointments/relationships-between-students>).

### Research Compliance

Several administrative panels review and approve research projects to safeguard the rights and welfare of all human research subjects, ensure the humane care and use of laboratory animals, and protect the safety of personnel and the general public in the areas of biosafety and radiological safety. For more information, contact the Research Compliance Office (<http://researchcompliance.stanford.edu>).

### Research Misconduct

Policy on allegations, investigations, and reporting of research misconduct. Each member of the University community has a responsibility to foster an environment which promotes intellectual honesty and integrity, and which does not tolerate misconduct in any aspect of research or scholarly endeavor. For complete text of the currently applicable version of this policy, see Research Policy Handbook memo 1.7, Research Misconduct: Policy on Allegations, Investigations and Reporting (<http://doresearch.stanford.edu/policies/research-policy-handbook/conduct-research/research-misconduct-policy-allegations>).

## Graduate Fellowship Programs

Several University-wide graduate fellowship programs are administered by the VPGE, including the Stanford Graduate Fellowships Program in Science and Engineering (SGF) and the Stanford Interdisciplinary Graduate Fellowship (SIGF) program. VPGE also administers several smaller University-wide fellowships programs to new and continuing doctoral students that require nomination by faculty or deans.

### Stanford Graduate Fellowships Program in Science and Engineering (SGF)

Web site: <http://sgf.stanford.edu>

SGF competitively awards approximately 100 two- and three-year fellowships providing tuition support and stipend to outstanding students

pursuing a doctoral degree in the sciences and engineering. SGF fellows can explore labs in a variety of fields. Nominations for SGF fellowships are submitted by science and engineering departments and programs.

### Stanford Interdisciplinary Graduate Fellowships (SIGF)

Web Site: <http://sigf.stanford.edu>

The SIGF program awards fellowships on a competitive basis to doctoral students engaged in interdisciplinary research. The fellowships enable Stanford doctoral students to pursue questions that cross traditional disciplinary boundaries. Students in the first three years of their doctoral program are eligible to apply.

## Graduate Student Diversity

VPGE works to diversify the graduate student population by supporting recruitment and retention programs in collaboration with faculty and staff in each of the schools. VPGE funds recruitment activities to expand the pool of qualified applicants, such as visits to campus and travel grants. VPGE offers resources to groups within and across schools for activities that enhance the quality of students' educational experiences and improve retention. VPGE also works collaboratively to develop programs that cultivate interest in academic careers and diversify the pipeline for future faculty. The DARE Doctoral Fellowship Program, administered by VPGE, awards two-year fellowships on a competitive basis to Stanford doctoral students in their final two years who want to investigate and prepare for academic careers and whose presence will help to diversify the professoriate.

## Professional Development

Leadership, pedagogy, communication, working in teams, career development and entrepreneurship are topics of interest to graduate students across the University. VPGE collaborates with other departments, such as the Center for Teaching and Learning (p. 96), the Graduate Life Office (p. ), and the Hume Writing Center (p. ) to raise the visibility and expand the breadth of offerings to help graduate students' professional development.

## Interdisciplinary and Cross-School Learning Opportunities

VPGE provides seed funding to initiatives that foster interdisciplinary and cross-school interactions for graduate students. The Stanford Graduate Summer Institute (SGSI) offers noncredit interdisciplinary short courses exclusively for Stanford graduate students and postdoctoral scholars. VPGE also seeks to facilitate enrollment in courses outside of students' home departments and schools.

Leadership, pedagogy, communication, working in teams, career development and entrepreneurship are topics of interest to graduate students across the University. VPGE collaborates with other departments, such as the Center for Teaching and Learning, the Graduate Life Office, and the Hume Writing Center to raise the visibility and expand the breadth of offerings to help graduate students' professional development.

### Stanford Graduate Summer Institute (SGSI)

Web site: <http://sgsi.stanford.edu>

SGSI courses introduce graduate students to multidisciplinary and interdisciplinary thinking. Students from across the University have the opportunity to meet others outside their fields, create networks, and foster cross-disciplinary collaborations. Most SGSI courses are small and taught in an intensive workshop format at the end of Summer Quarter. Courses are non-credit bearing and free of tuition or fees.

## Innovation in Graduate Programs

Academic departments and programs are the foundation of graduate education, so VPGE supports innovation in degree-granting programs. VPGE awards funds to faculty members for program innovation with SCORE Innovation funds (<http://vpge.stanford.edu/programs/score.html>); these help faculty and graduate students to scrutinize long-existing practices and test new approaches for graduate education. Student Projects for Intellectual Community Enhancement (SPICE) funds (<http://vpge.stanford.edu/programs/spice.html>) support graduate students (master's, doctoral, or professional) to develop activities to expand the intellectual community and enhance the academic life of their department or program.

*Vice Provost for Graduate Education:* Patricia J. Gumpert

*Associate Vice Provosts for Graduate Education:* John Boothroyd, Chris M. Golde, Sheri D. Sheppard

*Director of Fellowships and Programs:* Pat Cook

*Directors of Educational Programs:* Helen Doyle, Anika Green

*Associate Director, Programs and Administration:* Rebecca Jantzen

# GRADUATE SCHOOL OF BUSINESS

The mission of the Stanford Graduate School of Business is to create ideas that deepen and advance the understanding of management, and with these ideas, develop innovative, principled, and insightful leaders who change the world.

The two-year Master of Business Administration (M.B.A.) degree program prepares change agents to make a meaningful impact in the world through leadership of business, government, and social-sector organizations. The general management curriculum rests on a foundation of social science principles and management functions, tailored to each student's background and aspirations. Interdisciplinary themes of critical analytical thinking, creativity and innovation, and personal leadership development differentiate the Stanford M.B.A. experience. Each M.B.A. student undertakes a global experience to provide direct exposure to the world's opportunities. A Joint Degree Program (p. 49) allows Stanford students to combine the M.B.A. with degrees in the Graduate School of Education (M.A.), the School of Engineering (M.S. in C.S., M.S. in E.E.), the Stanford Law School (J.D.) as well as interdisciplinary degrees in Public Policy (M.P.P.) and in Environment and Resources (M.S.). Dual Degree programs are offered with the School of Medicine (M.D./M.B.A) and the program in International Policy Studies (M.A. in IPS/M.B.A).

The primary criteria for admission are intellectual vitality, demonstrated leadership potential, and personal qualities and contributions. No specific undergraduate major or courses are required for admission, but experience with analytic and quantitative concepts is important. Almost all students obtain one or more years of work experience before entering, but a few students enroll directly following undergraduate study.

The Stanford Master of Science in Management for Experienced Leaders Program (MSx) is an intensive, one-year course of study for middle-management executives leading to the degree of Master of Science in management. Participants generally have eight or more years of work experience, with at least five years of management experience. Some students are sponsored by their company, but most are self-sponsored.

The Doctor of Philosophy (Ph.D) degree program is designed to develop outstanding scholars for careers in research and teaching in various fields of study associated with business education. Students focus on one of seven discrete areas of study including accounting, economic analysis and policy, finance, marketing, operations information and technology, organizational behavior, and political economy.

For detailed information on programs, curricula, and faculty, see the School's (<http://gsb.stanford.edu>) web site.

*Visiting Professors:* Vladimir Asriyan, Henri-Claude De Bettignies

\* Recalled to active duty. \*\* Emeritus Professor from another SU department recalled to active duty.

# SCHOOL OF EARTH, ENERGY AND ENVIRONMENTAL SCIENCES

On February 11, 2015, the Stanford Board of Trustees approved the change of name for the school to become the School of Earth, Energy and Environmental Sciences. Prior to February 11, the school was named the School of Earth Sciences.

Courses offered by the School of Earth, Energy and Environmental Sciences are listed under the subject code EARTH on the Stanford Bulletin's ExploreCourses web site. Courses offered by departments and programs of the school are linked on their separate sections, and are available at the ExploreCourses (<http://explorecourses.stanford.edu>) web site.

The School of Earth, Energy and Environmental Sciences includes the departments of Geological Sciences, Geophysics, Energy Resources Engineering (formerly Petroleum Engineering), and Earth System Science; and two interdisciplinary programs: the Earth Systems undergraduate B.S. and coterminal M.S. and M.A. programs, and the Emmett Interdisciplinary Program in Environment and Resources (E-IPER). The Earth Systems Program and E-IPER offer study in biophysical and social dimensions of environment and resources.

The aims of the school are:

1. to prepare students for careers in the fields of biogeochemistry, climate science, energy resource engineering, environmental science, geology, geochemistry, geomechanics, geophysics, geostatistics, hydrogeology, land science, oceanography, petroleum engineering, and petroleum geology
2. to conduct research in the Earth sciences
3. to provide opportunities for Stanford undergraduates to learn about the planet's history, to understand the energy and resource base that supports humanity, to appreciate the geological and geophysical hazards that affect human societies, and to understand the challenges and solutions related to the environment and sustainability.

To accomplish these objectives, the school offers a variety of programs adaptable to the needs of the individual student:

- four-year undergraduate programs leading to the degree of Bachelor of Science (B.S.)
- five-year programs leading to the coterminal Bachelor of Science and Master of Science (M.S.)
- five-year programs leading to the coterminal Bachelor of Science and Master of Arts (M.A.)
- graduate programs offering the degrees of Master of Science, Engineer, and Doctor of Philosophy.

Details of individual degree programs are found in the section for each department or program.

## Undergraduate Programs in the School of Earth, Energy and Environmental Sciences

Any undergraduate admitted to the University may declare a major in one of the school's departments or programs by contacting the appropriate department or program office.

Requirements for the B.S. degree are listed in each department or program section. Departmental academic advisers work with students to

define a career or academic goal and assure that the student's curricular choices are appropriate to the pursuit of that goal. Advisers can help devise a sensible and enjoyable course of study that meets degree requirements and provides the student with opportunities to experience advanced courses, seminars, and research projects. To maximize such opportunities, students are encouraged to complete basic science and mathematics courses in high school or during their freshman year.

## Coterminal Master's Degrees in the School of Earth, Energy and Environmental Sciences

The Stanford coterminal degree program enables an undergraduate to embark on an integrated program of study leading to the master's degree before requirements for the bachelor's degree have been completed. This may result in more expeditious progress towards the advanced degree than would otherwise be possible, making the program especially important to Earth scientists because the master's degree provides an excellent basis for entry into the profession. The coterminal plan permits students to apply for admission to a master's program after earning 120 units, completion of six non-summer quarters, and declaration of an undergraduate major, but no later than the quarter prior to the expected completion of the undergraduate degree.

The student may meet the degree requirements in the more advantageous of the following two ways: by first completing the 180 units required for the B.S. degree and then completing the three quarters required for the M.S. or the M.A. degree; or by completing a total of 15 quarters during which the requirements for the two degrees are completed concurrently. In either case, the student has the option of receiving the B.S. degree upon meeting all the B.S. requirements or of receiving both degrees at the end of the coterminal program.

Students earn degrees in the same department or program, in two different departments, or even in different schools; for example, a B.S. in Physics and an M.S. in Geological Sciences. Students are encouraged to discuss the coterminal program with their advisers during their junior year. Additional information is available in the individual department offices.

University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

## Graduate Programs in the School of Earth, Energy and Environmental Sciences

### Admission to the Graduate Program

A student who wishes to enroll for graduate work in the school must be qualified for graduate standing in the University and also must be accepted by one of the school's four departments or one of the two interdisciplinary Ph.D. programs. One requirement for admission is submission of scores on the verbal and quantitative sections of the Graduate Record Exam. Admission to one department of the school does not guarantee admission to other departments.

### Faculty Adviser

Upon entering a graduate program, the student should report to the head of the department or program who arranges with a member of the faculty to act as the student's adviser. Alternatively, in several of the departments, advisers are established through student-faculty discussions prior to admission. The student, in consultation with the adviser(s), then arranges a course of study for the first quarter and ultimately develops a complete plan of study for the degree sought.

## Financial Aid

Detailed information on scholarships, fellowships, and research grants is available from the school's individual departments and programs. Applications should be filed by the various dates listed in the application packet for awards that become effective in Autumn Quarter of the following academic year.

Dean: Pamela A. Matson

Associate Dean, Academic Affairs: Stephan A. Graham

Associate Dean, Multicultural Affairs: Jerry M. Harris

Associate Dean, Educational Initiatives: Margot Gerritsen

Assistant Dean, Academic Affairs: Roni Holeton

Assistant Dean, Multicultural Affairs: Tenea M. Nelson

Lecturers: Sara Cina, Jennifer Saltzman

## Earth Systems

Courses offered by the Earth Systems Program are listed under the subject code EARTHSYS (<https://explorecourses.stanford.edu/search?q=EARTHSYS&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-departmentcode=EARTHSYS=on&filter-coursestatus-Active=on&filter-catalognumber-EARTHSYS=on&filter-catalognumber-EARTHSYS=on>) on the Stanford Bulletin's ExploreCourses web site.

## Mission of the Undergraduate Program in Earth Systems

The Earth Systems Program is an interdisciplinary environmental science major. Students learn about and independently investigate complex environmental problems caused by human activities in interaction with natural changes in the Earth system. Earth Systems majors become skilled in those areas of science, economics, and policy needed to tackle the globe's most pressing environmental problems, becoming part of a generation of scientists, professionals, and citizens who approach and solve problems in a systematic, interdisciplinary way.

For students to be effective contributors to solutions for such problems, their training and understanding must be both broad and deep. To this end, Earth Systems students take courses in the fundamentals of biology, calculus, chemistry, geology, and physics, as well as economics, policy, and statistics. After completing breadth training, they concentrate on advanced work in one of six focus areas: biology, energy, environmental economics and policy, land systems, sustainable food and agriculture, or oceanography. Tracks are designed to support focus and rigor but include flexibility for specialization. Examples of specialized focus have included but are not limited to environment and human health, sustainable agriculture, energy economics, sustainable development, business and the environment, and marine policy. Along with formal course requirements, Earth Systems students complete a 9-unit (270-hour) internship. The internship provides a hands-on academic experience working on a supervised field, laboratory, government, or private sector project.

The following is an outline of the sequential topics covered and skills developed in this major.

1. *Fundamentals*: The Earth Systems Program includes courses that describe the natural workings of the physical and biological components of the Earth, as well as courses that describe the human activities that lead to change in the Earth system. Training in fundamentals includes introductory course work in geology, biology,

chemistry, physics, and economics. Depending on the Earth Systems track chosen, training may also include introduction to the study of energy systems, microbiology, or soils.

2. *System Interactions*: Focus in these courses is on the fundamental interactions among the physical, biological, and human components of the Earth system. The dynamics of the interplay between natural variation and human-imposed influences must be understood to achieve effective solutions to environmental problems.
  - a. Earth Systems courses that introduce students to the dynamic and multiple interactions that characterize global change problems include:
 

		Units
EARTHSYS 10	Introduction to Earth Systems	4
EARTHSYS 111	Biology and Global Change	4
EARTHSYS 112	Human Society and Environmental Change	4
  - b. Competence in understanding system-level interactions is critical to development as an Earth Systems thinker, so additional classes that meet this objective are excellent choices as electives.
3. *Track-Specific Requirements*: After completing a core designed to introduce students to different components of the environment's functions, undergraduate students focus their studies through one of six tracks: Atmosphere, Biosphere, Energy Science & Technology, Oceans, Land Systems, or Sustainable Food & Agriculture.
4. *Skills Development*: Students take skills courses that help them to recognize, quantify, describe, and help solve complex problems that face society.

Field and laboratory methods can help students to recognize the scope and nature of environmental change. For example, training in satellite remote sensing and geographic information systems allows students to monitor and analyze large-scale spatial patterns of change. This training is either required or recommended for all tracks.

Quantification of environmental problems requires training in single and multivariable calculus, linear algebra, and statistics. Training in statistics is specific to the area of focus: geostatistics, biostatistics, econometrics.

Success in building workable solutions to environmental problems is linked to the ability to effectively communicate ideas, data, and results. Writing intensive courses (WIM) help students to communicate complex concepts to expert and non-expert audiences. All Stanford students must complete one WIM course in their major. The Earth Systems WIM course is offered in Winter and Spring quarters:

		Units
EARTHSYS 200	Sustaining Action: Research, Analysis and Writing for the Public	3

Other Earth Systems courses also focus on effective written and oral communication and are recommended.

Effective solutions to environmental problems take into consideration natural processes as well as human needs. Earth Systems emphasizes the importance of interdisciplinary analysis and implementation of workable solutions through:

		Units
EARTHSYS 210A	Senior Capstone and Reflection	3
or EARTHSYS 250B	Senior Capstone and Reflection	
or EARTHSYS 250C	Senior Capstone and Reflection	
EARTHSYS 210P	Earth Systems Capstone Project	1
EARTHSYS 260	Internship	9

A comprehensive list of environmental courses (p. 111) and advice on courses that focus on problem solving are available in the program office.

The Earth Systems Program provides an advising network that includes faculty, staff, and student peer advisers.

## Learning Outcomes (Undergraduate)

The program expects majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the program's undergraduate degree. Students are expected to:

1. demonstrate knowledge of foundational skills and concepts relevant to interdisciplinary study of the environment.
2. analyze environmental problems at the interface of natural and human systems in an interdisciplinary fashion.
3. demonstrate the ability to communicate complex concepts and data to expert and non-expert audiences.
4. integrate and apply relevant science, economics, engineering, and policy to problem analysis and proposed solutions, both independently and as part of a team.

## Learning Outcomes (Graduate)

The master's degree in Earth Systems provides the student with enhanced analytical tools to evaluate the disciplines most closely associated with the student's focus area. Specialization is gained through course work and independent research work supervised by the master's faculty adviser.

## Bachelor of Science in Earth Systems

The B.S. in Earth Systems (EARTHSYS) requires the completion of courses divided into three categories

1. core
2. foundation and breadth
3. track-specific requirements.

The student must carry out an internship project, participate in the Senior Capstone and Reflection (EARTHSYS 210A, EARTHSYS 210B, EARTHSYS 210C), Earth Systems Capstone Project (EARTHSYS 210P), and complete the Writing in the Major (WIM) requirement.

Core courses, track courses, and electives must be taken for a letter grade. The WIM course may not also count towards the track or electives, if counted as a WIM.

### Required Core

	Units
EARTHSYS 10 Introduction to Earth Systems	4
EARTHSYS 111 Biology and Global Change	4
EARTHSYS 112 Human Society and Environmental Change	4
Select one of the following:	3
EARTHSYS 210A Senior Capstone and Reflection	
EARTHSYS 210B Senior Capstone and Reflection	
EARTHSYS 210C Senior Capstone and Reflection	
EARTHSYS 210P Earth Systems Capstone Project	1
EARTHSYS 200 Sustaining Action: Research, Analysis and Writing for the Public	3
EARTHSYS 260 Internship	1-9

### Required Foundation and Breadth Courses

	Units	Units
<b>Biology</b>	4-10	<b>Additional foundation and breadth courses</b>
		10

Select one of the following:

BIO 41	Genetics, Biochemistry, and Molecular Biology
BIO 43	Plant Biology, Evolution, and Ecology
BIOHOPK 43	Plant Biology, Evolution, and Ecology
BIO 101	Ecology
EARTHSYS 30	Ecology for Everyone
HUMBIO 2A & HUMBIO 2B	Genetics, Evolution, and Ecology and Culture, Evolution, and Society
EARTHSYS 116	Ecology of the Hawaiian Islands

### Chemistry 5-10

Select one of the following:

CHEM 31X	Chemical Principles Accelerated
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II

### Economics 5

ECON 1	Principles of Economics
--------	-------------------------

### Geological Sciences<sup>1</sup> 4-5

Select one of the following:

GS 1A	Introduction to Geology: The Physical Science of the Earth
GS 1B	Introduction to Geology
GS 1C	Introduction to Geology: Dynamic Earth
GS 4	How to Build and Maintain a Habitable Planet: An Introduction to Earth System History
EARTHSYS 117	Earth Sciences of the Hawaiian Islands

### Mathematics 5-15

Select one of the following:

MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus
or MATH 41 & MATH 42	Calculus and Calculus
MATH 51	Linear Algebra and Differential Calculus of Several Variables
or CME 100	Vector Calculus for Engineers

### Probability and Statistics 3-5

Select one of the following:

BIOHOPK 174H	Experimental Design and Probability
BIO 141	Biostatistics
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists
STATS 110	Statistical Methods in Engineering and the Physical Sciences
STATS 116	Theory of Probability

More extensive work in mathematics and physics may be valuable for those planning graduate study. Graduate study in ecology and evolutionary biology and in economics requires familiarity with differential equations, linear algebra, and stochastic processes. Graduate study in geology, oceanography, and geophysics may require more physics and chemistry. Students should consult their adviser for recommendations beyond the requirements specified above.

<sup>1</sup> The Geological Sciences requirement can be fulfilled by completing GS 1A, 1B, 1C, or 4, or EARTHSYS 117. GS 1B, GS 1C, and EARTHSYS 117 are not offered in 15-16.

## Tracks

### Anthrosphere

	Units	Units
<b>Additional foundation and breadth courses</b>	4-10	10

ECON 50	Economic Analysis I	
ECON 155	Environmental Economics and Policy	
Physics (select one of the following):		3-4
One physics class from the PHYSICS 20 or 40 series		
<b>Choose one course in each of the three following sub-categories, with a total of six required. At least one of the six must be a skills/methods course marked with an asterisk (*):</b>		
<b>Economics and Environmental Policy</b>		3-5
ANTHRO 164	Natural Resource Extraction: Use and Development: Assessing Policies, Practices and Outcomes	
EARTHSYS 175	California Coast: Science, Policy, and Law	
ECON 51	Economic Analysis II	
ECON 102B	Applied Econometrics *	
ECON 150	Economic Policy Analysis	
ECON 154	Law and Economics	
INTNLREL 135	International Environmental Law and Policy	
IPS 270	The Geopolitics of Energy	
LAW 603	Environmental Law and Policy	
MS&E 197	Ethics, Technology, and Public Policy	
MS&E 243	Energy and Environmental Policy Analysis	
MS&E 294	Climate Policy Analysis	
MS&E 295	Energy Policy Analysis	
<b>Social Entrepreneurship and the Environment</b>		2-5
CEE 151	Negotiation	
EARTHSYS 187	FEED the Change: Redesigning Food Systems	
ENGR 231	Transformative Design	
ME 206A	Entrepreneurial Design for Extreme Affordability	
ME 377	Design Thinking Studio: Experiences in Innovation and Design	
MS&E 177	Creativity Rules	
MS&E 180	Organizations: Theory and Management	
MS&E 264	Sustainable Product Development and Manufacturing	
URBANST 132	Concepts and Analytic Skills for the Social Sector *	
URBANST 133	Social Entrepreneurship Collaboratory	
<b>Sustainable Development</b>		3-5
ANTHRO 161	Human Behavioral Ecology	
ANTHRO 162	Indigenous Peoples and Environmental Problems	
ANTHRO 343	Culture as Commodity	
ANTHRO 349	Anthropology of Capitalism	
CEE 124	Sustainable Development Studio (must be taken for at least 3 units)	
EARTHSYS 106	World Food Economy *	
EARTHSYS 185	Feeding Nine Billion	
ECON 52	Economic Analysis III *	
ECON 118	Development Economics	
HUMBIO 118	Theory of Ecological and Environmental Anthropology	
OSPSANTG 29	Sustainable Cities: Comparative Transportation Systems in Latin America	
URBANST 163	Land Use Control	
<b>Elective Requirement</b>		6-10
Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units.		

**Biosphere**

**Additional foundation and breadth courses**

Instead of Biology Foundation requirement listed above, these Bio courses are required:		5
BIO 41	Genetics, Biochemistry, and Molecular Biology	
And select one of the following:		5
BIO 43	Plant Biology, Evolution, and Ecology	
or BIOHOPK 43	Plant Biology, Evolution, and Ecology	
Additional Chemistry requirement (in addition to 31A/B or X):		5
CHEM 33	Structure and Reactivity	
Instead of Geology Foundation requirement listed above, select one of the following:		4
GS 1C	Introduction to Geology: Dynamic Earth	
or GS 4	How to Build and Maintain a Habitable Planet: An Introduction to Earth System History	
or EARTHSYS 117	Earth Sciences of the Hawaiian Islands	
Physics (select one of the following):		4
PHYSICS 41	Mechanics	
or PHYSICS 45	Light and Heat	
<b>Choose two courses from Ecology and Conservation Biology, and one course from each of the remaining sub-categories below, total six required:</b>		
<b>Biogeochemistry</b>		3-4
BIO 216	Terrestrial Biogeochemistry	
CEE 177	Aquatic Chemistry and Biology	
CEE 274A	Environmental Microbiology I	
EARTHSYS 151	Biological Oceanography	
EARTHSYS 152	Marine Chemistry	
EARTHSYS 155	Science of Soils	
EARTHSYS 158	Geomicrobiology	
GS 130	Soil Physics and Hydrology	
<b>Ecology and Conservation Biology</b>		3-12
BIO 101	Ecology	
BIO 115	The hidden kingdom - evolution, ecology and diversity of fungi	
BIO 143	Evolution	
BIO 144	Conservation Biology: A Latin American Perspective	
BIOHOPK 172H	Marine Ecology: From Organisms to Ecosystems	
BIOHOPK 173H	Marine Conservation Biology	
BIOHOPK 177H	Dynamics and Management of Marine Populations	
BIOHOPK 185H	Ecology and Conservation of Kelp Forest Communities	
EARTHSYS 116	Ecology of the Hawaiian Islands	
GS 123	Paleobiology	
OSPAUSTL 10	Coral Reef Ecosystems	
OSPAUSTL 25	Freshwater Systems	
OSPAUSTL 30	Coastal Forest Ecosystems	
OSPSANTG 58	Living Chile: A Land of Extremes	
OSPSANTG 85	Marine Ecology of Chile and the South Pacific	
<b>Ecosystems and Society</b> <sup>2</sup>		3-5
ANTHRO 118	Heritage, Environment, and Sovereignty in Hawaii	
ANTHRO 147	Nature, Culture, Heritage	
ANTHRO 161	Human Behavioral Ecology	
ANTHRO 162	Indigenous Peoples and Environmental Problems	
ANTHRO 166	Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness	
ANTHRO 177	Environmental Change and Emerging Infectious Diseases	

Units

ANTHRO 178	Evolution and Conservation in Galapagos
ANTHRO 183	
BIOHOPK 168H	Disease Ecology: from parasites evolution to the socio-economic impacts of pathogens on nations
EARTHSYS 129	Geographic Impacts of Global Change: Mapping the Stories
EARTHSYS 185	Feeding Nine Billion
SIW 144	Energy, Environment, Climate and Conservation Policy: A Washington, D.C. Perspective

**Elective Requirement** 6-10

Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units.

<sup>1</sup> Must take GS 1C, GS 4, or EARTHSYS 117 to fulfill this requirement, and not GS 1A or 1B.

<sup>2</sup> May also use ANTHRO 183 to fulfill this requirement. This course is not offered this year.

**Energy, Science and Technology**

**Additional Foundation and Breadth Courses** 8

PHYSICS 43	Electricity and Magnetism
PHYSICS 45	Light and Heat
CME 100	Vector Calculus for Engineers (preferred over MATH 51 for this track)

Computer science requirement: One-unit of Computer Science is required (unless CME 100 was completed); see Earth Systems staff for approved CS courses. 0-1

**Energy Fundamentals** 3

ENGR 30	Engineering Thermodynamics
---------	----------------------------

Select one of the following: 3-4

CEE 272R	Modern Power Systems Engineering
ENERGY 120	Fundamentals of Petroleum Engineering
MATSCI 154	Thermodynamic Evaluation of Green Energy Technologies
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution

Select one of the following: 3-5

EARTHSYS 101	Energy and the Environment
EARTHSYS 102	Renewable Energy Sources and Greener Energy Processes
EARTHSYS 103	Understanding Energy

**Choose at least one course in each of the three sub-categories, total five required. Please note that many of these have prerequisite work:**

**Energy Resources & Technology** 3-5

CEE 156	Building Systems
CEE 176A	Energy Efficient Buildings
EARTHSYS 101	Energy and the Environment
EARTHSYS 103	Understanding Energy
ENERGY 120	Fundamentals of Petroleum Engineering
ENERGY 269	Geothermal Reservoir Engineering
ENERGY 293B	Fundamentals of Energy Processes
ENERGY 293C	Energy from Wind and Water Currents
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
ME 250	Internal Combustion Engines
ME 260	Fuel Cell Science and Technology

**Sustainable Energy & Development** 3-4

CEE 176B	Electric Power: Renewables and Efficiency
CEE 221A	Planning Tools and Methods in the Power Sector

CEE 226	Life Cycle Assessment for Complex Systems
CEE 272S	Green House Gas Mitigation
EARTHSYS 102	Renewable Energy Sources and Greener Energy Processes
EARTHSYS 146	Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation
ENERGY 153	Carbon Capture and Sequestration
MATSCI 154	Thermodynamic Evaluation of Green Energy Technologies
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution

**Energy Policy, Economics & Entrepreneurship** 2-4

ENERGY 104	Sustainable Energy for 9 Billion
ENERGY 171	Energy Infrastructure, Technology and Economics
ENERGY 191	Optimization of Energy Systems
GSBGEN 336	Energy Markets and Policy
LAW 455	Energy Law
MS&E 243	Energy and Environmental Policy Analysis
MS&E 264	Sustainable Product Development and Manufacturing
MS&E 294	Climate Policy Analysis
MS&E 295	Energy Policy Analysis

**Elective Requirement** 3-5

One additional course at the 100-level or above is required. This course must be a minimum of 3 units. 3 units of approved energy seminars may count as one elective. See Earth Systems staff for the approved seminar list.

**Land Systems**

**Additional foundation and breadth courses** 4

PHYSICS 41	Mechanics or PHYSICS - Light and Heat
------------	---------------------------------------

**Choose at least one course in each of the four sub-categories below, total seven required:**

**Land Ecosystems** 3-4

BIO 144	Conservation Biology: A Latin American Perspective
BIO 216	Terrestrial Biogeochemistry
EARTHSYS 155	Science of Soils
EARTHSYS 156	Soil and Water Chemistry
OSPSANTG 58	Living Chile: A Land of Extremes

**Water** 3-4

CEE 101B	Mechanics of Fluids
CEE 166A	Watersheds and Wetlands
CEE 166B	Floods and Droughts, Dams and Aqueducts
CEE 177	Aquatic Chemistry and Biology
GEOPHYS 190	Near-Surface Geophysics
GS 130	Soil Physics and Hydrology

**Land Use** 3-5

CEE 124	Sustainable Development Studio
CEE 176A	Energy Efficient Buildings
EARTHSYS 106	World Food Economy
EARTHSYS 181	Urban Agriculture in the Developing World
EARTHSYS 185	Feeding Nine Billion
URBANST 110	Utopia and Reality: Introduction to Urban Studies
URBANST 113	Introduction to Urban Design: Contemporary Urban Design in Theory and Practice
URBANST 163	Land Use Control

URBANST 171 Urban Design Studio	
<b>Methods</b>	3-5
EARTHSYS 142 Remote Sensing of Land	
EARTHSYS 144 Fundamentals of Geographic Information Science (GIS)	
EARTHSYS 211 Fundamentals of Modeling	
HISTORY 401A Spatial History: Concepts, Methods, Problems	
<b>Elective Requirement</b>	6-10
Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units.	

**Sustainable Food and Agriculture**

<b>Additional foundation and breadth courses</b>	4
PHYSICS 41 Mechanics or PHYSICS Light and Heat	

A total of seven courses are required from the Food and Agriculture focus areas:

<b>Fundamentals of Agriculture Production and Economics</b>	9-10
Both required:	
EARTHSYS 106 World Food Economy	
EARTHSYS 185 Feeding Nine Billion	

<b>Biogeophysical Dimensions</b>	9-12
Required:	
EARTHSYS 155 Science of Soils	

And select two of the following:

BIO 137 Plant Genetics	
EARTHSYS 184 Climate and Agriculture	
GS 130 Soil Physics and Hydrology	
HUMBIO 113 The Human-Plant Connection	
HUMBIO 130 Human Nutrition	

<b>Social Dimensions</b>	3-5
Select one of the following:	

ANTHRO 169 The Ecology of Cuisine: Food, Nutrition, and the Evolution of the Human Diet	
EARTHSYS 181 Urban Agriculture in the Developing World	
EARTHSYS 187 FEED the Change: Redesigning Food Systems	
ECON 118 Development Economics	
HISTORY 203G Mobile Food: A Global Food History	
HUMBIO 113S Healthy/Sustainable Food Systems: Maximum Sustainability across Health, Economics, and Environment	
HUMBIO 166 Food and Society: Exploring Eating Behaviors in Social, Environmental, and Policy Context	

<b>Applied Study in the Field</b>	3-4
Required:	
EARTHSYS 180 Principles and Practices of Sustainable Agriculture	

<b>Elective Requirement</b>	6-10
Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units.	

**Oceans**

<b>Additional Foundation and Breadth Courses</b>	0-5
MATH 51 Linear Algebra and Differential Calculus of Several Variables & MATH 52 Variables and Integral Calculus of Several Variables (CME 100 preferred over MATH 51 and MATH 52) or CME 100 Vector Calculus for Engineers	

Physics (select one of the following):	3-4
PHYSICS 41 Mechanics	
PHYSICS 45 Light and Heat or GEOPHYS 140 On the Edge: Introduction to Geophysics	

<b>Physics of the Atmosphere and Climate</b>	3
Select one of the following:	

CEE 63 Weather and Storms	
EARTHSYS 146 Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation (preferred)	

<b>Physics of the Ocean</b>	3-4
Select one of the following:	

EARTHSYS 164 Introduction to Physical Oceanography	
EARTHSYS 146B Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation <sup>1</sup>	

<b>Spatial Analysis</b>	3-4
EARTHSYS 141 Remote Sensing of the Oceans	

<b>Biological Oceanography</b>	3-4
Select one of the following:	

EARTHSYS 151 Biological Oceanography (preferred; take at the same time as EARTHSYS 152)	
BIOHOPK 163H Oceanic Biology	

<b>Marine Chemistry</b>	3-4
EARTHSYS 152 Marine Chemistry	

<b>Human Dimensions</b>	1-5
Select one of the following:	

BIOHOPK 173H Marine Conservation Biology	
EARTHSYS 175 California Coast: Science, Policy, and Law	

<b>Field Experience<sup>2</sup></b>	12-20
Select at least one of the following:	

EARTHSYS 323 Stanford at Sea	
One quarter abroad at the Stanford in Australia Program	
One quarter (or more) at the Hopkins Marine Station	

<b>Elective Requirement</b>	6-10
Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units. See Earth Systems staff for a list of possible electives.	

<sup>1</sup> EARTHSYS 146B can be taken in addition to EARTHSYS 164 and would count as an elective.  
<sup>2</sup> Courses taken during Stanford@SEA and BOSP Australia cannot be substituted for track requirements but can count toward electives.

**Summary of Course Requirements and Units**

For all students:

	Units
Earth Systems Introduction and Core	12
Required Foundation and Breadth Courses	31-48
Internship	9
Senior Capstone & Reflection and Capstone Project	4
Writing in the Major (WIM)	3

**Track-Specific:**

	Units
Anthrosphere Track	38-54
Biosphere Track	40-60
Energy, Science and Technology Track	34-47
Land Systems Track	31-44
Sustainable Food and Agriculture Track	34-45

## Honors Program

The Earth Systems honors program provides students with an opportunity to pursue individual interdisciplinary research. It consists of a year-long research project that is mentored by one or more Earth Systems-affiliated faculty members, and culminates in a written thesis.

To qualify for the honors program, students must have and maintain a minimum overall GPA of 3.4. Potential honors students should complete the EARTHSYS 111 Biology and Global Change and EARTHSYS 112 Human Society and Environmental Change sequence by the end of the junior year. Qualified students can apply in Spring Quarter of the junior year, or the fourth quarter before graduation (check with program for specific application deadlines) by submitting a detailed research proposal and a brief statement of support from a faculty research adviser. Students who elect to do an honors thesis should begin planning no later than Winter Quarter of the junior year.

A maximum of 9 units is awarded for thesis research through EARTHSYS 199 Honors Program in Earth Systems. Those 9 units may not substitute for any other required parts of the Earth Systems curriculum. All theses are evaluated for acceptance by the thesis faculty adviser and one additional faculty member, who is the second reader. Both the adviser and second reader must be members of the Academic Council. Acceptance into the Honors program is not a guarantee of graduating with the honors designation. The thesis must be accepted and approved by both readers and the Director of Earth Systems, and a minimum overall GPA of 3.4 must be maintained.

Honors students are required to present their research preferably through the School of Earth, Energy, and Environmental Sciences' Annual Thesis Symposium, which highlights undergraduate and graduate research in the school. Faculty advisers are encouraged to sponsor presentation of student research results at professional society meetings.

## Coterminal Master's Degrees in Earth Systems

The Earth Systems Program offers current Stanford University undergraduates the opportunity to apply to a one-year coterminal master's program. Earth Systems offers a coterminal Master of Science (M.S.) degree in Earth Systems and a coterminal Master of Arts (M.A.) degree in Earth Systems, Environmental Communication. The Environmental Communication subplan prints on both the transcript and the diploma.

### Application and Admission

To apply, complete and return the following to the Earth Systems office (Y2E2, 131, attn: Kristin Tewksbury):

- The Stanford coterminal application (<https://stanford.box.com/CotermApplic>)
  - A statement of purpose
  - A resume
  - A current Stanford unofficial transcript
  - Two letters of recommendation, one of which must be from the master's adviser (who must be an Academic Council member; the advisers for the coterminal M.A. are Kevin Arrigo and Thomas Hayden)
  - A list of courses that fulfill degree requirements signed by the master's adviser and the Director of Earth Systems
1. Applications must be submitted no later than the quarter prior to the expected completion of the B.S. degree (check with program office for specific application deadlines). An application fee is assessed by the Registrar's Office for coterminal applications, once students are matriculated into the program.
  2. Students applying to the coterminal master's program must have completed a minimum of 120 units toward graduation with a minimum overall Stanford GPA of 3.4.
  3. All applicants must devise a program of study that shows a level of specialization appropriate to the master's level, as determined in consultation with the master's adviser and the Director of Earth Systems.
  4. Students applying from an undergraduate major other than Earth Systems should review their undergraduate course list with Deana Fabbro-Johnston, Richard Nevle, Katie Phillips, or Thomas Hayden (M.A. only).
  5. The student has the option of receiving the B.S. degree after completing that degree's requirements or receiving the B.S. and M.A./M.S. degrees concurrently at the completion of the master's program.
  6. Students must submit a new application to change from the M.S. to the M.A. in Earth Systems, or from the M.A. to the M.S. in Earth Systems. If accepted, the student must submit a Graduate Authorization Petition through Axxess; a \$125 fee applies to a successful Graduate Authorization Petition

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Master of Science in Earth Systems Degree Requirements

The master of science degree in Earth Systems allows increased specialization through graduate-level course work that may include up to 9 units of research with the master's adviser. This may culminate in the preparation of a M.S. thesis; however, a thesis is not required for the degree. The process of building mastery in the field is enriched through steady communication with a faculty adviser.

The following are required of all M.S. students:

- A minimum of 45 units of course work and/or research credit (upon approval).
- At least 34 units of the student's course work for the master's program must be at the 200-level or above.

- All remaining course work must be at the 100-level or above.
- All courses for the master's program must be taken for a letter grade; courses not taken for a letter grade must be approved by the master's adviser and Director of Earth Systems.
- A minimum overall GPA of 3.4 must be maintained.
- All coterminal master's students are required to take the capstone course, EARTHSYS 290 Master's Seminar.

For the Master of Science degree in Earth Systems, the following courses must be taken if not completed in the undergraduate degree program. These may not be counted as part of the 45-unit master's degree:

	Units
Core (both required):	8
EARTHSYS 111 Biology and Global Change	
EARTHSYS 112 Human Society and Environmental Change	
<b>Biology (select one of the following):</b>	4-10
BIO 41 Genetics, Biochemistry, and Molecular Biology	
BIO 43 Plant Biology, Evolution, and Ecology	
BIOHOPK 43 Plant Biology, Evolution, and Ecology	
BIO 101 Ecology	
HUMBIO 2A Genetics, Evolution, and Ecology & HUMBIO 2B and Culture, Evolution, and Society	
EARTHSYS 116 Ecology of the Hawaiian Islands	
<b>Chemistry (select one of the following):</b>	5-10
CHEM 31X Chemical Principles Accelerated	
CHEM 31A Chemical Principles I & CHEM 31B and Chemical Principles II	
<b>Physics (select one of the following):</b>	3-4
One physics class from the PHYSICS 20 or 40 series	
<b>Mathematics (select one of the following):</b>	5
MATH 51 Linear Algebra and Differential Calculus of Several Variables	
CME 100 Vector Calculus for Engineers	
<b>Statistics (select one of the following):</b>	3-5
BIOHOPK 174H Experimental Design and Probability	
BIO 141 Biostatistics	
ECON 102A Introduction to Statistical Methods (Postcalculus) for Social Scientists	
STATS 110 Statistical Methods in Engineering and the Physical Sciences	
STATS 116 Theory of Probability	

## Master of Arts in Earth Systems, Environmental Communication Degree Requirements

The Master of Arts in Earth Systems, Environmental Communication, provides an overview of the theory, techniques, and challenges of communicating environmental concepts to non-specialist audiences and includes hands-on experience with different modalities of communication, principally writing, multimedia production, and education. The degree program is built on a three quarter progression of required core courses, including a required practicum experience, along with electives. Students complete 22 units of required core courses along with 23 units of focus courses to be chosen in close consultation with Thomas Hayden and a faculty co-adviser.

For the master of arts degree, prerequisites may vary based on the interests and academic background of each student, to be determined in consultation with primary adviser Thomas Hayden, the faculty co-adviser, and the Director of Earth Systems. At a minimum, entering student must

have completed EARTHSYS 10 Introduction to Earth Systems (may be audited), EARTHSYS 111 Biology and Global Change, and EARTHSYS 112 Human Society and Environmental Change. Additional course work in the sciences, mathematics, and other fields may also be required on a case-by-case basis; such required foundational course work may not count toward the 45 units of master's-level course requirement.

The following are required of all M.A. students:

- All M.A. students must declare the Environmental Communication subplan in Axess.
- A minimum of 45 units of course work and/or research credit (upon approval).
- At least 34 units of the student's course work for the master's program must be at the 200-level or above.
- All remaining course work must be at the 100-level or above.
- All courses for the master's program must be taken for a letter grade; courses not taken for a letter grade must be approved by the master's adviser and Director of Earth Systems.
- A minimum overall GPA of 3.4 must be maintained.
- All coterminal master's students are required to take the capstone course, EARTHSYS 290 Master's Seminar.

*Director:* Kevin Arrigo

*Deputy Director:* Richard Nevle

*Associate Director:* Deana Fabbro-Johnston

*Affiliated Faculty and Lecturers:* Patrick Archie (Earth Systems, Earth System Science), Nicole Ardoin (School of Education, Woods Institute for the Environment), Kevin Arrigo (Earth Systems, Earth System Science), Gregory Asner (Department of Global Ecology, Carnegie Institution), Greg Beroza (Geophysics), Barbara Block (Biology, Hopkins Marine Station, Woods Institute for the Environment), Alexandria Boehm (Civil and Environmental Engineering), Gordon Brown (Geological Sciences), Marshall Burke (Earth System Science), Ken Caldeira (Earth System Science), Karen Casciotti (Earth System Science), Page Chamberlain (Earth System Science), Larry Crowder (Biology, Woods Institute for the Environment), Lisa Curran (Anthropology, Woods Institute for the Environment), Gretchen Daily (Biology, Woods Institute for the Environment), Jenna Davis (Civil and Environmental Engineering, Woods Institute for the Environment), Mark Denny (Biology, Hopkins Marine Station), Noah Diffenbaugh (Earth System Science, Woods Institute for the Environment), Rodolfo Dirzo (Biology, Woods Institute for the Environment), Robert Dunbar (Earth System Science, Woods Institute for the Environment), Debra Dunn (Earth Systems, Hasso Plattner Institute of Design), William Durham (Anthropology, Woods Institute for the Environment), Louis Durlinsky (Energy Resources Engineering), Ashley Erickson Reineman (Center for Ocean Solutions), Gary Ernst (Geological Sciences, emeritus), Walter Falcon (Freeman Spogli Institute for International Studies, emeritus, Woods Institute for the Environment), Scott Fendorf (Earth System Science, Woods Institute for the Environment, Precourt Institute for Energy), Christopher Field (Department of Global Ecology, Carnegie Institution, Woods Institute for the Environment), Derek Fong (Civil and Environmental Engineering), Christopher Francis (Earth System Science, Woods Institute for the Environment), Zephyr Frank (History, Woods Institute for the Environment), David Freyberg (Civil and Environmental Engineering, Woods Institute for the Environment), Tad Fukami (Biology), Margot Gerritsen (Energy Resources Engineering), Deborah Gordon (Biology, Woods Institute for the Environment), Steven Gorelick (Earth System Science, Woods Institute for the Environment), Elizabeth Hadly (Biology, Woods Institute for the Environment), Thomas Hayden (Earth Systems), George Hilley (Geological Sciences), Robert Jackson (Earth System Science, Woods Institute for the Environment), David Kennedy (History, emeritus, Woods Institute for the Environment), Donald Kennedy (Biology, Freeman Spogli Institute for International Studies,

emeritus, Woods Institute for the Environment), Julie Kennedy (Earth Systems, Earth System Science, Woods Institute for the Environment), Karl Knapp (Atmosphere and Energy Operations), Rosemary Knight (Geophysics, Woods Institute for the Environment), Jeffrey Koseff (Civil and Environmental Engineering, Woods Institute for the Environment), Anthony Kovscek (Energy Resources Engineering), Eric Lambin (Earth System Science, Woods Institute for the Environment), David Lobell (Earth System Science, Woods Institute for the Environment), Evan Lyons (Earth Systems Science), Gilbert Masters (Civil and Environmental Engineering), Pamela Matson (Dean, School of Earth, Energy & Environmental Sciences, Freeman Spogli Institute for International Studies, Woods Institute for the Environment), Anna Michalak (Earth System Science), Fiorenza Micheli (Hopkins Marine Station), Stephen Monismith (Civil and Environmental Engineering, Woods Institute for the Environment), Ian Monroe (Earth Systems), Harold Mooney (Biology, emeritus, Woods Institute for the Environment), Rosamond Naylor (Earth System Science, Freeman Spogli Institute for International Studies, Woods Institute for the Environment), Richard Neve (Earth Systems), Julia Novy-Hildesley (Earth Systems), Stephen Palumbi (Biology, Hopkins Marine Station, Woods Institute for the Environment), Jonathan Payne (Geological Sciences), Kabir Peay (Biology), Kathleen Phillips (Earth Systems), Bala Rajaratnam (Earth System Science, Statistics), Thomas Robinson (Medicine), Terry Root (Biology, Woods Institute for the Environment), Matt Rothe (Earth Systems, Hasso Plattner Institute of Design, Graduate School of Business), Paul Segall (Geophysics), Deborah Sivas (Law), George Somero (Biology, Hopkins Marine Station), James Sweeney (Management Science and Engineering, Woods Institute for the Environment), Leif Thomas (Earth System Science), Barton Thompson, Junior (Law, Woods Institute for the Environment), Sarah Truebe (Earth Systems), Tiziana Vanorio (Geophysics), Peter Vitousek (Biology, Emmett Interdisciplinary Program in Environment and Resources, Woods Institute for the Environment), Virginia Walbot (Biology), Paula Welander (Earth System Science), Cindy Wilber (Jasper Ridge), Michael Wilcox (Anthropology), Mikael Wolfe (History), Jane Woodward (Atmosphere and Energy Operations), Mark Zoback (Geophysics)

## Overseas Studies Courses in Earth Systems

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPAUSTL 10	Coral Reef Ecosystems	3
OSPAUSTL 25	Freshwater Systems	3
OSPAUSTL 30	Coastal Forest Ecosystems	3
OSPCPTWN 63	Socio-Ecological Systems	3
OSPKYOTO 45	Japan's Energy-Environment Conundrum	4
OSPMADRD 79	Earth and Water Resources' Sustainability in Spain	4
OSPSANTG 58	Living Chile: A Land of Extremes	5
OSPSANTG 85	Marine Ecology of Chile and the South Pacific	5

## Environmental Courses List

Units

AA 115N	The Global Positioning System: Where on Earth are We, and What Time is It?	
AA 116Q	Electric Automobiles and Aircraft	
AA 260	Sustainable Aviation	
AA 272C	Global Positioning Systems	
AFRICAAM 16N	African Americans and Social Movements	
AFRICAAM 47	History of South Africa	
AFRICAAM 147	History of South Africa	
AFRICAST 109	Running While Others Walk: African Perspectives on Development	
AFRICAST 112	AIDS, Literacy, and Land: Foreign Aid and Development in Africa	
AFRICAST 141	Science, Technology, and Medicine in Africa	
AFRICAST 190	Madagascar Prefield Seminar	
AFRICAST 200	The HIV/AIDS Epidemic in Tanzania: A Pre-Field Seminar	
AFRICAST 209	Running While Others Walk: African Perspectives on Development	
AMSTUD 1B	Media, Culture, and Society	
AMSTUD 124A	The American West	
AMSTUD 136X	Indigenous Peoples and Environmental Change in the North American West	
ANTHRO 11SC	Conservation and Development Dilemmas in the Amazon	
ANTHRO 31	Ecology, Evolution, and Human Health	
ANTHRO 34	Animals and Us	
ANTHRO 90C	Theory of Ecological and Environmental Anthropology	
ANTHRO 106	Incas and their Ancestors: Peruvian Archaeology	
ANTHRO 110A	Neandertals and Modern Humans: Origin, Evolution, Interactions	
ANTHRO 117	Thinking Through Animals	
ANTHRO 118	Heritage, Environment, and Sovereignty in Hawaii	
ANTHRO 119	Zooarchaeology: An Introduction to Faunal Remains	
ANTHRO 125	Language and the Environment	
ANTHRO 130B	Introduction to GIS in Anthropology	
ANTHRO 137	The Politics of Humanitarianism	
ANTHRO 141A	Science, Technology, and Medicine in Africa	
ANTHRO 147	Nature, Culture, Heritage	
ANTHRO 155	Research Methods in Ecological Anthropology	
ANTHRO 156B	Environment, Nature and Race	
ANTHRO 160	Social and Environmental Sustainability: The Costa Rican Case	
ANTHRO 160A	Tragedy of the Commons: Human Ecology of Communal Resources	
ANTHRO 161	Human Behavioral Ecology	
ANTHRO 161A	Human Ecology: Adaptations to Climate and Climate Change	
ANTHRO 162	Indigenous Peoples and Environmental Problems	
ANTHRO 163	Conservation and Evolutionary Ecology	
ANTHRO 164	Natural Resource Extraction: Use and Development: Assessing Policies, Practices and Outcomes	
ANTHRO 164A	Anthropology of Ecotourism	
ANTHRO 165	Parks and Peoples: The Benefits and Costs of Protected Area Conservation	

ANTHRO 165A	People and Parks: Management of Protected Areas	ANTHRO 364A	EcoGroup: Problems in Ecological and Evolutionary Anthropology
ANTHRO 166	Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness	ANTHRO 368	Dynamics of Coupled Human-Natural Systems
ANTHRO 167A	A Wilderness Empire: The Political Ecology of California	ANTHRO 372	Urban Ecologies
ANTHRO 168	Everest: Extreme Anthropology	ANTHRO 378	Dynamics of Coupled Human-Natural Systems
ANTHRO 168A	Risky Environments: The Nature of Disaster	APPPHYS 79N	Energy Options for the 21st Century
ANTHRO 169	The Ecology of Cuisine: Food, Nutrition, and the Evolution of the Human Diet	APPPHYS 219	Solid State Physics Problems in Energy Technology
ANTHRO 170	Australian Ecosystems: Human Dimensions and Environmental Dynamics	APPPHYS 294	Cellular Biophysics
ANTHRO 172	Seminar on Cultural Evolution and Coevolution	ARCHLGY 12	Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years
ANTHRO 173	Human Dimensions of Global Environmental Change: Resilience, Vulnerability, and Environmental Justice	ARCHLGY 102B	Incas and their Ancestors: Peruvian Archaeology
ANTHRO 177	Environmental Change and Emerging Infectious Diseases	ARCHLGY 119	Zooarchaeology: An Introduction to Faunal Remains
ANTHRO 178	Evolution and Conservation in Galapagos	ARCHLGY 126	Archaeobotany
ANTHRO 219	Zooarchaeology: An Introduction to Faunal Remains	ARCHLGY 224	Archaeology of Food: production, consumption and ritual
ANTHRO 225	Language and the Environment	ARCHLGY 226	Archaeobotany
ANTHRO 230B	Introduction to GIS in Anthropology	ARCHLGY 270	Heritage Ecologies: Heritage, Culture, and the Environment
ANTHRO 237	The Politics of Humanitarianism	ARTHIST 152	The American West
ANTHRO 247	Nature, Culture, Heritage	ARTSTUDI 12A	Drawing Intensive: Revisiting Nature
ANTHRO 255	Research Methods in Ecological Anthropology	ARTSTUDI 153	Ecology of Materials
ANTHRO 260	Social and Environmental Sustainability: The Costa Rican Case	ARTSTUDI 153I	Ecology of Materials
ANTHRO 260A	Tragedy of the Commons: Human Ecology of Communal Resources	ARTSTUDI 157	Art, Invention, Activism in the Public Sphere
ANTHRO 261	Human Behavioral Ecology	ARTSTUDI 253	ECOLOGY OF MATERIALS
ANTHRO 261A	Human Ecology: Adaptations to Climate and Climate Change	BIO 1	Human Evolution and Environment
ANTHRO 262	Indigenous Peoples and Environmental Problems	BIO 2N	Ecology and Evolution of Infectious Disease in a Changing World
ANTHRO 263	Conservation and Evolutionary Ecology	BIO 3	Frontiers in Marine Biology
ANTHRO 264	Natural Resource Extraction: Use and Development: Assessing Policies, Practices and Outcomes	BIO 3N	Views of a Changing Sea: Literature & Science
ANTHRO 266	Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness	BIO 7N	Introduction to Conservation Photography
ANTHRO 268A	Risky Environments: The Nature of Disaster	BIO 10AX	Conservation Photography
ANTHRO 270	Australian Ecosystems: Human Dimensions and Environmental Dynamics	BIO 10SC	Natural History, Marine Biology, and Research
ANTHRO 272	Seminar on Cultural Evolution and Coevolution	BIO 12N	Sensory Ecology of Marine Animals
ANTHRO 277	Environmental Change and Emerging Infectious Diseases, Japanese Society and Culture	BIO 15N	Environmental Literacy
ANTHRO 278	Evolution and Conservation in Galapagos	BIO 18Q	Plant Evolutionary Ecology
ANTHRO 283	Ecology, Evolution, and Human Health	BIO 21	The Science of the Extreme Life of the Sea
ANTHRO 302	History of Anthropological Theory, Ecology and Environment	BIO 29N	PARTY WITH TREES
ANTHRO 305	Research Methods in Ecological Anthropology	BIO 30	Ecology for Everyone
ANTHRO 353	Landscape	BIO 30N	Extinctions in Near Time: Biodiversity loss since the Pleistocene

## Emmett Interdisciplinary Program in Environment and Resources (E-IPER)

Courses offered by the Emmett Interdisciplinary Program in Environment and Resources are listed under the subject code ENVRES on the Stanford Bulletin's ExploreCourses web site (<http://explorecourses.stanford.edu/search?jsessionid=75B13D9BD401BF4435773811DC678716?view=catalog&catalog=&page=0&q=ENVRES&filter-catalognumber-ENVRES=on&filter-coursestatus-Active=on>).

### Mission of the Program

The Emmett Interdisciplinary Program in Environment and Resources develops the knowledge, skills, perspectives, and ways of thinking needed to understand and help solve the world's most significant environmental and resources sustainability challenges. E-IPER strives to be a model for interdisciplinary graduate education. E-IPER offers a Ph.D. in Environment and Resources, a Joint M.S. exclusively for students in Stanford's Graduate School of Business or Stanford Law School, and a Dual M.S. for students in the School of Medicine or a Ph.D. program in another department. E-IPER's home is the School of Earth, Energy & Environmental Sciences; affiliated faculty come from all seven Stanford schools.

### Graduate Programs in Environment and Resources

The University's basic requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (p. 45)" section of this bulletin. The E-IPER Ph.D. and M.S. degrees are guided by comprehensive requirements created with faculty and student input and approved by E-IPER's Executive Committee. To access the current Ph.D. and M.S. degree requirement documents, see the E-IPER web site.

### Learning Outcomes (Graduate)

Completion of the Ph.D. and M.S. degrees in Environment and Resources provides students with the knowledge, skills, perspectives, and ways of thinking needed to understand and help solve the world's most significant environmental and resources sustainability challenges.

### Master of Science in Environment and Resources

Students may not apply directly for the M.S. in Environment and Resources degree. The M.S. is an option exclusively for M.B.A. students in the Graduate School of Business, J.D. students in the Stanford Law School, M.D. students in the School of Medicine, students pursuing a Ph.D. in another Stanford department, and for E-IPER Ph.D. students who do not continue in the Ph.D. degree program.

### Joint Master's Degree

Students enrolled in a professional degree program in Stanford's Graduate School of Business or the Stanford Law School are eligible to apply for admission to the Joint M.S. in Environment and Resources Degree Program (JDP). Enrollment in the Joint M.S. Program allows students to pursue an M.S. degree concurrently with their professional degree and to count a defined number of units toward both degrees, resulting in the award of Joint M.B.A. and M.S. in Environment and Resources degree or a joint J.D. and M.S. in Environment and Resources degree.

The Joint M.B.A./M.S. degree program requires a total of 129 units (84 units for the M.B.A. and 45 units for the M.S., compared to 105 units for the M.B.A. and 45 units for the M.S. if pursued as separate degrees) to be completed over approximately eight academic quarters.

The Joint J.D./M.S. degree program requires a minimum of 113 units. The J.D. degree requires 111 units (minimum of 80 Law units and 31 non-Law units) and the M.S. degree requires 45 units. The joint degree allows up to 43 overlapping units, inclusive of the 31 non-Law units allowed within the J.D. degree and 12 professional school units allowed within the M.S. degree. Students may need to take additional units beyond the minimum 113 to satisfy the degree requirements for both the J.D. and M.S. The joint J.D./M.S. may be completed in three years.

The student's program of study is subject to the approval of the student's faculty adviser and E-IPER staff. The joint degrees are conferred when the requirements for both the E-IPER M.S. and the professional degree programs have been met.

In addition to requirements for the professional degree, all joint M.S. students are required to complete 45 units within the parameters outlined below and must achieve a 'B' (3.0) grade point average in all letter-graded courses taken toward the M.S. degree.

1. Completion of a required introductory core course and a capstone project seminar:

		Units
ENVRES 280	Introduction to Environmental Science	2
ENVRES 290	Capstone Project Seminar in Environment and Resources*	1-3

\* The capstone project integrates the student's professional and M.S. degrees and must be taken for a minimum of 3 units over one or two quarters.

2. Completion of a minimum of four letter-graded courses from one Joint M.S. Course Track (specific track course listings below):
  - a. Cleantech
  - b. Climate and Atmosphere
  - c. Energy
  - d. Freshwater
  - e. Global, Community, and Environmental Health
  - f. Land Use and Agriculture
  - g. Oceans and Estuaries
  - h. Sustainable Built Environment
  - i. Sustainable Design
3. Completion of at least four additional 3-5 unit letter-graded elective courses at the 100-level or higher. Courses may be taken from the student's selected course track, another course track, or elsewhere in the University, provided they are relevant to the student's environment and resources course of study.

Among the courses fulfilling the M.S. requirements, the student must complete at least 23 units at the 200-level or above. Courses numbered under 100 are not allowable.

Additional restrictions on course work that may fulfill the Joint M.S. degree include:

- A maximum of 5 units from courses that are identified as primarily consisting of guest lectures, such as the Energy Seminar or the Environmental Law Workshop, may be counted toward the joint M.S. degree.
- A maximum of 5 units of individual study courses, directed reading and independent research units (such as ENVRES 398 Directed Reading in Environment and Resources or ENVRES 399 Directed Research in Environment and Resources). One individual study course, if taken for 3-5 letter-graded units, can be counted as one of the four elective courses.
- A maximum of 12 units from approved courses related to the environmental and resource fields from any professional school. One approved professional school course can be counted as one of the four electives.

## Dual Master's Degree

Students in the School of Medicine or students pursuing a Ph.D. in another Stanford department may apply to pursue the M.S. in Environment and Resources dual degree. For the dual degree, students must meet the University's minimum requirements for their M.D. or Ph.D. degree and also complete an additional 45 units for the M.S. in Environment and Resources. Completion of the M.S. is anticipated to require at least three quarters in addition to the quarters required for the student's other degree. For additional information, see the E-IPER website.

The student's program of study is subject to the approval of the student's faculty adviser and E-IPER staff. The two degrees are conferred when the requirements for both the E-IPER M.S. and the other degree program have been met. For application information, see the Admissions (<https://pangea.stanford.edu/programs/eiper/admissions>) page on the E-IPER website.

In addition to requirements for the M.D. or Ph.D. degree, students are required to complete 45 units within the parameters outlined below and must achieve a 'B' (3.0) grade point average in all letter-graded courses taken toward the M.S. degree.

1. Completion of a required introductory core course and a capstone project seminar:

ENVRES 280	Introduction to Environmental Science	2
ENVRES 290	Capstone Project Seminar in Environment and Resources*	1-3

\* The Capstone Project integrates the student's professional/Ph.D. and M.S. degrees and must be taken for a minimum of 3 units over one or two quarters.

2. Completion of a minimum of four letter-graded courses from one M.S. Course Track (specific track course listings below):
  - Cleantech
  - Climate and Atmosphere
  - Energy
  - Freshwater
  - Global, Community, and Environmental Health
  - Land Use and Agriculture
  - Oceans and Estuaries
  - Sustainable Built Environment

- Sustainable Design

3. Completion of at least four additional 3-5 unit letter-graded elective courses at the 100-level or higher. Courses may be taken from the student's selected course track, another course track, or elsewhere in the University, provided they are relevant to the student's environment and resources course of study.

Among the courses fulfilling the M.S. requirements, completion of at least 23 units at the 200-level or above. Courses numbered under 100 are not allowable.

Additional restrictions on course work that may fulfill the dual M.S. degree include:

- A maximum of 5 units from courses that are identified as primarily consisting of guest lectures, such as the Energy Seminar or the Environmental Law Workshop may be counted toward the dual M.S. degree.
- A maximum of 5 units of individual study courses, directed reading, and independent research (such as ENVRES 398 Directed Reading in Environment and Resources or ENVRES 399 Directed Research in Environment and Resources). One individual study course, if taken for 3-5 letter-graded units, can be counted as one of the 4 elective courses.
- A maximum of 12 units from approved courses related to the environmental and resource fields from any professional school. One approved professional school course can be counted as one of the four electives.

## Joint M.S. and Dual M.S. Course Tracks

Students should consult Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) web site to determine course description, class schedule, location, eligibility, and prerequisites for all courses. Course tracks and other recommended courses are also available on the E-IPER website.

## Master of Science

In exceptional circumstances, E-IPER offers a Master of Science degree for students in E-IPER's Ph.D. program who opt to complete their training with an M.S. degree or who do not advance to candidacy for the Ph.D. degree. Admission directly to the M.S. program is not allowed. Requirements for the M.S. include:

1. Completion of a minimum of 45 units at or above the 100-level, of which 23 units must be at or above the 200-level. Courses numbered under 100 are not allowable.
2. Completion of the E-IPER Ph.D. core curriculum, each with a letter grade of 'B' or higher, comprising:

		Units
ENVRES 300	Introduction to Resource, Energy and Environmental Economics*	3
ENVRES 315	Environmental Research Design Seminar	1
ENVRES 320	Designing Environmental Research	3-4
ENVRES 330 & ENVRES 398	Research Approaches for Environmental Problem Solving and Directed Reading in Environment and Resources	4-13

\*Students admitted prior to 2014-15 must consult with E-IPER staff regarding an allowable replacement for this course.

Additional courses may be chosen in consultation with the student's lead advisers. Students must maintain at least a 'B' (3.0) grade point average in all courses taken for the M.S. degree. The M.S. degree does not have an M.S. with thesis option. Students may write a M.S. thesis, but it is not formally recognized by the University.

## Doctor of Philosophy in Environment and Resources

E-IPER's Ph.D. requirements are updated annually and lay out a scaffold of advising meetings, core courses, program activities, and milestones to guide students' progress. Each student works with a faculty advising team from different areas of research to design a course of study that allows the student to develop and exhibit:

1. familiarity with analytical tools and research approaches for interdisciplinary problem solving, and a mastery of those tools and approaches central to the student's thesis work
2. depth in at least two distinct fields of Inquiry; and
3. interdisciplinary breadth as determined by faculty advisers and student.

Program-specific Ph.D. requirements are outlined in detail in the current year requirements and are summarized below:

1. In the first year, completion of the Ph.D. core course sequence:

		Units
EARTH 300	Earth Sciences Seminar	1
ENVRES 300	Introduction to Resource, Energy and Environmental Economics	3
ENVRES 315	Environmental Research Design Seminar	1
ENVRES 320	Designing Environmental Research	3-4
ENVRES 330 & ENVRES 398	Research Approaches for Environmental Problem Solving and Directed Reading in Environment and Resources	4-13

2. Fulfillment of depth in the student's two chosen fields of Inquiry through courses, research, and/or independent studies as determined by the student and his/her faculty advisers and committee members. Fields of Inquiry are the central focus of a student's dissertation research. Students have the freedom to define and choose the fields of Inquiry in which they would like to develop depth of understanding through the course of their Ph.D. and which are distinct enough to ensure that the student's research is interdisciplinary. Each field of Inquiry must be mapped to a corresponding faculty adviser. As part of their qualifying exam, students are required to submit a detailed

essay describing: the two fields of Inquiry, mapping these fields of Inquiry from the larger disciplines on which their fields of Inquiry draw; how rigor is understood and achieved in these fields; the importance and applicability of these fields to the student's research questions; and how the student's work will combine these two fields of Inquiry to yield an interdisciplinary research project achieving scholarly rigor.

3. Demonstration of interdisciplinary breadth of knowledge related to environment and resources more broadly in the form of courses, independent study, and/or evidence of proficiency through prior course work or experience. Fulfillment of interdisciplinary breadth requirement must be certified by the student's lead faculty advisers and committee members.
4. Completion of quarterly meetings with advisers during the first year, and at minimum, annual meetings thereafter.
5. Submission of a candidacy plan by end of Spring Quarter of the second year, for review at the second year committee meeting of the minds and subject to the approval of the student's committee and E-IPER's faculty director. The candidacy plan should document how the student has fulfilled the program requirements to date and include a summary of research ideas and a list of faculty who might serve as qualifying exam committee members.
6. Completion of the oral qualifying exam and completion of the requirements for candidacy, including at least 25 letter-graded graduate course units (200 level and above) with at least a 'B' (3.0) average, by the end of Winter Quarter of the third year. The oral qualifying exam committee must include the student's two lead advisers and 2-3 other faculty with expertise in the student's research area. The majority of the oral qualifying exam committee should be members of the Academic Council; the chair of the committee must be an Academic Council member and may not be one of the student's two lead advisers. In exceptional cases, the committee may include a member-at-large who is not a Stanford faculty member as a fourth or fifth member.
7. Completion of a written dissertation, approved by the student's dissertation reading committee consisting of the student's lead advisers and at least one other member, and passage of the University oral examination in defense of the dissertation following the guidelines outlined in the "Graduate Degrees" section of this bulletin. The University oral examination committee comprises the student's two lead advisers, at least two additional members, and a chair who is appointed in a department outside that of the lead advisers, all of whom are normally Academic Council members. Appointment of a non-Academic Council member must be petitioned and approved by the faculty director.

In addition to the requirements listed above, all Ph.D. students must:

1. Serve as a teaching assistant (TA) for at least one quarter in a course with a discussion section or with an opportunity to lecture in at least two class sessions, in any department or program, including but not limited to ENVRES 320 Designing Environmental Research or ENVRES 330 Research Approaches for Environmental Problem Solving. Seminars, including Introductory Seminars, may not be used to fulfill this requirement. Students should fulfill the teaching requirement by the end of the third year unless they obtain a firm commitment from a faculty member to TA a future course.
2. On an ongoing basis, submit grant proposals for external funding, defined as fellowship and/or research funds provided by a government agency, a private foundation, or a University entity other than E-IPER or the School of Earth, Energy and Environmental Sciences.
3. Participate each year in a Spring Quarter annual review in which the student and lead advisers submit progress reports for review by the E-IPER academic guidance committee.

## Energy Resources Engineering

Courses offered by the Department of Energy Resources Engineering are listed under the subject code ENERGY on the Stanford Bulletin's ExploreCourses web site.

The Department of Energy Resources Engineering (ERE) awards the following degrees: the Bachelor of Science, Master of Science, Engineer, and Doctor of Philosophy in Energy Resources Engineering. The department also awards the Master of Science, Engineer, and Doctor of Philosophy in Petroleum Engineering. Consult the ERE student services office to determine the relevant program.

Energy resources engineers are concerned with the design of processes for energy recovery. Included in the design process are characterizing the spatial distribution of hydrocarbon and geothermal reservoir properties, drilling wells, designing and operating production facilities, selecting and implementing methods for enhancing fluid recovery, examining the environmental aspects of petroleum and geothermal exploration and production, monitoring reservoirs, and predicting recovery process performance.

The program also has a strong interest in related energy topics such as renewable energy, global climate change, carbon capture and sequestration, clean energy conversions (e.g., "clean coal"), and energy systems. The Energy Resources Engineering curriculum provides a sound background in basic sciences and their application to practical problems to address the complex and changing nature of the field. Course work includes the fundamentals of chemistry, computer science, engineering, geology, geophysics, mathematics, and physics. Applied courses cover most aspects of energy resources engineering and some related fields such as geothermal engineering and geostatistics. The curriculum emphasizes the fundamental aspects of fluid flow in the subsurface. These principles apply equally well to optimizing oil recovery from petroleum reservoirs, geothermal energy production and remediating contaminated groundwater systems.

Faculty and graduate students conduct research in areas including: enhanced oil recovery by thermal means, gas injection, and the use of chemicals; geostatistical reservoir characterization and mathematical modeling; geothermal engineering; natural gas engineering; production optimization; data assimilation and uncertainty modeling; properties of petroleum fluids; well test analysis; carbon sequestration; clean

energy conversions; and energy system modeling and optimization. Undergraduates are encouraged to participate in research projects.

The department is housed in the Green Earth Sciences Building. It operates laboratories for research in enhanced oil recovery processes, geological carbon storage operations, clean energy conversions, and geothermal engineering. Students have access to a variety of computers, computing platforms and software for research and course work.

## Mission of the Undergraduate Program in Energy Resources Engineering

The mission of the Energy Resources Engineering major is to provide students with the engineering skills and foundational knowledge needed to flourish as technical leaders within the energy industry. Such skills and knowledge include resource assessment, choices among energy alternatives, and carbon management, as well as the basic scientific background and technical skills common to engineers. The curriculum is designed to prepare students for immediate participation in many aspects of the energy industry and graduate school.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to:

1. apply skills developed in fundamental courses to engineering problems.
2. research, analyze, and synthesize solutions to an original and contemporary energy problem.
3. work independently and as part of a team to develop and improve engineering solutions.
4. apply written, visual, and oral presentation skills to communicate scientific knowledge.

## Graduate Programs in Energy Resources Engineering

The Energy Resources Engineering department offers two distinct degree programs at both the M.S and Ph.D. levels. One program leads to the degrees of M.S. or Ph.D. in Petroleum Engineering, and the other leads to the degrees of M.S. or Ph.D. in Energy Resources Engineering. The Engineer degree, which is offered in either Petroleum Engineering or Energy Resources Engineering, is an extended form of the M.S. degree with additional course work and research.

## Learning Outcomes (Graduate)

The objective is to prepare students to be technical leaders in the energy industry, academia and research organizations through completion of fundamental courses in the major field and in related sciences, as well as through independent research. Students are expected to:

1. apply skills developed in fundamental courses to engineering problems.
2. research, analyze, and synthesize solutions to an original and contemporary energy problem.
3. work independently and as part of a team to develop and improve engineering solutions.
4. apply written, visual, and oral presentation skills to communicate scientific knowledge.
5. MS students are expected to develop in-depth technical understanding of energy problems at an advanced level.

6. Ph.D. students are expected to complete a scientific investigation that is significant, challenging and original.

## Bachelor of Science in Energy Resources Engineering

The four-year program leading to the B.S. degree provides a foundation for careers in many facets of the energy industry. The curriculum includes basic science and engineering courses that provide sufficient depth for a wide spectrum of careers in the energy and environmental fields.

One of the goals of the program is to provide experience integrating the skills developed in individual courses to address a significant design problem. In ENERGY 199 Senior Project and Seminar in Energy Resources, taken in the senior year, student teams identify and propose technical solutions for an energy-resource related problem of current interest.

### Program

The requirements for the B.S. degree in Energy Resources Engineering are similar, but not identical, to those described in the "School of Engineering" section of this bulletin. Students must satisfy the University general education, writing, and language requirements. The normal Energy Resources Engineering undergraduate program automatically satisfies the University General Education Requirements (GERs) in the Disciplinary Breadth areas of Natural Sciences, Engineering and Applied Sciences, and Mathematics.

Engineering fundamentals courses and Energy Resources Engineering depth and elective courses must be taken for a letter grade.

The Energy Resources Engineering undergraduate curriculum is designed to prepare students for participation in the energy industry or for graduate studies, while providing requisite skills to evolve as the energy landscape shifts over the next half century. The program provides a background in mathematics, basic sciences, and engineering fundamentals such as multiphase fluid flow in the subsurface. In addition, the curriculum is structured with flexibility that allows students to explore energy topics of particular individual interest and to study abroad.

In brief, the unit and subject requirements are:

Energy Resources Core	15-16
Energy Resources Depth	18
Mathematics	25
Engineering Fundamentals and Depth	20-24
Science	29-32
Technology in Society	3-5
University Requirements: IHUM, GERs, Writing, Language	60-70
<b>Total Units</b>	<b>170-190</b>

The following courses constitute the normal program leading to a B.S. in Energy Resources Engineering. The program may be modified to meet a particular student's needs and interests with the advisor's prior approval.

### Required Core in Energy Resources Engineering

The following courses constitute the core program in Energy Resources Engineering

ENERGY 101	Energy and the Environment	3
ENERGY 104	Sustainable Energy for 9 Billion	3
ENERGY 120	Fundamentals of Petroleum Engineering	3
ENERGY 160	Modeling Uncertainty in the Earth Sciences	3

ENERGY 199	Senior Project and Seminar in Energy Resources (WIM)	3-4
------------	--	-----

### Mathematics

Select one of the following Series (A or B): 10

#### Series A

MATH 41	Calculus	
MATH 42	Calculus	

#### Series B

MATH 19	Calculus	
MATH 20	Calculus	
MATH 21	Calculus	

And the following (CME series recommended):

CME 100	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
CME 102	Ordinary Differential Equations for Engineers	5
or MATH 53	Ordinary Differential Equations with Linear Algebra	
CME 104	Linear Algebra and Partial Differential Equations for Engineers	5
or MATH 52	Integral Calculus of Several Variables	

### Science

CHEM 31A	Chemical Principles I	5
or CHEM 31X	Chemical Principles Accelerated	
CHEM 31B	Chemical Principles II	5
or CHEM 31X	Chemical Principles Accelerated	
CHEM 33	Structure and Reactivity	5
PHYSICS 41	Mechanics	4
PHYSICS 43	Electricity and Magnetism	4
PHYSICS 45	Light and Heat	4
PHYSICS 46	Light and Heat Laboratory	1
GS 1A	Introduction to Geology: The Physical Science of the Earth	5
or GS 1C	Introduction to Geology: Dynamic Earth	

### Engineering Fundamentals

CS 106A	Programming Methodology	3-5
or CS 106X	Programming Abstractions (Accelerated)	
CS 106B	Programming Abstractions	3-5
or CS 106X	Programming Abstractions (Accelerated)	
ENGR 14	Intro to Solid Mechanics	4
ENGR 30	Engineering Thermodynamics	3
ENERGY 110	Engineering Economics	3
or ECON 155	Environmental Economics and Policy	
or ECON 250	Environmental Economics	
or ECON 251	Natural Resource and Energy Economics	
or CEE 146A	Engineering Economy	
ME 70	Introductory Fluids Engineering	4
Technology in Society, 1 course		

### Earth and Energy Depth Concentration

Choose courses from the list below for a total of at least 18 units. At least one course must be completed in each category. Courses must be planned in consultation with the student's academic advisor. Appropriate substitutions are allowed with the consent of the advisor.

Units

		Units
<b>Fluid Flow and the Subsurface</b>		
ENERGY 120A	Flow Through Porous Media Laboratory	1
ENERGY 121	Fundamentals of Multiphase Flow	3
ENERGY 130	Well Log Analysis I	3

ENERGY 175	Well Test Analysis	3
ENERGY 180	Oil and Gas Production Engineering	3
ENGR 62	Introduction to Optimization	4
GEOPHYS 181	Fluids and Flow in the Earth: Computational Methods	3

### 3D Modeling of Subsurface Structures

ENERGY 125	Modeling and Simulation for Geoscientists and Engineers	3
ENERGY 141	Seismic Reservoir Characterization	3-4
ENERGY 146	Reservoir Characterization and Flow Modeling with Outcrop Data	3
GEOPHYS 112	Exploring Geosciences with MATLAB	1-3
GEOPHYS 182	Reflection Seismology	3
GS 151	Sedimentary Geology and Petrography: Depositional Systems	4
GEOPHYS 183	Reflection Seismology Interpretation	1-4
GEOPHYS 185	Rock Physics for Reservoir Characterization	3
GEOPHYS 186	Tectonophysics	3

### Earth and Energy Systems

ENERGY 102	Renewable Energy Sources and Greener Energy Processes	3
ENERGY 153	Carbon Capture and Sequestration	3-4
ENERGY 269	Geothermal Reservoir Engineering	3
ENERGY 191	Optimization of Energy Systems	3-4
ENERGY 301	The Energy Seminar	1
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions	3
CEE 70	Environmental Science and Technology	3
CEE 176B	Electric Power: Renewables and Efficiency	3-4
GEOPHYS 150	Geodynamics: Our Dynamic Earth	3
MATSCI 156/ ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
GEOPHYS 120	Ice, Water, Fire	3-5
GEOPHYS 150	Geodynamics: Our Dynamic Earth	3
ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
ENERGY 293B	Fundamentals of Energy Processes	3
ENERGY 293C	Energy from Wind and Water Currents	3
MS&E 211	Linear and Nonlinear Optimization	3-4

## Honors Program

The program in Energy Resources Engineering leading to the Bachelor of Science with Honors provides an opportunity for independent study and research on a topic of special interest and culminates in a written report and oral presentation.

The Honors Program is open to students with a grade point average (GPA) of at least 3.5 in all courses required for the ERE major and minimum of 3.0 in all University course work. Qualified students intending to pursue honors must submit an Honors Program Application to the Undergraduate Program Director no later than the eighth week of their ninth quarter, but students are encouraged to apply to the program during Winter Quarter of their junior year. The application includes a short form, an unofficial transcript, and a 2-3 page research proposal prepared by the student and endorsed by a faculty member who will serve as the research advisor.

Upon approval, students enroll in the Honors Program via Axess. Students must enroll in a total of 9 units of ENERGY 193 Undergraduate Research Problems; these units may be spread out over the course of the senior year, and may include previous enrollment units for the same research project. Research undertaken for the Honors Program cannot

be used as a substitute for regularly required courses. A formal written report must be submitted to the student's research advisor no later than the fourth week of the student's final quarter, and the report must be read, approved, and signed by the student's faculty advisor and a second member of the faculty. Each honors candidate must make an oral presentation of his or her research results.

## Minor in Energy Resources Engineering

The minor in Energy Resources Engineering requires the following three courses plus three additional electives. Courses must be planned in consultation with an ERE advisor. Appropriate substitutions are allowed with the consent of the advisor.

### Required courses

		Units
ENERGY 101	Energy and the Environment	3
ENERGY 120	Fundamentals of Petroleum Engineering	3
ENERGY 160	Modeling Uncertainty in the Earth Sciences	3

### Elective courses

Select at least three of the following:

		Units
ENERGY 102	Renewable Energy Sources and Greener Energy Processes	3
ENERGY 104	Sustainable Energy for 9 Billion	3
ENERGY 121	Fundamentals of Multiphase Flow	3
ENERGY 125	Modeling and Simulation for Geoscientists and Engineers	3
ENERGY 130	Well Log Analysis I	3
ENERGY 141	Seismic Reservoir Characterization	3
ENERGY 146	Reservoir Characterization and Flow Modeling with Outcrop Data	3
ENERGY 153	Carbon Capture and Sequestration	3
ENERGY 269	Geothermal Reservoir Engineering	3
ENERGY 175	Well Test Analysis	3
ENERGY 180	Oil and Gas Production Engineering	3
GEOPHYS 182	Reflection Seismology	3
GS 151	Sedimentary Geology and Petrography: Depositional Systems	3
GEOPHYS 112	Exploring Geosciences with MATLAB	3

## Master of Science in Petroleum Engineering

The objective is to prepare the student for professional work in the energy industry, or for doctoral studies, through completion of fundamental courses in the major field and in related sciences as well as independent research.

Students entering the graduate program are expected to have an undergraduate-level engineering or physical science background. Competence in computer programming in a high-level language (CS 106X Programming Abstractions (Accelerated) or the equivalent) and knowledge of engineering and geological fundamentals (ENERGY 120 Fundamentals of Petroleum Engineering, ENERGY 130 Well Log Analysis I, and GS 151 Sedimentary Geology and Petrography: Depositional Systems) are prerequisites for taking most graduate courses.

The following are minimum requirements for a student in the Department of Energy Resources Engineering to remain in good academic standing regarding course work:

1. no more than one incomplete grade at any time

- a cumulative grade point average (GPA) of 3.0
- a grade point average (GPA) of 2.7 each quarter
- a minimum of 15 units completed within each two quarter period (excluding Summer Quarter).

Unless otherwise stated by the instructor, incomplete grades in courses within the department are changed to 'NP' (not passed) at the end of the quarter after the one in which the course was given. This one quarter limit is a different constraint from the maximum one-year limit allowed by the University.

Academic performance is reviewed each quarter by a faculty committee. At the beginning of the next quarter, any student not in good academic standing receives a letter from the committee or department chair stating criteria that must be met for the student to return to good academic standing. If the situation is not corrected by the end of the quarter, possible consequences include termination of financial support, termination of departmental privileges, and termination from the University.

Students funded by research grants or fellowships from the department are expected to spend at least half of their time (a minimum of 20 hours per week) on research. Continued funding is contingent upon satisfactory research effort and progress as determined by the student's adviser. After Autumn Quarter of the first year, students receive a letter from the department chair concerning their research performance. If problems are identified and they persist through the second quarter, a warning letter is sent. Problems persisting into a third quarter may lead to loss of departmental support including tuition and stipend. Similar procedures are applied in subsequent years.

A balanced master's degree program including engineering course work and research requires a minimum of one maximum-tuition academic year beyond the baccalaureate to meet the University residence requirements. Most full-time students spend at least one additional summer to complete the research requirement. An alternative master's degree program based only on course work is available, also requiring at least one full tuition academic year to meet University residence requirements.

M.S. students who anticipate continuing in the Ph.D. program should follow the research option. M.S. students receiving financial aid normally require two academic years to complete the degree. Such students must take the research option.

The candidate must fulfill the following requirements:

- Register as a graduate student for at least 45 units.
- Submit a program proposal for the Master's degree approved by the adviser during the first quarter of enrollment.
- Complete 45 units with a grade point average (GPA) of at least 3.0. This requirement is satisfied by taking the core sequence, selecting one of the seven elective sequences, an appropriate number of additional courses from the list of technical electives, and completing 6 units of master's level research. Students electing the course work only M.S. degree are strongly encouraged to select an additional elective sequence in place of the research requirement. Students interested in continuing for a Ph.D. are expected to choose the research option and enroll in 6 units of ENERGY 361 Master's Degree Research in Energy Resources Engineering. All courses must be taken for a letter grade.
- Students entering without an undergraduate degree in Petroleum Engineering must make up deficiencies in previous training. Not more than 10 units of such work may be counted as part of the minimum total of 45 units toward the M.S. degree.

Research subjects include certain groundwater hydrology and environmental problems, energy industry management, flow of non-Newtonian fluids, geothermal energy, natural gas engineering, oil and gas recovery, pipeline transportation, production optimization,

reservoir characterization and modeling, carbon sequestration, reservoir engineering, reservoir simulation, and transient well test analysis.

## Recommended Courses and Sequences

The following list is recommended for most students. With the prior special consent of the student's adviser, courses listed under technical electives may be substituted based on interest or background.

### Core Sequence

		Units
ENERGY 175	Well Test Analysis	3
	or ENERGY 130 Well Log Analysis I	
ENERGY 221	Fundamentals of Multiphase Flow	3
ENERGY 222	Advanced Reservoir Engineering	3
ENERGY 246	Reservoir Characterization and Flow Modeling with Outcrop Data	3
ENERGY 251	Thermodynamics of Equilibria	3
CME 200	Linear Algebra with Application to Engineering Computations	3
CME 204	Partial Differential Equations in Engineering	3
Total Units		21

### Elective Sequence

		Units
Select one of the following Series:		9-14
Crustal Fluids:		
	GEOPHYS 200	
ESS 220	Physical Hydrogeology	
ESS 221	Contaminant Hydrogeology and Reactive Transport	
Environmental:		
ENERGY 227	Enhanced Oil Recovery	
ESS 221	Contaminant Hydrogeology and Reactive Transport	
And two of the following:		
ENERGY 240	Geostatistics	
CEE 270	Movement and Fate of Organic Contaminants in Waters	
CEE 273	Aquatic Chemistry	
CEE 274A	Environmental Microbiology I	
Enhanced Recovery:		
ESS 220	Physical Hydrogeology	
ENERGY 225	Theory of Gas Injection Processes	
ENERGY 226	Thermal Recovery Methods	
ENERGY 227	Enhanced Oil Recovery	
Geostatistics and Reservoir Modeling:		
ENERGY 240	Geostatistics	
ENERGY 241	Seismic Reservoir Characterization	
GEOPHYS 182	Reflection Seismology or GEOPHYS Rock Physics	
Geothermal:		
ENERGY 269	Geothermal Reservoir Engineering or ENERGY 2 Fundamentals of Energy Processes	
CHEMENG 120	Energy and Mass Transport	
ME 131A	Heat Transfer	
Reservoir Performance:		
ENERGY 223	Reservoir Simulation	
ENERGY 280	Oil and Gas Production Engineering	
GEOPHYS 202	Reservoir Geomechanics	

## Simulation and Optimization:

ENERGY 223	Reservoir Simulation	
ENERGY 224	Advanced Reservoir Simulation	
ENERGY 284	Optimization and Inverse Modeling	

Renewable Energy:

ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	
ENERGY 293B	Fundamentals of Energy Processes	
ENERGY 293C	Energy from Wind and Water Currents	
ESS 221	Contaminant Hydrogeology and Reactive Transport	4

Total Units 13-18

## Research Sequence

ENERGY 361	Master's Degree Research in Energy Resources Engineering	Units 1-6
------------	--	-----------

Total Units 1-6

<sup>1</sup> Students choosing the company sponsored course-work-only for the M.S. degree may substitute an additional elective sequence in place of the research.

## Technical Electives

Technical electives from the following list of advanced-level courses usually complete the M.S. program. In unique cases, when justified and approved by the adviser prior to taking the course, courses listed here may be substituted for courses listed above in the elective sequences.

		Units
ENERGY 130	Well Log Analysis I	3
ENERGY 224	Advanced Reservoir Simulation	3
ENERGY 230	Advanced Topics in Well Logging	3
ENERGY 267	Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties	3
ENERGY 269	Geothermal Reservoir Engineering	3
ENERGY 273	Special Topics in Energy Resources Engineering	1-3
ENERGY 280	Oil and Gas Production Engineering	3
ENERGY 281	Applied Mathematics in Reservoir Engineering	3
ENERGY 284	Optimization and Inverse Modeling	3
ENERGY 301	The Energy Seminar	1
CME 204	Partial Differential Equations in Engineering	3
ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
ENERGY 293B	Fundamentals of Energy Processes	3
ENERGY 293C	Energy from Wind and Water Currents	3
GEOPHYS 182	Reflection Seismology	3
GEOPHYS 190	Near-Surface Geophysics	3
GEOPHYS 202	Reservoir Geomechanics	3
CME 206	Introduction to Numerical Methods for Engineering	3
CME 211	Software Development for Scientists and Engineers	3

## Master of Science in Energy Resources Engineering

The objective of the M.S. degree in Energy Resources Engineering is to prepare the student either for a professional career or for doctoral studies. Students in the M.S. degree program must fulfill the following:

1. Complete a 45-unit program of study. The degree has two options:

- a. a course work degree, requiring 45 units of course work
- b. a research degree, of which a minimum of 39 units must be course work, with the remainder consisting of no more than 6 research units.

2. Course work units must be divided among two or more scientific and/or engineering disciplines and can include the core courses required for the Ph.D. degree.
3. All courses must be taken for a letter grade.
4. The program of study must be approved by the academic adviser and the department graduate program committee.
5. Students taking the research-option degree are required to complete an M.S. thesis, approved by the student's thesis committee.

### Recommended Courses and Sequences

The following list is recommended for most students. With the prior consent of the student's adviser, courses listed under technical electives may be substituted based on interest or background.

#### Core Sequence

		Units
ENERGY 221	Fundamentals of Multiphase Flow	3
ENERGY 246	Reservoir Characterization and Flow Modeling with Outcrop Data	3
CME 200	Linear Algebra with Application to Engineering Computations	3
CME 204	Partial Differential Equations in Engineering	3
ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
ENERGY 293B	Fundamentals of Energy Processes	3
ENERGY 293C	Energy from Wind and Water Currents	3
Total Units		21-22

#### Subject Sequence Alternatives

Select one of the following Series: 15 Units

Geothermal:	
ENERGY 223	Reservoir Simulation
ENERGY 269	Geothermal Reservoir Engineering
CHEMENG 120B	Energy and Mass Transport
GS 217	
ME 131A	Heat Transfer
ME 370A	Energy Systems I: Thermodynamics

Low Carbon Energy:

Select three of the following:	
ENERGY 104	Sustainable Energy for 9 Billion
ENERGY 223	Reservoir Simulation
ENERGY 251	Thermodynamics of Equilibria
ENERGY 256	Electronic Structure Theory and Applications to Chemical Kinetics (formerly ENERGY 252)
ENERGY 269	Geothermal Reservoir Engineering
ENERGY 291	Optimization of Energy Systems
CHEMENG 130	Separation Processes
GS 170	Environmental Geochemistry
GS 171	Geochemical Thermodynamics
ME 370A	Energy Systems I: Thermodynamics
ME 370B	Energy Systems II: Modeling and Advanced Concepts
MATSCI 156/ ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution

## Modeling Natural Resources:

Select three of the following:

ENERGY 240	Geostatistics
ENERGY 241	Seismic Reservoir Characterization
ENERGY 284	Optimization and Inverse Modeling
GEOPHYS 200	
GEOPHYS 262	Rock Physics

## Oil and Gas:

ENERGY 104	Sustainable Energy for 9 Billion
ENERGY 222	Advanced Reservoir Engineering
ENERGY 223	Reservoir Simulation
ENERGY 240	Geostatistics
ENERGY 251	Thermodynamics of Equilibria

Total Units	15
-------------	----

## Technical Electives

		Units
ENERGY 104	Sustainable Energy for 9 Billion	3
ENERGY 120	Fundamentals of Petroleum Engineering	3
ENERGY 130	Well Log Analysis I	3
Any 200-level ENERGY course		
ENERGY 301	The Energy Seminar	1
CEE 176A	Energy Efficient Buildings	3-4
CEE 176B	Electric Power: Renewables and Efficiency	3-4
CME 206	Introduction to Numerical Methods for Engineering	3
CME 212	Advanced Programming for Scientists and Engineers	3
ECON 250	Environmental Economics	2-5
ECON 251	Natural Resource and Energy Economics	2-5
GS 217		
MATSCI 316	Nanoscale Science, Engineering, and Technology	3
ME 131A	Heat Transfer	3-5
ME 260	Fuel Cell Science and Technology	3
ME 370A	Energy Systems I: Thermodynamics	3
ME 370B	Energy Systems II: Modeling and Advanced Concepts	4

## Coterminal B.S. and M.S. Program in Energy Resources Engineering

The coterminal B.S./M.S. program offers an opportunity for Stanford University students to pursue a graduate experience while completing the B.S. degree in any relevant major. Energy Resources Engineering graduate students generally come from backgrounds such as chemical, civil, or mechanical engineering; geology or other earth sciences; or physics or chemistry.

The two types of M.S. degrees, the course work only degree and the research degree, as well as the courses required to meet degree requirements, are described below in the M.S. section. Both degrees require 45 units and may take from one to two years to complete depending on circumstances unique to each student.

Requirements to enter the program are: three letters of recommendation from faculty members or job supervisors, a statement of purpose, scores from the GRE general test, and a copy of Stanford University transcripts. While the department does not require any specific GPA or GRE score, potential applicants are expected to compete favorably with graduate student applicants.

## University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

A Petroleum Engineering or Energy Resources Engineering master's degree can be used as a terminal degree for obtaining a professional job in the petroleum or energy industries, or in any related industry where analyzing flow in porous media or computer simulation skills are required. It can also be a stepping stone to a Ph.D. degree, which usually leads to a professional research job or an academic position.

Students should apply to the program any time after they have completed 120 undergraduate units, and in time to take ENERGY 120 Fundamentals of Petroleum Engineering, the basic introductory course in Autumn Quarter of the year they wish to begin the program. Contact the Department of Energy Resources Engineering to obtain additional information. Students should have a background at least through MATH 53 ([http://exploreddegrees.stanford.edu/schoolofearthsciences/energyresourcesengineering/js/fckeditor/editor/fckeditor.html?InstanceName=attr\\_text&Toolbar=PageWizard](http://exploreddegrees.stanford.edu/schoolofearthsciences/energyresourcesengineering/js/fckeditor/editor/fckeditor.html?InstanceName=attr_text&Toolbar=PageWizard)) Ordinary Differential Equations with Linear Algebra and CS 106AB ([http://exploreddegrees.stanford.edu/schoolofearthsciences/energyresourcesengineering/js/fckeditor/editor/fckeditor.html?InstanceName=attr\\_text&Toolbar=PageWizard](http://exploreddegrees.stanford.edu/schoolofearthsciences/energyresourcesengineering/js/fckeditor/editor/fckeditor.html?InstanceName=attr_text&Toolbar=PageWizard)) Programming Methodology before beginning graduate work in this program.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees (p. 42)" section of this bulletin. For University coterminal master's degree application forms, see the Registrar's Publications page (<https://studentaffairs.stanford.edu/registrar/publications/#Coterm>).

## Doctor of Philosophy in Petroleum Engineering or Energy Resources Engineering

The Ph.D. degree is conferred upon demonstration of high achievement in independent research and by presentation of the research results in a written dissertation and oral defense.

The following are minimum requirements for a student in the Department of Energy Resources Engineering to remain in good academic standing regarding course work:

1. no more than one incomplete grade at any time
2. a cumulative grade point average (GPA) of 3.25
3. a grade point average (GPA) of 2.7 each quarter
4. a minimum of 15 units completed within each two quarter period (excluding Summer Quarter).

Unless otherwise stated by the instructor, incomplete grades in courses within the department are changed to 'NP' (not passed) at the end of the quarter after the one in which the course was given. This one quarter limit is a different constraint from the maximum one-year limit allowed by the University.

Academic performance is reviewed each quarter by a faculty committee. At the beginning of the next quarter, any student not in good academic standing receives a letter from the committee or department chair stating criteria that must be met for the student to return to good academic standing. If the situation is not corrected by the end of the quarter, possible consequences include termination of financial support, termination of departmental privileges, and termination from the University.

Students funded by research grants or fellowships from the department are expected to spend at least half of their time (a minimum of 20 hours per week) on research. Continued funding is contingent upon satisfactory research effort and progress as determined by the student's adviser. After Autumn Quarter of the first year, students receive a letter from the department chair concerning their research performance. If problems are identified and they persist through the second quarter, a warning letter is sent. Problems persisting into a third quarter may lead to loss of departmental support including tuition and stipend. Similar procedures are applied in subsequent years.

The Ph.D. degree is awarded primarily on the basis of completion of significant, original research. Extensive course work and a minimum of 90 units of graduate work beyond the master's degree are required. Doctoral candidates planning theoretical work are encouraged to gain experimental research experience in the M.S. program. Ph.D. students receiving financial assistance are limited to 10 units per quarter and often require more than three years to complete the Ph.D. beyond the M.S. degree.

In addition to University and the Department of Energy Resources Engineering basic requirements for the doctorate, the Petroleum Engineering Ph.D. and Energy Resources Engineering Ph.D. degrees have the following requirements:

1. Complete 135 units of total graduate work (90 units beyond the master's degree). The 90 units are composed of a minimum of 36 units of research and a minimum of 36 units of course work. At least half of the classes must be at a 200 level or higher and all must be taken for a letter grade. Students with an M.S. degree or other specialized training from outside ERE are generally expected to include ENERGY 221 Fundamentals of Multiphase Flow, and ENERGY 240 Geostatistics, or their equivalents. The number and distribution of courses to be taken is determined with input from the research advisers and department graduate program committee.
2. To achieve candidacy (usually during or at the end of the first year of enrollment), the student must complete 24 units of letter-graded course work beyond the M.S. degree, pass a written exam, develop a written Ph.D. research proposal, and choose a dissertation committee.
3. The research adviser(s) and two other faculty members comprise the dissertation reading committee. Upon completion of the dissertation,

the student must pass a University oral examination in defense of the dissertation.

4. Act as a teaching assistant at least once, and enroll in ENERGY 359 Teaching Experience in Energy Resources Engineering.

36 units of course work is a minimum; in some cases the research adviser may specify additional requirements to strengthen the student's expertise in particular areas. The 36 units of course work does not include required teaching experience (ENERGY 359 Teaching Experience in Energy Resources Engineering) nor required research seminars.

The dissertation must be submitted in its final form within five calendar years from the date of admission to candidacy. Candidates who fail to meet this deadline must submit an Application for Extension of Candidacy for approval by the department chair if they wish to continue in the program.

Ph.D. students entering the department are required to hold an M.S. degree in a relevant science or engineering discipline. Students wishing to follow the Ph.D. program in Petroleum Engineering must hold an M.S. degree (or equivalent) in Petroleum Engineering. Students following the Ph.D. program in Energy Resources Engineering must hold an M.S. degree (or equivalent), although it need not be in Energy Resources Engineering.

After the second quarter at Stanford, a faculty committee evaluates the student's progress. If a student is found to be deficient in course work and/or research, a written warning is issued. After the third quarter, the faculty committee decides whether or not funding should be continued for the student. Students denied funding after the third quarter are advised against proceeding with the Ph.D. proposal, though the student may choose to proceed under personal funding.

### Ph.D. Degree Qualification

The procedure for Ph.D. qualification is identical for individuals who entered the department as an M.S. or a Ph.D. student. For students completing an MS in the department, the student formally applies to the Ph.D. program in the second year of the M.S. degree program. The student is considered for admission to the Ph.D. program along with external applicants. The admission decision is based primarily upon research progress and course work.

There are two steps to the qualification procedure. Students first take a preliminary written exam that is offered at the beginning of Autumn Quarter. The exam focuses upon synthesis of knowledge acquired from core courses in ERE or PE. Exams are different for ERE and PE Ph.D. students, but share a goal of having students exhibit capability to solve an engineering problem. Students continuing within the department take the exam at the beginning of their first quarter as Ph.D. students. Students who completed their M.S. outside of the department take the exam at the beginning of their fourth quarter as PhD students. A student who does not pass the exam may not be allowed to take the exam a second time.

Any student who does not pass the written exam is considered to have failed the qualifying exam. Any student who is deemed to have not made sufficient research progress may not be allowed to take the preliminary exam and research progress shall be taken into account for pass, fail, and retake decisions.

A written Ph.D. proposal and oral defense are the main components of the second step. The written proposals are reviewed by three faculty members. Students are provided a template of what constitutes an acceptable proposal. Students subsequently make an oral presentation of their proposal to three faculty members including material such as a literature review, identification of key unanswered research questions, proposed work outline, and an oral presentation.

Following the presentation, the student is questioned on the research topic and general field of study. The student can pass, pass with qualifications requiring more classes or teaching assistantships, or fail. Students who completed their MS in the department prepare and defend their proposal in their third quarter (not counting summer) as a Ph.D. student. Their advisor may request an additional quarter given extenuating circumstances such as a major change in research focus between M.S. and Ph.D. programs. Students who completed their MS outside of the department complete the proposal in their fourth quarter (not counting summer) of study.

## Course Work

The 36 units of course work may include graduate courses in Energy Resources Engineering (numbered 200 and above) and courses chosen from the following list. Other courses may be substituted with prior approval of the adviser. In general, non-technical courses are not approved.

Students who enter directly into the Ph.D. program after receiving an M.S. degree from another university are expected to show expertise in the core courses required for Stanford's M.S. degree in Energy Resources Engineering, either by including those courses in their Ph.D. degree or by showing that they have taken equivalent courses during their M.S. degree.

For a Ph.D. in Energy Resources Engineering, 12 of the 36 required course units must be completed from the following list of courses. If the student has not taken ENERGY 293A Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution, ENERGY 293B Fundamentals of Energy Processes, ENERGY 293C Energy from Wind and Water Currents or their equivalent during the M.S., then these courses must be taken during the Ph.D. (they will satisfy 9 of the required 12 units).

		Units
Required to take 12 units from the following list:		
ENERGY 104	Sustainable Energy for 9 Billion	3
ENERGY 253	Carbon Capture and Sequestration	3-4
ENERGY 256	Electronic Structure Theory and Applications to Chemical Kinetics (formerly ENERGY 252)	3
ENERGY 269	Geothermal Reservoir Engineering	3
ENERGY 291	Optimization of Energy Systems	3-4
ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
ENERGY 293B	Fundamentals of Energy Processes	3
ENERGY 293C	Energy from Wind and Water Currents	3
ENERGY 301	The Energy Seminar	1
CEE 176A	Energy Efficient Buildings	3-4
CEE 176B	Electric Power: Renewables and Efficiency	3-4
CEE 268	Groundwater Flow	3-4
CME 206	Introduction to Numerical Methods for Engineering	3
CME 302	Numerical Linear Algebra	3
CME 306	Numerical Solution of Partial Differential Equations	3
ESS 221/ CEE 260C	Contaminant Hydrogeology and Reactive Transport	4
CHEMENG 130	Separation Processes	3
CHEMENG 340	Molecular Thermodynamics	3
ECON 250	Environmental Economics	2-5
ECON 251	Natural Resource and Energy Economics	2-5
GS 170	Environmental Geochemistry	4
GS 171	Geochemical Thermodynamics	3
GS 217		
GS 253	Petroleum Geology and Exploration	3

GEOPHYS 182	Reflection Seismology	3
GEOPHYS 202	Reservoir Geomechanics	3
GEOPHYS 262	Rock Physics	3
ME 131A	Heat Transfer	3-5
ME 250	Internal Combustion Engines	3
ME 260	Fuel Cell Science and Technology	3
ME 335A	Finite Element Analysis	3
ME 335B	Finite Element Analysis	3
ME 335C	Finite Element Analysis	0
ME 370A	Energy Systems I: Thermodynamics	3
ME 370B	Energy Systems II: Modeling and Advanced Concepts	4
MATSCI 156/ ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
MATSCI 316	Nanoscale Science, Engineering, and Technology	3

## Ph.D. Minor in Petroleum Engineering or Energy Resources Engineering

To be recommended for a Ph.D. degree with Petroleum Engineering or Energy Resources Engineering as a minor subject, a student must take 20 units of graduate-level lecture courses in the department. These courses must include ENERGY 221 Fundamentals of Multiphase Flow and ENERGY 222 Advanced Reservoir Engineering for the Petroleum Engineering minor, or ENERGY 293A Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution and ENERGY 293B Fundamentals of Energy Processes and ENERGY 293C Energy from Wind and Water Currents for the Energy Resources Engineering minor. The remaining courses should be selected from:

		Units
ENERGY 175	Well Test Analysis	3
ENERGY 223	Reservoir Simulation	3-4
ENERGY 224	Advanced Reservoir Simulation	3
ENERGY 225	Theory of Gas Injection Processes	3
ENERGY 227	Enhanced Oil Recovery	3
ENERGY 240	Geostatistics	2-3
ENERGY 241	Seismic Reservoir Characterization	3-4
ENERGY 251	Thermodynamics of Equilibria	3
ENERGY 253	Carbon Capture and Sequestration	3-4
ENERGY 256	Electronic Structure Theory and Applications to Chemical Kinetics (formerly ENERGY 252)	3
ENERGY 269	Geothermal Reservoir Engineering	3
ENERGY 280	Oil and Gas Production Engineering	3
ENERGY 281	Applied Mathematics in Reservoir Engineering	3
ENERGY 284	Optimization and Inverse Modeling	3

\*\* Joint appointment with Geophysics

## Earth System Science

Courses offered by the Department of Earth System Science are listed under the subject code ESS on the Stanford Bulletin's ExploreCourses web site.

On April 16, 2015, the Senate of the Academic Council approved the change of name for the department to become the Department of Earth System Science. Prior to April 16, the department was named the Department of Environmental Earth System Science.

Earth System Science studies the planet's oceans, lands, and atmosphere as an integrated system, with an emphasis on changes occurring during the current period of overwhelming human influence, the Anthropocene. Faculty and students within the department use the principles of biology, chemistry, and physics to study problems involving processes occurring at the Earth's surface, such as climate change and global nutrient cycles, providing a foundation for problem solving related to environmental sustainability and global environmental change.

## Graduate Programs in Earth System Science

The University's basic requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin. The Department of Earth System Science does not offer coterminal admission to the master's in Earth System Science.

## Learning Objectives (Graduate)

The objectives of the doctoral program in Earth System Science are to enable students to develop the skills needed to conduct original investigations in environmental and earth system sciences, to interpret the results, and to present the data and conclusions in a publishable manner. Graduates should develop strong communication skills with the ability to teach and communicate effectively with the public.

The objectives of the master's program in Earth System Science is to continue a student's training in one of the earth science disciplines and to prepare students for a professional career or doctoral studies.

On April 16, 2015, the Senate of the Academic Council approved the Master of Science in Earth System Science. Students who matriculated into the Master of Science in Environmental Earth System Science have the option of changing the name of their degree to Earth System Science. Degree requirements remain the same.

## Master of Science in Earth System Science

The University's requirements for M.S. degrees are outlined in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin. Additional departmental requirements include the following:

### Admission

For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical writing assessment) of the Graduate Record Examination. In keeping with

University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Individuals who have completed a B.S. or two-year M.S. program in the U.S. or other English-speaking country are not required to submit TOEFL scores.

## Course Work

		Units
<b>Required Core Courses</b>		
ESS 305	Climate Change: An Earth Systems Perspective	2
ESS 306	From Freshwater to Oceans to Land Systems: An Earth System Perspective to Global Challenges	2
ESS 307	Research Proposal Development and Delivery	2
<b>Distribution Requirements</b>		
Area A: Analysis of the Earth System (Select one course)		
ESS 211	Fundamentals of Modeling	3-5
ESS 260	Advanced Statistical Methods for Earth System Analysis	3
Area B: Measurement of the Earth System (Select one course)		
ESS 212	Measurements in Earth Systems	3-4
ESS 241	Remote Sensing of the Oceans	3-4
ESS 262	Remote Sensing of Land	4
Area C: Earth System Processes, Models, and Human-Environmental Interactions (Select one course)		
ESS 220	Physical Hydrogeology	4
ESS 221	Contaminant Hydrogeology and Reactive Transport	4
ESS 246A	Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation	3
ESS 246B	Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation	3
ESS 270	Analyzing land use in a globalized world	3
<b>Seminar Requirements</b>		
Each quarter during the first academic year:		
EARTH 300	Earth Sciences Seminar	1
Autumn Quarter of first academic year:		
ESS 301	Topics in Earth System Science	1

## Unit Requirements

1. A minimum of 45 units of course work at the 100 level or above.
2. Half of the courses used to satisfy the 45-unit requirement must be intended primarily for graduate students, usually at the 200 level or above.
3. No more than 15 units of thesis research may be used to satisfy the 45-unit requirement.
4. Some students may be required to make up background deficiencies in addition to these basic requirements.
5. By the end of Winter Quarter of the first year in residence, a student must complete at least three courses taught by a minimum of two different department faculty members.

## Teaching Assistantship

Each student must serve as a teaching assistant in at least two quarters during their graduate career.

## Advising

The department's graduate coordinator, in coordination with the departmental faculty, appoints an academic adviser prior to registration with appropriate consideration of the student's background, interests, and professional goals. In consultation with the adviser, the student plans a program of course work for the first year. The faculty adviser is

charged with designing the curriculum in consultation with the student specific to the research topic.

## Thesis

Each student must complete a thesis describing his or her research. Thesis research should begin during the first year of study at Stanford and should be completed before the end of the second year of residence. Early during the thesis research period, and after consultation with the student, the thesis adviser appoints a second reader for the thesis who must be approved by the graduate coordinator; the thesis adviser is the first reader. The two readers jointly determine whether the thesis is acceptable for the M.S. degree in the department.

## Master of Science, Course Work Only Option for ESS Ph.D. Students

The course-work-only M.S. for EESS Ph.D. students requires 45 unduplicated units of which all 45 must be course work (non-research, non-independent study, non-thesis units). All required units must be in courses at the 100-level or above, 50 percent of those units must be in graduate-level courses (generally, at the 200-level or above). No units are awarded for course work completed elsewhere (i.e., not eligible to transfer-in units). All 45 units can be applied to the 135 unit requirement for the Ph.D. The remaining 90 units can consist of all research units

On April 16, 2015, the Senate of the Academic Council approved the Doctor of Philosophy in Earth System Science. Students who matriculated into the Doctor of Philosophy in Environmental Earth System Science have the option of changing the name of their degree to Earth System Science. Degree requirements remain the same.

## Doctor of Philosophy in Earth System Science

The University's requirements for the Ph.D. degree are outlined in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin. A summary of additional department requirements follows:

### Admission

For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical writing assessment) of the Graduate Record Examination. In keeping with University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Individuals who have completed a B.S. or two-year M.S. program in the U.S. or other English-speaking country are not required to submit TOEFL scores.

### Course Work

A minimum of 135 units of graduate study at Stanford must be satisfactorily completed. Required courses must be taken for a letter grade, if offered. Ph.D. students must complete the required courses in their individual program or in their specialized area of study with a grade point average (GPA) of 3.0 (B) or higher, or demonstrate that they have completed the equivalents elsewhere. Ph.D. students must complete a minimum of four graduate level, letter-grade courses of at least 3 units each from four different faculty members on the Academic Council in the University. By the end of Spring Quarter of their first year in residence, students must complete at least three graduate level courses taught by a minimum of two different ESS faculty members.

#### Required Core Courses

		Units
ESS 305	Climate Change: An Earth Systems Perspective	2
ESS 306	From Freshwater to Oceans to Land Systems: An Earth System Perspective to Global Challenges	2

ESS 307	Research Proposal Development and Delivery	2
---------	--	---

#### Distribution Requirements

Area A: Analysis of the Earth System (Select one course)		
ESS 211	Fundamentals of Modeling	3-5
ESS 260	Advanced Statistical Methods for Earth System Analysis	3
Area B: Measurement of the Earth System (Select one course)		
ESS 212	Measurements in Earth Systems	3-4
ESS 241	Remote Sensing of the Oceans	3-4
ESS 262	Remote Sensing of Land	4
Area C: Earth System Processes, Models, and Human-Environmental Interactions (Select one course)		
ESS 220	Physical Hydrogeology	4
ESS 221	Contaminant Hydrogeology and Reactive Transport	4
ESS 246A	Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation	3
ESS 246B	Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation	3
ESS 270	Analyzing land use in a globalized world	3

#### Seminar Requirements

Each quarter during the first academic year:		
EARTH 300	Earth Sciences Seminar	1
Autumn Quarter of first academic year:		
ESS 301	Topics in Earth System Science	1

### Teaching Assistantship

Each student must serve as a teaching assistant in at least two quarters during their graduate career.

### Annual Review

During Spring Quarter of each year, students must undergo an annual review by their thesis committee to allow the committee to monitor the progress of the student and make recommendations, where necessary.

### Candidacy and Qualification Exam

Qualify for candidacy for the Ph.D. by the end of the sixth quarter in residence, excluding summers. Department procedures require selection of a faculty thesis adviser, preparation of a written research proposal, approval of this proposal by the thesis adviser, selection of a committee for the Ph.D. qualifying examination, and approval of the membership by the graduate coordinator and chair of the department. The research examination consists of three parts: oral presentation of a research proposal; examination on the research proposal; and examination on subject matter relevant to the proposed research. The exam should take place prior to May 1 so that its outcome is known at the time of the annual spring evaluation of graduate students.

Upon qualifying for Ph.D. candidacy, the student and thesis adviser, who must be a department faculty member, choose a research committee that includes a minimum of two faculty members in the University in addition to the adviser. Annually, in the month of March or April, the candidate must organize a meeting of the full research committee to present a progress report covering the past year and provide expected goals for the coming year.

### Doctoral Dissertation and Oral Defense

Under the supervision of the research advisory committee, the candidate must prepare a doctoral dissertation that is a contribution to knowledge and is the result of independent research; curriculum must also be developed with the supervision of the committee, which should be designed to provide a rigorous foundation for the research area. The format of the dissertation must meet University guidelines. The student

is urged to prepare dissertation chapters that, in scientific content and format, are readily publishable.

The doctoral dissertation is defended in the University oral examination. The department appoints the research adviser and two other members of the research committee to be readers of the draft dissertation. The readers are charged to read the draft and to certify in writing to the department that it is adequate to serve as a basis for the University oral examination. Upon obtaining this written certification, the student is permitted to schedule the University oral examination.

## Geological Sciences

Courses offered by the Department of Geological Sciences are listed under the subject code GS on the Stanford Bulletin's ExploreCourses web site.

On April 16, 2015, the Senate of the Academic Council approved the change of name for the department to become the Department of Geological Sciences. Prior to April 16, the department was named the Department of Geological and Environmental Sciences.

The geological sciences are naturally interdisciplinary, and include: the study of earth materials, earth processes, and how they have changed over Earth's 4.56 billion year history. More specifically, courses and research within the department address: the chemical and physical makeup and properties of minerals, rocks, soils, sediments, and water; the formation and evolution of Earth and other planets; the processes that deform Earth's crust and shape Earth's surface; the stratigraphic, paleobiological, and geochemical records of Earth history including changes in climate, oceans, and atmosphere; present-day, historical, and long-term feedbacks between the geosphere and biosphere, and the origin and occurrence of our natural resources.

The department's research is critical to the study of natural hazards (earthquakes, volcanic eruptions, landslides, and floods), environmental and geological engineering, surface and groundwater management, the assessment, exploration, and extraction of energy, mineral and water resources, ecology and conservation biology, remediation of contaminated water and soil, geological mapping and land use planning, and human health and the environment.

A broad range of instrumentation for elemental and radiogenic/stable isotope analysis is available, including ion microprobe, electron microprobe, thermal and gas source mass spectrometry, inductively coupled plasma mass spectrometry and nuclear magnetic resonance. The Center for Materials Research and facilities at the SLAC National Accelerator Laboratory, Stanford Synchrotron Radiation Laboratory (SSRL), and the U.S. Geological Survey in nearby Menlo Park are also available for the department's research. Branner Library, devoted exclusively to the Earth Sciences, represents one of the department's most important resources. The department also maintains rock preparation (crushing, cutting, polishing), mineral separation, and microscopy facilities.

## Mission of the Undergraduate Program in Geological Sciences

The purpose of the undergraduate program in Geological Sciences is to provide students with a broad background in the fundamentals of the Earth sciences and the quantitative, analytical, and communications skills necessary to conduct research and think critically about questions involving the Earth. The major provides excellent preparation for graduate school and careers in geological and environmental consulting, land use planning, law, teaching, and other professions in which an understanding of the Earth and a background in science are important.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to develop and demonstrate:

1. an understanding of fundamental concepts in Earth science.
2. the ability to collect, analyze, and interpret geological and environmental data using a variety of techniques to test hypotheses.
3. the ability to address real geological and/or environmental problems in the field.
4. the ability to communicate scientific knowledge orally, visually, and in writing.

## Graduate Programs in Geological Sciences

Graduate Studies in the Department of Geological Sciences involve academic course work and independent research. Students are prepared for careers as professional scientists in research, education, or the application of the earth sciences to mineral, energy, and water resources. Programs lead to the M.S., Engineer, and Ph.D. degrees. Course programs in the areas of faculty interest are tailored to the student's needs and interests with the aid of his or her research adviser. Students are encouraged to include in their program courses offered in other departments in the School of Earth, Energy and Environmental Sciences as well as in other departments in the University. Diplomas designate degrees in Geological and Environmental Sciences or Geological Sciences and may also indicate the following specialized fields of study: Geostatistics and Hydrogeology.

## Learning Outcomes (Graduate)

The purpose of the master's program in Geological Sciences is to continue a student's training in one of a broad range of earth science disciplines and to prepare students for either a professional career or doctoral studies.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship, high attainment in a particular field of

knowledge, and the ability to conduct independent research. To this end, the objectives of the doctoral program are to enable students to develop the skills needed to conduct original investigations in a particular discipline or set of disciplines in the earth sciences, to interpret the results, and to present the data and conclusions in a publishable manner.

On April 16, 2015, the Senate of the Academic Council approved the Bachelor of Science in Geological Sciences. Students who declared the Bachelor of Science in Geological and Environmental Sciences have the option of changing the name of their degree to Geological Sciences. Degree requirements remain the same.

## Bachelor of Science in Geological Sciences

The major consists of five interrelated components:

- 1. Earth Sciences Fundamentals**—Students must complete a set of core courses that introduce the properties of Earth materials, the processes that change the Earth, and the timescales over which those processes act. These courses provide a broad foundational knowledge that can lead to specialization in many different disciplines of the geological and environmental sciences.
- 2. Quantitative and Analytical Skills**—Students must complete adequate course work in mathematics, chemistry, and physics or biology. In addition, they learn analytical techniques specific to the Earth sciences through the laboratory component of courses.
- 3. Advanced Course Work and Research**—Students gain breadth and depth in upper-level electives and are encouraged to apply these skills and knowledge to problems in the Earth sciences through directed research.
- 4. Field Research Skills**—Most GS courses include field trips and/or field-based projects. In addition, students must complete at least six weeks of field research through departmental offerings (GS 105 Introduction to Field Methods and GS 190 Research in the Field), in which they learn and apply field techniques, field mapping, and the prepare a written report.
- 5. Communication Skills**—To fulfill the Writing in the Major requirement, students take a writing-intensive senior seminar (GS 150 Senior Seminar: Issues in Earth Sciences), in which they give both oral and written presentations that address current research in the earth sciences.

The major requires at least 93 units; letter grades are required in all courses if available. Students interested in the GS major should consult with the undergraduate program coordinator for information about options within the curriculum.

