Design principles and statistical methods for observational studies. Topics include: matching methods, sensitivity analysis, instrumental variables, graphical models, marginal structural models. 3 unit registration requires a small project and presentation. Computing is in R. Pre-requisites: HRP 261 and 262 or STAT 209 (HRP 239), or equivalent. See <http://rogosateaching.com/somgen290/>.

Same as: EDUC 260B, STATS 266

**CHPR 298. Directed Reading. 1-18 Unit.**

Prerequisite: consent of instructor.

**CHPR 299. Community-based Research Internship. 1-18 Unit.**

Prerequisite: consent of instructor.

**CHPR 399. Community Health and Prevention Research Master's Thesis Writing. 1-18 Unit.**

Thesis writing for Community Health and Prevention Research Program. Students enroll in thesis advisor's section. Prerequisite: consent of instructor.

**Comparative Literature Courses****COMPLIT 10N. Shakespeare and Performance in a Global Context. 3 Units.**

Preference to freshmen. The problem of performance including the performance of gender through the plays of Shakespeare. In-class performances by students of scenes from plays. The history of theatrical performance. Sources include filmed versions of plays, and readings on the history of gender, gender performance, and transvestite theater.

**COMPLIT 11Q. Shakespeare, Playing, Gender. 3 Units.**

Preference to sophomores. Focus is on several of the best and lesser known plays of Shakespeare, on theatrical and other kinds of playing, and on ambiguities of both gender and playing gender.

**COMPLIT 11SC. Worlds (No Longer) Apart. 2 Units.**

What (if anything) do supermall shoppers in the Philippines, a Filipino taxi driver in Paris, and television viewers in Nepal have to do with a legal case in Canada, two young Japanese on a pilgrimage to Graceland, and a South Asian lawyer/liquor store owner trying to reclaim his property in Uganda from where he lives, in Mississippi? This course uses literary narratives, films, and historical research to examine new textures of contemporary life, where "borders" seem hard-pressed to contain culture. Texts include Pico Iyer, *Video Night in Kathmandu*, Mira Nair's film *Mississippi Masala*, and M.G. Vassanji, *No New Land*. New forms of identity have emerged that reflect the cultural changes that have accompanied such movements. Nevertheless, we will not idealize such phenomena either; we will want also to carefully observe the binding power of nations. The result will be a finer-tuned sense of "globalization" and the "local" and the "global." The course emphasizes creative thinking and discussion. Students are expected to do the reading and be well prepared for every session with not only questions, but tentative answers. Each student will participate in one group presentation as their final project.

**COMPLIT 13SC. Arabic in America: Language Immersion. 2 Units.**

Do you speak Arabic at home? Are you studying Arabic at Stanford? Have you done a year of Arabic study elsewhere? If you answer yes to any one of these questions then "Arabic in America: Language Immersion" might be for you. Our intensive course is designed to improve your command of Arabic while living in an active community of Arabic speakers and learners. We will be talking about films, poetry, politics, religion, gender and much more—all the while practicing how to talk to people, read newspapers, recite poetry, write emails, all with the goal of communicating better in Arabic. Our immersive experience will include: mosques and churches in the Bay Area and beyond, cultural festivals, research in the Hoover Archive, film, music, food, culture, and politics. Whether it is a trip to the beach or a classroom session on Arabic gender and sexuality, we will be talking in Arabic. All Arabic is welcome, from Moroccan or Iraqi colloquial (and everywhere in between) to Quranic recitation and Classical poetry. Sophomore College course, application required, due noon, April 5, 2016. Apply at <http://soco.stanford.edu>.

**COMPLIT 14N. Imagining India: Art, Culture, Politics in Modern India. 3 Units.**

This course explores history via cultural responses in modern India. We will examine a range of fiction, film and drama to consider the ways in which India emerges through its cultural productions. The course will consider key historical events such as the partition of the subcontinent, independence from British rule, Green Revolution, Emergency, liberalization of the Indian economy, among others. We will reflect on epochal historical moments by means of artistic responses to these events. For example, Ritwik Ghatak's experimental cinema intervenes into debates around the Bengal partition; Rohinton Mistry's novel, *A Fine Balance* grapples with the suspension of civil liberties during the emergency between 1975-77; Rahul Varma's play *Bhopal* reflects on the Bhopal gas tragedy, considered the world's worst industrial disaster. Students will read, view and reflect on the aesthetic and historical texts through their thoughtful engagement in class discussions and written essays. They will also have opportunities to imaginatively respond to these texts via short creative projects, which could range from poems, monologues, solo pieces, web installations, etc. Readings will also include Mahashweta Devi, Amitav Ghosh, Girish Karnad, Jhumpa Lahiri, Manjula Padmanabhan, Salman Rushdie, Aparna Sen, among others.

Same as: CSRE 15N, FEMGEN 14N, TAPS 14N

**COMPLIT 31SI. What is Neoconservatism? The Movement's History and Ideas. 2 Units.**

Its thinking from its communist roots, through the changes of the 60s, the rise of conservatism in the 80s, and the invasion of Iraq. Readings include Irving Kristol, Jeane Kirkpatrick, Daniel P. Moynihan, and David Brooks. Guest lecturers from supporters and critics.

**COMPLIT 37Q. Zionism and the Novel. 4 Units.**

At the end of the nineteenth century, Zionism emerged as a political movement to establish a national homeland for the Jews, eventually leading to the establishment of the State of Israel in 1948. This seminar uses novels to explore the changes in Zionism, the roots of the conflict in the Middle East, and the potentials for the future. We will take a close look at novels by Israelis, both Jewish and Arab, in order to understand multiple perspectives, and we will also consider works by authors from the North America and from Europe.

Same as: JEWISHST 37Q

**COMPLIT 38Q. Ethics of Jihad. 4 Units.**

Why choose jihad? An introduction to Islamic ethics. Focus on ways in which people have chosen, rejected, or redefined jihad. Topics include jihad in the age of 1001 Nights, feminist jihad, jihad in Africa, al-Qaida and Hamas, and the hashtag #MyJihad. All readings and discussion in English.

**COMPLIT 40Q. Aesthetics of Dissent: the Case of Islamic Iran. 2-3 Units.**

Censorship, Borges tells us, is the mother of metaphors. The Islamic regime in Iran censors all aesthetic production in the country. But Iranian dissident artists, from film-makers and fiction writers to composers in a thriving under-ground musical scene, have cleverly found ways to fight these draconian measures. They have developed an impressive body of work that is as sophisticated in style as it is rich in its discourse of democracy and dissent. The purpose of the seminar is to understand the aesthetic tropes of dissent in Iran, and the social and theological roots of rules of censorship. Masterpieces of post-revolutionary film, fiction, and music will be discussed in the context of tumultuous history of dissent in Islamic Iran.

Same as: INTNLREL 71Q

**COMPLIT 41N. Borderlands of Literature and Culture. 3-4 Units.**

Rather than try to examine the whole of such an extensive body of work by artists of Mexican descent living in Mexico and the United States, the focus will be on the transnational themes of border thinking, memory, and identity (both personal and collective). Looking at the foundational poetry, auto-ethnographies, and narratives by Américo Paredes and Gloria Anzaldúa and how their literary and ethnographic work laid the groundwork for subsequent imaginings in the narratives, poetry, and theory of border thinking and writing. We will explore the trans-frontier cultural conditions under which imaginative literary texts are produced, disseminated, and received. We will consider not only the historical transnational experiences that inform these borderlands texts but the potential futures of Mexico and the United States they imagine.

**COMPLIT 41Q. Ethnicity and Literature. 5 Units.**

Preference to sophomores. What is meant by ethnic literature? How is ethnic writing different from non-ethnic writing, or is there such a thing as either? How does ethnicity as an analytic perspective affect the way literature is read by ethnic peoples? Articles and works of fiction; films on ethnic literature and cultural politics. How ethnic literature represents the nexus of social, historical, political, and personal issues.

**COMPLIT 51Q. Comparative Fictions of Ethnicity. 4 Units.**

We may "know" "who" we "are," but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of "the Self"? After all, don't we tell stories in response to the question, "who are you"? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question—Does this universal issue ("who am I") become skewed differently when we add a qualifier before it, like "ethnic"?.

Same as: AMSTUD 51Q, CSRE 51Q

**COMPLIT 57. Human Rights and World Literature. 5 Units.**

Human rights may be universal, but each appeal comes from a specific location with its own historical, social, and cultural context. This summer we will turn to literary narratives and films from a wide number of global locations to help us understand human rights; each story taps into fundamental beliefs about justice and ethics, from an eminently human and personal point of view. What does it mean not to have access to water, education, free speech, for example? This course has two components. The first will be a set of readings on the history and ethos of modern human rights. These readings will come from philosophy, history, political theory. The second, and major component is comprised of novels and films that come from different locations in the world, each telling a compelling story. We will come away from this class with a good introduction to human rights history and philosophy and a set of insights into a variety of imaginative perspectives on human rights issues from different global locations. Readings include: Amnesty International, *Freedom: Stories Celebrating the Universal Declaration of Human Rights* Andrew Clapman, *Human Rights: A Very Short Introduction* James Dawes, *That the World May Know* Walter Echo-Hawk, *In the Light of Justice* Amitav Ghosh, *The Hungry Tides* Bessie Head, *Marun* Ursula LeGuin, *The Word for World is Forest*.

**COMPLIT 70N. Animal Planet and the Romance of the Species. 3-4 Units.**

Preference to freshmen. This course considers a variety of animal characters in Chinese and Western literatures as potent symbols of cultural values and dynamic sites of ethical reasoning. What does pervasive animal imagery tell us about how we relate to the world and our neighbors? How do animals define the frontiers of humanity and mediate notions of civilization and culture? How do culture, institutions, and political economy shape concepts of human rights and animal welfare? And, above all, what does it mean to be human in the pluralistic and planetary 21st century?.

Same as: CHINGEN 70N

**COMPLIT 90. Conversations about Comparative Literature. 2 Units.**

Come to discuss literature and comparative literary studies in a relaxed and informative class, over lunch. You will meet comparative literature faculty and graduate students who will share their work, their experiences, and interests in literature. Discussions will range from the challenges and excitement of studying medieval Chinese poetry to blogging about the humanities; the relation of different cultures; notions of aesthetics and the role literature plays, and much more. Topics will also be generated by class participants. No pre-requisites.

**COMPLIT 101. What Comparative Literature Is. 5 Units.**

Introduction (suitable for freshmen and seniors) to three themes: (1) How to Do Theory (with G.F.W. Hegel). (2) The Glittering Arab World (with Ahmad Faris Shidyaq). (3) 21st Century Genders (with Judith Butler). Fulfills the Writing in the Major Requirement. Gateway to the Comparative Literature Major.

**COMPLIT 104. Love, Passion, and Politics in Chinese Film. 4-5 Units.**

Focusing on the emotional structure of love and passion in Chinese films, the course will investigate the structures of feelings and moral relations in modern Chinese history from the 1940s till the present. Examining the interplay between private desire, romantic sentiment, family relations, and political passion, we will explore how men and women in China grapple with emotional and social issues in modern transformations. We will consider romantic love, the uplifting of sexuality into political passion, the intertwining of aesthetic experience with politics, nostalgia in the disenchanted modern world, and the tensions between the individual's self-realization and the community's agenda. Students will learn to read films as a work of art and understand how film works as expression of desire, impulse, emotional connections, and communal bonding during times of crisis. Course work includes a midterm exam (25%) and a final exam (25%), a weekly 250-300 word reflection on the film of the week (10%), participation and oral presentation in class (10%), and a paper of 5-7 pages to be submitted after the midterm week (30%). Starting from the second week, film screening will begin 6:30 pm Monday before classes on Tuesday and Thursday. The course does not encourage private viewing. At least 5 dinners will be provided for movie-screening events.

Same as: CHINGEN 138, CHINGEN 238

**COMPLIT 105. Learning About Human Rights - An International Experiment. 2 Units.**

This winter Stanford students in any discipline are invited to enroll in an experimental, 2-unit course that will put us in conversation with undergraduate students at the University of Wuerzburg, Germany and at UC Merced. We will be going through a common reading list and blogging with each other across the Stanford-based TeachingHumanRights.org website. The course will be led by Professors Heike Raphael-Hernandez at Wuerzburg, Nigel Hatton at UCM, and David Palumbo-Liu at Stanford. We will be reading texts on human rights, with a focus on race. Besides blogging together, we will create live chats. This is an absolutely unique chance to engage in an international discussion on rights and race, with invaluable perspectives shared beyond the physical classroom and national boundaries.

**COMPLIT 110. Introduction to Comparative Queer Literary Studies. 3-5 Units.**

Introduction to the comparative literary study of important gay, lesbian, queer, bisexual, and transgender writers and their changing social, political, and cultural contexts from the 1880s to today: Oscar Wilde, Rachilde, Radclyffe Hall, Djuna Barnes, James Baldwin, Jean Genet, Audre Lorde, Cherrie Moraga, Jeanette Winterson, Alison Bechdel and others, discussed in the context of 20th-century feminist and queer literary and social theories of gender and sexuality.

Same as: COMPLIT 310, FEMGEN 110X, FEMGEN 310X

**COMPLIT 111. German Capstone: Reading Franz Kafka. 3-5 Units.**

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. (Meets Writing-in-the-Major requirement). Same as: COMPLIT 311C, GERMAN 190, GERMAN 390, JEWISHST 147, JEWISHST 349

**COMPLIT 112. Oscar Wilde and the French Decadents. 3-5 Units.**

Close reading of Oscar Wilde's work together with major texts and authors of 19th-century French Decadence, including Symbolism, *l'art pour l'art*, and early Modernism. Points of contact between Wilde and avant-garde Paris salons; provocative, creative intersections between (homo)erotic and aesthetic styles, transgression; literary and cultural developments from Baudelaire to Mallarmé, Huysmans, Flaubert, Rachilde, Lorrain, and Proust compared with Wilde's *Salomé*, *Picture of Dorian Gray*, and critical writings; relevant historical and philosophical contexts. All readings in English; all student levels welcome. Same as: COMPLIT 312, FRENCH 112, FRENCH 312

**COMPLIT 114. Masterpieces: Kafka. 3-5 Units.**

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers.

Same as: GERMAN 150, JEWISHST 145

**COMPLIT 115. Nabokov in the Transnational Context. 3-5 Units.**

Nabokov's techniques of migration and camouflage as he inhabits the literary and historical contexts of St. Petersburg, Berlin, Paris, America, and Switzerland. His early and late stories, last Russian novel "The Gift," "Lolita" (the novel and screenplay), and "Pale Fire." Readings in English. Russian speakers will be encouraged to read Russian texts in original. Same as: COMPLIT 315, SLAVIC 156, SLAVIC 356

**COMPLIT 117. Women Writing War. 3-5 Units.**

War has long been recognized as a central theme in literature across traditions, yet little recognition has been given to women's voices in war writing. This course will explore female perspectives on America's wars and armed conflicts of the Twentieth Century, from World War One to the war in Afghanistan and the "War on Terror." Readings will include poetry, fiction, memoir and reportage by American and international writers such as Gertrude Stein, Amy Lowell, Denise Levertov, Theresa Kak Kyung Cha, Dunya Mikhail, and Solmaz Sharif. We will explore such topics as the gendering of war and of mourning, the poetry of witness, the representation of violence, and political censorship and surveillance. All readings will be in English.

**COMPLIT 121. Poems, Poetry, Worlds. 5 Units.**

What is poetry? How does it speak in many voices to questions of history, society, and personal experience? Why does it matter? The reading and interpretation of poetry in crosscultural comparison as experience, invention, form, sound, knowledge, and part of the world. Readings include: classical Chinese poetry, English Romantic poetry, and modern Arabic, American, Brazilian, Japanese, German, Spanish poetry, with specific attention to landscape, terrain, the environment, and the role of the poet.

**COMPLIT 122. Literature as Performance: The Potentials of Theater. 5 Units.**

An introduction to the "theatrical" dimensions of literature in different cultures based on a view of the staging arts as a specific segment within phenomena of "performance". Documentation and discussions of the history of western drama as a central axis within the debate about the cultural status of other forms of performance art that are normally not culturally canonized within this genre (eg. sports).

**COMPLIT 123. The Novel. 5 Units.**

Literary inventiveness and social significance of novelistic forms from the Great Depression to the present.

Same as: ENGLISH 184

**COMPLIT 125. Past Desire Made Present: The Traditions of Erotic Poetry in Medieval Iran and Europe. 3-5 Units.**

Aims to make present and accessible, to our early 21st-century experience, convergences and differences between medieval Persian and medieval European love poetry. Poetry will be dealt with as a discursive and institutional means through which it is possible to make present and tangible that which is absent – both in space and time. If we accept that medieval Persian and European love poetry conjured up moods of homo- and heteroerotic desire for contemporary audiences, then this desire can also become present for us today through a close reading of those same texts.

**COMPLIT 125A. The Gothic Novel. 5 Units.**

The Gothic novel and its relatives from its invention by Walpole in *The Castle of Otranto* of 1764. Readings include: *Northanger Abbey*, *The Italian*, *The Monk*, *Frankenstein*, *Jane Eyre*, *Great Expectations*, and *Dracula*. What defines the Gothic as it evolves from one specific novel to a mode that makes its way into a range of fictional types?

**COMPLIT 129A. Contemporary Persian Poetry: Encounter of a Thousand-Year-Old Classical Tradition with Modernity. 5 Units.**

The primacy of poetic expression in Persian culture in the transition from tradition to modernity. Major 20th-century poets in relation to historical events and social change. Authors include: Nima Yushij, Ahmad Shamlou, Sohrab Sepehri, Mehdi Akhavan Sales, Forough Farrokhzad, Nader Naderpour, Fereydown Moshiri, Esmā'il Kho'i, and Afghan and Tajik poets.

**COMPLIT 132A. Dynasties, Dictators and Democrats: History and Politics in Germany. 3-5 Units.**

Key moments in German history through documents: personal accounts, political speeches and texts, and literary works. The course begins with the Prussian monarchy and proceeds to the crisis years of the French Revolution. Documents from the 1848 revolution and the age of Bismarck and German unification follow. World War I and its impact on Germany, including the rise of Hitler, as well as the aftermath, divided Germany in the Cold War through the fall of the Berlin Wall. Taught in German. Same as: GERMAN 132

**COMPLIT 133. Gender and Modernism. 3-5 Units.**

Gender and sexuality in trans-Atlantic modernist literature and culture from the 1880s-1930s. Topics include the 19th-century culture wars and the figures of the dandy and the New Woman; modernist critiques of Enlightenment rationality; impact of World War I on gender roles; gender and the rise of modern consumer culture, fashion, design; the modernist metropolis and gender/sexuality; the avant-garde and gender; literary first-wave feminism; homoerotic modernism; modernism in the context of current theories of gender and sexuality. Same as: COMPLIT 333

**COMPLIT 135. Chinese Cultural Revolution: Performance, Politics, and Aesthetics. 4 Units.**

Events, arts, films, and operas of the Chinese Cultural Revolution. Analysis of political passion, aesthetics, and psychology of mass movements. Places the Cultural Revolution in the long-range context of art, social movements, and politics. Chinese language is not required. Same as: CHINLIT 190, CHINLIT 290

**COMPLIT 138A. Introduction to Modern Japanese Literature and Culture. 3-4 Units.**

This class introduces key literary texts from Japan's modern era (1868-present), locating these works in the larger political, social, and cultural trends of the period. Primary texts include: Futabatei Shimei's *Floating Clouds*, Higuchi Ichiyō's *Child's Play*, Natsume Sōseki's *Kokoro*, Kobayashi Takiji's *Cannery Boat*, Ōe Kenzaburō's *The Catch*, and Yoshimoto Banana's *Kitchen*. Examination of these literary works will be contextualized within larger political trends (e.g., the modernization program of the Meiji regime, the policies of Japan's wartime government, and postwar Japanese responses to the cold war), social developments (e.g., changing notions of social class, the women's rights movement, and the social effects of the postwar economic expansion), and cultural movements (e.g., literary reform movement of the 1890s, modernism of the 1920s and 30s, and postmodernism of the 1980s). The goal of the class is to use literary texts as a point of entry to understand the grand narrative of Japan's journey from its tentative re-entry into the international community in the 1850s, through the cataclysm of the Pacific War, to the remarkable prosperity of the bubble years in the 1980s.

Same as: JAPANGEN 138, JAPANGEN 238

**COMPLIT 141A. The Meaning of Arabic Literature: a seminar investigation into the nebulous concept of adab. 3-5 Units.**

An investigation into the concept of literature in mediaeval Arabic. Was there a mediaeval Arabic way of thinking? We look to develop a translation for the word "adab," a concept that dominated mediaeval Arabic intellectual culture, and is related in some ways to what we mean today when we use the word literature. Our core text is a literary anthology from the 900s in Iraq and we try, together, to work out what literature meant for the author and his contemporaries. Readings, assignments and, class discussion all in English.

**COMPLIT 142. The Literature of the Americas. 5 Units.**

A wide-ranging overview of the literatures of the Americas in comparative perspective, emphasizing continuities and crises that are common to North American, Central American, and South American literatures as well as the distinctive national and cultural elements of a diverse array of primary works. Topics include the definitions of such concepts as empire and colonialism, the encounters between worldviews of European and indigenous peoples, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, twentieth-century avant-gardes, and distinctive modern episodes—the Harlem Renaissance, the Beats, magic realism, Noigandres—in unaccustomed conversation with each other.

Same as: AMSTUD 142, CSRE 142, ENGLISH 172E

**COMPLIT 142B. Translating Japan, Translating the West. 3-4 Units.**

Translation lies at the heart of all intercultural exchange. This course introduces students to the specific ways in which translation has shaped the image of Japan in the West, the image of the West in Japan, and Japan's self-image in the modern period. What texts and concepts were translated by each side, how, and to what effect? No prior knowledge of Japanese language necessary. Same as: JAPANGEN 121, JAPANGEN 221

**COMPLIT 143A. Alla Turca Love: Tales of Romance in Turkish Literature. 3-5 Units.**

An introduction to the theme of romantic love in Turkish literature, with particular attention to key classical and contemporary works that influenced the development of the Turkish literary tradition. Topics include close reading and discussion of folk tales, poems, short stories, and plays with particular attention to the characters of lover/beloved, the theme of romantic love, and the cultural and historical background of these elements. We will begin with essential examples of ghazels from Ottoman court poetry to explore the notion of "courtly love" and move to the most influential texts of 19th and 20th centuries. All readings and discussions will be in English; all student levels welcome. Same as: COMPLIT 342

**COMPLIT 144A. Istanbul the Muse: The City in Literature and Film. 3-5 Units.**

The multiple layers of culture and history in Istanbul, a city on two continents between East and West, wrapped in past and present have inspired great art and literature. The class explores how Istanbul inspired artists and writers, and focuses on the idea of 'inbetweenness' through art, literature, music, and film seen chronologically. In addition to discussing literary, historical, and secondary texts we will explore visual genres such as film, painting, and photography. All readings, screenings, and discussions will be in English.

**COMPLIT 145. Reflection on the Other: The Jew and the Arab in Literature. 3-5 Units.**

How literary works outside the realm of Western culture struggle with questions such as identity, minority, and the issue of the Other. How the Arab is viewed in Hebrew literature, film and music and how the Jew is viewed in Palestinian works in Hebrew or Arabic (in translation to English). Historical, political, and sociological forces that have contributed to the shaping of these writers' views. Guest lectures about the Jew in Palestinian literature and music.

Same as: AMELANG 126, JEWISHST 106

**COMPLIT 145B. Africa in Atlantic Writing. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condé, Olinto), prose poetry (Césaire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Oulougem) and autobiography (Barack Obama).

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 345B, CSRE 145B, FRENCH 145B, FRENCH 345B

**COMPLIT 146. Asian American Culture and Community. 3-5 Units.**

This course introduces students to the histories of Asians in America, specifically as these histories are part of a broader Asia-US-Pacific history that characterized the 20th century and now the 21st. We will combine readings in history, literature, sociology, with community-based learning. The course takes place over two quarters. The first quarter focuses on gaining knowledge of Asian America and discussion key topics that students wish to focus on collaboratively. During this first quarter we also learn about community-based learning, set up teams and projects, and develop relationships with community organizations. The second quarter students work with student liaisons (senior students who have experience in service learning) and complete their work with the community; there are no formal class meetings this second quarter. Service Learning Course (certified by Haas Center). Course can be repeated once.

Same as: AMSTUD 146, ASNAMST 146S, CSRE 146S

**COMPLIT 146A. The Arab Spring in Arabic Literature. 3-5 Units.**

An examination of the events of 2011 in the Middle East through literature. We will read short stories, poetry, graphic novels, and blogs in order to try and work out whether the revolution could have been predicted, and how it took place. Prerequisite: two years of Arabic at Stanford, or equivalent.

Same as: COMPLIT 347

**COMPLIT 147A. The Hebrew Bible in Literature. 3-5 Units.**

Close reading of major biblical stories and poems that influenced modern literature written in English and Hebrew. Hebrew texts will be read in translation to English. Each class will include a section from the Hebrew Bible as well as a modern text or film based on the biblical story/poem. Discussion of questions such as: the meaning and function of myths and the influence of the Hebrew Bible on the development of literary styles and genres.

Same as: COMPLIT 347A, JEWISHST 147A, JEWISHST 347A

**COMPLIT 148B. Indian Epics: Past and Present. 4 Units.**

The Mahabharata and the Ramayana, the two great epics of India, have been crucial texts in South Asian literatures and cultures for millennia. In this course, we will explore the diverse traditions of both epics from their Sanskrit versions, first composed more than 2,000 years ago, through retellings in newer media forms well into the twenty-first century. Among our primary interests will be comparing versions of each epic that have circulated in South Asia, Southeast Asia, and the West at different times. We begin with abridged translations of both the Sanskrit Mahabharata (including the Bhagavadgita) and the Ramayana. We will discuss the major literary, religious, and social themes of each text as well as subsequent translations and transcreations of the stories in Indian and Southeast Asian contexts during the last thousand years. We will also investigate the modern lives of the epics, including their transformations into Indian television serials, film versions of both narratives (from India and America), and invocations of the epic stories in contemporary art, culture, and political disputes. Students will gain exposure to some of the foundational texts for the study of South Asia, both past and present. More broadly, students will cultivate the ability to fruitfully approach texts from different cultures and learn to critically analyze the impacts and roles of stories in various religious, literary, and historical contexts.

Same as: RELIGST 108

**COMPLIT 149A. Classical Arabic Poetry: An Introduction. 3-5 Units.**

The primary litmus test of proficiency in the Arabic language is, and has always been, a command of classical Arabic poetry. Study and memorize the great lines of Arabic poetry with a manual that has stood the pedagogical test of time from the eleventh century until today. Questions of literary merit, poetic technique, metaphor, and divine and human linguistic innovation are all raised by the text that we will read together. Readings in Arabic, assignments and discussion in English. Prerequisite: two years of Arabic at Stanford, or equivalent.

Same as: COMPLIT 346

**COMPLIT 151A. Philosophies, Literatures, and Alternatives. 3-5 Units.**

Aristotelian poetics and mediaeval Arabic literary theory. Nietzsche's irony and Philosophies and literatures, together and apart, dominate the last two millennia of human thought. How might they best be read? Are philosophy and literature two different ways of thinking, or are they just two separate institutional histories? This course starts with familiar Greeks, moves onto unfamiliar Arabs, confronts old Europe, and ends with contemporary Americans arguing.

Same as: COMPLIT 351A

**COMPLIT 151B. Great Books: Dramatic Traditions. 4 Units.**

The most influential and enduring texts in the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons.

Same as: COMPLIT 351B, TAPS 151T, TAPS 351

**COMPLIT 154A. Film & Philosophy. 4 Units.**

Issues of freedom, morality, faith, knowledge, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include *Twelve Monkeys* (Gilliam), *Ordet* (Dreyer), *The Dark Knight* (Nolan), *Vicky Cristina Barcelona* (Allen), and *Eternal Sunshine of the Spotless Mind* (Kaufman). Taught in English. Same as: FRENCH 154, ITALIAN 154, PHIL 193C, PHIL 293C

**COMPLIT 154B. Poetic Thinking Across Media. 4 Units.**

Even before Novalis claimed that the world must be romanticized, thinkers, writers, and artists wanted to perceive the human and natural world poetically. The pre- and post-romantic poetic modes of thinking they created are the subject of this course. Readings include Ecclesiastes, Zhaozhou Congshen, Montaigne, Nietzsche, Kafka, Benjamin, Arendt, and Sontag. This course will also present poetic thinking in the visual arts—from the expressionism of Ingmar Bergman to the neo-romanticism of Gerhard Richter.

Same as: COMPLIT 354B, GERMAN 154, GERMAN 354, JEWISHST 144B

**COMPLIT 157. Contemporary Turkish Cinema and Society. 3-5 Units.**

This course is an examination of contemporary Turkish cinema in a social and political context. The course will focus on films and directors that revived Turkish cinema starting with the mid-1990s with a focus on key issues pertaining to belonging, denied identities, masculinity, nationalism, silencing of women, and urbanization. The course aims to provide an overview of contemporary Turkish cinema and society in cultural, political, and social framework. There will be approximately two hours of film screening and two hours of classroom discussion/seminar (in English) each week. All films are in Turkish with English subtitles.

Same as: COMPLIT 357

**COMPLIT 160. The Literature of Dehumanization. 3-5 Units.**

An examination of a constellation in Western literature that specifically deals with a borderline state between humanity and animality, showing different approaches to the problem of humanity and non-humanity through some of the major works in the modern Western literary canon. The class explores the different ways in which dehumanization takes place in these texts, and how these texts also suggest a regaining of one's lost humanity. Readings include: Ovid, Marie de France, Shakespeare, Hobbes, Heine, Baudelaire, Tolstoy, Nietzsche, Lautreamont, Kafka, Rilke, Celan, and more.

**COMPLIT 161. Co-Existence in Hebrew Literature. 4-5 Units.**

Is co-existence possible? Does pluralism require co-existence? Can texts serve as forms of co-existence? The class will focus on these and other questions related to co-existence and literature. Through reading works mostly by Jewish authors writing in Europe, Israel and the US we will explore attempts for complete equality, for a variety of hierarchical systems and for different kinds of co-dependence. Guest speaker: professor Anat Weisman, Ben Gurion University of the Negev.

Same as: AMELANG 175, JEWISHST 146

**COMPLIT 162. American Poetry and Secular Prayer. 3-5 Units.**

This course will explore the practice of "secular prayer" in early- and mid-20th Century North American poetry. We will look at diverse poetic examples of meditation, contemplation, exegesis and revelation in order to consider how and why poetry has maintained a particular relation to the sacred, even amidst a secular cultural and intellectual context. We'll also consider how this question has played out in several key strands of 20th century literary theory, with particular emphasis on New Criticism and Eco-Criticism. Primary readings will include the poetry of T.S. Eliot, Wallace Stevens, Audre Lorde, George Oppen, Robert Bly, Mary Oliver, Charles Wright and Jan Zwicky.

**COMPLIT 168. Imagining the Oceans. 5 Units.**

How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Authors read might include Cook, Equiano, and Steinbeck; Defoe, Verne, Stevenson, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Films by Painlevé and Bigelow. Seminar co-ordinated with a spring 2015 Cantor Arts Center public exhibition. Visits to Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park.

Same as: ENGLISH 168, FRENCH 168

**COMPLIT 171. Ethics of Jihad. 5 Units.**

Why choose jihad? An introduction to Islamic ethics. Focus on ways in which people have chosen, rejected, or redefined jihad. Evaluation of the norms in moments of ethical and political choice. Topics include jihad in the age of 1001 Nights, jihad in the Arab Renaissance, jihad in Bin Laden's sermons, and the hashtag #MyJihad. All readings and discussion in English.

Same as: ETHICSOC 102R

**COMPLIT 181. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman; Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: CLASSICS 42, ENGLISH 81, FRENCH 181, GERMAN 181, ITALIAN 181, PHIL 81, SLAVIC 181

**COMPLIT 190. Tolstoy's Anna Karenina in Dialogue with Contemporary Philosophical, Social, and Ethical Thought. 3-5 Units.**

Anna Karenina, the novel as a case study in the contest between "modernity" and "tradition," their ethical order, ideology, cultural codes, and philosophies. Images of society, women and men in Tolstoy v. those of his contemporaries: Marx, Mill, Nietzsche, Weber, Durkheim, Freud. Open to juniors, seniors and graduate students. Requirements: three interpretive essays (500-1000 words each). Analysis of a passage from the novel; AK refracted through a "philosophical" prism and vice versa (30% each); class discussion and Forum (10%).

Same as: COMPLIT 390, SLAVIC 190, SLAVIC 390

**COMPLIT 194. Independent Research. 1-5 Unit.**

(Staff).

**COMPLIT 195. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.**

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section.

Same as: CSRE 196C, ENGLISH 172D, PSYCH 155, SOC 146, TAPS 165

**COMPLIT 197. Designing a Digital Community: Human Rights. 2 Units.**

This course will focus on helping to design, conceptualize, and populate an international human rights website. No knowledge of web design or of human rights is necessary to get started on this project. We have technical assistance available, though hopefully this course will attract students with those skills as well. Similarly, we will be learning about human rights as we build the site, explore and share resources and ideas, and reflect on the content. Preliminary site viewable at [teachinghumanrights.org](http://teachinghumanrights.org).

Same as: DLCL 197

**COMPLIT 199. Senior Seminar: The Pleasures of Reading. 5 Units.**

Senior seminar for Comp Lit Senior majors only.

**COMPLIT 202. Peripheral Modernism, in light of Modern Hebrew Poetry. 3-5 Units.**

Modern Hebrew Poetry is a unique, surprising branch of European and Anglo-American modernism. Reading major works of this literature – by Bialik, Rachel, Shlonsky, Goldberg, Amichai and Ravikovitch – will serve both as a comprehensive introduction to Modern Hebrew poetry as well as a case study of Peripheral Modernism vs. Modernism. Taught in English. Primary sources will be available also in Hebrew.

**COMPLIT 203. The Money Philosophers: Marx, Simmel, Keynes, Hayek. 3-5 Units.**

In this course we will discuss selections from writings by Marx, Simmel, Keynes, and Hayek that focuses on money, a key but neglected aspect of their work. It is money that drives today's economies, rather than "business", the "market", "capital", or the "state". It is this exclusive concern with monetary phenomena that uniquely defines these authors and characterizes their work as philosophical rather than economic, sociological or anthropological.

**COMPLIT 211A. Emile Zola. 3-5 Units.**

A comprehensive introduction to and historical analysis of Emile Zola's literary work as foundational for the late-nineteenth century literary movement that we call "Naturalism." The analysis of Zola's novels will be embedded in the historical situation of France in the transition from the Second Empire to the Third Republic, with special emphasis on the epistemological situation of that time. Knowledge of French desirable but participation through English translations will be possible. Same as: FRENCH 211

**COMPLIT 213A. Martin Heidegger. 3-5 Units.**

Working through the most systematically important texts by Martin Heidegger and their historical moments and challenges, starting with *Being and Time* (1927), but emphasizing his philosophical production after World War II. The philological and historical understanding of the texts function as a condition for the laying open of their systematic provocations within our own (early 21st-century) situations. Satisfies the capstone seminar requirement for the major tracks in Philosophy and Literature. Taught in English.

Same as: COMPLIT 313A, GERMAN 282, GERMAN 382

**COMPLIT 214A. Wilde's Words: Oscar Wilde in an International Context. 2-5 Units.**

Introduction to Oscar Wilde's major works and their reception history in various international and transnational contexts from the 1890s to today, in conjunction with Wilde's iconic importance for LGBTQ history and rights: from Wilde's own love for Greece, Rome, and Japanese art, to his erotic and aesthetic networks in Paris; from international adaptations of *The Picture of Dorian Gray*, *Salomé*, *The Importance of Being Earnest*, and *De Profundis* across Europe, Asia, and the U.S.; to Wilde's vibrant afterlife in global cinema, the visual and performing arts, and popular culture today.

**COMPLIT 217. The Poetry of Friedrich Holderlin. 3-5 Units.**

A working through of the complex prosodic forms, existential and political concerns, and poetological reflections of both the most past-oriented and most pathbreaking German poet of the late eighteenth and early nineteenth century. A comprehensive introduction that will attempt to develop an innovative view in which Holderlin will appear as one of the founding figures of literary Modernity. Knowledge of German desirable but participation through English translations will be possible.

Same as: GERMAN 217

**COMPLIT 218. The work of Luis Martín Santos in Mid-Twentieth Century Spain. 3-5 Units.**

First published in 1962, "Tiempo de Silencio" is the only book that the young psychiatrist Luis Martín Santos finished during his lifetime, and, although largely overlooked (even in Spain) until the present day, one of the great European novels of the 20th century. It brings to a complex convergence the evocation of Spain's decadent and run-down post-Civil War society with high-modernist literary procedures and (an implicit parody of) phenomenological analysis.

**COMPLIT 219. Dostoevsky: Narrative Performance and Literary Theory. 3-5 Units.**

In-depth engagement with a range of Dostoevsky's genres: early works (epistolary novella *Poor Folk* and experimental *Double*), major novels (*Crime and Punishment*, *The Idiot*), less-read shorter works ("A Faint Heart," "Bobok," and "The Meek One"), and genre-bending *House of the Dead* and *Diary of a Writer*. Course applies recent theory of autobiography, performance, repetition and narrative gaps, to Dostoevsky's transformations of genre, philosophical and dramatic discourse, and narrative performance. Slavic students read primary texts in Russian, other participants in translation. Course conducted in English. For graduate students; undergraduates with advanced linguistic and critical competence may enroll with consent of instructor. Same as: SLAVIC 251

**COMPLIT 221A. Courtly Love: Deceit and Desire in the Middle Ages. 3-5 Units.**

A comparative seminar on medieval love books and their reception. We will examine and question the notion of "amour courtois," which arose in the lyrics and romances of medieval France and was codified in Romantic-era criticism. Primary readings will be enriched by thinking about this notion through the lens of modern theories of desire, such as those of Girard, Lacan, and Žižek. Conducted in English with readings in translation.

Same as: FRENCH 234, ITALIAN 234

**COMPLIT 222A. German Literature 3: Myth and Modernity. 1-5 Unit.**

Masters of German 20th- and 21st-Century literature and philosophy as they present aesthetic innovation and confront the challenges of modern technology, social alienation, manmade catastrophes, and imagine the future. Readings include Nietzsche, Freud, Rilke, Musil, Brecht, Kafka, Döblin, Benjamin, Juenger, Arendt, Musil, Mann, Adorno, Celan, Grass, Bachmann, Bernhardt, Wolf, and Kluge. Taught in English. Undergraduates enroll in 222 for 5 units, graduate students enroll in 322 for 8 units.

Same as: GERMAN 222, GERMAN 322

**COMPLIT 223. Literature and Human Experimentation. 3-5 Units.**

This course introduces students to the ways literature has been used to think through the ethics of human subjects research and experimental medicine. We will focus primarily on readings that imaginatively revisit experiments conducted on vulnerable populations: namely groups placed at risk by their classification according to perceived human and cultural differences. We will begin with Mary Shelley's *Frankenstein* (1818), and continue our study via later works of fiction, drama and literary journalism, including Toni Morrison's *Beloved*, David Feldshuh's *Miss Evers Boys*, Hannah Arendt's *Eichmann* and Vivien Spitz's *Doctors from Hell*, Rebecca Skloot's *Immortal Life of Henrietta Lacks*, and Kazuo Ishiguro's *Never Let Me Go*. Each literary reading will be paired with medical, philosophical and policy writings of the period; and our ultimate goal will be to understand modes of ethics deliberation that are possible via creative uses of the imagination, and literature's place in a history of ethical thinking about humane research and care.

Same as: AFRICAAM 223, CSRE 123B, HUMBIO 175H, MED 220

**COMPLIT 224. Literature in the Age of Digital Culture. 3-5 Units.**

Study literary classics about readers and reading (by Austen, Dickinson, Wilde, Benjamin, Eliot, Orwell, Borges, Calvino, Bechdel, etc.) and compare with digital reading/writing today: fan fiction and online expansions of "the book", literary collaborations online, changing notions of "author", "reader", "work", literary-social interactions. Our literary close readings will also introduce some useful new digital tools and methods for literary studies (annotation, editing, and research tools, web-based public social interactions, innovative digital humanities projects in literary studies today). No technical prerequisites.

**COMPLIT 224A. Genocide and The Humanities. 3-5 Units.**

We will study the history and current instances of genocide and ways in which the humanities deal with these. Mass slaughter would seem not to be opposed by the supposedly humane nature of the humanities. Yet in each realm of the humanities has its own constraints. We will study historiography, memoirs, novels, and films in order to recognize ideologies of representation and signifying implications of structure. By discerning implicit values, students will gain tools they can use in working to eliminate genocide.

**COMPLIT 225E. Petrarch & Petrarchism: Fragments of the Self. 3-5 Units.**

In this course we will examine Francis Petrarch's book of Italian lyric poems, *Rerum vulgarium fragmenta*, and its reception in early modern France, England, and Spain. Readings from Petrarch's epistolary and ethical writings will contextualize historically and intellectually the aesthetics and ethics of the fragment in his poetry. With this foundation, we will investigate the long-lasting impact of Petrarch's work on Renaissance poetry and humanism, with attention to both the literary and the material aspects of its reception. Taught in English.

Same as: COMPLIT 325E, ITALIAN 225, ITALIAN 325

**COMPLIT 226A. Queer Literature and Film. 3-5 Units.**

Close analysis of major works of LGBTQ literature, film, and visual art from the 1890s to today. Students will gain deeper knowledge and appreciation of historical and contemporary forms of queer representation in various national literatures, film, and visual art; understand relevant social and political debates; and gain a basic knowledge of feminist and queer theory. Course will include an optional online component to reach out to the public (class website [queerlitfilm.wordpress.com](http://queerlitfilm.wordpress.com), social media).

Same as: FEMGEN 226A

**COMPLIT 227A. The Ballad Tradition. 3-5 Units.**

This team-taught cross-disciplinary course traces the history and aesthetics of the ballad in German, English, and Scottish literature, from the 18th century to the early 20th century. No knowledge of German is required, but reading knowledge is a plus.

Same as: GERMAN 200

**COMPLIT 228D. Introduction to Digital Humanities: Concepts, Technologies, Tools. 1-3 Unit.**

In this course, we will explore the perspectives of scholars who have thought about what "digital humanities" means and the technologies and tools that are shaping new kinds of research, scholarship, and publishing. Topics will include history of the digital humanities, textual studies, electronic literature, computational and new media, and emerging work around text, image, and new media curation and visualization. This seminar is ideal for anyone interested in digital methods and digital in the humanities, teaching with new digital methods, or to learn about all the digital humanities projects at Stanford. This course is organized as a mix of seminar and workshop and will be featuring a new platform called "Lacuna Stories," designed for Stanford students, that presents multiple platforms, media, and texts to digitally engage with narratives surrounding 9/11; active engagement by all participants is expected. Students may contribute to the field with a creative final project that they develop over the course of the quarter if they select the 3-unit option.

Same as: COMPLIT 338D, DLCL 228

**COMPLIT 229. Literature and Global Health. 3-5 Units.**

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with a call made by the editor-in-chief of *The Lancet* for a literature of global health, namely fiction modeled on the social reform novels of the nineteenth century, understood to have helped readers develop a conscience for public health as the field emerged as a modern medical specialty. We will then spend the quarter understanding how colonial, postcolonial, and world literatures have answered and complicated this call. Readings will include prose fiction by Albert Camus, Joseph Conrad, Tsitsi Dangarembga, Amitav Ghosh, Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese, Paul Farmer. And each literary reading will be paired with medical, philosophical, and policy writings that deeply inform the field of global health.

Same as: AFRICAAM 229, AFRICAST 229, CSRE 129B, FRENCH 229, HUMBIO 175L, MED 234

**COMPLIT 230A. The Novel in Europe: The Age of Compromise, 1800-1848. 5 Units.**

The novel after the French revolution and the industrial take-off. Novelistic form and historical processes of nation-building and the marriage market, political conservatism and the advent of fashion, aristocracy and bourgeoisie and proletariat... focusing on how stylistic choices and plot structures offer imaginary resolutions to social and ideological conflicts. Authors will include Austen, Scott, Shelley, Stendhal, Pushkin, Balzac, Bronte.

**COMPLIT 233. Baroque and Neobaroque. 5 Units.**

The literary, cultural, and political implications of the 17th-century phenomenon formed in response to the conditions of the 16th century including humanism, absolutism, and early capitalism, and dispersed through Europe, the Americas, and Asia. If the Baroque is a universal code of this period, how do its vehicles, such as tragic drama, Ciceronian prose, and metaphysical poetry, converse with one another? The neobaroque as a complex reaction to the remains of the baroque in Latin American cultures, with attention to the mode in recent Brazilian literary theory and Mexican poetry.

Same as: ENGLISH 233, ILAC 293E

**COMPLIT 235A. The Queer Literature and Arts Salon, 1870s-1930s. 2-5 Units.**

Study of the vibrant 1870s-1930s European salon culture in Paris, London, Berlin, and Vienna, focusing on the crucial roles of queer writers, artists, composers, performers, and their aesthetic and erotic networks, which inspired important artistic alliances, collaborations, and avant-garde experimentations. Course addresses such figures as Wilde, Rachilde, Stein, Barney, Romaine Brooks, Winnaretta Singer, Stravinsky, Diaghilev, Marie-Laure de Noailles, Poulenc, Ravel, Man Ray, Cocteau; movements like the Ballets Russes, Art Nouveau, the Munich and Vienna Secession movements, Surrealism, Art Deco, etc. Assignments may include digital arts salon project (no technical prerequisites) and/or outreach to community organizations.

Same as: FEMGEN 235A

**COMPLIT 236. Literature and Transgression. 3-5 Units.**

Close reading and analysis of erotic-sexual and aesthetic-stylistic transgression in selected works by such authors as Baudelaire, Wilde, Flaubert, Rachilde, Schnitzler, Kafka, Joyce, Barnes, Eliot, Bataille, Burroughs, Thomas Mann, Kathy Acker, as well as in recent digital literature and online communities. Along with understanding the changing cultural, social, and political contexts of what constitutes "transgression" or censorship, students will gain knowledge of influential theories of transgression and conceptual limits by Foucault, Blanchot, and contemporary queer and feminist writers.

Same as: FEMGEN 236

**COMPLIT 237C. Human Rights, Literature, Justice. 3-5 Units.**

This course will have three components. The first will be a set of readings on the history and ethos of modern human rights. These readings will come from philosophy, history, political theory. The second component will consist of readings from various global locations that involve human rights in various ways, predominantly as they interface with issues of environmental justice. Finally, this course will involve students in creating and populating a website that will be not only the archive of our work in class but also build a set of resources to be shared with others (we will be adding partners from different locations to speak to us online from their locations as well as to share resources and ideas). We will come away from this class with a good introduction to human rights history and philosophy; a set of insights into a variety of imaginative workings-out of human rights and environmental justice issues from different global locations, and a rich web resource.

**COMPLIT 238A. Uneasy Modernity: 20th Century Persian Poetry and the Specter of Tradition. 3-5 Units.**

Drawing on poems, theoretical texts, and audio-visual materials, this course seeks to retrace the struggle for a modern poetic language in Iran from the time of the Constitutional Revolution (1905/6) to the Islamic Revolution (1979), and beyond. Topics include: the unresolved relationship between tradition and modernity; poetry as a vehicle of enlightenment and revolution; the quest for a new poetic expression of love; the construction of historical memory through literature; responses to the experience of modern alienation; the figure of the poet as dissident; and the subversive force of poetic form itself. Poets include: Iraj Mirzā, ʿAziz Qazvini, Nimz Yushij, Aḡmad Shāmlu, Hushang Ebtehāj Sāyeh, Siavosh Kasrāzā, Sohrāb Sepehri, Mehdi Akhavan Sāles (Zāle), Forugh Farrokhzād, and Esmāʿil Khoʿi. Secondary readings include texts by Theodor W. Adorno, Mikhail Bakhtin, Emile Benveniste, Maurice Blanchot, Michel de Certeau, Philippe Lacoue-Labarthe, and Paul Ricœur. Taught in English.

**COMPLIT 239B. Literature and Social Online Learning. 3-5 Units.**

Study, develop, and test new digital methods, games, apps, interactive social media uses to innovate how the humanities can engage and educate students and the public today. Exploring well-known literary texts, digital storytelling forms and literary communities online, students work individually and in interdisciplinary teams to develop innovative projects aimed at bringing literature to life. Tasks include literary role-plays on Twitter; researching existing digital pedagogy and literary projects, games, and apps; reading and coding challenges; collaborative social events mediated by new technology. Minimal prerequisites which vary for students in CS and the humanities; please check with instructors. Same as: CS 27, ENGLISH 239B

**COMPLIT 240A. Introduction to Hebrew Literature. 3-5 Units.**

The influence of biblical poetry, piyut, and medieval Hebrew poetry on the development of Modern Hebrew poetry. With focus on voice, space, lyrical Subjectivity, Intertextuality, and Poetic Forms. Guest Speakers include Tamar Zwi, Susan Einbinder, Berry Saharoff, and Raymond Scheindlin.

**COMPLIT 242A. Short Stories from South Asia. 3-5 Units.**

This course will explore how cultural identities of the nations in South Asia were re-defined after the Partition of India in 1947, the independence of Sri Lanka in 1948 and the formation of Bangladesh in 1971. Comparative/cross-cultural study of stories will be taken up for indepth analysis based on certain themes like partition and violence, myth and narrative, gender and narrative, music and narratology, familial patterns, etc.

**COMPLIT 243B. Readings in Avicenna and al-Jurjani. 3-5 Units.**

Classical Arabic reading course. Instructor approval required. Prerequisite: minimum two years of Arabic at Stanford or equivalent.

**COMPLIT 245. Introductory Ottoman Turkish. 1-3 Unit.**

This course is an introduction to basic orthographic conventions and grammatical characteristics of Ottoman Turkish through readings in printed material from the 19th and 20th centuries. Selected readings will range from poetry to prose, from state documents, newspaper and journal articles to reference works. Course is open to both undergraduate and graduate students. Prior knowledge of modern Turkish is required (Completion of COMPLIT 248A, COMPLIT 248B Reading Turkish I&II and COMPLIT 248C Advanced Turkish OR AMELANG 184 & 185 First & Second Year Turkish OR a solid knowledge of Turkish grammar.) Please contact the instructor for more information.

**COMPLIT 245B. ADVANCED READING IN TURKISH. 3-53 Units.**

Close study and analysis of representative works of Italian literature (prose, poetry, drama) and culture (art, history, music, cinema, politics) designed to enhance the student's reading skills. Usually offered every year.

**COMPLIT 246B. Ottoman Translation Workshop. 1-2 Unit.**

This course aims to provide students with training in reading printed Ottoman Turkish texts and translating them into English. Through translation we will explore not only syntactical and lexical problems, but also cultural history and politics as they relate to the texts. Open to undergraduate and graduate students. High intermediate or advanced level of modern Turkish and introductory level of Ottoman Turkish is required. Contact Burcu Karahan Richardson (bkarahan@stanford.edu) for more information.

**COMPLIT 247. Bollywood and Beyond: An Introduction to Indian Film. 4 Units.**

A broad engagement with Indian cinema: its relationship with Indian politics, history, and economics; its key thematic concerns and forms; and its adaptation of and response to global cinematic themes, genres, and audiences. Locating the films within key critical and theoretical debates and scholarship on Indian and world cinemas. Goal is to open up what is often seen as a dauntingly complex region, especially for those who are interested in but unfamiliar with its histories and cultural forms. Same as: FILMSTUD 250B, GLOBAL 250

**COMPLIT 247F. Beyond Casablanca: North African Cinema and Literature. 3-5 Units.**

This course explores the emergence of Francophone cinema and literature from North Africa (Algeria, Tunisia, Morocco) in the post-independence era: aesthetics, exile, language métissage, race and gender relations, collective memory, parallax, nationalism, laïcité, religion, emigration and immigration, and the Arab Spring will be covered. Special attention will be given to judeo-maghrebi history, and to the notions of francophone / maghrebi / "beur" / diasporic cinema and literature. Readings from Frantz Fanon, Albert Memmi, Kateb Yacine, Albert Camus, Colette Fellous, Abdelkebir Khatibi, Leila Sebbar, Benjamin Stora, Lucette Valensi, Abdelwahab Meddeb. Movies include Viva Laldjérie, Tenja, Le Chant des Mariées, Française, Bled Number One, Omar Gatlato, Casanegra, La Saison des Hommes. Taught in French. Films in French and Arabic with English subtitles. Same as: FRENCH 242, JEWISHST 242

**COMPLIT 248A. Reading Turkish I. 2-4 Units.**

Reading Turkish I is an introduction to the structures of the Turkish language necessary for reading. It is designed to develop reading competence in Turkish for graduate students. Undergraduates should consult the instructor before enrolling for the course. Essential grammar, syntax points, vocabulary, and reading skills will be emphasized. This is not a traditional language course that takes an integrated four-skill approach; since the goal is advanced reading level, the focus is mainly on grammar, reading comprehension, and translation. With full concentration on reading, we will be able to cover advanced material in a short amount of time. The course is conducted in English, but students will be exposed to the sounds of Turkish, and will have the opportunity to practice pronunciation in class. nnCOMPLIT 248A Reading Turkish I is followed by COMPLIT 248B Reading Turkish II in the Winter and COMPLIT 248C Advanced Turkish for Research in the Spring."

**COMPLIT 248B. Reading Turkish II. 2-4 Units.**

This course is the continuation of COMPLIT 248A Reading Turkish I, which served as an introduction to the structures of the Turkish language necessary for reading. It is designed to develop reading competence in Turkish for graduate students. Undergraduates should consult the instructor before enrolling for the course. Essential grammar, syntax points, vocabulary, and reading skills will be emphasized. This is not a traditional language course that takes an integrated four-skill approach; it focuses only on reading, and as a result we will be able to cover advanced material in a short amount of time. This course is conducted in English, but students will be exposed to the sounds of Turkish, and will have the opportunity to practice pronunciation in class. COMPLIT 248B is followed by COMPLIT 248C Advanced Turkish for Research in the Spring.

**COMPLIT 248C. Advanced Turkish-English Translation. 2-4 Units.**

This course is the continuation of COMPLIT 248A Reading Turkish I and COMPLIT 248B Reading Turkish II. Refining advanced grammar, reading, and translation skills in modern Turkish through intensive reading and translation from a variety of source texts. Emphasis on Turkish cultural, historical, literary, and political texts depending on students' academic interests. Prerequisites COMPLIT 248A & B or prior knowledge of Turkish and consultation with the instructor is necessary.

**COMPLIT 249A. The Iranian Cinema: Image and Meaning. 1-3 Unit.**

This course will focus on the analysis of ten Iranian films with the view of conducting a discourse on the semiotics of Iranian art and culture. Each session will be designated to the viewing of a film by a prominent Iranian film-maker. Students are expected to prepare for class by having previously examined other available films by the film-maker under consideration.

Same as: GLOBAL 249A

**COMPLIT 249B. Iranian Cinema in Diaspora. 1-3 Unit.**

Despite enormous obstacles, immigrant Iranian Filmmakers, within a few decades (after the Iranian revolution), have created a slow but steady stream of films outside Iran. They were originally started by individual spontaneous attempts from different corners of the world and by now we can identify common lines of interest amongst them. There are also major differences between them. These films have never been allowed to be screened inside Iran, and without any support from the global system of production and distribution, as independent and individual attempts, they have enjoyed little attention. Despite all this, Iranian cinema in exile is in no sense any less important than Iranian cinema inside Iran. In this course we will view one such film, made outside Iran, in each class meeting and expect to reach a common consensus in identifying the general patterns within these works and this movement. Questions such as the ones listed below will be addressed in our meetings each week: What changes in aesthetics and point of view of the filmmaker are caused by the change in his or her work environment? Though unwantedly these films are made outside Iran, how related are they to the known (recognized) cinema within Iran? And in fact, to what extent do these films express things that are left unsaid by the cinema within Iran?

**COMPLIT 249C. Contemporary Iranian Theater. 1-3 Unit.**

Today Iranian plays - both in traditional and contemporary styles - are staged in theater festivals throughout the world play their role in forming a universal language of theater which combine the heritages from countries in all five continents. Despite many obstacles, some Iranian plays have been translated into English and some prominent Iranian figures are successful stage directors outside Iran. Forty-six years ago when "Theater in Iran" (a monograph on the history of Iranian plays) by Bahram Beyzaie was first published, it put the then contemporary Iranian theater movement - which was altogether westernizing itself blindly - face to face with a new kind of self-awareness. Hence in today's generation of playwrights and stage directors in Iran, all know something of their theatrical heritage. In this course we will spend some class sessions on the history of theater in Iran and some class meetings will be concentrating on contemporary movements and present day playwrights. Given the dearth of visual documents, an attempt will be made to present a picture of Iranian theater to the student. Students are expected to read the recommended available translated plays of the contemporary Iranian playwrights and participate in classroom discussions.

Same as: GLOBAL 249C

**COMPLIT 250. Literature, History and Memory. 3-5 Units.**

Analysis of literary works as historical narratives. Focus on the relationship history, fiction, and memory as reflected in Francophone literary texts that envision new ways of reconstructing or representing ancient or immediate past. Among questions to be raised: individual memory and collective history, master narratives and alternatives histories, the role of reconstructing history in the shaping or consolidating national or gender identities. Readings include fiction by Glissant, Kane, Condé, Schwarz-Bart, Djébar, Perec, as well as theoretical texts by Ricoeur, de Certeau, Nora, Halbwachs, White, Echevarría. Taught in French.

Same as: FRENCH 248

**COMPLIT 252A. Classic Arabic Poetry. 3-5 Units.**

Introduction to great Arabic poetry from the sixth to the twenty-first century. Imru' al-Qays, al-Mutanabbi, Mahmud Darwish, and more. Includes focus on the skills needed to read and understand, from grammar to dictionaries, encyclopedias, memorization, and the internet. Readings in Arabic. Two years of Arabic at Stanford or equivalent required. Counts for the Arabic Track in the MELLAC Minor.

**COMPLIT 252B. Classic Arabic Prose. 3-5 Units.**

Introduction to great Arabic prose writing from the 700s and the dawn of Islam to the 2010s and the Arab Spring. Al-Jahiz, Naguib Mahfouz, and more. Includes focus on the skills needed to read and understand, from grammar to dictionaries, encyclopedias, and the internet. Readings in Arabic. Two years of Arabic at Stanford or equivalent required. Counts for the Arabic Track in the MELLAC Minor.