### Course Sequence (93-110 units total)

#### Core Requirement

Students are required to take all of the following:

	Units
Select one of the following:	4-5
GS 1A Introduction to Geology: The Physical Science of the Earth	
GS 1B Introduction to Geology	
GS 1C Introduction to Geology: Dynamic Earth	
GS 4 How to Build and Maintain a Habitable Planet: An Introduction to Earth System History	4
GS 90 Introduction to Geochemistry	3-4
GS 102 Earth Materials: Introduction to Mineralogy	4
GS 103 Earth Materials: Rocks in Thin Section	3
GS 104 Introduction to Petrology	4
GS 105 Introduction to Field Methods	3

GS 150	Senior Seminar: Issues in Earth Sciences	3
GS 190	Research in the Field	6
Total Units		34-36

#### Breadth in the Discipline Requirement

To gain understanding of the breadth of subject areas within the geological and environmental sciences, students are required to take one course from each of the following seven groups (22-28 units).

##### Surface Processes

The chemical and physical properties of the solid, aqueous, and gaseous phases comprising Earth's surface environment, their natural compositional variations and biogeochemical interactions, and the processes that affect their distribution and stability.

	Units
GS 130 Soil Physics and Hydrology	3-4
or GS 131 Hydrologically-Driven Landscape Evolution	
or ESS 155 Science of Soils	
or GEOPHYS 190 Near-Surface Geophysics	

##### Structural Geology and Tectonics

The nature, description, and modeling of deformation of earth materials in response to tectonic forces. Processes of plate tectonics, mountain building, and sedimentary basin formation. The origin and evolution of geologic structures including folds, faults, fabrics, and fractures.

	Units
GS 110 Structural Geology and Tectonics	3-5
or GS 111 Fundamentals of Structural Geology	

##### Earth Materials and Geochemistry

The materials that comprise the Earth and how they can be used to deduce geological processes over time. The fundamental chemical and geologic processes responsible for the abundance and distribution of elements and their isotopes.

	Units
GS 163 Introduction to Isotope Geochemistry	3-4
or GS 170 Environmental Geochemistry	
or GS 180 Igneous Processes	
or GS 185 Volcanology	

##### Sedimentary Systems

The processes of weathering, erosion, transportation, and deposition, interpretation of depositional environments, the formation and evolution of sediments and sedimentary basins, and the evolution of sedimentary systems over geologic time.

	Units
GS 151 Sedimentary Geology and Petrography: Depositional Systems	4

##### Biogeosciences

The origin and evolution of life on Earth, the influence of biological processes on Earth's surface environments, and the role of geological processes in shaping large-scale evolutionary patterns.

	Units
GS 123 Paleobiology	4
or GS 128 Evolutionary History of Terrestrial Ecosystems	

**Geodynamics**

The integration of physics, mathematics, and geology to study Earth processes using remote sensing, modeling, experiments, and direct observations.

GS 107	Journey to the Center of the Earth
	or GEOPHYS 111 Earth on the Edge: Introduction to Geophysics
	or GEOPHYS 120 Ice, Water, Fire
	or GEOPHYS 130 Introductory Seismology

**Geospatial Statistics and Computer Science**

Statistical techniques specific to the geosciences that facilitate analysis of three- and four-dimensional data; computer programming and modeling.

CS 106A	Programming Methodology
	or EARTH 211 Software Development for Scientists and Engineers
	or ENERGY 125 Modeling and Simulation for Geoscientists and Engineers
	or ENERGY 160 Modeling Uncertainty in the Earth Sciences
	or ESS 164 Fundamentals of Geographic Information Science (GIS)
	or GEOPHYS 111 Exploring Geosciences with MATLAB

**Depth in the Discipline Requirement (10 Units)**

To allow students to go into greater depth in the major, students must complete at least 10 units of electives drawn primarily from the list above and other upper-level courses in GS (including graduate-level courses). Additional courses in Geophysics, ESS, and ERE may be counted towards the elective units if they allow a student to pursue a topic in depth; these options should be discussed with an adviser. A maximum of 3 elective units may be fulfilled by:

GS 192	Undergraduate Research in Geological Sciences
GS 197	Senior Thesis
GS 198	Special Problems in Geological Sciences
	Advanced Seminars

Honors research (GS 199 Honors Program) may fulfill up to 4 elective units.

**Required Supporting Mathematics (20 Units)**

Choose one of the following equivalent series:

Select one of the following series:

Series A		
MATH 19	Calculus	10
& MATH 20	and Calculus	
& MATH 21	and Calculus	

Series B		
MATH 41	Calculus	10
& MATH 42	and Calculus	

or a score of 4-5 on the Calculus BC exam

And at least TWO of the following:

CME 100	Vector Calculus for Engineers	5
	or MATH 51 Linear Algebra and Differential Calculus of Several Variables	
CME 102	Ordinary Differential Equations for Engineers	5
	or MATH 52 Integral Calculus of Several Variables	

CME 104	Linear Algebra and Partial Differential Equations for Engineers	5
	or MATH 53 Ordinary Differential Equations with Linear Algebra	

Units  
3-5

**Required Supporting Sciences (15-23 Units)**

Advanced placement credit may be accepted for these courses as determined by the relevant departments.

Units

**Chemistry**

CHEM 31A	Chemical Principles I	5-10
& CHEM 31B	and Chemical Principles II	
	or CHEM 31X Chemical Principles Accelerated	

or a score of 4-5 on the Chemistry AP exam

And one of the following:

Units	GS 171	Geochemical Thermodynamics	3
	or CHEM 135	Physical Biochemistry	
	or CHEM 171	Physical Chemistry I	

In addition to chemistry, students may choose between introductory sequences in biology and physics. This choice should be made after discussion with an adviser and based on a student's interests.

**Biology**

BIO 41	Genetics, Biochemistry, and Molecular Biology	5
	or BIO 44X Core Molecular Biology Laboratory	

And one of the following:

BIO 105A	Ecology and Natural History of Jasper Ridge	5-8
& BIO 105B	Biological Preserve	
	and Ecology and Natural History of Jasper Ridge	
	Biological Preserve	
	or BIO 42 Cell Biology and Animal Physiology	
	or BIO 43 Plant Biology, Evolution, and Ecology	
	or BIO 44Y Core Plant Biology & Eco Evo Laboratory	

Or

Units

**Physics**

Select one of the following Series: 8-9

Series A		
PHYSICS 21	Mechanics, Fluids, and Heat	10
& PHYSICS 22	and Mechanics, Fluids, and Heat Laboratory	
& PHYSICS 23	and Electricity, Magnetism, and Optics

**Field Research**

Field research skills are a critical component of the undergraduate curriculum in GS. The conventional and most straightforward way for undergraduates to meet the field requirement is to take the two GS courses (GS 105 Introduction to Field Methods and GS 190 Research in the Field) that are offered every year:

- GS 105 Introduction to Field Methods, is a two-week introduction to field techniques and geologic mapping that is taught every year in the White Mountains of eastern California prior to the start of Autumn Quarter in September. This course gives students the tools to undertake geologic research in the field. GS 105 Introduction to

Field Methods is required of all GS majors and is the framework upon which all subsequent undergraduate field-related instruction is based.

- GS 190 Research in the Field, gives GS undergraduates additional training in field research. This course provides undergraduates with a team-based experience of collecting data to answer research questions and is directed by faculty and graduate students. Offered in June and/or September.

By taking GS 105 Introduction to Field Methods and two iterations of GS 190 Research in the Field, GS undergraduates develop the broad experience and confidence necessary to go out and evaluate a geological or environmental geology question by collecting field-based data. The main goal is that, upon graduation, GS undergraduates will be able to plan and execute independent field research.

It is also possible to substitute non-Stanford courses to allow flexibility in fulfilling the field requirement. A modified version of an existing field-based course such as Stanford at Sea/Australia/Hawaii may fulfill one GS 190 Research in the Field requirement. To receive credit for GS 190, a proposal must be filed at the end of Winter Quarter with the field program committee which evaluates it for suitability. Students subsequently enroll in GS 190 with a specific instructor or their faculty mentor who evaluates the final report from the fieldwork.

GS 190 Research in the Field can also be satisfied by enrolling in a single four-to-six week geology field camp offered by another institution. This externally administered experience can substitute for two GS 190 courses, subject to approval by the Undergraduate Curriculum Committee.

## Engineering Geology and Hydrogeology Undergraduate Specialized Curriculum

The Engineering Geology and Hydrogeology curriculum is intended for undergraduates interested in the application of geological and engineering data and principles to the study of rock, soil, and water to recognize and interpret geological and environmental factors affecting engineering structures and groundwater resources. Students learn to characterize and assess the risks associated with natural geological hazards, such as landslides and earthquakes, and with groundwater flow and contamination. The curriculum prepares students for graduate programs and professional careers in engineering, environmental geology, geology, geotechnical engineering, and hydrogeology. Students interested in this curriculum should contact a faculty adviser: Professor Loague, Pollard, or Hilley.

GS majors who elect the Engineering Geology and Hydrogeology curriculum are expected to complete a core course sequence and a set of courses in supporting sciences and mathematics. The core courses come from Earth Sciences and Engineering. Any substitutions for core courses must be approved by the faculty adviser and through a formal petition to the undergraduate program director. In addition, four elective courses, consistent with the core curriculum and required of all majors, are to be chosen with the advice and consent of the adviser. Typically, electives are chosen from the list below. Letter grades are required if available.

### Course Sequence (85-101 Units Total)

#### Required Geological Sciences (33-35 Units)

		Units
GS 1A	Introduction to Geology: The Physical Science of the Earth	5
or GS 1B	Introduction to Geology	
or GS 1C	Introduction to Geology: Dynamic Earth	
GS 102	Earth Materials: Introduction to Mineralogy	4
GS 104	Introduction to Petrology	4

GS 111	Fundamentals of Structural Geology	3
GS 115	Engineering Geology and Global Change	3
GS 150	Senior Seminar: Issues in Earth Sciences	3
ESS 164	Fundamentals of Geographic Information Science (GIS)	3-4
ESS 220	Physical Hydrogeology	4
ENERGY 160	Modeling Uncertainty in the Earth Sciences	3-4
GEOPHYS 190	Near-Surface Geophysics	3
Total Units		35-37

#### Required Engineering (18-21 Units)

		Units
CEE 101A	Mechanics of Materials	4
or ME 80	Mechanics of Materials	
CEE 101B	Mechanics of Fluids	4
CEE 101C	Geotechnical Engineering	3-4
CS 106A	Programming Methodology	3-5
ENGR 14	Intro to Solid Mechanics	4
Total Units		18-21

#### Required Supporting Sciences and Mathematics (23-29 Units)

		Units
CHEM 31A	Chemical Principles I	5-10
& CHEM 31B	and Chemical Principles II	
or CHEM 31X	Chemical Principles Accelerated	
MATH 51	Linear Algebra and Differential Calculus of Several Variables	5
MATH 52	Integral Calculus of Several Variables	5
MATH 53	Ordinary Differential Equations with Linear Algebra	5
PHYSICS 41	Mechanics	4
Total Units		24-29

#### Suggested Electives (11-16 Units)

Choose four courses from the following list or, with faculty approval, four related courses:

		Units
CEE 101D	Computations in Civil and Environmental Engineering	3
CEE 180	Structural Analysis	4
CEE 270	Movement and Fate of Organic Contaminants in Waters	3
CEE 293	Foundations and Earth Structures	3
ESS 221	Contaminant Hydrogeology and Reactive Transport	4
ENGR 30	Engineering Thermodynamics	3
ENGR 50	Introduction to Materials Science, Nanotechnology Emphasis	4
GEOPHYS 112	Exploring Geosciences with MATLAB	1-3
GS 130	Soil Physics and Hydrology	3
GS 131	Hydrologically-Driven Landscape Evolution	3
GS 237	Surface and Near-Surface Hydrologic Response	3
MATSCI 151	Microstructure and Mechanical Properties	3-4
ME 80	Mechanics of Materials	4

## Honors Program

The honors program provides an opportunity for year-long independent study and research on a topic of special interest, culminating in a written thesis. Students select research topics in consultation with the faculty adviser of their choosing. Research undertaken for the honors program

may be of a theoretical, field, or experimental nature, or a combination of these approaches. The honors program is open to students with a GPA of at least 3.5 in GS courses and 3.0 in all University course work. Modest financial support is available from several sources to help defray laboratory and field expenses incurred in conjunction with honors research. Interested students must submit an application, including a research proposal, to the department by the end of their junior year.

Upon approval of the research proposal and entrance to the program, course credit for the honors research project and thesis preparation is assigned by the student's faculty adviser within the framework of GS 199 Honors Program; the student must complete a total of 9 units over the course of the senior year. Up to 4 units of GS 199 may be counted towards the elective requirement, but cannot be used as a substitute for regularly required courses.

Both a written and oral presentation of research results are required. The thesis must be read, approved, and signed by the student's faculty adviser and a second member of the faculty. In addition, honors students must participate in the GS Honors Symposium in which they present their research to the broader community. Honors students in GS are also eligible for the Firestone medal, awarded by Undergraduate Advising and Research (<http://ual.stanford.edu>) for exceptional theses.

On April 16, 2015, the Senate of the Academic Council approved the minor in Geological Sciences. Students who declared the minor in Geological and Environmental Sciences have the option of changing the name of their minor to Geological Sciences. Minor requirements remain the same.

## Minor in Geological Sciences

The minor in GS consists of a small set of required courses plus 12 elective units. A wide variety of courses may be used to satisfy these elective requirements. All courses must be taken for a letter grade.

### Required Courses

		Units
GS 1A	Introduction to Geology: The Physical Science of the Earth	5
or GS 1B	Introduction to Geology	
or GS 1C	Introduction to Geology: Dynamic Earth	
GS 4	How to Build and Maintain a Habitable Planet: An Introduction to Earth System History	4
GS 102	Earth Materials: Introduction to Mineralogy	4
GS 104	Introduction to Petrology	4
Total Units		17

### Electives (12 Units)

Students must take a minimum of 12 additional units drawn primarily from the Breadth in the Discipline list in the GS major (<http://www.stanford.edu/dept/registrar/bulletin/5038.htm>); a majority of units must be from classes within the GS department. Up to 3 units of Stanford Introductory Seminars in GS may be counted.

Students pursuing a minor in GS are encouraged to participate in the senior seminar (GS 150 Senior Seminar: Issues in Earth Sciences) and in field research (GS 105 Introduction to Field Methods)

On April 16, 2015, the Senate of the Academic Council approved the Master of Science in Geological Sciences. Students who matriculated into the Master of Science in Geological and Environmental Sciences have the option of changing the name of their degree to Geological Sciences. Degree requirements remain the same.

## Coterminal Master of Science Degree in Geological Sciences

The coterminal B.S./M.S. program offers students the opportunity to pursue graduate research and an M.S. degree concurrently with or subsequent to their B.S. studies. The M.S. degree can serve as an entrance to a professional degree in subdisciplines within the Earth sciences such as engineering geology and environmental geology, or to graduate course work and research as an intermediate step in pursuit of the Ph.D. Regardless of professional goals, coterminal B.S./M.S. students are treated as members of the graduate community and are expected to meet all of the standards set for regular M.S. students. Applicants must have earned no fewer than 120 units toward graduation, and must submit their application no later than the quarter prior to the expected completion of their undergraduate degree, normally the Winter Quarter prior to Spring Quarter graduation. The application includes a statement of purpose, a current Stanford transcript, official Graduate Record Examination (GRE) scores, letters of recommendation from two members of the Stanford faculty (at least one of whom must be in the GS department), and a list of courses in which they intend to enroll to fulfill the M.S. degree requirements. Specific research interests should be noted in the statement of purpose and discussed with a member of the GS faculty prior to submission of the application. Coterminal students must complete a thesis describing research results.

Students must meet all requirements for both the B.S. and M.S. degrees. Students may either:

1. complete 180 units required for the B.S. degree and then complete three full-time quarters (45 units at the 100-level or above) for the M.S. degree
2. or. complete a total of fifteen quarters during which the requirements of the two degrees are fulfilled concurrently.

At least half of the courses used to satisfy the 45-unit requirement must be designated as being primarily for graduate students, normally at the 200-level or above. No more than 15 units of thesis research may be used to satisfy the 45-unit requirement. Further information about this program may be obtained from the GS office.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Admission

For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical writing assessment) of the Graduate Record Examination. In keeping with University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Individuals who have completed a B.S. or two-year M.S. program in the U.S. or other English-speaking country are not required to submit TOEFL scores.

## Master of Science in Geological Sciences

### Objectives

The purpose of the master's program in Geological Sciences is to continue a student's training in one of a broad range of earth science disciplines and to prepare students for either a professional career or doctoral studies.

### Procedures

In consultation with the adviser, the student plans a program of course work for the first year. The student should select a thesis adviser within the first year of residence and submit to the thesis adviser a proposal for thesis research as soon as possible. The academic adviser supervises completion of the department requirements for the M.S. program (as outlined below) until the research proposal has been accepted; responsibility then passes to the thesis adviser. The student may change either thesis or academic advisers by mutual agreement and after approval of the Director of Graduate Studies.

### Requirements

The University's requirements for M.S. degrees are outlined in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin. Practical training (GS 385 Practical Experience in the Geosciences) may be required by some programs, with adviser approval, depending on the background of the student. Additional department requirements include the following:

1. A minimum of 45 units of course work at the 100 level or above.
  - a. Half of the courses used to satisfy the 45-unit requirement must be intended as being primarily for graduate students, usually at the 200 level or above.
  - b. No more than 15 units of thesis research may be used to satisfy the 45-unit requirement.
  - c. Some students may be required to make up background deficiencies in addition to these basic requirements.
2. By the end of Spring Quarter of their first year in residence, students must complete at least three graduate level courses taught by a minimum of two different GS faculty members.
3. Each student must have a research adviser who is a faculty member in the department and is within the student's thesis topic area or specialized area of study.
4. Each student must complete a thesis describing his or her research. Thesis research should begin during the first year of study at Stanford and should be completed before the end of the second year of residence.
5. Early during the thesis research period, and after consultation with the student, the thesis adviser appoints a second reader for the thesis, who must be approved by the Director of Graduate Studies; the thesis adviser is the first reader. The two readers jointly determine whether the thesis is acceptable for the M.S. degree in the department.

## Engineer Degree in Geological Sciences

The Engineer degree is offered as an option for students in applied disciplines who wish to obtain a graduate education extending beyond that of an M.S., yet do not have the desire to conduct the research needed to obtain a Ph.D. A minimum of two years (six quarters) of graduate study is required. The candidate must complete 90 units of course work, no more than 10 of which may be applied to overcoming deficiencies in undergraduate training. The student must prepare a substantial thesis that meets the approval of the thesis adviser and the graduate coordinator.

On April 16, 2015, the Senate of the Academic Council approved the Doctor of Philosophy in Geological Sciences. Students who matriculated into the Doctor of Philosophy in Geological and Environmental Sciences have the option of changing the name of their degree to Geological Sciences. Degree requirements remain the same.

## Doctor of Philosophy in Geological Sciences

### Objectives

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship, high attainment in a particular field of knowledge, and the ability to conduct independent research. To this end, the objectives of the doctoral program are to enable students to develop the skills needed to conduct original investigations in a particular discipline or set of disciplines in the earth sciences, to interpret the results, and to present the data and conclusions in a publishable manner.

### Admission

For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical writing assessment) of the Graduate Record Examination. In keeping with University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Individuals who have completed a B.S. or two-year M.S. program in the U.S. or other English-speaking country are not required to submit TOEFL scores. Previously admitted students who wish to change their degree objective from M.S. to Ph.D. must petition the GS Admissions Committee.

### Requirements

The University's requirements for the Ph.D. degree are outlined in the "Graduate Degrees (p. 45)" section of this bulletin. Practical training (GS 385 Practical Experience in the Geosciences) may be required by some programs, with adviser approval, depending on the background of the student. A summary of additional department requirements is presented below:

1. Ph.D. students must complete the required courses in their individual program or in their specialized area of study with a grade point average (GPA) of 3.0 (B) or higher, or demonstrate that they have completed the equivalents elsewhere. Ph.D. students must complete a minimum of four graduate level, letter-grade courses of at least 3 units each from four different faculty members on the Academic Council in the University. By the end of Spring Quarter of their first year in residence, students must complete at least three graduate level courses taught by a minimum of two different GS faculty members.
2. Each student must qualify for candidacy for the Ph.D. by the end of the sixth quarter in residence, excluding summers. Department procedures require selection of a faculty thesis adviser, preparation of a written research proposal, approval of this proposal by the thesis adviser, selection of a committee for the Ph.D. qualifying examination, and approval of the membership by the graduate coordinator and chair of the department. The research examination

consists of three parts: oral presentation of a research proposal, examination on the research proposal, and examination on subject matter relevant to the proposed research. The exam should be scheduled prior to May 1, so that the outcome of the exam is known at the time of the annual spring evaluation of graduate students.

3. Upon qualifying for Ph.D. candidacy, the student and thesis adviser, who must be a department faculty member, choose a research committee that includes a minimum of two faculty members in the University in addition to the adviser. Annually, during the Spring Quarter, the candidate must organize a meeting of the research committee to present a brief progress report covering the past year.
4. Under the supervision of the research advisory committee, the candidate must prepare a doctoral dissertation that is a contribution to knowledge and is the result of independent research. The format of the dissertation must meet University guidelines. The student is strongly urged to prepare dissertation chapters that, in scientific content and format, are readily publishable.
5. The doctoral dissertation is defended in the University oral examination. The research adviser and two other members of the research committee are determined to be readers of the draft dissertation. The readers are charged to read the draft and to certify in writing to the department that it is adequate to serve as a basis for the University oral examination. Upon obtaining this written certification, the student is permitted to schedule the University oral examination.

## Ph.D. Minor in Geological Sciences

Candidates for the Ph.D. degree in other departments who wish to obtain a minor in Geological Sciences must complete, with a GPA of 3.0 (B) or better, 20 units in the geosciences in lecture courses intended for graduate students. The selection of courses must be approved by the student's GS adviser and the department chair.

*Emeriti: (Professors)* Atila Aydin, W. Gary Ernst, James C. Ingle, Jr., Juhn G. Liou, Keith Loague\*, David D. Pollard\*

*Chair:* Jonathan Payne

*Associate Chair:* Wendy Mao

*Professors:* Dennis K. Bird, Gordon E. Brown, Jr., Jef Caers, Rodney C. Ewing, Stephan A. Graham, Donald R. Lowe, Gail A. Mahood, Elizabeth L. Miller, Jonathan F. Stebbins

*Associate Professors:* C. Kevin Boyce, George Hilley, Katherine Maher, Wendy Mao, Jonathan Payne

*Visiting Professors:* Gary Byerly, Pincelli Hull

\* Recalled to active duty

## Cognate Courses

Many courses offered within the School of Earth, Energy and Environmental Sciences, as well as courses in other schools with a

significant Earth sciences component, may be used in satisfaction of optional requirements for the Geological Sciences degree. Undergraduates should discuss the options available to them with the undergraduate program coordinator; graduate students should discuss options with their advisers.

The following courses outside the School of Earth, Energy and Environmental Sciences are particularly applicable:

		Units
BIO 121	Biogeography	3
BIO 136	Evolutionary Paleobiology	4
BIOHOPK 182H	Stanford at Sea	16
CEE 63	Weather and Storms	3
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions	3
CEE 101A	Mechanics of Materials	4
CEE 101B	Mechanics of Fluids	4
CEE 101C	Geotechnical Engineering	3-4
CEE 161A	Rivers, Streams, and Canals	3-4
CEE 164	Introduction to Physical Oceanography	4
CEE 166A	Watersheds and Wetlands	3

## Overseas Studies Courses in Geological Sciences

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

ExploreCourses No courses found: `explorecourses:OSP::gs`

## Geophysics

Courses offered by the Department of Geophysics are listed under the subject code GEOPHYS on the Stanford Bulletin's ExploreCourses web site.

Geophysics is the branch of Earth science concerned with exploring and analyzing active processes of the Earth through physical measurement. The undergraduate and graduate programs are designed to provide a background of fundamentals in science, and courses to coordinate these fundamentals with the principles of geophysics. The program leading to the Bachelor of Science (B.S.) in Geophysics permits many electives and a high degree of flexibility for each student. Graduate programs provide specialized training for professional work in resource exploration, research, and education, and lead to the degrees of Master of Science and Doctor of Philosophy.

The Department of Geophysics is housed in the Ruth Watis Mitchell Earth Sciences Building. It has numerous research facilities, among which are a state-of-the-art broadband seismic recording station, high pressure and temperature rock properties and rock deformation laboratories, various instruments for field measurements including seismic recorders, nine dual frequency GPS receivers, and field equipment for measuring in-situ stress at great depth. Current research

activities include crustal deformation; earthquake seismology and earthquake mechanics; reflection, refraction, and tomographic seismology; rock mechanics, rock physics; seismic studies of the continental lithosphere; remote sensing; environmental geophysics; and synthetic aperture radar studies.

## Mission of the Undergraduate Program in Geophysics

The mission of the undergraduate program in Geophysics is to expose students to a broad spectrum of geophysics, including resource exploration, environmental geophysics, seismology, and tectonics. Students in the major obtain a solid foundation in the essentials of mathematics, physics, and geology, and build upon that foundation with advanced course work in Geophysics to develop the in-depth knowledge they need to pursue advanced graduate study and professional careers in government or the private sector.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to:

1. understand the physics and geology that form the basis for geophysical observation and measurement.
2. understand Earth structure and evolution.
3. identify the physical processes governing the behavior of common geophysical systems.
4. be able to explain the principles of applying geophysical methods to societally relevant problems, including natural hazards, resource exploration and management, and environmental issues.
5. be able to quantitatively describe the behavior of natural systems and the principles of geophysical measurement with physics-based mathematical models.
6. investigate these models by solving the governing equations with a combination of analytical and computational methods.
7. make their own observations with a variety of geophysical instruments, and reduce, model, and interpret their data and uncertainties.
8. effectively communicate their scientific knowledge through written and oral presentations.
9. be able to interpret and evaluate the published literature and oral and poster presentations at national meetings.

## Graduate Programs in Geophysics

University requirements for the M.S. and Ph.D. are described in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin. Lecture course units applied to graduate degree program requirements must be taken for a letter grade if the course is offered for a letter grade.

## Learning Outcomes (Graduate)

The objective of the graduate program in Geophysics is to prepare students to be leaders in the geophysics industry, academia, and research organizations through completion of fundamental courses in the major field and in related sciences, as well as through independent research. Students are expected to:

1. apply skills developed in fundamental courses to geophysical problems.
2. research, analyze, and synthesize solutions to an original and contemporary geophysics problem.

3. work independently and as part of a team to develop and improve geophysics solutions.
4. apply written, visual, and oral presentation skills to communicate scientific knowledge.
5. master's students are expected to develop in-depth technical understanding of geophysics problems at an advanced level.
6. doctoral students are expected to complete a scientific investigation that is significant, challenging and original.

## Bachelor of Science in Geophysics

The following courses are required for the B.S. degree in Geophysics. A written report on original research or an honors thesis is also required through participation in and GEOPHYS 199 Senior Seminar: Issues in Earth Sciences in Autumn Quarter of the senior year. Seniors in Geophysics who expect to do graduate work should take the Graduate Record Examination (GRE) early in their final undergraduate year.

### Optional Pre-Major Class

		Units
GEOPHYS 90	Earthquakes and Volcanoes	3

### Geophysics Core Courses (29-32 units)

Students must take all of the following:

		Units
GEOPHYS 110	Earth on the Edge: Introduction to Geophysics	3
GEOPHYS 120	Ice, Water, Fire	3-5
GEOPHYS 130	Introductory Seismology	3
GEOPHYS 150	Geodynamics: Our Dynamic Earth	3
GEOPHYS 162	Laboratory Methods in Geophysics	2-3
	or PHYSICS 67 Introduction to Laboratory Physics	
GEOPHYS 190	Near-Surface Geophysics	3
GEOPHYS 196	Undergraduate Research in Geophysics (or approved research internship)	5
GEOPHYS 197	Senior Thesis in Geophysics	3
	or GEOPHYS 199 Honors Program	
GEOPHYS 199	Senior Seminar: Issues in Earth Sciences	3
GEOPHYS 201	Frontiers of Geophysical Research at Stanford: Faculty Lectures	1

Total Units 29-32

### Geophysics Breadth Courses (18-29 units)

Choose six upper-level courses, one from each of the following six areas (but an additional Geophysics class may substitute for either the Physics or the Geology breadth areas):

#### 1. Resources, hazards, and the environment

	Units
Select one of the following:	3
GEOPHYS 182 Reflection Seismology	
GEOPHYS 183 Reflection Seismology Interpretation	
GEOPHYS 185 Rock Physics for Reservoir Characterization	
ENERGY 120 Fundamentals of Petroleum Engineering	
GES 130	
GES 131	
Total Units	3

#### 2. Whole-Earth Geophysics

	Units
Select one of the following:	3

GES 122	(Also GEOPHYS 132)	3-4
GEOPHYS 141	Remote Sensing of the Oceans	3-4
GEOPHYS 184	Journey to the Center of the Earth	
GEOPHYS 186	Tectonophysics (Tectonophysics & Global Tectonics)	3
Total Units		12-14

(MATH 51 (MATH 51M recommended), MATH 52, and MATH 53 plus either GEOPHYS 112 or CME 192 may substitute for CME series

### Supporting Science Courses

Students must take all of the following (8-27 units):

#### 3. Numerical and computational methods

GEOPHYS 211	Environmental Soundings Image Estimation	3
GEOPHYS 281	Geophysical Inverse Problems	
EARTHSCI 211		
Select one of the following:		3-4
ENERGY 160	Modeling Uncertainty in the Earth Sciences	
EE 102A	Signal Processing and Linear Systems I	
CME 108	Introduction to Scientific Computing	
CS 106A	Programming Methodology	
& CS 106B	and Programming Abstractions	
PHYSICS 113	Computational Physics	

GES 1A

Units or GES 1B  
or GES 1C

CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	5-10
or CHEM 31X	Chemical Principles Accelerated	
or a score of 5 on the Chemistry AP exam		
PHYSICS 41	Mechanics	4
or PHYSICS 61	Mechanics and Special Relativity	
or a score of 4-5 on the Physics C Mechanics AP exam		
PHYSICS 43	Electricity and Magnetism	4
or PHYSICS 63	Electricity, Magnetism, and Waves	
or a score of 4-5 on the Physics C E & M AP exam		
PHYSICS 45	Light and Heat	4
or PHYSICS 65	Quantum and Thermal Physics	

Units

#### 4. Geophysical fluid dynamics

Select one of the following:		3-4
GEOPHYS 146	Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation	
GEOPHYS 146B	Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation	
GEOPHYS 181	Fluids and Flow in the Earth: Computational Methods	
ENERGY 121	Fundamentals of Multiphase Flow	
CEE 164	Introduction to Physical Oceanography	
EESS 220		

Units

### Optional Field Class

GES 105		3
---------	--	---

### Honors Program

The department offers a program leading to the B.S. degree in Geophysics with honors. The guidelines are:

1. Select a research project, either theoretical, field, or experimental, that has the approval of an adviser.
2. Submit a proposal to the department, which decides on its suitability as an honors project. Necessary forms are in the department office.
3. Course credit for the project is assigned by the adviser within the framework of GEOPHYS 198 Honors Program.
4. The decision whether a given independent study project does or does not merit an award of honors is made jointly by the department and the student's adviser. This decision is based on the quality of both the honors work and the student's other work in Earth Sciences.
5. The work done on the honors program cannot be used as a substitute for regularly required courses.

#### 5. Physics

Select one of the following:		4
EE 142	Engineering Electromagnetics (formerly EE 141)	3
ME 80	Mechanics of Materials	
PHYSICS 110	Advanced Mechanics	
PHYSICS 120	Intermediate Electricity and Magnetism I	

Units

#### 6. Geology

Select one of the following:		3-5
GES 102		
GES 110		
GES 111		
GES 151		

Units

### Minor in Geophysics

The Geophysics minor provides students with a general knowledge of Geophysics in addition to a background in the related fields of physics, mathematics, and geology. The minor consists of one required class (3 units), three electives (min. 9 units), and supporting classes in geology, mathematics, and physics.

### Curriculum

1. Required course:

GEOPHYS 110	Earth on the Edge: Introduction to Geophysics	3
-------------	---	---

Units

2. Plus three additional approved electives, typically chosen from:

Select three of the following:		9
GEOPHYS 120	Ice, Water, Fire	
GEOPHYS 130	Introductory Seismology	
GEOPHYS 141	Remote Sensing of the Oceans	
GEOPHYS 150	Geodynamics: Our Dynamic Earth	

### Supporting Mathematics Courses

Students must take one of the following series (15 or 19 units):

CME 100	Vector Calculus for Engineers	5
CME 102	Ordinary Differential Equations for Engineers	5
CME 104	Linear Algebra and Partial Differential Equations for Engineers	5

Units

GEOPHYS 162 Laboratory Methods in Geophysics  
 GEOPHYS 184 Journey to the Center of the Earth  
 GEOPHYS 186 Tectonophysics  
 GEOPHYS 190 Near-Surface Geophysics

### 3. Supporting Math & Science:

GES 1A		4-5
or GES 1B		
or GES 1C		
CME 100	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
PHYSICS 21	Mechanics, Fluids, and Heat	3
or PHYSICS 22	Mechanics, Fluids, and Heat Laboratory	
or PHYSICS 23	Electricity, Magnetism, and Optics	
or PHYSICS 24	Electricity, Magnetism, and Optics Laboratory	
or PHYSICS 41	Mechanics	
& PHYSICS 43	and Electricity and Magnetism	
or PHYSICS 41	Mechanics	
& PHYSICS 45	and Light and Heat	
or equivalent AP scores		

## Coterminal Master of Science Program in Geophysics

The department offers a coterminal M.S. degree for students wishing to obtain more specialized training in Geophysics than is normally possible during study for the B.S. degree alone. An M.S. degree should be considered as the professional degree in Geophysics, and is aimed at students wishing to work in a related industry, or students desiring more focused academic study in the field than the B.S. program allows.

The coterminal M.S. degree in Geophysics is offered in conjunction with any relevant undergraduate program at Stanford. Geophysics students often enter the department with degrees in Earth Sciences, Mathematics, Physics, Chemistry, or other natural science or engineering fields. Any of these are suitable for the coterminal Geophysics program, and interested students are encouraged to discuss their own background with a Geophysics faculty member.

### Admission

The requirements for entry into the coterminal M.S. program are submission of a transcript, a statement of purpose, and at least two letters of recommendation. Applications with a letter of recommendation from a Geophysics faculty are generally considered the strongest. Additional letters from other academic or work-related persons also strengthen the application. There are no specific GPA requirements for entry, but the Department looks for proven performance in a rigorous undergraduate curriculum as a prerequisite for admission.

Undergraduates with at least junior-level standing may apply, and applications should be submitted by the Autumn Quarter of the senior year.

The graduation requirements to obtain the degree are identical to those for the regular Geophysics master's degree.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements

for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Master of Science in Geophysics

### Objectives

To enhance the student's training for professional work in geophysics through the completion of fundamental courses, both in the major fields and in related sciences, and to begin independent work and specialization.

### Degree Requirements

The candidate must complete 45 units from the following groups of courses:

1. Complete 15 units of Geophysics lecture courses with at least 9 units numbered 200 or higher.
2. Complete six units numbered 100 or higher and three units of 200-level, non-Geophysics lecture courses in earth sciences.
3. Complete one to four electives selected from courses numbered 100 or higher from mathematics, chemistry, engineering, physics, relevant biology, computer science, ecology, hydrology, or earth science. At least one course must be numbered 200 or higher.
4. Enroll for at least three quarters of research seminar (GEOPHYS 385 series).
5. At least 6, but not more than 15, of the 45 units must be earned by enrollment in GEOPHYS 400 Research in Geophysics for independent work on a research problem resulting in a written report accepted and archived by the candidate's faculty. A summer internship is encouraged as venue for research, but no academic credit is given.
6. Submit a program proposal for approval by a faculty adviser in the first quarter of enrollment.
7. Each candidate must present and defend the results of his or her research at a public oral presentation attended by at least two faculty members; and turn in a thesis/report to adviser.
8. Students are required to attend department seminars.

## Doctor of Philosophy in Geophysics

### Objectives

The Ph.D. degree is conferred upon evidence of high attainment in Geophysics and ability to conduct an independent investigation and present the results of such research.

## Transfer Credit

An incoming student with a relevant master of science degree may apply for a departmental waiver of up to 12 units of the 30 lecture units required for the Ph.D. degree, for certain courses as approved by the departmental graduate faculty adviser. Credit for courses generally requires that students identify an equivalent Stanford course and obtain the signature of the Stanford faculty responsible for that course, stating its equivalence.

## Requirements for the Degree

A minimum of 135 units of graduate study at Stanford must be satisfactorily completed. Required courses must be taken for a letter grade, if offered. Students are required to attend the department seminars, and to complete sufficient units of independent work on a research problem to meet the 135-unit University requirement. 12 units must be met by participation in the GEOPHYS 385 series, or equivalent series in other departments with approval of the adviser and graduate coordinator. Students are encouraged to participate in the GEOPHYS 385 series from more than one faculty member or group and relevant equivalent series in other departments. Students with a Master's degree may waive up to 12 units for approved courses.

ENGR 202W Technical Writing, is recommended but not required.

The student's record must indicate outstanding scholarship, and deficiencies in previous training must be removed. Experience as a teaching assistant (quarter-time for at least two academic quarters) is required for the Ph.D. degree. For more information, see the Geophysics Administrative Guide, section 1.4.1.

The student must pass the departmental oral examination by the end of the sixth academic quarter (third academic quarter for students with an M.S. degree); prepare under faculty supervision a dissertation that is a contribution to knowledge and the result of independent work expressed in satisfactory form; and pass the University oral examination.

The Ph.D. dissertation must be submitted in its final form within five calendar years from the date of admission to candidacy. Upon formal acceptance into a research group, the student and faculty adviser form a supervising committee consisting of at least three members who are responsible for overseeing satisfactory progress toward the Ph.D. degree. At least two committee members must be Geophysics faculty members. The committee conducts the department oral examination, and meets thereafter annually with the student to review degree progress. The Geophysics faculty monitors progress of all students who have not yet passed their department oral examination by carrying out an annual performance appraisal at a closed faculty meeting.

## Course requirements

1. *Geophysics*: 12 units, lecture courses numbered 200 and above, from 4 different Geophysics faculty with different research specializations. These units cannot be waived.
2. *Additional Geophysics*: 3 units, lecture courses numbered 150 and above
3. *School of Earth Sciences (non-Geophysics)*: 3 units, lecture courses numbered 100 or above
4. *Mathematics (numbered 100 or above), Science, and Engineering (non-School of Earth Sciences)*: 6 units, lecture courses numbered 200 or above
5. *Any of the above categories*: 6 units, lecture courses numbered 200 or above
6. *Total required units*: 30 units.

## Ph.D. Department Examination Requirement

1. One research proposal (10-20 pages) with a completed component that outlines a plan of research for 2-3 years

2. Second scientific proposal or paper (4-10 pages) with a professor in another area
3. An oral presentation with the student's advising committee on both the research proposal (~30-40 min) and the second proposal/paper (~10 min), with questions by the committee constituting the qualifying exam.

## Second Project

The purpose of the second research project is to add breadth to Ph.D. study and give the student the opportunity, ability and confidence to carry out research in multiple areas.

### Description/Scope:

The second project should stand alone as a separate piece of work from the primary research project.

- The second project must be in Geophysics or a closely related discipline
- The topic must be substantially different from the topic of the Ph.D. thesis; i.e., it should not be the same method applied to a different problem, or a different method applied to the same problem.
- The second project should be supervised by a Stanford Geophysics faculty member (Academic Council or research faculty) who does not serve as the primary research adviser, and who must be in a separate research group. Exceptions allowing for second project advisers who are not Stanford Geophysics faculty must be approved by both the research adviser and the Director of Graduate Studies.
- Completion of the second project ideally results in a publication in the refereed literature, or a presentation at a scientific conference.
- Most students are expected to complete the second research project as part of their Ph.D. studies. However, the department allows an option of meeting academic breadth requirements through additional focused course work; see the Geophysics (<https://pangea.stanford.edu/departments/geophysics/academics/graduate-program/graduation-requirements>) web site for further information on program requirements and the coursework breadth option.

# GRADUATE SCHOOL OF EDUCATION

Courses offered by the Graduate School of Education are listed under the subject code EDUC on the Stanford Bulletin's ExploreCourses web site.

Aiming towards the ideal of enabling all people to achieve maximum benefit from their educational experiences, the Graduate School of Education seeks to continue as a world leader in ground-breaking, cross-disciplinary inquiries that shape educational practices, their conceptual underpinnings, and the professions that serve the enterprise. The Graduate School of Education prepares scholars, teachers, teacher educators, policy analysts, evaluators, researchers, administrators, and other educational specialists. Two graduate degrees with specialization in education are granted by the University: Master of Arts and Doctor of Philosophy. While no undergraduate majors are offered, the school offers a number of courses for undergraduates, an undergraduate minor and an undergraduate honors program.

The Graduate School of Education is organized into three program area committees: Curriculum Studies and Teacher Education (CTE); Developmental and Psychological Sciences (DAPS); and Social Sciences, Humanities, and Interdisciplinary Policy Studies in Education (SHIPS).

In addition, several cross-area programs are sponsored by faculty from more than one area. These programs include the doctoral program in Learning Sciences and Technology Design (LSTD); two master's level programs: the Stanford Teacher Education Program (STEP) and the Learning, Design, and Technology Program (LDT); and the undergraduate honors and minor programs.

These program area committees function as administrative units that act on admissions, plan course offerings, assign advisers, and determine program requirements. Various concentrations exist within most of these areas. Faculty members are affiliated primarily with one area but may participate in several programs. While there is a great deal of overlap and interdisciplinary emphasis across areas and programs, students are affiliated with one area committee or program and must meet its degree requirements.

Detailed information about admission and degree requirements, faculty members, and specializations related to these area committees and programs can be found in the Academics section of the School's web site (<https://ed.stanford.edu/academics>).

The Graduate School of Education offers no correspondence or extension courses, and in accordance with University policy, no part-time enrollment is allowed. Work in an approved internship or as a research assistant is accommodated within the full-time program of study.

## Undergraduate Programs in Education

The Graduate School of Education offers a minor and an honors program at the undergraduate level. Further information about these programs can be found at the Graduate School of Education (<https://ed.stanford.edu/academics/undergraduate>) web site.

Regardless of whether they are enrolled in one of these undergraduate programs, undergraduates are also welcome in many graduate-level courses at the GSE.

## Graduate Programs in Education

The Graduate School of Education offers Master of Arts and Doctor of Philosophy degrees in several programs (see "Master's" and "Doctoral" tabs on this page). University and Graduate School of Education requirements must be met for each degree. The University requirements

are detailed in the "Graduate Degrees (p. 45)" section of this bulletin. Students are urged to read this section carefully, noting residency, tuition, and registration requirements. A student who wishes to enroll for graduate work in the Graduate School of Education must be admitted to graduate standing by one of the school's area committees and with the approval of the Associate Dean of Student Affairs.

Complete information about admissions procedures and requirements is available from Graduate Admissions (<http://studentaffairs.stanford.edu/gradadmissions>), or at the Graduate School of Education (<https://ed.stanford.edu/admissions>) web site. All applicants, except coterminal applicants, must submit scores from the Graduate Record Examination General Test (verbal, quantitative, and analytical or analytical writing areas); TOEFL scores are also required from those whose first language is not English. Applicants to the Stanford Teacher Education Program are also required to submit specific test scores or acceptable equivalents as required by the California Commission on Teacher Credentialing; see the section on STEP. Test information is available at the Graduate School of Education (<https://ed.stanford.edu/admissions>) web site.

## Honors Program in Education

The Honors Program in Education is available to undergraduates to supplement their regular majors by applying their studies to the field of education, broadly conceived. This program enables qualified undergraduates at Stanford to extend the training in their major field of study by pursuing additional courses and a supervised research thesis in a related area in the study of education. Students apply for entry during the junior year. Application information can be found at the Graduate School of Education (<https://ed.stanford.edu/academics/undergraduate/honors>) web site. The current director of the honors program is Professor John Willinsky.

Near the end of Spring Quarter of their honors program, successful candidates for honors present brief reports of their work and findings at a mini-conference that all the honors students in Education, as well as other members of the academic community, attend.

Required Coursework:

1. Students are required to enroll in the Undergraduate Honors Seminar during their senior year: EDUC 199A Undergraduate Honors Seminar (Autumn, 3 units), EDUC 199B Undergraduate Honors Seminar (Winter, 1 units), and EDUC 199C Undergraduate Honors Seminar (Spring, 1 unit)
2. Students are required to enroll in Honors Research (EDUC 140 Honors Research) with their adviser during Winter and Spring quarters of their senior year. The number of units is to be determined in consultation with the faculty adviser.
3. Students must complete a minimum of 3 courses taken for a minimum of 3 units each in Education (EDUC units). All courses must be taken for a letter grade. Course work completed for the honors program in Education should address varied topics in the field of education, and must be approved by the honors director and student's faculty adviser.

## Minor in Education (Undergraduate)

The Graduate School of Education awards an undergraduate minor in the field of Education. The minor is structured to provide a substantial introduction to education through a broad-based and focused study of educational research, theory and practice. The goals of the minor are to allow undergraduates to develop an understanding of the core issues facing educators and policymakers, to make connections to their major programs of study, and to provide rigorous preparation for graduate studies in education.

Students interested in pursuing an undergraduate minor in Education begin by contacting the minor director (Jennifer Lynn Wolf,

jlwolf@stanford.edu (jlwolf@stanford.edu)), who is responsible for advising all candidates and approving each student's minor plan of study. Applications for the minor are due no later than the second quarter of the junior year.

The Education minor requires three core courses to ensure coverage of the disciplines of the field, while offering flexibility for students pursuing specific interests within Education. In order to graduate with a minor in Education, undergraduates must complete the minor program of study as described here, for a total of not less than 20 units and not more than 30 units, with a minimum of six courses.

### Course Requirements and Distribution

- All minor students are required to take the minor core course:

EDUC 101	Introduction to Teaching and Learning	4
----------	---------------------------------------	---

- All students are also required to take two foundational courses, such as the following:

EDUC 103B	Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices	3-5
EDUC 110	Sociology of Education: The Social Organization of Schools	4
EDUC 120C	Education and Society	4-5
EDUC 201	History of Education in the United States	3-5
EDUC 204	Introduction to Philosophy of Education	3

- Each student identifies a subfield of study in which to take at least three elective courses. Established subfields of study within the School of Education include: Teaching and Learning; Education Research and Policy; and Educational Technology. Suitable elective courses include:

- Subfield 1: Teaching and Learning—

EDUC 103A	Tutoring: Seeing a Child through Literacy	4
EDUC 111	The Young Adult Novel: A Literature For and About Adolescents	4
EDUC 112	Urban Education	3-4
EDUC 121	Hip Hop, Youth Identities, and the Politics of Language	3-4
EDUC 149	Theory and Issues in the Study of Bilingualism	3-5
EDUC 171	Early Childhood Education Practicum	2-4
EDUC 256	Psychological and Educational Resilience Among Children and Youth	4
EDUC 357	Science and Environmental Education in Informal Contexts	3-4

- Subfield 2: Education Research and Policy—

EDUC 117	Research and Policy on Postsecondary Access	3
EDUC 121	Hip Hop, Youth Identities, and the Politics of Language	3-4
EDUC 165	History of Higher Education in the U.S.	3-5
EDUC 197	Education, Gender, and Development	4
EDUC 218	Topics in Cognition and Learning: Executive Function	3
EDUC 277	Education of Immigrant Students: Psychological Perspectives	4

- Subfield 3: Learning Design and Technology—

		Units
EDUC 139	Educating Young STEM Thinkers	3-5
EDUC 303	Designing Learning Spaces	3-4
EDUC 328	Topics in Learning and Technology: Core Mechanics for Learning	3
EDUC 333A	Understanding Learning Environments	3
EDUC 342	Child Development and New Technologies	3

- Course work completed for the Education Minor must meet the following criteria:
  - All courses must be taken for a letter grade.
  - All courses must be completed with a minimum GPA of 3.0.
  - Courses used to fulfill the minor may not be used to fulfill any other department degree requirements (major or minor).
  - All courses must be taken at Stanford University.

Units

### Coterminal Master's Program in Education

Units

The Graduate School of Education admits a limited number of students from undergraduate departments within the University into a coterminal master's program. For information about the coterminal option through the Stanford Teacher Education Program (STEP), see the details under STEP. Students in a coterminal program receive the bachelor's degree in their undergraduate major and the master's degree in Education. Approval of the student's undergraduate department and admission to the Graduate School of Education's M.A. program are required. Undergraduates may apply when they have completed at least 120 units toward graduation (UTG). The number of units required for the M.A. degree depends on the program requirements; see the Master's Handbook (<https://ed.stanford.edu/academics/masters-handbook>) for additional information.

Units

Applicants may learn more about the coterminal application process from the Graduate School of Education's (<https://ed.stanford.edu/admissions/application-reqs>) web site. For University coterminal master's degree application forms, see the Registrar's coterminal forms page (<https://registrar.stanford.edu/resources-and-help/forms/coterminal-forms>).

#### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

Units

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Master of Arts in Education

The M.A. degree is conferred upon fulfillment of degree requirements and by recommendation of the faculty of the Graduate School of Education. Depending on the specialization (please see below), students must complete a minimum of 45–48 units at Stanford to receive a Master's degree. Students must maintain a grade point average (GPA) of 3.0 or better in courses applicable to the degree, and must complete a minimum of 27 units in the Graduate School of Education. Master's students should obtain detailed program requirements from the Master's Handbook (<https://ed.stanford.edu/academics/masters-handbook>). Additional detailed information regarding program content and degree requirements is available at the Graduate School of Education's (<https://ed.stanford.edu/admissions/application-reqs>) website.

The Graduate School of Education offers Master of Arts degrees in the following specializations:

- Curriculum and Teacher Education. (CTE) (This is not a credentialing program; see STEP below.)
- International Comparative Education (ICE)
- International Education Policy Analysis (IEPA)
- Joint Degree with Graduate School of Business (M.A./M.B.A.)
- Joint Degree with Law School (M.A./J.D.)
- Joint Degree with Public Policy Program (M.A./M.P.P.)
- Learning, Design, and Technology (LDT)
- Policy, Organization, and Leadership Studies (POLS)

In addition, an M.A. degree with a teaching credential is offered in the Stanford Teacher Education Program.

## Stanford Teacher Education Program (STEP)

STEP is a 12-month, full-time program leading to a Master of Arts and a preliminary California teaching credential. STEP offers a Master of Arts in Education that prepares program graduates for careers as teachers in single or multiple subject classrooms. STEP Elementary prepares students to become teachers in multiple subject classrooms. STEP Secondary prepares students to become teachers of English, World Languages (French, German, Japanese, Mandarin, Spanish), Mathematics, Science (biology, chemistry, earth science, physics), and History/Social Science. STEP seeks to prepare and support teacher candidates to work with diverse learners to achieve high intellectual, academic, and social standards by creating equitable and successful schools and classrooms.

The 12-month STEP year begins in June with a summer quarter of intensive academic preparation and placement in a local summer school. During the academic year, students continue their course work and begin year-long field placements under the guidance of expert teachers in local schools. The Master of Arts and teaching credential require a minimum of 45 quarter units, taken during four quarters of continuous residency.

Stanford undergraduates who enroll in STEP through the coterminal program must complete their undergraduate coursework and have their bachelor's degree conferred prior to beginning in the STEP year. Coterminal STEP students graduate with a Master of Arts in Education and a recommendation for a preliminary California teaching credential.

Applicants to STEP Elementary are required to pass the California Basic Educational Skills Test (CBEST), an approved out of state basic skills exam, or CSET: Writing Skills. Applicants must also pass the California Multiple Subject Examination for Teachers (CSET), and the Reading Instruction Competence Assessment Test (RICA).

Applicants to STEP Secondary are required to pass the California Basic Educational Skills Test (CBEST) or an approved out of state basic skills

exam, and must demonstrate subject matter competence in one of two ways:

1. by passing the California Subject Examination for Teachers (CSET) in their content area; or
2. by completing a California state-approved subject matter preparation program.

Further information regarding admission requirements, course work, and credential requirements is available at the Stanford Teacher Education Program web site. (<https://gse-step.stanford.edu>)

## Doctoral Degrees in Education

The Graduate School of Education offers the Doctor of Philosophy (Ph.D.) degree in all program area committees. The degree is conferred by the University upon recommendation by the faculty of the Graduate School of Education and the University Committee on Graduate Studies. The Ph.D. requires a minimum of 135 units of course work and research completed at Stanford beyond the baccalaureate degree. Students may transfer up to 45 units of graduate course work. Students must consult with the doctoral programs officer if they intend to transfer prior course work. Students must maintain a grade point average (GPA) of 3.0 (B) or better in courses applicable to the degree.

Students should note that admission to the doctoral program does not constitute admission to candidacy for the degree. Students must qualify and apply for candidacy by the end of their second year of study and should obtain information about procedures and requirements during their first year from the doctoral programs officer in Cubberley 135.

The Ph.D. degree is designed for students who are preparing for research work in public school systems, branches of government, or specialized institutions; teaching roles in education in colleges or universities, and research connected with such teaching; or other careers in educational scholarship and research.

Ph.D. students must complete a minor in another discipline taught outside the school, or hold an acceptable master's degree outside the field of education, or complete an approved individually designed distributed minor that combines relevant advanced work taken in several disciplines outside the school.

Upon admission, the admitting area committee assigns an initial adviser from its faculty who works with the student to establish an appropriate and individualized course of study, a relevant minor, and project research plans. Other faculty members may also be consulted in this process. Details about administrative and academic requirements for each area committee and the Graduate School of Education, along with the expected time frame to complete program milestones, are given in the publication Graduate School of Education Doctoral Degree Handbook, available for download at <http://ed.stanford.edu/academics/doctoral-handbook>.

The following doctoral specializations, with their sponsoring area and concentration, are offered:

- Anthropology of Education (SHIPS)
- Developmental and Psychological Sciences (DAPS)
- Economics of Education (SHIPS)
- Educational Linguistics (SHIPS)
- Educational Policy (SHIPS)
- Elementary Education (CTE)
- Higher Education (SHIPS)
- History/Social Science Education (CTE)
- History of Education (SHIPS)
- International Comparative Education (SHIPS)

- Learning Sciences and Technology Design (CTE, DAPS, SHIPS)
- Linguistics (SHIPS)
- Literacy, Language, and English Education (CTE)
- Mathematics Education (CTE)
- Organizational Studies (SHIPS)
- Philosophy of Education (SHIPS)
- Race, Inequality, and Language in Education (SHIPS)
- Science Education (CTE)
- Sociology of Education (SHIPS)
- Teacher Education (CTE)

## Ph.D. Minor in Education

Candidates for the Ph.D. degree in other departments or schools of the University may elect to minor in Education. Requirements include a minimum of 20 quarter units of graduate course work in Education and a field of concentration. Students choosing to minor in Education should meet with the Associate Dean for Student Affairs to determine a suitable course of study early in their program.

*Emeriti: (Professors)* J. Myron Atkin, John Baugh, Edwin M. Bridges, Larry Cuban, James Greeno, Pam Grossman, Edward Haertel, Linda Darling-Hammond, Connie Juel, Michael Kamil, Michael W. # SCHOOL OF ENGINEERING

Courses offered by the School of Engineering are listed under the subject code ENGR on the Stanford Bulletin's ExploreCourses web site.

The School of Engineering offers undergraduate programs leading to the degree of Bachelor of Science (B.S.), programs leading to both B.S. and Master of Science (M.S.) degrees, other programs leading to a B.S. with a Bachelor of Arts (B.A.) in a field of the humanities or social sciences, dual-degree programs with certain other colleges, and graduate curricula leading to the degrees of M.S., Engineer, and Ph.D.

The school has nine academic departments: Aeronautics and Astronautics, Bioengineering, Chemical Engineering, Civil and Environmental Engineering, Computer Science, Electrical Engineering, Management Science and Engineering, Materials Science and Engineering, and Mechanical Engineering. These departments and one interdisciplinary program, the Institute for Computational and Mathematical Engineering, are responsible for graduate curricula, research activities, and the departmental components of the undergraduate curricula.

In research where faculty interest and competence embrace both engineering and the supporting sciences, there are numerous programs within the school as well as several interschool activities, including the Army High Performance Computing Research Center, Biomedical Informatics Training Program, Center for Integrated Systems, Center for Work, Technology, and Organization, Collaboratory for Research on Global Projects, National Center for Physics-Based Simulation in Biology, Center for Position, Navigation, and Time, the Energy Modeling Forum, the NIH Biotechnology Graduate Training Grant in Chemical Engineering, and the Stanford Technology Ventures Program. Energy Resources Engineering (formerly Petroleum Engineering) is offered through the School of Earth Sciences.

The School of Engineering's Hasso Plattner Institute of Design (<http://dschool.stanford.edu>) brings together students and faculty in engineering, business, education, medicine, and the humanities to learn design thinking and work together to solve big problems in a human-centered way.

The Woods Institute for the Environment (<http://environment.stanford.edu>) brings together faculty, staff, and students from the schools, institutes and centers at Stanford to conduct interdisciplinary research, education, and outreach to promote an environmentally sound and sustainable world.

The Global Engineering Program offers a portfolio of international opportunities for Stanford undergraduate and graduate students majoring within the School of Engineering. Opportunities range from service learning programs to internships to study tours. These opportunities enhance engineering education by providing students with an opportunity to learn about technology and engineering globally, to build professional networks, and to gain real world experience in a culturally diverse and international environment. For more information and application deadlines, please see [gep.stanford.edu](http://gep.stanford.edu)

Instruction in Engineering is offered primarily during Autumn, Winter, and Spring quarters of the regular academic year. During the Summer Quarter, a small number of undergraduate and graduate courses are offered.

## Undergraduate Programs in the School of Engineering

The principal goals of the undergraduate engineering curriculum are to provide opportunities for intellectual growth in the context of an engineering discipline, for the attainment of professional competence, and for the development of a sense of the social context of technology.

The curriculum is flexible, with many decisions on individual courses left to the student and the adviser. For a student with well-defined educational goals, there is often a great deal of latitude.

In addition to the special requirements for engineering majors described below, all undergraduate engineering students are subject to the University general education, writing, and foreign language requirements outlined in the first pages of this bulletin. Depending on the program chosen, students have the equivalent of from one to three quarters of free electives to bring the total number of units to 180.

The School of Engineering's *Handbook for Undergraduate Engineering Programs* is the definitive reference for all undergraduate engineering programs. It is available online at <http://ughb.stanford.edu> and provides detailed descriptions of all undergraduate programs in the school, as well as additional information about extracurricular programs and services. Because it is revised in the summer, and updates are made to the web site on a continuing basis, the handbook reflects the most up-to-date information on School of Engineering programs for the academic year.

## Accreditation

The Accreditation Board for Engineering and Technology (ABET) accredits college engineering programs nationwide using criteria and standards developed and accepted by U.S. engineering communities. At Stanford, the following undergraduate programs are accredited:

- Chemical Engineering
- Civil Engineering
- Mechanical Engineering

In ABET-accredited programs, students must meet specific requirements for engineering science, engineering design, mathematics, and science course work. Students are urged to consult the School of Engineering Handbook for Undergraduate Engineering Programs and their adviser.

Accreditation is important in certain areas of the engineering profession; students wishing more information about accreditation should consult their department office or the office of the Senior Associate Dean for Student Affairs in 135 Huang Engineering Center.

## Policy on Satisfactory/No Credit Grading and Minimum Grade Point Average

All courses taken to satisfy major requirements (including the requirements for mathematics, science, engineering fundamentals, Technology in Society, and engineering depth) for all engineering students (including both department and School of Engineering majors) must be taken for a letter grade if the instructor offers that option.

For departmental majors, the minimum combined GPA (grade point average) for all courses taken in fulfillment of the Engineering Fundamentals requirement and the Engineering Depth requirement is 2.0. For School of Engineering majors, the minimum GPA on all engineering courses taken in fulfillment of the major requirements is 2.0.

## Admission

Any students admitted to the University may declare an engineering major if they elect to do so; no additional courses or examinations are required for admission to the School of Engineering.

## Recommended Preparation

### Freshman

Students who plan to enter Stanford as freshmen and intend to major in engineering should take the highest level of mathematics offered in high school. (See the "Mathematics (<http://www.stanford.edu/dept/registrar/bulletin/6023.htm>)" section of this bulletin for information on advanced placement in mathematics.) High school courses in physics and chemistry are strongly recommended, but not required. Additional

elective course work in the humanities and social sciences is also recommended.

### Transfer Students

Students who do the early part of their college work elsewhere and then transfer to Stanford to complete their engineering programs should follow an engineering or pre-engineering program at the first school, selecting insofar as possible courses applicable to the requirements of the School of Engineering, that is, courses comparable to those described under "Undergraduate Programs (<http://www.stanford.edu/dept/registrar/bulletin/5144.htm>)." In addition, students should work toward completing the equivalent of Stanford's foreign language requirement and as many of the University's General Education Requirements (GERs) as possible before transferring. Some transfer students may require more than four years (in total) to obtain the B.S. degree. However, Stanford affords great flexibility in planning and scheduling individual programs, which makes it possible for transfer students, who have wide variations in preparation, to plan full programs for each quarter and to progress toward graduation without undue delay.

Transfer credit is given for courses taken elsewhere whenever the courses are equivalent or substantially similar to Stanford courses in scope and rigor. The policy of the School of Engineering is to study each transfer student's preparation and make a reasonable evaluation of the courses taken prior to transfer by means of a petition process. Inquiries may be addressed to the Office of Student Affairs in 135 Huang Engineering Center. For more information, see the transfer credit section of the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>.

### Degree Program Options

In addition to the B.S. degrees offered by departments, the School of Engineering offers two other types of B.S. degrees:

- Bachelor of Science in Engineering (see subplan majors listed below)
- Bachelor of Science for Individually Designed Majors in Engineering (IDMEN)

There are seven Engineering B.S. subplans that have been proposed by cognizant faculty groups and pre-approved by the Undergraduate Council:

- Aeronautics and Astronautics
- Architectural Design
- Atmosphere/Energy
- Biomechanical Engineering
- Biomedical Computation
- Engineering Physics
- Product Design.

The B.S. for an Individually Designed Major in Engineering has also been approved by the council.

Curricula for majors are offered by the departments of:

- Bioengineering
- Chemical Engineering
- Civil and Environmental Engineering
- Computer Science
- Electrical Engineering
- Management Science and Engineering
- Materials Science and Engineering
- Mechanical Engineering

Curricula for majors in these departments have the following components:

- 36-45 units of mathematics and science (see Basic Requirements 1 and 2 at the end of this section)
- engineering fundamentals (three course minimum, at least one of which must be unspecified by the department, see Basic Requirement 3)
- Technology in Society (TIS) (one course minimum, see Basic Requirement 4)
- engineering depth (courses such that the total number of units for Engineering Fundamentals and Engineering Depth is between 60 and 72)
- ABET accredited majors must meet a minimum number of Engineering Science and Engineering Design units; (see Basic Requirement 5)

Consult the 2015-16 Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>) for additional information.

### Dual and Coterminal Programs

A Stanford undergraduate may work simultaneously toward two bachelor's degrees or toward a bachelor's and a master's degree, that is, B.A. and M.S., B.A. and M.A., B.S. and M.S., or B.S. and M.A. The degrees may be granted simultaneously or at the conclusion of different quarters. Five years are usually required for a dual or coterminal program or for a combination of these two multiple degree programs. For further information, inquire with the School of Engineering's student affairs office, 135 Huang Engineering Center, or with department contacts listed in the Handbook for Undergraduate Engineering Programs, available at <http://ughb.stanford.edu>.

Dual B.A. and B.S. Degree Program—To qualify for both degrees, a student must:

1. complete the stated University and department requirements for each degree
2. complete 15 full-time quarters, or 3 full-time quarters after completing 180 units
3. complete a total of 225 units (180 units for the first bachelor's degree plus 45 units for the second bachelor's degree)

Coterminal Bachelor's and Master's Degree Program—A Stanford undergraduate may be admitted to graduate study for the purpose of working simultaneously toward a bachelor's degree and a master's degree, in the same or different disciplines. To qualify for both degrees, a student must:

1. complete, in addition to the units required for the bachelor's degree, the number of units required by the graduate department for the master's degree which in no event is fewer than the University minimum of 45 units
2. complete the requirements for the bachelor's degree (department, school, and University) and apply for conferral of the degree at the appropriate time
3. complete the department and University requirements for the master's degree and apply for conferral of the degree at the appropriate time

A student may complete the bachelor's degree before completing the master's degree, or both degrees may be completed in the same quarter.

### Procedure for Applying for Admission to Coterminal Degree Programs

Stanford undergraduates apply to the pertinent graduate department using the University coterminal application. Application deadlines and admissions criteria vary by department, but in all cases the student must apply early enough to allow a departmental decision at least one quarter in advance of the anticipated date of conferral of the bachelor's degree.

Students interested in coterminal degree programs in Engineering should refer to our departments' sections of this bulletin for more detailed information. The University requirements for the coterminal master's degree are described in the "Coterminal Master's Degrees (<http://exploreddegrees.stanford.edu/cotermdegrees/#text>)" section of this bulletin.

## Graduate Programs in the School of Engineering

### Admission

Application for admission with graduate standing in the school should be made to the graduate admissions committee in the appropriate department or program. While most graduate students have undergraduate preparation in an engineering curriculum, it is feasible to enter from other programs, including chemistry, geology, mathematics, or physics.

For further information and application instructions, see the department sections in this bulletin or <http://gradadmissions.stanford.edu>. Stanford undergraduates may also apply as coterminal students; details can be found under "Degree Program Options" in the "Undergraduate Programs in the School of Engineering (<http://www.stanford.edu/dept/registrar/bulletin/5144.htm>)" section of this bulletin.

### Fellowships and Assistantships

Departments and divisions of the School of Engineering award graduate fellowships, research assistantships, and teaching assistantships each year.

### Curricula in the School of Engineering

For further details about the following programs, see the department sections in this bulletin.

Related aspects of particular areas of graduate study are commonly covered in the offerings of several departments and divisions. Graduate students are encouraged, with the approval of their department advisers, to choose courses in departments other than their own to achieve a broader appreciation of their field of study. For example, most departments in the school offer courses concerned with nanoscience, and a student interested in an aspect of nanotechnology can often gain appreciable benefit from the related courses given by departments other than her or his own.

Departments and programs of the school offer graduate curricula as follows:

#### Aeronautics and Astronautics

- Aeroelasticity and Flow Simulation
- Aircraft Design, Performance, and Control
- Applied Aerodynamics
- Autonomy
- Computational Aero-Acoustics
- Computational Fluid Dynamics
- Computational Mechanics and Dynamical Systems
- Control of Robots, including Space and Deep-Underwater Robots
- Conventional and Composite Materials and Structures
- Decision Making under Uncertainty
- Direct and Large-Eddy Simulation of Turbulence
- High-Lift Aerodynamics
- Hybrid Propulsion
- Hypersonic and Supersonic Flow
- Micro and Nano Systems and Materials
- Multidisciplinary Design Optimization

- Navigation Systems (especially GPS)
- Optimal Control, Estimation, System Identification
- Sensors for Harsh Environments
- Space Debris Characterization
- Space Environment Effects on Spacecraft
- Space Plasmas
- Spacecraft Design and Satellite Engineering
- Turbulent Flow and Combustion

#### Bioengineering

- Biomedical Computation
- Biomedical Devices
- Biomedical Imaging
- Cell and Molecular Engineering
- Regenerative Medicine

#### Chemical Engineering

- Applied Statistical Mechanics
- Biocatalysis
- Biochemical Engineering
- Bioengineering
- Biophysics
- Computational Materials Science
- Colloid Science
- Dynamics of Complex Fluids
- Energy Conversion
- Functional Genomics
- Hydrodynamic Stability
- Kinetics and Catalysis
- Microrheology
- Molecular Assemblies
- Nanoscience and Technology
- Newtonian and Non-Newtonian Fluid Mechanics
- Polymer Physics
- Protein Biotechnology
- Renewable Fuels
- Semiconductor Processing
- Soft Materials Science
- Solar Utilization
- Surface and Interface Science
- Transport Mechanics

#### Civil and Environmental Engineering

- Atmosphere/Energy
- Construction Engineering and Management
- Design/Construction Integration
- Environmental Engineering and Science
- Environmental Fluid Mechanics and Hydrology
- Environmental and Water Studies
- Geomechanics
- Structural Engineering
- Sustainable Design and Construction

#### Computational and Mathematical Engineering

- Applied and Computational Mathematics
- Computational Biology
- Computational Fluid Dynamics
- Computational Geometry and Topology
- Computational Geosciences

- Computational Medicine
- Data Science
- Discrete Mathematics and Algorithms
- Numerical Analysis
- Optimization
- Partial Differential Equations
- Stochastic Processes
- Uncertainty Quantification
- Financial Mathematics

### Computer Science

See <http://forum.stanford.edu/research/areas.php> for a comprehensive list.

- Algorithmic Game Theory
- Artificial Intelligence
- Autonomous Agents
- Biomedical Computation
- Compilers
- Complexity Theory
- Computational and Cognitive Neuroscience
- Computational Biology
- Computational Geometry and Topology
- Computational Logic
- Computational Photography
- Computational Physics
- Computer Architecture
- Computer Graphics
- Computer Security
- Computer Science Education
- Computer Vision
- Crowdsourcing
- Cryptography
- Database Systems
- Data Center Computing
- Data Mining
- Design and Analysis of Algorithms
- Digital Libraries
- Distributed and Parallel Computation
- Distributed Systems
- Electronic Commerce
- Formal Verification
- General Game Playing
- Haptic Display of Virtual Environments
- Human-Computer Interaction
- Image Processing
- Information and Communication Technologies for Development
- Information Management
- Learning Theory
- Machine Learning
- Mathematical Theory of Computation
- Mobile Computing
- Multi-Agent Systems
- Nanotechnology-enabled Systems
- Natural Language and Speech Processing
- Networking and Internet Architecture
- Operating Systems
- Parallel Computing

- Probabilistic Models and Methods
- Programming Systems/Languages
- Robotics
- Robust System Design
- Scientific Computing and Numerical Analysis
- Sensor Networks
- Social and Information Networks
- Social Computing
- Ubiquitous and Pervasive Computing
- Visualization
- Web Application Infrastructure

### Electrical Engineering

- Biomedical Devices and Bioimaging
- Communication Systems: Wireless, Optical, Wireline
- Control, Learning, and Optimization
- Electronic and Magnetic Devices
- Energy: Solar Cells, Smart Grid, Load Control
- Environmental and Remote Sensing: Sensor Nets, Radar Systems, Space
- Fields and Waves
- Graphics, HCI, Computer Vision, Photography
- Information Theory and Coding: Image and Data Compression, Denoising
- Integrated Circuit Design: MEMS, Sensors, Analog, RF
- Network Systems and Science: Next Gen Internet, Wireless Networks
- Nano and Quantum Science
- Photonic Devices
- Systems Software: OS, Compilers, Languages
- Systems Hardware: Architecture, VLSI, Embedded Systems
- VLSI Design

### Management Science and Engineering

- Decision and Risk Analysis
- Dynamic Systems
- Economics
- Entrepreneurship
- Finance
- Information
- Marketing
- Optimization
- Organization Behavior
- Organizational Science
- Policy
- Production
- Stochastic Systems
- Strategy

### Materials Science and Engineering

- Biomaterials
- Ceramics and Composites
- Computational Materials Science
- Electrical and Optical Behavior of Solids
- Electron Microscopy
- Fracture and Fatigue
- Imperfections in Crystals
- Kinetics
- Magnetic Behavior of Solids
- Magnetic Storage Materials

- Nanomaterials
- Photovoltaics
- Organic Materials
- Phase Transformations
- Physical Metallurgy
- Solid State Chemistry
- Structural Analysis
- Thermodynamics
- Thin Films
- X-Ray Diffraction

### Mechanical Engineering

- Biomechanics
- Combustion Science
- Computational Mechanics
- Controls
- Design of Mechanical Systems
- Dynamics
- Environmental Science
- Experimental Stress and Analysis
- Fatigue and Fracture Mechanics
- Finite Element Analysis
- Fluid Mechanics
- Heat Transfer
- High Temperature Gas Dynamics
- Kinematics
- Manufacturing
- Mechatronics
- Product Design
- Robotics
- Sensors
- Solids
- Thermodynamics
- Turbulence

For more information on the ME graduate curriculum, please see the Graduate Bulletin and Graduate student handbook.

## Bachelor of Science in the School of Engineering

Departments within the School of Engineering offer programs leading to the B.S. degree in the following fields:

- Bioengineering
- Chemical Engineering
- Civil Engineering
- Computer Science
- Electrical Engineering
- Environmental Systems Engineering
- Management Science and Engineering
- Materials Science and Engineering
- Mechanical Engineering

The School of Engineering itself offers interdisciplinary programs leading to the B.S. degree in Engineering with specializations in:

- Aeronautics and Astronautics
- Architectural Design
- Atmosphere/Energy

- Biomechanical Engineering
- Biomedical Computation
- Engineering Physics
- Product Design

In addition, students may elect a B.S. in an Individually Designed Major in Engineering.

## Bachelor of Arts and Science (B.A.S.) in the School of Engineering

This degree is available to students who complete both the requirements for a B.S. degree in engineering and the requirements for a major or program ordinarily leading to the B.A. degree. For more information, see the "Undergraduate Degrees (p. 24)" section of this bulletin.

## Independent Study, Research, and Honors

The departments of Chemical Engineering, Civil and Environmental Engineering, Computer Science, Electrical Engineering, and Mechanical Engineering, as well as the faculty overseeing the Architectural Design, Atmosphere/Energy, Bioengineering, Biomechanical Engineering, Biomedical Computing, and Engineering Physics majors, offer qualified students opportunities to do independent study and research at an advanced level with a faculty mentor in order to receive a Bachelor of Science with honors. An honors option is also available to students pursuing an independently designed major, with the guidance and approval of their adviser.

## Petroleum Engineering

Petroleum Engineering is offered by the Department of Energy Resource Engineering in the School of Earth, Energy, and Environmental Sciences. Consult the "Energy Resources Engineering (p. 132)" section of this bulletin for requirements. School of Engineering majors who anticipate summer jobs or career positions associated with the oil industry should consider enrolling in ENGR 120.

## Programs in Manufacturing

Programs in manufacturing are available at the undergraduate, master's, and doctorate levels. The undergraduate programs of the departments of Civil and Environmental Engineering, Management Science and Engineering, and Mechanical Engineering provide general preparation for any student interested in manufacturing. More specific interests can be accommodated through Individually Designed Majors in Engineering (IDMENS).

## Basic Requirements

### Basic Requirement 1 (Mathematics)

Engineering students need a solid foundation in the calculus of continuous functions, linear algebra, an introduction to discrete mathematics, and an understanding of statistics and probability theory. Students are encouraged to select courses on these topics. To meet ABET accreditation criteria, a student's program must include the study of differential equations. Courses that satisfy the math requirement are listed at <http://ughb.stanford.edu> in the Handbook for Undergraduate Engineering Programs.

### Basic Requirement 2 (Science)

A strong background in the basic concepts and principles of natural science in such fields as physics, chemistry, geology, and biology is essential for engineering. Most students include the study of physics and chemistry in their programs. Courses that satisfy the science requirement are listed at <http://ughb.stanford.edu> in the Handbook for Undergraduate Engineering Programs.

### Basic Requirement 3 (Engineering Fundamentals)

The Engineering Fundamentals requirement is satisfied by a nucleus of technically rigorous introductory courses chosen from the various engineering disciplines. It is intended to serve several purposes. First, it provides students with a breadth of knowledge concerning the major fields of endeavor within engineering. Second, it allows the incoming engineering student an opportunity to explore a number of courses before embarking on a specific academic major. Third, the individual classes each offer a reasonably deep insight into a contemporary technological subject for the interested non-engineer.

The requirement is met by taking three courses from the following list, at least one of which is chosen by the student rather than by the department:

		Units
ENGR 10	Introduction to Engineering Analysis	4
ENGR 14	Intro to Solid Mechanics	4
ENGR 15	Dynamics	4
ENGR 20	Introduction to Chemical Engineering (same as CHEMENG 20)	3
ENGR 25B	Biotechnology <sup>1</sup>	3
ENGR 25E	Energy: Chemical Transformations for Production, Storage, and Use (same as CHEMENG 25E) <sup>1</sup>	3
ENGR 30	Engineering Thermodynamics	3
ENGR 40	Introductory Electronics <sup>1,2</sup>	5
ENGR 40A	Introductory Electronics	3
ENGR 40M	An Intro to Making: What is EE	3-5
ENGR 40P	Physics of Electrical Engineering <sup>1</sup>	5
ENGR 50	Introduction to Materials Science, Nanotechnology Emphasis <sup>1,2</sup>	4
ENGR 50E	Introduction to Materials Science, Energy Emphasis <sup>1</sup>	4
ENGR 50M	Introduction to Materials Science, Biomaterials Emphasis <sup>1</sup>	4
ENGR 60	Engineering Economy	3
ENGR 62	Introduction to Optimization (same as MS&E 111)	4
ENGR 70A/ CS 106A	Programming Methodology <sup>1</sup>	5
ENGR 70B/ CS 106B	Programming Abstractions <sup>1</sup>	5
ENGR 70X/ CS 106X	Programming Abstractions (Accelerated) <sup>1</sup>	5
ENGR 80	Introduction to Bioengineering (Engineering Living Matter) (same as BIOE 80)	4
ENGR 90	Environmental Science and Technology (same as CEE 70)	3

<sup>1</sup> Only one course from each numbered series can be used in the Engineering Fundamentals category within a major program.

<sup>2</sup> ENGR 40 Introductory Electronics and ENGR 50 Introduction to Materials Science, Nanotechnology Emphasis may be taken on video at some of Stanford's Overseas Centers.

### Basic Requirement 4 (Technology in Society)

It is important for the student to obtain a broad understanding of engineering as a social activity. To foster this aspect of intellectual and professional development, all engineering majors must take one course devoted to exploring issues arising from the interplay of engineering, technology, and society. Courses that fulfill this requirement are listed online at <http://ughb.stanford.edu> in the Handbook for Undergraduate Engineering Programs.

### Basic Requirement 5 (Engineering Topics)

In order to satisfy ABET (Accreditation Board for Engineering and Technology) requirements, a student majoring in Chemical, Civil, or Mechanical Engineering must complete one and a half years of engineering topics, consisting of a minimum of 68 units of Engineering Fundamentals and Engineering Depth appropriate to the student's field of study. In most cases, students meet this requirement by completing the major program core and elective requirements. A student may need to take additional courses in Depth in order to fulfill the minimum requirement. Appropriate courses assigned to fulfill each major's program are listed online at <http://ughb.stanford.edu> in the Handbook for Undergraduate Engineering Programs.

### Experimentation

Chemical Engineering, Civil Engineering, and Mechanical Engineering must include experimental experience appropriate to the discipline. Lab courses taken in the sciences, as well as experimental work taken in courses within the School of Engineering, will fulfill this requirement.

### Overseas Studies Courses in Engineering

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses web site (<http://explorecourses.stanford.edu>) or the Bing Overseas Studies web site (<http://bosp.stanford.edu>). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

### Aeronautics and Astronautics (AA)

#### Mission of the Undergraduate Program in Aeronautics and Astronautics

The mission of the undergraduate program in Aeronautics and Astronautics Engineering is to provide students with the fundamental principles and techniques necessary for success and leadership in the conception, design, implementation, and operation of aerospace and related engineering systems. Courses in the major introduce students to engineering principles. Students learn to apply this fundamental knowledge to conduct laboratory experiments and aerospace system design problems. Courses in the major include engineering fundamentals, mathematics, and the sciences, as well as in-depth courses in aeronautics and astronautics, dynamics, mechanics of materials, fluids engineering, and heat transfer. The major prepares students for careers in aircraft and spacecraft engineering, space exploration, air and space-based telecommunication industries, teaching, research, military service, and many related technology-intensive fields.

Completion of the undergraduate program in Aeronautics and Astronautics leads to the conferral of the Bachelor of Science in Engineering. The subplan "Aeronautics and Astronautics" appears on the transcript and on the diploma.

### Requirements

		Units
<b>Mathematics</b>		
24 units minimum <sup>1</sup>		
MATH 41	Calculus (or AP Calculus)	5
MATH 42	Calculus (or AP Calculus)	5
CME 100/ ENGR 154	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
CME 102/ ENGR 155A	Ordinary Differential Equations for Engineers	5
or MATH 53	Ordinary Differential Equations with Linear Algebra	

CME 106/ ENGR 155C or STATS 110 or STATS 116 or CS 109	Introduction to Probability and Statistics for Engineers (or STATS 110, STATS 116, CS 109) Statistical Methods in Engineering and the Physical Sciences Theory of Probability Introduction to Probability for Computer Scientists	4-5
--	--	-----

**Science**  
19 units minimum

PHYSICS 41	Mechanics (or AP Physics)	4
PHYSICS 43	Electricity and Magnetism (or AP Physics)	4
PHYSICS 45	Light and Heat	4
CHEM 31X	Chemical Principles Accelerated ( or CHEM 31A+B, AP Chemistry)	5

Science elective<sup>2</sup> 3-5

**Technology in Society (one course required)**  
3 units minimum<sup>3</sup> 3-5

**Engineering Fundamentals (three courses required)**  
11 units minimum

ENGR 30	Engineering Thermodynamics	3
ENGR 70A	Programming Methodology	5
Fundamentals Elective <sup>4</sup>		3-5

**Engineering Depth**  
28 units minimum

AA 100	Introduction to Aeronautics and Astronautics	3
AA 190	Directed Research and Writing in Aero/Astro	3-5
ME 70	Introductory Fluids Engineering	4
ENGR 14	Intro to Solid Mechanics	4
ME 131A	Heat Transfer	3
ENGR 15	Dynamics	4
ME 161 or PHYSICS 11(Advanced Mechanics)	Dynamic Systems, Vibrations and Control	3-4
CEE 101A or ME 80	Mechanics of Materials	4

**Aero/Astro Depth**  
18 units minimum

Engineering Electives (two courses required) <sup>5</sup> See Course List AA-1 below for a list of options		6-10
Depth Area I (two courses required) <sup>6</sup> See Course List AA-2 below for a list of options		6-10
Depth Area II (two courses required) <sup>6</sup> See Course List AA-2 below for a list of options		6-10

Total Units 104-126

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

<sup>1</sup> It is recommended that the CME series (100, 102, 104) be taken rather than the MATH series (51, 52, 53). If students take the MATH series, it is recommended to take MATH 51M Introduction to MATLAB for Multivariable Mathematics, offered Autumn Quarter.

<sup>2</sup> Courses that satisfy the Science elective are listed in Figure 3-2 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>.

<sup>3</sup> Courses that satisfy the Technology in Society Requirement are listed in Figure 3-3 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>.

<sup>4</sup> Courses that satisfy the Engineering Fundamentals elective are listed in Figure 3-4 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>. ENGR 70B or X (same as CS 106B or X) is not allowed to fulfill the third fundamentals requirement.

<sup>5</sup> Courses that satisfy the Engineering Electives are listed in Figure AA-1 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>, as well as Course List AA-1 below.

<sup>6</sup> Courses that satisfy the Depth Area choices are listed in Figure AA-2 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>, as well as Course List AA-2 below.

AA-1. Engineering Electives: Two Courses Required		Units
AA 250	Nanomaterials for Aerospace	3
ENGR 240	Introduction to Micro and Nano Electromechanical Systems	3
ME 210	Introduction to Mechatronics	4
ME 220	Introduction to Sensors	3-4
ME 227	Vehicle Dynamics and Control	3
ME 250	Internal Combustion Engines	3-5
ME 257	Turbine and Internal Combustion Engines	3
ME 260	Fuel Cell Science and Technology	3
ME 324	Precision Engineering	4
ME 331A	Advanced Dynamics & Computation	3
ME 331B	Advanced Dynamics, Simulation & Control	3
ME 345	Fatigue Design and Analysis	3
ME 348	Experimental Stress Analysis	3
ME 351A	Fluid Mechanics	3
ME 351B	Fluid Mechanics	3
CHEMENG 140	Micro and Nanoscale Fabrication Engineering	3
CS 107	Computer Organization and Systems	3-5
CS 110	Principles of Computer Systems	3-5
CS 140	Operating Systems and Systems Programming	3-4
CS 161	Design and Analysis of Algorithms	3-5
EE 102A	Signal Processing and Linear Systems I	4
EE 102B	Signal Processing and Linear Systems II	4
EE 101A	Circuits I	4
EE 101B	Circuits II	4
ENERGY 121	Fundamentals of Multiphase Flow	3
ENERGY 191	Optimization of Energy Systems	3-4
ENERGY 226	Thermal Recovery Methods	3
MATSCI 155	Nanomaterials Synthesis	4
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
MATSCI 197	Rate Processes in Materials	3-4
MATSCI 198	Mechanical Properties of Materials	3-4
PHYSICS 100	Introduction to Observational Astrophysics	4
* It is recommended that students review prerequisites for all courses.		

**AA-2. Depth Area: Four Courses Required, Two From Each of Two Areas**

Dynamics and Controls		Units
ENGR 105	Feedback Control Design	3
ENGR 205	Introduction to Control Design Techniques	3
AA 203	Introduction to Optimal Control and Dynamic Optimization	3

AA 222	Introduction to Multidisciplinary Design Optimization	3-4
AA 242A	Classical Dynamics	3
AA 271A	Dynamics and Control of Spacecraft and Aircraft Systems Design	3
AA 236A	Spacecraft Design	3-5
AA 236B	Spacecraft Design Laboratory	3-5
AA 241A	Introduction to Aircraft Design, Synthesis, and Analysis	3
AA 241B	Introduction to Aircraft Design, Synthesis, and Analysis	3
AA 284B	Propulsion System Design Laboratory	3
Fluids and CFD		
AA 200	Applied Aerodynamics	3
AA 201A	Fundamentals of Acoustics	3
AA 210A	Fundamentals of Compressible Flow	3
AA 214A/ CME 207	Numerical Methods in Engineering and Applied Sciences	3
AA 283	Aircraft and Rocket Propulsion	3
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	4
ME 140	Advanced Thermal Systems	5
Structures		
AA 240A	Analysis of Structures	3
AA 240B	Analysis of Structures	3
AA 256	Mechanics of Composites	3
AA 280	Smart Structures	3
ME 335A	Finite Element Analysis	3

\* It is recommended that students review prerequisites for all courses.

## Architectural Design (AD)

Completion of the undergraduate program in Architectural Design leads to the conferral of the Bachelor of Science in Engineering. The subplan "Architectural Design" appears on the transcript and on the diploma.

### Mission of the Undergraduate Program in Architectural Design

The mission of the undergraduate program in Architectural Design is to develop students' ability to integrate engineering and architecture in ways that blend innovative architectural design with cutting-edge engineering technologies. Courses in the program combine hands-on architectural design studios with a wide variety of other courses. Students can choose from a broad mix of elective courses concerning energy conservation, sustainability, building systems, and structures, as well as design foundation and fine arts courses. In addition to preparing students for advanced studies in architecture and construction management, the program's math and science requirements prepare students well for graduate work in other fields such as civil and environmental engineering, law, and business.

### Requirements

#### Mathematics and Science (36 units minimum) <sup>1</sup>

Mathematics		Units
MATH 19	Calculus	3
MATH 20	Calculus	3
MATH 21	Calculus	4
Or the following sequence:		
MATH 41	Calculus	

MATH 42	Calculus	
CME 100	Vector Calculus for Engineers (Recommended)	5
One course in Statistics (required)		3-5
<b>Science</b>		
PHYSICS 41	Mechanics	4
Recommended:		
EARTHSYS 101 Energy and the Environment		
EARTHSYS 102 Renewable Energy Sources and Greener Energy Processes		
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions	
CEE 70	Environmental Science and Technology	
CEE 101D	Computations in Civil and Environmental Engineering	
PHYSICS 23	Electricity, Magnetism, and Optics	
or PHYSICS 43 Electricity and Magnetism		
Or from School of Engineering approved list		
<b>Technology in Society</b>		
One course required, see Basic Requirement 4		3-5
<b>Engineering Fundamentals</b>		
Three courses minimum, see Basic Requirement 3		9-15
ENGR 14	Intro to Solid Mechanics	4
ENGR 60	Engineering Economy <sup>2</sup>	3
or CEE 146A Engineering Economy		
<b>AD Depth Core <sup>3</sup></b>		
CEE 31	Accessing Architecture Through Drawing	4
or CEE 31Q Accessing Architecture Through Drawing		
CEE 100	Managing Sustainable Building Projects	4
CEE 120A	Building Information Modeling Workshop	2-4
CEE 130	Architectural Design: 3-D Modeling, Methodology, and Process	4
CEE 137B	Advanced Architecture Studio	5
ARTHIST 3	Introduction to World Architecture	5
<b>Depth Options</b>		12
See Note 3 for course options		
<b>Depth Electives</b>		
Elective units must be such that courses in ENGR Fundamentals, Core, Depth Options, and Depth Electives total at least 63 units. One of the following must be taken:		
CEE 131B	Financial Management of Sustainable Urban Systems	3
or CEE 32A Psychology of Architecture		
or CEE 32B Design Theory		
or CEE 32F Light, Color, and Space		
or CEE 32R American Architecture		
or CEE 32S The Situated Workplace and Public Life		
or CEE 32T Making and Remaking the Architect: Edward Durrell Stone and Stanford		
or CEE 32U Web of Apprenticeship		
or CEE 133F Principles of Freehand Drawing		
or CEE 133G Architectural History & Drawing in Eastern Europe		
or CEE 139 Design Portfolio Methods		
Total Units		80-92

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

<sup>1</sup> School of Engineering approved list of math and science courses available in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>.

<sup>2</sup> CEE 146A, offered Autumn quarter, may be used in place of ENGR 60 for the second ENGR Fundamental.

<sup>3</sup> Engineering depth options: Choose at least 12 units from the following courses: CEE 101A, CEE 101B, CEE 101C, CEE 156, CEE 172, CEE 172A, CEE 176A, CEE 180, CEE 181, CEE 182, CEE 183, CEE 226, CEE 241, OR CEE 242. Students should investigate any prerequisites for the listed courses and carefully plan course sequences with the AD director.

#### Electives:

- CEE 32A, CEE 32B, CEE 32D, CEE 32F, CEE 32G, CEE 32Q, CEE 32R, CEE 32S, CEE 32T, CEE 32U, CEE 101B, CEE 101C, CEE 120A, CEE 120B, CEE 120C, CEE 122A, CEE 122B, CEE 124, CEE 131A, CEE 131B, CEE 131C, CEE 132, CEE 134B, CEE 135A, CEE 139, CEE 172A, CEE 176A, CEE 180, CEE 181, CEE 182, CEE 183
- ENGR 50, ENGR 103, ENGR 131
- ME 10AX, ME 101, ME 110, ME 115A/B/C, ME 120, ME 203
- ARTSTUDI 13BX, ARTSTUDI 140, ARTSTUDI 145, ARTSTUDI 151, ARTSTUDI 160, ARTSTUDI 170, ARTSTUDI 171, ARTSTUDI 181
- ARTHIST 107A, ARTHIST 142, ARTHIST 143A, ARTHIST 188A
- FILMPROD 114
- TAPS 137
- URBANST 110, URBANST 113, URBANST 163, URBANST 171

## Atmosphere/Energy (A/E)

Completion of the undergraduate program in Atmosphere/Energy leads to the conferral of the Bachelor of Science in Engineering. The subplan "Atmosphere/Energy" appears on the transcript and on the diploma.

### Mission of the Undergraduate Program in Atmosphere/Energy

Atmosphere and energy are strongly linked: fossil-fuel energy use contributes to air pollution, global warming, and weather modification; and changes in the atmosphere feed back to renewable energy resources, including wind, solar, hydroelectric, and wave resources. The mission of the undergraduate program in Atmosphere/Energy (A/E) is to provide students with the fundamental background necessary to understand large- and local-scale climate, air pollution, and energy problems and solve them through clean, renewable, and efficient energy systems. To accomplish this goal, students learn in detail the causes and proposed solutions to the problems, and learn to evaluate whether the proposed solutions are truly beneficial. A/E students take courses in renewable energy resources, indoor and outdoor air pollution, energy efficient buildings, climate change, renewable energy and clean-vehicle technologies, weather and storm systems, energy technologies in developing countries, electric grids, and air quality management. The curriculum is flexible. Depending upon their area of interest, students may take in-depth courses in energy or atmosphere and focus either on science, technology, or policy. The major is designed to provide students with excellent preparation for careers in industry, government, and research; and for study in graduate school.

### Requirements

#### Mathematics and Science (45 units minimum):

Mathematics		23
23 units minimum, including at least one course from each group:		
Group A		
MATH 53	Ordinary Differential Equations with Linear Algebra	
CME 102	Ordinary Differential Equations for Engineers	
Group B		
CME 106	Introduction to Probability and Statistics for Engineers	
STATS 60	Introduction to Statistical Methods: Precalculus	

STATS 110	Statistical Methods in Engineering and the Physical Sciences	
<b>Science</b>		20
20 units minimum, including all of the following:		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism or PHYSICS Light and Heat	
Select one of the following:		4
CHEM 31B	Chemical Principles II or CHEM 31 Chemical Principles Accelerated	
CEE 70	Environmental Science and Technology <sup>1</sup>	
<b>Technology in Society (1 course)</b>		
MS&E 197	Ethics, Technology, and Public Policy (WIM)	5
<b>Engineering Fundamentals</b>		
Three courses minimum, including the following:		
ENGR 25E	Energy: Chemical Transformations for Production, Storage, and Use	3
or ENGR 50E	Introduction to Materials Science, Energy Emphasis	
Plus one of the following courses, plus one elective (see Basic Requirement 3):		6-9
ENGR 10	Introduction to Engineering Analysis	
ENGR 30	Engineering Thermodynamics	
ENGR 60	Engineering Economy	
ENGR 70A	Programming Methodology	
<b>Engineering Depth</b>		
Required: <sup>2</sup>		
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions (cannot also fulfill science requirement)	3
At least 36 units from the following with at least four courses from each group:		36
CEE 107A	Understanding Energy or CEE 107S Energy Resources: Fuels and Tools	
Group A: Atmosphere		
AA 100	Introduction to Aeronautics and Astronautics	
CEE 63	Weather and Storms	
CEE 101N	Mechanics of Fluids or CEE 101B Mechanics of Fluids or ME 70 Introductory Fluids Engineering	
CEE 164	Introduction to Physical Oceanography or ESS 146B Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation	
CEE 172	Air Quality Management	
CEE 172A	Indoor Air Quality (given alt years)	
CEE 178	Introduction to Human Exposure Analysis	
EARTHSYS 37N	Climate Change: Science & Society or EARTHSYS 44N Global Warming Paradox	
EARTHSYS 57C	Climate Change from the Past to the Future	
EARTHSYS 111	Biology and Global Change	
EARTHSYS 129	Geographic Impacts of Global Change: Mapping the Stories	
EARTHSYS 142	Remote Sensing of Land or EARTHSYS 144 Fundamentals of Geographic Information Science (GIS)	
EARTHSYS 146	Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation (alt years)	
EARTHSYS 184	Climate and Agriculture (alt. years)	

ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery
MS&E 92Q	International Environmental Policy
Group B: Energy	
APPPHYS 79N	Energy Options for the 21st Century
AA 116Q or EE 155	Electric Automobiles and Aircraft Green Electronics
CEE 107F	Understanding Energy -- Field Trips
CEE 107W	Understanding Energy -- Workshop
CEE 109	Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision (alternate years)
CEE 176A	Energy Efficient Buildings
CEE 176B	Electric Power: Renewables and Efficiency
CEE 177S	Design for a Sustainable World
CHEMENG 35N	Renewable Energy for a Sustainable World
EARTHSYS 46C	Environmental Impact of Energy Systems: What are the Risks?
EARTHSYS 101	Energy and the Environment
EARTHSYS 102	Renewable Energy Sources and Greener Energy Processes
ECON 17N or OSPKYOTC 45	Energy, the Environment, and the Economy California's Energy-Environment Conundrum
EE 151	Sustainable Energy Systems
ENERGY 104	Sustainable Energy for 9 Billion
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
ME 185	Electric Vehicle Design
OSPSANTG 31	

Total Units 100-109

<sup>1</sup> Can count as a science requirement or Engineering Fundamental, but not both.

<sup>2</sup> To fulfill the Writing in the Major (WIM) requirement take Technology in Society course MS&E 193W or MS&E 197. Alternative WIM Courses: CEE 100, EARTHSYS 200, HUMBIO 4B, or the combination of 2 units of CEE 199 with 1 unit of E199W.

## Honors Program

The A/E honors program offers eligible students the opportunity to engage in guided original research, or project design, over the course of an academic year. Interested students must:

- submit a 1-2 page letter applying to the honors program in A/E. The letter must describe the problem to be investigated. Students must obtain signatures from the current primary adviser and the proposed honors adviser, if different, and submit the letter to the student services office in the Department of Civil and Environmental Engineering (CEE). The application must include an unofficial Stanford transcript. Applications must be received in the fourth quarter prior to graduation. It is recommended that a prospective student meet with the proposed honors adviser well in advance of submitting an application.
- maintain a GPA of at least 3.5.
- complete an honors thesis or project over a period of three quarters. The typical length of the written report is 15-20 pages. The deadline for submission of the report is decided by the honors adviser, but should be no later than the end of the third week in May.
- present their thesis or project be read and evaluated by the honors adviser and one other reader. It is the student's responsibility to obtain both the adviser and the reader. At least one of the two must be a member of the Academic Council in the School of Engineering.

- present the completed work in an appropriate forum such as in the same session as honors theses are presented in the department of the adviser. All honors programs require some public presentation of the thesis or project.
- take up to 10 units of CEE 199H Undergraduate Honors Thesis toward the thesis (optional). Students must take ENGR 202S Writing: Special Projects or its equivalent. Units for ENGR 202S are beyond those required for the A/E major.
- submit two copies of the signed thesis to the CEE student services office no later than two weeks before the end of the graduation quarter.

For additional information and sample programs, see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

## Bioengineering (BioE)

Completion of the undergraduate program in Bioengineering leads to the conferral of the Bachelor of Science in Bioengineering.

### Mission of the Undergraduate Program in Bioengineering

The Stanford Bioengineering (BioE) major enables students to combine engineering and the life sciences in ways that advance scientific discovery, healthcare and medicine, manufacturing, environmental quality, culture, education, and policy. Students who major in BioE earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.

Students will complete engineering fundamentals courses, including an introduction to BioE and computer programming. A series of core BioE classes beginning in the second year leads to a student-selected depth area and a senior capstone design project. The department also organizes a summer Research Experience for Undergraduates (REU) program (<http://bioengineering.stanford.edu/education/REU.html>). BioE graduates are well prepared to pursue careers and lead projects in research, medicine, business, law, and policy.

### Requirements

	Units
<b>Mathematics</b> <sup>1</sup>	
28 units minimum required, see Basic Requirement 1)	
MATH 41 & MATH 42	Calculus and Calculus (or AP Calculus) 10
Select one of the following:	
CME 100 or MATH 51	Vector Calculus for Engineers (Recommended) 5 Linear Algebra and Differential Calculus of Several Variables
Select one of the following:	
CME 102 or MATH 53	Ordinary Differential Equations for Engineers (Recommended) 5 Ordinary Differential Equations with Linear Algebra
Select one of the following:	
CME 104 or MATH 52	Linear Algebra and Partial Differential Equations for Engineers (Recommended) 5 Integral Calculus of Several Variables
CME 106 or STATS 110 or STATS 141	Introduction to Probability and Statistics for Engineers (Recommended) 3-5 Statistical Methods in Engineering and the Physical Sciences Biostatistics
<b>Science</b> <sup>2</sup>	
28 units minimum:	
CHEM 31X	Chemical Principles Accelerated 5-10

or CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	
CHEM 33	Structure and Reactivity	5
BIO 41	Genetics, Biochemistry, and Molecular Biology	5
BIO 42	Cell Biology and Animal Physiology	5
PHYSICS 41	Mechanics	4
PHYSICS 43	Electricity and Magnetism	4
<b>Technology in Society</b>		
One course required; see Basic Requirement 4		
BIOE 131	Ethics in Bioengineering <sup>(WIM)</sup>	3
<b>Engineering Fundamentals</b>		
ENGR 70A	Programming Methodology (same as CS 106A)	5
ENGR 80	Introduction to Bioengineering (Engineering Living Matter)	4
Fundamentals Elective; see UGHB Fig. 3-4 for approved course list; may not use ENGR 70B or ENGR 70X		3-5
<b>Bioengineering Core</b>		
BIOE 41	Physical Biology of Macromolecules	4
BIOE 42	Physical Biology of Cells	4
BIOE 44	Fundamentals for Engineering Biology Lab	4
BIOE 51	Anatomy for Bioengineers	4
BIOE 101	Systems Biology	3
BIOE 103	Systems Physiology and Design	4
BIOE 123	Biomedical System Prototyping Lab	4
BIOE 141A	Senior Capstone Design I	4
BIOE 141B	Senior Capstone Design II	4
<b>Bioengineering Depth Electives</b>		
Four courses, minimum 12 units:		12
BIOE 115	Computational Modeling of Microbial Communities	
BIOE 122	Biosecurity and Bioterrorism Response	
BIOE 201C	Diagnostic Devices Lab	
BIOE 211	Biophysics of Multi-cellular Systems and Amorphous Computing	
BIOE 212	Introduction to Biomedical Informatics Research Methodology	
BIOE 214	Representations and Algorithms for Computational Molecular Biology	
BIOE 220	Introduction to Imaging and Image-based Human Anatomy	
BIOE 221	Physics and Engineering of Radionuclide Imaging	
BIOE 222	Instrumentation and Applications for Multi-modality Molecular Imaging of Living Subjects	
BIOE 223	Physics and Engineering of X-Ray Computed Tomography	
BIOE 224	Probes and Applications for Multi-modality Molecular Imaging of Living Subjects	
BIOE 227	Functional MRI Methods	
BIOE 231	Protein Engineering	
BIOE 244	Advanced Frameworks and Approaches for Engineering Integrated Genetic Systems	
BIOE 253	Science and Technology Policy	
BIOE 260	Tissue Engineering	
BIOE 281	Biomechanics of Movement	
BIOE 287	Introduction to Physiology and Biomechanics of Hearing	
BIOE 291	Principles and Practice of Optogenetics for Optical Control of Biological Tissues	

Total Units

118-127

<sup>1</sup> It is strongly recommended that CME 100 Vector Calculus for Engineers, CME 102 Ordinary Differential Equations for Engineers, and CME 104 Linear Algebra and Partial Differential Equations for Engineers be taken rather than MATH 51 Linear Algebra and Differential Calculus of Several Variables, MATH 52 Integral Calculus of Several Variables, and MATH 53 Ordinary Differential Equations with Linear Algebra. CME 106 Introduction to Probability and Statistics for Engineers utilizes MATLAB, a powerful technical computing program, and should be taken rather than STATS 110 Statistical Methods in Engineering and the Physical Sciences or STATS 141 Biostatistics. If you are taking the MATH 50 series, it is strongly recommended to take MATH 51M Introduction to MATLAB or CME 192 Introduction to MATLAB.

<sup>2</sup> Science must include both Chemistry (CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II; or CHEM 31X Chemical Principles Accelerated) and calculus-based Physics, with two quarters of course work in each, in addition to two courses of BIO core. CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II are considered one course even though given over two quarters.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>). Students pursuing a premed program need to take additional courses; see the UGHB, BioE Premed 4-Year Plan.

## Honors Program

The School of Engineering offers a program leading to a Bachelor of Science in Bioengineering with Honors (BIOE-BSH). This program provides the opportunity for qualified BioE majors to conduct independent research at an advanced level with a faculty research adviser and documented in an honors thesis.

In order to receive departmental honors, students admitted to the program must:

1. Declare the honors program in Axess (BIOE-BSH).
2. Maintain an overall grade point average (GPA) of at least 3.5 as calculated on the unofficial transcript.
3. Complete at least two quarters of research with a minimum of nine units of BIOE 191 Bioengineering Problems and Experimental Investigation or BIOE 191X Out-of-Department Advanced Research Laboratory in Bioengineering for a letter grade; up to three units may be used towards the bioengineering depth elective requirements.
4. Submit a completed thesis draft to the honors adviser and second reader by the first week of Spring Quarter. Further revisions and final endorsement are to be finished by the second Monday in May, when two signed bound copies plus one PC-compatible CD-ROM are to be submitted to the student services officer.
5. Attend the Bioengineering Honors Symposium at the end of Spring Quarter and give a poster or oral presentation, or present in another approved suitable forum.

For more information and application instructions, see the department's undergraduate site (<http://bioengineering.stanford.edu/education/bioe-honors-instructions-v.2.pdf>).

## Biomechanical Engineering (BME)

Completion of the undergraduate program in Biomechanical Engineering leads to the conferral of the Bachelor of Science in Engineering. The subplan "Biomechanical Engineering" appears on the transcript and on the diploma.

## Mission of the Undergraduate Program in Biomechanical Engineering

The mission of the undergraduate program in Biomechanical Engineering is to help students address health science challenges by applying engineering mechanics and design to the fields of biology and medicine. The program is interdisciplinary in nature, integrating engineering course work with biology and clinical medicine. Research and teaching in this discipline focus primarily on neuromuscular, musculoskeletal, cardiovascular, and cell and tissue biomechanics. This major prepares students for graduate studies in bioengineering, medicine or related areas.

## Requirements

	Units
<b>Mathematics</b>	21
21 units minimum; see Basic Requirement 1	
<b>Science (22 units Minimum)</b> <sup>1</sup>	
CHEM 31X Chemical Principles Accelerated (or CHEM 31A+B)	5
CHEM 33 Structure and Reactivity	5
PHYSICS 41 Mechanics	4
BIO 44X Core Molecular Biology Laboratory	5
Biology or Human Biology A/B core courses	10
<b>Technology in Society</b>	
One course required, see Basic Requirement 4	3-5
<b>Engineering Topics (Engineering Science and Design)</b>	
Engineering Fundamentals (minimum three courses; see Basic Requirement 3):	
ENGR 14 Intro to Solid Mechanics	4
ENGR 25B Biotechnology	3
or ENGR 80 Introduction to Bioengineering (Engineering Living Matter)	
Fundamentals Elective	3-5
<b>Engineering Depth</b>	
ENGR 15 Dynamics	4
ENGR 30 Engineering Thermodynamics	3
ME 70 Introductory Fluids Engineering	4
ME 80 Mechanics of Materials	4
ME 389 Biomechanical Research Symposium <sup>2</sup>	1
Options to complete the ME depth sequence (3 courses, minimum 9 units):	9
ENGR 105 Feedback Control Design	
ME 101 Visual Thinking	
ME 112 Mechanical Systems Design <sup>3</sup>	
ME 113 Mechanical Engineering Design	
ME 131A Heat Transfer <sup>3</sup>	
ME 131B Fluid Mechanics: Compressible Flow and Turbomachinery	
ME 140 Advanced Thermal Systems <sup>3</sup>	
ME 161 Dynamic Systems, Vibrations and Control	
ME 203 Design and Manufacturing	
ME 210 Introduction to Mechatronics	
ME 220 Introduction to Sensors	
Options to complete the BME depth sequence (3 courses, minimum 9 units) and WIM: <sup>3</sup>	9
BIOE 260 Tissue Engineering	
ME 239 Mechanics of the Cell	
ME 266 Introduction to Physiology and Biomechanics of Hearing	
ME 280 Skeletal Development and Evolution	
ME 281 Biomechanics of Movement	

ME 283	Tissue Mechanics and Mechanobiology
ME 287	Mechanics of Biological Tissues
ME 294L	
ME 328	Medical Robotics (with permission of instructor)

Total Units 97-101

- <sup>1</sup> Science must include both Chemistry and Physics with one year of course work (3 courses) in at least one, two courses of HUMBIO core or BIO core, and CHEM 31A and B or X, or ENGR 31. CHEM 31A and B are considered one course even though given over two quarters.
- <sup>2</sup> If ME 389 is not offered, other options include BIOE 393, ME 571, or course by petition.
- <sup>3</sup> There are two options for fulfilling the WIM requirement. The first option is to complete one of ME112, ME131A, or ME140 (ME 131A must be taken for 5 units to fulfill WIM). The second option is to perform engineering research over the summer or during the academic year and enroll in 3 units of ENGR 199W "Writing of Original Research for Engineers," (preferably during the time you are performing research or the following quarter) to write a technical report on your research. This second option requires an agreement with your faculty research supervisor.

## Honors Program

The School of Engineering offers a program leading to a Bachelor of Science in Engineering: Biomechanical Engineering with Honors. This program provides an opportunity for qualified BME majors to conduct independent study and research related to biomechanical engineering at an advanced level with a faculty mentor.

### Honors Criteria:

- GPA of 3.5 or higher in the major
- Arrangement with an ME faculty member (or a faculty member from another department who is approved by the BME Undergraduate Program Director) who agrees to serve as the honors adviser, plus a second faculty member who reads and approves the thesis. The honors adviser must be a member of the Academic Council in the School of Engineering.
- Applications are subject to the review and final approval by the BME Undergraduate Program Director. Applicants and thesis advisers receive written notification when a decision has been made. Submit application documents to the student services office, Building 530, room 125.
- An application consists of
  - One page written statement describing the research topic
  - Unofficial Stanford transcript
  - Signature of thesis adviser and thesis reader agreeing to serve on the committee
  - Deadline: No later than the second week of the Autumn Quarter of the senior year
- In order to graduate with honors:
  - Declare ENGR-BSH (Honors) program in Axess
  - Maintain 3.5 GPA
  - Submit a completed thesis draft to the adviser and reader by April 1
  - Present the thesis synopsis at the Mechanical Engineering Poster Session held in April
- Further revisions and a final endorsement by the adviser and reader are to be completed by May 15 when two bound copies are to be submitted to the Mechanical Engineering student services office.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

## Biomedical Computation (BMC)

Completion of the undergraduate program in Biomedical Computation leads to the conferral of the Bachelor of Science in Engineering. The subplan "Biomedical Computation" appears on the transcript and on the diploma.

### Mission of the Undergraduate Program in Biomedical Computation

As biology and medical science enter the 21st century, the importance of computational methods continues to increase dramatically. These methods span the analysis of biomedical data, the construction of computational models for biological systems, and the design of computer systems that help biologists and physicians create and administer treatments to patients. The Biomedical Computation major prepares students to work at the cutting edge of this interface between computer science, biology, and medicine. Students begin their journey by gaining a solid fundamental understanding of the underlying biological and computational disciplines. They learn techniques in informatics and simulation and their countless applications in understanding and analyzing biology at all levels, from individual molecules in cells to entire organs, organisms, and populations. Students then focus their efforts on a depth area of their choice, and participate in a substantial research project with a Stanford faculty member. Upon graduation, students are prepared to enter a wide range of cutting-edge fields in both academia and industry.

### Requirements

#### Mathematics

21 unit minimum, see Basic Requirement 1		
MATH 41	Calculus	5
MATH 42	Calculus	5
STATS 116	Theory of Probability <sup>1</sup>	3-5
CS 103	Mathematical Foundations of Computing	3-5

#### Science

17 units minimum, see Basic Requirement 2		
PHYSICS 41	Mechanics	4
CHEM 31X	Chemical Principles Accelerated	5
CHEM 33	Structure and Reactivity	5
BIO 41	Genetics, Biochemistry, and Molecular Biology	5
or HUMBIO 2A	Genetics, Evolution, and Ecology	
BIO 42	Cell Biology and Animal Physiology	5
or HUMBIO 3A	Cell and Developmental Biology	
BIO 43	Plant Biology, Evolution, and Ecology	5
or HUMBIO 4A	The Human Organism	

#### Engineering Fundamentals

CS 106B	Programming Abstractions	3-5
or CS 106X	Programming Abstractions (Accelerated)	

For the second required course, see concentrations

#### Technology in Society

One course required, see Basic Requirement 4		3-5
--	--	-----

#### Engineering

CS 107	Computer Organization and Systems	3-5
CS 161	Design and Analysis of Algorithms	3-5
Select one of the following:		3

CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	
CS 273A	A Computational Tour of the Human Genome	

CS 274	Representations and Algorithms for Computational Molecular Biology	
CS 275	Translational Bioinformatics	
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	
Research: 6 units of biomedical computation research in any department <sup>2,3</sup>		6
Engineering Depth Concentration (select one of the following concentrations): <sup>7</sup>		
<b>Cellular/Molecular Concentration</b>		
Mathematics: Select one of the following:		
CME 100	Vector Calculus for Engineers	
STATS 141	Biostatistics	
MATH 51	Linear Algebra and Differential Calculus of Several Variables	
One additional Engineering Fundamental <sup>4</sup>		
Biology (four courses):		
BIO 129A	Cellular Dynamics I: Cell Motility and Adhesion	
BIO 129B	Cellular Dynamics II: Building a Cell	
BIO 188	Biochemistry I (or CHEM 135 or CHEM 171)	
Informatics Electives (two courses) <sup>5,6</sup>		
Simulation Electives (two courses) <sup>5,6</sup>		
Simulation, Informatics, or Cell/Mol Elective (one course) <sup>5,6</sup>		
<b>Informatics Concentration</b>		
Mathematics: Select one of the following:		
STATS 141	Biostatistics	
STATS 203	Introduction to Regression Models and Analysis of Variance	
STATS 205	Introduction to Nonparametric Statistics	
STATS 215	Statistical Models in Biology	
One additional Engineering Fundamental <sup>4</sup>		
Informatics Core (three courses):		
CS 145	Introduction to Databases	
or CS 147	Introduction to Human-Computer Interaction Design	
CS 221	Artificial Intelligence: Principles and Techniques	
or CS 228	Probabilistic Graphical Models: Principles and Techniques	
or CS 229	Machine Learning	
One additional course from the previous two lines		
Informatics Electives (three courses) <sup>5,6</sup>		
Cellular Electives (two courses) <sup>5,6</sup>		
Organs Electives (two courses) <sup>5,6</sup>		6-10
<b>Organs/Organisms Concentration</b>		
Mathematics (select one of the following):		
CME 100	Vector Calculus for Engineers	
STATS 141	Biostatistics	
MATH 51	Linear Algebra and Differential Calculus of Several Variables	
One additional Engineering Fundamental <sup>4</sup>		
Biology (two courses):		
BIO 112	Human Physiology	
BIO 188	Biochemistry I	
or BIOE 220	Introduction to Imaging and Image-based Human Anatomy	
Two additional Organs Electives <sup>5,6</sup>		
Simulation Electives (two courses) <sup>5,6</sup>		
Informatics Electives (two courses) <sup>5,6</sup>		
Simulation, Informatics, or Organs Elective (one course) <sup>5,6</sup>		

**Simulation Concentration****Mathematics:**

CME 100	Vector Calculus for Engineers	
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	

**Engineering Fundamentals:**

ENGR 30	Engineering Thermodynamics	
---------	----------------------------	--

**Simulation Core:**

CME 102	Ordinary Differential Equations for Engineers	5
or MATH 53	Ordinary Differential Equations with Linear Algebra	
ENGR 80	Introduction to Bioengineering (Engineering Living Matter)	4
BIOE 101	Systems Biology	3
BIOE 103	Systems Physiology and Design	4
Simulation Electives (two courses) <sup>5,6</sup>		
Cellular Elective (one course) <sup>5,6</sup>		
Organs Elective (one course) <sup>5,6</sup>		
Simulation, Cellular, or Organs Elective (two courses) <sup>5,6</sup>		

Total Units

88-104

<sup>1</sup> CS 109 Introduction to Probability for Computer Scientists, MS&E 120 Probabilistic Analysis, MS&E 220 Probabilistic Analysis, EE 178 Probabilistic Systems Analysis, and CME 106 Introduction to Probability and Statistics for Engineers are acceptable substitutes for STATS 116 Theory of Probability.

<sup>2</sup> Research projects require pre-approval of BMC Coordinators

<sup>3</sup> Research units taken as CS 191W Writing Intensive Senior Project or in conjunction with ENGR 199W Writing of Original Research for Engineers fulfill the Writing in the Major (WIM) requirement. CS 272 Introduction to Biomedical Informatics Research Methodology, which does not have to be taken in conjunction with research, also fulfills the WIM requirement.

<sup>4</sup> One 3-5 unit course required; CS 106A Programming Methodology may not be used. See Fundamentals list in Handbook for Undergraduate Engineering Programs.

<sup>5</sup> The list of electives is continually updated to include all applicable courses. For the current list of electives, see <http://bmc.stanford.edu>.

<sup>6</sup> A course may only be counted towards one elective or core requirement; it may not be double-counted.

<sup>7</sup> A total of 40 Engineering units must be taken. The core classes only provide 27 Engineering units, so the remaining units must be taken from within the electives.

**Honors Program**

The Biomedical Computation program offers an honors option for qualified students, resulting in a B.S. with Honors degree in Engineering (ENGR-BSH, Biomedical Computation). An honors project is meant to be a substantial research project during the later part of a student's undergraduate career, culminating in a final written and oral presentation describing the student's project and its significance. There is no limit to the number of majors who can graduate with honors; any BMC major who is interested and meets the qualifications is considered.

1. Students apply by submitting a 1-2 page proposal describing the problem the student has chosen to investigate, its significance, and the student's research plan. This plan must be endorsed by the student's research and academic advisers, one of whom must be a member of the Academic Council. In making its decision, the department evaluates the overall scope and significance of the student's proposed work.
2. Students must maintain a 3.5 GPA.

3. Students must complete three quarters of research. All three quarters must be on the same project with the same adviser. A Summer Quarter counts as one quarter of research.

- Ideally, funding should not be obtained through summer research college sources, but rather through the UAR's Student Grants Program (<http://exploreddegrees.stanford.edu/schoolofengineering/%20http://studentgrants.stanford.edu>). In no case can the same work be double-paid by two sources.

4. Students must complete a substantial write-up of the research in the format of a publishable research paper. This research paper is expected to be approximately 15-20 pages and must be approved by the student's research adviser and by a second reader.

5. As the culmination of the honors project, each student presents the results in a public forum. This can either be in the honors presentation venue of the home department of the student's adviser, or in a suitable alternate venue.

For additional information and sample programs, see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

**Chemical Engineering (CHE)**

Completion of the undergraduate program in Chemical Engineering leads to the conferral of the Bachelor of Science in Chemical Engineering.

**Mission of the Undergraduate Program in Chemical Engineering**

Chemical engineers are responsible for the conception and design of processes for the purpose of production, transformation, and transportation of materials. This activity begins with experimentation in the laboratory and is followed by implementation of the technology in full-scale production. The mission of the undergraduate program in Chemical Engineering is to develop students' understanding of the core scientific, mathematical, and engineering principles that serve as the foundation underlying these technological processes. The program's core mission is reflected in its curriculum which is built on a foundation in the sciences of chemistry, physics, and biology. Course work includes the study of applied mathematics, material and energy balances, thermodynamics, fluid mechanics, energy and mass transfer, separations technologies, chemical reaction kinetics and reactor design, and process design. The program provides students with excellent preparation for careers in the corporate sector and government, or for graduate study.

**Requirements\***

		Units
<b>Mathematics</b> <sup>1</sup>		
MATH 41	Calculus	5
MATH 42	Calculus	5
Select one of the following:		5-10
CME 100	Vector Calculus for Engineers	
MATH 51 & MATH 52	Linear Algebra and Differential Calculus of Several Variables and Integral Calculus of Several Variables	
Select one of the following:		5
CME 102	Ordinary Differential Equations for Engineers	
or MATH 53	Ordinary Differential Equations with Linear Algebra	
Select one of the following:		4-5
CME 104	Linear Algebra and Partial Differential Equations for Engineers	
or CME 106	Introduction to Probability and Statistics for Engineers	
<b>Science</b> <sup>1</sup>		
CHEM 31X	Chemical Principles Accelerated	5
CHEM 33	Structure and Reactivity	5
CHEM 35	Synthetic and Physical Organic Chemistry	5
PHYSICS 41	Mechanics	4

PHYSICS 43	Electricity and Magnetism	4
CHEM 131	Organic Polyfunctional Compounds	3
<b>Technology in Society</b>		
One course required, see Basic Requirement 4		3-5
<b>Engineering Fundamentals</b>		
Three courses minimum; see Basic Requirement 3		
ENGR/CHEMENG 20	Introduction to Chemical Engineering	3
Fundamentals Elective from another School of Engineering department		3-5
See the UGHB for a list of courses.		
Select one of the following:		3
ENGR 25B	Biotechnology (same as CHEMENG 25B)	
ENGR 25E	Energy: Chemical Transformations for Production, Storage, and Use (same as CHEMENG 25E)	
<b>Chemical Engineering Depth</b>		
Minimum 68 Engineering Science and Design units; see Basic Requirement 5		
CHEMENG 10	The Chemical Engineering Profession	1
CHEMENG 100	Chemical Process Modeling, Dynamics, and Control	3
CHEMENG 110	Equilibrium Thermodynamics	3
CHEMENG 120A	Fluid Mechanics	4
CHEMENG 120B	Energy and Mass Transport	4
CHEMENG 130	Separation Processes	3
CHEMENG 150	Biochemical Engineering	3
CHEMENG 170	Kinetics and Reactor Design	3
CHEMENG 180	Chemical Engineering Plant Design	4
CHEMENG 181	Biochemistry I	3
CHEMENG 185A	Chemical Engineering Laboratory A (WIM)	4
CHEMENG 185B	Chemical Engineering Laboratory B	4
CHEM 171	Physical Chemistry I	3
CHEM 173	Physical Chemistry II	3
CHEM 175	Physical Chemistry III	3
Select four of the following: <sup>2,3</sup>		12
CHEMENG 140	Micro and Nanoscale Fabrication Engineering	
CHEMENG 142	Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations	
CHEMENG 160	Polymer Science and Engineering	
CHEMENG 162	Polymers for Clean Energy and Water	
CHEMENG 174	Environmental Microbiology I	
CHEMENG 183	Biochemistry II	
CHEMENG 196	Creating New Ventures in Engineering and Science-based Industries	
Total Units		122-132

\* For additional information and sample programs, see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>)

<sup>1</sup> Unit count is higher if program includes one of more of the following: MATH 51 and MATH 52 in lieu of CME 100; or CHEM 31A and CHEM 31B in lieu of CHEM 31X.

<sup>2</sup> Any two acceptable except combining 160 and 162.

<sup>3</sup> Students may substitute two of the depth electives with two other science and engineering 3-unit lecture courses. See UGHB for additional details.

## Civil Engineering (CE)

Completion of the undergraduate program in Civil Engineering leads to the conferral of the Bachelor of Science in Civil Engineering.

## Mission of the Undergraduate Program in Civil Engineering

The mission of the undergraduate program in Civil Engineering is to provide students with the principles of engineering and the methodologies necessary for civil engineering practice. This pre-professional program balances the fundamentals common to many specialties in civil engineering and allows for concentration in structures and construction or environmental and water studies. Students in the major learn to apply knowledge of mathematics, science, and civil engineering to conduct experiments, design structures and systems to creatively solve engineering problems, and communicate their ideas effectively. The curriculum includes course work in structural, construction, and environmental engineering. The major prepares students for careers in consulting, industry and government, as well as for graduate studies in engineering.

## Requirements

	Units	
<b>Mathematics and Science</b>	45	
45 units minimum; see Basic Requirements 1 and 2 <sup>1</sup>		
<b>Technology in Society</b>		
One course; see Basic Requirement 4 <sup>2</sup>	3-5	
<b>Engineering Fundamentals</b>		
Three courses minimum, see Basic Requirement 3		
ENGR 14	Intro to Solid Mechanics	4
ENGR 90/CEE 70	Environmental Science and Technology	3
Fundamentals Elective		3-5
<b>Engineering Depth</b>		
Minimum of 68 Engineering Fundamentals plus Engineering Depth; see Basic Requirement 5		
CEE 100	Managing Sustainable Building Projects <sup>3</sup>	4
CEE 101A	Mechanics of Materials	4
CEE 101B	Mechanics of Fluids (or CEE 101N)	4
CEE 101C	Geotechnical Engineering	4
CEE 146A	Engineering Economy	3
Specialty courses in either:		36-39
Environmental and Water Studies (see below)		
Structures and Construction (see below)		
Other School of Engineering Electives		3-0
Total Units		116-120

Mathematics must include CME 100 Vector Calculus for Engineers and CME 102 Ordinary Differential Equations for Engineers (or Math 51 Linear Algebra and Differential Calculus of Several Variables and MATH 53 Ordinary Differential Equations with Linear Algebra) and a Statistics course. Science must include Physics 41 Mechanics; either ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology, CHEM31A Chemical Principles I or CHEM 31X Chemical Principles; two additional quarters in either chemistry or physics, and GS 1A Introduction to Geology: The Physical Science of the Earth (or GS 1B or 1C); for students in the Environmental and Water Studies track, the additional chemistry or physics must include CHEM 33; for students in the Structures and Construction track, it must include PHYSICS 43 or 45. Please note that the only quarter GS 1A is offered for AY 2015-16 is Spring Quarter.

<sup>2</sup> Chosen TiS class must specifically include an ethics component, as indicated in Figure 3-3 in the Engineering Undergraduate Handbook (<http://web.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Handbooks>)

<sup>3</sup> CEE 100 meets the Writing in the Major (WIM) requirement

## Environmental and Water Studies Focus

		Units
ENGR 30	Engineering Thermodynamics <sup>1</sup>	3
CEE 101D	Computations in Civil and Environmental Engineering (or CEE 101S) <sup>2</sup>	3
CEE 160	Mechanics of Fluids Laboratory (req'd only if CEE 101B is taken)	2
CEE 161A	Rivers, Streams, and Canals	3-4
CEE 166A	Watersheds and Wetlands	3
CEE 166B	Floods and Droughts, Dams and Aqueducts	3
CEE 171	Environmental Planning Methods	3
CEE 172	Air Quality Management	3
CEE 177	Aquatic Chemistry and Biology	4
CEE 179A	Water Chemistry Laboratory	3
CEE 179C	Environmental Engineering Design	5
(or CEE 169) Capstone design experience course		
Remaining specialty units from:		
CEE 63	Weather and Storms <sup>2</sup>	3
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions <sup>2</sup>	3
CEE 107A	Understanding Energy	3
CEE 107F	Understanding Energy -- Field Trips	1
CEE 107W	Understanding Energy -- Workshop	1
CEE 109	Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision	2
CEE 155	Introduction to Sensing Networks for CEE	4
CEE 164	Introduction to Physical Oceanography	4
CEE 165C	Water Resources Management	3
CEE 166D	Water Resources and Water Hazards Field Trips	2
CEE 172A	Indoor Air Quality	2-3
CEE 174A	Providing Safe Water for the Developing and Developed World	3
CEE 174B	Wastewater Treatment: From Disposal to Resource Recovery	3
CEE 176A	Energy Efficient Buildings	3-4
CEE 176B	Electric Power: Renewables and Efficiency	3-4
CEE 178	Introduction to Human Exposure Analysis	3
CEE 199	Undergraduate Research in Civil and Environmental Engineering	1-4

## Structures and Construction Focus

		Units
CEE 102	Legal Principles in Design, Construction, and Project Delivery	3
CEE 156	Building Systems	4
CEE 180	Structural Analysis	4
CEE 181	Design of Steel Structures	4
CEE 182	Design of Reinforced Concrete Structures	4
CEE 183	Integrated Civil Engineering Design Project	4
Select one of the following:		4
ENGR 50	Introduction to Materials Science, Nanotechnology Emphasis	

ENGR 50E	Introduction to Materials Science, Energy Emphasis	
ENGR 50M	Introduction to Materials Science, Biomaterials Emphasis	
Remaining specialty units from:		
ENGR 15	Dynamics	4
CME 104	Linear Algebra and Partial Differential Equations for Engineers	5
CEE 101D	Computations in Civil and Environmental Engineering (or CEE 101S)	3
CEE 112A	Industry Applications of Virtual Design & Construction	2-4
CEE 112B	Industry Applications of Virtual Design & Construction	2-4
CEE 122A	Computer Integrated Architecture/Engineering/Construction	2
CEE 122B	Computer Integrated A/E/C	2
CEE 131A Professional Practice: Mixed Use Design in an Urban Setting (not given AY 2015-16)		
CEE 131B	Financial Management of Sustainable Urban Systems	3
CEE 141A	Infrastructure Project Development	3
CEE 141B	Infrastructure Project Delivery	3
CEE 151	Negotiation	3
CEE 155	Introduction to Sensing Networks for CEE	4
CEE 160	Mechanics of Fluids Laboratory	2
CEE 161A	Rivers, Streams, and Canals	3-4
CEE 171	Environmental Planning Methods	3
CEE 176A	Energy Efficient Buildings	3-4
CEE 176B	Electric Power: Renewables and Efficiency	3-4
CEE 195	Fundamentals of Structural Geology	3
CEE 196	Engineering Geology and Global Change	3
CEE 199	Undergraduate Research in Civil and Environmental Engineering	1-4
CEE 203	Probabilistic Models in Civil Engineering	3-4
One of the following can also count as remaining specialty units.		
CEE 120A	Building Information Modeling Workshop (or CEE 120S or CEE 120B)	2-4
CEE 130	Architectural Design: 3-D Modeling, Methodology, and Process	
CEE 131A	Professional Practice: Mixed-Use Design in an Urban Setting	
CEE 134B	Intermediate Arch Studio	

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

## Computer Science (CS)

**Units** Completion of the undergraduate program in Computer Science leads to the conferral of the Bachelor of Science in Computer Science.

## Mission of the Undergraduate Program in Computer Science

The mission of the undergraduate program in Computer Science is to develop students' breadth of knowledge across the subject areas of computer sciences, including their ability to apply the defining processes of computer science theory, abstraction, design, and implementation to solve problems in the discipline. Students take a set of core courses. After learning the essential programming techniques and the mathematical foundations of computer science, students take courses in

areas such as programming techniques, automata and complexity theory, systems programming, computer architecture, analysis of algorithms, artificial intelligence, and applications. The program prepares students for careers in government, law, and the corporate sector, and for graduate study.

## Requirements

### Mathematics (26 units minimum)–

CS 103	Mathematical Foundations of Computing <sup>1</sup>	5
CS 109	Introduction to Probability for Computer Scientists <sup>2</sup>	5
MATH 41 & MATH 42	Calculus and Calculus <sup>3</sup>	10
Plus two electives <sup>2</sup>		

### Science (11 units minimum)–

PHYSICS 41	Mechanics	4
PHYSICS 43	Electricity and Magnetism	4
Science elective <sup>5</sup>		3

### Technology in Society (3-5 units)–

One course; see Basic Requirement 4

### Engineering Fundamentals (13 units minimum; see Basic Requirement 3)–

CS 106B	Programming Abstractions	5
or CS 106X Programming Abstractions (Accelerated)		
ENGR 40	Introductory Electronics <sup>4</sup>	5
or ENGR 40A or		
Fundamentals Elective (may not be 70A, B, or X)		3-5

\*Students who take ENGR 40A or 40M for fewer than 5 units are required to take 1-2 additional units of ENGR Fundamentals (13 units minimum), or 1-2 additional units of Depth (27 units minimum for track and elective courses).

### Writing in the Major–

Select one of the following:

CS 181W	Computers, Ethics, and Public Policy	
CS 191W	Writing Intensive Senior Project	
CS 194W	Software Project	
CS 210B	Software Project Experience with Corporate Partners	
CS 294W	Writing Intensive Research Project in Computer Science	

### Computer Science Core (15 units)–

CS 107	Computer Organization and Systems	5
or CS 107E Computer Systems from the Ground Up		
CS 110	Principles of Computer Systems	5
CS 161	Design and Analysis of Algorithms	5

## Computer Science Depth B.S.

Choose one of the following ten CS degree tracks (a track must consist of at least 25 units and 7 classes):

### Artificial Intelligence Track–

CS 221	Artificial Intelligence: Principles and Techniques	Units 4
Select two of the following:		6-8
CS 223A	Introduction to Robotics	
CS 224M	Multi-Agent Systems	
CS 224N	Natural Language Processing	

CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 229	Machine Learning	
CS 131	Computer Vision: Foundations and Applications	
or CS 231A	Computer Vision: From 3D Reconstruction to Recognition	
One additional course from the list above or the following:		3-4
CS 124	From Languages to Information	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	
CS 222		
CS 224S	Spoken Language Processing	
CS 224U	Natural Language Understanding	
CS 224W	Social Information and Network Analysis	
CS 225A	Experimental Robotics	
CS 225B	Robot Programming Laboratory	
CS 227B	General Game Playing	
CS 231A	Computer Vision: From 3D Reconstruction to Recognition (If not taken for track requirement B)	
CS 231B	The Cutting Edge of Computer Vision	
CS 231M		
CS 231N	Convolutional Neural Networks for Visual Recognition	
CS 262	Computational Genomics	
CS 276	Information Retrieval and Web Search	
CS 277	Experimental Haptics	
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	
CS 329	Topics in Artificial Intelligence (with adviser consent)	
CS 331A	Advanced Reading in Computer Vision	
CS 371	Computational Biology in Four Dimensions	
CS 374	Algorithms in Biology	
CS 379	Interdisciplinary Topics (with adviser consent)	
EE 263	Introduction to Linear Dynamical Systems	
EE 376A	Information Theory	
ENGR 205	Introduction to Control Design Techniques	
ENGR 209A	Analysis and Control of Nonlinear Systems	
MS&E 251	Stochastic Control	
MS&E 351	Dynamic Programming and Stochastic Control	
STATS 315A	Modern Applied Statistics: Learning	
STATS 315B	Modern Applied Statistics: Data Mining	
Track Electives (at least three additional courses from the above lists, the general CS electives list, or the following): <sup>5</sup>		9-13
CS 238	Decision Making under Uncertainty	
CS 275	Translational Bioinformatics	
CS 278		
CS 334A	Convex Optimization I	
or EE 364A	Convex Optimization I	
EE 364B	Convex Optimization II	
ECON 286	Game Theory and Economic Applications	
MS&E 252	Decision Analysis I: Foundations of Decision Analysis	
MS&E 352	Decision Analysis II: Professional Decision Analysis	
MS&E 355	Influence Diagrams and Probabilistic Networks	
PHIL 152	Computability and Logic	
PSYCH 202	Cognitive Neuroscience	

PSYCH 204A	Human Neuroimaging Methods
PSYCH 204B	Computational Neuroimaging: Analysis Methods
STATS 200	Introduction to Statistical Inference
STATS 202	Data Mining and Analysis
STATS 205	Introduction to Nonparametric Statistics

## Biocomputation Track—

The Mathematics, Science, and Engineering Fundamentals requirements are non-standard for this track. See Handbook for Undergraduate Engineering Programs for details.

Select one of the following: 3-4

CS 121	(Not given this year)
CS 221	Artificial Intelligence: Principles and Techniques
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 229	Machine Learning
CS 231A	Computer Vision: From 3D Reconstruction to Recognition

Select one of the following:

CS 173	A Computational Tour of the Human Genome
or CS 273A	A Computational Tour of the Human Genome
CS 262	Computational Genomics
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
CS 274	Representations and Algorithms for Computational Molecular Biology
CS 275	Translational Bioinformatics
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells

One additional course from the lists above or the following: 3-4

CS 124	From Languages to Information
CS 145	Introduction to Databases
CS 147	Introduction to Human-Computer Interaction Design
CS 148	Introduction to Computer Graphics and Imaging
CS 248	Interactive Computer Graphics

One course selected from either the Biomedical Computation (BMC) 'Informatics' electives list (go to <http://bmc.stanford.edu> and select Informatics from the elective options), BIOE 101, or from the general CS electives list<sup>5</sup> 3-4

One course from the BMC Informatics elective list (go to <http://bmc.stanford.edu>) 3-4

One course from either the BMC Informatics, Cellular/Molecular, or Organs/Organisms electives lists 3-5

One course from either the BMC Cellular/Molecular or Organs/Organisms electives lists 3-5

## Computer Engineering Track—

EE 108 & EE 180	Digital System Design and Digital Systems Architecture
-----------------	--

Select two of the following: 8

EE 101A	Circuits I
EE 101B	Circuits II
EE 102A	Signal Processing and Linear Systems I
EE 102B	Signal Processing and Linear Systems II

Satisfy the requirements of one of the following concentrations:

1) Digital Systems Concentration

CS 140	Operating Systems and Systems Programming
or CS 143	Compilers
EE 109	Digital Systems Design Lab
EE 271	Introduction to VLSI Systems
Plus two of the following (6-8 units):	
CS 140	Operating Systems and Systems Programming (if not counted above)
or CS 143	Compilers
CS 144	Introduction to Computer Networking
CS 149	
CS 240E	
CS 244	Advanced Topics in Networking
EE 273	Digital Systems Engineering
EE 282	Computer Systems Architecture
2) Robotics and Mechatronics Concentration	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics
CS 223A	Introduction to Robotics
ME 210	Introduction to Mechatronics
ENGR 105	Feedback Control Design
Plus one of the following (3-4 units):	
CS 225A	Experimental Robotics
CS 225B	Robot Programming Laboratory
CS 231A	Computer Vision: From 3D Reconstruction to Recognition
CS 277	Experimental Haptics
ENGR 205	Introduction to Control Design Techniques
ENGR 207A	Linear Control Systems I
ENGR 207B	Linear Control Systems II
3) Networking Concentration	
CS 140	Operating Systems and Systems Programming and Introduction to Computer Networking
& CS 144	
Plus three of the following (9-11 units):	
CS 240	Advanced Topics in Operating Systems
CS 240E	
CS 241	Embedded Systems Workshop
CS 244	Advanced Topics in Networking
CS 244B	Distributed Systems
CS 244E	
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective
CS 249B	Large-scale Software Development
EE 179	Analog and Digital Communication Systems

## Graphics Track—

CS 148	Introduction to Computer Graphics and Imaging & CS 248	8
Select one of the following: <sup>6</sup>		3-5
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics (strongly recommended as a preferred choice)	
CME 104	Linear Algebra and Partial Differential Equations for Engineers (Note: students taking CME 104 are also required to take its prerequisite course, CME 102)	
CME 108	Introduction to Scientific Computing	
MATH 52	Integral Calculus of Several Variables	

MATH 113	Linear Algebra and Matrix Theory	
Select two of the following:		6-8
CS 178		
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	
or CS 131	Computer Vision: Foundations and Applications	
CS 233	The Shape of Data: Geometric and Topological Data Analysis	
CS 268		
CS 348A	Computer Graphics: Geometric Modeling	
CS 348B	Computer Graphics: Image Synthesis Techniques	
CS 348V		
CS 448	Topics in Computer Graphics	
Track Electives: at least two additional courses from the lists above, the general CS electives list, or the following: <sup>5</sup>		6-8
ARTSTUDI 160	Intro to Digital / Physical Design	
ARTSTUDI 170	Introduction to Photography	
ARTSTUDI 179	Digital Art I	
CME 302	Numerical Linear Algebra	
CME 306	Numerical Solution of Partial Differential Equations	
EE 262	Two-Dimensional Imaging	
EE 264	Digital Signal Processing	
EE 278	Introduction to Statistical Signal Processing	
EE 368	Digital Image Processing	
ME 101	Visual Thinking	
PSYCH 30	Introduction to Perception	
PSYCH 221	Applied Vision and Image Systems	

### Human-Computer Interaction Track—

		Units
CS 147	Introduction to Human-Computer Interaction Design	4
CS 247	Human-Computer Interaction Design Studio	4
Any three of the following:		
CS 142	Web Applications	
CS 148	Introduction to Computer Graphics and Imaging	
CS 194H	User Interface Design Project	
CS 210A	Software Project Experience with Corporate Partners	
CS 376	Human-Computer Interaction Research	
Any CS 377A/B/C/ 'Topics in HCI' of three or more units		
CS 448B	Data Visualization	
ME 216M		
At least two additional courses from above list, the general CS electives list, or the following: <sup>5</sup>		3-6
Any d.school class of 3+ units; any class of 3+ units at hci.stanford.edu under the 'courses' link		
Communication-		
COMM 121	Behavior and Social Media	
COMM 124	Digital Deception	
or COMM 22	Digital Deception	
COMM 140	Digital Media Entrepreneurship	
or COMM 240	Digital Media Entrepreneurship	
COMM 166	Virtual People	
COMM 169	Computers and Interfaces	
or COMM 269	Computers and Interfaces	
COMM 172	Media Psychology	

or COMM 27	Media Psychology	
COMM 182		
COMM 324	Language and Technology	
Art Studio-		
ARTSTUDI 160	Intro to Digital / Physical Design	
ARTSTUDI 162	Embodied Interfaces	
ARTSTUDI 163	Drawing with Code	
ARTSTUDI 164	DESIGN IN PUBLIC SPACES	
ARTSTUDI 165	Social Media and Performative Practices	
ARTSTUDI 168	Data as Material	
ARTSTUDI 264	Advanced Interaction Design	
ARTSTUDI 266	Sulptural Screens / Malleable Media	
ARTSTUDI 267	Emerging Technology Studio	
Sym Sys-		
SYMSYS 245	Cognition in Interaction Design	
Psychology-		
PSYCH 30	Introduction to Perception	
PSYCH 45	Introduction to Learning and Memory	
PSYCH 70	Introduction to Social Psychology	
PSYCH 75	Introduction to Cultural Psychology	
PSYCH 110	Research Methods and Experimental Design	
PSYCH 131	Language and Thought	
PSYCH 154	Judgment and Decision-Making	
Empirical Methods-		
MS&E 125	Introduction to Applied Statistics	
PSYCH 252	Statistical Methods for Behavioral and Social Sciences	
PSYCH 254	Lab in Experimental Methods	
PSYCH 110	Research Methods and Experimental Design	
STATS 203	Introduction to Regression Models and Analysis of Variance	
EDUC 191X		
HUMBIO 82A	Qualitative Research Methodology	
ME Design-		
ME 101	Visual Thinking	
ME 115A	Introduction to Human Values in Design	
ME 203	Design and Manufacturing	
ME 210	Introduction to Mechatronics

Computer Music-		
MUSIC 220A	Fundamentals of Computer-Generated Sound	
MUSIC 220B	Compositional Algorithms, Psychoacoustics, and Computational Music	
MUSIC 220C	Research Seminar in Computer-Generated Music	
MUSIC 250A	Physical Interaction Design for Music	
Optional Elective <sup>5</sup>		

**Information Track—**

	<b>Units</b>
CS 124 From Languages to Information	4
CS 145 Introduction to Databases	4
Two courses, from different areas:	6-9
<b>1) Information-based AI applications</b>	
CS 224N Natural Language Processing	
CS 224S Spoken Language Processing	
CS 229 Machine Learning	
CS 229A (Not given this year)	
CS 233 The Shape of Data: Geometric and Topological Data Analysis	
<b>2) Database and Information Systems</b>	
CS 140 Operating Systems and Systems Programming	
CS 142 Web Applications	
CS 245 Database Systems Principles	
CS 246 Mining Massive Data Sets	
CS 341 Project in Mining Massive Data Sets	
CS 345 (Offered occasionally)	
CS 346 Database System Implementation	
CS 347 Parallel and Distributed Data Management	
<b>3) Information Systems in Biology</b>	
CS 262 Computational Genomics	
CS 270 Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	
CS 274 Representations and Algorithms for Computational Molecular Biology	
<b>4) Information Systems on the Web</b>	
CS 224W Social Information and Network Analysis	
CS 276 Information Retrieval and Web Search	
CS 364B (Not given this year)	
At least three additional courses from the above areas or the general CS electives list. <sup>5</sup>	

**Systems Track—**

	<b>Units</b>
CS 140 Operating Systems and Systems Programming	4
Select one of the following:	3-4
CS 143 Compilers	
EE 180 Digital Systems Architecture	
Two additional courses from the list above or the following:	6-8
CS 144 Introduction to Computer Networking	
CS 145 Introduction to Databases	
CS 149	
CS 155 Computer and Network Security	
CS 240 Advanced Topics in Operating Systems	
CS 242 Programming Languages	
CS 243 Program Analysis and Optimizations	
CS 244 Advanced Topics in Networking	
CS 245 Database Systems Principles	
EE 271 Introduction to VLSI Systems	
EE 282 Computer Systems Architecture	
Track Electives: at least three additional courses selected from the list above, the general CS electives list, or the following: <sup>5</sup>	9-12
CS 240E	
CS 241 Embedded Systems Workshop	
CS 244C Readings and Projects in Distributed Systems	

CS 244E	
CS 315A Parallel Computer Architecture and Programming	
or CS 316 Advanced Multi-Core Systems	
CS 341 Project in Mining Massive Data Sets	
CS 343 (Not given this year)	
CS 344 Topics in Computer Networks	
CS 345 (Offered occasionally)	
CS 346 Database System Implementation	
CS 347 Parallel and Distributed Data Management	
CS 349 Topics in Programming Systems (with permission of undergraduate advisor)	
CS 448 Topics in Computer Graphics	
EE 382C Interconnection Networks	
EE 384A Internet Routing Protocols and Standards	
EE 384B Multimedia Communication over the Internet	
EE 384C Wireless Local and Wide Area Networks	
EE 384S Performance Engineering of Computer Systems & Networks	
EE 384X Packet Switch Architectures	

**Theory Track—**

	<b>Units</b>
CS 154 Introduction to Automata and Complexity Theory	4
Select one of the following:	3
CS 167 Readings in Algorithms (Not given this year)	
CS 168 The Modern Algorithmic Toolbox	
CS 255 Introduction to Cryptography	
CS 261 Optimization and Algorithmic Paradigms	
CS 264	
CS 265 Randomized Algorithms and Probabilistic Analysis	
CS 268	
CS 361A	
CS 361B	
Two additional courses from the list above or the following:	6-8
CS 143 Compilers	
CS 155 Computer and Network Security	
CS 157 Logic and Automated Reasoning	
or PHIL 151 Metalogic	
CS 166 Data Structures	
CS 205A Mathematical Methods for Robotics, Vision, and Graphics	
CS 228 Probabilistic Graphical Models: Principles and Techniques	
CS 233 The Shape of Data: Geometric and Topological Data Analysis	
CS 242 Programming Languages	
CS 254	
CS 259 ((With adviser consent); Not given this year)	
CS 262 Computational Genomics	
CS 263 Algorithms for Modern Data Models	
CS 266	
CS 267 Graph Algorithms	
CS 354 Topics in Circuit Complexity (Not given this year)	
CS 355 (Not given this year)	
CS 357 Advanced Topics in Formal Methods (Not given this year)	
CS 358 Topics in Programming Language Theory	

CS 359	Topics in the Theory of Computation (with adviser consent)
CS 364A	Algorithmic Game Theory
CS 364B	(Not given this year)
CS 366	(Not given this year)
CS 367	Algebraic Graph Algorithms (Not given this year)
CS 369	Topics in Analysis of Algorithms (with adviser consent)
CS 374	Algorithms in Biology
MS&E 310	Linear Programming

Track Electives: at least three additional courses from the list above, 9-12 the general CS electives list, or the following:<sup>5</sup>

CME 302	Numerical Linear Algebra
CME 305	Discrete Mathematics and Algorithms
PHIL 152	Computability and Logic

## Unspecialized Track—

	Units	
CS 154	Introduction to Automata and Complexity Theory	4
Select one of the following:		4
CS 140	Operating Systems and Systems Programming	
CS 143	Compilers	
One additional course from the list above or the following:		3-4
CS 144	Introduction to Computer Networking	
CS 155	Computer and Network Security	
CS 242	Programming Languages	
CS 244	Advanced Topics in Networking	
EE 180	Digital Systems Architecture	
Select one of the following:		3-4
CS 121	(Not given this year)	
CS 221	Artificial Intelligence: Principles and Techniques	
CS 223A	Introduction to Robotics	
CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 229	Machine Learning	
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	
Select one of the following:		3-4
CS 145	Introduction to Databases	
CS 147	Introduction to Human-Computer Interaction Design	
CS 148	Introduction to Computer Graphics and Imaging	
CS 248	Interactive Computer Graphics	
CS 262	Computational Genomics	
At least two courses from the general CS electives list <sup>5</sup>		

## Individually Designed Track—

Students may propose an individually designed track. Proposals should include a minimum of seven courses, at least four of which must be CS courses numbered 100 or above. See Handbook for Undergraduate Engineering Programs for further information.

### Senior Capstone Project (3 units minimum)

CS 191	Senior Project <sup>7</sup>
CS 191W	Writing Intensive Senior Project <sup>7</sup>
CS 194	Software Project
CS 194H	User Interface Design Project
CS 194W	Software Project

CS 210B	Software Project Experience with Corporate Partners
CS 294W	Writing Intensive Research Project in Computer Science

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>)

- <sup>1</sup> MATH 19, MATH 20, and MATH 21 may be taken instead of MATH 41 and MATH 42 as long as at least 26 MATH units are taken. AP Calculus must be approved by the School of Engineering.
- <sup>2</sup> The math electives list consists of: MATH 51, MATH 104, MATH 108, MATH 109, MATH 110, MATH 113; CS 157, CS 205A; PHIL 151; CME 100, CME 102, CME 104. Completion of MATH 52 and MATH 53 counts as one math elective. Restrictions: CS 157 and PHIL 151 may not be used in combination to satisfy the math electives requirement. Students who have taken both MATH 51 and MATH 52 may not count CME 100 as an elective. Courses counted as math electives cannot also count as CS electives, and vice versa.
- <sup>3</sup> The science elective may be any course of 3 or more units from the School of Engineering Science list plus PSYCH 30; AP Chemistry may be used to meet this requirement. Either of the PHYSICS sequences 61/63 or 21/23 may be substituted for 41/43 as long as at least 11 science units are taken. AP Physics must be approved by the School of Engineering.
- <sup>4</sup> Students who take ENGR 40A (3 units) are required to take two additional units of ENGR Fundamentals (13 units minimum), or 2 additional units of Depth (27 units minimum for track and elective courses).
- <sup>5</sup> General CS Electives: CS 108, CS 124, CS 131, CS 140, CS 142, CS 143, CS 144, CS 145, CS 147, CS 148, CS 149, CS 154, CS 155, CS 157 (or PHIL 151), CS 164, CS 166, CS 167, CS 168, CS 190, CS 205A, CS 205B, CS 210A, CS 223A, CS 224M, CS 224N, CS 224S, CS 224U, CS 224W, CS 225A, CS 225B, CS 227B, CS 228, CS 228T, CS 229, CS 229A, CS 229T, CS 231A, CS 231B, CS 231M, CS 231N, CS 232, CS 233, CS 240, CS 240H, CS 242, CS 243, CS 244, CS 244B, CS 245, CS 246, CS 247, CS 248, CS 249A, CS 249B, CS 251, CS 254, CS 255, CS 261, CS 262, CS 263, CS 264, CS 265, CS 266, CS 267, CS 270, CS 272, CS 173 or CS 273A, CS 274, CS 276, CS 277, CS 279, CS 348B; CME 108; EE 180, EE 282, EE 364A.
- <sup>6</sup> CS 205A Mathematical Methods for Robotics, Vision, and Graphics is recommended in this list for the Graphics track. Students taking CME 104 Linear Algebra and Partial Differential Equations for Engineers are also required to take its prerequisite, CME 102 Ordinary Differential Equations for Engineers.
- <sup>7</sup> Independent study projects (CS 191 Senior Projector CS 191W Writing Intensive Senior Project) require faculty sponsorship and must be approved by the adviser, faculty sponsor, and the CS senior project adviser (P. Young). A signed approval form, along with a brief description of the proposed project, should be filed the quarter before work on the project is begun. Further details can be found in the *Handbook for Undergraduate Engineering Programs*.

## Electrical Engineering (EE)

Completion of the undergraduate program in Electrical Engineering leads to the conferral of the Bachelor of Science in Electrical Engineering.

### Mission of the Undergraduate Program in Electrical Engineering

The mission of the undergraduate program of the Department of Electrical Engineering is to augment the liberal education expected of all Stanford undergraduates, to impart basic understanding of electrical engineering and to develop skills in the design and building of systems that directly impact societal needs. The program includes a balanced foundation in the physical sciences, mathematics and computing; core courses in electronics, information systems and digital systems; and develops specific skills in the analysis and design of systems. Students

in the major have broad flexibility to select from many specialization areas beyond the core, including areas in electronics, optics, information systems and hardware and software systems as well as application-oriented cross-cuts in bio-instrumentation and bio-imaging, energy and environment and music. The program prepares students for a broad range of careers—both industrial and government—as well as for professional and academic graduate education.

## Requirements

### Mathematics

MATH 41	Calculus	5
MATH 42	Calculus	5
Select one 2-course sequence:		10

CME 100 & CME 102 Vector Calculus for Engineers and Ordinary Differential Equations for Engineers (Same as ENGR 154)

MATH 52 & MATH 53 Integral Calculus of Several Variables and Ordinary Differential Equations with Linear Algebra

EE Math. One additional 100-level course. Select one of the following: 3

EE 102B Signal Processing and Linear Systems II (if not used in Depth)

EE 103 Introduction to Matrix Methods

EE 142 Engineering Electromagnetics

CME 104/ENGR 155B Linear Algebra and Partial Differential Equations for Engineers

MATH 113 Linear Algebra and Matrix Theory

CS 103 Mathematical Foundations of Computing

Statistics/Probability. Select one of the following:<sup>1</sup> 3-4

EE 178 Probabilistic Systems Analysis (Preferred)

CS 109 Introduction to Probability for Computer Scientists

### Science

Select one of the following sequences: 8

PHYSICS 41 & PHYSICS 43 Mechanics and Electricity and Magnetism<sup>2</sup>

PHYSICS 61 & PHYSICS 63 Mechanics and Special Relativity and Electricity, Magnetism, and Waves

Science elective. One additional 4-5 unit course from approved list in Undergraduate Handbook, Figure 3-2.<sup>3</sup> 4-5

### Technology in Society

One course, see Basic Requirement 4 in the School of Engineering section 3-5

### Engineering Fundamentals<sup>4</sup>

Select one of the following:

CS 106B/ENGR 70B Programming Abstractions 5

or CS 106X/ENGR 70X Programming Abstractions (Accelerated)

At least two additional courses, at least one of which is not in EE or CS (CS 106A is not allowed). Choose from table in Undergraduate Handbook, Figure 3-4. One from ENGR 40 or ENGR 40M recommended. 8-10

### Writing in the Major (WIM)

Select one of the following: 3-4

EE 109 Digital Systems Design Lab (WIM/Design)

EE 133 Analog Communications Design Laboratory (WIM/Design)

EE 134 Introduction to Photonics (WIM/Design)

EE 153 Power Electronics (WIM/Design)

EE 155 Green Electronics (WIM/Design)

EE 168 Introduction to Digital Image Processing (WIM/Design)

EE 191W Special Studies and Reports in Electrical Engineering (WIM; Department approval required)<sup>5</sup>

CS 194W Software Project (WIM/Design)

### Core Electrical Engineering Courses

EE 100 The Electrical Engineering Profession<sup>6</sup> 1

EE 101A Circuits I 4

EE 102A Signal Processing and Linear Systems I 4

EE 108 Digital System Design 4

Physics in Electrical Engineering. Students must complete one of the following courses: 3-5

EE 65 Modern Physics for Engineers (Preferred)

EE 142 Engineering Electromagnetics<sup>7</sup>

### Depth Courses 14

Select four courses from one of the following Depth areas. Courses must include one required course, one Design course, and 2 additional courses.

### Design Course 3-4

Select one of the following:

EE 109 Digital Systems Design Lab (WIM/Design)

EE 133 Analog Communications Design Laboratory (WIM/Design)

EE 134 Introduction to Photonics (WIM/Design)

EE 153 Power Electronics (WIM/Design)

EE 155 Green Electronics (WIM/Design)

EE 168 Introduction to Digital Image Processing (WIM/Design)

EE 262 Two-Dimensional Imaging (Design)

EE 264 Digital Signal Processing<sup>8</sup>

CS 194W Software Project (WIM/Design)

### Additional Electives 12

May include up to two additional Engineering Fundamentals, any CS 193 course and any letter graded EE or EE Related courses (minus any previously noted restrictions). Freshman and Sophomore seminars, EE191 and CS 106A do not count toward the 60 units.

<sup>1</sup> CME 106 or STATS 116 can also fulfill the Statistics/Probability requirement, but these are not preferred.

<sup>2</sup> The EE introductory class ENGR 40 or ENGR 40M may be taken concurrently with PHYSICS 43. PHYSICS 43 is not a prerequisite for ENGR 40 or 40M. Many students find the material complementary in terms of fundamental and applied perspectives on electronics.

<sup>3</sup> A minimum of 12 science units must be taken. A minimum of 40 math and science units combined must be taken.

<sup>4</sup> EE Engineering Topics: Fundamentals and Depth courses must total 60 units minimum.

<sup>5</sup> EE 191W may satisfy WIM only if it is a follow-up to an REU, independent study project or as part of an honors thesis project where a faculty agrees to provide supervision of writing a technical paper and with suitable support from the Writing Center.

<sup>6</sup> For upper division students, a 200-level seminar in their depth area will be accepted, on petition.

<sup>7</sup> EE 142 cannot be double counted. It may be used for only one of: Math; Physics in Electrical Engineering; or as a depth elective.

<sup>8</sup> To satisfy Design, EE 264 must be taken for 4 units and complete the laboratory project.

### Depth Areas

#### Bio-electronics and Bio-imaging

Units

EE 101B	Circuits II (Required)	4	CS 155	Computer and Network Security	3
or EE 102B	Signal Processing and Linear Systems II		EE 155	Green Electronics (WIM/Design)	4

ENGR 205	Introduction to Control Design Techniques	3

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

## Engineering Physics (EPHYS)

Completion of the undergraduate program in Engineering Physics leads to the conferral of the Bachelor of Science in Engineering. The subplan "Engineering Physics" appears on the transcript and on the diploma.

### Mission of the Undergraduate Program in Engineering Physics

The mission of the undergraduate program in Engineering Physics is to provide students with a strong foundation in physics and mathematics, together with engineering and problem-solving skills. All majors take high-level math and physics courses as well as engineering courses. This background prepares them to tackle complex problems in multidisciplinary areas that are at the forefront of 21st-century technology such as aerospace physics, biophysics, computational science, solid state devices, quantum optics and photonics, materials science, nanotechnology, electromechanical systems, energy systems, renewable energy, and any other engineering field that requires a solid background in physics. Because the program emphasizes science, mathematics, and engineering, students are well prepared to pursue graduate work in engineering, physics, or applied physics.

### Requirements

#### Mathematics

Select one of the following sequences:		10
MATH 51 & MATH 52	Linear Algebra and Differential Calculus of Several Variables and Integral Calculus of Several Variables	
CME 100 & CME 104	Vector Calculus for Engineers and Linear Algebra and Partial Differential Equations for Engineers	
MATH 53 or CME 102	Ordinary Differential Equations with Linear Algebra	5
MATH 131P	Ordinary Differential Equations for Engineers	
MATH 131P	Partial Differential Equations I (or CME 204 or MATH 173)	3

#### Science

PHYSICS 41	Mechanics (or PHYSICS 61)	4
PHYSICS 42	Classical Mechanics Laboratory (or PHYSICS 62) <sup>1</sup>	1
PHYSICS 43	Electricity and Magnetism (or PHYSICS 63)	4
PHYSICS 67	Introduction to Laboratory Physics <sup>2</sup>	2
PHYSICS 45	Light and Heat (or PHYSICS 65)	4
PHYSICS 46	Light and Heat Laboratory (or PHYSICS 67)	1
PHYSICS 70	Foundations of Modern Physics (if taking the 40 series)	4

### Technology in Society

One course required, see Basic Requirement 4 3-5

### Engineering Fundamentals

Three courses minimum (CS 106A or X recommended)<sup>3</sup> 9-14

### Engineering Physics Depth (core)

Advanced Mathematics:

One advanced math elective such as 3-5

EE 261	The Fourier Transform and Its Applications	
PHYSICS 112	Mathematical Methods of Physics	
CS 109	Introduction to Probability for Computer Scientists	
CME 106	Introduction to Probability and Statistics for Engineers	

Also qualified are EE 263, any Math or Statistics course numbered 100 or above, and any CME course numbered 200 or above, except CME 206.

Advanced Mechanics:<sup>4</sup> 3-4

AA 242A	Classical Dynamics (or ME 333 or PHYSICS 110)	3
Intermediate Electricity and Magnetism		6-8

Select one of the following sequences:

PHYSICS 120 Intermediate Electricity and Magnetism I & PHYSICS 121 and Intermediate Electricity and Magnetism II

EE 142 Engineering Electromagnetics & EE 242 and Electromagnetic Waves

Numerical Methods

Select one of the following: 3-4

APPPHYS 215	Numerical Methods for Physicists and Engineers	
CME 108	Introduction to Scientific Computing	
CME 206/ ME 300C	Introduction to Numerical Methods for Engineering	
PHYSICS 113	Computational Physics	

### Electronics Lab

Select one of the following: 3-5

ENGR 40	Introductory Electronics (ENGR 40A is not allowed)	
EE 101B	Circuits II	
EE 122A	Analog Circuits Laboratory	
PHYSICS 105	Intermediate Physics Laboratory I: Analog Electronics	
APPPHYS 207	Laboratory Electronics	

### Writing Lab (WIM)

Select one of the following: 4-5

AA 190	Directed Research and Writing in Aero/Astro (for Aerospace specialty only)	
ENGR 199W	Writing of Original Research for Engineers (for students pursuing an independent research project)	
BIOE 131	Ethics in Bioengineering (for Biophysics specialty only)	
CS 181W	Computers, Ethics, and Public Policy (for Computational Science specialty only)	
EE 134	Introduction to Photonics (for Photonics specialty only)	
EE 155	Green Electronics (for Renewable Energy specialty only)	
ME 112	Mechanical Systems Design (for Electromechanical System Design specialty only)	
ME 131A & ME 140	Heat Transfer and Advanced Thermal Systems (for Energy Systems specialty only)	

MATSCI 161	Nanocharacterization Laboratory (Okay for Materials Science and Renewable Energy specialties)
MATSCI 164	Electronic and Photonic Materials and Devices Laboratory (Okay for Materials Science and Renewable Energy specialties)
PHYSICS 107	Intermediate Physics Laboratory II: Experimental Techniques and Data Analysis (for Phontonics specialty)

**Quantum Mechanics**

Select one of the following sequences: 6-8

EE 222 & EE 223	Applied Quantum Mechanics I and Applied Quantum Mechanics II
PHYSICS 130 & PHYSICS 131	Quantum Mechanics I and Quantum Mechanics II

**Thermodynamics and Statistical Mechanics**

PHYSICS 170 & PHYSICS 171	Thermodynamics, Kinetic Theory, and Statistical Mechanics I and Thermodynamics, Kinetic Theory, and Statistical Mechanics II	3-8
or ME 346A	Introduction to Statistical Mechanics	

**Design Course**

Select one of the following: 3-4

AA 236A	Spacecraft Design
CS 108	Object-Oriented Systems Design
EE 133	Analog Communications Design Laboratory
ME 203	Design and Manufacturing
ME 210	Introduction to Mechatronics
PHYSICS 108	Advanced Physics Laboratory: Project

**Specialty Tracks**

Select three courses from one specialty area: 9-12

**Aerospace Physics:**

AA 203	Introduction to Optimal Control and Dynamic Optimization
AA 244A	Introduction to Plasma Physics and Engineering
AA 251	Introduction to the Space Environment
AA 279A	Space Mechanics
ME 161	Dynamic Systems, Vibrations and Control

**Materials Science:**

Any MATSCI courses numbered 151 to 199 (except 159Q) or PHYSICS 172

**Electromechanical System Design:**

ME 80	Mechanics of Materials
ME 112	Mechanical Systems Design
ME 210 or EE 118	Introduction to Mechatronics

**Energy Systems:**

ME 131A	Heat Transfer
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery
ME 140	Advanced Thermal Systems

**Renewable Energy:**

CEE 176B	Electric Power: Renewables and Efficiency
EE 153	Power Electronics
EE 155	Green Electronics
EE 237	Solar Energy Conversion
EE 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
EE 293B	Fundamentals of Energy Processes

MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
MATSCI 302	Solar Cells
MATSCI 316	Nanoscale Science, Engineering, and Technology
ME 260	Fuel Cell Science and Technology

**Biophysics:**

APPPHYS 205	Introduction to Biophysics
BIO 132	Advanced Imaging Lab in Biophysics
BIOE 41	Physical Biology of Macromolecules
BIOE 42	Physical Biology of Cells
BIOE 44	Fundamentals for Engineering Biology Lab
BIOE 101	Systems Biology
BIOE 103	Systems Physiology and Design
BIOE 123	Biomedical System Prototyping Lab
CS 262	Computational Genomics
EE 169 or EE 369A	Introduction to Bioimaging Medical Imaging Systems I

**Computational Science:**

CME 212	Advanced Programming for Scientists and Engineers	
CME 215A	Advanced Computational Fluid Dynamics	
CME 215B	Advanced Computational Fluid Dynamics	
Any CME course with course number greater than 300 and less than 390		
CS 103	Mathematical Foundations of Computing	
CS 154	Introduction to Automata and Complexity Theory	
CS 161	Design and Analysis of Algorithms	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	
CS 205B	Mathematical Methods for Fluids, Solids, and Interfaces	
CS 221	Artificial Intelligence: Principles and Techniques	
CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 229	Machine Learning	3-4
STATS 202	Data Mining and Analysis	
STATS 213	Introduction to Graphical Models	

Total Units 99-127

- PHYSICS 42 Classical Mechanics Laboratory or PHYSICS 62 Mechanics Laboratory, Mechanics Lab (1 unit), required in 2011-12 and beyond
- PHYSICS 67 Introduction to Laboratory Physics (2 units), recommended in place of PHYSICS 44 Electricity and Magnetism Lab
- The Engineering Fundamental courses are to be selected from the Basic Requirements 3 list. Fundamentals courses acceptable for the core program may also be used to satisfy the fundamentals requirement as long as 45 unduplicated units of Engineering are taken.
- ENGR 15 Dynamics, allowed for students who matriculated in 2011/2012 or earlier; however, AA 242A Classical Dynamics, ME 333 Mechanics or PHYSICS 110 Advanced Mechanics recommended instead of, or in addition to, ENGR 15 Dynamics.

- <sup>5</sup> Although not required, PHYSICS 59 (<https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=physics59&collapse=>) (Frontiers in Physics Research, 1 unit) and PHYSICS 91SI (<https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=physics91si&collapse=>) (Practical Computing for Scientists, 2 units) are highly recommended.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

## Honors Program

The School of Engineering offers a program leading to a Bachelor of Science in Engineering: Engineering Physics with Honors.

### Honors Criteria

1. Minimum overall GPA of 3.5.
2. Independent research conducted at an advanced level with a faculty research adviser and documented in an honors thesis. The honors candidate must identify a faculty member who will serve as his or her honors research adviser and a second reader who will be asked to read the thesis and give feedback before endorsing the thesis. One of the two must be a member of the Academic Council and in the School of Engineering.

*Application:* The deadline to apply is October 15 in Autumn Quarter of the senior year. The application documents should be submitted to the student services officer. Applications are reviewed by a subcommittee of the faculty advisers for Engineering Physics majors. Applicants and thesis advisers receive written notification when the application is approved. An application consists of three items:

1. One-page description of the research topic
2. Application form ([http://www.stanford.edu/group/ughb/2011-12/2012-13/EPhysHonorsReq\\_App\\_2012.doc](http://www.stanford.edu/group/ughb/2011-12/2012-13/EPhysHonorsReq_App_2012.doc)) signed by the honors thesis adviser
3. Unofficial Stanford transcript

### Requirements and Timeline for Honors in Engineering Physics:

1. Declare the honors program in Axxess (ENGR-BSH, Subplan: Engineering Physics)
2. Obtain application form from the student services officer.
3. Apply to honors program by October 15 in the autumn quarter of the senior year.
4. Maintain an overall GPA of at least 3.5.
5. Optional: Under direction of the thesis adviser, students may enroll for research units in ENGR 199(W) or in departmental courses such as ME 191(H).
6. Submit a completed thesis draft to the research adviser and second reader by April 15.
7. Present the thesis work in an oral presentation or poster session in an appropriate forum (e.g., an event that showcases undergraduate research and is organized by the department of the adviser, the school of the adviser, or the university).
8. Incorporate feedback, which the adviser and second reader should provide by April 30, and obtain final endorsement signatures from the thesis adviser and second reader by May 15.
9. Submit two signed, single-sided copies to the student services officer by May 15.

## Environmental Systems Engineering (EnvSE)

Completion of the undergraduate program in Environmental Systems Engineering leads to the conferral of the Bachelor of Science in Environmental Systems Engineering.

### Environmental Engineering (ENV)

The program in Environmental Engineering has been discontinued. Students currently enrolled in this program should consult the previous year's Stanford Bulletin (<http://exploreddegrees.stanford.edu/archive/2012-13/schoolofengineering/civilandenvironmentalengineering/#bachelorofsciencetext-enviengi>) for program requirements (click on Environmental Engineering in the right hand menu). Any current Environmental Engineering major wishing ABET accreditation must graduate by June 2015.

## Mission of the Undergraduate Program in Environmental Systems Engineering

The mission of the undergraduate program in Environmental Systems Engineering is to prepare students for incorporating environmentally sustainable design, strategies and practices into natural and built systems and infrastructure involving buildings, water supply, and coastal regions. Courses in the program are multidisciplinary in nature, combining math/science/engineering fundamentals, and tools and skills considered essential for an engineer, along with a choice of one of three focus areas for more in-depth study: coastal environments, freshwater environments, or urban environments. This major offers the opportunity for a more focused curriculum than the Environmental and Water Studies concentration in the Civil Engineering degree program. The program of study, which includes a capstone experience, aims to equip engineering students to take on the complex challenges of the 21<sup>st</sup> Century involving natural and built environments, in consulting and industry as well as in graduate school.

### Requirements

#### Mathematics and Science

See Basic Requirement 1 and 2 <sup>1</sup> 36

#### Technology in Society (TiS)

One 3-5 unit course required, see Basic Requirement 4 3-5

#### Engineering Fundamentals

Three courses minimum (see Basic Requirement 3), including:

ENGR 70A Programming Methodology 5

(or ENGR 70X)

(req'd) plus one of the following courses:

ENGR 90 Environmental Science and Technology

(req'd for Freshwater and Coastal focus areas)

or

CEE 146A Engineering Economy 3

(req'd for Urban focus area)

plus one Engineering Fundamentals Elective 3-5

**Fundamental Tools/Skills** <sup>2</sup> 9

in Visual, Oral/Written Communication, and Modeling/Analysis

**Specialty Courses, in either** 37

Coastal Environments (see Below)

or Freshwater Environments (see Below)

or Urban Environments (see Below)

**Total Units** 96-100

<sup>1</sup> Math must include CME 100 Vector Calculus for Engineers (or MATH 51 Linear Algebra and Differential Calculus of Several Variables), and either a Probability/Statistics course or CME 102 Ordinary Differential Equations for Engineers (or MATH 53 Ordinary Differential Equations with Linear Algebra). Science must include PHYSICS 41 Mechanics; and either Engr 31 Chemical Principles with Application to Nanoscale Science and Technology, CHEM 31B Chemical Principles II or CHEM 31X Chemical Principles Accelerated (or PHYSICS 43 Electricity and Magnetism, for Urban focus area only).

<sup>2</sup> Fundamental Tools/Skills must include: (a) CEE 1 Introduction to Environmental Systems Engineering; (b) *at least* one Visual Communication class from CEE 31 Accessing Architecture Through Drawing / CEE 31Q Accessing Architecture Through Drawing, CEE 133F Principles of Freehand Drawing, ME 101 Visual Thinking, ME 110 Design Sketching, ARTSTUDI 160 Intro to Digital / Physical Design, or OSPPARIS 44 EAP: Analytical Drawing and Graphic Art; (c) *at least* one Oral/Written Communication class from ENGR 103 Public Speaking (or ORALCOMM 122 "The TED Commandments": The Art and Heart of Effective Public Speaking), ENGR 202W Technical Writing, or CEE 151 Negotiation, EARTHSYS 195 Natural Hazards and Risk Communication, or EARTHSYS 200 Sustaining Action: Research, Analysis and Writing for the Publicand (d) *at least* one Modeling/Analysis class from CEE 155 Introduction to Sensing Networks for CEE, CEE 120A Building Information Modeling Workshop (or CEE 120S Building Information Modeling Special Study ), CEE 146A Engineering Economy, CEE 226 Life Cycle Assessment for Complex Systems, EARTHSYS 144 Fundamentals of Geographic Information Science (GIS), CEE 101D Computations in Civil and Environmental Engineering (if not counted as Math), or CME 211 Software Development for Scientists and Engineers (or EARTHSYS 211 Fundamentals of Modeling).

**Urban Environments Focus Area (37 units)**

Required		
CEE 100	Managing Sustainable Building Projects	4
CEE 101B	Mechanics of Fluids (or CEE 101N)	4
CEE 176A	Energy Efficient Buildings	3-4
Electives (at least two of the 4 areas below must be included)		
Building Systems		
CEE 102	Legal Principles in Design, Construction, and Project Delivery	3
or		
CEE 131B	Financial Management of Sustainable Urban Systems	3
CEE 130	Architectural Design: 3-D Modeling, Methodology, and Process	4
CEE 156	Building Systems	4
Energy Systems		
CEE 107A	Understanding Energy	3
CEE 176B	Electric Power: Renewables and Efficiency	3-4
ENERGY 171	Energy Infrastructure, Technology and Economics	3
or		
ENERGY 191	Optimization of Energy Systems	3-4
Water Systems		
CEE 166A	Watersheds and Wetlands	3
CEE 166B	Floods and Droughts, Dams and Aqueducts	3
CEE 174A	Providing Safe Water for the Developing and Developed World	3
CEE 174B	Wastewater Treatment: From Disposal to Resource Recovery	3
Urban Planning		
CEE 171	Environmental Planning Methods	3

or		
URBANST 163	Land Use Control	4
CEE 177L	Smart Cities & Communities	2-3
URBANST 113	Introduction to Urban Design: Contemporary Urban Design in Theory and Practice	5
or		
URBANST 164	Sustainable Cities	4-5
or		
URBANST 165	Sustainable Urban and Regional Transportation Planning	4-5
Capstone		
CEE 112A	Industry Applications of Virtual Design & Construction	3-4
CEE 122A	Computer Integrated Architecture/Engineering/Construction	2
-and-		
CEE 112B	Industry Applications of Virtual Design & Construction	2
CEE 126	International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development	4-5
CEE 141A	Infrastructure Project Development	3
CEE 141B	Infrastructure Project Delivery	3
CEE 221A	Planning Tools and Methods in the Power Sector	3-4
CEE 226E	Advanced Topics in Integrated, Energy-Efficient Building Design	3
CEE 199	Undergraduate Research in Civil and Environmental Engineering	3-4

**Freshwater Environments Focus Area (37 units)**

Required		
CEE 101B	Mechanics of Fluids ( or CEE 101N)	4
CEE 177	Aquatic Chemistry and Biology	4
CEE 166A	Watersheds and Wetlands	3
or		
CEE 174A	Providing Safe Water for the Developing and Developed World	3
Electives		
CEE 160	Mechanics of Fluids Laboratory	2
CEE 161A	Rivers, Streams, and Canals	3-4
CEE 165C	Water Resources Management	3
CEE 166A	Watersheds and Wetlands	3
(if not counted as req'd course)		
CEE 166B	Floods and Droughts, Dams and Aqueducts	3
CEE 166D	Water Resources and Water Hazards Field Trips	2
CEE 171	Environmental Planning Methods	3
or		
URBANST 163	Land Use Control	4
CEE 174A	Providing Safe Water for the Developing and Developed World	3
(if not counted as a req'd course)		
CEE 174B	Wastewater Treatment: From Disposal to Resource Recovery	3
CEE 179A	Water Chemistry Laboratory	3
CEE 265A	Sustainable Water Resources Development	3
CEE 265D	Water and Sanitation in Developing Countries	3
BIOHOPK 150H	Ecological Mechanics	3
EARTHSYS 140	The Energy-Water Nexus	3
EARTHSYS 156	Soil and Water Chemistry	1-4
GS 130	Soil Physics and Hydrology	3

OSPAUSTL 25	Freshwater Systems	3
Capstone		
CEE 126	International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development	4-5
CEE 141A	Infrastructure Project Development	3
CEE 169	Environmental and Water Resources Engineering Design	5
CEE 179C	Environmental Engineering Design	5
CEE 199	Undergraduate Research in Civil and Environmental Engineering	3-4

### Coastal Environments Focus Area (36 units)

#### Required

CEE 101B	Mechanics of Fluids (or CEE 101N)	4
CEE 164	Introduction to Physical Oceanography	4
CEE 175A	California Coast: Science, Policy, and Law	3-4

#### Electives

CEE 160	Mechanics of Fluids Laboratory	2
CEE 166A	Watersheds and Wetlands	3
CEE 171	Environmental Planning Methods	3

or

URBANST 163	Land Use Control	4
CEE 174A	Providing Safe Water for the Developing and Developed World	3

CEE 174B	Wastewater Treatment: From Disposal to Resource Recovery	3
----------	--	---

CEE 177	Aquatic Chemistry and Biology	4
---------	-------------------------------	---

CEE 272	Coastal Contaminants	3-4
---------	----------------------	-----

BIO 30	Ecology for Everyone	4
--------	----------------------	---

or

BIO 43	Plant Biology, Evolution, and Ecology	5
--------	---------------------------------------	---

or

BIOHOPK 172H	Marine Ecology: From Organisms to Ecosystems	5

CEE 199	Undergraduate Research in Civil and Environmental Engineering	3-4
---------	---	-----

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

## Individually Designed Majors in Engineering (IDMENS)

Completion of the undergraduate program in Individually Designed Majors in Engineering (IDMEN) leads to the conferral of the Bachelor of Science in an Individually Designed Major: (approved title). The approved title of the IDMEN also appears on the transcript.

### Mission of the Undergraduate Program in Individually Designed Majors in Engineering

The mission of the undergraduate program in Individually Designed Majors in Engineering (IDMEN) is to provide students with an understanding of engineering principles and the analytical and problem solving, design, and communication skills necessary to be successful in the field. The B.S. for IDMENS is intended for undergraduates interested in pursuing engineering programs that, by virtue of their focus and intellectual content, cannot be accommodated by existing departmental majors or the pre-approved School of Engineering majors. Core courses in the curriculum include engineering fundamentals, mathematics, technology in society, and the sciences. Students then take additional courses pertinent to their IDMEN major. The program prepares students for careers in government and the corporate sector, and for graduate study.

### B.S. in Individually Designed Majors in Engineering

The B.S. degree for IDMENS is intended for undergraduates interested in pursuing engineering programs that, by virtue of their focus and intellectual content, cannot be accommodated by existing departmental majors or the pre-approved School of Engineering majors. IDMEN curricula are designed by students with the assistance of two faculty advisers of their choice and are submitted to the Undergraduate Council's Subcommittee on Individually Designed Majors. The degree conferred is "Bachelor of Science in Individually Designed Major in Engineering: (approved title)."

Students must submit written proposals to the IDMEN subcommittee detailing their course of study. Programs must meet the following requirements: mathematics (21 unit minimum, see Basic Requirement 1 below), science (17 units minimum, see Basic Requirement 2 below), Technology in Society (one approved course, see Basic Requirement 4 below), at least three Engineering Fundamentals courses, see Basic Requirement 4 for a list of courses, and a minimum of 31 units of engineering depth courses, including a capstone depth course with content relevant to proposed goals, and sufficient relevant additional course work to bring the total number of units to at least 90 and at most 107. Students may take additional courses pertinent to their IDMEN major, but the IDMEN proposal itself may not exceed 107 units. Students are responsible for completing the prerequisites for all courses included in their majors.

Each proposal should begin with a statement describing the proposed major. In the statement, the student should make clear the motivation for and goal of the major, and indicate how it relates to her or his projected career plans. The statement should specify how the courses to be taken relate to and move the student toward realizing the major's goal. A proposed title for the major should be included. The title approved by the IDMEN Subcommittee is listed on the student's official University transcript and on the diploma in this form: "Individually Designed

Major in Subplan", where "Subplan" is the title approved by the IDMEN Subcommittee.

The proposal statement should be followed by a completed Program Sheet listing all the courses comprising the student's IDMEN curriculum, organized by the five categories printed on the sheet (mathematics, science, technology in society, engineering fundamentals, and engineering depth). Normally, the courses selected should comprise a well-coordinated sequence or sequences that provide mastery of important principles and techniques in a well-defined field. In some circumstances, especially if the proposal indicates that the goal of the major is to prepare the student for graduate work outside of engineering, a more general engineering program may be appropriate. A four-year study plan, showing courses to be taken each quarter, should also be included in the student's IDMEN proposal.

The proposal must be signed by two faculty members who certify that they endorse the major as described in the proposal and that they agree to serve as the student's permanent advisers. One of the faculty members, who must be a member of the School of Engineering and of the Academic Council, acts as the student's primary adviser. The proposal must be accompanied by a statement from that person giving an appraisal of the academic value and viability of the proposed major.

Students proposing IDMENs must have at least four quarters of undergraduate work remaining at Stanford after the quarter in which their proposals are first submitted. Any changes in a previously approved major must be endorsed by the advisers and re-approved by the IDMEN subcommittee. A request by a student to make changes in her or his approved curriculum must be made sufficiently far in advance so that, should the request be denied, adequate time remains to complete the original, approved curriculum. Proposals are reviewed and acted upon once a quarter. Planning forms may be obtained from the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>. Completed proposals should be submitted to Darlene Lazar in the Office of Student Affairs, Huang Engineering Center, Suite 135. An IDMEN cannot be a student's secondary major.

## Management Science and Engineering (MS&E)

Completion of the undergraduate program in Management Science and Engineering leads to the conferral of the Bachelor of Science in Management Science and Engineering.

### Requirements

#### Mathematics and Science

All required; see SoE Basic Requirements 1 and 2 <sup>1</sup>		Units
CME 100	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
CME 103	Introduction to Matrix Methods	5
MS&E 120	Probabilistic Analysis	5
MS&E 121	Introduction to Stochastic Modeling	4
MS&E 125	Introduction to Applied Statistics	4
Select one of the following sequences:		8
CHEM 31B & CHEM 33	Chemical Principles II and Structure and Reactivity	
CHEM 31X & CHEM 33	Chemical Principles Accelerated and Structure and Reactivity	
PHYSICS 21 & PHYSICS 22 & PHYSICS 23 & PHYSICS 24	Mechanics, Fluids, and Heat and Mechanics, Fluids, and Heat Laboratory and Electricity, Magnetism, and Optics and Electricity, Magnetism, and Optics Laboratory	

PHYSICS 41 & PHYSICS 43	Mechanics and Electricity and Magnetism	
Electives from SoE approved list or AP/IB credit <sup>1</sup>		13
<b>Technology in Society</b>		
Select one of the following; see SoE Basic Requirement 4		3
COMM 120W	Digital Media in Society	
COMM 169	Computers and Interfaces	
CS 181	Computers, Ethics, and Public Policy	
ENGR 129		
ENGR 130	Science, Technology, and Contemporary Society	
ENGR 131	Ethical Issues in Engineering	
MS&E 181	Issues in Technology and Work for a Postindustrial Economy	
MS&E 193	Technology and National Security (WIM)	
MS&E 197	Ethics, Technology, and Public Policy (WIM)	
STS 1	The Public Life of Science and Technology	
<b>Engineering Fundamentals<sup>2</sup></b>		
Three courses; see SoE Basic Requirement 3		
CS 106A	Programming Methodology <sup>3</sup>	5
Select one of the following:		3
ENGR 25B	Biotechnology	
or ENGR 25E	Energy: Chemical Transformations for Production, Storage, and Use	
ENGR 40	Introductory Electronics	
or ENGR 40A	Introductory Electronics	
or ENGR 40M	An Intro to Making: What is EE	
or ENGR 40P	Physics of Electrical Engineering	
ENGR 80	Introduction to Bioengineering (Engineering Living Matter)	
Select one of the following (or ENGR 25, ENGR 40, or ENGR 80 if not used above):		3
ENGR 10	Introduction to Engineering Analysis	
ENGR 14	Intro to Solid Mechanics	
ENGR 15	Dynamics	
ENGR 20	Introduction to Chemical Engineering	
ENGR 30	Engineering Thermodynamics	
ENGR 50	Introduction to Materials Science, Nanotechnology Emphasis	
or ENGR 50E	Introduction to Materials Science, Energy Emphasis	
or ENGR 50M	Introduction to Materials Science, Biomaterials Emphasis	
ENGR 60	Engineering Economy	
ENGR 90	Environmental Science and Technology	
<b>Engineering Depth<sup>2</sup></b>		
Core Courses (all six required)		25
CS 103	Mathematical Foundations of Computing <sup>4</sup>	
or CS 106B	Programming Abstractions	
or CS 106X	Programming Abstractions (Accelerated)	
ECON 50	Economic Analysis I	
MS&E 108	Senior Project	
MS&E 111	Introduction to Optimization <sup>4</sup>	
MS&E 140	Accounting for Managers and Entrepreneurs	
or MS&E 14C	Financial Accounting Concepts and Analysis	
MS&E 180	Organizations: Theory and Management	
Area Courses (see below)		27

Choose four or five courses (minimum 15 units) from a primary area and two courses (minimum 6 units) from each of the other two areas.

### Depth Areas

#### Finance and Decision Area

Students choosing F&D as their primary area must take at least two of ECON 51, MS&E 145, and MS&E 152

Introductory (appropriate for freshmen and sophomores)

MS&E 152 Introduction to Decision Analysis (WIM)

Intermediate (appropriate for juniors and seniors)

MS&E 145 Introductory Financial Analysis

MS&E 146 Corporate Financial Management

MS&E 245G Finance for Non-MBAs

MS&E 252 Decision Analysis I: Foundations of Decision Analysis

Advanced (intended primarily for graduate students)

MS&E 245A Investment Science

MS&E 246 Financial Risk Analytics

MS&E 250A Engineering Risk Analysis

MS&E 250B Project Course in Engineering Risk Analysis

MS&E 245B Advanced Investment Science

#### Operations and Analytics Area

Students choosing O&A as their primary area may also include CS 161, CS 229, and STATS 202 in their selections<sup>4</sup>

Introductory (no prerequisites)

MS&E 107 Interactive Management Science

Methods

MS&E 112 Mathematical Programming and Combinatorial Optimization

MS&E 135 Networks

MS&E 223 Simulation

MS&E 226 "Small" Data

MS&E 231 Introduction to Computational Social Science

MS&E 251 Stochastic Control

Applications

MS&E 130 Information Networks and Services

MS&E 233 Networked Markets

MS&E 235 Analytics in Action

MS&E 260 Introduction to Operations Management

MS&E 262 Supply Chain Management

MS&E 263 Healthcare Operations Management

MS&E 264 Sustainable Product Development and Manufacturing

MS&E 268 Operations Strategy

#### Organizations, Technology, and Policy Area

Students choosing OT&P as their primary area must take at least two of ENGR 145, MS&E 175, MS&E 181, MS&E 185, PSYCH 70, and SOC 114 (but not both PSYCH 70 and SOC 114)<sup>4</sup>

Introductory (no prerequisites)

ENGR 131 Ethical Issues in Engineering<sup>4</sup>

MS&E 178 The Spirit of Entrepreneurship

MS&E 189 Social Networks - Theory, Methods, and Applications

MS&E 190 Methods and Models for Policy and Strategy Analysis

MS&E 193 Technology and National Security (WIM)<sup>4</sup>

MS&E 197 Ethics, Technology, and Public Policy (WIM)<sup>4</sup>

Advanced (has prerequisites and/or appropriate for juniors and seniors)

ENGR 145 Technology Entrepreneurship

MS&E 175 Innovation, Creativity, and Change

MS&E 177 Creativity Rules

MS&E 181 Issues in Technology and Work for a Postindustrial Economy<sup>4</sup>

MS&E 183 Leadership in Action

MS&E 185 Global Work

MS&E 243 Energy and Environmental Policy Analysis

MS&E 292 Health Policy Modeling

MS&E 294 Climate Policy Analysis

MS&E 295 Energy Policy Analysis

- <sup>1</sup> Math and Science must total a minimum of 44 units. Electives must come from the School of Engineering approved list, or, PSYCH 50 Introduction to Cognitive Neuroscience, or PSYCH 70 Introduction to Social Psychology, and may not repeat material from any other requirement. AP/IB credit for Chemistry, Mathematics, and Physics may be used.
- <sup>2</sup> Engineering fundamentals plus engineering depth must total a minimum of 60 units.
- <sup>3</sup> Students may petition to place out of CS 106A Programming Methodology.
- <sup>4</sup> Courses used to satisfy the Math, Science, Technology in Society, or Engineering Fundamental requirement may not also be used to satisfy an engineering depth requirement.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

## Materials Science and Engineering (MATSCI)

Completion of the undergraduate program in Materials Science and Engineering leads to the conferral of the Bachelor of Science in Materials Science and Engineering.

## Mission of the Undergraduate Program in Materials Science and Engineering

The mission of the undergraduate program in Materials Science and Engineering is to provide students with a strong foundation in materials science and engineering with emphasis on the fundamental scientific and engineering principles which underlie the knowledge and implementation of material structure, processing, properties, and performance of all classes of materials used in engineering systems. Courses in the program develop students' knowledge of modern materials science and engineering, teach them to apply this knowledge analytically to create effective and novel solutions to practical problems, and develop their communication skills and ability to work collaboratively. The program prepares students for careers in industry and for further study in graduate school.

The B.S. in Materials Science and Engineering provides training for the materials engineer and also preparatory training for graduate work in materials science. Capable undergraduates are encouraged to take at least one year of graduate study to extend their course work through the coterminal degree program which leads to an M.S. in Materials Science and Engineering. Coterminal degree programs are encouraged both for undergraduate majors in Materials Science and Engineering and for undergraduate majors in related disciplines.

## Requirements

## Mathematics

20 units minimum; see Basic Requirement 1<sup>1</sup>

Select one of the following: 5

MATH 51 Linear Algebra and Differential Calculus of Several Variables

CME 100/  
ENGR 154 Vector Calculus for Engineers

Select one of the following: 5

MATH 52 Integral Calculus of Several Variables

CME 104/  
ENGR 155B Linear Algebra and Partial Differential Equations for Engineers

Select one of the following: 5

MATH 53 Ordinary Differential Equations with Linear Algebra

CME 102/  
ENGR 155A Ordinary Differential Equations for Engineers

One additional course 5

## Science

20 units minimum; see Basic Requirement 2<sup>2</sup> 20

Must include a full year of physics or chemistry, with one quarter of study in the other subject.

## Technology in Society

One course; see Basic Requirement 3<sup>3</sup> 3-5

## Engineering Fundamentals

Three courses minimum; see Basic Requirement 4<sup>4</sup>

Select one of the following: 4

ENGR 50 Introduction to Materials Science, Nanotechnology Emphasis<sup>4</sup>ENGR 50E Introduction to Materials Science, Energy Emphasis<sup>4</sup>ENGR 50M Introduction to Materials Science, Biomaterials Emphasis<sup>4</sup>

At least two additional courses 6-9

## Materials Science and Engineering Depth

Materials Science Fundamentals:

MATSCI 153 Nanostructure and Characterization 4

MATSCI 154 Thermodynamic Evaluation of Green Energy Technologies<sup>5</sup> 4

MATSCI 155 Nanomaterials Synthesis 4

MATSCI 157 Quantum Mechanics of Nanoscale Materials 4

Two of the following courses: 8

MATSCI 151 Microstructure and Mechanical Properties

MATSCI 152 Electronic Materials Engineering

MATSCI 156 Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution

MATSCI 190 Organic and Biological Materials

MATSCI 192 Materials Chemistry

MATSCI 193 Atomic Arrangements in Solids

MATSCI 194 Thermodynamics and Phase Equilibria

MATSCI 195 Waves and Diffraction in Solids

MATSCI 196 Defects in Crystalline Solids

MATSCI 197 Rate Processes in Materials

MATSCI 198 Mechanical Properties of Materials

MATSCI 199 Electronic and Optical Properties of Solids

Engineering Depth 16

One of the following courses:

MATSCI 161 Nanocharacterization Laboratory (WIM)

MATSCI 164 Electronic and Photonic Materials and Devices Laboratory (WIM)

Units

Three of the following courses:

MATSCI 160 Nanomaterials Laboratory

MATSCI 162 X-Ray Diffraction Laboratory

MATSCI 163 Mechanical Behavior Laboratory

MATSCI 165 Nanoscale Materials Physics Computation Laboratory

Focus Area Options<sup>6</sup> 10<sup>1</sup> Basic Requirement 1 (20 units minimum): see a list of approved Math Courses ([http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved\\_Courses](http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses)).<sup>2</sup> Basic Requirement 2 (20 units minimum): see a list of approved Science Courses ([http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved\\_Courses](http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses)).<sup>3</sup> Basic Requirement 3 (one course minimum): see a list of approved Technology in Society Courses ([http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved\\_Courses](http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses)).<sup>4</sup> Basic Requirement 4 (3 courses minimum): see a list of approved Engineering Fundamentals ([http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved\\_Courses](http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses)) Courses. If both ENGR 50 Introduction to Materials Science, Nanotechnology Emphasis, ENGR 50E Introduction to Materials Science - Energy Emphasis, and/or ENGR 50M Introduction to Materials Science, Biomaterials Emphasis are taken, one may be used for the Materials Science Fundamentals requirement.<sup>5</sup> ENGR 30 Engineering Thermodynamics may be substituted for MATSCI 154 Thermodynamic Evaluation of Green Energy Technologies as long as the total MATSCI program units total 50 or more.<sup>6</sup> Focus Area Options: 10 units from one of the following Focus Area Options below.

## Focus Area Options

Bioengineering (10 units minimum)

BIOE 220 Introduction to Imaging and Image-based Human Anatomy

BIOE 281 Biomechanics of Movement

BIOE 284B Cardiovascular Bioengineering

BIOE 333 Interfacial Phenomena and Bionanotechnology

BIOE 381 Orthopaedic Bioengineering

MATSCI 190 Organic and Biological Materials

MATSCI 380 Nano-Biotechnology

MATSCI 381 Biomaterials in Regenerative Medicine

MATSCI 382 Biochips and Medical Imaging

Chemical Engineering (10 units minimum)

CHEM 171 Physical Chemistry I

CHEMENG 130 Separation Processes

CHEMENG 140 Micro and Nanoscale Fabrication Engineering

CHEMENG 150 Biochemical Engineering

CHEMENG 160 Polymer Science and Engineering

Chemistry (10 units minimum)

CHEM 151 Inorganic Chemistry I

CHEM 153 Inorganic Chemistry II

CHEM 171 Physical Chemistry I

CHEM 173 Physical Chemistry II

CHEM 175 Physical Chemistry III

CHEM 181 Biochemistry I

CHEM 183 Biochemistry II

CHEM 185 Biophysical Chemistry

## Electronics &amp; Photonics (10 units minimum)

EE 101A	Circuits I
EE 101B	Circuits II
EE 102A	Signal Processing and Linear Systems I
EE 102B	Signal Processing and Linear Systems II
EE 116	Semiconductor Device Physics
EE 134	Introduction to Photonics
EE 136	Introduction to Nanophotonics and Nanostructures
EE 142	Engineering Electromagnetics (Formerly EE 141)
MATSCI 343	Organic Semiconductors for Electronics and Photonics

## Energy Technology (10 units minimum)

EE 293B	Fundamentals of Energy Processes
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
MATSCI 302	Solar Cells
MATSCI 303	Principles, Materials and Devices of Batteries
ME 260	Fuel Cell Science and Technology

## Materials Characterization Techniques (10 units minimum)

MATSCI 320	Nanocharacterization of Materials
MATSCI 321	Transmission Electron Microscopy
MATSCI 322	Transmission Electron Microscopy Laboratory
MATSCI 323	Thin Film and Interface Microanalysis
MATSCI 326	X-Ray Science and Techniques

## Mechanical Behavior &amp; Design (10 units minimum)

AA 240A	Analysis of Structures
AA 240B	Analysis of Structures
AA 256	Mechanics of Composites
MATSCI 198	Mechanical Properties of Materials
MATSCI 358	Fracture and Fatigue of Materials and Thin Film Structures
ME 80	Mechanics of Materials
or CEE 101A	Mechanics of Materials
ME 203	Design and Manufacturing
ME 294	

## Nanoscience (10 units minimum)

BIOE 333	Interfacial Phenomena and Bionanotechnology
EE 136	Introduction to Nanophotonics and Nanostructures
ENGR 240	Introduction to Micro and Nano Electromechanical Systems
MATSCI 316	Nanoscale Science, Engineering, and Technology
MATSCI 320	Nanocharacterization of Materials
MATSCI 346	Nanophotonics
MATSCI 347	Introduction to Magnetism and Magnetic Nanostructures
MATSCI 380	Nano-Biotechnology

## Physics (10 units minimum)

PHYSICS 70	Foundations of Modern Physics
PHYSICS 110	Advanced Mechanics
PHYSICS 120	Intermediate Electricity and Magnetism I
PHYSICS 121	Intermediate Electricity and Magnetism II
PHYSICS 130	Quantum Mechanics I
PHYSICS 131	Quantum Mechanics II
PHYSICS 134	Advanced Topics in Quantum Mechanics
PHYSICS 170	Thermodynamics, Kinetic Theory, and Statistical Mechanics I

PHYSICS 171 Thermodynamics, Kinetic Theory, and Statistical Mechanics II

PHYSICS 172 Solid State Physics

Self-Defined Option (10 units minimum)

Petition for a self-defined cohesive program.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

## Mechanical Engineering (ME)

Completion of the undergraduate program in Mechanical Engineering leads to the conferral of the Bachelor of Science in Mechanical Engineering.

## Mission of the Undergraduate Program in Mechanical Engineering

The mission of the undergraduate program in Mechanical Engineering is to provide students with a balance of intellectual and practical experiences that enable them to address a variety of societal needs. The curriculum encompasses elements from a wide array of disciplines built around the themes of biomedicine, computational engineering, design, energy, and multiscale engineering. Course work may include mechatronics, computational simulation, solid and fluid dynamics, microelectromechanical systems, biomechanical engineering, energy science and technology, propulsion, sensing and control, nano- and micro- mechanics, and design. The program prepares students for entry-level work as mechanical engineers and for graduate studies in either an engineering discipline or another field where a broad engineering background is useful.

### Requirements

#### Mathematics

24 units minimum; see Basic Requirement 1 <sup>1</sup>

CME 102/ Ordinary Differential Equations for Engineers 5  
ENGR 155A

or MATH 53 Ordinary Differential Equations with Linear Algebra

Select one of the following: 3-5

CME 106/ Introduction to Probability and Statistics for  
ENGR 155C Engineers

STATS 110 Statistical Methods in Engineering and the  
Physical Sciences

STATS 116 Theory of Probability

Plus additional courses to total min. 24 16

#### Science

20 units minimum; see Basic Requirement 2 <sup>1</sup>

CHEM 31X Chemical Principles Accelerated 5  
or ENGR 31

Plus additional required courses <sup>1</sup> 15

#### Technology in Society

One course from approved SoE list; see Basic Requirement 4 3-5

#### Engineering Fundamentals

Three courses minimum; see Basic Requirement 3 <sup>2</sup>

ENGR 40 Introductory Electronics 5

ENGR 70A Programming Methodology (same as CS 106A) 5

Fundamentals Elective <sup>2</sup> 3-5

#### Engineering Depth

Minimum of 68 Engineering Science and Design ABET units; see Basic Requirement 5

ENGR 14 Intro to Solid Mechanics 4

ENGR 15 Dynamics 4

ENGR 30	Engineering Thermodynamics	3
ME 70	Introductory Fluids Engineering	4
ME 80	Mechanics of Materials	4
ME 101	Visual Thinking	4
ME 103D	Engineering Drawing and Design <sup>3</sup>	1
ME 112	Mechanical Systems Design <sup>4</sup>	4
ME 113	Mechanical Engineering Design	4
ME 131A	Heat Transfer	3-5
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	4
ME 140	Advanced Thermal Systems <sup>4</sup>	5
ME 161	Dynamic Systems, Vibrations and Control	4
ME 203	Design and Manufacturing <sup>3</sup>	4

<sup>1</sup> Math and science must total 45 units.

- Math: 24 units required and must include a course in differential equations (CME 102 Ordinary Differential Equations for Engineers or MATH 53 Ordinary Differential Equations with Linear Algebra; one of these required) and calculus-based Statistics (CME 106 Introduction to Probability and Statistics for Engineers or STATS 110 Statistical Methods in Engineering and the Physical Sciences or STATS 116 is required).
- Science: 20 units minimum and requires courses in calculus-based Physics and Chemistry, with at least a full year (3 courses) in one or the other. CHEM 31A Chemical Principles I/CHEM 31B Chemical Principles II are considered one course because they cover the same material as CHEM 31X Chemical Principles Accelerated but at a slower pace. CHEM 31X Chemical Principles Accelerated or ENGR 31 are recommended.

<sup>2</sup> ME Fundamental elective may not be a course counted for other requirements. Students may opt to use ENGR 14 Intro to Solid Mechanics, ENGR 15 Dynamics, or ENGR 30 Engineering Thermodynamics from the required depth courses as the third fundamental class. However, total units for Engineering Topics (Fundamentals + Depth) must be a minimum of 68 units; additional options courses may be required to meet unit requirements. ENGR 70A (CS 106A) must be taken for 5 units.

<sup>3</sup> Courses ME 103D and ME 203 must be taken concurrently.

<sup>4</sup> ME 112, ME 131A and ME 140 together fulfill the WIM requirement.

Options to complete the ME depth sequence: see the list of options in the ME major section of the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

## Product Design (PD)

Completion of the undergraduate program in Product Design leads to the conferral of the Bachelor of Science in Engineering. The subplan "Product Design" appears on the transcript and on the diploma.

### Mission of the Undergraduate Program in Product Design

The mission of the undergraduate program in Product Design is to graduate designers who can synthesize technology, human factors, and business factors in the service of human need. The program teaches a design process that encourages creativity, craftsmanship, aesthetics, and personal expression, and emphasizes brainstorming and need finding. The course work provides students with the skills necessary to carry projects from initial concept to completion of working prototypes. Students studying product design follow the basic mechanical engineering curriculum and are expected to meet the University requirements for a Bachelor of Science degree. The program prepares students for careers in industry and for graduate study.

Conferral of the undergraduate program in Product Design leads to the conferral of the Bachelor of Science in Engineering. The subplan "Product Design" appears on the transcript and on the diploma.

### Requirements

	Units
<b>Mathematics and Science</b>	43 minimum
<b>Mathematics</b>	20
20 units minimum	
Recommended: one course in Statistics	
<b>Science</b>	23 units minimum
23 units minimum: 8 units of social science (inc PSYCH 1) and 15 units must be from School of Engineering approved list <sup>1</sup>	
PHYSICS 41	Mechanics 4
PHYSICS 43	Electricity and Magnetism 4
PHYSICS 45	Light and Heat 4
PSYCH 1	Introduction to Psychology 5
PSYCH elective from courses numbered 30-200 <sup>1</sup>	3-5
<b>Technology in Society</b>	
Choose one from SoE Approved TiS Courses list at < <a href="http://ughb.stanford.edu">ughb.stanford.edu</a> >.	
<b>Engineering Fundamentals</b>	11 units minimum
ENGR 40	Introductory Electronics 3-5
or ENGR 40A	Introductory Electronics
or ENGR 40M	An Intro to Making: What is EE
ENGR 70A	Programming Methodology 5
Fundamentals Elective <sup>2</sup>	3-4
<b>Product Design Engineering Depth</b>	55 units minimum
Three Art Studio courses numbered 100 or higher	12
ENGR 14	Intro to Solid Mechanics <sup>3</sup> 4
ME 80	Mechanics of Materials 4
ME 101	Visual Thinking <sup>3</sup> 4
ME 103D	Engineering Drawing and Design <sup>4</sup> 1
ME 110	Design Sketching 2
ME 112	Mechanical Systems Design <sup>5</sup> 4
ME 115A	Introduction to Human Values in Design 3
ME 115B	Product Design Methods 3
ME 115C	Design and Business Factors <sup>6</sup> 3
ME 203	Design and Manufacturing <sup>4</sup> 4
ME 216A	Advanced Product Design: Needfinding 4
ME 216B	Advanced Product Design: Implementation 1 4
ME 216C	Advanced Product Design: Implementation 2 4

<sup>1</sup> School of Engineering approved science list available at <http://ughb.stanford.edu>. If the Psychology elective was taken prior to the requirement being increased to 3 units minimum in 2012-13, student will be short 1 unit in Science/Behavioral Science; this is approved without petition.

<sup>2</sup> Select one of the following: ENGR 10, ENGR 15, ENGR 20, ENGR 25B or ENGR 25E, ENGR 30, ENGR 50 or ENGR 50E or ENGR 50M, ENGR 60, ENGR 62, ENGR 90. Note that CS 106B or CS 106X are not allowed to fulfill elective.

- <sup>3</sup> If ENGR 14 and/or ME 110 were taken prior to the courses being offered for 4 units, depth total may be reduced by 1-2 units with no petition required.
- <sup>4</sup> ME 103D and ME 203 should be taken concurrently.
- <sup>5</sup> ME 112 meets the Writing in the Major (WIM) requirement for Product Design.
- <sup>6</sup> ME 115C is the only course that can be waived if student takes a quarter overseas. Students should plan their overseas quarter to take place in Sophomore year, or Spring Quarter of the junior year only. Total depth units are reduced by 3; this is approved without petition.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

The joint major program (JMP), authorized by the Academic Senate for a pilot period of six years beginning in 2014-15, permits students to major in both Computer Science and one of ten Humanities majors. See the "Joint Major Program (p. 26)" section of this bulletin for a description of University requirements for the JMP. See also the Undergraduate Advising and Research JMP web site and its associated FAQs.

Students completing the JMP receive a B.A.S. (Bachelor of Arts and Science).

Because the JMP is new and experimental, changes to procedures may occur; students are advised to check the relevant section of the bulletin periodically.

## Mission

The Joint Major provides a unique opportunity to gain mastery in two disciplines: Computer Science and a selected humanities field. Unlike the double major or dual major, the Joint Major emphasizes integration of the two fields through a cohesive, transdisciplinary course of study and integrated capstone experience. The Joint Major not only blends the intellectual traditions of two Stanford departments-it does so in a way that reduces the total unit requirement for each major.

## Computer Science Major Requirements in the Joint Major Program

(See the respective humanities department Joint Major Program section of this bulletin for details on humanities major requirements.)

The CS requirements for the Joint Major follow the CS requirements for the CS-BS degree with the following exceptions:

- Two of the depth electives are waived. The waived depth electives are listed below for each CS track.
- The Senior Project is fulfilled with a joint capstone project. The student enrolls in CS191 or 191W (3 units) during the senior year. Depending on the X department, enrollment in an additional Humanities capstone course may also be required. But, at a minimum, 3 units of CS191 or 191W must be completed.
- There is no double-counting of units between majors. If a course is required for both the CS and Humanities majors, the student will work with one of the departments to identify an additional course - one which will benefit the academic plan - to apply to that major's total units requirement.
- For CS, WIM can be satisfied with CS181W or CS191W.

### Depth Electives for CS Tracks for students completing a Joint Major:

#### Artificial Intelligence Track:

One Track Elective (rather than three).

#### Biocomputation Track:

One course from Note 3 of the Department Program Sheet, plus one course from Note 4 of the Program Sheet.

#### Computer Engineering Track:

- EE 108A and 108B
- One of the following: EE 101A, 101B, 102A, 102B
- Satisfy the requirements of one of the following concentrations:
  - Digital Systems Concentration: CS 140 or 143; EE 109, 271; plus one of CS 140 or 143 (if not counted above), 144, 149, 240E, 244; EE 273, 282
  - Robotics and Mechatronics Concentration: CS 205A, 223A; ME 210; ENGR 105
  - Networking Concentration: CS 140, 144; plus two of the following, CS 240, 240E, 244, 244B, 244E, 249A, 249B, EE 179, EE 276

#### Graphics Track:

No Track Electives required (rather than two)

#### HCI Track:

No Interdisciplinary HCI Electives required

Information Track:

One Track Elective (rather than three)

#### Systems Track:

One Track Elective (rather than three)

#### Theory Track:

One Track Elective (rather than three)

#### Unspecialized Track:

No Track Electives required (rather than two)

#### Individually Designed Track:

Proposals should include a minimum of five (rather than seven) courses, at least four of which must be CS courses numbered 100 or above.

## Declaring a Joint Major Program

To declare the joint major, students must first declare each major through Axess, and then submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (<https://stanford.box.com/change-UG-program>) The Major-Minor and Multiple Major Course Approval Form ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin\\_MultMaj.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf)) is required for graduation for students with a joint major.

## Dropping a Joint Major Program

To drop the joint major, students must submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (<https://stanford.box.com/change-UG-program>) . Students may also consult the Student Services Center (<http://studentservicescenter.stanford.edu>) with questions concerning dropping the joint major.

## Transcript and Diploma

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major". The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major".

## Minor in the School of Engineering

An undergraduate minor in some Engineering programs may be pursued by interested students; see the Handbook for Undergraduate Engineering Programs, or consult with a department's undergraduate program representative or the Office of Student Affairs, Huang Engineering Center, Suite 135.

General requirements and policies for a minor in the School of Engineering are:

1. A set of courses totaling not less than 20 and not more than 36 units, with a minimum of six courses of at least 3 units each. These courses must be taken for a letter grade except where letter grades are not offered, and a minimum GPA of 2.0 within the minor course list must be maintained (departments may require a higher GPA if they choose).
2. The set of courses should be sufficiently coherent as to present a body of knowledge within a discipline or subdiscipline.
3. Prerequisite mathematics, statistics, or science courses, such as those normally used to satisfy the school's requirements for a department major, may not be used to satisfy the requirements of the minor; conversely, engineering courses that serve as prerequisites for subsequent courses must be included in the unit total of the minor program.
4. Courses used for the major and/or minor core must not be duplicated within any other of the student's degree programs; that is, students may not overlap (double-count) courses for completing major and minor requirements except in the case of prerequisite courses as noted in #3.

Departmentally based minor programs are structured at the discretion of the sponsoring department, subject only to requirements 1, 2, 3, and 4 above. Interdisciplinary minor programs may be submitted to the Undergraduate Council for approval and sponsorship. A general Engineering minor is not offered.

### Aeronautics and Astronautics (AA) Minor

The Aero/Astro minor introduces undergraduates to the key elements of modern aerospace systems. Within the minor, students may focus on aircraft, spacecraft, or disciplines relevant to both. The course requirements for the minor are described in detail below. Courses cannot be double-counted within a major and a minor, or within multiple minors; if necessary, the Aero/Astro adviser can help select substitute courses to fulfill the AA minor core.

The following core courses fulfill the minor requirements:

		Units
AA 100	Introduction to Aeronautics and Astronautics	3
ENGR 14	Intro to Solid Mechanics *	4
ENGR 15	Dynamics *	4
ENGR 30	Engineering Thermodynamics *	3
ME 70	Introductory Fluids Engineering	4
ME 131A	Heat Transfer <sup>1</sup>	3

Two courses from one of the upper-division elective areas below (min. 6 units)

Plus one course from a second area below (min. 3 units) 9-11

#### Aerospace Systems Synthesis/Design

AA 236A & AA 236B	Spacecraft Design and Spacecraft Design Laboratory
AA 241A & AA 241B	Introduction to Aircraft Design, Synthesis, and Analysis and Introduction to Aircraft Design, Synthesis, and Analysis
AA 284B	Propulsion System Design Laboratory

#### Dynamics and Controls

AA 242A	Classical Dynamics
AA 203	Introduction to Optimal Control and Dynamic Optimization
AA 222	Introduction to Multidisciplinary Design Optimization
AA 271A	Dynamics and Control of Spacecraft and Aircraft
ENGR 105	Feedback Control Design
ENGR 205	Introduction to Control Design Techniques

#### Fluids

AA 200	Applied Aerodynamics
AA 201A	Fundamentals of Acoustics
AA 210A	Fundamentals of Compressible Flow
AA 214A/ CME 207	Numerical Methods in Engineering and Applied Sciences
AA 283	Aircraft and Rocket Propulsion
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery
ME 140	Advanced Thermal Systems

#### Structures

AA 240A	Analysis of Structures
AA 240B	Analysis of Structures
AA 256	Mechanics of Composites
AA 280	Smart Structures
ME 335A	Finite Element Analysis

\* ENGR 14 Intro to Solid Mechanics, ENGR 15 Dynamics, or ENGR 30 Engineering Thermodynamics are waived as minor requirements if already taken as part of the major.

<sup>1</sup> AA minors take ME 131 for 3 units

### Chemical Engineering (CHE) Minor

The following core courses fulfill the minor requirements:

	Units
ENGR/CHEMENG 20 Introduction to Chemical Engineering	3
CHEMENG 100 Chemical Process Modeling, Dynamics, and Control	3
CHEMENG 110 Equilibrium Thermodynamics	3
CHEMENG 120A Fluid Mechanics	4
CHEMENG 120B Energy and Mass Transport	4
CHEMENG 170 Kinetics and Reactor Design	3
CHEMENG 185A Chemical Engineering Laboratory A	4
CHEM 171 Physical Chemistry I	3
CHEMENG 180 Chemical Engineering Plant Design	4
Select one of the following:	3
CHEMENG 140 Micro and Nanoscale Fabrication Engineering	
CHEMENG 142 Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations	
CHEMENG 160 Polymer Science and Engineering	
CHEMENG 162 Polymers for Clean Energy and Water	
CHEMENG 174 Environmental Microbiology I	
CHEMENG 181 Biochemistry I	
Total Units	34

### Civil Engineering (CE) Minor

The civil engineering minor is intended to give students a focused introduction to one or more areas of civil engineering. Departmental

expertise and undergraduate course offerings are available in the areas of Architectural Design, Construction Engineering and Management, and Structural and Geotechnical Engineering. Students interested in Environmental and Water Studies should refer to the Environmental Systems Engineering minor.

The minimum prerequisite for a civil engineering minor is MATH 42 Calculus (or MATH 21 Calculus); however, many courses of interest require PHYSICS 41 Mechanics and/or MATH 51 Linear Algebra and Differential Calculus of Several Variables as prerequisites. The minimum prerequisite for a Civil Engineering minor focusing on architectural design is MATH 41 Calculus (or MATH 19 Calculus) and a course in Statistics. Students should recognize that a minor in civil engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining a civil engineering minor, and the field itself is so broad, no single set of course requirements will be appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below. Additional information, including example minor programs, are provided on the CEE web site ([http://cee.stanford.edu/prospective/undergrad/minor\\_overview.html](http://cee.stanford.edu/prospective/undergrad/minor_overview.html)) and in Chapter 6 of the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

General guidelines are:

1. A civil engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each of letter-graded work, except where letter grades are not offered.
2. The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another. Example programs are given on the CEE webpage.

Professor Anne Kiremidjian ([kiremidjian@stanford.edu](mailto:kiremidjian@stanford.edu)) is the CEE undergraduate minor adviser in Structural Engineering and Construction Engineering and Management. John Barton ([jhbarton@stanford.edu](mailto:jhbarton@stanford.edu) (<http://www.stanford.edu/dept/registrar/bulletin/jhbarton@stanford.edu>)), Program Director for Architectural Design, is the undergraduate minor adviser in Architectural Design. Students must consult the appropriate adviser when developing their minor program, and obtain approval of the finalized study list from them.

### Computer Science (CS) Minor

The following core courses fulfill the minor requirements. Prerequisites include the standard mathematics sequence through MATH 51.

Introductory Programming (AP Credit may be used to fulfill this requirement):

CS 106B	Programming Abstractions	5
or CS 106X	Programming Abstractions (Accelerated)	

Core:

CS 103	Mathematical Foundations of Computing	5
CS 107	Computer Organization and Systems	5
or CS 107E	Computer Systems from the Ground Up	
CS 109	Introduction to Probability for Computer Scientists	5

Electives (choose two courses from different areas):

Artificial Intelligence—		
CS 124	From Languages to Information	4
CS 221	Artificial Intelligence: Principles and Techniques	4
CS 229	Machine Learning	3-4
Human-Computer Interaction—		
CS 147	Introduction to Human-Computer Interaction Design	4

Software—		
CS 108	Object-Oriented Systems Design	4
CS 110	Principles of Computer Systems	5
Systems—		
CS 140	Operating Systems and Systems Programming	4
CS 143	Compilers	4
CS 144	Introduction to Computer Networking	4
CS 145	Introduction to Databases	4
CS 148	Introduction to Computer Graphics and Imaging	4
Theory—		
CS 154	Introduction to Automata and Complexity Theory	4
CS 157	Logic and Automated Reasoning	3
CS 161	Design and Analysis of Algorithms	5

Note: for students with no programming background and who begin with CS 106A, the minor consists of seven courses.

### Electrical Engineering (EE) Minor

The options for completing a minor in EE are outlined below. Students must complete a minimum of 23-25 units, as follows:

	<b>Units</b>
Select one of the following courses:	5
EE 65	Modern Physics for Engineers
ENGR 40	Introductory Electronics
ENGR 40M	An Intro to Making: What is EE
Select one of the following options:	8
Option I:	
EE 101A	Circuits I
EE 101B	Circuits II
Option II:	
EE 102A	Signal Processing and Linear Systems I
EE 102B	Signal Processing and Linear Systems II
Option III:	
EE 108	Digital System Design
EE 180	Digital Systems Architecture

In addition, four letter-graded EE or Related courses at the 100-level or higher must be taken (12 units minimum). CS 107 is required as a prerequisite for EE 180, but can count as one of the four classes.

## Environmental Systems Engineering (EnvSE) Minor

The Environmental Systems Engineering minor is intended to give students a focused introduction to one or more areas of Environmental Systems Engineering. Departmental expertise and undergraduate course offerings are available in the areas of environmental engineering and science, environmental fluid mechanics and hydrology, and atmosphere/energy. The minimum prerequisite for an Environmental Systems Engineering minor is MATH 42 Calculus (or MATH 21 Calculus); however, many courses of interest require PHYSICS 41 Mechanics and/or MATH 51 Linear Algebra and Differential Calculus of Several Variables as prerequisites. Students should recognize that a minor in Environmental Systems Engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining an environmental systems engineering minor, no single set of course requirements is appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below. Additional information on preparing a minor program is available in the Undergraduate Engineering Handbook (<http://ughb.stanford.edu>).

General guidelines are—

- An Environmental Systems Engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each of letter-graded work, except where letter grades are not offered.
- The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another. Example programs are available on the CEE web site ([http://cee.stanford.edu/prospective/undergrad/minor\\_overview.html](http://cee.stanford.edu/prospective/undergrad/minor_overview.html)).

Professor Lynn Hildemann ([hildemann@stanford.edu](mailto:hildemann@stanford.edu)) is the CEE undergraduate minor adviser in Environmental Systems Engineering. Students must consult with Professor Hildemann in developing their minor program, and obtain approval of the finalized study list from her.

### Management Science and Engineering (MS&E) Minor

The following courses are required to fulfill the minor requirements:

	Units
<b>Background requirements (two courses)</b>	
CME 100 Vector Calculus for Engineers	5
or MATH 51 Linear Algebra and Differential Calculus of Several Variables	
CS 106A Programming Methodology	5
<b>Minor requirements (seven courses, letter-graded)</b>	
MS&E 111 Introduction to Optimization	4
MS&E 120 Probabilistic Analysis	5
MS&E 121 Introduction to Stochastic Modeling	4
MS&E 125 Introduction to Applied Statistics	4
MS&E 180 Organizations: Theory and Management	4
Electives (select any two 100- or 200-level MS&E courses)	6
<b>Recommended courses</b>	
In addition to the required background and minor courses, it is recommended that students also take the following courses.	
ECON 50 Economic Analysis I	5
MS&E 140 Accounting for Managers and Entrepreneurs (may be used as one of the required electives above)	2-4
or MS&E 140X Financial Accounting Concepts and Analysis	

### Materials Science and Engineering (MATSCI) Minor

A minor in Materials Science and Engineering allows interested students to explore the role of materials in modern technology and to gain an understanding of the fundamental processes that govern materials behavior.

The following courses fulfill the minor requirements:

	Units
<b>Engineering Fundamentals</b>	
Select one of the following:	4
ENGR 50 Introduction to Materials Science, Nanotechnology Emphasis	
ENGR 50E Introduction to Materials Science, Energy Emphasis	
ENGR 50M Introduction to Materials Science, Biomaterials Emphasis	
<b>Materials Science Fundamentals and Engineering Depth</b>	
Select six of the following:	24
MATSCI 151 Microstructure and Mechanical Properties	
MATSCI 152 Electronic Materials Engineering	
MATSCI 153 Nanostructure and Characterization	

MATSCI 154	Thermodynamic Evaluation of Green Energy Technologies	
MATSCI 155	Nanomaterials Synthesis	
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	
MATSCI 157	Quantum Mechanics of Nanoscale Materials	
MATSCI 160	Nanomaterials Laboratory	
MATSCI 161	Nanocharacterization Laboratory	
MATSCI 162	X-Ray Diffraction Laboratory	
MATSCI 163	Mechanical Behavior Laboratory	
MATSCI 164	Electronic and Photonic Materials and Devices Laboratory	
MATSCI 165	Nanoscale Materials Physics Computation Laboratory	
MATSCI 190	Organic and Biological Materials	
MATSCI 192	Materials Chemistry	
MATSCI 193	Atomic Arrangements in Solids	
MATSCI 194	Thermodynamics and Phase Equilibria	
MATSCI 195	Waves and Diffraction in Solids	
MATSCI 196	Defects in Crystalline Solids	
MATSCI 197	Rate Processes in Materials	
MATSCI 198	Mechanical Properties of Materials	
MATSCI 199	Electronic and Optical Properties of Solids	
Total Units		28

### Mechanical Engineering (ME) Minor

The following courses fulfill the minor requirements:

	Units
<b>General Minor *</b>	
ENGR 14 Intro to Solid Mechanics	4
ENGR 15 Dynamics	4
ENGR 30 Engineering Thermodynamics	3
ME 70 Introductory Fluids Engineering	4
ME 101 Visual Thinking	4
Plus two of the following:	8-9
ME 80 Mechanics of Materials	
ME 131A Heat Transfer	
ME 161 Dynamic Systems, Vibrations and Control	
ME 203 Design and Manufacturing	
<b>Thermosciences Minor **</b>	
ENGR 14 Intro to Solid Mechanics	4
ENGR 30 Engineering Thermodynamics	3
ME 70 Introductory Fluids Engineering	4
ME 131A Heat Transfer	5
ME 131B Fluid Mechanics: Compressible Flow and Turbomachinery	4
ME 140 Advanced Thermal Systems	5
<b>Mechanical Design Minor ***</b>	
ENGR 14 Intro to Solid Mechanics	4
ENGR 15 Dynamics	4
ME 80 Mechanics of Materials	4
ME 101 Visual Thinking	4
ME 112 Mechanical Systems Design	4
ME 203 Design and Manufacturing	4
Plus one of the following:	3-4
ME 113 Mechanical Engineering Design	

ME 210	Introduction to Mechatronics
ME 220	Introduction to Sensors
Total Units	

79-81

- \* This minor aims to expose students to the breadth of ME in terms of topics and analytic and design activities. Prerequisites: MATH 41 Calculus, MATH 42 Calculus, and PHYSICS 41 Mechanics.
- \*\* Prerequisites: MATH 41 Calculus, MATH 42 Calculus, MATH 51 Linear Algebra and Differential Calculus of Several Variables (or CME 100 Vector Calculus for Engineers) and PHYSICS 41 Mechanics.
- \*\*\* This minor aims to expose students to design activities supported by analysis. Prerequisites: MATH 41 Calculus, PHYSICS 42 Classical Mechanics Laboratory, and PHYSICS 41 Mechanics.

## Master of Science in the School of Engineering

The M.S. degree is conferred on graduate students in engineering according to the University regulations stated in the "Graduate Degrees (p. 45)" section of this bulletin, and is described in the various department listings. A minimum of 45 units is usually required in M.S. programs in the School of Engineering. The presentation of a thesis is not a school requirement. Further information is found in departmental listings.

## Master of Science in Engineering

The M.S. in Engineering is available to students who wish to follow an interdisciplinary program of study that does not conform to a normal graduate program in a department. There are three school requirements for the M.S. degree in Engineering:

1. The student's program must be a coherent one with a well-defined objective and must be approved by a department within the school which has experience with graduate-level teaching and advising in the program area.
2. The student's program must include at least 21 units of courses within the School of Engineering with catalog numbers of 200 or above in which the student receives letter grades.
3. The program must include a total of at least 45 units.

Each student's program is administered by the particular department in which it is lodged and must meet the standard of quality of that department. Transfer into this program is possible from any graduate program by application through the appropriate department; the department then recommends approval to the Office of Student Affairs in the School of Engineering. The application should be submitted before completing 18 units of the proposed program; it should include a statement describing the objectives of the program, the coherence of the proposed course work, and why this course of study cannot conform to existing graduate programs. Normally, it would include the approval of at least one faculty member willing to serve as adviser. (A co-advising team may be appropriate for interdisciplinary programs.) The actual transfer is accomplished through the Graduate Authorization Petition process.

The M.S. in Engineering is rarely pursued as a coterminal program, and potential coterminals are encouraged to explore the range of master's options in the departments and interdisciplinary programs. In the unusual circumstance of a coterminal application to the M.S. in Engineering, the application process should be the same as described above, using either the Graduate Authorization Petition in Axess (for coterminal students who want to transfer between MS programs) or the the Application for Admission to Coterminal Masters' Program (<http://registrar.stanford.edu/pdf/CotermApplic.pdf>) (for students who have not yet been admitted to a master's program). The policy for transferring courses taken as an undergraduate prior to coterm admission to the M.S. in Engineering corresponds to the policy of the particular department in which the student's program is lodged and administered. A clear statement of the

department's coterminal policy, and how it applies to the applicant within the Master of Science in Engineering program, should be added to the application materials.

## Honors Cooperative Program

Industrial firms, government laboratories, and other organizations may participate in the Honors Cooperative Program (HCP), a program that permits qualified engineers, scientists, and technology professionals admitted to Stanford graduate degree programs to register for Stanford courses and obtain the degree on a part-time basis. In many areas of concentration, the master's degree can be obtained entirely online.

Through this program, many graduate courses offered by the School of Engineering on campus are made available through the Stanford Center for Professional Development (SCPD). SCPD delivers more than 250 courses a year online. For HCP employees who are not part of a graduate degree program at Stanford, courses and certificates are also available through a non-degree option (NDO) and a non-credit professional education program. Non-credit short courses may be customized to meet a company's needs. For a full description of educational services provided by SCPD, see <http://scpd.stanford.edu>; call (650) 725-3000; fax (650) 725-2868; or email [scpd-registration@stanford.edu](mailto:scpd-registration@stanford.edu).

## Engineer Degree in the School of Engineering

The degree of Engineer is intended for students who want additional graduate training beyond that offered in an M.S. program. The program of study must satisfy the student's department and must include at least 90 units beyond the B.S. degree. The presentation of a thesis is required. The University regulations for the Engineer degree are stated in the "Graduate Degrees (p. 45)" section of this bulletin, and further information is available in the individual departmental sections of this bulletin.

## Doctor of Philosophy in the School of Engineering

Programs leading to the Ph.D. degree are offered in each of the departments of the school. University regulations for the Ph.D. are given in the "Graduate Degrees (p. 45)" section of this bulletin. Further information is found in departmental listings.

*Dean:* Persis Drell

*Senior Associate Deans:* Laura L. Breyfogle (External Relations), Scott Calvert (Administration), Bernd Girod (Senior Associate Dean at Large), Thomas Kenny (Student Affairs), Jennifer Widom (Faculty and Academic Affairs)

*Associate Dean:* Noé P. Lozano (Diversity Programs)

*Assistant Dean:* Sally Gressens (Graduate Student Affairs)

## Faculty Teaching General Engineering Courses

*Professors:* Chris Edwards, Mark Horowitz, Chaitan Khosla, Sanjay Lall, Parviz Moin, Eric Roberts, Stephen M. Rock, Sheri Sheppard, Robert Sinclair, James Swartz, Hai Wang, Bernard Roth

*Associate Professors:* : Drew Endy, Sarah Heilshorn, Jan Liphardt, Nick Melosh, Allison Okamura, Amin Saberi, Thomas Jaramillo, Xiaolin Zheng

*Assistant Professors:* Chuck Eesley, W. Matthias Ihme, Sindy Tang

*Professors (Teaching):* Thomas H. Byers, Robert McGinn, Eric Roberts, Mehran Sahami

Senior Lecturers: Vadim Khayms

Lecturers: Jeff Epstein, Larry Lagerstrom, Cynthia Bailey Lee, Keith Schwarz, Marty Stepp, Jeremy Utlej

Other Teaching: Steve Blank

## Overseas Studies Courses in Engineering

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPPER 50M	Introductory Science of Materials	4
OSPFLOR 50M	Introductory Science of Materials	4
OSPPARIS 40P	Introductory Electronics	5
OSPPARIS 50M	Introductory Science of Materials	4

## Aeronautics and Astronautics

Courses offered by the Department of Aeronautics and Astronautics are listed under the subject code AA on the (<https://explorecourses.stanford.edu/search?filter-term-Autumn=on&filter-catalognumber-AA=on&filter-term-Summer=on&page=0&q=AA&filter-coursestatus-Active=on&view=catalog&filter-term-Spring=on&collapse=&filter-term-Winter=on&catalog=71>) Stanford Bulletin's ExploreCourses web site.

The Department of Aeronautics and Astronautics prepares students for professional positions in industry, government, and academia by offering a comprehensive program of graduate teaching and research. In this broad program, students have the opportunity to learn and integrate multiple engineering disciplines. The program emphasizes structural, aerodynamic, guidance and control, and propulsion problems of aircraft and spacecraft. Courses in the teaching program lead to the degrees of Master of Science, Engineer, and Doctor of Philosophy. Undergraduates and doctoral students in other departments may also elect a minor in Aeronautics and Astronautics.

Requirements for all degrees include courses on basic topics in Aeronautics and Astronautics, as well as in mathematics, and related fields in engineering and the sciences.

The current research and teaching activities cover a number of advanced fields, with emphasis on:

- Aeroelasticity and Flow Simulation
- Aircraft Design, Performance, and Control
- Applied Aerodynamics
- Autonomy
- Computational Aero-Acoustics
- Computational Fluid Dynamics
- Computational Mechanics and Dynamical Systems
- Control of Robots, including Space and Deep-Underwater Robots
- Conventional and Composite Materials and Structures
- Decision Making under Uncertainty
- Direct and Large-Eddy Simulation of Turbulence

- High-Lift Aerodynamics
- Hybrid Propulsion
- Hypersonic and Supersonic Flow
- Micro and Nano Systems and Materials
- Multidisciplinary Design Optimization
- Navigation Systems (especially GPS)
- Optimal Control, Estimation, System Identification
- Sensors for Harsh Environments
- Space Debris Characterization
- Space Environment Effects on Spacecraft
- Space Plasmas
- Spacecraft Design and Satellite Engineering
- Turbulent Flow and Combustion

## Mission of the Undergraduate Program in Aeronautics and Astronautics

The mission of the undergraduate program in Aeronautics and Astronautics Engineering is to provide students with the fundamental principles and techniques necessary for success and leadership in the conception, design, implementation, and operation of aerospace and related engineering systems. Courses in the major introduce students to engineering principles. Students learn to apply this fundamental knowledge to conduct laboratory experiments and aerospace system design problems. Courses in the major include engineering fundamentals, mathematics, and the sciences, as well as in-depth courses in aeronautics and astronautics, dynamics, mechanics of materials, fluids engineering, and heat transfer. The major prepares students for careers in aircraft and spacecraft engineering, space exploration, air and space-based telecommunication industries, teaching, research, military service, and many related technology-intensive fields.

## Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work which provides a solid grounding in the basic disciplines, including fluid mechanics, dynamics and control, propulsion, structural mechanics, and applied or computational mathematics, and course work or supervised research which provides depth and breadth in the student's area of specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Aeronautics and Astronautics and related fields.

## Graduate Programs in Aeronautics and Astronautics

### Admission

To be eligible to apply for admission to the department, a student must have a bachelor's degree in engineering, physical science, mathematics, or an acceptable equivalent. Students who have not yet received a master's degree in a closely allied discipline will be admitted to the master's program; eligibility for the Ph.D. program is considered after the master's year (see "Doctor of Philosophy"). Applications for admission with financial aid (fellowships or assistantships) or without financial aid must be received and completed by December 1 for the next Autumn Quarter.

Information about admission to the Honors Cooperative Program is included in the "School of Engineering" section of this bulletin. The department may consider HCP applications for Winter or Spring quarters

as well as for Autumn Quarter; prospective applicants should contact the department's student services office.

Further information and application forms for all graduate degree programs may be obtained from Graduate Admissions, the Registrar's Office, <http://gradadmissions.stanford.edu>.

### Waivers and Transfer Credits

Waivers of the Basic Courses required for the M.S. degree in Aeronautics and Astronautics can only be granted by the instructor of that course. Students who believe that they have had a substantially equivalent course at another institution should consult with the course instructor to determine if they are eligible for a waiver, and with their adviser to judge the effect on their overall program plans. To request a waiver, students should fill out a Petition for Waiver form (reverse side of the department's program proposal) and have it approved by the instructor and their adviser. One additional technical elective must be added for each Basic Course that is waived.

A similar procedure should be followed for transfer credits. The number of transfer credits allowed for each degree (Engineer and Ph.D.) is delineated in the "Graduate Degrees" section of this bulletin; transfer credit is not accepted for the M.S. degree. Transfer credit is allowed only for courses taken as a graduate student, after receiving a bachelor's degree, in which equivalence to Stanford courses is established and for which a grade of 'B' or better has been awarded. Transfer credits, if approved, reduce the total number of Stanford units required for a degree.

### Fellowships and Assistantships

Fellowships and course or research assistantships are available to qualified graduate students. Fellowships sponsored by Gift Funds, Stanford University, and Industrial Affiliates of Stanford University in Aeronautics and Astronautics provide grants to several first-year students for the nine-month academic year to cover tuition and living expenses. Stanford Graduate Fellowships, sponsored by the University, provide grants for three full years of study and research; each year, the department is invited to nominate several outstanding doctoral or predoctoral students for these prestigious awards. Students who have excelled in their master's-level course work at Stanford are eligible for course assistantships in the department; those who have demonstrated research capability are eligible for research assistantships from individual faculty members. Students may also hold assistantships in other departments if the work is related to their academic progress; the criteria for selecting course or research assistants are determined by each hiring department. A standard, 20 hours/week course or research assistantship provides a semi-monthly salary and an 8-10 unit tuition grant per quarter. Research assistants may be given the opportunity of additional summer employment. They may use their work as the basis for a dissertation or Engineer's thesis.

### Aeronautics and Astronautics Facilities

The work of the department is centered in the William F. Durand Building for Space Engineering and Science. This 120,000 square foot building houses advanced research and teaching facilities and concentrates in one complex the Department of Aeronautics and Astronautics. The Durand Building also houses faculty and staff offices and several conference rooms.

Through the department's close relations with nearby NASA-Ames Research Center, students and faculty have access to one of the best and most extensive collections of experimental aeronautical research facilities in the world, as well as the latest generation of supercomputers.

## General Information

Further information about the facilities and programs of the department is available at <http://aa.stanford.edu>, or from the department's student services office.

The department has a student branch of the American Institute of Aeronautics and Astronautics, which sponsors programs and speakers covering aerospace topics and social events. It also conducts visits to nearby research, government, and industrial facilities, and sponsors a Young Astronauts Program in the local schools.

## Bachelor of Science in Engineering (Aeronautics and Astronautics)

Although primarily a graduate-level department, the program offers an undergraduate major in Aeronautics and Astronautics (AA) leading to the B.S. degree in Engineering. For further information, see the *Handbook for Undergraduate Engineering Programs* at <http://ughb.stanford.edu>.

Undergraduates interested in aerospace are encouraged to combine either a minor or a coterminal M.S. in Aeronautics and Astronautics with a major in a related discipline (such as Mechanical or Electrical Engineering). Students considering these options are encouraged to contact the department's student services office.

## Aeronautics and Astronautics (AA)

### Mission of the Undergraduate Program in Aeronautics and Astronautics

The mission of the undergraduate program in Aeronautics and Astronautics Engineering is to provide students with the fundamental principles and techniques necessary for success and leadership in the conception, design, implementation, and operation of aerospace and related engineering systems. Courses in the major introduce students to engineering principles. Students learn to apply this fundamental knowledge to conduct laboratory experiments and aerospace system design problems. Courses in the major include engineering fundamentals, mathematics, and the sciences, as well as in-depth courses in aeronautics and astronautics, dynamics, mechanics of materials, fluids engineering, and heat transfer. The major prepares students for careers in aircraft and spacecraft engineering, space exploration, air and space-based telecommunication industries, teaching, research, military service, and many related technology-intensive fields.

Completion of the undergraduate program in Aeronautics and Astronautics leads to the conferral of the Bachelor of Science in Engineering. The subplan "Aeronautics and Astronautics" appears on the transcript and on the diploma.

### Requirements

		Units
<b>Mathematics</b>		
24 units minimum <sup>1</sup>		
MATH 41	Calculus (or AP Calculus)	5
MATH 42	Calculus (or AP Calculus)	5
CME 100/ ENGR 154	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
CME 102/ ENGR 155A	Ordinary Differential Equations for Engineers	5
or MATH 53	Ordinary Differential Equations with Linear Algebra	
CME 106/ ENGR 155C	Introduction to Probability and Statistics for Engineers (or STATS 110, STATS 116, CS 109)	4-5

- or STATS 110 Statistical Methods in Engineering and the Physical Sciences
- or STATS 116 Theory of Probability
- or CS 109 Introduction to Probability for Computer Scientists

Science		
19 units minimum		
PHYSICS 41	Mechanics (or AP Physics)	4
PHYSICS 43	Electricity and Magnetism (or AP Physics)	4
PHYSICS 45	Light and Heat	4
CHEM 31X	Chemical Principles Accelerated ( or CHEM 31A+B, AP Chemistry)	5
Science elective <sup>2</sup>		3-5
Technology in Society (one course required)		
3 units minimum <sup>3</sup>		
Engineering Fundamentals (three courses required)		
11 units minimum		
ENGR 30	Engineering Thermodynamics	3
ENGR 70A	Programming Methodology	5
Fundamentals Elective <sup>4</sup>		3-5
Engineering Depth		
28 units minimum		
AA 100	Introduction to Aeronautics and Astronautics	3
AA 190	Directed Research and Writing in Aero/Astro	3-5
ME 70	Introductory Fluids Engineering	4
ENGR 14	Intro to Solid Mechanics	4
ME 131A	Heat Transfer	3
ENGR 15	Dynamics	4
ME 161	Dynamic Systems, Vibrations and Control	3-4
or PHYSICS 11	Advanced Mechanics	
CEE 101A	Mechanics of Materials	4
or ME 80	Mechanics of Materials	
Aero/Astro Depth		
18 units minimum		
Engineering Electives (two courses required) <sup>5</sup>		6-10
See Course List AA-1 below for a list of options		
Depth Area I (two courses required) <sup>6</sup>		6-10
See Course List AA-2 below for a list of options		
Depth Area II (two courses required) <sup>6</sup>		6-10
See Course List AA-2 below for a list of options		
Total Units		104-126

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

<sup>1</sup> It is recommended that the CME series (100, 102, 104) be taken rather than the MATH series (51, 52, 53). If students take the MATH series, it is recommended to take MATH 51M Introduction to MATLAB for Multivariable Mathematics, offered Autumn Quarter.