**COMPLIT 253. Honoré de Balzac. 3-5 Units.**

Working through a selection of novels by the author widely considered as a founder of western (19th-century) "Literary Realism." Balzac's will be contextualized within his life and the French culture and literature of his time. We will also approach, from a philosophical point of view, the emergence and functions of "Literary Realism." Another focus will be Balzac's work as exemplary of certain traditions within Literary Criticism (particularly Marxist Literary Criticism). Taught in English.

Same as: FRENCH 253

**COMPLIT 254. Modern Chinese Novel: Theory, Aesthetics, History. 4 Units.**

By reading theories of fiction along with 5 representative Chinese novels, the course explores the individual's relationships to the moral fabric of family, community, and society. In the transition from the traditional culture to the modern world, the traditional moral order was dismantled. Yet strands of old morality persist and are revitalized into new moral imperatives. The modern Chinese novel will be a prism to comprehend the critique and novelization of the moral norms in the formation of modern subjectivity. The theoretical half of the course includes Taylor's *Sources of the Self*, *Slaughter's Human Rights, Inc.*, Marston Anderson's *Limits of Realism*, and works by Chinese theorists. We will read fictions by Wu Woyao, Mao Dun, Ding Ling, Zhang Rong, and Yu Hua. This course will be part of the workshop *Moral Reform, Public Virtue, and Literature*, sponsored by Stanford's McCoy Family Center for Ethics in Society. Speakers will be invited to present their work. All books are provided for free.

Same as: CHINLIT 274

**COMPLIT 254A. Was Deconstruction an Illusion?. 3-5 Units.**

A both systematic and historical presentation of "Deconstruction" as a philosophical and intellectual movement that dominated academic and general culture in many western societies during the final decades of the twentieth century, with special focus on the writings of Jacques Derrida and Paul de Man. Deconstruction's specific reception history obliges us to ask the question of whether the extremely high esteem that it enjoyed over two decades was intellectually justified or the result of a misunderstanding. Participation through English translations is possible.

Same as: FRENCH 254

**COMPLIT 257A. Literature and Death: An Existential Constellation in its Historical Unfolding. 2-3 Units.**

This seminar will pursue the intuition that literary texts, due to their status as fiction, have always been intensely related to Death as the ultimate horizon of individual existence, a horizon that is only available to our imagination. We will concentrate on this largely unexplored link as an existential constellation of concrete historical and of challenging philosophical complexity. The discussions will begin with a detailed analysis of the canonical passages in Martin Heidegger's *Being and Time* that try to understand the difference between Death as seen from outside and Death in its *Jemeinigkeit*, that is Death as the absolute end-horizon of individual existence which necessarily causes *Angst* because it is followed by *Nothingness*. On this basis and supplemented by an introduction into several present-day theories and reflections on imagination as a distinct potential of the human mind, we will dedicate the weekly seminar sessions to specific historical moments and different literary (and perhaps artistic) forms that have articulated the connection between Death and Literature (with the final choice of texts and paradigms being open to the participants' interests and area of competence). Topics and textual materials may include: fifth century Greek Tragedy, Roman Stoicism, Medieval Epic in the context of Christian cosmology, Death as a horizon of individual existence in early Modernity (*Don Quijote*), the invisible presence of Death in baroque art, the bracketing of Death in the context of the Enlightenment mentality, Death and suicide as gestures of Romantic self-stylization, the presence of Death in Classical and Romantic conception of music, Death and the absence of God in nineteenth century novels and philosophy, the experience of World War I and a new intensity in the experience of Death, Death and grand abstraction in art, Death in mid-twentieth century Existentialism, Death and its place in the Anthropocene as an early twenty-first century frame of mind. Emphasizing weekly the reading assignments and intense participation in the seminar discussions, this course is laid out for two units (no final paper) but open for the participation of auditors (including undergraduate students with specific areas of competence) who are willing to work through the full range of philosophical texts, literary texts, and artworks on the syllabus. Students interested in this topic should begin with a reading of Heidegger's *Being and Time* and try to remember own readings and forms of experiences that seem pertinent to this topic. Contact with the instructor during the summer months is encouraged (sepp@stanford.edu).

Same as: COMPLIT 355A, FRENCH 256, ITALIAN 255

**COMPLIT 258A. Existentialism, from Moral Quest to Novelistic Form. 3-5 Units.**

This seminar intends to follow the development of Existentialism from its genesis to its literary expressions in the European postwar. The notions of defining commitment, of moral ambiguity, the project of the self, and the critique of humanism will be studied in selected texts by Kierkegaard, Heidegger, Unamuno, Albert Camus, Jean-Paul Sartre, Simone de Beauvoir, and Joan Sales.

**COMPLIT 260B. Love and Negativity in Medieval Persian Mysticism. 3-5 Units.**

An analysis of apophatic discourses of love in medieval Persian mystical texts. The philosophical underpinnings and implications of Sufi thought are discussed in this course. However, the principal aim is to shed light on the radical poetic force of the Persian texts. Topics to be addressed include the fundamentally oral, temporal nature of mystic speech; the relation of the speaking  $\zeta\lambda$  to the unknown and unknowable Other; the discourse of love in which God and the beloved are one; the linguistic fragmentation of mystical discourse, straining against the edges of meaning; the possibility of salvaging mystical experience in language; and, finally, the question of apophasis as a theologically and politically subversive act. Primary readings include texts by Ab $\zeta$  Sa $\zeta$ d Abi $\zeta$ -Khayr, A $\zeta$ mad Ghaz $\zeta$ ,  $\zeta$ Ayn al-Qo $\zeta$ t Hamad $\zeta$ ni, A $\zeta$ mad Sam $\zeta$ ni, R $\zeta$ zbeh $\zeta$ n Baqli, Far $\zeta$ d al-D $\zeta$ n  $\zeta$ A $\zeta$  $\zeta$ r, and Jal $\zeta$ l al-D $\zeta$ n R $\zeta$ m $\zeta$ . The primary texts will be complemented by readings from Georges Bataille, Maurice Blanchot, Michel de Certeau, Jacques Derrida, Philippe Lacoue-Labarthe, Emmanuel Levinas, and Paul Ric $\zeta$ ur, among others. Taught in English.

**COMPLIT 262A. Explosions of Enlightenment. 3-5 Units.**

Eighteenth-century culture seen as permeated by intellectual and artistic practices and plays pushing principles of reason and rationality to an extreme that becomes self-undercutting. Such obsessions and practices are becoming more visible and prominent now, as the traditional concept of "Enlightenment" (synonymous with the 18th century) is undergoing a profound transformation. Among the protagonists of this seminar will be: Diderot as a philosopher and novelist; Lichtenberg as a scientist and writer of everyday notes; Goya, accusing violence and obsessed with nightmarish visions; Mozart as the excessive master of repetition and variation.

Same as: GERMAN 262A

**COMPLIT 264. Walter Benjamin. 3-5 Units.**

Walter Benjamin's work as cultural historian, critic, literary author and philosopher, seen from the trajectory of a German-Jewish intellectual life in the context of the first half of the 20th century. Providing such a historical perspective will be the condition for an actively critical reading of Benjamin's works; a reading that – counter to the predominant Benjamin-reception – will try to distinguish between works of purely biographical and historical interest and those Benjamin texts that prove to be of great and lasting intellectual value. Taught in English.

Same as: GERMAN 264A

**COMPLIT 271A. Futurity: Why the Past Matters. 3-5 Units.**

Drawing on literature, the arts, political discourse, museums, and new media, this course asks why and how we take interest in the watershed events of the modern era; how does contemporary culture engages with modern, made-made disasters such as the World Wars or 9/11? Readings and viewings include the literature of G. Grass, W. G. Sebald, Ian McEwan, Toni Morrison and Cormac McCarthy; the cinema of Kathryn Bigelow and Steven Spielberg; speeches by Barak Obama; and the theoretical writing of Walter Benjamin, Hayden White, Fredric Jameson, among others. Taught in English.

Same as: GERMAN 271

**COMPLIT 275. Humanities Education in the Changing University. 3 Units.**

Advanced study in the humanities faces changes within fields, the university and the wider culture. Considers the debate over the status of the humanities with regard to historical genealogies and current innovations. Particular attention on changes in doctoral education. Topics include: origins of the research university; disciplines and specialization; liberal education in conflict with professionalization; literature and literacy education; interdisciplinarity as a challenge to departments; education policy; digital humanities; accountability in education, assessment and student-centered pedagogies.

Same as: DLCL 320, GERMAN 250

**COMPLIT 281. Visions of the Future in Literature. 4 Units.**

Emphasis on personal and collective future as perceived and described in works translated from Hebrew or written originally in English. Focus on novels, short stories, poems and movies that deal both with the future of Israel and the Middle East and the future of individuals in the area. Guest speaker on Science Fiction and the Graphic Novel. The course is part of "The Future of Storytelling" activities organized by Taube Center for Jewish Studies.

**COMPLIT 281E. Pirandello, Sartre, and Beckett. 3-5 Units.**

In this course we will read the main novels and plays of Pirandello, Sartre, and Beckett, with special emphasis on the existentialist themes of their work. Readings include *The Late Mattia Pascal*, *Six Characters in Search of an Author*, *Henry IV*; *Nausea*, *No Exit*, "Existentialism is a Humanism"; *Molloy*, *Endgame*, *Krapp's Last Tape*, *Waiting for Godot*. Taught in English.

Same as: COMPLIT 381E, FRENCH 214, FRENCH 314, ITALIAN 214, ITALIAN 314

**COMPLIT 283. Masterpieces of Hebrew Literature from the Bible to the Present. 3-5 Units.**

This course presents and reflects on some of the canonical works of Hebrew literature, from biblical era to the present. Discussing works such as the Wisdom Books and selections from the Midrash; and reflecting on important periods such as the Golden Age of Jewish Culture in Spain, the Renaissance, and contemporary Israeli literature, we will highlight linguistic innovation, as well as crucial thematic and philosophical concerns. Readings include the Book of Job, Psalm, Ibn Gabirol, Mapu, Rachel, Goldbegr, Agnon, S. Yizhar, Amichai, Oz and more.

Same as: JEWISHST 243

**COMPLIT 290. Human Rights in a Global Frame: Race, Place, Redress, Resistance. 3-5 Units.**

A presentation of human rights discourse around issues of how we "occupy" space. Centering on racialized spaces and the effects on a wide range rights in US and in other countries. Readings on human rights, history, critique. Deep readings in cultural texts and practices that name injustice and seek redress in a number of forms.

Same as: AFRICAAM 290, CSRE 290

**COMPLIT 303D. Thinking in Fiction. 5 Units.**

Narrative and cognition in 18th-century fictional, philosophical, scientific, and cultural texts. Probable readings: Hobbes, Locke, Newton, Swift, Defoe, Hume, Lennox, Sterne, Adam Smith, Wollstonecraft, and Bentham.

**COMPLIT 310. Introduction to Comparative Queer Literary Studies. 3-5 Units.**

Introduction to the comparative literary study of important gay, lesbian, queer, bisexual, and transgender writers and their changing social, political, and cultural contexts from the 1880s to today: Oscar Wilde, Rachilde, Radclyffe Hall, Djuna Barnes, James Baldwin, Jean Genet, Audre Lorde, Cherrie Moraga, Jeanette Winterson, Alison Bechdel and others, discussed in the context of 20th-century feminist and queer literary and social theories of gender and sexuality.

Same as: COMPLIT 110, FEMGEN 110X, FEMGEN 310X

**COMPLIT 311. Shakespeare, Islam, and Others. 5 Units.**

Shakespeare and other early modern writers in relation to new work on Islam and the Ottoman Turk in early modern studies. *Othello*, *Twelfth Night*, *Titus Andronicus*, *The Merchant of Venice*, and other Shakespeare plays. Kyd's *Solyman and Perseda*, Daborne's *A Christian Turned Turk*, Massinger's *The Renegado*, Marlowe's *The Jew of Malta*, and literary and historical materials.

**COMPLIT 311C. German Capstone: Reading Franz Kafka. 3-5 Units.**

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. (Meets Writing-in-the-Major requirement).

Same as: COMPLIT 111, GERMAN 190, GERMAN 390, JEWISHST 147, JEWISHST 349

**COMPLIT 312. Oscar Wilde and the French Decadents. 3-5 Units.**

Close reading of Oscar Wilde's work together with major texts and authors of 19th-century French Decadence, including Symbolism, l'art pour l'art, and early Modernism. Points of contact between Wilde and avant-garde Paris salons; provocative, creative intersections between (homo)erotic and aesthetic styles, transgression; literary and cultural developments from Baudelaire to Mallarmé, Huysmans, Flaubert, Rachilde, Lorrain, and Proust compared with Wilde's *Salomé*, *Picture of Dorian Gray*, and critical writings; relevant historical and philosophical contexts. All readings in English; all student levels welcome. Same as: COMPLIT 112, FRENCH 112, FRENCH 312

**COMPLIT 313A. Martin Heidegger. 3-5 Units.**

Working through the most systematically important texts by Martin Heidegger and their historical moments and challenges, starting with *Being and Time* (1927), but emphasizing his philosophical production after World War II. The philological and historical understanding of the texts function as a condition for the laying open of their systematic provocations within our own (early 21st-century) situations. Satisfies the capstone seminar requirement for the major tracks in Philosophy and Literature. Taught in English.

Same as: COMPLIT 213A, GERMAN 282, GERMAN 382

**COMPLIT 315. Nabokov in the Transnational Context. 3-5 Units.**

Nabokov's techniques of migration and camouflage as he inhabits the literary and historical contexts of St. Petersburg, Berlin, Paris, America, and Switzerland. His early and late stories, last Russian novel "The Gift," "Lolita" (the novel and screenplay), and "Pale Fire." Readings in English. Russian speakers will be encouraged to read Russian texts in original. Same as: COMPLIT 115, SLAVIC 156, SLAVIC 356

**COMPLIT 317. João/Joyce: Guimarães Rosa and the World Novel. 3-5 Units.**

A comparative analysis of João Guimarães Rosa's (1908-1967) work, with special attention to the novel *Grande Sertão-Veredas*, translated by a Stanford professor, launched by A. Knopf in 1963. Rosa's fiction disturbs gender, racial, and literary divisions by the creation of a Babelic Brazilian Portuguese language from the sertão. Students increase their literary vocabulary with new terms, *nonada* and *conversa*, and a gallery of Indigenous, Afro-Americans, *mestizos*, and foreigners' characters. Discussions in English; readings in Portuguese and Spanish.

Same as: ILAC 367

**COMPLIT 320A. Epic and Empire. 5 Units.**

Focus is on Virgil's *Aeneid* and its influence, tracing the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.

Same as: ENGLISH 314

**COMPLIT 321A. German Literature 2: Selfhood and History. 1-5 Unit.**

How the literature of the period between 1750 and 1900 gives voice to new conceptions of selfhood and articulates the emergent self understanding of modernity. Responses to unprecedented historical experiences such as the French Revolution and the ensuing wars, changes in the understanding of nature, the crisis of foundations, and the persistence of theological motifs. Lessing, Herder, Goethe, Schiller, Holderlin, Kleist, Heine, Buchner, Keller, and Fontane. Taught in English, readings in German. (Note: Fulfills DLCL 325 for AY 1415 for the PhD Minor in the Humanities).

Same as: GERMAN 221, GERMAN 321

**COMPLIT 321B. Anthropology and Literature: Problems of Representation, Power, and Textuality. 5 Units.**

How are literary and social scientific forms of cultural description, evocation, and interpretation related? The seminar reads classic texts as well as recent experiments, addressing issues of genre, rhetoric, epistemology, translation, authority, and collaboration. The emphasis is on writing as a situated practice—embodied, relational, and historically circumscribed. Authors may include Malinowski, Mead, Benedict, Lévi-Strauss, Geertz, Taussig, Leiris, Conrad, Achebe, Said, Barthes, Kroeber, Le Guin, and selected contemporary ethnographies. Examples from film, visual culture, and performance art may also be included.

Same as: ANTHRO 321A

**COMPLIT 324. Landscapes of the Sublime. 5 Units.**

The modern notion of the sublime in philosophy, literature, and art, emphasizing its connection to space and landscape. Topics include: how global exploration contributed to the sublime in the late 17th and 18th centuries; the romantic interiorization of the sublime; and the sublime's connection to mimesis, power, work, and technology. Writers may include Milton, Burke, Kant, Deleuze and Guattari, Freud, the Shelleys, Coleridge, Hugo, Baudelaire, and Rimbaud; artists may include Gericault, Turner, Delacroix, and Friedrich.

**COMPLIT 325. Rethinking Comparative Literary Study Outside of Academia. 2 Units.**

This graduate seminar will serve three primary purposes: 1) we will create and inspire a dialogue to help us think through the application of comparative literary study in non-academic contexts, 2) we will refine our ideas by applying them in various exercises and settings, and, as a result, 3) we will need to investigate what is meant by the phrase "critical thinking." Broadly speaking, this seminar represents a forum for thinking creatively about the unique skills of a doctoral student as well as the specific challenges that await when pursuing career opportunities outside of academia. The goal is to come out of the seminar with a heightened appreciation of the humanities skill set in applications that may present new opportunities for the student. Texts will be highly cross-disciplinary, drawing from legal, financial, and technological traditions and mediums. No prerequisites required.

**COMPLIT 325E. Petrarch & Petrarchism: Fragments of the Self. 3-5 Units.**

In this course we will examine Francis Petrarch's book of Italian lyric poems, *Rerum vulgarium fragmenta*, and its reception in early modern France, England, and Spain. Readings from Petrarch's epistolary and ethical writings will contextualize historically and intellectually the aesthetics and ethics of the fragment in his poetry. With this foundation, we will investigate the long-lasting impact of Petrarch's work on Renaissance poetry and humanism, with attention to both the literary and the material aspects of its reception. Taught in English.

Same as: COMPLIT 225E, ITALIAN 225, ITALIAN 325

**COMPLIT 327. Genres of the Novel. 5 Units.**

Provides students with an overview of some major genres in the history of the modern novel, along with major theorists in the critical understanding of the form. Novels might include works by Cervantes, Defoe, Lafayette, Radcliffe, Goethe, Scott, Balzac, Melville, and Woolf. Theorists might include Lukacs, Bakhtin, Jameson, Gallagher, Barthes, Kristeva, and Bourdieu. \*PLEASE NOTE: Course for graduate students only.\*

Same as: ENGLISH 327, FRENCH 327

**COMPLIT 328. Literature, Narrative, and the Self. 3-5 Units.**

The role of narrative in the well-lived life. Are narratives necessary? Can they, and should they, be literary? When might non-narrative approaches, whether literary or otherwise, be more relevant? Is unity of self something given, something to be achieved, or something to be overcome? Readings from Aristotle, Montaigne, Schopenhauer, Nietzsche, Camus, Sartre, MacIntyre, G. Strawson, Velleman; Ricoeur, Brooks; Shakespeare, Stendhal, Musil, Levi, Beckett, Morrison; film. Taught in English.

Same as: FRENCH 328, ITALIAN 328

**COMPLIT 330. The Bourgeois. 5 Units.**

Goal is to define the ruling class of modern times. Social history (Weber, Hirschmann, Marx); literary texts (Defoe, Goethe, Gaskell); and Henrik Ibsen who produced an intransigent criticism of the bourgeois ethos.

**COMPLIT 331. The Contemporary. 3-5 Units.**

Drawing on philosophy, theory, literature, and the arts, this graduate students seminar examines the concept of the contemporary and asks what it means to belong to our historical age: how do thinkers, writers, and artists make sense of the man-made catastrophes of the modern era; how by employing innovative thinking and aesthetics they allow us to consider the human condition as well as politics and ethics in our time. Philosophical readings include Arendt, Rorty, Agamben, Bauman, Taylor; literary readings include Marilynne Robinson, J. M. Coetzee, Phillip Roth, Sebald, Kluge, Celan among others.

**COMPLIT 332. The Transatlantic Renaissance. 5 Units.**

The emergence of a transatlantic culture in the early modern period. How is the Renaissance of Europe and England fashioned in a conversation with the cultural forms and material realities of the colonial Americas? And how do colonial writings expand and complicate the available understanding of the Renaissance? Readings in Columbus, More, Hakluyt, Spenser, Shakespeare, the Inca Garcilaso de la Vega.

**COMPLIT 333. Gender and Modernism. 3-5 Units.**

Gender and sexuality in trans-Atlantic modernist literature and culture from the 1880s-1930s. Topics include the 19th-century culture wars and the figures of the dandy and the New Woman; modernist critiques of Enlightenment rationality; impact of World War I on gender roles; gender and the rise of modern consumer culture, fashion, design; the modernist metropolis and gender/sexuality; the avant-garde and gender; literary first-wave feminism; homoerotic modernism; modernism in the context of current theories of gender and sexuality.  
Same as: COMPLIT 133

**COMPLIT 334B. Concepts of Modernity II: Culture, Aesthetics, and Society in the Age of Globalization. 5 Units.**

Emphasis on world-system theory, theories of coloniality and power, and aesthetic modernity/postmodernity in their relation to culture broadly understood.  
Same as: ENGLISH 334B, MTL 334B

**COMPLIT 335A. Materialism and Literature. 3-5 Units.**

Exploration of vibrant materialism (Bennet, Latour) and historical materialism (critical theory) as a basis to approach Latin American commodity novels, i.e., those that revolve around bananas, coffee, etc. Literary works by J.E. Rivera, García Márquez, Asturias, Neruda, Magnus, and others. Taught in Spanish.  
Same as: ILAC 335

**COMPLIT 338. The Gothic in Literature and Culture. 5 Units.**

This course examines the Gothic as a both a narrative subgenre and an aesthetic mode, since its 18th century invention. Starting with different narrative genres of Gothic expression such as the Gothic novel, the ghost tale, and the fantastic tale by writers such as Walpole, Radcliffe, Sade, Poe, and E.T.A. Hoffmann, the course goes on to ask how the Gothic sensibility permeates a wide range of 19th century cultural phenomena that explore the dark side of Enlightenment, from Romantic poetry and art to melodrama, feuilleton novels, popular spectacles like the wax museum and the morgue. If time permits, we will also ask how the Gothic is updated into our present in popular novels and cinema. Critical readings will examine both the psychology of the Gothic sensibility and its social context, and might be drawn from theorists such as Benjamin, Freud, Lacan, Kristeva, and Zizek.  
Same as: ENGLISH 338, FRENCH 338

**COMPLIT 338D. Introduction to Digital Humanities: Concepts, Technologies, Tools. 1-3 Unit.**

In this course, we will explore the perspectives of scholars who have thought about what "digital humanities" means and the technologies and tools that are shaping new kinds of research, scholarship, and publishing. Topics will include history of the digital humanities, textual studies, electronic literature, computational and new media, and emerging work around text, image, and new media curation and visualization. This seminar is ideal for anyone interested in digital methods and digital in the humanities, teaching with new digital methods, or to learn about all the digital humanities projects at Stanford. This course is organized as a mix of seminar and workshop and will be featuring a new platform called "Lacuna Stories," designed for Stanford students, that presents multiple platforms, media, and texts to digitally engage with narratives surrounding 9/11; active engagement by all participants is expected. Students may contribute to the field with a creative final project that they develop over the course of the quarter if they select the 3-unit option.  
Same as: COMPLIT 228D, DLCL 228

**COMPLIT 342. Alla Turca Love: Tales of Romance in Turkish Literature. 3-5 Units.**

An introduction to the theme of romantic love in Turkish literature, with particular attention to key classical and contemporary works that influenced the development of the Turkish literary tradition. Topics include close reading and discussion of folk tales, poems, short stories, and plays with particular attention to the characters of lover/beloved, the theme of romantic love, and the cultural and historical background of these elements. We will begin with essential examples of ghazels from Ottoman court poetry to explore the notion of "courtly love" and move to the most influential texts of 19th and 20th centuries. All readings and discussions will be in English; all student levels welcome.  
Same as: COMPLIT 143A

**COMPLIT 345B. Africa in Atlantic Writing. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condé, Olinto), prose poetry (Césaire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Ouologuem) and autobiography (Barack Obama).  
Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 145B, CSRE 145B, FRENCH 145B, FRENCH 345B

**COMPLIT 346. Classical Arabic Poetry: An Introduction. 3-5 Units.**

The primary litmus test of proficiency in the Arabic language is, and has always been, a command of classical Arabic poetry. Study and memorize the great lines of Arabic poetry with a manual that has stood the pedagogical test of time from the eleventh century until today. Questions of literary merit, poetic technique, metaphor, and divine and human linguistic innovation are all raised by the text that we will read together. Readings in Arabic, assignments and discussion in English. Prerequisite: two years of Arabic at Stanford, or equivalent.  
Same as: COMPLIT 149A

**COMPLIT 347. The Arab Spring in Arabic Literature. 3-5 Units.**

An examination of the events of 2011 in the Middle East through literature. We will read short stories, poetry, graphic novels, and blogs in order to try and work out whether the revolution could have been predicted, and how it took place. Prerequisite: two years of Arabic at Stanford, or equivalent.  
Same as: COMPLIT 146A

**COMPLIT 347A. The Hebrew Bible in Literature. 3-5 Units.**

Close reading of major biblical stories and poems that influenced modern literature written in English and Hebrew. Hebrew texts will be read in translation to English. Each class will include a section from the Hebrew Bible as well as a modern text or film based on the biblical story/poem. Discussion of questions such as: the meaning and function of myths and the influence of the Hebrew Bible on the development of literary styles and genres.

Same as: COMPLIT 147A, JEWISHST 147A, JEWISHST 347A

**COMPLIT 350A. What is Left of Marxism. 3-5 Units.**

A both historical and systematic retrospective on "Marxism" as the intellectual configuration and movement that most strongly influenced politics and the state of societies during the 20th century. Discussions will be grounded on a reconstruction of Marx's most canonized writings [especially "Capital"] as emerging from Hegel's work as their philosophical ground, and then proceed to a survey of "Marxism" in its most prominent forms of ideological and intellectual appropriation. Guiding questions [not rhetorical questions!] will be [a] what basic concepts developed by Marx have remained indispensable in 21st century world views and [b] whether "Marxism" today deserves more than an academico-antiquarian interest.

**COMPLIT 351A. Philosophies, Literatures, and Alternatives. 3-5 Units.**

Aristotelian poetics and mediaeval Arabic literary theory. Nietzsche's irony and Philosophies and literatures, together and apart, dominate the last two millennia of human thought. How might they best be read? Are philosophy and literature two different ways of thinking, or are they just two separate institutional histories? This course starts with familiar Greeks, moves onto unfamiliar Arabs, confronts old Europe, and ends with contemporary Americans arguing.

Same as: COMPLIT 151A

**COMPLIT 351B. Great Books: Dramatic Traditions. 4 Units.**

The most influential and enduring texts in the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons.

Same as: COMPLIT 151B, TAPS 151T, TAPS 351

**COMPLIT 353A. Experiment and the Novel. 5 Units.**

A double exploration of experiment in the novel from 1719 into the 19th century. Taking off from Zola's *The Experimental Novel*, consideration of the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the usual sense of departures from standard practice, consideration of works that seem to break away from techniques of "realism" devised prior to 1750. Texts by: Sterne, Walpole, Burney, Sade, Godwin, Lewis, and Goethe. Substantial readings in the theory of the novel.

Same as: ENGLISH 303

**COMPLIT 354B. Poetic Thinking Across Media. 4 Units.**

Even before Novalis claimed that the world must be romanticized, thinkers, writers, and artists wanted to perceive the human and natural world poetically. The pre- and post-romantic poetic modes of thinking they created are the subject of this course. Readings include Ecclestias, Zhaozhou Congshen, Montaigne, Nietzsche, Kafka, Benjamin, Arendt, and Sontag. This course will also present poetic thinking in the visual arts—from the expressionism of Ingmar Bergman to the neo-romanticism of Gerhard Richter.

Same as: COMPLIT 154B, GERMAN 154, GERMAN 354, JEWISHST 144B

**COMPLIT 355. Alterity, Ethics, Politics. 3-5 Units.**

How do literary texts and the investigation into language allow us to think through, debate, and re-imagine our relation to others, and even the idea of alterity? And what ethical and political considerations feed into these discussions?.

**COMPLIT 355A. Literature and Death: An Existential Constellation in its Historical Unfolding. 2-3 Units.**

This seminar will pursue the intuition that literary texts, due to their status as fiction, have always been intensely related to Death as the ultimate horizon of individual existence, a horizon that is only available to our imagination. We will concentrate on this largely unexplored link as an existential constellation of concrete historical and of challenging philosophical complexity. The discussions will begin with a detailed analysis of the canonical passages in Martin Heidegger's *Being and Time* from 1927 that try to understand the difference between Death as seen from outside and Death in its *Jemeinigkeit*, that is Death as the absolute end-horizon of individual existence which necessarily causes *Angst* because it is followed by *Nothingness*. On this basis and supplemented by an introduction into several present-day theories and reflections on imagination as a distinct potential of the human mind, we will dedicate the weekly seminar sessions to specific historical moments and different literary (and perhaps artistic) forms that have articulated the connection between Death and Literature (with the final choice of texts and paradigms being open to the participants' interests and area of competence). Topics and textual materials may include: fifth century Greek Tragedy, Roman Stoicism, Medieval Epic in the context of Christian cosmology, Death as a horizon of individual existence in early Modernity (*Don Quijote*), the invisible presence of Death in baroque art, the bracketing of Death in the context of the Enlightenment mentality, Death and suicide as gestures of Romantic self-stylization, the presence of Death in Classical and Romantic conception of music, Death and the absence of God in nineteenth century novels and philosophy, the experience of World War I and a new intensity in the experience of Death, Death and grand abstraction in art, Death in mid-twentieth century Existentialism, Death and its place in the *Anthropocene* as an early twenty-first century frame of mind. Emphasizing weekly the reading assignments and intense participation in the seminar discussions, this course is laid out for two units (no final paper) but open for the participation of auditors (including undergraduate students with specific areas of competence) who are willing to work through the full range of philosophical texts, literary texts, and artworks on the syllabus. Students interested in this topic should begin with a reading of Heidegger's *Being and Time* and try to remember own readings and forms of experiences that seem pertinent to this topic. Contact with the instructor during the summer months is encouraged (sepp@stanford.edu).

Same as: COMPLIT 257A, FRENCH 256, ITALIAN 255

**COMPLIT 357. Contemporary Turkish Cinema and Society. 3-5 Units.**

This course is an examination of contemporary Turkish cinema in a social and political context. The course will focus on films and directors that revived Turkish cinema starting with the mid-1990s with a focus on key issues pertaining to belonging, denied identities, masculinity, nationalism, silencing of women, and urbanization. The course aims to provide an overview of contemporary Turkish cinema and society in cultural, political, and social framework. There will be approximately two hours of film screening and two hours of classroom discussion/seminar (in English) each week. All films are in Turkish with English subtitles.

Same as: COMPLIT 157

**COMPLIT 359A. Philosophical Reading Group. 1 Unit.**

Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit. Taught in English.

Same as: FRENCH 395, ITALIAN 395

**COMPLIT 360B. The Theory of the Novel. 5 Units.**

Topics will include: theories of the novel's origin; novelistic subjectivity; voice and text; body and text; the problem of the quotidian; democracy, revolution and novelistic form; and the peculiar dynamic of the novelistic trinity (author, character, reader).

**COMPLIT 363. Ecology, History, Exchange. 4-5 Units.**

Readings of novels, ecocriticism. Ghosh, Gordimer, Coetzee, Al-Koni, Ondatjee, Silko.

**COMPLIT 364. Style. 5 Units.**

The return of a term that was central in 20th-century criticism, and has all but disappeared in recent decades. Focus on looking at concepts of style from various branches of linguistic and literary theory, and examination of some revealing examples in novels and films. Team taught with D.A. Miller from U.C. Berkeley.

**COMPLIT 368A. Imagining the Oceans. 5 Units.**

How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Primary authors read might include Cook, Banks, Equiano, Ricketts, and Steinbeck; Defoe, Cooper, Verne, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Critical readings include Schmitt, Rediker and Linebaugh, Baucom, Best, Corbin, Auden, Sontag and Heller-Roazen. Films by Sekula, Painlevé and Bigelow. Seminar coordinated with a 2015 Cantor Arts Center public exhibition. Visits to the Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park. Open to graduate students only.

Same as: ENGLISH 368A, FRENCH 368A

**COMPLIT 369. Introduction to the Profession of "Literary Studies" for Graduate Students. 1-2 Unit.**

A history of literary theory for entering graduate students in national literature departments and comparative literature.

Same as: DLCL 369, FRENCH 369, GERMAN 369, ITALIAN 369

**COMPLIT 371. Aesthetics, Politics, Modernity and China. 2-5 Units.**

The making of global heroes—and the many bodies of Chairman Mao. This course explores a number of key motifs of critical theory relevant to Chinese studies. It introduces some seminal theories of visuality and the making of (global) heroes and problematizes the writing of visual histories and the uses of Digital Humanities for this purpose. Part of an ongoing research project which focuses on two hyper-visible male protagonists of the twentieth century—Mohandas Gandhi and Mao Zedong. How have these flesh and blood men been transformed through the work of visual imagery into globally recognizable, transcultural "bio-icons"? Prerequisite: CHINLIT 127/207 or consent of instructor.

Same as: CHINLIT 371

**COMPLIT 376C. Tragic Form and Political Theory. 5 Units.**

Tragic form and political theory have in common a profound interest in the conflictual foundation of human society. This course explores how the two intellectual approaches define the actors of conflict, its causes, and its possible (or impossible) resolution.

Same as: PHIL 376C

**COMPLIT 381E. Pirandello, Sartre, and Beckett. 3-5 Units.**

In this course we will read the main novels and plays of Pirandello, Sartre, and Beckett, with special emphasis on the existentialist themes of their work. Readings include *The Late Mattia Pascal*, *Six Characters in Search of an Author*, *Henry IV*; *Nausea*, *No Exit*, "Existentialism is a Humanism"; *Molloy*, *Endgame*, *Krapp's Last Tape*, *Waiting for Godot*. Taught in English.

Same as: COMPLIT 281E, FRENCH 214, FRENCH 314, ITALIAN 214, ITALIAN 314

**COMPLIT 390. Tolstoy's Anna Karenina in Dialogue with Contemporary Philosophical, Social, and Ethical Thought. 3-5 Units.**

Anna Karenina, the novel as a case study in the contest between "modernity" and "tradition," their ethical order, ideology, cultural codes, and philosophies. Images of society, women and men in Tolstoy v. those of his contemporaries: Marx, Mill, Nietzsche, Weber, Durkheim, Freud. Open to juniors, seniors and graduate students. Requirements: three interpretive essays (500-1000 words each). Analysis of a passage from the novel; AK refracted through a "philosophical" prism and vice versa (30% each); class discussion and Forum (10%).

Same as: COMPLIT 190, SLAVIC 190, SLAVIC 390

**COMPLIT 398L. Literary Lab. 2-5 Units.**

Gathering and analyzing data, constructing hypotheses and designing experiments to test them, writing programs [if needed], preparing visuals and texts for articles or conferences. Requires a year-long participation in the activities of the Lab.

Same as: ENGLISH 398L

**COMPLIT 399. Individual Work. 1-15 Unit.**

.

**COMPLIT 802. TGR Dissertation. 0 Units.**

.

**Comparative Medicine Courses****COMP MED 10SC. Comparative Anatomy and Physiology of Mammals. 2 Units.**

This class will provide the student with a deeper appreciation for the diversity of the mammalian orders, along with the fundamentals of comparative anatomy, physiology, and basic dissection techniques. In addition to dissection labs, Dr. B has a large collection of skulls, bones and plastinated organs that will facilitate learning mammalian anatomy. A field trip to the California Academy of Sciences will expose the students to the "behind the scenes" collection of 1000's of mammalian species, and a field trip to a local zoo will enable students to appreciate behavior and locomotion of assorted mammals in their "native" habitats. Course assignments: There will be 1 exam, 1 short presentation on an evolutionary topic and 1 final power point presentation on a human/animal or animal/animal interaction or conflict. The presentations will highlight animals from the students' assigned mammalian orders. Summer reading assignments will help prepare students for this enjoyable but intensive class. Sophomore College course, applications required. Applications due 12 noon April 5, 2015; apply at <http://soco.stanford.edu>.

**COMP MED 11SC. Life in the Zoo: Behavior, Welfare and Enrichment. 2 Units.**

Emphasis is on how animal welfare sciences provide an evidence-based approach to optimize and balance each of these demands so that "good welfare is good business." Topics include how to apply principles of animal behavior to design environmental enrichments beneficial to both animals and complex mission of the zoo; assessing exhibits from the point of view of animal behavior and well-being, educational opportunities and guest experience; developing an enrichment plan; designing and building enrichments for animals; interacting with the public as docents; assessing overall effectiveness of new enrichment. Class includes experience at San Francisco Zoo.

**COMP MED 80N. Introduction to Animal Behavior. 3 Units.**

Preference to freshman. Behavior is what makes animals special (thirsty plants don't walk to water), but why do animals behave the way they do? What does their behavior tell us about their inner lives, and about ourselves? What do lipstick and cuckoos and fireflies have in common? Why would nobody want to be a penguin? What do mice say to each other in their pee-mail? Learning how to think about questions like these gives us a unique perspective on the natural world. Format: Discussion and criticism of video examples, documentaries, and research papers. Topics: History and approaches to animal behavior; development of behavior, from genetics to learning; mechanisms of behavior, from neurons to motivation; function of behavior, from honest signals to selfish genes; the phylogeny of behavior, from domestication to speciation; and modern applications of behavior, from abnormal behavior, to conservation, to animal welfare, and animal consciousness.

**COMP MED 81N. Comparative Anatomy and Physiology of Mammals. 3 Units.**

Preference to freshmen. Emphasis is on a comparative approach to anatomy and physiology of a wide range of mammals, the unique adaptations of each species in terms of its anatomical, and behavioral characteristics, and how these species interact with human beings and other animals. Dissection required. Class size is limited to 16.

**COMP MED 83N. Horse Medicine. 3 Units.**

Preference to freshmen. The most common equine diseases, ranging from colic to lameness are reviewed using problem-oriented approach. Topics include: equine infectious diseases, care of the newborn foal, medical emergencies, and neurological disorders. A lab on the physical and neurological examination of the horse at the Red Barn.

**COMP MED 84Q. Globally Emerging Zoonotic Diseases. 3 Units.**

Preference to sophomores. Infectious diseases impacting veterinary and human health around the world today. Mechanisms of disease, epidemiology, and underlying diagnostic, treatment and control principles associated with these pathogens.

**COMP MED 85N. Animal Use in Biomedical Research. 3 Units.**

Preference to freshmen. How and why animals are used in biomedical science. Addresses human and animal disease entities and how animal research has contributed to the treatment and cure of disease. Significant portions of this course are devoted to documenting the humane care and treatment of laboratory animals in research, including, but not limited to such topics as laws and ethics, animal behavior, animal modeling, and the animal activist movement. Course topics will also include: What advances have been made as a result of the use of animals in research? Who conducts animal research? Predominant animal species used in biomedical research, facts and myths; the regulation of biomedical research; housing and care of laboratory animals; why new drugs must be tested; animal use in stem cell research, cancer research and genetically engineered mice; career choices in biomedical research.

**COMP MED 87Q. Introduction to the Mouse in Biomedical Research. 3 Units.**

Preference to sophomores. Focus is on the laboratory mouse, a widely used and important research model. Topics include the ethics of animal use in research; the natural history, origin and husbandry of the mouse; characteristics of key mouse strains; its anatomy and physiology; common diseases and their effects on research; coat color genetics relative to human diseases; immunodeficient mouse models; and genetic engineering of mice. The laboratory includes necropsy, handling, anesthesia, identification methods, and common research techniques using live and dead mice. Enrollment limited to 14 students.

**COMP MED 88Q. Blood Cells- The Basics. 3 Units.**

Preference to sophomores. The essential and constant production of new blood cells by the bone marrow. Focus is on fundamentals of the three blood cell types along with white blood cell subtypes. Topics include the microscopic appearance of blood cells in mammalian and non-mammalian species, common morphologic abnormalities of blood cells, and shifts in blood cells that occur in several major diseases of humans and animals. Ideally suited for premed, prevet and Bio-X students, but no biology specialty background required.

**COMP MED 89Q. Ouch it Hurts! The Comparative Neurobiology of Pain. 3 Units.**

Preference to sophomores. Focus is on understanding the basic neurobiology of pain pathways. Topics include the physiology, pharmacology, and clinical aspects of effective pain management. In both humans and animals pain is part of the protective mechanisms that prevent further injury to the body. However, if the pain process continues unchecked, it can become extremely detrimental.

**COMP MED 107. Comparative Brain Evolution. 4 Units.**

Functional organization and evolution of the vertebrate nervous system. Topics include paleoneurology, cladistic analysis, allometry, mosaic versus concerted evolution, and evolution of brain region structure, connectivity, and neurons. Comparisons between structure and function of vertebrate forebrains including hippocampi. Evolution of the primate visual and sensorimotor central nervous system as related to vocalization, socialization, and intelligence.

Same as: COMP MED 207

**COMP MED 110. Pre-Vet Advisory. 1 Unit.**

For students interested in a career in veterinary medicine. How to meet the academic and practical experience prerequisites for admission to veterinary school. Networking with other pre-vet students. Periodic group meetings with guest speakers presenting career options in veterinary medicine. Prerequisite: consent of instructor.

**COMP MED 121. Imaging Anatomy in Animal Models. 3 Units.**

(Same as RADO 121) Introduces engineering and physical science majors to the basic laboratory animal anatomy visualized and targeted with biomedical imaging. Topics include: various imaging modalities (PET, CT, Radiology, MRI, and other optical imaging) and associated depiction of normal organs and skeletal structures in pigs, dogs, rabbits and rodents. Course includes didactic lectures, discussion, imaging labs and gross cadaver examination.

**COMP MED 198. Undergraduate Directed Reading in Comparative Medicine. 1-3 Unit.**

May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research.

**COMP MED 199. Undergraduate Research. 1-3 Unit.**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**COMP MED 200. Comparative Medicine Seminar and One Health Journal Club. 3 Units.**

Focus is on animal modeling and translational research that examines animal and human diseases. Teaches critical reading of scientific papers and presentation skills. Participants report on recent scientific articles and provide updates on their own research projects. Enrollment limited to undergraduate and graduate students currently matriculated or planning to enroll in the MS in Laboratory Animal Science degree program.

**COMP MED 201. Neuro-Cellular Core. 2 Units.**

Focuses on fundamental aspects of cellular neurophysiology. Topics include exploration of electrophysiological properties of neurons, synaptic structure and function and synaptic plasticity. The course consists of didactic lectures and student-led discussions of classical papers. Incorporates simulation program Neuron. Enrollment restricted to students enrolled in Neurosciences Graduate Program.

Same as: NEPR 201

**COMP MED 202. Training in Research and Biomethodology for Laboratory Animal Science. 5 Units.**

Emphasis is on providing introductory training and practical, hands-on workshops for students interested in learning more about research biomethodology and animal models of human and animal disease. Topics include basic care and principals guiding the use of research animals, animal health and welfare, and research animal enrichment, basic mouse handling, rodent breeding, and the principals of rodent surgery and anesthesia. Content delivered online and in-person.

**COMP MED 207. Comparative Brain Evolution. 4 Units.**

Functional organization and evolution of the vertebrate nervous system. Topics include paleoneurology, cladistic analysis, allometry, mosaic versus concerted evolution, and evolution of brain region structure, connectivity, and neurons. Comparisons between structure and function of vertebrate forebrains including hippocampi. Evolution of the primate visual and sensorimotor central nervous system as related to vocalization, socialization, and intelligence.

Same as: COMP MED 107

**COMP MED 209. Laboratory Animal Medicine Seminar. 2 Units.**

Focuses on husbandry, care and diseases of laboratory animal species; experimental techniques; statistics; factors that influence animal research and behavior. Course content is divided into seminars over a two-year period. Department consent required for enrollment. May be repeated for credit.

**COMP MED 215. Synaptic Properties and Neuronal Circuits. 2-3 Units.**

Focus is on synapses and circuits in the central nervous system. Objective is to demonstrate how the specific properties of different synapses play a role in the function of neuronal circuits. The main types of synapses are covered, including both ionotropic and metabotropic-receptor-dependent synapses and their related circuits in the CNS. Lectures and student presentations. If taken for 3 units qualifies as a Core Course satisfying requirements in Cellular, Molecular & Developmental Neuroscience in the Neurosciences Graduate Program. Students enrolling for 3 units write a NIH-style proposal on a selected synapse, proposing a study of its properties and related function and presenting the proposal to the class for critique and discussion.

**COMP MED 299. Directed Reading in Comparative Medicine. 1-18 Unit.**

Prerequisite: consent of instructor. (Staff).

**COMP MED 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**COMP MED 399. Graduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Opportunities are available in comparative medicine and pathology, immunohistochemistry, electron microscopy, molecular genetics, quantitative morphometry, neuroanatomy and neurophysiology of the hippocampus, pathogenesis of intestinal infections, immunopathology, biology of laboratory rodents, anesthesiology of laboratory animals, gene therapy of animal models of neurodegenerative diseases, and development and characterization of transgenic animal models. Prerequisite: consent of instructor.

**Comparative Studies in Race & Ethnicity Courses****CSRE 1A. Meet the Profs: Conversations on Race and Ethnicity. 1-2 Unit.**

This course meets once a week for one hour, over lunch (provided). Students will meet with CSRE faculty who will share their work, their life stories, their reasons for believing that race and ethnicity are of central concern to all members of our society. Diverse fields will be represented: sociology, history, literature, psychology and others. The course may be taken for either one or two units. Open to freshmen and sophomores only.

**CSRE 8. Conjure and Manifest: Building a Sustainable Artistic Practice. 3 Units.**

In this course, student-artists spend time investigating their artistic practice as a framework for promoting power, wellness, and creativity; and as a tangible means for navigating the first steps of their artistic careers. We spend time critically examining the philosophies and works of Black artists including James Baldwin, Octavia Butler, RZA (Wu-Tang Clan) and Nayyirah Waheed, in order to explore new visions for the artist as activist, as futurist and as spiritual healer. We then use a mixture of these ideas and our own, along with meditation and mindfulness experiences, to begin conjuring and manifesting intimate relationships with our art practice and ourselves. Student-artists will develop creative confidence, formulate game plans for success, and begin to find balance between the uncertainty and ultimate freedom that life as an artist can bring.

Same as: AFRICAAM 8

**CSRE 11W. Service-Learning Workshop on Issues of Education Equity. 1 Unit.**

Introduces students to a variety of issues at stake in the public education of at-risk high school youth in California. Participants will hear from some of the leading faculty in the School of Education as well as the Departments of Psychology, Sociology, and others, who will share perspectives on the problems and challenges of educating a diverse student body in the state's public school system. The service-learning component of the workshop is a mentoring project (Stanford Students for Educational Equity) with junior class history students from East Palo Alto Academy High School, a Stanford charter school.

Same as: HISTORY 11W

**CSRE 14N. Growing Up Bilingual. 3 Units.**

This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants. Same as: CHILATST 14N, EDUC 114N

**CSRE 15N. Imagining India: Art, Culture, Politics in Modern India. 3 Units.**

This course explores history via cultural responses in modern India. We will examine a range of fiction, film and drama to consider the ways in which India emerges through its cultural productions. The course will consider key historical events such as the partition of the subcontinent, independence from British rule, Green Revolution, Emergency, liberalization of the Indian economy, among others. We will reflect on epochal historical moments by means of artistic responses to these events. For example, Ritwik Ghatak's experimental cinema intervenes into debates around the Bengal partition; Rohinton Mistry's novel, *A Fine Balance* grapples with the suspension of civil liberties during the emergency between 1975-77; Rahul Varma's play *Bhopal* reflects on the Bhopal gas tragedy, considered the world's worst industrial disaster. Students will read, view and reflect on the aesthetic and historical texts through their thoughtful engagement in class discussions and written essays. They will also have opportunities to imaginatively respond to these texts via short creative projects, which could range from poems, monologues, solo pieces, web installations, etc. Readings will also include Mahashweta Devi, Amitav Ghosh, Girish Karnad, Jhumpa Lahiri, Manjula Padmanabhan, Salman Rushdie, Aparna Sen, among others.

Same as: COMPLIT 14N, FEMGEN 14N, TAPS 14N

**CSRE 16N. African Americans and Social Movements. 3 Units.**

Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women's right, LGBT rights, environmental movement, and contemporary political conservatism. Same as: AFRICAAM 16N, SOC 16N

**CSRE 19N. "Land of Milk and Honey": Food, Justice, and Ethnic Identity in Jewish Culture. 3 Units.**

Food is an essential aspect of the human experience. The decisions and choices we make about food define who we have been, who we are now, and who we want to become. This seminar examines Jewish culture and the food practices and traditions that have shaped and continue to shape it. Why has Jewish culture been centered around food practices? How have religious laws and rituals about food and food production shaped Jewish culture and vice versa? Dietary laws prescribe which animals are and are not "kosher" and what can be eaten with them, holidays are celebrated with traditional foods, and regional foods contribute to the formation of distinct Jewish ethnic identities. More recently, American Jews have begun to organize around issues of food justice, and joined the sustainability movement, adapting Jewish traditions about food production into their cause. What is the significance of animal welfare, environmental issues, and labor practices in Jewish culture? This multi-disciplinary seminar explores the connection between food practices and ethnic and religious identity(ies), the history of the dietary laws and their multiple interpretations, the cultural significance of the phenomenal success of kosher certification in the U.S. food market, and the rise of the Jewish food justice movement. These issues raise a multitude of comparative questions, and you are encouraged to engage in research into other religious and ethnic food cultures. Course materials include: biblical and later religious, legal, and philosophical texts; cook-books (as cultural and historical sources); literature (both fiction and academic); films; news media, and food experts. We will visit an urban farming community (Urban Adamah) to learn from those involved in the Jewish sustainability movement. Same as: JEWISHST 19N, RELIGST 19N

**CSRE 24D. Introduction to Dance in the African Diaspora. 4 Units.**

This course introduces students to dance as an important cultural force in the African Diaspora. From capoeira in Brazil to dance hall in Jamaica to hip hop in the United States and Ghana, we will analyze dance as a form of resistance to slavery, colonialism, and oppression; as an integral component of community formation; and as a practice that shapes racial, gendered, and national identity. We will explore these topics through readings, film viewings, and movement workshops (no previous dance experience required). Students will have the option to do a creative performance as part of their final project.

Same as: AFRICAAM 24, DANCE 24, TAPS 152D

**CSRE 28SI. What is Whiteness? Historical and Contemporary Definitions of White Racial Identity in the U.S.. 1-2 Unit.**

This course will explore one central question: What does it mean to be White, and how has that changed over time and place? From Abigail Fisher to Kreyshawna to the Tsarnaev brothers, we will use narratives and experiences of Whiteness to illuminate historical and contemporary understandings of what it means to be White in 2013. Through this class, students will share their own encounters with Whiteness, and will develop tools and strategies for navigating privileged identities and engaging within Stanford's diverse student community.

**CSRE 29SI. Migration is Beautiful: Historical and Political Perspectives on Immigrant Justice. 1 Unit.**

We will begin the course by analyzing the history of immigration politics and policy in the United States. How did immigrants fit into and complicate the constructed racial hierarchy throughout history? What characterized the waves of migration to the United States? How have undocumented been marginalized, and what are the ways in which the community responded? In looking at this history, we will learn about the effects it has had on the immigrant community as it relates to the long-lasting disparate impacts in education, criminal justice, and political representation. Immigrants make up a profoundly diverse community that is often mischaracterized. We will discuss the varying perceptions of immigrants today and how they impact attitudes and current policies. Although the course and the trip are designed with a focus on national immigration policy, we will also spend some time in this course narrowing in and using the Bay Area as a case study.

**CSRE 30SI. Housing Justice and Stratification in the Bay Area. 1 Unit.**

This is a survey course on relevant topics to local housing justice concerns, including current debates in housing policy and the role of various sectors in shaping the local housing market. This course will prepare participants to both personally engage in service learning and critically engage with actors in housing policy over spring break. To begin, we will explore paradigms of critical community engagement and develop a decolonized framework about the history of the local land. With these underlying philosophies in mind, we will dive into the politics behind ongoing gentrification, the rise of the city and the decline of suburbs in the Bay Area. From there, we will analyze housing policies which have strongly influenced the local housing situation, including national policies such as the Fair Housing Act and East Palo Alto affordability measures. To close, the course will focus on the role of different actors and sectors in affecting change. We will examine possible obligations local technology companies and real estate developers might have in shaping the region's housing market. Finally, we will study the notion of housing as a human right and ask whether achieving housing justice would require a formally declared right to affordable and fair housing.

**CSRE 32. Theories in Race and Ethnicity: A Comparative Perspective. 5 Units.**

This undergraduate course employs an anthropological and historical perspective to introduce students to ideas and concepts of race and ethnicity that emerged primarily in Europe and the United States in the eighteenth and nineteenth centuries and that continue to shape contemporary racial attitudes, interactions, and inequalities. Ideas about race and ethnicity forged outside the U.S. and case studies from other nations are presented to broaden students' understanding and to overcome the limitations of an exclusive focus on the U.S. This course is geared to sophomores and juniors who have already taken at least one course on race and ethnicity, anthropology, African American Studies, Asian American Studies, Chicana/o Studies, Jewish Studies or Native American Studies.

Same as: ANTHRO 32

**CSRE 32A. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.**

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations.

Same as: AFRICAAM 32, AMSTUD 32, EDUC 32, EDUC 432, TAPS 32

**CSRE 36. REPRESENT! Covering Race, Culture, and Identity In The Arts through Writing, Media, and Transmedia.. 5 Units.**

Probably since the first audience formed for the first chalk scrawls in a cave, there have been storytellers to narrate that caveperson's art and life, and critics to troll that caveperson's choice and usage of color. And so it goes. This course is an exploration into how to cover race, culture, and identity in the arts in journalism, such as print, web, video, radio, and podcasting. It is also an arts journalism practicum. During the quarter, we will be working toward creating work that is publishable in various venues and outlets. In this course, we will be discussing exemplary arts writers and their works and interrogating critical questions around race, identity, representation, and ethics. Experienced journalists, editors, and experts from different platforms and backgrounds will also be imparting important skills and training that will help you to navigate today's working media and transmedia environments. Those who enroll in the class will be expected to produce quality content (e.g. articles, blog posts, video reports, podcasts) for media outlets. Some travel outside of class may be required for additional reporting and training. This seminar class will be By Instructor Approval Only. Please submit an application by February 22 at 11:59pm. Starred items are required. The app is available at: <http://bit.ly/RepresentClass36> Those selected for this class will be informed by March 2nd so that they may enroll in the course. Please do not apply for the course if you are unsure about completing it. If you have any questions, you may email the instructor at: [jeffc410@stanford.edu](mailto:jeffc410@stanford.edu). Same as: AFRICAAM 36

**CSRE 38. Deliberative Democracy Practicum: Applying Deliberative Polling. 3-5 Units.**

In this course, students will work directly on a real-world deliberative democracy project using the method of Deliberative Polling. Students in this course will work in partnership with the Center for Deliberative Democracy at Stanford, a research center devoted to the research in democracy and public opinion around the world. This unique practicum will allow students to work on an actual Deliberative Polling project on campus. In just one quarter, the students will prepare for, implement, and analyze the results for an Deliberative Polling project. This is a unique opportunity that allows students to take part in the entire process of a deliberative democracy project. Through this practicum, students will apply quantitative and qualitative research methods in a local community or local high school and subsequently, analyze the relevant quantitative and qualitative data. Students will explore the underlying challenges and complexities of what it means to actually do community-engaged research in the real world. As such, this course will provide students with skills and experience in research design in deliberative democracy, community and stakeholder engagement, and the practical aspects of working in local communities. This practicum is a collaboration between the Center for Deliberative Democracy, the Bill Lane Center for the American West and the Haas Center for Public Service. nnCDD website: <http://cdd.stanford.edu> Bill Lane Center website: <http://west.stanford.edu> Haas Center website: <https://haas.stanford.edu>. Same as: COMM 138

**CSRE 41A. Genes and Identity. 3 Units.**

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and anthropological works (ethnographies). We will explore several case studies where the use of DNA markers (as proof of heritage, disease risk, or legal standing) has spawned cultural movements that are biosocial in nature. Throughout we will look at how new social movements are organized around gene-based definitions of personhood, health, and legal truth. Several examples include political analyses of citizenship and belonging. On this count we will discuss issues of African ancestry testing as evidence in slavery reparations cases, revisit debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, and hear arguments on whether people with genetic links to Jewish groups should have a right of return to Israel. We will also examine the ways genetic knowledge may shape different health politics at the individual and societal level. On this count we will do close readings of how personal genomics testing companies operate, we will investigate how health disparities funding as well as orphan disease research take on new valences when re-framed in genetic terms, and we will see how new articulations of global health priorities are emerging through genetic research in places like Africa. Finally we will explore social implications of forensic uses of DNA. Here we will examine civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects, and inquire into the use of DNA to generate digital mugshots of suspects that re-introduce genetic concepts of race. Same as: AFRICAAM 41, ANTHRO 41

**CSRE 45Q. Understanding Race and Ethnicity in American Society. 4 Units.**

Preference to sophomores. Historical overview of race in America, race and violence, race and socioeconomic well-being, and the future of race relations in America. Enrollment limited to 16. Same as: SOC 45Q

**CSRE 51Q. Comparative Fictions of Ethnicity. 4 Units.**

We may "know" "who" we "are," but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of "the Self"? After all, don't we tell stories in response to the question, "who are you"? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question—Does this universal issue ("who am I") become skewed differently when we add a qualifier before it, like "ethnic"? Same as: AMSTUD 51Q, COMPLIT 51Q

**CSRE 52D. Asian American Human Development: Cultural Perspectives on Psychology, Education and Critical Issues. 3 Units.**

In this course, we will examine the critical issues in Asian American growth and development with particular attention given to current theoretical and research perspectives within a diverse society. We will consider topics related to their cultural identity, cognitive, and socio-emotional development, engaging in the ethnic discourse on Confucian history and culture, Eastern and Western thought and learning, tiger parenting, gender roles, the model minority stereotype, acculturation and bicultural identity, and mental health. This course uniquely integrates the fields of history, education, psychology, human biology, and ethnic studies as we seek to understand the underlying processes of the Asian American person as an individual and as an effective member of the larger society. Same as: ASNAMST 52D

**CSRE 54N. African American Women's Lives. 3-4 Units.**

Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality.

Same as: AFRICAAM 54N, AMSTUD 54N, FEMGEN 54N, HISTORY 54N

**CSRE 55M. MMUF Seminar. 1 Unit.**

This seminar is designed to help MMUF honor students in the following ways: (1) developing and refining research paper topics, (2) learning about the various approaches to research and writing, and (3) connecting to Stanford University resources such as the library and faculty.

**CSRE 63N. The Feminist Critique: The History and Politics of Gender Equality. 3-4 Units.**

This course explores the emergence of concepts of gender equality in world history. It asks how gender inequality relates to racial, ethnicity, and sexual identities, how men engage with feminism, whether gender equality is purely a western cultural tradition, and much more. We approach the long history of ideas about gender and equality by reading primary historical documents from around the world, moving from the 15th century to the present. Topics include education, the body, sexuality, violence, labor, and politics.

Same as: AMSTUD 63N, FEMGEN 63N, HISTORY 63N

**CSRE 64. Racial and Ethnic Diversity in Modern America. 4-5 Units.**

How ethnicity influenced the American experience and how prevailing attitudes about racial and ethnic groups over time have affected the historical and contemporary reality of the nation's major minority populations. Focus is on the past two centuries.

Same as: HISTORY 64

**CSRE 65. Nation in Motion: Film, Race and Immigration in Contemporary French Cinema. 3-5 Units.**

An examination of the current debates in France regarding national identity, secularism, and the integration of immigrants, notably from the former colonies. Confronts films' and other media's visual and discursive rhetorical strategies used to represent ethnic or religious minorities, discrimination, citizens' resistance to government policies, inter-racial marriages, or women's rights within immigrant communities. By embodying such themes in stories of love, hardships, or solidarity, the motion pictures make the movements and emotions inherent to immigration tangible: to what effect? Taught in French. Films in French with English subtitles. Additional paper for students enrolled in 235.

Same as: FRENCH 122

**CSRE 66. SPECTACULAR TRIALS: SEX, RACE AND VIOLENCE IN MODERN AMERICAN CULTURE. 5 Units.**

This course will use the phenomenon of the spectacular trial as a framework for exploring the intersections of sex, race, and violence in the formation of modern American culture. Beginning in the late nineteenth century and continuing through the 1990s, we will focus our inquiry on a number of notorious cases, some associated with familiar names—the Scottsboro Boys, Emmett Till, O.J. Simpson—others involving once-infamous actors—like Joan Little and Inez Garcia—whose ordeals have receded into historical memory, considering a range of questions arising from this thematic nexus. For instance, in what ways are sexual transgressions racialized and gendered? What are the practical and theoretical ramifications of the seemingly inextricable conjunction of sex and violence in legal and popular discourse? And what insights might such spectacles afford when broached as an arena in which sexual meanings, identities, and practices are refracted and ultimately constructed? We will also examine the role of the pertinent professions in the evolution of these events, in particular how the interplay of law, medicine, psychiatry, and forensic science helped define the shifting boundaries of legality, and how print, radio, and television journalism operated not only in sensationalizing, but also in reflecting, modeling, and shaping prevailing attitudes and behaviors. Our study of this vital facet of our society of the spectacle will draw on a series of compelling secondary readings complemented by a diverse array of primary sources—from contemporaneous pamphlets and newspaper accounts to photographs, letters, trial testimony, and psychological commentary—that will enable class members to evaluate the strengths and weaknesses of different textual genres, experiment with alternative methods of fashioning historical interpretations, and contemplate the ways history might be employed to illuminate the persistent problems of racial bias, reflexive sexualization, and the packaging of trials as mass entertainment in the present day.

Same as: AMSTUD 106

**CSRE 69M. Race, Science, and Medicine in U.S. History. 5 Units.**

How have scientific ideas about race been shaped by their historical contexts, and what effects do these ideas have on people, institutions, law, and medicine? Is racial science always racist science? How do ideas about race intersect with ideas about gender, class, and disability? This course explores how natural philosophers and scientists have defined, used, and sometimes challenged ideas about race from the eighteenth century to today. Topics include medicine and slavery, eugenics, sociology, psychiatry, race-based medicine, and genetic ancestry. This course fulfills the departmental Sources and Methods requirement.

Priority given to history majors and minors.

Same as: FEMGEN 69S, HISTORY 69S

**CSRE 84. Zionism and the State of Israel. 3 Units.**

(Same as HISTORY 184. History majors and others taking 5 units, register for 184.) Hotly contested still, this course will open up the movement's ideas, practices, achievements and crises in such a way as to allow students to hear the fullest range of voices - Jewish, Arab, religious, secular, etc. It will track the movement from its appearance in the late nineteenth century until the establishment of State of Israel in 1948, and beyond.

Same as: HISTORY 84, JEWISHST 84, REES 84

**CSRE 85B. Jews in the Contemporary World: Faith and Ethnicity, Visibility and Vulnerability. 3 Units.**

(Same as HISTORY 185B. History majors and others taking 5 units, register for 185B.) This course explores the full expanse of Jewish life today and in the recent past. The inner workings of religious faith, the content of Jewish identity shorn of belief, the interplay between Jewish powerlessness and influence, the myth and reality of Jewish genius, the continued pertinence of antisemitism, the rhythms of Jewish economic life—all these will be examined in weekly lectures, classroom discussion, and with the use of a widely diverse range of readings, films, and other material. Explored in depth will be the ideas and practices of Zionism, the content of contemporary secularism and religious Orthodoxy, the impact of the Holocaust, the continued crisis facing Israel and the Palestinians. Who is to be considered Jewish, in any event, especially since so many of the best known (Spinoza, Freud, Marx) have had little if anything to do with Jewish life with their relationships to it indifferent, even hostile?.

Same as: HISTORY 85B, JEWISHST 85B, REES 85B

**CSRE 100. Grassroots Community Organizing: Building Power for Collective Liberation. 4-5 Units.**

This course explores the theory, practice and history of grassroots community organizing as a method for developing community power to promoting social justice. We will develop skills for 1-on-1 relational meetings, media messaging, fundraising strategies, power structure analysis, and strategies organizing across racial/ethnic difference. And we will contextualize these through the theories and practices developed in the racial, gender, queer, environmental, immigrant, housing and economic justice movements to better understand how organizing has been used to engage communities in the process of social change. Through this class, students will gain the hard skills and analytical tools needed to successfully organize campaigns and movements that work to address complex systems of power, privilege, and oppression. As a Community-Engaged Learning course, students will work directly with community organizations on campaigns to address community needs, deepen their knowledge of theory and history through hands-on practice, and develop a critical analysis of inequality at the structural and interpersonal levels. Placements with community organizations are limited. Enrollment will be determined on the first day through a simple application process. Students will have the option to continue the course for a second quarter in the Winter, where they will execute a campaign either on campus or in collaboration with their community partner.

Same as: AFRICAAM 100, FEMGEN 100X, URBANST 108

**CSRE 100B. Grassroots Community Organizing Practicum. 1-5 Unit.**

Continuation of projects and community engagement from CSRE 100. Prerequisite: completion of CSRE 100.

**CSRE 102A. Art and Social Criticism. 5 Units.**

Contemporary visual artists have long been in the forefront of social criticism in America and their key works have become anchors for discourses on racism, sexism, economic inequality, and immigrant rights. We will consider political art by artists such as ACT-UP, Judy Chicago, Fred Wilson, Guerilla Girls, Ai Weiwei and many others that raises social awareness, inspires social change and galvanizes activism. What makes their art enduring social criticism? How have they contributed to our understanding of American history?.

Same as: AMSTUD 102, ARTHIST 162B

**CSRE 103. Intergroup Communication. 3 Units.**

In an increasingly globalized world, our ability to connect and engage with new audiences is directly correlated with our competence and success in any field. How do our intergroup perceptions and reactions influence our skills as communicators? This course uses experiential activities and discussion sections to explore the role of social identity in effective communication. The objective of the course is to examine and challenge our explicit and implicit assumptions about various groups to enhance our ability to successfully communicate across the complex web of identity.

Same as: PSYCH 103

**CSRE 103B. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices. 3-5 Units.**

Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.

Same as: AFRICAAM 106, EDUC 103B, EDUC 337

**CSRE 103F. Intergroup Communication Facilitation. 1 Unit.**

This is a TA training course for Psych 103 - Intergroup Communication.

Same as: PSYCH 103F

**CSRE 103S. Native American Women, Gender Roles, and Status. 5 Units.**

Historical and cultural forces at work in traditional and contemporary Native American women's lives through life stories and literature. How women are fashioning gendered indigenous selves. Focus is on the diversity of Native American communities and cultures.

Same as: FEMGEN 103S, NATIVEAM 103S

**CSRE 106A. Gang Colors: The Racialization of Violence and the American City. 5 Units.**

Street gangs (e.g. Bloods, Crips, Mara Salvatrucha, M-18, etc.) serve as a window onto the experience of racial, ethnic and economic marginalization under late capitalism. This class explores the context that gives rise to gang violence through a combination of anthropological, sociological, and historical approaches. Students will be familiarized with the macro-social factors that shape both gangs and the politics of violence in the Americas, North and South.

Same as: ANTHRO 106A

**CSRE 107. The Black Mediterranean: Greece, Rome and Antiquity. 4-5 Units.**

Explore problems of race and ethnicity as viable criteria in studying ancient societies and consider the question, What is the Mediterranean?, in relation to premodern evidence. Investigate the role of blackness as a marker of ethnicity; the demography of slavery and its roles in forming social identities; and environmental determinism as a factor in ethnic and racial thinking. Consider Greek and Roman perspectives and behavior, and their impact on later theories of race and ethnicity as well as the Mediterranean as a whole.

Same as: AFRICAAM 107C

**CSRE 108. Introduction to Feminist, Gender, and Sexuality Studies. 4-5 Units.**

Introduction to interdisciplinary approaches to gender, sexuality, queer, trans and feminist studies. Topics include the emergence of sexuality studies in the academy, social justice and new subjects, science and technology, art and activism, history, film and memory, the documentation and performance of difference, and relevant socio-economic and political formations such as work and the family. Students learn to think critically about race, gender, and sexuality from local and global perspectives.

Same as: AMSTUD 107, FEMGEN 101, TAPS 108

**CSRE 108S. American Indian Religious Freedom. 5 Units.**

The persistence of tribal spiritual beliefs and practices in light of legal challenges (sacred geography and the 1st Amendment), treatment of the dead and sacred objects (repatriation), consumerism (New Age commodification), and cultural intellectual property protection (trademark, copyright, patent law). Focus is on contemporary issues and cases, analyzed through interdisciplinary scholarship and practical strategies to protect the fundamental liberty of American Indian religious freedom.

Same as: NATIVEAM 108S

**CSRE 109A. Federal Indian Law. 5 Units.**

Cases, legislation, comparative justice models, and historical and cultural material. The interlocking relationships of tribal, federal, and state governments. Emphasis is on economic development, religious freedom, and environmental justice issues in Indian country.

Same as: NATIVEAM 109A

**CSRE 109B. Indian Country Economic Development. 3 Units.**

The history of competing tribal and Western economic models, and the legal, political, social, and cultural implications for tribal economic development. Case studies include mineral resource extraction, gaming, and cultural tourism. 21st-century strategies for sustainable economic development and protection of political and cultural sovereignty. Same as: NATIVEAM 109B

**CSRE 112X. Urban Education. 3-4 Units.**

(Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education. Same as: AFRICAAM 112, EDUC 112, EDUC 212, SOC 129X, SOC 229X

**CSRE 117S. History of California Indians. 5 Units.**

Demographic, political, and economic history of California Indians, 1700s-1950s. Processes and events leading to the destruction of California tribes, and their effects on the groups who survived. Geographic and cultural diversity. Spanish, Mexican, and Anglo-American periods. The mission system. Same as: HISTORY 250A, NATIVEAM 117S

**CSRE 118A. Digital Heritage: Bringing the Past Online with the Chinese American Historical Museum. 5 Units.**

Interpreting the past is no longer just for people like historians and archaeologists, and it's no longer confined to the pages of books. More and more, community-based organizations are gathering stories and perspectives from everyday people, and they're putting them out for the world to see online. With these big changes, what will be the future of thinking about the past? In this course, students will work through the dynamics of digital heritage through readings, discussion, and original research. The course centers around artifacts unearthed at the Market Street Chinatown in San Jose. Each student will analyze and gather stories relating to a single artifact in order to contribute to a multimedia exhibit for the Chinese American Historical Museum in San Jose. Class time will be devoted both to discussion and to work on artifact-based projects, and will also include a fieldtrip to the museum and collaboration time with members of the Chinese Historical and Cultural Project. Same as: ANTHRO 118A, ASNAMST 118A

**CSRE 118F. Navigating Race and Identity in America: The Role of Psychology in Racial Interactions. 4 Units.****CSRE 119F. The Ethics of Metaphor: Identities in Parallel. 5 Units.**

Many of our political arguments are arguments by analogy. But analogies between ethnic and racial experiences are especially problematic, and especially incendiary. This class will think about metaphor and contend with how it's used in both fictional and nonfictional texts concerning race and ethnicity. The works we will read in this class are uncomfortable. They're uncomfortable because they address suffering and pain; they're uncomfortable because they compare suffering and pain; they're uncomfortable because of what they get right and because of what they don't. This is a class fundamentally concerned with how we traverse boundaries of race and ethnicity ethically, and about thinking through when and how authors have failed to do so. When does empathy become presumption? When does altruism become condescension? When does exploration become voyeurism? We will plumb these questions (to which there are no clear answers) through the lens of speeches, poetry, sci-fi, film, essays, short stories, and novels. Same as: ENGLISH 172J

**CSRE 121. Discourse of the Colonized: Native American and Indigenous Voices. 5 Units.**

Using the assigned texts covering the protest movements in the 20th century to the texts written from the perspective of the colonized at the end of the 20th century, students will engage in discussions on decolonization. Students will be encouraged to critically explore issues of interest through two short papers and a 15-20 minute presentation on the topic of interest relating to decolonization for Native Americans in one longer paper. Approaching research from an Indigenous perspective will be encouraged throughout. Same as: NATIVEAM 121

**CSRE 121L. Racial-Ethnic Politics in US. 5 Units.**

This course examines various issues surrounding the role of race and ethnicity in the American political system. Specifically, this course will evaluate the development of racial group solidarity and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. We will also examine the politics surrounding the Multiracial Movement and the development of racial identity and political attitudes in the 21st century. Stats 60 or Econ 1 is strongly recommended. Same as: AMSTUD 121L, POLISCI 121L, PUBLPOL 121L

**CSRE 121X. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.**

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture. Same as: AFRICAAM 121X, AMSTUD 121X, ANTHRO 121A, EDUC 121, LINGUIST 155

**CSRE 122E. Art in the Streets: Identity in Murals, Site-specific works, and Interventions in Public Spaces. 4 Units.**

This class will introduce students to both historical and contemporary public art practices and the expression of race and identity through murals, graffiti, site-specific works and performative interventions in public spaces. Involving lectures, guest speakers, field trips, and hands-on art practice, students will be expected to produce both an individual and group piece as a final project. Same as: AFRICAAM 122E

**CSRE 123A. American Indians and the Cinema. 5 Units.**

Hollywood and the film industry have had a major influence on American society for nearly a century. Initially designed to provide entertainment, the cinema broadened its impact by creating images perceived as real and essentialist. Hollywood's Indians have been the main source of information about who American Indians are and Hollywood has helped shape inaccurate and stereotypical perceptions that continue to exist today. This course looks chronologically at cinematic interpretations and critically examines accurate portrayals of American Indians and of American history. Same as: NATIVEAM 123A

**CSRE 123B. Literature and Human Experimentation. 3-5 Units.**

This course introduces students to the ways literature has been used to think through the ethics of human subjects research and experimental medicine. We will focus primarily on readings that imaginatively revisit experiments conducted on vulnerable populations: namely groups placed at risk by their classification according to perceived human and cultural differences. We will begin with Mary Shelley's *Frankenstein* (1818), and continue our study via later works of fiction, drama and literary journalism, including Toni Morrison's *Beloved*, David Feldshuh's *Miss Evers Boys*, Hannah Arendt's *Eichmann and Vivien Spitz's Doctors from Hell*, Rebecca Skloot's *Immortal Life of Henrietta Lacks*, and Kazuo Ishiguro's *Never Let Me Go*. Each literary reading will be paired with medical, philosophical and policy writings of the period; and our ultimate goal will be to understand modes of ethics deliberation that are possible via creative uses of the imagination, and literature's place in a history of ethical thinking about humane research and care.

Same as: AFRICAAM 223, COMPLIT 223, HUMBIO 175H, MED 220

**CSRE 125V. The Voting Rights Act. 5 Units.**

Focus is on whether and how racial and ethnic minorities including African Americans, Asian Americans, and Latinos are able to organize and press their demands on the political system. Topics include the political behavior of minority citizens, the strength and effect of these groups at the polls, the theory and practice of group formation among minorities, the responsiveness of elected officials, and the constitutional obstacles and issues that shape these phenomena.

Same as: AFRICAAM 125V, POLISCI 125V

**CSRE 126B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.**

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings.

Same as: AFRICAAM 126B, EDUC 136B, EDUC 236B, PUBLPOL 126B

**CSRE 127A. Can't Stop Won't Stop: A History Of The Hip-Hop Arts. 4 Units.**

This course explores the history and development of the hip-hop arts movement, from its precursor movements in music, dance, visual arts, literature, and folk and street cultures to its rise as a neighborhood subculture in the Bronx in the early 1970s through its local, regional and global expansion and development. Hip-hop aesthetics, structures, and politics will be explored within the context of the movement's rise as a post-multicultural form in an era of neoliberal globalization.

Same as: AFRICAAM 127A

**CSRE 127X. The Ethics of Anonymity. 1 Unit.**

When is it ethical to conceal your identity or to permit another to remain anonymous? What is the value to remaining unknown, and what might be the cost? Does anonymity free you to think, act, or be in ways you wouldn't otherwise? What else might it allow or constrain? How might your answers differ depending on the circumstances or context? In this one-unit lunchtime seminar, guest speakers will discuss topics that might include: anonymous sources in journalism; anonymity online; the history of anonymous authorship and attribution; whistleblowers and confidential informants; anonymous egg or sperm donors and birth parents; anonymity vs. confidentiality for research participants; anonymity and art; technology and anonymity.

Same as: COMM 127X, ETHICSOC 2

**CSRE 128. What We Want is We: Identity in Visual Arts, Social Engagement, and Civic Propositions. 4 Units.**

This studio practicum examines contemporary culture through case studies on visual art, race theory, urban studies, and resistance legacies. This class looks at strategies of socially engaged art practices, community building endeavors, and the complications peculiar to these projects. From these case studies, students will make public art/text/performative experiments and learn research and grant writing approaches for designing long-term political projects. Students will translate their research into grant proposals that will be judged by a professional panel during the final week. Course guests include granting agencies/arts foundations and international artists, curators, city planners, and activists (live/video conferences).

**CSRE 129B. Literature and Global Health. 3-5 Units.**

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with a call made by the editor-in-chief of *The Lancet* for a literature of global health, namely fiction modeled on the social reform novels of the nineteenth century, understood to have helped readers develop a conscience for public health as the field emerged as a modern medical specialty. We will then spend the quarter understanding how colonial, postcolonial, and world literatures have answered and complicated this call. Readings will include prose fiction by Albert Camus, Joseph Conrad, Tsitsi Dangarembga, Amitav Ghosh, Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese, Paul Farmer. And each literary reading will be paired with medical, philosophical, and policy writings that deeply inform the field of global health.

Same as: AFRICAAM 229, AFRICAST 229, COMPLIT 229, FRENCH 229, HUMBIO 175L, MED 234

**CSRE 130. Community-based Research As Tool for Social Change: Discourses of Equity in Communities & Classrooms. 3-5 Units.**

Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques.

Same as: AFRICAAM 130, EDUC 123, EDUC 322

**CSRE 131. Genes and Identity. 5 Units.**

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and ethnographies. We will explore several case studies where the use of DNA markers (either as proof of heritage or disease risk) has spawned cultural movements that are biosocial in nature. Examples include legal and political analyses of African ancestry testing as evidence in slavery reparations cases, debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, considerations on whether people with genetic links to Jewish groups should have a right of return to Israel, close readings of The U.S. Food and Drug Administration's crackdown on personal genomics testing companies (such as 23andMe), examinations of genetic identity politics in health disparities funding and orphan disease research, inquiries into new social movements organized around gene-based definitions of personhood, and civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects. Students will engage in a short observational pilot ethnographic project that allows them to further explore issues from the course for their final paper. Same as: AFRICAAM 131, ANTHRO 131

**CSRE 131C. Trauma, healing, and empowerment in Asian America. 3-5 Units.**

This course will look at the ways in which Asian Americans are affected by the legacy of war, occupation and colonialism through themes of home, displacement, community, roots, identity, and inter-generational trauma. The approach is integrative, including scholarly investigation, embodied practice, and creative approach. This self-reflective process uses narrative, oral and written, as a means of becoming whole and healing personal, historical, and collective wounds. Same as: ASNAMST 131

**CSRE 132J. Sociology of Jewishness. 3-5 Units.**

Examines the place of the Jewish people in society throughout various locales and historical periods to understand how interactions among Jews and with other groups have shaped Jewish identities. Topics include modernism, the Holocaust, Israel/nationhood, race/ethnicity, intermarriage, and assimilation. Uses theoretical, empirical, and historical material from multiple social scientific fields of study and explores the study of Judaism from several major sociological lenses. Same as: JEWISHST 132D, SOC 132J

**CSRE 133A. Anthropology of the Middle East. 3-5 Units.**

This course examines social, political, and religious dimensions of various Middle Eastern societies. Key topics include the development of the modern nation-state, the Islamic revival, human rights, and discourses of democracy. Course materials include ethnographic studies, novels, and films, which provide a rich contextualization of social life and cultural politics in the region. Same as: ANTHRO 133A

**CSRE 133B. Covering Islam: On What We Learn to See, Think and Hear about Islam & Muslims. 3-5 Units.**

In this course, students will think critically about how knowledge about Islam, Muslims, and Muslim Societies is produced and circulated. As a class, we will consider why and how certain kinds of ideas about Islam and Muslims become representative (i.e., authoritative discourse) while others ideas do not. This is an interdisciplinary class; course material will draw on readings from anthropology, literary criticism, history, sociology and media and cultural studies. We will also be engaging with other kinds of material, including news articles, editorials, documentaries, and films. Same as: AFRICAST 133B, ANTHRO 133B

**CSRE 134. Museum Cultures: Material Representation in the Past and Present. 3-5 Units.**

Students will open the "black box" of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores "museum cultures": representations of self and other within museums and institutional cultures of the museum world itself. 3 credits (no final project) or 5 credits (final project). May be repeat for credit. Same as: AMSTUD 134, ARCHLGY 134, ARCHLGY 234, ARTHIST 284B, EDUC 214, NATIVEAM 134

**CSRE 135H. Conversations in CSRE: Case Studies in the Stanford Community. 1-2 Unit.**

Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists. Same as: ANTHRO 135H

**CSRE 135I. CSRE House Seminar: Race and Ethnicity at Stanford. 1-2 Unit.**

Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists. Same as: ANTHRO 135I

**CSRE 138. Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise. 5 Units.**

This course will explore historical as well as current market transformations of medical ethics in different global contexts. We will examine various aspects of the research enterprise, its knowledge-generating and life-saving goals, as well as the societal, cultural, and political influences that make medical research a site of brokering in need of oversight and emergent ethics. This seminar will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state, the media, and certain publics in shaping scientific research agendas. We will also examine how structural violence, poverty, global standing, and issues of citizenship also influence issues of consent and just science and medicine. Same as: ANTHRO 138, ANTHRO 238

**CSRE 140C. Stand Up Comedy and the "Great American Joke" Since 1945. 5 Units.**

Development of American Stand Up Comedy in the context of social and cultural eruptions after 1945, including the Borscht Belt, the Chitlin Circuit, the Cold War, censorship battles, Civil Rights and other social movements of the 60s and beyond. The artistry of stories, monologues, jokes, impersonations, persona, social satire, scatology, obscenity, riffs, rants, shtick, and more by such artists as Lenny Bruce, Dick Gregory, Richard Pryor, George Carlin, Margaret Cho, Sarah Silverman, Jon Stewart, Stephen Colbert, as well as precursors such as Mark Twain, minstrelsy and vaudeville and related films, TV shows, poems and other manifestations of similar sensibilities and techniques. Same as: AMSTUD 140

**CSRE 142. The Literature of the Americas. 5 Units.**

A wide-ranging overview of the literatures of the Americas in comparative perspective, emphasizing continuities and crises that are common to North American, Central American, and South American literatures as well as the distinctive national and cultural elements of a diverse array of primary works. Topics include the definitions of such concepts as empire and colonialism, the encounters between worldviews of European and indigenous peoples, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, twentieth-century avant-gardes, and distinctive modern episodes--the Harlem Renaissance, the Beats, magic realism, Noigandres--in unaccustomed conversation with each other. Same as: AMSTUD 142, COMPLIT 142, ENGLISH 172E

**CSRE 142A. What is Hemispheric Studies?. 5 Units.**

Will attempt to open up "America," beyond the United States. Have we reached the end of an era in our national literary imaginations? What is the utility and durability of the idea of the nation in a global era? New developments in hemispheric, Black Atlantic, and trans-american studies have raised questions about the very viability of US literary studies. Should we, as Franco Moretti suggests, map, count, and graph the relationships in our close (rhetorical) and "distant" readings of texts in the Americas? Topics include the definitions of concepts such as coloniality, modernity, time and the colonial difference, the encounters between world views of Europeans and indigenous Native American peoples, and the inventions of America, Latinamericanism, and Americanness.

**CSRE 144. Transforming Self and Systems: Crossing Borders of Race, Nation, Gender, Sexuality, and Class. 5 Units.**

Exploration of crossing borders within ourselves, and between us and them, based on a belief that understanding the self leads to understanding others. How personal identity struggles have meaning beyond the individual, how self healing can lead to community healing, how the personal is political, and how artistic self expression based in self understanding can address social issues. The tensions of victimization and agency, contemplation and action, humanities and science, embracing knowledge that comes from the heart as well as the mind. Studies are founded in synergistic consciousness as movement toward meaning, balance, connectedness, and wholeness. Engaging these questions through group process, journaling, reading, drama, creative writing, and storytelling. Study is academic and self-reflective, with an emphasis on developing and presenting creative works in various media that express identity development across borders.

Same as: ASNAMST 144, FEMGEN 144X

**CSRE 145. Race and Ethnic Relations in the USA. 4 Units.**

(Graduate students register for 245.) Race and ethnic relations in the U.S. and elsewhere. The processes that render ethnic and racial boundary markers, such as skin color, language, and culture, salient in interaction situations. Why only some groups become targets of ethnic attacks. The social dynamics of ethnic hostility and ethnic/racial protest movements. Same as: SOC 145, SOC 245

**CSRE 145B. Africa in Atlantic Writing. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condé, Olinto), prose poetry (Césaire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Ouologuem) and autobiography (Barack Obama).

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 145B, COMPLIT 345B, FRENCH 145B, FRENCH 345B

**CSRE 145F. Race and Power. 5 Units.**

This course examines how race is made. We will pay close attention to how people engage with material, economic, scientific, and cultural forces to articulate human group difference as a given, and even natural. In this seminar, we will look at the construction of race as a literally made phenomenon, where historical, colonial, bodily, market, and humanitarian constituent elements both circulate and sediment racial understandings. To focus our readings and discussions we will divide this vast terrain into three units: race and the colonial encounter, race and biopower, and race and capital.

Same as: ANTHRO 145, ANTHRO 245

**CSRE 146. Community Matters: Research and Service with Community Organizations. 2-4 Units.**

(Taught in conjunction with URBANST 123B. Students participating in CRSI must enroll in CSRE 146. All others can enroll in either course.) This course focuses on issues of research design and how to select specific methodological strategies to assure ethical and effective partnership-based research. In this course, students will plan for their own participation in a CB(P)R project. Topical themes will include best practice strategies for (a) defining and selecting community problems or issues to be addressed, (b) generating relevant and useful research questions, (c) choosing specific means and methods for data collection [e.g., surveys, interviews, focus groups, etc.], (d) storing, organizing and analyzing data, (e) reflecting on and critiquing research findings, and (f) carrying out dissemination in ways that can be expected to enhance community power and advance community development. Students will be provided with opportunities to workshop their respective projects-in-development, (e.g., developing and sharing research questions, data collection instruments, strategies for engaging community constituents as co-researchers, etc.). Students will leave the course with a plan for participating in a CBPR project.

**CSRE 146A. Approaching Research and the Community. 2-3 Units.**

Comparative perspective on research with communities and basic overview of research methodologies, with an emphasis on the principles and practices of doing community-based research as a collaborative enterprise between academic researchers and community members. How academic scholarship can be made useful to communities. How service experiences and interests can be used to develop research questions in collaboration with communities and serve as a starting point for developing senior theses or other independent research projects. Through the coursework, students are encouraged to develop a draft proposal for an actual community-based research project. The course is highly recommended for students planning to apply for community-based summer research fellowships through the Haas Center for Public Service (Community-based Research Fellowship Program) or CRSE (Community Research Summer Internship). Students who complete the course will be given priority for these fellowships.

Same as: URBANST 123

**CSRE 146S. Asian American Culture and Community. 3-5 Units.**

This course introduces students to the histories of Asians in America, specifically as these histories are part of a broader Asia-US-Pacific history that characterized the 20th century and now the 21st. We will combine readings in history, literature, sociology, with community-based learning. The course takes place over two quarters. The first quarter focuses on gaining knowledge of Asian America and discussion key topics that students wish to focus on collaboratively. During this first quarter we also learn about community-based learning, set up teams and projects, and develop relationships with community organizations. The second quarter students work with student liaisons (senior students who have experience in service learning) and complete their work with the community; there are no formal class meetings this second quarter. Service Learning Course (certified by Haas Center). Course can be repeated once.

Same as: AMSTUD 146, ASNAMST 146S, COMPLIT 146

**CSRE 147J. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.**

The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.)

Same as: AFRICAAM 19, AMSTUD 147J, MUSIC 147J, MUSIC 247J

**CSRE 147L. Studies in Music, Media, and Popular Culture: Latin American Music and Globalization. 3-4 Units.**

Focuses on vernacular music of Latin America and the Caribbean, including Mexico, Cuba, Dominican Republic, Peru, Brazil, Colombia, and Argentina. Musical examples discussed in relation to: globalization, migration, colonialism, nationalism, diaspora, indigeneity, politics, religion, dance, ethnicity, and gender. How music reflects and shapes cultures, identities, and social structures. Genres addressed: bachata, bossa nova, cumbia, forro, ranchero, reggaeton, rock, salsa, tango, and others. Seminar, guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.). Same as: CHILATST 147L, MUSIC 147L, MUSIC 247L

**CSRE 148. Comparative Ethnic Conflict. 4 Units.**

Causes and consequences of racial and ethnic conflict, including nationalist movements, ethnic genocide, civil war, ethnic separatism, politics, indigenous peoples' movements, and minority rights movements around the world.

Same as: SOC 148, SOC 248

**CSRE 150. Race and Political Sociology. 3 Units.**

How race informs the theories and research within political sociology. The state's role in creation and maintenance of racial categories, the ways in which racial identity motivates political actors, how race is used to legitimate policy decisions, comparisons across racial groups. Emphasis on understanding the ways race operates in the political arena. Same as: SOC 150, SOC 250

**CSRE 151H. ID21 STRATLAB: Interdisciplinary Approaches to Improvising Identities. 4-5 Units.**

A quarter-long exploration of improvisation in relationship to identity and race in the 21st century in which students investigate new dynamics of doing and thinking identities through the arts. Panel discussions, performances, and talks that engage critically with the theme, concept, and practice of improvising identity across a variety of contexts and genres such as jazz music, modern dance, contemporary art, race comedy, food, and hip-hop poetry/freestyle. Strategies that artists/scholars have used to overturn essentializing notions of identity in theory and practice.

Same as: AMSTUD 151H, DANCE 151H, DANCE 251H, TAPS 151H, TAPS 351H

**CSRE 152. Introduction to Improvisation in Dance: From Salsa to Vodun to Tap Dance. 3-4 Units.**

This seminar introduces students to Dance Studies by exploring the topic of improvisation, a central concept in multiple genres of dance and music. We will survey a range of improvised dance forms—from salsa to vodun to tap dance—through readings, video viewings, discussion, and movement exercises (no previous dance experience required). When studying each genre, we will examine how race, gender, sexuality, citizenship, and other power structures affect the practices and theorizations of improvisation. Topics include community and identity formation; questions of technique versus “natural” ability; improvisation as a spiritual practice; and the role of history in improvisers’ quest for spontaneity. Course material will focus on improvised dance, but we will also read pertinent literature in jazz music, theatre, and the law.

Same as: AFRICAAM 52, DANCE 152, TAPS 152

**CSRE 152K. Mixed-Race Politics and Culture. 5 Units.**

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? This course approaches issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st-century U.S. Issues surrounding the role of multiculturalism, immigration, acculturation, racial representation, and racial prejudice in American society. Topics include the political and social formation of race; racial representation in the media, arts, and popular culture; the rise and decline of the “one-drop rule” and its effect on political and cultural attachments; the politicization of census categories and the rise of the multiracial movement.

Same as: AFRICAAM 226, AMSTUD 152K

**CSRE 154. Anthropology of Drugs: Experience, Capitalism, Modernity. 5 Units.**

This course examines the significant role drugs play in shaping expressions of the self and social life; in the management populations, and in the production of markets and inequality. It engages these themes through cultural representations of drugs and drug use, analyses of scientific discourse, and social theory. Topics include: the social construction of the licit and illicit; the shifting boundaries of deviance, disease and pleasure; and the relationship between local markets and global wars.

Same as: ANTHRO 154, ANTHRO 254B

**CSRE 154D. Law, Slavery, and Race. 5 Units.**

(Same as LAW 747.) This course will explore the interaction of law, slavery and race in the United States, as well as from a comparative perspective. We will read original documents, including excerpts of trial transcripts, appellate opinions, treatises, codes, and first-person narratives. We will study the way law, politics and culture interacted to shape the institution of slavery and the development of modern conceptions of race. Course lectures and discussions will focus on questions such as: Did different legal regimes (Spanish, French, British) foster different systems of race and slavery in the Americas? How did/does law work “on the ground” to shape the production of racial hierarchy and creation of racial identities? In what ways did slavery influence the U.S. Constitution? How has race shaped citizenship in the U.S., and how can we compare it to other constitutional regimes? The course will begin with the origins of New World slavery, race and racism, and move chronologically to the present day.

Same as: AFRICAAM 254D, HISTORY 254D, HISTORY 354

**CSRE 156J. Environment, Nature and Race. 3-5 Units.**

Environment, nature and race: Politics of belonging, exclusion, and embodiment. Scientific and popular understandings of race and ethnicity remain deeply entangled with ideas about “nature” and the “environment”. This course will introduce students to some of the many ways that nature, environment, and race have been and remain intertwined, for better or for worse. What does it mean to claim race is “natural”? To what extent is race shaped by environment and vice versa? How are the politics of race linked to the politics of environmentalism? The class will begin with a brief treatment of current critical consensus on the biology of race and the cultural politics of race and nature, and move on to a theoretical discussion of how humans and “nature” interact. From there, the course moves into historical and ethnographic examples of the politics of race and the environment: the racialized and racializing character of particular environments; the ways that racial politics shape natural environments; and the politics of exclusion and belonging in environmental movements. Case studies will be both rural and urban and draw from anthropology, geography, history, and biology. The course will end by considering the recent resurgence of the race concept in biology.

Same as: ANTHRO 156B

**CSRE 157P. Solidarity and Racial Justice. 4-5 Units.**

Many activists in the racial justice, immigrant, indigenous, feminist, and LGBTQ movements, are committed to principles of leadership by frontline communities - their goal is to build power in communities that are disempowered by dominant institutions and practices. This makes for complicated relationships with those that are not part of those frontline communities but recognize that their own silence makes them complicit in systems of oppression. In this course, we will examine how power and privilege can undermine attempts to collaborate in social justice work, and then explore principles and practices of solidarity and allyship that attempt to overcome these challenges. We will discuss texts on white privilege and anti-racism as our primary point of reference, but will connect to other kinds of ally work and movements for collective liberation. As a community-engaged learning course, students will work with community partners to establish long-term relationships based in solidarity. Students are encouraged to work with movements and organizations with whom they already have relationships (e.g., through student-activism). Throughout the quarter, we will have guest lectures and workshops with community partners and movement strategy organizations.

Same as: AFRICAAM 157P, AMSTUD 157P, FEMGEN 157P

**CSRE 159M. Movement and Meaning: Dance Studies in Global Comparative Context. 4 Units.**

This course introduces students to various approaches to studying dance in a humanities context. We will explore how people create meaning through dance and how dance, in turn, shapes social norms, political institutions, and cultural practices across time and space. The course's structure challenges the Western/non-Western binary that still pervades many academic disciplines by comparing dance forms across the globe on the basis of functional similarities. At the same time, we will keep in mind the unequal power hierarchies shaping our modern world, and therefore we will examine how and why certain forms have become delineated as 'Western' and others as 'world' or 'ethnic,' despite similarities in movement, meaning, or purpose.

Same as: DANCE 23, TAPS 159M, TAPS 259M

**CSRE 162. Women in Modern America. 4-5 Units.**

This course explores the transition from Victorian to modern womanhood in the U.S. from the 1890s to the end of the 20th century, including the experiences of Native, European, African, Mexican, and Asian American women. It asks how, when, and why the majority of American women become wage earners, gained full citizenship, and enacted political opportunities; how race- and class-specific ideals of womanhood changed in popular culture; and how women have redefined their reproductive and sexual relations.

Same as: AMSTUD 161, FEMGEN 161, HISTORY 161

**CSRE 162A. Spirituality and Nonviolent Urban and Social Transformation. 3 Units.**

A life of engagement in social transformation is often built on a foundation of spiritual and religious commitments. Case studies of nonviolent social change agents including Rosa Parks in the civil rights movement, César Chávez in the labor movement, and William Sloane Coffin in the peace movement; the religious and spiritual underpinnings of their commitments. Theory and principles of nonviolence. Films and readings. Service learning component includes placements in organizations engaged in social transformation. Service Learning Course (certified by Haas Center).

Same as: RELIGST 162X, URBANST 126

**CSRE 163. Mindful Intelligence: Making Peace in Ourselves and in the World. 3-5 Units.**

Our study explores the development of mindfulness and related abilities that lead to making peace in ourselves and in the world. We examine the intersection of race and ethnicity with the emerging field of contemplative studies through the teachings of leaders whose lives were dedicated to both contemplation and social action. Through self reflection, experiential learning, and creative expression we explore the personal as political. We aim to develop the capacity to move among worldviews, transcending particular identities while simultaneously honoring each of them, finding peace among the component parts of our own psyche, and possessing the inner resources to make peace in a multicultural society.

**CSRE 164. Immigration and the Changing United States. 4 Units.**

The role of race and ethnicity in immigrant group integration in the U.S. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; intermarriage; hybrid racial and ethnic identities; comparisons between contemporary and historical waves of immigration.

Same as: CHILATST 164, SOC 164, SOC 264

**CSRE 165. Race, Athletics and College Achievement. 3 Units.**

How do social identities affect how people experience academic interactions? How can learning environments be better structured to support the success of all students? In this class, we will explore how a variety of identities such as race, gender, social class, and athletic participation can affect academic achievement, with the goal of identifying concrete strategies to make learning environments at Stanford and similar universities more inclusive. Readings will draw from psychology, sociology, education, and popular press. This class is a seminar format.

Same as: AFRICAAM 165, VPTL 165

**CSRE 165C. Mexican American History through Film. 5 Units.**

Focus is on the 20th century. Themes such as immigration, urbanization, ethnic identity, the role of women, and the struggle for civil rights.

Same as: CHILATST 165, HISTORY 165

**CSRE 166B. Immigration Debates in America, Past and Present. 3-5 Units.**

Examines the ways in which the immigration of people from around the world and migration within the United States shaped American nation-building and ideas about national identity in the twentieth century. Focuses on how conflicting ideas about race, gender, ethnicity, and citizenship with respect to particular groups led to policies both of exclusion and integration. Part One begins with the ways in which the American views of race and citizenship in the colonial period through the post-Reconstruction Era led to the passage of the Chinese Exclusion Act in 1882 and subsequently to broader exclusions of immigrants from other parts of Asia, Southern and Eastern Europe, and Mexico. Explores how World War II and the Cold War challenged racial ideologies and led to policies of increasing liberalization culminating in the passage of the 1965 Immigration Act, which eliminated quotas based on national origins and opened the door for new waves of immigrants, especially from Asia and Latin America. Part Two considers new immigration patterns after 1965, including those of refugees, and investigates the contemporary debate over immigration and immigration policy in the post 9/11 era as well as inequalities within the system and the impact of foreign policy on exclusions and inclusions.

Same as: HISTORY 166B, HISTORY 366B

**CSRE 168. New Citizenship: Grassroots Movements for Social Justice in the U.S.. 5 Units.**

Focus is on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis.

Same as: ANTHRO 169A, CHILATST 168, FEMGEN 140H

**CSRE 170. Introduction to American Indian Literature. 5 Units.**

This course provides a general introduction to American Indian literatures, beginning with early translations, including oral literatures and autobiographies, and continuing with contemporary poetry and fiction written by American Indian writers. We will want to pay particular attention to the American Indian writers; connections to a specific locale or place. In what ways are the stories and poems evocative of a long-standing relationship to a "home landscape"? What is the nature of the relationship? How is that relationship to place similar to or different from our own? At the same time, we will want to pay attention to the nature and scope of the various representations of American Indians in the texts we examine, and ask how the representations reinforce and/or dispel popular and often stereotypical images of American Indian people. Finally, we will want to be aware of and understand our position as readers, particularly as readers who come from and are constituted by historical, social, political, cultural, and ethnic worlds different from or similar to the worlds we find in the books that we are reading.

Same as: NATIVEAM 170

**CSRE 171H. Mexicans in the United States. 5 Units.**

This course explores the lives and experiences of Mexicans living in the United States, from 1848 to the present. Themes and topics include: the legacies of colonialism, the Mexican-American War, transnational migration, the effects of economic stratification, race and racialization, and the impact of sexual and gender ideologies on the lives of Mexicans residing north of the border.

Same as: AMSTUD 271, CHILATST 171, HISTORY 271

**CSRE 172. Out of Place: (W)riting Home. 4 Units.**

A creative writing workshop; all genres. This course will introduce students to the fundamentals of a productive creative writing practice, including the beginner's mind (as founded in Eastern spiritual practices); and, an indigenous approach to authenticity in one's work and one's words. Through writing, one returns to the body of home-knowledges, languages, and geographies to uncover what is profoundly original in us as artists, writers and thinkers.

Same as: FEMGEN 172, TAPS 172, TAPS 272

**CSRE 172H. Theories of Citizenship and Sovereignty in a Transnational Context. 4-5 Units.**

This course explores the multiple meanings of citizenship and the ways in which they change when examined using different geographic scales (from the local to the transnational). The course will pair theoretical readings on citizenship with case studies that focus on North America. Topics include: definitions of citizenship; the interrelation of ideas of citizenship with those of race, ethnicity, gender, and sexuality; the relationship between sovereignty and territoriality; human and civil rights; and immigration.

Same as: AMSTUD 272E, CHILATST 172, FEMGEN 272E, HISTORY 272E, HISTORY 372E

**CSRE 174S. When Half is Whole: Developing Synergistic Identities and Mestiza Consciousness. 5 Units.**

This is an exploration of the ways in which individuals construct whole selves in societies that fragment, label, and bind us in categories and boxes. We examine identities that overcome the destructive dichotomies of us and them, crossing borders of race, ethnicity, culture, nation, sex, and gender. Our focus is on the development of hybrid and synergistic forms of identity and mestiza consciousness in which the whole is greater than the sum of its parts.

**CSRE 176S. Finding Meaning in Life's Struggles: Narrative Ways of Healing. 5 Units.**

We can find meaning in life's struggles through narrative ways of healing. The self-reflective, dynamic process of finding, telling, and living our stories connects us with our whole selves as well as with others. We find our stories through vulnerability and courage; tell them with humility and honesty; and live them authentically and responsibly. Our shared stories will focus on gratitude, acceptance, reconciliation, forgiveness and compassion, empowering us to overcome personal, community, and historical traumas and wounds. In a respectful, caring community we will discover our hidden wholeness by improvising with various experiential and embodied means of finding our stories; telling our stories in diverse ways, including writing, storytelling, music, and art; and living our stories by putting values into action.

Same as: TAPS 176S

**CSRE 177. Writing for Performance: The Fundamentals. 4 Units.**

Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter's end.

Same as: FEMGEN 177, TAPS 177, TAPS 277

**CSRE 177B. Introduction to Dance on the Global Stage. 4 Units.**

The course will examine and engage with dance cultures from around the world. Through historical and theoretical readings, film screenings, and viewing performances, this course aims to introduce students to a number of theoretical issues central to the study of dance across various disciplines. As a class we set out to explore how dance is more than a set of organized bodily movements, pleasurable to both do and watch. We will consider what cultural work dance performance accomplishes in the world.

Same as: DANCE 177

**CSRE 177E. Well-Being in Immigrant Children & Youth: A Service Learning Course. 3 Units.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177A, EDUC 177A, HUMBIO 29A

**CSRE 177F. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-2 Unit.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177B, EDUC 177B

**CSRE 177G. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-3 Unit.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177C, EDUC 177C

**CSRE 178. Ethics and Politics of Public Service. 5 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. [This class is capped but there are some spaces available with permission of instructor. If the class is full and you would like to be considered for these extra spaces, please email sburbank@stanford.edu with your name, grade level, and a paragraph explaining why you want to take the class.]

Same as: ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D, URBANST 122

**CSRE 178B. Intensive Playwriting. 4 Units.**

Intermediate level study of fundamentals of playwriting through an intensive play development process. Course emphasizes visual scripting for the stage and play revision. Script analysis of works by contemporary playwrights may include: Suzan-Lori Parks, Tony Kushner, Adrienne Kennedy, Edward Albee, Maria Irene Fornes and others. Table readings of full length work required by quarter's end.

Same as: TAPS 178B, TAPS 278

**CSRE 179C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.**

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what the facts can offer.

Same as: CSRE 279C, FEMGEN 179C, TAPS 179C, TAPS 279C

**CSRE 179F. Flor y Canto: Poetry Workshop. 3-5 Units.**

Poetry reading and writing. The poet as philosopher and the poet as revolutionary. Texts: the philosophical meditations of pre-Columbian Aztec poetry known as *flor y canto*, and reflections on the poetry of resistance born out of the nationalist and feminist struggles of Latin America and Aztlán. Required 20-page poetry manuscript.

Same as: CHILATST 179F, TAPS 179F, TAPS 279F

**CSRE 179G. Indigenous Identity in Diaspora: People of Color Art Practice in North America. 3-5 Units.**

This "gateway" core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.

Same as: CSRE 279G, FEMGEN 179G, TAPS 279G

**CSRE 183. Re- Imagining American Borders. 5 Units.**

How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual preference, and class borders in the context of a national discussion about the place of Americans in the world. How Anna Deavere Smith, Sherman Alexie, or Michael Moore consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguistic borderlines within multilingual literature by Caribbean, Arab, and Asian Americans function. Can Anzaldúa's conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these American narratives? Course includes examining one's own identity.

Same as: AMSTUD 183, FEMGEN 183

**CSRE 184C. Zionism and the State of Israel. 5 Units.**

(Same as History 84.) Hotly contested still, this course will open up the movement's ideas, practices, achievements and crises in such a way as to allow students to hear the fullest range of voices - Jewish, Arab, religious, secular, etc. It will track the movement from its appearance in the late nineteenth century until the establishment of State of Israel in 1948, and beyond.

Same as: HISTORY 184, JEWISHST 184, REES 184

**CSRE 185B. Jews in the Contemporary World: Faith and Ethnicity, Vulnerability and Visibility. 5 Units.**

This course explores the full expanse of Jewish life today and in the recent past. The inner workings of religious faith, the content of Jewish identity shorn of belief, the interplay between Jewish powerlessness and influence, the myth and reality of Jewish genius, the continued pertinence of antisemitism, the rhythms of Jewish economic life - all these will be examined in weekly lectures, classroom discussion, and with the use of a widely diverse range of readings, films, and other material. Explored in depth will the ideas and practices of Zionism, the content of contemporary secularism and religious Orthodoxy, the impact Holocaust, the continued crisis facing Israel and the Palestinians. Who is to be considered Jewish, in any event, especially since so many of the best known (Spinoza, Freud, Marx) have had little if anything to do with Jewish life with their relationships to it indifferent, even hostile?

Same as: HISTORY 185B, HISTORY 385C, JEWISHST 185B, REES 185B

**CSRE 187A. The Anthropology of Race, Nature, and Animality. 5 Units.**

As recently as the 40s, the S. Africa government labeled indigenous San people part of the animal landscape. Using the San example as a starting point, course examines socially, culturally, and politically constructed ideas about race, animality, and nature in the cultural and geographic settings of N. America, Australia, and Africa. How connections between race and nature have served as terrains of power through which people and governments have claimed territories and justified violence. Classic texts by nature writers and philosophers and current social science works that focus on race and ethnicity. Concepts such as gender, sex, and nature; environmental tourism; natural resource development; and indigeneity and animality. How ideas about race and nature have come together around concepts such as the myth of wilderness and the violence of considering certain people to be less-than-human. Issues of environmental politics and activism.

Same as: ANTHRO 187A

**CSRE 188Q. Imagining Women: Writers in Print and in Person. 4-5 Units.**

Gender roles, gender relations and sexual identity explored in contemporary literature and conversation with guest authors. Weekly meetings designated for book discussion and meeting with authors. Interest in writing and a curiosity about diverse women's lives would be helpful to students. Students will use such tools as close reading, research, analysis and imagination. Seminar requires strong voice of all participants. Oral presentations, discussion papers, final projects.

Same as: FEMGEN 188Q

**CSRE 192E. Sexual Violence in America. 4-5 Units.**

This undergraduate/graduate colloquium explores the history of sexual violence in America, with particular attention to the intersections of gender and race in the construction of rape. We discuss the changing definitions of sexual violence in law and in cultural representations from early settlement through the late-twentieth century, including slavery, wartime and prison rape, the history of lynching and anti-lynching movements, and feminist responses to sexual violence. In addition to introducing students to the literature on sexual violence, the course attempts to teach critical skills in the analysis of secondary and primary historical texts. Students write short weekly reading responses and a final paper; no final exam; fifth unit research or CEL options. Limited enrollment, permission of instructor required. Submit application form (available on Coursework) by Dec. 1, 2015 and indicate interest in CEL option. Priority admission to History, FGSS, CSRE, AFRICAAM, and AMSTUD declared majors and minors.

Same as: AFRICAAM 192, AMSTUD 258, FEMGEN 258, FEMGEN 358, HISTORY 258, HISTORY 358

**CSRE 196C. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.**

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section.

Same as: COMPLIT 195, ENGLISH 172D, PSYCH 155, SOC 146, TAPS 165

**CSRE 196D. Introduction to Comparative Studies in Race & Ethnicity: Continuing Community Engagement. 1-5 Unit.**

In this continuation of CSRE 196C, students will continue to develop an interactive map that explores race and community in the Bay Area, through the work of local musicians. In collaboration with the SF-based non-profit, PeaceTones, you will interview musicians and contribute to an online map. The working map can be found at bayareamusicmap.weebly.com. Students will complete readings to explore diversity in the arts, specifically focusing on policy and advocacy implications as we develop the map as a tool for this work. Students will also meet as a group every other week for 50 minutes to reflect and discuss the work (we will set a time that works for everyone) and submit bi-weekly reflections of 500 words.

**CSRE 198. Internship for Public Service. 1-5 Unit.**

Students should consult with CCSRE Director of Community Engaged Learning (ddmurray@stanford.edu) to develop or sign-up for a community service internship. Group meetings may be required. May be repeated for credit. Service Learning Course (certified by Haas Center).

Same as: CHILATST 198

**CSRE 200. Latin@ Literature. 3-5 Units.**

Examines a diverse set of narratives by U.S. Latin@s of Mexican, Puerto Rican, Cuban, Guatemalan, and Dominican heritage through the lens of latinidad. All share the historical experience of Spanish colonization and U.S. imperialism, yet their im/migration patterns differ, affecting social, cultural, and political trajectories in the US and relationships to "home" and "homeland," nation, diaspora, history, and memory. Explores how racialization informs genders as well as sexualities. Emphasis on textual analysis. Taught in English.

Same as: CHILATST 200, ILAC 280, ILAC 382

**CSRE 200R. Directed Research. 1-5 Unit.****CSRE 200W. Directed Reading. 1-5 Unit.****CSRE 200X. CSRE Senior Seminar. 5 Units.**

Required for CSRE-related students, including those who opt to write honors theses in other departments and programs. Research and the writing of the senior honors thesis or senior paper under the supervision of a faculty project adviser. The process of research including conceptualization, development of prospectus, development of theses, research, analysis, and writing.

**CSRE 200Y. CSRE Senior Honors Research. 1-10 Unit.****CSRE 200Z. CSRE Senior Honors Research. 1-10 Unit.****CSRE 201. Introduction to Public History and Public Service. 4-5 Units.**

Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions. Service Learning Course (certified by Haas Center).

Same as: AFRICAAM 102, HISTORY 201, HISTORY 301

**CSRE 201B. From Racial Justice to Multiculturalism: Movement-based Arts Organizing in the Post Civil Rights Era. 3 Units.**

How creative projects build and strengthen communities of common concern. Projects focus on cultural reclamation, multiculturalism, cultural equity and contemporary cultural wars, media literacy, independent film, and community-based art. Guest artists and organizers, films, and case studies.

Same as: CHILATST 201B

**CSRE 201C. Critical Concepts in Chican@ Literature. 3-5 Units.**

Combines primary texts of Chican@ literature with a metacritical interrogation of key concepts informing Chican@ literary criticism, the construction of Chican@ literary history, and a Chican@ literary canon. Interrogates the resistance paradigm and the "proper" subject of this literature, and critiques established genealogies and foundational authors and texts, as well as issues of periodization, including the notion of "emergence" (e.g. of feminist voices or dissident sexualities). Considers texts, authors and subjects that present alternatives to the resistance paradigm.

Same as: CHILATST 201C, ILAC 380E

**CSRE 203A. The Changing Face of America: Building Leaders for Civil Rights and Education. 5 Units.**

For students with leadership potential who have studied these topics in lecture format. Race discrimination strategies, their relation to education reform initiatives, and the role of media in shaping racial attitudes in the U.S. A service-learning component will be offered as an option in this course in partnership with East Palo Alto organizations. Application Required! Please apply here: [http://bit.ly/CSRE\\_203A](http://bit.ly/CSRE_203A) before 5pm on Friday, March 21st.

**CSRE 216X. Education, Race, and Inequality in African American History, 1880-1990. 3-5 Units.**

Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

Same as: AFRICAAM 116, EDUC 216, HISTORY 255E

**CSRE 220. Public Policy Institute. 3-5 Units.**

\*\* This course meets and concludes prior to Autumn Quarter. If you were not a student in this year's PPI, please DO NOT ENROLL. \*\*  
Public Policy Institute serves to: provide students with information and perspectives on important public policy issues that have particular relevancy to matters of race and ethnicity in American society, past and present; expose students to faculty and other professionals working on public policy-related issues; and provide insight into the legislative process of public policy making at the state and local levels. Students are expected to conduct research necessary to write a policy brief on a particular issue, and make a presentation based on the policy brief. A field trip to Sacramento introduces students to policymakers and current policy matters of importance to marginalized communities in California.

**CSRE 221. Sentencing, Corrections, and Criminal Justice Policy. 3 Units.**

This introductory course will familiarize students with the history, structure, and performance of America's sentencing and corrections system. Sentencing is the process by which criminal sanctions are imposed in individual cases following criminal convictions. Corrections deals with the implementation and evaluation of criminal sentences after they are handed down. In fact, the two subject areas are inseparable. The course will examine sentencing and corrections from global and historical views, from theoretical and policy perspectives, and with close attention to many problem-specific areas. We will explore sentencing theories and their application, the nature, scope and function of corrections, the impact of mass incarceration on crime and communities, the effectiveness of rehabilitation, the relationship between sanctions and crime, and the consequences of prisoner reentry. These topics will be considered as they play out in current political and policy debates. Guest lectures may include presentations by legal professionals, victims, offenders, and correctional leaders. We also plan to visit a correctional facility. This course is open to 1Ls, 2Ls, and 3Ls in the Law School. Special Instructions: Grades will be based on class participation, and either: (1) three reflection papers of 5 to 7 pages each, or (2) a longer research paper. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the research (R) requirement, with consent of the instructor. Elements used in grading: Class participation, reflection papers or research paper. Cross-listed with Comparative Studies in Race & Ethnicity (CSRE 221), Law (LAW 621), Public Policy (PUBLPOL 221). Same as: PUBLPOL 221

**CSRE 226. Race and Racism in American Politics. 5 Units.**

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

Same as: AMSTUD 226, POLISCI 226, POLISCI 326

**CSRE 226X. Curating Experience: Representation in and beyond Museums. 2-4 Units.**

In an age when some 50% of museum visitors only "visit" museums online and when digital technologies have broken open archival access, anyone can be a curator, a critic, an historian, an archivist. In this context, how do museums create experiences that teach visitors about who they are and about the world around them? What are the politics of representation that shape learning in these environments? Using an experimental instructional approach, students will reconsider and redefine what it means to curate experience.

Same as: AMSTUD 226X, EDUC 226

**CSRE 227. Juvenile Crime, Juvenile Justice. 3 Units.**

Juveniles are accorded special status under the American legal system. This introductory course will examine the historical precedents and philosophical reasons for treating juveniles differently from adults, and review empirical evidence about child development that can illuminate the reasons for their special status within the court system. Students will learn about the distribution of juvenile delinquency and the impact of significant social and institutional influences on delinquency: family, school, peers, and drugs. The course will also provide a detailed overview of the juvenile system, from its beginning to the current state of the institution, which will include a review of police work with juveniles, pretrial procedures, and the juvenile court and corrections systems. Major court rulings that have shaped contemporary juvenile justice will be presented. Finally, the course will consider dispositional options available to Courts, and will identify the most effective in reducing delinquency. By the conclusion of this course, students should have an understanding of the juvenile justice system and how it compares with the adult justice system, what programs work to reduce recidivism, and be cognizant of some of the major legal and policy issues confronting that system today. The course format will combine lecture, group discussions, and guest presentations. Students may also have the opportunity to observe the juvenile justice system first hand by attending a juvenile court session, visiting a correctional facility for adjudicated delinquents, and hearing directly from those who work with high-risk youth on probation or in the community. Written Work. Each student will write four reflection papers, 5-7 pages each (about 1,700 words) over the quarter. Due dates will be listed in the class syllabus. Elements used in grading: Final grades will be based on the four reflection papers (20% each) and class participation (20%). This course is open to 2Ls, and 3Ls in the Law School. Cross-listed with Comparative Studies in Race & Ethnicity (CSRE 227).