<sup>2</sup> Courses that satisfy the Science elective are listed in Figure 3-2 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>.

<sup>3</sup> Courses that satisfy the Technology in Society Requirement are listed in Figure 3-3 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>.

<sup>4</sup> Courses that satisfy the Engineering Fundamentals elective are listed in Figure 3-4 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>. ENGR 70B or X (same as CS 106B or X) is not allowed to fulfill the third fundamentals requirement.

<sup>5</sup> Courses that satisfy the Engineering Electives are listed in Figure AA-1 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>, as well as Course List AA-1 below.

<sup>6</sup> Courses that satisfy the Depth Area choices are listed in Figure AA-2 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>, as well as Course List AA-2 below.

AA-1. Engineering Electives: Two Courses Required			Units
AA 250	Nanomaterials for Aerospace		3
ENGR 240	Introduction to Micro and Nano Electromechanical Systems		3
ME 210	Introduction to Mechatronics		4
ME 220	Introduction to Sensors		3-4
ME 227	Vehicle Dynamics and Control		3
ME 250	Internal Combustion Engines		3-5
ME 257	Turbine and Internal Combustion Engines		3
ME 260	Fuel Cell Science and Technology		3
ME 324	Precision Engineering		4
ME 331A	Advanced Dynamics & Computation		3
ME 331B	Advanced Dynamics, Simulation & Control		3
ME 345	Fatigue Design and Analysis		3
ME 348	Experimental Stress Analysis		3
ME 351A	Fluid Mechanics		3
ME 351B	Fluid Mechanics		3
CHEMENG 140	Micro and Nanoscale Fabrication Engineering		3
CS 107	Computer Organization and Systems		3-5
CS 110	Principles of Computer Systems		3-5
CS 140	Operating Systems and Systems Programming		3-4
CS 161	Design and Analysis of Algorithms		3-5
EE 102A	Signal Processing and Linear Systems I		4
EE 102B	Signal Processing and Linear Systems II		4
EE 101A	Circuits I		4
EE 101B	Circuits II		4
ENERGY 121	Fundamentals of Multiphase Flow		3
ENERGY 191	Optimization of Energy Systems		3-4

MATSCI 155	Nanomaterials Synthesis		4
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution		3-4
MATSCI 197	Rate Processes in Materials		3-4
MATSCI 198	Mechanical Properties of Materials		3-4
PHYSICS 100	Introduction to Observational Astrophysics		4
* It is recommended that students review prerequisites for all courses.			

AA-2. Depth Area: Four Courses Required, Two From Each of Two Areas			Units
Dynamics and Controls			
ENGR 105	Feedback Control Design		3
ENGR 205	Introduction to Control Design Techniques		3
AA 203	Introduction to Optimal Control and Dynamic Optimization		3
AA 222	Introduction to Multidisciplinary Design Optimization		3-4
AA 242A	Classical Dynamics		3
AA 271A	Dynamics and Control of Spacecraft and Aircraft Systems Design		3

AA 236A	Spacecraft Design	3-5
AA 236B	Spacecraft Design Laboratory	3-5
AA 241A	Introduction to Aircraft Design, Synthesis, and Analysis	3
AA 241B	Introduction to Aircraft Design, Synthesis, and Analysis	3
AA 284B	Propulsion System Design Laboratory	3
Fluids and CFD		
AA 200	Applied Aerodynamics	3
AA 201A	Fundamentals of Acoustics	3
AA 210A	Fundamentals of Compressible Flow	3
AA 214A/ CME 207	Numerical Methods in Engineering and Applied Sciences	3
AA 283	Aircraft and Rocket Propulsion	3
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	4
ME 140	Advanced Thermal Systems	5
Structures		
AA 240A	Analysis of Structures	3
AA 240B	Analysis of Structures	3
AA 256	Mechanics of Composites	3
AA 280	Smart Structures	3
ME 335A	Finite Element Analysis	3

\* It is recommended that students review prerequisites for all courses.

## Aeronautics and Astronautics (AA) Minor

The Aero/Astro minor introduces undergraduates to the key elements of modern aerospace systems. Within the minor, students may focus on aircraft, spacecraft, or disciplines relevant to both. The course requirements for the minor are described in detail below. Courses cannot be double-counted within a major and a minor, or within multiple minors; if necessary, the Aero/Astro adviser can help select substitute courses to fulfill the AA minor core.

The following core courses fulfill the minor requirements:

		Units
AA 100	Introduction to Aeronautics and Astronautics	3
ENGR 14	Intro to Solid Mechanics *	4
ENGR 15	Dynamics *	4
ENGR 30	Engineering Thermodynamics *	3
ME 70	Introductory Fluids Engineering	4
ME 131A	Heat Transfer	3

Two courses from one of the upper-division elective areas below (min. 6 units)

Plus one course from a second area below (min. 3 units) 9-14

### Aerospace Systems Synthesis/Design

AA 236A	Spacecraft Design
AA 236B	Spacecraft Design Laboratory
AA 241A	Introduction to Aircraft Design, Synthesis, and Analysis
AA 241B	Introduction to Aircraft Design, Synthesis, and Analysis
AA 284B	Propulsion System Design Laboratory

### Dynamics and Controls

ENGR 105	Feedback Control Design
ENGR 205	Introduction to Control Design Techniques
AA 203	Introduction to Optimal Control and Dynamic Optimization

AA 222	Introduction to Multidisciplinary Design Optimization
AA 242A	Classical Dynamics
AA 271A	Dynamics and Control of Spacecraft and Aircraft
<b>Fluids</b>	
AA 200	Applied Aerodynamics
AA 201A	Fundamentals of Acoustics
AA 210A	Fundamentals of Compressible Flow
AA 214A	Numerical Methods in Engineering and Applied Sciences
AA 283	Aircraft and Rocket Propulsion
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery
ME 140	Advanced Thermal Systems
<b>Structures</b>	
AA 240A	Analysis of Structures
AA 240B	Analysis of Structures
AA 256	Mechanics of Composites
AA 280	Smart Structures
ME 335A	Finite Element Analysis

Total Units 30-35

\* ENGR 14 Intro to Solid Mechanics, ENGR 15 Dynamics, or ENGR 30 Engineering Thermodynamics are waived as minor requirements if already taken as part of the major.

## Coterminal Master's Program in Aeronautics and Astronautics

This program allows Stanford undergraduates an opportunity to work simultaneously toward a B.S. in another field and an M.S. in Aeronautics and Astronautics. General requirements for this program and admissions procedures are described in the "School of Engineering" section of this bulletin. Admission is granted or denied through the departmental faculty Admissions and Awards Committee.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Master of Science in Aeronautics and Astronautics

The University's basic requirements for the master's degree are outlined in the "Graduate Degrees" section of this bulletin. Students with an aeronautical engineering background should be able to qualify for the master's degree in three quarters of work at Stanford. Students with a bachelor's degree in Physical Science, Mathematics, or other areas of Engineering may find it necessary to take certain prerequisite courses, which would lengthen the time required to obtain the master's degree. The following are departmental requirements.

### Grade Point Averages

A minimum grade point average (GPA) of 2.75 is required to fulfill the department's M.S. degree requirements; a minimum GPA of 3.5 is required for eligibility to attempt the Ph.D. qualifying examination. It is incumbent upon both M.S. and potential Ph.D. candidates to request letter grades in all courses except those that do not offer a letter grade option and those that fall into the categories of colloquia and seminars (for example, ENGR 298 Seminar in Fluid Mechanics). Insufficient grade points on which to base the GPA may delay expected degree conferral or result in refusal of permission to take the qualifying examinations.

### Course Requirements

The Master of Science (M.S.) program is a terminal degree program. It is based on the completion of lecture courses focused on a theme within the discipline of Aeronautics and Astronautics engineering. No thesis is required. No research is required.

The Master's degree program requires 45 quarter units of course work, which must be taken at Stanford. The course work is divided into four categories

- Basic Courses
- Mathematics Courses
- Technical Electives
- Other Electives

#### Basic Courses

M.S. candidates must select eight courses as follows:

(I) Five courses in the basic areas of Aeronautics and Astronautics (one in each area):

Fluids		
AA 200	Applied Aerodynamics	3
AA 210A	Fundamentals of Compressible Flow	3
Structures		
AA 240A	Analysis of Structures	3
Guidance and Control		
ENGR 105	Feedback Control Design	3
ENGR 205	Introduction to Control Design Techniques	3
Propulsion		
AA 283	Aircraft and Rocket Propulsion	3
Experimentation/Design Requirements (see courses under Related Courses tab above)		

(II) Three courses (one each from three of the four areas below)

Fluids		
AA 200	Applied Aerodynamics	3
AA 210A	Fundamentals of Compressible Flow	3
AA 244A	Introduction to Plasma Physics and Engineering	3
Structures		
AA 240B	Analysis of Structures	3

AA 242B	Mechanical Vibrations	3
AA 256	Mechanics of Composites	3
AA 280	Smart Structures	3
Guidance and Control		
AA 242A	Classical Dynamics	3
AA 242B	Mechanical Vibrations	3
AA 251	Introduction to the Space Environment	3
AA 271A	Dynamics and Control of Spacecraft and Aircraft	3
AA 272C	Global Positioning Systems	3
AA 279A	Space Mechanics	3
One course selected from AA courses numbered 200 and above, excluding seminars and independent research		

Candidates who believe they have satisfied a basic course requirement in previous study may request a waiver of one or more courses (see "Waivers and Transfer Credits" in the "Graduate Programs in Aeronautics and Astronautics" section of this bulletin).

#### Mathematics Courses

M.S. candidates are expected to exhibit competence in applied mathematics. Students meet this requirement by taking a minimum of 6 units of either advanced mathematics offered by the Mathematics Department or technical electives that strongly emphasize applied mathematics. Common choices include:

AA 214A Numerical Methods in Engineering and Applied Sciences

AA 214B Numerical Methods for Compressible Flows

AA 214C Numerical Computation of Viscous Flow

AA 215A Advanced Computational Fluid Dynamics

AA 215B Advanced Computational Fluid Dynamics

AA 218 Introduction to Symmetry Analysis

AA 222 Introduction to Multidisciplinary Design Optimization

See the list of mathematics courses under Related Courses tab above for additional suggestions. All courses in the Mathematics Department numbered 200 or above are also included as suggestions.

#### Units

#### Technical Electives

Students, in consultation with their advisers, select at least four courses (totaling at least 12 units) from among the graduate-level courses offered by departments of the School of Engineering and related science departments. Normally, one course (3 units) may be directed research.

#### Other Electives

It is recommended that all candidates enroll in a humanities or social sciences course to complete the 45-unit requirement. Practicing courses in, for example, art, music, and physical education do not qualify in this category. Language courses may qualify.

## Master of Science in Engineering (AA)

Students whose career objectives require a more interdepartmental or narrowly focused program than is possible in the M.S. program in Aeronautics and Astronautics (AA) may pursue a program for an M.S. degree in Engineering (45 units). This program is described in the "Graduate Programs in the School of Engineering" section of this bulletin.

Sponsorship by the Department of Aeronautics and Astronautics in this more general program requires that the student file a proposal before completing 18 units of the proposed graduate program. The proposal must be accompanied by a statement explaining the objectives of the program and how the program is coherent, contains depth, and fulfills

a well-defined career objective. The proposed program must include at least 12 units of graduate-level work in the department and meet rigorous standards of technical breadth and depth comparable to the regular AA Master of Science program. The grade and unit requirements are the same as for the M.S. degree in Aeronautics and Astronautics.

## Engineer in Aeronautics and Astronautics

The degree of Engineer represents an additional year (or more) of study beyond the M.S. degree and includes a research thesis. The program is designed for students who wish to do professional engineering work upon graduation and who want to engage in more specialized study than is afforded by the master's degree alone. It is expected that full-time students will be able to complete the degree within two years of study after the master's degree.

The University's basic requirements for the degree of Engineer are outlined in the "Graduate Degrees" section of this bulletin. The following are department requirements.

The candidate's prior study program should have fulfilled the department's requirements for the master's degree or a substantial equivalent. Beyond the master's degree, a total of 45 units of work is required, including a thesis and a minimum of 30 units of courses chosen as follows:

1. 24 units of approved technical electives, of which 9 are in mathematics or applied mathematics. See the list of mathematics courses under Related Courses tab above. All courses in the Mathematics Department numbered 200 or above are included. The remaining 15 units are chosen in consultation with the adviser, and represent a coherent field of study related to the thesis topic. Suggested fields include: (a) acoustics, (b) aerospace structures, (c) aerospace systems synthesis and design, (d) analytical and experimental methods in solid and fluid mechanics, (e) computational fluid dynamics, and (f) guidance and control.
2. 6 units of free electives.
3. The remaining 15 units may be thesis, research, technical courses, or free electives.

Candidates for the degree of Engineer are expected to have a minimum grade point average (GPA) of 3.0 for work in courses beyond those required for the master's degree. All courses except seminars and directed research should be taken for a letter grade.

## Doctor of Philosophy in Aeronautics and Astronautics

The University's basic requirements for the Ph.D. degree are outlined in the "Graduate Degrees (p. 45)" section of this bulletin. Department requirements are stated below.

Before beginning dissertation research for the Ph.D. degree, a student must pass the departmental Qualifying Examination. A student must meet the following conditions by the appropriate deadline to be able to take the Qualifying Examination:

1. 30 units of Master's coursework completed in our department. A student who has completed fewer than 30 units may petition to take Qualls.
2. Stanford graduate GPA of 3.5 or higher.
3. Investigation of a research problem, under the direction of a faculty member who will evaluate this work as evidence of the potential for doctoral research. The minimum requirement for taking Qualls is to complete 3 units of AA 290 before the Qualls quarter.

Additional information about the deadlines, nature, and scope of the Ph.D. qualifying examination can be obtained from the department. After

passing the exam, the student must submit an approved program of Ph.D. course work on an Application for Candidacy for Doctoral Degree to the department's student services office.

## Course Requirements

Each individual Ph.D. program in Aeronautics and Astronautics, designed by the student in consultation with the adviser, should represent a strong and cohesive program reflecting the student's major field of interest. A total of 90 units of work is required beyond the master's degree, including a minimum of 36 units of approved formal course work (excluding research, directed study, and seminars). The courses should consist primarily of graduate courses in engineering and related sciences. The remainder of the 90 units may be in the form of either Ph.D. dissertation units or free electives. For students who elect a minor in another department, a maximum of 12 units from the minor program may be included in the 36 units of formal course work; the remaining minor units may be considered free electives and are included in the 90 unit total required for the AA Ph.D. degree.

Ph.D. students in Aeronautics and Astronautics must take 12 units of mathematics courses, with at least 6 of these units from courses with numbers over 200. The AA department and other engineering departments offer many courses that have sufficient mathematical content that they may be used to satisfy the mathematics requirement. See the list of mathematics courses under Related Courses tab above for suggestions. Others may be acceptable if approved by the adviser and the AA Student Services Office. University requirements for continuous registration apply to doctoral students for the duration of the degree.

## Grade Point Average

A minimum grade point average (GPA) of 3.0 is required to fulfill the department's Ph.D. It is incumbent upon Ph.D. students to request letter grades in all courses listed on the Application for Candidacy form.

## Candidacy

Ph.D. students must complete the candidacy process and be admitted to candidacy by their second year of doctoral study. There are two requirements for admission to Ph.D. candidacy in Aeronautics and Astronautics: students must first pass the departmental qualifying exam and must then submit an application for candidacy. The candidacy form lists the courses the student will take to fulfill the requirements for the degree. The form must include the 90 non-MS units required for the Ph.D.; it should be signed by the adviser and submitted to the AA Student Services Office for the candidacy chairman's signature. AA has a department-specific candidacy form, which may be obtained in the AA student services office. Candidacy is valid for five years; this term is not affected by leaves of absence.

## Dissertation Reading Committee

Each Ph.D. candidate is required to establish a reading committee for the doctoral dissertation within six months after passing the department's Ph.D. qualifying exam. Thereafter, the student should consult frequently with all members of the committee about the direction and progress of the dissertation research.

A dissertation reading committee consists of the principal dissertation adviser and at least two other readers. If the principal adviser is emeritus, there should be a non-emeritus co-adviser. Reading committees in Aeronautics and Astronautics often include faculty from another department. It is expected that at least two members of the AA faculty be on each reading committee. If the principal research adviser is not within the AA department, then the student's AA academic adviser should be one of those members. The initial committee, and any subsequent changes, must be approved by the department Chair.

Although all readers are usually members of the Stanford Academic Council, the department Chair may approve one non-Academic Council

reader if the person brings unusual and necessary expertise to the dissertation research. Generally, this non-Academic Council reader will be a fourth reader, in addition to three Academic Council members.

## University Oral and Dissertation

The Ph.D. candidate is required to take the University oral examination after the dissertation is substantially completed (with the dissertation draft in writing), but before final approval. The examination consists of a public presentation of dissertation research, followed by substantive private questioning on the dissertation and related fields by the University oral committee (four faculty examiners, plus a chairman). The examiners usually include the three members on the student's Ph.D. reading committee. The chairman must not be in the same department as the student or the adviser. Once the oral has been passed, the student finalizes the dissertation for reading committee review and final approval. Forms for the University oral scheduling and a one-page dissertation abstract should be submitted to the AA Student Services Office at least three weeks prior to the date of the oral for departmental review and approval. Students must be enrolled during the quarter when they take their University oral. If the oral takes place during the vacation time between quarters, the student must be enrolled in the prior quarter.

## Ph.D. Minor in Aeronautics and Astronautics

A student who wishes to obtain a Ph.D. minor in Aeronautics and Astronautics should consult the department office for designation of a minor adviser. A minor in Aeronautics and Astronautics may be obtained by completing 20 units of graduate-level courses in the Department of Aeronautics and Astronautics, following a program (and performance) approved by the department's candidacy chair.

The student's Ph.D. reading committee and University oral committee must each include at least one faculty member from Aeronautics and Astronautics.

*Emeriti: (Professors)* Arthur E. Bryson, Robert H. Cannon, Richard Christensen\*, Daniel B. DeBra, Robert W. MacCormack, Bradford W. Parkinson\*, J. David Powell, George S. Springer, Charles R. Steele, Stephen W. Tsai\*, Walter G. Vincenti

*Chair:* Charbel Farhat

*Professors:* Juan Alonso, Brian J. Cantwell, Fu-Kuo Chang, Per Enge, Charbel Farhat, Ilan Kroo, Sanjay Lall, Sanjiva Lele, Stephen Rock

*Research Professors:* Antony Jameson

*Assistant Professors:* Sigrid Close, Simone D'Amico, Mykel Kochenderfer, Marco Pavone, Debbie Senesky, Mac Schwager

*Courtesy Professors:* J. Christian Gerdes, Ronald K. Hanson, Lambertus Hesselink

*Consulting Professors:* G. Scott Hubbard, Heinz Erzberger

*Consulting Assistant Professors:* Andrew Barrows, Andrew Kalman, Frank Van Diggelen

\* Recalled to active duty.

## Experimentation/Design Requirements Courses

The following courses satisfy the master's Experimentation/Design Requirements.

AA 236A      Spacecraft Design

AA 241X	Design, Construction, and Testing of Autonomous Aircraft	3
AA 284B	Propulsion System Design Laboratory	3
CS 225A	Experimental Robotics	3
CS 402L	Beyond Bits and Atoms - Lab	1-3
EE 133	Analog Communications Design Laboratory	3-4
EE 233	Analog Communications Design Laboratory	3-4
EE 234	Photonics Laboratory	3
EE 410	Integrated Circuit Fabrication Laboratory	3-4
EE 412	Advanced Nanofabrication Laboratory	3
ENGR 206	Control System Design	3-4
ENGR 207A	Linear Control Systems I	3
ENGR 341	Micro/Nano Systems Design and Fabrication	3-5
MATSCI 160	Nanomaterials Laboratory	4
MATSCI 161	Nanocharacterization Laboratory	3-4
MATSCI 162	X-Ray Diffraction Laboratory	3-4
MATSCI 163	Mechanical Behavior Laboratory	3-4
MATSCI 164	Electronic and Photonic Materials and Devices Laboratory	3-4
MATSCI 171	Nanocharacterization Laboratory	3-4
MATSCI 172	X-Ray Diffraction Laboratory	3-4
MATSCI 173	Mechanical Behavior Laboratory	3-4
MATSCI 322	Transmission Electron Microscopy Laboratory	3
ME 210	Introduction to Mechatronics	4
ME 218A	Smart Product Design Fundamentals	4-5
ME 218B	Smart Product Design Applications	4-5
ME 218C	Smart Product Design Practice	4-5
ME 218D	Smart Product Design: Projects	3-4
ME 220	Introduction to Sensors	3-4
ME 310A	Product-Based Engineering Design, Innovation, and Development	4
ME 310B	Product-Based Engineering Design, Innovation, and Development	4
ME 310C	Project-Based Engineering Design, Innovation, and Development	4
ME 324	Precision Engineering	4
ME 348	Experimental Stress Analysis	3
ME 354	Experimental Methods in Fluid Mechanics	4
ME 367	Optical Diagnostics and Spectroscopy Laboratory	4
ME 385	Tissue Engineering Lab	1-2

## Mathematics Courses

Each Aero/Astro degree has a mathematics requirement, for which courses on the following list are pre-approved. (Other advanced courses may also be acceptable.) Students should consult with their advisers in selecting the most appropriate classes for their field. M.S. candidates select 2 courses; they may also use the mathematics courses listed as common choices in the master's degree course requirements. Engineers select 3 courses; Ph.D. candidates select 4 courses, with at least 6 units from courses numbered above 200.

		Units
AA 214B	Numerical Methods for Compressible Flows	3
AA 214C	Numerical Computation of Viscous Flow	3
AA 215A	Advanced Computational Fluid Dynamics	3
AA 215B	Advanced Computational Fluid Dynamics	3
AA 218	Introduction to Symmetry Analysis	3
AA 222	Introduction to Multidisciplinary Design Optimization	3-4

Units  
3-5

CEE 281	Mechanics and Finite Elements	3
CME 306	Numerical Solution of Partial Differential Equations	3
CME 326	Numerical Methods for Initial Boundary Value Problems	3
EE 261	The Fourier Transform and Its Applications	3
EE 263	Introduction to Linear Dynamical Systems	3
EE 264	Digital Signal Processing	3-4
EE 364A	Convex Optimization I	3
EE 364B	Convex Optimization II	3
ENGR 207B	Linear Control Systems II	3
ENGR 209A	Analysis and Control of Nonlinear Systems	3
MATH 113	Linear Algebra and Matrix Theory	3
MATH 115	Functions of a Real Variable	3
MATH 120	Groups and Rings	3
MATH 132	Partial Differential Equations II	3
ME 300A	Linear Algebra with Application to Engineering Computations	3
ME 300B	Partial Differential Equations in Engineering	3
ME 300C	Introduction to Numerical Methods for Engineering	3
ME 335A	Finite Element Analysis	3
ME 335B	Finite Element Analysis	3
ME 335C	Finite Element Analysis	3
ME 408	Spectral Methods in Computational Physics	3
ME 469	Computational Methods in Fluid Mechanics	3
ME 469B	Computational Methods in Fluid Mechanics	3
MS&E 201	Dynamic Systems	3-4
MS&E 211	Linear and Nonlinear Optimization	3-4
MS&E 311	Optimization	3
MS&E 312	Advanced Methods in Numerical Optimization	3
PHYSICS 211	Continuum Mechanics	3
STATS 110	Statistical Methods in Engineering and the Physical Sciences	4-5
STATS 116	Theory of Probability	3-5
STATS 217	Introduction to Stochastic Processes	2-3

## Bioengineering

Courses offered by the Department of Bioengineering are listed under the subject code BIOE (<https://explorecourses.stanford.edu/search?q=BIOE&view=catalog&page=0&academicYear=&collapse=&filter-coursestatus=Active=on&filter-departmentcode=BIOE=on&filter-catalognumber=BIOE=on>) on the *Stanford Bulletin's* ExploreCourses web site.

Bioengineering is jointly supported by the School of Engineering and the School of Medicine. The facilities and personnel of the Department of Bioengineering are housed in the Shriram Center, James H. Clark Center, the William F. Durand Building for Space Engineering and Science, the William M. Keck Science Building, the Jerry Yang and Akiko Yamazaki Environment and Energy Building, and the Richard M. Lucas Center for Magnetic Resonance Spectroscopy and Imaging. The departmental headquarters is in the Shriram Center for Bioengineering and Chemical Engineering.

Courses in the teaching program lead to the degrees of Bachelor of Science in Bioengineering, Master of Science and Doctor of Philosophy. The department collaborates in research and teaching programs with faculty members in Chemical Engineering, Mechanical Engineering, Electrical Engineering, and departments in the School of Medicine. Quantitative biology is the core science base of the department. The research and educational thrusts are in biomedical computation,

biomedical imaging, biomedical devices, regenerative medicine, and cell/molecular engineering. The clinical dimension of the department includes cardiovascular medicine, neuroscience, orthopedics, cancer care, neurology, and environment.

## Mission of the Undergraduate Program in Bioengineering

The Stanford Bioengineering (BioE) major enables students to combine engineering and the life sciences in ways that advance scientific quality, culture, education, and policy. Students who major in BioE earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.

The department offers an undergraduate major in Bioengineering (BioE) leading to the B.S. degree in Bioengineering.

## Learning Outcomes (Undergraduate)

The learning outcomes are used in evaluating students as well as the department's undergraduate program. The department expects undergraduate majors in the program to be able to demonstrate the ability to:

1. Apply the knowledge of mathematics, science, and engineering.
2. Design and conduct experiments, as well to analyze and interpret data.
3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. Function on multidisciplinary teams.
5. Identify, formulate, and solve engineering problems.
6. Understand professional and ethical responsibility.
7. Communicate effectively.
8. Understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. Demonstrate a working knowledge of contemporary issues.
10. Apply the techniques, skills, and modern engineering tools necessary for engineering practice.
11. Transition from engineering concepts and theory to real engineering applications.

## Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work with specialization in an area of the field, including biomedical computation, regenerative medicine and tissue engineering, molecular and cell bioengineering, biomedical imaging, and biomedical devices.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Bioengineering and related fields.

## Graduate Programs in Bioengineering

The University's requirements for the M.S. and Ph.D. degrees are outlined in the "Graduate Degrees (p. 45)" section of this bulletin.

## Admission

Students are expected to enter with a series of core competencies in mathematics, biology, chemistry, physics, computing, and engineering. Students entering the program are assessed by the examination of their undergraduate transcripts and research experiences. Specifically, the department requires that students have completed mathematics through multivariable calculus and differential equations, completed a series of undergraduate biology courses and completed physics, chemistry, and computer sciences courses required of all undergraduate majors in engineering.

Qualified applicants are encouraged to apply for predoctoral national competitive fellowships, especially those from the National Science Foundation. Applicants to the Ph.D. program should consult with their financial aid officers for information and applications.

The deadline for receiving applications is December 1, 2015.

Further information and application forms for all graduate degree programs may be obtained from Graduate Admissions, the Registrar's Office, <http://gradadmissions.stanford.edu>.

## Bachelor of Science in Engineering (Bioengineering)

The department offers an undergraduate major in Bioengineering (BioE) leading to the B.S. degree in Engineering. For additional information, see the *Handbook for Undergraduate Engineering Programs* at <http://ughb.stanford.edu>.

## Bioengineering (BioE)

Completion of the undergraduate program in Bioengineering leads to the conferral of the Bachelor of Science in Bioengineering.

### Mission of the Undergraduate Program in Bioengineering

The Stanford Bioengineering (BioE) major enables students to combine engineering and the life sciences in ways that advance scientific discovery, healthcare and medicine, manufacturing, environmental quality, culture, education, and policy. Students who major in BioE earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.

Students will complete engineering fundamentals courses, including an introduction to BioE and computer programming. A series of core BioE classes beginning in the second year leads to a student-selected depth area and a senior capstone design project. The department also organizes a summer Research Experience for Undergraduates (REU) program (<http://bioengineering.stanford.edu/education/REU.html>). BioE graduates are well prepared to pursue careers and lead projects in research, medicine, business, law, and policy.

### Requirements

#### Mathematics<sup>1</sup>

28 units minimum required, see Basic Requirement 1)

MATH 41	Calculus	10
& MATH 42	and Calculus (or AP Calculus)	

Select one of the following:

CME 100	Vector Calculus for Engineers (Recommended)	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	

Select one of the following:

CME 102	Ordinary Differential Equations for Engineers (Recommended)	5
---------	---	---

or MATH 53	Ordinary Differential Equations with Linear Algebra	
Select one of the following:		
CME 104	Linear Algebra and Partial Differential Equations for Engineers (Recommended)	5
or MATH 52	Integral Calculus of Several Variables	
CME 106	Introduction to Probability and Statistics for Engineers (Recommended)	3-5
or STATS 110	Statistical Methods in Engineering and the Physical Sciences	
or STATS 141	Biostatistics	
<b>Science<sup>2</sup></b>		
28 units minimum:		
CHEM 31X	Chemical Principles Accelerated	5-10
or CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	
CHEM 33	Structure and Reactivity	5
BIO 41	Genetics, Biochemistry, and Molecular Biology	5
BIO 42	Cell Biology and Animal Physiology	5
PHYSICS 41	Mechanics	4
PHYSICS 43	Electricity and Magnetism	4
<b>Technology in Society</b>		
One course required; see Basic Requirement 4		
BIOE 131	Ethics in Bioengineering <sup>(WIM)</sup>	3
<b>Engineering Fundamentals</b>		
ENGR 70A	Programming Methodology (same as CS 106A)	5
ENGR 80	Introduction to Bioengineering (Engineering Living Matter)	4
Fundamentals Elective; see UGHB Fig. 3-4 for approved course list; may not use ENGR 70B or ENGR 70X		
<b>Bioengineering Core</b>		
BIOE 41	Physical Biology of Macromolecules	4
BIOE 42	Physical Biology of Cells	4
BIOE 44	Fundamentals for Engineering Biology Lab	4
BIOE 51	Anatomy for Bioengineers	4
BIOE 101	Systems Biology	3
BIOE 103	Systems Physiology and Design	4
BIOE 123	Biomedical System Prototyping Lab	4
BIOE 141A	Senior Capstone Design I	4
BIOE 141B	Senior Capstone Design II	4
<b>Bioengineering Depth Electives</b>		
Four courses, minimum 12 units:		
BIOE 115	Computational Modeling of Microbial Communities	
BIOE 122	Biosecurity and Bioterrorism Response	
BIOE 201C	Diagnostic Devices Lab	
BIOE 211	Biophysics of Multi-cellular Systems and Amorphous Computing	
BIOE 212	Introduction to Biomedical Informatics Research Methodology	
BIOE 214	Representations and Algorithms for Computational Molecular Biology	
BIOE 220	Introduction to Imaging and Image-based Human Anatomy	
BIOE 221	Physics and Engineering of Radionuclide Imaging	
BIOE 222	Instrumentation and Applications for Multi-modality Molecular Imaging of Living Subjects	
BIOE 223	Physics and Engineering of X-Ray Computed Tomography	
BIOE 224	Probes and Applications for Multi-modality Molecular Imaging of Living Subjects	

BIOE 227	Functional MRI Methods
BIOE 231	Protein Engineering
BIOE 244	Advanced Frameworks and Approaches for Engineering Integrated Genetic Systems
BIOE 253	Science and Technology Policy
BIOE 260	Tissue Engineering
BIOE 281	Biomechanics of Movement
BIOE 287	Introduction to Physiology and Biomechanics of Hearing
BIOE 291	Principles and Practice of Optogenetics for Optical Control of Biological Tissues

Total Units

118-120

- It is strongly recommended that CME 100 Vector Calculus for Engineers, CME 102 Ordinary Differential Equations for Engineers, and CME 104 Linear Algebra and Partial Differential Equations for Engineers) be taken rather than MATH 51 Linear Algebra and Differential Calculus of Several Variables, MATH 52 Integral Calculus of Several Variables, and MATH 53 Ordinary Differential Equations with Linear Algebra. CME 106 Introduction to Probability and Statistics for Engineers utilizes MATLAB, a powerful technical computing program, and should be taken rather than STATS 110 Statistical Methods in Engineering and the Physical Sciences or STATS 141 Biostatistics. If you are taking the MATH 50 series, it is strongly recommended to take MATH 51M Introduction to MATLAB or CME 192 Introduction to MATLAB.
- Science must include both Chemistry (CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II; or CHEM 31X Chemical Principles Accelerated) and calculus-based Physics, with two quarters of course work in each, in addition to two courses of BIO core. CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II are considered one course even though given over two quarters.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>). Students pursuing a premed program need to take additional courses; see the UGHB, BioE Premed 4-Year Plan.

## Honors Program

The School of Engineering offers a program leading to a Bachelor of Science in Bioengineering with Honors (BIOE-BSH). This program provides the opportunity for qualified BioE majors to conduct independent research at an advanced level with a faculty research adviser and documented in an honors thesis.

In order to receive departmental honors, students admitted to the program must:

- Declare the honors program in AxBSS (BIOE-BSH).
- Maintain an overall grade point average (GPA) of at least 3.5 as calculated on the unofficial transcript.
- Complete at least two quarters of research with a minimum of nine units of BIOE 191 Bioengineering Problems and Experimental Investigation or BIOE 191X Out-of-Department Advanced Research Laboratory in Bioengineering for a letter grade; up to three units may be used towards the bioengineering depth elective requirements.
- Submit a completed thesis draft to the honors adviser and second reader by the first week of Spring Quarter. Further revisions and final endorsement are to be finished by the second Monday in May, when two signed bound copies plus one PC-compatible CD-ROM are to be submitted to the student services officer.

- Attend the Bioengineering Honors Symposium at the end of Spring Quarter and give a poster or oral presentation, or present in another approved suitable forum.

For more information and application instructions, see the department's undergraduate site (<http://bioengineering.stanford.edu/education/bioe-honors-instructions-v.2.pdf>).

## Coterminal Master's Program in Bioengineering

This option is available to Stanford undergraduates who wish to work simultaneously toward a B.S. in another field and an M.S. in Bioengineering. The degrees may be granted simultaneously or at the conclusion of different quarters, though the bachelor's degree cannot be awarded after the master's degree has been granted.

The University minimum requirements for the coterminal program are 180 units for the bachelor's degree plus 45 unduplicated units for the master's degree.

In order to apply for the coterminal master's program student's must have completed six, non-summer quarters at Stanford (two non-summer quarters for transfer students), have completed 120 undergraduate units, and must have declared the undergraduate major. They must be accepted into our program one quarter before receiving the B.S. degree.

Students should apply directly to the Bioengineering student service office by November 1, 2015. Students interested in the coterminal master's degree must take the Graduate Record Examination (GRE) (<http://www.gre.org>). Prospective applicants should see the department's web site for application form, instructions, and supporting documents (<http://bioengineering.stanford.edu/admissions/coterm>).

The application must provide evidence of potential for strong academic performance as a graduate student. The application is evaluated and acted upon by the graduate admissions committee of the department. Students are expected to enter with a series of core competencies in mathematics, biology, chemistry, physics, computing, and engineering. Typically, a GPA of at least 3.5 in engineering, science, and math is expected.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree

Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Master of Science in Bioengineering

The Master of Science in Bioengineering requires 45 units of course work. The curriculum consists of core bioengineering courses, technical electives, seminars and unrestricted electives. Core courses focus on quantitative biology and biological systems analysis. Approved technical electives are chosen by the student in consultation with his/her graduate adviser, and can be selected from graduate course offerings in mathematics, statistics, engineering, physical sciences, life sciences, and medicine. Seminars highlight emerging research in bioengineering and provide training in research ethics. Unrestricted electives can be freely chosen by the student in association with his/her adviser.

### Requirements

The department's requirements for the M.S. in Bioengineering are:

#### 1. Core Bioengineering courses (10-11 units)

The following courses are required:

		Units
BIOE 300A	Molecular and Cellular Bioengineering	3
BIOE 300B	Engineering Concepts Applied to Physiology	3
Select two of the following:		4-5
BIOE 301A	Molecular and Cellular Engineering Lab	
BIOE 301B	Clinical Needs and Technology	
BIOE 301C	Diagnostic Devices Lab	
Total Units		10-11

These courses, together with the approved technical electives, should form a cohesive course of study that provides depth and breadth.

#### 2. Approved Technical Electives (26 units)

These units must be selected from graduate courses in mathematics, statistics, engineering, physical science, life science, and medicine. They should be chosen in concert with the bioengineering courses to provide a cohesive degree program in a bioengineering focus area. Students are required to take at least one course in some area of device or instrumentation. Up to 9 units of directed study and research may be used as approved electives.

#### 3. Seminars (4 units)

The seminar units should be fulfilled through:

		Units
BIOE 393	Bioengineering Departmental Research Colloquium	3
MED 255	The Responsible Conduct of Research	1
Total Units		4

Other relevant seminar units may also be used with the approval of the faculty adviser. One of the seminar units must be MED 255 The Responsible Conduct of Research.

#### 4. Unrestricted Electives (6 units).

Students are assigned an initial faculty adviser to assist them in designing a plan of study that creates a cohesive degree program with a concentration in a particular bioengineering focus area. These focus areas include, but are not limited to: Biomedical Computation, Regenerative Medicine/Tissue Engineering, Molecular and Cell Bioengineering, Biomedical Imaging, and Biomedical Devices.

To ensure that an appropriate program is pursued by all M.S. candidates, students who first matriculate at Stanford at the graduate level must:

1. submit an adviser-approved Program Proposal for a Master's Degree form to the student services office during the first month of the first quarter of enrollment
2. obtain approval from the M.S. adviser and the Chair of Graduate Studies for any subsequent program change or changes.

It is expected that the requirements for the M.S. in Bioengineering can be completed within approximately one year. There is no thesis requirement for the M.S.

Due to the interdisciplinary nature of Bioengineering, a number of courses are offered directly through the Bioengineering Department but many are available through other departments. See respective ExploreCourses for course descriptions.

## Doctor of Philosophy in Bioengineering

A student studying for the Ph.D. degree must complete a master's degree (45 units) comparable to that of the Stanford M.S. degree in Bioengineering. Up to 45 units of master's degree residency units may be counted towards the degree. The Ph.D. degree is awarded after the completion of a minimum of 135 units of graduate work as well as satisfactory completion of any additional University requirements. Students admitted to the Ph.D. program with an M.S. degree must complete at least 90 units of work at Stanford. The maximum number of transfer units is 45.

On the basis of the research interests expressed in their application, students are assigned an initial faculty adviser who assists them in choosing courses and identifying research opportunities. The department does not require formal lab rotations, but students are encouraged to explore research activities in two or three labs during their first academic year.

Prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate knowledge of bioengineering fundamentals and a potential for research by passing a qualifying oral examination.

Typically, the exam is taken shortly after the student earns a master's degree. The student is expected to have a nominal graduate Stanford GPA of 3.25 to be eligible for the exam. Once the student's faculty sponsor has agreed that the exam is to take place, the student must submit an application folder containing items including a curriculum vitae, research project abstract, and preliminary dissertation proposal to the student services office. Information about the exam may be obtained from the student services office.

In addition to the course requirements of the M.S. degree, doctoral candidates must complete a minimum of 15 additional units of approved formal course work (excluding research, directed study, and seminars).

### Dissertation Reading Committee

Each Ph.D. candidate is required to establish a reading committee for the doctoral dissertation within six months after passing the department's Ph.D. qualifying exams. Thereafter, the student should consult frequently with all members of the committee about the direction and progress of the dissertation research.

A dissertation reading committee consists of the principal dissertation adviser and at least two other readers. Reading committees in Bioengineering may include faculty from another department. It is expected that at least one member of the Bioengineering faculty be on each reading committee. The initial committee, and any subsequent changes, must be officially approved by the department Chair.

### University Oral and Dissertation

The Ph.D. candidate is required to take the University oral examination after the dissertation is substantially completed (with the dissertation draft in writing), but before final approval. The examination consists of

a public presentation of dissertation research, followed by substantive private questioning on the dissertation and related fields by the University oral committee (four selected faculty members, plus a chair from another department). Once the oral has been passed, the student finalizes the dissertation for reading committee review and final approval. Forms for the University oral scheduling and a one-page dissertation abstract should be submitted to the department student services office at least three weeks prior to the date of the oral for departmental review and approval.

## Ph.D. Minor in Bioengineering

Doctoral students pursuing a Ph.D. degree in a major other than Bioengineering may apply for the Ph.D. minor in Bioengineering. A minor is not a requirement for any degree, but is available when agreed upon by the student and the major and minor department.

Application forms, including the University's general requirements, can be found at <http://registrar.stanford.edu/shared/forms.htm>.

A student desiring a Ph.D. minor in Bioengineering must have a minor program advisor who is a regular Bioengineering faculty member. This advisor must be a member of the student's reading committee for the doctoral dissertation, and the entire reading committee must meet at least one year prior to the date of the student's dissertation defense.

The Ph.D. minor program must include at least 20 units of course work in Stanford Bioengineering or Bioengineering cognate courses at or above the 200 level. Of these 20 units, no more than 10 can be in cognate courses. All courses listed to fulfill the 20-unit requirement must be taken for a letter grade and the GPA must be at least 3.25. Courses used for a minor may not be used to also meet the requirements for a master's degree.

## M.D./Ph.D. Dual Degree Program

Students interested in a career oriented towards bioengineering and medicine can pursue the combined M.D./Ph.D. degree program. Stanford has two ways to do an M.D./Ph.D. U.S. citizens and permanent residents can apply to the Medical Scientist Training Program and can be accepted with funding from both M.D. and Ph.D. programs for stipend and tuition. They can then select a bioengineering laboratory for their Ph.D. Students not admitted to the Medical Scientist Training Program must apply to be admitted separately to the M.D. program and the Ph.D. program of their choice.

The Ph.D. is administered by the Department of Bioengineering. To be formally admitted as a Ph.D. degree candidate in this combined degree program, the student must apply through normal departmental channels and must have earned or have plans to earn an M.S. in bioengineering or other engineering discipline at Stanford or another university. The M.S. requires 45 units of course work which consists of core bioengineering courses, technical electives, seminars, and 6 unrestricted units. Students must also pass the Department of Bioengineering Ph.D. qualifying examination.

For students fulfilling the full M.D. requirements who earned their master's level engineering degree at Stanford, the Department of Bioengineering waives the normal departmental requirement of 15 units applied towards the Ph.D. degree beyond the master's degree level through formal course work. Consistent with the University Ph.D. requirements, the department accepts 15 units comprised of courses, research, or seminars approved by the student's academic adviser and the department chair. Students not completing their M.S. engineering degree at Stanford are required to take 15 units of formal course work in engineering-related areas as determined by their academic adviser.

## Joint Degree Programs in Bioengineering and the School of Law

The School of Law and the Department of Bioengineering offer joint programs leading to either a J.D. degree combined with an M.S. degree in Bioengineering or to a J.D. degree combined with a Ph.D. in Bioengineering.

The J.D./M.S. and J.D./Ph.D. degree programs are designed for students who wish to prepare themselves intensively for careers in areas relating to both law and bioengineering. Students interested in either joint degree program must apply and gain entrance separately to the School of Law and the Department of Bioengineering and, as an additional step, must secure permission from both academic units to pursue degrees in those units as part of a joint degree program. Interest in either joint degree program should be noted on the student's admission applications and may be considered by the admission committee of each program. Alternatively, an enrolled student in either the Law School or the Bioengineering Department may apply for admission to the other program and for joint degree status in both academic units after commencing study in either program.

Joint degree students may elect to begin their course of study in either the School of Law or the Department of Bioengineering. Faculty advisers from each academic unit will participate in the planning and supervising of the student's joint program. Students must be enrolled full time in the Law School for the first year of law school, and, at some point during the joint program, may be required to devote one or more quarters largely or exclusively to studies in the Bioengineering program regardless of whether enrollment at that time is in the Law School or in the Department of Bioengineering. At all other times, enrollment may be in the graduate school or the Law School, and students may choose courses from either program regardless of where enrolled. Students must satisfy the requirements for both the J.D. and the M.S. or Ph.D. degrees as specified in the *Stanford Bulletin* or elsewhere.

The Law School shall approve courses from the Bioengineering Department that may count toward the J.D. degree, and the Bioengineering Department shall approve courses from the Law School that may count toward the M.S. or Ph.D. degree in Bioengineering. In either case, approval may consist of a list applicable to all joint degree students or may be tailored to each individual student's program. The lists may differ depending on whether the student is pursuing an M.S. or a Ph.D. in Bioengineering.

In the case of a J.D./M.S. program, no more than 45 units of approved courses may be counted toward both degrees. In the case of a J.D./Ph.D. program, no more than 54 units of approved courses may be counted toward both degrees. In either case, no more than 36 units of courses that originate outside the Law School may count toward the law degree. To the extent that courses under this joint degree program originate outside of the Law School but count toward the law degree, the law school credits permitted under Section 17(1) of the Law School Regulations shall be reduced on a unit-per-unit basis, but not below zero. The maximum number of law school credits that may be counted toward the M.S. or Ph.D. in Bioengineering is the greater of: (i) 15 units; or (ii) the maximum number of units from courses outside of the department that M.S. or Ph.D. candidates in Bioengineering are permitted to count toward the applicable degree under general departmental guidelines or in the case of a particular student's individual program. Tuition and financial aid arrangements will normally be through the school in which the student is then enrolled.

### Graduate Related Courses

		Units
BIOMEDIN 210	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	3
BIOMEDIN 217	Translational Bioinformatics	4
EE 369A	Medical Imaging Systems I	3
EE 369B	Medical Imaging Systems II	3
ME 287	Mechanics of Biological Tissues	3

## Chemical Engineering

Courses offered by the Department of Chemical Engineering are listed under the subject code CHEMENG on the *Stanford Bulletin's* ExploreCourses web site.

Research investigations are currently being carried out in the following fields: applied statistical mechanics, biocatalysis, bioengineering, biophysics, colloid science, computational materials science, electronic materials, hydrodynamic stability, kinetics and catalysis, Newtonian and non-Newtonian fluid mechanics, polymer science, renewable energy, rheo-optics of polymeric systems, and surface and interface science. Additional information may be found at <http://cheme.stanford.edu>.

The Department of Chemical Engineering offers opportunities for both undergraduates and graduate students to pursue course work and research in energy sciences and technology, which include the chemical, physical, mathematical, and engineering sciences. Courses include 25E, 35N, 140/240, 142/242, 162/262, 432, 444 with some 400 level courses being offered only in alternate years.

In addition, both undergraduates and graduate students can pursue work in interdisciplinary biosciences, which include the chemical, biological, physical, mathematical, and engineering sciences. Courses include 25B, 150, 174/274, 181/281, 183/283, 185B, 355, 420, 450, 454 with some advanced graduate courses offered only in alternate years. Students are encouraged to review course offerings in all departments of the School of Engineering and to seek academic advising with individual chemical engineering faculty. Students wishing assistance should talk with student services staff in the department.

Further information about the department also may be found at <http://cheme.stanford.edu>. Undergraduates considering majoring in Chemical Engineering are encouraged to talk with faculty and to meet with student services' staff in Shriram room 129. Students interested in pursuing advanced work in chemical engineering, including coterminal degrees,

should contact the student services manager. Admission to an advanced degree program for an active Stanford graduate student is by approval of a Graduate Authorization Petition. All other interested applicants should go to <http://studentaffairs.stanford.edu/gradadmissions> for general and departmental information about the requirements and processes for applying for admission to a graduate degree program.

## Mission of the Undergraduate Program in Chemical Engineering

Chemical engineers are responsible for the conception and design of processes for the purpose of production, transformation, and transportation of materials. This activity begins with experimentation in the laboratory and is followed by implementation of the technology in full-scale production. The mission of the undergraduate program in Chemical Engineering is to develop students' understanding of the core scientific, mathematical, and engineering principles that serve as the foundation underlying these technological processes. The program's core mission is reflected in its curriculum which is built on a foundation in the sciences of chemistry, physics, and biology. Course work includes the study of applied mathematics, material and energy balances, thermodynamics, fluid mechanics, energy and mass transfer, separations technologies, chemical reaction kinetics and reactor design, and process design. The program provides students with excellent preparation for careers in the corporate sector and government or for advanced study.

### Learning Outcomes (Undergraduate)

Learning outcomes are used in evaluating students and the undergraduate program. The department expects undergraduate majors in the program to be able to demonstrate the following:

1. an ability to apply knowledge of mathematics, science, and engineering.
2. an ability to design and conduct experiments, as well as to analyze and interpret data.
3. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. an ability to function on multidisciplinary teams.
5. an ability to identify, formulate, and solve engineering problems.
6. an understanding of professional and ethical responsibility.
7. an ability to communicate effectively.
8. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. a recognition of the need for, and an ability to engage in life-long learning.
10. a knowledge of contemporary issues.
11. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
12. the background for admission to engineering or other professional graduate programs.

### Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through advanced lecture course work in the fundamentals of the field, including microhydrodynamics, molecular thermodynamics, kinetics, spectroscopy, applied mathematics, and biochemical engineering, in addition to the student's area of specialization. All students must master the fundamental chemical, physical, and biological concepts that govern molecular behavior.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Chemical Engineering and related fields.

## Graduate Programs in Chemical Engineering

The University's requirements, including residency requirements, for the M.S., Engineer, and Ph.D. degrees are summarized in the "Graduate Degrees" section of this bulletin.

Current research and teaching activities cover a number of advanced topics in chemical engineering, including applied statistical mechanics, biocatalysis, biochemical engineering, bioengineering, biophysics, computational materials science, colloid science, dynamics of complex fluids, energy conversion, functional genomics, hydrodynamic stability, kinetics and catalysis, microrheology, molecular assemblies, nanoscience and technology, Newtonian and non-Newtonian fluid mechanics, polymer physics, protein biotechnology, renewable fuels, semiconductor processing, soft materials science, solar utilization, surface and interface science, and transport mechanics.

### Fellowships and Assistantships

Qualified predoctoral applicants are encouraged to apply for nationally competitive fellowships, for example, those from the National Science Foundation. Applicants to the Ph.D. program should consult with their financial aid officers for application information and advice. In the absence of other awards, incoming Ph.D. students normally are awarded departmental fellowships. Matriculated Ph.D. students are supported primarily by fellowship awards and assistantship research or teaching appointments. All students are encouraged to apply for external, competitive fellowships and may obtain information about various awarding agencies from faculty advisers and student services. Assistantships are paid positions for graduate students that, in addition to a salary, provide the benefit of a tuition allocation. Individual faculty members appoint students to research assistantships; the department chair appoints doctoral students to teaching assistantships. Contact departmental student services for additional information.

## Bachelor of Science in Chemical Engineering

The Chemical Engineering B.S. program requires basic courses in biology, chemistry, engineering, mathematics, and physics. The depth sequence of courses required for the major in chemical engineering provides training in applied chemical kinetics, biochemical engineering, electronic materials, engineering thermodynamics, plant design, polymers, process analysis and control, separation processes, and transport phenomena. Undergraduates who are considering and/or wish to major in chemical engineering should talk with departmental student services as early as during freshman orientation if feasible and consult the curriculum outlined in the "Undergraduate Program in Chemical Engineering" section of this bulletin. Courses taken to fulfill the requirements for the major (courses in mathematics; science; technology and society; engineering fundamentals; and engineering depth) must be taken for a letter grade if this option is offered.

Representative sequences of courses leading to a B.S. in Chemical Engineering, in both flow chart and 4-year, quarter-by-quarter formats, can be found in the *Handbook for Undergraduate Engineering Programs*, available at <http://ughb.stanford.edu>. These are explanatory examples, with each sequence starting at a different level and demonstrating how a student, based on his or her pre-college preparation, can complete the major in four years. These typical course schedules are available as well from departmental student services and chemical engineering faculty advisers for undergraduates. It is recommended that students

discuss their prospective programs with the chemical engineering faculty advisers, particularly if they are transferring from another major such as Biology, Chemistry, Physics, or another Engineering major. With advance planning, students can usually arrange to attend one of the overseas campuses.

Students interested in a minor in Chemical Engineering should consult the requirements for a "Minor in Chemical Engineering" section of this bulletin.

## Chemical Engineering (CHE)

Completion of the undergraduate program in Chemical Engineering leads to the conferral of the Bachelor of Science in Chemical Engineering.

### Mission of the Undergraduate Program in Chemical Engineering

Chemical engineers are responsible for the conception and design of processes for the purpose of production, transformation, and transportation of materials. This activity begins with experimentation in the laboratory and is followed by implementation of the technology in full-scale production. The mission of the undergraduate program in Chemical Engineering is to develop students' understanding of the core scientific, mathematical, and engineering principles that serve as the foundation underlying these technological processes. The program's core mission is reflected in its curriculum which is built on a foundation in the sciences of chemistry, physics, and biology. Course work includes the study of applied mathematics, material and energy balances, thermodynamics, fluid mechanics, energy and mass transfer, separations technologies, chemical reaction kinetics and reactor design, and process design. The program provides students with excellent preparation for careers in the corporate sector and government, or for graduate study.

### Requirements\*

	Units
<b>Mathematics</b> <sup>1</sup>	
MATH 41      Calculus	5
MATH 42      Calculus	5
Select one of the following:	5-10
CME 100    Vector Calculus for Engineers	
MATH 51    Linear Algebra and Differential Calculus of Several & MATH 52    Variables and Integral Calculus of Several Variables	
Select one of the following:	5
CME 102    Ordinary Differential Equations for Engineers or MATH 53    Ordinary Differential Equations with Linear Algebra	
Select one of the following:	4-5
CME 104    Linear Algebra and Partial Differential Equations for Engineers or CME 106    Introduction to Probability and Statistics for Engineers	
<b>Science</b> <sup>1</sup>	
CHEM 31X    Chemical Principles Accelerated	5
CHEM 33      Structure and Reactivity	5
CHEM 35      Synthetic and Physical Organic Chemistry	5
PHYSICS 41    Mechanics	4
PHYSICS 43    Electricity and Magnetism	4
CHEM 131    Organic Polyfunctional Compounds	3
<b>Technology in Society</b>	
One course required, see Basic Requirement 4	3-5
<b>Engineering Fundamentals</b>	
Three courses minimum; see Basic Requirement 3	
ENGR/CHEMENG Introduction to Chemical Engineering 20	3

Fundamentals Elective from another School of Engineering department 3-5

See the UGHB for a list of courses.

Select one of the following: 3

ENGR 25B Biotechnology (same as CHEMENG 25B)

ENGR 25E Energy: Chemical Transformations for Production, Storage, and Use (same as CHEMENG 25E)

### Chemical Engineering Depth

Minimum 68 Engineering Science and Design units; see Basic Requirement 5

CHEMENG 10 The Chemical Engineering Profession 1

CHEMENG 100 Chemical Process Modeling, Dynamics, and Control 3

CHEMENG 110 Equilibrium Thermodynamics 3

CHEMENG 120A Fluid Mechanics 4

CHEMENG 120B Energy and Mass Transport 4

CHEMENG 130 Separation Processes 3

CHEMENG 150 Biochemical Engineering 3

CHEMENG 170 Kinetics and Reactor Design 3

CHEMENG 180 Chemical Engineering Plant Design 4

CHEMENG 181 Biochemistry I 3

CHEMENG 185A Chemical Engineering Laboratory A (WIM) 4

CHEMENG 185B Chemical Engineering Laboratory B 4

CHEM 171 Physical Chemistry I 3

CHEM 173 Physical Chemistry II 3

CHEM 175 Physical Chemistry III 3

Select four of the following:<sup>2,3</sup> 12

CHEMENG 140 Micro and Nanoscale Fabrication Engineering

CHEMENG 142 Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations

CHEMENG 160 Polymer Science and Engineering

CHEMENG 162 Polymers for Clean Energy and Water

CHEMENG 174 Environmental Microbiology I

CHEMENG 183 Biochemistry II

CHEMENG 196 Creating New Ventures in Engineering and Science-based Industries

Total Units 122-132

\* For additional information and sample programs, see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>)

<sup>1</sup> Unit count is higher if program includes one of more of the following: MATH 51 and MATH 52 in lieu of CME 100; or CHEM 31A and CHEM 31B in lieu of CHEM 31X.

<sup>2</sup> Any two acceptable except combining 160 and 162.

<sup>3</sup> Students may substitute two of the depth electives with two other science and engineering 3-unit lecture courses. See UGHB for additional details.

## Honors Program in Chemical Engineering

The Department of Chemical Engineering offers a program leading to the degree of Bachelor of Science in Chemical Engineering with Honors. Qualified undergraduate majors conduct independent study and research at an advanced level with faculty mentors, graduate students, and fellow undergraduates. This three quarter sequential program requires concurrent participation each quarter in the CHEMENG 191H Undergraduate Honors Seminar; completion of a faculty-approved thesis; and participation in the Chemical Engineering Honors Poster Session held annually during the Mason Lecture Series Spring Quarter. The last requirement may also be fulfilled through an alternative, public, oral

presentation with the approval of the department chair. A research proposal/application must be submitted at least five quarters prior to graduation with work to begin at a minimum of four quarters prior to graduation.

Admission to the honors program is by application and submission of a research proposal and is subject to approvals by faculty advisers, sponsors, and the chair of the department. Declared Chemical Engineering majors with a cumulative grade point average (GPA) of 3.5 or higher are encouraged to apply. Students must submit their applications no later than the first week of March Winter Quarter of their junior year, assuming a June degree conferral the following year, e.g. the primary 2015-2016 deadline is March 4, 2016. An application includes a Stanford transcript in addition to the research proposal, approved by both the student's research thesis adviser, a faculty reader, and, if required, a chemical engineering faculty sponsor. The research adviser or the reader or, alternatively, a faculty sponsor, must be a faculty member in the Department of Chemical Engineering. Students must start their research no later than Spring Quarter their junior year and are encouraged to consider incorporating research opportunities such as those sponsored by Undergraduate Academic Life into their honors research proposal; see [http://ual.stanford.edu/00/research\\_opps/Grants](http://ual.stanford.edu/00/research_opps/Grants) [http://ual.stanford.edu/00/research\\_opps/Grants](http://ual.stanford.edu/00/research_opps/Grants)). See departmental student services staff in Shriram Center room 129, for more information about the application process, a proposal template, and other assistance.

In order to receive departmental honors, students admitted to the honors program must:

1. Maintain an overall grade point average (GPA) of at least 3.5 as calculated on the unofficial transcript.
2. Complete at least three quarters of research with a minimum of 9 units of CHEMENG 190H Undergraduate Honors Research in Chemical Engineering for a letter grade. All quarters must focus on the same topic. The same faculty adviser and faculty reader should be maintained throughout if feasible.
3. Enroll in CHEMENG 191H Undergraduate Honors Seminar, concurrently with each quarter of enrollment in CHEMENG 190H Undergraduate Honors Research in Chemical Engineering.
4. Participate with a poster and oral presentation of thesis work at the Chemical Engineering Honors Poster Session held during the Mason Lectures week, Spring Quarter, or, at the Undergraduate Program Committee's discretion, at a comparable public event. Submit at the same time to student services one copy of the poster in electronic format.
5. Submit final drafts of a thesis simultaneously to the adviser and the reader and, if appropriate, to the Chemical Engineering faculty sponsor, no later than April 4, 2016, or the first school day of the second week of the quarter in which the degree is to be conferred.
6. Complete all work and thesis revisions and obtain indicated faculty approvals on the Certificate of Final Reading of Thesis forms by April 29, 2016, or the end of the first month of the graduation quarter.
7. Submit to departmental student services five (5) final copies of the honors thesis, as approved by the appropriate faculty. Include in each thesis an original, completed, faculty signature sheet immediately following the title page. The 2015-2016 deadline is May 2, 2016.
8. Submit to student services a copy of the honors thesis in electronic format at the same time as the final copies of the thesis.

Upon faculty approval, departmental student services to submit one copy of each honors thesis to Student Affairs, School of Engineering.

### Chemical Engineering (CHE) Minor

The following core courses fulfill the minor requirements:

ENGR/CHEMENG 20	Introduction to Chemical Engineering	3
CHEMENG 100	Chemical Process Modeling, Dynamics, and Control	3
CHEMENG 110	Equilibrium Thermodynamics	3
CHEMENG 120A	Fluid Mechanics	4
CHEMENG 120B	Energy and Mass Transport	4
CHEMENG 170	Kinetics and Reactor Design	3
CHEMENG 185A	Chemical Engineering Laboratory A	4
CHEM 171	Physical Chemistry I	3
CHEMENG 180	Chemical Engineering Plant Design	4
Select one of the following:		3
CHEMENG 140	Micro and Nanoscale Fabrication Engineering	
CHEMENG 142	Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations	
CHEMENG 160	Polymer Science and Engineering	
CHEMENG 162	Polymers for Clean Energy and Water	
CHEMENG 174	Environmental Microbiology I	
CHEMENG 181	Biochemistry I	
Total Units		34

## Master of Science in Chemical Engineering

A range of M.S. programs comprising appropriate course work is available to accommodate students wishing to obtain further academic preparation before pursuing a professional chemical engineering career. This degree is lecture course based; there are no research or thesis requirements. It is a terminal M.S. degree, i.e. this degree is not a prerequisite for nor does it lead to admission to the department's Ph.D. program. For conferral of a master's degree in chemical engineering the following departmental requirements must be met.

### Coterminal Bachelor's and Master's Degrees in Chemical Engineering

Stanford undergraduates with strong academic records may apply to study for a master's degree while at the same time completing their bachelor's degree(s). Interested students should discuss their educational goals with their faculty advisers and talk with departmental graduate student services about the application requirements before submitting an application. Students, who have completed at least 120 units toward an undergraduate degree and complete their applications by the seventh week of a quarter, may be admitted to the Chemical Engineering M.S. program the following quarter.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor.

**Units** No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

### Unit and Course Requirements for the Master's Degree

Students terminating their graduate work with the M.S. degree in Chemical Engineering must develop a graduate-level, thematic M.S. program consisting of a minimum of 45 completed units of academic work that includes:

1. Four (4) Chemical Engineering core graduate lecture courses selected from the CHEMENG 300 series
2. Three (3) units of CHEMENG 699 Colloquium
3. An additional 30 units, selected from graduate-level science or engineering lecture courses (3 units or more) in any appropriate department and, by petition to the Chair of the Department of Chemical Engineering, from upper-division undergraduate lecture courses in science and engineering

Alternatively, up to 6 units of research may be used in lieu of up to 6 units of the additional 30 lecture units, to partially satisfy the 45 unit minimum requirement. Credit toward the required minimum of 45 completed units for the M.S. degree is not given for non science and engineering courses in other departments or for the Chemical Engineering special topics courses numbered in the 500 series.

To ensure that an appropriate Chemical Engineering graduate program is pursued by each M.S. candidate, students who first matriculate at Stanford at the graduate level must do the following, during the first quarter no later than the seventh week:

1. Complete a Program Proposal for a Master's Degree form, that is approved by the M.S. adviser
2. Submit this petition to departmental student services, for review by the graduate curriculum committee, and
3. Obtain approval for any subsequent program change or changes from the M.S. adviser and the graduate committee.

Stanford undergraduates admitted to the coterminal master's program must:

1. Submit an adviser-approved Program Proposal for a Master's Degree (a graduate degree progress form), either during their second quarter of graduate standing or upon the completion of 9 units of graduate work (whichever occurs first), and
2. Document with student services their M.S. adviser's review and approval of their graduate program when they have accrued 30 units toward the M.S. degree in Chemical Engineering.

Each M.S. candidate must obtain approvals for the final M.S. program no later than the seventh week of the quarter preceding the quarter of degree conferral, in order to permit amendment of the final quarter's study list if the faculty deem this necessary. Students with questions should contact departmental graduate student services.

### Minimum Grade Requirement

Any course used to satisfy the 45-unit minimum for the Master of Science degree must be taken for a letter grade, if offered. An overall grade point average (GPA) of 3.0 must be maintained for these courses.

## Research Experience

Students in the M.S. program wishing to obtain research experience should talk with departmental student services and work with the M.S. faculty adviser on the choice of research adviser as early as feasible and in advance of the anticipated quarter(s) of research. Once arrangements are mutually agreed upon, including the number of units, students enroll in the appropriate section of CHEMENG 600 Graduate Research in Chemical Engineering. A written report describing the results of the research undertaken must be submitted to and approved by the research adviser. Research units may not be substituted for any of the required four 300-level core lecture courses.

## Engineer in Chemical Engineering

The degree of Engineer is awarded after the completion of a minimum of 90 units of graduate work beyond the B.S. degree and the satisfactory completion of all University requirements plus the following departmental requirements. Application to this program is open only to active chemical engineering M.S. or Ph.D. candidates. This degree is not a prerequisite for the Ph.D. program.

### Unit and Course Requirements

A minimum of 90 completed units is required, including a component of a minimum of 45 units, consisting of 42 lecture units and 3 colloquium units. See Course List for required CHEMENG courses. The remaining 45 units are primarily research units.

		Units
CHEMENG 300	Applied Mathematics in the Chemical and Biological Sciences	3
CHEMENG 310	Microhydrodynamics	3
CHEMENG 320	Chemical Kinetics and Reaction Engineering	3
CHEMENG 340	Molecular Thermodynamics	3
CHEMENG 345	Fundamentals and Applications of Spectroscopy	3
CHEMENG 355	Advanced Biochemical Engineering	3
(2) 3 units of:		
CHEMENG 699	Colloquium	1

The remaining lecture courses, (24 units), may be chosen from graduate level science and engineering courses according to the guidelines given in the Master of Science section and with the consent of the graduate curriculum committee chair and the department chair. In fulfilling the required 45-unit requirement for lecture course units, the course work may not include chemical engineering's 500 level seminar courses or similar 1-2 unit courses in other departments.

Students seeking the Engineer degree may petition to add a M.S. program and apply for the M.S. degree once the requirements for that degree have been fulfilled (see General Requirements in the "Graduate Degrees" section of this bulletin and Chemical Engineering's "Master of Science" section).

### Minimum Grade Requirement

Any course intended to satisfy the Engineer degree requirements must be taken for a letter grade, if offered. An overall grade point average (GPA) of 3.0 must be maintained.

### Reading Committee Requirement

All candidates are required to have an initial meeting with their reading committees by the end of their ninth quarter. The committee must have a minimum of two members, both of whom are Chemical Engineering faculty members. The reading committee meetings are intended to be discussion sessions, which help to focus and guide the thesis project; they are not examinations.

Students are responsible for reporting meeting dates to departmental student services.

### Thesis Requirement

The thesis must represent a substantial piece of research equivalent to nine months of full-time effort and must be approved by the student's reading committee.

### Qualification for the Ph.D. Program by Students Ready to Receive the Degree of Engineer

After completing the requirements for the Engineer degree, a student may request to be examined on the research work completed for that degree, for the purpose of qualifying for admission to Ph.D. candidacy. If the request is granted, the student's thesis must be approved by the reading committee and available in its final form for inspection by the entire faculty at least two weeks prior to the scheduled date of said examination.

## Doctor of Philosophy in Chemical Engineering

The Ph.D. degree is awarded after the completion of a minimum of 135 units of graduate work as well as satisfactory completion of any additional University requirements and the following departmental requirements. Completion of a M.S. degree is not a prerequisite for beginning, pursuing, or completing doctoral work.

### Unit and Course Requirements

A minimum of 135 completed units is required, including a component of a minimum of 45 units, consisting of 42 lecture units and 3 colloquium units.

#### Notes:

- CHEMENG 699 should be taken each quarter of the academic year; all these units count toward the required 135 units.
- The research units for CHEMENG 399 count toward the required 135 units, but may not be counted toward the 45 unit component.
- Students working with a research adviser should enroll each quarter in the 500 series, 600, and 699 as appropriate and as study list unit limits permit.

Students with questions or issues should contact departmental graduate student services.

The following courses are required:

		Units
CHEMENG 300	Applied Mathematics in the Chemical and Biological Sciences	3
CHEMENG 310	Microhydrodynamics	3
CHEMENG 320	Chemical Kinetics and Reaction Engineering	3
CHEMENG 340	Molecular Thermodynamics	3
CHEMENG 345	Fundamentals and Applications of Spectroscopy	3
CHEMENG 355	Advanced Biochemical Engineering	3
CHEMENG 399	Graduate Research Rotation in Chemical Engineering	1
CHEMENG 699	Colloquium	1

Plus two courses at the 400 course level; in 2015-16 the following are available:

CHEMENG 420	Growth and Form	3
CHEMENG 444	Electronic Structure Theory and Applications to Chemical Kinetics	3

## CHEMENG 469 Solid Structure and Properties of Polymers 3

These courses are to be taken at Stanford, and any petition to substitute another graduate-level course for any of these core courses must be approved by the department chair. The remaining graduate-level science and engineering lecture courses may be chosen from any department. A student may petition the department chair for approval to include an upper-division undergraduate science or engineering lecture course. All proposals for Ph.D. course work must be approved by the student's adviser and the department chair or his designee.

*Note:* For 2015-16 only, MATSCI 204 Thermodynamics and Phase Equilibria may be taken in lieu of CHEMENG 340 Molecular Thermodynamics.

Ph.D. students may petition to add a M.S. degree program to their university record; submit in a Graduate Authorization petition in Axess. Once the online petition is approved, the M.S. candidate must complete a Program Proposal for a Master's Degree form and submit it to departmental student services.

Ph.D. students with a M.S. program apply in Axess for M.S. degree conferral. (See the "Master of Science in Chemical Engineering" section in this bulletin.) The M.S. degree must be awarded within the University's candidacy period for completion of a master's degree.

### Minimum Grade Requirement

Any course intended to satisfy the Ph.D. degree requirements must be taken for a letter grade, if offered. A GPA of 3.0 or above is required by the end of the first year, in order to continue in the Ph.D. program. The overall grade point average (GPA) of 3.0 must be maintained.

### Candidacy

To be advanced to Ph.D. candidacy, the student must secure a research dissertation adviser (and any required co-adviser) and complete a Ph.D. candidacy examination.

First, the research adviser and any required co-adviser must be established by the end of the second quarter in the Ph.D. program. Failure to do so leads to termination of a student's study toward a Ph.D. in Chemical Engineering; however, the student may continue to work toward an M.S. degree (see the "Master of Science in Chemical Engineering (p. 210)" section of this bulletin). Departmental Ph.D. financial support will not continue.

Second, the Ph.D. candidacy examination before a faculty committee is at the end of the fourth quarter. It consists of (a) a student's oral presentation of their thinking about their research proposal and current progress and (b) an examination by faculty members of the proposal specifics as well as the student's understanding of the fundamental chemical, physical, and biological concepts that govern the molecular behavior of the system being studied. Upon successful completion of this examination candidates must submit an Application for Candidacy for Doctoral Degree form, approved by their research adviser(s), to departmental graduate student services within two months.

### Teaching Requirement

Teaching experience is considered an essential component of predoctoral training because it assists in the further development and refinement of candidates' skills in conveying what they know, think, and conclude, based on articulated assumptions and knowledge. All Ph.D. candidates, regardless of the source of their financial support, are required to assist in the teaching of a minimum of two chemical engineering courses.

### Reading Committee Requirement

Reading committee meetings are intended to be discussion sessions, which help to focus and guide the dissertation project; they are not examinations.

By the end of the second year, all Ph.D. candidates are required to assemble reading committees and submit Doctoral Dissertation Reading Committee forms signed by research advisers to student services.

By the end of the first quarter of the third year, candidates are required to have an initial meeting with the full reading committee. It is the student's responsibility to schedule committee meetings, and the faculty's to respond in a timely manner to scheduling requests. Students are responsible for reporting meeting dates to departmental student services.

The faculty strongly encourage doctoral candidates to take advantage of the benefits of ongoing, yearly, full reading committee meetings.

### Research Poster Requirement

Experience in analyzing and presenting one's research to diverse audiences also is an essential component of predoctoral training, and faculty strongly encourage candidates to do so several times each year, starting in the second year. All candidates in their third year are required to prepare and present a research poster during the annual Mason Lecturers week in spring quarter.

### Dissertation and Oral Defense Requirements

A dissertation based on a successful investigation of a fundamental problem in chemical engineering is required. A student is expected to have fulfilled all the requirements for this degree, including the completion of a dissertation approved by his or her research adviser(s) and reading committee members within approximately five calendar years after enrolling the Ph.D. program. Upon adviser approval (s), copies of the final draft of the dissertation must be distributed to each reading committee member. No sooner than three weeks after this distribution, a student may schedule an oral examination. This examination is a dissertation defense, based on the candidate's dissertation research, and is in the form of a public seminar followed by a private examination by the faculty members on the student's oral examination committee. Satisfactory performance in the oral examination and acceptance of an approved dissertation by Graduate Degree Progress, Office of the University Registrar, leads to Ph.D. degree conferral.

### Ph.D. Minor in Chemical Engineering

The University's general requirements for the Ph.D. minor are specified in the "Graduate Degrees" section of this bulletin. An application for a Ph.D. minor must be approved by both the major and minor departments.

A student desiring a Ph.D. minor in Chemical Engineering must work with a minor program adviser who has a faculty appointment in Chemical Engineering. This adviser must be included as a member of the student's reading committee for the doctoral dissertation, and the entire reading committee must meet at least once and at least one year prior to the scheduling of the student's oral examination. The department strongly prefers that regular meetings of the full reading committee start no later than the third year of graduate study or when the student is admitted to Ph.D. candidacy. In addition, the Chemical Engineering faculty member who is the minor adviser must be a member of the student's University oral examination committee.

The Ph.D. minor program must include at least 20 units of graduate-level lecture courses (numbered at the 200 level or above), but may not include any 1-2 unit lecture courses in the 20-unit minimum. The list of courses must form a coherent program and must be approved by the minor program adviser and the chair of this department. All courses for

the minor must be taken for a letter grade, and a GPA of at least 3.0 must be earned for these courses.

*Emeriti: (Professors)* Andreas Acrivos, George M. Homsy, Robert J. Madix, Channing R. Robertson

*Chair:* Stacey F. Bent

*Professors:* Zhenan Bao, Stacey F. Bent, Curtis W. Frank, Gerald G. Fuller, Chaitan Khosla, Jens K. Nørskov, Eric S. G. Shaqfeh, Alfred M. Spormann, James R. Swartz

*Associate Professors:* Thomas F. Jaramillo, Andrew J. Spakowitz

*Assistant Professors:* Matteo Cargnello, Alexander R. Dunn, Jian Qin (effective January 1, 2016), Elizabeth S. Sattely, Clifford L. Wang

*Courtesy Professors:* Gordon E. Brown, Jennifer R. Cochran, Sarah C. Heilshorn, Daniel Herschlag, Anders R. Nilsson, Christina D. Smolke, Robert M. Waymouth

*Lecturers:* Lisa Y. Hwang, Ricardo B. Levy, Shari B. Libicki, Sara Loesch-Frank, John E. Moalli, Anthony Pavone, Howard B. Rosen

*Consulting Professors:* Jae Chun Hyun, Do Yeung Yoon

*Visiting Professor:* Karsten Reuter

### Cognate Courses for Advanced Degrees in Chemical Engineering

In addition to core CHEMENG graduate courses in the 300 series and elective CHEMENG graduate courses in the 200 and 400 series, students pursuing advanced degrees in chemical engineering include elective courses offered by other departments. The following list is a partial list of the more frequently chosen courses and is subdivided into five focus areas.

#### Broadly Applicable

APPPHYS 207	Laboratory Electronics	4
CHEM 221	Advanced Organic Chemistry	3
CHEM 271	Advanced Physical Chemistry	3
CHEM 273	Advanced Physical Chemistry	3
EE 261	The Fourier Transform and Its Applications	3
STATS 200	Introduction to Statistical Inference	3

#### Biochemistry and Bioengineering focus \*

BIO 217	Neuronal Biophysics	4
BIOE 331	Protein Engineering	3
BIOPHYS 228	Computational Structural Biology	3
BIOPHYS/SBIO 241	Biological Macromolecules	3-5
CBIO 241	Cellular Basis of Cancer	5
MCP 256	How Cells Work: Energetics, Compartments, and Coupling in Cell Biology	4
SBIO 228	Computational Structural Biology	3
SBIO 241	Biological Macromolecules	3-5

#### Fluid Mechanics, Applied Mathematics, and Numerical Analysis focus \*\*

AA 218	Introduction to Symmetry Analysis	3
CME 200	Linear Algebra with Application to Engineering Computations	3
CME 204	Partial Differential Equations in Engineering	3
CME 206	Introduction to Numerical Methods for Engineering	3
CME 212	Advanced Programming for Scientists and Engineers	3
ME 351A	Fluid Mechanics	3

ME 457	Fluid Flow in Microdevices	3
--------	----------------------------	---

#### Materials Science focus \*\*\*

MATSCI 210	Organic and Biological Materials	3
MATSCI 251	Microstructure and Mechanical Properties	3
MATSCI 316	Nanoscale Science, Engineering, and Technology	3
MATSCI 343	Organic Semiconductors for Electronics and Photonics	3

MATSCI 380	Nano-Biotechnology	3
------------	--------------------	---

#### Microelectronics focus \*\*\*\*

AA 218	Introduction to Symmetry Analysis	3
CME 200	Linear Algebra with Application to Engineering Computations	3

CME 204	Partial Differential Equations in Engineering	3
---------	---	---

CME 206	Introduction to Numerical Methods for Engineering	3
---------	---	---

CME 212	Advanced Programming for Scientists and Engineers	3
---------	---	---

ME 457	Fluid Flow in Microdevices	3
--------	----------------------------	---

#### Microelectronics focus

AA 218	Introduction to Symmetry Analysis	3
--------	-----------------------------------	---

CME 200	Linear Algebra with Application to Engineering Computations	3
---------	---	---

CME 204	Partial Differential Equations in Engineering	3
---------	---	---

CME 206	Introduction to Numerical Methods for Engineering	3
---------	---	---

CME 212	Advanced Programming for Scientists and Engineers	3
---------	---	---

ME 457	Fluid Flow in Microdevices	3
--------	----------------------------	---

\* e.g., with CHEMENG 281 Biochemistry I, CHEMENG 283 Biochemistry II, CHEMENG 454 Synthetic Biology and Metabolic Engineering, CHEMENG 456 Microbial Bioenergy Systems.

Units \*\* e.g., with CHEMENG 462 Complex Fluids and Non-Newtonian Flows.

\*\*\* e.g., with CHEMENG 260 Polymer Science and Engineering, CHEMENG 442 Structure and Reactivity of Solid Surfaces, CHEMENG 460, CHEMENG 461, CHEMENG 464 Polymer Chemistry, CHEMENG 466 Polymer Physics.

\*\*\*\* e.g., with CHEMENG 240 Micro and Nanoscale Fabrication Engineering.

## Civil and Environmental Engineering

Courses offered by the Department of Civil and Environmental Engineering are listed under the subject code CEE (<https://explorecourses.stanford.edu/search?/search?view=catalog&academicYear=&q=CEE&filter-departmentcode=CEE=on&filter-coursestatus=Active=on&filter-term=Autumn=on&filter-term=Winter=on&filter-term=Spring=on&filter-term=Summer=on&page=0>) on the *Stanford Bulletin's* ExploreCourses (<https://explorecourses.stanford.edu>) web site.

The Department of Civil and Environmental Engineering (CEE) at Stanford conducts fundamental and applied research to advance the civil and environmental engineering professions, educate future academic and industry leaders, and prepare students for careers in professional practice. Civil and environmental engineers work to sustain the natural environment while creating and maintaining the built environment. Civil and environmental engineers are essential to providing the necessities of human life, including water, air, shelter, the infrastructure, energy, and food in increasingly more efficient and renewable ways.

The department focuses on the theme of engineering for sustainability, including three core areas: built environment, environmental and water studies, and atmosphere/energy. In the area of sustainable built environments it focuses on processes, techniques, materials, and

monitoring technologies for planning, design, construction and operation of environmentally sensitive, economically efficient, performance-based buildings and infrastructure, and managing associated risks from natural and man-made hazards. In the area of environmental and water studies the department focuses on creating plans, policies, science-based assessment models and engineered systems to manage water in ways that protect human health, promote human welfare, and provide freshwater and coastal ecosystem services. In the atmosphere/energy area it studies fundamental energy and atmospheric engineering and science, assess energy-use effects on atmospheric processes and air quality, and analyze and design energy-efficient generation and use systems with minimal environmental impact.

The department oversees undergraduate programs in Civil Engineering and in Environmental Systems Engineering. The department also hosts the School of Engineering undergraduate major in Architectural Design and the undergraduate major in Atmosphere/Energy; both of these programs lead to a B.S. in Engineering.

## Mission of the Undergraduate Program in Civil Engineering

The mission of the undergraduate program in Civil Engineering is to provide students with the principles of engineering and the methodologies needed for civil engineering practice. This pre-professional program balances the fundamentals common to many specialties in civil engineering and allows for concentration in structures and construction or environmental and water studies. Students in the major learn to apply knowledge of mathematics, science, and civil engineering to conduct experiments, design structures and systems to creatively solve engineering problems, and communicate their ideas effectively. The curriculum includes course work in structural, construction, and environmental engineering. The major prepares students for careers in consulting, industry and government, as well as for graduate school in engineering.

## Mission of the Undergraduate Program in Environmental Systems Engineering

The mission of the undergraduate program in Environmental Systems Engineering is to prepare students for incorporating environmentally sustainable design, strategies and practices into natural and built systems and infrastructure involving buildings, water supply, and coastal regions. Courses in the program are multidisciplinary in nature, combining math, science, and engineering fundamentals, and tools and skills considered essential for an engineer, along with a choice of one of three focus areas for more in-depth study: coastal environments, freshwater environments, or urban environments. This major offers the opportunity for a more focused curriculum than the Environmental and Water Studies concentration in the Civil Engineering degree program. The program of study, which includes a capstone experience, aims to equip engineering students to take on the complex challenges of the 21<sup>st</sup> century involving natural and built environments, in consulting and industry as well as in graduate school.

## Learning Outcomes (Undergraduate)

Undergraduates in the Civil Engineering and the Environmental Systems Engineering programs are expected to achieve the following learning outcomes through their major. These learning outcomes are used both in evaluating students and the department's undergraduate programs. Students are expected to demonstrate the ability to:

1. apply knowledge of mathematics, science, and engineering.
2. design and conduct experiments, as well as analyze and interpret data.
3. design a system, component, or process to meet desired needs.

4. function on multidisciplinary teams.
5. identify, formulate, and solve engineering problems.
6. understand professional and ethical responsibility.
7. communicate effectively.
8. obtain the broad education necessary to understand the impact of engineering solutions in a global and societal context.
9. recognize the need for and engage in life-long learning.
10. gain knowledge of contemporary issues.
11. apply the techniques, skills, and modern engineering tools necessary for engineering practice.
12. acquire the background for admission to engineering or other professional graduate programs.

## Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. Students are prepared through course work with specialization within one of three broad areas including the built environment, atmosphere and energy, and environmental and water studies. All graduate students must master the analytical, quantitative, and interpretive skills necessary for successful leadership in their chosen field.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Civil and Environmental Engineering and related fields.

## Graduate Programs in Civil and Environmental Engineering

The Department of Civil and Environmental Engineering (CEE), in collaboration with other departments, offers graduate degrees structured in three areas of study.

- The Atmosphere/Energy Program offers degrees with the designation of Atmosphere/Energy.
- The Sustainable Built Environment Program offers degrees with two designations:
  - Structural Engineering and Geomechanics
  - Sustainable Design and Construction
- The Environmental and Water Studies Program offers degrees with two designations:
  - Environmental Engineering and Science
  - Environmental Fluid Mechanics and Hydrology

For detailed information on these programs and degree designations, see the "Programs of Graduate Study in Civil and Environmental Engineering" section of this bulletin.

## Admissions and Financial Aid

Applications require online submission of the application form and statement of purpose, followed by three letters of recommendation, results of the General Section of the Graduate Record Examination, and transcripts of all courses taken at colleges and universities. See <http://gradadmissions.stanford.edu>. Policies for each of the department's programs are available on the department website. See: <http://cee.stanford.edu>. Successful applicants are advised as to the degree and program for which they are admitted. If students wish to transfer from one CEE program to another after being accepted, an application for the

intradepartmental change must be filed within the department; they will then be advised whether the change is possible. If, after enrollment at Stanford, students wish to continue toward a degree beyond the one for which they were originally admitted, a written application must be made to the Department of Civil and Environmental Engineering.

The department maintains a continuing program of merit-based financial aid for graduate students. MS and ENG applications for financial aid and assistantships should be filed by December 2, 2014; it is important that Graduate Record Examination scores be available at that time. MS and ENG applicants not requesting financial assistance have until January 13, 2015 to submit their online application. PHD applicants for financial aid and assistantships should be filed January 13, 2015.

Merit-based financial aid consists of teaching assistantships and research assistantships for up to half-time work. Engineer and Ph.D. candidates may be able to use research results as a basis for their thesis or dissertation. Fellowship and scholarship awards or loans may supplement assistantships and other basic support. Continued support is generally provided for further study toward the Engineer or Ph.D. degree based on the student's performance, the availability of research funds, and requisite staffing of current research projects.

## Research Centers and Facilities

Research work and instruction in the principal areas are carried out in research centers and facilities in these areas: Environmental Engineering and Science Laboratory (EESL); Environmental Fluid Mechanics Laboratory (EFML); and Sustainable Built Environment.

The EESL conducts laboratory and field-based research on air quality and on water and wastewater quality and treatment and is home to the following centers: The National Science Foundation (NSF) supported Engineering Research Center for Re-inventing the Nation's Urban Water Infrastructure (ReNUWit): a four-university consortium that seeks more sustainable solutions to urban water challenges in the arid west; and The William and Cloy Codiga Resource Recovery Center (CR2C), a new facility for pilot-scale testing of resource recovery technology, will be operational in 2015. The Center for Sustainable Development and Global Competitiveness (CSDGC) engages in research and educational programs that integrate business development strategies with leadership practices that will ensure enterprise growth and success within a healthy and sustainable natural environment.

The EFML focuses on transport and mixing processes in the surface and sub-surface environment using computation, laboratory experimentation and a global network of field sites

Several research centers focus on improving the sustainability of the built environment. The John A. Blume Earthquake Engineering Center conducts research on earthquake engineering including advanced sensing and control, innovative materials, and risk hazard assessment. Research and advanced global teamwork education is conducted in the Project Based Learning (PBL) Laboratory. In collaboration with the Department of Computer Science, the Center for Integrated Facility Engineering (CIFE) employs advanced information and communication technologies and concepts to integrate the facility development process and enhance the usability, buildability, operability, and sustainability of facilities. The Global Projects Center (GPC) is a multi-discipline, multi-university research program aimed at improving the performance of global engineering and construction projects, with a special focus on financing and governance of sustainable civil and social infrastructure projects. The Stanford Sustainable Systems Lab (S3L) aims to advance the state of the art in the design, monitoring and management of built environment systems, with a special focus on smart grid, smart buildings and smart infrastructures.

## Programs of Graduate Study in Civil and Environmental Engineering Atmosphere/Energy Program

The Atmosphere/Energy Program in Civil and Environmental Engineering combines atmospheric science with energy science and engineering. The main goals of the program are to educate students and the public, through courses, research, and public outreach, about the causes of climate, air pollution, and weather problems and methods of addressing these problems through renewable and efficient energy systems. In addition, students learn about feedback between the atmosphere and renewable energy systems and the effects of the current energy infrastructure on the atmosphere.

Major focus areas of energy research include examining the resource availability of renewable energies, such as wind, solar, and wave, and studying optimal methods of combining renewable energies together to match energy supply with instantaneous demand. This type of work is generally done through a combination of data analysis, three-dimensional atmospheric computer modeling of wind, solar, wave, and hydroelectric power resources, and transmission load flow computer modeling. Other energy research, performed through three-dimensional computer modeling, focuses on the effects, for example, of hydrogen fuel cell vehicles on air pollution and the ozone layer and the effects of ethanol and diesel vehicles on air quality and climate. Studies also examine the feedback of wind turbines to the atmosphere and the effects of climate change on wind and solar energy resources.

Atmospheric research in the program generally involves laboratory work, field measurements, or three-dimensional computer modeling of the combined atmosphere, ocean, and land surface. An example of laboratory work includes measuring the properties of organic particulate matter that forms in the atmosphere. Examples of fieldwork include measuring exposures to secondhand smoke, allergens, and emissions from building materials.

Computer modeling is performed at a variety of spatial scales, from the globe down to the size of a building or smaller. Some examples of modeling studies include examining the effects of air pollution particles on clouds, rainfall, water supply, ultraviolet radiation, the stratospheric ozone layer, and climate, simulating the dispersion of toxic contaminants in an urban street canyon, studying the effects of aircraft exhaust and biomass burning on climate, studying the effects of carbon dioxide domes over cities on air pollution mortality, and studying the leading causes of global warming and their impacts.

## Environmental and Water Studies Programs

Environmental and Water Studies includes programs in Environmental Engineering and Science and Environmental Fluid Mechanics and Hydrology, which includes environmental planning. Course offerings permit study in a single area or interrelated study between areas. Programs are flexible to foster interaction among students and encourage the development of individual programs. The Stanford laboratories for water quality control and environmental fluid mechanics are well equipped for advanced research and instruction.

Courses from other programs and departments complement our programs' course offerings. Examples include the Institute for Computational and Mathematical Engineering (applied math, numerical methods), Environmental Earth System Science (geostatistics, soil science, hydrogeology, oceanography), Mechanical Engineering (experimental methods, fluid mechanics, heat transfer), Energy Resources Engineering (reservoir engineering, well-test analysis), Statistics (probability and statistics), and the School of Law (natural resources law, environmental law).

### **Environmental Engineering and Science**

The Environmental Engineering and Science (EES) Program emphasizes the chemical and biological processes involved in water quality engineering, pollution treatment, remediation, and environmental protection.

Course offerings include: the biological, chemical, and engineering aspects of water supply; the movement and fate of pollutants in surface and ground waters, soil, and the atmosphere; hazardous substance control; molecular environmental biotechnology; and water and air pollution. Companion courses in the Environmental Fluid Mechanics and Hydrology Program (EFMH) include environmental planning and impact assessment, and environmental fluid mechanics, hydrology, and transport modeling.

### **Environmental Fluid Mechanics and Hydrology**

The Environmental Fluid Mechanics and Hydrology (EFMH) Program focuses on understanding, characterizing, and modeling the physical and biochemical processes, and their interaction, controlling the movement of mass, energy, and momentum in the water environment and the atmosphere. It also considers the planning, design, and implementation of water resources projects and systems, including environmental and institutional issues.

Environmental fluid mechanics courses address: experimental methods in the field and in the laboratory; fluid transport and mixing processes; the fluid mechanics of geophysical and stratified flows; natural flows in coastal waters, estuaries, lakes, and open channels; and hydrodynamic modeling. Hydrology courses consider flow and transport in porous media, stochastic methods in both surface and subsurface hydrology, and watershed hydrology and modeling. Water resources courses address design principles and tools for systems incorporating urban and rural water supply, irrigation, hydropower, stormwater management, flood-damage mitigation, and hydrologic ecosystem services. Planning courses emphasize environmental policy implementation and sustainable water resources development.

EFMH research is focused in the Bob and Norma Street Environmental Fluid Mechanics Laboratory, which includes numerous experimental facilities and a wide range of field equipment.

Admission to Environmental Engineering and Science and Environmental Fluid Mechanics and Hydrology are handled separately; prospective students should indicate their preference on their application.

### **Sustainable Built Environment Program**

The Sustainable Built Environment program includes subprograms in Structural Engineering and Geomechanics, and Sustainable Design and Construction. These programs focus on educating practitioners and researchers to plan, design, build, and operate more sustainable buildings and infrastructure.

The Structural Engineering and Geomechanics (SEG) subprogram educates designers and researchers who want to progress beyond traditional life safety code-based design, to develop and disseminate performance-based structural and geotechnical engineering methods and tools that maximize the lifecycle economic value of facilities.

The Sustainable Design and Construction (SDC) subprogram provides courses in sustainable, multi-stakeholder design methods and tools that incorporate lifecycle assessment, project planning and entitlement, green architectural design, lighting, and energy analysis, power systems, transportation, water supply and wastewater treatment to educate students interested in promoting more sustainable development of buildings and infrastructure.

Admission is managed separately for these two subprograms; prospective students should indicate their preference on their application.

### **Structural Engineering and Geomechanics**

The Structural Engineering and Geomechanics (SEG) subprogram encompasses teaching and research in structural design and analysis, structural materials, earthquake engineering and structural dynamics, advanced sensing and structural health monitoring, risk and reliability analysis, computational science and engineering, solid mechanics, computational mechanics, and geomechanics. The SEG subprogram prepares students for industrial or academic careers.

Students can balance engineering fundamentals with modern computational and experimental methods to customize programs to launch careers as consultants on large and small projects, designers, and engineering analysts.

Structural design and analysis focuses on the conceptual design of structural systems and on computational methods for predicting the static and dynamic, linear and nonlinear responses of structures.

Structural materials research and teaching focuses on the design and analysis of high-performance as well as low-environmental impact materials.

Earthquake engineering and structural dynamics addresses earthquake phenomena, ground shaking, and the behavior, analysis, and design of structures under seismic and other dynamic forces.

Reliability and risk analysis focuses on assessing damage and losses to structures and lifeline systems under earthquakes, wind and other hazards; insights from these assessments are used to engineer more sustainable structures and more resilient communities.

Computational science and engineering emphasizes the application of modern computing methods to structural engineering and geomechanics, and encompasses numerical, structural, and geotechnical analysis.

In the area of geomechanics, students focus on the application of the principles of computational and applied mechanics to problems involving geologic materials including soil and rock, as well as on the use of computational methods for analysis and design of foundations and earth structures.

### **Sustainable Design and Construction**

The Sustainable Design and Construction (SDC) subprogram prepares students for careers in planning, designing, building, and operating sustainable buildings and infrastructure to maximize their lifecycle economic value, their net contribution to environmental functions and services, and their social equity. To give students the breadth and depth necessary to become leaders in practice or research in sustainable design and construction, the SDC program offers four tracks of study: construction, energy, structures, and water. In addition to providing critical skills and the necessary industry context, each track offers courses in the following areas of competency: Building and infrastructure development; structural performance, design, and analysis; water infrastructure systems; energy systems, energy efficiency, and atmosphere; and construction engineering and management.

Classes address advanced topics like cutting-edge information technology, metrics and tools to enhance lifecycle sustainability of the sustainable built environment, sensor networks embedded in intelligent buildings and infrastructure, strategy, economics, entrepreneurship and organization design for new businesses, and corporate or governmental initiatives aimed at enhancing the sustainability of buildings and infrastructure.

The SDC subprogram is intended for students with undergraduate degrees in architecture, engineering, science, construction management,

economics or business who wish to pursue careers that enhance the sustainability of the built environment.

Employers of past SDC graduates include: architectural and engineering design firms, constructors, design-build firms and developers focused on delivering green buildings and infrastructure; energy and sustainability consultants; facility management or sustainability departments within large companies; clean-tech start ups, and clean-tech venture funds.

### **SDC Construction (SDC-C)**

The SDC-C track includes courses in construction engineering and management and introduces advanced modeling and visualization methods and tools known as virtual design and construction. This track prepares technically qualified students for responsible engineering and management roles in all phases of the development of major constructed facilities. It emphasizes management techniques useful in organizing, planning, and controlling the activities of diverse specialists working within the unique project environment of the construction industry, and it covers construction engineering aspects of heavy, industrial and building construction. Additional related course work is available from other programs within the department, from other engineering departments, and from other schools in the University such as Earth Sciences and the Graduate School of Business. SDC-C allows students substantial flexibility to tailor their program of study for careers with general contractors, specialty contractors, real estate or infrastructure developers or facility owners and operators.

### **SDC-Energy (SDC-E)**

The SDC-Energy (SDC-E) track includes courses on design and construction of buildings and infrastructure systems to produce, distribute and consume energy sustainably. SDC-E prepares students for careers in design and construction of building energy systems, renewable power generating systems, and smart power grids connected to smart buildings and infrastructure, cleantech venture capital, sustainability-focused public policy, green real estate development, and sustainability management positions.

SDC-E includes courses from the CEE department and several other departments at Stanford on sustainable HVAC design and construction of small scale and large structures, the planning, design and construction of renewable power systems, and sensing and control technologies to link integrated smart grids with intelligent buildings, data centers and infrastructure systems.

### **SDC-Structures (SDC-S)**

The SDC-Structures (SDC-S) track includes courses from construction engineering and management and Structural Engineering and Geomechanics (SEG) to prepare students for careers in design and construction firms that provide integrated design-build project delivery, construction management, and pre-construction services.

This track prepares students for multidisciplinary collaborative teamwork in an integrated design and construction process. The subprogram extends a student's design or construction background with core courses in each of these areas and develops the background needed to understand the concerns and expertise of the many project stakeholders. It includes a comprehensive project-based learning experience.

The SDC-S track is intended for applicants with backgrounds in engineering and science. Applicants should also have a background in the planning, design, or construction of facilities by virtue of work experience and/or their undergraduate education. Knowledge in subjects from the traditional areas of civil engineering is necessary for students to receive the degree and to satisfy prerequisite requirements for some of the required graduate courses. Students with an undergraduate degree in Civil Engineering, and who expect to pursue careers with design or construction firms that emphasize design-build, EPC, or turnkey projects should consider SDC-S.

### **SDC-Water (SDC-W)**

The SDC-Water (SDC-W) track combines courses from our department's subprograms in Environmental Engineering and Science and Environmental Fluid Mechanics with courses on sustainable design and construction methods and tools. The SDC-W track prepares students for careers in sustainable design, construction and operation of both centralized systems and emerging distributed systems for water supply and water and waste treatment that integrate the production of energy and a grown stream of valuable bio-engineered products recovered from the waste stream.

This track offers courses in physical and chemical treatment processes for water and wastewater treatment, environmental biotechnology for use in water resource management and bioremediation, watershed and wetland management, environmental engineering design, and sustainable water resource development. Additional related course work is available from other programs within the department, including the Environmental Engineering and Science (EES) and Environmental Fluid Mechanics and Hydrology (EFMH) programs.

This track is intended for students with a background and interest in environmental engineering and fluid mechanics who wish to pursue careers in the development of sustainable water and waste treatment facilities with large integrated design-building firms or progressive governmental agencies in this sector.

## **Bachelor of Science in Civil Engineering**

The B.S. in Civil Engineering is an ABET accredited program, which integrates research with engineering education. The B.S. in Civil Engineering offers the opportunity to focus on structures and construction, or on environmental and water studies. Three educational objectives structure the Civil Engineering degree program. Graduates of the program are expected within a few years of graduation to have the ability to:

1. Establish themselves as practicing professionals in civil or environmental engineering or a related field.
2. Pursue graduate study in civil or environmental engineering or other fields.
3. Work effectively as responsible professionals alone or in teams handling increasingly complex professional and societal expectations.

Students who major in Civil Engineering must complete the appropriate requirements for the B.S. degree listed. Each student has elective units, which may be used in any way the student desires, including additional studies in the department of Civil and Environmental Engineering or any other school or department in the University. Because the undergraduate engineering curriculum provides breadth of study, students who intend to enter professional practice in civil engineering should plan to obtain their professional education at the graduate level.

A number of undergraduate programs at Stanford may be of interest to students seeking to specialize in environmental studies. In addition to the Environmental and Water Studies track within the Civil Engineering major, students may consider related programs in the department such as Atmosphere/Energy and Environmental Systems Engineering, as well as programs offered in other departments and schools such as Earth Systems, Geological and Environmental Sciences, Urban Studies, and Human Biology.

## **Civil Engineering (CE)**

Completion of the undergraduate program in Civil Engineering leads to the conferral of the Bachelor of Science in Civil Engineering.

## Mission of the Undergraduate Program in Civil Engineering

The mission of the undergraduate program in Civil Engineering is to provide students with the principles of engineering and the methodologies necessary for civil engineering practice. This pre-professional program balances the fundamentals common to many specialties in civil engineering and allows for concentration in structures and construction or environmental and water studies. Students in the major learn to apply knowledge of mathematics, science, and civil engineering to conduct experiments, design structures and systems to creatively solve engineering problems, and communicate their ideas effectively. The curriculum includes course work in structural, construction, and environmental engineering. The major prepares students for careers in consulting, industry and government, as well as for graduate studies in engineering.

### Requirements

<b>Mathematics and Science</b>	45
45 units minimum; see Basic Requirements 1 and 2 <sup>1</sup>	
<b>Technology in Society</b>	3-5
One course; see Basic Requirement 4 <sup>2</sup>	
<b>Engineering Fundamentals</b>	
Three courses minimum, see Basic Requirement 3	
ENGR 14 Intro to Solid Mechanics	4
ENGR 90/CEE 70 Environmental Science and Technology Fundamentals Elective	3-5
<b>Engineering Depth</b>	
Minimum of 68 Engineering Fundamentals plus Engineering Depth; see Basic Requirement 5	
CEE 100 Managing Sustainable Building Projects <sup>3</sup>	4
CEE 101A Mechanics of Materials	4
CEE 101B Mechanics of Fluids (or CEE 101N)	4
CEE 101C Geotechnical Engineering	4
CEE 146A Engineering Economy	3
Specialty courses in either:	36-39
Environmental and Water Studies (see below)	
Structures and Construction (see below)	
Other School of Engineering Electives	3-0
<b>Total Units</b>	<b>116-120</b>

<sup>1</sup> Mathematics must include CME 100 Vector Calculus for Engineers and CME 102 Ordinary Differential Equations for Engineers (or Math 51 Linear Algebra and Differential Calculus of Several Variables and MATH 53 Ordinary Differential Equations with Linear Algebra) and a Statistics course. Science must include Physics 41 Mechanics; either ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology, CHEM31A Chemical Principles I or CHEM 31X Chemical Principles; two additional quarters in either chemistry or physics, and GS 1A Introduction to Geology: The Physical Science of the Earth (or GS 1B or 1C); for students in the Environmental and Water Studies track, the additional chemistry or physics must include CHEM 33; for students in the Structures and Construction track, it must include PHYSICS 43 or 45. Please note that the only quarter GS 1A is offered for AY 2015-16 is Spring Quarter.

<sup>2</sup> Chosen TiS class must specifically include an ethics component, as indicated in Figure 3-3 in the Engineering Undergraduate Handbook (<http://web.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Handbooks>)

<sup>3</sup> CEE 100 meets the Writing in the Major (WIM) requirement

## Environmental and Water Studies Focus

	Units
ENGR 30 Engineering Thermodynamics <sup>1</sup>	3
CEE 101D Computations in Civil and Environmental Engineering (or CEE 101S) <sup>2</sup>	3
CEE 160 Mechanics of Fluids Laboratory (req'd only if CEE 101B is taken)	2
CEE 161A Rivers, Streams, and Canals	3-4
CEE 166A Watersheds and Wetlands	3
CEE 166B Floods and Droughts, Dams and Aqueducts	3
CEE 171 Environmental Planning Methods	3
CEE 172 Air Quality Management	3
CEE 177 Aquatic Chemistry and Biology	4
CEE 179A Water Chemistry Laboratory	3
CEE 179C Environmental Engineering Design (or CEE 169) Capstone design experience course	5
Remaining specialty units from:	
CEE 63 Weather and Storms <sup>2</sup>	3
CEE 64 Air Pollution and Global Warming: History, Science, and Solutions <sup>2</sup>	3
CEE 107A Understanding Energy	3
CEE 107F Understanding Energy – Field Trips	1
CEE 107W Understanding Energy – Workshop	1
CEE 109 Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision	2
CEE 155 Introduction to Sensing Networks for CEE	4
CEE 164 Introduction to Physical Oceanography	4
CEE 165C Water Resources Management	3
CEE 166D Water Resources and Water Hazards Field Trips	2
CEE 172A Indoor Air Quality	2-3
CEE 174A Providing Safe Water for the Developing and Developed World	3
CEE 174B Wastewater Treatment: From Disposal to Resource Recovery	3
CEE 176A Energy Efficient Buildings	3-4
CEE 176B Electric Power: Renewables and Efficiency	3-4
CEE 178 Introduction to Human Exposure Analysis	3
CEE 199 Undergraduate Research in Civil and Environmental Engineering	1-4

## Structures and Construction Focus

	Units
CEE 102 Legal Principles in Design, Construction, and Project Delivery	3
CEE 156 Building Systems	4
CEE 180 Structural Analysis	4
CEE 181 Design of Steel Structures	4
CEE 182 Design of Reinforced Concrete Structures	4
CEE 183 Integrated Civil Engineering Design Project	4
Select one of the following:	4
ENGR 50 Introduction to Materials Science, Nanotechnology Emphasis	
ENGR 50E Introduction to Materials Science, Energy Emphasis	
ENGR 50M Introduction to Materials Science, Biomaterials Emphasis	
Remaining specialty units from:	
ENGR 15 Dynamics	4

CME 104	Linear Algebra and Partial Differential Equations for Engineers	5
CEE 101D	Computations in Civil and Environmental Engineering (or CEE 101S)	3
CEE 112A	Industry Applications of Virtual Design & Construction	2-4
CEE 112B	Industry Applications of Virtual Design & Construction	2-4
CEE 122A	Computer Integrated Architecture/Engineering/Construction	2
CEE 122B	Computer Integrated A/E/C	2
CEE 131A	Professional Practice: Mixed Use Design in an Urban Setting (not given AY 2015-16)	
CEE 131B	Financial Management of Sustainable Urban Systems	3
CEE 141A	Infrastructure Project Development	3
CEE 141B	Infrastructure Project Delivery	3
CEE 151	Negotiation	3
CEE 155	Introduction to Sensing Networks for CEE	4
CEE 160	Mechanics of Fluids Laboratory	2
CEE 161A	Rivers, Streams, and Canals	3-4
CEE 171	Environmental Planning Methods	3
CEE 176A	Energy Efficient Buildings	3-4
CEE 176B	Electric Power: Renewables and Efficiency	3-4
CEE 195	Fundamentals of Structural Geology	3
CEE 196	Engineering Geology and Global Change	3
CEE 199	Undergraduate Research in Civil and Environmental Engineering	1-4
CEE 203	Probabilistic Models in Civil Engineering	3-4
One of the following can also count as remaining specialty units.		3-4
CEE 120A	Building Information Modeling Workshop (or CEE 120S or CEE 120B)	2-4
CEE 130	Architectural Design: 3-D Modeling, Methodology, and Process	
CEE 131A	Professional Practice: Mixed-Use Design in an Urban Setting	
CEE 134B	Intermediate Arch Studio	

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

## Bachelor of Science in Environmental Systems Engineering

For undergraduate studies focusing on Environmental Engineering, two options are available. The undergraduate Civil Engineering major (which is ABET-accredited) offers an Environmental & Water Studies track, and the new Environmental Systems Engineering major (which is not ABET-accredited) offers a choice of focusing on coastal environments, freshwater environments, or urban environments.

## Environmental Systems Engineering (EnvSE)

Completion of the undergraduate program in Environmental Systems Engineering leads to the conferral of the Bachelor of Science in Environmental Systems Engineering.

### Environmental Engineering (ENV)

The program in Environmental Engineering has been discontinued. Students currently enrolled in this program should consult the previous year's Stanford Bulletin (<http://exploreddegrees.stanford.edu/>

[archive/2012-13/schoolofengineering/civilandenvironmentalengineering/#bachelorofsciencetext-enviengi](http://archive/2012-13/schoolofengineering/civilandenvironmentalengineering/#bachelorofsciencetext-enviengi)) for program requirements (click on Environmental Engineering in the right hand menu). Any current Environmental Engineering major wishing ABET accreditation must graduate by June 2015.

## Mission of the Undergraduate Program in Environmental Systems Engineering

The mission of the undergraduate program in Environmental Systems Engineering is to prepare students for incorporating environmentally sustainable design, strategies and practices into natural and built systems and infrastructure involving buildings, water supply, and coastal regions. Courses in the program are multidisciplinary in nature, combining math/science/engineering fundamentals, and tools and skills considered essential for an engineer, along with a choice of one of three focus areas for more in-depth study: coastal environments, freshwater environments, or urban environments. This major offers the opportunity for a more focused curriculum than the Environmental and Water Studies concentration in the Civil Engineering degree program. The program of study, which includes a capstone experience, aims to equip engineering students to take on the complex challenges of the 21<sup>st</sup> Century involving natural and built environments, in consulting and industry as well as in graduate school.

### Requirements

#### Mathematics and Science

See Basic Requirement 1 and 2<sup>1</sup> 36

#### Technology in Society (TiS)

One 3-5 unit course required, see Basic Requirement 4 3-5

#### Engineering Fundamentals

Three courses minimum (see Basic Requirement 3), including:

ENGR 70A Programming Methodology 5

(or ENGR 70X)

(req'd) plus one of the following courses:

ENGR 90 Environmental Science and Technology

(req'd for Freshwater and Coastal focus areas)

or

CEE 146A Engineering Economy 3

(req'd for Urban focus area)

plus one Engineering Fundamentals Elective 3-5

**Fundamental Tools/Skills**<sup>2</sup> 9

in Visual, Oral/Written Communication, and Modeling/Analysis

**Specialty Courses, in either** 37

Coastal Environments (see Below)

or Freshwater Environments (see Below)

or Urban Environments (see Below)

**Total Units** 96-100

<sup>1</sup> Math must include CME 100 Vector Calculus for Engineers (or MATH 51 Linear Algebra and Differential Calculus of Several Variables), and either a Probability/Statistics course or CME 102 Ordinary Differential Equations for Engineers (or MATH 53 Ordinary Differential Equations with Linear Algebra). Science must include PHYSICS 41 Mechanics; and either Engr 31 Chemical Principles with Application to Nanoscale Science and Technology, CHEM 31B Chemical Principles II or CHEM 31X Chemical Principles Accelerated (or PHYSICS 43 Electricity and Magnetism, for Urban focus area only).

<sup>2</sup> Fundamental Tools/Skills must include: (a) CEE 1 Introduction to Environmental Systems Engineering; (b) *at least* one Visual Communication class from CEE 31 Accessing Architecture Through Drawing / CEE 31Q Accessing Architecture Through Drawing, CEE 133F Principles of Freehand Drawing, ME 101 Visual Thinking, ME 110 Design Sketching, ARTSTUDI 160 Intro to Digital / Physical Design, or OSPPARIS 44 EAP: Analytical Drawing and Graphic Art; (c) *at least* one Oral/Written Communication class from ENGR 103 Public Speaking (or ORALCOMM 122 "The TED Commandments": The Art and Heart of Effective Public Speaking), ENGR 202W Technical Writing, or CEE 151 Negotiation, EARTHSYS 195 Natural Hazards and Risk Communication, or EARTHSYS 200 Sustaining Action: Research, Analysis and Writing for the Publicand (d) *at least* one Modeling/Analysis class from CEE 155 Introduction to Sensing Networks for CEE, CEE 120A Building Information Modeling Workshop (or CEE 120S Building Information Modeling Special Study ), CEE 146A Engineering Economy, CEE 226 Life Cycle Assessment for Complex Systems, EARTHSYS 144 Fundamentals of Geographic Information Science (GIS), CEE 101D Computations in Civil and Environmental Engineering (if not counted as Math), or CME 211 Software Development for Scientists and Engineers (or EARTHSYS 211 Fundamentals of Modeling).

### Urban Environments Focus Area (37 units)

Required			
CEE 100	Managing Sustainable Building Projects		4
CEE 101B	Mechanics of Fluids (or CEE 101N)		4
CEE 176A	Energy Efficient Buildings		3-4
Electives (at least two of the 4 areas below must be included)			
Building Systems			
CEE 102	Legal Principles in Design, Construction, and Project Delivery		3
or			
CEE 131B	Financial Management of Sustainable Urban Systems		3
CEE 130	Architectural Design: 3-D Modeling, Methodology, and Process		4
CEE 156	Building Systems		4
Energy Systems			
CEE 107A	Understanding Energy		3
CEE 176B	Electric Power: Renewables and Efficiency		3-4
ENERGY 171	Energy Infrastructure, Technology and Economics		3
or			
ENERGY 191	Optimization of Energy Systems		3-4
Water Systems			
CEE 166A	Watersheds and Wetlands		3
CEE 166B	Floods and Droughts, Dams and Aqueducts		3
CEE 174A	Providing Safe Water for the Developing and Developed World		3
CEE 174B	Wastewater Treatment: From Disposal to Resource Recovery		3
Urban Planning			
CEE 171	Environmental Planning Methods		3
or			
URBANST 163	Land Use Control		4
CEE 177L	Smart Cities & Communities		2-3
URBANST 113	Introduction to Urban Design: Contemporary Urban Design in Theory and Practice		5
or			
URBANST 164	Sustainable Cities		4-5
or			

URBANST 165	Sustainable Urban and Regional Transportation Planning		4-5
Capstone			
CEE 112A	Industry Applications of Virtual Design & Construction		3-4
CEE 122A	Computer Integrated Architecture/Engineering/Construction		2
-and-			
CEE 112B	Industry Applications of Virtual Design & Construction		2
CEE 126	International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development		4-5
CEE 141A	Infrastructure Project Development		3
CEE 141B	Infrastructure Project Delivery		3
CEE 221A	Planning Tools and Methods in the Power Sector		3-4
CEE 226E	Advanced Topics in Integrated, Energy-Efficient Building Design		3
CEE 199	Undergraduate Research in Civil and Environmental Engineering		3-4

### Freshwater Environments Focus Area (37 units)

Required			
CEE 101B	Mechanics of Fluids ( or CEE 101N)		4
CEE 177	Aquatic Chemistry and Biology		4
CEE 166A	Watersheds and Wetlands		3
or			
CEE 174A	Providing Safe Water for the Developing and Developed World		3
Electives			
CEE 160	Mechanics of Fluids Laboratory		2
CEE 161A	Rivers, Streams, and Canals		3-4
CEE 165C	Water Resources Management		3
CEE 166A	Watersheds and Wetlands		3
(if not counted as req'd course)			
CEE 166B	Floods and Droughts, Dams and Aqueducts		3
CEE 166D	Water Resources and Water Hazards Field Trips		2
CEE 171	Environmental Planning Methods		3
or			
URBANST 163	Land Use Control		4
CEE 174A	Providing Safe Water for the Developing and Developed World		3
(if not counted as a req'd course)			
CEE 174B	Wastewater Treatment: From Disposal to Resource Recovery		3
CEE 179A	Water Chemistry Laboratory		3
CEE 265A	Sustainable Water Resources Development		3
CEE 265D	Water and Sanitation in Developing Countries		3
BIOHOPK 150H	Ecological Mechanics		3
EARTHSYS 140	The Energy-Water Nexus		3
EARTHSYS 156	Soil and Water Chemistry		1-4
GS 130	Soil Physics and Hydrology		3
OSPAUSTL 25	Freshwater Systems		3
Capstone			
CEE 126	International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development		4-5
CEE 141A	Infrastructure Project Development		3
CEE 169	Environmental and Water Resources Engineering Design		5

CEE 199	Undergraduate Research in Civil and Environmental Engineering	3-4
---------	---	-----

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

## Honors Program

This program leads to a B.S. with honors for undergraduates majoring in Civil Engineering or in Environmental Systems Engineering. It is designed to encourage qualified students to undertake a more intensive study of civil and environmental engineering than is required for the normal majors through a substantial, independent research project.

The program involves an in-depth research study in an area proposed to and agreed to by a Department of Civil and Environmental Engineering faculty adviser and completion of a thesis of high quality. A written proposal for the research to be undertaken must be submitted and approved by the faculty advisor in the fourth quarter prior to graduation. At the time of application, the student must have an overall grade point average (GPA) of at least 3.3 for course work at Stanford; this GPA must be maintained to graduation. The thesis is supervised by a CEE faculty adviser and must involve input from the School of Engineering writing program by means of ENGR 202S Writing: Special Projects or its equivalent. The written thesis must be approved by the thesis adviser. Students are encouraged to present their results in a seminar for faculty and students. Up to 10 units of CEE 199H Undergraduate Honors Thesis, may be taken to support the research and writing (not to duplicate ENGR 202S). These units are beyond the normal Civil Engineering or Environmental Systems Engineering major program requirements.

## Minor in Civil Engineering or Environmental Systems Engineering

The department offers a minor in Civil Engineering and a minor in Environmental Systems Engineering. Departmental expertise and undergraduate course offerings are available in the areas of architectural design, construction engineering, construction management, structural/geotechnical engineering, environmental engineering and science, environmental fluid mechanics and hydrology, and atmosphere/energy. The courses required for the minors typically have prerequisites. Minors are not ABET-accredited programs.

## Civil Engineering (CE) Minor

The civil engineering minor is intended to give students a focused introduction to one or more areas of civil engineering. Departmental expertise and undergraduate course offerings are available in the areas of Architectural Design, Construction Engineering and Management, and Structural and Geotechnical Engineering. Students interested in Environmental and Water Studies should refer to the Environmental Systems Engineering minor.

The minimum prerequisite for a civil engineering minor is MATH 42 Calculus (or MATH 21 Calculus); however, many courses of interest require PHYSICS 41 Mechanics and/or MATH 51 Linear Algebra and Differential Calculus of Several Variables as prerequisites. The minimum prerequisite for a Civil Engineering minor focusing on architectural design is MATH 41 Calculus (or MATH 19 Calculus) and a course in Statistics. Students should recognize that a minor in civil engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining a civil engineering minor, and the field itself is so broad, no single set of course requirements will be appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below. Additional information, including example minor programs, are provided on the CEE web site ([http://cee.stanford.edu/prospective/undergrad/minor\\_overview.html](http://cee.stanford.edu/prospective/undergrad/minor_overview.html)) and in Chapter 6 of the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

General guidelines are:

1. A civil engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each of letter-graded work, except where letter grades are not offered.
2. The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another. Example programs are given on the CEE webpage.

Professor Anne Kiremidjian ([kiremidjian@stanford.edu](mailto:kiremidjian@stanford.edu)) is the CEE undergraduate minor adviser in Structural Engineering and Construction Engineering and Management. John Barton ([jhbarton@stanford.edu](mailto:jhbarton@stanford.edu) (<http://www.stanford.edu/dept/registrar/bulletin/jhbarton@stanford.edu>)), Program Director for Architectural Design, is the undergraduate minor adviser in Architectural Design. Students must consult the appropriate adviser when developing their minor program, and obtain approval of the finalized study list from them.

## Environmental Systems Engineering (EnvSE) Minor

The Environmental Systems Engineering minor is intended to give students a focused introduction to one or more areas of Environmental Systems Engineering. Departmental expertise and undergraduate course offerings are available in the areas of environmental engineering and science, environmental fluid mechanics and hydrology, and atmosphere/energy. The minimum prerequisite for an Environmental Systems Engineering minor is MATH 42 Calculus (or MATH 21 Calculus); however, many courses of interest require PHYSICS 41 Mechanics and/or MATH 51 Linear Algebra and Differential Calculus of Several Variables as prerequisites. Students should recognize that a minor in Environmental Systems Engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining an environmental systems engineering minor, no single set of course requirements is appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below. Additional information on preparing a minor program is available in the Undergraduate Engineering Handbook (<http://ughb.stanford.edu>).

General guidelines are—

- An Environmental Systems Engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each of letter-graded work, except where letter grades are not offered.
- The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another. Example programs are available on the CEE web site ([http://cee.stanford.edu/prospective/undergrad/minor\\_overview.html](http://cee.stanford.edu/prospective/undergrad/minor_overview.html)).

Professor Lynn Hildemann ([hildemann@stanford.edu](mailto:hildemann@stanford.edu)) is the CEE undergraduate minor adviser in Environmental Systems Engineering. Students must consult with Professor Hildemann in developing their minor program, and obtain approval of the finalized study list from her.

## Coterminal B.S./M.S. Program in Civil and Environmental Engineering

Stanford undergraduates who wish to continue their studies for the Master of Science degree in the coterminal program at Stanford must have earned a minimum of 120 units towards graduation. This includes allowable Advanced Placement (AP) and transfer credit. Applicants must submit their application no later than the quarter prior to the expected completion of their undergraduate degree and are expected to meet the Department of Civil and Environmental Engineering application deadlines for coterminal applicants for graduate study (January 15, 2016). Applications are considered once a year during Winter Quarter.