**CSRE 233A. Counseling Theories and Interventions from a Multicultural Perspective. 3-5 Units.**

In an era of globalization characterized by widespread migration and cultural contacts, professionals face a unique challenge: How does one practice successfully when working with clients/students from so many different backgrounds? This course focuses upon the need to examine, conceptualize, and work with individuals according to the multiple ways in which they identify themselves. It will systematically examine multicultural counseling concepts, issues, and research. Literature on counselor and client characteristics such as social status or race/ethnicity and their effects on the counseling process and outcome will be reviewed. Issues in consultation with culturally and linguistically diverse parents and students and work with migrant children and their families are but a few of the topics covered in this course.

Same as: AFRICAAM 233A, EDUC 233A

**CSRE 243. Writing Across Languages and Cultures: Research in Writing and Writing Instruction. 3-5 Units.**

Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area.

Same as: EDUC 145, EDUC 243

**CSRE 245. Understanding Racial and Ethnic Identity Development. 3-5 Units.**

African American, Native American, Mexican American, and Asian American racial and ethnic identity development; the influence of social, political and psychological forces in shaping the experience of people of color in the U.S. The importance of race in relationship to social identity variables including gender, class, and occupational, generational, and regional identifications. Bi- and multiracial identity status, and types of white racial consciousness.

Same as: AFRICAAM 245, EDUC 245

**CSRE 246. Constructing Race and Religion in America. 4-5 Units.**

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time.

Same as: HISTORY 256G, HISTORY 356G, RELIGST 246, RELIGST 346

**CSRE 255D. Racial Identity in the American Imagination. 4-5 Units.**

From Sally Hemings to Barack Obama, this course explores the ways that racial identity has been experienced, represented and contested throughout American history. Engaging historical, legal and literary texts and films, this course examines major historical transformations that have shaped our understanding of racial identity. This course also draws on other imaginative modes including autobiography, memoir, photography and music to consider the ways that racial identity has been represented in American society. Most broadly, this course interrogates the problem of American identity and examines the interplay between racial identity and American identity. This course moves along both chronological and thematic axes to investigate the problems of racial mixture, mixed-race identity, racial passing and racial performance across historical periods. Themes of ambiguous, hidden and hybrid identity will be critical to this course. This course will also explore the interplay of the problems of class, gender and sexuality in the construction of racial identity.

Same as: AFRICAAM 255, AMSTUD 255D, HISTORY 255D, HISTORY 355D

**CSRE 260. California's Minority-Majority Cities. 4-5 Units.**

Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. Service Learning Course (certified by Haas Center).

Same as: HISTORY 260, URBANST 169

**CSRE 275B. History of Modern Mexico. 4-5 Units.**

Surveys the history of governance, resistance, and identity formation in Mexico from the nineteenth century to the present. Explores Mexico's historical struggles to achieve political stability, economic prosperity, and social justice and examines how regional, class, ethnic, and gender differences have figured prominently in the shaping of Mexican affairs. Topics include Mexico's wars and their legacies, the power of the state, violence and protest, debates over the meaning of "Mexicanness," youth culture, and the politics of indigenismo.

Same as: AMSTUD 275B, CHILATST 275B, HISTORY 275B, HISTORY 375C

**CSRE 279C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.**

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what the facts can offer.

Same as: CSRE 179C, FEMGEN 179C, TAPS 179C, TAPS 279C

**CSRE 279G. Indigenous Identity in Diaspora: People of Color Art Practice in North America. 3-5 Units.**

This "gateway" core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.

Same as: CSRE 179G, FEMGEN 179G, TAPS 279G

**CSRE 289E. Queer of Color Critique: Race, Sex, Gender in Cultural Representations. 3-5 Units.**

Examines major questions and issues that arise in considering race, sex, and gender together. Focus on critical and theoretical texts queering ethnic and diaspora studies and bringing race and ethnicity into queer studies. Close reading of texts in a variety of media negotiating racialized sexualities and sexualized identities. How is desire racialized? How is racial difference produced through sex acts? How to reconcile pleasure and desire with histories of imperialism and (neo)colonialism and structures of power?.

Same as: FEMGEN 389E, ILAC 389E

**CSRE 290. Human Rights in a Global Frame: Race, Place, Redress, Resistance. 3-5 Units.**

A presentation of human rights discourse around issues of how we "occupy" space. Centering on racialized spaces and the effects on a wide range rights in US and in other countries. Readings on human rights, history, critique. Deep readings in cultural texts and practices that name injustice and seek redress in a number of forms.

Same as: AFRICAAM 290, COMPLIT 290

**CSRE 314. Performing Identities. 4 Units.**

This course examines claims and counter-claims of identity, a heated political and cultural concept over the past few decades. We will consider the ways in which theories of performance have offered generative discursive frameworks for the study of identities, variously shaped by vectors of race, gender, sexuality, religion, class, nation, ethnicity, among others. How is identity as a social category different from identity as a unique and personal attribute of selfhood? Throughout the course we will focus on the inter-locking ways in which certain dimensions of identity become salient at particular historical conjunctures. In addition, we will consider the complex discourses of identity within transnational and historical frameworks. Readings include Robin Bernstein, Ann Pellegrini, Tavia Nyong'o, Jose Munoz, Michael Taussig, Wendy Brown, Talal Asad, Jasbir Puar, among others.

Same as: FEMGEN 314, TAPS 314

**CSRE 385. Language, Race, and Urban Schools. 3-4 Units.**

This seminar explores the intersections of language and race/racism/ racialization in the public schooling experiences of students of color. As we examine relevant literature from the fields of sociolinguistics and linguistic anthropology, we will devote significant attention to considering implications for teaching and learning in urban classrooms. Issues to be addressed include language variation and change, language and identity, bilingualism and multilingualism, language ideologies, and classroom discourse.

Same as: EDUC 385

**Computational & Mathematical Engineering Courses****CME 20Q. Computational Modeling for Future Leaders. 3 Units.**

Preference to sophomores. How can we harness and exploit the power of computational modeling? What responsibilities are there in developing and using computer models? In this course we will analyze fundamental issues inherent to computational modeling such as uncertainty, predictability, error, and resolution. We will furthermore examine the social context of computational modeling including the public perception of computational models, how computer modeling impacts politics and policy, and how politics and policy, in turn, influence computer modeling.

**CME 100. Vector Calculus for Engineers. 5 Units.**

Computation and visualization using MATLAB. Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Introduction to linear algebra: matrix operations, systems of algebraic equations, methods of solution and applications. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green's, divergence, and Stokes' theorems. Examples and applications drawn from various engineering fields. Prerequisites: 10 units of AP credit (Calc BC with 4 or 5, or Calc AB with 5), or Math 41 and 42. Note: Students enrolled in section 100-02 and 100A-02 are required to attend the discussion section (section 03) on Thursdays 4:30-5:50pm. Same as: ENGR 154

**CME 100A. Vector Calculus for Engineers, ACE. 6 Units.**

Students attend CME100/ENGR154 lectures with additional recitation sessions; two to four hours per week, emphasizing engineering mathematical applications and collaboration methods. Enrollment by department permission only. Prerequisite: application at: [http://soe.stanford.edu/current\\_students/edp/programs/ace.html](http://soe.stanford.edu/current_students/edp/programs/ace.html).

**CME 102. Ordinary Differential Equations for Engineers. 5 Units.**

Analytical and numerical methods for solving ordinary differential equations arising in engineering applications: Solution of initial and boundary value problems, series solutions, Laplace transforms, and nonlinear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool kit for computations. Problems from various engineering fields. Prerequisite: 10 units of AP credit (Calc BC with 4 or 5, or Calc AB with 5), or Math 41 and 42. Recommended: CME100. Same as: ENGR 155A

**CME 102A. Ordinary Differential Equations for Engineers, ACE. 6 Units.**

Students attend CME102/ENGR155A lectures with additional recitation sessions; two to four hours per week, emphasizing engineering mathematical applications and collaboration methods. Prerequisite: application at: [http://soe.stanford.edu/current\\_students/edp/programs/ace.html](http://soe.stanford.edu/current_students/edp/programs/ace.html).

**CME 103. Introduction to Matrix Methods. 4-5 Units.**

Introduction to applied linear algebra with emphasis on applications. Vectors, norm, and angle; linear independence and orthonormal sets. Matrices, left and right inverses, QR factorization. Least-squares and model fitting, regularization and cross-validation, time-series prediction, and other examples. Constrained least-squares; applications to least-norm reconstruction, optimal control, and portfolio optimization. Newton methods and nonlinear least-squares. Prerequisites: MATH 51 or CME 100. Same as: EE 103

**CME 104. Linear Algebra and Partial Differential Equations for Engineers. 5 Units.**

Linear algebra: matrix operations, systems of algebraic equations, Gaussian elimination, undetermined and overdetermined systems, coupled systems of ordinary differential equations, eigensystem analysis, normal modes. Fourier series with applications, partial differential equations arising in science and engineering, analytical solutions of partial differential equations. Numerical methods for solution of partial differential equations: iterative techniques, stability and convergence, time advancement, implicit methods, von Neumann stability analysis. Examples and applications from various engineering fields. Prerequisite: CME 102/ENGR 155A. Same as: ENGR 155B

**CME 104A. Linear Algebra and Partial Differential Equations for Engineers, ACE. 6 Units.**

Students attend CME104/ENGR155B lectures with additional recitation sessions; two to four hours per week, emphasizing engineering mathematical applications and collaboration methods. Prerequisite: application at: [http://soe.stanford.edu/current\\_students/edp/programs/ace.html](http://soe.stanford.edu/current_students/edp/programs/ace.html).

**CME 106. Introduction to Probability and Statistics for Engineers. 4 Units.**

Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR154 or MATH 51 or 52. Same as: ENGR 155C

**CME 108. Introduction to Scientific Computing. 3-4 Units.**

Introduction to Scientific Computing Numerical computation for mathematical, computational, physical sciences and engineering: error analysis, floating-point arithmetic, nonlinear equations, numerical solution of systems of algebraic equations, banded matrices, least squares, unconstrained optimization, polynomial interpolation, numerical differentiation and integration, numerical solution of ordinary differential equations, truncation error, numerical stability for time dependent problems and stiffness. Implementation of numerical methods in MATLAB programming assignments. Prerequisites: MATH 51, 52, 53; prior programming experience (MATLAB or other language at level of CS 106A or higher). nGraduate students should take it for 3 units and undergraduate students should take it for 4 units. Same as: MATH 114

**CME 151. Introduction to Data Visualization. 1 Unit.**

Bring your data to life with beautiful and interactive visualizations. This course is designed to provide practical experience on combining data science and graphic design to effectively communicate knowledge buried inside complex data. Each lecture will explore a different set of free industry-standard tools, for example d3.js, three.js, ggplots2, and processing; enabling students to think critically about how to architect their own interactive visualization for data exploration, web, presentations, and publications. Geared towards scientists and engineers, and with a particular emphasis on web, this course assumes an advanced background in programming methodology in multiple languages (particularly R and Javascript). Assignments are short and focus on visual experimentation with interesting data sets or the students' own data. Topics: data, visualization, web. Prerequisites: some experience with general programming is required to understand the lectures and assignments.

**CME 181. Projects in Applied and Computational Mathematics. 3 Units.**

Teams of students use techniques in applied and computational mathematics to tackle problems of their choosing. Students will have the opportunity to pursue open-ended projects in a variety of areas: economics, physics, political science, operations research, etc. Projects can cover (but are not limited to!) topics such as mathematical modeling of real-world phenomena (population dynamics), data-driven applications (movie recommendations) or complex systems in engineering (optimal control). Each team will be paired with a graduate student mentor working in applied and computational mathematics. Limited enrollment. Prerequisites: CME 100/102/104 or equivalents, or instructor consent. Recommended: CME 106/108 and familiarity with programming at the level of CME 192/193.

**CME 192. Introduction to MATLAB. 1 Unit.**

This short course runs for the first eight weeks of the quarter and is offered each quarter during the academic year. It is highly recommended for students with no prior programming experience who are expected to use MATLAB in math, science, or engineering courses. It will consist of interactive lectures and application-based assignments. The goal of the short course is to make students fluent in MATLAB and to provide familiarity with its wide array of features. The course covers an introduction of basic programming concepts, data structures, and control/flow; and an introduction to scientific computing in MATLAB, scripts, functions, visualization, simulation, efficient algorithm implementation, toolboxes, and more.

**CME 193. Introduction to Scientific Python. 1 Unit.**

This short course runs for the first eight weeks of the quarter and is offered each quarter during the academic year. It is recommended for students who want to use Python in math, science, or engineering courses and for students who want to learn the basics of Python programming. The goal of the short course is to familiarize students with Python's tools for scientific computing. Lectures will be interactive with a focus on learning by example, and assignments will be application-driven. Some prior programming experience is highly recommended. Topics covered include control flow, basic data structures, File I/O, and an introduction to NumPy/SciPy.

**CME 194. Introduction to MPI. 1 Unit.**

This short course runs for the first four weeks of the quarter. Recommended for students interested in writing parallel programs. Focus is on distributed memory programming via the Message Passing Interface (MPI). Topics include: parallel decomposition, basic communication primitives, collective operations, and debugging. Interactive lectures and homework assignments require writing software. Students should be comfortable and interested in writing software in C/C++ but no prior parallel programming experience is required.

**CME 195. Introduction to R. 1 Unit.**

This short course runs for the first four weeks of the quarter and is offered in fall and spring. It is recommended for students who want to use R in statistics, science, or engineering courses and for students who want to learn the basics of R programming. The goal of the short course is to familiarize students with R's tools for scientific computing. Lectures will be interactive with a focus on learning by example, and assignments will be application-driven. No prior programming experience is needed. Topics covered include basic data structures, File I/O, graphs, control structures, etc, and some useful packages in R. Same as: STATS 195

**CME 196. Practical Fortran. 1 Unit.**

A five-week short course presenting the use of the Fortran programming language in science and engineering. Topics covered: basic language elements; good programming practices; testing and debugging; verification and validation; differences between Fortran-77 and Fortran-90 (95, 03, 08); calling numerical software libraries such as LAPACK; calling Fortran routines from C or C++; performance considerations. The course will be centered around solving real computational problems, emphasizing practice over theory. Programming proficiency in C/C++, or other modern compiled language, is required. Familiarity with the GNU development tools (compilers, debuggers, makefiles, etc.) is assumed. Prerequisites: CME 211 or equivalent.

**CME 200. Linear Algebra with Application to Engineering Computations. 3 Units.**

Computer based solution of systems of algebraic equations obtained from engineering problems and eigen-system analysis, Gaussian elimination, effect of round-off error, operation counts, banded matrices arising from discretization of differential equations, ill-conditioned matrices, matrix theory, least square solution of unsolvable systems, solution of non-linear algebraic equations, eigenvalues and eigenvectors, similar matrices, unitary and Hermitian matrices, positive definiteness, Cayley-Hamilton theory and function of a matrix and iterative methods. Prerequisite: familiarity with computer programming, and MATH51. Same as: ME 300A

**CME 204. Partial Differential Equations in Engineering. 3 Units.**

Geometric interpretation of partial differential equation (PDE) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200/ME 300A, equivalent, or consent of instructor. Same as: ME 300B

**CME 206. Introduction to Numerical Methods for Engineering. 3 Units.**

Numerical methods from a user's point of view. Lagrange interpolation, splines. Integration: trapezoid, Romberg, Gauss, adaptive quadrature; numerical solution of ordinary differential equations: explicit and implicit methods, multistep methods, Runge-Kutta and predictor-corrector methods, boundary value problems, eigenvalue problems; systems of differential equations, stiffness. Emphasis is on analysis of numerical methods for accuracy, stability, and convergence. Introduction to numerical solutions of partial differential equations; Von Neumann stability analysis; alternating direction implicit methods and nonlinear equations. Prerequisites: CME 200/ME 300A, CME 204/ME 300B. Same as: ME 300C

**CME 207. Numerical Methods in Engineering and Applied Sciences. 3 Units.**

Scientific computing and numerical analysis for physical sciences and engineering. Advanced version of CME206 that, apart from CME206 material, includes nonlinear PDEs, multidimensional interpolation and integration and an extended discussion of stability for initial boundary value problems. Recommended for students who have some prior numerical analysis experience. Topics include: 1D and multi-D interpolation, numerical integration in 1D and multi-D including adaptive quadrature, numerical solutions of ordinary differential equations (ODEs) including stability, numerical solutions of 1D and multi-D linear and nonlinear partial differential equations (PDEs) including concepts of stability and accuracy. Prerequisites: linear algebra, introductory numerical analysis (CME 108 or equivalent). Same as: AA 214A, GEOPHYS 217

**CME 211. Software Development for Scientists and Engineers. 3 Units.**

Basic usage of the Python and C/C++ programming languages are introduced and used to solve representative computational problems from various science and engineering disciplines. Software design principles including time and space complexity analysis, data structures, object-oriented design, decomposition, encapsulation, and modularity are emphasized. Usage of campus wide Linux compute resources: login, file system navigation, editing files, compiling and linking, file transfer, etc. Versioning and revision control, software build utilities, and the LaTeX typesetting software are introduced and used to help complete programming assignments. Prerequisite: introductory programming course equivalent to CS 106A or instructor consent. Same as: EARTH 211

**CME 212. Advanced Programming for Scientists and Engineers. 3 Units.**

Advanced topics in software development, debugging, and performance optimization are covered. The capabilities and usage of common libraries and frameworks such as BLAS, LAPACK, FFT, PETSc, and MKL/ACML are reviewed. Computer representation of integer and floating point numbers, and interoperability between C/C++ and Fortran is described. More advanced software engineering topics including: representing data in files, signals, unit and regression testing, and build automation. The use of debugging tools including static analysis, gdb, and Valgrind are introduced. An introduction to computer architecture covering processors, memory hierarchy, storage, and networking provides a foundation for understanding software performance. Profiles generated using gprof and perf are used to help guide the performance optimization process. Computational problems from various science and engineering disciplines will be used in assignments. Prerequisites: CME 200 / ME 300A and CME 211. The CME 211 requirement may be satisfied by passing a placement test administered by ICME.

Same as: ENERGY 212

**CME 213. Introduction to parallel computing using MPI, openMP, and CUDA. 3 Units.**

This class will give hands on experience with programming multicore processors, graphics processing units (GPU), and parallel computers. Focus will be on the message passing interface (MPI, parallel clusters) and the compute unified device architecture (CUDA, GPU). Topics will include: network topologies, modeling communication times, collective communication operations, parallel efficiency, MPI, dense linear algebra using MPI. Symmetric multiprocessing (SMP), pthreads, openMP. CUDA, combining MPI and CUDA, dense linear algebra using CUDA, sort, reduce and scan using CUDA. Pre-requisites include: C programming language and numerical algorithms (solution of differential equations, linear algebra, Fourier transforms).

Same as: ME 339

**CME 213B. Parallel Computing Projects. 3 Units.**

Students will discuss, devise and implement parallel applications for a discipline of mutual interest. The parallel implementation will focus on the use of MPI for clusters, OpenMP for multicore processors, and/or CUDA for GPU processors. Instructors will help guide students to relevant literature and resources. A short introduction to MPI, OpenMP, and CUDA will be given at the beginning of the quarter. Hardware will be available for the duration of the quarter including NVIDIA Jetson TK1 development kits, and the ICME GPU cluster. Prerequisites: CME 211/212 or equivalent.

**CME 214. Software Design in Modern Fortran for Scientists and Engineers. 3 Units.**

This course introduces software design and development in modern Fortran. Course covers the functional, object-oriented, and parallel programming features introduced in the Fortran 95, 2003, and 2008 standards, respectively, in the context of numerical approximations to ordinary and partial differential equations; introduces object-oriented design and design schematics based on the Unified Modeling Language (UML) structure, behavior, and interaction diagrams; cover the basic use of several open-source tools for software building, testing, documentation generation, and revision control. Recommended: Familiarity with programming in Fortran 90, basic numerical analysis and linear algebra, or instructor approval.

Same as: EARTH 214

**CME 215A. Advanced Computational Fluid Dynamics. 3 Units.**

High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

Same as: AA 215A

**CME 215B. Advanced Computational Fluid Dynamics. 3 Units.**

High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

Same as: AA 215B

**CME 232. Introduction to Computational Mechanics. 3 Units.**

Provides an introductory overview of modern computational methods for problems arising primarily in mechanics of solids and is intended for students from various engineering disciplines. The course reviews the basic theory of linear solid mechanics and introduces students to the important concept of variational forms, including the principle of minimum potential energy and the principles of virtual work. Specific model problems that will be considered include deformation of bars, beams and membranes, plates, and problems in plane elasticity (plane stress, plane strain, axisymmetric elasticity). The variational forms of these problems are used as the starting point for developing the finite element method (FEM) and boundary element method (BEM) approaches providing an important connection between mechanics and computational methods.

Same as: ME 332

**CME 237. Spectral Graph Theory and Algorithmic Applications. 3 Units.**

Brings students to the forefront of a very active area of research. Reviews classic results relating graph expansion and spectra, random walks, random spanning trees, and their electrical network representation. Covers recent progress on graph sparsification, Kadison-Singer problem and approximation algorithms for traveling salesman problems.

Same as: MS&E 237

**CME 239B. Workshop in Quantitative Finance. 1 Unit.**

Topics of current interest. May be repeated for credit.

Same as: STATS 239B

**CME 242. Mathematical and Computational Finance Seminar. 1 Unit.**

.

Same as: STATS 239

**CME 243. Financial Models and Statistical Methods in Active Risk Management. 3 Units.**

Market risk and credit risk, credit markets. Back testing, stress testing and Monte Carlo methods. Logistic regression, generalized linear models and generalized mixed models. Loan prepayment and default as competing risks. Survival and hazard functions, correlated default intensities, frailty and contagion. Risk surveillance, early warning and adaptive control methodologies. Banking and bank regulation, asset and liability management. Prerequisite: STATS 240 or equivalent.

Same as: STATS 243

**CME 244. Project Course in Mathematical and Computational Finance. 1-6 Unit.**

For graduate students in the MCF track; students will work individually or in groups on research projects.

**CME 245. Topics in Mathematical and Computational Finance. 1 Unit.**

Current topics for enrolled students in the MCF program; can be repeated up to three times.

**CME 249. Using Design for Effective Data Analysis. 1 Unit.**

Teams of students use techniques in applied and computational mathematics to tackle problems with real world data sets. Application of design methodology adapted for data analysis will be emphasized; leverage design thinking to come up with efficient and effective data driven insights; explore design thinking methodology in small group setting; apply design thinking to a specific data centric problem and make professional group presentation of the results. Limited enrollment. Prerequisites: CME100/102/104 or equivalents, or instructor consent. Recommended: CME106/108 and familiarity with programming at the level of CME 192/193.

**CME 250. Introduction to Machine Learning. 1 Unit.**

A Short course presenting the principles behind when, why, and how to apply modern machine learning algorithms. We will discuss a framework for reasoning about when to apply various machine learning techniques, emphasizing questions of over-fitting/under-fitting, regularization, interpretability, supervised/unsupervised methods, and handling of missing data. The principles behind various algorithms—the why and how of using them—will be discussed, while some mathematical detail underlying the algorithms—including proofs—will not be discussed. Unsupervised machine learning algorithms presented will include k-means clustering, principal component analysis (PCA), and independent component analysis (ICA). Supervised machine learning algorithms presented will include support vector machines (SVM), classification and regression trees (CART), boosting, bagging, and random forests. Imputation, the lasso, and cross-validation concepts will also be covered. The R programming language will be used for examples, though students need not have prior exposure to R. Prerequisite: undergraduate-level linear algebra and statistics; basic programming experience (R/Matlab/Python).

**CME 251. The Shape of Data: Geometric and Topological Data Analysis. 3 Units.**

Mathematical computational tools for the analysis of data with geometric content, such images, videos, 3D scans, GPS traces – as well as for other data embedded into geometric spaces. Global and local geometry descriptors allowing for various kinds of invariances. The rudiments of computational topology and persistent homology on sampled spaces. Clustering and other unsupervised techniques. Spectral methods for geometric data analysis. Non-linear dimensionality reduction. Alignment, matching, and map computation between geometric data sets. Function spaces and functional maps. Networks of data sets and joint analysis for segmentation and labeling. The emergence of abstractions or concepts from data. Prerequisites: discrete algorithms at the level of 161; linear algebra at the level of CM103. Same as: CS 233

**CME 252. Introduction to Optimization. 1 Unit.**

This course introduces mathematical optimization and modeling, with a focus on convex optimization. Topics include: varieties of mathematical optimization, convexity of functions and sets, convex optimization modeling with CVXPY, gradient descent and basic distributed optimization, in-depth examples from machine learning, statistics and other fields and applications of bi-convexity and non-convex gradient descent. Recommended prerequisite: familiarity with linear algebra, differential multivariable calculus, and basic probability and statistics. Experience with Python will be helpful, but not required.

**CME 253. Introduction to GPU Computing and CUDA. 1 Unit.**

Covers the fundamentals of accelerating applications with GPUs (Graphics Processing Units); GPU programming with CUDA and OpenACC, debugging, thrust/CUB, profiling, optimization, debugging, and other CUDA tools. Libraries to easily accelerate compute code will be presented and deployment on larger systems will be addressed, including multi-GPU environments. Several practical examples will be detailed, including deep learning. Pre-requisite: knowledge of C/C++ at the level of CME211 or CS106b.

**CME 257. Advanced Topics in Scientific Computing with Julia. 1 Unit.**

This short course runs from the 2nd to the 5th week of the quarter. This course will rapidly introduce students to the new Julia language, with the goal of giving students the knowledge and experience necessary to begin contributing to the language and package ecosystem while using Julia for their own scientific computing needs. The course will begin with learning the basics of Julia with an emphasis on its object-oriented features, and then introduce students to Github and package development. Additional topics include: common packages, interfacing with C shared object libraries, and Julia's core linear algebra implementation. Lectures will be interactive, with an emphasis on collaboration and learning by example. Prerequisites: Data structures at the level of CS106B, experience with one or more scientific computing languages (e.g. Python, Matlab, or R), and some familiarity with C/C++ and the Unix shell. No prior experience with Julia or Github is required.

**CME 263. Introduction to Linear Dynamical Systems. 3 Units.**

Applied linear algebra and linear dynamical systems with applications to circuits, signal processing, communications, and control systems. Topics: least-squares approximations of over-determined equations, and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm, and singular-value decomposition. Eigenvalues, left and right eigenvectors, with dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input/multi-output systems, impulse and step matrices; convolution and transfer-matrix descriptions. Control, reachability, and state transfer; observability and least-squares state estimation. Prerequisites: linear algebra and matrices as in MATH104; differential equations and Laplace transforms as in EE102B. Same as: EE 263

**CME 279. Computational Biology: Structure and Organization of Biomolecules and Cells. 3 Units.**

Computational approaches to understanding the three-dimensional spatial organization of biological systems and how that organization evolves over time. The course will cover cutting-edge research in both physics-based simulations and computational analysis of experimental data, at scales ranging from individual molecules to multiple cells. Prerequisites: elementary programming background (106A or equivalent) and an introductory course in biology or biochemistry. Same as: BIOMEDIN 279, BIOPHYS 279, CS 279

**CME 291. Master's Research. 1-6 Unit.**

Students require faculty sponsor. (Staff).

**CME 292. Advanced MATLAB for Scientific Computing. 1 Unit.**

Short course running first four weeks of the quarter (8 lectures) with interactive lectures and application based assignment. Students will be introduced to advanced MATLAB features, syntaxes, and toolboxes not traditionally found in introductory courses. Material will be reinforced with in-class examples, demos, and homework assignment involving topics from scientific computing. MATLAB topics will be drawn from: advanced graphics (2D/3D plotting, graphics handles, publication quality graphics, animation), MATLAB tools (debugger, profiler), code optimization (vectorization, memory management), object-oriented programming, compiled MATLAB (MEX files and MATLAB coder), interfacing with external programs, toolboxes (optimization, parallel computing, symbolic math, PDEs). Scientific computing topics will include: numerical linear algebra, numerical optimization, ODEs, and PDEs.

**CME 298. Basic Probability and Stochastic Processes with Engineering Applications. 3 Units.**

Calculus of random variables and their distributions with applications. Review of limit theorems of probability and their application to statistical estimation and basic Monte Carlo methods. Introduction to Markov chains, random walks, Brownian motion and basic stochastic differential equations with emphasis on applications from economics, physics and engineering, such as filtering and control. Prerequisites: exposure to basic probability. Same as: MATH 158

**CME 300. First Year Seminar Series. 1 Unit.**

Required for first-year ICME Ph.D. students; recommended for first-year ICME M.S. students. Presentations about research at Stanford by faculty and researchers from Engineering, H&S, and organizations external to Stanford. May be repeated for credit.

**CME 302. Numerical Linear Algebra. 3 Units.**

First in a three quarter graduate sequence. Solution of systems of linear equations: direct methods, error analysis, structured matrices; iterative methods and least squares. Parallel techniques. Prerequisites: CME 108, MATH 103 or 113.

**CME 303. Partial Differential Equations of Applied Mathematics. 3 Units.**

First-order partial differential equations; method of characteristics; weak solutions; elliptic, parabolic, and hyperbolic equations; Fourier transform; Fourier series; and eigenvalue problems. Prerequisite: foundation in multivariable calculus and ordinary differential equations.

Same as: MATH 220

**CME 304. Numerical Optimization. 3 Units.**

Solution of nonlinear equations; unconstrained optimization; linear programming; quadratic programming; global optimization; general linearly and nonlinearly constrained optimization. Theory and algorithms to solve these problems. Prerequisite: background in analysis and numerical linear algebra.

Same as: MS&E 315

**CME 305. Discrete Mathematics and Algorithms. 3 Units.**

Topics: Basic Algebraic Graph Theory, Matroids and Minimum Spanning Trees, Submodularity and Maximum Flow, NP-Hardness, Approximation Algorithms, Randomized Algorithms, The Probabilistic Method, and Spectral Sparsification using Effective Resistances. Topics will be illustrated with applications from Distributed Computing, Machine Learning, and large-scale Optimization. Prerequisites: CS 261 is highly recommended, although not required.

Same as: MS&E 316

**CME 306. Numerical Solution of Partial Differential Equations. 3 Units.**

Hyperbolic partial differential equations: stability, convergence and qualitative properties; nonlinear hyperbolic equations and systems; combined solution methods from elliptic, parabolic, and hyperbolic problems. Examples include: Burger's equation, Euler equations for compressible flow, Navier-Stokes equations for incompressible flow. Prerequisites: MATH 220A or CME 302.

Same as: MATH 226

**CME 308. Stochastic Methods in Engineering. 3 Units.**

The basic limit theorems of probability theory and their application to maximum likelihood estimation. Basic Monte Carlo methods and importance sampling. Markov chains and processes, random walks, basic ergodic theory and its application to parameter estimation. Discrete time stochastic control and Bayesian filtering. Diffusion approximations, Brownian motion and an introduction to stochastic differential equations. Examples and problems from various applied areas. Prerequisites: exposure to probability and background in analysis.

Same as: MATH 228

**CME 309. Randomized Algorithms and Probabilistic Analysis. 3 Units.**

Randomness pervades the natural processes around us, from the formation of networks, to genetic recombination, to quantum physics. Randomness is also a powerful tool that can be leveraged to create algorithms and data structures which, in many cases, are more efficient and simpler than their deterministic counterparts. This course covers the key tools of probabilistic analysis, and application of these tools to understand the behaviors of random processes and algorithms.

Emphasis is on theoretical foundations, though we will apply this theory broadly, discussing applications in machine learning and data analysis, networking, and systems. Topics include tail bounds, the probabilistic method, Markov chains, and martingales, with applications to analyzing random graphs, metric embeddings, random walks, and a host of powerful and elegant randomized algorithms. Prerequisites: CS 161 and STAT 116, or equivalents and instructor consent.

Same as: CS 265

**CME 321A. Mathematical Methods of Imaging. 3 Units.**

Image denoising and deblurring with optimization and partial differential equations methods. Imaging functionals based on total variation and l-1 minimization. Fast algorithms and their implementation.

Same as: MATH 221A

**CME 321B. Mathematical Methods of Imaging. 3 Units.**

Array imaging using Kirchhoff migration and beamforming, resolution theory for broad and narrow band array imaging in homogeneous media, topics in high-frequency, variable background imaging with velocity estimation, interferometric imaging methods, the role of noise and inhomogeneities, and variational problems that arise in optimizing the performance of array imaging algorithms.

Same as: MATH 221B

**CME 322. Spectral Methods in Computational Physics. 3 Units.**

Data analysis, spectra and correlations, sampling theorem, nonperiodic data, and windowing; spectral methods for numerical solution of partial differential equations; accuracy and computational cost; fast Fourier transform, Galerkin, collocation, and Tau methods; spectral and pseudospectral methods based on Fourier series and eigenfunctions of singular Sturm-Liouville problems; Chebyshev, Legendre, and Laguerre representations; convergence of eigenfunction expansions; discontinuities and Gibbs phenomenon; aliasing errors and control; efficient implementation of spectral methods; spectral methods for complicated domains; time differencing and numerical stability.

Same as: ME 408

**CME 323. Distributed Algorithms and Optimization. 3 Units.**

The emergence of large distributed clusters of commodity machines has brought with it a slew of new algorithms and tools. Many fields such as Machine Learning and Optimization have adapted their algorithms to handle such clusters. Topics include distributed algorithms for: Optimization, Numerical Linear Algebra, Machine Learning, Graph analysis, Streaming and online algorithms, and other problems that are challenging to scale on a commodity cluster. Throughout the class, topics will be illustrated with hands-on exercises using the high-speed cluster programming framework, Spark, with computing resources provided by the instructor.

**CME 325. Numerical Approximations of Partial Differential Equations in Theory and Practice. 1-2 Unit.**

Finite volume and finite difference methods for initial boundary value problems in multiple space dimensions. Emphasis is on formulation of boundary conditions for the continuous and the discrete problems. Analysis of numerical methods with respect to stability, accuracy, and error behavior. Techniques of treating non-rectangular domains, and effects of non-regular grids.

**CME 326. Numerical Methods for Initial Boundary Value Problems. 3 Units.**

Initial boundary value problems model many phenomena in engineering and science such as, fluid flow problems, wave propagation, fluid-structure interaction, conjugate heat transfer and financial mathematics. We discuss numerical techniques for such simulations and focus on the underlying principles and theoretical understanding. Emphasis is on stability, convergence and efficiency for methods applied to hyperbolic and parabolic initial boundary value problems.

**CME 327. Numerical Methods for Stiff Problems. 3 Units.**

Focus is on analysis of numerical techniques for stiff ordinary differential equations, including those resulting from spatial discretization of partial differential equations. Topics include stiffness, convergence, stability, adaptive time stepping, implicit time-stepping methods (SDIRK, Rosenbrock), linear and nonlinear system solvers (Fixed Point, Newton, Multigrid, Krylov subspace methods) and preconditioning. Pre-requisites: CME200/ME300A or equivalent; or consent of instructor.

**CME 328. Advanced Topics in Partial Differential Equations. 3 Units.**

Contents change each time and is taught as a topics course, most likely by a faculty member visiting from another institution. May be repeated for credit. Topic in 2012-13: numerical solution of time-dependent partial differential equations is a fundamental tool for modeling and prediction in many areas of science and engineering. In this course we explore the stability, accuracy, efficiency, and appropriateness of specialized temporal integration strategies for different classes of partial differential equations including stiff problems and fully implicit methods, operator splitting and semi-implicit methods, extrapolation methods, multirate time integration, multi-physics problems, symplectic integration, and temporal parallelism. Prerequisites: recommended CME303 and 306 or with instructor's consent.

**CME 330. Applied Mathematics in the Chemical and Biological Sciences. 3 Units.**

Mathematical solution methods via applied problems including chemical reaction sequences, mass and heat transfer in chemical reactors, quantum mechanics, fluid mechanics of reacting systems, and chromatography. Topics include generalized vector space theory, linear operator theory with eigenvalue methods, phase plane methods, perturbation theory (regular and singular), solution of parabolic and elliptic partial differential equations, and transform methods (Laplace and Fourier). Prerequisites: CME 102/ENGR 155A and CME 104/ENGR 155B, or equivalents.

Same as: CHEMENG 300

**CME 334. Advanced Methods in Numerical Optimization. 3 Units.**

Topics include interior-point methods, relaxation methods for nonlinear discrete optimization, sequential quadratic programming methods, optimal control and decomposition methods. Topic chosen in first class; different topics for individuals or groups possible. Individual or team projects. May be repeated for credit.

Same as: MS&E 312

**CME 335. Advanced Topics in Numerical Linear Algebra. 3 Units.**

Possible topics: Classical and modern (e.g., focused on provable communication minimization) algorithms for executing dense and sparse-direct factorizations in high-performance, distributed-memory environments; distributed dense eigensolvers, dense and sparse-direct triangular solvers, and sparse matrix-vector multiplication; unified analysis of distributed Interior Point Methods for symmetric cones via algorithms for distributing Jordan algebras over products of second-order cones and Hermitian matrices. May be repeated for credit. Prerequisites: CME 302 and CME 304 (or equivalents).

**CME 336. Linear and Conic Optimization with Applications. 3 Units.**

Linear, semidefinite, conic, and convex nonlinear optimization problems as generalizations of classical linear programming. Algorithms include the interior-point, barrier function, and cutting plane methods. Related convex analysis, including the separating hyperplane theorem, Farkas lemma, dual cones, optimality conditions, and conic inequalities. Complexity and/or computation efficiency analysis. Applications to combinatorial optimization, sensor network localization, support vector machine, and graph realization. Prerequisite: MS&E 211 or equivalent. Same as: MS&E 314

**CME 338. Large-Scale Numerical Optimization. 3 Units.**

The main algorithms and software for constrained optimization emphasizing the sparse-matrix methods needed for their implementation. Iterative methods for linear equations and least squares. The simplex method. Basis factorization and updates. Interior methods. The reduced-gradient method, augmented Lagrangian methods, and SQP methods. Prerequisites: Basic numerical linear algebra, including LU, QR, and SVD factorizations, and an interest in MATLAB, sparse-matrix methods, and gradient-based algorithms for constrained optimization. Recommended: MS&E 310, 311, 312, 314, or 315; CME 108, 200, 302, 304, 334, or 335. Same as: MS&E 318

**CME 342. Parallel Methods in Numerical Analysis. 3 Units.**

Emphasis is on techniques for obtaining maximum parallelism in numerical algorithms, especially those occurring when solving matrix problems, partial differential equations, and the subsequent mapping onto the computer. Implementation issues on parallel computers. Topics: parallel architecture, programming models (MPI, GPU Computing with CUDA  $\zeta$  quick review), matrix computations, FFT, fast multiple methods, domain decomposition, graph partitioning, discrete algorithms. Prerequisites: 302 or 200 (ME 300A), 213 or equivalent, or consent of instructor. Recommended: differential equations and knowledge of a high-level programming language such as C or C++ (F90/95 also allowable).

**CME 345. Model Reduction. 3 Units.**

Model reduction is an indispensable tool for computational-based design and optimization, statistical analysis, embedded computing, and real-time optimal control. This course presents the basic mathematical theory for projection-based model reduction. Topics include: notions of linear dynamical systems and projection; projection-based model reduction; error analysis; proper orthogonal decomposition; Hankel operator and balancing of a linear dynamical system; balanced truncation method: modal truncation and other reduction methods for linear oscillators; model reduction via moment matching methods based on Krylov subspaces; introduction to model reduction of parametric systems and notions of nonlinear model reduction. Course material is complemented by a balanced set of theoretical, algorithmic and Matlab computer programming assignments. Prerequisites: CME 200 or equivalent, CME 263 or equivalent and basic numerical methods for ODEs.

**CME 356. Engineering Functional Analysis and Finite Elements. 3 Units.**

Concepts in functional analysis to understand models and methods used in simulation and design. Topology, measure, and integration theory to introduce Sobolev spaces. Convergence analysis of finite elements for the generalized Poisson problem. Extensions to convection-diffusion-reaction equations and elasticity. Upwinding. Mixed methods and LBB conditions. Analysis of nonlinear and evolution problems. Prerequisites: 335A,B, CME 200, CME 204, or consent of instructor. Recommended: 333, MATH 171.

Same as: ME 412

**CME 358. Finite Element Method for Fluid Mechanics. 3 Units.**

Mathematical theory of the finite element method for incompressible flows; related computational algorithms and implementation details. Poisson equation; finite element method for simple elliptic problems; notions of mathematical analysis of non-coercive partial differential equations; the inf-sup or Babushka-Brezzi condition and its applications to the Stokes and Darcy problems; presentation of stable mixed finite element methods and corresponding algebraic solvers; stabilization approaches in the context of advection-diffusion equation; numerical solution of the incompressible Navier-Stokes equations by finite element method. Theoretical, computational, and MATLAB computer programming assignments. Prerequisites: foundation in multivariate calculus and ME 335A or equivalent.

**CME 362. An Introduction to Compressed Sensing. 3 Units.**

Compressed sensing is a new data acquisition theory asserting that one can design nonadaptive sampling techniques that condense the information in a compressible signal into a small amount of data. This revelation may change the way engineers think about signal acquisition. Course covers fundamental theoretical ideas, numerical methods in large-scale convex optimization, hardware implementations, connections with statistical estimation in high dimensions, and extensions such as recovery of data matrices from few entries (famous Netflix Prize). Same as: STATS 330

**CME 364A. Convex Optimization I. 3 Units.**

Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as EE263, basic probability. Same as: CS 334A, EE 364A

**CME 364B. Convex Optimization II. 3 Units.**

Continuation of 364A. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Monotone operators and proximal methods; alternating direction method of multipliers. Exploiting problem structure in implementation. Convex relaxations of hard problems. Global optimization via branch and bound. Robust and stochastic optimization. Applications in areas such as control, circuit design, signal processing, and communications. Course requirements include project. Prerequisite: 364A. Same as: EE 364B

**CME 371. Computational Biology in Four Dimensions. 3 Units.**

Computational approaches to understanding the three-dimensional spatial organization of biological systems and how that organization evolves over time. The course will cover cutting-edge research in both physics-based simulation and computational analysis of experimental data, at scales ranging from individual molecules to entire cells. Prerequisite: CS 106A or equivalent, and an introductory course in biology or biochemistry. Recommended: some experience in mathematical modeling (does not need to be a formal course). Same as: BIOMEDIN 371, BIOPHYS 371, CS 371

**CME 372. Applied Fourier Analysis and Elements of Modern Signal Processing. 3 Units.**

Introduction to the mathematics of the Fourier transform and how it arises in a number of imaging problems. Mathematical topics include the Fourier transform, the Plancherel theorem, Fourier series, the Shannon sampling theorem, the discrete Fourier transform, and the spectral representation of stationary stochastic processes. Computational topics include fast Fourier transforms (FFT) and nonuniform FFTs. Applications include Fourier imaging (the theory of diffraction, computed tomography, and magnetic resonance imaging) and the theory of compressive sensing.

Same as: MATH 262

**CME 375. Advanced Topics in Convex Optimization. 3 Units.**

Modern developments in convex optimization: semidefinite programming; novel and efficient first-order algorithms for smooth and nonsmooth convex optimization. Emphasis on numerical methods suitable for large scale problems arising in science and engineering. Prerequisites: convex optimization (EE 364), linear algebra (Math 104), numerical linear algebra (CME 302); background in probability, statistics, real analysis and numerical optimization.

Same as: MATH 301

**CME 390. Curricular Practical Training. 1 Unit.**

May be repeated three times for credit.

**CME 399. Special Research Topics in Computational and Mathematical Engineering. 1-15 Unit.**

Graduate-level research work not related to report, thesis, or dissertation. May be repeated for credit.

**CME 400. Ph.D. Research. 1-15 Unit.**

.

**CME 444. Computational Consulting. 1-3 Unit.**

Advice by graduate students under supervision of ICME faculty. Weekly briefings with faculty adviser and associated faculty to discuss ongoing consultancy projects and evaluate solutions. May be repeated for credit.

**CME 500. Departmental Seminar. 1 Unit.**

Weekly research lectures by experts from academia, national laboratories, industry, and doctoral students. May be repeated for credit. In autumn and winter 2014-15, this seminar will predominantly feature current graduate students talking about their research.

**CME 510. Linear Algebra and Optimization Seminar. 1 Unit.**

Recent developments in numerical linear algebra and numerical optimization. Guest speakers from other institutions and local industry. Goal is to bring together scientists from different theoretical and application fields to solve complex scientific computing problems. May be repeated for credit.

**CME 520. Topics in Simulation of Human Physiology & Anatomical Systems. 1 Unit.**

Biweekly interdisciplinary lecture series on the development of computational tools for modeling and simulation of human physiological and anatomical systems. Lectures by instructors and guest speakers on topics such as surgical simulation, anatomical & surgical Modeling, neurological Systems, and biomedical models of human movement. Group discussions, team based assignments, and project work. Prerequisite: Medical students, residents or fellows from school of medicine, and computationally oriented students with a strong interest to explore computational and mathematical methods related to the health sciences.

Same as: SURG 253

**CME 801. TGR Project. 0 Units.**

.

**CME 802. TGR Dissertation. 0 Units.**

.

## Computer Science Courses

### CS 1C. Introduction to Computing at Stanford. 1 Unit.

For those with limited experience with computers or who want to learn more about Stanford's computing environment. Topics include: computer maintenance and security, computing resources, Internet privacy, and copyright law. One-hour lecture/demonstration in dormitory clusters prepared and administered weekly by the Resident Computer Consultant (RCC). Final project. Not a programming course.

### CS 1U. Practical Unix. 1 Unit.

A practical introduction to using the Unix operating system with a focus on Linux command line skills. Class will consist of video tutorials and weekly hands-on lab sections. The time listed on AXESS is for the first week's logistical meeting only. Topics include: grep and regular expressions, ZSH, Vim and Emacs, basic and advanced GDB features, permissions, working with the file system, revision control, Unix utilities, environment customization, and using Python for shell scripts. Topics may be added, given sufficient interest. Course website: <http://cs1u.stanford.edu>.

### CS 2C. Introduction to Media Production. 2 Units.

Sound, image and video editing techniques and applications, best practices and information regarding Stanford media support. Technical topics will cover Photoshop, iMovie and Garageband. Weekly pre-class online tutorials followed by weekly group work and peer critiques. Not a programming course, but will use computer multimedia applications heavily for editing.

### CS 9. Problem-Solving for the CS Technical Interview. 1 Unit.

This course will prepare students to interview for software engineering and related internships and full-time positions in industry. Drawing on multiple sources of actual interview questions, students will learn key problem-solving strategies specific to the technical/coding interview. Students will be encouraged to synthesize information they have learned across different courses in the major. Emphasis will be on the oral and combination written-oral modes of communication common in coding interviews, but which are unfamiliar settings for problem solving for many students. Prerequisites: CS 106B or X.

### CS 10SC. Great Ideas in Computer Science. 2 Units.

Computers have come to permeate many aspects of our lives, from how we communicate with each other to how we produce and consume information. And while it is all too easy to think of computing in terms of the products and applications we see emerging from technology companies, the intellectual foundations of computer science go much deeper. Indeed, beneath the surface of the tools we use, the social networks we engage in, and the web of information we search, lays a field rich with fascinating, intellectually exciting, and sometimes unexpectedly surprising ideas. In this seminar, we will explore several of the great ideas in computer science, looking at both challenging problems and their impact on real applications. From understanding how search engines on the Web work to looking at mathematical theories underlying social networks, from questioning whether a computer can be intelligent to analyzing the notion of what is even possible to compute, this seminar will take us on a series of intellectual excursions that will change the way you look at computers. No prior experience with computer science or programming is required, but a high school mathematics background, an interest in problem-solving, and a healthy curiosity will go a long way toward ensuring an enjoyable and enlightening experience. Students will work in small groups to research topics in computer science they find most intriguing. The course will also take advantage of Stanford's location in the heart of Silicon Valley by conducting field trips to a local company and the Computer History Museum. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

### CS 22A. The Social & Economic Impact of Artificial Intelligence. 1 Unit.

Recent advances in computing may place us at the threshold of a unique turning point in human history. Soon we are likely to entrust management of our environment, economy, security, infrastructure, food production, healthcare, and to a large degree even our personal activities, to artificially intelligent computer systems. The prospect of "turning over the keys" to increasingly autonomous systems raises many complex and troubling questions. How will society respond as versatile robots and machine-learning systems displace an ever-expanding spectrum of blue- and white-collar workers? Will the benefits of this technological revolution be broadly distributed or accrue to a lucky few? How can we ensure that these systems respect our ethical principles when they make decisions at speeds and for rationales that exceed our ability to comprehend? What, if any, legal rights and responsibilities should we grant them? And should we regard them merely as sophisticated tools or as a newly emerging form of life? The goal of CS22 is to equip students with the intellectual tools, ethical foundation, and psychological framework to successfully navigate the coming age of intelligent machines.

### CS 27. Literature and Social Online Learning. 3-5 Units.

Study, develop, and test new digital methods, games, apps, interactive social media uses to innovate how the humanities can engage and educate students and the public today. Exploring well-known literary texts, digital storytelling forms and literary communities online, students work individually and in interdisciplinary teams to develop innovative projects aimed at bringing literature to life. Tasks include literary role-plays on Twitter; researching existing digital pedagogy and literary projects, games, and apps; reading and coding challenges; collaborative social events mediated by new technology. Minimal prerequisites which vary for students in CS and the humanities; please check with instructors. Same as: COMPLIT 239B, ENGLISH 239B

### CS 29N. Computational Decision Making. 3 Units.

Although we make decisions every day, many people base their decisions on initial reactions or "gut" feelings. There are, however, powerful frameworks for making decisions more effectively based on computationally analyzing the choices available and their possible outcomes. In this course we give an introduction to some of these frameworks, including utility theory, decision analysis, and game theory. We also discuss why people sometimes make seemingly reasonable, yet irrational, decisions. We begin the class by presenting some of the basics of probability theory, which serves as the main mathematical foundation for the decision making frameworks we will subsequently present. Although we provide a mathematical/computational basis for the decision making frameworks we examine, we also seek to give intuitive (and sometimes counterintuitive) explanations for actual decision making behavior through in-class demonstrations. No prior experience with probability theory is needed (we'll cover what you need to know in class), but students should be comfortable with mathematical manipulation at the level of Math 20 or Math 41.

### CS 42. Callback Me Maybe: Contemporary Javascript. 2 Units.

Introduction to the JavaScript programming language with a focus on building contemporary applications. Course consists of in-class activities and programming assignments that challenge students to create functional web apps (e.g. Yelp, Piazza, Instagram). Topics include syntax/ semantics, event-based programming, document object model (DOM), application programming interfaces (APIs), asynchronous JavaScript and XML (AJAX), JQuery, Node.js, and MongoDB. Prerequisite: CS 107.

**CS 44N. Computational Thinking and Systems in the Real-World. 3 Units.**

Computing in the real-world is too often viewed as working away concocting some computer incantations hidden inside some high technology company. However, computing and computer communication has infiltrated and in many cases revolutionized several "systems" in the real world, including financial systems, inventory management, advertising systems, supply chain management, transportation systems, defense systems and so on. Moreover, the discipline of thinking that has developed to build these systems, computational thinking, has powerful applicability to real-world problems and situations outside of computer programming. This course provides an introduction and exposure to some of these dramatic trends, opportunities and risks. Also included is an introduction to some basic ideas in "computational thinking". The course will include guest speakers. No programming competence is assumed but exposure to programming would be useful. Interest in the real world and interest in not being run-over by this trend is essential.

**CS 45N. Computers and Photography: From Capture to Sharing. 3-4 Units.**

Preference to freshmen with experience in photography and use of computers. Elements of photography, such as lighting, focus, depth of field, aperture, and composition. How a photographer makes photos available for computer viewing, reliably stores them, organizes them, tags them, searches them, and distributes them online. No programming experience required. Digital SLRs and editing software will be provided to those students who do not wish to use their own.

**CS 46N. Big Data, Big Discoveries, Big Fallacies. 3 Units.**

A sea change has occurred in science, technology, medicine, politics, and society as a whole: many of the world's biggest discoveries and decisions are now being made on the basis of analyzing massive data sets, referred to as "big data". Everyday examples include social-network friend recommendations, and weather predictions far more accurate than a decade ago; both use vast collections of data to model the past and predict the future. But it is surprisingly easy to come to false conclusions from data analysis alone. For example, we might conclude that acne medicine prevents heart attacks and strokes, if we forget to factor in the age of the patients. Privacy is a major concern: Target stores analyzed buying patterns to predict with remarkable accuracy which of their shoppers had just become pregnant, but trouble arose when they sent baby ads to the homes of pregnant teens whose parents weren't yet in the know. We will start by surveying the history of data-driven activities, leading up to the recent Big Data explosion. A variety of data analysis techniques will be covered, leading students to appreciate that even simple techniques can go a long way when the data set is large enough. Common stumbling blocks leading to false conclusions will be discussed, and students will be asked to debate the many issues surrounding privacy. In one project, students will see whose analysis techniques can best predict user movie ratings based on past rating behavior. A second project will be individually designed in an area of the student's choosing. The seminar will include a mix of assigned readings, small-scale investigations and assignments, classroom discussions, and two projects. No computer programming or special math skills are required; students will learn the basic techniques and tools they need to complete the data analysis assignments and projects.

**CS 54N. Great Ideas in Computer Science. 3 Units.**

Stanford Introductory Seminar. Preference to freshmen. Covers the intellectual tradition of computer science emphasizing ideas that reflect the most important milestones in the history of the discipline. No prior experience with programming is assumed. Topics include programming and problem solving; implementing computation in hardware; algorithmic efficiency; the theoretical limits of computation; cryptography and security; and the philosophy behind artificial intelligence.

**CS 74N. Digital Dilemmas. 3 Units.**

Preference to freshmen. Issues where policy decision making requires understanding computer and communications technology. Technology basics taught in non-technology terms. Topics include consumer privacy, government surveillance, file sharing and intellectual property, and electronic voting.

**CS 75N. Cell Phones, Sensors, and You. 3 Units.**

Focuses on the role of cell phones as the first prevalent wearable sensors that gather information about you that can be both useful and potentially harmful. Topics include the state of technology, sociological and privacy implications, potential governmental regulation, etc. Addresses omniscient "big brother" technology including radar guns and the recording devices that led to the Watergate scandal. Students will gather and compile information on topics and come to class ready to discuss and debate with formulated opinions.

**CS 90SI. CS + Social Good: Using Web Technologies to Change the World. 2 Units.**

Learn web technologies by working on real world projects focused on creating positive social impact. The class will cover basic topics related to web development and provide resources for more advanced learning. Students will work on small teams to implement high-impact projects for partner organizations. The aim of the class is to empower students to leverage technology for social good by inspiring action, facilitating collaboration, and forging pathways toward change. No web application experience required. Prerequisite: 106B. Application required; apply online at <http://bit.ly/90siApp>. Applications accepted until midnight on September 14th.

**CS 91SI. Digital Canvas: Intro to Visual Design on the Web. 2 Units.**

Introduction to visual design in the web context. Course consists of two components: lectures and critiques. Lectures will focus on design principles and examples from print and web, with some guest speakers. Critiques will give students the opportunity to practice both giving and receiving feedback. Topics include layout, composition, color, typography, and interaction design. Students will create designs to be showcased in a final presentation. Application required, see <http://cs91si.stanford.edu>.

**CS 92SI. Hap.py Coder: The Python Programming Language. 2 Units.**

The fundamentals and contemporary usage of the Python programming language. Primary focus on developing best practices in writing Python and exploring the extensible and unique parts of Python that make it such a powerful scripting language. Topics include: data structures (e.g. lists and dictionaries), and characteristic pythonic conventions like anonymous functions, iterables, and powerful built-ins (e.g. map, filter, zip). Time permitting, we will also cover object-oriented design, modules, (e.g. request, itertools), and modern Python-based web frameworks. Prerequisite: 106A. Application required.

**CS 101. Introduction to Computing Principles. 3-5 Units.**

Introduces the essential ideas of computing: data representation, algorithms, programming "code", computer hardware, networking, security, and social issues. Students learn how computers work and what they can do through hands-on exercises. In particular, students will see the capabilities and weaknesses of computer systems so they are not mysterious or intimidating. Course features many small programming exercises, although no prior programming experience is assumed or required. CS101 is not a complete programming course such as CS106A. CS101 is effectively an alternative to CS105. A laptop computer is recommended for the in-class exercises.

**CS 102. Big Data: Tools and Techniques, Discoveries and Pitfalls. 3-4 Units.**

Aimed primarily at students who may not major in CS but want to learn about big data and apply that knowledge in their areas of study. Many of the world's biggest discoveries and decisions in science, technology, business, medicine, politics, and society as a whole, are now being made on the basis of analyzing massive data sets, but it is surprisingly easy to come to false conclusions from data analysis alone, and privacy of data connected to individuals can be a major concern. This course provides a broad introduction to big data: historical context and case studies; privacy issues; data analysis techniques including databases, data mining, and machine learning; sampling and statistical significance; data analysis tools including spreadsheets, SQL, Python, R; data visualization techniques and tools. Tools and techniques are hands-on but at a cursory level, providing a basis for future exploration and application. Prerequisites: high school AP computer science, CS106A, or other equivalent programming experience; comfort with statistics and spreadsheets helpful but not required.

**CS 103. Mathematical Foundations of Computing. 3-5 Units.**

Mathematical foundations required for computer science, including propositional predicate logic, induction, sets, functions, and relations. Formal language theory, including regular expressions, grammars, finite automata, Turing machines, and NP-completeness. Mathematical rigor, proof techniques, and applications. Prerequisite: 106A or equivalent.

**CS 103A. Mathematical Problem-solving Strategies. 1 Unit.**

Problem solving strategies and techniques in discrete mathematics and computer science. Additional problem solving practice for CS103. In-class participation required. Prerequisite: consent of instructor. Co-requisite: CS103.

**CS 105. Introduction to Computers. 3-5 Units.**

For non-technical majors. What computers are and how they work. Practical experience in programming. Construction of computer programs and basic design techniques. A survey of Internet technology and the basics of computer hardware. Students in technical fields and students looking to acquire programming skills should take 106A or 106X. Students with prior computer science experience at the level of 106 or above require consent of instructor. Prerequisite: minimal math skills.

**CS 106A. Programming Methodology. 3-5 Units.**

Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required. Summer quarter enrollment is limited. Priority given to Stanford students.

Same as: ENGR 70A

**CS 106B. Programming Abstractions. 3-5 Units.**

Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or equivalent. Summer quarter enrollment is limited. Priority given to Stanford students.

Same as: ENGR 70B

**CS 106L. Standard C++ Programming Laboratory. 1 Unit.**

Supplemental lab to 106B and 106X. Additional features of standard C++ programming practice. Possible topics include advanced C++ language features, standard libraries, STL containers and algorithms, object memory management, operator overloading, and inheritance. Prerequisite: consent of instructor. Corequisite: 106B or 106X.

**CS 106X. Programming Abstractions (Accelerated). 3-5 Units.**

Intensive version of 106B for students with a strong programming background interested in a rigorous treatment of the topics at an accelerated pace. Additional advanced material and more challenging projects. Prerequisite: excellence in 106A or equivalent, or consent of instructor.

Same as: ENGR 70X

**CS 107. Computer Organization and Systems. 3-5 Units.**

Introduction to the fundamental concepts of computer systems. Explores how computer systems execute programs and manipulate data, working from the C programming language down to the microprocessor. Topics covered include: the C programming language, data representation, machine-level code, computer arithmetic, elements of code compilation, memory organization and management, and performance evaluation and optimization. Prerequisites: 106B or X, or consent of instructor.

**CS 107E. Computer Systems from the Ground Up. 3-5 Units.**

Introduction to the fundamental concepts of computer systems through bare metal programming on the Raspberry Pi. Explores how five concepts come together in computer systems: hardware, architecture, assembly code, the C language, and software development tools. Students do all programming with a Raspberry Pi kit and several add-ons (LEDs, buttons). Topics covered include: the C programming language, data representation, machine-level code, computer arithmetic, compilation, memory organization and management, debugging, hardware, and I/O. Prerequisite: 106B or X, and consent of instructor.

**CS 108. Object-Oriented Systems Design. 3-4 Units.**

Software design and construction in the context of large OOP libraries. Taught in Java. Topics: OOP design, design patterns, testing, graphical user interface (GUI) OOP libraries, software engineering strategies, approaches to programming in teams. Prerequisite: 107.

**CS 109. Introduction to Probability for Computer Scientists. 3-5 Units.**

Topics include: counting and combinatorics, random variables, conditional probability, independence, distributions, expectation, point estimation, and limit theorems. Applications of probability in computer science including machine learning and the use of probability in the analysis of algorithms. Prerequisites: 103, 106B or X, multivariate calculus at the level of MATH 51 or CME 100 or equivalent.

**CS 109L. Statistical Computing with R Laboratory. 1 Unit.**

Supplemental lab to CS109. Introduces the R programming language for statistical computing. Topics include basic facilities of R including mathematical, graphical, and probability functions, building simulations, introductory data fitting and machine learning. Provides exposure to the functional programming paradigm. Corequisite: CS109.

**CS 110. Principles of Computer Systems. 3-5 Units.**

Principles and practice of engineering of computer software and hardware systems. Topics include: techniques for controlling complexity; strong modularity using client-server design, virtual memory, and threads; networks; atomicity and coordination of parallel activities; security, and encryption; and performance optimizations. Prerequisite: 107.

**CS 123. Programming Your Personal Robot. 3 Units.**

An introduction to the programming of a sensor-rich personal robot. This course extends programming from the virtual environment into the physical world, which presents unique challenges. Focus is on three areas of intellectual discourse that are fundamental to the programming of physical devices: communication with the devices; programming of event driven behaviors; and reasoning with uncertainty. The concepts introduced will be put into practical use through a series of class projects centered around programming your personal robot. This course also serves as a good introduction to Experimental Robotics by exposing students to basic concepts and techniques that are relevant for real world robot programming. Prerequisite: Basic knowledge of computer programming (as covered in CS 106). Knowledge of Python is recommended.

**CS 124. From Languages to Information. 3-4 Units.**

Extracting meaning, information, and structure from human language text, speech, web pages, genome sequences, social networks. Methods include: string algorithms, edit distance, language modeling, the noisy channel, naive Bayes, inverted indices, collaborative filtering, PageRank. Applications such as question answering, sentiment analysis, information retrieval, text classification, social network models, machine translation, genomic sequence alignment, spell checking, speech processing, recommender systems. Prerequisite: CS103, CS107, CS109. Same as: LINGUIST 180, LINGUIST 280

**CS 131. Computer Vision: Foundations and Applications. 3-4 Units.**

Robots that can navigate space and perform duties, search engines that can index billions of images and videos, algorithms that can diagnose medical images for diseases, or smart cars that can see and drive safely: Lying in the heart of these modern AI applications are computer vision technologies that can perceive, understand and reconstruct the complex visual world. This course is designed for students who are interested in learning about the fundamental principles and important applications of computer vision. Course will introduce a number of fundamental concepts in computer vision and expose students to a number of real-world applications, plus guide students through a series of well designed projects such that they will get to implement cutting-edge computer vision algorithms. Prerequisites: Students should be familiar with Matlab (i.e. have programmed in Matlab before) and Linux; plus Calculus & Linear Algebra.

**CS 140. Operating Systems and Systems Programming. 3-4 Units.**

Operating systems design and implementation. Basic structure; synchronization and communication mechanisms; implementation of processes, process management, scheduling, and protection; memory organization and management, including virtual memory; I/O device management, secondary storage, and file systems. Prerequisite: CS 110.

**CS 142. Web Applications. 3 Units.**

Concepts and techniques used in constructing interactive web applications. Browser-side web facilities such as HTML, cascading stylesheets, javascript, and the document object model. Server-side technologies such as sessions, templates, relational databases, and object-relational mapping. Issues in web security and application scalability. New models of web application deployment. Prerequisites: CS 107 and CS 108.

**CS 143. Compilers. 3-4 Units.**

Principles and practices for design and implementation of compilers and interpreters. Topics: lexical analysis; parsing theory; symbol tables; type systems; scope; semantic analysis; intermediate representations; runtime environments; code generation; and basic program analysis and optimization. Students construct a compiler for a simple object-oriented language during course programming projects. Prerequisites: 103 or 103B, and 107.

**CS 144. Introduction to Computer Networking. 3-4 Units.**

Principles and practice. Structure and components of computer networks, packet switching, layered architectures. Applications: web/http, voice-over-IP, p2p file sharing and socket programming. Reliable transport: TCP/IP, reliable transfer, flow control, and congestion control. The network layer: names and addresses, routing. Local area networks: ethernet and switches. Wireless networks and network security. Prerequisite: CS 110.

**CS 145. Introduction to Databases. 3-4 Units.**

The course covers database design and the use of database management systems for applications. It includes extensive coverage of the relational model, relational algebra, and SQL. The course includes database design and relational design principles based on dependencies and normal forms. Many additional key database topics from the design and application-building perspective are also covered: indexes, views, transactions, authorization, integrity constraints, triggers, on-line analytical processing (OLAP), JSON, and emerging NoSQL systems. Class time will include guest speakers from industry and additional advanced topics as time and class interest permits. Prerequisites: 103 and 107 (or equivalent).

**CS 147. Introduction to Human-Computer Interaction Design. 3-5 Units.**

Introduces fundamental methods and principles for designing, implementing, and evaluating user interfaces. Topics: user-centered design, rapid prototyping, experimentation, direct manipulation, cognitive principles, visual design, social software, software tools. Learn by doing: work with a team on a quarter-long design project, supported by lectures, readings, and studios. Prerequisite: 106B or X or equivalent programming experience.

**CS 148. Introduction to Computer Graphics and Imaging. 3-4 Units.**

Introductory prerequisite course in the computer graphics sequence introducing students to the technical concepts behind creating synthetic computer generated images. Focuses on using OpenGL to create visual imagery, as well as an understanding of the underlying mathematical concepts including triangles, normals, interpolation, texture mapping, bump mapping, etc. Course will cover fundamental understanding of light and color, as well as how it impacts computer displays and printers. Class will discuss more thoroughly how light interacts with the environment, constructing engineering models such as the BRDF, plus various simplifications into more basic lighting and shading models. Also covers ray tracing technology for creating virtual images, while drawing parallels between ray tracers and real world cameras to illustrate various concepts. Anti-aliasing and acceleration structures are also discussed. The final class mini-project consists of building out a ray tracer to create visually compelling images. Starter codes and code bits will be provided to aid in development, but this class focuses on what you can do with the code as opposed to what the code itself looks like. Therefore grading is weighted toward in person "demos" of the code in action - creativity and the production of impressive visual imagery are highly encouraged. Prerequisites: CS 107, MATH 51.

**CS 154. Introduction to Automata and Complexity Theory. 3-4 Units.**

This course provides a mathematical introduction to the following questions: What is computation? Given a computational model, what problems can we hope to solve in principle with this model? Besides those solvable in principle, what problems can we hope to efficiently solve? In many cases we can give completely rigorous answers; in other cases, these questions have become major open problems in computer science and mathematics. By the end of this course, students will be able to classify computational problems in terms of their computational complexity (Is the problem regular? Not regular? Decidable? Recognizable? Neither? Solvable in P? NP-complete? PSPACE-complete?, etc.). Students will gain a deeper appreciation for some of the fundamental issues in computing that are independent of trends of technology, such as the Church-Turing Thesis and the P versus NP problem. Prerequisites: CS 103 or 103B.

**CS 155. Computer and Network Security. 3 Units.**

For seniors and first-year graduate students. Principles of computer systems security. Attack techniques and how to defend against them. Topics include: network attacks and defenses, operating system security, application security (web, apps, databases), malware, privacy, and security for mobile devices. Course projects focus on building reliable code. Prerequisite: 110. Recommended: basic Unix.

**CS 157. Logic and Automated Reasoning. 3 Units.**

An elementary exposition from a computational point of view of propositional and predicate logic, axiomatic theories, and theories with equality and induction. Interpretations, models, validity, proof, strategies, and applications. Automated deduction: polarity, skolemization, unification, resolution, equality. Prerequisite: 103 or 103B.

**CS 161. Design and Analysis of Algorithms. 3-5 Units.**

Worst and average case analysis. Recurrences and asymptotics. Efficient algorithms for sorting, searching, and selection. Data structures: binary search trees, heaps, hash tables. Algorithm design techniques: divide-and-conquer, dynamic programming, greedy algorithms, amortized analysis, randomization. Algorithms for fundamental graph problems: minimum-cost spanning tree, connected components, topological sort, and shortest paths. Possible additional topics: network flow, string searching. Prerequisite: 103 or 103B; 109 or STATS 116.

**CS 166. Data Structures. 3-4 Units.**

Techniques in the design, analysis, and implementation of data structures. Isometries between data structures (including red/black trees and 2-3-4 trees), amortized analysis (including Fibonacci heaps and splay trees), and randomization (including count-min sketches and dynamic perfect hash tables). Data structures for integers and strings (including van Emde Boas trees and suffix trees). Possible additional topics include functional data structures, concurrent data structures, and spatial data structures. Prerequisites: CS107 and CS161.

**CS 167. Readings in Algorithms. 3 Units.**

Recent research in the design and analysis of algorithms. Readings cover both classical and emerging topics, such as: computational models for massive data sets; data privacy; dimensionality reduction; exact and approximate algorithms for NP-hard problems; graph algorithms; hashing; online learning; search trees; streaming and sketching. Students are expected to respond to research papers, deliver an oral presentation, and complete a reading or programming project. Limited enrollment; preference given to undergraduates. Prerequisites: CS161.

**CS 168. The Modern Algorithmic Toolbox. 3-4 Units.**

This course will provide a rigorous and hands-on introduction to the central ideas and algorithms that constitute the core of the modern algorithms toolkit. Emphasis will be on understanding the high-level theoretical intuitions and principles underlying the algorithms we discuss, as well as developing a concrete understanding of when and how to implement and apply the algorithms. The course will be structured as a sequence of one-week investigations; each week will introduce one algorithmic idea, and discuss the motivation, theoretical underpinning, and practical applications of that algorithmic idea. Each topic will be accompanied by a mini-project in which students will be guided through a practical application of the ideas of the week. Topics include hashing, dimension reduction and LSH, boosting, linear programming, gradient descent, sampling and estimation, and an introduction to spectral techniques. Prerequisites: CS107 and CS161, or permission from the instructor.

**CS 170. Stanford Laptop Orchestra: Composition, Coding, and Performance. 1-5 Unit.**

Classroom instantiation of the Stanford Laptop Orchestra (SLOrk) which includes public performances. An ensemble of more than 20 humans, laptops, controllers, and special speaker arrays designed to provide each computer-mediated instrument with its sonic identity and presence. Topics and activities include issues of composing for laptop orchestras, instrument design, sound synthesis, programming, and live performance. May be repeated four times for credit. Same as: MUSIC 128

**CS 173. A Computational Tour of the Human Genome. 3 Units.**

(Only one of 173 or 273A counts toward any CS degree program.) Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing; functional landscape of the human genome (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures on current genomic research topics. Class will be similar in spirit to CS273A, which will not be offered this year. Prerequisites: CS107 or equivalent background in programming.

**CS 181. Computers, Ethics, and Public Policy. 4 Units.**

(Formerly 201.) Primarily for majors entering computer-related fields. Ethical and social issues related to the development and use of computer technology. Ethical theory, and social, political, and legal considerations. Scenarios in problem areas: privacy, reliability and risks of complex systems, and responsibility of professionals for applications and consequences of their work. Prerequisite: 106B or X.

**CS 181W. Computers, Ethics, and Public Policy. 4 Units.**

Writing-intensive version of CS181. Satisfies the WIM requirement for Computer Science, Engineering Physics, STS, and Math/Comp Sci undergraduates.

Same as: WIM

**CS 183C. Technology-enabled Blitzscaling. 2 Units.**

We are all familiar with the power of technological innovation to reshape markets and daily lives. But what many overlook is how technology enables a far more rapid scaling of organizations and businesses. This rapid scaling, or 'blitzscaling', confers massive competitive advantage, but requires massive adjustments at every stage of growth. 'Technology-enabled Blitzscaling' examines how technology enables this hyper growth and how technology can help entrepreneurs and organizations manage that growth.

**CS 183E. Effective Leadership in High-Tech. 1 Unit.**

You will undoubtedly leave Stanford with the technical skills to excel in your first few jobs. But non-technical skills are just as critical to making a difference. This seminar is taught by two industry veterans in engineering leadership and product management. In a small group setting, we will explore how you can be a great individual contributor (communicating with clarity, getting traction for your ideas, resolving conflict, and delivering your best work) and how you can transition into leadership roles (finding leadership opportunities, creating a great team culture, hiring and onboarding new team members). We will end by turning back to your career (picking your first job and negotiating your offer, managing your career changes, building a great network, and succeeding with mentors). Prerequisites: Preference given to seniors and co-terms in Computer Science and related majors.

**CS 190. Software Design Studio. 3 Units.**

This course will teach the art of software design: how to decompose large complex systems into classes that can be implemented and maintained easily. Topics include information hiding, thick classes, API design, managing complexity, and how to write in-code documentation. The class will involve significant system software implementation and will use an iterative approach consisting of implementation, review, and revision. The course will be taught in a studio format with in-class discussions and code reviews in addition to lectures. Prerequisites: CS 140.

**CS 191. Senior Project. 1-6 Unit.**

Restricted to Computer Science and Computer Systems Engineering students. Group or individual projects under faculty direction. Register using instructor's section number. A project can be either a significant software application or publishable research. Software application projects include substantial programming and modern user-interface technologies and are comparable in scale to shareware programs or commercial applications. Research projects may result in a paper publishable in an academic journal or presentable at a conference. Required public presentation of final application or research results. Prerequisite: Completion of at least 135 units.

**CS 191W. Writing Intensive Senior Project. 3-6 Units.**

Restricted to Computer Science and Computer Systems Engineering students. Writing-intensive version of CS191. Register using the section number of an Academic Council member. Prerequisite: Completion of at least 135 units.

Same as: WIM

**CS 192. Programming Service Project. 1-4 Unit.**

Restricted to Computer Science students. Appropriate academic credit (without financial support) is given for volunteer computer programming work of public benefit and educational value.

**CS 193A. Android Programming. 1-2 Unit.**

Introduction to building applications for Android platform. Examines key concepts of Android programming: tool chain, application life-cycle, views, controls, intents, designing mobile UIs, networking, threading, and more. Features ten weekly lectures and a series of small programming projects. Phone not required, but a phone makes the projects more engaging. Prerequisites: 106B or Java experience at 106B level. Winter quarter enrollment limited and application required: <http://goo.gl/forms/HCV1mRQpa0>.

**CS 193C. Client-Side Internet Technologies. 3 Units.**

Client-side technologies used to create web sites such as sophisticated Web 2.0 interfaces similar to Google maps. XHTML, CSS, JavaScript, document object model (DOM), AJAX, and Flash. Prerequisite: programming experience at the level of 106A.

**CS 193P. iPhone and iPad Application Programming. 3 Units.**

Tools and APIs required to build applications for the iPhone and iPad platforms using the iOS SDK. User interface design for mobile devices and unique user interactions using multi-touch technologies. Object-oriented design using model-view-controller paradigm, memory management, Swift programming language. Other topics include: object-oriented database API, animation, mobile device power management, multi-threading, networking and performance considerations. Prerequisites: C language and object-oriented programming experience exceeding 106B or X level. Previous completion of any one of the following is required: CS 107, 108 (preferred) or 110. Recommended: UNIX, graphics, databases.

**CS 193W. Apple Watch & TV Programming. 2 Units.**

The technologies behind building Apple Watch and Apple TV applications. Students must have access to a Macintosh computer. iPhone, Apple Watch, and Apple TV are not required, but recommended. Prerequisite: CS193P.

**CS 194. Software Project. 3 Units.**

Design, specification, coding, and testing of a significant team programming project under faculty supervision. Documentation includes a detailed proposal. Public demonstration of the project at the end of the quarter. Preference given to seniors. May be repeat for credit. Prerequisites: CS 110 and CS 161.

**CS 194H. User Interface Design Project. 3-4 Units.**

Advanced methods for designing, prototyping, and evaluating user interfaces to computing applications. Novel interface technology, advanced interface design methods, and prototyping tools. Substantial, quarter-long course project that will be presented in a public presentation. Prerequisites: CS 147, or permission of instructor.

**CS 194W. Software Project. 3 Units.**

Restricted to Computer Science and Electrical Engineering undergraduates. Writing-intensive version of CS194. Preference given to seniors.

Same as: WIM

**CS 196. Computer Consulting. 2 Units.**

Focus is on Macintosh and Windows operating system maintenance and troubleshooting through hardware and software foundation and concepts. Topics include operating systems, networking, security, troubleshooting methodology with emphasis on Stanford's computing environment. Not a programming course. Prerequisite: 1C or equivalent.

**CS 198. Teaching Computer Science. 3-4 Units.**

Students lead a discussion section of 106A while learning how to teach a programming language at the introductory level. Focus is on teaching skills, techniques, and course specifics. Application and interview required; see <http://cs198.stanford.edu>.

**CS 198B. Additional Topics in Teaching Computer Science. 1 Unit.**

Students build on the teaching skills developed in CS198. Focus is on techniques used to teach topics covered in CS106B. Prerequisite: successful completion of CS198.

**CS 199. Independent Work. 1-6 Unit.**

Special study under faculty direction, usually leading to a written report. Letter grade; if not appropriate, enroll in 199P.

**CS 199P. Independent Work. 1-6 Unit.**

(Staff).

**CS 202. Law for Computer Science Professionals. 1 Unit.**

Intellectual property law as it relates to computer science including copyright registration, patents, and trade secrets; contract issues such as non-disclosure/non-compete agreements, license agreements, and works-made-for-hire; dispute resolution; and principles of business formation and ownership. Emphasis is on topics of current interest such as open source and the free software movement, peer-to-peer sharing, encryption, data mining, and spam.

**CS 204. Legal Informatics. 3 Units.**

Legal informatics based on representation of regulations in computable form. Encoding regulations facilitate creation of legal information systems with significant practical value. Convergence of technological trends, growth of the Internet, advent of semantic web technology, and progress in computational logic make computational law prospects better. Topics: current state of computational law, prospects and problems, philosophical and legal implications. This course is \*Cross\* listed with LAW 729. Prerequisite: basic concepts of programming.

**CS 205A. Mathematical Methods for Robotics, Vision, and Graphics. 3 Units.**

Continuous mathematics background necessary for research in robotics, vision, and graphics. Possible topics: linear algebra; the conjugate gradient method; ordinary and partial differential equations; vector and tensor calculus. Prerequisites: 106B or X; MATH 51; or equivalents.

**CS 205B. Mathematical Methods for Fluids, Solids, and Interfaces. 3 Units.**

Numerical methods for simulation of problems involving solid mechanics and fluid dynamics. Focus is on practical tools needed for simulation, and continuous mathematics involving nonlinear hyperbolic partial differential equations. Possible topics: finite element method, highly deformable elastic bodies, plasticity, fracture, level set method, Burgers' equation, compressible and incompressible Navier-Stokes equations, smoke, water, fire, and solid-fluid coupling. Prerequisite: 205A or equivalent.

**CS 210A. Software Project Experience with Corporate Partners. 3-4 Units.**

Two-quarter project course. Focus is on real-world software development. Corporate partners seed projects with loosely defined challenges from their R&D labs; students innovate to build their own compelling software solutions. Student teams are treated as start-up companies with a budget and a technical advisory board comprised of instructional staff and corporate liaisons. Teams will typically travel to the corporate headquarters of their collaborating partner, meaning some teams will travel internationally. Open loft classroom format such as found in Silicon Valley software companies. Exposure to: current practices in software engineering; techniques for stimulating innovation; significant development experience with creative freedoms; working in groups; real-world software engineering challenges; public presentation of technical work; creating written descriptions of technical work. Prerequisites: CS 109 and 110.

**CS 210B. Software Project Experience with Corporate Partners. 3-4 Units.**

Continuation of CS210A. Focus is on real-world software development. Corporate partners seed projects with loosely defined challenges from their R&D labs; students innovate to build their own compelling software solutions. Student teams are treated as start-up companies with a budget and a technical advisory board comprised of the instructional staff and corporate liaisons. Teams will typically travel to the corporate headquarters of their collaborating partner, meaning some teams will travel internationally. Open loft classroom format such as found in Silicon Valley software companies. Exposure to: current practices in software engineering; techniques for stimulating innovation; significant development experience with creative freedoms; working in groups; real world software engineering challenges; public presentation of technical work; creating written descriptions of technical work. Prerequisites: CS 210A.

**CS 210L. Introducing Software through Video Stories. 1 Unit.**

In this one-unit lab where coding meets film, software development teams from CS210 are paired with film students. This resulting cross-disciplinary group will create a short video that tells an engaging and creative story about the software developed by the team in CS210. The class will introduce students to principles of short form narrative storytelling and the visual language of film, as well as cover the technical principles of DSLR cinematography and non-linear editing. This course will offer students the experience of creating a film in partnership with a producing team.

**CS 211. Content Creation in Virtual Reality. 3-4 Units.**

Students are immersed in a cutting edge virtual reality development environment consisting of both hardware and software elements. Students will progress from configuring a comprehensive development environment to designing and implementing networked content in VR. The deep development focus is overlaid with a discussion series with leaders in the VR space to provide both breadth and depth to a student's understanding of the VR space. Prerequisites: CS 107 or equivalent. A strong software development background is required that includes comfort with C++. Design experience a plus.

**CS 221. Artificial Intelligence: Principles and Techniques. 3-4 Units.**

Artificial intelligence (AI) has had a huge impact in many areas, including medical diagnosis, speech recognition, robotics, web search, advertising, and scheduling. This course focuses on the foundational concepts that drive these applications. In short, AI is the mathematics of making good decisions given incomplete information (hence the need for probability) and limited computation (hence the need for algorithms). Specific topics include search, constraint satisfaction, game playing, Markov decision processes, graphical models, machine learning, and logic. Prerequisites: CS 103 or CS 103B/X, CS 106B or CS 106X, CS 107, and CS 109 (algorithms, probability, and programming experience).

**CS 223A. Introduction to Robotics. 3 Units.**

Robotics foundations in modeling, design, planning, and control. Class covers relevant results from geometry, kinematics, statics, dynamics, motion planning, and control, providing the basic methodologies and tools in robotics research and applications. Concepts and models are illustrated through physical robot platforms, interactive robot simulations, and video segments relevant to historical research developments or to emerging application areas in the field. Recommended: matrix algebra. Same as: ME 320

**CS 224M. Multi-Agent Systems. 3 Units.**

For advanced undergraduates, and M.S. and beginning Ph.D. students. The course serves primarily as an introduction to game theory, including computational aspects. Topics: basic game representations and solution concepts, social choice and mechanism design, multi-agent learning, communication. Applications discussed as appropriate; emphasis is on conceptual matters and theoretical foundations. Prerequisites: very basic probability theory and optimization.

**CS 224N. Natural Language Processing. 3-4 Units.**

Methods for processing human language information and the underlying computational properties of natural languages. Syntactic and semantic processing from linguistic and algorithmic perspectives. Focus is on modern quantitative techniques in NLP: using large corpora, statistical models for acquisition, translation, and interpretation; and representative systems. Prerequisites: CS124 or CS121/221. Same as: LINGUIST 284

**CS 224S. Spoken Language Processing. 2-4 Units.**

Introduction to spoken language technology with an emphasis on dialogue and conversational systems. Automatic speech recognition, extraction of affect and social meaning from speech, speech synthesis, dialogue management, and applications to digital assistants, search, and recommender systems. Prerequisites: CS 124, 221, 224N, or 229.

**CS 224U. Natural Language Understanding. 3-4 Units.**

Project-oriented class focused on developing systems and algorithms for robust machine understanding of human language. Draws on theoretical concepts from linguistics, natural language processing, and machine learning. Topics include lexical semantics, distributed representations of meaning, relation extraction, semantic parsing, sentiment analysis, and dialogue agents, with special lectures on developing projects, presenting research results, and making connections with industry. Prerequisites: one of LINGUIST 180, CS 124, CS 224N, CS224S, or CS221; and logical/semantics such as LINGUIST 130A or B, CS 157, or PHIL150. Same as: LINGUIST 188, LINGUIST 288

**CS 224W. Social Information and Network Analysis. 3-4 Units.**

(Formerly 322) How do diseases spread? Who are the influencers? How can we predict friends and enemies in a social network? How information flows and mutates as it is passed through networks? Behind each of these questions there is an intricate wiring diagram, a network, that defines the interactions between the components. And we will never understand these questions unless we understand the networks behind them. The course will cover recent research on the structure and analysis of such large social and information networks and on models and algorithms that abstract their basic properties. Class will explore how to practically analyze large-scale network data and how to reason about it through models for network structure and evolution. Topics include methods for link analysis and network community detection, diffusion and information propagation on the web, virus outbreak detection in networks, and connections with work in the social sciences and economics.

**CS 225A. Experimental Robotics. 3 Units.**

Hands-on laboratory course experience in robotic manipulation. Topics include robot kinematics, dynamics, control, compliance, sensor-based collision avoidance, and human-robot interfaces. Second half of class is devoted to final projects using various robotic platforms to build and demonstrate new robot task capabilities. Previous projects include the development of autonomous robot behaviors of drawing, painting, playing air hockey, yoyo, basketball, ping-pong or xylophone. Prerequisites: 223A or equivalent.

**CS 225B. Robot Programming Laboratory. 3-4 Units.**

For robotics and non-robotics students. Students program mobile robots to exhibit increasingly complex behavior (simple dead reckoning and reactivity, goal-directed motion, localization, complex tasks). Topics: motor control and sensor characteristics; sensor fusion, model construction, and robust estimation; control regimes (subsumption, potential fields); probabilistic methods, including Markov localization and particle filters. Student programmed robot contest. Programming is in C++ on Unix machines, done in teams. Prerequisite: programming at the level of 106B, 106X, 205, or equivalent.

**CS 227B. General Game Playing. 3 Units.**

A general game playing system accepts a formal description of a game to play it without human intervention or algorithms designed for specific games. Hands-on introduction to these systems and artificial intelligence techniques such as knowledge representation, reasoning, learning, and rational behavior. Students create GGP systems to compete with each other and in external competitions. Prerequisite: programming experience. Recommended: 103 or equivalent.

**CS 228. Probabilistic Graphical Models: Principles and Techniques. 3-4 Units.**

Probabilistic graphical modeling languages for representing complex domains, algorithms for reasoning using these representations, and learning these representations from data. Topics include: Bayesian and Markov networks, extensions to temporal modeling such as hidden Markov models and dynamic Bayesian networks, exact and approximate probabilistic inference algorithms, and methods for learning models from data. Also included are sample applications to various domains including speech recognition, biological modeling and discovery, medical diagnosis, message encoding, vision, and robot motion planning. Prerequisites: basic probability theory and algorithm design and analysis.

**CS 229. Machine Learning. 3-4 Units.**

Topics: statistical pattern recognition, linear and non-linear regression, non-parametric methods, exponential family, GLMs, support vector machines, kernel methods, model/feature selection, learning theory, VC dimension, clustering, density estimation, EM, dimensionality reduction, ICA, PCA, reinforcement learning and adaptive control, Markov decision processes, approximate dynamic programming, and policy search. Prerequisites: linear algebra, and basic probability and statistics. Same as: STATS 229

**CS 229T. Statistical Learning Theory. 3 Units.**

(Same as STATS 231) How do we formalize what it means for an algorithm to learn from data? This course focuses on developing mathematical tools for answering this question. We will present various common learning algorithms and prove theoretical guarantees about them. Topics include online learning, kernel methods, generalization bounds (uniform convergence), and spectral methods. Prerequisites: A solid background in linear algebra and probability theory, statistics and machine learning (STATS 315A or CS 229). Convex optimization (EE 364a) is helpful but not required. Same as: STATS 231

**CS 231A. Computer Vision: From 3D Reconstruction to Recognition. 3-4 Units.**

(Formerly 223B) An introduction to the concepts and applications in computer vision. Topics include: cameras and projection models, low-level image processing methods such as filtering and edge detection; mid-level vision topics such as segmentation and clustering; shape reconstruction from stereo, as well as high-level vision tasks such as object recognition, scene recognition, face detection and human motion categorization. Prerequisites: linear algebra, basic probability and statistics.

**CS 231B. The Cutting Edge of Computer Vision. 3 Units.**

(Formerly 223C) More than one-third of the brain is engaged in visual processing, the most sophisticated human sensory system. Yet visual recognition technology has fundamentally influenced our lives on the same scale and scope as text-based technology has, thanks to Google, Twitter, Facebook, etc. This course is designed for those students who are interested in cutting edge computer vision research, and/or are aspiring to be an entrepreneur using vision technology. Course will guide students through the design and implementation of three core vision technologies: segmentation, detection and classification on three highly practical, real-world problems. Course will focus on teaching the fundamental theory, detailed algorithms, practical engineering insights, and guide them to develop state-of-the-art systems evaluated based on the most modern and standard benchmark datasets. Prerequisites: CS2223B or equivalent and a good machine learning background (i.e. CS221, CS228, CS229). Fluency in Matlab and C/C++.

**CS 231N. Convolutional Neural Networks for Visual Recognition. 3-4 Units.**

Computer Vision has become ubiquitous in our society, with applications in search, image understanding, apps, mapping, medicine, drones, and self-driving cars. Core to many of these applications are the tasks of image classification, localization and detection. This course is a deep dive into details of neural network architectures with a focus on learning end-to-end models for these tasks, particularly image classification. During the 10-week course, students will learn to implement, train and debug their own neural networks and gain a detailed understanding of cutting-edge research in computer vision. The final assignment will involve training a multi-million parameter convolutional neural network and applying it on the largest image classification dataset (ImageNet). We will focus on teaching how to set up the problem of image recognition, the learning algorithms (e.g. backpropagation), practical engineering tricks for training and fine-tuning the networks and guide the students through hands-on assignments and a final course project. Much of the background and materials of this course will be drawn from the ImageNet Challenge: <http://image-net.org/challenges/LSVRC/2014/index>. Prerequisites: Proficiency in Python; familiarity with C/C++; CS 131 and CS 229 or equivalents; Math 21 or equivalent, linear algebra.

**CS 232. Digital Image Processing. 3 Units.**

Image sampling and quantization color, point operations, segmentation, morphological image processing, linear image filtering and correlation, image transforms, eigenimages, multiresolution image processing, noise reduction and restoration, feature extraction and recognition tasks, image registration. Emphasis is on the general principles of image processing. Students learn to apply material by implementing and investigating image processing algorithms in Matlab and optionally on Android mobile devices. Term project. Recommended: EE261, EE278. Same as: EE 368

**CS 233. The Shape of Data: Geometric and Topological Data Analysis. 3 Units.**

Mathematical computational tools for the analysis of data with geometric content, such images, videos, 3D scans, GPS traces – as well as for other data embedded into geometric spaces. Global and local geometry descriptors allowing for various kinds of invariances. The rudiments of computational topology and persistent homology on sampled spaces. Clustering and other unsupervised techniques. Spectral methods for geometric data analysis. Non-linear dimensionality reduction. Alignment, matching, and map computation between geometric data sets. Function spaces and functional maps. Networks of data sets and joint analysis for segmentation and labeling. The emergence of abstractions or concepts from data. Prerequisites: discrete algorithms at the level of 161; linear algebra at the level of CM103.

Same as: CME 251

**CS 238. Decision Making under Uncertainty. 3-4 Units.**

This course is designed to increase awareness and appreciation for why uncertainty matters, particularly for aerospace applications. Introduces decision making under uncertainty from a computational perspective and provides an overview of the necessary tools for building autonomous and decision-support systems. Following an introduction to probabilistic models and decision theory, the course will cover computational methods for solving decision problems with stochastic dynamics, model uncertainty, and imperfect state information. Topics include: Bayesian networks, influence diagrams, dynamic programming, reinforcement learning, and partially observable Markov decision processes. Applications cover: air traffic control, aviation surveillance systems, autonomous vehicles, and robotic planetary exploration. Prerequisites: basic probability and fluency in a high-level programming language.

Same as: AA 228

**CS 239. Advanced Topics in Sequential Decision Making. 3-4 Units.**

Survey of recent research advances in intelligent decision making for dynamic environments from a computational perspective. Efficient algorithms for single and multiagent planning in situations where a model of the environment may or may not be known. Partially observable Markov decision processes, approximate dynamic programming, and reinforcement learning. New approaches for overcoming challenges in generalization from experience, exploration of the environment, and model representation so that these methods can scale to real problems in a variety of domains including aerospace, air traffic control, and robotics. Students are expected to produce an original research paper on a relevant topic. Prerequisites: AA 228/CS 238 or CS 221.

Same as: AA 229

**CS 240. Advanced Topics in Operating Systems. 3 Units.**

Recent research. Classic and new papers. Topics: virtual memory management, synchronization and communication, file systems, protection and security, operating system extension techniques, fault tolerance, and the history and experience of systems programming. Prerequisite: 140 or equivalent.

**CS 240H. Functional Systems in Haskell. 3-4 Units.**

Covers an array of practical issues and techniques that arise when building real-world systems in the Haskell programming language. Topics include the basics of Haskell, laziness, monads, parsers, testing and debugging, performance tuning, interfacing to native code, concurrency and I/O paradigms, language extensions, meta-programming, and applications to the web and security. Concepts will be reinforced through a few individual programming assignments followed by a larger team project. Prior familiarity with Haskell may be helpful but is not required. Prerequisites: CS106B or 106X.

**CS 241. Embedded Systems Workshop. 3 Units.**

Project-centric building hardware and software for embedded computing systems. Students work on an existing project of their own or join one of these projects. Syllabus topics will be determined by the needs of the enrolled students and projects. Examples of topics include: interrupts and concurrent programming, deterministic timing and synchronization, state-based programming models, filters, frequency response, and high-frequency signals, low power operation, system and PCB design, security, and networked communication. Prerequisite: CS107 (or equivalent).

**CS 242. Programming Languages. 3 Units.**

Central concepts in modern programming languages, impact on software development, language design trade-offs, and implementation considerations. Functional, imperative, and object-oriented paradigms. Formal semantic methods and program analysis. Modern type systems, higher order functions and closures, exceptions and continuations. Modularity, object-oriented languages, and concurrency. Runtime support for language features, interoperability, and security issues. Prerequisite: 107, or experience with Lisp, C, and an object-oriented language.

**CS 243. Program Analysis and Optimizations. 3-4 Units.**

Program analysis techniques used in compilers and software development tools to improve productivity, reliability, and security. The methodology of applying mathematical abstractions such as graphs, fixpoint computations, binary decision diagrams in writing complex software, using compilers as an example. Topics include data flow analysis, instruction scheduling, register allocation, parallelism, data locality, interprocedural analysis, and garbage collection. Prerequisites: 103 or 103B, and 107.

**CS 244. Advanced Topics in Networking. 3-4 Units.**

Classic papers, new ideas, and research papers in networking. Architectural principles: naming, addressing, routing; congestion control, traffic management, QoS; wireless and mobility; overlay networks and virtualization; network security; switching and routing; content distribution; and proposals for future Internet structures. Prerequisite: 144 or equivalent.

**CS 244B. Distributed Systems. 3 Units.**

Distributed operating systems and applications issues, emphasizing high-level protocols and distributed state sharing as the key technologies. Topics: distributed shared memory, object-oriented distributed system design, distributed directory services, atomic transactions and time synchronization, application-sufficient consistency, file access, process scheduling, process migration, and storage/communication abstractions on distribution, scale, robustness in the face of failure, and security. Prerequisites: CS 144 and CS 249A.

**CS 244C. Readings and Projects in Distributed Systems. 3-6 Units.**

Companion project option for 244B. Corequisite: 244B.

**CS 245. Database Systems Principles. 3 Units.**

File organization and access, buffer management, performance analysis, and storage management. Database system architecture, query optimization, transaction management, recovery, concurrency control. Reliability, protection, and integrity. Design and management issues. Prerequisites: 145, 161.

**CS 246. Mining Massive Data Sets. 3-4 Units.**

The course will discuss data mining and machine learning algorithms for analyzing very large amounts of data. The emphasis will be on Map Reduce as a tool for creating parallel algorithms that can process very large amounts of data. Topics include: Frequent itemsets and Association rules, Near Neighbor Search in High Dimensional Data, Locality Sensitive Hashing (LSH), Dimensionality reduction, Recommender Systems, Clustering, Link Analysis, Large-scale machine learning, Data streams, Analysis of Social-network Graphs, and Web Advertising. Prerequisites: At least one of CS107 or CS145; At least one of CS109 or STAT116, or equivalent.

**CS 246H. Mining Massive Data Sets Hadoop Lab. 1 Unit.**

Supplement to CS 246 providing additional material on Hadoop. Students will learn how to implement data mining algorithms using Hadoop, how to implement and debug complex MapReduce jobs in Hadoop, and how to use some of the tools in the Hadoop ecosystem for data mining and machine learning. Topics: Hadoop, MapReduce, HDFS, combiners, secondary sort, distributed cache, SQL on Hadoop, Hive, Cloudera ML/Oryx, Mahout, Hadoop streaming, implementing Hadoop jobs, debugging Hadoop jobs, TF-IDF, Pig, Sqoop, Oozie, HBase, Impala. Prerequisite: CS 107 or equivalent.

**CS 247. Human-Computer Interaction Design Studio. 3-4 Units.**

Project-based focus on interaction design process, especially early-stage design and rapid prototyping. Methods used in interaction design including needs analysis, user observation, sketching, concept generation, scenario building, and evaluation. Prerequisites: 147 or equivalent background in design thinking; 106B or equivalent background in programming. Recommended: CS 142 or equivalent background in web programming.

**CS 247L. Human Computer Interaction Technology Laboratory. 1 Unit.**

Hands-on introduction to contemporary HCI technologies. Interaction design with Adobe Flash, mobile development, physical computing, and web applications. Corequisite: 247.

**CS 248. Interactive Computer Graphics. 3-4 Units.**

This is the second course in the computer graphics sequence, and as such it assumes a strong familiarity with rendering and image creation. The course has a strong focus on computational geometry, animation, and simulation. Topics include splines, implicit surfaces, geometric modeling, collision detection, animation curves, particle systems and crowds, character animation, articulation, skinning, motion capture and editing, rigid and deformable bodies, and fluid simulation. As a final project, students implement an interactive video game utilizing various concepts covered in the class. Games may be designed on mobile devices, in a client/server/browser environment, or on a standard personal computer. Prerequisite: CS148.

**CS 249A. Object-Oriented Programming from a Modeling and Simulation Perspective. 3 Units.**

Topics: large-scale software development approaches for complex applications, class libraries and frameworks; encapsulation, use of inheritance and dynamic dispatch, design of interfaces and interface/implementation separation, exception handling, smart pointers and reference management, minimalizing dependencies and value-oriented programming. Inheritance: when and why multiple inheritance naming, directories, manager, and disciplined use of design patterns including functors, event notification and iterators. Prerequisites: C, C++, and programming methodology as developed in 106B or X, and 107 (107 may be taken concurrently). Recommended: 193D.

**CS 249B. Large-scale Software Development. 3 Units.**

Software engineering of high quality large-scale complex software with a focus on evolvability, performance and cost. Software development processes, people and practice; audit: integrating invariant checks with production software; concurrency with modular object-oriented programming; collection implementation; generic programming and templates; design of value types; named descriptions for large value types; memory management; controlling placement, locality and consumption; run-time vs. static type checking and identification.

**CS 251. Bitcoin and Crypto Currencies. 3 Units.**

For advanced undergraduates and for graduate students. The potential applications for Bitcoin-like technologies is enormous. The course will cover the technical aspects of crypto-currencies, blockchain technologies, and distributed consensus. Students will learn how these systems work and how to engineer secure software that interacts with the Bitcoin network and other crypto currencies. Prerequisite: CS110. Recommended: CS255.

**CS 251P. Bitcoin & Crypto Currencies Lab. 1 Unit.**

Bitcoin has the potential to change how payments are done on the Internet and beyond. In this class, you will build Bitcoin-powered versions of many of the most popular internet services. For example, you will build a search engine that takes in a small amount of bitcoin for each query, a social network that allows individuals to buy internet celebrity endorsements for bitcoin, and a content site that charges a small amount of bitcoin for each page view. In each case, we will show how Bitcoin micropayments can supplant or complement the traditional ad-supported model. The course is based on a weekly hackathon; each Monday you will receive some stub code illustrating the basic mechanics of a Bitcoin-powered internet service, and you will improve this as best you can as an individual or in a small group by the end of Sunday on that week. Winners of each week's hackathon will be recognized. Prerequisites: No previous Bitcoin knowledge is required. Students who have taken CS251 or CS251P will have more context, but this course is all new material. Recommended: Intensive programming experience at the level of CS107 or above.

**CS 255. Introduction to Cryptography. 3 Units.**

For advanced undergraduates and graduate students. Theory and practice of cryptographic techniques used in computer security. Topics: encryption (symmetric and public key), digital signatures, data integrity, authentication, key management, PKI, zero-knowledge protocols, and real-world applications. Prerequisite: basic probability theory.

**CS 261. Optimization and Algorithmic Paradigms. 3 Units.**

Algorithms for network optimization: max-flow, min-cost flow, matching, assignment, and min-cut problems. Introduction to linear programming. Use of LP duality for design and analysis of algorithms. Approximation algorithms for NP-complete problems such as Steiner Trees, Traveling Salesman, and scheduling problems. Randomized algorithms. Introduction to online algorithms. Prerequisite: 161 or equivalent.

**CS 262. Computational Genomics. 3 Units.**

Applications of computer science to genomics, and concepts in genomics from a computer science point of view. Topics: dynamic programming, sequence alignments, hidden Markov models, Gibbs sampling, and probabilistic context-free grammars. Applications of these tools to sequence analysis: comparative genomics, DNA sequencing and assembly, genomic annotation of repeats, genes, and regulatory sequences, microarrays and gene expression, phylogeny and molecular evolution, and RNA structure. Prerequisites: 161 or familiarity with basic algorithmic concepts. Recommended: basic knowledge of genetics. Same as: BIOMEDIN 262

**CS 263. Algorithms for Modern Data Models. 3 Units.**

We traditionally think of algorithms as running on data available in a single location, typically main memory. In many modern applications including web analytics, search and data mining, computational biology, finance, and scientific computing, the data is often too large to reside in a single location, is arriving incrementally over time, is noisy/uncertain, or all of the above. Paradigms such as map-reduce, streaming, sketching, Distributed Hash Tables, Bulk Synchronous Processing, and random walks have proved useful for these applications. This course will provide an introduction to the design and analysis of algorithms for these modern data models. Prerequisite: Algorithms at the level of CS 261. Same as: MS&E 317

**CS 265. Randomized Algorithms and Probabilistic Analysis. 3 Units.**

Randomness pervades the natural processes around us, from the formation of networks, to genetic recombination, to quantum physics. Randomness is also a powerful tool that can be leveraged to create algorithms and data structures which, in many cases, are more efficient and simpler than their deterministic counterparts. This course covers the key tools of probabilistic analysis, and application of these tools to understand the behaviors of random processes and algorithms. Emphasis is on theoretical foundations, though we will apply this theory broadly, discussing applications in machine learning and data analysis, networking, and systems. Topics include tail bounds, the probabilistic method, Markov chains, and martingales, with applications to analyzing random graphs, metric embeddings, random walks, and a host of powerful and elegant randomized algorithms. Prerequisites: CS 161 and STAT 116, or equivalents and instructor consent. Same as: CME 309

**CS 267. Graph Algorithms. 3 Units.**

An introduction to advanced topics in graph algorithms. Focusing on a variety of graph problems, the course will explore topics such as small space graph data structures, approximation algorithms, dynamic algorithms, and algorithms for special graph classes. Topics include: approximation algorithms for shortest paths and graph matching, distance oracles, graph spanners, cliques and graph patterns, dynamic algorithms, graph coloring, algorithms for planar graphs. Prerequisites: 161 or the equivalent mathematical maturity.

**CS 270. Modeling Biomedical Systems: Ontology, Terminology, Problem Solving. 3 Units.**

Methods for modeling biomedical systems and for making those models explicit in the context of building software systems. Emphasis is on intelligent systems for decision support and Semantic Web applications. Topics: knowledge representation, controlled terminologies, ontologies, reusable problem solvers, and knowledge acquisition. Recommended: exposure to object-oriented systems, basic biology. Same as: BIOMEDIN 210

**CS 272. Introduction to Biomedical Informatics Research Methodology. 3 Units.**

Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Because the team projects start in the first week of class, attendance that week is strongly recommended. Prerequisites: BIOMEDIN 210 or 211 or 214 or 217 or consent of instructor. Same as: BIOE 212, BIOMEDIN 212, GENE 212

**CS 273A. A Computational Tour of the Human Genome. 3 Units.**

Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing (technologies, assembly, personalized sequencing); functional landscape (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures from genomic researchers. No prerequisites. See <http://cs273a.stanford.edu/>. Same as: BIOMEDIN 273A, DBIO 273A

**CS 274. Representations and Algorithms for Computational Molecular Biology. 3-4 Units.**

Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.

Same as: BIOE 214, BIOMEDIN 214, GENE 214

**CS 275. Translational Bioinformatics. 4 Units.**

Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A and familiarity with statistics and biology.

Same as: BIOMEDIN 217

**CS 275A. Symbolic Musical Information. 2-4 Units.**

Focus on symbolic data for music applications including advanced notation systems, optical music recognition, musical data conversion, and internal structure of MIDI files.

Same as: MUSIC 253

**CS 275B. Music Query, Analysis, and Style Simulation. 2-4 Units.**

Leveraging off three synchronized sets of symbolic data resources for notation and analysis, the lab portion introduces students to the open-source Humdrum Toolkit for music representation and analysis. Issues of data content and quality as well as methods of information retrieval, visualization, and summarization are considered in class. Grading based primarily on student projects. Prerequisite: 253 or consent of instructor.

Same as: MUSIC 254

**CS 276. Information Retrieval and Web Search. 3 Units.**

Text information retrieval systems; efficient text indexing; Boolean, vector space, and probabilistic retrieval models; ranking and rank aggregation; evaluating IR systems. Text clustering and classification: classification algorithms, latent semantic indexing, taxonomy induction; Web search engines including crawling and indexing, link-based algorithms, and web metadata. Prerequisites: CS 107, CS 109, CS 161.

Same as: LINGUIST 286

**CS 277. Experimental Haptics. 3 Units.**

Computer haptics is the discipline of synthesizing touch feedback in simulated or virtual environments. Course objective is to study and develop computational methods for generating force feedback through haptic interfaces. Theoretical topics: haptic rendering in 3-D virtual environments, simulation of haptic interaction with rigid and deformable objects, haptic interfaces, psychophysics of touch. Applied topics: CHAI3D haptic library, implementation of algorithms for haptic rendering, collision detection, and deformable body simulation. Guest speakers; Lab/programming exercises; open-ended final project. Enrollment limited to 20. Prerequisite: experience with C++. Recommended: 148 or 248, 223A.

**CS 279. Computational Biology: Structure and Organization of Biomolecules and Cells. 3 Units.**

Computational approaches to understanding the three-dimensional spatial organization of biological systems and how that organization evolves over time. The course will cover cutting-edge research in both physics-based simulations and computational analysis of experimental data, at scales ranging from individual molecules to multiple cells. Prerequisites: elementary programming background (106A or equivalent) and an introductory course in biology or biochemistry. Same as: BIOMEDIN 279, BIOPHYS 279, CME 279

**CS 294A. Research Project in Artificial Intelligence. 3 Units.**

Student teams under faculty supervision work on research and implementation of a large project in AI. State-of-the-art methods related to the problem domain. Prerequisites: AI course from 220 series, and consent of instructor.

**CS 294H. Research Project in Human-Computer Interaction. 3 Units.**

Student teams under faculty supervision work on research and implementation of a large project in HCI. State-of-the-art methods related to the problem domain. Prerequisites CS 377, 147, 247, or permission from instructor.

**CS 294S. Research Project in Software Systems and Security. 3 Units.**

Topics vary. Focus is on emerging research themes such as programmable open mobile Internet that spans multiple system topics such as human-computer interaction, programming systems, operating systems, networking, and security. May be repeated for credit. Prerequisites: CS 103 and 107.

**CS 294W. Writing Intensive Research Project in Computer Science. 3 Units.**

Restricted to Computer Science and Computer Systems Engineering undergraduates. Students enroll in the CS 294W section attached to the CS 294 project they have chosen.

**CS 295. Software Engineering. 2-3 Units.**

Software specification, testing, and verification. Emphasis is on current best practices and technology for developing reliable software at reasonable cost. Assignments focus on applying these techniques to realistic software systems. Prerequisites: 108. Recommended a project course such as 140, 143, or 145.

**CS 300. Departmental Lecture Series. 1 Unit.**

Priority given to first-year Computer Science Ph.D. students. CS Masters students admitted if space is available. Presentations by members of the department faculty, each describing informally his or her current research interests and views of computer science as a whole.

**CS 309. Industrial Lectureships in Computer Science. 1 Unit.**

Guest computer scientist. By arrangement. May be repeated for credit.

**CS 309A. Cloud Computing. 1 Unit.**

For science, engineering, business, medicine, and law students. Cloud computing is bringing information systems out of the back office and making it core to the entire economy. This class is intended for all students who want to begin to understand the implications of this shift in technology. Guest industry experts are public company CEOs who are delivering application, software development, operations management, compute, storage & data center, and network cloud services.

**CS 315A. Parallel Computer Architecture and Programming. 3 Units.**

The principles and tradeoffs in the design of parallel architectures. Emphasis is on naming, latency, bandwidth, and synchronization in parallel machines. Case studies on shared memory, message passing, data flow, and data parallel machines illustrate techniques. Architectural studies and lectures on techniques for programming parallel computers. Programming assignments on one or more commercial multiprocessors. Prerequisites: EE 282, and reasonable programming experience.

**CS 315B. Parallel Computing Research Project. 3 Units.**

Advanced topics and new paradigms in parallel computing including parallel algorithms, programming languages, runtime environments, library debugging/tuning tools, and scalable architectures. Research project. Prerequisite: consent of instructor.

**CS 316. Advanced Multi-Core Systems. 3 Units.**

In-depth coverage of the architectural techniques used in modern, multi-core chips for mobile and server systems. Advanced processor design techniques (superscalar cores, VLIW cores, multi-threaded cores, energy-efficient cores), cache coherence, memory consistency, vector processors, graphics processors, heterogeneous processors, and hardware support for security and parallel programming. Students will become familiar with complex trade-offs between performance-power-complexity and hardware-software interactions. A central part of CS316 is a project on an open research question on multi-core technologies. Prerequisites: EE 180 (formerly 108B). Recommended: CS 149, EE 282.

**CS 319. Topics in Digital Systems. 3 Units.**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

**CS 325. Topics in Computational Sustainability. 3 Units.**

Computational Sustainability focuses on developing computational models, methods and tools for sustainable development. In this course, we will study recent computational approaches that have contributed to addressing sustainability topics related to biodiversity, climate, environment, urban design, transportation, buildings and others. Computational themes include machine learning, optimization, statistical modeling, and data mining.

**CS 327A. Advanced Robotic Manipulation. 3 Units.**

Advanced control methodologies and novel design techniques for complex human-like robotic and bio mechanical systems. Class covers the fundamentals in operational space dynamics and control, elastic planning, human motion synthesis. Topics include redundancy, inertial properties, haptics, simulation, robot cooperation, mobile manipulation, human-friendly robot design, humanoids and whole-body control. Additional topics in emerging areas are presented by groups of students at the end-of-quarter mini-symposium. Prerequisites: 223A or equivalent.

**CS 328. Topics in Computer Vision. 3 Units.**

Fundamental issues of, and mathematical models for, computer vision. Sample topics: camera calibration, texture, stereo, motion, shape representation, image retrieval, experimental techniques. May be repeated for credit. Prerequisites: 205, 223B, or equivalents.

**CS 329. Topics in Artificial Intelligence. 3 Units.**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

**CS 331A. Advanced Reading in Computer Vision. 3 Units.**

(Formerly CS323) The field of computer vision has seen an explosive growth in past decade. Much of recent effort in vision research is towards developing algorithms that can perform high-level visual recognition tasks on real-world images and videos. With development of Internet, this task becomes particularly challenging and interesting given the heterogeneous data on the web. Course will focus on reading recent research papers that are focused on solving high-level visual recognition problems, such as object recognition and categorization, scene understanding, human motion understanding, etc. Project required. Prerequisite: some experience in research with one of the following fields: computer vision, image processing, computer graphics, machine learning.

**CS 331B. 3D Representation and Recognition. 3 Units.**

The course surveys recent developments in high level and 3D computer vision and will focus on reading recent research papers on topics related to 3D object recognition and representation, spatial inference, activity understanding, human vision and 3D perception. The course is inspired by a famous series of workshops (called 3d-RR) which have been offered during the International Conference in Computer Vision (ICCV) since 2007. Prerequisites - Some experience in research with one of the following fields: computer vision, image processing, computer graphics, machine learning.

**CS 334A. Convex Optimization I. 3 Units.**

Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as EE263, basic probability.

Same as: CME 364A, EE 364A

**CS 340. Topics in Computer Systems. 3-4 Units.**

Topics vary every quarter, and may include advanced material being taught for the first time. May be repeated for credit.

**CS 341. Project in Mining Massive Data Sets. 3 Units.**

Team project in data-mining of very large-scale data, including the problem statement and implementation and evaluation of a solution. Teams consist of three students each, and they will meet regularly with a "coach" chosen from participating staff. Early lectures will cover the use of Amazon EC2 and certain systems like Hadoop and Hive. Occasional lectures thereafter will feature outside speakers, special topics of interest, and progress reports by the teams.

**CS 344. Topics in Computer Networks. 3 Units.**

High-performance embedded system design. Student teams of two software engineers (C experience required) and one hardware engineer (Verilog experience required) build a fully functioning Internet router. Work in teams of three. How router interoperates with others in class. Open-ended design challenge judged by panel of industry experts. Prerequisites: CS 144, 244, or network programming experience.

**CS 344E. Advanced Wireless Networks. 3 Units.**

Networking research in wireless systems. Topics include: multi-channel/multi-radio systems, routing, coding, physical layer hints, low power, mesh networking, interference cancellation, technological trends, and protocol design. Students implement and test research ideas on SWAN, a WiFi testbed.

**CS 344G. Network Application Studio. 3 Units.**

Graduate project class on computer networking, emphasizing end-to-end applications and protocols. Students will propose and execute an original project in teams of 2-3, culminating in a final writeup and presentation/demonstration. Each week, students will read, present, and lead a discussion about a seminal paper or system. Prerequisites: programming experience.

**CS 346. Database System Implementation. 3-5 Units.**

A major database system implementation project realizes the principles and techniques covered in earlier courses. Students independently build a complete database management system, from file structures through query processing, with a personally designed feature or extension. Lectures on project details and advanced techniques in database system implementation, focusing on query processing and optimization. Guest speakers from industry on commercial DBMS implementation techniques. Prerequisites: 145, 245, programming experience in C++.

**CS 347. Parallel and Distributed Data Management. 3 Units.**

The principles and system organization of distributed and parallel databases. Data fragmentation and distribution, distributed database design, query processing and optimization, distributed concurrency control, reliability and commit protocols, and replicated data management. Data management in peer-to-peer systems. Data management in the "cloud" using map-reduce and other massive parallelism techniques.

**CS 348A. Computer Graphics: Geometric Modeling. 3-4 Units.**

The mathematical tools needed for the geometrical aspects of computer graphics and especially for modeling smooth shapes. Fundamentals: homogeneous coordinates, transformations, and perspective. Theory of parametric and implicit curve and surface models: polar forms, Bézier arcs and de Casteljau subdivision, continuity constraints, B-splines, tensor product, and triangular patch surfaces. Subdivision surfaces and multi-resolution representations of geometry. Representations of solids and conversions among them. Surface reconstruction from scattered data points. Geometry processing on meshes, including simplification and parameterization. Prerequisite: linear algebra. Recommended: 248.