An application must display evidence of potential for strong academic performance as a graduate student.

It is recommended that students who contemplate advanced study at Stanford discuss their plans with their advisers in the junior year.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Master of Science in Civil and Environmental Engineering

The following programs are available leading to the M.S. degree in Civil and Environmental Engineering:

- Atmosphere/Energy
- Environmental Engineering and Science
- Environmental Fluid Mechanics and Hydrology
- Geomechanics
- Structural Engineering
- Sustainable Design and Construction

Students admitted to graduate study with a B.S. in Civil Engineering, or equivalent, from an accredited curriculum can satisfy the requirements for the M.S. degree in Civil and Environmental Engineering by completing a minimum of 45 units beyond the B.S. All 45 units must be taken at Stanford. A minimum 2.75 grade point average (GPA) is required for candidates to be recommended for the M.S. degree. No thesis is required.

The program of study must be approved by the faculty of the department and should include at least 45 units of courses in engineering, mathematics, science, and related fields unless it can be shown that other work is pertinent to the student's objectives. Additional program area requirements are available on the department web site and from the department's student services office (Y2E2 room 316).

Candidates for the M.S. in Civil and Environmental Engineering who do not have a B.S. in Civil Engineering may, in addition to the above, be required to complete those undergraduate courses deemed important to their graduate programs. In such cases, more than three quarters is often required to obtain the degree.

## Engineer in Civil and Environmental Engineering

A student with an M.S. in Civil Engineering may satisfy the requirements of the degree of Engineer in Civil and Environmental Engineering by completing 45 unduplicated course work and research units for a total of 90 units. Engineer candidates must submit an acceptable thesis (12-15 units) and maintain a minimum GPA of 3.0. The program of study must be approved by a faculty member in the department.

This degree is recommended for those desiring additional graduate education, especially those planning a career in professional practice. The thesis normally should be started in the first quarter of graduate study after the M.S. degree. Programs are offered in the fields of specialization mentioned for the M.S. degree. For students who will continue study toward a CEE Ph.D., the Engineer thesis topic must be significantly different from their doctoral research.

Graduate students who lack adequate background in their area of specialization (e.g. lack a prior degree in civil engineering, if required in their program) or who are not full-time students should expect to be enrolled for more than two years. Engineer degree candidates should develop individually tailored expected-progress timetables in consultation with their program advisers.

For graduate students not currently attending Stanford, admission to study for the Engineer degree in the Department of Civil and Environmental Engineering begins with the office of Graduate Admissions (<http://www.stanford.edu/home/admission/index/html>).

If you are currently pursuing a graduate degree at Stanford, and wish to apply for the Engineer degree program, submit an Application for Post-Masters Study (available in the department office, Y2E2 Room 314). This form is typically filed during your second quarter of graduate study, preferably before January 1, so that your application may be reviewed during the normal graduate admissions cycle. You may apply at a later date if your adviser feels that it is appropriate to do so.

A minimum of 90 quarter units of full-time graduate study (or equivalent part-time graduate study) is required for the Engineer degree. For most students, the master's degree supplies 45 of these units.

If your master's degree was obtained at another school, you can apply to transfer up to 45 quarter units of residency credit by completing an Application for Transfer Credit for Graduate Work Done Elsewhere. No units need to be transferred if you hold an M.S. degree from Stanford.

## Doctor of Philosophy in Civil and Environmental Engineering

The Ph.D. is offered under the general regulations of the University as set forth in the "Graduate Degrees" section of this bulletin. This degree is recommended for those who expect to engage in a professional career in research, teaching, or technical work of an advanced nature. The Ph.D. program requires a total of 135 units of graduate study, at least 90 units of which must be at Stanford. Up to 45 units of graduate study can be represented by the M.S. program described above. Additionally, up to 45 units of graduate study can be represented by the Engineer (ENG) program as described above if both the M.S. and ENG units were all completed at Stanford. Students must maintain a minimum GPA of 3.0 in post-M.S. course work. All candidates for the Ph.D. degree are required to complete CEE 200 in conjunction with a one-quarter teaching assistantship/course assistantship to gain training and instructional experience. Further information on Ph.D. requirements and regulations is found in the department Graduate Handbook.

The program of study is arranged by the prospective candidate at the beginning of the second year with the advice of a faculty committee

whose members are nearest in the field of interest to that of the student. The chair of the committee serves as the student's interim adviser until such time as a member of the faculty has agreed to direct the dissertation research. Insofar as possible, the program of study is adapted to the interests and needs of the student within the framework of the requirements of the department and the University.

By the end of the second year of graduate study (or by the end of the first year for students who enroll at Stanford with an M.S.), the student is expected to pass the department's General Qualifying Examination (GQE) to be admitted to candidacy for the doctoral degree. The purpose of the GQE is to ensure that the student is adequately prepared to undertake doctoral research and has a well planned research topic. The exam may take the form of (1) a written and/or oral general examination of the candidate's major field, (2) a presentation and defense of the candidate's doctoral research dissertation proposal, or (3) a combination research proposal and general examination. The GQE is administered by an advisory committee consisting of at least three Stanford faculty members, including a chair who is a faculty member in Civil and Environmental Engineering. All members are normally on the Stanford Academic Council. A petition for appointment of one advisory committee member who is not on the Academic Council may be made if the proposed person contributes an area of expertise that is not readily available from the faculty. Such petitions are subject to approval by the department chair. When the primary research adviser is not a member of the CEE Academic Council faculty, the committee must consist of four examiners, with two members from the CEE department.

## Ph.D. Minor in Civil and Environmental Engineering

A Ph.D. minor is a program outside a major department. Requirements for a minor are established by the minor department. Acceptance of the minor as part of the total Ph.D. program is determined by the major department. Application for the Ph.D. minor must be approved by both the major and the minor department, and the minor department must be represented at the University oral examination.

A student desiring a Ph.D. minor in Civil and Environmental Engineering (CEE) must have a minor program adviser who is both a CEE faculty member and a member of the Academic Council. The faculty member must be in the program of the designated minor subfield of CEE. This adviser must be a member of the student's University oral examination committee and the reading committee for the doctoral dissertation.

The program must include at least 20 units of graduate-level course work (courses numbered 200 or above, excluding special studies and thesis) in CEE completed at Stanford University. Units taken for the minor cannot be counted as part of the 45 unduplicated units for the PhD major. The list of courses must form a coherent program and must be approved by the minor program adviser and the CEE chair. A minimum GPA of 3.0 must be achieved in these courses.

*Emeriti: (Professors)* Gilbert M. Masters\*, Perry L. McCarty\*, Henry W. Parker, Martin Reinhard\*, Haresh C. Shah, Robert L. Street\*, Clyde B. Tatum\*, Paul M. Teicholz

*Chair:* Stephen G. Monismith

*Associate Chair:* Eduardo Miranda

*Professors:* Sarah L. Billington, Alexandria B. Boehm, Ronaldo I. Borja, Craig S. Criddle, John O. Dabiri, Gregory G. Deierlein, Martin A. Fischer, Lynn M. Hildemann, Mark Z. Jacobson, Anne S. Kiremidjian, Peter K. Kitanidis, Jeffrey R. Koseff, Kincho H. Law, James O. Leckie, Raymond E. Levitt, Richard G. Luthy, Stephen G. Monismith, Leonard Ortolano (on leave Autumn), Alfred M. Spormann

*Associate Professors:* Jack W. Baker (on leave Aut, Win, Spr), Jennifer Davis, David L. Freyberg (on leave Aut, Win, Spr), Oliver B. Fringer, Michael D. Lepech, Nicholas T. Ouelette, Eduardo Miranda, William A. Mitch

*Assistant Professors:* Christian Linder, Ram Rajagopal

*Consulting Associate Professors:* Jordan Brandt, Gloria T. Lau, Colin Ong

*Consulting Assistant Professor:* Patrick Shiel

*Shimizu Visiting Professor:* Harrison S. Fraker

*UPS Visiting Associate Professor:* Karan Venayagamoorthy

\* Recalled to active duty.

## Overseas Studies Courses in Civil and Environmental Engineering

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPAUSTL 10	Coral Reef Ecosystems	3
OSPAUSTL 25	Freshwater Systems	3
OSPAUSTL 30	Coastal Forest Ecosystems	3

Note: OSPAUSTL 10 may count towards the ENVEN-BS and the CE-BS with Specialty in Environmental & Water Studies, however it does not count towards the CE-BS with Specialty in Structures & Construction.

## Computer Science

Courses offered by the Department of Computer Science are listed under the subject code CS on the *Stanford Bulletin's* ExploreCourses web site.

The Department of Computer Science (CS) operates and supports computing facilities for departmental education, research, and administration needs. All CS students have access to the departmental student machine for general use (mail, news, etc.), as well as computer labs with public workstations located in the Gates Building. In addition, most students have access to systems located in their research areas.

Each research group in Computer Science has systems specific to its research needs. These systems include workstations (PCs, Macs), multi-CPU computer clusters, and local mail and file servers. Servers and workstations running Linux or various versions of Windows are commonplace. Support for course work and instruction is provided on systems available through U (<http://itservices.stanford.edu>) university IT (<https://uit.stanford.edu>) (UIT) and the School of Engineering (<http://engineering.stanford.edu>) (SoE).

## Mission of the Undergraduate Program in Computer Science

The mission of the undergraduate program in Computer Science is to develop students' breadth of knowledge across the subject areas of computer sciences, including their ability to apply the defining processes of computer science theory, abstraction, design, and implementation to solve problems in the discipline. Students take a set of core courses. After learning the essential programming techniques and the mathematical foundations of computer science, students take courses in areas such as programming techniques, automata and complexity theory, systems programming, computer architecture, analysis of algorithms, artificial intelligence, and applications. The program prepares students for careers in government, law, and the corporate sector, and for graduate study.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to be able to:

1. Apply the knowledge of mathematics, science, and engineering.
2. Design and conduct experiments, as well to analyze and interpret data.
3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. Function on multidisciplinary teams.
5. Identify, formulate, and solve engineering problems.
6. Understand professional and ethical responsibility.
7. Communicate effectively.
8. Understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. Demonstrate a working knowledge of contemporary issues.
10. Apply the techniques, skills, and modern engineering tools necessary for engineering practice.
11. Transition from engineering concepts and theory to real engineering application.

## Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work in the foundational elements of the field and in at least one graduate specialization. Areas of specialization include artificial intelligence, biocomputation, computer and network security, human-computer interaction, information

management and analytics, mobile and internet computing, real-world computing, software theory, systems, and theoretical computer science.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Computer Science and related fields.

## Graduate Programs in Computer Science

The University's basic requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (p. 45)" section of this bulletin.

## Computer Science Course Catalog Numbering System

The first digit of a CS course number indicates its general level of sophistication:

Digit	Description
001-099	Service courses for nontechnical majors
100-199	Other service courses, basic undergraduate
200-299	Advanced undergraduate/beginning graduate
300-399	Advanced graduate
400-499	Experimental
500-599	Graduate seminars

The tens digit indicates the area of Computer Science it addresses:

Digit	Description
00-09	Introductory, miscellaneous
10-19	Hardware and Software Systems
20-39	Artificial Intelligence
40-49	Software Systems
50-59	Mathematical Foundations of Computing
60-69	Analysis of Algorithms
70-79	Computational Biology and Interdisciplinary Topics
90-99	Independent Study and Practicum

## Bachelor of Science in Computer Science

The department offers both a major in Computer Science and a minor in Computer Science. Further information is available in the *Handbook for Undergraduate Engineering Programs* published by the School of Engineering. The Computer Science major offers a number of tracks (programs of study) from which students can choose, allowing them to focus their program on the areas of most interest. These tracks also reflect the broad diversity of areas in computing disciplines. The department has an honors program, which is described in the following section.

In addition to Computer Science itself, Stanford offers several interdisciplinary degrees with a substantial computer science component. The Symbolic Systems major (in the School of Humanities and Sciences) offers an opportunity to explore computer science and its relation to linguistics, philosophy, and psychology. The Mathematical and Computational Sciences major (also Humanities and Sciences) allows students to explore computer science along with more mathematics, statistics, and operations research.

## Computer Science (CS)

Completion of the undergraduate program in Computer Science leads to the conferral of the Bachelor of Science in Computer Science.

## Mission of the Undergraduate Program in Computer Science

The mission of the undergraduate program in Computer Science is to develop students' breadth of knowledge across the subject areas of computer sciences, including their ability to apply the defining processes of computer science theory, abstraction, design, and implementation to solve problems in the discipline. Students take a set of core courses. After learning the essential programming techniques and the mathematical foundations of computer science, students take courses in areas such as programming techniques, automata and complexity theory, systems programming, computer architecture, analysis of algorithms, artificial intelligence, and applications. The program prepares students for careers in government, law, and the corporate sector, and for graduate study.

## Requirements

### Mathematics (26 units minimum)–

CS 103	Mathematical Foundations of Computing <sup>1</sup>	5
CS 109	Introduction to Probability for Computer Scientists <sup>2</sup>	5
MATH 41 & MATH 42	Calculus and Calculus <sup>3</sup>	10
Plus two electives <sup>2</sup>		

### Science (11 units minimum)–

PHYSICS 41	Mechanics	4
PHYSICS 43	Electricity and Magnetism	4
Science elective <sup>5</sup>		3

### Technology in Society (3-5 units)–

One course; see Basic Requirement 4

### Engineering Fundamentals (13 units minimum; see Basic Requirement 3)–

CS 106B	Programming Abstractions	5
or CS 106X	Programming Abstractions (Accelerated)	
ENGR 40	Introductory Electronics <sup>4</sup>	5
or ENGR 40A or		
Fundamentals Elective (may not be 70A, B, or X)		3-5

\*Students who take ENGR 40A or 40M for fewer than 5 units are required to take 1-2 additional units of ENGR Fundamentals (13 units minimum), or 1-2 additional units of Depth (27 units minimum for track and elective courses).

### Writing in the Major–

Select one of the following:

CS 181W	Computers, Ethics, and Public Policy
CS 191W	Writing Intensive Senior Project
CS 194W	Software Project
CS 210B	Software Project Experience with Corporate Partners
CS 294W	Writing Intensive Research Project in Computer Science

### Computer Science Core (15 units)–

CS 107	Computer Organization and Systems	5
or CS 107E	Computer Systems from the Ground Up	
CS 110	Principles of Computer Systems	5

CS 161 Design and Analysis of Algorithms 5

## Computer Science Depth B.S.

Choose one of the following ten CS degree tracks (a track must consist of at least 25 units and 7 classes):

### Artificial Intelligence Track—

	Units
CS 221 Artificial Intelligence: Principles and Techniques	4
Select two of the following:	6-8
CS 223A Introduction to Robotics	
CS 224M Multi-Agent Systems	
CS 224N Natural Language Processing	
CS 228 Probabilistic Graphical Models: Principles and Techniques	
CS 229 Machine Learning	
CS 131 Computer Vision: Foundations and Applications or CS 231A Computer Vision: From 3D Reconstruction to Recognition	
One additional course from the list above or the following:	3-4
CS 124 From Languages to Information	
CS 205A Mathematical Methods for Robotics, Vision, and Graphics	
CS 222	
CS 224S Spoken Language Processing	
CS 224U Natural Language Understanding	
CS 224W Social Information and Network Analysis	
CS 225A Experimental Robotics	
CS 225B Robot Programming Laboratory	
CS 227B General Game Playing	
CS 231A Computer Vision: From 3D Reconstruction to Recognition (If not taken for track requirement B)	
CS 231B The Cutting Edge of Computer Vision	
CS 231M	
CS 231N Convolutional Neural Networks for Visual Recognition	
CS 262 Computational Genomics	
CS 276 Information Retrieval and Web Search	
CS 277 Experimental Haptics	
CS 279 Computational Biology: Structure and Organization of Biomolecules and Cells	
CS 329 Topics in Artificial Intelligence (with adviser consent)	
CS 331A Advanced Reading in Computer Vision	
CS 371 Computational Biology in Four Dimensions	
CS 374 Algorithms in Biology	
CS 379 Interdisciplinary Topics (with adviser consent)	
EE 263 Introduction to Linear Dynamical Systems	
EE 376A Information Theory	
ENGR 205 Introduction to Control Design Techniques	
ENGR 209A Analysis and Control of Nonlinear Systems	
MS&E 251 Stochastic Control	
MS&E 351 Dynamic Programming and Stochastic Control	
STATS 315A Modern Applied Statistics: Learning	
STATS 315B Modern Applied Statistics: Data Mining	
Track Electives (at least three additional courses from the above lists, the general CS electives list, or the following): <sup>5</sup>	9-13
CS 238 Decision Making under Uncertainty	

CS 275 Translational Bioinformatics	
CS 278	
CS 334A Convex Optimization I or EE 364A Convex Optimization I	
EE 364B Convex Optimization II	
ECON 286 Game Theory and Economic Applications	
MS&E 252 Decision Analysis I: Foundations of Decision Analysis	
MS&E 352 Decision Analysis II: Professional Decision Analysis	
MS&E 355 Influence Diagrams and Probabilistic Networks	
PHIL 152 Computability and Logic	
PSYCH 202 Cognitive Neuroscience	
PSYCH 204A Human Neuroimaging Methods	
PSYCH 204B Computational Neuroimaging: Analysis Methods	
STATS 200 Introduction to Statistical Inference	
STATS 202 Data Mining and Analysis	
STATS 205 Introduction to Nonparametric Statistics	

### Biocomputation Track—

	Units
The Mathematics, Science, and Engineering Fundamentals requirements are non-standard for this track. See Handbook for Undergraduate Engineering Programs for details.	
Select one of the following:	3-4
CS 121 (Not given this year)	
CS 221 Artificial Intelligence: Principles and Techniques	
CS 228 Probabilistic Graphical Models: Principles and Techniques	
CS 229 Machine Learning	
CS 231A Computer Vision: From 3D Reconstruction to Recognition	
Select one of the following:	
CS 173 A Computational Tour of the Human Genome or CS 273A A Computational Tour of the Human Genome	
CS 262 Computational Genomics	
CS 270 Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	
CS 274 Representations and Algorithms for Computational Molecular Biology	
CS 275 Translational Bioinformatics	
CS 279 Computational Biology: Structure and Organization of Biomolecules and Cells	
One additional course from the lists above or the following:	3-4
CS 124 From Languages to Information	
CS 145 Introduction to Databases	
CS 147 Introduction to Human-Computer Interaction Design	
CS 148 Introduction to Computer Graphics and Imaging	
CS 248 Interactive Computer Graphics	
One course selected from either the Biomedical Computation (BMC) 'Informatics' electives list (go to <a href="http://bmc.stanford.edu">http://bmc.stanford.edu</a> and select Informatics from the elective options), BIOE 101, or from the general CS electives list <sup>5</sup>	3-4
One course from the BMC Informatics elective list (go to <a href="http://bmc.stanford.edu">http://bmc.stanford.edu</a> )	3-4
One course from either the BMC Informatics, Cellular/Molecular, or Organs/Organisms electives lists	3-5

One course from either the BMC Cellular/Molecular or Organs/  
Organisms electives lists 3-5

### Computer Engineering Track—

EE 108 & EE 180	Digital System Design and Digital Systems Architecture	6-8
Select two of the following:		8
EE 101A	Circuits I	
EE 101B	Circuits II	
EE 102A	Signal Processing and Linear Systems I	
EE 102B	Signal Processing and Linear Systems II	
Satisfy the requirements of one of the following concentrations:		
1) Digital Systems Concentration		
CS 140 or CS 143	Operating Systems and Systems Programming / Compilers	
EE 109	Digital Systems Design Lab	
EE 271	Introduction to VLSI Systems	
Plus two of the following (6-8 units):		
CS 140 or CS 143	Operating Systems and Systems Programming (if not counted above) / Compilers	
CS 144	Introduction to Computer Networking	
CS 149		
CS 240E		
CS 244	Advanced Topics in Networking	
EE 273	Digital Systems Engineering	
EE 282	Computer Systems Architecture	
2) Robotics and Mechatronics Concentration		
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	
CS 223A	Introduction to Robotics	
ME 210	Introduction to Mechatronics	
ENGR 105	Feedback Control Design	
Plus one of the following (3-4 units):		
CS 225A	Experimental Robotics	
CS 225B	Robot Programming Laboratory	
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	
CS 277	Experimental Haptics	
ENGR 205	Introduction to Control Design Techniques	
ENGR 207A	Linear Control Systems I	
ENGR 207B	Linear Control Systems II	
3) Networking Concentration		
CS 140 & CS 144	Operating Systems and Systems Programming and Introduction to Computer Networking	
Plus three of the following (9-11 units):		
CS 240	Advanced Topics in Operating Systems	
CS 240E		
CS 241	Embedded Systems Workshop	
CS 244	Advanced Topics in Networking	
CS 244B	Distributed Systems	
CS 244E		
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective	
CS 249B	Large-scale Software Development	
EE 179	Analog and Digital Communication Systems	

### Graphics Track—

		Units
CS 148 & CS 248	Introduction to Computer Graphics and Imaging and Interactive Computer Graphics	8
Select one of the following: <sup>6</sup>		3-5
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics (strongly recommended as a preferred choice)	
CME 104	Linear Algebra and Partial Differential Equations for Engineers (Note: students taking CME 104 are also required to take its prerequisite course, CME 102)	
CME 108	Introduction to Scientific Computing	
MATH 52	Integral Calculus of Several Variables	
MATH 113	Linear Algebra and Matrix Theory	
Select two of the following:		6-8
CS 178		
CS 231A or CS 131	Computer Vision: From 3D Reconstruction to Recognition / Computer Vision: Foundations and Applications	
CS 233	The Shape of Data: Geometric and Topological Data Analysis	
CS 268		
CS 348A	Computer Graphics: Geometric Modeling	
CS 348B	Computer Graphics: Image Synthesis Techniques	
CS 348V		
CS 448	Topics in Computer Graphics	
Track Electives: at least two additional courses from the lists above, the general CS electives list, or the following: <sup>5</sup>		
ARTSTUDI 160	Intro to Digital / Physical Design	
ARTSTUDI 170	Introduction to Photography	
ARTSTUDI 179	Digital Art I	
CME 302	Numerical Linear Algebra	
CME 306	Numerical Solution of Partial Differential Equations	
EE 262	Two-Dimensional Imaging	
EE 264	Digital Signal Processing	
EE 278	Introduction to Statistical Signal Processing	
EE 368	Digital Image Processing	
ME 101	Visual Thinking	
PSYCH 30	Introduction to Perception	
PSYCH 221	Applied Vision and Image Systems	

### Human-Computer Interaction Track—

		Units
CS 147	Introduction to Human-Computer Interaction Design	4
CS 247	Human-Computer Interaction Design Studio	4
Any three of the following:		
CS 142	Web Applications	
CS 148	Introduction to Computer Graphics and Imaging	
CS 194H	User Interface Design Project	
CS 210A	Software Project Experience with Corporate Partners	
CS 376	Human-Computer Interaction Research	
Any CS 377A/B/C/ 'Topics in HCI' of three or more units		
CS 448B	Data Visualization	
ME 216M		

At least two additional courses from above list, the general CS electives list, or the following:<sup>5</sup>

Any d.school class of 3+ units; any class of 3+ units at hci.stanford.edu under the 'courses' link

Communication-

COMM 121 Behavior and Social Media

COMM 124 Digital Deception

or COMM 22 Digital Deception

COMM 140 Digital Media Entrepreneurship

or COMM 24 Digital Media Entrepreneurship

COMM 166 Virtual People

COMM 169 Computers and Interfaces

or COMM 26 Computers and Interfaces

COMM 172 Media Psychology

or COMM 27 Media Psychology

COMM 182

COMM 324 Language and Technology

Art Studio-

ARTSTUDI 160 Intro to Digital / Physical Design

ARTSTUDI 162 Embodied Interfaces

ARTSTUDI 163 Drawing with Code

ARTSTUDI 164 DESIGN IN PUBLIC SPACES

ARTSTUDI 165 Social Media and Performative Practices

ARTSTUDI 168 Data as Material

ARTSTUDI 264 Advanced Interaction Design

ARTSTUDI 266 Sculptural Screens / Malleable Media

ARTSTUDI 267 Emerging Technology Studio

Sym Sys-

SYMSYS 245 Cognition in Interaction Design

Psychology-

PSYCH 30 Introduction to Perception

PSYCH 45 Introduction to Learning and Memory

PSYCH 70 Introduction to Social Psychology

PSYCH 75 Introduction to Cultural Psychology

PSYCH 110 Research Methods and Experimental Design

PSYCH 131 Language and Thought

PSYCH 154 Judgment and Decision-Making

Empirical Methods-

MS&E 125 Introduction to Applied Statistics

PSYCH 252 Statistical Methods for Behavioral and Social Sciences

PSYCH 254 Lab in Experimental Methods

PSYCH 110 Research Methods and Experimental Design

STATS 203 Introduction to Regression Models and Analysis of Variance

EDUC 191X

HUMBIO 82A Qualitative Research Methodology

ME Design-

ME 101 Visual Thinking

ME 115A Introduction to Human Values in Design

ME 203 Design and Manufacturing

ME 210 Introduction to Mechatronics

ME 216A Advanced Product Design: Needfinding

Learning Design + Tech-

EDUC 281X

EDUC 239X

EDUC 338X

EDUC 342 Child Development and New Technologies

MS&E-

MS&E 185 Global Work

MS&E 331

Computer Music-

MUSIC 220A Fundamentals of Computer-Generated Sound

MUSIC 220B Compositional Algorithms, Psychoacoustics, and Computational Music

MUSIC 220C Research Seminar in Computer-Generated Music

MUSIC 250A Physical Interaction Design for Music

Optional Elective<sup>5</sup>

## Information Track—

	<b>Units</b>
CS 124 From Languages to Information	4
CS 145 Introduction to Databases	4
Two courses, from different areas:	6-9
1) Information-based AI applications	
CS 224N Natural Language Processing	
CS 224S Spoken Language Processing	
CS 229 Machine Learning	
CS 229A (Not given this year)	
CS 233 The Shape of Data: Geometric and Topological Data Analysis	
2) Database and Information Systems	
CS 140 Operating Systems and Systems Programming	
CS 142 Web Applications	
CS 245 Database Systems Principles	
CS 246 Mining Massive Data Sets	
CS 341 Project in Mining Massive Data Sets	
CS 345 (Offered occasionally)	
CS 346 Database System Implementation	
CS 347 Parallel and Distributed Data Management	
3) Information Systems in Biology	
CS 262 Computational Genomics	
CS 270 Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	
CS 274 Representations and Algorithms for Computational Molecular Biology	
4) Information Systems on the Web	
CS 224W Social Information and Network Analysis	
CS 276 Information Retrieval and Web Search	
CS 364B (Not given this year)	
At least three additional courses from the above areas or the general CS electives list. <sup>5</sup>	

## Systems Track—

	<b>Units</b>
CS 140 Operating Systems and Systems Programming	4
Select one of the following:	3-4
CS 143 Compilers	
EE 180 Digital Systems Architecture	
Two additional courses from the list above or the following:	6-8
CS 144 Introduction to Computer Networking	
CS 145 Introduction to Databases	
CS 149	
CS 155 Computer and Network Security	
CS 240 Advanced Topics in Operating Systems	

CS 242	Programming Languages
CS 243	Program Analysis and Optimizations
CS 244	Advanced Topics in Networking
CS 245	Database Systems Principles
EE 271	Introduction to VLSI Systems
EE 282	Computer Systems Architecture
Track Electives: at least three additional courses selected from the list above, the general CS electives list, or the following: <sup>5</sup>	
CS 240E	
CS 241	Embedded Systems Workshop
CS 244C	Readings and Projects in Distributed Systems
CS 244E	
CS 315A	Parallel Computer Architecture and Programming
or CS 316	Advanced Multi-Core Systems
CS 341	Project in Mining Massive Data Sets
CS 343	(Not given this year)
CS 344	Topics in Computer Networks
CS 345	(Offered occasionally)
CS 346	Database System Implementation
CS 347	Parallel and Distributed Data Management
CS 349	Topics in Programming Systems (with permission of undergraduate advisor)
CS 448	Topics in Computer Graphics
EE 382C	Interconnection Networks
EE 384A	Internet Routing Protocols and Standards
EE 384B	Multimedia Communication over the Internet
EE 384C	Wireless Local and Wide Area Networks
EE 384S	Performance Engineering of Computer Systems & Networks
EE 384X	Packet Switch Architectures

**Theory Track—**

CS 154	Introduction to Automata and Complexity Theory	4
Select one of the following:		3
CS 167	Readings in Algorithms (Not given this year)	
CS 168	The Modern Algorithmic Toolbox	
CS 255	Introduction to Cryptography	
CS 261	Optimization and Algorithmic Paradigms	
CS 264		
CS 265	Randomized Algorithms and Probabilistic Analysis	
CS 268		
CS 361A		
CS 361B		
Two additional courses from the list above or the following:		6-8
CS 143	Compilers	
CS 155	Computer and Network Security	
CS 157	Logic and Automated Reasoning	
or PHIL 151	Metalogic	
CS 166	Data Structures	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	
CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 233	The Shape of Data: Geometric and Topological Data Analysis	
CS 242	Programming Languages	
CS 254		

CS 259	((With adviser consent); Not given this year)
CS 262	Computational Genomics
CS 263	Algorithms for Modern Data Models
CS 266	
CS 267	Graph Algorithms
CS 354	Topics in Circuit Complexity (Not given this year)
CS 355	(Not given this year)
CS 357	Advanced Topics in Formal Methods (Not given this year)
CS 358	Topics in Programming Language Theory
CS 359	Topics in the Theory of Computation (with adviser consent)
CS 364A	Algorithmic Game Theory
CS 364B	(Not given this year)
CS 366	(Not given this year)
CS 367	Algebraic Graph Algorithms (Not given this year)
CS 369	Topics in Analysis of Algorithms (with adviser consent)
CS 374	Algorithms in Biology
MS&E 310	Linear Programming

Track Electives: at least three additional courses from the list above, the general CS electives list, or the following:<sup>5</sup>

CME 302	Numerical Linear Algebra
CME 305	Discrete Mathematics and Algorithms
PHIL 152	Computability and Logic

**Unspecialized Track—**

CS 154	Introduction to Automata and Complexity Theory	4
Select one of the following:		4
CS 140	Operating Systems and Systems Programming	
CS 143	Compilers	
One additional course from the list above or the following:		3-4
CS 144	Introduction to Computer Networking	
CS 155	Computer and Network Security	
CS 242	Programming Languages	
CS 244	Advanced Topics in Networking	
EE 180	Digital Systems Architecture	
Select one of the following:		3-4
CS 121	(Not given this year)	
CS 221	Artificial Intelligence: Principles and Techniques	
CS 223A	Introduction to Robotics	
CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 229	Machine Learning	
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	
Select one of the following:		3-4
CS 145	Introduction to Databases	
CS 147	Introduction to Human-Computer Interaction Design	
CS 148	Introduction to Computer Graphics and Imaging	
CS 248	Interactive Computer Graphics	
CS 262	Computational Genomics	
At least two courses from the general CS electives list <sup>5</sup>		

## Individually Designed Track—

Students may propose an individually designed track. Proposals should include a minimum of seven courses, at least four of which must be CS courses numbered 100 or above. See Handbook for Undergraduate Engineering Programs for further information.

### Senior Capstone Project (3 units minimum)

CS 191	Senior Project <sup>7</sup>
CS 191W	Writing Intensive Senior Project <sup>7</sup>
CS 194	Software Project
CS 194H	User Interface Design Project
CS 194W	Software Project
CS 210B	Software Project Experience with Corporate Partners
CS 294W	Writing Intensive Research Project in Computer Science

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>)

- <sup>1</sup> MATH 19, MATH 20, and MATH 21 may be taken instead of MATH 41 and MATH 42 as long as at least 26 MATH units are taken. AP Calculus must be approved by the School of Engineering.
- <sup>2</sup> The math electives list consists of: MATH 51, MATH 104, MATH 108, MATH 109, MATH 110, MATH 113; CS 157, CS 205A; PHIL 151; CME 100, CME 102, CME 104. Completion of MATH 52 and MATH 53 counts as one math elective. Restrictions: CS 157 and PHIL 151 may not be used in combination to satisfy the math electives requirement. Students who have taken both MATH 51 and MATH 52 may not count CME 100 as an elective. Courses counted as math electives cannot also count as CS electives, and vice versa.
- <sup>3</sup> The science elective may be any course of 3 or more units from the School of Engineering Science list plus PSYCH 30; AP Chemistry may be used to meet this requirement. Either of the PHYSICS sequences 61/63 or 21/23 may be substituted for 41/43 as long as at least 11 science units are taken. AP Physics must be approved by the School of Engineering.
- <sup>4</sup> Students who take ENGR 40A (3 units) are required to take two additional units of ENGR Fundamentals (13 units minimum), or 2 additional units of Depth (27 units minimum for track and elective courses).
- <sup>5</sup> General CS Electives: CS 108, CS 124, CS 131, CS 140, CS 142, CS 143, CS 144, CS 145, CS 147, CS 148, CS 149, CS 154, CS 155, CS 157 (or PHIL 151), CS 164, CS 166, CS 167, CS 168, CS 190, CS 205A, CS 205B, CS 210A, CS 223A, CS 224M, CS 224N, CS 224S, CS 224U, CS 224W, CS 225A, CS 225B, CS 227B, CS 228, CS 228T, CS 229, CS 229A, CS 229T, CS 231A, CS 231B, CS 231M, CS 231N, CS 232, CS 233, CS 240, CS 240H, CS 242, CS 243, CS 244, CS 244B, CS 245, CS 246, CS 247, CS 248, CS 249A, CS 249B, CS 251, CS 254, CS 255, CS 261, CS 262, CS 263, CS 264, CS 265, CS 266, CS 267, CS 270, CS 272, CS 173 or CS 273A, CS 274, CS 276, CS 277, CS 279, CS 348B; CME 108; EE 180, EE 282, EE 364A.
- <sup>6</sup> CS 205A Mathematical Methods for Robotics, Vision, and Graphics is recommended in this list for the Graphics track. Students taking CME 104 Linear Algebra and Partial Differential Equations for Engineers are also required to take its prerequisite, CME 102 Ordinary Differential Equations for Engineers.
- <sup>7</sup> Independent study projects (CS 191 Senior Projector CS 191W Writing Intensive Senior Project) require faculty sponsorship and must be approved by the adviser, faculty sponsor, and the CS senior project adviser (P. Young). A signed approval form, along with a brief description of the proposed project, should be filed the quarter before work on the project is begun. Further details can be found in the *Handbook for Undergraduate Engineering Programs*.

## Honors Program

The Department of Computer Science (CS) offers an honors program for undergraduates whose academic records and personal initiative indicate that they have the necessary skills to undertake high-quality research in computer science. Admission to the program is by application only. To apply for the honors program, students must be majoring in Computer Science, have a grade point average (GPA) of at least 3.6 in courses that count toward the major, and achieve senior standing (135 or more units) by the end of the academic year in which they apply. Coterminal master's students are eligible to apply as long as they have not already received their undergraduate degree. Beyond these requirements, students who apply for the honors program must find a Computer Science faculty member who agrees to serve as the thesis adviser for the project. Thesis advisers must be members of Stanford's Academic Council.

Students who meet the eligibility requirements and wish to be considered for the honors program must submit a written application to the CS undergraduate program office by May 1 of the year preceding the honors work. The application must include a letter describing the research project, a letter of endorsement from the faculty sponsor, and a transcript of courses taken at Stanford. Each year, a faculty review committee selects the successful candidates for honors from the pool of qualified applicants.

In order to receive departmental honors, students admitted to the honors program must, in addition to satisfying the standard requirements for the undergraduate degree, do the following:

1. Complete at least 9 units of CS 191 or CS 191W under the direction of their project sponsor.
2. Attend a weekly honors seminar Winter and Spring quarters.
3. Complete an honors thesis deemed acceptable by the thesis adviser and at least one additional faculty member.
4. Present the thesis at a public colloquium sponsored by the department.
5. Maintain the 3.6 GPA required for admission to the honors program.

## Guide to Choosing Introductory Courses

Students arriving at Stanford have widely differing backgrounds and goals, but most find that the ability to use computers effectively is beneficial to their education. The department offers many introductory courses to meet the needs of these students.

For students whose principal interest is an exposure to the fundamental ideas behind computer science and programming, CS 101 or CS 105 are the most appropriate courses. They are intended for students in nontechnical disciplines who expect to make some use of computers, but who do not expect to go on to more advanced courses. CS 101 and CS 105 meet the new Ways of Thinking Ways of Doing breadth requirements in Formal Reasoning and include an introduction to programming and the use of modern Internet-based technologies. Students interested in learning to use the computer should consider CS 1C, Introduction to Computing at Stanford.

Students who intend to pursue a serious course of study in computer science may enter the program at a variety of levels, depending on their background. Students with little prior experience or those who wish to take more time to study the fundamentals of programming should take CS 106A followed by CS 106B. Students in CS 106A need not have prior programming experience. Students with significant prior exposure to programming or those who want an intensive introduction to the field should take CS 106X or may start directly in CS 106B. CS 106A uses Java as its programming language; CS 106B and X use C++. No prior knowledge of these languages is assumed, and the prior programming experience required for CS 106B or X may be in any language. In all cases,

students are encouraged to discuss their background with the instructors responsible for these courses.

After the introductory sequence, Computer Science majors and those who need a significant background in computer science for related majors in engineering should take CS 103, CS 107 and CS 110. CS 103 offers an introduction to the mathematical and theoretical foundations of computer science. CS 107 exposes students to a variety of programming concepts that illustrate critical strategies used in systems development; CS 110 builds on this material, focusing on the development of larger-scale software making use of systems and networking abstractions.

#### In summary:

For exposure:

CS 1C	Introduction to Computing at Stanford
-------	---------------------------------------

For nontechnical use:

CS 101	Introduction to Computing Principles
or CS 105	Introduction to Computers

For scientific use:

CS 106A	Programming Methodology
---------	-------------------------

For a technical introduction:

CS 106A	Programming Methodology
---------	-------------------------

For significant use:

CS 106A & CS 106B	Programming Methodology and Programming Abstractions
or CS 106X	Programming Abstractions (Accelerated)
CS 103	Mathematical Foundations of Computing
CS 107	Computer Organization and Systems
CS 110	Principles of Computer Systems

## Overseas Studies Courses in Computer Science

For course descriptions and additional offerings, see the listings in the *Stanford Bulletin's* ExploreCourses web site (<http://explorecourses.stanford.edu>) or the Bing Overseas Studies web site (<http://bosp.stanford.edu>). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

## Joint Major Program: Computer Science and a Humanities Major

The joint major program (JMP), authorized by the Academic Senate for a pilot period of six years beginning in 2014-15, permits students to major in both Computer Science and one of ten Humanities majors. See the "Joint Major Program (p. 26)" section of this bulletin for a description of University requirements for the JMP. See also the Undergraduate Advising and Research JMP web site and its associated FAQs.

Students completing the JMP receive a B.A.S. (Bachelor of Arts and Science).

Because the JMP is new and experimental, changes to procedures may occur; students are advised to check the relevant section of the bulletin periodically.

## Mission

The Joint Major provides a unique opportunity to gain mastery in two disciplines: Computer Science and a selected humanities field. Unlike the double major or dual major, the Joint Major emphasizes integration of the two fields through a cohesive, transdisciplinary course of study and integrated capstone experience. The Joint Major not only blends the

intellectual traditions of two Stanford departments—it does so in a way that reduces the total unit requirement for each major.

## Computer Science Major Requirements in the Joint Major Program

(See the respective humanities department Joint Major Program section of this bulletin for details on humanities major requirements.)

The CS requirements for the Joint Major follow the CS requirements for the CS-BS degree with the following exceptions:

1. Two of the depth electives are waived. The waived depth electives are listed below for each CS track.
2. The Senior Project is fulfilled with a joint capstone project. The student enrolls in CS191 or 191W (3 units) during the senior year. Depending on the X department, enrollment in an additional Humanities capstone course may also be required. But, at a minimum, 3 units of CS191 or 191W must be completed.
3. There is no double-counting of units between majors. If a course is required for both the CS and Humanities majors, the student will work with one of the departments to identify an additional course - one which will benefit the academic plan - to apply to that major's total units requirement.
4. For CS, WIM can be satisfied with CS181W or CS191W.

## Depth Electives for CS Tracks for students completing a Joint Major:

### Artificial Intelligence Track:

One Track Elective (rather than three).

### Biocomputation Track:

One course from Note 3 of the Department Program Sheet, plus one course from Note 4 of the Program Sheet..

### Computer Engineering Track:

- EE 108A and 108B
- One of the following: EE 101A, 101B, 102A, 102B
- Satisfy the requirements of one of the following concentrations:
  1. Digital Systems Concentration: CS 140 or 143; EE 109, 271; plus one of CS 140 or 143 (if not counted above), 144, 149, 240E, 244; EE 273, 282
  2. Robotics and Mechatronics Concentration: CS 205A, 223A; ME 210; ENGR 105
  3. Networking Concentration: CS 140, 144; plus two of the following, CS 240, 240E, 244, 244B, 244E, 249A, 249B, EE 179, EE 276

### Graphics Track:

No Track Electives required (rather than two)

### HCI Track:

No Interdisciplinary HCI Electives required

Information Track:

One Track Elective (rather than three)

### Systems Track:

One Track Elective (rather than three)

### Theory Track:

One Track Elective (rather than three)

**Unspecialized Track:**

No Track Electives required (rather than two)

**Individually Designed Track:**

Proposals should include a minimum of five (rather than seven) courses, at least four of which must be CS courses numbered 100 or above.

**Declaring a Joint Major Program**

To declare the joint major, students must first declare each major through Axess, and then submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (<https://stanford.box.com/change-UG-program>) The Major-Minor and Multiple Major Course Approval Form ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin\\_MultMaj.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf)) is required for graduation for students with a joint major.

**Dropping a Joint Major Program**

To drop the joint major, students must submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (<https://stanford.box.com/change-UG-program>). Students may also consult the Student Services Center (<http://studentservicescenter.stanford.edu>) with questions concerning dropping the joint major.

**Transcript and Diploma**

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major". The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major".

**Computer Science (CS) Minor**

The following core courses fulfill the minor requirements. Prerequisites include the standard mathematics sequence through MATH 51.

Introductory Programming (AP Credit may be used to fulfill this requirement):

CS 106B	Programming Abstractions	5
or CS 106X	Programming Abstractions (Accelerated)	

Core:

CS 103	Mathematical Foundations of Computing	5
CS 107	Computer Organization and Systems	5
or CS 107E	Computer Systems from the Ground Up	
CS 109	Introduction to Probability for Computer Scientists	5

Electives (choose two courses from different areas):

Artificial Intelligence—

CS 124	From Languages to Information	4
CS 221	Artificial Intelligence: Principles and Techniques	4
CS 229	Machine Learning	3-4

Human-Computer Interaction—

CS 147	Introduction to Human-Computer Interaction Design	4
--------	---	---

Software—

CS 108	Object-Oriented Systems Design	4
CS 110	Principles of Computer Systems	5

Systems—

CS 140	Operating Systems and Systems Programming	4
CS 143	Compilers	4
CS 144	Introduction to Computer Networking	4
CS 145	Introduction to Databases	4
CS 148	Introduction to Computer Graphics and Imaging	4

Theory—

CS 154	Introduction to Automata and Complexity Theory	4
CS 157	Logic and Automated Reasoning	3
CS 161	Design and Analysis of Algorithms	5

Note: for students with no programming background and who begin with CS 106A, the minor consists of seven courses.

**Master of Science in Computer Science**

In general, the M.S. degree in Computer Science is intended as a terminal professional degree and does not lead to the Ph.D. degree. Most students planning to obtain the Ph.D. degree should apply directly for admission to the Ph.D. program. Some students, however, may wish to complete the master's program before deciding whether to pursue the Ph.D. To give such students a greater opportunity to become familiar with research, the department has instituted a program leading to a master's degree with distinction in research. This program is described in more detail below.

**Admission**

Applications to the M.S. program and all supporting documents must be submitted and received online by the published deadline. Information on admission requirements and deadlines is available at <http://cs.stanford.edu/admissions/>. Exceptions are made for applicants who are already students at Stanford and are applying to the coterminal program. See <http://cs/content/coterminal-program-deadline>.

**University Coterminal Requirements**

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

**Units**

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

**Requirements**

A candidate is required to complete a program of 45 units. At least 36 of these must be graded units, passed with a grade point average (GPA) of 3.0 (B) or better. The 45 units may include no more than 10 units of courses from those listed below in Requirement 1. Thus, students needing to take more than two of the courses listed in Requirement 1 actually complete more than 45 units of course work in the program. Only well-prepared students may expect to finish the program in one year; most students complete the program in six quarters. Students hoping to complete the program with 45 units should already have a substantial background in computer science, including course work or experience

equivalent to all of Requirement 1 and some prior course work related to their specialization area.

**Requirement 1: Foundations–**

Students must complete the following courses, or waive out of them by providing evidence to their advisers that similar or more advanced courses have been taken, either at Stanford or another institution (total units used to satisfy foundations requirement may not exceed 10):

Logic, Automata, and Computability

CS 103	Mathematical Foundations of Computing
--------	---------------------------------------

Probability

Select one of the following:

CS 109	Introduction to Probability for Computer Scientists
--------	---

STATS 116	Theory of Probability
-----------	-----------------------

MS&E 220	Probabilistic Analysis
----------	------------------------

CME 106	Introduction to Probability and Statistics for Engineers
---------	--

Algorithms

CS 161	Design and Analysis of Algorithms
--------	-----------------------------------

Computer Organization and Systems

CS 107	Computer Organization and Systems
--------	-----------------------------------

or CS 107E	Computer Systems from the Ground Up
------------	-------------------------------------

Principles of Computer Systems

CS 110	Principles of Computer Systems
--------	--------------------------------

**Requirement 2: Significant Software Implementation–**

Students must complete at least one course designated as having a significant software implementation component. The list of such courses includes:

CS 140	Operating Systems and Systems Programming	3-4
CS 143	Compilers	3-4
CS 144	Introduction to Computer Networking	3-4
CS 145	Introduction to Databases	3-4
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 210B	Software Project Experience with Corporate Partners	3-4
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 227B	General Game Playing	3
CS 243	Program Analysis and Optimizations	3-4
CS 248	Interactive Computer Graphics	3-4
CS 341	Project in Mining Massive Data Sets	3
CS 346	Database System Implementation (no longer offered)	3-5

**Requirement 3: Specialization–**

Students may choose to satisfy this requirement through one of two options, Single Depth or Dual Depth, outlined following. All courses taken for this requirement must be taken for letter grades.

**Option 1–Single Depth**

- A program of 27 units in a single area of specialization must be completed. A maximum of 9 units of independent study (CS 393, CS 395, CS 399) may be counted toward the specialization.
- Additionally, students must complete three breadth courses from the list of approved breadth courses associated with their chosen specialization. Individual specializations explicitly have different breadth requirements; see the individual specialization sheets at <http://cs.stanford.edu/degrees/mscs/programsheets> for details.
- Breadth courses may not be waived, must be taken for at least 3 units each, and must be completed for a letter grade.

**Option 2–Dual Depth**

- Students select distinct primary and secondary areas.
- A program of 21 units in the primary area of specialization must be completed. A maximum of 9 units of independent study (CS 393, CS 395, CS 399) may be counted toward the primary specialization.
- Students must also complete a program of five courses satisfying the requirements for their secondary area of specialization.
- Breadth courses are not required.

**Specialization Areas–**

Ten approved specialization areas which may be used to satisfy Requirement 3 are listed following. Students may propose to the M.S. program committee other coherent programs that meet their goals and satisfy the basic requirements.

Courses marked with an asterisk (\*) require consent of the faculty adviser. Courses marked with a double asterisk (\*\*) may be waived by students with equivalent course work and with the approval of their adviser.

**1. Artificial Intelligence–**

A.	CS 221	Artificial Intelligence: Principles and Techniques **
B. Select at least four of the following:	CS 223A	Introduction to Robotics
	CS 224M	Multi-Agent Systems
	CS 224N	Natural Language Processing
	CS 224S	Spoken Language Processing
	CS 224U	Natural Language Understanding
	CS 224W	Social Information and Network Analysis
	CS 228	Probabilistic Graphical Models: Principles and Techniques
	CS 229	Machine Learning
	CS 231A	Computer Vision: From 3D Reconstruction to Recognition
C. Sufficient depth units from category (b) and the following:	CS 173	A Computational Tour of the Human Genome
	or CS 273A	A Computational Tour of the Human Genome
	CS 205A	Mathematical Methods for Robotics, Vision, and Graphics
	CS 225A	Experimental Robotics
	CS 225B	Robot Programming Laboratory
	CS 227B	General Game Playing
	CS 229A	(Not given this year)
	CS 229T	Statistical Learning Theory
	CS 231B	The Cutting Edge of Computer Vision
	CS 231M	
	CS 231N	Convolutional Neural Networks for Visual Recognition
	CS 232	Digital Image Processing
	CS 233	The Shape of Data: Geometric and Topological Data Analysis
	CS 238	Decision Making under Uncertainty
	CS 239	Advanced Topics in Sequential Decision Making
	CS 246	Mining Massive Data Sets
	CS 262	Computational Genomics
	CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
	CS 274	Representations and Algorithms for Computational Molecular Biology
	CS 275	Translational Bioinformatics

CS 276	Information Retrieval and Web Search	
CS 277	Experimental Haptics	
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	
CS 294A	Research Project in Artificial Intelligence *	
CS 325	Topics in Computational Sustainability	
CS 327A	Advanced Robotic Manipulation (Not given this year)	
CS 328	Topics in Computer Vision	
CS 329	Topics in Artificial Intelligence	
CS 331A	Advanced Reading in Computer Vision	
CS 331B	3D Representation and Recognition	
CS 334A	Convex Optimization I	
or EE 364A	Convex Optimization I	
CS 341	Project in Mining Massive Data Sets	
CS 345	(Offered occasionally)	
CS 362	(Not given this year)	
CS 364A	Algorithmic Game Theory	
CS 371	Computational Biology in Four Dimensions	
CS 364B	(Not given this year)	
CS 374	Algorithms in Biology (not given this year)	
CS 377	Topics in Human-Computer Interaction *	
CS 379	Interdisciplinary Topics *	
CS 393	Computer Laboratory *

CS 244B	Distributed Systems	3
CS 244E		
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective	3
CS 255	Introduction to Cryptography	3
CS 261	Optimization and Algorithmic Paradigms	3
CS 264		3
CS 265	Randomized Algorithms and Probabilistic Analysis	3
CS 266		3
CS 267	Graph Algorithms	3
CS 268		
CME 108	Introduction to Scientific Computing	3-4
CME 302	Numerical Linear Algebra	3
EE 180	Digital Systems Architecture	3-4
EE 282	Computer Systems Architecture	3

## 2. Biocomputation—

A. Select at least four of the following:

CS 173	A Computational Tour of the Human Genome	
or CS 273A	A Computational Tour of the Human Genome	
CS 262	Computational Genomics	
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	
CS 272	Introduction to Biomedical Informatics Research Methodology	
CS 274	Representations and Algorithms for Computational Molecular Biology	
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	
B. Sufficient depth units from category (a) and the following:		
CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 229	Machine Learning	
CS 229A	(Not given this year)	
CS 231N	Convolutional Neural Networks for Visual Recognition	
CS 233	The Shape of Data: Geometric and Topological Data Analysis	
CS 245	Database Systems Principles	

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a), (b), and (c) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Artificial Intelligence must take five total courses satisfying the area (a) and (b) requirements above.
- Those students who have waived out of CS 221 may take an additional course in either area (b) or (c).

### Artificial Intelligence Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 246	Mining Massive Data Sets	
CS 261	Optimization and Algorithmic Paradigms	
CS 264		
CS 265	Randomized Algorithms and Probabilistic Analysis	
CS 268		
CS 275	Translational Bioinformatics	
CS 277	Experimental Haptics	
CS 325	Topics in Computational Sustainability	
CS 341	Project in Mining Massive Data Sets	
CS 345	(Offered occasionally)	
CS 346	Database System Implementation	
CS 362	(Not given this year)	
CS 371	Computational Biology in Four Dimensions	
CS 374	Algorithms in Biology	
CS 393	Computer Laboratory *	
CS 395	Independent Database Project *	
CS 399	Independent Project *	
APPPHYS 293	Theoretical Neuroscience	
BIOC 218		
BIOE 332	Large-Scale Neural Modeling	
GENE 203		
GENE 211	Genomics	
SBIO 228	Computational Structural Biology	

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a) and (b) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Biocomputation must take five total courses, three courses of which must come from area (a) and the remaining two courses may come from either area (a) or (b).

### Biocomputation Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 140	Operating Systems and Systems Programming	3-4
CS 143	Compilers	3-4
CS 144	Introduction to Computer Networking	3-4
or EE 284	Introduction to Computer Networks	
CS 145	Introduction to Databases	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-5
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149		3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 166	Data Structures	3-4
CS 168	The Modern Algorithmic Toolbox	3-4
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 223A	Introduction to Robotics	3
CS 224M	Multi-Agent Systems	3
CS 224N	Natural Language Processing	3-4
CS 224S	Spoken Language Processing	2-4
CS 224U	Natural Language Understanding	3-4

CS 224W	Social Information and Network Analysis	3
CS 227B	General Game Playing	3
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	3
CS 240	Advanced Topics in Operating Systems	3
CS 240E		
CS 240H	Functional Systems in Haskell	3-4
CS 242	Programming Languages	3
CS 243	Program Analysis and Optimizations	3-4
CS 244	Advanced Topics in Networking	3-4
CS 244B	Distributed Systems	3
CS 244E		
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective	3
CS 255	Introduction to Cryptography	3
CS 276	Information Retrieval and Web Search	3
CME 108	Introduction to Scientific Computing	3-4
CME 302	Numerical Linear Algebra	3
EE 180	Digital Systems Architecture	3-4
EE 282	Computer Systems Architecture	3

### 3. Computer and Network Security—

A.

CS 140	Operating Systems and Systems Programming **	
CS 144	Introduction to Computer Networking **	
CS 155	Computer and Network Security	
CS 244	Advanced Topics in Networking	
CS 255	Introduction to Cryptography	

B. Select at least three of the following:

CS 142	Web Applications	
CS 240	Advanced Topics in Operating Systems	
CS 244B	Distributed Systems	
CS 244C	Readings and Projects in Distributed Systems	
CS 261	Optimization and Algorithmic Paradigms	
CS 265	Randomized Algorithms and Probabilistic Analysis	
CS 340	Topics in Computer Systems	
CS 344	Topics in Computer Networks	
CS 355	(Not given this year)	

C. Sufficient depth units from category (b) and the following:

CS 240E		
CS 241	Embedded Systems Workshop	
CS 244E		
CS 245	Database Systems Principles	
CS 251	Bitcoin and Crypto Currencies	
CS 264		
CS 294S	Research Project in Software Systems and Security (Not given this year) *	
CS 341	Project in Mining Massive Data Sets	
CS 345	(Offered occasionally)	
CS 347	Parallel and Distributed Data Management	
CS 361A		
CS 393	Computer Laboratory *	
CS 395	Independent Database Project *	
CS 399	Independent Project *	
EE 384A	Internet Routing Protocols and Standards	
EE 384C	Wireless Local and Wide Area Networks	
EE 384S	Performance Engineering of Computer Systems & Networks	

## EE 384X Packet Switch Architectures

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a), (b), and (c) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Computer and Network Security must take five courses; those five courses must satisfy the area (a) requirement and additional courses from area (b) should be taken if any area (a) requirements are waived.

**Computer and Network Security Breadth Courses**

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 143	Compilers	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-5
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149		3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 157	Logic and Automated Reasoning	3
CS 166	Data Structures	3-4
CS 168	The Modern Algorithmic Toolbox	3-4
CS 173	A Computational Tour of the Human Genome	3
or CS 273A	A Computational Tour of the Human Genome	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 223A	Introduction to Robotics	3
CS 224M	Multi-Agent Systems	3
CS 224N	Natural Language Processing	3-4
CS 224S	Spoken Language Processing	2-4
CS 224U	Natural Language Understanding	3-4
CS 224W	Social Information and Network Analysis	3
CS 227B	General Game Playing	3
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
CS 229	Machine Learning	3-4
CS 229A	(Not given this year)	3-4
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	3
CS 233	The Shape of Data: Geometric and Topological Data Analysis	3
CS 242	Programming Languages	3
CS 243	Program Analysis and Optimizations	3-4
CS 246	Mining Massive Data Sets	3-4
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective	3
CS 262	Computational Genomics	3
CS 268		
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	3
CS 274	Representations and Algorithms for Computational Molecular Biology	3-4
CS 276	Information Retrieval and Web Search	3
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	3
CME 108	Introduction to Scientific Computing	3-4
CME 302	Numerical Linear Algebra	3
EE 180	Digital Systems Architecture	3-4

## EE 282 Computer Systems Architecture

3

**4. Human-Computer Interaction—**

A.

CS 147	Introduction to Human-Computer Interaction Design**
CS 247	Human-Computer Interaction Design Studio

Students with equivalent course work may waive with adviser approval

B. Select any three of the following:

CS 142	Web Applications
CS 148	Introduction to Computer Graphics and Imaging
CS 194H	User Interface Design Project
CS 210A	Software Project Experience with Corporate Partners
CS 248	Interactive Computer Graphics
CS 376	Human-Computer Interaction Research
CS 377	Topics in Human-Computer Interaction (Any CS 377 A/B/C suffix)
CS 448B	Data Visualization

ME 216M

C. A total of at least 27 units from categories (a), (b), and the following:

a. Broader CS

CS 221	Artificial Intelligence: Principles and Techniques
CS 224N	Natural Language Processing
CS 224U	Natural Language Understanding
CS 224W	Social Information and Network Analysis
CS 229	Machine Learning
CS 231A	Computer Vision: From 3D Reconstruction to Recognition
CS 231B	The Cutting Edge of Computer Vision
CS 242	Programming Languages
CS 246	Mining Massive Data Sets
CS 341	Project in Mining Massive Data Sets
CS 393	Computer Laboratory *
CS 395	Independent Database Project *
CS 399	Independent Project *

(\* courses require approval of MS advisor)

b. Art Studio

ARTSTUDI 160	Intro to Digital / Physical Design
ARTSTUDI 162	Embodied Interfaces
ARTSTUDI 163	Drawing with Code
ARTSTUDI 164	DESIGN IN PUBLIC SPACES
ARTSTUDI 165	Social Media and Performative Practices
ARTSTUDI 168	Data as Material
ARTSTUDI 264	Advanced Interaction Design
ARTSTUDI 266	Sulptural Screens / Malleable Media
ARTSTUDI 267	Emerging Technology Studio

c. Communication

COMM 224	Digital Deception
COMM 240	Digital Media Entrepreneurship
COMM 266	Virtual People
COMM 269	Computers and Interfaces
COMM 272	Media Psychology
Comm 282	
COMM 324	Language and Technology

d. Empirical Methods

COMM 314	Qualitative Social Science Research Methods		CS 149		3-4
EDUC 200B	Introduction to Qualitative Research Methods		CS 154	Introduction to Automata and Complexity Theory	3-4
EDUC 291X			CS 155	Computer and Network Security	3
MS&E 125	Introduction to Applied Statistics		CS 157	Logic and Automated Reasoning	3
PSYCH 252	Statistical Methods for Behavioral and Social Sciences		CS 166	Data Structures	3-4
PSYCH 254	Lab in Experimental Methods		CS 168	The Modern Algorithmic Toolbox	3-4
STATS 203	Introduction to Regression Models and Analysis of Variance		CS 173	A Computational Tour of the Human Genome	3
e. Learning Design & Tech			or CS 273A	A Computational Tour of the Human Genome	
EDUC 239X			CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3

			<b>5. Information Management and Analytics—</b>		
			A.		
			CS 145	Introduction to Databases **	3-4
			B. Select at least four of the following:		
			CS 224N	Natural Language Processing	
			CS 224W	Social Information and Network Analysis	
			CS 229	Machine Learning	
			CS 245	Database Systems Principles	
			CS 246	Mining Massive Data Sets	
			CS 276	Information Retrieval and Web Search	
			CS 345	(Offered occasionally)	
CS 140	Operating Systems and Systems Programming	3-4			
CS 143	Compilers	3-4			
CS 144	Introduction to Computer Networking	3-4			
or EE 284	Introduction to Computer Networks				
CS 145	Introduction to Databases	3-4			

CS 346	Database System Implementation (no longer offered)
CS 347	Parallel and Distributed Data Management
C. Sufficient depth units from category (b) and the following:	
CS 144	Introduction to Computer Networking
CS 173	A Computational Tour of the Human Genome
or CS 273A	A Computational Tour of the Human Genome
CS 224S	Spoken Language Processing
CS 224U	Natural Language Understanding
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 229A	(Not given this year)
CS 229T	Statistical Learning Theory
CS 231A	Computer Vision: From 3D Reconstruction to Recognition
CS 231N	Convolutional Neural Networks for Visual Recognition
CS 233	The Shape of Data: Geometric and Topological Data Analysis
CS 240	Advanced Topics in Operating Systems
CS 242	Programming Languages
CS 243	Program Analysis and Optimizations
CS 244	Advanced Topics in Networking
CS 244B	Distributed Systems
CS 244C	Readings and Projects in Distributed Systems
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective
CS 249B	Large-scale Software Development
CS 251	Bitcoin and Crypto Currencies
CS 255	Introduction to Cryptography
CS 262	Computational Genomics
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
CS 272	Introduction to Biomedical Informatics Research Methodology
CS 274	Representations and Algorithms for Computational Molecular Biology
CS 275	Translational Bioinformatics
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells
CS 315A	Parallel Computer Architecture and Programming
or CS 316	Advanced Multi-Core Systems
CS 325	Topics in Computational Sustainability
CS 341	Project in Mining Massive Data Sets
CS 344	Topics in Computer Networks
CS 362	(Not given this year)
CS 364B	(Not given this year)
CS 374	Algorithms in Biology
CS 393	Computer Laboratory *
CS 395	Independent Database Project *
CS 399	Independent Project *
STATS 315A	Modern Applied Statistics: Learning
STATS 315B	Modern Applied Statistics: Data Mining

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a), (b), and (c) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Information Management and Analytics must take five courses

satisfying the area (a) and (b) requirements above. Note that if CS145 was waived in area (a), students should take an additional course from either area (b) or (c) in its place.

### Information Management and Analytics Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 140	Operating Systems and Systems Programming	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-5
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149		3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 166	Data Structures	3-4
CS 168	The Modern Algorithmic Toolbox	3-4
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 223A	Introduction to Robotics	3
CS 224M	Multi-Agent Systems	3
CS 227B	General Game Playing	3
CS 240E		
CS 244E		
CS 261	Optimization and Algorithmic Paradigms	3
CS 264		3
CS 265	Randomized Algorithms and Probabilistic Analysis	3
CS 266		3
CS 267	Graph Algorithms	3
CS 268		
CME 108	Introduction to Scientific Computing	3-4
CME 302	Numerical Linear Algebra	3
EE 180	Digital Systems Architecture	3-4
EE 282	Computer Systems Architecture	3

### 6. Mobile and Internet Computing—

A. Select two of the following:

CS 140	Operating Systems and Systems Programming **
CS 144	Introduction to Computer Networking
CS 244	Advanced Topics in Networking

B. Select one of the following:

CS 142	Web Applications
CS 147	Introduction to Human-Computer Interaction Design
CS 247	Human-Computer Interaction Design Studio

C. Select one of the following:

CS 155	Computer and Network Security
CS 255	Introduction to Cryptography

D.

CS 294S	Research Project in Software Systems and Security
---------	---

E. Sufficient depth units from categories (a) through (d) and the following:

CS 224W	Social Information and Network Analysis
CS 241	Embedded Systems Workshop
CS 244E	
CS 246	Mining Massive Data Sets

CS 251	Bitcoin and Crypto Currencies
CS 344	Topics in Computer Networks
CS 344E	Advanced Wireless Networks
CS 364A	Algorithmic Game Theory
CS 376	Human-Computer Interaction Research
CS 393	Computer Laboratory *
CS 395	Independent Database Project *
CS 399	Independent Project *
EE 359	Wireless Communications
EE 384A	Internet Routing Protocols and Standards
EE 384B	Multimedia Communication over the Internet (not given this year)
EE 384C	Wireless Local and Wide Area Networks
EE 384E	Networked Wireless Systems
EE 384S	Performance Engineering of Computer Systems & Networks
COMM 268	
PSYCH 252	Statistical Methods for Behavioral and Social Sciences

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a) through (e) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Mobile and Internet Computing must take five courses satisfying the area (a) through (d) requirements above.

### Mobile and Internet Computing Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 143	Compilers	3-4
CS 145	Introduction to Databases	3-4
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149		3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 157	Logic and Automated Reasoning	3
CS 166	Data Structures	3-4
CS 168	The Modern Algorithmic Toolbox	3-4
CS 173	A Computational Tour of the Human Genome	3
or CS 273A	A Computational Tour of the Human Genome

EE 282	Computer Systems Architecture	3

### 7. Real-World Computing—

A. Select at least three of the following:

CS 148	Introduction to Computer Graphics and Imaging
CS 223A	Introduction to Robotics
CS 231A	Computer Vision: From 3D Reconstruction to Recognition
CS 248	Interactive Computer Graphics

B. Select at least three of the following:

CS 205A	Mathematical Methods for Robotics, Vision, and Graphics
CS 205B	Mathematical Methods for Fluids, Solids, and Interfaces
CS 233	The Shape of Data: Geometric and Topological Data Analysis
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective
CS 249B	Large-scale Software Development
CS 262	Computational Genomics
CS 268	
CS 277	Experimental Haptics
CS 348A	Computer Graphics: Geometric Modeling
CS 348B	Computer Graphics: Image Synthesis Techniques
CS 374	Algorithms in Biology
CME 302	Numerical Linear Algebra
CME 306	Numerical Solution of Partial Differential Equations

C. Sufficient additional units chosen from the above and from the following:

CS 173	A Computational Tour of the Human Genome
or CS 273A	A Computational Tour of the Human Genome
CS 225A	Experimental Robotics
CS 225B	Robot Programming Laboratory

CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 229	Machine Learning
CS 229A	(Not given this year)
CS 231B	The Cutting Edge of Computer Vision
CS 231M	
CS 232	Digital Image Processing
or EE 368	Digital Image Processing
CS 247	Human-Computer Interaction Design Studio
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
CS 272	Introduction to Biomedical Informatics Research Methodology
CS 274	Representations and Algorithms for Computational Molecular Biology
CS 294A	Research Project in Artificial Intelligence *
CS 327A	Advanced Robotic Manipulation (Not given this year)
CS 328	Topics in Computer Vision
CS 331A	Advanced Reading in Computer Vision
CS 331B	3D Representation and Recognition
CS 393	Computer Laboratory *
CS 395	Independent Database Project *
CS 399	Independent Project *
CS 448	Topics in Computer Graphics
EE 267	Virtual Reality

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a), (b), and (c) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Real-World Computing must take five total courses satisfying area (a) and two of the three courses in the area (b) requirements above (i.e., three courses in area (a) and two courses in area (b)).

### Real-World Computing Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 140	Operating Systems and Systems Programming	3-4
CS 143	Compilers	3-4
CS 144	Introduction to Computer Networking	3-4
or EE 284	Introduction to Computer Networks	
CS 145	Introduction to Databases	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-5
CS 149		3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 166	Data Structures	3-4
CS 168	The Modern Algorithmic Toolbox	3-4
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 224M	Multi-Agent Systems	3
CS 224N	Natural Language Processing	3-4
CS 224S	Spoken Language Processing	2-4
CS 224U	Natural Language Understanding	3-4
CS 224W	Social Information and Network Analysis	3

### 9. Systems—

A.

CS 140	Operating Systems and Systems Programming **
CS 144	Introduction to Computer Networking **
CS 240	Advanced Topics in Operating Systems
B. Select at least four of the following:	
CS 242	Programming Languages
CS 243	Program Analysis and Optimizations
CS 244	Advanced Topics in Networking
CS 245	Database Systems Principles
CS 248	Interactive Computer Graphics
CS 348B	Computer Graphics: Image Synthesis Techniques
EE 271	Introduction to VLSI Systems
EE 282	Computer Systems Architecture
C. At least two additional courses chosen from category (b) and the following:	
CS 240E	(no longer offered)
CS 240H	Functional Systems in Haskell
CS 241	Embedded Systems Workshop
CS 244B	Distributed Systems
CS 244C	Readings and Projects in Distributed Systems
CS 244E	
CS 246	Mining Massive Data Sets
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective
CS 249B	Large-scale Software Development
CS 251	Bitcoin and Crypto Currencies
CS 255	Introduction to Cryptography
CS 262	Computational Genomics
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
CS 272	Introduction to Biomedical Informatics Research Methodology
CS 276	Information Retrieval and Web Search
CS 294S	Research Project in Software Systems and Security (Not given this year) *
CS 315A	Parallel Computer Architecture and Programming
or CS 316	Advanced Multi-Core Systems
CS 340	Topics in Computer Systems
CS 341	Project in Mining Massive Data Sets
CS 343	(Not given this year)
CS 344	Topics in Computer Networks
CS 345	(Offered occasionally)
CS 346	Database System Implementation
CS 347	Parallel and Distributed Data Management
CS 348A	Computer Graphics: Geometric Modeling
CS 349	Topics in Programming Systems

CS 395	Independent Database Project *
CS 399	Independent Project *
CS 448	Topics in Computer Graphics
EE 267	Virtual Reality
EE 273	Digital Systems Engineering
EE 382C	Interconnection Networks
EE 384A	Internet Routing Protocols and Standards
EE 384B	Multimedia Communication over the Internet (not given this year)
EE 384C	Wireless Local and Wide Area Networks
EE 384M	

EE 384S Performance Engineering of Computer Systems & Networks

EE 384X Packet Switch Architectures

- Students with a 27-unit depth option (Option 1 above) must take 27 units subject to satisfying the area (a), (b), and (c) requirements above.
- Students with a 21-unit depth option (Option 2 above) must take that many units subject to satisfying the area (a) and (b) requirements above, and additional courses may be taken from area (c) if any courses in the area (a) requirement are waived.
- Students with a secondary area of specialization (per Option 2 above) in Systems need to take five courses; those courses must satisfy the area (a) requirement and additional courses may be taken from area (b).

### Systems Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-5
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 166	Data Structures	3-4
CS 168	The Modern Algorithmic Toolbox	3-4
CS 173	A Computational Tour of the Human Genome	3
or CS 273A	A Computational Tour of the Human Genome	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 223A	Introduction to Robotics	3
CS 233	The Shape of Data: Geometric and Topological Data Analysis	3
CS 224M	Multi-Agent Systems	3
CS 224N	Natural Language Processing	3-4
CS 224S	Spoken Language Processing	2-4
CS 224U	Natural Language Understanding	3-4
CS 224W	Social Information and Network Analysis	3
CS 227B	General Game Playing	3
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
CS 229	Machine Learning	3-4
CS 229A	(Not given this year)	3-4
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	3

CS 264		3
CS 265	Randomized Algorithms and Probabilistic Analysis	3
CS 266		3
CS 267	Graph Algorithms	3
CS 268		
CS 274	Representations and Algorithms for Computational Molecular Biology	3-4
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	3
CME 108	Introduction to Scientific Computing	3-4
CME 302	Numerical Linear Algebra	3

### 10. Theoretical Computer Science—

A.

CS 261 Optimization and Algorithmic Paradigms \*\*\*

B. Sufficient additional units chosen from:

CS 166 Data Structures

CS 168 The Modern Algorithmic Toolbox

CS 228 Probabilistic Graphical Models: Principles and Techniques

CS 233 The Shape of Data: Geometric and Topological Data Analysis

CS 246 Mining Massive Data Sets

CS 251 Bitcoin and Crypto Currencies

CS 254

CS 255 Introduction to Cryptography

CS 262 Computational Genomics

CS 263 Algorithms for Modern Data Models

CS 264

CS 265 Randomized Algorithms and Probabilistic Analysis

CS 266

CS 267 Graph Algorithms

CS 268

CS 334A Convex Optimization I

or EE 364A Convex Optimization I

CS 341 Project in Mining Massive Data Sets

CS 345 (Offered occasionally)

CS 354 Topics in Circuit Complexity (Not given this year)

CS 355 (Not given this year)

CS 357 Advanced Topics in Formal Methods (Not given this year)

CS 358 Topics in Programming Language Theory

CS 359 Topics in the Theory of Computation \*

CS 361B

CS 362 (Not given this year)

CS 364A Algorithmic Game Theory

CS 364B (Not given this year)

CS 366 (Not given this year)

CS 367 Algebraic Graph Algorithms (Not given this year)

CS 369 Topics in Analysis of Algorithms \*

CS 374 Algorithms in Biology (not given this year)

CS 393 Computer Laboratory \*

CS 395 Independent Database Project \*

CS 399 Independent Project \*

CS 468 \*

MS&E 310 Linear Programming

- Multiple CS 359, CS 369, and/or CS 468 courses may be taken as long as they are each on different topics, denoted by different letter suffixes for the courses.
- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a) and (b) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Theoretical Computer Science need to take 5 total courses satisfying the area (a) and (b) requirements above.

### Theoretical Computer Science Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124 From Languages to Information

3-4

CS 140	Operating Systems and Systems Programming	3-4
CS 143	Compilers	3-4
CS 144	Introduction to Computer Networking	3-4
or EE 284	Introduction to Computer Networks	
CS 145	Introduction to Databases	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-5
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149		3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 173	A Computational Tour of the Human Genome	3
or CS 273A	A Computational Tour of the Human Genome	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 223A	Introduction to Robotics	3
CS 224M	Multi-Agent Systems	3
CS 224N	Natural Language Processing	3-4
CS 224S	Spoken Language Processing	2-4
CS 224U	Natural Language Understanding	3-4
CS 224W	Social Information and Network Analysis	3
CS 227B	General Game Playing	3
CS 229	Machine Learning	3-4
CS 229A	(Not given this year)	3-4
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	3
CS 240	Advanced Topics in Operating Systems	3
CS 240E		
CS 240H	Functional Systems in Haskell	3-4
CS 242	Programming Languages	3
CS 243	Program Analysis and Optimizations	3-4
CS 244	Advanced Topics in Networking	3-4
CS 244B	Distributed Systems	3
CS 244E		
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective	3
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	3
CS 274	Representations and Algorithms for Computational Molecular Biology	3-4
CS 276	Information Retrieval and Web Search	3
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	3
CME 108	Introduction to Scientific Computing	3-4
CME 302	Numerical Linear Algebra	3
EE 180	Digital Systems Architecture	3-4
EE 282	Computer Systems Architecture	3

\* With consent of faculty adviser.

\*\* Students with equivalent course work may waive with approval of their adviser.

\*\*\* CS 361B may be used as substitute for CS 261.

#### Requirement 4

Additional elective units must be technical courses (numbered 100 or above) related to the degree program and approved by the adviser. All CS courses numbered above 110 (with the exception of CS 196 and

198) taken for 3 or more units are pre-approved as elective courses. Additionally, up to a maximum of 3 units of 500-level CS seminars, CS 300, EE 380, EE 385A, or other 1-2 unit seminars offered in the School of Engineering may be counted as electives. Elective courses may be taken on a satisfactory/no credit basis provided that a minimum of 36 graded units is presented within the 45-unit program.

## Master of Science with Distinction in Research

A student who wishes to pursue the M.S. in CS with distinction in research must first identify a faculty adviser who agrees to supervise and support the research work. The research adviser must be a member of the Academic Council and must hold an appointment in Computer Science. The student and principal adviser must also identify another faculty member, who need not be in the Department of Computer Science, to serve as a secondary adviser and reader for the research report. In addition, the student must complete the following requirements beyond those for the regular M.S. in CS degree:

- 1. Research Experience**—The program must include significant research experience at the level of a half-time commitment over the course of three academic quarters. In any given quarter, the half-time research commitment may be satisfied by a 50 percent appointment to a departmentally supported research assistantship, 6 units of independent study (CS 393, CS 395, or CS 399), or a prorated combination of the two (such as a 25 percent research assistantship supplemented by 3 units of independent study). This research must be carried out under the direction of the primary or secondary adviser.
- 2. Supervised Writing and Research**—In addition to the research experience outlined in the previous requirement, students must enroll in at least 3 units of independent research (CS 393, CS 395, or CS 399) under the direction of their primary or secondary adviser. These units should be closely related to the research described in the first requirement, but focused more directly on the preparation of the research report described in the next section. The writing and research units described in parts (1) and (2) may be counted toward the 45 units required for the degree.
- 3. All independent study units (CS 393, CS 395, CS 399) must be taken for letter grades and a GPA of 3.0 (B) or better must be maintained.**
- 4. Research Report**—Students must complete a significant report describing their research and its conclusions. The research report represents work that is publishable in a journal or at a high-quality conference, although it is presumably longer and more expansive in scope than a typical conference paper. A copy of the research report must be submitted to the student services office in the department three weeks before the beginning of the examination period in the student's final quarter. Both the primary and secondary adviser must approve the research report before the distinction-in-research designation can be conferred.

## Joint M.S. and MBA Degree

The joint MS in Computer Science/MBA degree links two of Stanford University's world-class programs. This joint degree offers students an opportunity to develop advanced technical and managerial skills for a broader perspective on both existing technologies and new technology ventures.

Admission to the joint MSCS/MBA program requires that students apply and be accepted independently to both the Computer Science Department in the School of Engineering and the Graduate School of Business. Students may apply concurrently, or elect to begin their course of study in CS and apply to the GSB during their first year.

Additional information on the MS in Computer Science/MBA Joint Degree Program and its requirements is available on the web at: <http://cs.stanford.edu/education/masters>

## Joint M.S. and Law Degree

Law students interested in pursuing an M.S. in Computer Science must apply for admission to the Computer Science Department either (i) concurrently with applying to the Law School; or (ii) after being admitted to the Law School, but no later than the earlier of: (a) the end of the second year of Law School; or (b) the Computer Science Department's admission deadline for the year following that second year of Law School.

In addition to being admitted separately to the Law School and the Computer Science Department, students must secure permission from both academic units to pursue degrees in those units as part of a joint degree program.

J.D./M.S. students may elect to begin their course of study in either the Law School or the Computer Science Department. Faculty advisors from each academic unit participate in the planning and supervising of the student's joint program. Students must be enrolled full-time in the Law School for the first year of law studies. Otherwise, enrollment may be in the graduate school or the Law School, and students may choose courses from either program regardless of where enrolled. Students must satisfy the requirements for both the J.D. degree as specified by the Law School and the M.S. degree as specified in this Bulletin.

The Law School approves courses from the Department of Computer Science that may count toward the J.D. degree, and the Computer Science Department approves courses from the Law School that may count toward the M.S. degree in Computer Science. In either case, approval may consist of a list applicable to all joint-degree students or may be tailored to each individual student program. No more than 45 units of approved courses may be counted toward both degrees. No more than 36 units of courses that originate outside the Law School may count toward the Law degree. To the extent that courses under this joint degree program originate outside of the Law School but count toward the Law degree, the Law School credits permitted under Section 17(1) of the Law School Regulations shall be reduced on a unit-per-unit basis, but not below zero. The maximum number of Law School credits that may be counted toward the M.S. in Computer Science is the greater of: (i) 12 units; or (ii) the maximum number of units from courses outside of the department that M.S. candidates in Computer Science are permitted to count toward the M.S. in the case of a particular student's individual program. Tuition and financial aid arrangements are normally through the school in which the student is then enrolled.

## Teaching and Research Assistantships in Computer Science

Graduate student assistantships are available. Half-time assistants receive a tuition scholarship for 8, 9, or 10 units per quarter during the academic year, and in addition receive a monthly stipend.

Duties for half-time assistants during the academic year involve approximately 20 hours of work per week. Course assistants (CAs) help an instructor teach a course by conducting discussion sections, consulting with students, and grading examinations. Research assistants (RAs) help faculty and senior staff members with research in computer science. Most course and research assistantships are held by Ph.D. students. If there is an insufficient number of Ph.D. students to staff teaching and research assistantships, then these positions are open to master's students. However, master's students should not plan on being appointed to an assistantship.

Students with fellowships may have the opportunity to supplement their stipends by serving as graduate student assistants.

## Doctor of Philosophy in Computer Science

The University's basic requirements for the Ph.D. degree are outlined in the "Graduate Degrees (p. 45)" section of this bulletin. Department requirements are stated below.

## Requirements

Applications to the Ph.D. program and all supporting documents must be submitted and received online by the published deadline. Please see <http://www-cs.stanford.edu/admissions> for admissions requirements and the application deadline. Changes or updates to the admission process are posted in September.

The following are general department requirements. Contact the Computer Science Ph.D. administrator for details.

1. A student should plan and complete a coherent program of study covering the basic areas of computer science and related disciplines. The student's adviser has primary responsibility for the adequacy of the program, which is subject to review by the Student Services Office.
2. The first year of the Ph.D. program is spent working with 1-3 different professors on a rotating basis. The intent is to allow the first-year Ph.D. student to work with a variety of professors before aligning with a permanent program adviser. Students who don't need the full year to find a professor to align with will have the option of aligning within the first or second quarter.
3. The CS 300 Departmental Lecture Series seminar gives faculty the opportunity to explain their research to first year CS Ph.D. students. First year CS Ph.D. students are required to attend 2/3 of the classes to receive credit.
4. A student must complete 135 course units for graduation. Computer Science Ph.D. students take 8-10 units per quarter. Credit for coursework done elsewhere (up to the maximum of 45 course units) may be applied to graduation requirements. Students must also take at least three units of coursework from four different faculty members. There are NO courses specifically required by the CS Ph.D. program except for the 1-unit CS 300 Departmental Lecture Series and CS 499 Advanced Reading and Research or its equivalent.
5. Each student, to remain in the Ph.D. program, must satisfy the breadth requirement covering introductory-level graduate material in major areas of computer science. A student must fulfill two breadth-area requirements in each of three general areas by the end of the second year in the program. If students have fulfilled the six breadth-area requirements, and taken courses from at least four different faculty members, they are eligible to apply for candidacy prior to the second year in the program. An up-to-date list of courses that satisfy the breadth requirements can be found at <http://cs.stanford.edu/education/phd>. The student must completely satisfy the breadth requirement by the end of the second year in the program and must pass a qualifying exam in the general area of their expected dissertation by the end of the third year in the program.
6. University policy requires that all doctoral students declare candidacy by the end of the sixth quarter in residence, excluding summers. However, after aligning with a permanent adviser, passing six breadth requirements, and taking classes with four different faculty, a student is eligible to file for candidacy prior to the sixth quarter. The candidacy form serves as a "contract" between the department and the student. The department acknowledges that the student is a *bona fide* candidate for the Ph.D. and agrees that the program submitted by the student is sufficient to warrant granting the Ph.D. upon completion. The student may petition the department for modification of his or her program. Candidacy expires five years from the date of submission of the candidacy form, rounded to the end of the quarter. In special cases, the department may extend a student's candidacy, but is under no obligation to do so.

7. Each student is required to pass a qualifying exam in their area by the end of their third year in the program. A student may only take the qualifying exam twice. If the student fails the qualifying exam a second time, the Ph.D. Program Committee is convened to discuss the student's lack of a reasonable academic progress. Failing the exam a second time is cause for dismissal from the Computer Science Ph.D. program and the committee will meet to discuss the final outcome for the student.
8. As part of the training for the Ph.D., the student is also required to complete at least four units (a unit is ten hours per week for one quarter) as a course assistant or instructor for courses in Computer Science numbered 100 or above.
9. The Reading Committee form and Oral Thesis Proposal must be submitted within one year of passing the qualifying exam.
10. The most important requirement is the dissertation. After passing the required qualifying examination, each student must secure the agreement of a member of the department faculty to act as the dissertation adviser. The dissertation adviser is often the student's program adviser.
11. The student must pass a University oral examination in the form of a defense of the dissertation. This is typically held after all or a substantial portion of the dissertation research has been completed.
12. The student is expected to demonstrate the ability to present scholarly material orally in the dissertation defense.
13. The dissertation must be accepted by a reading committee composed of the principal dissertation adviser, a second member from within the department, and a third member chosen from within or outside of the University. The department requires at least two committee members to be affiliated with the Computer Science department. The principal adviser and at least one of the other committee members must be Academic Council members.

## Guidelines for Reasonable Progress

By the end of the first academic year, a student should be aligned with a permanent research advisor.

By Spring Quarter of the second year, a student should complete all six breadth area requirements, two breadth area requirements in each of three areas, and file for candidacy.

By Spring Quarter of the third year, a student should pass a Qualifying Examination (<http://cs.stanford.edu/content/qualifying-exams>) in the area of his or her intended dissertation.

Within one year of passing the Qualifying Examination, a student should submit a signed Reading Committee Form ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/doc\\_diss\\_rdg\\_ctte.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/doc_diss_rdg_ctte.pdf)) and Thesis Proposal.

The teaching requirement may be satisfied at any time. The research requirement is routinely satisfied by participation in research throughout the student's career.

## Ph.D. Minor in Computer Science

For a minor in Computer Science, a candidate must complete 20 units of Computer Science coursework numbered 200 or above, except for the 100-level courses listed on the Ph.D. Minor Worksheet found at <http://cs.stanford.edu/content/phd-minor>. At least three of the courses must be master's core courses to provide breadth and one course numbered 300 or above to provide depth. One of the courses taken must include a significant programming project to demonstrate programming efficiency. Courses must be taken for a letter grade and passed with a grade of 'B' or better. Applications for a minor in Computer Science are submitted at the same time as admission to candidacy.

*Emeriti (Professors)* Tom Binford, Edward Feigenbaum (<http://ksl-web.stanford.edu/people/eaf>), Richard Fikes (<http://www.stanford.edu/~fikes>), Donald E. *Secondary Appointment in CS:* Anshul Kundaje

\* Recalled to active duty.

## Electrical Engineering

Courses offered by the Department of Electrical Engineering are listed under the subject code EE (<https://explorecourses.stanford.edu/search?view=catalog&academicYear=&q=EE&filter-departmentcode=EE=on&filter-coursestatus=Active=on&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&page=0>) on the *Stanford Bulletin's* ExploreCourses web site.

## Mission of the Undergraduate Program in Electrical Engineering

The mission of the undergraduate program of the Department of Electrical Engineering is to augment the liberal education expected of all Stanford undergraduates, to impart basic understanding of electrical engineering and to develop skills in the design and building of systems that directly impact societal needs.

The program includes a balanced foundation in the physical sciences, mathematics and computing; core courses in electronics, information systems and digital systems; and develops specific skills in the analysis and design of systems. Students in the major have broad flexibility to select from many specialization areas beyond the core, including areas in electronics, optics, information systems and hardware and software systems as well as application-oriented cross-cuts in bio-instrumentation and bio-imaging, energy and environment and music.

The program prepares students for a broad range of careers—both industrial and government—as well as for professional and academic graduate education.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning

outcomes are used in evaluating students and the department's undergraduate program. The educational objectives of the program are:

1. Technical knowledge—provide a knowledge of electrical engineering principles along with the required supporting knowledge of computing, engineering fundamentals, mathematics, and science. The program must include depth in at least one specialty area, currently including bio-electronics and bio-imaging; circuits and devices; computer hardware; computer software; music; signal processing, communication and controls; and photonics, solid state and electromagnetics; and energy and environment.
2. Laboratory and design skills—develop the basic skills needed to perform and design experimental projects. Develop the ability to formulate problems and projects and to plan a process for solution, taking advantage of diverse technical knowledge and skills.
3. Communications skills—develop the ability to organize and present information and to write and speak effective English.
4. Preparation for further study—provide sufficient breadth and depth for successful subsequent graduate study, postgraduate study, or lifelong learning programs.
5. Preparation for the profession—provide an appreciation for the broad spectrum of issues arising in professional practice, including economics, ethics, leadership, professional organizations, safety, service, and teamwork.

## Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work providing specialization in one area of Electrical Engineering and breadth in several other areas. Areas of specialization include bio-electrical engineering; hardware; software; control and system engineering; communication systems; dynamic systems and optimization; circuits; devices, sensors and technology; fields, waves and radioscience; image systems; lasers, optoelectronics and quantum electronics; network systems; signal processing; solid state materials and devices.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Electrical Engineering and related fields.

## Graduate Programs in Electrical Engineering

University regulations governing the M.S. and Ph.D. degrees are described in the "Graduate Degrees" section of this bulletin.

The profession of electrical engineering demands a strong foundation in physical science and mathematics, a broad knowledge of engineering techniques, and an understanding of the relationship between technology and society. Curricula at Stanford are planned to offer the breadth of education and depth of training necessary for leadership in the profession. To engage in this profession with competence, four years of undergraduate study and at least one year of postgraduate study are recommended. For those who plan to work in highly technical development or fundamental research, additional graduate study is desirable.

The degree of Master of Science is offered under the general regulations of the University. The master's program, requiring a minimum of 45 units of graduate study, should be considered by those with the ability and desire to make a life work of professional practice or continued graduate study.

The degree of Doctor of Philosophy is offered under the general regulations of the University. The doctoral program, requiring a minimum of 135 units of graduate study, should be considered by those with the ability and desire to make a life work of research or teaching.

## Application for Admission

Applications for graduate admission in Electrical Engineering (EE) should be completed electronically at the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site. See the Electrical Engineering graduate admissions (<http://ee.stanford.edu/admissions>) web site for department specific information. The application deadline for full-time admission for Autumn Quarter 2016-17 is December 8, 2015.

## Electrical Engineering Course Catalog Numbering System

Electrical Engineering courses are typically numbered according to the year in which the courses are normally taken.

Number	Year
010-099	first or second year undergraduate
100-199	second through fourth year undergraduate
200-299	mezzanine courses for advanced undergraduate or first-year graduate
300-399	second through fourth year graduate
400-499	specialized courses for advanced graduate
600-799	special summer courses

The Department of Electrical Engineering (EE) offers courses in the following areas:

- Biomedical Devices and Bioimaging
- Communication Systems: wireless, optical, wireline
- Control, Learning, and Optimization
- Electronic and Magnetic Devices
- Energy: solar cells, smart grid, load control
- Environmental and Remote Sensing: sensor nets, radar systems, space
- Fields and Waves
- Graphics, HCI, Computer Vision, Photography
- Information Theory and Coding: Image and data compression, denoising
- Integrated Circuit Design: MEMs, sensors, analog, RF
- Network Systems and Science: Next gen internet, wireless networks
- Nano and Quantum Science
- Nanofabrication Science and Technology
- Photonic Devices
- Systems Software: OS, compilers, languages
- Systems Hardware: architecture, VLSI, embedded systems

## Areas of Research in Electrical Engineering

Candidates for advanced degrees participate in the research activities of the department as paid research assistants or as students of individual faculty members. At any one time, certain areas of research have more openings than others. At present, faculty members and students are actively engaged in research in the following areas:

## Hardware/Software Systems

- Data Science
- Secure Distributed Systems
- Energy-Efficient Hardware Systems
- Integrated Circuits and Power Electronics
- Software Defined Networking
- Mobile Networking

## Information Systems and Science

- Bio-Medical Imaging
- Communications Systems
- Control & Optimization
- Data Science
- Information Theory and Applications
- Societal Networks
- Signal Processing and Multimedia

## Physical Science and Technology

- Biomedical Devices, Sensors and Systems
- Electronic Devices
- Energy Harvesting and Conversion
- Integrated Circuits and Power Electronics
- Nanotechnology, Nanofabrication and NEMS/MEMS
- Photonics, Nanoscience and Quantum Technologies

For additional information, see the Department of Electrical Engineering's Research (<https://ee.stanford.edu/research/the-big-picture>) web site.

## Undergraduate Programs in Electrical Engineering

To major in Electrical Engineering (EE), undergraduates should follow the depth sequence in the "Undergraduate Degree in Electrical Engineering" section of this bulletin. Students must have a program planning sheet approved by their adviser and the department before the end of the quarter following the quarter in which they declare the EE major. A final version of the completed and signed program sheet is due to the department no later than one month prior to the quarter of senior year. Program sheets are available at <http://ughb.stanford.edu>. Majors must receive at least a 2.0 grade point average (GPA) in courses taken for the EE depth requirement; all classes must be taken for a letter grade.

Students interested in a minor should consult the "Minor in Electrical Engineering" section of this bulletin.

A Stanford undergraduate may work simultaneously toward the B.S. and M.S. degrees. University requirements for the coterminal M.A. or M.S. are described in the "Coterminal Bachelor's and Master's Degrees" section of this bulletin. For University coterminal degree program rules and University application forms, see <http://studentaffairs.stanford.edu/registrar/publications#Coterm>.

## Electrical Engineering (EE)

Completion of the undergraduate program in Electrical Engineering leads to the conferral of the Bachelor of Science in Electrical Engineering.

### Mission of the Undergraduate Program in Electrical Engineering

The mission of the undergraduate program of the Department of Electrical Engineering is to augment the liberal education expected of all Stanford undergraduates, to impart basic understanding of electrical engineering and to develop skills in the design and building of systems that directly impact societal needs. The program includes a balanced foundation in the physical sciences, mathematics and computing; core

courses in electronics, information systems and digital systems; and develops specific skills in the analysis and design of systems. Students in the major have broad flexibility to select from many specialization areas beyond the core, including areas in electronics, optics, information systems and hardware and software systems as well as application-oriented cross-cuts in bio-instrumentation and bio-imaging, energy and environment and music. The program prepares students for a broad range of careers—both industrial and government—as well as for professional and academic graduate education.

## Requirements

### Mathematics

MATH 41	Calculus	5
MATH 42	Calculus	5
Select one 2-course sequence:		10
CME 100 & CME 102	Vector Calculus for Engineers and Ordinary Differential Equations for Engineers (Same as ENGR 154)	
MATH 52 & MATH 53	Integral Calculus of Several Variables and Ordinary Differential Equations with Linear Algebra	
EE Math. One additional 100-level course. Select one of the following:		3
EE 102B	Signal Processing and Linear Systems II (if not used in Depth)	
EE 103	Introduction to Matrix Methods	
EE 142	Engineering Electromagnetics	
CME 104/ ENGR 155B	Linear Algebra and Partial Differential Equations for Engineers	
MATH 113	Linear Algebra and Matrix Theory	
CS 103	Mathematical Foundations of Computing	
Statistics/Probability. Select one of the following: <sup>1</sup>		3-4
EE 178	Probabilistic Systems Analysis (Preferred)	
CS 109	Introduction to Probability for Computer Scientists	

### Science

Select one of the following sequences:		8
PHYSICS 41 & PHYSICS 43	Mechanics and Electricity and Magnetism <sup>2</sup>	
PHYSICS 61 & PHYSICS 63	Mechanics and Special Relativity and Electricity, Magnetism, and Waves	
Science elective. One additional 4-5 unit course from approved list in Undergraduate Handbook, Figure 3-2. <sup>3</sup>		4-5

### Technology in Society

One course, see Basic Requirement 4 in the School of Engineering section 3-5

### Engineering Fundamentals<sup>4</sup>

Select one of the following:		
CS 106B/ ENGR 70B	Programming Abstractions	5
or CS 106X/ ENGR 70X	Programming Abstractions (Accelerated)	
At least two additional courses, at least one of which is not in EE or CS (CS 106A is not allowed). Choose from table in Undergraduate Handbook, Figure 3-4. One from ENGR 40 or ENGR 40M recommended.		8-10

At least two additional courses, at least one of which is not in EE or CS (CS 106A is not allowed). Choose from table in Undergraduate Handbook, Figure 3-4. One from ENGR 40 or ENGR 40M recommended.

### Writing in the Major (WIM)

Select one of the following:		3-4
EE 109	Digital Systems Design Lab (WIM/Design)	
EE 133	Analog Communications Design Laboratory (WIM/Design)	
EE 134	Introduction to Photonics (WIM/Design)	
EE 153	Power Electronics (WIM/Design)	

EE 155	Green Electronics (WIM/Design)	
EE 168	Introduction to Digital Image Processing (WIM/Design)	
EE 191W	Special Studies and Reports in Electrical Engineering (WIM; Department approval required) <sup>5</sup>	
CS 194W	Software Project (WIM/Design)	

### Core Electrical Engineering Courses

EE 100	The Electrical Engineering Profession <sup>6</sup>	1
EE 101A	Circuits I	4
EE 102A	Signal Processing and Linear Systems I	4
EE 108	Digital System Design	4

Physics in Electrical Engineering. Students must complete one of the 3-5 following courses:

EE 65	Modern Physics for Engineers (Preferred)	
EE 142	Engineering Electromagnetics <sup>7</sup>	

### Depth Courses 14

Select four courses from one of the following Depth areas. Courses must include one required course, one Design course, and 2 additional courses.

### Design Course 3-4

Select one of the following:

EE 109	Digital Systems Design Lab (WIM/Design)	
EE 133	Analog Communications Design Laboratory (WIM/Design)	
EE 134	Introduction to Photonics (WIM/Design)	
EE 153	Power Electronics (WIM/Design)	
EE 155	Green Electronics (WIM/Design)	
EE 168	Introduction to Digital Image Processing (WIM/Design)	
EE 262	Two-Dimensional Imaging (Design)	
EE 264	Digital Signal Processing <sup>8</sup>	
CS 194W	Software Project (WIM/Design)	

### Additional Electives 12

May include up to two additional Engineering Fundamentals, any CS 193 course and any letter graded EE or EE Related courses (minus any previously noted restrictions). Freshman and Sophomore seminars, EE191 and CS 106A do not count toward the 60 units.

<sup>1</sup> CME 106 or STATS 116 can also fulfill the Statistics/Probability requirement, but these are not preferred.

<sup>2</sup> The EE introductory class ENGR 40 or ENGR 40M may be taken concurrently with PHYSICS 43. PHYSICS 43 is not a prerequisite for ENGR 40 or 40M. Many students find the material complementary in terms of fundamental and applied perspectives on electronics.

<sup>3</sup> A minimum of 12 science units must be taken. A minimum of 40 math and science units combined must be taken.

<sup>4</sup> EE Engineering Topics: Fundamentals and Depth courses must total 60 units minimum.

<sup>5</sup> EE 191W may satisfy WIM only if it is a follow-up to an REU, independent study project or as part of an honors thesis project where a faculty agrees to provide supervision of writing a technical paper and with suitable support from the Writing Center.

<sup>6</sup> For upper division students, a 200-level seminar in their depth area will be accepted, on petition.

<sup>7</sup> EE 142 cannot be double counted. It may be used for only one of: Math; Physics in Electrical Engineering; or as a depth elective.

<sup>8</sup> To satisfy Design, EE 264 must be taken for 4 units and complete the laboratory project.

## Depth Areas

## Bio-electronics and Bio-imaging

EE 101B	Circuits II (Required)	4
or EE 102B	Signal Processing and Linear Systems II	
EE 122B	Introduction to Biomedical Electronics	3
EE 124	Introduction to Neuroelectrical Engineering	3
EE 134	Introduction to Photonics (WIM/Design)	4
EE 168	Introduction to Digital Image Processing (WIM/Design)	4

ENGR 205	Introduction to Control Design Techniques	3

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

### Honors Program

The Department of Electrical Engineering offers a program leading to a Bachelor of Science in Electrical Engineering with Honors. This program offers a unique opportunity for qualified undergraduate majors to conduct independent study and research at an advanced level with a faculty mentor, graduate students, and fellow undergraduates.

Admission to the honors program is by application. Declared EE majors with a grade point average (GPA) of at least 3.5 in Electrical Engineering are eligible to submit an application. Applications must be submitted by Autumn quarter of the senior year, be signed by the thesis adviser and second reader (one must be a member of the EE Faculty), and include an honors proposal. Students need to declare honors on Axess.

In order to receive departmental honors, students admitted to the honors program must:

1. Submit an application, including the thesis proposal, by autumn quarter of senior year signed by the thesis advisor and second reader (one must be a member of the Electrical Engineering faculty).
2. Declare the EE Honors major in Axess before the end of autumn quarter of senior year.
3. Maintain a grade point average of at least 3.5 in Electrical Engineering courses.
4. Complete at least 10 units of EE 191 or EE 191W with thesis advisor for a letter grade. EE 191 units do not count toward the required 60 units, with the exception of EE 191W if approved to satisfy WIM.
5. Submit one final copy of the honors thesis approved by the advisor and second reader to the EE Degree Progress Officer by May 15.
6. Attend poster and oral presentation held at the end of spring quarter or present in another suitable forum approved by the faculty adviser.

### Electrical Engineering (EE) Minor

The options for completing a minor in EE are outlined below. Students must complete a minimum of 23-25 units, as follows:

Select one of the following courses:	5
EE 65	Modern Physics for Engineers
ENGR 40	Introductory Electronics
ENGR 40M	An Intro to Making: What is EE
Select one of the following options:	8

Option I:	
EE 101A	Circuits I
EE 101B	Circuits II
Option II:	
EE 102A	Signal Processing and Linear Systems I
EE 102B	Signal Processing and Linear Systems II
Option III:	
EE 108	Digital System Design
EE 180	Digital Systems Architecture

In addition, four letter-graded EE or Related courses at the 100-level 12 or higher must be taken (12 units minimum). CS 107 is required as a prerequisite for EE 180, but can count as one of the four classes.

## Master of Science in Electrical Engineering

Students with undergraduate degrees in physics, mathematics, or related sciences, as well as in various branches of engineering, are invited to apply for admission. They should typically be able to complete the master's degree in five quarters; note that many courses are not taught during the summer. Capable students without formal undergraduate preparation in electrical engineering may also be admitted for graduate study. Such students may have graduated in any field and may hold either the B.S. or B.A. degree. Graduate study in electrical engineering demands that students be adequately prepared in areas such as circuits, digital systems, fields, lab work, mathematics, and physics.

It is the student's responsibility, in consultation with an adviser, to determine whether the prerequisites for advanced courses have been met. Prerequisite courses ordinarily taken by undergraduates may be included as part of the graduate program of study. However, if the number of these is large, the proposed program may contain more than the minimum 45 units, and the time required to meet the degree requirements may be increased.

The master's degree program may provide advanced preparation for professional practice or for teaching at the junior college level. The faculty does not prescribe specific courses to be taken. Each student, with the help of a program adviser, prepares an individual program and submits it to the department for approval. The Program Proposal must be submitted to the Degree Progress Office before the end of the first quarter of graduate study (second quarter for Honors Cooperative Program students); a final revised version is due early in the final quarter of study, prior to degree conferral. Detailed requirements and instructions are available at <http://ee.stanford.edu/gradhandbook>. All requirements for a master's degree must be completed within three years after the student's first term of enrollment in the master's program (five years for Honors Cooperative Program students).

### University Coterminial Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor.

No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Master of Science with Distinction in Research

A student who wishes to pursue the M.S. in EE with distinction in research must first identify a faculty adviser who agrees to supervise and support the research work. The research adviser must be a member of the Academic Council and must hold an appointment in Electrical Engineering. The student and principal adviser must also identify another faculty member, who need not be in the Department of Electrical Engineering, to serve as a secondary adviser and reader for the research report. In addition, the student must complete the following requirements beyond those for the regular M.S. in EE degree:

1. *Research Experience*—The program must include significant research experience at the level of a half-time commitment over the course of three academic quarters. In any given quarter, the half-time research commitment may be satisfied by:
  - a. a 50 percent appointment to a departmentally supported research assistantship,
  - b. 6 units of independent study (EE 300, EE 390, or EE 391)
  - c. a prorated combination of the two (such as a 25 percent research assistantship supplemented by 3 units of independent study).
  - d. An equivalent research experience while fully supported on a Stanford-funded or externally funded fellowship. Student and research adviser must document the planned research-experience before the quarter starts and its completion at the end. Note: Fellowship must provide full support at the 10-unit tuition level, and allow the student to pursue degree-related research in addition to his/her fulltime course enrollment. This research must be carried out under the direction of the primary or secondary adviser.
2. *Supervised Writing and Research*—In addition to the research experience outlined in the previous requirement, students must enroll in at least 3 units of independent research (EE 300, EE 390, or EE 391 under the direction of their primary or secondary adviser. These units should be closely related to the research described in the first requirement, but focused more directly on the preparation of the research report described in the next section. The writing and research units described in parts (1) and (2) may be counted toward the 45 units required for the degree.
3. All independent study units (EE 300, EE 390, or EE 391) must be taken for letter grades and a GPA of 3.0 (B) or better must be maintained.
4. *Research Report*—Students must complete a significant report describing their research and its conclusions. The research report represents work that is publishable in a journal or at a high-quality conference, although it is presumably longer and more expansive in scope than a typical conference paper. A copy of the research report must be submitted to the student services office in the department three weeks before the beginning of the examination period in the student's final quarter. Both the primary and secondary adviser must approve the research report before the distinction-in-research designation can be conferred.

## The Honors Cooperative Program

Many of the department's graduate students are supported by the Honors Cooperative Program (HCP), which makes it possible for academically qualified engineers and scientists in nearby companies to be part-time master's students in Electrical Engineering while continuing nearly full-time professional employment. Prospective HCP students follow the same admission process and must meet the same admission requirements as full-time master's students. For more information regarding the Honors Cooperative Program, see the "School of Engineering" section of this bulletin.

## Joint Electrical Engineering and Law Degree (J.D./M.S.)

The Department of Electrical Engineering and the School of Law offer a joint degree program leading to an M.S. degree in EE combined with a J.D. degree. The J.D./M.S. program is designed for students who wish to prepare themselves for careers that involve both Law and Electrical Engineering.

Students interested in this joint degree program must apply to and gain admission separately from the Department of Electrical Engineering and the School of Law, and as an additional step, secure consent from both academic units to pursue both degrees simultaneously. Interest in the program should be noted on a student's application to each academic unit. A student currently enrolled in either the Department of Electrical Engineering or the School of Law may apply for admission to the other academic unit and for joint degree status after commencing study in that unit.

Joint degree students may elect to begin their study in either the Department of Electrical Engineering or the School of Law. Faculty advisers from each academic unit participate in the planning and supervising of the student's joint program. In the first year of the joint degree program, students must be enrolled full-time in the School of Law. Students must satisfy the requirements for both the J.D. and the M.S. degrees as specified in the *Stanford Bulletin*.

The Electrical Engineering Department approves courses from the Law School that may count toward the M.S. degree in Electrical Engineering, and the Law School approves courses from the Department of Electrical Engineering that may count toward the J.D. degree. In either case, approval may consist of a list applicable to all joint degree students or may be tailored to each individual student's program.

No more than 45 quarter hours of approved courses may be counted toward both degrees. No more than 36 quarter hours of courses that originate outside the School of Law may count toward the Law degree. To the extent that courses under this joint degree program originate outside of the School of Law but count toward the Law degree, the School of Law credits permitted under Section 17(1) of the Law School Regulations shall be reduced on a unit-per-unit basis but not below zero.

The maximum number of School of Law units that may be counted toward the M.S. degree in Electrical Engineering is the greater of:

1. 12 units, or
2. the maximum number of units from courses outside of the department that M.S. candidates in Electrical Engineering are permitted to count toward the M.S. degree under general departmental guidelines, or as set forth in the case of a particular student's individual program.

Tuition and financial aid arrangements are typically administered through the school in which the student is enrolled.

## Joint Electrical Engineering and Master's in Business Administration Degree (M.S./M.B.A.)

The Department of Electrical Engineering and the Graduate School of Business offer a joint degree program leading to an M.S. degree in EE combined with an M.B.A. degree. The joint program offers students an opportunity to develop advanced technical and managerial skills in preparation for careers in existing and new technology ventures.

Admission to the joint M.S./M.B.A. program requires that students apply and be accepted independently to both the Electrical Engineering Department at the School of Engineering and the Graduate School of Business. Students may apply concurrently, or elect to begin their course of study in EE and apply to the GSB during their first year.

## Doctor of Philosophy in Electrical Engineering

The University requirements for the Ph.D. degree are described in the "Graduate Degrees" section of this bulletin.

Admission to a graduate program does not imply that the student is a candidate for the Ph.D. degree. Advancement to candidacy requires superior academic achievement, satisfactory performance on a qualifying examination, and sponsorship by two faculty members. Enrollment in EE 391, Special Studies, is recommended as a means for getting acquainted with a faculty member who might be willing to serve as the dissertation advisor.

Students admitted to the Ph.D. program must sign up to take the department qualifying examination, given once a year in winter quarter. Students are allowed two attempts to pass the examination. Students are encouraged to take the exam in their first year of study. The first attempt must be made no later than the second year of study. Students who have never taken the qualifying examination by the end of the second year of study will be dismissed from the Ph.D. program for failure to progress. Such students may be allowed to complete a master's degree in Electrical Engineering instead. Students who do not pass the qualifying examination after two attempts will be dismissed from the Ph.D. program for failure to progress. Such students may be allowed to complete a master's degree in Electrical Engineering instead.

Upon completion of the qualifying examination and after securing agreement by two faculty members to serve as dissertation adviser and second reader, the student files an Application for Candidacy for Doctoral Degree. The dissertation adviser must be a member of the Academic Council. One of the two faculty members must have either a full, joint or courtesy appointment in the Electrical Engineering department. Students are required to advance to candidacy prior to the end of their second year in the graduate program. Students who do not advance to candidacy by the end of their second year will be dismissed from the Ph.D. program for failure to progress.

The Ph.D. in Electrical Engineering is a specialized degree, and is built on a broad base of physics, mathematics, and engineering skills. The course program is expected to reflect competency in Electrical Engineering and specialized study in other areas relevant to the student's research focus. 90 units must be completed at Stanford beyond the 45 units for a master's degree (completed either at Stanford or at another institution and transferred in via the Application for Graduate Residency Credit form), for a total of 135 units. Students must complete 21 units of letter-graded lecture courses in related advanced physics, mathematics, engineering, or computer science courses, depending on the area of research. 12 of these 21 units must be EE/EE Related courses at the 200 level or higher. The remaining 69 units should be research with the

dissertation advisor (EE 400, or the corresponding course number if the dissertation advisor's primary appointment is in another department).

Only after receiving department approval of the Application for Candidacy does the student become a candidate for the Ph.D. degree.

For additional information, see the department's web site (<http://ee.stanford.edu/gradhandbook>).

## Financial Assistance

The department awards a limited number of fellowships, teaching and course assistantships, and research assistantships to incoming graduate students. Applying for financial assistance is part of the admission application.

## Ph.D. Minor in Electrical Engineering

For a minor in Electrical Engineering, students must fulfill the M.S. degree depth requirement, complete at least 20 units of lecture course work at the 200-level or higher in Electrical Engineering (of which 15 units must be letter-graded), and have the Application for Ph.D. Minor approved by the EE department and the major department. A grade point average of at least 3.35 on these courses is required.

*Emeriti: (Professors)* Clayton W. Bates, Richard Bube, John Cioffi\*, Donald C. Cox, Von R. Eshleman, Michael J. Flynn\*, Joseph W. Goodman, Robert M. Gray, Stephen E. Harris, Martin E. *Visiting Associate Professors:* Diego Gutierrez, Shiyun Hu, SoYoung Kim, Liyang Yu, Feng Zhan

*Visiting Assistant Professors:* Meik Dorpinghaus, Daisuke Kanemoto, Xiumin Shi

## Institute for Computational and Mathematical Engineering

Courses offered by the Institute for Computational and Mathematical Engineering are listed under the subject code CME on the (<http://explorecourses.stanford.edu/search;jsessionid=14DE1634FEFCBE32542A001C07860506?view=catalog&catalog=&page=0&q=CME&filter-catalognumber=CME=on&filter-coursestatus-Active=on>) *Stanford Bulletin's* ExploreCourses web site.

ICME is a degree granting (M.S./Ph.D.) interdisciplinary institute at the intersection of mathematics, computing, engineering and applied sciences. ICME was founded in 2004, building upon the Scientific Computing and Computational Mathematics Program (est. 1989).

At ICME, we design state-of-the-art mathematical and computational models, methods, and algorithms for engineering and science applications. The program collaborates closely with engineers and scientists in academia and industry to develop improved computational approaches and advance disciplinary fields. In particular, it leverages Stanford's strength in engineering applications in the physical, biological, mathematical, and information sciences, and has established connections with nearly 20 departments across five schools at Stanford.

The program identifies research areas that would benefit from a multidisciplinary approach in which computational mathematics plays a role. This multidisciplinary intellectual environment is a core strength of ICME, with interaction among students and faculty with diverse backgrounds and expertise. Students and faculty are active in many research areas: aerodynamics and space applications, fluid dynamics, protein folding, data science including machine learning and recommender systems, ocean dynamics, climate modeling, reservoir engineering, computer graphics, financial mathematics, and many more.

The program trains students and scholars from across Stanford in mathematical modeling, scientific computing, and advanced computational algorithms at the undergraduate and graduate levels. Courses typically provide strong theoretical foundations for the solution of real world problems and numerical computations to facilitate application of mathematical techniques and theories. Training offered includes matrix computations, computational probability and combinatorial optimization, optimization, stochastics, numerical solution of partial differential equations, parallel computer algorithms, and new computing paradigms, amongst others.

ICME offers service courses for undergraduates and graduate students to fulfill departmental requirements, core courses for master's and doctoral students in Computational and Mathematical Engineering, and specialized electives in various application areas.

The ICME master's program offers both specialized and general tracks. Currently, the program is offering specialized tracks in Computational Geoscience (<https://pangea.stanford.edu/programs/compgeo>), Data Science, Imaging Science, and Mathematical and Computational Finance. The program is planning to implement a Computational Medicine track in the near future.

## Graduate Programs in Computational and Mathematical Engineering

University regulations governing the M.S. and Ph.D. degrees are described in the "Graduate Degrees (p. 45)" section of this bulletin.

### Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through coursework in mathematical modeling, scientific computing, advanced computational algorithms, and a set of courses from a specific area of application or field. The latter includes computational geoscience, data sciences, imaging sciences, mathematical and computational finance and other interdisciplinary areas that combine advanced mathematics with the classical physical sciences or with challenging interdisciplinary problems emerging within disciplines such as business, biology, medicine, and information.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Computational and Mathematical Engineering and related fields.

## Master of Science in Computational and Mathematical Engineering

The University's basic requirements for the M.S. degree are discussed in the "Graduate Degrees" (p. 45) section of this bulletin. The following are specific departmental requirements.

The M.S. degree in Computational and Mathematical Engineering is intended as a terminal professional degree and does not lead to the Ph.D. program. Students interested in the doctoral program should apply directly to the Ph.D. program. Master's students who have maintained a minimum grade point average (GPA) of 3.5 are eligible to take the Ph.D. qualifying exam; those who pass this examination and secure a research adviser may continue into the Ph.D. program upon acceptance by the institute.

### Admission

Prospective applicants should consult the Graduate Admissions (<https://studentaffairs.stanford.edu/gradadmissions>) and the ICME admissions

web page (<http://icme.stanford.edu/admissions/requirements>) for complete information on admission requirements and deadlines.

## Prerequisites

Fundamental courses in mathematics and computing may be needed as prerequisites for other courses in the program. Check the prerequisites of each required course. Recommended preparatory courses include advanced undergraduate level courses in linear algebra and probabilities, and introductory courses in PDEs, stochastics, numerical methods and proficiency in programming.

Applications to the M.S. program and all supporting documents must be submitted and received online by January 19, 2016, the deadline published on ICME admissions web page (<http://icme.stanford.edu/admissions/requirements>). Exceptions are made for applicants who are already students at Stanford and are applying to the coterminal program. See <http://icme.stanford.edu/admissions/requirements>.

## Coterminal Master's Program

Stanford undergraduates who want to apply for the coterminal master's degree must submit their application no later than eight weeks before the start of the proposed admit quarter. The application must give evidence that the student possesses a potential for strong academic performance at the graduate level. Graduate Record Examination (GRE) General Test scores are required for application review. A student is eligible to apply for admission once the following conditions have been met:

- completion of six non-summer quarters at Stanford or two non-summer quarters at Stanford for transfer students
- completion of 120 units toward graduation (UTG) as shown on the undergraduate transcript, including transfer, Advanced Placement exam, and other external test credit
- declaration of an undergraduate major

## University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken two quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Requirements for the Master of Science in Computational and Mathematical Engineering

The master's program consists of 45 units of course work taken at Stanford. No thesis is required; however, students may become involved in research projects during the master's program, particularly to explore an interest in continuing to the doctoral program. Although there is no

specific background requirement, significant exposure to mathematics and engineering course work is necessary for successful completion of the program.

There are five tracks in the master's program:

- General CME
- Computational Geosciences (see the Computational Geosciences web site (<https://pangea.stanford.edu/programs/compgeo>) for more information)
- Data Science
- Imaging Science
- Mathematical and Computational Finance

## General CME Track

This track is designed for students interested in studying and developing computational tools in those aspects of applied mathematics central to modeling in the physical and engineering sciences. The curriculum consists of core computational and mathematical engineering courses, unrestricted breadth and depth electives, programming coursework and seminars. Core courses provide instruction in mathematical and computational tools applicable to a wide range of scientific, industrial and engineering disciplines and augment breadth and depth electives of one's choosing. Programming requirement ensures proficiency in scientific computing and professional computing skills. Seminars highlight emerging research in engineering and sciences.

## Requirements

A candidate is required to complete a program of 45 units of courses numbered 200 or above. Courses below 200 level require special approval from the program office. At least 36 of these must be graded units, passed with a grade point average (GPA) of 3.0 (B) or better. Master's students interested in continuing to the doctoral program must maintain a 3.5 or better grade point average in the program. The curriculum consists of core computational and mathematical engineering courses, breadth electives, depth electives, programming coursework and seminars and unrestricted electives. Core courses provide instruction in mathematical and computational tools applicable to a wide range of scientific, industrial and engineering disciplines and augment breadth and depth electives of one's choosing.

### Requirement 1: Foundations (12 units)

Students must demonstrate foundational knowledge in the field by completing four of the six core courses. Courses in this area must be taken for letter grades. Deviations from the core curriculum must be justified in writing and approved by the student's ICME adviser and the chair of the ICME curriculum committee. Courses that are waived may not be counted towards the master's degree.

		Units
CME 303	Partial Differential Equations of Applied Mathematics	3
CME 306	Numerical Solution of Partial Differential Equations	3
CME 302	Numerical Linear Algebra	3
CME 304 or CME 364A	Numerical Optimization Convex Optimization I	3
CME 305	Discrete Mathematics and Algorithms	3
CME 308	Stochastic Methods in Engineering	3

### Requirement 2: Breadth Electives (18 units)

18 units of general electives to demonstrate breadth of knowledge in technical area. The elective course list represents automatically accepted electives within the program. However, electives are not limited to the list below, and the list is expanded on a continuing basis. The elective part of

the ICME program is meant to be broad and inclusive of relevant courses of comparable rigor to ICME courses. Courses outside this list can be accepted as electives subject to approval by the student's ICME adviser.