**CS 348B. Computer Graphics: Image Synthesis Techniques. 3-4 Units.**

Intermediate level, emphasizing high-quality image synthesis algorithms and systems issues in rendering. Topics include: Reyes and advanced rasterization, including motion blur and depth of field; ray tracing and physically based rendering; Monte Carlo algorithms for rendering, including direct illumination and global illumination; path tracing and photon mapping; surface reflection and light source models; volume rendering and subsurface scattering; SIMD and multi-core parallelism for rendering. Written assignments and programming projects. Prerequisite: 248 or equivalent. Recommended: Fourier analysis or digital signal processing.

**CS 349. Topics in Programming Systems. 3 Units.**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

**CS 349C. Topics in Programming Systems: Readings in Distributed Systems. 1-3 Unit.**

Discussion of research publications that are of current interest in distributed systems. Students are expected to read all papers, and sign up for presentation of one paper. The course itself is 1 unit. Those interested in working on a project along with the readings should enroll for 3 units.

**CS 354. Topics in Circuit Complexity. 3 Units.**

An overview of circuit complexity, focusing on limitations of solving computational problems with circuits. Classical methods: diagonalization; the gate elimination method and circuit size lower bounds; the method of random restrictions and formula size lower bounds; approximating circuits with polynomials and depth-restricted lower bounds. Connections between circuit-analysis algorithms and circuit complexity: learning circuits via queries; pseudorandomness and derandomization; satisfiability algorithms. Prerequisite: CS254 or the equivalent mathematical maturity.

**CS 357. Advanced Topics in Formal Methods. 3 Units.**

Topics vary annually. Recent offerings have covered the foundations of static analysis, including decision procedures for important theories (SAT, linear integer constraints, SMT solvers), model checking, abstract interpretation, and constraint-based analysis. May be repeated for credit. Prerequisite: 256.

**CS 358. Topics in Programming Language Theory. 3 Units.**

Topics of current research interest in the mathematical analysis of programming languages, structured operational semantics, domain theory, semantics of concurrency, rich type disciplines, problems of representation independence, and full abstraction. See Time Schedule or Axxess for current topics. May be repeated for credit. Prerequisites: 154, 157, 258, or equivalents. (Staff).

**CS 359. Topics in the Theory of Computation. 3 Units.**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

**CS 364A. Algorithmic Game Theory. 3 Units.**

Topics at the interface of computer science and game theory such as: algorithmic mechanism design; combinatorial auctions; computation of Nash equilibria and relevant complexity theory; congestion and potential games; cost sharing; game theory and the Internet; matching markets; network formation; online learning algorithms; price of anarchy; prior-free auctions; selfish routing; sponsored search. Prerequisites: 154N and 161, or equivalents.

**CS 367. Algebraic Graph Algorithms. 3 Units.**

Due to the surprisingly fast algorithms for the problem, matrix multiplication is routinely used as a basic building block for algorithms beating the brute-force approach. This course explores matrix multiplication algorithms and a variety of problems, mostly within graph algorithms, that can be solved faster using a fast matrix multiplication algorithm. Topics include: Fast Matrix Multiplication, algebraic algorithms for Graph Transitive Closure, All Pairs Shortest Paths and variants of the problem, Perfect Matching and Minimum Cycle, and a variety of equivalences between problems involving matrix multiplication. Prerequisites: CS154, CS161, or the equivalent mathematical maturity.

**CS 369. Topics in Analysis of Algorithms. 3 Units.**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

**CS 369A. Topics in Analysis of Algorithms: Advanced Approximation Algorithms. 3 Units.**

Optimization problems are ubiquitous, yet most are NP-hard to solve exactly. One popular approach to circumvent this intractability is to design approximation algorithms, i.e. efficient algorithms that produce solutions with value close to the optimum. This course will cover major advances in the field of approximation algorithms in the past decade or so. Prerequisites: Students will be expected to have a strong background in algorithms and probability. Familiarity with basic approximation algorithms (or permission of instructor).

**CS 369L. Theoretical Perspective on Machine Learning. 3 Units.**

Many problems in machine learning are intractable in the worst case, and pose a challenge for the design of algorithms with provable guarantees. In this course, we will discuss several success stories at the intersection of algorithm design and machine learning, focusing on devising appropriate models and mathematical tools to facilitate rigorous analysis. Prerequisites: A strong background in algorithms, probability and linear algebra.

**CS 371. Computational Biology in Four Dimensions. 3 Units.**

Computational approaches to understanding the three-dimensional spatial organization of biological systems and how that organization evolves over time. The course will cover cutting-edge research in both physics-based simulation and computational analysis of experimental data, at scales ranging from individual molecules to entire cells. Prerequisite: CS 106A or equivalent, and an introductory course in biology or biochemistry. Recommended: some experience in mathematical modeling (does not need to be a formal course). Same as: BIOMEDIN 371, BIOPHYS 371, CME 371

**CS 373. Statistical and Machine Learning Methods for Genomics. 3 Units.**

Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets. Same as: BIO 268, BIOMEDIN 245, GENE 245, STATS 345

**CS 374. Algorithms in Biology. 2-3 Units.**

Algorithms and computational models applied to molecular biology and genetics. Topics vary annually. Possible topics include biological sequence comparison, annotation of genes and other functional elements, molecular evolution, genome rearrangements, microarrays and gene regulation, protein folding and classification, molecular docking, RNA secondary structure, DNA computing, and self-assembly. May be repeated for credit. Prerequisites: 161, 262 or 274, or BIOCHEM 218, or equivalents. Same as: BIOMEDIN 374

**CS 376. Human-Computer Interaction Research. 3-4 Units.**

Prepares students to conduct original HCI research by reading and discussing seminal and cutting-edge research papers. Main topics are ubiquitous computing, social computing, and design and creation; breadth topics include HCI methods, programming, visualization, and user modeling. Student pairs perform a quarter-long research project. Prerequisites: For CS and Symbolic Systems undergraduates/masters students, CS 147 or CS 247. No prerequisite for PhD students or students outside of CS and Symbolic Systems.

**CS 377. Topics in Human-Computer Interaction. 2-3 Units.**

Contents change each quarter. May be repeated for credit. See <http://hci.stanford.edu/academics> for offerings.

**CS 377D. Topics in Learning and Technology: d.compress - Designing Calm. 3 Units.**

Contents of the course change each year. The course can be repeated. Stress silently but steadily damages physical and emotional well-being, relationships, productivity, and our ability to learn and remember. This highly experiential and project-oriented class will focus on designing interactive technologies to enable calm states of cognition, emotion, and physiology for better human health, learning, creativity and productivity. Same as: EDUC 328A

**CS 377E. Designing Solutions to Global Grand Challenges. 3-4 Units.**

In this course we will creatively apply information technologies to collectively attack Global Grand Challenges (e.g., global warming, rising healthcare costs and declining access, and ensuring quality education for all). Interdisciplinary student teams will carry out needfinding within a target domain, followed by brainstorming to propose a quarter long project. Teams will spend the rest of the quarter applying user-centered design methods to rapidly iterate through design, prototyping, and testing of their solutions. This course will interleave a weekly lecture with a weekly studio session where students apply the techniques hands-on in a small-scale, supportive environment.

**CS 377U. Understanding Users. 3-4 Units.**

This project-based class focuses on understanding the use of technology in the world. Students will learn generative and evaluative research methods to explore how systems are appropriated into everyday life in a quarter-long project where they design, implement and evaluate a novel mobile application. Quantitative (e.g. A/B testing, instrumentation, analytics, surveys) and qualitative (e.g. diary studies, contextual inquiry, ethnography) methods and their combination will be covered along with practical experience applying these methods in their project. Prerequisites: CS 147, 193A/193P (or equivalent mobile programming experience).

**CS 377W. HCI Issues in Wearable Computing. 3 Units.**

With devices like Pebble and Google Glass moving from labs to consumer use, Wearable Computing represents the forefront of HCI innovation. In this course, students will engage with a broad range of issues around the design and development of wearable devices and systems and develop their own wearable interaction. The course begins with use, analysis, and redesign of an existing wearable, followed by a larger group project integrating concepts from the course to prototype a novel wearable interaction. Students work in project teams, prototyping their wearable concept and communicating their progress through demonstration, final report, and presentation. Google Glass will be available for students interested in experimenting with this platform. Prerequisites: One of the following: CS 147 or CS 247.

**CS 379. Interdisciplinary Topics. 3 Units.**

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

**CS 390A. Curricular Practical Training. 1 Unit.**

Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390 A, B, and C may each be taken once.

**CS 390B. Curricular Practical Training. 1 Unit.**

Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390A,B,C may each be taken once.

**CS 390C. Curricular Practical Training. 1 Unit.**

Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390A,B,C may each be taken once.

**CS 390P. Part-time Curricular Practical Training. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 390Q. Part-Time Curricular Practical Training. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 390R. Part-Time Curricular Practical Training. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 390S. Part-Time CPT. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 390T. Part-Time CPT. 1 Unit.**

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

**CS 393. Computer Laboratory. 1-9 Unit.**

For CS graduate students. A substantial computer program is designed and implemented; written report required. Recommended as a preparation for dissertation research. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

**CS 395. Independent Database Project. 1-6 Unit.**

For graduate students in Computer Science. Use of database management or file systems for a substantial application or implementation of components of database management system. Written analysis and evaluation required. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

**CS 399. Independent Project. 1-9 Unit.**

Letter grade only.

**CS 399P. Independent Project. 1-9 Unit.**

Graded satisfactory/no credit.

**CS 402. Beyond Bits and Atoms: Designing Technological Tools. 3-4 Units.**

Practicum in designing and building technology-enabled curricula and hands-on learning environments. Students use software toolkits and state-of-the-art fabrication machines to design educational software, educational toolkits, and tangible user interfaces. The course will focus on designing low-cost technologies, particularly for urban school in the US and abroad. We will explore theoretical and design frameworks from the constructionist learning perspective, critical pedagogy, interaction design for children.

Same as: EDUC 236

**CS 402L. Beyond Bits and Atoms - Lab. 1-3 Unit.**

This course is a hands-on lab in the prototyping and fabrication of tangible technologies, with a special focus in learning and education. We will learn how to use state-of-the-art fabrication machines (3D printers, 3D scanners, laser cutters, routers) to design educational toolkits, educational toys, science kits, and tangible user interfaces. A special focus of the course will be to design low-cost technologies, particularly for urban school in the US and abroad.

Same as: EDUC 211

**CS 424M. Learning Analytics and Computational Modeling in Social Science. 3-4 Units.**

Computational modeling and data-mining are dramatically changing the physical sciences, and more recently also the social and behavioral sciences. Traditional analysis techniques are insufficient to investigate complex dynamic social phenomena as social networks, online gaming, diffusion of innovation, opinion dynamics, classroom behavior, and other complex adaptive systems. In this course, we will learn about how modeling, network theory, and basic data-mining can support research in cognitive, and social sciences, in particular around issues of learning, cognitive development, and educational policy.

Same as: EDUC 390

**CS 431. High-Level Vision: Object Representation. 3 Units.**

(Formerly CS423 High-Level Vision: Behaviors, Neurons, and Computational Models) Interdisciplinary seminar focusing on understanding how computations in the brain enable rapid and efficient object perception. Covers topics from multiple perspectives drawing on recent research in Psychology, Neuroscience, Computer Science and Applied Statistics. Emphasis on discussing recent empirical findings, methods and theoretical debates in the field. Topics include: theories of object perception, neural computations underlying invariant object perception, how visual exemplars and categories are represented in the brain, what information is present in distributed activations across neural populations and how it relates to object perception, what modern statistical and analytical tools there are for multi-variate analysis of brain activations.

Same as: PSYCH 250

**CS 448. Topics in Computer Graphics. 3-4 Units.**

Topic changes each quarter. Recent topics: computational photography, datanvisualization, character animation, virtual worlds, graphics architectures, advanced rendering. See <http://graphics.stanford.edu/courses> for offerings and prerequisites. May be repeated for credit.

**CS 448B. Data Visualization. 3 Units.**

Techniques and algorithms for creating effective visualizations based on principles from graphic design, visual art, perceptual psychology, and cognitive science. Topics: graphical perception, data and image models, visual encoding, graph and tree layout, color, animation, interaction techniques, automated design. Lectures, reading, and project. Prerequisite: one of 147, 148, or equivalent.

**CS 448H. Topics in Computer Graphics: Domain-Specific Languages for Graphics, Imaging, and Beyond. 3 Units.**

Topic changes each quarter. Recent topics: computational photography, data visualization, character animation, virtual worlds, graphics architectures, advanced rendering. See <http://graphics.stanford.edu/courses> for offerings and prerequisites. May be repeated for credit.

**CS 448I. Computational Imaging and Display. 3 Units.**

Spawned by rapid advances in optical fabrication and digital processing power, a new generation of imaging technology is emerging: computational cameras at the convergence of applied mathematics, optics, and high-performance computing. Similar trends are observed for modern displays pushing the boundaries of resolution, contrast, 3D capabilities, and immersive experiences through the co-design of optics, electronics, and computation. This course serves as an introduction to the emerging field of computational imaging and displays. Students will learn to master bits and photons.

Same as: EE 367

**CS 448J. Concepts and Algorithms of Scientific and Visual Computing. 3 Units.**

This course covers a selection of fundamental concepts and algorithms for scientific and visual computing. Based on prior knowledge in basis calculus, linear algebra, numerical interpolation and optimization, this course introduces the concept of the phase space, variational principles, methods for ordinary and partial differential equations, Fourier analysis, and multi-scale modeling. The lecture is algorithmically oriented, aiming to enable the students to develop efficient solutions for practically relevant problems, based on solid theoretical foundations and mathematically precise modeling. It covers practical applications, like the simulation of rigid and deformable objects, fibers, fluids, molecular dynamics, signal/image analysis and processing, as well as wavelet-based modeling on different scales. Prerequisites: Basic knowledge such as taught in MATH 41, MATH 42, CS 103, or CS 205A.

**CS 448Z. Physically Based Animation and Sound. 3-4 Units.**

Intermediate level, emphasizing physically based simulation techniques for computer animation and synchronized sound synthesis. Topics vary from year to year, but include integrated approaches to visual and auditory simulation of rigid bodies, deformable solids, collision detection and contact resolution, fracture, fluids and gases, and virtual characters. Written assignments and programming projects. Prerequisite: None. Recommended: Computer graphics (CS 148 and CS 248), and/or scientific computing (CS 205).

**CS 476A. Music, Computing, Design I: Art of Design for Computer Music. 3-4 Units.**

Creative design for computer music software. Programming, audiovisual design, as well as software design for musical tools, instruments, toys, and games. Provides paradigms and strategies for designing and building music software, with emphases on interactive systems, aesthetics, and artful product design. Course work includes several programming assignments and a "design+implement" final project. Prerequisite: experience in C/C++ and/or Java.

Same as: MUSIC 256A

**CS 476B. Music, Computing, Design II: Virtual and Augmented Reality for Music. 3-4 Units.**

Aesthetics, design, and exploration of creative musical applications of virtual reality (VR) and augmented reality (AR), centered around VR and mobile technologies. Comparison between AR, VR, and traditional software design paradigms for music. Topics include embodiment, interaction design, novel instruments, social experience, software design + prototyping. Prerequisite: MUSIC 256A / CS 476A.

Same as: MUSIC 256B

**CS 499. Advanced Reading and Research. 1-15 Unit.**

Letter grade only. Advanced reading and research for CS graduate students. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

**CS 499P. Advanced Reading and Research. 1-15 Unit.**

Graded satisfactory/no credit. Advanced reading and research for CS graduate students. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

**CS 546. Seminar on Liberation Technologies. 1 Unit.**

This one-unit seminar will present speakers relevant in a variety of ways to how various forms of information technology are being used to defend human rights, improve governance, deepen democracy, empower the poor, promote economic development, protect the environment, enhance public health, and pursue a variety of other social goods.

**CS 547. Human-Computer Interaction Seminar. 1 Unit.**

Weekly speakers on human-computer interaction topics. May be repeated for credit.

**CS 548. Internet and Distributed Systems Seminar. 1 Unit.**

Guest speakers from academia and industry. May be repeated for credit.

**CS 549. Human-Computer Interaction in the Real World. 1 Unit.**

Intended for students who are pursuing a focus on HCI, this course focuses on showing students how HCI gets applied in industry across different types of companies. The course consists of on-site visits to large companies (for example Google, Yahoo, Square, Tesla) and to startups to talk to the HCI practitioners at these companies and learn first hand how HCI and design fits in at different companies. The objective of this class is to have students understand how HCI practitioners fit into organizations, the roles they play, and what skills they need in the real world to be able to do their magic.

**CS 571. Surgical Robotics Seminar. 1 Unit.**

Surgical robots developed and implemented clinically on varying scales. Seminar goal is to expose students from engineering, medicine, and business to guest lecturers from academia and industry. engineering and clinical aspects connected to design and use of surgical robots, varying in degree of complexity and procedural role. May be repeated for credit. Same as: ME 571

**CS 801. TGR Project. 0 Units.****CS 802. TGR Dissertation. 0 Units.****Dance Courses****DANCE 13AX. Ballet Intensive. 2 Units.**

Rigorous daily practice that will challenge and expand students' understanding of and perspective on the art form. Focus on strengthening technique, exploring ballet as an expressive form and performing art, and developing an artistic voice.

**DANCE 14AX. Modern Dance: Traditions of Creation. 2 Units.**

Interested in putting your hands in the clay? In this hands-on course, dancers will investigate and re-choreograph some of Robert Moses' signature works. Robert and long-term dancers in his company, Robert Moses' Kin, will collaboratively guide students in intensive studio sessions as they revisit the significant issues, techniques, and directions in such seminal works as Word of Mouth, The Soft Sweet Smell of Firm Warm Things, and Helen. Elements used to create the works will be re-investigated and re-framed through the lens of the students' experience and perspective. Students will coordinate a showcase of excerpts of their remolded choreography. This class will utilize the language of Robert Moses' repertory to train dancers in the basics of Moses' movement vocabulary. Students will improve and reinforce technical proficiency, artistic range, and performance skills. In addition, students will expand their movement range and vocabulary in a manner that demonstrates an increase in strength, agility, flexibility, and endurance through classical ballet and contemporary modern dance techniques.

**DANCE 23. Movement and Meaning: Dance Studies in Global Comparative Context. 4 Units.**

This course introduces students to various approaches to studying dance in a humanities context. We will explore how people create meaning through dance and how dance, in turn, shapes social norms, political institutions, and cultural practices across time and space. The course's structure challenges the Western/non-Western binary that still pervades many academic disciplines by comparing dance forms across the globe on the basis of functional similarities. At the same time, we will keep in mind the unequal power hierarchies shaping our modern world, and therefore we will examine how and why certain forms have become delineated as 'Western' and others as 'world' or 'ethnic,' despite similarities in movement, meaning, or purpose. Same as: CSRE 159M, TAPS 159M, TAPS 259M

**DANCE 24. Introduction to Dance in the African Diaspora. 4 Units.**

This course introduces students to dance as an important cultural force in the African Diaspora. From capoeira in Brazil to dance hall in Jamaica to hip hop in the United States and Ghana, we will analyze dance as a form of resistance to slavery, colonialism, and oppression; as an integral component of community formation; and as a practice that shapes racial, gendered, and national identity. We will explore these topics through readings, film viewings, and movement workshops (no previous dance experience required). Students will have the option to do a creative performance as part of their final project. Same as: AFRICAAM 24, CSRE 24D, TAPS 152D

**DANCE 25. Studio to Stage. 1 Unit.****DANCE 26. Dance and at the African Diaspora. 4 Units.**

Same as: TAPS 155M

**DANCE 27. Faculty Choreography. 1 Unit.****DANCE 28. Integrated Dance: Dance and Disability Class. 1 Unit.**

Stanford Lecturer and Choreographer Alex Ketley has had a long history working on dance pieces integrating dance for people with and without disability. The politics involved in working with dance and performance as it functions in the realm of disability are very potent. Society has inherent prejudices and fears when it comes to disability, and engaging this directly through the creation of dance pieces is a way to challenge assumptions of who can dance, and what a dancing body can look like. The class will function as a studio class, where dancers with and without disability will learn choreography as well as different improvisational and collaborative strategies towards the goal of the creation of a new dance work. Discussions and reading will also be involved around the topic of how the body, in all its different configurations, lends itself and informs artistic exploration and creation. Any questions can be directed to Lecturer Alex Ketley at [aketley@stanford.edu](mailto:aketley@stanford.edu).

**DANCE 30. Chocolate Heads Movement Band Performance Workshop. 2 Units.**

Students from diverse dance styles (ballet to hip-hop to contemporary) participate in the dance-making/remix process and collaborate with musicians, visual artists, designers and spoken word artists, to co-create multidisciplinary fully produced production and installation. Open to student artists of different genres, styles, disciplines and levels. By audition and/or discussion with the instructor.

Same as: AFRICAAM 37

**DANCE 31. Chocolate Heads Performance. 2 Units.**

Students who participate in the Chocolate Head-Space will engage in a dance and music activities and collaborative crowd-sourced performance on the Stanford campus. A mobile app using GPS data would be implemented to fellow Chocolate Heads students-- prompting them to engage, perform and collaborate with others in that space. Students (and audiences) would be encouraged to learn a piece (or multiple pieces with friends) and record themselves performing in a different places on campus. No prior experience is required.

**DANCE 32. Choreography for Evita. 1-3 Unit.**

In this course, students will be given the opportunity to be part of the development of choreography for the Stanford TAPS Spring production of Evita. They will learn about tango, salsa, musical theater dance and waltz as we construct combinations and pieces that will ultimately go into the show. Auditions for Evita will take place in week 1 of winter, but students enrolled in the course need not be in the cast to participate. On the flipside, students hoping to be cast are strongly encouraged to consider enrolling in the course. No previous dance experience is required.

**DANCE 33. The Critic as Artist. 3 Units.**

Criticism is art. It therefore must aspire to reach the heights, depths and strange in-betweens it grapples with in the art of others. Yet criticism owes a singular responsibility to these others, and to the wider culture it seeks to interrogate. Our interrogation will be generated by dance and performance criticism, with possible forays into live visual art, theater, hybrid forms and whatever else we think might suit our purposes. Various methodologies will be debated and employed throughout the semester, as students are encouraged to begin (or continue) developing personal philosophies and voices through their writing. Our meetings will be hands-on affairs, guided by student experiments. ¿Experiments¿ is a key word¿this class will function like a laboratory, an introduction to an unruly literary art form that is open to all individuals with an interest in better understanding themselves and their world through words and art. Same as: TAPS 151D

**DANCE 34. GAGA. 1 Unit.**

Gaga is a movement language created by the Israeli choreographer Ohad Naharin. It is the main mode of training for the Batsheva Dance Company in Tel Aviv, Israel, which is directed by Naharin. Gaga provides the person with an experience of freedom and pleasure while emphasizing sensation through a wide variety of multi-textured movements. The Gaga language is dynamic, fluid, and continually evolving. It connects you to your groove, passion, and physicality. Guest instructor Bobbi Jene Smith is a former dancer with the internationally acclaimed Batsheva Dance Company, and a principal collaborator in the works of choreographer Ohad Naharin, as well as one of the world's most recognized teachers of GaGa and Naharin repertory.

**DANCE 35. Choreography and Textures. 1 Unit.**

An introductory class in exploring the different ways of approaching choreography. Bobbi will create an original work on the students through out the term that will focus on the cognitive and emotional experience of movement. Guest instructor Bobbi Jene Smith is a former dancer with the internationally acclaimed Batsheva Dance Company, and a principal collaborator in the works of choreographer Ohad Naharin, as well as one of the world's most recognized teachers of GaGa and Naharin repertory.

**DANCE 36. Scene in Action Performance Workshop. 1 Unit.**

This singular performance opportunity and workshop is inspired by the stunning abstract expressionist art found in the Anderson Collection at Stanford opening in fall 2014 that includes Robert Frank's photography at the Cantor, and the special Anderson Collection of abstract expressionist paintings shown in the brand new Anderson building at Stanford. The period between the 1950's and early 1960's was a rich time for painting, dance, music, conceptual and interdisciplinary art movements. Through this course we will consider how contemporary dancers/musicians/models/performers might express these ideas as a direct response the impulses seen and felt in the art of this period. The objective is to consider and integrate historical and contemporary ideas into the choreography, music and fashion performance. Culminating performance installation will be presented during the fall quarter 2 nights – October 29th and October 30th, 2014 at the Cantor Arts Center and at the Anderson Collection – in celebration and commemoration of the openings of the Robert Frank exhibition and the Abstract Expressionists art collection.

**DANCE 37. Beginning Lyric Contemporary. 1 Unit.**

Lyric Contemporary appeals to the creative mover with little or no experience in dance and will focus on developing a fluid coordinated dancer. The work in this course does not assume a technical or conceptual proficiency in any dance form. It does presume you have some interest in dance forms including Jazz, Hip Hop, Ballet, and Modern or at least have a strong interest in one or more of the arts. This class deals with the notion of movement as a mode of expression. We will try to find ways through movement to render as clearly as possible concepts central to the human experience.

**DANCE 39. Intro/Beginning Contemporary Modern. 1 Unit.**

Beginning Modern Dance appeals to the beginning mover with little or no experience in dance and will focus on developing a coordinated and technical dancer. We will use exercises from Limon, Cunningham, and Ballet techniques in training, but will not focus on any one-dance form. This class deals with the notion of movement as a mode of expression. We will try to find ways through movement to render as clearly as possible concepts central to the human experience.

**DANCE 43. Liquid Flow: Introduction to Contemporary Dance and Dance-making. 1 Unit.**

This introductory dance course combines the fundamentals of contemporary dance technique and exercises from various movement practices, such as yoga and Tai chi. Liquid Flow implies the continuum from the dance of the everyday to the studio to the stage. Students will develop articulation, flexibility and "grace", learn contemporary, popular and classic dance vocabulary, and gain freedom dancing with others. Designed for beginners, we welcome student movers from diverse dance traditions, non-dancers, athletes, and more advanced dancers, who desire fluidity in their daily life, from thought to action. Same as: AFRICAAM 40

**DANCE 45. Dance Improvisation Techniques and Strategies Lab: From Hip Hop to Contact. 2 Units.**

By learning various dance improvisation forms across cultures, students will develop techniques to gain a deep understanding of generating movement from the inside-out, inspired by conceptual strategies from master improvisors while harnessing that potential for creating dances. Guest dancer/choreographer workshops and Dance Jams enhance the learning experience. All Levels welcome. Same as: AFRICAAM 45

**DANCE 46. Social Dance I. 1 Unit.**

Introduction to non-competitive social ballroom dance. The partner dances found in today's popular culture include 3 kinds of swing, 3 forms of waltz, tango, salsa, cha-cha and nightclub two-step. The course also includes tips for great partnering, enhancing creativity, developing personal style, stress reduction, musicality, and the ability to adapt to changing situations. The emphasis on comfort, partnering and flexibility enables students to dance with partners whose experience comes from any dance tradition.

**DANCE 48. Beginning Ballet. 1 Unit.**

Fundamentals of ballet technique including posture, placement, the foundation steps, and ballet terms; emphasis on the development of coordination, balance, flexibility, sense of lines, and sensitivity to rhythm and music. May be repeated for credit.

**DANCE 50. Contemporary Choreography. 1 Unit.****DANCE 56. Ballet Repertory: Swan Lake Recalibrated. 1 Unit.**

Series of directed studio practices focusing on the creation of a formal choreography to be integrated in the Dance Division repertory and performed during the Division Winter Concert. The course is designed to engage students in acquiring interpretive and expressive skills working one on one with a choreographer, increase adaptability of artistic technique and style, develop knowledge of movement possibilities and artistic voices, and cultivate presence and authority as performers. The new work, Swan Lake Recalibrated, will be a contemporary reinterpretation of the traditional ballet, created by choreographer Alex Ketley. Students recruited via audition. Contact: aketley@stanford.edu.

**DANCE 57. Dance Repertory: Hope Mohr/Denae Hannah. 1 Unit.**

Choreographer Hope Mohr/Denae Hannah will set contemporary work from her company repertory as part of an alumni commission initiative. Rehearsal Autumn Quarter. Culminate in performance on Winter Quarter concert. Participation by audition and/or invitation (Rehearsal Director: Diane Frank).

**DANCE 58. Beginning Hip Hop. 1 Unit.**

Steps and styling in one of America's 21st-century vernacular dance forms. May be repeated for credit.

**DANCE 59. Intermediate-Advanced Hip-Hop. 1 Unit.**

Steps and styling in one of America's 21st-century vernacular dance forms. May be repeated for credit.

**DANCE 60. The Evolution of Hip Hop and the Dance Stage: From Broadway to Hollywood and MTV. 1 Unit.**

The repertory of Hip Hop history through steps and choreography. May be repeated for credit.

**DANCE 63. Beginning Dance and Dance Making. 1 Unit.**

This Choreography course is designed to expose students to fundamental techniques and approaches used in the creation of dance. All of the basic elements of dance composition will be creatively touched upon including: style, form, theme and variation, narrative versus abstract methods of expression, elements of time, quality and use of space, motif and repetition. These different tools will be illustrated and the options and restrictions of each will be explored. Practical assignments will culminate in a performance of work generated and arranged by the instructor and students. The course is recommended for all students interested in the artistic process in a creative situation.

**DANCE 65. Construction Site. 2 Units.**

This movement-based introductory course to site-specific dance/performance art investigates one of humanity's basic drives: to build and express relationship to the external environment. Using their bodies as sensory information-gathering tools, student will examine the qualitative aspects of various sites, indoor and outdoor. Using skills/knowledge acquired through studio work supplemented by readings/concerts/videos & films of site specific works, students will create short culminating projects/works in physical conversation with campus sites, building upon both the concrete and imaginative dimensions of place.

**DANCE 67. Being S(c)ene: Dance, Fashion and Art as Exhibition. 2 Units.**

In everyday life we are constantly moving from the subjects of the public, to its objects--from seeing to being seen. This performance-creation, interactive seminar explores everyday/pedestrian movement as articulated through the language of dance. Looking through the interpretive lenses of fashion, dance and visual representation, we critically consider how we observe others and ourselves in the world, and how we respond performatively or unconsciously. In addition to seminars and rehearsals, we will host guest lectures by curators, artists and professors: incorporate fieldwork research in museums as sites of display, and discuss scholarly texts and films. A performance installation with dance, fashion and visual display will ensue in the galleries at the Cantor Arts Center at Stanford, in conjunction with the Fall 2013 exhibition, Carrie Mae Weems: Three Decades of Photography and Video.

**DANCE 69. The Athletic Body in Dance: Conditioning to Aesthetics. 1 Unit.**

This course provides instruction in the fundamentals of the goal-oriented body in the artistic practice. Emphasis will be placed on using sports movement as a base for training in dance.

**DANCE 100. DANCE, MOVEMENT & MEDICINE. 1-3 Unit.****DANCE 102. Musical Theater Dance Styles. 1 Unit.**

Fundamental techniques and approaches used in the creation of dance. Basic elements of composition including: style, form, theme and variation, and phrasing, development of movement vocabulary, symmetry and asymmetry, explicit versus abstract methods of expression, elements of time, quality and use of space, motif, and repetition. May be repeated for credit.

**DANCE 103. Dance, Text, Gesture: Performance and Composition. 1 Unit.**

Students practice, compose and combine the languages of dance, gestural movement, music and text, to render complete expression in performance. Suitable for dancers, actors, spoken word artists and triple threat performers to devise original performance, dance and theater, culminating in an end of quarter showing. Same as: AFRICAAM 103

**DANCE 104. Duets Project. 1 Unit.**

Rehearsal experiences and techniques embedded in the reconstruction of repertory by three artists whose collective works represent differing approaches to the choreographic process. May be repeated for credit.

**DANCE 106. Choreography Project: Dancing, Recollected. 1 Unit.**

Collaboratively directed by Ketley and Frank, students will create dance material prompted by weekly interactions with residents of Lytton Gardens Assisted Living Residence. Students will meet twice weekly: once in studio on-campus, and once on-site with Lytton residents. Drawing from interviews and interactions with Lytton residents, students will engage in an evolving rehearsal process including movement score creation, aesthetic discussion, revision with active involvement of the residents, and performance. The course culminates in performance(s) of the dance work for Lytton residents, staff, and families on-site at the end of the quarter.

**DANCE 107. Disruptive Choreography: Student Choreographers Creating Innovative Work. 1 Unit.**

Collaboratively taught by choreographers and Stanford dance faculty Alex Ketley and Diane Frank, this is a body-based investigation and studio class. As a class we will take a conspiratorial approach toward choreographic processes that insure breakthrough moments of innovation as students investigate, create, and eventually perform their own dance works. Both instructors have a wide range of choreographic experience which they will use to guide students through a myriad of approaches they can deploy when devising new dance and physical performance. Pre-requisite: A curiosity about making your own work and diversifying your understanding of movement generation and the infinite possible forms dances can take. Dancers of all genres, training backgrounds, and levels of experience are strongly encouraged to enroll. The quarter of studio exploration work will culminate in a public performance of the created works during the last week of class.

**DANCE 108. Hip Hop Meets Broadway. 1 Unit.**

What happens when Hip Hop meets "Fosse", "Aida", "Dream Girls" and "In the Heights"? The most amazing collaboration of Hip Hop styles adapted to some of the most memorable Broadway Productions. This class will explore the realm between Hip Hop Dance and the Broadway Stage. Infusing Acting thru dance movement and exploring the Art of Lip Sync thru Hip Hop Dance styles.

**DANCE 118. Developing Creativity In Dance. 2 Units.**

Developing Creativity In Dance Robert Moses Course description: This introductory course explores the creative process in dance. There are many effective ways to approach creative expression, and this course will utilize multiple approaches, both in series and in parallel. Parallel processing and multitasking will become the dominant mode as rational, intuitive and physical skills merge. Processes will include changing perception, design by analogy, quick adaptation to changing situations, musicality, overcoming creative blocks, and stress reduction to relax into a more creative state of mind. Class sessions will be primarily practice, with two-thirds of the class time spent in the dance studio, creating ways of moving, to embody the concepts that will be detailed in the discussion sessions. Previous dance experience will not be required to take this course. Rationale: Dance in the University plays a vital role in the experience of self-definition. The opportunity to create dance offers students the means to experience the body in new ways through diverse forms of movement. Students come to understand dance as a conduit for impression and expression in society. It becomes a means of giving physical voice to the most private and powerful aspects of an individual's understanding of himself in relation to the world.

**DANCE 133. History of the Waltz. 1 Unit.**

Two hundred years of waltzing: Regency era waltz (1816), Vienna in the 1830s, redowa and mazurka waltz variations, waltz in 5/4 time, the Russian Mazurka Quadrille, pivots, 20th-century hesitation waltz, tango waltz, Parisian valse musette, 1930s Boston, 1950s Bandstand-style waltz, swing waltz. Each form is explored for possible adaptation to today's non-competitive social dancing. May be repeated for credit two times.

**DANCE 140. Intermediate Contemporary Modern Technique. 1 Unit.**

This intermediate studio dance practice class is primarily grounded in training practices of Merce Cunningham, with additional technical work drawn from other major modern dance training techniques. Participation in this class will increase strength, speed, line, amplitude and rhythmic acuity/musicality. Dance technique will be supplemented by other studio experiences that will increase awareness of dance as an art form. Studio work will be supplemented by readings, video viewings, concert attendance, and lively participation in classes with guest artists. Students must be ready to work at an intermediate level.

**DANCE 141. Advanced Contemporary Modern Technique. 2 Units.**

This advanced dance technique class is grounded in the technical training, aesthetic sensibilities, and choreographic processes of Merce Cunningham, American dancer/master choreographer. This studio work at an advanced level will build technical strength, speed, line, and rhythmic acuity/musicality and amplitude in dancing. The class will provide solid technical training useful and applicable to other forms of dancing. Dancers must be ready to work at an high intermediate/advanced level to enroll. Studio practice will be supplemented by readings, video viewing, concert attendance, and participation in special workshops with guest artists. Cunningham-based technique is particularly well-suited to dancers with prior training in ballet technique; dancers with prior training in any form are welcome. May be repeated for credit.

**DANCE 145. ADVANCED JAZZ DANCE. 2 Units.**

Practical skills of intermediate technique will focus on elements of contemporary jazz dance. Los Angeles, Broadway, and video dance styles will be covered. Studio work will focus on phrasing, endurance, technical proficiency, and musicality. Course includes viewing of a professional live performance. May be repeated for credit.

**DANCE 146. Social Dance II. 1 Unit.**

Intermediate non-competitive social ballroom dance. The partner dances found in today's popular culture include Lindy hop, Viennese waltz, hustle, traveling foxtrot, plus intermediate/advanced levels of cross-step waltz and nightclub two-step. The course continues further tips for great partnering, enhancing creativity, developing personal style, stress reduction, musicality, and the ability to adapt to changing situations. Prerequisite: Dance 46.

**DANCE 147. Living Traditions of Swing. 1 Unit.**

Swing dancing: the early Lindy of the 1920s; 6- and 8-count Lindy hop, Shag, Big Apple, 1950s Rock 'n' Roll swing, disco Hustle and West Coast Swing. Partnering and improvisation. Swing's crosscultural influences and personal creativity. May be repeated for credit.

**DANCE 148. Beginning/Intermediate Ballet. 1 Unit.**

Intermediate Ballet at Stanford is designed for students who have done ballet in their past, but maybe have stepped away from the form for awhile. The class focuses on technique, musicality, vocabulary, coordination and artistic choice. The class looks at ballet as an enduring and vibrant movement system that can be used for classical purposes or as a way to strengthen and diversify the movement vocabulary inherent in other dance forms like modern, hip-hop, or social dancing. Any questions can be directed to Lecturer Alex Ketley at [aketley@stanford.edu](mailto:aketley@stanford.edu).

**DANCE 149. Advanced Ballet. 2 Units.**

Advanced Ballet at Stanford is offered for students who are interested in rigorous, complex, and artistically compelling ballet training. The class focuses on technique, but in the broad sense of how ballet as a movement system can be used for a wide range of dance disciplines. The class honors the historical training legacy that defines classical ballet, but is in no way shackled to that history in an antiquated fashion. The students are encouraged to explore the form as artists, to question its foundations, and find their own sense of agency within classical dance. Students with a strong background in ballet are encouraged to come, but also students with less ballet training are welcome as long as they have an email dialog with the lecturer beforehand. Any questions can be directed to Lecturer Alex Ketley at [aketley@stanford.edu](mailto:aketley@stanford.edu).

**DANCE 151H. ID21 STRATLAB: Interdisciplinary Approaches to Improvising Identities. 4-5 Units.**

A quarter-long exploration of improvisation in relationship to identity and race in the 21st century in which students investigate new dynamics of doing and thinking identities through the arts. Panel discussions, performances, and talks that engage critically with the theme, concept, and practice of improvising identity across a variety of contexts and genres such as jazz music, modern dance, contemporary art, race comedy, food, and hip-hop poetry/freestyle. Strategies that artists/scholars have used to overturn essentializing notions of identity in theory and practice.

Same as: AMSTUD 151H, CSRE 151H, DANCE 251H, TAPS 151H, TAPS 351H

**DANCE 152. Introduction to Improvisation in Dance: From Salsa to Vodun to Tap Dance. 3-4 Units.**

This seminar introduces students to Dance Studies by exploring the topic of improvisation, a central concept in multiple genres of dance and music. We will survey a range of improvised dance forms from salsa to vodun to tap dance through readings, video viewings, discussion, and movement exercises (no previous dance experience required). When studying each genre, we will examine how race, gender, sexuality, citizenship, and other power structures affect the practices and theorizations of improvisation. Topics include community and identity formation; questions of technique versus natural ability; improvisation as a spiritual practice; and the role of history in improvisers' quest for spontaneity. Course material will focus on improvised dance, but we will also read pertinent literature in jazz music, theatre, and the law.

Same as: AFRICAAM 52, CSRE 152, TAPS 152

**DANCE 154. Shall We Dance? Social Dancing as Political Practice. 3-4 Units.**

This seminar investigates social dancing as a political practice, and the dance floor as a place where race, ethnicity, class status, and sexuality are formed and contested. While many students may be familiar with salsa, and can imagine how it produces particular kinds of Latin/a femininities, this course asks students to expand the notion of social dancing beyond partner-dancing spheres. Course materials will focus on dance practices from the late-nineteenth century to present-day, ranging from rural Louisiana dancehalls to NYC nightclubs to Iranian backyards. We will examine how dances become racially coded (e.g., what makes a dance black or Latin@?), and understand how categories such as gender, class, and regionality intersect with such racializations. Students will engage in a range of activities, including reading, viewing films, and participating in occasional movement workshops (no previous dance experience required). Each student's final project will require independent, sustained, ethnographic research in a social dance setting of choice (e.g., student dance club, yoga studio, aerobics class, or YouTube).

Same as: TAPS 154C

**DANCE 156. Social Dance III. 1 Unit.**

Intermediate non-competitive social ballroom dance: intermediate/advanced waltz, redowa, Bohemian National Polka, intermediate/advanced tango, cha-cha, and salsa. The course continues further tips for great partnering, enhancing creativity, developing personal style, stress reduction, musicality, and the ability to adapt to changing situations. Prerequisite: Dance 46. Dance 156 may immediately follow Dance 46.

**DANCE 156T. Movement and Digital Culture. 4 Units.**

What is physical intelligence? How could we cultivate it? What technologies can extend sensory awareness, and which can suppress it? How can better understanding of human movement impact a creative/design process? The term 'hybrid action' introduces the notion of movement, expressed in both the physical and virtual worlds. Through interactive technologies, such as the Kinect and camera tracking, and literature from multiple fields, this class takes human movement as a practice-based, creative, theoretical, historical, and philosophical realm of study. The course introduces basic principles and practices of body awareness as a way to extend one's 'physical intelligence' and asks how studying movement can inform creative practices from computer programming to engineering to choreography, as well as applications in health and rehabilitation, cognitive and neuroscience, philosophy and literature. The class emphasizes hands-on, individual and collaborative projects through research and prototyping.

Same as: TAPS 156T

**DANCE 160. Performance and History: Rethinking the Ballerina. 4 Units.**

The ballerina occupies a unique place in popular imagination as an object of over-determined femininity as well as an emblem of extreme physical accomplishment for the female dancer. This seminar is designed as an investigation into histories of the ballerina as an iconographic symbol and cultural reference point for challenges to political and gender ideals. Through readings, videos, discussions and viewings of live performances this class investigates pivotal works, artists and eras in the global histories of ballet from its origins as a symbol of patronage and power in the 15th century through to its radical experiments as a site of cultural obedience and disobedience in the 20th and 21st centuries.

Same as: FEMGEN 160, TAPS 160, TAPS 260

**DANCE 161H. Dance, History and Conflict. 4 Units.**

This seminar investigates how moving bodies are compelling agents of social, cultural, and political change. Through readings, videos, discussions and viewings of live performances this class questions the impact of social conflict and war on selected 20th and 21st century dances and dance practices. This class asks to what extent dance, in its history as well as contemporary development, is linked to concepts of the political and conflict.

Same as: TAPS 161H

**DANCE 162H. Baroque Modernities: Dance, Theater, Film, Political Theory. 4 Units.**

What do seventeenth-century choreography and dramaturgy contribute to (mean to) choreographic and theatrical modernity? How can we explain the recurrent baroque phenomenon across the twentieth century – becoming particularly prominent in the 1980s – beyond the historicist accounts of theatrical reconstruction? How does the baroque locate itself within cultural modernity? This seminar asks this question of choreography at several junctures: The analysis of seventeenth century baroque spectacle that fashioned dance and theatre into political tools of monarchical sovereignty; Twentieth-century literature on the Baroque that destabilizes received notions of subjectivity and political sovereignty; Twentieth-century choreography and film that deploys baroque figures and techniques. Thus, our material shall range from seventeenth-century dance and theater to contemporary dance, film and literature.

Same as: TAPS 162H

**DANCE 163. Introduction to Dance and History: From Postwar to the Present. 4 Units.**

This course explores the cultural and historical unfolding of the genre of contemporary performance known as postmodern dance over the past six decades. It begins with the formative influence of the émigré Bauhaus artists of the 1930s, then the postwar experiments of the Beat artists in the 1950s, to Merce Cunningham, the Judson Dance Theatre, postmodern formalism, neo-expressionism, dance theatre and through to the global, spectacle-rich, cross-genre dance work of the early 21st century as the most recent extended legacy of this history. This course uses dance history to trace with special emphasis the effects of these visual art and movement experimentalists on gender representation and nationalist identity construction in the negotiation of boundaries between dance and life.

Same as: FEMGEN 163D, TAPS 163, TAPS 263

**DANCE 166. History of Social Dance in Western Culture. 1 Unit.**

Historic social dance from the past five centuries, including studio technique and history. Renaissance, Baroque, Regency Era, 19th Century, Ragtime Era, Swing Era and 1950s Rock'n'Roll social dances.

**DANCE 167. Performing Indigeneity on Global Stage. 4 Units.**

Explores how indigeneity is expressed and embodied through performance on the global stage.

Same as: NATIVEAM 167

**DANCE 177. Introduction to Dance on the Global Stage. 4 Units.**

The course will examine and engage with dance cultures from around the world. Through historical and theoretical readings, film screenings, and viewing performances, this course aims to introduce students to a number of theoretical issues central to the study of dance across various disciplines. As a class we set out to explore how dance is more than a set of organized bodily movements, pleasurable to both do and watch. We will consider what cultural work dance performance accomplishes in the world.

Same as: CSRE 177B

**DANCE 190. Special Research. 1-5 Unit.**

Topics related to the discipline of dance. May be repeated for credit.

**DANCE 191. Independent Research. 1-18 Unit.**

Individual supervision of off-campus internship. Prerequisite: consent of instructor.

**DANCE 197. Dance in Prison: The Arts, Juvenile Justice, and Rehabilitation in America. 4 Units.**

This class works collaboratively with a local juvenile hall to use civic engagement and performance to explore the aesthetic, cultural and legal issues in the lives of incarcerated youth. In the process students gain an understanding of incarceration on an immediate and personal scale. Taught jointly by a Dance Studies scholar and a lawyer specializing in Juvenile Justice, we will consider what unique understandings are possible if we position the arts as central to an exploration of punishment, rehabilitation and recidivism in America. The course will examine case studies, historical and contemporary narratives about the social, imaginative and behavioral change possible through arts programs in prison. Half of the class meetings will be in Hillcrest Juvenile Hall in San Mateo, where our class will join with a group of 13-18 year old youths currently detained there. Dance will be used to help shape their individual expressive voices, and ours, through collaborative hip hop dance classes. Books to be read are *Just Mercy: A Story of Justice and Redemption* by Bryan Stevenson, and *Last Chance in Texas* by John Hubner.

Same as: TAPS 197

**DANCE 251H. ID21 STRATLAB: Interdisciplinary Approaches to Improvising Identities. 4-5 Units.**

A quarter-long exploration of improvisation in relationship to identity and race in the 21st century in which students investigate new dynamics of doing and thinking identities through the arts. Panel discussions, performances, and talks that engage critically with the theme, concept, and practice of improvising identity across a variety of contexts and genres such as jazz music, modern dance, contemporary art, race comedy, food, and hip-hop poetry/freestyle. Strategies that artists/scholars have used to overturn essentializing notions of identity in theory and practice.

Same as: AMSTUD 151H, CSRE 151H, DANCE 151H, TAPS 151H, TAPS 351H

**DANCE 290. Special Research. 1-18 Unit.**

Individual project on the work of any choreographer, period, genre, or dance-related topic. May be repeated for credit.

**Dermatology Courses****DERM 199. Undergraduate Research. 1-18 Unit.**

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**DERM 309A. Pediatric Dermatology. 3-6 Units.**

2-4 week clerkship based at Pediatric Dermatology Clinic at 770 Welch Road, Suite 261 at LPCH Palo Alto location. Designed to give students a broad clinical exposure to pediatric skin diseases. Emphasis on the outpatient diagnosis and treatment of common skin problems and the cutaneous manifestations of systemic disease. Students are expected to attend the Tuesday morning didactic teaching sessions as well as the dermatology grand rounds every Thursday morning. Students are expected to learn how to describe and recognize morphology, to perform a thorough skin examination, and to perform basic diagnostic and therapeutic procedures. Basic conversational Spanish is recommended but not required as we have a translation service accessible in every exam room in the clinic. Prerequisites: nMed 208 or IND 206, DERM 300A preferred.

**DERM 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**DERM 399. Graduate Research. 1-18 Unit.**

Allows for qualified students to undertake investigations sponsored by individual faculty members. Opportunities are available in dermatopathology, histochemistry, electron microscopy, biochemistry, tissue culture, quantitative and qualitative evaluation of peripheral vascular disease and sweating, immunofluorescent microscopy, connective tissue molecular biology, and wound healing. Prerequisite: consent of instructor.

**Design Institute Courses****DESINST 230. Bursting the 'Impossible' Bubble-The Art of Creative Engagement. 4 Units.**

In this class, we'll employ the design-thinking process to innovate new theories of learning engagement. Students will explore methodologies like alternative education, improvisational design, storytelling and experience design. Field research will include trips to the SF Exploratorium, the Children's Creativity Museum, Autodesk and Obscura Digital. Students will form hybrid teams with industry experts, fellows, and technical staff, using emerging technology to explore creative leadership and pioneer concepts that will be prototyped, tested, refined and showcased at the Children's Creativity Museum.

**DESINST 366. Creative Gym: A Design Thinking Skills Studio. 1 Unit.**

Build your creative confidence and sharpen your design thinking skills. Train your intuition and expand the design context from which you operate every day. This experimental studio will introduce d.school students to fast-paced experiential exercises that lay the mental and physical foundation for a potent bias toward action, and a wider knowledge of the personal skills that expert design thinkers utilize in all phases of their process. Recent research based on this course curriculum show that performing these class activities will expand your creative capacity in statistically significant ways.

**DESINST 423. Design for Healthy Behavior Change. 3 Units.**

In the U.S., 75% of medical expenditures are for illnesses that are predominantly lifestyle related such as type 2 diabetes, arthritis and heart disease. It has been shown as people modify their lifestyles with healthier habits, medical problems can be reduced or avoided and a healthier and happier life achieved. The class employs design thinking in teams while working directly with volunteers in the community to help them achieve their health goals. There is an individual project and a team project each with multiple milestones. Learn and experience the design thinking process through interactions and design working within student teams and working directly with patient-volunteers from the practice of Drs. Ann Lindsay and Alan Glaseroff from the Stanford Coordinated Care Clinic. Admission by application. See [dschool.stanford.edu/classes](https://dschool.stanford.edu/classes) for more information.

**Developmental Biology Courses****DBIO 12Q. The Evolution and Development of the Human Hand. 3-4 Units.**

Evolution of the human hand in the context of primate evolution; roles of the human hand in tool use, manufacture, art, music, and communication. Development of the hand: embryonic axes, appearance of the digit program, roles of cell death, molecular bases of normal and abnormal hand patterns. Prerequisite: advanced placement biology.

**DBIO 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**DBIO 200. Genetics and Developmental Biology Training Camp. 1 Unit.**

Open to first year Department of Genetics and Developmental Biology students, to others with consent of instructors. Introduction to basic manipulations, both experimental and conceptual, in genetics and developmental biology.

Same as: GENE 200

**DBIO 201. Development and Disease Mechanisms. 2 Units.**

Mechanisms that direct human development from conception to birth. Conserved molecular and cellular pathways regulate tissue and organ development; errors in these pathways result in congenital anomalies and human diseases. Topics: molecules regulating development, cell induction, developmental gene regulation, cell migration, programmed cell death, pattern formation, stem cells, cell lineage, and development of major organ systems. Emphasis on links between development and clinically significant topics including infertility, assisted reproductive technologies, contraception, prenatal diagnosis, teratogenesis, inherited birth defects, fetal therapy, adolescence, cancer, and aging.

**DBIO 210. Developmental Biology. 4 Units.**

Current areas of research in developmental biology. How organismic complexity is generated during embryonic and post-embryonic development. The roles of genetic networks, gene regulation, organogenesis, tissue patterning, cell lineage, maternal inheritance, cell-cell communication, signaling, and regeneration in developmental processes in well-studied organisms such as vertebrates, insects, and nematodes. Team-taught. Students meet with faculty to discuss current papers from the literature. Prerequisite: graduate standing, consent of instructor. Recommended: familiarity with basic techniques and experimental rationales of molecular biology, biochemistry, and genetics.

**DBIO 211. Biophysics of Multi-cellular Systems and Amorphous Computing. 2-3 Units.**

Provides an interdisciplinary perspective on the design, emergent behavior, and functionality of multi-cellular biological systems such as embryos, biofilms, and artificial tissues and their conceptual relationship to amorphous computers. Students discuss relevant literature and introduced to and apply pertinent mathematical and biophysical modeling approaches to various aspect multi-cellular systems, furthermore carry out real biology experiments over the web. Specific topics include: (Morphogen) gradients; reaction-diffusion systems (Turing patterns); visco-elastic aspects and forces in tissues; morphogenesis; coordinated gene expression, genetic oscillators and synchrony; genetic networks; self-organization, noise, robustness, and evolvability; game theory; emergent behavior; criticality; symmetries; scaling; fractals; agent based modeling. The course is geared towards a broadly interested graduate and advanced undergraduates audience such as from bio / applied physics, computer science, developmental and systems biology, and bio / tissue / mechanical / electrical engineering. Prerequisites: Previous knowledge in one programming language - ideally Matlab - is recommended; undergraduate students benefit from BIOE 41, BIOE 42, or equivalent.

Same as: BIOE 211, BIOE 311, BIOPHYS 311

**DBIO 215. Frontiers in Biological Research. 1 Unit.**

Students analyze cutting edge science, develop a logical framework for evaluating evidence and models, and enhance their ability to design original research through exposure to experimental tools and strategies. The class runs in parallel with the Frontiers in Biological Research seminar series. Students and faculty meet on the Tuesday preceding each seminar to discuss a landmark paper in the speaker's field of research. Following the Wednesday seminar, students meet briefly with the speaker for a free-range discussion which can include insights into the speakers' paths into science and how they pick scientific problems. Same as: BIOC 215, GENE 215

**DBIO 220. Genomics and Personalized Medicine. 3 Units.**

Principles of genetics underlying associations between genetic variants and disease susceptibility and drug response. Topics include: genetic and environmental risk factors for complex genetic disorders; design and interpretation of genome-wide association studies; pharmacogenetics; full genome sequencing for disease gene discovery; population structure and genetic ancestry; use of personal genetic information in clinical medicine; ethical, legal, and social issues with personal genetic testing. Hands-on workshop making use of personal or publicly available genetic data. Prerequisite: GENE 202, Gene 205 or BIOS 200. Same as: GENE 210

**DBIO 234. Elements of Grant Writing. 1 Unit.**

Focus is on training first year graduate students in proposal writing. In an intensive 4-week period, students learn fundamental skills focused on scientific proposal writing, including writing and criticizing a proposal on the scientific topic of their choice. Students encouraged to use these new skills and the proposal they create to apply for external funding to support their research training.

**DBIO 257. The Biology of Stem Cells. 3 Units.**

The role of stem cells in human development and potential for treating disease. Guest lectures by biologists, ethicists, and legal scholars. Prerequisites: HumBio 2A and 3A, or the equivalent in the BioCore in Biological Sciences. Same as: HUMBIO 157

**DBIO 273A. A Computational Tour of the Human Genome. 3 Units.**

Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing (technologies, assembly, personalized sequencing); functional landscape (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures from genomic researchers. No prerequisites. See <http://cs273a.stanford.edu/>. Same as: BIOMEDIN 273A, CS 273A

**DBIO 299. Directed Reading in Developmental Biology. 1-18 Unit.**

Prerequisite: consent of instructor.

**DBIO 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**DBIO 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**DBIO 802. TGR Dissertation. 0 Units.**

.

**Division of Literatures, Cultures, & Languages Courses****DLCL 1. History and Theory of Novel Group. 1 Unit.**

This reading group, organized by the Undergraduate Initiative of the Center for the Study of the Novel (CSN), is intended for undergraduates interested in the study of the novel. The group will meet four times in the Spring Quarter, to discuss works by major theorists of the novel, including Lukàcs, Watt, Bakhtin, Barthes, Foucault, Moretti, Sedgwick, and others. Discussions will be led by CSN's graduate coordinators, Elena Dancu (DLCL) and Mark Taylor (English). All readings will be available on CourseWork. Same as: ENGLISH 1

**DLCL 50. Humanities House student research workshop. 1 Unit.**

For Humanities House student residents; research workshop.

**DLCL 98. Independent Study for Modern Languages Minor. 1-2 Unit.**

Independent study for language students pursuing a Modern Languages minor. Instructor consent required before enrolling in this course.

**DLCL 101. Translation Matters: Applications in the 21st Century. 1-2 Unit.**

For students interested in translation, interpreting, and translation studies. The course will highlight guest speakers who apply translation in a variety of professional contexts (e.g. medical, legal, literary, nreligious contexts, localization, machine-translation).

**DLCL 105. Going Medieval: Introduction to Freiburg, Germany, and its Surrounding Region. 1 Unit.**

This course offers an introduction to materials that are pertinent to the BOSP summer seminar "Going Medieval" offered in summer 2015. It is a required course for participants of the seminar. Same as: GERMAN 105

**DLCL 111Q. Spanish-English Literary Translation Workshop. 3 Units.**

This course introduces students to the theoretical knowledge and practical skills necessary to translate literary texts from Spanish to English and English to Spanish. Topics may include comparative syntaxes, morphologies, and semantic systems; register and tone; audience; the role of translation in the development of languages and cultures; and the ideological and socio-cultural forces that shape translations. Students will workshop and revise an original translation project throughout the quarter. Same as: ILAC 111Q

**DLCL 113Q. Borges and Translation. 3-5 Units.**

Borges's creative process and practice as seen through the lens of translation. How do Borges's texts articulate the relationships between reading, writing, and translation? Topics include authorship, fidelity, irreverence, and innovation. Readings will draw on Borges's short stories, translations, and essays. Taught in Spanish. Prerequisite: 100-level course in Spanish or permission of instructor.

Same as: ILAC 113Q

**DLCL 121. Performing the Middle Ages. 3-5 Units.**

Through an analysis of medieval love, satirical and Crusade lyrics in the Old Occitan, Old French, and Galician-Portuguese traditions, we will study deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Special attention will be given to the transmission of vernacular song from live performance to manuscripts. Authors include Ovid, Bernart de Ventadorn, Bertran de Born, La Comtesa de Dia, Thibaut de Champagne, Dante, and Pound. Taught in English.

Same as: FRENCH 151

**DLCL 122. The Digital Middle Ages. 3-5 Units.**

How can we make historical materials, social and cultural practices and extant sites accessible in the present day? In this course, students will have the opportunity to design and create an innovative digital project based on a medieval primary source. In the first part of the course, we will familiarize ourselves with medieval European cultural history, focusing on different kinds of sources, including historical and religious texts, narrative and music, architecture, images, objects, and textiles. Then we will examine and evaluate digital resources and approaches to medieval sources, including digital facsimiles, experiments with virtual spaces, and informational sites. In order to contemporize and vivify the medieval, an integral component of this course will be the California Missions, since they so dramatically represent a medieval *modus operandi* in a modern, and, for Stanford, local, world.

**DLCL 123. Medieval Journeys: Tales of Devotion and Discovery. 3-5 Units.**

This course explores the experience and imagination of medieval journeys through interdisciplinary, cross-cultural, and skills-based approaches. As a foundations class, this survey of medieval culture engages with an array of written texts from the period. Narratives of medieval journeys are studied across a wide range of categories, including pilgrimages, crusades, quests, and sagas. The journey as metaphor, along with the resulting and very real cultural interactions, will provide a main focus for examining this rich tradition of literature. Students will have the opportunity to produce a creative project that brings medieval ideas about travel into dialogue with modern conceptions. The course will satisfy the Ways-Creative Expression requirement as well as one of the following two: Ways-Analytical Interpretive or Ways-Engaging Difference.

Same as: ARTHIST 105B

**DLCL 152A. DLCL Film Series: Monsters. 1 Unit.**

Join us this quarter for our theme, "Vicinity," where we will explore proximity, connection, and conflict in international film. Starting with the infamous apartment building mystery of Alfred Hitchcock's *Rear Window* (1954), where mobility, surveillance, and proximity create classic suspense, we will then look at the way living spaces create both community and conflict in Marco Ferreri's charming *El Pisito* (1959), Billy Wilder's classic comedy *The Apartment* (1960), and Jean-Pierre Jeunet's surreal *Delicatessen* (1991). In week five we will move to the prison environments of Renoir's *La Grande Illusion* (1954) to discuss international relationships during the first world war, before considering Northern Ireland prisoners' hunger strikes in Steve McQueen's *Hunger* (2008). In week seven Miguel Gomes' *Tabu* (2012) will take us around the world, searching for connections almost lost across a lifetime. Mathieu Kassovitz's *La Haine* (1995) will start our discussion of the incredibly tense racial and cultural tensions between different urban and suburban neighborhoods, continued in Spike Lee's *Do the Right Thing* (1989). We'll finish the series with Quentin Tarantino's classic *Pulp Fiction* (1994), which follows the random connections between multiple storylines threading in and out of Los Angeles. Discussion will focus on how analyzing relationships through space highlights issues of surveillance, gender, race, class, and culture as well as the different ways that films have represented the positive and negative aspects of people living in proximity across cultures, schools of cinema, film technologies, and time. Please be aware that some films may include graphic or disturbing content. Viewers are advised to familiarize themselves with the films' content before viewing. All screenings are free and open to the public and audience members are encouraged to participate in the discussions following the films. Please also note that grades for this course are entirely dependent on attendance, which is taken at the end of each screening. Enrolled students MUST attend AT LEAST SEVEN screenings in order to obtain credit.

Same as: DLCL 354A

**DLCL 189A. Honors Thesis Seminar. 4 Units.**

For undergraduate majors in DLCL departments; required for honors students. Planning, researching, and writing an honors thesis. Oral presentations and peer workshops. Research and writing methodologies, and larger critical issues in literary studies.

**DLCL 189B. Honors Thesis Seminar. 2-4 Units.**

For undergraduate majors in DLCL departments; required for honors students. Planning, researching, and writing an honors thesis. Oral presentations and peer workshops. Research and writing methodologies, and larger critical issues in literary studies.

**DLCL 189C. Honors Thesis Seminar. 2-4 Units.**

For undergraduate majors in DLCL departments; required for honors students. Planning, researching, and writing an honors thesis. Oral presentations and peer workshops. Research and writing methodologies, and larger critical issues in literary studies.

**DLCL 197. Designing a Digital Community: Human Rights. 2 Units.**

This course will focus on helping to design, conceptualize, and populate an international human rights website. No knowledge of web design or of human rights is necessary to get started on this project. We have technical assistance available, though hopefully this course will attract students with those skills as well. Similarly, we will be learning about human rights as we build the site, explore and share resources and ideas, and reflect on the content. Preliminary site viewable at [teachinghumanrights.org](http://teachinghumanrights.org).

Same as: COMPLIT 197

**DLCL 199. Honors Thesis Oral Presentation. 1 Unit.**

For undergraduate majors in DLCL departments; required for honors students. Oral presentations and peer workshops. Regular advisory meetings required.

**DLCL 202. Humanities+Design. 2 Units.**

How might visualization tools effect the way Humanities scholars work in the digital age? Humanities research relies increasingly on digitized source material and, consequently, on data visualization as an interface for organizing and assessing as well as analyzing information. We will explore different ways of thinking about data visually, using visualization software under development to discover themes, questions and relationships. In an age where visual forms hold the force of persuasion, data visualization skills not only shape arguments but also help researchers engage critically with the information behind their analyses. Humanities+Design investigates the role of the humanities in the challenges of interpreting data - especially 'big data'. Each student will participate in the design of visualization tools for humanities research, learning about the design process and design theory as it applies to digital humanities research. The course is targeted to students interested in using visualization in their own work, as well as students new to data-driven research. All of our course meetings will take place in the at CESTA (Center for Spatial and Textual Analysis) on the 4th floor of Wallenberg Hall. There are no prerequisites for the class and the class is open to graduate students as well as advanced undergraduates.

**DLCL 209. Paleography of Medieval and Early Modern Manuscripts. 3-5 Units.**

Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures.

Same as: CLASSICS 215, HISTORY 309G, RELIGST 204

**DLCL 220. Humanities Education. 1 Unit.**

Humanities Education explores issues concerning teaching and learning in the humanities, including research on student learning, innovation in pedagogy, the role of new technologies in humanities instruction, and professional issues for humanities teachers at all educational levels.

**DLCL 222. Philosophy and Literature. 1 Unit.**

Please refer to the Philosophy+Literature web site: <http://phililit.stanford.edu/programs/dlcl222> Students may sign up for a unit of credit each quarter via DLCL 222. To earn the unit, students must do one of the following three things: (a) attend an event hosted by the Philosophy and Literature group (including events hosted by the graduate workshop) and write up a reaction paper of 2-5 pages; (b) present a paper of their own to the graduate workshop; (c) agree with one of the DLCL 222 instructors on a reading related to the year's activities, and meet with him/her for a discussion of that reading.

**DLCL 223. Renaissances. 1 Unit.**

The Renaissances Group brings together faculty members and students from over a dozen departments at Stanford to consider the present and future of early modern literary studies (a period spanning the fourteenth through the seventeenth centuries). Taking seriously the plural form of the group's name, we seek to explore the early modern period from a wide range of disciplinary, cultural, linguistic, and geographical perspectives. Topic for 2012-14: "Nodes, Networks, Names."

**DLCL 224. Workshop in Poetics. 1 Unit.**

The Workshop in Poetics is concerned with the theoretical and practical dimensions of the reading and criticism of poetry. During the three years of its existence, the Workshop has become a central venue at Stanford enabling participants to share their individual projects in a general conversation outside of disciplinary and national confinements. The two dimensions that the workshop sees as urgent are: poetics in its specificity as an arena for theory and interpretive practice, and historical poetics as a particular set of challenges for the reader and scholar.

**DLCL 225. Digital Humanities. 1 Unit.**

The Digital Humanities Focal Group (DHFG) will promote faculty and graduate research in the digital humanities through lectures series, praxis workshops, curriculum, and the identification and development of digital humanities research projects, especially those eligible for grant-funding opportunities. DHFG sponsors a lecture series and convenes regular workshops alternating between praxis and theory. These activities provide fora in which faculty and graduate students can share work in progress, discuss the state of the field, and identify important research that should be shared with the DLCL and broader academic communities. Crucially, the DHFG will promote digital research on underrepresented literatures and cultures to counteract the English-language dominance of much work in the field.

**DLCL 228. Introduction to Digital Humanities: Concepts, Technologies, Tools. 1-3 Unit.**

In this course, we will explore the perspectives of scholars who have thought about what "digital humanities" means and the technologies and tools that are shaping new kinds of research, scholarship, and publishing. Topics will include history of the digital humanities, textual studies, electronic literature, computational and new media, and emerging work around text, image, and new media curation and visualization. This seminar is ideal for anyone interested in digital methods and digital in the humanities, teaching with new digital methods, or to learn about all the digital humanities projects at Stanford. This course is organized as a mix of seminar and workshop and will be featuring a new platform called "Lacuna Stories," designed for Stanford students, that presents multiple platforms, media, and texts to digitally engage with narratives surrounding 9/11; active engagement by all participants is expected. Students may contribute to the field with a creative final project that they develop over the course of the quarter if they select the 3-unit option. Same as: COMPLIT 228D, COMPLIT 338D

**DLCL 239. Borges and Translation. 3-5 Units.**

Borges's creative process and practice as seen through the lens of translation. How do Borges's texts articulate the relationships between reading, writing, and translation? Topics include authorship, fidelity, irreverence, and innovation. Readings will draw on Borges's short stories, translations, and essays. Taught in Spanish. Prerequisite: 100-level course in Spanish or permission of instructor. Same as: ILAC 239

**DLCL 245. LA ALJAMÍA, ROMÁRABE LANGUAGE. 3-5 Units.**

This specific course will offer an overview of Aljamía, language of the Moors, considered an "Islamic variant of Spanish" that serves them to approach respectfully the language of their religious cult-material reality, beyond their day-to-day communication. Students will study a crucial part of the history of medieval and early modern Spain and especially the history of Moors as a community of crypto Muslims.

**DLCL 293. Literary Translation. 4 Units.**

An overview of translation theories and practices over time. The aesthetic, ethical, and political questions raised by the act and art of translation and how these pertain to the translator's tasks. Discussion of particular translation challenges and the decision processes taken to address these issues. Coursework includes assigned theoretical readings, comparative translations, and the undertaking of an individual translation project. Same as: ENGLISH 293

**DLCL 299. DLCL CS+ CAPSTONE. 2 Units.**

Only DLCL/CS+ joint majors may enroll in this course.

**DLCL 300. Medieval Methodologies. 1-3 Unit.**

An introduction to the essential tool-kit for medievalists, this course will give all medievalists a great head start in knowing how to access and interpret major works and topics in the field. Stanford's medieval faculty will explain the key sources and methods in the major disciplines from History to Religion, French to Arabic, English to Chinese, and Art History to German and Music. In so doing, students will be introduced to the breadth and interdisciplinary potential of Medieval Studies. A workshop devoted to Digital Technologies and Codicology/Palaeography will offer elementary training in these fundamental skills.

Same as: ENGLISH 300, MUSIC 300C

**DLCL 301. The Learning and Teaching of Second Languages. 3 Units.**

Prepares DLCL graduate students to teach first- and second-year foreign languages. Participants learn about second-language acquisition research and participate in the initial stages of Oral Proficiency Interview (OPI) training.

**DLCL 302. The Learning and Teaching of Second-Language Literatures. 1-3 Unit.**

Focuses on the research on advanced level reading and writing in second language contexts with a special focus on upper-level cultural texts. Discussion of second language writing and reading assessment including a writing familiarization workshop. Participants will focus on their cognizant language and literature for the completion of their assignments. Prerequisite: DLCL 301.

**DLCL 303. Language Program Management. 1-3 Unit.**

Administrative Internship in Language Program Management. Experiences can include, but are not limited to, the following: Shadow faculty and staff in select areas of administration and supervision within the Language Center and DLCL; Placement testing and student advisement; Technology in teaching and learning; Processes for teacher observation and feedback; Procedures in staff supervision and Human Resources; Course scheduling, budgeting, staffing, and searches; Interface with external programs (e.g. BOSP, Bechtel, CTL).

**DLCL 311. Professional Workshop. 1-2 Unit.**

Meets regularly throughout the year to discuss issues in the professional study of literature. Topics include the academic job market and the challenges of research and teaching at different types of institutions. Supervised by the graduate affairs committee of the DLCL. May be repeated for credit.

**DLCL 320. Humanities Education in the Changing University. 3 Units.**

Advanced study in the humanities faces changes within fields, the university and the wider culture. Considers the debate over the status of the humanities with regard to historical genealogies and current innovations. Particular attention on changes in doctoral education. Topics include: origins of the research university; disciplines and specialization; liberal education in conflict with professionalization; literature and literacy education; interdisciplinarity as a challenge to departments; education policy; digital humanities; accountability in education, assessment and student-centered pedagogies.

Same as: COMPLIT 275, GERMAN 250

**DLCL 321. Classical Seminar: Rethinking Classics. 4-5 Units.**

Literary and philosophical texts from Antiquity (including Homer, the Greek tragedians, Plato, Aristotle, Virgil, and Augustine). In each case, we will examine the cultural contexts in which each text was composed (e.g. political regimes and ideologies; attitudes towards gender and sexuality; hierarchies of class and status; discourses on "barbarians" and resident aliens). We will study various theoretical approaches to these books in an effort to "rethink" these texts in the 21st century.

Same as: CLASSICS 244

**DLCL 322. Medieval Seminar. 3-5 Units.**

The cultural, literary, and artistic evolution of the Middle Ages. The barbarian invasions and the Germanic ethos, the Celtic heritage, and the monastic tradition. Romanesque art and architecture, pilgrimages, and the Crusades. Gothic aesthetics, chivalry and courtly love, scholasticism, and the rise of universities. The late Middle Ages, humanism, and the threshold of the Renaissance. Texts include: Beowulf, Mabinogion, Song of Roland, Chretien de Troyes' Lancelot and Yvain, Dante's Divine Comedy, Boccaccio's Decameron, and Chaucer's Canterbury Tales. 3-5 units.

**DLCL 323. Early Modern Seminar. 3-5 Units.**

Explores some of the key texts of European early modernity and the critical paradigms according to which the idea of the "Renaissance" has been formed, analyzed, and questioned since the 19th century. Will aim to provide a broad introduction to Early Modern studies from the point of view of the Italian Renaissance and its reception in different European contexts. Taught in English.

Same as: ITALIAN 220

**DLCL 324. The Enlightenment. 3-5 Units.**

The Enlightenment as a philosophical, literary, and political movement. Themes include the nature and limits of philosophy, the grounds for critical intellectual engagement, the institution of society and the public, and freedom, equality and human progress. Authors include Voltaire, Montesquieu, Rousseau, Hume, Diderot, and Condorcet.

Same as: FRENCH 244, HISTORY 234, HISTORY 334, HISTORY 432A, HUMNTIES 324

**DLCL 325. Modern Seminar. 3-5 Units.**

The postmodern condition as post-WWII rupture in Western tradition; moral, political, cultural, and aesthetic dimensions. Sources include literature, philosophy, essays, films, and painting. Authors and artists include: Primo Levi, Hannah Arendt, Alain Resnais, Samuel Beckett, Georges Bataille, Michel Foucault, Theodor Adorno, David Riesman, Georges Perec, Juliet Mitchell, and Francis Bacon.

**DLCL 333. Philosophy, Literature, and the Arts Core Seminar. 2-4 Units.**

Same as: PHIL 333

**DLCL 354A. DLCL Film Series: Monsters. 1 Unit.**

Join us this quarter for our theme, "Vicinities," where we will explore proximity, connection, and conflict in international film. Starting with the infamous apartment building mystery of Alfred Hitchcock's *Rear Window* (1954), where mobility, surveillance, and proximity create classic suspense, we will then look at the way living spaces create both community and conflict in Marco Ferreri's charming *El Pisito* (1959), Billy Wilder's classic comedy *The Apartment* (1960), and Jean-Pierre Jeunet's surreal *Delicatessen* (1991). In week five we will move to the prison environments of Renoir's *La Grande Illusion* (1954) to discuss international relationships during the first world war, before considering Northern Ireland prisoners' hunger strikes in Steve McQueen's *Hunger* (2008). In week seven Miguel Gomes' *Tabu* (2012) will take us around the world, searching for connections almost lost across a lifetime. Mathieu Kassovitz's *La Haine* (1995) will start our discussion of the incredibly tense racial and cultural tensions between different urban and suburban neighborhoods, continued in Spike Lee's *Do the Right Thing* (1989). We'll finish the series with Quentin Tarantino's classic *Pulp Fiction* (1994), which follows the random connections between multiple storylines threading in and out of Los Angeles. Discussion will focus on how analyzing relationships through space highlights issues of surveillance, gender, race, class, and culture as well as the different ways that films have represented the positive and negative aspects of people living in proximity across cultures, schools of cinema, film technologies, and time. Please be aware that some films may include graphic or disturbing content. Viewers are advised to familiarize themselves with the films' content before viewing. All screenings are free and open to the public and audience members are encouraged to participate in the discussions following the films. Please also note that grades for this course are entirely dependent on attendance, which is taken at the end of each screening. Enrolled students MUST attend AT LEAST SEVEN screenings in order to obtain credit.

Same as: DLCL 152A

**DLCL 369. Introduction to the Profession of "Literary Studies" for Graduate Students. 1-2 Unit.**

A history of literary theory for entering graduate students in national literature departments and comparative literature.

Same as: COMPLIT 369, FRENCH 369, GERMAN 369, ITALIAN 369

**DLCL 396. Humanities+Design: Visualizing the Grand Tour. 4-5 Units.**

Study of the eighteenth-century Grand Tour of Italy through visualization tools of the digital age. Critical readings in both visual epistemology and current Grand Tour studies; interrogating the relationship between quantitative and qualitative approaches in digital humanities; what new insights in eighteenth-century British travel to Italy does data visualization offer us? Students will transform traditional texts and documents into digital datasets, developing individual data analysis projects using text mining, data capture and visualization techniques.

Same as: CLASSICS 396, HISTORY 336E

**Drama Courses****Earth System Science Courses****ESS 10SC. In the Age of the Anthropocene: Coupled-Human Natural Systems of Southeast Alaska. 2 Units.**

Southeast Alaska is often described as America's "last frontier," embodying a physical reality of the "pristine" that was once revered by the early romantics and founders of the modern conservation movement throughout Western North America. Although endowed with more designated Wilderness land than any other state, Alaska remains a working landscape: a mixed cash-subsistence economy where communities rely upon the harvest and export of natural resources. Here, ecosystem services remain tangible, and people living in communities that are unconnected by roads confront questions of sustainability on a daily basis. This field-based course introduces students to the global questions of land use change and sustainable resource management in the American West through the place-based exploration of Southeast Alaska. Focused on four key social-ecological challenges – fisheries, forestry, tourism, and energy – the coupled human-natural systems of Southeast Alaska provide a unique lens for students to interpret broader resource management and conservation issues. The curriculum balances field explorations and classroom lectures with community exploration in which students will engage with fishermen, hatchery workers, forest managers, loggers, mill owners, tour operators, tourists, city officials, citizens, and Native residents. Students will catch their own salmon, walk through old-growth and logged forests, kayak next to glacial moraines, and witness the impacts of human activities, both local and global, on the social-ecological systems around them. In the context of rapidly changing ecosystems, students will confront the historical, ecological, and economic complexities of environmental stewardship in this region. By embedding their experiences within frameworks of land change science, land-ocean interactions, ecosystem ecology, and natural resource management and economics, students will leave this course ready to apply what they have learned to the global challenges of sustainability and conservation that pervade systems far beyond Alaska. This course is co-sponsored by the School of Earth Sciences and takes place in Sitka, Alaska. Students arrange for their arrival in Seattle, WA on August 30; all subsequent travel is made possible by Sophomore College and the School of Earth Sciences.

**ESS 12SC. Environmental and Geological Field Studies in the Rocky Mountains. 2 Units.**

The ecologically and geologically diverse Rocky Mountain area is being strongly impacted by changing land use patterns, global and regional environmental change, and societal demands for energy and natural resources. This field program emphasizes coupled environmental and geological problems in the Rocky Mountains, covering a broad range of topics including the geologic origin of the American West from three billion years ago to the present; paleoclimatology and the glacial history of this mountainous region; the long- and short-term carbon cycle and global climate change; and environmental issues in the American West related to changing land-use patterns and increased demand for its abundant natural resources. In addition to the science aspects of this course we will also investigate the unique western culture of the area particularly in regards to modern ranching and outfitting in the American West. These broad topics are integrated into a coherent field-study as we examine earth/ environmental science-related questions in three different settings: 1) the three-billion-year-old rocks and the modern glaciers of the Wind River Mountains of Wyoming; 2) the sediments in the adjacent Wind River basin that host abundant gas and oil reserves and also contain the long-term climate history of this region; and 3) the volcanic center of Yellowstone National Park and the mountainous region of Teton National Park. Students will complete six assignments based upon field exercises, working in small groups to analyze data and prepare reports and maps. Lectures will be held in the field prior to and after fieldwork. Note: This course involves one week of backpacking in the Wind Rivers and hiking while staying in cabins near Jackson Hole, Wyoming. Students must arrive in Salt Lake City on Tuesday, September 6. (Hotel lodging will be provided for the night of September 6, and thereafter students will travel as a Sophomore College group.) We will return to campus on Friday, September 23. Sophomore College Course: Application required, due noon, April 5, 2016. Apply at <http://soco.stanford.edu>. Same as: EARTHSYS 12SC, GS 12SC

**ESS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration. 3 Units.**

This course examines the motivations and experiences of polar explorers under the harshest conditions on Earth, as well as the chronicles of their explorations and hardships, dating to the 1500s for the Arctic and the 1700s for the Antarctic. Materials include *The Worst Journey in the World* by Aspley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Optional field trip into the high Sierra in March. Same as: EARTHSYS 38N, GS 38N

**ESS 42. The Global Warming Paradox II. 1 Unit.**

Further discussion of the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Discussions of topics of student interest, including peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks. Focus is on student engagement in on-campus and off-campus activities. Prerequisite: EESS 41N or EARTHSYS 41N or consent of instructor. Same as: EARTHSYS 42

**ESS 43. The Global Warming Paradox III. 1 Unit.**

Further discussion of the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Discussions explore topics of student interest, including peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks. Focus is on student engagement in on-campus and off-campus activities. May be repeat for credit.

**ESS 46N. Exploring the Critical Interface between the Land and Monterey Bay: Elkhorn Slough. 3 Units.**

Preference to freshmen. Field trips to sites in the Elkhorn Slough, a small agriculturally impacted estuary that opens into Monterey Bay, a model ecosystem for understanding the complexity of estuaries, and one of California's last remaining coastal wetlands. Readings include Jane Caffrey's *Changes in a California Estuary: A Profile of Elkhorn Slough*. Basics of biogeochemistry, microbiology, oceanography, ecology, pollution, and environmental management. Same as: EARTHSYS 46N

**ESS 49N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay. 3 Units.**

This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended. Same as: CEE 50N, EARTHSYS 49N

**ESS 56Q. Changes in the Coastal Ocean: The View From Monterey and San Francisco Bays. 3 Units.**

Preference to sophomores. Recent changes in the California current, using Monterey Bay as an example. Current literature introduces principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC. Optional field trip to MBARI and Monterey Bay. Same as: EARTHSYS 56Q

**ESS 57Q. Climate Change from the Past to the Future. 3 Units.**

Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies. Same as: EARTHSYS 57Q

**ESS 60. Food, Water and War: Life on the Mekong. 1 Unit.**

Preparatory course for Bing Overseas Studies summer course in Cambodia. Prerequisite. Requires instructor consent.

**ESS 61Q. Food and security. 3 Units.**

The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security. Same as: EARTHSYS 61Q, INTNLREL 61Q

**ESS 101. Environmental and Geological Field Studies in the Rocky Mountains. 3 Units.**

Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns. Same as: EARTHSYS 100, GS 101

**ESS 105. Food and Community: New Visions for a Sustainable Future. 3 Units.**

Through this course students will learn about the community and outreach component of the urban gardening movement. Over the quarter students will learn about urban farming, about projects that work to increase access of the most underserved to fresh and local food, and about the challenges surrounding these efforts. The theme of the course will be stories- stories of food and community, of innovation, and of service. Students will learn through engaging in conversation with different leaders in the local food movement. Additionally, through hands-on learning and participation, students will become familiar with different types of community food projects in the Bay Area, including urban farms, free food giveaways, food banks, and gleaning projects. Service Learning Course (certified by Haas Center). Limited enrollment. May be repeated for credit.

Same as: EARTHSYS 105

**ESS 106. World Food Economy. 5 Units.**

The economics of food production, consumption, and trade. The micro- and macro- determinants of food supply and demand, including the interrelationship among food, income, population, and public-sector decision making. Emphasis on the role of agriculture in poverty alleviation, economic development, and environmental outcomes. (graduate students enroll in 206).

Same as: EARTHSYS 106, EARTHSYS 206, ECON 106, ECON 206, ESS 206

**ESS 107. Control of Nature. 3 Units.**

Think controlling the earth's climate is science fiction? It is when you watch *Snowpiercer* or *Dune*, but scientists are already devising geoengineering schemes to slow climate change. Will we ever resurrect the woolly mammoth or even a T. Rex (think *Jurassic Park*)? Based on current research, that day will come in your lifetime. Who gets to decide what species to save? And more generally, what scientific and ethical principles should guide our decisions to control nature? In this course, we will examine the science behind ways that people alter and engineer the earth, critically examining the positive and negative consequences. We'll explore these issues first through popular movies and books and then, more substantively, in scientific research.

Same as: EARTHSYS 107

**ESS 111. Biology and Global Change. 4 Units.**

The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing.

Same as: BIO 117, EARTHSYS 111

**ESS 112. Human Society and Environmental Change. 4 Units.**

Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1.

Same as: EARTHSYS 112, HISTORY 103D

**ESS 117. Earth Sciences of the Hawaiian Islands. 4 Units.**

Progression from volcanic processes through rock weathering and soil-ecosystem development to landscape evolution. The course starts with an investigation of volcanic processes, including the volcano structure, origin of magmas, physical-chemical factors of eruptions. Factors controlling rock weathering and soil development, including depth and nutrient levels impacting plant ecosystems, are explored next. Geomorphic processes of landscape evolution including erosion rates, tectonic/volcanic activity, and hillslope stability conclude the course. Methods for monitoring and predicting eruptions, defining spatial changes in landform, landform stability, soil production rates, and measuring biogeochemical processes are covered throughout the course. This course is restricted to students accepted into the Earth Systems of Hawaii Program.

Same as: EARTH 117, EARTHSYS 117

**ESS 118. D\*3: Disasters, Decisions, Developmen. 3-5 Units.**

This class connects the science behind natural disasters with the real-world constraints of disaster management and development. In each iteration of this class we will focus on a specific, disaster-prone location as case study. By collaborating with local stakeholders we will explore how science and engineering can make a make a difference in reducing disaster risk in the future. Offered every other year.

Same as: EARTHSYS 124, ESS 218, GEOPHYS 118, GEOPHYS 218, GS 118, GS 218

**ESS 122. GIS for good: Applications of GIS for International Development and Humanitarian Assistance. 3-4 Units.**

This service-learning course exposes students to geographic information systems (GIS) as a tool for exploring alternative solutions to complex environmental and humanitarian issues in the international arena. The project-based, interdisciplinary structure of this class gives primary emphasis to the use of GIS for field data collection, mapping, analysis and visualization that allows for multi-criteria assessment of community development. Those with no prior GIS experience will be required to take an introductory GIS workshop hosted by the Geospatial Center in Branner Library during the first two weeks of class.

Same as: EARTHSYS 127, ESS 222

**ESS 132. Biogeochemical Cycles on Earth through Time. 4 Units.**

This course examines biogeochemical cycles and how they developed through the interaction between the atmosphere, hydrosphere, biosphere, and lithosphere. Emphasis is on the long-term carbon cycle and how it is connected to other biogeochemical cycles on Earth. The course consists of lectures, discussion of research papers, and quantitative modeling of biogeochemical cycles. Students produce a model on some aspect of the cycles discussed in this course. Grades based on class interaction, student presentations, and the modeling project.

Same as: EARTHSYS 132, EARTHSYS 232, ESS 232

**ESS 135. Community Leadership. 1-2 Unit.**

Offered through Residential Education to residents of Castano House, Manzanita Park. Topics include: emotional intelligence, leadership styles, listening, facilitating meetings, group dynamics and motivation, finding purpose, fostering resilience. Students will lead discussions on personal development, relationships, risky behaviors, race, ethnicity, spirituality, integrity.

**ESS 141. Remote Sensing of the Oceans. 3-4 Units.**

How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.

Same as: EARTHSYS 141, EARTHSYS 241, ESS 241, GEOPHYS 141

**ESS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: EARTHSYS 146A, EARTHSYS 246A, ESS 246A, GEOPHYS 146A, GEOPHYS 246A

**ESS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A or EESS 246A, or CEE 164 or CEE 262D, or consent of instructor.

Same as: EARTHSYS 146B, EARTHSYS 246B, ESS 246B, GEOPHYS 146B, GEOPHYS 246B

**ESS 148. Introduction to Physical Oceanography. 4 Units.**

The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53).

Same as: CEE 164, CEE 262D, EARTHSYS 164

**ESS 151. Biological Oceanography. 3-4 Units.**

Required for Earth Systems students in the oceans track. Interdisciplinary look at how oceanic environments control the form and function of marine life. Topics include distributions of planktonic production and abundance, nutrient cycling, the role of ocean biology in the climate system, expected effects of climate changes on ocean biology. Local weekend field trips. Designed to be taken concurrently with Marine Chemistry (EESS/EARTHSYS 152/252). Prerequisites: BIO 43 and EESS 8 or equivalent.

Same as: EARTHSYS 151, EARTHSYS 251, ESS 251

**ESS 152. Marine Chemistry. 3-4 Units.**

Introduction to the interdisciplinary knowledge and skills required to critically evaluate problems in marine chemistry and related disciplines. Physical, chemical, and biological processes that determine the chemical composition of seawater. Air-sea gas exchange, carbonate chemistry, and chemical equilibria, nutrient and trace element cycling, particle reactivity, sediment chemistry, and diagenesis. Examination of chemical tracers of mixing and circulation and feedbacks of ocean processes on atmospheric chemistry and climate. Designed to be taken concurrently with Biological Oceanography (EESS/EARTHSYS 151/251).

Same as: EARTHSYS 152, EARTHSYS 252, ESS 252

**ESS 155. Science of Soils. 3-4 Units.**

Physical, chemical, and biological processes within soil systems. Emphasis is on factors governing nutrient availability, plant growth and production, land-resource management, and pollution within soils. How to classify soils and assess nutrient cycling and contaminant fate. Recommended: introductory chemistry and biology.

Same as: EARTHSYS 155

**ESS 156. Soil and Water Chemistry. 1-4 Unit.**

(Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

Same as: EARTHSYS 156, EARTHSYS 256, ESS 256

**ESS 158. Geomicrobiology. 3 Units.**

How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

Same as: EARTHSYS 158, EARTHSYS 258, ESS 258

**ESS 162. Remote Sensing of Land. 4 Units.**

The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

Same as: EARTHSYS 142, EARTHSYS 242, ESS 262

**ESS 164. Fundamentals of Geographic Information Science (GIS). 3-4 Units.**

Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments. All students are required to attend a weekly lab on Tuesdays or Thursdays from 6 pm to 9 pm.

Same as: EARTHSYS 144

**ESS 173. Aquaculture and the Environment: Science, History, and Policy. 3 Units.**

Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures. By application only - instructor consent required. Contact gerhart@stanford.edu or dhklinger@stanford.edu prior to first day of class.

Same as: EARTHSYS 173, EARTHSYS 273, ESS 273

**ESS 173E. Climate Change & Ecosystem Conservation. 2 Units.**

Examination of social and ecological effects of climate change on ecosystems and recommendations on conservation and management practices. Focus on broad-scale climate/forest interactions and the emergence of novel plant communities, change in species ranges, and climate-induced die-off. Explores ecological thresholds and vulnerabilities caused by drought, fog pattern changes, snow-cover loss, and secondary factors and implications of these emerging dynamics in the human dimension.

Same as: CEE 173E, CEE 273E

**ESS 179S. Seminar: Issues in Environmental Science, Technology and Sustainability. 1-2 Unit.**

Invited faculty, researchers and professionals share their insights and perspectives on a broad range of environmental and sustainability issues. Students critique seminar presentations and associated readings.

Same as: CEE 179S, CEE 279S, EARTHSYS 179S

**ESS 181. Urban Agriculture in the Developing World. 3-4 Units.**

In this advanced undergraduate course, students will learn about some of the key social and environmental challenges faced by cities in the developing world, and the current and potential role that urban agriculture plays in meeting (or exacerbating) those challenges. This is a service-learning course, and student teams will have the opportunity to partner with real partner organizations in a major developing world city to define and execute a project focused on urban development, and the current or potential role of urban agriculture. Service-learning projects will employ primarily the student's analytical skills such as synthesis of existing research findings, interdisciplinary experimental design, quantitative data analysis and visualization, GIS, and qualitative data collection through interviews and textual analysis. Previous coursework in the aforementioned analytical skills is preferred, but not required. Admission is by application.

Same as: EARTHSYS 181, EARTHSYS 281, ESS 281, URBANST 181

**ESS 183. Food Matters: Agriculture in Film. 1 Unit.**

Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

Same as: EARTHSYS 183, EARTHSYS 283, ESS 283

**ESS 184. Climate and Agriculture. 3-4 Units.**

The effects of climate change on global agriculture and food security, and the effects of agriculture on climate change. An overview of different lines of evidence used to measure impacts and adaptations, and to quantify future impacts, risks, and adaptation needs for agro-ecosystems and society. Enrollment limited to 25; priority to juniors, seniors, and graduate students. Prerequisites: ECON 106/206 or permission of instructor.

Same as: EARTHSYS 184, EARTHSYS 284, ESS 284

**ESS 206. World Food Economy. 5 Units.**

The economics of food production, consumption, and trade. The micro- and macro- determinants of food supply and demand, including the interrelationship among food, income, population, and public-sector decision making. Emphasis on the role of agriculture in poverty alleviation, economic development, and environmental outcomes. (graduate students enroll in 206).

Same as: EARTHSYS 106, EARTHSYS 206, ECON 106, ECON 206, ESS 106

**ESS 208. Topics in Geobiology. 1 Unit.**

Reading and discussion of classic and recent papers in the field of Geobiology. Co-evolution of Earth and life; critical intervals of environmental and biological change; geomicrobiology; paleobiology; global biogeochemical cycles; scaling of geobiological processes in space and time.

Same as: GS 208

**ESS 211. Fundamentals of Modeling. 3-5 Units.**

Simulation models are a powerful tool for environmental research, if used properly. The major concepts and techniques for building and evaluating models. Topics include model calibration, model selection, uncertainty and sensitivity analysis, and Monte Carlo and bootstrap methods.

Emphasis is on gaining hands-on experience using the R programming language. Prerequisite: Basic knowledge of statistics.

Same as: EARTHSYS 211

**ESS 212. Measurements in Earth Systems. 3-4 Units.**

Preference will be given to ESS first-year grad students. Techniques to track biological, chemical, and physical processes operating across the San Francisco Creek watershed, encompassing upland, aquatic, estuarine, and marine environments. Topics include gas and water flux measurement, assessment of microbiological communities, determination of biological productivity, isotopic analysis, soil and water chemistry determination, and identification of rock strata and weathering processes.

**ESS 214. Introduction to geostatistics and modeling of spatial uncertainty. 3-4 Units.**

Introduction of fundamental geostatistical tools for modeling spatial variability and uncertainty, and mapping of environmental attributes. Additional topics include sampling design and incorporation of different types of information (continuous, categorical) in prediction. Assignments consist of small problems to familiarize students with theoretical concepts, and applications dealing with the analysis and interpretation of various data sets (soil, water pollution, atmospheric constituents, remote sensing) primarily using Matlab. No prior programming experience is required. Open to undergraduates with consent from the instructor. 3-credit option includes midterm/final or student-developed project. 4-credit option requires both. Prerequisite: College-level introductory statistics.

**ESS 215. Earth System Dynamics. 2 Units.**

This is a graduate level course that examines the dynamics of the Earth System from an integrated perspective. Lectures introduce the physical, biogeochemical, ecological, and human dimensions of the Earth System, with emphasis on feedbacks, thresholds and tipping points. Human interactions with climate and land systems are emphasized in order to enable in-depth exploration of Earth System dynamics. Lab projects focus on a region of the globe for which rich coordinated data sources exist and complex Earth System dynamics dominate the environment.

**ESS 216. Terrestrial Biogeochemistry. 3 Units.**

Nutrient cycling and the regulation of primary and secondary production in terrestrial, freshwater, and marine ecosystems; land-water and biosphere-atmosphere interactions; global element cycles and their regulation; human effects on biogeochemical cycles. Prerequisite: graduate standing in science or engineering; consent of instructor for undergraduates or coterminal students.

Same as: BIO 216

**ESS 217. Climate of the Cenozoic. 3 Units.**

For upper-division undergraduate and graduate students. The paleoclimate of the Cenozoic and how climate changes in the past link to the carbon cycle. Topics include long- and short-term records of climate on continents and oceans, evidence for and causes of hyperthermal events, how the Earth's climate has responded in increased carbon dioxide in the atmosphere. Guest speakers, student presentations.

**ESS 218. D\*3: Disasters, Decisions, Developmen. 3-5 Units.**

This class connects the science behind natural disasters with the real-world constraints of disaster management and development. In each iteration of this class we will focus on a specific, disaster-prone location as case study. By collaborating with local stakeholders we will explore how science and engineering can make a make a difference in reducing disaster risk in the future. Offered every other year.

Same as: EARTHSYS 124, ESS 118, GEOPHYS 118, GEOPHYS 218, GS 118, GS 218

**ESS 219. Climate Variability during the Holocene: Understanding what is Natural Climate Change. 3 Units.**

Many elements of the debate about attribution of modern climate change to man-made influences hinge on understanding the past history of climate as well as forcing functions such as solar output, volcanism, and "natural" trace gas variability. Interest in Holocene reconstructions of past climate and forcing functions has surged in the last 20 years providing a robust literature set for discussion and analysis. The goal of this class is to provide graduate students with a view of the archives available for Holocene paleoenvironmental analysis, the tracers that are used, and the results thus far. We will also explore the world of data-model comparisons and examine the role that paleorecords play in the IPCC reports. The class will consist of some lectures as well as many class discussions based on assigned readings.

**ESS 220. Physical Hydrogeology. 4 Units.**

(Formerly GES 230.) Theory of underground water occurrence and flow, analysis of field data and aquifer tests, geologic groundwater environments, solution of field problems, and groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus.  
Same as: CEE 260A

**ESS 221. Contaminant Hydrogeology and Reactive Transport. 4 Units.**

For earth scientists and engineers. Environmental, geologic, and water resource problems involving migration of contaminated groundwater through porous media and associated biogeochemical and fluid-rock reactions. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and reactive transport modeling using geochemical transport software. Some Matlab programming / program modification required. Prerequisite: Physical Hydrogeology ESS 220 / CEE 260A (Gorelick) or equivalent. Recommended: course work in environmental chemistry or geochemistry (e.g., one or more of the following: ESS 155, ESS 156/256 GS 90, GS 170/279, GS 171, CEE 177 or CEE 270).  
Same as: CEE 260C, GS 225

**ESS 222. GIS for good: Applications of GIS for International Development and Humanitarian Assistance. 3-4 Units.**

This service-learning course exposes students to geographic information systems (GIS) as a tool for exploring alternative solutions to complex environmental and humanitarian issues in the international arena. The project-based, interdisciplinary structure of this class gives primary emphasis to the use of GIS for field data collection, mapping, analysis and visualization that allows for multi-criteria assessment of community development. Those with no prior GIS experience will be required to take an introductory GIS workshop hosted by the Geospatial Center in Branner Library during the first two weeks of class.  
Same as: EARTHSYS 127, ESS 122

**ESS 232. Biogeochemical Cycles on Earth through Time. 4 Units.**

This course examines biogeochemical cycles and how they developed through the interaction between the atmosphere, hydrosphere, biosphere, and lithosphere. Emphasis is on the long-term carbon cycle and how it is connected to other biogeochemical cycles on Earth. The course consists of lectures, discussion of research papers, and quantitative modeling of biogeochemical cycles. Students produce a model on some aspect of the cycles discussed in this course. Grades based on class interaction, student presentations, and the modeling project.  
Same as: EARTHSYS 132, EARTHSYS 232, ESS 132

**ESS 240. Advanced Oceanography. 3 Units.**

For upper-division undergraduates and graduate students in the earth, biologic, and environmental sciences. Topical issues in marine science/oceanography. Topics vary each year following or anticipating research trends in oceanographic research. Focus is on links between the circulation and physics of the ocean with climate in the N. Pacific region, and marine ecologic responses. Participation by marine scientists from research groups and organizations including the Monterey Bay Aquarium Research Institute.

**ESS 241. Remote Sensing of the Oceans. 3-4 Units.**

How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.  
Same as: EARTHSYS 141, EARTHSYS 241, ESS 141, GEOPHYS 141

**ESS 242. Antarctic Marine Geology. 3 Units.**

For upper-division undergraduates and graduate students. Intermediate and advanced topics in marine geology and geophysics, focusing on examples from the Antarctic continental margin and adjacent Southern Ocean. Topics: glaciers, icebergs, and sea ice as geologic agents (glacial and glacial marine sedimentology, Southern Ocean current systems and deep ocean sedimentation), Antarctic biostratigraphy and chronostratigraphy (continental margin evolution). Students interpret seismic lines and sediment core/well log data. Examples from a recent scientific drilling expedition to Prydz Bay, Antarctica. Up to two students may have an opportunity to study at sea in Antarctica during Winter Quarter.  
Same as: EARTHSYS 272

**ESS 244. Marine Ecosystem Modeling. 3 Units.**

This course will provide the practical background necessary to construct and implement a 2-dimensional (space and time) numerical model of a simple marine ecosystem. Instruction on computer programming, model design and parameterization, and model evaluation will be provided. Throughout the 10-week course, each student will develop and refine their own multi-component marine ecosystem model. Instructor consent required.

**ESS 245. Advanced Biological Oceanography. 3-4 Units.**

For upper-division undergraduates and graduate students. Themes vary annually but include topics such as marine bio-optics, marine ecological modeling, and phytoplankton primary production. May be repeated for credit. Enrollment by instructor consent only.

**ESS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.  
Same as: EARTHSYS 146A, EARTHSYS 246A, ESS 146A, GEOPHYS 146A, GEOPHYS 246A

**ESS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A or EESS 246A, or CEE 164 or CEE 262D, or consent of instructor.  
Same as: EARTHSYS 146B, EARTHSYS 246B, ESS 146B, GEOPHYS 146B, GEOPHYS 246B

**ESS 249. Marine Stable Isotopes. 3 Units.**

This course will provide an introduction to stable isotopes biogeochemistry with emphasis on applications in marine science. We will cover fundamental concepts of nuclear structure and origin of elements and isotopes, and stable isotopic fractionation. We will discuss mass spectrometry techniques, mass independent fractionation, clumped isotopes, mass balance and box models. Applications of these concepts to studies of ocean circulation, marine carbon and nitrogen cycles, primary productivity, and particle scavenging will also be discussed.

**ESS 250. Elkhorn Slough Microbiology. 3 Units.**

(Formerly GES 270.) The microbial ecology and biogeochemistry of Elkhorn Slough, an agriculturally-impacted coastal estuary draining into Monterey Bay. The diversity of microbial lifestyles associated with estuarine physical/chemical gradients, and the influence of microbial activity on the geochemistry of the Slough, including the cycling of carbon, nitrogen, sulfur, and metals. Labs and field work. Location: Hopkins Marine Station.

**ESS 251. Biological Oceanography. 3-4 Units.**

Required for Earth Systems students in the oceans track. Interdisciplinary look at how oceanic environments control the form and function of marine life. Topics include distributions of planktonic production and abundance, nutrient cycling, the role of ocean biology in the climate system, expected effects of climate changes on ocean biology. Local weekend field trips. Designed to be taken concurrently with Marine Chemistry (EESS/EARTHSYS 152/252). Prerequisites: BIO 43 and EESS 8 or equivalent.

Same as: EARTHSYS 151, EARTHSYS 251, ESS 151

**ESS 252. Marine Chemistry. 3-4 Units.**

Introduction to the interdisciplinary knowledge and skills required to critically evaluate problems in marine chemistry and related disciplines. Physical, chemical, and biological processes that determine the chemical composition of seawater. Air-sea gas exchange, carbonate chemistry, and chemical equilibria, nutrient and trace element cycling, particle reactivity, sediment chemistry, and diagenesis. Examination of chemical tracers of mixing and circulation and feedbacks of ocean processes on atmospheric chemistry and climate. Designed to be taken concurrently with Biological Oceanography (EESS/EARTHSYS 151/251).

Same as: EARTHSYS 152, EARTHSYS 252, ESS 152

**ESS 253S. Hopkins Microbiology Course. 3-12 Units.**

(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A and CEE 274B, or equivalents.

Same as: BIO 274S, BIOHOPK 274, CEE 274S

**ESS 255. Microbial Physiology. 3 Units.**

Introduction to the physiology of microbes including cellular structure, transcription and translation, growth and metabolism, mechanisms for stress resistance and the formation of microbial communities.

These topics will be covered in relation to the evolution of early life on Earth, ancient ecosystems, and the interpretation of the rock record.

Recommended: introductory biology and chemistry.

Same as: BIO 180, EARTHSYS 255, GS 233A

**ESS 256. Soil and Water Chemistry. 1-4 Unit.**

(Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

Same as: EARTHSYS 156, EARTHSYS 256, ESS 156

**ESS 258. Geomicrobiology. 3 Units.**

How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

Same as: EARTHSYS 158, EARTHSYS 258, ESS 158

**ESS 259. Environmental Microbial Genomics. 1-3 Unit.**

The application of molecular and environmental genomic approaches to the study of biogeochemically-important microorganisms in the environment without the need for cultivation. Emphasis is on genomic analysis of microorganisms by direct extraction and cloning of DNA from natural microbial assemblages. Topics include microbial energy generation and nutrient cycling, genome structure, gene function, physiology, phylogenetic and functional diversity, evolution, and population dynamics of uncultured communities.

**ESS 260. Advanced Statistical Methods for Earth System Analysis. 3 Units.**

Introduction for graduate students to important issues in data analysis relevant to earth system studies. Emphasis on methodology, concepts and implementation (in R), rather than formal proofs. Likely topics include the bootstrap, non-parametric methods, regression in the presence of spatial and temporal correlation, extreme value analysis, time-series analysis, high-dimensional regressions and change-point models. Topics subject to change each year. Prerequisites: STATS 110 or equivalent.

Same as: STATS 360

**ESS 261. Molecular Microbial Biosignatures. 1-3 Unit.**

Critical reading and discussion of literature on molecular biosignatures as indicators of microbial life and metabolisms in modern and ancient environments. Focus will be primarily on recalcitrant lipids that form chemical fossils and topics covered will include biosynthetic pathways of these lipids, their phylogenetic origins, their physiological roles in modern organisms, and their occurrence throughout the geological record. Recommended: microbiology and organic chemistry.

Same as: GS 234A

**ESS 262. Remote Sensing of Land. 4 Units.**

The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

Same as: EARTHSYS 142, EARTHSYS 242, ESS 162

**ESS 263. Topics in Advanced Geostatistics. 3-4 Units.**

Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran.

Same as: ENERGY 242

**ESS 270. Analyzing land use in a globalized world. 3 Units.**

This is a graduate level course that examines the dynamics of land use in relation to the multiple dimensions of globalization. The objective is to understand and analyze how the expansion of global trade, the emergence of new global actors, and public and private regulations affect land use changes. Beyond getting a better understanding of the dynamics of land use change, the course will enable students to better understand how to effectively influence land use change, from different vantage points: government, NGO, information broker, corporate actor. The main emphasis is on tropical regions. Lectures introduce various topics related to theories, practical cases, and evaluation tools to better understand and analyze contemporary land use dynamics. Data analyses will be conducted in the lab section, based on case studies.

**ESS 273. Aquaculture and the Environment: Science, History, and Policy. 3 Units.**

Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures. By application only - instructor consent required. Contact gerhart@stanford.edu or dhklinger@stanford.edu prior to first day of class.

Same as: EARTHSYS 173, EARTHSYS 273, ESS 173

**ESS 275. Nitrogen in the Marine Environment. 1-2 Unit.**

The goal of this seminar course is to explore current topics in marine nitrogen cycle. We will explore a variety of processes, including primary production, nitrogen fixation, nitrification, denitrification, and anaerobic ammonia oxidation, and their controls. We will use the book *Nitrogen in the Marine Environment* and supplement with student-led discussions of recent literature. A variety of biomes, spatial and temporal scales, and methodologies for investigation will be discussed.

**ESS 280B. Principles and Practices of Sustainable Agriculture. 3-4 Units.**

Field-based training in ecologically sound agricultural practices at the Stanford Community Farm. Weekly lessons, field work, and group projects. Field trips to educational farms in the area. Topics include: soils, composting, irrigation techniques, IPM, basic plant anatomy and physiology, weeds, greenhouse management, and marketing.

Same as: EARTHSYS 180B

**ESS 281. Urban Agriculture in the Developing World. 3-4 Units.**

In this advanced undergraduate course, students will learn about some of the key social and environmental challenges faced by cities in the developing world, and the current and potential role that urban agriculture plays in meeting (or exacerbating) those challenges. This is a service-learning course, and student teams will have the opportunity to partner with real partner organizations in a major developing world city to define and execute a project focused on urban development, and the current or potential role of urban agriculture. Service-learning projects will employ primarily the student's analytical skills such as synthesis of existing research findings, interdisciplinary experimental design, quantitative data analysis and visualization, GIS, and qualitative data collection through interviews and textual analysis. Previous coursework in the aforementioned analytical skills is preferred, but not required. Admission is by application.

Same as: EARTHSYS 181, EARTHSYS 281, ESS 181, URBANST 181

**ESS 282. Ecological Farm Management. 1 Unit.**

A project-based course emphasizing 'ways of doing' in sustainable agricultural systems based at the new Stanford Educational Farm. Students will work individually and in small groups on farm projects of their choice facilitated and guided by the Educational Farm Director. Potential projects include: orchards, compost systems, pastured poultry, beekeeping, medicinal herbs, mushroom cultivation, native plants, etc.

**ESS 283. Food Matters: Agriculture in Film. 1 Unit.**

Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

Same as: EARTHSYS 183, EARTHSYS 283, ESS 183

**ESS 284. Climate and Agriculture. 3-4 Units.**

The effects of climate change on global agriculture and food security, and the effects of agriculture on climate change. An overview of different lines of evidence used to measure impacts and adaptations, and to quantify future impacts, risks, and adaptation needs for agro-ecosystems and society. Enrollment limited to 25; priority to juniors, seniors, and graduate students. Prerequisites: ECON 106/206 or permission of instructor.

Same as: EARTHSYS 184, EARTHSYS 284, ESS 184

**ESS 292. Directed Individual Study in Environmental Earth System Science. 1-10 Unit.**

Under supervision of an Environmental Earth System Science faculty member on a subject of mutual interest.

**ESS 300. Climate studies of terrestrial environments. 3 Units.**

This course will consist of a weekly seminar covering topics of interest in Cenozoic climate. The course examines the interactions between the biosphere, atmosphere and geosphere and how these interactions influence climate. The course will cover classic and seminal papers on the controls of the oxygen, hydrogen, and carbon isotopes of the hydrosphere, atmosphere and biosphere and how they are expressed in paleoclimate proxies. Seminar will consist of reading and discussion of these papers. Students will be responsible for presenting papers. Grades will be determined by class participation. (Chamberlain).

**ESS 301. Topics in Earth System Science. 1 Unit.**

Current topics, issues, and research related to interactions that link the oceans, atmosphere, land surfaces and freshwater systems. May be repeated for credit.

**ESS 305. Climate Change: An Earth Systems Perspective. 2 Units.**

A graduate-level, seminar-style class on climate change structured around the IPCC's AR5. Significant reading load and weekly talks by a rotating roster of contributing and lead authors from the IPCC. The focus will be on the physical science basis, adaptation and impacts (working groups 1 and 2), with some material drawn from mitigation (working group 3).

**ESS 306. From Freshwater to Oceans to Land Systems: An Earth System Perspective to Global Challenges. 2 Units.**

Within this class we will have cover Earth System processes ranging from nutrient cycles to ocean circulation. We will also address global environmental challenges of the twenty-first century that include maintaining freshwater resources, land degradation, health of our oceans, and the balance between food production and environmental degradation. Weekly readings and problem sets on specific topics will be followed by presentations of Earth System Science faculty and an in-depth class discussion. ESS first year students have priority enrollment.

**ESS 307. Research Proposal Development and Delivery. 2 Units.**

In this class students will learn how to write rigorous, high yield, multidisciplinary proposals targeting major funding agencies. The skills gained in this class are essential to any professional career, particularly in research science. Students will write a National Science Foundation style proposal involving testable hypotheses, pilot data or calculations, and broader impact. Restricted to EESS first-year, graduate students.

**ESS 310. Climate and Energy Seminar. 3 Units.**

This course examines the links between climate change policy and other regulation of the energy sector in the U.S. context. In the electricity sector, these policies are likely to be closely interconnected, yet they are often considered in isolation. We will evaluate the impacts of energy, air pollution, and water pollution regulations on US greenhouse gas emissions from the energy sector. We will also examine how state regulatory activities aimed at reducing greenhouse gas emissions in the electricity sector are likely to have co-benefits for air and water pollution.

**ESS 311. Seminar in Advanced Applications of Remote Sensing. 1 Unit.**

In this seminar course, we will invite the pioneering scientists from academia and leading experts from the industry to share their applications of remote sensing technology, with a focus on terrestrial use (e.g. agriculture and forestry). In each independent seminar, speakers will present the basic technology and focus on applications with case studies. Students will gain insight into a variety of remote sensing applications in both academia and industry. No prior remote sensing knowledge is required, and each seminar is independent. Attendance is required to receive credit.

**ESS 318. Global Land Use Change to 2050. 2-3 Units.**

An exploration of the fundamental drivers behind long term shifts in the demand for, and supply of, land for agriculture, forestry and environmental uses over the next four decades. Topics include trends in food and bioenergy demand, crop productivity on existing and potential croplands, water and climate constraints, non-extractive uses such as carbon sequestration, and the role of global trade and public policies. Students will lead discussions of weekly readings and perform simple numerical experiments to explore the role of individual drivers of long run global land use.

**ESS 322A. Seminar in Hydrogeology. 1 Unit.**

Current topics. May be repeated for credit. Autumn Quarter has open enrollment, For Winter Quarter, consent of instructor is required.

**ESS 322B. Seminar in Hydrogeology. 1 Unit.**

Current topics. May be repeated for credit. Prerequisite: consent of instructor.

**ESS 330. Advanced Topics in Hydrogeology. 1-2 Unit.**

Topics: questioning classic explanations of physical processes; coupled physical, chemical, and biological processes affecting heat and solute transport. May be repeated for credit.

**ESS 342. Geostatistics. 1-2 Unit.**

Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.

**ESS 342B. Geostatistics. 1-2 Unit.**

Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.

**ESS 342C. Geostatistics. 1-2 Unit.**

Classic results and current research. Topics based on interest and timeliness. May be repeated for credit.

**ESS 363F. Oceanic Fluid Dynamics. 3 Units.**

Dynamics of rotating stratified fluids with application to oceanic flows. Topics include: inertia-gravity waves; geostrophic and cyclogeostrophic balance; vorticity and potential vorticity dynamics; quasi-geostrophic motions; planetary and topographic Rossby waves; inertial, symmetric, barotropic and baroclinic instability; Ekman layers; and the frictional spin-down of geostrophic flows. Prerequisite: CEE 262A or a graduate class in fluid mechanics.

Same as: CEE 363F

**ESS 364F. Advanced Topics in Geophysical Fluid Dynamics. 2-3 Units.**

A seminar-style class covering the classic papers on the theory of the large-scale ocean circulation. Topics include: wind-driven gyres, mesoscale eddies and geostrophic turbulence, eddy-driven recirculation gyres, homogenization of potential vorticity, the ventilated thermocline, subduction, and the abyssal circulation. Prerequisite: EESS 363F or CEE 363F. Recommended: EESS 246B.

Same as: CEE 364F

**ESS 385. Practical Experience in the Geosciences. 1 Unit.**

On-the-job training, that may include summer internship, in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets USCIS requirements for F-1 curricular practical training. May be repeated for credit.

**ESS 398. Current Topics in Ecosystem Modeling. 1-2 Unit.****ESS 400. Graduate Research. 1-15 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**ESS 401. Curricular Practical Training. 1-3 Unit.**

CPT course required for international students completing degree. Prerequisite: Earth System Science Ph.D. candidate.

**ESS 801. TGR Project. 0 Units.****ESS 802. TGR Dissertation. 0 Units.****Earth Systems Courses****EARTHSYS 4. How to Build and Maintain a Habitable Planet: An Introduction to Earth System History. 4 Units.**

Introduction to the history of the Earth, with a focus on processes that maintain or threaten habitability. Principles of stratigraphy, correlation, the geological timescale, the history of biodiversity, and the interpretation of fossils. The use of data from sedimentary geology, geochemistry, and paleontology to test theories for critical events in Earth history such as mass extinctions. One half-day field trip.

Same as: GS 4

**EARTHSYS 9. Public Service Internship Preparation. 1 Unit.**

Are you prepared for your internship this summer? This workshop series will help you make the most of your internship experience by setting learning goals in advance; negotiating and communicating clear roles and expectations; preparing for a professional role in a non-profit, government, or community setting; and reflecting with successful interns and community partners on how to prepare sufficiently ahead of time. You will read, discuss, and hear from guest speakers, as well as develop a learning plan specific to your summer or academic year internship placement. This course is primarily designed for students who have already identified an internship for summer or a later quarter. You are welcome to attend any and all workshops, but must attend the entire series and do the assignments for 1 unit of credit.

Same as: ARTSINST 40, EDUC 9, HUMBIO 9, PUBLPOL 74, URBANST 101

**EARTHSYS 10. Introduction to Earth Systems. 4 Units.**

For non-majors and prospective Earth Systems majors. Multidisciplinary approach using the principles of geology, biology, engineering, and economics to describe how the Earth operates as an interconnected, integrated system. Goal is to understand global change on all time scales. Focus is on sciences, technological principles, and sociopolitical approaches applied to solid earth, oceans, water, energy, and food and population. Case studies: environmental degradation, loss of biodiversity, and resource sustainability.