		Units
<b>Aeronautics and Astronautics</b>		
AA 214B	Numerical Methods for Compressible Flows	3
AA 214C	Numerical Computation of Viscous Flow	3
AA 218	Introduction to Symmetry Analysis	3
<b>Computational and Mathematical Engineering</b>		
CME 212	Advanced Programming for Scientists and Engineers	3
CME 213	Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 214	Software Design in Modern Fortran for Scientists and Engineers	3
CME 215A/215B	Advanced Computational Fluid Dynamics	3
CME 263	Introduction to Linear Dynamical Systems	3
CME 342	Parallel Methods in Numerical Analysis	3
CME 364A	Convex Optimization I	3
<b>Computer Science</b>		
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
CS 229	Machine Learning	3-4
CS 255	Introduction to Cryptography	3
CS 261	Optimization and Algorithmic Paradigms	3
CS 340	Topics in Computer Systems	3-4
CS 348A	Computer Graphics: Geometric Modeling	3-4
CS 364A	Algorithmic Game Theory	3
<b>Electrical Engineering</b>		
EE 223	Applied Quantum Mechanics II	3
EE 256	Numerical Electromagnetics	3
EE 376A	Information Theory	3
<b>Management Science and Engineering</b>		
MS&E 220	Probabilistic Analysis	3-4
MS&E 221	Stochastic Modeling	3
MS&E 223	Simulation	3
MS&E 238	Leading Trends in Information Technology	3
MS&E 251	Stochastic Control	3
MS&E 310	Linear Programming	3
MS&E 316	Discrete Mathematics and Algorithms	3
MS&E 321	Stochastic Systems	3
MS&E 322	Stochastic Calculus and Control	3
<b>Mathematics</b>		
MATH 136	Stochastic Processes	3
MATH 171	Fundamental Concepts of Analysis	3
MATH 221A	Mathematical Methods of Imaging	3
MATH 221B	Mathematical Methods of Imaging	3
MATH 227	Partial Differential Equations and Diffusion Processes	3
MATH 236	Introduction to Stochastic Differential Equations	3
MATH 238	Mathematical Finance	3
<b>Mechanical Engineering</b>		
ME 335A/335B/335C	Finite Element Analysis	3
ME 346B	Introduction to Molecular Simulations	3
ME 408	Spectral Methods in Computational Physics	3
ME 412	Engineering Functional Analysis and Finite Elements	3
ME 469	Computational Methods in Fluid Mechanics	3
ME 484	Computational Methods in Cardiovascular Bioengineering	3
<b>Statistics</b>		
STATS 208	Introduction to the Bootstrap	3
STATS 217	Introduction to Stochastic Processes	3
STATS 219	Stochastic Processes	3
STATS 237	Theory of Investment Portfolios and Derivative Securities	3
STATS 250	Mathematical Finance	3
STATS 305	Introduction to Statistical Modeling	3
STATS 310A/310B/310C	Theory of Probability	2-4
STATS 324	Multivariate Analysis	3
STATS 362	Topic: Monte Carlo	3
<b>Other</b>		
CEE 281	Mechanics and Finite Elements	3
CEE 362G	Stochastic Inverse Modeling and Data Assimilation Methods	3-4
ENGR 209A	Analysis and Control of Nonlinear Systems	3

### Requirement 3: Specialized Electives (9 units)

Nine units of focused graduate application electives, approved by the ICME graduate adviser, in the areas of engineering, mathematics, physical, biological, information, and other quantitative sciences. These courses should be foundational depth courses relevant to the student's professional development and research interests.

### Requirement 4: Programming (3 units)

Three units of programming course work demonstrating programming proficiency. All graduate students in the program are required to complete programming course for letter grade at the level of CME 212 Advanced Programming for Scientists and Engineers or higher (students may ONLY place out of 211 with prior written approval).

		Units
CME 212	Advanced Programming for Scientists and Engineers	3
CME 213	Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 214	Software Design in Modern Fortran for Scientists and Engineers	3
CME 323	Distributed Algorithms and Optimization	3
CME 342	Parallel Methods in Numerical Analysis	3

### Requirement 5: Seminar (3 units)

Three units of ICME graduate seminars or other approved seminars. Additional seminar units may not be counted towards the 45-unit requirement.

## Computational Geosciences Track

The Computational Geosciences (CompGeo) track is designed for students interested in the skills and knowledge required to develop efficient and robust numerical solutions to Earth Science problems using high-performance computing. The CompGeo curriculum is based on four fundamental areas: modern programming methods for Science and Engineering, applied mathematics with an emphasis on numerical methods, algorithms and architectures for high-performance computing and computationally oriented Earth Sciences courses. Earth Sciences/computational project courses give practice in applying methodologies

and concepts. CompGeo students are required to complete general and focused application electives (Requirements 2 and 3) from the approved list of courses from the Computational Geosciences program as well as completing EARTHSYS 310 seminar as part of Requirement 5. See <http://pangea.stanford.edu/programs/compgeo/>. All other requirements remain the same as set forth above.

*Note:* Students interested in pursuing the ICME M.S. in the Computational Geosciences (CompGeo) track are encouraged to contact the Computational Geosciences Program Director before applying.

Students are required to take 45 units of course work, and research credits to earn an M.S. in Computational and Mathematical Engineering with the Computational Geosciences track. The course work follows the requirements of the ICME M.S. degree as above with additional restrictions placed on the general and focused electives.

### Requirement 1: Fundamentals (12 units)

Identical to the general CME master's track requirement.

### Requirement 2: Breadth Electives in Geosciences (18 units)

The M.S. CompGeo track requires 18 units of course work in the Geosciences. Courses are currently offered but are not limited to the following specific areas of the School of Earth Sciences:

1. Reservoir Simulation
2. Geophysical Imaging
3. Tectonophysics/Geomechanics
4. Climate/Atmosphere/Ocean
5. Ecology/Geobiology.

The Earth Science courses, offered in EESS, ERE, GES, and Geophysics is selected based on the area of the student's interest and their research/thesis work, along with the advice and consent of the student's adviser. Students are encouraged to choose a range of courses in order to guarantee breadth of knowledge in Earth Sciences. A maximum of one non-computationally-oriented course can be counted towards the master's degree requirements. Following is a list of recommended courses (grouped by area) that can be taken to fulfill the Geosciences course requirement.

Environmental/Climate/Hydrogeology		
ESS 220	Physical Hydrogeology	4
ESS 221	Contaminant Hydrogeology and Reactive Transport	4
ESS 246B	Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation	3
CEE 262A	Hydrodynamics	3-4
CEE 262B	Transport and Mixing in Surface Water Flows	3-4
CEE 262C	Modeling Environmental Flows	3
CEE 263A	Air Pollution Modeling	3-4
CEE 263B	Numerical Weather Prediction	3-4
CEE 361	Turbulence Modeling for Environmental Fluid Mechanics	2-4
Geophysical Imaging		
EE 256	Numerical Electromagnetics	3
GEOPHYS 204	Spectral Finite Element Method (SPECFEM) Seismograms	3
GEOPHYS 210	Basic Earth Imaging	2-3
GEOPHYS 211	Environmental Soundings Image Estimation	3
GEOPHYS 240	Borehole Seismic Modeling and Imaging	3
GEOPHYS 280	3-D Seismic Imaging	2-3
GEOPHYS 287	Earthquake Seismology	3-5

General Computational/Mathematical Geosciences		
CEE 362G	Stochastic Inverse Modeling and Data Assimilation Methods	3-4
CHEM 275	Advanced Physical Chemistry	3
CME 372	Applied Fourier Analysis and Elements of Modern Signal Processing	3
CME 321A	Mathematical Methods of Imaging	3
CME 321B	Mathematical Methods of Imaging	3
ESS 211	Fundamentals of Modeling	3-5
ENERGY 242	Topics in Advanced Geostatistics	3-4
ENERGY 256	Electronic Structure Theory and Applications to Chemical Kinetics	3
ENERGY 260		3
ENERGY 284	Optimization and Inverse Modeling	3
ENERGY 291	Optimization of Energy Systems	3-4
GEOPHYS 257	Introduction to Computational Earth Sciences	2-4
GEOPHYS 258	Applied Optimization Laboratory (Geophys 258)	3-4
GEOPHYS 281	Geophysical Inverse Problems	3
GS 240	Geostatistics	2-3
STATS 253	Analysis of Spatial and Temporal Data	3
ME 335A	Finite Element Analysis	3
ME 346B	Introduction to Molecular Simulations	3
ME 361	Turbulence	3
ME 469B	Computational Methods in Fluid Mechanics	3
MS&E 211	Linear and Nonlinear Optimization	3-4
Reservoir Simulation/Fluid Flow		
CME 358	Finite Element Method for Fluid Mechanics	3
ENERGY 223	Reservoir Simulation	3-4
ENERGY 224	Advanced Reservoir Simulation	3
ENERGY 281	Applied Mathematics in Reservoir Engineering	3
ENERGY 290	Numerical Modeling of Fluid Flow in Heterogeneous Porous Media	3
GES 255		3
Subsurface/Reservoir Characterization		
ENERGY 241	Seismic Reservoir Characterization	3-4
GEOPHYS 202	Reservoir Geomechanics	3
GEOPHYS 260	Rock Physics for Reservoir Characterization	3
Structural/Tectonophysics/Geomechanics		
CEE 292	Computational Micromechanics	3
CEE 294	Computational Poromechanics	3
CEE 362	Numerical Modeling of Subsurface Processes	3-4
GEOPHYS 220	Ice, Water, Fire	3-5
GEOPHYS 251	Structural Geology and Rock Mechanics	4
GEOPHYS 288A	Crustal Deformation	3-5
GEOPHYS 288B	Crustal Deformation	3-5
GEOPHYS 290	Tectonophysics	3

### Requirement 3: Integrative courses in Computational Geosciences (9 units)

9 units of focused research in computational geosciences. Students are required to either complete a Research Project or an Internship as described below.

Internship and/or Research Project, enrolling in a course such as:

EARTH 400	Directed Research	3
EARTH 401	Curricular Practical Training	1

**Research Project**

Students who plan to apply to the Ph.D. program need to take 9 units of research. Students will work with the CompGeo program director to find an appropriate adviser and research topic and then enroll in EARTHSCI 400: Directed Research (or a similar SES research course). The successful outcome of a Research Project can be:

1. an oral presentation at an international meeting requiring an extended abstract
2. a publication submission in a peer reviewed journal.
3. a written report

**Internship**

As an alternative to the Research Project students have the option of an internship which is recommended for those students interested in a terminal degree. The individual student is responsible for securing and organizing the internship and is required to obtain a faculty advisor and submit a written report on the internship project. Credit for the internship will be obtained through EARTHSCI 401: Curricular Practical Training (1 unit) and in this case only 8 units of research are required.

**Requirement 4: Programming (3 units)**

3 units of programming course work demonstrating programming proficiency. All graduate students in the program are required to complete programming course for letter grade at the level of CME 212 Advanced Programming for Scientists and Engineers or higher (students may ONLY place out of 211 with prior written approval).

CME 212	Advanced Programming for Scientists and Engineers	3
CME 213	Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 214	Software Design in Modern Fortran for Scientists and Engineers	3
CME 323	Distributed Algorithms and Optimization	3
CME 342	Parallel Methods in Numerical Analysis	3
GEOPHYS 257	Introduction to Computational Earth Sciences	2-4

**Requirement 5: Seminar (3 units)**

3 units of ICME graduate seminars or other approved seminars. Additional seminar units may not be counted towards the 45-unit requirement. One of the required seminars for CompGeo must be EARTH 310 Computational Geosciences Seminar (1 unit).

**Data Science Track**

The Data Science track develops strong mathematical, statistical, and computational and programming skills through the general master's core and programming requirements. In addition, it provides a fundamental data science education through general and focused electives requirement from courses in data sciences and related areas. The course work follows the requirements of the general master's degree in the core course requirement. The general and focused elective requirements (requirements 2 and 3 below) are limited to predefined courses from the data sciences and related courses group. Programming requirement (requirement 4) is extended to 6 units and includes course work in advanced scientific programming and high performance computing. The final requirement is a practical component (requirement 5) for 6 units to be completed through capstone project, data science clinic, or other courses that have strong hands-on or practical component such as statistical consulting.

**Requirement 1: Foundational (12 units)**

Students must demonstrate foundational knowledge in the field by completing the following core courses. Courses in this area must be taken for letter grades. Deviations from the core curriculum must be

justified in writing and approved by the student's ICME adviser and the chair of the ICME curriculum committee. Courses that are waived may not be counted towards the master's degree.

		Units
CME 302	Numerical Linear Algebra	3
CME 304 or CME 364A	Numerical Optimization Convex Optimization I	3
CME 305	Discrete Mathematics and Algorithms	3
CME 308	Stochastic Methods in Engineering (or an equivalent course approved by the committee)	3

**Requirement 2: Data Science electives (12 units)**

Data Science electives should demonstrate breadth of knowledge in the technical area. The elective course list is defined. Courses outside this list can be accepted as electives subject to approval. Petitions for approval should be submitted to student services.

		Units
STATS 200	Introduction to Statistical Inference	3
STATS 203 or STATS 305	Introduction to Regression Models and Analysis of Variance Introduction to Statistical Modeling	3
STATS 315A	Modern Applied Statistics: Learning	3
STATS 315B	Modern Applied Statistics: Data Mining	3

**Requirement 3: Specialized electives (9 units)**

Choose three courses in specialized areas from the following list. Courses outside this list can be accepted as electives subject to approval. Petitions for approval should be submitted to student services.

		Units
BIOE 214	Representations and Algorithms for Computational Molecular Biology	3-4
BIOMEDIN 215	Data Driven Medicine	3
BIOS 221	Modern Statistics for Modern Biology	3
CS 224W	Social Information and Network Analysis	3-4
CS 229	Machine Learning	3-4
CS 246	Mining Massive Data Sets	3-4
CS 347	Parallel and Distributed Data Management	3
CS 448	Topics in Computer Graphics	3-4
ENERGY 240	Geostatistics	2-3
OIT 367	Business Intelligence from Big Data	3
PSYCH 204A	Human Neuroimaging Methods	3
PSYCH 303	Human and Machine Hearing	3
STATS 290	Paradigms for Computing with Data	3
STATS 366	Modern Statistics for Modern Biology	3

**Requirement 4: Advanced Scientific Programming and High Performance Computing Core (6 units)**

To ensure that students have a strong foundation in programming, 3 units of advanced programming for letter grade at the level of CME 212 (students may ONLY place out of 211 with prior written approval) and three units of parallel computing for letter grades are required.

		Units
Advanced Scientific Programming; take 3 units		
CME 212	Advanced Programming for Scientists and Engineers	3
CME 214	Software Design in Modern Fortran for Scientists and Engineers	3
Parallel/HPC Computing; take 3 units		

CME 213	Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 323	Distributed Algorithms and Optimization	3
CME 342	Parallel Methods in Numerical Analysis	3
CS 149		3-4
CS 315A	Parallel Computer Architecture and Programming	3
CS 316	Advanced Multi-Core Systems	3
CS 344C, offered in previous years, may also be counted		3

**Requirement 5: Practical component (6 units)**

Students are required to take 6 units of practical component that may include any combination of:

- A capstone project, supervised by a faculty member and approved by the steering committee. The capstone project should be computational in nature. Students should submit a one-page proposal, supported by the faculty member, to the steering committee (gwalther@stanford.edu) for approval at least one quarter before.
- Project labs offered by Stanford Data Lab: ENGR 250 Data Challenge Lab, and ENGR 350 Data Impact Lab.
- Other courses that have a strong hands-on and practical component, such as STATS 390 Consulting Workshop up to 3 units.

## Imaging Science Track

The Imaging Science track is designed for students interested in the skills and knowledge required to develop efficient and robust computational tools for imaging science. The curriculum is based on four fundamental areas: mathematical models and analysis for imaging sciences and inverse problems, tools and techniques from modern imaging sciences from medicine, biology, physics/chemistry, and earth science, algorithms in numerical methods and scientific computing and high performance computing skills and architecture oriented towards imaging sciences.

The course work follows the requirements of the general master's degree in the core course requirement. The general and focused elective requirements (requirements 2 and 3 below) are limited to approved courses listed below. Programming requirement (requirement 4) is extended to 6 units and includes course work in advanced scientific programming and high performance computing. The final requirement is a practical component (requirement 5) for 6 units to be completed through capstone project, data science clinic, or other courses that have strong hands-on or practical component such as statistical consulting.

1. general and focused application electives (Requirements 2 and 3) from the approved list of courses
2. high performance computing core (Requirement 4)
3. the ICME graduate seminar or other approved seminar series (Requirement 5)

**Requirement 1: Fundamentals (12 units)**

Identical to the general ICME master's program; see above.

**Requirement 2: Imaging Sciences electives (18 units)**

Imaging Sciences electives should demonstrate breadth of knowledge in the technical area. The elective course list is defined. Courses outside this list can be accepted as electives subject to approval. Petitions for approval should be submitted to student services.

Take 18 units of the following:

APPPHYS 232	Advanced Imaging Lab in Biophysics	4
-------------	------------------------------------	---

BIOE 220	Introduction to Imaging and Image-based Human Anatomy	3
CEE 362G	Stochastic Inverse Modeling and Data Assimilation Methods	3-4
EE 236A	Modern Optics	3
EE 262	Two-Dimensional Imaging	3
EE 355	Imaging Radar and Applications	3
EE 368	Digital Image Processing	3
EE 369A	Medical Imaging Systems I	3
EE 369B	Medical Imaging Systems II	3
EE 369C	Medical Image Reconstruction	3
GEOPHYS 210	Basic Earth Imaging	2-3
GEOPHYS 211	Environmental Soundings Image Estimation	3
GEOPHYS 280	3-D Seismic Imaging	2-3
MATH 221A	Mathematical Methods of Imaging	3
MATH 221B	Mathematical Methods of Imaging	3
MATH 262	Applied Fourier Analysis and Elements of Modern Signal Processing	3
PSYCH 204A	Human Neuroimaging Methods	3

**Requirement 3: Specialized electives (6 units)**

6 units of focused graduate application electives, approved by the ICME graduate adviser, in the areas of engineering, mathematics, physical, biological, information, and other quantitative sciences. These courses should be foundational depth courses relevant to the student's professional development and research interests.

**Requirement 4: Advanced Scientific Programming and High Performance Computing Core (6 units)**

To ensure that students have a strong foundation in programming, 3 units of advanced programming for letter grade at the level of CME 212 (students may ONLY place out of 211 with prior written approval) and three units of parallel computing for letter grades are required.

		Units
CME 212	Advanced Programming for Scientists and Engineers	3
CME 213	Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 214	Software Design in Modern Fortran for Scientists and Engineers	3
CME 323	Distributed Algorithms and Optimization	3
CME 342	Parallel Methods in Numerical Analysis	3
GEOPHYS 257	Introduction to Computational Earth Sciences	2-4

**Requirement 5: Seminar (3 units)**

3 units of ICME graduate seminars or other approved seminars. Additional seminar units may not be counted towards the 45-unit requirement.

## Mathematical and Computational Finance Track

The Mathematical & Computational Finance (MCF) track is an interdisciplinary program that provides education in applied and computational mathematics, statistics, and financial applications for individuals with strong mathematical skills. Upon successful completion of the MCF track in the ICME master's program, students will be prepared to assume positions in the financial industry as data and information scientists, quantitative strategists, risk managers, regulators, financial technologists, or to continue on to their Ph.D. in ICME, MS&E, Mathematics, Statistics, Finance and other disciplines.

Units

The Institute for Computational and Mathematical Engineering, in close cooperation with Mathematics, Management Science and Engineering and Statistics provide many of the basic courses.

*Note:* This new track in the ICME master's program supersedes, beginning in the Autumn Quarter of 2014, the interdisciplinary master's program (IDP) in Financial Mathematics in the School of Humanities & Sciences.

### Requirement 1: Foundational (9 units)

Students must demonstrate foundational knowledge in the field by completing the following core courses. Courses in this area must be taken for letter grades. Deviations from the core curriculum must be justified in writing and approved by the student's ICME adviser and the chair of the ICME curriculum committee. Courses that are waived may not be counted towards the master's degree.

		Units
CME 302	Numerical Linear Algebra	3
or MATH 239	Computation and Simulation in Finance	
or CME 303	Partial Differential Equations of Applied Mathematics	
CME 304	Numerical Optimization <sup>1</sup>	3
or CME 364A	Convex Optimization I	
CME 308	Stochastic Methods in Engineering (or an equivalent course approved by the committee) <sup>2</sup>	3
or MATH 236	Introduction to Stochastic Differential Equations	

### Requirement 2: Finance electives (18 units)

Choose six units in each of the three Finance specialized areas: Financial Mathematics, Financial and Risk Modeling, and Financial Markets. Courses outside of this list can be accepted as electives subject to approval prior to taking the course. Petitions for approval should be submitted to student services.

		Units
Financial Markets (6 units)		
FINANCE 320	Debt Markets	4
FINANCE 620	Financial Markets I	3
FINANCE 621	Financial Markets II	3
FINANCE 622	Dynamic Asset Pricing Theory	4
STATS 242	Algorithmic Trading and Quantitative Strategies	3
STATS 244	Quantitative Trading: Algorithms, Data, and Optimization	2-4
MS&E 445	Projects in Wealth Management	3-4
MS&E 448	Big Financial Data and Algorithmic Trading	3
Financial Mathematics (6 units)		
MATH 238	Mathematical Finance	3
MATH 239	Computation and Simulation in Finance	3
STATS 240	Statistical Methods in Finance	3-4
Financial and Risk Modeling (6 units)		
MATH 237	Default and Systemic Risk	3
MS&E 246	Financial Risk Analytics	3
MS&E 347	Credit Risk: Modeling and Management	3
MS&E 348	Optimization of Uncertainty and Applications in Finance	3
MS&E 447	Systemic and Market Risk : Notes on Recent History, Practice, and Policy	3
STATS 241	Data-driven Financial and Risk Econometrics	3-4
STATS 243	Financial Models and Statistical Methods in Active Risk Management	2-4

*Note:* CME 211 can be applied towards finance core and electives if necessary.

### Requirement 3: Data Science electives (6 units)

Data Science electives should demonstrate breadth of knowledge in the technical area. The elective course list is defined below. Courses outside this list can be accepted as electives subject to approval prior to taking the course. Petitions for approval should be submitted to student services.

		Units
CS 229	Machine Learning	3-4
CS 246	Mining Massive Data Sets	3-4
STATS 362	Topic: Monte Carlo	3
STATS 315A	Modern Applied Statistics: Learning	2-3
STATS 315B	Modern Applied Statistics: Data Mining	2-3

### Requirement 4: Advanced Scientific Programming and High Performance Computing Core (6 units)

To ensure that students have a strong foundation in programming, 3 units of advanced programming for letter grade at the level of CME 212 (students may ONLY place out of 211 with prior written approval) and three units of parallel computing for letter grades are required.

		Units
Advanced Scientific Programming; take 3 units		
CME 212	Advanced Programming for Scientists and Engineers	3
CME 214	Software Design in Modern Fortran for Scientists and Engineers	3
Parallel/HPC Computing; take 3 units		
CME 213	Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 323	Distributed Algorithms and Optimization	3
CME 342	Parallel Methods in Numerical Analysis	3
CS 149		3-4
CS 315A	Parallel Computer Architecture and Programming	3
CS 316	Advanced Multi-Core Systems	3
CS 344C, offered in previous years, may also be counted		3
CS 545		1

### Requirement 5: Practical component (6 units)

Students are required to take 6 units of practical component, of which at least 3 units must be taken for letter grade:

		Units
CME 244	Project Course in Mathematical and Computational Finance	1-6
CME 245	Topics in Mathematical and Computational Finance	1
MS&E 445	Projects in Wealth Management	3-4

## Doctor of Philosophy in Computational and Mathematical Engineering

The University's basic requirements for the Ph.D. degree are outlined in the "Graduate Degrees" (p. 45) section of this bulletin.

Applications to the Ph.D. program and all required supporting documents must be received by December 8, 2015. See Graduate Admissions (<http://gradadmissions.stanford.edu>) for information and application materials. See the department's admissions site (<http://icme.stanford.edu/admissions/requirements>) for additional details. Applicants should take the Graduate Record Examination by October of the academic year in which the application is submitted.

Admission to the Ph.D. program does not imply that the student is a candidate for the Ph.D. degree. Advancement to candidacy requires superior academic achievement and passing the qualifying examination.

## Requirements

1. Complete a minimum of 135 units of residency at Stanford, including:
  - a. 45 units from the master's program; all six core courses have to be completed for letter grade.
  - b. 27 units of focused electives for letter grade in an area planned with the student's Ph.D. adviser; 12 of these units should come from ICME specialized electives with significant computational content such as the CME 320-380 series. The focused and specialized elective component of the ICME program is meant to be broad and inclusive of relevant courses of comparable rigor to ICME courses. The elective course list following represents automatically accepted electives within the program. However, electives are not limited to the list below, and the list is expanded on a continuing basis; courses outside the list can be accepted as electives subject to approval by the student's ICME adviser. Research, directed study, and seminar units are excluded.
  - c. 3 units of programming elective demonstrating programming proficiency. Students are required to complete programming course at the level of CME 213 Introduction to parallel computing using MPI, openMP, and CUDA or higher for letter grade.
  - d. 60 units of thesis research
2. Maintain a grade point average (GPA) of 3.5.
3. Pass the ICME qualifying examination before the beginning of the second year.
4. Complete an approved program of original research.
5. Complete a written dissertation based on research.
6. Pass the oral examination that is a defense of the dissertation research.

## Specialized Elective List

See requirement 1b above.

		Units
CEE 362G	Stochastic Inverse Modeling and Data Assimilation Methods	3-4
CME 364A/364B	Convex Optimization I	3
CS 348A	Computer Graphics: Geometric Modeling	3-4
EE 368	Digital Image Processing	3
MATH 205A	Real Analysis	3
MATH 215A	Complex Analysis, Geometry, and Topology	3
MATH 217A		3
MATH 221A	Mathematical Methods of Imaging	3
MATH 221B	Mathematical Methods of Imaging	3
MATH 227	Partial Differential Equations and Diffusion Processes	3
MATH 236	Introduction to Stochastic Differential Equations	3
MATH 238	Mathematical Finance	3
ME 335A/335B/335C	Finite Element Analysis	3
ME 346B	Introduction to Molecular Simulations	3
ME 351A/351B	Fluid Mechanics	3
ME 361	Turbulence	3
ME 408	Spectral Methods in Computational Physics	3
ME 412	Engineering Functional Analysis and Finite Elements	3
ME 469	Computational Methods in Fluid Mechanics	3
MS&E 319	Approximation Algorithms	3

MS&E 336	Platform and Marketplace Design	3
STATS 305	Introduction to Statistical Modeling	3
STATS 306A/306B	Methods for Applied Statistics	5-6
STATS 318	Modern Markov Chains	3
STATS 366	Modern Statistics for Modern Biology	3

*Note:* Students who need to complete 135 units at Stanford, should necessarily complete the CME master's requirements (p. 253). All courses listed under "Requirement 3" under the "Master of Science in Computational and Mathematical Engineering (p. 253)" section can be used for fulfilling the general elective requirement.

## Financial Assistance

The department awards a limited number of fellowships, course assistantships, and research assistantships to incoming graduate students. Applying for such assistance is part of submitting the application for admission to the program. Students are appointed for half-time assistantships which provide a tuition scholarship at the 8, 9, 10 unit rate during the academic year and a monthly stipend. Half-time appointments generally require 20 hours of work per week. Most course assistantships and research assistantships are awarded to students in the doctoral program in ICME. If the number of Ph.D. students is not sufficient to staff all course and research assistantship positions available, these positions may be open to master's students. However, master's students are not guaranteed financial assistance.

## Ph.D. Minor in Computational and Mathematical Engineering

For a minor in Computational and Mathematical Engineering (CME), a doctoral candidate must complete 21 units of approved graduate level courses. These should include three ICME core courses and three ICME graduate electives at the 300 level or above and a programming course at the level of CME212 or higher. All courses must be taken for a letter grade and passed with a grade of 'B' or better. Elective courses cannot be cross listed with the primary department. Minor programs should be developed in close discussion between the student and the student's primary Ph.D. adviser.

*Emeriti:* (Professor) Joe Keller (Mathematics, Mechanical Engineering), (Professor, Research) Arogyaswami Paulraj (Electrical Engineering)

*Director:* Margot Gerritsen (Energy Resources Engineering)

*Co-Director:* Gianluca Iaccarino (Mechanical Engineering)

*Professors:* Juan Alonso (Aeronautics and Astronautics), Biondo Biondi (Geophysics), Stephen Boyd (Electrical Engineering), Emanuel Candes (Mathematics, Statistics), Gunnar Carlsson (Mathematics), Persi Diaconis (Mathematics, Statistics), David Donoho (Statistics), Charbel Farhat (Aeronautics and Astronautics, Mechanical Engineering), Ronald Fedkiw (Computer Science), Peter Glynn (Management Science and Engineering), Ashish Goel (Management Science and Engineering), Leonidas Guibas (Computer Science), Pat Hanrahan (Computer Science, Electrical Engineering), Jerry Harris (Geophysics), Trevor Hastie (Mathematics, Statistics), Peter Kitanidis (Civil and Environmental Engineering), Tze Leung Lai (Statistics), Sanjiva Lele (Mechanical Engineering, Aeronautics and Astronautics), Parviz Moin (Mechanical Engineering), Brad Osgood (Electrical Engineering), Vijay Pande (Chemistry), George Papanicolaou (Mathematics), Peter Pinsky (Mechanical Engineering), Lenya Ryzhik (Mathematics), Eric Shaqfeh (Chemical Engineering, Mechanical Engineering), Jonathan Taylor (Statistics), Hamdi Tchelepi (Energy Resources Engineering), Benjamin Van Roy (Management Science and Engineering, Electrical Engineering), Andras Vasy (Mathematics), Lawrence Wein (Graduate School of Business), Wing Wong (Statistics), Yinyu Ye (Management Science and

Engineering), Lexing Ying (Mathematics, Institute for Computational and Mathematical Engineering)

*Associate Professors:* Eric Darve (Mechanical Engineering), Ron Dror (CS, Institute for Computational and Mathematical Engineering), Eric Dunham (Geophysics), Oliver Fringer (Civil and Environmental Engineering), Margot Gerritsen (Energy Resources Engineering), Kay Giesecke (Management Science and Engineering), Gianluca Iaccarino (Mechanical Engineering), Ramesh Johari (Management Science and Engineering), Adrian Lew (Mechanical Engineering), Alison Marsden (Pediatrics, Bioengineering), Amin Saberi (Management Science and Engineering), Andrew Spakowitz (Chemical Engineering)

*Assistant Professors:* Marco Pavone (Aeronautics and Astronautics), Jack Poulson (Mathematics, Institute for Computational and Mathematical Engineering), Bala Rajaratnam (Statistics, Environmental and Earth System Sciences), Jenny Suckale (Geophysics)

*Professors (Research):* Antony Jameson (Aeronautics and Astronautics), Walter Murray (Management Science and Engineering), Michael A. Saunders (Management Science and Engineering)

*Senior Lecturer:* Vadim Khayms

*Lecturers:* Bill Behrman, Kapil Jain, Hung Le

*Consulting Professors:* Reza Bosagh-Zadeh, Sanjeeb Bose, Michael Minion

Courses of interest to students in the department may include:

		Units
CEE 262A	Hydrodynamics	3-4
CEE 262B	Transport and Mixing in Surface Water Flows	3-4
CEE 263A	Air Pollution Modeling	3-4
CEE 263B	Numerical Weather Prediction	3-4
CEE 294	Computational Poromechanics	3
CEE 362	Numerical Modeling of Subsurface Processes	3-4
CEE 362G	Stochastic Inverse Modeling and Data Assimilation Methods	3-4
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
CS 229	Machine Learning	3-4
CS 232	Digital Image Processing	3
CS 261	Optimization and Algorithmic Paradigms	3
CS 348A	Computer Graphics: Geometric Modeling	3-4
EE 256	Numerical Electromagnetics	3
EE 368	Digital Image Processing	3
ENERGY 223	Reservoir Simulation	3-4
ENERGY 224	Advanced Reservoir Simulation	3
ENERGY 241	Seismic Reservoir Characterization	3-4
ENERGY 252	Chemical Kinetics Modeling	3
ENERGY 281	Applied Mathematics in Reservoir Engineering	3
ENERGY 284	Optimization and Inverse Modeling	3
ENERGY 290	Numerical Modeling of Fluid Flow in Heterogeneous Porous Media	3
GEOPHYS 190	Near-Surface Geophysics	3
GEOPHYS 202	Reservoir Geomechanics	3
GEOPHYS 210	Basic Earth Imaging	2-3
GEOPHYS 211	Environmental Soundings Image Estimation	3
GEOPHYS 240	Borehole Seismic Modeling and Imaging	3
GEOPHYS 257	Introduction to Computational Earth Sciences	2-4

GEOPHYS 258	Applied Optimization Laboratory (Geophys 258)	3-4
GEOPHYS 260	Rock Physics for Reservoir Characterization	3
GEOPHYS 262	Rock Physics	3
GEOPHYS 280	3-D Seismic Imaging	2-3
GEOPHYS 281	Geophysical Inverse Problems	3
GEOPHYS 287	Earthquake Seismology	3-5
GEOPHYS 288A	Crustal Deformation	3-5
GEOPHYS 288B	Crustal Deformation	3-5
GEOPHYS 290	Tectonophysics	3
MATH 136	Stochastic Processes	3
MATH 205A	Real Analysis	3
MATH 215A	Complex Analysis, Geometry, and Topology	3
MATH 236	Introduction to Stochastic Differential Equations	3
MATH 238	Mathematical Finance	3
ME 335A	Finite Element Analysis	3
ME 335B	Finite Element Analysis	3
ME 335C	Finite Element Analysis	3
ME 346B	Introduction to Molecular Simulations	3
ME 351A	Fluid Mechanics	3
ME 351B	Fluid Mechanics	3
ME 361	Turbulence	3
ME 408	Spectral Methods in Computational Physics	3
ME 469	Computational Methods in Fluid Mechanics	3
MS&E 211	Linear and Nonlinear Optimization	3-4
STATS 219	Stochastic Processes	3
STATS 250	Mathematical Finance	3
STATS 305	Introduction to Statistical Modeling	3
STATS 306A	Methods for Applied Statistics	3
STATS 306B	Methods for Applied Statistics: Empirical Bayes Methods	2-3
STATS 310A	Theory of Probability	2-4
STATS 310B	Theory of Probability	2-3
STATS 310C	Theory of Probability	2-4
STATS 318	Modern Markov Chains	3

## Management Science and Engineering

Courses offered by the Department of Management Science and Engineering are listed under the subject code MS&E on the *Stanford Bulletin's* ExploreCourses web site.

The Department of Management Science and Engineering leads at the interface of engineering, business, and public policy. The department's mission is, through education and research, to advance the design, management, operation, and interaction of technological, economic, and social systems. The department's engineering research strength is integrated with its educational program at the undergraduate, master's, and doctoral levels: graduates of the program are trained as engineers and future leaders in technology, policy, and industry. Research and teaching activities are complemented by an outreach program that encourages the transfer of ideas to the environment of Silicon Valley and beyond.

Management Science and Engineering (MS&E) provides programs of education and research by integrating three basic strengths:

1. depth in conceptual and analytical foundations
2. comprehensive coverage of functional areas of application

3. interaction with other Stanford departments, Silicon Valley industry, and organizations throughout the world.

The analytical and conceptual foundations include decision and risk analysis, dynamic systems, economics, optimization, organizational science, and stochastic systems. The functional areas of application include entrepreneurship, finance, information, marketing, organizational behavior, policy, production, and strategy. Close associations with other engineering departments and with industry enrich the programs by providing opportunities to apply MS&E methods to important problems and by motivating new theoretical developments from practical experience. MS&E's programs also provide a basis for contributing to other areas such as biotechnology, defense policy, environmental policy, information systems, and telecommunications.

## Mission of the Undergraduate Program in Management Science and Engineering

The mission of the undergraduate program in Management Science and Engineering is to provide students with the fundamentals of engineering systems analysis so that they are able to plan, design, and implement complex economic and technical management systems. The program builds on the foundational courses for engineering including calculus, engineering fundamentals, and physics or chemistry as well as management science. Students complete core courses in accounting, computer science, economics, ethics, organizational theory, mathematical modeling, optimization, probability, and statistics. To personalize their exploration, students select additional courses from different areas of the department, with greater emphasis in one of them. The major prepares students for a variety of career paths, including investment banking, management consulting, facilities and process management, or for graduate school in industrial engineering, operations research, business, economics, law, medicine, or public policy.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to be able:

1. to apply the knowledge of mathematics, science, and engineering;
2. to design and conduct experiments;
3. to design a system or components to meet desired needs;
4. to identify, formulate, and solve engineering problems;
5. to use techniques, skills, and modern engineering tools necessary for engineering practice;
6. to function on multidisciplinary teams;
7. to communicate effectively;
8. to recognize the need for and demonstrate an ability to engage in life-long learning;
9. to obtain the background necessary for admission to top professional graduate engineering or business programs;
10. to understand professional and ethical responsibility;
11. to obtain the broad education necessary to understand the impact of engineering solutions in a global and societal context; and
12. to obtain a knowledge of contemporary issues pertinent to the field of management science and engineering.

## Graduate Programs in Management Science and Engineering

MS&E offers programs leading to the degrees of Master of Science and Doctor of Philosophy. The department also offers a coterminal B.S./M.S. degree, a dual master's degree in cooperation with each of the other

departments in the School of Engineering, and joint master's degrees with the School of Law and the Public Policy Program.

For University coterminal degree program rules and University application forms, see the Registrar's coterminal degrees web site (<http://studentaffairs.stanford.edu/registrar/publications/#Coterm>).

Applicants for admission as graduate students in MS&E must submit the results of the verbal, quantitative, and analytical parts of the Graduate Record Examination. The deadline for application to the doctoral program is December 1, 2015, and the deadline for application to the master's program is January 12, 2016.

Except in unusual circumstances, admission is limited to the Autumn Quarter because courses are arranged sequentially with basic courses and prerequisites offered early in the academic year.

## Assistantships and Fellowships

A limited number of fellowships and assistantships are awarded each year. Applicants admitted to the doctoral program, who have indicated on their application that they would like to be considered for financial aid, are automatically considered for these assistantships and fellowships. New and returning master's students may apply for course assistantships each quarter, but priority is given to MS&E doctoral students.

Information about loan programs and need-based aid for U.S. citizens and permanent residents can be obtained from the Financial Aid Office.

## Learning Outcomes (Graduate)

The M.S. prepares engineers for a lifelong career addressing the critical technical and managerial needs of private and public organizations. The program emphasizes developing analytic abilities, making better decisions, developing and executing strategies while also leading people who innovate. Unlike an MBA, our master's program addresses the technical as well as the behavioral challenges of running organizations and complex systems. We emphasize quantitative analytic skills and an entrepreneurial spirit.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Management Science and Engineering and related fields.

## Careers in MS&E

MS&E students are candidates for careers in consulting, product and project management, financial analysis, and work in policy arenas. A significant number join or found start-ups. Many have become leaders in technology-based businesses which have an increasing need for analytically oriented people who understand both business and technology. Other graduates make careers tackling the problems faced by local, national, and international governments by developing new healthcare systems, new energy systems and a more sustainable environment. The major problems of the day demand an ability to integrate the technical, social and economic ways of thinking. This is precisely what the department educates its students to do.

## Bachelor of Science in Management Science and Engineering

The program leading to the B.S. degree in Management Science and Engineering (MS&E) is outlined in the School of Engineering section of this bulletin; more information is contained in the School of Engineering's *Handbook for Undergraduate Engineering Programs*. Students are encouraged to plan their academic programs as early as possible, ideally in the freshman or sophomore year. Students should not wait until they

are declaring a major to consult with the department's student services staff. This is particularly important for students who would like to study overseas or pursue another major or minor.

The undergraduate curriculum in Management Science and Engineering provides students training in the fundamentals of engineering systems analysis to prepare them to plan, design, and implement complex economic and technological management systems where a scientific or engineering background is necessary or desirable. The major prepares students for a variety of career paths, including investment banking, management consulting, facilities and process management, or for graduate school in industrial engineering, operations research, business, economics, law, medicine, or public policy.

The educational objectives of the undergraduate degree program are:

- *Principles and Skills*—provide students with a basic understanding of management science and engineering principles, including analytical problem solving and communications skills.
- *Preparation for Practice*—prepare students for practice in a field that sees rapid changes in tools, problems, and opportunities.
- *Preparation for Continued Growth*—prepare students for graduate study and self development over an entire career.
- *Preparation for Service*—develop in students the awareness, background, and skills necessary to become responsible citizens, employees, and leaders.

See also the department's undergraduate Learning Outcomes (p. ) for additional learning objectives.

The program builds on the foundational courses for engineering, including calculus, mathematical modeling, probability, statistics, engineering fundamentals, and physics or chemistry.

Students interested in a minor should see the Minor tab in this section.

MS&E also participates with the departments of Computer Science, Mathematics, and Statistics in a program leading to a B.S. in Mathematical and Computational Science. See the "Mathematical and Computational Science (p. 551)" section of this bulletin.

## Core

The department core, taken for all areas, includes courses in accounting, computer science, deterministic optimization, economics, organization theory, and a capstone senior project. Through the core, students in the program are exposed to the breadth of faculty interests, and are in a good position to choose an area during the junior year.

## Areas

The major is designed to allow a student to explore all three areas of the department in greater depth.

1. *Finance and Decision*: focuses on the design and analysis of financial and strategic plans.
2. *Operations and Analytics*: focuses on algorithms, theory, and the design and analysis of manufacturing, production, and service systems.
3. *Organizations, Technology, and Policy*: focuses on understanding, design, and analysis of organizations and public policy, particularly technology-based issues.

## Management Science and Engineering (MS&E)

Completion of the undergraduate program in Management Science and Engineering leads to the conferral of the Bachelor of Science in Management Science and Engineering.

## Requirements

Units

### Mathematics and Science

All required; see SoE Basic Requirements 1 and 2 <sup>1</sup>		
CME 100	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
CME 103	Introduction to Matrix Methods	5
MS&E 120	Probabilistic Analysis	5
MS&E 121	Introduction to Stochastic Modeling	4
MS&E 125	Introduction to Applied Statistics	4
Select one of the following sequences:		8
CHEM 31B & CHEM 33	Chemical Principles II and Structure and Reactivity	
CHEM 31X & CHEM 33	Chemical Principles Accelerated and Structure and Reactivity	
PHYSICS 21 & PHYSICS 22	Mechanics, Fluids, and Heat and Mechanics, Fluids, and Heat Laboratory	
& PHYSICS 23 & PHYSICS 24	and Electricity, Magnetism, and Optics and Electricity, Magnetism, and Optics Laboratory	
PHYSICS 41 & PHYSICS 43	Mechanics and Electricity and Magnetism	
Electives from SoE approved list or AP/IB credit <sup>1</sup>		13

### Technology in Society

Select one of the following; see SoE Basic Requirement 4		3
COMM 120W	Digital Media in Society	
COMM 169	Computers and Interfaces	
CS 181	Computers, Ethics, and Public Policy	
ENGR 129		
ENGR 130	Science, Technology, and Contemporary Society	
ENGR 131	Ethical Issues in Engineering	
MS&E 181	Issues in Technology and Work for a Postindustrial Economy	
MS&E 193	Technology and National Security (WIM)	
MS&E 197	Ethics, Technology, and Public Policy (WIM)	
STS 1	The Public Life of Science and Technology	

### Engineering Fundamentals <sup>2</sup>

Three courses; see SoE Basic Requirement 3		
CS 106A	Programming Methodology <sup>3</sup>	5
Select one of the following:		3
ENGR 25B	Biotechnology	
or ENGR 25E	Energy: Chemical Transformations for Production, Storage, and Use	
ENGR 40	Introductory Electronics	
or ENGR 40A	Introductory Electronics	
or ENGR 40M	An Intro to Making: What is EE	
or ENGR 40P	Physics of Electrical Engineering	
ENGR 80	Introduction to Bioengineering (Engineering Living Matter)	
Select one of the following (or ENGR 25, ENGR 40, or ENGR 80 if not used above):		3
ENGR 10	Introduction to Engineering Analysis	
ENGR 14	Intro to Solid Mechanics	
ENGR 15	Dynamics	
ENGR 20	Introduction to Chemical Engineering	
ENGR 30	Engineering Thermodynamics	
ENGR 50	Introduction to Materials Science, Nanotechnology Emphasis	
or ENGR 50E		Introduction to Materials Science, Energy Emphasis

	or ENGR 50 Introduction to Materials Science, Biomaterials Emphasis	
ENGR 60	Engineering Economy	
ENGR 90	Environmental Science and Technology	
<b>Engineering Depth</b> <sup>2</sup>		
Core Courses (all six required)		25
CS 103	Mathematical Foundations of Computing <sup>4</sup>	
or CS 106B	Programming Abstractions	
or CS 106X	Programming Abstractions (Accelerated)	
ECON 50	Economic Analysis I	
MS&E 108	Senior Project	
MS&E 111	Introduction to Optimization <sup>4</sup>	
MS&E 140	Accounting for Managers and Entrepreneurs	
or MS&E 140C	Financial Accounting Concepts and Analysis	
MS&E 180	Organizations: Theory and Management	
Area Courses (see below)		27
Choose four or five courses (minimum 15 units) from a primary area and two courses (minimum 6 units) from each of the other two areas.		

**Depth Areas****Finance and Decision Area****Units**

6-15

Students choosing F&D as their primary area must take at least two of ECON 51, MS&E 145, and MS&E 152

Introductory (appropriate for freshmen and sophomores)		
MS&E 152	Introduction to Decision Analysis (WIM)	
Intermediate (appropriate for juniors and seniors)		
MS&E 145	Introductory Financial Analysis	
MS&E 146	Corporate Financial Management	
MS&E 245G	Finance for Non-MBAs	
MS&E 252	Decision Analysis I: Foundations of Decision Analysis	
Advanced (intended primarily for graduate students)		
MS&E 245A	Investment Science	
MS&E 246	Financial Risk Analytics	
MS&E 250A	Engineering Risk Analysis	
MS&E 250B	Project Course in Engineering Risk Analysis	
MS&E 245B	Advanced Investment Science	

**Operations and Analytics Area**

6-15

Students choosing O&A as their primary area may also include CS 161, CS 229, and STATS 202 in their selections<sup>4</sup>

Introductory (no prerequisites)		
MS&E 107	Interactive Management Science	
Methods		
MS&E 112	Mathematical Programming and Combinatorial Optimization	
MS&E 135	Networks	
MS&E 223	Simulation	
MS&E 226	"Small" Data	
MS&E 231	Introduction to Computational Social Science	
MS&E 251	Stochastic Control	
Applications		
MS&E 130	Information Networks and Services	
MS&E 233	Networked Markets	
MS&E 235	Analytics in Action	
MS&E 260	Introduction to Operations Management	
MS&E 262	Supply Chain Management	

MS&E 263	Healthcare Operations Management	
MS&E 264	Sustainable Product Development and Manufacturing	
MS&E 268	Operations Strategy	
<b>Organizations, Technology, and Policy Area</b>		6-15
Students choosing OT&P as their primary area must take at least two of ENGR 145, MS&E 175, MS&E 181, MS&E 185, PSYCH 70, and SOC 114 (but not both PSYCH 70 and SOC 114) <sup>4</sup>		
Introductory (no prerequisites)		
ENGR 131	Ethical Issues in Engineering <sup>4</sup>	
MS&E 178	The Spirit of Entrepreneurship	
MS&E 189	Social Networks - Theory, Methods, and Applications	
MS&E 190	Methods and Models for Policy and Strategy Analysis	
MS&E 193	Technology and National Security (WIM) <sup>4</sup>	
MS&E 197	Ethics, Technology, and Public Policy (WIM) <sup>4</sup>	
Advanced (has prerequisites and/or appropriate for juniors and seniors)		
ENGR 145	Technology Entrepreneurship	
MS&E 175	Innovation, Creativity, and Change	
MS&E 177	Creativity Rules	
MS&E 181	Issues in Technology and Work for a Postindustrial Economy <sup>4</sup>	
MS&E 183	Leadership in Action	
MS&E 185	Global Work	
MS&E 243	Energy and Environmental Policy Analysis	
MS&E 292	Health Policy Modeling	
MS&E 294	Climate Policy Analysis	
MS&E 295	Energy Policy Analysis	

<sup>1</sup> Math and Science must total a minimum of 44 units. Electives must come from the School of Engineering approved list, or, PSYCH 50 Introduction to Cognitive Neuroscience, or PSYCH 70 Introduction to Social Psychology, and may not repeat material from any other requirement. AP/IB credit for Chemistry, Mathematics, and Physics may be used.

<sup>2</sup> Engineering fundamentals plus engineering depth must total a minimum of 60 units.

<sup>3</sup> Students may petition to place out of CS 106A Programming Methodology.

<sup>4</sup> Courses used to satisfy the Math, Science, Technology in Society, or Engineering Fundamental requirement may not also be used to satisfy an engineering depth requirement.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

**Management Science and Engineering (MS&E) Minor**

The following courses are required to fulfill the minor requirements:

		<b>Units</b>
<b>Background requirements (two courses)</b>		
CME 100	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
CS 106A	Programming Methodology	5
<b>Minor requirements (seven courses, letter-graded)</b>		
MS&E 111	Introduction to Optimization	4
MS&E 120	Probabilistic Analysis	5
MS&E 121	Introduction to Stochastic Modeling	4

MS&E 125	Introduction to Applied Statistics	4
MS&E 180	Organizations: Theory and Management	4
Electives (select any two 100- or 200-level MS&E courses)		6

#### Recommended courses

In addition to the required background and minor courses, it is recommended that students also take the following courses.

ECON 50	Economic Analysis I	5
MS&E 140	Accounting for Managers and Entrepreneurs (may be used as one of the required electives above)	2-4
or MS&E 140X	Financial Accounting Concepts and Analysis	

## Coterminal Program in Management Science and Engineering

This program allows Stanford undergraduates an opportunity to work simultaneously toward a B.S. in Management Science and Engineering or another quantitative major, and an M.S. in Management Science and Engineering.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Master of Science in Management Science and Engineering

The M.S. degree programs require a minimum of 45 units beyond the equivalent of a B.S. degree at Stanford. All programs represent substantial progress in the major field beyond the bachelor's degree.

University requirements for the master's degree are described in the "Graduate Degrees (p. 45)" section of this bulletin.

The master's in Management Science and Engineering prepares engineers for a lifelong career addressing the technical and managerial needs of private and public organizations. The program emphasizes developing analytic abilities, making better decisions, and developing and executing strategies while also leading people who innovate. Unlike an M.B.A., the department's master's program addresses the technical as well as the behavioral challenges of running organizations and complex systems, emphasizing quantitative analytic skills and an entrepreneurial spirit.

MS&E students know math, engineering, as well as behavioral science. They can conduct experiments to design better systems, organizations and work processes. They understand how to analyze data to solve real world problems. They can develop mathematical and computational models to inform action. They know how to surface and examine unarticulated assumptions and root causes. These students can communicate effectively in the team environments found in so many contemporary organizations.

MS&E master's students have breadth as well as depth. All are required to develop competence in optimization and analytics, organizations and decisions, and probability. In addition every student pursues a specialty in one of six areas:

1. *Financial Analytics*: Students who concentrate in Financial Analytics are prepared for careers requiring analytical rigor and the ability to innovate around market challenges. Example career paths include financial services, risk management, investment management, financial technology and data processing, financial regulation and policy, exchanges and clearing houses, and auditing and compliance. The concentration combines the in-depth study of quantitative techniques with practical, hands-on business problem solving. Students learn to use mathematical models and quantitative tools to solve complex problems in finance practice. The concentration exploits the intellectual ties between finance, operations research, computer science, and engineering. It offers a high level of flexibility and a range of elective courses that allow students to tailor the program to their specific career goals. Required courses immerse students in quantitative methods and deepen their understanding of finance fundamentals. Projects courses feature practical, data-driven team projects and case studies, fostering group learning and interaction with peers.
2. *Operations and Analytics*: Students following the Operations and Analytics track become prepared in the fundamentals and applications that are critical to careers in a fields ranging from operations management in the service, health care, production, manufacturing, computer, telecommunications, banking, industries to modern Silicon Valley information technology and data analytics. The program emphasizes a balance between the technical rigor of methodologies with lasting value and insightful modern applications and design challenges in a variety of established and emerging industries and operations environments. It offers a portfolio of courses in probabilistic modeling, optimization, simulation, algorithms, data science, networks, markets, and corresponding applications.
3. *Technology and Engineering Management*: Students who concentrate in Technology and Engineering Management are prepared for careers including product and project management, management consulting, and entrepreneurship. They acquire skills to manage technical organizations, foster innovation, and deal with rapidly evolving technologies and dynamic markets. Specialized coursework is flexible, allowing students to explore and gain depth, understanding technical organizations to develop a culture of successful innovation and entrepreneurship, along with methods for decision making under uncertainty, financial analysis, and strategic planning.
4. *Computational Social Science*: The Computational Social Science track teaches students how to apply rigorous statistical and computational methods to address problems in economics, sociology, political science, and beyond. The program prepares students for a diverse set of career paths in data science, information technology, and policy analysis. The core coursework covers fundamental statistical concepts, large-scale computation, and network analysis. Through electives, students can explore topics such as experimental design, algorithmic economics, and machine learning.
5. *Decision and Risk Analysis*: Students who specialize in Decision and Risk Analysis are prepared for careers including management consulting, policy analysis, and risk management, applying engineering systems analysis to tackle complex economic and

technical management problems in the private and public sectors. They acquire the skills to identify and develop opportunities in uncertain situations while recognizing and hedging the downside risks. Specialized course work includes the mathematical foundations for modeling in dynamic uncertain environments to value and manage uncertain opportunities and risks, applications to public policy, and an opportunity to work on a client project under faculty guidance.

- Energy and Environment:** The Energy and Environment track is designed for students interested in energy and environmental issues from the perspectives of public policy, nongovernmental organizations, or corporations. This track includes core courses; courses in economic analysis, energy resources, and energy/environmental policy analysis; and an individually designed concentration, typically emphasizing policy, strategy, or technology. Seminars provide insights into current corporate strategy, public policy, and research community developments. Energy/environmental project courses give practice in applying methodologies and concepts.
- Health Systems Modeling:** The Health Systems Modeling track is designed for students interested in healthcare operations and policy. The courses in this track emphasize the application of mathematical and economic analysis to problems in public health policy and the design and operation of healthcare services.

The master's degree is designed to be a terminal degree program with a professional focus. The M.S. degree can be earned in one academic year (three academic quarters) of full-time work, although most students choose to complete the program in five academic quarters, or eighteen months, and work as an intern in the Summer Quarter.

### Background Requirements

Students are expected to have completed both MATH 51 Linear Algebra and Differential Calculus of Several Variables, or an equivalent multivariable differential calculus course, and CS 106A Programming Methodology, or an equivalent general programming course, before beginning graduate study. These courses do not count toward degree requirements.

### Degree Requirements

Students must take a minimum of 45 course units as follows:

- Three core courses (9-12 units)
- A primary or specialized concentration (12-24 units)
- One project course or two integrated project courses (0-8 units)
- Elective courses (1-24 units; see restrictions below)

### Core Courses (three courses required) Optimization and Analytics (select one)

	Units
MS&E 211 Linear and Nonlinear Optimization	3-4
MS&E 226 "Small" Data	3
Relevant 200 or 300 level MS&E course in optimization or analytics if a comparable introductory course in optimization or analytics has already been completed.	3-4

### Organizations and Decisions (select one)

	Units
MS&E 252 Decision Analysis I: Foundations of Decision Analysis	3-4
MS&E 280 Organizational Behavior: Evidence in Action	3-4
Relevant 200 or 300 level MS&E course in organizations or decisions if a comparable introductory course in organizations or decisions has already been completed.	3-4

### Probability (select one)

	Units
MS&E 220 Probabilistic Analysis	3-4
MS&E 221 Stochastic Modeling	3
Relevant 200 or 300 level MS&E course in probability or stochastics if a comparable introductory course in probability or stochastics has already been completed.	3-4

### Primary Concentrations

#### Financial Analytics Concentration (five courses required)

	Units
Financial Theory and Modeling (select one):	
MS&E 245A Investment Science	3
MS&E 245B Advanced Investment Science	3
MS&E 246 Financial Risk Analytics	3
Quantitative Methods (two required):	
Select one (whichever wasn't taken for core):	
MS&E 211 Linear and Nonlinear Optimization	3-4
MS&E 226 "Small" Data	3
Select one:	
MS&E 322 Stochastic Calculus and Control	3
STATS 207 Introduction to Time Series Analysis	3
STATS 240 Statistical Methods in Finance	3-4
STATS 241 Data-driven Financial and Risk Econometrics	3-4
Financial Applications (select two):	
CME 243 Financial Models and Statistical Methods in Active Risk Management	2-4
MATH 237 Default and Systemic Risk	3
MS&E 347 Credit Risk: Modeling and Management	3
MS&E 348 Optimization of Uncertainty and Applications in Finance	3
MS&E 445 Projects in Wealth Management	3-4
MS&E 447 Systemic and Market Risk: Notes on Recent History, Practice, and Policy	3
MS&E 448 Big Financial Data and Algorithmic Trading	3
STATS 237 Theory of Investment Portfolios and Derivative Securities	3

#### Operations and Analytics Concentration (four courses required)

	Units
Required Courses	
MS&E 211 Linear and Nonlinear Optimization (whichever course wasn't taken for core)	3-4
or MS&E 226 "Small" Data	
MS&E 221 Stochastic Modeling (or a more advanced course in probability (i.e. MS&E 223 Simulation) if a student has taken an equivalent class in stochastic modeling)	3
MS&E 235 Analytics in Action	3
or MS&E 251 Stochastic Control	
MS&E 260 Introduction to Operations Management	3
or MS&E 261 Inventory Control and Production Systems	
or MS&E 263 Healthcare Operations Management	
Recommended Elective Courses:	
MS&E 223 Simulation	3
MS&E 231 Introduction to Computational Social Science	3
MS&E 233 Networked Markets	3
MS&E 235 Analytics in Action	3
MS&E 243 Energy and Environmental Policy Analysis	3

MS&E 245A	Investment Science	3
MS&E 250A	Engineering Risk Analysis	3
MS&E 251	Stochastic Control	3
MS&E 252	Decision Analysis I: Foundations of Decision Analysis	3-4
MS&E 260	Introduction to Operations Management	3
MS&E 261	Inventory Control and Production Systems	3
MS&E 262	Supply Chain Management	3
MS&E 263	Healthcare Operations Management	3
MS&E 264	Sustainable Product Development and Manufacturing	3-4
MS&E 268	Operations Strategy	3
MS&E 270	Strategy in Technology-Based Companies	3-4
MS&E 292	Health Policy Modeling	3
MS&E 467	Strategic Operations Consulting	3

### Technology and Engineering Management Concentration (five courses required)

The course used to satisfy the Organizations and Decisions Core may also be counted here.

	Units
Organizations and Strategy (select at least one):	
MS&E 270	Strategy in Technology-Based Companies 3-4
MS&E 274	Dynamic Entrepreneurial Strategy 3
MS&E 278	Patent Law and Strategy for Innovators and Entrepreneurs 2-3
MS&E 280	Organizational Behavior: Evidence in Action 3-4
MS&E 282	Transformational Leadership 3
MS&E 284	Designing Modern Work Organizations 3
Entrepreneurship and Innovation (select at least one):	
MS&E 270	Strategy in Technology-Based Companies 3-4
MS&E 271	Global Entrepreneurial Marketing 3-4
MS&E 272	Startup Boards 3
MS&E 273	Technology Venture Formation 3-4
MS&E 275	Foundations for Large-Scale Entrepreneurship 3
MS&E 276	Entrepreneurial Management and Finance 3
MS&E 277	Creativity and Innovation 3-4
ENGR 245	The Lean LaunchPad: Getting Your Lean Startup Off the Ground 3-4
Finance and Decisions (select at least one):	
MS&E 240	Accounting for Managers and Entrepreneurs 3-4
MS&E 245A	Investment Science 3
MS&E 245G	Finance for Non-MBAs 3
MS&E 250A	Engineering Risk Analysis 3
MS&E 252	Decision Analysis I: Foundations of Decision Analysis 3-4
MS&E 352	Decision Analysis II: Professional Decision Analysis 3-4

### Specialized Concentrations (must have approval of the academic advisor)

Computational Social Science (four courses required)

Statistics (select at least one)	
MS&E 226	"Small" Data (may not be duplicated in core) 3
STATS 203	Introduction to Regression Models and Analysis of Variance 3
STATS 305	Introduction to Statistical Modeling 3
Computation (select at least one)	

MS&E 231	Introduction to Computational Social Science	3
MS&E 235	Analytics in Action	3
CS 246	Mining Massive Data Sets	3-4
Networks (select at least one)		
MS&E 233	Networked Markets	3
ECON 291	Social and Economic Networks	2-5
CS 224W	Social Information and Network Analysis	3-4
MS&E 334	The Structure of Social Data	3

### Decision and Risk Analysis Concentration (four courses required)

Units

Core Courses are restricted as follows:

MS&E 211	Linear and Nonlinear Optimization	3-4
MS&E 221	Stochastic Modeling	3
MS&E 252	Decision Analysis I: Foundations of Decision Analysis	3-4

Required Courses (select two):

MS&E 241	Economic Analysis	3-4
MS&E 250A	Engineering Risk Analysis	3
MS&E 352	Decision Analysis II: Professional Decision Analysis	3-4

Policy Course (select one):

MS&E 243	Energy and Environmental Policy Analysis	3
MS&E 292	Health Policy Modeling	3
MS&E 293	Technology and National Security	3
MS&E 294	Climate Policy Analysis	3
MS&E 295	Energy Policy Analysis	3

Project Course (select one):

MS&E 250B	Project Course in Engineering Risk Analysis	3
MS&E 452	Decision Analysis Projects: Helping Real Leaders Make Real Decisions	3

### Energy and Environment Concentration (six courses required)

Units

Required Courses:

CEE 207A	Understanding Energy	3
MS&E 241	Economic Analysis	3-4
MS&E 243	Energy and Environmental Policy Analysis	3

Three additional courses from energy, policy, or strategy areas below.

Policy:

ECON 251	Natural Resource and Energy Economics	2-5
ENERGY 158	Bringing New Energy Technologies to Market: Optimizing Technology Push and Market Pull	3
GSBGEN 336	Energy Markets and Policy	3
LAW 455	Energy Law	3
MS&E 293	Technology and National Security	3
MS&E 294	Climate Policy Analysis	3
MS&E 295	Energy Policy Analysis	3

Strategy:

ECON 203N	Microeconomics II For Non-Economics PhDs	2-5
ENERGY 158	Bringing New Energy Technologies to Market: Optimizing Technology Push and Market Pull	3
GSBGEN 538	Energy Policy, Markets, and Climate Change	2
MS&E 270	Strategy in Technology-Based Companies	3-4
MS&E 271	Global Entrepreneurial Marketing	3-4
MS&E 272	Startup Boards	3
MS&E 273	Technology Venture Formation	3-4
MS&E 274	Dynamic Entrepreneurial Strategy	3

MS&E 275	Foundations for Large-Scale Entrepreneurship	3	MS&E 445	Projects in Wealth Management	3-4
MS&E 276	Entrepreneurial Management and Finance	3	MS&E 447	Systemic and Market Risk : Notes on Recent History, Practice, and Policy	3
MS&E 277	Creativity and Innovation	3-4	MS&E 448	Big Financial Data and Algorithmic Trading	3
MS&E 278	Patent Law and Strategy for Innovators and Entrepreneurs	2-3	MS&E 452	Decision Analysis Projects: Helping Real Leaders Make Real Decisions	3
Energy:					
ENERGY 102	Renewable Energy Sources and Greener Energy Processes	3	MS&E 463	Healthcare Systems Design	3
ENERGY 104	Sustainable Energy for 9 Billion	3	MS&E 464	Global Project Coordination	3-4
ENERGY 158	Bringing New Energy Technologies to Market: Optimizing Technology Push and Market Pull	3	MS&E 467	Strategic Operations Consulting	3
ME 370A	Energy Systems I: Thermodynamics	3	Integrated Project Courses		
ME 370B	Energy Systems II: Modeling and Advanced Concepts	4	MS&E 201	Dynamic Systems	3-4
PHYSICS 240	Introduction to the Physics of Energy	3	MS&E 226	"Small" Data	3
PHYSICS 241	Introduction to Nuclear Energy	3	MS&E 233	Networked Markets	3
Recommended Seminars:					
ECON 341	Public Economics and Environmental Economics Seminar	1-10	MS&E 243	Energy and Environmental Policy Analysis	3
ENERGY 301	The Energy Seminar	1	MS&E 245A	Investment Science	3
MS&E 441	Policy and Economics Research Roundtable	1	MS&E 245B	Advanced Investment Science	3
MS&E 472	Entrepreneurial Thought Leaders' Seminar	1	MS&E 252	Decision Analysis I: Foundations of Decision Analysis	3-4
Recommended Elective Courses:					
ECON 250	Environmental Economics	2-5	MS&E 256	Technology Assessment and Regulation of Medical Devices	3
ECON 270	Intermediate Econometrics I	2-5	MS&E 260	Introduction to Operations Management	3
ECON 278	Behavioral and Experimental Economics I	2-5	MS&E 262	Supply Chain Management	3
MGTECON 603	Econometric Methods I	4	MS&E 265	Product Management Fundamentals	3
MS&E 201	Dynamic Systems	3-4	MS&E 270	Strategy in Technology-Based Companies	3-4
MS&E 211	Linear and Nonlinear Optimization	3-4	MS&E 271	Global Entrepreneurial Marketing	3-4
MS&E 244	Economic Growth and Development	3	MS&E 273	Technology Venture Formation	3-4
MS&E 251	Stochastic Control	3	MS&E 274	Dynamic Entrepreneurial Strategy	3
<b>Health Systems Modeling Concentration (four courses required)</b>					
<b>Units</b>					
Required Courses (select four)					
HRP 263	Advanced Decision Science Methods and Modeling in Health	3	MS&E 275	Foundations for Large-Scale Entrepreneurship	3
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4	MS&E 277	Creativity and Innovation	3-4
MS&E 263	Healthcare Operations Management	3	MS&E 280	Organizational Behavior: Evidence in Action	3-4
MS&E 292	Health Policy Modeling	3	MS&E 282	Transformational Leadership	3
MS&E 463	Healthcare Systems Design	3	MS&E 284	Designing Modern Work Organizations	3
Recommended Elective Courses:					
HRP 256	Economics of Health and Medical Care	5	MS&E 294	Climate Policy Analysis	3
HRP 391	Health Law: Finance and Insurance	3	MS&E 295	Energy Policy Analysis	3
MS&E 256	Technology Assessment and Regulation of Medical Devices	3	MS&E 311	Optimization	3
MS&E 257	Healthcare Reforms and Value-Based Biomedical Technology Innovation	3	MS&E 338	Advanced Topics in Information Science and Technology	3
<b>Projects</b>					
Select one project course or two integrated project courses; may double-count as part of the core or concentration.					
<b>Units</b>					
Project Courses					
MS&E 250B	Project Course in Engineering Risk Analysis	3	MS&E 347	Credit Risk: Modeling and Management	3
MS&E 348	Optimization of Uncertainty and Applications in Finance	3	MS&E 355	Influence Diagrams and Probabilistics Networks	3
MS&E 403	Integrative Modeling	3			

### Additional Requirements

- At least 45 units must be in courses numbered 100 and above.
- The degree program must be completed with a grade point average (GPA) of 3.0 or higher.
- At least 27 units must be in courses numbered 200 and above in MS&E, taken for a letter grade and a minimum of two units each.
- At least 36 letter-graded units must be in MS&E or closely related fields. Closely related fields include any department in the School of Engineering, mathematics, statistics, economics, sociology, psychology, or business.
- All courses used to satisfy core, concentration, or project requirements must be taken for a letter grade.
- A maximum of three units of 1-unit courses such as seminars, colloquia, workshops, in any department, including MS&E 208A, B, and C, Curricular Practical Training.
- A maximum of 18 non-degree option (NDO) units through the Stanford Center for Professional Development (SCPD).
- Courses in athletics, physical education, and recreation may not be applied toward the degree.

## Professional Education

The Stanford Center for Professional Development (SCPD) provides opportunities for employees of some local and remote companies to take courses at Stanford.

The Honors Cooperative Program (HCP) provides opportunities for employees of SCPD member companies to earn an M.S. degree, over a longer period, by taking one or two courses per academic quarter. Some courses are only offered on campus; HCP students may attend those courses at Stanford to meet the degree requirements. It is possible to complete this program as a remote HCP student although the remote offerings are limited. Students must apply for a degree program through the standard application process, and must meet the standard application deadlines.

The non-degree option (NDO) allows employees of some local companies to take courses for credit from their company sites before being admitted to a degree program. Students apply to take NDO courses each quarter through the Stanford Center for Professional Development. Up to 18 units taken as an NDO student may be applied toward a degree program. For additional information about the NDO application process and deadlines, see the SCPD web site (<http://scpd.stanford.edu>), or contact SCPD at (650) 725-3000.

### Certificate

The department offers a certificate program within the framework of the NDO program. A certificate can be obtained by completing three MS&E core courses, plus one MS&E elective course for a total of four courses. For further information, see <http://scpd.stanford.edu/scpd/programs/certs/managementSci.htm>.

## Dual Master's Degree Program

The dual degree program enables a small group of graduate students to obtain two master's degrees simultaneously. Students complete the course requirements for each department. A total of 90 units is required to complete the dual master's degree.

### Admission

For the dual degree, admission to two departments is required, but is coordinated by designated members of both admissions committees who make recommendations to the committees of their respective departments. Students may apply to only one department initially. After the first quarter at Stanford, students may apply to be admitted to the second department.

### Advising

Every student in the dual degree program has one adviser in each department.

## Joint MS&E and Law Degrees

The School of Law and the Department of Management Science and Engineering offer joint degree programs leading to a J.D. degree and an M.S. degree in MS&E, or to a J.D. and Ph.D. in MS&E. These programs are designed for students who wish to prepare themselves for careers in areas relating to both law and to the decision making, policy making, and problem solving knowledge and skills developed in the MS&E program. Students interested in either joint degree program must apply and gain admission separately to the School of Law and the Department of Management Science and Engineering and, as an additional step, must secure consent from both academic units to pursue degrees in those units as part of a joint degree program. Interest in either joint degree program should be noted on the student's admission applications and may be considered by the admission committee of each program. Alternatively, an enrolled student in either the Law School or MS&E may

apply for admission to the other program and for joint degree status in both academic units after commencing study in either program.

Joint degree students may elect to begin their course of study in either the School of Law or MS&E. Students are assigned to a joint program committee composed of at least one faculty member from Law and one from MS&E. This committee plans the student's program jointly with the student. Students must be enrolled full time in the Law School for the first year of law studies, and it is recommended that students devote exclusively one Autumn Quarter to the MS&E M.S. program to initiate their MS&E work. After that time, enrollment may be in MS&E or Law, and students may choose courses from either program regardless of where enrolled. A candidate in the joint J.D./Ph.D. program should spend a substantial amount of full time residency in MS&E. Students must satisfy the requirements for both the J.D. and the M.S. or Ph.D. degrees as specified in this bulletin or by the School of Law. The Law School may approve courses from MS&E or courses in the student's MS&E program from outside of the Department of Management Science and Engineering that may count toward the J.D. degree, and MS&E may approve courses from the Law School that may count toward the M.S. or Ph.D. degree in MS&E. In either case, approval may consist of a list applicable to all joint degree students or may be tailored to each individual student's program. The lists may differ depending on whether the student is pursuing an M.S. or a Ph.D. in MS&E.

In the case of a J.D./M.S. program, no more than 45 units of approved courses may be counted toward both degrees. In the case of a J.D./Ph.D. program, no more than 54 units of approved courses may be counted toward both degrees. In either case, no more than 36 units of courses that originate outside the Law School may count toward the law degree. To the extent that courses under this joint degree program originate outside the Law School but count toward the law degree, the law credits permitted under Section 17(1) of the Law School Regulations are reduced on a unit-per-unit basis, but not below zero. The maximum number of law school credits that may be counted toward the M.S. in MS&E is the greater of: (a) 18 units in the case of the M.S., or (b) the maximum number of hours from courses outside the department that an M.S. candidate in MS&E is permitted to count toward the applicable degree under general departmental guidelines or under departmental rules that apply in the case of a particular student.

Tuition and financial aid arrangements are normally through the school in which the student is then enrolled.

## Joint MS&E and Master of Public Policy Degree

MS MS&E students who wish to apply their analytical and management skills to the field of public policy can simultaneously pursue a master degree in MS&E and a master degree in Public Policy. The MPP is a two-year degree program, but MS MS&E students who pursue the joint program can earn both degrees in a minimum of two years, depending on prior preparation and elective choices, by counting up to 45 quarter units of course work toward both degrees. After admission to the Department of Management Science and Engineering, incoming or current MS students request that their application file be forwarded to the MPP program director for review.

Students in the joint program normally will spend most of their first year taking MS&E core courses. The second year is typically devoted to the MPP core, concentration, and practicum. The joint degree requires 90 quarter units. Tuition for the first year of study is paid at the Graduate Engineering rate, the remaining time at the graduate rate.

## Doctor of Philosophy in Management Science and Engineering

University requirements for the Ph.D. degree are described in the "Graduate Degrees" section of this bulletin.

The Ph.D. degree in MS&E is intended for students primarily interested in a career of research and teaching, or high-level technical work in universities, industry, or government. The program requires three years of full-time graduate study, at least two years of which must be at Stanford. Typically, however, students take four to five years after entering the program to complete all Ph.D. requirements. The Ph.D. is organized around the expectation that the students acquire a certain breadth across all areas of the department, and depth in one of them. The current areas are:

- Decision analysis and risk analysis
- Economics and finance
- Information science and technology
- Organization, technology, and entrepreneurship
- Policy and strategy
- Probability and stochastic systems
- Production and operations management
- Systems modeling and optimization

Doctoral students are required to take a number of courses, both to pass a qualifying exam in one of these areas, or the Systems Program which is a combination of several areas, and to complete a dissertation based on research which must make an original contribution to knowledge.

Each student admitted to the Ph.D. program must satisfy a breadth requirement and pass a qualification procedure. The purpose of the qualification procedure is to assess the student's command of the field and to evaluate his or her potential to complete a high-quality dissertation in a timely manner. The student must complete specified course work in one of the areas of the department (or the Systems Program which is a combination of several areas). The qualification decision is based on the student's coursework and grade point average (GPA), on the one or two preliminary papers prepared by the student with close guidance from two faculty members, at least one of whom must be an MS&E faculty member, the student's performance in an area examination or defense of the written paper(s), and an overall assessment by the faculty of the student's ability to conduct high-quality Ph.D. research. Considering this evidence, the department faculty will vote on advancing the student to candidacy in the department at large. The Ph.D. requires a minimum of 135 units, up to 45 units of which may be transferred from another graduate program. All courses used to satisfy breadth and depth requirements must be taken for a letter grade, if the letter graded option is available. Prior to candidacy, at least 3 units of work must be taken with each of four Stanford faculty members.

Finally, the student must pass a University oral examination and complete a Ph.D. dissertation. During the course of the Ph.D. program, students who do not have a master's degree are strongly encouraged to complete one, either in MS&E or in another Stanford department.

### Breadth Requirement

All first year students are required to attend and participate in MS&E 302 Fundamental Concepts in Management Science and Engineering, which will meet in the Autumn Quarter.

Each course session will be devoted to a specific MS&E PhD research area. At a given session several advanced PhD students in that area will make carefully prepared presentations designed for first-year doctoral students regardless of area. The presentations will be devoted to: (a) illuminating how people in the area being explored that day think about and approach problems, and (b) illustrating what can and cannot be done

when addressing problems by deploying the knowledge, perspectives, and skills acquired by those who specialize in the area in question.

Faculty in the focal area of the week will comment on the student presentations. The rest of the session will be devoted to questions posed and comments made by the first year PhD students.

During the last two weeks of the quarter groups of first year students will make presentations on how they would approach a problem drawing on two or more of the perspectives to which they have been exposed earlier in the class.

Attendance is mandatory and performance will be assessed on the basis of the quality of the students' presentations and class participation

### Qualification Procedure Requirements

The qualification procedure is based on depth in an area of the student's choice and preparation for dissertation research. The qualification process must be completed by the end of the month of May of the student's second year of graduate study in the department. The performance of all doctoral students is reviewed every year at a department faculty meeting at the end of May or beginning of June. Ph.D. qualification decisions will be made at that time and individual feedback will be provided.

The Ph.D. qualification requirements comprise these elements:

1. *Courses and GPA*: Students must complete the depth requirements of one of the areas of the MS&E department (or the Systems Program which is a combination of several areas). (The Ph.D. area course requirements are below). All courses used to satisfy depth requirements must be taken for a letter grade, if the letter graded option is available. Course substitutions may be approved by the doctoral program advisor or the MS&E dissertation advisor on the candidacy form or on a request for graduate course waiver/substitution form. A student must maintain a GPA of at least 3.4 in the set of all courses taken by the student within the department. The GPA will be computed on the basis of the nominal number of units for which each course is offered.
2. *Paper(s)*: A student may choose between two options. The first option involves one paper supervised by a primary faculty adviser and a second faculty reader. This paper should be written in two quarters. The second option involves two shorter sequential tutorials, with two different faculty advisors. Each tutorial should be completed in one quarter. In both options, the student chooses the faculty advisor(s)/reader with the faculty members' consent. There must be two faculty members, at least one of whom must be an MS&E faculty member, supervising and evaluating this requirement for advancement to candidacy. The paper/tutorials must be completed before the Spring Quarter of the student's second year of graduate study in the department if the student's qualifying exam is during the Spring Quarter, and before the end of May of that year otherwise. A student may register for up to 3 units per tutorial and up to 6 units for a paper.
3. *Area Qualification*: In addition, during the second year, a student must pass an examination in one of the areas of the MS&E department (or the Systems Program which is a combination of several areas), or defense of the written paper(s). The student chooses the area/program in which to take the examination. This area examination is written, oral, or both, at the discretion of the area faculty administering the exam. Most areas offer the qualifying exam only once per year, which may be early in the second year.

### Degree Progress and Student Responsibility

Each student's progress will be reviewed annually by the MS&E faculty. Typically, this will occur at a faculty meeting at the end of Spring Quarter, and email notifications will be sent over the summer.

First year students should complete 30 units of breadth and depth courses, including MS&E 302, and develop relationships with faculty members who might serve as dissertation advisor and reading committee.

Second year students should complete most, if not all, of the required depth courses, work with two faculty members, at least one of whom must be an MS&E faculty member, on tutorials/research paper, and pass an area qualifying exam. Most areas offer the qualifying exam only once per year, which may be early in the second year. Students should continue to develop relationships with faculty members who might serve as dissertation advisors and reading committee, and select a dissertation advisor before the beginning of the third year.

Third year students should complete any remaining depth courses, select a dissertation topic, and make progress on the dissertation.

Fourth year students should select a reading committee, and complete, or nearly complete, the oral exam and dissertation.

It shall be the responsibility of the student to initiate each step in completing the Ph.D. program.

It is strongly recommended that each student, in the first year of graduate study at Stanford, make it a special point to become well acquainted with MS&E faculty members and to seek advice and counsel regarding possible Ph.D. candidacy. A faculty member will be more likely to accept the responsibility of supervising the research of a student whom he or she knows fairly well than a student whose abilities, initiative, and originality the faculty member knows less.

It is expected that advanced students will regularly report to their full Reading Committee on the progress of their dissertation. It is also expected that the student avail him/herself of the different expertise represented on the Committee continually. Each member of this Committee must certify approval of both the scope and quality of the dissertation.

The *Doctoral Dissertation Reading Committee* consists of the principal dissertation adviser and two other readers. At least one member must be from the student's major department.

As administered in this department, the *University Oral Examination* is a defense of the dissertation; however, the candidate should be prepared to answer any question raised by any members of the Academic Council who choose to be present. Students should schedule three hours for the Oral Examination, which usually consists of a 45 minute public presentation, followed by closed-session questioning of the examinee by the committee, and committee deliberation. The University Oral examination may be scheduled after the Dissertation Reading Committee has given tentative approval to the dissertation. *The student must be enrolled in the quarter of their Oral Examination.*

The examining committee usually consists of the three members of the Reading Committee as well as a fourth faculty member and an Orals Chair. It is the responsibility of the student's advisor to find an appropriate Orals Chair. The Chair must be an Academic Council member and may not be affiliated with either the Department of Management Science and Engineering nor any department in which the student's advisor has a regular appointment. Emeriti Professors are eligible to serve as an Orals Chair. The student needs to reserve a room, and meet with the Student Services Manager to complete the Oral Examination Schedule and pick up other paper work. This paperwork, along with an abstract, needs to be delivered to the Orals Chair at least one week prior to the Oral Examination.

## Course Requirements

### Decision Analysis and Risk Analysis

Prerequisites:

CS 106A	Programming Methodology
CME 100	Vector Calculus for Engineers
CME 103	Introduction to Matrix Methods
Required:	
MS&E 201	Dynamic Systems
or EE 263	Introduction to Linear Dynamical Systems
MS&E 211	Linear and Nonlinear Optimization
or MS&E 311	Optimization
MS&E 220	Probabilistic Analysis
MS&E 221	Stochastic Modeling
or STATS 211	Introduction to Stochastic Processes
MS&E 223	Simulation
MS&E 241	Economic Analysis
MS&E 250A	Engineering Risk Analysis
MS&E 250B	Project Course in Engineering Risk Analysis
or MS&E 452	Decision Analysis Projects: Helping Real Leaders Make Real Decisions
MS&E 251	Stochastic Control
or MS&E 351	Dynamic Programming and Stochastic Control
MS&E 252	Decision Analysis I: Foundations of Decision Analysis
MS&E 352	Decision Analysis II: Professional Decision Analysis
MS&E 353	Decision Analysis III: Frontiers of Decision Analysis
MS&E 355	Influence Diagrams and Probabilistics Networks
Recommended:	
MS&E 207	Interactive Management Science
MS&E 245A	Investment Science
MS&E 254	The Ethical Analyst
MS&E 270	Strategy in Technology-Based Companies
MS&E 280	Organizational Behavior: Evidence in Action
MS&E 299	Voluntary Social Systems
MS&E 321	Stochastic Systems
or STATS 211	Introduction to Stochastic Processes
MS&E 450	Lessons in Decision Making
or MS&E 453	Decision Analysis Applications: Business Strategy and Public Policy
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
ECON 286	Game Theory and Economic Applications
ECON 290	Multiperson Decision Theory
MGTECON 332	Analysis of Costs, Risks, and Benefits of Health Care
STATS 200	Introduction to Statistical Inference
or STATS 200	Design and Analysis of Experiments
or STATS 200	Data Mining and Analysis
or ECON 271	Intermediate Econometrics II

### Economics and Finance

The economics and finance area emphasizes the use of economic and financial concepts, methods, and practice for problem solving, in areas including individual choice, financial engineering, economic policy analysis, and financial market analysis. A strong mathematical and systems analysis background is essential to the area. Students in this area are expected to develop a strong background in economics

and finance and closely related disciplines and to obtain experience in addressing significant problem areas.

#### Required

MS&E 201	Dynamic Systems
MS&E 220	Probabilistic Analysis
MS&E 241	Economic Analysis
MS&E 245A	Investment Science
MS&E 245B	Advanced Investment Science
MS&E 311	Optimization
MATH 115	Functions of a Real Variable
	or MATH 171 Fundamental Concepts of Analysis

Select five of the following options:

#### General

MS&E 314	Linear and Conic Optimization with Applications
EE 263	Introduction to Linear Dynamical Systems
STATS 310A	Theory of Probability
	or MATH 205 Real Analysis

#### Economics (two of Econ 280-290 may be used)

ECON 370	Econometrics Workshop
	or ECON 271 Intermediate Econometrics II
	or ECON 272 Intermediate Econometrics III
	or ECON 273 Advanced Econometrics I
	or ECON 274 Advanced Econometrics II
	or ECON 275 Time Series Econometrics
	or ECON 276 Limited Dependent Variables
ECON 282	Contracts, Information, and Incentives
	or ECON 283 Theory and Practice of Auction Market Design
	or ECON 285 Matching and Market Design
	or ECON 286 Game Theory and Economic Applications
	or ECON 288 Computational Economics
	or ECON 289 Advanced Topics in Game Theory and Information Economics
	or ECON 290 Multiperson Decision Theory

#### Finance

MS&E 347	Credit Risk: Modeling and Management
MS&E 348	Optimization of Uncertainty and Applications in Finance
MATH 136	Stochastic Processes

Students should consult with their dissertation advisors to select additional courses from any department to complete a PhD in their area.

Students should plan to complete most if not all required courses by the end of the first year of graduate study. The choice courses should be chosen to form a coherent program either in economics, finance or both. PhD students must also meet the department's requirements for both an MS degree and a PhD degree.

#### Economics and Finance Qualifying Procedure

In addition to beginning an appropriate course program, students must pass two-quarters of tutorial and an oral examination to obtain qualification. The tutorials emphasize basic research skills. The oral examination emphasizes command of basic concepts as represented in the required courses as well as the modeling of practical situations.

#### Information Science and Technology

Select five classes from four different core areas.

Optimization and algorithms core:

MS&E 212	Mathematical Programming and Combinatorial Optimization
MS&E 310	Linear Programming
MS&E 311	Optimization
MS&E 312	Advanced Methods in Numerical Optimization
MS&E 314	Linear and Conic Optimization with Applications
MS&E 315	Numerical Optimization
MS&E 316	Discrete Mathematics and Algorithms
MS&E 317	Algorithms for Modern Data Models
MS&E 318	Large-Scale Numerical Optimization
MS&E 319	Approximation Algorithms
MS&E 351	Dynamic Programming and Stochastic Control
CS 261	Optimization and Algorithmic Paradigms

#### Networks core:

MS&E 235	Analytics in Action
MS&E 238	Leading Trends in Information Technology
MS&E 335	Queueing and Scheduling in Processing Networks
MS&E 337	

#### Economics and game theory core:

MS&E 246	Financial Risk Analytics
MS&E 336	Platform and Marketplace Design

#### Data analysis/probability core:

MS&E 321	Stochastic Systems
MS&E 322	Stochastic Calculus and Control
MS&E 383	Doctoral Seminar on Ethnographic Research
CS 229	Machine Learning
EDUC 316	Social Network Methods
STATS 310A	Theory of Probability

#### Behavioral sciences core:

MS&E 371	Innovation and Strategic Change
MS&E 380	Doctoral Research Seminar in Organizations
MS&E 381	Doctoral Research Seminar in Work, Technology, and Organization
MS&E 383	Doctoral Seminar on Ethnographic Research
MS&E 384	Groups and Teams
MS&E 387	Design of Field Research Methods
MS&E 388	Themes in Contemporary Meso-level Field Research
EDUC 316	Social Network Methods
SOC 314	Economic Sociology

Four courses in a focus area.

Students can substitute other 300-level classes (including those from other departments) from the same general area on a case-by-case basis, subject to approval by the student's program/dissertation advisor. The students must obtain a GPA of 3.50 or better in the core courses to qualify. The core courses must be completed in or before the spring quarter of the student's second year.

Students must choose one of six focus areas, and take at least four 300-level classes in this area. At most one class may be used to satisfy both core and focus requirements. The list of classes must be chosen and approved by the student's dissertation advisor by the end of the second year, and these classes must be completed by the end of the student's third year. Any changes must be approved by the student's dissertation advisor.

#### Information Science and Technology Qualifying Procedure

The student will do two quarter-length tutorials with IST faculty. At the end of these tutorials, the student must make a 45-minute presentation

of one of their tutorials to a committee of three IST faculty members. The student can do both tutorials with the same faculty member, in which case the presentation can be of the two tutorials together, and another committee member must be kept informed of the student's progress on a regular basis during the two quarters. The presentation should take place in the spring quarter of the student's second year, or earlier. The presentation must include original research or promising directions towards original research. During this presentation, the student must also provide the name of their chosen focus area, and the list of courses that the student has completed and intends to complete in the core as well as in the chosen focus area. The committee will then make a recommendation to the IST area and the MS&E department regarding qualification of the student for the PhD program in IST.

### Operations Research (combination of Systems Modeling and Optimization and Probability and Stochastic Systems)

Prerequisites:

MS&E 220	Probabilistic Analysis or STATS 11 Theory of Probability
MS&E 221	Stochastic Modeling or STATS 21 Introduction to Stochastic Processes
MS&E 241	Economic Analysis or ECON 50 Economic Analysis I
CS 106A	Programming Methodology or CS 106X Programming Abstractions (Accelerated)
MATH 113	Linear Algebra and Matrix Theory
MATH 115	Functions of a Real Variable or MATH 171 Fundamental Concepts of Analysis

Strongly Recommended:

CME 108	Introduction to Scientific Computing
STATS 200	Introduction to Statistical Inference
STATS 203	Introduction to Regression Models and Analysis of Variance

Core (four courses):

MS&E 310	Linear Programming
MS&E 321	Stochastic Systems
Two of the following three courses:	
MS&E 311	Optimization
MS&E 316	Discrete Mathematics and Algorithms
STATS 310A	Theory of Probability

Three to four courses in some coherent area of specialization.

In addition to the four core courses, students should take at least four 3-4 unit courses in some coherent area of specialization. The area of specialization may be methodological; examples include (but are not limited to) optimization, stochastic systems, stochastic control, algorithms, economic analysis, statistical inference, scientific computing, etc. The area of specialization could also have a significant modeling and application component, such as (but not limited to) information services, telecommunications, financial engineering, supply chains, health care, energy, etc. Independent of the choice of specialization, students are encouraged to take a range of courses covering methodology, modeling, and applications. Any MS&E courses satisfying this requirement must be at the 300-level, while courses outside MS&E must be at a comparable level. Students are expected to earn a letter grade of A- or better in all courses counted for the requirements. A student's plan for completing these requirements must be discussed with and approved by their faculty advisor by the beginning of Autumn Quarter of their second year.

#### Operations Research Qualifying Procedure

Students take the area qualifying exam at the beginning of their second year of study. The qualifying exam consists of two written exams: one in

Optimization and one in Stochastic Systems. The first exam covers the material in MS&E 310 and related prerequisites. The second exam covers the material in MS&E 321 and related prerequisites.

The student will do two quarter-length tutorials with Operations Research faculty (or affiliated faculty). A written report approved by the supervising faculty member is required on each tutorial. In addition, at the end of the second year, students are expected to make a 30-minute presentation to the broader Operations Research faculty. The presentation must include original research or promising directions towards original research. The student can do both tutorials with the same faculty member; in this case a single written report is sufficient, and the presentation can be of the two tutorials together.

### Organization, Technology, and Entrepreneurship

Foundation in Organizational Behavior (five courses):

PSYCH 212	Social Psychology
SOC 363A	Seminar on Organizational Theory
Plus three of the following:	
MS&E 371	Innovation and Strategic Change
MS&E 372	Entrepreneurship Doctoral Research Seminar
MS&E 374	Dynamic Corporate Strategy
MS&E 375	Research on Entrepreneurship
MS&E 376	Strategy Doctoral Research Seminar
MS&E 380	Doctoral Research Seminar in Organizations
MS&E 381	Doctoral Research Seminar in Work, Technology, and Organization
MS&E 383	Doctoral Seminar on Ethnographic Research
MS&E 384	Groups and Teams
MS&E 387	Design of Field Research Methods
MS&E 388	Themes in Contemporary Meso-level Field Research
MS&E 389	Seminar on Organizational Theory
Statistics and Research Methods (examples; three courses required)	
MS&E 231	Introduction to Computational Social Science
PSYCH 252	Statistical Methods for Behavioral and Social Sciences
SOC 381	Sociological Methodology I: Introduction
SOC 382	Sociological Methodology II: Principles of Regression Analysis
SOC 383	Sociological Methodology III: Models for Discrete Outcomes
SOC 384	New Models and Methods in the Social Sciences

In their first two years in the Ph.D. program, all students are expected to work with faculty on research. To ensure an early start, all students must work at least 25% of their time in their first year as a research assistant with a faculty member. Students on fellowships can earn course credit for the work. With approval from the students' advisor, one quarter of the requirement may be fulfilled by working as a Course Assistant (CA).

Ph.D. students in organizational behavior must take 3 courses in statistics and research methods. Two of these courses must be statistics courses.

Ph.D. students are required to take a minimum of 2 advanced-content courses chosen with input from their advisor.

Students are expected to complete a yearly plan, of no more than two typed pages in length, detailing the student's plans for the next year in terms of education (e.g., courses and seminars), research (e.g., RAships), and teaching (e.g., TAs). This plan should be provided to the students' academic advisor for review no later than May 15 each calendar year.

## Policy and Strategy

The Policy and Strategy (P&S) Area addresses policy and strategy questions in a variety of organizational and societal settings. In order to approach interdisciplinary research questions in application domains as diverse as energy, environment, health, information technology, innovation, and government regulation, P&S faculty members rely on a broad range of analytical and empirical tools, such as decision analysis, optimization and operations research methods, formal economic modeling, econometrics, case studies, and simulation. After having been exposed to foundational knowledge of economics, strategy, and organizational theory, doctoral students in the P&S Area can select from a variety of courses to deepen their understanding of the specific application domains. The P&S Area's mission is to provide a first-class learning and research environment preparing doctoral students for careers at research universities, government institutions, and in the private sector.

Foundation in Policy and Strategy (three):

MS&E 241	Economic Analysis
MS&E 375	Research on Entrepreneurship or MS&E 376 Strategy Doctoral Research Seminar or MS&E 390 Doctoral Research Seminar in Health Systems Modeling or MS&E 391 Doctoral Research Seminar in Energy-Environmental Systems Modeling and Analysis

Statistics and Research Methods (three):

MS&E 201	Dynamic Systems
MS&E 211	Linear and Nonlinear Optimization
MS&E 212	Mathematical Programming and Combinatorial Optimization
MS&E 221	Stochastic Modeling
MS&E 223	Simulation
MS&E 352	Decision Analysis II: Professional Decision Analysis
PSYCH 252	Statistical Methods for Behavioral and Social Sciences
SOC 383	Sociological Methodology III: Models for Discrete Outcomes
SOC 384	New Models and Methods in the Social Sciences

The student must select a program of four or more electives including disciplinary depth courses that reflects his or her interests and this approved by the Policy and Strategy faculty. The following are a number of sample programs:

Sample Program: Modeling Emphasis

Research Methods

MS&E 201	Dynamic Systems
MS&E 252	Decision Analysis I: Foundations of Decision Analysis
MS&E 311	Optimization
MS&E 321	Stochastic Systems

Domain Depth

MS&E 292	Health Policy Modeling
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care

Two of the following:

MS&E 263	Healthcare Operations Management
MS&E 463	Healthcare Systems Design
HRP 256	Economics of Health and Medical Care
HRP 263	Advanced Decision Science Methods and Modeling in Health

Sample Program: Economics Emphasis

Research Methods

ECON 282	Contracts, Information, and Incentives
ECON 286	Game Theory and Economic Applications

Domain Depth

ECON 257	Industrial Organization 1
ECON 285	Matching and Market Design

Sample Program: Strategy Emphasis

Research Methods

MS&E 408	Directed Reading and Research ( (Methods Apprenticeship))
SOC 369	Social Network Methods

Domain Depth

MS&E 371	Innovation and Strategic Change
MS&E 376	Strategy Doctoral Research Seminar
SOC 314	Economic Sociology

Sample Program: Risk Analysis Emphasis

Research Methods

MS&E 250A	Engineering Risk Analysis
MS&E 251	Stochastic Control
MS&E 252	Decision Analysis I: Foundations of Decision Analysis
MS&E 355	Influence Diagrams and Probabilistics Networks

Domain Depth

MS&E 250B	Project Course in Engineering Risk Analysis or MS&E 452 Decision Analysis Projects: Helping Real Leaders Make Real Decisions
MS&E 353	Decision Analysis III: Frontiers of Decision Analysis

Students are expected to complete a yearly plan, of no more than two typed pages in length, detailing the student's plans for the next year in terms of education (e.g., courses and seminars), research (e.g., RAships), and teaching (e.g., TAships). This plan should be provided to the students' academic advisor for review no later than May 15 each calendar year.

Policy and Strategy Qualifying Procedure

Advancement to PhD candidacy will be determined at the end of the student's second year of studies. It will be based on the following three components:

1. the student's overall gradepoint average in the program (a GPA of 3.5 or higher is required);
2. a second-year research paper that is written by the student under the supervision of a faculty member, and that is presented to examining faculty members in the second year;
3. a written and an oral qualifying examination taken by the student in the spring quarter of the second year.

## Production and Operations Management

Foundation courses (may be waived based on prior coursework):

MS&E 211	Linear and Nonlinear Optimization
MS&E 241	Economic Analysis or ECON 202 Microeconomics I For Non-Economics PhDs
MS&E 260	Introduction to Operations Management or MS&E 261 Inventory Control and Production Systems

Methodology courses (all):

MS&E 221	Stochastic Modeling or STATS 21 Introduction to Stochastic Processes
MS&E 223	Simulation or STATS 367 Topic: Monte Carlo
MS&E 251	Stochastic Control

or MS&E 351	Dynamic Programming and Stochastic Control
MS&E 311	Optimization
or EE 364A	Convex Optimization I
MS&E 321	Stochastic Systems
MS&E 335	Queueing and Scheduling in Processing Networks
ECON 203N	Microeconomics II For Non-Economics PhDs
OM research courses (any four):	
MS&E 336	Platform and Marketplace Design
MS&E 365	Advanced Models in Operations Management
Faculty-approved GSB OIT Ph.D. courses (about six are offered every two years).	

## Ph.D. Minor in Management Science and Engineering

Students pursuing a Ph.D. in another department who wish to receive a Ph.D. minor in Management Science and Engineering should consult the MS&E student services office. A minor in MS&E may be obtained by completing 20 units of approved graduate-level MS&E courses, of which at least 6 units must be at the 300-level. Courses approved for the minor must form a coherent program, and must include one course from at least three of the eleven MS&E Master of Science core options. The program must include a minimum of 16 letter-graded units, and a minimum grade point average of 3.3 must be achieved in these courses.

*Emeriti: (Professors)* James L. Adams, Kenneth J. Arrow, Richard W. Cottle, B. Curtis Eaves, Frederick S. Hillier, Donald L. Iglehart, David G. Luenberger, Michael M. May, William J. Perry, David A. Thompson

*Chair:* Peter W. Glynn

*Professors:* Nicholas Bambos, Stephen R. Barley, Margaret L. Brandeau, Kathleen M. Eisenhardt, Peter W. Glynn, Ashish Goel, Warren H. Hausman, Pamela J. Hinds, Ronald A. Howard, Riitta Katila, M. Elisabeth Paté-Cornell, Robert I. Sutton, James L. Sweeney, Benjamin Van Roy, Yinyu Ye

*Associate Professors:* Samuel S. Chiu, Kay Giesecke, Ramesh Johari, Amin Saberi, Ross D. Shachter, Edison T. S. Tse

*Assistant Professors:* Itai Ashlagi, Charles E. Eesley, Sharad Goel, Markus Pelger, Johan Ugander, Melissa A. Valentine

*Professors (Research):* Siegfried S. Hecker, Walter Murray, Michael A. Saunders, John P. Weyant

*Professors (Teaching):* Thomas H. Byers, Robert E. McGinn

*Professor of the Practice:* Tina L. Seelig

*Courtesy Professors:* Stephen P. Boyd, Douglas K. Owens, Sylvia Plevritis, Walter Powell, Balaji Prabhakar, Tim Roughgarden

*Lecturers:* Daniel Barreto, Ravi Belani, Lisa Borland, Shoshanah Cohen, Toby Corey, Jeff Epstein, Jack Fuchs, John B. Hernandez, Rebeca Hwang, Thomas J. Kosnik, Arik Lifschitz, Trevor Loy, R. Ann Miura-Ko, Mary K. Morrison, Dale Nesbitt, Michael T. Padilla, Heidi Roizen, David Scheinker, Rosanne Siino, Lynda Kate Smith, Steve Weinstein, Andrew Wong

*Consulting Professors:* Peter J. Haas, Gerd Infanger, Burke Robinson, James E. Matheson, Sam Savage, Behnam N. Tabrizi

*Consulting Associate Professors:* Steve Blank, Michael G. Lyons, Audrey MacLean, Jan B. Pietzsch, F. Victor Stanton, Peter Woehrmann

*Consulting Assistant Professors:* Blake Johnson

*Visiting Professor:* Olivier de la Grandville

*Visiting Associate Professor:* Irad Ben Gal

*Director of the Industrial Affiliates Program:* Yinyu Ye

## Materials Science and Engineering

Courses offered by the Department of Materials Science and Engineering are listed under the subject code MATSCI on the *Stanford Bulletin's* ExploreCourses (<http://explorecourses.stanford.edu/browse>) web site.

The Department of Materials Science and Engineering is concerned with the relation between the structure and properties of materials, factors that control the internal structure of solids, and processes for altering their structure and properties, particularly at the nanoscale.

## Mission of the Undergraduate Program in Materials Science and Engineering

The mission of the undergraduate program in Materials Science and Engineering is to provide students with a strong foundation in materials science and engineering with emphasis on the fundamental scientific and engineering principles which underlie the knowledge and implementation of material structure, processing, properties, and performance of all classes of materials used in engineering systems. Courses in the program develop students' knowledge of modern materials science and engineering, teach them to apply this knowledge analytically to create effective and novel solutions to practical problems, and develop their communication skills and ability to work collaboratively. The program prepares students for careers in industry and for further study in graduate school.

The B.S. in Materials Science and Engineering provides training for the materials engineer and also preparatory training for graduate work in materials science. Capable undergraduates are encouraged to take at least one year of graduate study to extend their course work through the coterminal degree program which leads to an M.S. in Materials Science and Engineering. Coterminal degree programs are encouraged both for undergraduate majors in Materials Science and Engineering and for undergraduate majors in related disciplines.

## Graduate Programs in Materials Science Engineering

Graduate programs lead to the degrees of Master of Science, Engineer, and Doctor of Philosophy. Graduate students can specialize in any of the areas of materials science and engineering.

## Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course and laboratory work in solid state fundamentals and materials engineering, and further course work in a technical depth area which may include a master's Research Report. Typical depth areas include nanocharacterization, electronic and photonic materials, energy materials, nano and biomaterials.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Materials Science and Engineering and related fields.

## Facilities

The department is located in the William F. Durand Building, with extensive facilities in the Jack A. McCullough Building and the Gordon and Betty Moore Materials Research Building. These buildings house offices for the chair, majority of the faculty, administrative and technical

staff, graduate students as well as lecture and seminar rooms. The research facilities are equipped to conduct electrical measurements, mechanical testing of bulk and thin film materials, fracture and fatigue of advanced materials, metallography, optical, scanning, transmission electron microscopy, atomic force microscopy, UHV sputter deposition, vacuum annealing treatments, wet chemistry, and x-ray diffraction.

The McCullough/Moore Complex is also the home for the Center for Magnetic Nanotechnology (CMN ([http://www.stanford.edu/group/nanomag\\_center](http://www.stanford.edu/group/nanomag_center))), Stanford Nanocharacterization Laboratory (SNL (<http://www.stanford.edu/group/snl>)) and Nanoscale Prototyping Laboratory (NPL (<http://npl-web.stanford.edu>); joint facility with Mechanical Engineering in Building 530). The department maintains a microcomputer cluster for its students, which is linked to the internet.

Depending on the needs of their programs, students and faculty also conduct research in a number of other departments and independent laboratories. Chief among these are the Stanford Nanofabrication Facility (SNF (<http://snf.stanford.edu>)), Geballe Laboratory for Advanced Materials (GLAM (<http://stanford.edu/group/glam>)), and Stanford Synchrotron Radiation Laboratory (SSRL (<http://www-ssrl.slac.stanford.edu>)).

The Stanford Nanofabrication Facility (SNF) is a laboratory joining government and industrially funded research on microelectronic materials, devices, and systems. It houses a 10,000 sq. ft., class 100 clean room for Si and GaAs integrated circuit fabrication, a large number of electronic test, materials analysis, and computer facilities, and office space for faculty, staff, and students. In addition, the Center for Integrated Systems (CIS (<http://cis.stanford.edu>)) provides start-up research funds and maintains a fellow-mentor program with industry.

## Bachelor of Science in Materials Science and Engineering

### Mission Statement

The mission of the Materials Science and Engineering Program is to provide students with a strong foundation in materials science and engineering. The program's curriculum places special emphasis on the fundamental scientific and engineering principles which underlie the knowledge and implementation of materials structure, processing, properties, and performance of all classes of materials used in engineering systems. Courses in the program develop students' knowledge of modern materials science and engineering and teach them to apply this knowledge analytically to create effective and novel solutions to practical problems. The program prepares students for careers in industry or for further study in graduate school.

The undergraduate program provides training in solid state fundamentals and materials engineering. Students desiring to specialize in this field during their undergraduate period may do so by following the curriculum outlined in the Bachelor of Science in Materials Science and Engineering section of this bulletin as well as the School of Engineering Undergraduate Handbook ([http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Main\\_Page](http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Main_Page)). The University's basic requirements for the bachelor's degree are discussed in the Bachelor of Science in Materials Science and Engineering section of this bulletin. Electives are available so that students with broad interests can combine materials science and engineering with work in another science or engineering department.

Students interested in the minor should see the Materials Science and Engineering Minor section of this bulletin.

## Materials Science and Engineering (MATSCI)

Completion of the undergraduate program in Materials Science and Engineering leads to the conferral of the Bachelor of Science in Materials Science and Engineering.

### Mission of the Undergraduate Program in Materials Science and Engineering

The mission of the undergraduate program in Materials Science and Engineering is to provide students with a strong foundation in materials science and engineering with emphasis on the fundamental scientific and engineering principles which underlie the knowledge and implementation of material structure, processing, properties, and performance of all classes of materials used in engineering systems. Courses in the program develop students' knowledge of modern materials science and engineering, teach them to apply this knowledge analytically to create effective and novel solutions to practical problems, and develop their communication skills and ability to work collaboratively. The program prepares students for careers in industry and for further study in graduate school.

The B.S. in Materials Science and Engineering provides training for the materials engineer and also preparatory training for graduate work in materials science. Capable undergraduates are encouraged to take at least one year of graduate study to extend their course work through the coterminal degree program which leads to an M.S. in Materials Science and Engineering. Coterminal degree programs are encouraged both for undergraduate majors in Materials Science and Engineering and for undergraduate majors in related disciplines.

### Requirements

	Units
<b>Mathematics</b>	
20 units minimum; see Basic Requirement 1 <sup>1</sup>	
Select one of the following:	5
MATH 51      Linear Algebra and Differential Calculus of Several Variables	
CME 100/ ENGR 154      Vector Calculus for Engineers	
Select one of the following:	5
MATH 52      Integral Calculus of Several Variables	
CME 104/ ENGR 155B      Linear Algebra and Partial Differential Equations for Engineers	
Select one of the following:	5
MATH 53      Ordinary Differential Equations with Linear Algebra	
CME 102/ ENGR 155A      Ordinary Differential Equations for Engineers	
One additional course	5
<b>Science</b>	
20 units minimum; see Basic Requirement 2 <sup>2</sup>	20
Must include a full year of physics or chemistry, with one quarter of study in the other subject.	
<b>Technology in Society</b>	
One course; see Basic Requirement 3 <sup>3</sup>	3-5
<b>Engineering Fundamentals</b>	
Three courses minimum; see Basic Requirement 4 <sup>4</sup>	
Select one of the following:	4
ENGR 50      Introduction to Materials Science, Nanotechnology Emphasis <sup>4</sup>	
ENGR 50E      Introduction to Materials Science, Energy Emphasis <sup>4</sup>	

ENGR 50M	Introduction to Materials Science, Biomaterials Emphasis <sup>4</sup>	
At least two additional courses		6-9
<b>Materials Science and Engineering Depth</b>		
Materials Science Fundamentals:		
MATSCI 153	Nanostructure and Characterization	4
MATSCI 154	Thermodynamic Evaluation of Green Energy Technologies <sup>5</sup>	4
MATSCI 155	Nanomaterials Synthesis	4
MATSCI 157	Quantum Mechanics of Nanoscale Materials	4
Two of the following courses:		8
MATSCI 151	Microstructure and Mechanical Properties	
MATSCI 152	Electronic Materials Engineering	
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	
MATSCI 190	Organic and Biological Materials	
MATSCI 192	Materials Chemistry	
MATSCI 193	Atomic Arrangements in Solids	
MATSCI 194	Thermodynamics and Phase Equilibria	
MATSCI 195	Waves and Diffraction in Solids	
MATSCI 196	Defects in Crystalline Solids	
MATSCI 197	Rate Processes in Materials	
MATSCI 198	Mechanical Properties of Materials	
MATSCI 199	Electronic and Optical Properties of Solids	
Engineering Depth		16
One of the following courses:		
MATSCI 161	Nanocharacterization Laboratory (WIM)	
MATSCI 164	Electronic and Photonic Materials and Devices Laboratory (WIM)	
Three of the following courses:		
MATSCI 160	Nanomaterials Laboratory	
MATSCI 162	X-Ray Diffraction Laboratory	
MATSCI 163	Mechanical Behavior Laboratory	
MATSCI 165	Nanoscale Materials Physics Computation Laboratory	
Focus Area Options <sup>6</sup>		10

<sup>1</sup> Basic Requirement 1 (20 units minimum): see a list of approved Math Courses ([http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved\\_Courses](http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses)).

<sup>2</sup> Basic Requirement 2 (20 units minimum): see a list of approved Science Courses ([http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved\\_Courses](http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses)).

<sup>3</sup> Basic Requirement 3 (one course minimum): see a list of approved Technology in Society Courses ([http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved\\_Courses](http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses)).

<sup>4</sup> Basic Requirement 4 (3 courses minimum): see a list of approved Engineering Fundamentals ([http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved\\_Courses](http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses)) Courses.

If both ENGR 50 Introduction to Materials Science, Nanotechnology Emphasis, ENGR 50E Introduction to Materials Science - Energy Emphasis, and/or ENGR 50M Introduction to Materials Science, Biomaterials Emphasis are taken, one may be used for the Materials Science Fundamentals requirement.

<sup>5</sup> ENGR 30 Engineering Thermodynamics may be substituted for MATSCI 154 Thermodynamic Evaluation of Green Energy Technologies as long as the total MATSCI program units total 50 or more.

<sup>6</sup> Focus Area Options: 10 units from one of the following Focus Area Options below.

## Focus Area Options

### Bioengineering (10 units minimum)

BIOE 220	Introduction to Imaging and Image-based Human Anatomy
BIOE 281	Biomechanics of Movement
BIOE 284B	Cardiovascular Bioengineering
BIOE 333	Interfacial Phenomena and Bionanotechnology
BIOE 381	Orthopaedic Bioengineering
MATSCI 190	Organic and Biological Materials
MATSCI 380	Nano-Biotechnology
MATSCI 381	Biomaterials in Regenerative Medicine
MATSCI 382	Biochips and Medical Imaging

### Chemical Engineering (10 units minimum)

CHEM 171	Physical Chemistry I
CHEMENG 130	Separation Processes
CHEMENG 140	Micro and Nanoscale Fabrication Engineering
CHEMENG 150	Biochemical Engineering
CHEMENG 160	Polymer Science and Engineering

### Chemistry (10 units minimum)

CHEM 151	Inorganic Chemistry I
CHEM 153	Inorganic Chemistry II
CHEM 171	Physical Chemistry I
CHEM 173	Physical Chemistry II
CHEM 175	Physical Chemistry III
CHEM 181	Biochemistry I
CHEM 183	Biochemistry II
CHEM 185	Biophysical Chemistry

### Electronics & Photonics (10 units minimum)

EE 101A	Circuits I
EE 101B	Circuits II
EE 102A	Signal Processing and Linear Systems I
EE 102B	Signal Processing and Linear Systems II
EE 116	Semiconductor Device Physics
EE 134	Introduction to Photonics
EE 136	Introduction to Nanophotonics and Nanostructures
EE 142	Engineering Electromagnetics (Formerly EE 141)
MATSCI 343	Organic Semiconductors for Electronics and Photonics

### Energy Technology (10 units minimum)

EE 293B	Fundamentals of Energy Processes
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
MATSCI 302	Solar Cells
MATSCI 303	Principles, Materials and Devices of Batteries
ME 260	Fuel Cell Science and Technology

### Materials Characterization Techniques (10 units minimum)

MATSCI 320	Nanocharacterization of Materials
MATSCI 321	Transmission Electron Microscopy
MATSCI 322	Transmission Electron Microscopy Laboratory
MATSCI 323	Thin Film and Interface Microanalysis
MATSCI 326	X-Ray Science and Techniques

### Mechanical Behavior & Design (10 units minimum)

AA 240A	Analysis of Structures
AA 240B	Analysis of Structures
AA 256	Mechanics of Composites
MATSCI 198	Mechanical Properties of Materials

MATSCI 358	Fracture and Fatigue of Materials and Thin Film Structures
ME 80	Mechanics of Materials
or CEE 101A	Mechanics of Materials
ME 203	Design and Manufacturing
ME 294	
Nanoscience (10 units minimum)	
BIOE 333	Interfacial Phenomena and Bionanotechnology
EE 136	Introduction to Nanophotonics and Nanostructures
ENGR 240	Introduction to Micro and Nano Electromechanical Systems
MATSCI 316	Nanoscale Science, Engineering, and Technology
MATSCI 320	Nanocharacterization of Materials
MATSCI 346	Nanophotonics
MATSCI 347	Introduction to Magnetism and Magnetic Nanostructures
MATSCI 380	Nano-Biotechnology
Physics (10 units minimum)	
PHYSICS 70	Foundations of Modern Physics
PHYSICS 110	Advanced Mechanics
PHYSICS 120	Intermediate Electricity and Magnetism I
PHYSICS 121	Intermediate Electricity and Magnetism II
PHYSICS 130	Quantum Mechanics I
PHYSICS 131	Quantum Mechanics II
PHYSICS 134	Advanced Topics in Quantum Mechanics
PHYSICS 170	Thermodynamics, Kinetic Theory, and Statistical Mechanics I
PHYSICS 171	Thermodynamics, Kinetic Theory, and Statistical Mechanics II
PHYSICS 172	Solid State Physics
Self-Defined Option (10 units minimum)	
Petition for a self-defined cohesive program.	

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

### Materials Science and Engineering (MATSCI) Minor

A minor in Materials Science and Engineering allows interested students to explore the role of materials in modern technology and to gain an understanding of the fundamental processes that govern materials behavior.

The following courses fulfill the minor requirements:

Engineering Fundamentals		Units
Select one of the following:		4
ENGR 50	Introduction to Materials Science, Nanotechnology Emphasis	
ENGR 50E	Introduction to Materials Science, Energy Emphasis	
ENGR 50M	Introduction to Materials Science, Biomaterials Emphasis	
Materials Science Fundamentals and Engineering Depth		Units
Select six of the following:		24
MATSCI 151	Microstructure and Mechanical Properties	
MATSCI 152	Electronic Materials Engineering	
MATSCI 153	Nanostructure and Characterization	
MATSCI 154	Thermodynamic Evaluation of Green Energy Technologies	

MATSCI 155	Nanomaterials Synthesis
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
MATSCI 157	Quantum Mechanics of Nanoscale Materials
MATSCI 160	Nanomaterials Laboratory
MATSCI 161	Nanocharacterization Laboratory
MATSCI 162	X-Ray Diffraction Laboratory
MATSCI 163	Mechanical Behavior Laboratory
MATSCI 164	Electronic and Photonic Materials and Devices Laboratory
MATSCI 165	Nanoscale Materials Physics Computation Laboratory
MATSCI 190	Organic and Biological Materials
MATSCI 192	Materials Chemistry
MATSCI 193	Atomic Arrangements in Solids
MATSCI 194	Thermodynamics and Phase Equilibria
MATSCI 195	Waves and Diffraction in Solids
MATSCI 196	Defects in Crystalline Solids
MATSCI 197	Rate Processes in Materials
MATSCI 198	Mechanical Properties of Materials
MATSCI 199	Electronic and Optical Properties of Solids

Total Units

28

## Master of Science in Materials Science Engineering

The University's basic requirements for the M.S. degree are discussed in the "Graduate Degrees (p. 45)" section of this bulletin. The following are specific departmental requirements.

The Department of Materials Science and Engineering requires a minimum of 45 units for a master's degree to be taken in residence at Stanford. A Master's Program Proposal (<https://stanford.app.box.com/progpropma>) form should be filled out, signed by the student's academic adviser, and submitted to the department's student services manager by the end of the student's first quarter of study. Final revisions to the master's program proposal must be submitted no later than one academic quarter prior to the quarter of expected degree conferral. Stanford Materials Science undergraduates who are pursuing or who plan to pursue a Coterminal M.S. degree may have more flexibility in their programs and should consult with their academic advisers regarding appropriate core course and elective choices.

Degree requirements are as follows:

1. A minimum of 30 units of Materials Science and Engineering (MATSCI) course work, including core and lab courses specified below, all taken for a letter grade. Research units, one-unit seminars, MATSCI 299 Practical Training and courses in other departments (i.e., where students cannot enroll in a class with a MATSCI subject code) cannot be counted for this requirement.
2. Of these 30 units Materials Science requirements, students must include a or b.
  - a. three classes from MATSCI 201-210 core courses and three MATSCI 171, 172, 173, 174, 175 laboratory courses. One laboratory requirement may be fulfilled by taking a lab course from another engineering department.

### Select three of the following core courses:

MATSCI 202	Materials Chemistry	3
MATSCI 203	Atomic Arrangements in Solids	3
MATSCI 204	Thermodynamics and Phase Equilibria	3
MATSCI 205	Waves and Diffraction in Solids	3

Units

MATSCI 206	Defects in Crystalline Solids	3
MATSCI 207	Rate Processes in Materials	3
MATSCI 208	Mechanical Properties of Materials	3
MATSCI 209	Electronic and Optical Properties of Solids	3
MATSCI 210	Organic and Biological Materials	3
<b>Total core course units</b>		<b>9</b>

**Select three of the following lab courses:**

MATSCI 171	Nanocharacterization Laboratory	3
MATSCI 172	X-Ray Diffraction Laboratory	3
MATSCI 173	Mechanical Behavior Laboratory	3
MATSCI 174	Electronic and Photonic Materials and Devices Laboratory	3
MATSCI 175	Nanoscale Materials Physics Computation Laboratory	3

One laboratory requirement may be fulfilled by taking lab courses from another engineering dept.

<b>Total lab course units</b>		<b>9</b>
<b>TOTAL</b>		<b>18</b>

- b. four classes from MATSCI 201-210 core courses and two MATSCI 171, 172, 173, 174, 175 laboratory courses. One laboratory requirement may be fulfilled by taking a lab course from another engineering department.

**Select four of the following core courses:**

MATSCI 202	Materials Chemistry	3
MATSCI 203	Atomic Arrangements in Solids	3
MATSCI 204	Thermodynamics and Phase Equilibria	3
MATSCI 205	Waves and Diffraction in Solids	3
MATSCI 206	Defects in Crystalline Solids	3
MATSCI 207	Rate Processes in Materials	3
MATSCI 208	Mechanical Properties of Materials	3
MATSCI 209	Electronic and Optical Properties of Solids	3
MATSCI 210	Organic and Biological Materials	3
<b>Total core course units</b>		<b>12</b>

**Select two of the following lab courses:**

MATSCI 171	Nanocharacterization Laboratory	3
MATSCI 172	X-Ray Diffraction Laboratory	3
MATSCI 173	Mechanical Behavior Laboratory	3
MATSCI 174	Electronic and Photonic Materials and Devices Laboratory	3
MATSCI 175	Nanoscale Materials Physics Computation Laboratory	3

One laboratory requirement may be fulfilled by taking lab courses from another engineering dept.

<b>Total lab course units</b>		<b>6</b>
<b>TOTAL</b>		<b>18</b>

3. 15 units of approved course electives to result in a technically cohesive program. Of the 15 units of elective courses:
- 12 units must be taken for a letter grade (except for those submitting a M.S. thesis report).
  - a maximum of three units may be seminars.
  - if writing a master's thesis report, a minimum of 6 and a maximum of 15 units of MATSCI 200 Master's Research may be counted. Master's research units may be counted only if writing a M.S. thesis report. The final version of the thesis report must be signed off by two faculty and submitted to student services manager by last day of classes of the graduation quarter. See student services manager for details and approval.

- a maximum of three units may be undergraduate units, but not courses below the 100 level offering.
  - a maximum of five units may be used for a foreign language course (not including any remedial English or courses in the student's native language if other than English). Students must plan to enroll in an upper level designation of a foreign language course offering.
  - the combination of seminar, undergraduate, and language units may not exceed six units total.
  - the combination of research, seminar, undergraduate, and language units may not exceed 15 units total.
  - activity units may not be counted toward M.S. degree.
4. A minimum grade point average (GPA) of 2.75 for degree course work.

All proposed degree programs are subject to approval by student's academic adviser, and department's student services manager, who has responsibility for assuring that each proposal is a technically cohesive program. The M.S. degree is expected to be completed within two years during the University's candidacy period for completion of a master's degree.

## Master's Thesis Report

Students wishing to take this option must consult with a MATSCI faculty member initially. Out of the 45 units M.S. degree requirements, 6-15 units may be taken in Materials Science Master's research by enrolling in MATSCI 200. Students using 15 units of research toward the degree must participate in a more complex and demanding research project than those using lesser units.

The M.S. thesis report must be approved and signed off by two faculty members. In general, one is student's research adviser, if adviser is a non MATSCI faculty member, a second MATSCI faculty is required to sign off on the thesis report. Consult with student services manager about faculty criteria, and requirements. Three copies of M.S. thesis report in final format should be submitted to two faculty advisers, and the department. The report is not an official University thesis but is intended to demonstrate to the department and faculty student's ability to conduct and report a directed research.

As a general guide line, a 6-9 units of master's research is a normal load for most students. The report should reflect the number of units taken. For instance, 3-4 laboratory reports are required for a 3-unit laboratory course. Accordingly, the level expected for 9 units of research would be at least equivalent to three such courses.

Students are advised to submit their thesis draft to faculty adviser readers by the end of fifth week of the quarter in which the units are to be assigned to allow time for faculty comments and revisions. A collated final version of the thesis report should be submitted to faculty and student services manager by last day of classes of student's graduation quarter. The appropriate grade for satisfactory progress in the research project prior to submission of the final report is 'N' (continuing); the 'S' (Satisfactory) final grade is given only when the report is fully approved and signed off by both faculty members.

In cases where students decide to pursue research after the initial program submission deadline, they should submit a revised M.S. Program Proposal at least two quarters before the degree is granted. The total combined units of Materials Science research units, seminars, language courses, and undergraduate courses cannot exceed 15. If a master's thesis report is not submitted, units in MATSCI 200 Master's Research cannot be applied to the department's requirement of 45 units for the conferral of the master's degree.

## Honors Cooperative Program

Some of the department's graduate students participate in the Honors Cooperative Program (HCP), which makes it possible for academically qualified engineers and scientists in industry to be part-time graduate students in Materials Science while continuing professional employment. Prospective HCP students follow the same admissions process and must meet the same admissions requirements as full-time graduate students. For information regarding the Honors Cooperative Program, see Graduate Programs in the "School of Engineering (p. 157)" section of this bulletin.

## Petition Process for Transfer from M.S. to Ph.D. Degree Program

Students admitted to graduate programs are admitted specifically into either the terminal M.S. or the Ph.D. program. A student admitted to the terminal M.S. program should not assume admission to the Ph.D. program. Admission to the Ph.D. program is required for a student to be eligible to work towards the Ph.D. degree.

A student in the terminal M.S. program may petition to be admitted to the Ph.D. program by filing an M.S. to Ph.D. petition form. Petition must include a one-page statement of purpose explaining why the student wishes to transfer to the Ph.D. program, most recent unofficial transcript, and two letters of recommendation from members of the Stanford faculty, including one from the student's prospective research adviser and at least one from a Materials Science faculty member belonging to the Academic Council. The M.S. to Ph.D. petition to transfer should be submitted to the student services manager by June of the first year in the M.S. program. Students who wish to submit a petition to the Ph.D. degree, should plan to complete at least six of the MATSCI 200 series (including MATSCI 203 Atomic Arrangements in Solids, MATSCI 204 Thermodynamics and Phase Equilibria, MATSCI 207 Rate Processes in Materials) core courses during their first year of admission. A grade point average (GPA) of 3.5 or better in the core courses is requirement.

Transferring to the Ph.D. program is a competitive process and only highly qualified M.S. students may be admitted. Student's original application to the graduate program as well as the materials provided for the transfer petition are reviewed. Students must adhere to requirements for the terminal M.S. degree, and plan to confer the M.S. degree in the event that the Ph.D. petition to transfer is not approved.

## Coterminal Master of Science Program in Materials Science and Engineering

Stanford undergraduates who wish to continue their studies for the Master of Science degree in Materials Science and Engineering through the Coterminal program may apply for admission after they have earned 120 units toward graduation (UTG) as shown on the undergraduate unofficial transcript. Applicants must submit their application no later than eight weeks before the start of the proposed admit quarter. The application must give evidence that student possesses a potential for strong academic performance at the graduate level. Scores from the Graduate Record Examination (GRE) General Test must be reported before action can be taken on an application.

Materials science is a highly integrated and interdisciplinary subject, therefore students of any engineering or science undergraduate major are encouraged to apply.

Information and other requirements pertaining to the coterminal program in Materials Science and Engineering may be obtained from the department's student services manager.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the

"Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Engineer in Materials Science Engineering

The University's basic requirements for the degree of Engineer are outlined in the "Graduate Degrees" section of this bulletin.

A student wishing to enter the Engineer program must have completed the requirements of the M.S. in Materials Science and Engineering, and must file a petition requesting admission to the program, stating the type of research to be done and the proposed supervising professor. Once approved, the Application for Candidacy must be submitted to the department's student services manager by the end of the second quarter in the Engineer program. Final changes in the Application for Candidacy form must be submitted no later than one academic quarter prior to degree conferral.

The 90-unit program must include 9 units of graduate courses in Materials Science with a MATSCI subject code (no research units, seminars, colloquia, and MATSCI 400 Participation in Materials Science Teaching, Participation in Teaching) beyond the requirements for the M.S. degree, and additional research or other units to meet the 90-unit University minimum requirement. A grade point average (GPA) of 3.0 must be maintained for all degree course work taken at Stanford.

The Engineer thesis must be approved and signed off by two Academic Council faculty members, one must be a MATSCI faculty member.

## Doctor of Philosophy in Materials Science Engineering

The University's basic requirements for the Ph.D. degree are outlined in the "Graduate Degrees (p. 45)" section of this bulletin.

The Ph.D. degree is awarded after the completion of a minimum of 135 units of graduate work as well as satisfactory completion of any additional University requirements. Degree requirements for the department are as follows:

Core Courses <sup>1</sup>	Units	
EE 222	Applied Quantum Mechanics I	30
MATSCI 202	Materials Chemistry	
MATSCI 203	Atomic Arrangements in Solids	
MATSCI 204	Thermodynamics and Phase Equilibria	

MATSCI 205	Waves and Diffraction in Solids	
MATSCI 206	Defects in Crystalline Solids	
MATSCI 207	Rate Processes in Materials	
MATSCI 208	Mechanical Properties of Materials	
MATSCI 209	Electronic and Optical Properties of Solids	
MATSCI 210	Organic and Biological Materials	
<b>Five Elective Graduate Technical Courses</b> <sup>2</sup>		15
<b>Materials Science Colloquia</b> <sup>3</sup>		3
MATSCI 230	Materials Science Colloquium (Autumn 2014)	
MATSCI 230	Materials Science Colloquium (Winter 2015)	
MATSCI 230	Materials Science Colloquium (Spring 2015)	
<b>Research &amp; Electives</b>		87
75 Units of MATSCI 300: Ph.D. Research		
12 Units of Electives <sup>4</sup>		

<sup>1</sup> At least six of these courses must be taken during the first year (including MATSCI 203 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialscienceandengineering>) Atomic Arrangements in Solids, MATSCI 204 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialscienceandengineering>) Thermodynamics and Phase Equilibria, and MATSCI 207 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialscienceandengineering>) Rate Processes in Materials). All core courses must be completed for a letter grade, and taken during the first two years in the program.

<sup>2</sup> Elective technical courses must be in areas related directly to student's research interest in Materials Science and Engineering, and may not include MATSCI 230 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialscienceandengineering>) Materials Science Colloquium, MATSCI 299 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialscienceandengineering>) Practical Training, MATSCI 300 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialscienceandengineering>) Ph.D. Research or MATSCI 400 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialscienceandengineering>) Participation in Materials Science Teaching. All courses must be completed for a letter grade.

<sup>3</sup> Materials Science & Engineering Ph.D. students are required to take MATSCI 230 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialscienceandengineering>) Materials Science Colloquium during each quarter of their first year. Attendance is required, roll is taken, and more than two absences results to an automatic "No Pass" grade.

<sup>4</sup> May include other engineering courses, or MATSCI 400 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialscienceandengineering>) Participation in Materials Science Teaching or a maximum of 3 units MATSCI 299 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialscienceandengineering>) Practical Training

- Students must consult with their academic adviser on Ph.D. course selection planning. For students with a non-MATSCI research adviser, the MATSCI academic/co-adviser must also approve the list of proposed courses. Any proposed deviations from the requirements can only be considered by petition.
- Ph.D. students are required to apply for and have conferred a MATSCI M.S. degree normally by the end of their third year of studies. A Graduate Program Authorization Petition (in Axxess) and an M.S. Program Proposal (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/progpropma.pdf>) must be submitted after taking the Ph.D. qualifying examination.
- A departmental oral qualifying examination must be passed by the end of January of the second year. A grade point average (GPA) of 3.5 in core courses MATSCI 201-210 is required for admission to the Ph.D. qualifying examination. Students who have passed the Ph.D. qualifying examination are required to complete the Application for Candidacy to the Ph.D. degree by June of the second year after passing the qualifying examination. Final changes in the Application

for Candidacy form must be submitted no later than one academic quarter prior to the TGR status.

- Maintain a cumulative GPA of 3.0 in all courses taken at Stanford.
- Students must present the results of their research dissertation at the University Ph.D. oral defense examination.
- Current students subject to either this set of requirements or a prior set must obtain the approval of their adviser before filing a revised program sheet, and should as far as possible adhere to the intent of the new requirements.
- Students may refer the list of "Advanced Specialty Courses and Cognate Courses" provided below as guidelines for their selection of technical elective units. As noted above, academic adviser approval is required.
- At least 90 units must be taken in residence at Stanford. Students entering with an M.S. degree in Materials Science from another university may request to transfer up to 45 units of equivalent work toward the total of 135 Ph.D. degree requirement units.
- Students may propose a petition for exemption from a required core course if they have taken a similar course in the past. To petition, a student must consult and obtain academic and/or research adviser approval, and consent of the instructor of the proposed core course. To assess a student's level of knowledge, the instructor may provide an oral or written examination on the subject matter. The student must pass the examination in order to be exempt from core course requirement. If the petition is approved, the student is required to complete the waived number of units by taking other relevant upper level MATSCI courses.

## Advanced Specialty Courses

Units

### Biomaterials

APPPHYS 292	(Offered previous years, may be counted)
BIOPHYS 228	Computational Structural Biology
CHEMENG 260	Polymer Science and Engineering
CHEMENG 310	Microhydrodynamics
CHEMENG 355	Advanced Biochemical Engineering
ME 284A	(Offered previous years, may be counted)
ME 284B	(Offered previous years, may be counted)
ME 381	Orthopaedic Bioengineering
ME 385	Tissue Engineering Lab
ME 457	Fluid Flow in Microdevices
MATSCI 380	Nano-Biotechnology
MATSCI 381	Biomaterials in Regenerative Medicine
MATSCI 382	Biochips and Medical Imaging

### Electronic Materials Processing

EE 212	Integrated Circuit Fabrication Processes
EE 216	Principles and Models of Semiconductor Devices
EE 311	Advanced Integrated Circuits Technology
EE 316	Advanced VLSI Devices
EE 410	Integrated Circuit Fabrication Laboratory
MATSCI 312	New Methods in Thin Film Synthesis

### Materials Characterization

APPPHYS 216	
CHEMENG 345	Fundamentals and Applications of Spectroscopy
EE 329	(Not offered in 2013-2014)
MATSCI 312	New Methods in Thin Film Synthesis
MATSCI 320	Nanocharacterization of Materials
MATSCI 321	Transmission Electron Microscopy
MATSCI 322	Transmission Electron Microscopy Laboratory
MATSCI 323	Thin Film and Interface Microanalysis

MatSci 325 (Not offered in 2013-2014)	
MATSCI 326	X-Ray Science and Techniques
Mechanical Behavior of Solids	
AA 252	Techniques of Failure Analysis
AA 256	Mechanics of Composites
MATSCI 251	Microstructure and Mechanical Properties
MATSCI 353	Mechanical Properties of Thin Films
MATSCI 358	Fracture and Fatigue of Materials and Thin Film Structures
ME 335A	Finite Element Analysis
ME 335B	Finite Element Analysis
ME 335C	Finite Element Analysis
ME 340	Theory and Applications of Elasticity
ME 340A (Offered previous years, may be counted)	
ME 340B (Offered previous years, may be counted)	
ME 345	Fatigue Design and Analysis
Physics of Solids and Computation	
APPPHYS 272	Solid State Physics
APPPHYS 273	Solid State Physics II
EE 222	Applied Quantum Mechanics I
EE 223	Applied Quantum Mechanics II
EE 228	Basic Physics for Solid State Electronics
EE 327	Properties of Semiconductor Materials
EE 328	Physics of Advanced Semiconductor Devices
EE 329	The Electronic Structure of Surfaces and Interfaces
EE 335 (Offered previous years, may be counted)	
MATSCI 331	Atom-based computational methods for materials
MATSCI 343	Organic Semiconductors for Electronics and Photonics
MATSCI 347	Introduction to Magnetism and Magnetic Nanostructures
ME 344A (Offered previous years, may be counted)	
ME 344B (Offered previous years, may be counted)	
Soft Materials	
CHEMENG 260	Polymer Science and Engineering
CHEMENG 310	Microhydrodynamics
CHEMENG 460 (Offered previous years, may be counted)	
MATSCI 343	Organic Semiconductors for Electronics and Photonics
ME 455	Complex Fluids and Non-Newtonian Flows

## Ph.D. Minor in Materials Science and Engineering

The University's basic requirements for the Ph.D. minor are outlined in the "Graduate Degrees (p. 47)" section of this bulletin. A minor requires 20 units of graduate work of quality and depth at the 200-level or higher in the Materials Science and Engineering course offering. Courses must be taken for a letter grade. The proposed list of courses must be approved by department's advanced degree committee. Individual programs must be submitted to the student services manager at least one quarter prior to the quarter of the degree conferral. None of the units taken for the Ph.D. minor may overlap with any M.S. degree units.

## Mechanical Engineering

Courses offered by the Department of Mechanical Engineering are listed under the subject code ME on the *Stanford Bulletin's* ExploreCourses web site.

The programs in the Department of Mechanical Engineering (ME) emphasize a mix of applied mechanics, biomechanical engineering, computer simulations, design, and energy science and technology. Since mechanical engineering is a broad discipline, the undergraduate program can be a springboard for graduate study in business, law, medicine, political science, and other professions where understanding technology is important. Both undergraduate and graduate programs provide technical background for work in biomechanical engineering, environmental pollution control, ocean engineering, transportation, and other multidisciplinary problems that concern society. In all programs, emphasis is placed on developing systematic procedures for analysis, communication of work and ideas, practical and aesthetic aspects in design, and responsible use of technology.

### Mission of the Undergraduate Program in Mechanical Engineering

The mission of the undergraduate program in Mechanical Engineering is to provide students with a balance of intellectual and practical experiences that enable them to address a variety of societal needs. The curriculum encompasses elements from a wide array of disciplines built around the themes of biomedicine, computational engineering, design, energy, and multiscale engineering. Course work may include mechatronics, computational simulation, solid and fluid dynamics, microelectromechanical systems, biomechanical engineering, energy science and technology, propulsion, sensing and control, nano- and micro-mechanics, and design. The program prepares students for entry-level work as mechanical engineers and for graduate studies in either an engineering discipline or another field where a broad engineering background is useful.

### Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an ability to apply knowledge of mathematics, science, and engineering.
2. an ability to design and conduct experiments, as well as to analyze and interpret data.
3. an ability to design a system, component, or process to meet desired needs.
4. an ability to function on multidisciplinary teams.
5. an ability to identify, formulate, and solve engineering problems.
6. an understanding of professional and ethical responsibility.
7. an ability to communicate effectively.
8. the broad education necessary to understand the impact of engineering solutions in a global and societal context.
9. a recognition of the need for and an ability to engage in life-long learning.
10. a knowledge of contemporary issues.
11. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice..
12. the ability to apply advanced mathematics through multivariate calculus and differential equations.
13. the ability to work professionally in both thermal and mechanical systems areas including the design and realization of such systems.

## Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work providing depth in one area of specialization and breadth in complementary areas. Areas of specialization range from automatic controls, energy systems, fluid mechanics, heat transfer, and solid mechanics to biomechanical engineering, MEMS, and design.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Mechanical Engineering and related fields.

## Graduate Programs in Mechanical Engineering

### Admission and Financial Assistance

To be eligible for admission to the department, a student must have a B.S. degree in engineering, physics, or a comparable science program. To apply for the Ph.D. degree, applicants must have already completed an M.S. degree. PhD admission is based upon not only the admissions application, but faculty sponsorship within the department, which must be arranged prior to admission. Applications for Ph.D. and HCP (Honors Co-op) programs are accepted each quarter. M.S. applications must be received by the first Tuesday in December, and admitted students must matriculate in Autumn. The department annually awards, on a competitive basis, a limited number of fellowships, teaching assistantships, and research assistantships to incoming graduate students. Research assistantships are used primarily for post-master's degree students and are awarded by individual faculty research supervisors, not by the department.

Mechanical engineering is a varied profession, ranging from primarily aesthetic aspects of design to highly technical scientific research. Disciplinary areas of interest to mechanical engineers include biomechanics, energy conversion, fluid mechanics, materials, nuclear reactor engineering, propulsion, rigid and elastic body mechanics, systems engineering, scientific computing, and thermodynamics, to name a few. No mechanical engineer is expected to have a mastery of the entire spectrum.

A master's degree program leading to the M.S. is offered in Mechanical Engineering, and a master's degree program leading to the M.S. is offered in Engineering with a choice of the following fields of study: Biomechanical Engineering, Product Design, and an individually designed major.

### Post-Master's Degree Programs

The department offers two post-master's degrees: Engineer and Doctor of Philosophy. Post-master's research generally requires some evidence that a student has research potential before a faculty member agrees to supervision and a research assistantship appointment. It is most efficient to carry out preliminary research during the M.S. degree program, if interested in a post-master's degree.

### Departmental Groups

The department has five groups: Biomechanical Engineering; Design; Flow Physics and Computation; Mechanics and Computation; and Thermosciences. Each maintains its own labs, shops, and offices.

*The Biomechanical Engineering (BME) Group* has teaching and research activities which focus primarily on musculoskeletal biomechanics, neuromuscular biomechanics, cardiovascular biomechanics, and rehabilitation engineering. Research in other areas including hearing,

ocean, plant, and vision biomechanics exists in collaboration with associated faculty in biology, engineering, and medicine. The group has strong research interactions with the Mechanics and Computation and the Design groups, and the departments of Neurology, Radiology, and Surgery in the School of Medicine.

*The Design Group* is devoted to the imaginative application of science, technology, and art to the conception, visualization, creation, analysis and realization of useful devices, products, and objects. Courses and research focus on topics such as kinematics, applied finite elements, microprocessors, medical devices, fatigue and fracture mechanics, dynamics and simulation, micro-electromechanical systems (MEMS), rehabilitation, optimization, high-speed devices, product design, vehicle dynamics, experimental mechanics, robotics, creativity, idea visualization, computer-aided design, manufacturing, design analysis, and engineering education.

*The Flow Physics and Computational Engineering Group (FPCE)* The Flow Physics and Computational Engineering Group (FPCE) blends research on flow physics and modeling with algorithm development, scientific computing, and numerical database construction. FPCE is contributing new theories, models and computational tools for accurate engineering design analysis and control of complex flows (including multi phase flows, micro-fluidics, chemical reactions, acoustics, plasmas, interactions with electromagnetic waves and other phenomena) in aerodynamics, propulsion and power systems, materials processing, electronics cooling, environmental engineering, and other areas. A significant emphasis of research is on modeling and analysis of physical phenomena in engineering systems.

*The Mechanics and Computational Group* covers biomechanics, continuum mechanics, dynamics, experimental and computational mechanics, finite element analysis, fluid dynamics, fracture mechanics, micromechanics, nanotechnology, and simulation based design. Qualified students can work as research project assistants, engaging in thesis research in association with the faculty director and fellow students. Projects include analysis, synthesis, and control of systems; biomechanics; flow dynamics of liquids and gases; fracture and micro-mechanics, vibrations, and nonlinear dynamics; and original theoretical, computational, and experimental investigations in the strength and deformability of elastic and inelastic elements of machines and structures.

*The Thermosciences Group* conducts experimental and analytical research on both fundamental and applied topics in the general area of thermal and fluid systems. Research strengths include high Reynolds number flows, microfluidics, combustion and reacting flows, multiphase flow and combustion, plasma sciences, gas physics and chemistry, laser diagnostics, microscale heat transfer, convective heat transfer, and energy systems. Research motivation comes from applications including air-breathing and space propulsion, bioanalytical systems, pollution control, electronics fabrication and cooling, stationary and mobile energy systems, biomedical systems, and materials processing. Emphasis is on fundamental experiments leading towards advances in modeling, optimization, and control of complex systems.

### Facilities

The department groups maintain modern laboratories that support undergraduate and graduate instruction and graduate research work.

The Structures and Composites Laboratory, a joint activity with the Department of Aeronautics and Astronautics, studies structures made of fiber-reinforced composite materials. Equipment for fabricating structural elements includes autoclave, filament winder, and presses. X-ray, ultrasound, and an electron microscope are available for nondestructive testing. The lab also has environmental chambers, a high speed impactor, and mechanical testers. Lab projects include designing composite structures, developing novel manufacturing processes, and evaluating environmental effects on composites.

Experimental facilities are available through the interdepartmental Structures and Solid Mechanics Research Laboratory, which includes an electrohydraulic materials testing system, a vehicle crash simulator, and a shake table for earthquake engineering and related studies, together with highly sophisticated auxiliary instrumentation. Facilities to study the micromechanics of fracture areas are available in the Micromechanics/Fracture Laboratory, and include a computer-controlled materials testing system, a long distance microscope, an atomic force microscope, and other instrumentation. Additional facilities for evaluation of materials are available through the Center for Materials Research, Center for Integrated Circuits, and the Ginzton Laboratory. Laboratories for biological experimentation are accessible through the School of Medicine. Individual accommodation is available for the work of each research student.

Major experimental and computational laboratories engaged in bioengineering work are located in the Biomechanical Engineering Group. Other Biomechanical Engineering Group activities and resources are associated with the Rehabilitation Research and Development Center of the Veterans Administration Palo Alto Health Care System. This major national research center has computational and prototyping facilities. In addition, the Rehabilitation Research and Development Center houses the Electrophysiology Laboratory, Experimental Mechanics Laboratory, Human Motor Control Laboratory, Rehabilitation Device Design Laboratory, and Skeletal Biomechanics Laboratory. These facilities support graduate course work as well as Ph.D. student research activities.

Computational and experimental work is also conducted in various facilities throughout the School of Engineering and the School of Medicine, particularly the Advanced Biomaterials Testing Laboratory of the Department of Materials Science and Engineering, the Orthopaedic Research Laboratory in the Department of Functional Restoration, and the Vascular Research Laboratory in the Department of Surgery. In collaboration with the School of Medicine, facilities throughout the Stanford Medical Center and the Veterans Administration Palo Alto Health Care System conduct biological and clinical work.

The Design Group has facilities for lab work in experimental mechanics and experimental stress analysis. Additional facilities, including MTS electrohydraulic materials test systems, are available in the Solid Mechanics Research Laboratory. Design Group students also have access to Center for Integrated Systems (CIS) and Ginzton Lab microfabrication facilities.

The group also maintains the Product Realization Laboratory (PRL), a teaching facility offering students integrated experiences in market definition, product design, and prototype manufacturing. The PRL provides coaching, design manufacturing tools, and networking opportunities to students interested in product development. The ME 310 Design Project Laboratory has facilities for CAD, assembly, and testing of original designs by master's students in the engineering design program. A Smart Product Design Laboratory supports microprocessor application projects. The Center for Design Research (CDR) has an excellent facility for concurrent engineering research, development, and engineering curriculum creation and assessment. Resources include a network of high-performance workstations. For worldwide web mediated concurrent engineering by virtual, non-located, design development teams, see the CDR web site at <http://cdr.stanford.edu>. In addition, CDR has several industrial robots for student projects and research. These and several NC machines are part of the CDR Manufacturing Sciences Lab. The Manufacturing Modeling Laboratory (MML) addresses various models and methods that lead to competitive manufacturing. MML links design for manufacturing (dfm) research at the Department of Mechanical Engineering with supply chain management activities at the Department of Management Science and Engineering. The Rapid Prototyping Laboratory consists of seven processing stations including cleaning, CNC milling, grit blasting, laser deposition, low temperature deposition, plasma deposition, and shot peening. Students gain experience by using ACIS

and Pro Engineer on Hewlett Packard workstations for process software development. The Design Group also has a Product Design Loft in which students in the Joint Program in Design develop graduate thesis projects.

The Flow Physics and Computation Group has a 32 processor Origin 2000, 48-node and 85-node Linux cluster with high performance interconnection and an array of powerful workstations for graphics and data analysis. Several software packages are available, including all the major commercial CFD codes. FPC is strongly allied with the Center for Turbulence Research (CTR), a research consortium between Stanford and NASA, and the Center for Integrated Turbulence Simulations (CITS), which is supported by the Department of Energy (DOE) under its Accelerated Strategic Computing Initiative (ASCI). The Center for Turbulence Research has direct access to major national computing facilities located at the nearby NASA-Ames Research Center, including massively parallel super computers. The Center for Integrated Turbulence Simulations has access to DOE's vast supercomputer resources. The intellectual atmosphere of the Flow Physics and Computation Group is greatly enhanced by the interactions among CTR's and CITS's postdoctoral researchers and distinguished visiting scientists.

The Mechanics and Computation Group has a Computational Mechanics Laboratory that provides an integrated computational environment for research and research-related education in computational mechanics and scientific computing. The laboratory houses Silicon Graphics, Sun, and HP workstations and servers, including an 8-processor SGI Origin2000 and a 16-processor networked cluster of Intel-architecture workstations for parallel and distributed computing solutions of computationally intensive problems. Software is available on the laboratory machines, including commercial packages for engineering analysis, parametric geometry and meshing, and computational mathematics. The laboratory supports basic research in computational mechanics as well as the development of related applications such as simulation-based design technology.

The Thermosciences Group has four major laboratory facilities. The Heat Transfer and Turbulence Mechanics Laboratory concentrates on fundamental research aimed at understanding and improved prediction of turbulent flows and high performance energy conversion systems. The laboratory includes two general-purpose wind tunnels, a pressurized high Reynolds number tunnel, two supersonic cascade flow facilities, three specialized boundary layer wind tunnels, and several other flow facilities. Extensive diagnostic equipment is available, including multiple particle-image velocimetry and laser-Doppler anemometry systems.

The High Temperature Gas Dynamics Laboratory includes research on sensors, plasma sciences, cool and biomass combustion and gas pollutant formation, and reactive and non-reactive gas dynamics. Research facilities include diagnostic devices for combustion gases, a spray combustion facility, laboratory combustors including a coal combustion facility and supersonic combustion facilities, several advanced laser systems, a variety of plasma facilities, a pulsed detonation facility, and four shock tubes and tunnels. The Thermosciences Group and the Design Group share the Microscale Thermal and Mechanical Characterization laboratory (MTMC). MTMC is dedicated to the measurement of thermal and mechanical properties in thin-film systems, including microfabricated sensors and actuators and integrated circuits, and features a nanosecond scanning laser thermometry facility, a laser interferometer, a near-field optical microscope, and an atomic force microscope. The activities at MTMC are closely linked to those at the Heat Transfer Teaching Laboratory (HTTL), where undergraduate and master's students use high-resolution probe stations to study thermal phenomena in integrated circuits and thermally-actuated microvalves. HTTL also provides macroscopic experiments in convection and radiative exchange.

The Energy Systems Laboratory is a teaching and research facility dedicated to the study of energy conversion systems. The lab includes three dynamometers for engine testing, a computer-controlled variable

engine valve controller, a fuel-cell experimental station, a small rocket testing facility, and a small jet engine thrust stand.

The Guidance and Control Laboratory, a joint activity of the Department of Aeronautics and Astronautics and the Department of Mechanical Engineering, specializes in construction of electromechanical systems and instrumentation, particularly where high precision is a factor. Work ranges from robotics for manufacturing to feedback control of fuel injection systems for automotive emission control. The faculty and staff work in close cooperation with both the Design and Thermosciences Groups on device development projects of mutual interest.

Many computation facilities are available to department students. Three of the department's labs are equipped with super-minicomputers. Numerous smaller minicomputers and microcomputers are used in the research and teaching laboratories.

Library facilities at Stanford beyond the general library include Engineering, Mathematics, and Physics department libraries.

## Bachelor of Science in Mechanical Engineering

Undergraduates seeking to major in Mechanical Engineering should see the curriculum outlined in the "Undergraduate Degree in Mechanical Engineering" section of this bulletin. The University's basic requirements for the bachelor's degree are discussed in the "Undergraduate Degrees" section of this bulletin. Courses taken for the departmental major (mathematics; science; science, technology, and society; engineering fundamentals; and engineering depth) must be taken for a letter grade if the instructor offers the option.

A Product Design program offered by the Design Group leads to the B.S. in Engineering (Product Design). A major in Biomechanical Engineering offered by the Biomechanical Engineering Group leads to the B.S. in Engineering (Biomechanical Engineering); this may be appropriate for students preparing for medical school or graduate bioengineering studies.

### Grade Requirements

To be recommended by the department for a B.S. in Mechanical Engineering, a student must achieve the minimum grade point average (GPA) set by the School of Engineering (2.0 in engineering fundamentals and mechanical engineering depth).

Students interested in the minor should see the "Minor in Mechanical Engineering" section of this bulletin.

## Mechanical Engineering (ME)

Completion of the undergraduate program in Mechanical Engineering leads to the conferral of the Bachelor of Science in Mechanical Engineering.

## Mission of the Undergraduate Program in Mechanical Engineering

The mission of the undergraduate program in Mechanical Engineering is to provide students with a balance of intellectual and practical experiences that enable them to address a variety of societal needs. The curriculum encompasses elements from a wide array of disciplines built around the themes of biomedicine, computational engineering, design, energy, and multiscale engineering. Course work may include mechatronics, computational simulation, solid and fluid dynamics, microelectromechanical systems, biomechanical engineering, energy science and technology, propulsion, sensing and control, nano- and micro-mechanics, and design. The program prepares students for entry-level work as mechanical engineers and for graduate studies in either

an engineering discipline or another field where a broad engineering background is useful.

### Requirements

#### Mathematics

24 units minimum; see Basic Requirement 1 <sup>1</sup>		
CME 102/ ENGR 155A	Ordinary Differential Equations for Engineers	5
or MATH 53	Ordinary Differential Equations with Linear Algebra	
Select one of the following:		
CME 106/ ENGR 155C	Introduction to Probability and Statistics for Engineers	
STATS 110	Statistical Methods in Engineering and the Physical Sciences	
STATS 116	Theory of Probability	
Plus additional courses to total min. 24		16

#### Science

20 units minimum; see Basic Requirement 2 <sup>1</sup>		
CHEM 31X or ENGR 31	Chemical Principles Accelerated	5
Plus additional required courses <sup>1</sup>		15

#### Technology in Society

One course from approved SoE list; see Basic Requirement 4		3-5
--	--	-----

#### Engineering Fundamentals

Three courses minimum; see Basic Requirement 3 <sup>2</sup>		
ENGR 40	Introductory Electronics	5
ENGR 70A	Programming Methodology (same as CS 106A)	5
Fundamentals Elective <sup>2</sup>		3-5

#### Engineering Depth

Minimum of 68 Engineering Science and Design ABET units; see Basic Requirement 5

ENGR 14	Intro to Solid Mechanics	4
ENGR 15	Dynamics	4
ENGR 30	Engineering Thermodynamics	3
ME 70	Introductory Fluids Engineering	4
ME 80	Mechanics of Materials	4
ME 101	Visual Thinking	4
ME 103D	Engineering Drawing and Design <sup>3</sup>	1
ME 112	Mechanical Systems Design <sup>4</sup>	4
ME 113	Mechanical Engineering Design	4
ME 131A	Heat Transfer	3-5
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	4
ME 140	Advanced Thermal Systems <sup>4</sup>	5
ME 161	Dynamic Systems, Vibrations and Control	4
ME 203	Design and Manufacturing <sup>3</sup>	4

<sup>1</sup> Math and science must total 45 units.

- Math: 24 units required and must include a course in differential equations (CME 102 Ordinary Differential Equations for Engineers or MATH 53 Ordinary Differential Equations with Linear Algebra; one of these required) and calculus-based Statistics (CME 106 Introduction to Probability and Statistics for Engineers or STATS 110 Statistical Methods in Engineering and the Physical Sciences or STATS 116 is required).
- Science: 20 units minimum and requires courses in calculus-based Physics and Chemistry, with at least a full year (3 courses) in one or the other. CHEM 31A Chemical Principles I/CHEM 31B Chemical Principles II are considered one course because they cover the same material as CHEM 31X Chemical Principles Accelerated but at a slower pace. CHEM 31X Chemical Principles Accelerated or ENGR 31 are recommended.

- <sup>2</sup> ME Fundamental elective may not be a course counted for other requirements. Students may opt to use ENGR 14 Intro to Solid Mechanics, ENGR 15 Dynamics, or ENGR 30 Engineering Thermodynamics from the required depth courses as the third fundamental class. However, total units for Engineering Topics (Fundamentals + Depth) must be a minimum of 68 units; additional options courses may be required to meet unit requirements. ENGR 70A (CS 106A) must be taken for 5 units.
- <sup>3</sup> Courses ME 103D and ME 203 must be taken concurrently .
- <sup>4</sup> ME 112, ME 131A and ME 140 together fulfill the WIM requirement.

Options to complete the ME depth sequence: see the list of options in the ME major section of the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

## Honors Program

The Department of Mechanical Engineering offers a program leading to a B.S. in Mechanical Engineering with honors. This program offers a unique opportunity for qualified undergraduate engineering majors to conduct independent study and research at an advanced level with a faculty mentor.

Mechanical Engineering majors who have a grade point average (GPA) of 3.5 or higher in the major may apply for the honors program. Students who meet the eligibility requirement and wish to be considered for the honors program must submit a written application to the Mechanical Engineering student services office no later than the second week of Autumn Quarter in the senior year. The application to enter the program can be obtained from the ME student services office, and must contain a one-page statement describing the research topic and include an unofficial Stanford transcript. In addition, the application must be approved by a Mechanical Engineering faculty member who agrees to serve as the thesis adviser for the project. Thesis advisers must be members of Stanford's Academic Council.

In order to receive departmental honors, students admitted to the program must:

1. maintain the 3.5 GPA required for admission to the honors program.
2. submit a completed thesis draft to the adviser by April 25. Further revisions and final endorsement by the adviser are to be finished by May 15, when two bound copies are to be submitted to the Mechanical Engineering student services office.
3. present the thesis at the Mechanical Engineering Poster Session held in mid-April.

## Mechanical Engineering (ME) Minor

The following courses fulfill the minor requirements:

### General Minor \*

ENGR 14	Intro to Solid Mechanics	4
ENGR 15	Dynamics	4
ENGR 30	Engineering Thermodynamics	3
ME 70	Introductory Fluids Engineering	4
ME 101	Visual Thinking	4
Plus two of the following:		8-9
ME 80	Mechanics of Materials	
ME 131A	Heat Transfer	
ME 161	Dynamic Systems, Vibrations and Control	
ME 203	Design and Manufacturing	

### Thermosciences Minor \*\*

ENGR 14	Intro to Solid Mechanics	4
ENGR 30	Engineering Thermodynamics	3
ME 70	Introductory Fluids Engineering	4
ME 131A	Heat Transfer	5
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	4
ME 140	Advanced Thermal Systems	5

### Mechanical Design Minor \*\*\*

ENGR 14	Intro to Solid Mechanics	4
ENGR 15	Dynamics	4
ME 80	Mechanics of Materials	4
ME 101	Visual Thinking	4
ME 112	Mechanical Systems Design	4
ME 203	Design and Manufacturing	4
Plus one of the following:		3-4
ME 113	Mechanical Engineering Design	
ME 210	Introduction to Mechatronics	
ME 220	Introduction to Sensors	

Total Units 79-81

- \* This minor aims to expose students to the breadth of ME in terms of topics and analytic and design activities. Prerequisites: MATH 41 Calculus, MATH 42 Calculus, and PHYSICS 41 Mechanics.
- \*\* Prerequisites: MATH 41 Calculus, MATH 42 Calculus, MATH 51 Linear Algebra and Differential Calculus of Several Variables (or CME 100 Vector Calculus for Engineers) and PHYSICS 41 Mechanics.
- \*\*\* This minor aims to expose students to design activities supported by analysis. Prerequisites: MATH 41 Calculus, PHYSICS 42 Classical Mechanics Laboratory, and PHYSICS 41 Mechanics.

## Coterminal Master of Science Program in Mechanical Engineering

Stanford undergraduates who wish to continue their studies for the master of science degree in the coterminal program must have earned a minimum of 120 units towards graduation. This includes allowable Advanced Placement (AP) and transfer credit. Applicants must submit the Application for Admission to Coterminal Masters' Program (<https://stanford.box.com/CotermApplic>) no later than the quarter prior to the expected completion of their undergraduate degree. This is normally Winter Quarter (late January) prior to Spring Quarter graduation.

The application must provide evidence of potential for strong academic performance as a graduate student. The Mechanical Engineering department graduate admissions committee makes decisions on each application. Typically, a GPA of at least 3.5 in engineering, science, and math is expected. Applicants must have completed two of ME 80 Mechanics of Materials, ME 112 Mechanical Systems Design, ME 131A Heat Transfer, and ME 131B Fluid Mechanics: Compressible Flow and Turbomachinery, and must take the Graduate Record Examination (GRE) before action is taken on the application.

Coterminal information, applications deadlines, and forms can be obtained from the ME student services office.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Master of Science in Mechanical Engineering

The basic University requirements for the M.S. degree are discussed in the "Graduate Degrees (p. 45)" section of this bulletin .

The master's program consists of 45 units of course work taken at Stanford. No thesis is required, although many students become involved in research projects during the master's program, particularly to explore their interests in working towards a Ph.D. degree. Students whose undergraduate backgrounds are entirely devoid of some of the major subject disciplines of engineering (for example, applied mechanics, applied thermodynamics, fluid mechanics, ordinary differential equations) may need to take some undergraduate courses to fill obvious gaps and prepare themselves to take graduate courses in these areas. Such students may require more than three quarters to fulfill the master's degree requirements, as the makeup courses may only be used as unrestricted electives (see item 4 below) in the M.S. degree program. However, it is not the policy to require fulfillment of mechanical engineering B.S. degree requirements to obtain an M.S. degree.

### Mechanical Engineering

The master's degree program requires 45 units of course work taken as a graduate student at Stanford. No thesis is required. However, students who want some research experience during the master's program may participate in research through ME 391 Engineering Problems and ME 392 Experimental Investigation of Engineering Problems.

Students are encouraged to refer to the most recent *Mechanical Engineering Graduate Student Handbook* provided by the student services office. The department's requirements for the M.S. in Mechanical Engineering are as follows:

- Mathematical Fundamentals:** two mathematics courses for a total of at least 6 units from the following list are required: ME 300A, 300B, 300C, 408; CME 302; EE 261, 263; ENGR 155C/CME106. Only MATH courses with catalog numbers greater than 100 and CME courses with catalog numbers greater than 200 will count towards the math requirement. However, courses must cover two different areas out of the following choices: partial differential equations, linear algebra, numerical analysis and statistics. This excludes programming classes such as CS 106; CME 211, 212, 213, 214, 292. Those classes can counted towards the Approved Electives category. Courses taken for the math requirement must be taken for a letter grade.
- Depth in Mechanical Engineering:** a set of graduate-level courses in Mechanical Engineering to provide depth in one area. The faculty have approved these sets as providing depth in specific areas as well as a significant component of applications of the material in the context of engineering synthesis. These sets are outlined in the *Mechanical Engineering Graduate Student Handbook*. Depth courses must be taken for a letter grade.
- Breadth in Mechanical Engineering:** two additional graduate level courses (outside the depth) from the depth/breadth charts listed in the *Mechanical Engineering Graduate Handbook*. Breadth courses must be taken for a letter grade.
- Sufficient Mechanical Engineering Course Work:** students must take a minimum of 24 units of course work in mechanical engineering topics. For the purposes of determining mechanical engineering topics, any course on approved lists for the mathematics, depth, and breadth requirements counts towards these units. In addition, any graduate-level course with an ME course number is considered a mechanical engineering topic.
- Approved Electives** (to bring the total number of units to at least 39): electives must be approved by an adviser. Graduate engineering, mathematics, and science courses are normally approved. Approved electives must be taken for a letter grade. No more than 6 of the 39 units may come from ME 391/392 (or other independent study/research courses), and no more than 3 may come from seminars. Students planning a Ph.D. should discuss with their advisers the option of taking 391 or 392 during the master's program. ME 391/392 (and other independent study courses) may only be taken on a credit/no credit basis.
- Unrestricted electives** (to bring the total number of units submitted for the M.S. degree to 45): students are encouraged to take these units outside engineering, mathematics, or the sciences. Students should consult their advisers on course loads and on ways to use the unrestricted electives to make a manageable program. Unrestricted electives must have catalog numbers greater than 100. Unrestricted electives may be taken CR/NC.
- Within the courses satisfying the requirements above, there must be at least one graduate-level course with a laboratory component. Courses which satisfy this requirement are:

		Units
ENGR 206	Control System Design	3-4
ENGR 341	Micro/Nano Systems Design and Fabrication	3-5
ME 203	Design and Manufacturing	4
ME 210	Introduction to Mechatronics	4
ME 220	Introduction to Sensors	3-4
ME 218A	Smart Product Design Fundamentals	4-5
ME 218B	Smart Product Design Applications	4-5
ME 218C	Smart Product Design Practice	4-5
ME 218D	Smart Product Design: Projects	3-4
ME 250	Internal Combustion Engines	3-5
ME 310A	Product-Based Engineering Design, Innovation, and Development	4
ME 310B	Product-Based Engineering Design, Innovation, and Development	4
ME 310C	Project-Based Engineering Design, Innovation, and Development	4
ME 317A	Design Methods: Product Definition	4
ME 317B	Design Methods: Quality By Design	4
ME 318	Computer-Aided Product Creation	4
ME 323	Modeling and Identification of Mechanical Systems for Control	3
ME 324	Precision Engineering	4
ME 348	Experimental Stress Analysis	3
ME 354	Experimental Methods in Fluid Mechanics	4
ME 367	Optical Diagnostics and Spectroscopy Laboratory	4
ME 382A		4
ME 382B		4

ME 385	Tissue Engineering Lab	1-2
ME 391/392	Engineering Problems	1-10
Or other independent study courses may satisfy this requirement if 3 units are taken for work involving laboratory experiments		

Candidates for the M.S. in Mechanical Engineering are expected to have the approval of the faculty; they must maintain a minimum grade point average (GPA) of 3.0 in the 45 units presented for fulfillment of degree requirements (exclusive of independent study courses). All courses used to fulfill mathematics, depth, breadth, approved electives, and lab studies must be taken for a letter grade (excluding seminars, independent study, and courses for which a letter grade is not an option for any student).

Students falling below a GPA of 2.5 at the end of 20 units may be disqualified from further registration. Students failing to meet the complete degree requirements at the end of 60 units of graduate registration are disqualified from further registration. Courses used to fulfill deficiencies arising from inadequate undergraduate preparation for mechanical engineering graduate work may not be applied to the 45 units required for completion of the MS degree.

### Engineering

As described in the "School of Engineering" section of this bulletin, each department in the school may sponsor students in a more general degree, the M.S. in Engineering. Sponsorship by the Department of Mechanical Engineering (ME) requires (1) filing a petition for admission to the program by no later than the day before instruction begins, and (2) that the center of gravity of the proposed program lies in ME. No more than 18 units used for the proposed program may have been previously completed. The program must include at least 9 units of graduate-level work in the department other than ME 300A,B,C, seminars, and independent study. The petition must be accompanied by a statement explaining the program objectives and how it is coherent, contains depth, and fulfills a well-defined career objective. The grade requirements are the same as for the M.S. in Mechanical Engineering.

### Master of Science in Engineering, Biomechanical Engineering

The Master of Science in Engineering: Biomechanical Engineering (MSE:BME) promotes the integration of engineering mechanics and design with the life sciences. Applicants are expected to have an additional exposure to biology and/or bioengineering in their undergraduate studies. Students planning for subsequent medical school studies are advised to contact Stanford's Premedical Advising Office in Sweet Hall.

Students wishing to pursue this program must complete the Graduate Program Authorization form and get approval from the Student Services Office. This form serves to officially add the field to the student's record. This form must be filled out electronically on AxBESS. The Mechanical Engineering Department does not have a coterminal Biomechanical Engineering Master's program.

### Degree Requirements

1. Mathematical competence (minimum 6 units) in two of the following areas: partial differential equations, linear algebra, complex variables, or numerical analysis, as demonstrated by completion of two appropriate courses from the following list: ME300A,B,C; MATH106, 109, 113, 131M/P, 132; STATS110, or ENGR155C; CME108, 302. Students who have completed comparable graduate-level courses as an undergraduate, and who can demonstrate their competence to the satisfaction of the instructors of the Stanford courses, may be waived via petition from this requirement by their adviser and the Student Services Office. The approved equivalent courses should be placed in the approved electives category of the program proposal.
2. Graduate Level Engineering Courses (minimum 21 units), consisting of:

- a. Biomechanical engineering restricted electives (9 units) to be chosen from:

ME 239	Mechanics of the Cell	3
ME 280	Skeletal Development and Evolution	3
ME 281	Biomechanics of Movement	3
ME 287	Mechanics of Biological Tissues	3
ME 337	Mechanics of Growth	3
ME 381	Orthopaedic Bioengineering	3-4
ME 382A		4
ME 385	Tissue Engineering Lab	1-2
ME 387	Soft Tissue Mechanics	3

- b. Specialty in engineering (9-12 units): A set of three or four graduate level courses in engineering mechanics, materials, controls, or design (excluding bioengineering courses) selected to provide depth in one area. Such sets are approved by the Mechanical Engineering Faculty. Comparable specialty sets composed of graduate engineering courses outside the Mechanical Engineering Department can be used with the approval of the student's adviser. Examples can be obtained from the Biomechanical Engineering Group Office (Durand 223).
  - c. Graduate engineering electives (to bring the total number of graduate level engineering units to at least 21). These electives must contribute to a cohesive degree program, and be approved by the student's adviser. No units may come from bioengineering courses, mathematics courses, or seminars.
3. Life science approved electives (minimum 6 units): Undergraduate or graduate biological/medical science/chemistry courses which contribute to a cohesive program.
  4. Biomechanical engineering seminar ME 389 Biomechanical Research Symposium.
  5. General approved electives (to bring the total number of units to 39): These courses must be approved by the student's adviser. Graduate level engineering, math, and physical science courses and upper division undergraduate or graduate life science courses are normally approved.
  6. Unrestricted electives (to bring the total number of units to 45): Students without undergraduate biology are encouraged to use some of these unrestricted units to strengthen their biology background. Students should consult their adviser for recommendations on course loads and on ways to use the unrestricted electives to create a manageable program. Unrestricted electives must have catalog numbers greater than 100.

All courses except unrestricted electives must be taken for a letter grade unless letter grades are not an option. A minimum cumulative GPA of 3.0 is required for degree conferral.

## Master of Science in Engineering, Product Design

The Masters Program in Design focuses on the synthesis of technology with human needs and market viability (both profit and non-profit models) to create innovative products, services and experiences. This program is offered jointly by the departments of Mechanical Engineering and Art and Art History. It provides a design thinking education that seeks to create design leaders who can transform organizations into cultures of creativity and innovation. Students entering the program from the engineering side will earn a Master of Science in Engineering degree with a concentration in Design (MSE-Design); those from the Art side earn a Master of Fine Arts and Design (MFA-Design). Students complete

the core product design courses in their first year of graduate study at Stanford before undertaking the master's project in their second year.

## Degree Requirements

Please check with the Mechanical Engineering Department Student Services Office for updates on degree requirements.

Students must complete the following courses. Students making unsatisfactory degree progress by the end of the first year, at the faculty's discretion, may not advance to the second year (Masters Project Year). A minimum cumulative GPA of 3.0 and 60 units are required for degree conferral.

		Units
ME 203	Design and Manufacturing	4
ME 277	Graduate Design Research Techniques	3-4
ME 312	Advanced Product Design: Formgiving	3
ME 313	Human Values and Innovation in Design	3
ME 316A/316B/316C	Product Design Master's Project *	2-6
ARTSTUDI 350A/350B	Art & Design I: History and Theory **	3
Approved Electives - including at least one d.School class ***		28

- \* ME 316A Product Design Master's Project and B/C are taken sequentially for three quarters during the second year. ME316B & C are listed on the d.School website as Design Garage: A Deep Dive in Design Thinking. Students in the Masters of Science program just take this sequence for 4-6 units per quarter.
- \*\* ARTSTUDI 350A Art & Design I: History and Theory & B are taken sequentially for two quarters during the first year, starting in the fall quarter.
- \*\*\* Students may choose classes (at the 200 level or higher) from any of the schools at the University to fulfill their elective requirement. However, electives that are not already pre-approved must be approved by the student's adviser via petition prior to enrollment. Electives should be chosen to fulfill career objectives; students may focus their energy in engineering, entrepreneurship and business, psychology, or other areas relevant to design. Taking a coherent sequence of electives focused on a subject area is recommended. For example, the patent, negotiation, and licensing classes (ME 208 Patent Law and Strategy for Innovators and Entrepreneurs, ME 265 Technology Licencing and Commercialization) constitute a sequence most relevant to potential inventors. Students interested in social entrepreneurship should apply to the d.school course ME 206A Entrepreneurial Design for Extreme Affordability, B, Extreme Affordability.

Note: All required and approved electives must be taken for a letter grade unless prior approval is granted to take a class CR/NC.

### Pre-approved electives list

The following courses are pre-approved for fulfilling the elective requirement for the Masters Degree in Engineering - Design. Electives not on this list must be approved via petition prior to enrollment. Electives must be taken for a letter grade unless prior approval is obtained.

		Units
ME 208	Patent Law and Strategy for Innovators and Entrepreneurs	2-3
ME 212	Calibrating the Instrument	1
ME 265	Technology Licencing and Commercialization	3
ME 238	Patent Prosecution	2
ME 297	Forecasting for Innovators: Technology, Tools & Social Change	3

ME 304	The Designer's Voice	1
ME 315	The Designer in Society	3
MS&E 273	Technology Venture Formation	3-4
STRAMGT 353	Entrepreneurship: Formation of New Ventures	4
STRAMGT 356/366	The Startup Garage: Design	4

### Additional requirements

As part of their Masters Degree program, and in addition to Design Garage (ME316B/C), students are required to take at least one course offered by the Hasso Plattner Institute of Design (the d.School). All d.School courses require applications submitted the quarter prior to the start of class. All d.School classes (with the exception of 'pop-ups') count as pre-approved electives. Suggest classes are found below.

		Units
ME 206A/206B	Entrepreneurial Design for Extreme Affordability <sup>1</sup>	4
ENGR 231	Transformative Design	3-5
ENGR 280	From Play to Innovation	2-4
ENGR 281	d.media 4.0 - Designing Media that Matters	2-3
ME 301	LaunchPad: Design and Launch your Product or Service	4

- <sup>1</sup> Students who opt to take ME 206A Entrepreneurial Design for Extreme Affordability & ME 206B Entrepreneurial Design for Extreme Affordability as one of their pre-approved electives should take the sequence during the first year. This shifts ME 312 Advanced Product Design: Formgiving from first year to second year (Winter).

## Engineer in Mechanical Engineering

The basic University requirements for the degree of Engineer are discussed in the "Graduate Degrees (p. 45)" section of this bulletin.

This degree requires an additional year of study beyond the M.S. degree and includes a research thesis. The program is designed for students who wish to do professional engineering work upon graduation and who want to engage in more specialized study than is afforded by the master's degree alone.

Admission standards are substantially the same as indicated under the master's degree. However, since thesis supervision is required and the availability of thesis supervisors is limited, admission is not granted until the student has personally engaged a faculty member to supervise a research project. This most often involves a paid research assistantship awarded by individual faculty members (usually from the funds of sponsored research projects under their direction). Thus, individual arrangement between student and faculty is necessary. Students studying for the M.S. degree at Stanford who wish to continue to the Engineer degree ordinarily make such arrangements during the M.S. degree program. Students holding master's degrees from other universities are invited to apply and may be admitted providing they are sufficiently well qualified and have made thesis supervision and financial aid arrangements.

Department requirements for the degree include a thesis; up to 18 units of credit are allowed for thesis work (ME 400 Thesis). In addition to the thesis, 27 units of approved advanced course work in mathematics, science, and engineering are expected beyond the requirements for the M.S. degree; the choice of courses is subject to approval of the adviser. Students who have not fulfilled the Stanford M.S. degree requirements are required to do so, with allowance for approximate equivalence of courses taken elsewhere; up to 45 units may be transferable. A total of 90 units is required for degree conferral.

Candidates for the degree must have faculty approval and have a minimum grade point average (GPA) of 3.0 for all courses (exclusive of

thesis credit and other independent study courses) taken beyond those required for the master's degree.

## Doctor of Philosophy in Mechanical Engineering

The basic University requirements for the Ph.D. degree are discussed in the "Graduate Degree" section of this bulletin. The Ph.D. degree is intended primarily for students who desire a career in research, advanced development, or teaching; for this type of work, a broad background in mathematics and the engineering sciences, together with intensive study and research experience in a specialized area, are the necessary requisites.

Ph.D. students must have a master's degree from another institution, or must fulfill the requirements for the Stanford M.S. degree in Mechanical Engineering or another discipline.

In special situations dictated by compelling academic reasons, Academic Council members who are not members of the department's faculty may serve as the principal dissertation adviser when approved by the department. In such cases, a member of the department faculty must serve as program adviser and as a member of the reading committee, and agree to accept responsibility that department procedures are followed and standards maintained.

Admission involves much the same consideration described under the Engineer degree. Since thesis supervision is required, admission is not granted until the student has personally engaged a member of the faculty to supervise a research project. Once a student has obtained a research supervisor, this supervisor becomes thereafter the student's academic adviser. Research supervisors may require that the student pass the departmental qualifying examination before starting research and before receiving a paid research assistantship. Note that research assistantships are awarded by faculty research supervisors and not by the department.

Prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate knowledge of engineering fundamentals by passing a qualifying examination. The academic level and subject matter of the examination correspond approximately to the M.S. program described above. Typically, the exam is taken shortly after the student completes the M.S. degree requirements. The student is required to have a minimum graduate Stanford GPA of 3.5 to be eligible for the exam (grades from independent study courses are not included in the GPA calculation). Once the student's faculty sponsor has agreed that the exam should be scheduled, the student must submit an application folder containing several items including a curriculum vitae, research project abstract, and preliminary dissertation proposal. Information, examination dates, and deadlines may be obtained from the department's student services office.

Ph.D. candidates must complete a minimum of 21 units (taken for a letter grade) of approved formal course work (excluding research, directed study, and seminars) in advanced study beyond the M.S. degree. The courses should consist primarily of graduate courses in engineering and sciences, although the candidate's adviser may approve a limited number of upper-level undergraduate courses and courses outside of engineering and sciences, as long as such courses contribute to a strong and coherent program. In addition to this 21-unit requirement, all Ph.D. candidates must participate each quarter in one of the following (or equivalent) seminars:

		Units
ME 389	Biomechanical Research Symposium	1
ME 390	Thermosciences Research Project Seminar	1
ME 395	Seminar in Solid Mechanics	1
ME 396		1

ME 397	Design Theory and Methodology Seminar	1-3
AA 297	Seminar in Guidance, Navigation, and Control	1
ENGR 298	Seminar in Fluid Mechanics	1
ENGR 311A/311B	Women's Perspectives	1

The department has a breadth requirement for the Ph.D. degree. This may be satisfied either by a formal minor in another department (generally 20 units) or by at least 9 units of course work (outside of the primary research topic) which are approved by the principal dissertation adviser. If a minor is taken, 9 units from the minor requirements can be counted towards the depth requirement.

The Ph.D. thesis normally represents at least one full year of research work and must be a substantial contribution to the field. Students may register for course credit for thesis work (ME 500) to help fulfill University academic unit requirements, but there is no minimum limit on registered dissertation units, as long as students are registered in at least 8 units (10 is recommended) per quarter prior to TGR. Candidates should note that only completed course units are counted toward the requirement, so ungraded courses or courses with an "N" grade must be cleared before going TGR. Questions should be directed to the department student services office.

The final University oral examination (dissertation defense) is conducted by a committee consisting of a chair from another department and four faculty members of the department or departments with related interests. Usually, the committee includes the candidate's adviser, reading committee members, plus two more faculty. The examination consists of two parts. The first is open to the public and is scheduled as a seminar talk, usually for one of the regular meetings of a seminar series. The second is conducted in private and covers subjects closely related to the dissertation topic.

### Ph.D. Minor in Mechanical Engineering

Students who wish a Ph.D. minor in ME should consult with the ME student services office. A minor in ME may be obtained by completing 20 units of approved graduate-level ME courses. Courses approved for the minor must form a coherent program and must be chosen from those satisfying requirement 2 for the M.S. in Mechanical Engineering.

See the *Mechanical Engineering Graduate Student Handbook* produced by the Mechanical Engineering student services office for more information.

### Mechanical Engineering Course Catalog Numbering System

The department uses the following course numbering system:

Number	Level
010-099	Freshman and Sophomore
100-199	Junior and Senior
200-299	Advanced Undergraduate and Beginning Graduate
300-399	Graduate
400-499	Advanced Graduate
500	Ph.D. Thesis

*Emeriti:* (Professors) James L. Adams, Peter Bradshaw\*, Daniel B. DeBra, Robert H. Eustis, Thomas J. R. Hughes, James P. Johnston, Thomas R. Kane, William M. Kays, Joseph B. Keller, Charles H. Kruger, Robert H. McKim, Robert J. Moffat,\* M. Godfrey Mungal\*, J. David Powell, Charles R. Steele,\* Douglass J. Wilde,\* (*Professors, Research*) Richard M. Christensen, Sidney A. Self, Kenneth J. Waldron, Felix E. Zajac

*Chair:* Kenneth E. Goodson

*Group Chairs:* Mark R. Cutkosky (Design), Scott L. Delp (Biomechanical Engineering), Parviz Moin (Flow Physics and Computational Engineering), Peter M. Pinsky (Mechanics and Computation), Mark A. Cappelli (Thermosciences)

*Professors:* Thomas P. Andriacchi, David M. Barnett, Craig T. Bowman, Brian J. Cantwell, Mark A. Cappelli, Dennis R. Carter, Mark R. Cutkosky, Scott L. Delp, John K. Eaton, Christopher F. Edwards, Charbel Farhat, Kenneth E. Goodson, Ronald K. Hanson, David M. Kelley, Thomas W. Kenny, Larry J. Leifer, Sanjiva K. Lele, Arun Majumdar, Reginald E. Mitchell, Parviz Moin, Drew V. Nelson, Peter M. Pinsky, Friedrich B. Prinz, Bernard Roth, Juan G. Santiago, Eric S. G. Shaqfeh, Sheri D. Sheppard, Hai Wang

*Associate Professors:* Wei Cai, Eric F. Darve, J. Christian Gerdes, Gianluca Iaccarino, Ellen Kuhl, Marc E. Levenston, Adrian J. Lew, Allison M. Okamura, Beth L. Pruitt

*Assistant Professors:* Ovijit Chaudhuri, W. Matthias Ihme, David Lentink, Ali Mani, Sindy K.-Y. Tang, Xiaolin Zheng

*Professor (Teaching):* David W. Beach

*Associate Professor (Teaching):* Shilajeet S. Banerjee

*Courtesy Professors:* Fu-Kuo Chang, Reinhold Dauskardt, Oussama Khatib, Paul Yock

*Courtesy Associate Professor:* Margot G. Gerritsen, Nicholas Giori

*Courtesy Professor (Research):* J. Kenneth Salisbury

*Courtesy Professor (Teaching):* Shelley V. Goldman

*Senior Lecturers:* Vadim Khayms, J. Craig Milroy

*Consulting Professors:* Gary S. Beaupré, J. Edward Carryer, David M. Golden, Barry M. Katz, Paul Mitiguy, Johannes Schoonman, Edith Wilson

*Consulting Associate Professors:* Mehdi Asheghi, Rainer J. Fasching, John A. Howard, Gary O'Brien, R. Matthew Ohline, Sunil Puria, Paul L. Saffo III, Lester K. Su, Marc F. Theeuwes

*Consulting Assistant Professors:* Michael R. Barry, William R. Burnett, Jonathan Edelman

\* Recalled to active duty.

## Overseas Studies Courses in Mechanical Engineering

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

OSPKYOTO 66	Robotics: Technology and Culture	3
OSPMADRD 49	Structure and Shape: From the Middle Ages to the Present	3

# SCHOOL OF HUMANITIES AND SCIENCES

The largest of Stanford's seven schools, the School of Humanities and Sciences is the center of the University's liberal arts education. Through exposure to the humanities and arts, undergraduate and graduate students consider the ethical, aesthetic, and intellectual dimensions of the human experience, past and present, and are thereby prepared to make thoughtful and imaginative contributions to the culture of the future. Through the study of social, political, and economic events, they acquire theories and techniques for the analysis of specific societal issues, as well as general cross-cultural perspectives on the human condition. And through exposure to the methods and discoveries of mathematics and the sciences, they become well-informed participants and leaders in today's increasingly technological societies.

The School of Humanities and Sciences is comprised of academic departments, which are organized into three clusters, each with its own distinct character.

- Humanities and Arts
  - Art and Art History
  - Classics
  - Division of Literatures, Cultures, and Languages
    - Comparative Literature
    - French and Italian
    - German Studies
    - Iberian and Latin American Cultures
    - Slavic Languages and Literatures
  - East Asian Languages and Cultures
  - English
  - History
  - Linguistics
  - Music
  - Philosophy
  - Religious Studies
  - Theater and Performance Studies
- Social Sciences
  - Anthropology
  - Communication
  - Economics
  - Political Science
  - Psychology
  - Sociology
- Natural Sciences
  - Applied Physics
  - Biology (including Hopkins Marine Station)
  - Chemistry
  - Mathematics
  - Physics
  - Statistics

The school also includes interdisciplinary degree programs that bridge traditionally disparate fields in the humanities and sciences: African and African American Studies; African Studies; American Studies; Archaeology; Arts; Biophysics; Comparative Studies in Race and Ethnicity; East Asian Studies; Ethics in Society; Feminist, Gender, and Sexuality Studies; Global Studies; Human Biology; Humanities;

International Policy Studies; International Relations; Latin American Studies; Mathematical and Computational Science; Modern Thought and Literature; Public Policy; Russian, East European and Eurasian Studies; Science, Technology, and Society; Symbolic Systems; and Urban Studies.

In addition, the school has diverse programs and research centers that do not currently grant degrees such as the Bill Lane Center for the American West; the Center for Computer Research in Music and Acoustics; the Center for Molecular Analysis; the Confucius Institute; the Center for Medieval and Early Modern Studies; the Michelle R. Clayman Center for Gender Research; the Jasper Ridge Biological Preserve; and the Institute for Research in the Social Sciences. For more information about the School of Humanities and Sciences and a complete listing of research centers and programs, see the School's web site (<http://exploreddegrees.stanford.edu/schoolofhumanitiesandsciences/%20http://humsci.stanford.edu/about>).

Prospective applicants and candidates for the degree of Bachelor of Arts, Bachelor of Science, Bachelor of Arts and Sciences, Master of Arts, Master of Fine Arts, Master of Public Policy, Master of Science, Doctor of Musical Arts, or Doctor of Philosophy should consult the relevant department or program for detailed information about application procedures and degree requirements.

## Faculty

*Dean:* Richard P. Saller

*Senior Associate Deans:* Ralph L. Cohen, Ellen M. Markman, Debra M. Satz

*Senior Associate Dean for Finance and Administration:* Adam R. Daniel

*Associate Dean for Faculty Affairs:* Tina Kass

*Associate Dean for Graduate and Undergraduate Studies:* Susan J. Weersing

*Assistant Dean for Diversity Programs, Data and Technology:* Ayodele Thomas

*Assistant Dean for Curricular and Academic Support:* Beth McKeown

*Graduate Diversity Recruitment Officer:* Joseph L. Brown

*Department Chairs:* B. Douglas Bernheim (Economics), Emmanuel Candes (Statistics; effective Winter Quarter), Dan Edelstein (Division of Literatures, Cultures, and Languages), Ronald Egan (East Asian Languages and Cultures), Paula Findlen (History), Judith L. Goldstein (Political Science), Ian H. Gotlib (Psychology), Paul M. Harrison (Religious Studies), Keith O. Hodgson (Chemistry), Branislav Jakovljevic (Theater and Performance Studies), Dan Jurafsky (Linguistics), Krista Lawlor (Philosophy), Hideo Mabuchi (Applied Physics), Peter F. Michelson (Physics), Alexander Nemerov (Art and Art History), Stephen Palumbi (Hopkins Marine Station), Grant Parker (Classics), Stephen Makoto Sano (Music), Tim Stearns (Biology), Fred Turner (Communication), Guenther Walther (Statistics; through Autumn Quarter), Brian White (Mathematics), Alex Woloch (English), Sylvia J. Yanagisako (Anthropology), Xueguang Zhou (Sociology)

*Lecturer:* Ayodele Thomas

## African and African American Studies Undergraduate Program in African and African American Studies

The Program in African and African American Studies (AAAS), established in 1969, was the first ethnic studies program developed at Stanford University and the first African and African American Studies program at a private institution in the U.S. The AAAS program provides an interdisciplinary introduction to the study of peoples of African descent

as a central component of American culture, offering a course of study that promotes research across disciplinary and departmental boundaries as well as providing research training and community service learning opportunities for undergraduates. It has developed an extensive network of Stanford scholars who work in race studies specific to AAAS and in concert with the Center for Comparative Studies in Race and Ethnicity.

AAAS encourages an interdisciplinary program of study drawn from fields including anthropology, art, art history, economics, education, drama, history, languages, linguistics, literature, music, philosophy, political science, psychology, religion, and sociology. The program emphasizes rigorous and creative scholarship and research, and fosters close academic advising with a faculty adviser, the AAAS Associate Director, and the Director.

AAAS is an interdisciplinary program (IDP) affiliated with the Center for Comparative Studies in Race and Ethnicity (p. 400) (CCSRE) and offers a major independent of it. CCSRE offers additional majors in Asian American Studies, Chicana/o Studies, Comparative Studies in Race and Ethnicity, and Native American Studies.

The Interdisciplinary Program in African and African American Studies (AAAS) provides students the opportunity to structure a major or minor with a core curriculum designed to develop a comparative and multidisciplinary understanding of the experiences and communities on the continent of Africa and African Americans within a broader global, diasporic dialogue. Additionally, majors or minors can focus their course work in one of eleven thematic concentrations.

The directors of the program and the advisory board constitute the AAAS curriculum committee, the policy making body for the interdisciplinary program.

## Mission Statement for the Undergraduate Program in African and African American Studies

The mission of the undergraduate program in African and African American Studies is to provide students with an interdisciplinary introduction to the study of people of African descent as a central component of American culture. Courses in the major promote research across disciplinary and departmental boundaries as well as provide students with research training and community service learning opportunities. Courses of study are drawn from anthropology, art, art history, economics, education, drama, history, languages, linguistics, literature, music, philosophy, political science, psychology, religion, and sociology among others. The program provides an intellectual background for students considering graduate school or professional careers.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the program's undergraduate program. Students are expected to demonstrate:

1. an interdisciplinary understanding of scholarship related to the African diaspora and Africa, drawing on interdisciplinary course work and each student's individualized concentration.
2. the ability to identify and critically assess different disciplinary, methodological, and interpretive approaches to the study of African Americans, Africans, and/or people of the African diaspora.
3. an understanding of comparative approaches to race.
4. skills in disciplinary methods necessary for their study.

5. the ability to express their interpretive and analytical arguments in clear, effective prose.

## Bachelor of Arts in African and African American Studies

### Core Curriculum

All core courses taken for the major must be taken for a letter grade.

### Requirements

Majors must complete a total of 60 units, consisting of the following:

1. One of two required courses:
  - a. AFRICAAM 43 Introduction to English III: Introduction to African American Literature (5 units), or
  - b. AFRICAAM 105 Introduction to African and African American Studies (5 units)
2. One Social Science course from AAAS approved core course list. (<https://explorecourses.stanford.edu/search?page=0&catalog=&q=AAAS%3a%3ass&filter-coursestatus-Active=on&view=catalog&academicYear=&collapse=>) (5 units)
3. One Humanities course from AAAS approved core course list. (<https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3A%3Ah&collapse=>) (5 units)
4. One course in African Studies (<http://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3A%3Aafrica&collapse=>). (5 units)
5. AFRICAAM 200X Honors Thesis and Senior Thesis Seminar - WIM. (5 units)
6. 35 units of AAAS core (<https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3A%3Acore&collapse=>) and related (<https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3A%3Arelated&collapse=>) courses
  - At least 10 of the 35 units must be core courses (<https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3A%3Acore&collapse=>), which are defined as courses that are primarily focused on Africa (<https://explorecourses.stanford.edu/search?q=AAAS%3A%3Aafrica&view=catalog&page=0&academicYear=&collapse=&filter-coursestatus-Active=on>), African American Studies, the Caribbean (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3acaribbean+&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=>), or the African Diaspora (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3adiaspora&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=>).

Students also work closely with a faculty adviser, the AAAS associate director, and the AAAS director in developing a coherent thematic emphasis within their major that reflects their scholarly interests in the field.

### Thematic Emphasis

AAAS majors select a thematic emphasis. Selecting an emphasis allows students to customize their curriculum and synthesize coursework

taken across various departments and programs into a coherent focus. Emphases offered include (but are not limited to):

- Africa (<https://explorecourses.stanford.edu/search?q=AAAS%3A%3Aafrica&view=catalog&page=0&academicYear=&collapse=&filter-coursestatus-Active=on>)
- African Americans
- Class
- Diaspora (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3adiaspora&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=>)
- Education (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3aeducation&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=>)
- Gender (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3agender&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=>)
- Historical Period ([https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3ahistorical\\_period&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=](https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3ahistorical_period&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=))
- Identities, Diversity, and Aesthetics (IDA) (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3aaida&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=>)
- Linguistics (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3alanguage+&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=>)
- Mixed Race ([https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3amixed\\_race&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=](https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3amixed_race&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=))
- Theory (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3atheory&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=>)

## Core Courses

		Units
AFRICAAM 16N	African Americans and Social Movements	3
AFRICAAM 19	Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music	3-4
AFRICAAM 21	African American Vernacular English	3-5
AFRICAAM 30	The Egyptians	3-5
AFRICAAM 31	RealTalk: Intimate Discussions about the African Diaspora	1
AFRICAAM 32	The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice	1-5
AFRICAAM 43	Introduction to English III: Introduction to African American Literature	5
AFRICAAM 47	History of South Africa	3
AFRICAAM 48Q	South Africa: Contested Transitions	4
AFRICAAM 50B	19th Century America	3
AFRICAAM 54N	African American Women's Lives	3-4
AFRICAAM 64C	From Freedom to Freedom Now!: African American History, 1865-1965	3
AFRICAAM 75E	Black Cinema	2
AFRICAAM 105	Introduction to African and African American Studies	5
AFRICAAM 116	Education, Race, and Inequality in African American History, 1880-1990	3-5
AFRICAAM 123	Great Works of the African American Tradition	5
AFRICAAM 147	History of South Africa	5
AFRICAAM 152G	Harlem Renaissance and Modernism	5
AFRICAAM 156	Performing History: Race, Politics, and Staging the Plays of August Wilson	4
AFRICAAM 159	James Baldwin & Twentieth Century Literature	5
AFRICAAM 166	Introduction to African American History - the Modern Freedom Struggle	3-5
AFRICAAM 181Q	Alternative Viewpoints: Black Independent Film	4
AFRICAAM 189	Black Life and Death in the Neoliberal Era	5
AFRICAAM 190	Directed Reading	1-5
AFRICAAM 195	Independent Study	5
AFRICAAM 199	Honors Project	1-5
AFRICAAM 200X	Honors Thesis and Senior Thesis Seminar	5
AFRICAAM 200Y	Honors Thesis and Senior Thesis Research	3-5
AFRICAAM 200Z	Honors Thesis and Senior Thesis Research	3-5
AFRICAAM 226	Mixed-Race Politics and Culture	5
AFRICAAM 245	Understanding Racial and Ethnic Identity Development	3-5
AFRICAAM 262D	African American Poetics	5
AFRICAAM 267E	Martin Luther King, Jr. - His Life, Ideas, and Legacy	4-5
AFRICAST 109	Running While Others Walk: African Perspectives on Development	5
AFRICAST 111	Education for All? The Global and Local in Public Policy Making in Africa	5
AFRICAST 112	AIDS, Literacy, and Land: Foreign Aid and Development in Africa	5
AFRICAST 115	South African Encounters	1
AFRICAST 127	African Art and Politics, c. 1900 - Present	4
AFRICAST 135	Designing Research-Based Interventions to Solve Global Health Problems	3-4
AFRICAST 138	Conflict and Reconciliation in Africa: International Intervention	3-5
AFRICAST 139A	Forgotten Africa: An Introduction to the Archaeology of Africa	5
AFRICAST 141A	Science, Technology, and Medicine in Africa	4
AFRICAST 142	Challenging the Status Quo: Social Entrepreneurs Advancing Democracy, Development and Justice	3-5
AFRICAST 151	AIDS in Africa	3
AFRICAST 190	Madagascar Prefield Seminar	1-2
AFRICAST 195	Back from Africa Workshop	1-2
AFRICAST 199	Independent Study or Directed Reading	1-5
AFRICAST 200	The HIV/AIDS Epidemic in Tanzania: A Pre-Field Seminar	1
AFRICAST 209	Running While Others Walk: African Perspectives on Development	5
AFRICAST 211	Education for All? The Global and Local in Public Policy Making in Africa	5
AFRICAST 212	AIDS, Literacy, and Land: Foreign Aid and Development in Africa	5
AFRICAST 224	Memory and Heritage In South Africa Syllabus	1
AFRICAST 235	Designing Research-Based Interventions to Solve Global Health Problems	3-4
AFRICAST 299	Independent Study or Directed Reading	1-10
AFRICAST 301A	The Dynamics of Change in Africa	4-5
AMSTUD 166	Introduction to African American History - the Modern Freedom Struggle	3-5
AMSTUD 261E	Mixed Race Literature in the U.S. and South Africa	5
AMSTUD 262C	African American Literature and the Retreat of Jim Crow	5
AMSTUD 262D	African American Poetics	5
ARCHLGY 139A	Forgotten Africa: An Introduction to the Archaeology of Africa	5

ARTHIST 127A	African Art and Politics, c. 1900 - Present	4
ARTHIST 178	Ethnicity and Dissent in United States Art and Literature	4
COMPLIT 145B	Africa in Atlantic Writing	3-5
HISTORY 45B	Africa in the Twentieth Century	3
HISTORY 47	History of South Africa	3
HISTORY 48Q	South Africa: Contested Transitions	4
HISTORY 54N	African American Women's Lives	3-4
HISTORY 145B	Africa in the 20th Century	5
HISTORY 164C	From Freedom to Freedom Now: African American History, 1865-1965	5
HISTORY 166	Introduction to African American History - the Modern Freedom Struggle	3-5
HISTORY 245G	Law and Colonialism in Africa	4-5
HISTORY 254D	Law, Slavery, and Race	5
HISTORY 267E	Martin Luther King, Jr. - His Life, Ideas, and Legacy	4-5
LINGUIST 152	Sociolinguistics and Pidgin Creole Studies	2-4
LINGUIST 252	Sociolinguistics and Pidgin Creole Studies	2-4
MUSIC 147J	Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music	3-4
OSPMADRD 31	Hip Hop Madrid: La Globalizacion de la Cultura, Arte, y Politica de Hip Hop	3
POLISCI 146A	African Politics	4-5
POLISCI 246P	The Dynamics of Change in Africa	4-5
SOC 16N	African Americans and Social Movements	3
SOC 149	The Urban Underclass	4
TAPS 32	The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice	1-5
TAPS 181Q	Alternative Viewpoints: Black Independent Film	4

## Directed Reading and Research

Directed reading and research allows students to focus on a special topic of interest. In organizing a reading or research plan, the student consults with the director of the major and one or more faculty members specializing in the area or discipline.

Courses that fulfill directed reading and research requirements:

		Units
AFRICAAM 190	Directed Reading	1-5
AFRICAAM 195	Independent Study	5
AFRICAAM 199	Honors Project	1-5

## Senior Seminar

Research and writing of the senior honors thesis or senior paper is under the supervision of a faculty project adviser. All majors in the IDP in AAAS, even those who opt to write honors theses in other departments and programs, must enroll in AFRICAAM 200X Honors Thesis and Senior Thesis Seminar, offered in Autumn Quarter. The course takes students through the process of researching an honors thesis, including conceptualization, development of prospectus, development of theses, research, analysis, and finally the process of drafting and writing. This course meets the Writing in the Major requirement (WIM).

## Honors Program for Majors in African and African American Studies

The honors program offers an opportunity to do independent research for a senior thesis. It is open to majors who have maintained a grade point average (GPA) of at least 3.5 in the major and 3.3 overall. The honors thesis is intended to enable students to synthesize skills to produce a

document or project demonstrating a measure of competence in their specialty.

The honors program begins with a proposal describing the project that is approved by the faculty adviser and AAAS directors. Students are required to identify both a faculty adviser and a second reader for the thesis project. The faculty adviser for the honors thesis must be an academic council faculty member and affiliated faculty of the student's major.

Honors students must enroll in AFRICAAM 200X Honors Thesis and Senior Thesis Seminar which fulfills the program's WIM requirement, during Autumn Quarter of the senior year and may take up to an additional 10 units of honors work (AFRICAAM 200Y Honors Thesis and Senior Thesis Research and AFRICAAM 200Z Honors Thesis and Senior Thesis Research) to be distributed across Winter and Spring quarters of senior year to continue their access to peer and faculty support as they write their theses. Students must complete their theses with a grade of 'B+' to receive honors in AAAS.

In May of the senior year, honors students are afforded an opportunity to present their research formally. Prizes for best undergraduate honors thesis are awarded annually by the Program in African and African American Studies.

## Thematic Emphasis

AAAS majors select a thematic emphasis. Selecting an emphasis allows students to customize their curriculum and synthesize course work taken across various departments and programs into a coherent focus. Emphases offered include; for faster navigation click on the links to the right:

### Thematic Emphasis in Africa

Students in the African and African American Studies major can choose a concentration in Africa. The Thematic Emphasis in Africa concentration is designed to investigate how individual African states' domestic and foreign policy, law, history, culture, and society are formed within conversations, debates, policies and studies. Issues of immigration, citizenship, empire and expansion, defense, diplomacy, human rights, public welfare, social justice and law, educational rights and other topics are explored.

The concentration is not declared on Axxess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Africa concentration.

		Units
AFRICAAM 24	Introduction to Dance in the African Diaspora	4
AFRICAAM 30	The Egyptians	3-5
AFRICAAM 31	RealTalk: Intimate Discussions about the African Diaspora	1
AFRICAAM 47	History of South Africa	3
AFRICAAM 48Q	South Africa: Contested Transitions	4
AFRICAAM 87	Egyptomania! The Allure of Ancient Egypt Over the Past 3,500 Years	5
AFRICAAM 111	AIDS, Literacy, and Land: Foreign Aid and Development in Africa	5
AFRICAAM 115	South African Encounters	1
AFRICAAM 133	Literature and Society in Africa and the Caribbean	4
AFRICAAM 145B	Africa in the 20th Century	5
AFRICAAM 146A	African Politics	4-5
AFRICAAM 147	History of South Africa	5

AFRICAAM 54N	African American Women's Lives	3-4	ARTHIST 178	Ethnicity and Dissent in United States Art and Literature	4
AFRICAAM 64C	From Freedom to Freedom Now!: African American History, 1865-1965	3	COMPLIT 290	Human Rights in a Global Frame: Race, Place, Redress, Resistance	3-5
AFRICAAM 75E	Black Cinema	2	DANCE 31	Chocolate Heads Performance	2
AFRICAAM 105	Introduction to African and African American Studies	5	DANCE 45	Dance Improvisation Techniques and Strategies Lab: From Hip Hop to Contact	2
AFRICAAM 116	Education, Race, and Inequality in African American History, 1880-1990	3-5	DANCE 60	The Evolution of Hip Hop and the Dance Stage: From Broadway to Hollywood and MTV	1
AFRICAAM 121X	Hip Hop, Youth Identities, and the Politics of Language	3-4	EDUC 193C	Psychological Well-Being On Campus: Perspectives Of The Black Diaspora	1

### Thematic Concentration in Class

Students in the African and African American Studies major can choose a concentration in Class. The Thematic Concentration in Class concentration is designed to explore the cultural, social, legal, and political construction of racial and ethnic differences in African and/or African American history, while examining the historical specificity of markets, money, property, and labor relations and explores the interdependence between the economy and politics, society, and culture.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Class concentration.

		Units
AFRICAAM 16N	African Americans and Social Movements	3
AFRICAAM 54N	African American Women's Lives	3-4
AFRICAAM 64C	From Freedom to Freedom Now!: African American History, 1865-1965	3
AFRICAAM 154	Black Feminist Theory	5
AFRICAAM 156	Performing History: Race, Politics, and Staging the Plays of August Wilson	4
AFRICAAM 190	Directed Reading	1-5
AFRICAAM 195	Independent Study	5
AFRICAAM 199	Honors Project	1-5
AFRICAAM 200X	Honors Thesis and Senior Thesis Seminar	5
AFRICAAM 226	Mixed-Race Politics and Culture	5
AFRICAAM 245	Understanding Racial and Ethnic Identity Development	3-5
AFRICAAM 254D	Law, Slavery, and Race	5
AFRICAST 111	Education for All? The Global and Local in Public Policy Making in Africa	5
AFRICAST 211	Education for All? The Global and Local in Public Policy Making in Africa	5
ANTHRO 145	Race and Power	5
ANTHRO 245	Race and Power	5
ARTHIST 178	Ethnicity and Dissent in United States Art and Literature	4
EDUC 232	Culture, Learning, and Poverty	2-3
EDUC 245	Understanding Racial and Ethnic Identity Development	3-5
HISTORY 47	History of South Africa	3
HISTORY 50A	Colonial and Revolutionary America	3
HISTORY 164C	From Freedom to Freedom Now: African American History, 1865-1965	5

HISTORY 254D	Law, Slavery, and Race	5
HUMBIO 122S	Social Class, Race, Ethnicity, and Health	4
LAWGEN 114Q	Dilemmas of Regulating Race and Inequality in American Society	3
POLISCI 242A	Why is Africa Poor?, Civil War and Peace Processes	5
POLISCI 246P	The Dynamics of Change in Africa	4-5

PSYCH 29N	Growing Up in America	3
PSYCH 183	SPARQshop: Social Psychological Answers to Real-world Questions	2
SOC 45Q	Understanding Race and Ethnicity in American Society	4
SOC 135	Poverty, Inequality, and Social Policy in the United States	3
SOC 140	Introduction to Social Stratification	3
SOC 148	Comparative Ethnic Conflict	4
SOC 149	The Urban Underclass	4
URBANST 112	The Urban Underclass	4

### Thematic Concentration in Diaspora

Students in the African and African American Studies major can choose a concentration in the Diaspora. The Thematic Concentration in Diaspora concentration is designed to explore the exchanges among peoples and cultures from the continent of Africa and their global impact through symbolic, aesthetic and empirical exchanges (i.e. trade, travel, exploration, and migration). This concentration will also examine comparisons, connections and genealogical relations among geographically dispersed cases in order to consider past and present African identities in their global contexts.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Diaspora concentration.

		Units
AFRICAAM 21	African American Vernacular English	3-5

### Thematic Concentration in Education

Students in the African and African American Studies major can choose a concentration in Education. The Thematic Concentration in Education concentration is designed to explore the history, policy, and practice in education to understand how issues of race, ethnicity, socioeconomic status, culture, and language shape educational opportunity. The goal of the concentration is to develop an understanding of the core issues facing educators and policy makers so that students may learn how they can contribute to the social and political discourse surrounding issues of education and opportunity policy.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Diaspora concentration.

		Units
AFRICAAM 31	RealTalk: Intimate Discussions about the African Diaspora	1
AFRICAAM 32	The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice	1-5
AFRICAAM 106	Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices	3-5

## Thematic Concentration in Identity, Diversity and Aesthetics (IDA)

The Identity, Diversity, and Aesthetics concentration is designed to be attainable and flexible within the AAAS major. Each quarter IDA offers a range of courses taught by IDA-affiliated faculty or Artists. A concentration typically requires 15 units in IDA-approved courses, which may include the senior honors thesis.

IDA Concentration students must also complete a senior creative project. Possible senior projects could include: a stage production, an album of music, a fiction or creative non-fiction piece, or an arts workshop curriculum for a community setting. Students who elect to write an honors thesis may incorporate their project as the basis for their thesis.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office and/or The Institute for Diversity in the Arts. (<https://diversityarts.stanford.edu/about/contact>)

Students may find the following courses useful in fulfilling requirements in the Identity, Diversity and Aesthetics (IDA) concentration.

		Units

### Thematic Concentration in Mixed Race

Students in the African & African American Studies major can choose a concentration in Mixed Race. The Thematic Concentration in Mixed Race concentration is designed to explore how African and/or African American identities were and are constituted in relation to issues of race and ethnicity. The concentration investigates how conversations, debates, and policies on mixed race identities effect domestic and foreign policy, law, history, culture, society and studies on race and ethnicity. In this concentration a number of topics (Issues of immigration, citizenship, empire and expansion, defense, diplomacy, human rights, public welfare, social justice and law, educational rights, etc) are explored from the angle of how racial and ethnic difference impacts debate and policy.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Mixed Race concentration.

		Units
AFRICAAM 31	RealTalk: Intimate Discussions about the African Diaspora	1
AFRICAAM 41	Genes and Identity	3
AFRICAAM 126B	Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population	3-4

## Thematic Concentration in Theory

Students in the African and African American Studies major can choose a concentration in Theory. The Thematic Concentration in Theory concentration is a program designed to explore the meta-narratives and theoretical frameworks for analyzing enduring issues of cultural, religious, and political life both within African and/or African American societies and between political communities. Students will also explore the role of identities, values and prejudices that are the product of historical processes and the interaction of different peoples.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Theory concentration.

		Units
AFRICAAM 31	RealTalk: Intimate Discussions about the African Diaspora	1
AFRICAAM 107C	The Black Mediterranean: Greece, Rome and Antiquity	4-5
AFRICAAM 125V	The Voting Rights Act	5
AFRICAAM 127A	Can't Stop Won't Stop: A History Of The Hip-Hop Arts	4
AFRICAAM 154	Black Feminist Theory	5
AFRICAAM 158	Black Queer Theory	5
AFRICAAM 190	Directed Reading	1-5
AFRICAAM 195	Independent Study	5
AFRICAAM 199	Honors Project	1-5
AFRICAAM 200X	Honors Thesis and Senior Thesis Seminar	5
AFRICAAM 200Y	Honors Thesis and Senior Thesis Research	3-5
AFRICAAM 200Z	Honors Thesis and Senior Thesis Research	3-5
AFRICAAM 233A	Counseling Theories and Interventions from a Multicultural Perspective	3-5
AFRICAAM 254D	Law, Slavery, and Race	5
AFRICAST 135	Designing Research-Based Interventions to Solve Global Health Problems	3-4
AFRICAST 142	Challenging the Status Quo: Social Entrepreneurs Advancing Democracy, Development and Justice	3-5
AFRICAST 195	Back from Africa Workshop	1-2
AMSTUD 121L	Racial-Ethnic Politics in US	5
HISTORY 254D	Law, Slavery, and Race	5
HUMBIO 170	Justice, Policy, and Science	5
LAWGEN 112N	Law and Inequality	3
LAWGEN 114Q	Dilemmas of Regulating Race and Inequality in American Society	3
LINGUIST 156	Language and Gender	4
LINGUIST 251	Sociolinguistic Field Methods	3-5
LINGUIST 255B	Sociolinguistics Classics and Community Studies	3-5
POLISCI 146A	African Politics	4-5
POLISCI 226	Race and Racism in American Politics	5

POLISCI 242A	Why is Africa Poor?, Civil War and Peace Processes	5
PSYCH 75	Introduction to Cultural Psychology	5
RELIGST 246	Constructing Race and Religion in America	4-5
SOC 14N	Inequality in American Society	4
SOC 15N	The Transformation of Socialist Societies	3
SOC 46N	Race, Ethnic, and National Identities: Imagined Communities	3
SOC 118	Social Movements and Collective Action	4
SOC 119	Understanding Large-Scale Societal Change: The Case of the 1960s	5
URBANST 123	Approaching Research and the Community	2-3

## Minor in African and African American Studies

Students who minor in AAAS complete a minimum of 30 units of approved courses. 15 of the required units must include:

- One of two required courses:
  - AFRICAAM 43 Introduction to English III: Introduction to African American Literature (5 units) or
  - AFRICAAM 105 Introduction to African and African American Studies (5 units)
- One Social Science course from AAAS approved core course list. (<https://explorecourses.stanford.edu/search?page=0&catalog=&q=AAAS%3a%3ass&filter-coursestatus-Active=on&view=catalog&academicYear=&collapse=>) (5 units)
- One Humanities course from AAAS approved core course list. (<https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3A%3Ah&collapse=>) (5 units)

*Director:* Dr. H. Samy Alim (Education)

*Associate Director:* Dr. Cheryl A. Brown

*Advisory Committee:* H. Samy Alim (Education), Ralph Richard Banks (Law), Jan Barker-Alexander (Director, Black Community Services Center), Jennifer Brody (Drama), Bryan Anthony Brown (Education), Cheryl Brown (Program in African and African American Studies), James Campbell (History), Clayborne Carson (History), Prudence Carter (Education), Jennifer Eberhardt (Psychology), Harry Elam (Drama), Michele Elam (English), James Ferguson (Anthropology), Corey Fields (Sociology), Shelley Fisher Fishkin (English), Linda Darling-Hammond (Education), Allyson Hobbs (History), Vaughn Rasberry (English), John R. Rickford (Linguistics), Joel Samoff (African Studies), Matt Snipp (Sociology), Grant Parker (Classics)

*Affiliated Faculty:* David Abernethy (Political Science, emeritus), H. Samy Alim (Education), R. Lanier Anderson (Philosophy), Anthony Antonio (Education), Arnetha Ball (Education), Ralph Richard Banks (Law), Lucius Barker (Political Science, emeritus), Don Barr (Sociology), Shasad Bashir (Religious Studies), Carl Bielefeldt (Religious Studies), Jennifer Brody (Drama), Bryan Anthony Brown (Education), Cheryl Brown (Associate Director, Program in African and African American Studies), Albert Camarillo (History), James Campbell (History), Clayborne Carson (History), Prudence Carter (Education), Gordon Chang (History), Wanda Corn (Art and Art History, emerita), David Degusta (Anthropology), Sandra Drake (English, emerita), Jennifer Eberhardt (Psychology), Paulla Ebron (Anthropology), Harry Elam (Vice Provost), Michele Elam (English), Corey Fields (Sociology), James Ferguson (Anthropology), Shelley Fisher Fishkin (English), Charlotte Fonrobert (Religious Studies), Aleta Hayes (Drama), Jeff Chang (Director, Identity Diversity, and Aesthetics), Allyson Hobbs (History), Gavin Jones (English), Terry Karl (Political Science), Anthony Kramer (Drama), Teresa LaFromboise (Education), Brian Lowery

(Graduate School of Business), Lisa Malkki (Anthropology), Hazel Markus (Psychology), Barbaro Martinez-Ruiz (Art and Art History), Daniel Murray (Director, Service Learning in Comparative Studies in Race and Ethnicity), Paula Moya (English), Elisabeth Mudimbe-Boyi (French and Comparative Literature), Susan Olzak (Sociology), David Palumbo-Liu (Comparative Literature), Arnold Rampersad (English), Vaughn Rasberry (English), John R. Rickford (Linguistics), Richard Roberts (History), Sonia Rocha (Sociology), Michael Rosenfeld (Sociology), José David Saldívar (English), Ramón Saldívar (English), Joel Samoff (African Studies), Gary Segura (Political Science), Paul Sniderman (Political Science), C. Matthew Snipp (Sociology), Ewart Thomas (Psychology), Jeane Tsai (Psychology), Jeremy Weinstein (Political Science), Bryan Wolf (American Art and Culture), Yvonne Yarbo-Bejarno (Spanish and Portuguese), Grant Parker (Classics), Alvan Ikoku (Comparative Literature and Medicine), Lauren Davenport (Political Science), Adam Banks (Education)

## Overseas Studies Courses in African and African American Studies

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPCPTWN 18	Xhosa Language and Culture	2
OSPCPTWN 24A	Targeted Research Project in Community Health and Development	3
OSPCPTWN 24B	Targeted Research Project in Community Health and Development	5
OSPCPTWN 31	Political Economy of Foreign Aid	3

OSPCPTWN 33	Southern Africa: from Liberation Struggles to Region-Building	4
OSPCPTWN 36	The Archaeology of Southern African Hunter Gatherers	4
OSPCPTWN 38	Genocide: African Experiences in Comparative Perspective	3-5
OSPPARIS 186F	Contemporary African Literature in French	4

## African Studies

Courses offered by the Center for African Studies (CAS) are listed under the subject code AFRICAST on the Stanford Bulletin's ExploreCourses web site.

The Center for African Studies coordinates an interdisciplinary program in African Studies for undergraduates and graduate students. The program seeks to enrich understanding of the interactions among the social, economic, cultural, historical, linguistic, genetic, geopolitical, ecological, and biomedical factors that shape and have shaped African societies.

Courses in African Studies are offered by departments and programs throughout the University. Each year CAS sponsors a range of seminars and workshops to demonstrate to advanced undergraduates and graduate students how topics of current interest in African Studies are approached from different disciplinary perspectives.

Course offerings in African languages are also coordinated by the Center for African Studies. Along with regular courses in several levels of Arabic, Swahili, Xhosa, and Zulu, the center arranges with the African and Middle Eastern Languages and Literatures Program in the Stanford Language Center to offer instruction in other African languages; in recent years, it has offered courses in Afrikaans, Amharic, Igbo, Kinyarwanda, Shona, Twi, Wolof, and Yoruba.

The Center for African Studies offers a master of arts degree for graduate students. Undergraduates and graduate students not pursuing the master's degree can specialize in African Studies under the arrangements described under the Undergraduate (p. 308) and Master's (p. 310) tabs.

## Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in African Studies and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

## Undergraduate Programs in African Studies

Undergraduates may choose an African Studies focus from:

1. A minor in Global Studies with African Studies Specialization offers students the ability to combine a focus on Africa with their major in any other discipline. This offers the students a strong regional specialization. For requirements see the "Minor" tab on this page.
2. A major in a traditionally defined academic department such as Anthropology (p. 316), History (p. 491), or Political Science (p. 589). These departments afford ample opportunity to enroll in courses outside the major, leaving the student free to pursue the interdisciplinary study of Africa.
3. Interdepartmental majors, such as African and African American Studies (p. 294) or International Relations (p. 524), offer coordinated and comprehensive interdisciplinary course sequences, which permit a concentration in African Studies.

## Certificate in African Studies

Students may apply for a certificate in African Studies. Requirements for the certificate are the same as for the minor in Global Studies with African Studies Specialization; however, students may double-count courses applied to their major or graduate studies in fulfillment of the certificate requirements. The certificate in African Studies is issued by the Center for African Studies and does not appear on any University record, including the student's transcript. For more information and an application, contact the center (<http://africanstudies.stanford.edu>).

*The minor in African Studies is no longer accepting applicants. It has been replaced by the minor in Global Studies with African Studies Specialization. Students currently enrolled in the pre-existing minor in African Studies should consult the Stanford Bulletin (<http://exploreddegrees.stanford.edu/schoolofhumanitiesandsciences/africanstudies/archive/#text>) of the year in which they declared the minor for degree requirements.*

## Minor in Global Studies with African Studies Specialization

The minor in Global Studies, African Studies specialization, offers students the opportunity to complement their major course of study with an in-depth, interdisciplinary exploration of the cultures, histories, politics, religions, and societies of Africa.

Students from any major interested in applying for admission to this minor program should consult the minor adviser at the Center for African Studies. Students declare the minor and the African Studies specialization in Axess (<http://axess.stanford.edu>) (see below for detailed instructions).

Students consult with their minor adviser to develop individual programs. The minor is especially well-suited for undergraduates who plan to make service, research, or study abroad in Africa as part of their Stanford experience.

## Declaring the Global Studies Minor with African Studies Specialization

To declare the Global Studies minor with African Studies specialization, students must:

1. Set up an appointment with Laura Hubbard, <lhubbard@stanford.edu>, Associate Director for the Center for African Studies.
2. Declare the Global Studies minor in Axess (<http://axess.stanford.edu>).
3. Complete the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program ([https://studentaffairs.stanford.edu/sites/default/files/registrar/files/change\\_UG\\_program.pdf](https://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_UG_program.pdf)) form in order to declare the African Studies specialization. Submit the form to the minor adviser, Laura Hubbard, in the Center for African Studies office (Encina Hall West, Room 219, 417 Galvez Mall).

## Learning Outcomes

The SGS minor specialization in African Studies enables students to:

1. develop critical knowledge and skills in African Studies
2. organize their interest in Africa into a coherent course of study through directed mentorship and participation in intellectual community.
3. prepare for research, study, or service in Africa

Upon completion of requirements, final certification of the minor is made by the Center for African Studies. The minor and the specialization appear on the transcript but they do not appear on the diploma.

## Requirements

1. A minimum of 25 units of Africa-related courses. Students may not double-count courses for completing major and minor requirements.
2. GLOBAL 101 Global Studies Gateway Course (3 units)
3. At least one quarter's exposure to a sub-Saharan African language. The Center for African Studies (p. 308) and the Special Languages Program of the Language Center (p. 537) can arrange instruction in any of several languages spoken in West, East, Central, and Southern Africa.
4. One entry level course that covers more than one region of Africa.
5. A designated focus of study, either disciplinary or regional, through a three course concentration developed with the minor adviser.
6. A minimum 25-page research paper, with a focus on Africa. This paper may be an extension of a previous paper written for an African Studies course. Other approaches to fulfilling the capstone requirement may be accepted with the approval of the Director of African Studies.
  - Students present their work in an end-of-year capstone seminar with other SGS minors and led by SGS faculty.

## Course List

For a representative, rather than comprehensive, list of courses that count towards the minor, see the Related Courses tab in this section of the Bulletin. Other courses may also fulfill the requirements; students should consult their African Studies minor adviser concerning which courses might fulfill minor requirements.

## Related Courses

Below is a sample of AFRICAST and related courses that may be counted toward the minor. Other courses may also fulfill the requirements; consult your African Studies minor adviser concerning the applicability of other courses to the minor.

## Graduate Study in African Studies

For those who wish to specialize in Africa at the graduate level, African Studies can be designated a field of concentration within the master's and doctoral programs of some academic departments. Students in such departments as Anthropology (p. 315), History (p. 490), Political Science (p. 588), and Sociology (p. 638), and in the School of Education (p. 153), may declare African Studies as the area of specialization for their master's and Ph.D. thesis work. Some other departments, programs, and institutes such as the International Comparative Education Program (p. 154) also permit students to specialize in African Studies.

### Financial Aid

The Center for African Studies (CAS) does not offer financial aid. However, CAS offers a variety of fellowship opportunities to Stanford graduate students of different levels and disciplines. The following is a partial list:

#### 1. M.A. Fellowship

Partial funding for two incoming M.A. students in African Studies.

#### 2. Susan Ford Dorsey Fellowship for Field Research in Africa

9-12 month dissertation field research fellowship for Ph.D. candidates in the School of Humanities and Sciences.

#### 3. Summer Research and Language Fellowship

Graduate research fellowship, an intensive African language fellowship for graduate students and undergraduates.

## Master of Arts in African Studies

The one-year master's program in African Studies is designed for students who have experience working, living, or studying in Africa, and little prior course work on the region.

### Coterminal Master of Arts in African Studies

#### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken two quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to

the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

### Admission to the Master's Program in African Studies

The annual deadline for all applications for the master's program, including coterminal students, is December 8. All applicants must submit:

- External applicants submit an online application, including a 500-word statement of purpose. Coterminal applicants submit the Application for Admission to Coterminal Masters' Program (<https://stanford.box.com/CotermApplic>)
- resume
- 15-20 page double-spaced academic writing sample
- three letters of recommendation
- two official transcripts
- Graduate Record Examination scores
- TOEFL scores are required of applicants for whom English is not their first language or who did not attend an undergraduate institution where English is the language of instruction

To apply online and for further information on graduate admissions, see the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site.

### Degree Requirements

University requirements for the master's degree are described in the "Graduate Degrees (p. 45)" section of this bulletin.

The program requires completion of a minimum of 45 graduate units. Upon entering, each student is assigned a faculty adviser who works with the student to develop a customized program of study.

To receive the M.A. degree in African Studies, students must complete:

#### 1. Core Courses (15 units)

Students must complete the core African Studies M.A. course, AFRICAST 301A The Dynamics of Change in Africa, in Autumn Quarter. Students elect two additional graduate courses taught by African Studies academic council members and drawn from a list of approved courses. Students must also complete, AFRICAST 302 Research Workshop, in Spring Quarter, in which they present and discuss their research and research interests.

#### 2. Cognate Courses (10 units)

A minimum of 10 units of graduate-level credit in two cognate courses from the following thematic clusters not chosen as the student's concentration field:

- a. culture and society
- b. health, well-being, and the environment
- c. political economy and security.

#### 3. Concentration Field (15 units)

Students choose one area of specialization:

- a. culture and society
- b. health, well-being, and the environment
- c. political economy and security

- Students also choose a group of three related elective courses for graduate credit from the cognate course listings or elsewhere in the Stanford curriculum in consultation with the student's

adviser and with the approval of the CAS director. With approval, one introductory course may be substituted in a field such as advanced undergraduate biology or statistics for those interested in epidemic diseases or public health. The academic adviser, in agreement with faculty in the chosen field, guarantees that each set of courses forms part of a coherent program.

#### 4. Language Requirement

Students take one year of training in an African language, usually at least 3 units per quarter, resulting in intermediate-level proficiency as measured by the American Council on the Teaching of Foreign Languages (ACTFL) or comparable language acquisition standards. Students who have advanced proficiency in several African languages may fulfill this requirement by taking another European language spoken in Africa, such as French or Portuguese, or by taking a year-long sequence in Arabic.

#### 5. Seminar Requirement

Students enroll each quarter in AFRICAST 300 Contemporary Issues in African Studies, 1 unit, in which guest scholars present lectures on African themes and topics.

#### 6. Thesis Option

Students may elect to write a master's thesis; they may register for up to 10 units of thesis research under the guidance of an Academic Council member. Thesis units may be counted toward the electives within the concentration field unit requirements.

#### 7. Grade Requirements

Courses to be counted toward the degree, except for AFRICAST 300 Contemporary Issues in African Studies, must be taken for a letter grade and receive a grade of 'B' or higher.

In addition to AFRICAST courses, master's students take Africa-related courses across departments and schools due to the interdisciplinary nature of the degree. The following list represents a small sample of courses that may be taken to fulfill the requirements of the master's degree. To count toward the completion of the master's degree, courses should be taken at the graduate level and approved by the African Studies graduate adviser.

#### Courses in AFRICAST

		Units
AFRICAST 209	Running While Others Walk: African Perspectives on Development	5
AFRICAST 211	Education for All? The Global and Local in Public Policy Making in Africa	5
AFRICAST 212	AIDS, Literacy, and Land: Foreign Aid and Development in Africa	5
AFRICAST 235	Designing Research-Based Interventions to Solve Global Health Problems	3-4
AFRICAST 238	Conflict and Reconciliation in Africa: International Intervention	3-5
AFRICAST 300	Contemporary Issues in African Studies	1
AFRICAST 301A	The Dynamics of Change in Africa	4-5

#### Related Courses from Other Departments

		Units

MED 232	Discussions in Global Health	2
POLISCI 314D	Democracy, Development, and the Rule of Law	5
SURG 250	Principles and Practice of International Humanitarian Surgery	4

## Joint Degree Program in African Studies and Law

This joint degree program grants an M.A. degree in African Studies and a Doctor of Jurisprudence (J.D.) degree. It is designed to train students interested in a career in teaching, research, or the practice of law related to African legal affairs. Students must apply separately to the African Studies M.A. program and to the Stanford School of Law and be accepted by both. Completing this combined course of study requires approximately four academic years, depending on the student's background and level of training in African languages. A number of approved courses may be counted towards both degrees. For more information, see the "Joint Degree Programs (p. 49)" section of this bulletin and the Stanford Law School's web site (<http://www.law.stanford.edu/degrees/joint>). Students who have been accepted by both programs should consult with the departments to determine which courses can be double-counted.

*Emeriti:* David B. Abernethy, Ellen Jo Baron, John Baugh, Joan Bresnan, Susan Cashion, Sandra E. Drake, Peter Egbert, James. L. Gibbs, Jr., William B. Gould, Bruce F. Johnston, William R. Leben, Bruce Lusignan, Elisabeth Mudimbe-Boyi, Mary Polan, Hans N. Weiler, Sylvia Wynter

*Director:* Richard Roberts

*Professors:* H. Samy Alim (Education), Jean-Marie Apostolidès (French), Michele Barry (Medicine), Joel Beinin (History), John Boothroyd (Microbiology and Immunology), James T. Campbell (History), Martin Carnoy (Education), Prudence L. Carter (Education), William H. Durham (Anthropology), Harry Elam (Drama), James Fearon (Political Science), James Ferguson (Anthropology), Shelley Goldman (Education), Terry Lynn Karl (Latin American Studies and Political Science), Richard Klein (Anthropology), David Laitin (Political Science), Yvonne Maldonado (Pediatrics), Lynn Meskell (Anthropology), Julie Parsonnet (Medicine and Health Research and Policy), John Rickford (Linguistics), Richard Roberts (History), Alvan Ikoku (Comparative Literature)

*Associate Professors:* Vincent Barletta (Comparative Literature and Iberian and Latin American Cultures), Alexandria B. Boehm (Civil and Environmental Engineering), Jenna Davis (Civil and Environmental Engineering), Paulla A. Ebron (Anthropology), Oliver Fringer (Civil and Environmental Engineering), Duana Fullwiley (Anthropology), Liisa Malkki (Anthropology), Grant Parker (Classics), Jeremy Weinstein (Political Science)

*Assistant Professors:* Eran Bendavid (General Internal Medicine), Katherine Casey (Political Economy), Pascaline Dupas (Economics), Vaughn Rasberry (English), Krish Seetah (Anthropology)

*Professor (Research):* David Katzenstein (School of Medicine), Cheryl Koopman (Psychiatry and Behavioral Sciences)

*Professor (Teaching):* Robert Siegel (Microbiology and Immunology)

*Associate Professor (Clinical):* Brian Blackburn (Infectious Diseases), Daryn Reicherter (Psychiatry and Behavioral Sciences), Hugh Brent Solvason (Psychiatry and Behavioral Sciences)

*Senior Lecturers:* Khalil Barhoum (African and Middle Eastern Languages)

*Lecturers:* Kwame Assenyoh (African and Middle Eastern Languages), Byron Bland (Law), Jonathan Greenberg (Law), Sarah Mkhonza (African and Middle Eastern Languages), Samuel Mukoma (African and Middle Eastern Languages), Jill Rosenthal (History), Ramzi Salti (African and Middle Eastern Languages), Timothy Stanton (Bing Overseas Studies), Toussaint Nothias (African Studies)

*Consulting Professors:* Anne Firth-Murray (Human Biology), Joel Samoff (Center for African Studies)

*Curators:* Karen Fung (African Collection Curator, Green Library), Regina Roberts (Bibliographer, Green Library), Anna Lessenger Soland (Assistant Curator, Arts of Africa and the Americas, Cantor Arts Center)

*Senior Research Fellows:* Coit Blacker (Freeman Spogli Institute), Larry Diamond (Freeman Spogli Institute, Hoover Institution), Marcel Fafchamps (Freeman Spogli Institute), Helen Stacy (Freeman Spogli Institute), Stephen Stedman (Freeman Spogli Institute, Center for International Security and Cooperation)

#### Overseas Studies Courses in African Studies

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPCPTWN 18	Xhosa Language and Culture	2
OSPCPTWN 24A	Targeted Research Project in Community Health and Development	3
OSPCPTWN 24B	Targeted Research Project in Community Health and Development	5
OSPCPTWN 33	Southern Africa: from Liberation Struggles to Region-Building	4
OSPCPTWN 36	The Archaeology of Southern African Hunter Gatherers	4
OSPCPTWN 38	Genocide: African Experiences in Comparative Perspective	3-5
OSPCPTWN 58		
OSPCPTWN 60	Hip Hop in Post-apartheid South Africa	3
OSPCPTWN 69	Comparatively Assessing South Africa's Transition to Democracy: Past, Present and Future	3
OSPCPTWN 75	Giving Voice to the Now: Studies in the South African Present	3

## American Studies

Courses offered by American Studies Program are listed under the subject code AMSTUD on the Stanford Bulletin's ExploreCourses web site.

## Mission of the Undergraduate Program in American Studies

The mission of the undergraduate program in American Studies is to provide students with a broad understanding of American culture and society. Building on a foundation of courses in history and institutions, literature and the arts, and race and ethnicity, students learn to analyze and interpret America's past and present, forging fresh and creative syntheses along the way. The program is an interdisciplinary major and, beyond the core requirements of the major, students may define and pursue their own interests from fields such as history, literature, art, communication, theater, African American studies, feminist studies, economics, anthropology, religious studies, Chicana/o studies, law, sociology, education, Native American studies, music, and film. The program is designed to provide students majoring in American Studies with excellent preparation for further study in graduate or professional schools as well as careers in government, business, or other specialized fields.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. higher order, interdisciplinary, historically informed understanding of how to think about American culture and society, drawing on course work in: history and institutions; literature, art, and culture; comparative race and ethnicity; and each student's individualized thematic focus.
2. ability to identify and critically to assess different disciplinary, methodological, and interpretive approaches to the study of Americans and their past.

- ability to produce their own persuasive, nuanced, fact-based interpretations reflecting a close critical reading and analysis of relevant primary or secondary sources.
- ability to express their interpretive and analytical arguments in clear, effective prose.
- ability to listen actively and to contribute to productive intellectual discussion in class.

## Bachelor of Arts in American Studies

The core requirements illustrate how different disciplines approach the study and interpretation of American life and include three courses in each of two main areas: history and institutions; and literature, culture, and the arts. One additional course in comparative race and ethnicity is also required. The required gateway seminar, AMSTUD 160 Perspectives on American Identity, explores the tensions between commonality and difference from a variety of disciplinary perspectives.

Beyond the core requirements of the major, American Studies expects students to define and pursue their own interests in interpreting important dimensions of American life. Accordingly, each student designs a thematic concentration of at least five courses drawn from fields such as history, literature, art, communication, theater, political science, African American studies, feminist studies, economics, anthropology, religious studies, Chicana/o studies, law, sociology, education, Native American studies, music, and film. At least one of the five courses in a student's thematic concentration should be a small group seminar or a colloquium. With program approval, students may conclude the major with a capstone honors research project during their senior year.

Whether defined broadly or narrowly, the thematic focus or concentration should examine its subject from the vantage of multiple disciplines. Examples of concentrations include: race and the law in America; gender in American culture and society; technology in American life and thought; health policy in America; art and culture in 19th-century America; education in America; nature and the environment in American culture; politics and the media; religion in American life; borders and boundaries in American culture; the artist in American society; and civil rights in America.

Completion of the major thus normally requires 13 courses (totaling at least 60 units), all of which must be taken for a letter grade. Not all courses are offered each year; students should consult ExploreCourses (<http://explorecourses.stanford.edu>) for scheduling information for the current academic year.

### Degree Requirements

#### 1. Gateway Seminar

AMSTUD 160	Perspectives on American Identity (WIM course for American Studies)	5
------------	---	---

#### 2. History and Institution

Majors are required to complete three courses in American History and Institutions. Specific requirements are:

AMSTUD/ HISTORY 150A	Colonial and Revolutionary America	5
AMSTUD/ HISTORY 150B	19th-Century America	5
Select one of the following:		3-5
AMSTUD 54N	African American Women's Lives	3-4
AMSTUD 55N	Social Movements through Song in Modern America	3-4

AMSTUD 63N	The Feminist Critique: The History and Politics of Gender Equality	3-4
AMSTUD 107	Introduction to Feminist, Gender, and Sexuality Studies	5
AMSTUD 117N	Losing My Religion: Secularism and Spirituality in American Lives	3
AMSTUD 124A	The American West	5
AMSTUD 125	Perspectives on American Journalism	4-5
AMSTUD 135	Deliberative Democracy and its Critics	3-5
AMSTUD 136X	Indigenous Peoples and Environmental Change in the North American West	5
AMSTUD 137	The Dialogue of Democracy	4-5
AMSTUD/ HISTORY 150C	The United States in the Twentieth Century	5
AMSTUD 156H	Women and Medicine in US History: Women as Patients, Healers and Doctors	5
AMSTUD/ HISTORY 161	Women in Modern America	4-5
AMSTUD/ HISTORY 166	Introduction to African American History - the Modern Freedom Struggle	3-5
AMSTUD 179/ POLISCI 122	Introduction to American Law	3-5
AMSTUD 241K	Technology in Modern American Culture	4-5
AMSTUD 255D	Racial Identity in the American Imagination	4-5
AMSTUD/ HISTORY 258	Sexual Violence in America	4-5
AMSTUD 293	Church, State, & Schools: Issues in Education & Religion	4
SOC 155	The Changing American Family	5

### 3. Literature, Culture, and the Arts

Majors are required to take a minimum of three courses in literature, culture, and the arts, broadly understood. Specific requirements are:

		<b>Units</b>
At least one course focusing on the period before the Civil War, normally:		
AMSTUD 150/ ENGLISH 11B	Introduction to English II: American Literature and Culture to 1855	5
Select two of the following: <sup>1</sup>		6-10
AMSTUD 55N	Social Movements through Song in Modern America	3-4
AMSTUD/ ENGLISH 68N	Mark Twain and American Culture	4
AMSTUD 120/ COMM 120W	Digital Media in Society	5
AMSTUD 12A	Introduction to English III: Introduction to African American Literature	5
AMSTUD 124A	The American West	5
AMSTUD 125C	The Lost Generation: American literature between the World Wars	5
AMSTUD 127	American Style and the Rhetoric of Fashion	5
AMSTUD/ ENGLISH 139B	American Women Writers, 1850-1920	5
AMSTUD 143A	American Architecture	4
AMSTUD 143X	Starstuff: Space and the American Imagination	5
AMSTUD 152C	The JFK Era and American Literature	5
AMSTUD 152G	Harlem Renaissance and Modernism	5
AMSTUD 163	Queer America	4
AMSTUD 183	Re- Imagining American Borders	5

AMSTUD 226X/ EDUC 226	Curating Experience: Representation in and beyond Museums	4
AMSTUD 262C	African American Literature and the Retreat of Jim Crow	5
THINK 31	Race and American Memory	4

#### 4. Comparative Race and Ethnicity

Majors are required to take one course that focuses on the comparative study of race and ethnicity rather than a single racial or ethnic group.

		Units
Choose one from the following list:		
AMSTUD 54N	African American Women's Lives	3-4
AMSTUD 152G	Harlem Renaissance and Modernism	5
AMSTUD/CSRE 183	Re- Imagining American Borders	5
AMSTUD 255D	Racial Identity in the American Imagination	4-5
AMSTUD 262C	African American Literature and the Retreat of Jim Crow	5
SOC 149	The Urban Underclass	4

#### 5. Concentration and Capstone Seminar

Students must design a thematic concentration of at least five courses, with the help of faculty advisers. The courses, taken together, must give the student in-depth knowledge and understanding of a coherent topic in American cultures, history, and institutions. Thematic concentrations should be approved by the end of the registration period of the Autumn Quarter of the junior year, if at all possible. Sample thematic concentrations and courses that allow a student to explore them are available in the American Studies Office in Building 460.

At least one of the courses in the concentration must be an upper division seminar designated as the capstone seminar and must require a substantial research paper on a topic related to the thematic concentration. This paper must be filed in the program office prior to degree conferral. An honors project, or an independent study course with a faculty member culminating in a research paper, may also fulfill this requirement with the Director's approval.

Students may choose, but are not limited to, selections for their thematic concentrations from the following list of suggested courses:

		Units
AFRICAAM 16N	African Americans and Social Movements	3
AFRICAAM 105	Introduction to African and African American Studies	5
ANTHRO 82	Medical Anthropology	5
ARTHIST 156	American and European Art, 1945-1968	4
ARTHIST 176	Feminism and Contemporary Art	4
ARTHIST 246A	California Dreaming: West Coast Art and Visual Culture, 1848 - present	5
CHILATST 14N	Growing Up Bilingual	3
CHILATST 125S	Chicano/Latino Politics	5
CHILATST 200	Latin@ Literature	3-5
CHILATST 201B	From Racial Justice to Multiculturalism: Movement-based Arts Organizing in the Post Civil Rights Era	5
COMM 1A	Mass Media, Society, and Democracy	4-5
COMM 116	Journalism Law	5
COMM 125	Perspectives on American Journalism	5
COMM 162	Campaigns, Voting, Media, and Elections	5
CSRE 45Q	Understanding Race and Ethnicity in American Society	4
CSRE 103B	Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices	3-5

CSRE 179G	Indigenous Identity in Diaspora: People of Color Art Practice in North America	3-5
CSRE 245	Understanding Racial and Ethnic Identity Development	3-5
ECON 153	Economics of the Internet	5
ECON 155	Environmental Economics and Policy	5
ECON 157	Imperfect Competition	5
EDUC 102	Examining Social Structures, Power, and Educational Access	2-3
EDUC 216	Education, Race, and Inequality in African American History, 1880-1990	3-5
EDUC 277	Education of Immigrant Students: Psychological Perspectives	4
ENGLISH 151F	Angelheaded Hipsters: Beat Writers of San Francisco and New York	5
HISTORY 41Q	Madwomen: The History of Women and Mental Illness in the U.S.	3
HISTORY 60N	Revolutionaries and Founders	3
HISTORY 64	Racial and Ethnic Diversity in Modern America	5
HISTORY 130A	In Sickness and In Health: Medicine and Society in the United States: 1800-Present	5
HISTORY 166B	Immigration Debates in America, Past and Present	3-5
HISTORY 167A	Martin Luther King, Jr. and the Global Freedom Struggle	3-5
HISTORY 201	Introduction to Public History and Public Service	4-5
HISTORY 260	California's Minority-Majority Cities	4-5
HISTORY 264G	The Social History of Mental Illness in the United States	5
HUMBIO 120	Health Care in America: An Introduction to U.S. Health Policy	4
HUMBIO 120A	American Health Policy	3

PUBLPOL 156	Health Care Policy and Reform	5
PUBLPOL 194	Technology Policy	3-4
SOC 135	Poverty, Inequality, and Social Policy in the United States	3
SOC 118	Social Movements and Collective Action	4
SOC 138	American Indians in Comparative Historical Perspective	4
SOC 142	Sociology of Gender	5
SOC 145	Race and Ethnic Relations in the USA	4
SOC 150	Race and Political Sociology	3
TAPS 156	Performing History: Race, Politics, and Staging the Plays of August Wilson	4
TAPS 180Q	Noam Chomsky: The Drama of Resistance	4
TAPS 248	Family Drama: American Plays about Families	5
URBANST 161	U.S. Urban History since 1920	5
URBANST 166	East Palo Alto: Reading Urban Change	5

<sup>1</sup> Including at least one course outside of literature that emphasizes art, drama, film, music, translation studies, or culture from a different disciplinary or interpretive perspective.

## Honors Program

To graduate with honors, American Studies majors must complete a senior thesis and have an overall grade point average of at least 3.5 in the major, or demonstrated academic competence. Students applying must secure a thesis adviser, a Stanford faculty member who is willing and available to direct the thesis project through the ensuing year. Having a confirmed thesis adviser is required for final approval to pursue an honors project. Students also need to secure a second reader for the honors thesis no later than the start of Spring Quarter of senior year. Along with the application form signed by the thesis adviser, a 3-5 page proposal describing the thesis project and including a preliminary bibliography is due to the program office but October 1 of senior year at the latest (though students are strongly encouraged to submit at least preliminary thesis proposals in Spring of their junior year). The program may approve the application and proposal or request that the student resubmit with revisions. Students pursuing honors must enroll in 10-15 units of AMSTUD 250 Senior Research during the senior year. These units are in addition to the 60 units required for the major and must be taken for a letter grade. The finished essay is due in mid-May (typically May 15) of the senior year.

Students are encouraged to choose an honors topic and adviser during the junior year. The honors coordinator is available to meet with students to discuss possible honors topics and strategies. Students are strongly encouraged to enroll in the American Studies Honors College during September before the senior year. American Studies also provides students the opportunity to work as paid research assistants for faculty members during the summer between their junior and senior years. More

information about American Studies honors is available from the program office.

## Minor in American Studies

To earn a minor in American Studies, students must complete at least 28 units of course work in the program. Because students may not count courses for both a major and a minor, the specific courses that are used for an American Studies minor depend on the courses that are used to satisfy the major requirement.

A student must take the following:

	Units
AMSTUD 160 Perspectives on American Identity (The gateway seminar)	5
at least 2 courses from category 2 (History and Institutions)	6-10
at least 2 courses from category 3 (Literature, Culture and the Arts)	6-10
at least 1 course from category 4 (Comparative Race and Ethnicity)	3-5

If the units for these requirements do not total 28, the student must take additional coursework, appropriate to American Studies and approved by the Director or one of the Program Coordinators, to meet the minimum unit requirement. Courses used to satisfy all units taken for the minor must be taken for a letter grade.

*Director:* Shelley Fisher Fishkin

*Program Coordinators:* Elizabeth Kessler, Judith Richardson

*Committee in Charge:* Shelley Fisher Fishkin (English, Chair), Barton J. Bernstein (History, emeritus), Jennifer DeVere Brody (Drama), Scott Bukatman (Art and Art History), James T. Campbell (History), Gordon H. Chang (History), Michele B. Elam (English), James Fishkin (Communication, and by courtesy, Political Science), Estelle Freedman (History), Leah Gordon (Education), Allyson Hobbs (History), Ari Kelman (Education), Kathryn Gin Lum (Religious Studies), Doug McAdam (Sociology), Richard Meyer (Art and Art History), Ana Minian (History), Paula Moya (English), Clayton Nall (Political Science), Alexander Nemerov (Art and Art History), Jack Rakove (History, Political Science), Vaughn Rasberry (English), Judith Richardson (English), Ramón Saldivar (English, Comparative Literature), Gary Segura (Political Science), Fred Turner (Communication), Caroline Winterer (History), Amy Beth Zegart (Hoover Senior Fellow)

## Anthropology

Courses offered by the Department of Anthropology are listed under the subject code ANTHRO on the *Stanford Bulletin's* ExploreCourses web site.

## Mission of the Department of Anthropology

The courses offered by the Department of Anthropology are designed to: provide undergraduates with instruction in anthropology; provide undergraduate majors in Anthropology with a program of work leading to the bachelor's degree; and prepare graduate candidates for advanced degrees in Anthropology. Anthropology is devoted to the study of human beings and human societies as they exist across time and space. It is distinct from other social sciences in that it gives central attention to the full time span of human history, and to the full range of human societies and cultures, including those located in historically marginalized parts of the world. It is therefore especially attuned to questions of social, cultural, and biological diversity, to issues of power, identity, and inequality, and to understanding the dynamic processes of social, historical, ecological, and biological change over time. Education in Anthropology provides excellent preparation for living in a multicultural and globally-interconnected world, and helps to equip students for

careers in fields including law, medicine, business, public service, research, ecological sustainability, and resource management. Students may pursue degrees in Anthropology at the bachelor's, master's, and doctoral levels.

The Department of Anthropology offers a wide range of approaches to the topics and area studies within the field, including archaeology, ecology, environmental anthropology, evolution, linguistics, medical anthropology, political economy, science and technology studies, and sociocultural anthropology. Methodologies for the study of micro- and macro-social processes are taught through the use of qualitative and quantitative approaches. The department provides students with excellent training in theory and methods to enable them to pursue graduate study in any of the above mentioned subfields of Anthropology.

## Undergraduate Programs in Anthropology

- Bachelor of Arts (B.A.)
- Anthropology Minor

In addition to gaining an excellent foundation for graduate research and study, students majoring in Anthropology can pursue careers in government, international business, international development agencies, international education, law, mass media, nonprofit organizations, and public policy.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the degree program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an understanding of core knowledge within the Anthropology discipline.
2. the ability to communicate ideas clearly and persuasively in writing.
3. identify analytical problems and make appropriate inferences and analytical arguments.
4. critically evaluate anthropological theory and ethnographic research.

## Graduate Programs in Anthropology

Graduate training in Anthropology at Stanford is designed for students who seek the Doctoral (Ph.D.) degree, and for students who seek the Masters of Arts (M.A.) degree only.

## Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Anthropology and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses in the primary field, as well as related areas, and through experience with independent work, area specialization and field research.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Anthropology. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Anthropology and to interpret and present the results of such research.

## Field School and Research Opportunities in Anthropology

Students majoring in Anthropology are encouraged to develop field research projects under the supervision of a department faculty member. The department offers research grants to support individually-designed and other summer field research in Anthropology. The department research grants may be used to support field research as a supplement

to other field research grants such as the UAR research grants. The department also offers opportunities to participate in faculty-led research projects.

Please refer to <http://anthropology.stanford.edu> for information about the department's summer research opportunities, including the following: Beagle II Award, Tambopata, and Franz Boas summer scholars programs, and Michelle Z. Rosaldo Summer Field Research Grant program. Other field school opportunities include the following: Catalhoyuk and Chavin Huantar. *Note:* Required courses for the Franz Boas summer scholars program and the Michelle Z. Rosaldo grant program include:

		Units
ANTHRO 93	Prefield Research Seminar	5
	or ANTHRO 93BPrefield Research Seminar: Non-Majors	
ANTHRO 94	Postfield Research Seminar	5

For more information about research opportunities and deadlines, see the department's web site.

## Bachelor of Arts in Anthropology

Undergraduate training in the Department of Anthropology is designed for students who seek the Bachelor of Arts (B.A.) degree, only. Students may declare a major in Anthropology and earn the B.A. degree by completing the requirements below. The Department also offers a minor in Anthropology. The Anthropology B.A. degree program usually requires at least five quarters of enrollment. Students interested in majoring in Anthropology are encouraged to declare by the beginning of their junior year and to work closely with a faculty adviser to develop a coherent plan of study.

To declare a major in Anthropology, apply in Axxess for the B.A. in Anthropology, contact the department's student peer adviser(s) or the undergraduate student services specialist to prepare the department major checklist and planning form; submit the required forms to the undergraduate student services specialist; request a faculty adviser assignment and meet with the assigned faculty adviser for approval of the department major checklist and planning form. Students must apply in Axxess for the major in Anthropology by the time junior status is achieved at 85 units.

## Degree Requirements

The B.A. degree in Anthropology may be earned by fulfilling the following requirements:

1. A faculty adviser appointed in the Department of Anthropology. A faculty adviser will be assigned based on the students chosen emphasis. Undergraduate Anthropology (ANTHRO) majors should plan to meet with their faculty adviser at least once each quarter.
2. A program of 65 units, passed with an overall minimum grade point average of 'C':
  - of the 65 units, 50 units must be in courses with the ANTHRO subject code. 15 may be approved from related areas of study, overseas studies, and/or transfer units.
    - any related, overseas studies, or transfer units must be approved by the faculty adviser and by petition to the undergraduate committee.
  - of the 65 units, at least 20 units with a minimum grade of 'C' must be in courses with the ANTHRO subject code numbered 100 or above and taught by Anthropology faculty.
  - no more than 10 units of directed reading-style course work may be counted towards the 50 units required for the major in the ANTHRO subject code.

- no more than 10 units may be taken for a satisfactory/no credit grade: 5 units in ANTHRO courses, and 5 in related or transfer units.
3. A minimum grade of 'B' in the ANTHRO Writing in the Major (WIM) course from the chosen emphasis. This can be fulfilled by completing the ANTHRO Theory course, ANTHRO 90C or ANTHRO 90B, and should be taken within a year of declaring the Major or before the end of the junior year.
  4. A minimum grade of 'B' in the ANTHRO Theory course from the chosen emphasis. This should be taken within a year of declaring the major or before the end of the junior year.
  5. A minimum grade of 'B' in the ANTHRO Methods course (ANTHRO 91 Method and Evidence in Anthropology). This should be taken within a year of declaring the major or before the end of the junior year.
  6. Students must enroll in the senior Capstone course, (ANTHRO 193 Anthropology Capstone: Contemporary Debates in Anthropology) during their senior year.
  7. An approved plan of study which includes an emphasis chosen from the list below. Students must complete a minimum of 20 units in their chosen emphasis of which 10 units must be numbered 100 or above.
    - Culture and Society
    - Ecology, Environment, and Evolution
    - Medical Anthropology
    - Self-Designed Emphasis (with faculty adviser and undergraduate committee approval, only)
  8. Competence in a foreign language beyond the first-year level. Such competence is usually demonstrated by completing a 5 unit course at the second-year level with a minimum grade of 'B-'. The requirement may be met by special examination administered through the Language Center, or demonstration of superior placement scores.
    - Up to 5 units from a second-year language course can count towards the "Related to Anthro" category of the major requirements.
  9. At least five quarters of enrollment in the major. Each candidate for the B.A. in Anthropology should declare a major by the first day of the first quarter of the third year of study.

Advising is an important component of the Anthropology major. Students are encouraged to work closely with their major adviser throughout their pursuit of the B.A. degree. Advising milestones for the major include the following:

1. In the quarter in which the major is declared, students meet with their assigned faculty adviser, create a rigorous plan of study based on topical breadth, obtain adviser approval of an Anthropology emphasis as part of the plan of study, and obtain the major adviser's signature on the Major Checklist form.
2. Undergraduate Anthropology majors should plan to meet with their major faculty adviser at least once each quarter before the final study list deadline. Any revisions to the initial checklist must be approved by the faculty adviser.
3. Undergraduate Anthropology majors must submit an updated major checklist and planning form to the Undergraduate Student Services Specialist in the quarter before graduating.

## Required Courses

### 1. Writing in the Major courses

Undergraduate majors can fulfill the Writing in the major course requirement for the B.A. in Anthropology by taking the ANTHRO theory course designated from a chosen emphasis.

### 2. Theory courses

Enroll in one of the following theory courses according to the student's chosen emphasis:

		Units
<b>Culture and Society/Medical Anthropology:</b>		
ANTHRO 90B	Theory of Cultural and Social Anthropology	5
<b>Ecology, Environment, and Evolution:</b>		
ANTHRO 90C	Theory of Ecological and Environmental Anthropology	5

### 3. Methods courses

The following course fulfills the ANTHRO undergraduate major methods course requirement for all emphases:

		Units
ANTHRO 91	Method and Evidence in Anthropology	5

### 4. Capstone Course

The following course fulfills the ANTHRO undergraduate major capstone course requirement for all emphases:

		Units
ANTHRO 193	Anthropology Capstone: Contemporary Debates in Anthropology	5

## Department Courses

Students should complete a minimum of 20 units from the courses listed below within their chosen emphases; 10 of these units must be numbered 100, or above. Departmental courses may fulfill the requirements for more than one emphasis. For example: with approval, an Archaeology course may fulfill a course needed to meet a course requirement in the Medical Anthropology emphasis. Undergraduates may also petition to the undergraduate committee for a self-designed emphasis in the Anthropology major.

		Units
<b>Cultural &amp; Society Anthropology Courses</b>		
ANTHRO 1	Introduction to Cultural and Social Anthropology	5
ANTHRO 4	Language and Culture	4-5
ANTHRO 30Q	The Big Shift	4
ANTHRO 34	Animals and Us (not given this year)	5
ANTHRO 42	Megacities	5
ANTHRO 49	Violence and Belonging in the Middle East (not given this year)	5
ANTHRO 90B	Theory of Cultural and Social Anthropology	5
ANTHRO 91	Method and Evidence in Anthropology	5
ANTHRO 124N	Maya Mythology and the Popol Vuh (not given this year)	3
ANTHRO 126	Urban Culture in Global Perspective	5
ANTHRO 136	The Anthropology of Global Supply Chains	5
ANTHRO 140	Ethnography of Africa	3
ANTHRO 149	South Asia: History, People, Politics	5
ANTHRO 152	Ritual, Politics, Power	5
ANTHRO 187	Nuclear Cultures	5
<b>Medical Anthropology Courses</b>		
ANTHRO 82	Medical Anthropology	4
ANTHRO 138	Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise	5
ANTHRO 154	Anthropology of Drugs: Experience, Capitalism, Modernity	5
ANTHRO 175	Human Skeletal Anatomy	5
ANTHRO 176	Cultures, Minds, and Medicine	1
ANTHRO 182N	Smoke and Mirrors in Global Health	3
ANTHRO 186	Culture and Madness	5
<b>Ecology, Environment &amp; Evolution Anthropology Courses</b>		

ANTHRO 10SC		2
ANTHRO 90C	Theory of Ecological and Environmental Anthropology	5
ANTHRO 160	Social and Environmental Sustainability: The Costa Rican Case	3-5
ANTHRO 162	Indigenous Peoples and Environmental Problems	3-5
ANTHRO 166	Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness	3-5

**Senior Courses**

ANTHRO 95B	Directed Study in Honors and Senior Papers	1-10
ANTHRO 193	Anthropology Capstone: Contemporary Debates in Anthropology	5

**Senior Paper/Honors & Research Courses**

ANTHRO 92A	Undergraduate Research Proposal Writing Workshop	2-3
ANTHRO 92B	Undergraduate Research Proposal Writing Workshop	2-3
ANTHRO 93	Prefield Research Seminar	5
ANTHRO 93B	Prefield Research Seminar: Non-Majors	5
ANTHRO 94	Postfield Research Seminar	5
ANTHRO 95	Research in Anthropology	1-10
ANTHRO 96	Directed Individual Study	1-10
ANTHRO 97	Internship in Anthropology	1-10

**Emphasis Courses**

The following course listing includes courses taught by the Anthropology faculty in Archaeology. These courses may be considered towards the published emphasis requirements in the Anthropology bachelors degree with the culture and society, ecology, environment and evolution, medical, and self-designed emphases in the Anthropology undergraduate major.

**Archaeology Courses**

ANTHRO 3	Introduction to Prehistoric Archeology	3-5
ANTHRO 34	Animals and Us	5
ANTHRO 91A	Archaeological Methods	5
ANTHRO 98B	Digital Methods in Archaeology	3-5
ANTHRO 106	Incas and their Ancestors: Peruvian Archaeology	3-5
ANTHRO 108E	Catalhoyuk and Neolithic Archaeology	3
ANTHRO 113B	Religious Practices in Archaeological Cultures	5
ANTHRO 115	The Social life of Human Bones	3-5
ANTHRO 118	Heritage, Environment, and Sovereignty in Hawaii	4
ANTHRO 119	Zooarchaeology: An Introduction to Faunal Remains	5
ANTHRO 134	Object Lessons	5

**Plan of Study (example)**

Please see the example Plan of Study grid below designed for an ANTHRO major beginning junior year (from 85 units). This sample course schedule details the courses needed to satisfy the requirements for the Culture & Society emphasis.

Junior	Units		
	Autumn	Winter	Spring
Method and Evidence in Anthropology (ANTHRO 91)		5	
Undergraduate Research Proposal Writing Workshop (ANTHRO 92A)		2-3	
Culture, Narrative, and Medicine (ANTHRO 178A)		5	
Language and Culture (ANTHRO 4)		4-5	
Undergraduate Research Proposal Writing Workshop (ANTHRO 92B)			2-3

Introduction to Cultural and Social Anthropology (ANTHRO 1)		5	
Theory of Cultural and Social Anthropology (ANTHRO 90B)		5	
Sex and Gender (ANTHRO 15)		3	
Prefield Research Seminar (ANTHRO 93)			5
Field School Training Workshop (ANTHRO 98F)			1-3
The Anthropology of Global Supply Chains (ANTHRO 136)			5
Medical Anthropology (ANTHRO 82)			4
Year Total:	16-18	15-16	15-17

Senior	Units		
	Autumn	Winter	Spring
Urban Culture in Global Perspective (ANTHRO 126)		5	
Senior and Master's Paper Writing Workshop (ANTHRO 199)		1-2	
Postfield Research Seminar (ANTHRO 94)		5	
Anthropology Capstone: Contemporary Debates in Anthropology (ANTHRO 193)		5	
Ritual, Politics, Power (ANTHRO 152)			5
Ethnography of Africa (ANTHRO 139)			5
Senior and Master's Paper Writing Workshop (ANTHRO 199)		1-2	
Directed Study in Honors and Senior Papers (ANTHRO 95B)			1-10
South Asia: History, People, Politics (ANTHRO 149)			5
Year Total:	16-17	11-12	6-15

Total Units in Sequence:

79-95

Course selections may vary depending on the students chosen emphasis. The number of units needed to satisfy the ANTHRO major requirements may also vary depending on the student's current undergraduate status and units accomplished previously before declaration of the ANTHRO major.

**Research Courses**

Courses listed are recommended for students writing a research paper in the major:

	Units
ANTHRO 92A Undergraduate Research Proposal Writing Workshop	2-3
ANTHRO 93B Prefield Research Seminar: Non-Majors	5
ANTHRO 93 Prefield Research Seminar	5
ANTHRO 94 Postfield Research Seminar	5
ANTHRO 95 Research in Anthropology	1-10
ANTHRO 199 Senior and Master's Paper Writing Workshop	1-2
<b>Total Units</b>	<b>19-30</b>

**Senior Courses**

	Units
ANTHRO 95B Directed Study in Honors and Senior Papers	1-10
ANTHRO 193 Anthropology Capstone: Contemporary Debates in Anthropology	5

**Senior Paper**

The senior paper program in Anthropology provides majors with the opportunity to conduct original research under the guidance of an Anthropology faculty member. All Anthropology majors are encouraged to write a senior paper. Interested Anthropology majors of junior standing may apply to the senior paper program by submitting a senior paper application form, including a research topic/title of the proposed senior paper project, a two page abstract/proposal, and a letter of reference from their faculty adviser to the undergraduate student services specialist on or by February 15 in the junior year. Enrollment in ANTHRO 95 Research in Anthropology is recommended during

Autumn and Winter quarters of the senior year. Students must enroll in ANTHRO 95B Directed Study in Honors and Senior Papers in the final quarter of the undergraduate degree program before graduating. The senior paper is submitted in the final quarter before graduation. For more information, see the undergraduate student services specialist.

### Honors Program

The honors program in Anthropology provides eligible Anthropology majors with an opportunity to conduct original ethnographic, field, laboratory, or library-based research under the guidance of an Anthropology faculty member. All Anthropology majors are urged to consider applying to the Departmental Honors Program in Anthropology. Interested Anthropology majors of junior standing may apply for admission to the honors program by applying first in Axess, submitting an honors program application form, including a research topic/title of the proposed honors project, a two page abstract/proposal, a transcript, and a letter of reference from the faculty or honors adviser, to the undergraduate student services specialist on or by February 15 in the junior year.

Department majors are eligible to apply for honors candidacy with a 3.4 GPA in the major, a 3.0 GPA in overall course work, and with no more than one incomplete listed on the transcript at the time of application. Students interested in the honors program are encouraged to apply for Summer Quarter research funding through the Department of Anthropology, Undergraduate Advising and Research, and area studies centers. In most cases, honors students apply for such funding early in the junior year. This process requires advanced planning as the Spring Quarter research deadline falls before the honors application due date.

Students must enroll in ANTHRO 95B Directed Study in Honors and Senior Papers in the final quarter of the undergraduate degree program and earn a grade of 'A-' or better to graduate with honors. Students must submit the final draft of their honors thesis to their honors adviser (first reader) and second reader, electronically or printed, no later than May 13, 2016. Honors advisers and second readers must review the final draft submission and sign off on the Honors Signature Cover Sheet to confirm satisfactory completion of the honors paper and approved honors status. The Honors Signature Cover Sheet and final copy of the honors paper must be submitted to the undergraduate student services specialist no later than May 20, 2016. If ineligible for honors status, students must withdraw their request to graduate with honors via Axess. For more information, see the undergraduate student services specialist.

### Minor in Anthropology

To declare a minor in Anthropology, apply in Axess; contact the department's student peer adviser(s) or the undergraduate student services specialist to prepare the minor checklist and the minor planning form; submit the required forms to the undergraduate student services specialist; request a faculty adviser assignment; and meet with the assigned faculty adviser for approval of the minor checklist and planning form. These forms are available at <http://anthropology.stanford.edu>. Students must apply in Axess for the undergraduate minor in Anthropology by the last day of the quarter at least two quarters before degree conferral.

Requirements for the minor in Anthropology include the following:

1. A faculty adviser appointed in the Department of Anthropology.
2. A program of 30 units, with a minimum grade of 'C':
  - Of the 30 units, 10 units may be approved from related areas of study, overseas studies, and transfer units.
    - *Note:* Any related, overseas studies, or transfer units must be approved by the faculty adviser and by petition to the Undergraduate Committee.
  - Of the 30 units, a minimum of 15 units must be ANTHRO courses numbered 100 or above.

- No more than 5 units of directed reading-style course work may be counted towards the minor and may only be included among the 10 related units permitted for the minor.
- No more than 5 units may be taken for a satisfactory/no credit grade.

3. A self-designed course of study chosen from an Anthropology emphasis listed below and approved by the faculty adviser:
  - Culture and Society
  - Ecology, Environment and Evolution
  - Medical Anthropology
4. A minimum grade of 'C' in two ANTHRO courses listed at the 100 level or higher and taught by Anthropology faculty.
5. At least two quarters of enrollment in the minor. Each candidate for the minor in Anthropology should declare by the last day of the quarter at least two quarters before the quarter of degree conferral.

Advising milestones for the minor include the following:

1. In the quarter in which the minor is declared, the student must meet with his or her assigned adviser, create a rigorous course of study based on topical breadth, and obtain adviser approval for the checklist.
2. Any revisions to the initial checklist must be approved by the faculty adviser.
3. Undergraduate Anthropology minors must submit an updated minor checklist and planning form to the undergraduate student services specialist in the quarter before graduating.

### Coterminal Master's Degrees in Anthropology

Graduate enrollment at Stanford University for three consecutive quarters of full tuition for at least 45 units is usually required of all candidates for the coterminal M.A. degree. Coterminal M.A. students must matriculate in the M.A. graduate program for a minimum of two quarters (excluding the Summer Quarter) with Anthropology faculty advising and supervision.

M.A. students in Anthropology must take a minimum of 45 units of Anthropology course work beyond the undergraduate degree with an overall minimum grade point average of 3.0. Coterminal M.A. students may transfer units from the two quarters previous to the graduate admit quarter. For the master's degree, all courses must be at or above the 100 level, and at least 23 of the required 45 units must be taken at either the ANTHRO 200- or 300-level.

The M.A. program usually requires more than one year of study. However, full-time students entering the program with appropriate background should complete the M.A. degree program within three consecutive quarters after the student's first quarter of master's-level enrollment.

The University allows no transfer units into the master's program. To provide a meaningful master's program within one year, advance planning of course work with a faculty adviser is required. Requirements for the coterminal M.A. program must be completed within three years.

It is recommended by this department that a student who accepts an offer of admission to the Anthropology coterminal master's program, defer their undergraduate bachelor's conferral until the graduate M.A. degree requirements have been completed. The student can then request to graduate in both the bachelor's and master's degrees simultaneously. Students are advised to consult the undergraduate student services specialist.

#### Admission to the Coterminal Master's Degree Program

The deadline for graduate applications to the coterminal M.A. degree program in Anthropology is December 8, 2015. Stanford University

undergraduate majors are eligible to apply for the coterminal M.A. degree program if they have a 3.4 GPA in their department major, a 3.0 GPA in overall course work, and have no more than one incomplete listed on the transcript at the time of application. Successful applicants to the M.A. program may enter only in the following Autumn Quarter. However, the department may consider a request for early deferral of admission in the Spring Quarter by petition. Coterminal M.A. degree applicants are not required to submit their Graduate Record Examination scores.

Applicants must submit the following:

1. Application for Admission to Coterminal Masters' Program (<https://stanford.box.com/CotermApplic>)
2. Preliminary Program Proposal, Coterminal Degree Program
3. Coterminal Course Approval Form
4. Two Letters of Recommendation. Letters of recommendation must be accompanied by signed Recommendation Form.
5. All relevant transcripts
6. A 2-3 page, singled-spaced Statement of Purpose
  - a. For further information on how to write a personal statement please contact your faculty recommenders. You may also contact current graduate students in Anthropology.
  - b. For tips on writing Statement of Purpose and Personal Statement Essays, see available resources at the Hume Center for Writing and Speaking (<https://undergrad.stanford.edu/tutoring-support/hume-center>).
7. Writing Sample in English: A 10-12 page paper giving evidence of both writing ability and the capacity for research, analysis, and original thought at the graduate level, and demonstrating the ability to use theory in relation to evidence. If your writing sample is longer than 10-12 pages, please indicate which 10-12 pages should be reviewed by the admissions committee.

See the department's web site (<http://exploreddegrees.stanford.edu/schoolofhumanitiesandsciences/anthropology/%20https://web.stanford.edu/dept/anthropology/cgi-bin/web/?q=node/35>) for additional information.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken two quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

### Degree Options

Students may pursue one of three possible department tracks in the coterminal Anthropology M.A. degree program. The tracks are:

- Archaeology
- Culture and Society
- Ecology and Environment

The tracks are not declarable in Axess.

## Master of Arts in Anthropology

University requirements for the terminal M.A. are described in the "Graduate Degrees (p. 46)" section of this bulletin.

The Department of Anthropology offers the terminal M.A. degree to the following:

1. Graduate applicants who apply from outside the University for admission to the terminal M.A. program in Anthropology.
2. Stanford graduate students, taking advanced degrees in other departments or schools at Stanford, who are admitted to the terminal M.A. program in Anthropology.
3. Anthropology Ph.D. students at Stanford University who fulfill the M.A. degree requirements on the way to the Ph.D. degree.

Graduate applicants who apply from outside the University and whose ultimate goal is the Ph.D. degree should apply directly to the Ph.D. degree program. Applicants who are offered admission to the terminal Masters degree program may not transfer to the Ph.D. degree program; they must reapply on the same basis as other Ph.D. applicants and in competition with the Ph.D. applicants.

Graduate applicants, taking an advanced degree in other departments or schools at Stanford, applying for admission to the M.A. in Anthropology should apply via the Department terminal M.A. degree application for current Stanford University graduate students form and via the Registrar electronic graduate authorization petition by December 8, 2015 in consideration of beginning degree matriculation in either the following Spring Quarter or the following Autumn Quarter.

Anthropology Ph.D. students choosing to take the M.A. in Anthropology on the way to the Ph.D. are governed by separate requirements described in the Anthropology Ph.D. Degree Program and Ph.D. Handbook.

Graduate enrollment at Stanford University for three consecutive quarters of full tuition for at least 45 units is required of all candidates for the terminal master's degree. M.A. students in Anthropology must take a minimum of 45 units of course work with an overall minimum grade point average of 3.0. For the Masters degree, all courses must be at or above the 100 level, and, at least 23 of the required 45 units must be taken at either the ANTHRO 200 or 300-level.

The M.A. program may require more than one year of study. However, full-time students entering the program with appropriate background should complete the M.A. degree program within three consecutive calendar quarters after the student's first quarter of master's-level enrollment. The University allows no transfer units into the master's program. To provide a meaningful master's program within one year, advance planning of course work with an adviser is required. Requirements for the terminal master's program must be completed within three years.

For further information about the Department's M.A. degree program requirements, please consult the Department webpages.

### Admission to the Master's Degree Program

The deadline for graduate applications to the M.A. degree program in Anthropology is December 8, 2015. Successful applicants to the M.A. program may enter only in the following Autumn Quarter. M.A. degree

applicants must file a report of their Graduate Record Examination score electronically. Additional terminal M.A. degree program application procedures are required by the Department. Please consult the Department webpages.

No financial support is available to students enrolled for the M.A. degree.

## Degree Requirements

Requirements for the coterminal and terminal master's degree program include the following:

1. A faculty adviser appointed in the Department of Anthropology.
2. A program of 45 units, taken at the 100 level or higher with a minimum grade of 'B'. *Note:* At least 23 of the 45 units must be taken at the 200/300 level.
  - of the 45 units, no more than 15 units may be approved from related areas of study or overseas studies.
  - of the 45 units, no more than 10 units of directed reading-style course work may be counted towards the degree.
  - of the 45 units, no more than 5 units may be taken for a satisfactory/no credit grade.
3. A minimum grade of 'B' in one graduate-level ANTHRO Theory course from the chosen track. Please note that ANTHRO theory courses are usually considered as department review courses.
4. A minimum grade of 'B' in one graduate-level ANTHRO Methods course from the chosen track. Please note that ANTHRO methods courses are not considered as department review course.
5. A minimum grade of 'B' in four ANTHRO Review courses from the chosen track, listed at the 200-level or higher, taught by Anthropology faculty, and taken as a five unit course.
6. A self-designed plan of study chosen from one of the following Anthropology tracks; the tracks are not declarable in Axess.:
  - Archaeology
  - Culture and Society
  - Ecology and Environment
7. Submission of an approved plan of study form and an approved department graduate report of degree progress form, inclusive of a field research, laboratory research or library-based paper proposal, by the last day of the first quarter of the Master's degree program.
8. Submission of an approved Master's degree program proposal form by the last day of the first quarter of the Master's degree program.
9. Presentation of the Master's research project at the Department's Master's (Honors) paper presentation event in Spring Quarter, optional.
10. Submission of the Master's paper reviewed by two faculty members (advisor and reader). For the Culture and Society track, the paper can be a field research or library-based research paper. For the Archaeology and the Ecology and Environment tracks, the paper can also be a laboratory research paper.

## Required Courses

### Archaeology Track, Required Theory (Review) Course

		Units
ANTHRO 303	Introduction to Archaeological Theory	5

### Culture and Society Track, Required Theory (Review) Courses

ANTHRO 301	History of Anthropological Theory, Culture and Society	5
------------	--	---

-or-

ANTHRO 301A	Foundations of Social Theory	5
-------------	------------------------------	---

-or-

ANTHRO 300	Reading Theory Through Ethnography	5
------------	------------------------------------	---

### Ecology and Environment Track, Required Theory (Review) Course

ANTHRO 302	History of Anthropological Theory, Ecology and Environment (or comparable, approved course at the 200 level)	5
------------	--	---

Units

### Archaeology Track, Required Methods Course

ANTHRO 307	Archaeological Methods	5
------------	------------------------	---

### Culture and Society Track, Required Methods Course

ANTHRO 306	Anthropological Research Methods	5
------------	----------------------------------	---

### Ecology and Environment Track, Required Methods Course

ANTHRO 305	Research Methods in Ecological Anthropology (or comparable, approved course at the 200 level)	5
------------	---	---

-or-

ANTHRO 255	Research Methods in Ecological Anthropology (or comparable, approved course at the 200 level)	5
------------	---	---

## Recommended Courses

For all tracks, attendance at the Departmental colloquium each quarter is recommended for all Master's students. Students may enroll in the following course for additional units.

		Units
ANTHRO 444	Anthropology Colloquium	1
ANTHRO 445	Anthropology Brown Bag Series	1

## Doctor of Philosophy in Anthropology

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 45)" section of this bulletin.

## Admission

The deadline for graduate application to the Ph.D. degree program is December 8, 2015. Successful applicants for the Ph.D. program may enter only in Autumn Quarter. It is the Department of Anthropology's policy not to defer graduate admission. Additional Ph.D. application procedures are required by the department. Please consult the department website.

## Financial Support

The department endeavors to provide needed financial support (through fellowships, teaching and research assistantships, and tuition grants) to all students admitted to the program who maintain satisfactory degree progress in years one through five of the Ph.D. program. San Francisco Bay Area residency during the Autumn, Winter, and Spring Quarters in academic cohort years one through five is required for eligibility to receive department funding.

First year students who have not obtained a graduate degree previous to entering the Ph.D. program, and who have not obtained extramural funding previously before entering the Ph.D. program, are required to submit one extramural funding application to the faculty advisor in support of graduate doctoral training (for example, funding support for training during the first three years of the Ph.D. program) by the first day of finals week in the Autumn Quarter of the first year. In order to be eligible to apply for the departments exceptional (pre)dissertation research-related Summer Quarter funding support, first-year students must submit at least two intramural or extramural Summer Quarter research funding proposals (deadlines are usually early Winter Quarter and advanced planning is required) as well as the department graduate report of degree progress form inclusive of a research proposal on or by May 15 in the Spring Quarter of the first year of the Ph.D. program.

Note that two instances of predissertation field research Summer Quarter funding support are given to qualified Ph.D. students in Anthropology. The first of two summers of predissertation field research funding support, is given in the Summer Quarter of the second year in the Ph.D.

program and provided by way of a predoctoral research affiliation. The second of two summers of predissertation field research funding support may be taken in either the first or third year Summer Quarter in the Ph.D. and is provided by way of a department fellowship with no tuition. Careful consideration should be given when choosing to take Summer Quarter funding support, either in the first year for a pilot study, survey work, or approved predissertation research, or, in the third year as a bridge to the field to conduct approved dissertation research.

Second-year students are required to complete one or more full time quarterly teaching assistant assignments and be advanced to candidacy. In order to qualify for a predoctoral research affiliation given in the Summer Quarter of the second year, Ph.D. students are required to submit at least two predissertation research funding proposals for second year Summer Quarter funding support.

Third-year students must pass the department qualifying examinations, inclusive of an oral component, and to receive department approval by the dissertation reading committee for the dissertation proposal. Third-year students who have not secured fourth-year field research funding support are required to make at least three extramural funding applications to support dissertation research usually by the end of Autumn Quarter of the third year. Advanced planning is required in order to meet approved dissertation research funding application deadlines. If receiving department funding for fourth year field research, third-year students must review the department Ph.D. funding agreement form before leaving to conduct field research. Finally, the second of two Summer Quarters of (pre)dissertation field research funding support may be taken as a bridge to the field in the third year Summer Quarter if this support was not taken previously in the first year Summer Quarter. If this support is taken in the third year Summer Quarter, Ph.D. students may qualify to receive these funds by way of successful completion of the department qualifying examinations, inclusive of an oral component, and receive approval for the dissertation proposal by the dissertation reading committee by the Summer Quarter final study list deadline.

While in the field, fourth-year students make quarterly reports of their dissertation research progress to the dissertation reading committee via email. Fourth-year students returning from the field must submit the department's graduate report of degree progress form to establish eligibility for fifth year funding for degree progress and dissertation writing support, on or by May 15th in the Spring Quarter of the fourth year.

Fifth-year students are required to complete one or more full time quarterly teaching assistantship assignments. Fifth-year students who have not secured extramural funding for the sixth year are required to make at least two dissertation write-up funding applications to secure extramural or intramural funding for dissertation write-up in order to be eligible for consideration of a department teaching affiliation in the sixth year. A department offer of teaching affiliation is always dependent on the availability of funds and is given at the discretion of the department curriculum committee. During the fifth year and after returning from field research, students confirm Bay Area residency to be eligible for department fifth-year dissertation writing funds. Eligibility for department support is based on seminar attendance and dissertation chapter production, as well as on Bay Area residency (the Bay Area is defined as Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, or Sonoma counties)

## Program

The Ph.D. in Anthropology allows the student to develop a flexible program reflecting special research interests, under the supervision of a faculty committee, chosen by the student. Students are encouraged to plan for completion of all work for the Ph.D. in five years. Matriculation in the Ph.D. is full-time only. In order to be eligible for department and intramural support, students must reside locally through the Autumn, Winter and Spring Quarters of academic years one through five. The

University oral examination may be scheduled in the fifth year or beyond depending upon a student's time to degree completion. Ph.D. students in Anthropology must complete a minimum of 135 quarter units with a minimum grade point average (GPA) of 3.0 (B). The maximum allowable number of transfer units is 45.

## Degree Options

Students may pursue three different tracks in the Anthropology Ph.D. program. The tracks are not declarable in Axess and do not appear on the transcript or the diploma. The three tracks are:

- Archaeology
- Culture and Society
- Ecology and Environment.

## Degree Requirements

For students who matriculate beginning 2015-16, the requirements for the doctoral degree program include the following:

1. Students must submit a department (first year) plan of study form detailing intended courses enrollment and milestone accomplishment to be completed in the first year of the Ph.D. program. The plan of study form should be submitted by the first day of Autumn Quarter. In addition, the plan of study form also confirms the department track: Archaeology, Culture and Society, or Ecology and Environment.
2. Students must pass six graduate level ANTHRO subject code department review courses, with a minimum grade of 'B+', appropriate to the student's chosen track, within the first two years of the degree program. Department review courses are usually those seminar-style courses, taught by tenure-line ANTHRO faculty appointed in the department, at the 300-level.
3. In the first year of the program:
  - a. pass with a minimum grade of 'B+' the theory course(s) as required for the chosen track in Archaeology, Culture and Society, and Ecology and Environment:

### Archaeology Track, Required Theory (Review) Course

ANTHRO 303	Introduction to Archaeological Theory	5
------------	---------------------------------------	---

### Culture and Society Track, Required Theory (Review) Courses

ANTHRO 300	Reading Theory Through Ethnography	5
ANTHRO 301	History of Anthropological Theory, Culture and Society	5
ANTHRO 301A	Foundations of Social Theory	5

### Ecology and Environment Track, Required Theory (Review) Course

ANTHRO 302	History of Anthropological Theory, Ecology and Environment (or comparable, approved course at the ANTHRO 200 level)	5
------------	---	---

- b. pass with a minimum grade of 'B+' one or more methods courses as required for the chosen track in Archaeology and in Ecology and Environment:

### Archaeology Track, Required Methods Course

ANTHRO 307	Archaeological Methods	5
------------	------------------------	---

(may be taken in either the first or second year of the PhD program)

### Ecology and Environment Track, Required Methods Course

In the first year, pass at least one of two required methods courses, or a comparable, approved ANTHRO course at the 200-level:

ANTHRO 304	Data Analysis for Quantitative Research	5
ANTHRO 305	Research Methods in Ecological Anthropology	5

Units

Units

or ANTHRO 255 Research Methods in Ecological Anthropology

- c. complete at least 45 units by the end of Spring Quarter in the first year.
- d. as scheduled by the department, attend the department ethics workshop for review of ethics in Anthropology. Submit the department review of ethics in anthropology form on or by May 15th in Spring Quarter.
- e. enroll in ANTHRO 310G Introduction to Graduate Studies during Autumn Quarter (all tracks).
- f. Culture and Society track students only enroll in ANTHRO 311G Introduction to Culture and Society Graduate Studies in Anthropology during Winter and Spring quarters for 1-2 units (no more than 5 units total over two quarters).
- g. attend the department colloquial series each quarter. Enrollment in ANTHRO 444 Anthropology Colloquium is optional.
- h. attend the department brown bag series each quarter. Enrollment in ANTHRO 445 Anthropology Brown Bag Series is optional.
- i. submit the department graduate report of degree progress form inclusive of the research proposal to the faculty adviser and the graduate program committee on or by May 15th in Spring Quarter of the first year. Receive final approval for the predissertation research proposal from the adviser and the graduate program committee by the first day of finals week in Spring Quarter.
- j. submit at least one extramural funding application within the first year (deadlines are usually early Autumn Quarter and advanced planning is required). If ineligible to submit an extramural funding proposal due to previous graduate work, nationality, or other, submit a draft proposal in the style of a National Science Foundation (NSF) Graduate Research Fellowship Program (GRFP) to the faculty advisor.
- k. to be eligible for exceptional funding support in the Summer Quarter of the first year, submit at least two intramural or extramural funding proposals for Summer Quarter funding support (deadlines are usually early Winter Quarter and advanced planning is required). If exceptional Summer Quarter funding support is needed, submit a petition for predissertation funding support for the Summer Quarter of the first year using a department graduate petition form on or by May 15th in the Spring Quarter. The second of two summers of predissertation field research funding support may be taken in the Summer Quarter of either the first or third year in the Ph.D. program and is provided by way of a department fellowship. Careful consideration should be given when choosing to use the Summer Quarter funding support in either the first year for a pilot study, survey work, or approved field research or, in the third year as a 'bridge to the field' to conduct approved dissertation field research.
- l. complete the appropriate CITI tutorial for non-medical human subjects, and, either submit a non-medical human subjects protocol, based on the predissertation research proposal, to the Institutional Review Board before departing for Summer Quarter field research in the first year, or confirm approval for exempt status. Alternately, a notice of determination may be confirmed with the Institutional Review Board for a pilot study proposal that does not require protocol submission.
- m. complete the appropriate CITI tutorial for Responsible Conduct of Research on or by May 15 in Spring Quarter.
- n. upon completion of the above requirements, and with recommendation from the faculty adviser and department chair, request the master's degree 'on the way to the Ph.D.' by the first day of finals week in Spring Quarter, or during any other registered quarter following this time, if desired.

4. In the second year:

- a. pass with a minimum grade of 'B+' the methods course(s) appropriate for the chosen track in Archaeology, Culture and Society, and Ecology And Environment:

**Archaeology Track, Required Methods Course**

ANTHRO 307	Archaeological Methods	5
ANTHRO 370	Advanced Theory and Method in Historical Archaeology	5

**Culture and Society Track, Required Methods Course**

ANTHRO 306	Anthropological Research Methods	5
------------	----------------------------------	---

**Ecology and Environment Track, Required Methods Course(s)**

ANTHRO 305	Research Methods in Ecological Anthropology	5
------------	---	---

or ANTHRO 255 Research Methods in Ecological Anthropology

- b. pass with a minimum grade of 'B+' the proposal writing course appropriate for the chosen track in Archaeology and in Culture and Society:

**Archaeology Track, Required Proposal Writing Course**

ANTHRO 308A	Proposal Writing Seminar in Archaeology	5
-------------	---	---

**Culture and Society Track, Required Proposal Writing Course**

ANTHRO 308	Proposal Writing Seminar in Cultural and Social Anthropology	5
------------	--	---

- c. for all tracks, submit the pre-dissertation proposal to the assigned faculty adviser and the graduate program committee by the first day of finals week in Spring Quarter. Receive approval for the draft proposal of the second year summer pre-dissertation research before departing for field research.
- d. complete at least 40 units of course work in the second year and a total of at least 50 units overall including the Summer Quarter enrollment in ANTHRO 450 Research Apprenticeship (10 units). Students must have completed a total of 95 units overall by the end of the second year.
- e. pass with a minimum grade of 'B+' any remaining ANTHRO subject code review courses to complete the six review course requirement.
- f. for the Ecology and Environment track, pass the second of two required methods courses by the end of the second year:

**Ecology and Environment Track, Required Methods Courses**

ANTHRO 304	Data Analysis for Quantitative Research (or, comparable approved ANTHRO course at the 200-level)	5
ANTHRO 305	Research Methods in Ecological Anthropology (or, comparable approved ANTHRO course at the 200-level)	5

or ANTHRO 255 Research Methods in Ecological Anthropology

- g. as scheduled by the department, attend the teaching assistant training workshop (to be scheduled during or after the week before the first day of Autumn Quarter).
- h. complete one or more full time quarterly teaching assistant assignments in the second year.
- i. submit a second year graduate report of degree progress form inclusive of the research proposal on or by May 15th in Spring Quarter. Receive approvals from the assigned faculty adviser and the graduate program committee by the first day of finals week in Spring Quarter.
- j. by the first day of finals week in Winter Quarter, confirm the qualifying examination committee adviser for each examination committee (i.e. one committee for AREA and one committee for TOPIC) by submitting the department report of qualifying

Units

Units

School of Humanities and Sciences

Units

examination form to the department graduate program committee.

- k. by the first day of finals week in Winter Quarter (for those whose native language is English), either pass a foreign research or field language exam, or petition the department's language committee for exemption from a foreign research or field language examination (based on a description of previous field or research language training). For those whose native language is not English, demonstrate satisfactory command of the English language, as evidenced by completion of the first two years of graduate study and a petition to the language committee.
  - l. upon completion of the above requirements and at the recommendation of the Anthropology faculty, petition the University for candidacy by submitting the University application for candidacy for doctoral degree form by the first day of finals week in Winter Quarter. Advancement to candidacy is based on faculty review and approval of the predissertation research proposal demonstrating the ability to conduct independent research, analysis and interpretation. The should be submitted no later than May 15th in Spring Quarter of the second year. Failure to advance to candidacy may result in the dismissal of the student from the program.
  - m. In order to qualify for a predoctoral research affiliateship given in the Summer Quarter of the second year, Ph.D. students are required to submit at least two predissertation research funding proposals for second year Summer Quarter funding support.
5. In the third year, complete the following:
    - a. by the last day of the third week of Autumn Quarter, confirm the committee reader for each of the qualifying examination committees (i.e. one committee for AREA and one committee for TOPIC) by submitting the report of qualifying examination form to the department graduate program committee.
    - b. by the first day of finals week in Autumn Quarter, submit three dissertation research grant proposals to the faculty adviser for approval. In order to be eligible for fourth year field research funding support, submit approved extramural funding proposals to three funding agencies by the end of the Summer Quarter.
    - c. by the first day of finals week in Autumn Quarter, confirm the dissertation reading committee by submitting the University dissertation reading committee form to the graduate committee.
    - d. by the last day of third week in Winter Quarter, submit the third year department report of qualifying examination status form to the graduate program committee reaffirming committee formulation, and confirming the exam dates, preliminary qualifying bibliographies, and the proposed question set for each examination.
    - e. by the last day of finals week in Winter Quarter, complete the qualifying examinations for area and for topic (two separate examinations to be scheduled one week apart), inclusive of the final bibliographies.
    - f. by the last day of the second week in Spring Quarter, submit a draft of the dissertation proposal to the dissertation reading committee.
    - g. by the last day of the second week in Spring Quarter, confirm a scheduled meeting with the qualifying examination committee/ dissertation reading committee members for the oral component of the qualifying examinations and for review and approval of the dissertation proposal.
    - h. accomplish a meeting with the qualifying examination/ dissertation reading committee to review the dissertation proposal, inclusive of the oral component of the qualifying examinations, on or by May 15th in Spring Quarter.
    - i. the second of two summers of (pre)dissertation field research funding support provided by way of a fellowship stipend may be taken in either the first or third year Summer Quarters in the Ph.D.
6. In the fourth year, complete the following requirements:
    - a. successfully complete a possible third of three possible attempts to re-write/re-take the qualifying examinations for area and topic no later than the last day of Autumn quarter following the Spring quarter of the second year.
    - b. by the first day of finals week in the Autumn, Winter and Spring Quarters, submit a quarterly report of dissertation field research via email to the dissertation reading committee.
    - c. to establish eligibility for funding and to confirm Bay Area residency, submit a fourth-year department graduate report of degree progress form to the department graduate program committee on or by May 15th in the Spring Quarter.
    - d. submit one or more funding proposals supporting of Summer Quarter in the fourth year.
7. In the fifth year, complete the following requirements:
    - a. during the fifth year and after returning from field research, confirm Bay Area residency to be eligible for department fifth year dissertation writing funds. Eligibility for department support is based on seminar attendance as well as on Bay Area residency (the Bay Area is defined as Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, or Sonoma counties).
    - b. during the fifth year and after returning from field research, complete one or more full time quarterly teaching assistant assignments in the department.
    - c. during Autumn, Winter, Spring Quarters in the fifth year, students attend a minimum of four out of five class meetings of ANTHRO 400 Dissertation Writers Seminar (required of Culture and Society track, only; and, recommended for the Archaeology and the Ecology and Environment tracks). In each quarter and for all tracks, chapter drafts of the dissertation must be handed in to the dissertation reading committee for review.
    - d. submit the fifth year dissertation writers report of degree progress and time to degree completion form by the last day of finals week in the Autumn, Winter and Spring Quarters.
    - e. fifth year students who have not secured funding support from the beginning of the Summer Quarter of the fifth year through the end of Summer Quarter in the sixth year, should submit one or more funding proposals for dissertation writing funding support.
8. In either the fifth year or in the sixth plus year and beyond, complete the following requirements:
    - a. submit a penultimate draft of the dissertation by the last day of the first week of the quarter preceding the quarter in which the oral examination (dissertation defense) has been scheduled, and in which the dissertation is to be submitted in partial fulfillment of degree requirements.
    - b. at least four weeks prior to a proposed date for the oral examination, submit the University oral examination schedule program. If not taken in Summer Quarter of the first year, submit the third-year Summer Quarter dissertation bridge to the field funding request via a graduate petition form on or by May 15th in Spring Quarter.
    - j. by the first day of finals week in Spring Quarter, submit the approved dissertation proposal to the graduate program committee.
    - k. before departing for field research, receive approval for the non-medical human subjects protocol from the Institutional Review Board.
    - l. meet with faculty to review comments for the dissertation proposal, all tracks.
    - m. full-time research, based on the approved dissertation research proposal, should start no later than the final study list deadline in the Summer Quarter of the third year.

form and a final draft of the dissertation, to the department graduate program committee.

- c. pass the University oral examination, inclusive of an oral presentation held at the beginning of the oral examination period (approximately 30 minutes for the public presentation with a 15 minute public discussion period preceding a closed session with the oral examination committee), prior to the final submission of the dissertation to the University Registrar and the conferral of the doctoral degree in Anthropology.

## Required Courses

### Archaeology Track

		Units
ANTHRO 303	Introduction to Archaeological Theory	5
ANTHRO 307	Archaeological Methods	5
ANTHRO 310G	Introduction to Graduate Studies	2
ANTHRO 308A	Proposal Writing Seminar in Archaeology	5
Total Units		17

### Culture and Society Track

		Units
ANTHRO 300	Reading Theory Through Ethnography	5
ANTHRO 301	History of Anthropological Theory, Culture and Society	5
ANTHRO 301A	Foundations of Social Theory	5
ANTHRO 306	Anthropological Research Methods	5
ANTHRO 308	Proposal Writing Seminar in Cultural and Social Anthropology	5
ANTHRO 310G	Introduction to Graduate Studies	2
ANTHRO 311G	Introduction to Culture and Society Graduate Studies in Anthropology	2
Total Units		29

### Ecology and Environment Track

		Units
ANTHRO 302	History of Anthropological Theory, Ecology and Environment	5
ANTHRO 304	Data Analysis for Quantitative Research	5
ANTHRO 305	Research Methods in Ecological Anthropology	5
ANTHRO 310G	Introduction to Graduate Studies	2
Total Units		17

### Recommended Courses

For all tracks, quarterly attendance (during the Autumn, Winter, and Spring quarters) in the departmental colloquium is recommended for all doctoral students and required for all current first-year, second-year, and fifth-year cohort Ph.D. students. Students may enroll in the following course for additional units.

		Units
ANTHRO 444	Anthropology Colloquium	1
ANTHRO 445	Anthropology Brown Bag Series	1

## Ph.D. Minor in Anthropology

University requirements for the Ph.D. Minor are described in the Graduate Degrees section of this Bulletin.

To request the Ph.D. Minor in Anthropology, apply to the department graduate program committee at least three quarters before terminal graduate registration status is confirmed with the following materials: the University application for Ph.D. minor form, the department request

for Ph.D. minor adviser form, an approved pre-dissertation proposal, confirmation of qualifying status in the Ph.D. (home) department, confirmation of Ph.D. candidacy in the Ph.D. (home) department, proposed dates for the University oral examination and the dissertation defense, and a recommendation for consideration of the Ph.D. minor made by the Ph.D. (Minor) department adviser. Once approved, a HelpSU request to the University Registrar requesting the addition of the Ph.D. minor to the student's academic career will be submitted by the Anthropology student services officer on behalf of the Ph.D. minor applicant.

The requirements for a Ph.D. Minor in Anthropology include the following:

1. Complete 30 units of ANTHRO subject code courses at the 300 level. The courses dedicated to the Ph.D. minor must be successfully completed with a minimum (GPA) of 3.0 (B). Directed Individual Study units are not approved for the Ph.D. minor in Anthropology.
2. Request a faculty member within the Department of Anthropology who provides written consent to serve as the adviser for the Ph.D. minor and serve on the student's oral examination and dissertation reading committees.
3. With the faculty adviser, determine a coherent plan and submit the plan of study form for the Ph.D. minor.
4. Pass with a minimum grade of 'B+' three ANTHRO theory courses, and one ANTHRO course in geographical or theoretical area, for a total of four department Review courses.

For additional information regarding the Ph.D. Minor in Anthropology, consult the department website.

## Faculty

*Emeriti: (Professors)* Harumi Befu, George A. Collier, Jane F. Collier, Carol Delaney, Charles O. Frake, James L. Gibbs, Jr., Renato I. Rosaldo

*Chair:* Sylvia Yanagisako

*Professors:* Lisa Curran, William H. Durham, James Ferguson, Thomas Blom Hansen, Ian Hodder, Richard G. Klein, Tanya Luhmann, Lynn Meskell, Sylvia J. Yanagisako

*Associate Professors:* Paulla Ebron (on leave A&S), James A. Fox, Duana Fullwiley, Miyako Inoue, S. Lochlann Jain, Matthew Kohrman, Liisa Malkki, John W. Rick (on leave), Barbara Voss

*Assistant Professors:* Andrew Bauer, Angela Garcia (on leave A&W), Krish Seetah (on leave W&S), Kabir Tambar (on leave), Sharika Thiranagama (on leave)

*Associate Professors (Teaching):* Michael V. Wilcox

*Courtesy Professors:* H. Samy Alim, Penelope Eckert, Raymond McDermott

*Visiting Professors:* James Clifford

*Visiting Associate Professors:* Ewa Domanska

*Visiting Assistant Professors:*

*Lecturers:* Sasa Caval, Claudia Engel, Julia Huang

*Affiliated Faculty:* James Holland Jones, Li Liu, Richard White

*Postdoctoral Fellows:* Mary-Ashley Hazel, Nev Jones, Zhiyuan Song

*Teaching Affiliates:* Stephanie Bautista, Firat Bozcali, Yasemin Ipek Can, Claudia Liuzza, Elspeth Ready

## Overseas Studies Courses in Anthropology

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPBER 25	Architecture, Memory, Commemoration	5
OSPCPTWN 36	The Archaeology of Southern African Hunter Gatherers	4
OSPOXFRD 93	Collecting the World	3

## Applied Physics

Courses offered by the Department of Applied Physics are listed under the subject code APPPHYS on the Stanford Bulletin's ExploreCourses web site.

The Department of Applied Physics offers qualified students with backgrounds in physics or engineering the opportunity to do graduate course work and research in the physics relevant to technical applications and natural phenomena. These areas include accelerator physics, biophysics, condensed matter physics, nanostructured materials, quantum electronics and photonics, quantum optics and quantum information, space science and astrophysics, synchrotron radiation and applications.

Student research is supervised by the faculty members listed above and also by various members of other departments such as Biology, Chemistry, Electrical Engineering, Materials Science and Engineering, Physics, the SLAC National Accelerator Laboratory, and faculty of the Medical School who are engaged in related research fields.

Research activities are carried out in laboratories including the Geballe Laboratory for Advanced Materials, the Edward L. Ginzton Laboratory, the Hansen Experimental Physics Laboratory, the SLAC National Accelerator Laboratory, the Center for Probing the Nanoscale, and the Stanford Institute for Materials and Energy Science.

The number of graduate students admitted to Applied Physics is limited. Applications to the Master of Science and Ph.D. programs should be received by December 15, 2015. M.S. and Ph.D. students normally enter the department only in Autumn Quarter.

## Graduate Programs in Applied Physics

The Department of Applied Physics offers three types of advanced degrees:

- the Doctor of Philosophy
- the coterminal Master of Science in Applied and Engineering Physics
- the Master of Science in Applied Physics, either a terminal degree or an en route degree to the Ph.D. for students enrolled in the Applied Physics Department

Admission requirements for graduate work in the Master of Science and Ph.D. programs in Applied Physics include a bachelor's degree in Physics

or an equivalent engineering degree. Students entering the program from an engineering curriculum should expect to spend at least an additional quarter of study acquiring the background to meet the requirements for the M.S. and Ph.D. degrees in Applied Physics.

## Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Applied Physics and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Applied Physics. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Applied Physics and to interpret and present the results of such research.

## Coterminal Master of Science in Applied and Engineering Physics

Stanford undergraduates, regardless of undergraduate major, who are interested in a M.S. degree at the intersection of applied physics and engineering may choose to apply for the coterminal Master of Science program in Applied and Engineering Physics. The program is designed to be completed in a fifth year at Stanford. Students with accelerated undergraduate programs may be able to complete their B.S. and coterminal M.S. in four years.

### Application and Admission

Undergraduates must be admitted to the program and enrolled as a graduate student for at least one quarter prior to B.S. conferral. Applications will be due on the last day of class of the Spring Quarter for Autumn matriculation and at least four weeks before the last day of class in the previous quarter for Winter or Spring matriculation. All application materials must be submitted directly to the Applied Physics department office by the deadlines. To apply for admission to the Applied and Engineering Physics coterminal M.S. program, students must submit the coterminal application which consists of the following:

- Application for Admission to Coterminal Masters' Program (<https://stanford.box.com/CotermApply>)
- Statement of Purpose
- Unofficial Transcript
- Two Letters of Recommendation from members of the Stanford faculty
- Supplemental Form (<http://www.stanford.edu/dept/app-physics/cgi-bin/aep-application-process>)

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to

the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

## Program Requirements

Coterminal M.S. students are required to take 45 units of course work during their graduate career. Of these 45 units, the following are required.

	Units
<b>Four Breadth Courses (required)</b>	
APPPHYS 201 Electrons and Photons	4
APPPHYS 203 Atoms, Fields and Photons	4
APPPHYS 204 Quantum Materials	4
APPPHYS 205 Introduction to Biophysics	4
<b>Three Engineering Depth Courses</b>	9
At least one must be at the 300 level and the other courses must be at the 200 level or above to provide depth in one area. To be approved by the Applied Physics academic adviser.	
<b>One Laboratory or Methods Course</b>	3-4
APPPHYS 207 Laboratory Electronics	
APPPHYS 208 Laboratory Electronics	
APPPHYS 215 Numerical Methods for Physicists and Engineers	
APPPHYS 217 Estimation and Control Methods for Applied Physics	
APPPHYS 232 Advanced Imaging Lab in Biophysics	
APPPHYS 304 Lasers Laboratory	
APPPHYS 305 Advanced Nonlinear Optics Laboratory	
EE 234 Photonics Laboratory	
EE 251 High-Frequency Circuit Design Laboratory	
EE 410 Integrated Circuit Fabrication Laboratory	
ENGR 341 Micro/Nano Systems Design and Fabrication	
ENGR 342 MEMS Laboratory II	
MATSCI 322 Transmission Electron Microscopy Laboratory	
MATSCI 331 Atom-based computational methods for materials	
<b>Seminar</b> <sup>1</sup>	3
<b>Approved Technical Electives</b> <sup>2</sup>	6-12
6 units minimum that brings up the total units to 45	
<b>Total Units</b>	<b>45</b>

<sup>1</sup> The seminar requirement can be fulfilled by either (i) taking one formal seminar course for credit each term, and/or (ii) enrolling in Applied Physics 290 and attending a minimum of 8 informal talks or formal research seminars during each of the three terms. Students enrolling in Applied Physics 290 must submit with their final M.S. program proposal a list of the 8 talks/seminars with a paragraph describing the content, signed by their academic adviser.

<sup>2</sup> These include APPPHYS, CS, CME, EE, ME, BIOE, MATSCI, PHYSICS courses (see <http://www.stanford.edu/dept/app-physics/cgi-bin/academic-programs/>) as well as those courses that are formally approved by the Applied Physics Graduate Studies Committee through petition.

Any request for a course transfer from the undergraduate career is subject to approval of the undergraduate and graduate departments.

## Master of Science in Applied Physics

The University's basic requirements for the master's degree are discussed in the "Graduate Degrees (p. 45)" section of this bulletin. The minimum requirements for the degree are 45 units, of which at least 39 units must be graduate-level courses in applied physics, engineering, mathematics, and physics. The required program consists of the following:

	Units
<b>Advanced Mechanics</b>	3
Select one of the following:	
PHYSICS 210 Advanced Mechanics	
PHYSICS 211 Continuum Mechanics (approved substitute)	
<b>Electrodynamics</b>	3
PHYSICS 220 Classical Electrodynamics	
<b>Quantum Mechanics</b>	6
Select two of the following:	
PHYSICS 230 Graduate Quantum Mechanics I	
PHYSICS 231 Graduate Quantum Mechanics II	
EE 222 Applied Quantum Mechanics I (approved substitute)	
EE 223 Applied Quantum Mechanics II (approved substitute)	
PHYSICS 234 Advanced Topics in Quantum Mechanics (approved substitute)	
PHYSICS 330 Quantum Field Theory I (approved substitute)	
PHYSICS 331 Quantum Field Theory II (approved substitute)	
PHYSICS 332 Quantum Field Theory III (approved substitute)	
	<b>Units</b>
APPPHYS 290 Directed Studies in Applied Physics	
1-unit seminar courses	
Examples of suitable courses include:	
BIO 217 Neuronal Biophysics	
EE 222 Applied Quantum Mechanics I	
EE 223 Applied Quantum Mechanics II	
EE 236A Modern Optics	
EE 236C Lasers	
EE 248	
EE 332 Laser Dynamics	
EE 346 Introduction to Nonlinear Optics	
PHYSICS 372 Condensed Matter Theory I	
PHYSICS 373 Condensed Matter Theory II	

1. Courses in Physics and Mathematics to overcome deficiencies, if any, in undergraduate preparation.
2. Basic graduate courses (letter grade required):
  - 33 units of additional advanced courses in science and/or engineering. May be any combination of APPPHYS 290 Directed Studies in Applied Physics, any 1-unit course, and regular courses. At least 18 of these 33 units must be taken for a letter grade.
3. A final overall grade point average (GPA) of 3.0 (B) is required for courses used to fulfill degree requirements.

There are no department nor University examinations. There is no thesis component. If a student is admitted to the M.S. program only, but later

wishes to change to the Ph.D. program, the student must apply to the department's admissions committee.

## Doctor of Philosophy in Applied Physics

The University's basic requirements for the Ph.D. including residency, dissertation, and examinations are discussed in the "Graduate Degrees (p. 45)" section of this bulletin. The program leading to a Ph.D. in Applied Physics consists of course work, research, qualifying for Ph.D. candidacy, a research progress report, a University oral examination, and a dissertation as follows:

### 1. Course Work:

	Units
<b>Advanced Mechanics</b>	3
Select one of the following:	
PHYSICS 210 Advanced Mechanics	
PHYSICS 211 Continuum Mechanics (approved substitute)	
<b>Statistical Physics</b>	3-4
Select one of the following:	
APPPHYS 217 Estimation and Control Methods for Applied Physics	
APPPHYS 285 Physics of Disordered Systems	
APPPHYS 315 Methods in Computational Biology	
APPPHYS 387 Quantum Optics and Measurements	
PHYSICS 212 Statistical Mechanics	
<b>Electrodynamics</b>	3
PHYSICS 220 Classical Electrodynamics	
<b>Quantum Mechanics</b>	6
Select two of the following:	
PHYSICS 230 Graduate Quantum Mechanics I	
PHYSICS 231 Graduate Quantum Mechanics II	
PHYSICS 234 Advanced Topics in Quantum Mechanics (approved substitute)	
PHYSICS 330 Quantum Field Theory I (approved substitute)	
PHYSICS 331 Quantum Field Theory II (approved substitute)	
PHYSICS 332 Quantum Field Theory III (approved substitute)	
EE 222 Applied Quantum Mechanics I (approved substitute)	
EE 223 Applied Quantum Mechanics II (approved substitute)	
<b>Laboratory</b>	3-4
Select one of the following:	
APPPHYS 207 Laboratory Electronics	
APPPHYS 208 Laboratory Electronics	
APPPHYS 232 Advanced Imaging Lab in Biophysics	
APPPHYS 304 Lasers Laboratory	
APPPHYS 305 Advanced Nonlinear Optics Laboratory	
BIOE 370 Microfluidic Device Laboratory	
EE 234 Photonics Laboratory	
EE 410 Integrated Circuit Fabrication Laboratory	
MATSCI 171 Nanocharacterization Laboratory	
MATSCI 172 X-Ray Diffraction Laboratory	
MATSCI 173 Mechanical Behavior Laboratory	
PHYSICS 301 Astrophysics Laboratory	

- Courses in Physics and Mathematics to overcome deficiencies, if any, in undergraduate preparation.
- Basic graduate courses:* These requirements may be totally or partly satisfied with equivalent courses taken elsewhere, pending

the approval of the graduate study committee. Letter grades required for all courses:

- 21 units of additional advanced courses in science and/or engineering. Units from APPPHYS 290, APPPHYS 390, and any 1-unit courses do not count towards this requirement. Examples of suitable courses include:

BIO 217	Neuronal Biophysics	4
EE 222	Applied Quantum Mechanics I	3
EE 223	Applied Quantum Mechanics II	3
EE 236A	Modern Optics	3
EE 236C	Lasers	3
EE 248		
EE 332	Laser Dynamics	3
EE 346	Introduction to Nonlinear Optics	3
PHYSICS 372	Condensed Matter Theory I	3
PHYSICS 373	Condensed Matter Theory II	3

- Only 3 units at the 300 or above level may be taken on a satisfactory/no credit basis.
  - Additional units of courses as needed to meet the minimum residency requirement of 135. Directed study and research units as well as 1-unit seminar courses can be included.
  - A final average overall grade point average (GPA) of 3.0 (B) is required for courses used to fulfill degree requirements.
  - Students are normally expected to complete the specified course requirements by the end of their third year of graduate study.
- Research:* may be conducted in a science/engineering field under the supervision of a member of the Applied Physics faculty or appropriate faculty from other departments.
  - Ph.D. Candidacy:* satisfactory progress in academic and research work, together with passing the Ph.D. candidacy qualifying examination, qualifies the student to apply for Ph.D. candidacy, and must be completed before the third year of graduate registration. The examination consists of a seminar on a suitable subject delivered by the student before the faculty academic adviser (or an approved substitute) and two other members of the faculty selected by the department.
  - Research Progress Report:* normally before the end of the Winter Quarter of the fourth year of enrollment in graduate study at Stanford, the student arranges to give an oral research progress report of approximately 45 minutes, of which a minimum of 15 minutes should be devoted to questions from the Ph.D. reading committee.
  - University Ph.D. Oral Examination:* consists of a public seminar in defense of the dissertation, followed by private questioning of the candidate by the University examining committee.
  - Dissertation:* must be approved and signed by the Ph.D. reading committee.

*Emeriti:* (Professors) Malcolm R. Beasley, Arthur Bienenstock, Alexander L. Fetter, Theodore H. Geballe, Stephen E. Harris, Walter A. Harrison, Peter A. Sturrock, Yoshihisa Yamamoto; (Professors, Research) Calvin F. Quate, Helmut Wiedemann, Herman Winick; (Courtesy) Gordon S. Kino, Douglas D. Osheroff

*Chair:* Hideo Mabuchi

*Professors:* Steven M. Block, Philip H. Bucksbaum, Robert L. Byer, Sebastian Doniach, Martin M. Fejer, Daniel S. Fisher, Ian R. Fisher, Tony F. Heinz, Harold Y. Hwang, Aharon Kapitulnik, Mark A. Kasevich, Young S. Lee, Hideo Mabuchi, Kathryn A. Moler, Vahé Petrosian (on leave Autumn Quarter), Stephen R. Quake, Zhi-Xun Shen, Yuri Suzuki

*Associate Professors:* Benjamin L. Lev, David A. Reis, Mark J. Schnitzer (on leave Spring Quarter)

*Assistant Professors:* Surya Ganguli, Amir H. Safavi-Naeini

*Professor (Research):* Michel J-F. Digonnet

*Courtesy Professors:* Mark L. Brongersma, Bruce M. Clemens, Shanhui Fan, David Goldhaber-Gordon, James S. Harris, Lambertus Hesselink, David A. B. Miller, W. E. Moerner, Jelena Vuckovic, Shoucheng Zhang

*Courtesy Associate Professors:* Zhirong Huang, Andrew J. Spakowitz

*Courtesy Assistant Professor:* William J. Greenleaf

*Consulting Professors:* Thomas M. Baer, Raymond G. Beausoleil, John D. Fox, Richard M. Martin

## Archaeology

Courses offered by the Archaeology Program are listed under the subject code ARCHLGY on the Stanford Bulletin's ExploreCourses web site.

Archaeology is the study of the past through its material remains that survive into the present. Archaeology is a discipline that offers direct access to the experiences of a wide range of people in numerous cultures across the globe. Increasingly, archaeology bridges past and present societies through the study of the human heritage and its role in contemporary societies. Stanford's Archaeology Program provides students with an interdisciplinary approach to the material remains of past societies, drawing in equal parts on the humanities, social sciences, and natural sciences.

The Archaeology curriculum draws on faculty from a wide range of University departments and schools. To complete the requirements for the major, students must take courses from the offerings of the program and from the listings of other University departments. The program culminates in a Bachelor of Arts (B.A.) in Archaeology.

## Mission of the Undergraduate Program in Archaeology

The mission of the undergraduate program in Archaeology is to provide students with a broad and rigorous introduction to the analysis of the material culture of past societies, drawing on the questions and methods of the humanities, social sciences, and natural sciences. Students in the major learn to relate these analyses to the practice of archaeology in the contemporary world. The program seeks to help each student achieve a high level of understanding through concentrated study of a particular research area. Courses in the major complete a comprehensive curriculum that draws on faculty from a wide range of University departments and programs. Archaeology majors are well prepared for advanced training in professional schools such as education, law, and journalism and, depending upon their choice of upper-division course, graduate programs in the humanities, social sciences, and natural sciences.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to:

1. demonstrate an understanding of core knowledge of the history of thought and basic theoretical foundations in archaeology.

2. write clearly and persuasively, communicating ideas about archaeology to multiple audiences and different communities, from the scholarly and to the general public in a variety of formats.
3. learn about the development of archaeology as a discipline and the major trends that have influenced thinking and writing about archaeology today.
4. demonstrate their mastery of the broad historical and theoretical trends in the field through critique of research within archaeology.

## Bachelor of Arts in Archaeology

To declare a major in Archaeology, students should apply for the B.A. in Archaeology on Axxess and contact the student services specialist, who provides an application form, answers initial questions, and helps the student choose a faculty adviser. Students should declare by the beginning of their junior year.

All majors must complete 65 units with an overall minimum grade of 'C', which must form a coherent program of study and be approved by the student's faculty adviser and the program director.

Students who plan to pursue graduate work in Archaeology should be aware of the admission requirements of the particular departments to which they intend to apply. These vary greatly. Early planning is advisable to guarantee completion of major and graduate school requirements.

### Degree Requirements

The B.A. in Archaeology requires a minimum of 65 units in the major, with an overall minimum grade of 'C', and no more than 10 units may be taken for pass/nopass credit. The major requirements are divided among five components. A course may only be used once to fulfill a component.

#### 1. Core Courses

20 units must be taken for a letter grade (minimum passing grade of 'B')

		Units
ARCHLGY 1	Introduction to Prehistoric Archeology (Gateway)	5
ARCHLGY 102	Archaeological Methods (Intermediate)	5
ARCHLGY 103	History of Archaeological Thought (Intermediate)	5
ARCHLGY 107A	(Capstone)	5
Total Units		20

ARCHLGY 1 Introduction to Prehistoric Archeology is recommended as a first course. Many upper-level courses in Archaeology require this course as a prerequisite. Students should normally take the capstone course in their final year of course work in the major.

#### 2. Analytical Methods and Computing (5 units)

Quantitative skills and computing ability are indispensable to archaeologists. It is recommended that students take one of the following:

		Units
Select one of the following:		5
ANTHRO 98B	Digital Methods in Archaeology (recommended)	
PSYCH 10/ STATS 60	Introduction to Statistical Methods: Precalculus	
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	

#### 3. Archaeological Skills (10 units)

Archaeological skills include archaeological formation processes, botanical analysis, cartography, ceramic analysis, dating methods, faunal analysis, geographic information systems, geology, geophysics, genetics, osteology, remote sensing, soil chemistry, and statistics. With

the approval of the instructor and Archaeology director, undergraduates may fulfill part of this requirement from graduate-level courses (typically courses with catalog numbers of 200 or higher).

		Units
ARCHLGY 119	Zooarchaeology: An Introduction to Faunal Remains	5
ARCHLGY 124	Archaeology of Food: production, consumption and ritual	3-5
ANTHRO 103A	Human Osteoarchaeology	5
ANTHRO 175	Human Skeletal Anatomy	5

#### 4. Theory (at least 10 units)

Topics include archaeological, art-historical, sociocultural, historical, and material culture theory. With the approval of the instructor, undergraduates may fulfill part of this requirement from graduate-level courses (typically courses with catalog numbers of 200 or higher).

		Units
ARCHLGY 151	Ten Things: An Archaeology of Design	3
ANTHRO 90B	Theory of Cultural and Social Anthropology	5
ANTHRO 117	Thinking Through Animals	5
ANTHRO 125	Language and the Environment	4-5
ANTHRO 134	Object Lessons	5
ANTHRO 147	Nature, Culture, Heritage	5

#### 5. Electives (20 units)

Select from any of the courses listed below. Courses are arranged around a regional or thematic focus, and therefore, may appear more than once. Students have the option of taking courses around a theme or concentration, and are encouraged to do so by consulting with their faculty adviser(s) to design a course plan. Courses other than those on this list can be used to fulfill this requirement with prior approval of the student's faculty adviser and program director. With the approval of instructor, undergraduates may fulfill part of this requirement from graduate-level courses, typically courses numbered 200 or higher.

##### • World Archaeology: Mediterranean

		Units
ARCHLGY 118	Engineering the Roman Empire	4-5
ARCHLGY 145	Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean	3
CLASSICS 51	Introduction to Greek Archaeology	3-5
CLASSICS 52	Introduction to Roman Archaeology	3-5
CLASSICS 169	Archaeology of Britannia	3-4

##### • World Archaeology: Americas

		Units
ARCHLGY 10	The Archaeology of Home	3-5
ARCHLGY 102B	Incas and their Ancestors: Peruvian Archaeology	3-5
ANTHRO 30Q	The Big Shift	4

##### • World Archaeology: Asia

		Units
ARCHLGY 111	Emergence of Chinese Civilization from Caves to Palaces	3-4
ARCHLGY 135	Constructing National History in East Asian Archaeology	3-5

##### • Heritage

		Units
ARCHLGY 13	Islamic Routes: Archaeology and Heritage of Muslim Societies	3-5
ARCHLGY 135	Constructing National History in East Asian Archaeology	3-5
ARCHLGY 143	Classical Archaeology Today: Ethical Issues of Excavation, Ownership, and Display	3
ANTHRO 112	Public Archaeology: Market Street Chinatown Archaeology Project	4-5
ANTHRO 112B	Advanced Study in Public Archaeology	2-5
ANTHRO 147	Nature, Culture, Heritage	5
THINK 22	Who Owns the Past? Archaeology, Heritage and Global Conflicts	4

##### • Urbanism and Cities

		Units
ANTHRO 112	Public Archaeology: Market Street Chinatown Archaeology Project	5
ANTHRO 112B	Advanced Study in Public Archaeology	2-5

#### 6. Archaeological Fieldwork

Students must take part in a month-long Stanford Archaeology Center field project directed by a Stanford faculty member, and enroll in any coursework that is required for participation in the field project. Projects are typically offered during summer months and funding may be provided. In summer 2013, field schools were located in: Turkey, Peru, China, Mauritius and Italy.

#### 7. Collateral Language Requirement

All Archaeology majors must demonstrate competence in a foreign language beyond the first-year level. Students can meet this requirement by completing a course beyond the first-year level with a grade of 'B' or better, and are encouraged to choose a language that has relevance to their archaeological region or topic of interest. Students may petition to take an introductory-level course in a second language to fulfill this requirement by demonstrating the connection between the language(s) and their research interest(s).

#### 8. Research and Independent Study

Students may count up to 5 units of research and independent study toward the Archaeology major:

		Units
ARCHLGY 190	Archaeology Directed Reading/Independent Study	1-5
ARCHLGY 195	Independent Study/Research	1-5
ARCHLGY 199	Honors Independent Study	5

including but not limited to:

#### Honors Program

The honors program in Archaeology gives qualified majors the chance to work closely with faculty on an individual research project culminating in an honors thesis. Students may begin honors research from a number of starting points, including topics introduced in the core or upper-division courses, independent interests, research on artifacts in Stanford's collections, or fieldwork experiences.

Interested Archaeology majors of junior standing may apply for admission by submitting an honors application form, including a 4-5 page statement of the project, a transcript, and a letter of recommendation from the faculty member supervising the honors thesis to the student services specialist, no later than the end of the fourth week of the Spring Quarter. Archaeology majors are eligible to apply for honors candidacy. The thesis is due in early May of the senior year and is read by the

candidate's adviser and a second reader appointed by the undergraduate committee.

## Overseas Studies Courses in Archaeology

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) web site or the Bing Overseas Studies (<http://bosp.stanford.edu>) web site. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

## Minor in Archaeology

A minor in Archaeology provides an introduction to the study of the material cultures of past societies. It can complement many majors, including but not limited to Anthropology, Applied Physics, Art and Art History, Classics, Earth Systems, Geological and Environmental Sciences, History, and Religious Studies.

Students must complete the declaration process, including the planning form submission and Axxess registration, by the last day of the quarter, two quarters prior to degree conferral; for example, by the last day of Autumn Quarter if Spring graduation is the intended quarter of graduation.

## Requirements

To minor in Archaeology, students must complete at least 27 units of relevant course work, including:

### 1. Core Program (10 units)

ARCHLGY 1	Introduction to Prehistoric Archeology (Gateway 3-5 Course, Required)	
ARCHLGY 103	History of Archaeological Thought	5
ARCHLGY 107A		5

is recommended as a first course, and many of the upper-level courses in Archaeology require this course as a prerequisite. Students have the option to take ARCHLGY 103 History of Archaeological Thought or ARCHLGY 107A to fulfill the rest of the 10 unit core requirement for the minor.

### 2. Archaeological Skills (2-5 units)

Archaeological skills include dating methods, faunal analysis, botanical analysis, ceramic analysis, geology, geophysics, soil chemistry, remote sensing, osteology, genetics, statistics, cartography, and geographic information systems. The course(s) must be chosen from the list of courses under Archaeological Skills (requirement 3) in the Bachelor's tab of this section.

### 3. Theory (5 units)

Topics include archaeological, art historical, sociocultural, historical, and material culture theory. The course(s) must be chosen from the list of courses under Theory (requirement 4) in the Bachelor's tab of this section.

### 4. Electives (10 units)

Select courses from the list of courses under Electives (requirement 5) in the Bachelor's tab of this section. Students have the option of taking courses around a theme or concentration, and are encouraged to do so by consulting their faculty advisers to design a course plan.

## Cognate Courses

Archaeology is an interdisciplinary program. Students should meet with their adviser about degree requirements and the applicability of courses from other University departments to the Archaeology major or minor. Applicable courses are commonly found in Anthropology (ANTHRO) and

Classics (CLASSICS), but are not limited to these departments. Please check with your adviser and the program director for course approvals.

*Director:* Lynn Meskell (Anthropology)

*Professors:* Ian Hodder (Anthropology), Mark Lewis (History, Asian Languages), Li Liu (East Asian Languages and Cultures; on leave), Gail Mahood (Geological and Environmental Sciences), Mike Moldowan (Geological and Environmental Sciences), Ian Morris (Classics, History), Amos Nur (Geophysics), Michael Shanks (Classics), Peter Vitousek (Biology)

*Associate Professors:* Giovanna Ceserani (Classics), Jody Maxmin (Art and Art History, Classics), John Rick (Anthropology; on leave), Jennifer Trimble (Classics), Barbara Voss (Anthropology)

*Assistant Professors:* Andrew Bauer (Anthropology), Justin Leidwanger (Classics), Krish Seetah (Anthropology; on leave, winter and spring)

*Assistant Professor (Teaching):* Michael V. Wilcox (Anthropology)

*Postdoctoral Fellows:* Alan Greene, Maureece Levin, Gertjan Plets

*Associated Staff:* Laura Jones (Campus Archaeologist), Christina Hodge (Academic Curator & Collections Manager)

## Overseas Studies Courses in Archaeology

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

### Units

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPCPTWN 16	Sites of Memory	2
OSPCPTWN 36	The Archaeology of Southern African Hunter Gatherers	4
OSPAUSTL 40	Australian Studies	3

## Art and Art History

Courses offered by the Department of Art & Art History are listed on the Stanford Bulletin's ExploreCourses web site under the subject codes ARTHIST (Art History), ARTSTUDI (Art Practice), FILMSTUD (Film Studies), and FILMPROD (Film Practice).

## Mission of the Department of Art and Art History

The department offers courses of study in:

1. Art History
2. Art Practice (studio)
3. Design
4. Film and Media Studies
5. Film Production

leading to the following degrees: B.A. degree in Art History; B.A. degree in Art Practice; B.A. degree in Film and Media Studies; M.F.A. degree in Art

Practice; M.F.A. degree in Design; M.F.A. degree in Documentary Film and Video; Ph.D. degree in Art History.

The undergraduate program is designed to help students think critically about the visual arts and visual culture. Courses focus on the meaning of images and media, and their historical development, roles in society, and relationships to disciplines such as literature, music, and philosophy. Work performed in the classroom, studio, and screening room is designed to develop a student's powers of perception, capacity for visual analysis, and knowledge of technical processes.

## Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program.

Students in historical studies are expected to demonstrate:

1. knowledge and awareness of art and/or film terminology and concepts;
2. ability to develop effective and nuanced lines of interpretation;
3. improved critical thinking skills using primary and secondary source materials;
4. improvement in analytical writing skills and close reading skills;
5. ability to form and validate their own and others' opinions through knowledge of artistic movements and sociohistorical events.

Students in creative art are expected to demonstrate:

1. enhanced awareness of the role of art in intellectual and cultural life;
2. problem solving skills to organize, analyze and interpret visual information;
3. mastery of techniques and materials of a discipline with awareness of historical and current practices;
4. selection of materials, processes, form, and content to achieve poetic and expressive relationships to artistic media;
5. ability to apply critical analysis to the student's own work and the work of others;
6. effective techniques for the preparation and presentation of work consistent with professional practices in the field.

## Learning Outcomes (Graduate)

The purpose of the master's programs is to further develop knowledge and skills in Art and Art History and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates in Art History (including Film and Media Studies) who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in their respective disciplines. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to knowledge in their fields and to interpret and present the results of their research.

## Iris and B. Gerald Cantor Center For Visual Arts

The Cantor Arts Center at Stanford University is a major resource for the department. The Cantor presents art from around the world in 24 galleries: from Africa to the Americas to Asia, and from ancient to contemporary periods. The Cantor offers changing selections from its 30,000-object collection; the Rodin Sculpture Garden; special

exhibitions; and a variety of educational programs. Through collaborations with the teaching program, student internships, and student activities, the Cantor provides a rich resource for Stanford students.

## Art History

### Undergraduate Program in Art History

The discipline of Art History teaches students how to analyze and interpret works of fine art (paintings, drawings, prints, and sculpture), photography and moving image media (film, video, television, and digital art), material culture (ritual objects, fashion, advertisements, and the decorative, applied, and industrial arts), and the built environment (architecture, urbanism, and design). The department takes it as axiomatic that the skills of visual literacy and analysis are not innate but may be acquired through training and practice. Objects of study are drawn from the cultures of Africa, Asia, the Americas, from the Middle East; from Western, Central, and Eastern Europe; and from antiquity to the present.

Art History is a historical discipline that seeks to reintegrate the work of art into the original context of its making and reception, foregrounding its significant status as both historical document and act of social communication. At the same time, Art History seeks to understand the ways in which the work of art transcends the historical moment of its production, taking on different meanings in later historical periods, including the present. As part of their visual training, students of Art History become proficient in cultural analysis and historical interpretation. Art History thus envisions itself as uniquely well positioned to train students from a variety of disciplines in the light of the dramatic visual turn that has gripped the humanities and the sciences over the course of the last decade, with more and more disciplines becoming vitally interested in visual forms and modes of communication.

### Graduate Program in Art History

The doctoral program in Art History at Stanford is relatively small, and affords the graduate student the opportunity to work intensively with individual members of the faculty. The Doctor of Philosophy degree is taken in a particular field, supported by a background in the general history of art. Doctoral candidates also undertake collateral studies in other graduate departments or in one of the University's interdisciplinary programs.

## Art Practice (Studio)

### Undergraduate Program in Art Practice (Studio)

The Art Practice program offers production-based courses founded on the concepts, skills and cultural viewpoints that characterize contemporary art practice. The goal is to educate students, both majors and minors, in the craft, culture, and theory of current fine art practices to prepare them for successful careers as artists. The art practice program is designed to develop in-depth skills in more than one area of the visual arts. It emphasizes the expressive potential of an integration of media, often via a cross-disciplinary, interactive path. Through collaboration and connections with scientists, engineers, and humanities scholars, the program addresses a breadth of topical and artistic concerns central to a vital undergraduate education.

### Graduate Program in Painting, Sculpture, New Genres, and Photography

The program provides a demanding course of study designed to challenge advanced students. Participants are chosen for the program on the basis of work that indicates high artistic individuality, achievement, and promise. Candidates should embody the intellectual curiosity and broad interests appropriate to, and best served by, work and study within the University context.

## The Graduate Program in Design

Working jointly, the departments of Art & Art History and Mechanical Engineering offer graduate degrees in product and visual design. A large physical environment, the Design Yard, provides professional studio space and well-equipped shops. Flexible programs may include graduate courses in fields such as engineering design, biotechnology, marketing, microcomputers, or the studio and art history curriculum. The program centers on a master's project and may also include work in advanced art and design. The program is structured to balance independent concentration with the use of the University and community, and interaction with the students and faculty of the graduate Design program. Cross-disciplinary interaction is encouraged by a four-person graduate Design faculty.

## Film and Media Studies

### Undergraduate Program in Film and Media Studies

The Bachelor of Arts in Film and Media Studies provides an introduction to film aesthetics, national cinematic traditions, modes of production in narrative, documentary, and experimental films, the incorporation of moving image media by contemporary artists, and the proliferation of new forms of digital media. The program is designed to develop the critical vocabulary and intellectual framework for understanding the role of cinema and related media within broad cultural and historical concepts.

### Graduate Program in Documentary Film and Video

The Master of Fine Arts program in documentary production provides a historical, theoretical, and critical framework within which students master the conceptual and practical skills for producing nonfiction film and video. The M.F.A. is a terminal degree program with a two-year, full-time curriculum representing a synthesis of film praxis and film and media history, theory, and criticism. Courses provide an intellectual and theoretical framework within which students' creative work is developed. Students proceed through the program as a cohort. The program does not permit leaves of absence.

The M.F.A. degree is designed to prepare graduate students for professional careers in film, video, and digital media. Graduates are qualified to teach at the university level. The philosophy of the program is predicated on a paradigm of independent media that values artistic expression, social awareness, and an articulated perspective. Students become conversant with the documentary tradition as well as with alternative media and new directions in documentary. Training in documentary production is combined with the development of research skills in film criticism and analysis. Electives in film studies, art history, and studio art provide an intellectual and theoretical framework within which creative work is realized. The parallel focus on production and studies prepares students for an academic position that may require teaching both film studies and production.

## Art and Art History Department Course Catalog Numbering System

The first digit of the ARTHIST and FILMSTUD course number indicates its general level of sophistication.

Digit	Area
001-099	Introductory
100-199	Undergraduate level lectures
200-299	Undergraduate seminars/individual work
300-399	Graduate level lectures
400-599	Graduate seminars/individual work

## Art History

Digit	Area
001-099	Introductory
100-104	Ancient
105-109	Medieval
110-119	Renaissance
120-139	Early Modern
140-159	Modern
160-179	Contemporary
180-189	Asia
190-195	Africa and the Americas
200-299	Seminars and Colloquia
410-499	Historical Studies
500-599	Critical Studies
600-699	Graduate Research

## Art Practice (Studio)

Digit	Area
001-099	Courses for Non-Major (Lower Level)
100-199	Lower Level Undergraduate Courses
200-299	Upper Level Undergraduate Courses
300-399	Graduate Seminars

## Film and Media Studies

Digit	Area
004-103	Introductory
111-118	Genre
130-139	National Cinemas
140-149	Aesthetics
150-159	Other
220-299	Undergraduate Seminars
400-660	Graduate Seminars

## Film Production

Digit	Area
001-199	Undergraduate Courses
300-399	Graduate Courses
400-499	Graduate Courses for MFA Doc Film Students Only

## Bachelor of Arts in Art History

### Suggested Preparation for the Major

Students considering a major in art history should take either ARTHIST 1A Introduction to the Visual Arts: Prehistoric through Medieval or ARTHIST 1B Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present, during their freshman or sophomore year.

### Fields of Study or Degree Options

Students who wish to major in Art History must meet with the undergraduate coordinator. At that time the student selects a faculty adviser and declares the major on Axess. Concentrations within the major are approved by the student's major adviser and are not declared on Axess. Sample concentrations include:

1. Topical concentrations: art and gender; art, politics, race, and ethnicity; art, science, and technology; urban studies

- Genre concentrations: architecture; painting; sculpture; film studies; prints and media; decorative arts and material culture
- Historical and national concentrations: ancient and medieval; Renaissance and early modern; modern and contemporary; America; Africa; Asia; the Americas
- Interdisciplinary concentrations: art and literature; art and history; art and religion; art and economics; art and medicine (with adviser consent a maximum of two concentration courses may be taken outside the department).

## Degree Requirements

All undergraduate majors complete a minimum of 65 units (15 courses that carry 4 or 5 units each). Students are required to complete four core courses, two seminar courses for the major (ARTHIST 294 Writing and the Visual (WIM): Pre-Modern Perceptions of Materiality and ARTHIST 296 Junior Seminar: Methods & Historiography of Art History), five Art History foundation courses, three concentration courses, one of which must be a seminar, Art Practice course (4 units). Courses must be taken for a letter grade. Majors are required to attend an orientation session presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the major declaration.

## Required Courses

### 1. Core Courses (20 units)

Select four of the following:

ARTHIST 1A	Introduction to the Visual Arts: Prehistoric through Medieval (meets WAY A-II and ED)	5
ARTHIST 1B	Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present (meets WAY A-II)	5
ARTHIST 2	Asian Arts and Cultures (meets WAY A-II)	5
ARTHIST 3	Introduction to World Architecture (meets WAY A-II)	5
FILMSTUD 4	Introduction to Film Study (meets WAY A-II)	5

### 2. Foundation Courses (20 units)

In order that students acquire a broad overview of different historical periods and different geographic regions, majors must take five Art History lecture courses, one from each of the following five categories:

Take one course from each of the following categories:

#### Ancient and Medieval

Select one of the following:

ARTHIST 100N	The Artist in Ancient Greek Society (meets WAY A-II)	3
ARTHIST 101	Introduction to Greek Art I: The Archaic Period	4
ARTHIST 102	Introduction to Greek Art II: The Classical Period (meets WAY A-II)	4
ARTHIST 106	Byzantine Art and Architecture, 300-1453 C.E.	4

#### Renaissance and Early Modern

Select one of the following:

ARTHIST 126	Post-Naturalist Painting	4
-------------	--------------------------	---

#### Modern, Contemporary, and the U.S

Select one of the following:

ARTHIST 143A	American Architecture	4
ARTHIST 160N	The Sisters: Poetry & Painting	3
ARTHIST 163	Queer America	4

ARTHIST 171	Baudelaire to Bardot: Art, Fashion, and Film in Modern France	4
-------------	---	---

ARTHIST 176	Feminism and Contemporary Art	4
-------------	-------------------------------	---

#### Asia, Africa, and the Americas

Select one of the following:

ARTHIST 182B	Cultures in Competition: Arts of Song-Era China	4
--------------	---	---

ARTHIST 186	Theme and Style in Japanese Art	4
-------------	---------------------------------	---

ARTHIST 187	Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868	4
-------------	--	---

#### Film & Media Studies

Select one of the following:

FILMSTUD 4	Introduction to Film Study (meets WAY A-II)	5
------------	---	---

FILMSTUD 6	Introduction to Digital Media	5
------------	-------------------------------	---

FILMSTUD 100B	History of World Cinema II, 1930-1959 (meets WAY A-II)	4
---------------	--	---

FILMSTUD 100C	History of World Cinema III, 1960-Present (meets WAY A-II)	4
---------------	--	---

FILMSTUD 101	Fundamentals of Cinematic Analysis (meets WAY A-II)	4
--------------	---	---

FILMSTUD 102	Theories of the Moving Image (meets WAY A-II)	4
--------------	---	---

FILMSTUD 115	Documentary Issues and Traditions	4
--------------	-----------------------------------	---

### 3. Seminar Courses for Majors (10 units)

**Writing in the Major (5 units):** This course is designed for Art History majors in their junior year, equipping them with the scholarly tools necessary for writing about art in a variety of contexts as they progress through the major. This course fulfills the requirements of Writing in the Major (WIM).

**Capstone Junior Seminar (5 units):** This course is designed to introduce majors to methods and theories underlying the practice of Art History. The seminar is offered annually, typically during Autumn Quarter.

Units

Take each of the following:

#### Writing in the Major

ARTHIST 294	Writing and the Visual (WIM): Pre-Modern Perceptions of Materiality (Required: WIM course)	5
-------------	--	---

#### Capstone Junior Seminar

ARTHIST 296	Junior Seminar: Methods & Historiography of Art History	5
-------------	---	---

Units

### 4. Seminar Requirement (5 units)

The student needs one additional seminar course within his or her area of concentration.

Units

Select one of the following:

ARTHIST 203	Greek Art In and Out of Context	5
-------------	---------------------------------	---

ARTHIST 208	Hagia Sophia	5
-------------	--------------	---

ARTHIST 210	Giotto	5
-------------	--------	---

ARTHIST 217B	The Classical Theory of Architecture from Antiquity to the French Revolution	5
--------------	--	---

ARTHIST 278	Curating Africa: Anatomy of an Exhibition	5
-------------	---	---

ARTHIST 287	Pictures of the Floating World: Images from Japanese Popular Culture	5
-------------	--	---

ARTHIST 287A	The Japanese Tea Ceremony: The History, Aesthetics, and Politics Behind a National Pastime	5
--------------	--	---

**5. Area of Concentration (8-10 units)**

The department encourages students to pursue their interests by designing an area of concentration tailored to their own intellectual concerns. This area of concentration provides the student with an in-depth understanding of a coherent topic in Art History and consists of three Art History courses: one must be a seminar, and two of the three courses must be in a single field or concentration constructed by the student in consultation with his or her faculty adviser. Students must submit an area of concentration form, signed by their faculty adviser, during Winter Quarter of the junior year.

**6. Art Practice Course (4 units)**

Majors are required to complete at least one introductory Art Practice course.

**Honors Program in Art History**

The purpose of the honors program is to extend and deepen work done in Art History classes. The honors thesis topic typically emerges out of prior course work; it should be focused and have clear parameters. Ordinarily, an honors thesis is not an exploration of an area that the student has never studied before.

**Admission to the Program**

The minimum requirement for admission to the Honors Program is an overall GPA of 3.5, and at least 3.5 in Art History courses. Students must complete at least five Art History courses at Stanford by the end of their junior year, and four must be completed by the end of Winter Quarter; with the adviser's approval, two of these courses may be taken at an overseas campus or Stanford in Washington. Students interested in pursuing Honors should consult a potential thesis adviser on the Art History faculty during the Autumn Quarter of junior year. Thesis advisers must be in residence during Autumn Quarter of the student's senior year, and it is recommended that they be in residence throughout the senior year. Students considering honors should contact the Director of the Honors Program in their junior year as soon as they begin to think about writing an honors thesis. Those wishing to do so must announce their intention to write an honors thesis by submitting an intent form signed by their thesis adviser (who need not be the student's academic adviser) by February 1 of their junior year.

**Submission of the Thesis Proposal Package**

Candidates for the honors program must submit a five-page (double-spaced) thesis proposal, including bibliography and illustrations, and one completed paper that demonstrates the student's ability to conceptualize and write cogently about art historical issues. The deadline for submitting the complete package to the department's undergraduate coordinator is the third week of Spring Quarter of the candidate's junior year. Upon approval by a majority of the faculty at its regular meeting in early May, the candidate is accepted into the honors program.

**Research and Writing of the Honors Thesis**

Once admitted to the honors program, students work with the Director of the Honors Program and their thesis adviser to define the scope of study, establish a research and writing timetable, and enlist one other faculty member, ideally but not necessarily in the Department of Art and Art History, to serve as a second reader. The summer between junior and senior years is usually devoted to refining the topic and pursuing any off-campus research. Students are encouraged to apply for UAR research grants (<https://undergrad.stanford.edu/opportunities/research>) to help finance trips or expenses related to research for their honors thesis.

During their senior year, students must register for 10 units of ARTHIST 297 Honors Thesis Writing, 5 units of which may count towards the student's concentration in Art History. Students are required to register for 2-5 units each quarter during their senior year, for a total of 10 units.

**Submission and Approval of the Honors Thesis**

With the guidance of the Director of the Honors Program, students and thesis advisers should plan their work so that a complete, final manuscript is submitted to the thesis adviser and the second reader by the beginning of the seventh week of the student's final quarter at Stanford. The thesis adviser assigns a letter grade; both the adviser and the second reader must approve the honors thesis in order to qualify the student to graduate with honors.

**Bachelor of Arts in Art Practice (Studio)****Degree Requirements**

All undergraduate majors complete a minimum of 65 units including six lower level courses, six upper level courses, and four art history courses, including the WIM course ARTHIST 294 Writing and the Visual (WIM): Pre-Modern Perceptions of Materiality. All courses must be taken for a letter grade. University units earned by placement tests or advanced placement work in secondary school are not counted within the 65 units. The studio requirements are divided into lower level (introductory, 100 level) and upper level (advanced, 200 level) course work. At the lower level, students focus on a range of subject matter from historical motifs (figure, still life, landscape) to contemporary ideas in art. Upper level courses are designed to stretch the student's understanding of materials, techniques, site, and social relevance. Experimental and challenging in nature, these courses cross area boundaries. Independent study supervised by a member of the permanent faculty is also available to the advanced student.

Students are encouraged to move through the requirements for the major in the sequence outlined. Students are exposed to a range of practices early in their development in order to have a good basis of comparison if they choose to focus on a particular medium. This sequence of courses also broadens the students' skills and enables them to combine materials and methods. In all courses, students are expected to pass mid-term and final reviews and critiques of their work.

To declare the major, students must meet with the undergraduate coordinator. At that time the student selects a faculty adviser. Art Practice majors are required to meet with both their adviser and the undergraduate coordinator during the first two weeks of each quarter to have course work approved and make certain they are meeting degree requirements. Majors are required to attend an orientation session presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the major declaration.

**Required Courses****1. Six lower level courses (24 units)**

	Units
Select six of the following:	
ARTSTUDI 130 Interactive Art: Making it with Arduino	4
ARTSTUDI 131 Sound Art I	4
ARTSTUDI 140 Drawing I	4
ARTSTUDI 141 Plein Air Painting Now	4
ARTSTUDI 145 Painting I	4
ARTSTUDI 147 Artist's Book	4
ARTSTUDI 148 Monotype	4
ARTSTUDI 148A Lithography	4
ARTSTUDI 148B Introduction to Printmaking Techniques	4
ARTSTUDI 148P DIGITAL PRINTMAKING	4
ARTSTUDI 151 Sculpture I	4
ARTSTUDI 156Q Installation Art in Time and Space	4
ARTSTUDI 157 Art, Invention, Activism in the Public Sphere	4

ARTSTUDI 160	Intro to Digital / Physical Design	3-4
ARTSTUDI 162	Embodied Interfaces	4
ARTSTUDI 163	Drawing with Code	4
ARTSTUDI 164	DESIGN IN PUBLIC SPACES	4
ARTSTUDI 165	Social Media and Performative Practices	4
ARTSTUDI 168	Data as Material	4
ARTSTUDI 170	Introduction to Photography	4
ARTSTUDI 173E	Cell Phone Photography	4
ARTSTUDI 174B	Creativity in the Age of Facebook: Making Art for and from Networks	4
ARTSTUDI 177	Video Art I	4
ARTSTUDI 179	Digital Art I	4
FILMPROD 114	Introduction to Film and Video Production	5

## 2. Six upper level courses (24 units):

a. ARTSTUDI 230 Interdisciplinary Art Survey is a required course which focuses on direct experiences of multidisciplinary art and art practices.  
ARTSTUDI 249 Advanced Undergraduate Seminar (8 units)

b. Students select four optional courses from the following list.

Select four of the following:

ARTSTUDI 239	Intermedia Workshop	3-4
ARTSTUDI 245	Painting II	4
ARTSTUDI 252	Sculpture II	4
ARTSTUDI 254	Kinetic Sculpture	4
ARTSTUDI 264	Advanced Interaction Design	4
ARTSTUDI 266	Sulptural Screens / Malleable Media	4
ARTSTUDI 270	Advanced Photography Seminar	1-5
ARTSTUDI 271	The View Camera: Its Uses and Techniques	4
ARTSTUDI 275	Introduction to Digital Photography and Visual Images	4
ARTSTUDI 276	The Photographic Book	4
ARTSTUDI 277	Project class: Digital and Analogue Projects in Photography	4
ARTSTUDI 277A		4
ARTSTUDI 278	Intermediate Black and White Photography	4
ARTSTUDI 284	Art and Biology	4

## 3. Four Art History courses (17-20 units)

ARTHIST 294 Writing and the Visual (WIM): Pre-Modern Perceptions of Materiality (Required: WIM course)

Three other art history courses, one must be from the modern art series.

One Film & Media Studies course may satisfy an Art History elective.

## Transfer Credit Evaluation

Upon declaring an Art Practice major, a student transferring from another school must have his or her work evaluated by the Director of Undergraduate Studies (DUS) in Art Practice. A maximum of 13 transfer units are applied toward the 65 total units required for the major. A student wishing to have more than 13 units applied toward the major must submit a petition to the Director of Undergraduate Studies in Art Practice and then have his or her work reviewed by a studio committee.

## Overseas Study or Study Abroad

A minimum of 52 of the 65 units required for the Art Practice major and a minimum of 32 of the 36 units required for the Art Practice minor must be taken at the Stanford campus. A student must meet with his or her

adviser and with the undergraduate coordinator before planning an overseas campus program.

## Honors Program in Art Practice

The purpose of the honors program is to extend and deepen work done in Art Practice classes. The honors thesis exhibition topic typically emerges out of prior course work. Ordinarily, an honors thesis exhibition is not an exploration of an area that the student has never studied before. Completion of the program is noted on the diploma and on the transcript

### Admission to the Program

The honors program is open to art practice majors only. The minimum requirement for admission to the honors program is an overall GPA of 3.5, and at least 3.5 in Art Practice courses. Students must complete at least five Art Practice courses at Stanford by the end of their junior year, and four must be completed by the end of Winter Quarter. With adviser approval, two of these courses may be taken at an overseas campus.

Students interested in pursuing honors should consult a potential thesis adviser on the Art Practice faculty during the Autumn Quarter of junior year. Thesis advisers must be in residence during Autumn Quarter of the student's senior year. Students considering honors should contact the Director of the Honors Program in their junior year. Those wishing to do so must announce their intention to write an honors thesis exhibition proposal by submitting an intent form signed by their thesis adviser, who need not be the student's academic adviser, by March 1 of their junior year.

### Submission of the Thesis Proposal Package

The thesis proposal package must include:

1. A two-page Honors Thesis Exhibition Project Proposal description of the artwork/project, including an outline of research and goals signed by the thesis adviser.
2. Artwork Samples: 10 JPEGs of recent work (scaled to 8"x 10", no larger than 1MB each) or 5 minutes of video/audio clips. If video/audio work only is submitted, it may consist of up to 15 minutes of clips.
3. Artwork Sample Descriptions: Printed sheet listing each artwork and descriptions of submitted artwork (title, date, medium, dimensions, length if applicable, explanation if needed)
4. Students may include preparatory sketches (artwork samples of proposed work) on the Slideroom application.

### Research and Writing of the Honors Thesis

Once admitted to the honors program, students work with the Director of the Honors Program and their thesis adviser to define the scope of study, establish a research and artwork completion timetable, and enlist one other faculty member, ideally but not necessarily on the Art Practice faculty, to serve as a second reader. The summer between junior and senior years is usually devoted to refining the topic and pursuing any off-campus research. Students are encouraged to apply for UAR research grants (<https://undergrad.stanford.edu/opportunities/research/get-funded/apply-uar-student-grants>) to help finance trips or expenses related to research for their honors thesis.

During their senior year, students must register for 10 units of ARTSTUDI 297 Honors Thesis Exhibition, 5 units of which may count towards the student's concentration in Art Practice. Students are required to register for 2-5 units each quarter during their senior year, for a total of 10 units.

### Submission and Approval of the Honors Thesis

With the guidance of the Director of the Honors Program, students and thesis advisers should plan their work so that a complete art exhibition is installed in the first five weeks of Spring Quarter of their senior year with Liz Celeste ([lizceleste@stanford.edu](mailto:lizceleste@stanford.edu)), Museum Curator for the Department of Art and Art History. The student arranges a meeting with the advisers while the exhibition is on display. The thesis adviser assigns

a letter grade; both the main adviser and the second adviser must approve the honors thesis in order to qualify the student to graduate with honors.

## Bachelor of Arts in Film and Media Studies

### Suggested Preparation for the Major

Students considering a major in film and media studies should take FILMSTUD 4 Introduction to Film Study, and are encouraged to take either ARTHIST 1A Introduction to the Visual Arts: Prehistoric through Medieval or ARTHIST 1B Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present, during their freshman or sophomore year. These courses anchor the major through exposure to film language, genre, and visual and narrative structures. Majors are required to take one course in the fundamentals of film and video production.

### Suggested or Recommended Courses (all of which meet major requirements)

		Units
ARTHIST 1A	Introduction to the Visual Arts: Prehistoric through Medieval (meets WAY A-II and ED)	5
ARTHIST 1B	Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present (meets WAY A-II)	5
FILMSTUD 4	Introduction to Film Study (meets WAY A-II)	5
FILMSTUD 101	Fundamentals of Cinematic Analysis (meets WAY A-II)	4

### Fields of Study or Degree Option

Advanced undergraduate courses are offered in five fields of study. These fields are declared on ACESS; they appear on the transcript but they do not appear on the diploma:

- Film History
- Film and Culture
- Film, Media, and Technology
- Writing, Criticism, and Practice
- Aesthetics and Performance

Working with a faculty adviser, students choose five courses in their field from course offerings in Art and Art History and one course from another department in the University.

### Degree Requirements

All undergraduate majors complete a minimum of 64 units (16 courses of 3-5 units each), or 15 courses plus an honors thesis. FILMSTUD 101 Fundamentals of Cinematic Analysis (WIM course) is required for all majors. All courses for the major must be taken for a letter grade.

To declare the major, students must meet with the undergraduate coordinator. At that time the student selects a faculty adviser. Majors are required to attend an orientation session presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the major declaration.

### Required Courses

		Units
FILMSTUD 4	Introduction to Film Study (meets WAY A-II)	5
FILMSTUD 6	Introduction to Digital Media	5
FILMSTUD 100A	History of World Cinema I, 1895-1929	4

FILMSTUD 100B	History of World Cinema II, 1930-1959 (meets WAY A-II)	4
FILMSTUD 100C	History of World Cinema III, 1960-Present (meets WAY A-II)	4
FILMSTUD 101	Fundamentals of Cinematic Analysis (WIM Course, meets WAY A-II)	4
FILMSTUD 102	Theories of the Moving Image (meets WAY A-II)	4
FILMPROD 114	Introduction to Film and Video Production (meets WAY CE)	5

### Concentration <sup>1</sup>

FILMSTUD 290	Movies and Methods: Hitchcock and Beyond <sup>2</sup>	5
--------------	---	---

Choose one of the following:

ARTHIST 1A	Introduction to the Visual Arts: Prehistoric through Medieval (meets WAY A-II and ED)	5
ARTHIST 1B	Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present (meets WAY A-II)	5

<sup>1</sup> Concentration - Five courses, four of which must be in a single film and media studies concentration developed by the student in consultation with an adviser. Concentration areas are: film history; film and culture; aesthetics and performance; film, media, and technology; and writing, criticism, and practice. The remaining course must be related, situating the student's concentration in a broader context.

<sup>2</sup> Capstone Experience - FILMSTUD 290 Movies and Methods: Hitchcock and Beyond, offered once a year. The Senior Seminar represents the culminating intellectual experience for Film Studies majors choosing not to write an honors thesis. Honors thesis writers may also take the senior seminar. Seniors who may not be in residence in the quarter that the senior seminar is offered may enroll in their junior year. Movies and Methods provides majors with an opportunity to synthesize their previous work in Film Studies and work in an advanced setting with a faculty member.

### Electives (20 units)

		Units
Film Studies Concentration Electives		
FILMPROD 101T	Writing the Television Pilot	5
FILMPROD 103	Adaptation	4
FILMPROD 104	Screenwriting II: Intermediate Screenwriting	5
FILMPROD 105	Script Analysis	4
FILMSTUD 115	Documentary Issues and Traditions	4
FILMSTUD 125	Horror Films	4
FILMSTUD 232	CHINESE CINEMA	5
FILMSTUD 245B	History and Politics in Russian and Eastern European Cinema	5
FILMSTUD 250B	Bollywood and Beyond: An Introduction to Indian Film	3-5

### Honors Program in Film and Media Studies

The purpose of the honors program is to extend and deepen work done in Film and Media Studies classes. The honors thesis topic typically emerges out of prior coursework; it should be focused and have clear parameters. Ordinarily, an honors thesis is not an exploration of an area that the student has never studied before.

### Admission to the Program

The minimum requirement for admission to the honor program is an overall GPA of 3.5, and at least 3.5 in Film and Media Studies courses. Students must complete at least five Film and Media Studies courses at Stanford by the end of their junior year, and four must be completed by the end of winter quarter; with the adviser's approval, two of these

courses may be taken at an overseas campus. Students interested in pursuing honors should consult a potential thesis adviser on the Film and Media Studies faculty during the Fall Quarter of junior year. Thesis advisers must be in residence during Autumn Quarter of the student's senior year, and it is highly recommended that they be in residence throughout the senior year. Students considering honors should contact the Director of the Honors Program in their junior year as soon as they begin to think about writing an honors thesis. Those wishing to do so must announce their intention to write an honors thesis by submitting an intent form signed by their thesis adviser (who need not be the student's academic adviser) by February 1 of their junior year.

### Submission of the Thesis Proposal Package

Candidates for the Honors Program must submit a five-page (double-spaced) thesis proposal, including bibliography, a tentative schedule for research and writing, and one completed paper that demonstrates the student's ability to conceptualize and write cogently about film. The deadline for submitting the complete package to the department's undergraduate coordinator is the third week of Spring Quarter of the candidate's junior year. Upon approval by a majority of the faculty at its regular meeting in early May, the candidate is accepted into the honors program.

### Research and Writing of the Honors Thesis

Once admitted to the honors program, students work with the Director of the Honors Program and their thesis adviser to define the scope of study, establish a research and writing timetable, and enlist one other faculty member, ideally but not necessarily in the Department of Art and Art History, to serve as a second reader. The summer between junior and senior years is usually devoted to refining the topic and pursuing any off-campus research. Students are encouraged to apply for UAR research grants to help finance trips or expenses related to research for their honors thesis.

During their senior year, students must register for 10 units of FILMSTUD 297 Honors Thesis Writing, 5 units of which may count towards the student's concentration in Film and Media Studies. Students are required to register for two to five units each quarter during their senior year, for a total of ten units.

### Submission and Approval of the Honors Thesis

With the guidance of the Director of the Honors Program, students and thesis advisers should plan their work so that a complete, final manuscript is submitted to the thesis adviser and the second reader by the beginning of the seventh week of the student's final quarter at Stanford. The thesis adviser assigns a letter grade; both the adviser and the second reader must approve the honors thesis in order to qualify the student to graduate with honors.

### Required Course

	Units
FILMSTUD 297 Honors Thesis Writing	1-5

The joint major program (JMP), authorized by the Academic Senate for a pilot period of six years beginning in 2014-15, permits students to major in both Computer Science and one of ten Humanities majors. See the "Joint Major Program (p. 26)" section of this bulletin for a description of University requirements for the JMP. See also the Undergraduate Advising and Research JMP web site and its associated FAQs.

Students completing the JMP receive a B.A.S. (Bachelor of Arts and Science).

Because the JMP is new and experimental, changes to procedures may occur; students are advised to check the relevant section of the bulletin periodically.

## Joint Major Program in Art Practice and Computer Science

### Art Practice Major Requirements in the Joint Major Program

See the "Computer Science Joint Major Program (p. 231)" section of this bulletin for details on Computer Science requirements.

Students majoring in the Art Practice and Computer Science joint major program must complete five lower level courses and six upper level courses in art practice, and four art history courses, including the WIM course. Students in the JMP are excused from completing one lower level course, reducing the required unit count of the Art Practice major from 65 to 61 units. All courses comprising the major must be taken for a letter grade.

Students majoring in the joint major program in Art Practice and Computer Science must complete the modified degree requirements for Art Practice by completing the following:

#### 1. Five lower level courses (20 units)

##### a.

ARTSTUDI 130 Interactive Art: Making it with Arduino	4
ARTSTUDI 131 Sound Art I	4
ARTSTUDI 140 Drawing I	4
ARTSTUDI 141 Plein Air Painting Now	4
ARTSTUDI 145 Painting I	4
ARTSTUDI 147 Artist's Book	4
ARTSTUDI 148 Monotype	4
ARTSTUDI 148A Lithography	4
ARTSTUDI 148B Introduction to Printmaking Techniques	4
ARTSTUDI 148P DIGITAL PRINTMAKING	4
ARTSTUDI 151 Sculpture I	4
ARTSTUDI 156Q Installation Art in Time and Space	4
ARTSTUDI 157 Art, Invention, Activism in the Public Sphere	4
ARTSTUDI 160 Intro to Digital / Physical Design	3-4
ARTSTUDI 162 Embodied Interfaces	4
ARTSTUDI 163 Drawing with Code	4
ARTSTUDI 164 DESIGN IN PUBLIC SPACES	4
ARTSTUDI 165 Social Media and Performative Practices	4
ARTSTUDI 168 Data as Material	4
ARTSTUDI 170 Introduction to Photography	4
ARTSTUDI 173E Cell Phone Photography	4
ARTSTUDI 174B Creativity in the Age of Facebook: Making Art for and from Networks	4
ARTSTUDI 177 Video Art I	4
ARTSTUDI 179 Digital Art I	4

#### 2. Six upper level courses (24 units) including:

- ARTSTUDI 230 Interdisciplinary Art Survey (4 units) is a required course which focuses on direct experiences of multidisciplinary art and art practices
- ARTSTUDI 249 Advanced Undergraduate Seminar ; majors must take this course for 4 units.

#### 3. Students select four optional courses from the following list

##### a.

ARTSTUDI 239 Intermedia Workshop	3-4
ARTSTUDI 245 Painting II	4
ARTSTUDI 252 Sculpture II	4
ARTSTUDI 253 ECOLOGY OF MATERIALS	4

ARTSTUDI 254	Kinetic Sculpture	3-4
ARTSTUDI 264	Advanced Interaction Design	4
ARTSTUDI 266	Sulptural Screens / Malleable Media	4
ARTSTUDI 267	Emerging Technology Studio	4
ARTSTUDI 270	Advanced Photography Seminar	1-5
ARTSTUDI 271	The View Camera: Its Uses and Techniques	4
ARTSTUDI 275	Introduction to Digital Photography and Visual Images	4
ARTSTUDI 277	Project class: Digital and Analogue Projects in Photography	4
ARTSTUDI 278	Intermediate Black and White Photography	4

4. Four Art History courses (17-20 units)
  - a. ARTHIST 294 Writing and the Visual (WIM): Pre-Modern Perceptions of Materiality (5 units)
  - b. Three other Art History courses, one must be from the modern art series. One Film and Media Studies course may satisfy an Art History elective.

#### 5. Senior Capstone Project

The senior seminar (4 units) in conjunction with the computer science capstone course (3-5 units) enables students to produce a creative and in-depth senior capstone project that highlights the integration of the two disciplines. An adviser from each program guides and assesses the project throughout the academic year. The completed project is included in the Senior Exhibit.

Example capstone projects might include an interactive installation that combines various sensors with computer graphic techniques, a screen based artwork that requires sophisticated data visualization, a sculpture involving new forms of projection mapping, or a social media artwork integrating a new type of mobile application. These works would qualify as effective contemporary artworks, and also illustrate unique command of and innovations within the field of computer science.

## Declaring a Joint Major Program

To declare the joint major, students must first declare each major through Axess, and then submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (<https://stanford.box.com/change-UG-program>) The Major-Minor and Multiple Major Course Approval Form ([http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin\\_MultMaj.pdf](http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf)) is required for graduation for students with a joint major.

## Dropping a Joint Major Program

To drop the joint major, students must submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (<https://stanford.box.com/change-UG-program>). Students may also consult the Student Services Center (<http://studentservicescenter.stanford.edu>) with questions concerning dropping the joint major.

## Transcript and Diploma

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major". The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major".

## Minor in Art History

A student declaring a minor in Art History must complete 25 units of course work in one of the following four tracks: Open, Modern, Asian, or Architecture. Upon declaring the minor, students are assigned a faculty adviser with whom they plan their course of study and electives.

A proposed course of study must be approved by the adviser and placed in the student's departmental file. Only one class may be taken for credit outside of the Stanford campus; this includes courses taken in the Overseas Studies Program. Minors are required to attend an orientation session presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the minor declaration.

## Degree Requirements

A student with a minor in Art History must complete six Art History courses for a total of 25 units.

### Units

#### Open Track

choose one of the following:

ARTHIST 1A Introduction to the Visual Arts: Prehistoric through Medieval

ARTHIST 1B Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present

Plus five Art History lecture courses or seminars in any field.

#### Modern Track

choose one of the following:

ARTHIST 1A Introduction to the Visual Arts: Prehistoric through Medieval

ARTHIST 1B Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present

Plus five Art History lecture courses or seminars in any aspect of 19th- to 20th-century art.

#### Asian Track

ARTHIST 2 Asian Arts and Cultures

Plus five Art History lecture courses or seminars in Asian Art (ARTHIST 1A OR ARTHIST 1B may be one of the five courses).

#### Architecture Track

ARTHIST 3 Introduction to World Architecture

Plus five Art History lecture courses or seminars in Architectural History (ARTHIST 1A OR ARTHIST 1B may be one of the five courses).

## Minor in Art Practice (Studio)

A student declaring a minor in Art Practice must complete 36 units of Art Practice and Art History course work. All minors are required to attend an orientation session presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the internet. Minors are required to meet with both their adviser and the undergraduate coordinator during the first two weeks of each quarter to have course work approved and to make certain they are meeting degree requirements.