**EARTHSYS 11Q. Sustainability And Social Justice. 3 Units.**

At its core, sustainability is a conversation about equity. Equity between people today and people tomorrow. Equity between the many diverse people today who are all trying to pursue their hopes and dreams. Equity between human beings and the myriad other living creatures we share this planet with. Movements for environmental sustainability and social justice share a concern for equity, but have largely evolved in parallel. Mounting evidence however shows that environmental and social change are almost always inextricably linked, and the climate crisis is pushing together these two areas of study like never before. That is good news, but tough questions remain. What happens when the environmental costs of personal freedom can no longer be sustained? Should the needs of the many always outweigh the needs of the few? Are we responsible for repairing the injustices of our parents' and grandparents' generations? Where are the win-win solutions? In this interdisciplinary seminar, we will explore the theory and practice of sustainability and social justice, examining case studies where they have intersected, and where they have not. Readings will draw from sustainability science, environmental justice, environmental ethics, religious studies, social psychology, and ecological economics. Through weekly readings, discussions, and journal writing, students will develop a personal sustainability manifesto and analyze a policy, technology, or social movement through the lens of social and environmental sustainability.

Same as: ETHICSOC 11Q

**EARTHSYS 12SC. Environmental and Geological Field Studies in the Rocky Mountains. 2 Units.**

The ecologically and geologically diverse Rocky Mountain area is being strongly impacted by changing land use patterns, global and regional environmental change, and societal demands for energy and natural resources. This field program emphasizes coupled environmental and geological problems in the Rocky Mountains, covering a broad range of topics including the geologic origin of the American West from three billion years ago to the present; paleoclimatology and the glacial history of this mountainous region; the long- and short-term carbon cycle and global climate change; and environmental issues in the American West related to changing land-use patterns and increased demand for its abundant natural resources. In addition to the science aspects of this course we will also investigate the unique western culture of the area particularly in regards to modern ranching and outfitting in the American West. These broad topics are integrated into a coherent field-study as we examine earth/ environmental science-related questions in three different settings: 1) the three-billion-year-old rocks and the modern glaciers of the Wind River Mountains of Wyoming; 2) the sediments in the adjacent Wind River basin that host abundant gas and oil reserves and also contain the long-term climate history of this region; and 3) the volcanic center of Yellowstone National Park and the mountainous region of Teton National Park. Students will complete six assignments based upon field exercises, working in small groups to analyze data and prepare reports and maps. Lectures will be held in the field prior to and after fieldwork. Note: This course involves one week of backpacking in the Wind Rivers and hiking while staying in cabins near Jackson Hole, Wyoming. Students must arrive in Salt Lake City on Tuesday, September 6. (Hotel lodging will be provided for the night of September 6, and thereafter students will travel as a Sophomore College group.) We will return to campus on Friday, September 23. Sophomore College Course: Application required, due noon, April 5, 2016. Apply at <http://soco.stanford.edu>.

Same as: ESS 12SC, GS 12SC

**EARTHSYS 13SC. People, Land, and Water in the Heart of the West. 2 Units.**

Salmon River. Sun Valley. Pioneer Mountains. The names speak of powerful forces and ideas in the American West. Central Idaho - a landscape embracing snow-capped mountains, raging rivers, sagebrush deserts, farms, ranches, and resort communities - is our classroom for this field-based seminar led by David Freyberg, professor of Civil and Environmental Engineering, and David Kennedy, professor emeritus of History. This course focuses on the history and future of a broad range of natural resource management issues in the western United States. We will spend a week on campus preparing for a two-week field course in Idaho exploring working landscapes, private and public lands, water and fisheries, conservation, and the history and literature of the relationship between people and the land in the American West. After the first week spent on campus, we will drive to Idaho to begin the field portion of our seminar. In Idaho, we will spend time near Twin Falls, at Lava Lake Ranch near Craters of the Moon National Monument, in Custer County at the Upper Salmon River, and near Stanley in the Sawtooth National Forest. No prior camping experience is required, but students should be comfortable living outdoors in mobile base camps for periods of several days. Students will investigate specific issues in-depth and present their findings at the end of the course.

**EARTHSYS 18. Promoting Sustainability Behavior Change at Stanford. 2 Units.**

Stanford Green Living Council training course. Strategies for designing and implementing effective behavior change programs for environmental sustainability on campus. Includes methods from community-based social marketing, psychology, behavioral economics, education, public health, social movements, and design. Students design a behavior change intervention project targeting a specific environmental sustainability-related behavior. Lectures online and weekly sections/workshops.

**EARTHSYS 30. Ecology for Everyone. 4 Units.**

Everything is connected, but how? Ecology is the science of interactions and the changes they generate. This project-based course links individual behavior, population growth, species interactions, and ecosystem function. Introduction to measurement, observation, experimental design and hypothesis testing in field projects, mostly done in groups. The goal is to learn to think analytically about everyday ecological processes involving bacteria, fungi, plants, animals and humans. The course uses basic statistics to analyze data; there are no math prerequisites except arithmetic. Open to everyone, including those who may be headed for more advanced courses in ecology and environmental science.

Same as: BIO 30

**EARTHSYS 37N. Climate Change: Science & Society. 3 Units.**

Preference to freshmen. How and why do greenhouse gases cause climate to change? How will a changing climate affect humans and natural ecosystems? What can be done to prevent climate change and better adapt to the climate change that does occur? Focus is on developing quantitative understanding of these issues rooted in both the physical and social sciences. Exercises based on simple quantitative observations and calculations; algebra only, no calculus.

**EARTHSYS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration. 3 Units.**

This course examines the motivations and experiences of polar explorers under the harshest conditions on Earth, as well as the chronicles of their explorations and hardships, dating to the 1500s for the Arctic and the 1700s for the Antarctic. Materials include *The Worst Journey in the World* by Aspley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Optional field trip into the high Sierra in March.

Same as: ESS 38N, GS 38N

**EARTHSYS 39N. The Carbon Cycle: Reducing Your Impact. 3 Units.**

Preference to freshmen. Changes in the long- and short-term carbon cycle and global climate through the burning of fossil fuels since the Industrial Revolution. How people can shrink their carbon footprints. Long-term sources and sinks of carbon and how they are controlled by tectonics and short-term sources and sinks and the interaction between the biosphere and ocean. How people can shrink their carbon footprints. Held at the Stanford Community Farm.

**EARTHSYS 41N. The Global Warming Paradox. 3 Units.**

Preference to freshman. Focus is on the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Topics include: Earth's energy balance; detection and attribution of climate change; the climate response to enhanced greenhouse forcing; impacts of climate change on natural and human systems; and proposed methods for curbing further climate change. Sources include peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks.

**EARTHSYS 42. The Global Warming Paradox II. 1 Unit.**

Further discussion of the complex climate challenges posed by the substantial benefits of energy consumption, including the critical tension between the enormous global demand for increased human well-being and the negative climate consequences of large-scale emissions of carbon dioxide. Discussions of topics of student interest, including peer-reviewed scientific papers, current research results, and portrayal of scientific findings by the mass media and social networks. Focus is on student engagement in on-campus and off-campus activities. Prerequisite: EESS 41N or EARTHSYS 41N or consent of instructor. Same as: ESS 42

**EARTHSYS 44N. The Invisible Majority: The Microbial World That Sustains Our Planet. 3 Units.**

Microbes are often viewed through the lens of infectious disease yet they play a much broader and underappreciated role in sustaining our Earth system. From introducing oxygen into the Earth's atmosphere over 2 billion years ago to consuming greenhouse gases today, microbial communities have had (and continue to have) a significant impact on our planet. In this seminar, students will learn how microbes transformed the ancient Earth environment into our modern planet, how they currently sustain our Earth's ecosystems, and how scientists study them both in the present and in the past. Students will be exposed to the fundamentals of microbiology, biogeochemistry, and Earth history.

**EARTHSYS 46N. Exploring the Critical Interface between the Land and Monterey Bay: Elkhorn Slough. 3 Units.**

Preference to freshmen. Field trips to sites in the Elkhorn Slough, a small agriculturally impacted estuary that opens into Monterey Bay, a model ecosystem for understanding the complexity of estuaries, and one of California's last remaining coastal wetlands. Readings include Jane Caffrey's *Changes in a California Estuary: A Profile of Elkhorn Slough*. Basics of biogeochemistry, microbiology, oceanography, ecology, pollution, and environmental management. Same as: ESS 46N

**EARTHSYS 46Q. Environmental Impact of Energy Systems: What are the Risks?. 3 Units.**

In order to reduce CO<sub>2</sub> emissions and meet growing energy demands during the 21st Century, the world can expect to experience major shifts in the types and proportions of energy-producing systems. These decisions will depend on considerations of cost per energy unit, resource availability, and unique national policy needs. Less often considered is the environmental impact of the different energy producing systems: fossil fuels, nuclear, wind, solar, and other alternatives. One of the challenges has been not only to evaluate the environmental impact but also to develop a systematic basis for comparison of environmental impact among the energy sources. The course will consider fossil fuels (natural gas, petroleum and coal), nuclear power, wind and solar and consider the impact of resource extraction, refining and production, transmission and utilization for each energy source. Same as: GS 46Q

**EARTHSYS 49N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay. 3 Units.**

This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended. Same as: CEE 50N, ESS 49N

**EARTHSYS 56Q. Changes in the Coastal Ocean: The View From Monterey and San Francisco Bays. 3 Units.**

Preference to sophomores. Recent changes in the California current, using Monterey Bay as an example. Current literature introduces principles of oceanography. Visits from researchers from MBARI, Hopkins, and UCSC. Optional field trip to MBARI and Monterey Bay. Same as: ESS 56Q

**EARTHSYS 57Q. Climate Change from the Past to the Future. 3 Units.**

Preference to sophomores. Numeric models to predict how climate responds to increase of greenhouse gases. Paleoclimate during times in Earth's history when greenhouse gas concentrations were elevated with respect to current concentrations. Predicted scenarios of climate models and how these models compare to known hyperthermal events in Earth history. Interactions and feedbacks among biosphere, hydrosphere, atmosphere, and lithosphere. Topics include long- and short-term carbon cycle, coupled biogeochemical cycles affected by and controlling climate change, and how the biosphere responds to climate change. Possible remediation strategies. Same as: ESS 57Q

**EARTHSYS 61Q. Food and security. 3 Units.**

The course will provide a broad overview of key policy issues concerning agricultural development and food security, and will assess how global governance is addressing the problem of food security. At the same time the course will provide an overview of the field of international security, and examine how governments and international institutions are beginning to include food in discussions of security. Same as: ESS 61Q, INTNLREL 61Q

**EARTHSYS 100. Environmental and Geological Field Studies in the Rocky Mountains. 3 Units.**

Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns. Same as: ESS 101, GS 101

**EARTHSYS 101. Energy and the Environment. 3 Units.**

Energy use in modern society and the consequences of current and future energy use patterns. Case studies illustrate resource estimation, engineering analysis of energy systems, and options for managing carbon emissions. Focus is on energy definitions, use patterns, resource estimation, pollution. Recommended: MATH 21 or 42.  
Same as: ENERGY 101

**EARTHSYS 102. Renewable Energy Sources and Greener Energy Processes. 3 Units.**

Do you want a much better understanding of renewable power technologies? Did you know that wind and solar are the fastest growing forms of electricity generation? Are you interested in hearing about the most recent, and future, designs for green power? Do you want to understand what limits power extraction from renewable resources and how current designs could be improved? This course dives deep into these and related issues for wind, solar, biomass, geothermal, tidal and wave power technologies. We welcome all student, from non-majors to MBAs and grad students. If you are potentially interested in an energy or environmental related major, this course is particularly useful. Recommended: Math 21 or 42.  
Same as: ENERGY 102

**EARTHSYS 103. Understanding Energy. 3 Units.**

Energy is one of the world's main drivers of opportunity and development for human beings. At the same time, our energy system has significant consequences for our society, political system, economy, and environment. For example, energy production and use is the #1 source of greenhouse gas emissions. This course surveys key aspects of each energy resource, including significance and potential conversion processes and technologies, drivers and barriers, policy and regulatory environment, and social, economic, and environmental impacts. Both depletable and renewable energy resources are covered, including oil, natural gas, coal, nuclear, biomass, hydroelectric, wind, solar, photovoltaics, geothermal, and ocean energy, with cross-cutting topics including electricity, storage, climate change, sustainability, green buildings, energy efficiency, transportation, and the developing world. Understanding Energy is part of a trio of inter-related courses aimed at gaining an in-depth understanding of each energy resource - from fossil fuels to renewable energy. The other two classes are CEE 107W/207W Understanding Energy - Workshop, and CEE 107F/207F Understanding Energy -- Field Trips. Note that this course was formerly called Energy Resources (CEE 173A/207A & Earthsys 103). Prerequisites: Algebra. May not be taken for credit by students who have completed CEE 107S.  
Same as: CEE 107A, CEE 207A

**EARTHSYS 103F. Understanding Energy -- Field Trips. 1 Unit.**

Understanding Energy -- Field Trips takes students on trips to some of the most significant energy resource sites in North American located within a few hours of Stanford University. Students visit at least two of the many field trips offered, including to Diablo Canyon nuclear power plant, an Altmont Pass wind farm, a geothermal facility at The Geysers, a solar photovoltaic (PV) farm, Shasta Dam and hydroelectric power plant, a major oil field, and a natural gas-fired power plant, an energy efficiency technology lab, among others. Students meet on a weekly basis to debrief previous field trips and prepare for future ones. Open to all majors and backgrounds. Understanding Energy Field Trips is part of a trio of inter-related courses aimed at gaining an in-depth understanding of each energy resource -- from fossil fuels to renewable energy. The other two classes are CEE 107A/207A Understanding Energy, and CEE 107W/207W Understanding Energy - Workshop. Priority is given to students who have taken or are concurrently enrolled in CEE 173A, CEE 107A, CEE 207A, Earthsys 103, or CEE 107S/207S.  
Same as: CEE 107F, CEE 207F

**EARTHSYS 103W. Understanding Energy -- Workshop. 1 Unit.**

Interactive workshop that goes in depth into energy topics touched on by CEE 107A/207A & Earthsys 103 - Understanding Energy. Topics covered include energy and sustainability, energy information analysis, energy and climate change policy, electricity storage, exergy and energy quality, energy-water nexus, energy and land use, energy and air quality, and transportation policy. Students are graded on attendance, participation, and a short final paper. Sessions will involve discussions, group activities, and fun debates. Open to all majors and backgrounds. This workshop is part of a trio of inter-related courses aimed at gaining an in-depth understanding of each energy resource -- from fossil fuels to renewable energy. The other two classes are CEE 107A/207A Understanding Energy, and CEE 107F/207F Understanding Energy Field Trips. Prerequisites: Must have taken or take concurrently CEE 173A, CEE 107A, CEE 207A, Earthsys 103, or CEE 107S/207S.  
Same as: CEE 107W, CEE 207W

**EARTHSYS 104. The Water Course. 3 Units.**

The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water; taste tests of water from around the world. Current U.S. and world water supply issues.  
Same as: GEOPHYS 70

**EARTHSYS 105. Food and Community: New Visions for a Sustainable Future. 3 Units.**

Through this course students will learn about the community and outreach component of the urban gardening movement. Over the quarter students will learn about urban farming, about projects that work to increase access of the most underserved to fresh and local food, and about the challenges surrounding these efforts. The theme of the course will be stories- stories of food and community, of innovation, and of service. Students will learn through engaging in conversation with different leaders in the local food movement. Additionally, through hands-on learning and participation, students will become familiar with different types of community food projects in the Bay Area, including urban farms, free food giveaways, food banks, and gleaning projects. Service Learning Course (certified by Haas Center). Limited enrollment. May be repeated for credit.  
Same as: ESS 105

**EARTHSYS 105A. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.**

Formerly 96A - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course.  
Same as: BIO 105A

**EARTHSYS 105B. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.**

Formerly 96B - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course.  
Same as: BIO 105B

**EARTHSYS 106. World Food Economy. 5 Units.**

The economics of food production, consumption, and trade. The micro- and macro- determinants of food supply and demand, including the interrelationship among food, income, population, and public-sector decision making. Emphasis on the role of agriculture in poverty alleviation, economic development, and environmental outcomes. (graduate students enroll in 206).

Same as: EARTHSYS 206, ECON 106, ECON 206, ESS 106, ESS 206

**EARTHSYS 107. Control of Nature. 3 Units.**

Think controlling the earth's climate is science fiction? It is when you watch *Snowpiercer* or *Dune*, but scientists are already devising geoengineering schemes to slow climate change. Will we ever resurrect the woolly mammoth or even a T. Rex (think *Jurassic Park*)? Based on current research, that day will come in your lifetime. Who gets to decide what species to save? And more generally, what scientific and ethical principles should guide our decisions to control nature? In this course, we will examine the science behind ways that people alter and engineer the earth, critically examining the positive and negative consequences. We'll explore these issues first through popular movies and books and then, more substantively, in scientific research.

Same as: ESS 107

**EARTHSYS 109. Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision. 2 Units.**

Examination of program-based local actions that promote resource conservation and an educational environment for sustainability. Examination of building-level actions that contribute to conservation, lower utility costs, and generate understanding of sustainability consistent with Stanford's commitment to sustainability as a core value. Overview of operational sustainability including energy, water, buildings, waste, and food systems. Practical training to enable students to become sustainability coordinators for their dorms or academic units.

Same as: CEE 109, ENVRINST 109

**EARTHSYS 111. Biology and Global Change. 4 Units.**

The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing.

Same as: BIO 117, ESS 111

**EARTHSYS 112. Human Society and Environmental Change. 4 Units.**

Interdisciplinary approaches to understanding human-environment interactions with a focus on economics, policy, culture, history, and the role of the state. Prerequisite: ECON 1.

Same as: ESS 112, HISTORY 103D

**EARTHSYS 113. Earthquakes and Volcanoes. 3 Units.**

Is the "Big One" overdue in California? What kind of damage would that cause? What can we do to reduce the impact of such hazards in urban environments? Does "fracking" cause earthquakes and are we at risk? Is the United States vulnerable to a giant tsunami? The geologic record contains evidence of volcanic super eruptions throughout Earth's history. What causes these gigantic explosive eruptions, and can they be predicted in the future? This course will address these and related issues. For non-majors and potential Earth scientists. No prerequisites.

More information at [https://pangea.stanford.edu/research/CDFM/CourseDescriptions/GP\\_113\\_announcement.pdf](https://pangea.stanford.edu/research/CDFM/CourseDescriptions/GP_113_announcement.pdf).

Same as: GEOPHYS 90

**EARTHSYS 115. Wetlands Ecology of the Pantanal Prefield Seminar. 2-3 Units.**

This seminar will prepare students for their overseas field experience in the Pantanal, Brazil, the largest wetland in the world, studying wetlands ecology and conservation in situ. Students will give presentations on specific aspects of the Pantanal and lay the groundwork for the presentations they will be giving during the field seminar where access to the internet and to other scholarly resources will be quite limited. Additional topics include: logistics, health and safety, cultural sensitivity, geography and politics, and basic language skills; also, post-field issues such as reverse culture shock, and ways in which participants can consolidate and build up their abroad experiences after they return to campus. Students will have the opportunity to participate in a pilot study aimed at developing a series of innovative online curriculum based upon their field experience.

**EARTHSYS 115T. Island Biogeography of Tasmania Prefield Seminar. 3 Units.**

Islands are natural laboratories for studying a wide variety of subjects including biological diversity, cultural diversity, epidemiology, geology, climate change, conservation, and evolution. This field seminar focuses on Island Biogeography in one of the most extraordinary and well-preserved ecosystems in the world: Tasmania. Tasmanian devils, wombats, and wallabies – the names conjure up images of an exotic faraway place, a place to appreciate the incredibly diversity of life and how such striking forms of life came to be. This course will prepare students for their overseas seminar in Tasmania. Students will give presentations on specific aspects of the Tasmania and will lay the groundwork for the presentations they will be giving during the field seminar where access to the internet and to other scholarly resources will be quite limited. Additional topics to be addressed include: logistics, health and safety, group dynamics, cultural sensitivity, history, and politics. We will also address post-field issues such as reverse culture shock, and ways to consolidate and build up abroad experiences after students return to campus.

**EARTHSYS 116. Ecology of the Hawaiian Islands. 4 Units.**

Terrestrial and marine ecology and conservation biology of the Hawaiian Archipelago. Taught in the field in Hawaii as part of quarter-long sequence of courses including Earth Sciences and Anthropology. Topics include ecological succession, plant-soil interactions, conservation biology, biological invasions and ecosystem consequences, and coral reef ecology. Restricted to students accepted into the Earth Systems of Hawaii Program.

Same as: BIO 116

**EARTHSYS 117. Earth Sciences of the Hawaiian Islands. 4 Units.**

Progression from volcanic processes through rock weathering and soil-ecosystem development to landscape evolution. The course starts with an investigation of volcanic processes, including the volcano structure, origin of magmas, physical-chemical factors of eruptions. Factors controlling rock weathering and soil development, including depth and nutrient levels impacting plant ecosystems, are explored next. Geomorphic processes of landscape evolution including erosion rates, tectonic/volcanic activity, and hillslope stability conclude the course. Methods for monitoring and predicting eruptions, defining spatial changes in landform, landform stability, soil production rates, and measuring biogeochemical processes are covered throughout the course. This course is restricted to students accepted into the Earth Systems of Hawaii Program.

Same as: EARTH 117, ESS 117

**EARTHSYS 118. Heritage, Environment, and Sovereignty in Hawaii. 4 Units.**

This course explores the cultural, political economic, and environmental status of contemporary Hawaiians. What sorts of sustainable economic and environmental systems did Hawaiians use in prehistory? How was colonization of the Hawaiian Islands informed and shaped by American economic interests and the nascent imperialism of the early 20th century? How was sovereignty and Native Hawaiian identity been shaped by these forces? How has tourism and the leisure industry affected the natural environment? This course uses archaeological methods, ethnohistorical sources, and historical analysis in an exploration of contemporary Hawaiian social economic and political life. Same as: ANTHRO 118

**EARTHSYS 119. Will Work for Food. 1 Unit.**

This is a speaker series class featuring highly successful innovators in the food system. Featured speakers will talk in an intimate, conversational manner about their current work, as well as about their successes, failures, and learnings along the way. Additional information can be found here: <http://feedcollaborative.org/speaker-series/>. Same as: EARTHSYS 219

**EARTHSYS 121. Building a Sustainable Society: New Approaches for Integrating Human and Environmental Priorities. 3 Units.**

"Building a Sustainable Society: New approaches to integrating human and environmental priorities" draws on economics, natural resources management, sociology and leadership science to examine theoretical frameworks and diverse case studies that illustrate the main drivers, core features and challenges of building a sustainable society where human beings and the natural environment thrive. Themes include collaborative consumption, the sharing economy, worker-owned cooperatives, community-corporate partnerships, cradle to cradle design, social entrepreneurship, impact investing, "beyond GDP" measures, and 21st century leadership. Critical perspectives, lectures and student-led discussions guide analysis of innovations within public, private and civic sectors globally, with emphasis on Latin America.

**EARTHSYS 122. Paleobiology. 4 Units.**

Introduction to the fossil record with emphasis on marine invertebrates. Major debates in paleontological research. The history of animal life in the oceans. Topics include the nature of the fossil record, evolutionary radiations, mass extinctions, and the relationship between biological evolution and environmental change. Fossil taxa through time. Exercises in phylogenetics, paleoecology, biostratigraphy, and statistical methods. Same as: GS 123, GS 223B

**EARTHSYS 124. D\*3: Disasters, Decisions, Developmen. 3-5 Units.**

This class connects the science behind natural disasters with the real-world constraints of disaster management and development. In each iteration of this class we will focus on a specific, disaster-prone location as case study. By collaborating with local stakeholders we will explore how science and engineering can make a difference in reducing disaster risk in the future. Offered every other year. Same as: ESS 118, ESS 218, GEOPHYS 118, GEOPHYS 218, GS 118, GS 218

**EARTHSYS 127. GIS for good: Applications of GIS for International Development and Humanitarian Assistance. 3-4 Units.**

This service-learning course exposes students to geographic information systems (GIS) as a tool for exploring alternative solutions to complex environmental and humanitarian issues in the international arena. The project-based, interdisciplinary structure of this class gives primary emphasis to the use of GIS for field data collection, mapping, analysis and visualization that allows for multi-criteria assessment of community development. Those with no prior GIS experience will be required to take an introductory GIS workshop hosted by the Geospatial Center in Branner Library during the first two weeks of class. Same as: ESS 122, ESS 222

**EARTHSYS 128. Evolutionary History of Terrestrial Ecosystems. 4 Units.**

The what, when, and how do we know it regarding life on land including plants, fungi, invertebrates, and vertebrates (yes, dinosaurs) and how all of those components interact with each other and with changing climates, continental drift, atmospheric composition, and environmental perturbations like glaciation and mass extinction. Same as: GS 128, GS 228

**EARTHSYS 129. Geographic Impacts of Global Change: Mapping the Stories. 4 Units.**

Forces of global change (eg., climate disruption, biodiversity loss, disease) impart wide-ranging political, socioeconomic, and ecological impacts, creating an urgent need for science communication. Students will collect data for a region of the US using sources ranging from academic journals to popular media and create an interactive Story Map (<http://stanford.maps.arcgis.com/apps/StorytellingTextLegend/index.html?appid=dafe2393fd2e4acc8b0a4e6e71d0b6d5>) that merges the scientific and human dimensions of global change. Students will interview stakeholders as part of a community-engaged learning experience and present the Map to national policy-makers. Our 2014 Map is being used by the CA Office of Planning & Research. Same as: BIO 128

**EARTHSYS 132. Biogeochemical Cycles on Earth through Time. 4 Units.**

This course examines biogeochemical cycles and how they developed through the interaction between the atmosphere, hydrosphere, biosphere, and lithosphere. Emphasis is on the long-term carbon cycle and how it is connected to other biogeochemical cycles on Earth. The course consists of lectures, discussion of research papers, and quantitative modeling of biogeochemical cycles. Students produce a model on some aspect of the cycles discussed in this course. Grades based on class interaction, student presentations, and the modeling project. Same as: EARTHSYS 232, ESS 132, ESS 232

**EARTHSYS 135. Podcasting the Anthropocene. 3 Units.**

Identification and interview of Stanford researchers to be featured in an audio podcast. Exploration of interviewing techniques, audio storytelling, audio editing, and podcasting as a newly emerging media platform. Individual and group projects. Group workshops focused on preparation, review, and critiques of podcasts. Same as: EARTHSYS 235

**EARTHSYS 135A. Podcasting the Anthropocene 1.0. 1-2 Unit.**

In this course students will conduct audio interviews with experts about subjects related to the Anthropocene. The term Anthropocene refers to the proposed new geologic age based on the global footprint of humankind. The course is one part seminar and one part project-based. Students will work with the instructors and with each other throughout the production cycle. The podcasting show works in collaboration with Smithsonian Magazine, and there will be opportunities to publish. In contrast to EARTHSYS 135, this course will focus more heavily on the interview process, with less emphasis on post-production. Same as: EARTHSYS 235A

**EARTHSYS 138. International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development. 4-5 Units.**

Comparative approach to sustainable cities, with focus on international practices and applicability to China. Tradeoffs regarding land use, infrastructure, energy and water, and the need to balance economic vitality, environmental quality, cultural heritage, and social equity. Student teams collaborate with Chinese faculty and students partners to support urban sustainability projects. Limited enrollment via application; see [internationalurbanization.org](http://internationalurbanization.org) for details. Prerequisites: consent of the instructor(s). Same as: CEE 126, IPS 274, URBANST 145

**EARTHSYS 140. The Energy-Water Nexus. 3 Units.**

Energy, water, and food are our most vital resources constituting a tightly intertwined network: energy production requires water, transporting and treating water needs energy, producing food requires both energy and water. The course is an introduction to learn specifically about the links between energy and water. Students will look first at the use of water for energy production, then at the role of energy in water projects, and finally at the challenge in figuring out how to keep this relationship as sustainable as possible. Students will explore case examples and are encouraged to contribute examples of concerns for discussion as well as suggest a portfolio of sustainable energy options.

Same as: GEOPHYS 80

**EARTHSYS 141. Remote Sensing of the Oceans. 3-4 Units.**

How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.

Same as: EARTHSYS 241, ESS 141, ESS 241, GEOPHYS 141

**EARTHSYS 142. Remote Sensing of Land. 4 Units.**

The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

Same as: EARTHSYS 242, ESS 162, ESS 262

**EARTHSYS 144. Fundamentals of Geographic Information Science (GIS). 3-4 Units.**

Survey of geographic information including maps, satellite imagery, and census data, approaches to spatial data, and tools for integrating and examining spatially-explicit data. Emphasis is on fundamental concepts of geographic information science and associated technologies. Topics include geographic data structure, cartography, remotely sensed data, statistical analysis of geographic data, spatial analysis, map design, and geographic information system software. Computer lab assignments. All students are required to attend a weekly lab on Tuesdays or Thursdays from 6 pm to 9 pm.

Same as: ESS 164

**EARTHSYS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: EARTHSYS 246A, ESS 146A, ESS 246A, GEOPHYS 146A, GEOPHYS 246A

**EARTHSYS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A or EESS 246A, or CEE 164 or CEE 262D, or consent of instructor.

Same as: EARTHSYS 246B, ESS 146B, ESS 246B, GEOPHYS 146B, GEOPHYS 246B

**EARTHSYS 151. Biological Oceanography. 3-4 Units.**

Required for Earth Systems students in the oceans track. Interdisciplinary look at how oceanic environments control the form and function of marine life. Topics include distributions of planktonic production and abundance, nutrient cycling, the role of ocean biology in the climate system, expected effects of climate changes on ocean biology. Local weekend field trips. Designed to be taken concurrently with Marine Chemistry (EESS/EARTHSYS 152/252). Prerequisites: BIO 43 and EESS 8 or equivalent.

Same as: EARTHSYS 251, ESS 151, ESS 251

**EARTHSYS 152. Marine Chemistry. 3-4 Units.**

Introduction to the interdisciplinary knowledge and skills required to critically evaluate problems in marine chemistry and related disciplines. Physical, chemical, and biological processes that determine the chemical composition of seawater. Air-sea gas exchange, carbonate chemistry, and chemical equilibria, nutrient and trace element cycling, particle reactivity, sediment chemistry, and diagenesis. Examination of chemical tracers of mixing and circulation and feedbacks of ocean processes on atmospheric chemistry and climate. Designed to be taken concurrently with Biological Oceanography (EESS/EARTHSYS 151/251).

Same as: EARTHSYS 252, ESS 152, ESS 252

**EARTHSYS 155. Science of Soils. 3-4 Units.**

Physical, chemical, and biological processes within soil systems. Emphasis is on factors governing nutrient availability, plant growth and production, land-resource management, and pollution within soils. How to classify soils and assess nutrient cycling and contaminant fate. Recommended: introductory chemistry and biology.

Same as: ESS 155

**EARTHSYS 156. Soil and Water Chemistry. 1-4 Unit.**

(Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

Same as: EARTHSYS 256, ESS 156, ESS 256

**EARTHSYS 156M. Marine Resource Economics and Conservation. 5 Units.**

Economic and ecological frameworks to understand the causes of and potential solutions to marine resource degradation. Focus on conservation of marine biodiversity and ecosystem-based management. Applications include: commercial and recreational fisheries, marine reserves, and offshore energy production.

Same as: ECON 156, HUMBIO 111M

**EARTHSYS 158. Geomicrobiology. 3 Units.**

How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

Same as: EARTHSYS 258, ESS 158, ESS 258

**EARTHSYS 160. Sustainable Cities. 4-5 Units.**

Service-learning course that exposes students to sustainability concepts and urban planning as a tool for determining sustainable outcomes in the Bay Area. Focus will be on the relationship of land use and transportation planning to housing and employment patterns, mobility, public health, and social equity. Topics will include government initiatives to counteract urban sprawl and promote smart growth and livability, political realities of organizing and building coalitions around sustainability goals, and increasing opportunities for low-income and communities of color to achieve sustainability outcomes. Students will participate in team-based projects in collaboration with local community partners and take part in significant off-site fieldwork. Prerequisites: consent of the instructor. Same as: URBANST 164

**EARTHSYS 163E. International Climate Negotiations: Unpacking the Road to Paris. 3 Units.**

Interested in what's going on with international climate negotiations, why it has proven so difficult to reach a meaningful agreement? Wondering whether or not another UN agreement is even a meaningful part of climate policy in 2015? This course traces the history of climate negotiations from the very first awareness of the problem of climate change, through the Kyoto Protocol and Copenhagen Accord, to the current state of international negotiations in the lead-up to the 21st Conference of the Parties meeting in Paris in December 2015. The course covers fundamental concepts in climate change science and policy, international law and multilateral environmental agreements, as well as key issues of climate finance, climate justice, equity, adaptation, communication, and social movements that together comprise the subjects of debate in the negotiations. We will discuss all the key facets of what's being negotiated in Paris and prepare students to follow the outcome of the negotiation in detail. Students also participate in a three-day mock conference of the parties. By application only. Same as: CEE 163E, CEE 263E, EARTHSYS 263E

**EARTHSYS 163F. Groundwork for COP21. 1 Unit.**

This course will prepare undergraduate and coterm students to observe the climate change negotiations (COP 21) in Paris in November/December 2015. Students will develop individual projects to be carried out before and during the negotiation session and be paired with mentors. Please note: Along with EARTHSYS 163E/CEE 163E, this course is part of the required two-course-set in which undergraduate and co-terminal masters degree students must enroll to receive accreditation to the climate negotiations. Same as: CEE 163F, CEE 263F, EARTHSYS 263F

**EARTHSYS 164. Introduction to Physical Oceanography. 4 Units.**

The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53). Same as: CEE 164, CEE 262D, ESS 148

**EARTHSYS 168. The Evolving Sphere of Food Security. 2 Units.**

This seminar delves into a comprehensive new volume on food security written by an all-Stanford team of nineteen faculty and researchers. It explores the interconnections of food security with energy, water, climate, health, and national security, and examines the role of food and agricultural policies and their consequences in countries at different stages of development. Led by the editor of the book, with participation of several of the authors from across many disciplines. Prerequisite: ECON 106. Admission is by application. Same as: EARTHSYS 268

**EARTHSYS 170. Environmental Geochemistry. 4 Units.**

Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor. Same as: GS 170, GS 270

**EARTHSYS 172. Australian Ecosystems: Human Dimensions and Environmental Dynamics. 3 Units.**

This cross-disciplinary course surveys the history and prehistory of human ecological dynamics in Australia, drawing on geology, climatology, archaeology, geography, ecology and anthropology to understand the mutual dynamic relationships between the continent and its inhabitants. Topics include anthropogenic fire and fire ecology, animal extinctions, aridity and climate variability, colonization and spread of *Homo sapiens*, invasive species interactions, changes in human subsistence and mobility throughout the Pleistocene and Holocene as read through the archaeological record, the totemic geography and social organization of Aboriginal people at the time of European contact, the ecological and geographical aspects of the "Dreamtime", and contemporary issues of policy relative to Aboriginal land tenure and management. Same as: ANTHRO 170, ANTHRO 270

**EARTHSYS 173. Aquaculture and the Environment: Science, History, and Policy. 3 Units.**

Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures. By application only - instructor consent required. Contact gerhart@stanford.edu or dhklinger@stanford.edu prior to first day of class. Same as: EARTHSYS 273, ESS 173, ESS 273

**EARTHSYS 175. California Coast: Science, Policy, and Law. 3-4 Units.**

Same as LAW 514. Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in field trips. Same as: CEE 175A, CEE 275A, EARTHSYS 275

**EARTHSYS 176. Open Space Management Practicum. 3-4 Units.**

The unique patchwork of urban-to-rural land uses, property ownership, and ecosystems in our region poses numerous challenges and opportunities for regional conservation and environmental stewardship. Students in this class will address a particular challenge through a faculty-mentored research project engaged with the Peninsula Open Space Trust, Acterra, or the Amah Mutsun Land Trust that focuses on open space management. By focusing on a project driven by the needs of these organizations and carried out through engagement with the community, and with thorough reflection, study, and discussion about the roles of scientific, economic, and policy research in local-scale environmental decision-making, students will explore the underlying challenges and complexities of what it means to actually do community-engaged research for conservation and open space preservation in the real world. As such, this course will provide students with skills and experience in research design in conservation biology and ecology, community and stakeholder engagement, land use policy and planning, and the practical aspects of land and environmental management. Same as: EARTHSYS 276

**EARTHSYS 176A. Open Space Practicum Independent Study. 1-2 Unit.**

Additional practicum units for students intent on continuing their projects from EARTHSYS 176. Students who enroll in 176A must have completed EARTHSYS 176: Open Space Management Practicum, or have consent of the instructors.

**EARTHSYS 177. Interdisciplinary Research Survival Skills. 2 Units.**

Learning in interdisciplinary situations. Framing research questions. Developing research methods that benefit from interdisciplinary understanding. Writing for multiple audiences and effectively making interdisciplinary presentations. Discussions with interdisciplinary experts from across campus regarding interdisciplinary research projects. Same as: EARTHSYS 277, ENVRINST 177, ENVRINST 277

**EARTHSYS 177C. Specialized Writing and Reporting: Environmental Journalism. 4-5 Units.**

(Graduate students register for COMM / EARTHSYS 277C.) A practical, writing-intensive course for science and journalism students that begins with the assumption that you already know how to research and relay the essential facts of almost any environmental story. You will go beyond the basics, both as reporters and storytellers. Learn how to write stories that stand on fact but move like fiction, that have protagonists and antagonists, that create suspense, that reveal character through dialogue and action, and that pay off with resonant finales. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: COMM 104, EARTHSYS 200 or consent of instructor. Admission by application only, available from [thayden@stanford.edu](mailto:thayden@stanford.edu). Applications due Nov. 30, 2015. Same as: COMM 177C, COMM 277C, EARTHSYS 277C

**EARTHSYS 179S. Seminar: Issues in Environmental Science, Technology and Sustainability. 1-2 Unit.**

Invited faculty, researchers and professionals share their insights and perspectives on a broad range of environmental and sustainability issues. Students critique seminar presentations and associated readings. Same as: CEE 179S, CEE 279S, ESS 179S

**EARTHSYS 180B. Principles and Practices of Sustainable Agriculture. 3-4 Units.**

Field-based training in ecologically sound agricultural practices at the Stanford Community Farm. Weekly lessons, field work, and group projects. Field trips to educational farms in the area. Topics include: soils, composting, irrigation techniques, IPM, basic plant anatomy and physiology, weeds, greenhouse management, and marketing. Same as: ESS 280B

**EARTHSYS 181. Urban Agriculture in the Developing World. 3-4 Units.**

In this advanced undergraduate course, students will learn about some of the key social and environmental challenges faced by cities in the developing world, and the current and potential role that urban agriculture plays in meeting (or exacerbating) those challenges. This is a service-learning course, and student teams will have the opportunity to partner with real partner organizations in a major developing world city to define and execute a project focused on urban development, and the current or potential role of urban agriculture. Service-learning projects will employ primarily the student's analytical skills such as synthesis of existing research findings, interdisciplinary experimental design, quantitative data analysis and visualization, GIS, and qualitative data collection through interviews and textual analysis. Previous coursework in the aforementioned analytical skills is preferred, but not required. Admission is by application.

Same as: EARTHSYS 281, ESS 181, ESS 281, URBANST 181

**EARTHSYS 183. Food Matters: Agriculture in Film. 1 Unit.**

Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit.

Same as: EARTHSYS 283, ESS 183, ESS 283

**EARTHSYS 184. Climate and Agriculture. 3-4 Units.**

The effects of climate change on global agriculture and food security, and the effects of agriculture on climate change. An overview of different lines of evidence used to measure impacts and adaptations, and to quantify future impacts, risks, and adaptation needs for agro-ecosystems and society. Enrollment limited to 25; priority to juniors, seniors, and graduate students. Prerequisites: ECON 106/206 or permission of instructor.

Same as: EARTHSYS 284, ESS 184, ESS 284

**EARTHSYS 185. Feeding Nine Billion. 4-5 Units.**

Feeding a growing and wealthier population is a huge task, and one with implications for many aspects of society and the environment. There are many tough choices to be made—on fertilizers, groundwater pumping, pesticide use, organics, genetic modification, etc. Unfortunately, many people form strong opinions about these issues before understanding some of the basics of how food is grown, such as how most farmers currently manage their fields, and their reasons for doing so. The goal of this class is to present an overview of global agriculture, and the tradeoffs involved with different practices. Students will develop two key knowledge bases: basic principles of crop ecology and agronomy, and familiarity with the scale of the global food system. The last few weeks of the course will be devoted to building on this knowledge base to evaluate different future directions for agriculture.

**EARTHSYS 187. FEED the Change: Redesigning Food Systems. 2-3 Units.**

Introductory course in design thinking and food system analysis offered through the FEED Collaborative. Targeted at upper-class undergraduates, this course provides a series of diverse, primarily hands-on experiences (design projects, field work, and storytelling) in which students both learn and apply the process of human-centered design to projects of real consequence in the food system. Students will also develop knowledge and basic tools for working effectively in teams and for analyzing complex systems. The goal of this course is to develop the creative confidence of students and, in turn, to work collaboratively with thought leaders in the local food system to design innovative solutions to the challenges they face. Admission is by application: <http://feedcollaborative.org/classes/>.

**EARTHSYS 188. Social and Environmental Tradeoffs in Climate Decision-Making. 1-2 Unit.**

How can we ensure that measures taken to mitigate global climate change don't create larger social and environmental problems? What metrics should be used to compare potential climate solutions beyond cost and technical feasibility, and how should these metrics be weighed against each other? How can modeling efforts and stakeholder engagement be best integrated into climate decision making? What information are we still missing to make fully informed decisions between technologies and policies? Exploration of these questions, alongside other issues related to potential negative externalities of emerging climate solutions. Evaluation of energy, land use, and geoenvironmental approaches in an integrated context, culminating in a climate stabilization group project.

Same as: EARTHSYS 288

**EARTHSYS 191. Introduction to Environmental Communication. 3 Units.**

Introduction to the history, development, and current state of communication of environmental science and policy to non-specialist audiences. Includes fundamental principles, core competencies, and major challenges of effective environmental communication in the public and policy realms and an overview of the current range and scope of research and practice in environmental communication. Intended for senior undergraduates and above with a background in environmental science and policy. Prerequisite: Earth Systems core (EarthSys 111 and EarthSys 112) or equivalent.

Same as: EARTHSYS 291

**EARTHSYS 195. Natural Hazards and Risk Communication. 3 Units.**

Introduction to the science behind natural hazards, the risks associated with these hazards, and effective methods of communicating them to a variety of audiences. Examination of methods of translation and communication. Investigation of the relative effectiveness of these methods for increasing preparedness and resiliency to natural hazards. Satisfies the Earth Systems WIM requirement.

**EARTHSYS 197. Directed Individual Study in Earth Systems. 1-9 Unit.**

Under supervision of an Earth Systems faculty member on a subject of mutual interest.

**EARTHSYS 199. Honors Program in Earth Systems. 1-9 Unit.****EARTHSYS 200. Sustaining Action: Research, Analysis and Writing for the Public. 3 Units.**

Preference to graduate students and senior undergraduates in environmental, natural and social sciences, engineering, journalism. Students help produce and publish SAGE, an eco advice column, by choosing, researching, and answering questions about sustainable living submitted by Stanford alumni and the general public. (Meets Earth Systems WIM requirement).

**EARTHSYS 205. Navigating Wicked Marine Problems. 3 Units.**

Commercial shipping is essential to international trade, consumer goods and the global economy, but can impact the marine environment. Vessel traffic schemes often overlap with important marine areas, creating unintended pressures and impacts to marine ecosystems, including whales. Ship strikes are a threat to endangered whales, and ship noise can affect important mating and feeding behavior. In this course, the issue of whale and vessel interactions will be used as a case study to help students identify threats, pressures, and policy responses of a complex, or "wicked," ocean-based problem. In project teams, students will complete a Pressure State Response analysis of the problem, with the goal of developing practical and professional skills necessary to participate in complex marine planning and decision-making in their post-graduate careers. Students will gain an opportunity to network with experts, scientists and professionals who have experience on the primary themes of the course. The deadline for enrollment for this course is Feb. 23. Contact lhgood@stanford.edu with interest.

**EARTHSYS 206. World Food Economy. 5 Units.**

The economics of food production, consumption, and trade. The micro- and macro- determinants of food supply and demand, including the interrelationship among food, income, population, and public-sector decision making. Emphasis on the role of agriculture in poverty alleviation, economic development, and environmental outcomes. (graduate students enroll in 206).

Same as: EARTHSYS 106, ECON 106, ECON 206, ESS 106, ESS 206

**EARTHSYS 207. Spanish in Science/Science in Spanish. 2 Units.**

For graduate and undergraduate students interested in the natural sciences and the Spanish language. Students will acquire the ability to communicate in Spanish using scientific language and will enhance their ability to read scientific literature written in Spanish. Emphasis on the development of science in Spanish-speaking countries or regions. Course is conducted in Spanish and intended for students pursuing degrees in the sciences, particularly disciplines such as ecology, environmental science, sustainability, resource management, anthropology, and archeology.

Same as: BIO 208, LATINAM 207

**EARTHSYS 210A. Senior Capstone and Reflection. 3 Units.**

The Earth Systems Senior Capstone and Reflection, required of all seniors, provides students with opportunities to synthesize and reflect on their learning in the major. Students participate in guided career development and planning activities and initiate work on an independent or group capstone project related to an Earth Systems problem or question of interest. In addition, students learn and apply principles of effective oral communication through developing and giving a formal presentation on their internship. Students must also take EARTHSYS 210P, Earth Systems Capstone Project, in the quarter following the Senior Capstone and Reflection Course. Prerequisite: Completion of an approved Earth Systems internship (EARTHSYS 260).

**EARTHSYS 210B. Senior Capstone and Reflection. 3 Units.**

The Earth Systems Senior Capstone and Reflection, required of all seniors, provides students with opportunities to synthesize and reflect on their learning in the major. Students participate in guided career development and planning activities and initiate work on an independent or group capstone project related to an Earth Systems problem or question of interest. In addition, students learn and apply principles of effective oral communication through developing and giving a formal presentation on their internship. Students must also take EARTHSYS 210P, Earth Systems Capstone Project, in the quarter following the Senior Capstone and Reflection Course. Prerequisite: Completion of an approved Earth Systems internship (EARTHSYS 260).

**EARTHSYS 210C. Senior Capstone and Reflection. 3 Units.**

The Earth Systems Senior Capstone and Reflection, required of all seniors, provides students with opportunities to synthesize and reflect on their learning in the major. Students participate in guided career development and planning activities and initiate work on an independent or group capstone project related to an Earth Systems problem or question of interest. In addition, students learn and apply principles of effective oral communication through developing and giving a formal presentation on their internship. Students must also take EARTHSYS 210P, Earth Systems Capstone Project, in the quarter following the Senior Capstone and Reflection Course. Prerequisite: Completion of an approved Earth Systems internship (EARTHSYS 260).

**EARTHSYS 210P. Earth Systems Capstone Project. 1 Unit.**

Students work independently or in groups to complete their Senior Capstone Projects. They will participate in regular advising meetings with the instructor(s), and will give a final presentation on their projects at the end of the quarter in a special Earth Systems symposium. Prerequisite: EARTHSYS 210A, B, or C.

**EARTHSYS 211. Fundamentals of Modeling. 3-5 Units.**

Simulation models are a powerful tool for environmental research, if used properly. The major concepts and techniques for building and evaluating models. Topics include model calibration, model selection, uncertainty and sensitivity analysis, and Monte Carlo and bootstrap methods.

Emphasis is on gaining hands-on experience using the R programming language. Prerequisite: Basic knowledge of statistics.

Same as: ESS 211

**EARTHSYS 219. Will Work for Food. 1 Unit.**

This is a speaker series class featuring highly successful innovators in the food system. Featured speakers will talk in an intimate, conversational manner about their current work, as well as about their successes, failures, and learnings along the way. Additional information can be found here: <http://feedcollaborative.org/speaker-series/>.

Same as: EARTHSYS 119

**EARTHSYS 232. Biogeochemical Cycles on Earth through Time. 4 Units.**

This course examines biogeochemical cycles and how they developed through the interaction between the atmosphere, hydrosphere, biosphere, and lithosphere. Emphasis is on the long-term carbon cycle and how it is connected to other biogeochemical cycles on Earth. The course consists of lectures, discussion of research papers, and quantitative modeling of biogeochemical cycles. Students produce a model on some aspect of the cycles discussed in this course. Grades based on class interaction, student presentations, and the modeling project.

Same as: EARTHSYS 132, ESS 132, ESS 232

**EARTHSYS 235. Podcasting the Anthropocene. 3 Units.**

Identification and interview of Stanford researchers to be featured in an audio podcast. Exploration of interviewing techniques, audio storytelling, audio editing, and podcasting as a newly emerging media platform. Individual and group projects. Group workshops focused on preparation, review, and critiques of podcasts.

Same as: EARTHSYS 135A

**EARTHSYS 235A. Podcasting the Anthropocene 1.0. 1-2 Unit.**

In this course students will conduct audio interviews with experts about subjects related to the Anthropocene. The term Anthropocene refers to the proposed new geologic age based on the global footprint of humankind. The course is one part seminar and one part project-based. Students will work with the instructors and with each other throughout the production cycle. The podcasting show works in collaboration with Smithsonian Magazine, and there will be opportunities to publish. In contrast to EARTHSYS 135, this course will focus more heavily on the interview process, with less emphasis on post-production.

Same as: EARTHSYS 135A

**EARTHSYS 238. Land Use. 3 Units.**

(Same as LAW 338.) This course focuses on the pragmatic (rather than theoretical) aspects of contemporary land use law and policy, including: nuisance as a land use tool and foundation for modern land use law; use and abuse of the "police power" (the legal basis for land use control); zoning flexibility; vested property rights, development agreements, and takings; redevelopment; growth control; and direct democracy. We explore how land use decisions affect environmental quality and how land use decision-making addresses environmental impacts. Special Instructions: All graduate students from other departments are encouraged to enroll, and no pre-requisites apply. Student participation is essential. Roughly two-thirds of the class time will involve a combination of lecture and classroom discussion. The remaining time will engage students in case studies based on actual land use issues and disputes. Elements used in grading: Attendance, class participation, writing assignments, and final exam.

**EARTHSYS 241. Remote Sensing of the Oceans. 3-4 Units.**

How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.

Same as: EARTHSYS 141, ESS 141, ESS 241, GEOPHYS 141

**EARTHSYS 242. Remote Sensing of Land. 4 Units.**

The use of satellite remote sensing to monitor land use and land cover, with emphasis on terrestrial changes. Topics include pre-processing data, biophysical properties of vegetation observable by satellite, accuracy assessment of maps derived from remote sensing, and methodologies to detect changes such as urbanization, deforestation, vegetation health, and wildfires.

Same as: EARTHSYS 142, ESS 162, ESS 262

**EARTHSYS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: EARTHSYS 146A, ESS 146A, ESS 246A, GEOPHYS 146A, GEOPHYS 246A

**EARTHSYS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A or EESS 246A, or CEE 164 or CEE 262D, or consent of instructor.

Same as: EARTHSYS 146B, ESS 146B, ESS 246B, GEOPHYS 146B, GEOPHYS 246B

**EARTHSYS 250. Directed Research. 1-9 Unit.**

Independent research related to student's primary track, carried out after the junior year, during the summer, and/or during the senior year. Student develops own project with faculty supervision. 10-15 page thesis. May be repeated for credit.

**EARTHSYS 251. Biological Oceanography. 3-4 Units.**

Required for Earth Systems students in the oceans track. Interdisciplinary look at how oceanic environments control the form and function of marine life. Topics include distributions of planktonic production and abundance, nutrient cycling, the role of ocean biology in the climate system, expected effects of climate changes on ocean biology. Local weekend field trips. Designed to be taken concurrently with Marine Chemistry (EESS/EARTHSYS 152/252). Prerequisites: BIO 43 and EESS 8 or equivalent.

Same as: EARTHSYS 151, ESS 151, ESS 251

**EARTHSYS 252. Marine Chemistry. 3-4 Units.**

Introduction to the interdisciplinary knowledge and skills required to critically evaluate problems in marine chemistry and related disciplines. Physical, chemical, and biological processes that determine the chemical composition of seawater. Air-sea gas exchange, carbonate chemistry, and chemical equilibria, nutrient and trace element cycling, particle reactivity, sediment chemistry, and diagenesis. Examination of chemical tracers of mixing and circulation and feedbacks of ocean processes on atmospheric chemistry and climate. Designed to be taken concurrently with Biological Oceanography (EESS/EARTHSYS 151/251).

Same as: EARTHSYS 152, ESS 152, ESS 252

**EARTHSYS 255. Microbial Physiology. 3 Units.**

Introduction to the physiology of microbes including cellular structure, transcription and translation, growth and metabolism, mechanisms for stress resistance and the formation of microbial communities. These topics will be covered in relation to the evolution of early life on Earth, ancient ecosystems, and the interpretation of the rock record. Recommended: introductory biology and chemistry.

Same as: BIO 180, ESS 255, GS 233A

**EARTHSYS 256. Soil and Water Chemistry. 1-4 Unit.**

(Graduate students register for 256.) Practical and quantitative treatment of soil processes affecting chemical reactivity, transformation, retention, and bioavailability. Principles of primary areas of soil chemistry: inorganic and organic soil components, complex equilibria in soil solutions, and adsorption phenomena at the solid-water interface. Processes and remediation of acid, saline, and wetland soils. Recommended: soil science and introductory chemistry and microbiology.

Same as: EARTHSYS 156, ESS 156, ESS 256

**EARTHSYS 258. Geomicrobiology. 3 Units.**

How microorganisms shape the geochemistry of the Earth's crust including oceans, lakes, estuaries, subsurface environments, sediments, soils, mineral deposits, and rocks. Topics include mineral formation and dissolution; biogeochemical cycling of elements (carbon, nitrogen, sulfur, and metals); geochemical and mineralogical controls on microbial activity, diversity, and evolution; life in extreme environments; and the application of new techniques to geomicrobial systems. Recommended: introductory chemistry and microbiology such as CEE 274A.

Same as: EARTHSYS 158, ESS 158, ESS 258

**EARTHSYS 260. Internship. 1-9 Unit.**

Supervised field, lab, or private sector project. May consist of directed research under the supervision of a Stanford faculty member, participation in one of several off campus Stanford programs, or an approved non-Stanford program relevant to the student's Earth Systems studies. Required of and restricted to declared Earth Systems majors. Includes 15-page technical summary research paper that is subject to iterative revision.

**EARTHSYS 263E. International Climate Negotiations: Unpacking the Road to Paris. 3 Units.**

Interested in what's going on with international climate negotiations, why it has proven so difficult to reach a meaningful agreement? Wondering whether or not another UN agreement is even a meaningful part of climate policy in 2015? This course traces the history of climate negotiations from the very first awareness of the problem of climate change, through the Kyoto Protocol and Copenhagen Accord, to the current state of international negotiations in the lead-up to the 21st Conference of the Parties meeting in Paris in December 2015. The course covers fundamental concepts in climate change science and policy, international law and multilateral environmental agreements, as well as key issues of climate finance, climate justice, equity, adaptation, communication, and social movements that together comprise the subjects of debate in the negotiations. We will discuss all the key facets of what's being negotiated in Paris and prepare students to follow the outcome of the negotiation in detail. Students also participate in a three-day mock conference of the parties. By application only.

Same as: CEE 163E, CEE 263E, EARTHSYS 163E

**EARTHSYS 263F. Groundwork for COP21. 1 Unit.**

This course will prepare undergraduate and coterm students to observe the climate change negotiations (COP 21) in Paris in November/December 2015. Students will develop individual projects to be carried out before and during the negotiation session and be paired with mentors. Please note: Along with EARTHSYS 163E/CEE 163E, this course is part of the required two-course-set in which undergraduate and co-terminal masters degree students must enroll to receive accreditation to the climate negotiations.

Same as: CEE 163F, CEE 263F, EARTHSYS 163F

**EARTHSYS 268. The Evolving Sphere of Food Security. 2 Units.**

This seminar delves into a comprehensive new volume on food security written by an all-Stanford team of nineteen faculty and researchers. It explores the interconnections of food security with energy, water, climate, health, and national security, and examines the role of food and agricultural policies and their consequences in countries at different stages of development. Led by the editor of the book, with participation of several of the authors from across many disciplines. Prerequisite: ECON 106. Admission is by application.

Same as: EARTHSYS 168

**EARTHSYS 272. Antarctic Marine Geology. 3 Units.**

For upper-division undergraduates and graduate students. Intermediate and advanced topics in marine geology and geophysics, focusing on examples from the Antarctic continental margin and adjacent Southern Ocean. Topics: glaciers, icebergs, and sea ice as geologic agents (glacial and glacial marine sedimentology, Southern Ocean current systems and deep ocean sedimentation), Antarctic biostratigraphy and chronostratigraphy (continental margin evolution). Students interpret seismic lines and sediment core/well log data. Examples from a recent scientific drilling expedition to Prydz Bay, Antarctica. Up to two students may have an opportunity to study at sea in Antarctica during Winter Quarter.

Same as: ESS 242

**EARTHSYS 273. Aquaculture and the Environment: Science, History, and Policy. 3 Units.**

Can aquaculture feed billions of people without degrading aquatic ecosystems or adversely impacting local communities? Interdisciplinary focus on aquaculture science and management, international seafood markets, historical case studies (salmon farming in Chile, tuna ranching in the Mediterranean, shrimp farming in Vietnam), current federal/state legislation. Field trip to aquaculture farm and guest lectures. By application only - instructor consent required. Contact gerhart@stanford.edu or dhklinger@stanford.edu prior to first day of class.

Same as: EARTHSYS 173, ESS 173, ESS 273

**EARTHSYS 275. California Coast: Science, Policy, and Law. 3-4 Units.**

Same as LAW 514. Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in field trips.

Same as: CEE 175A, CEE 275A, EARTHSYS 175

**EARTHSYS 276. Open Space Management Practicum. 3-4 Units.**

The unique patchwork of urban-to-rural land uses, property ownership, and ecosystems in our region poses numerous challenges and opportunities for regional conservation and environmental stewardship. Students in this class will address a particular challenge through a faculty-mentored research project engaged with the Peninsula Open Space Trust, Acterra, or the Amah Mutsun Land Trust that focuses on open space management. By focusing on a project driven by the needs of these organizations and carried out through engagement with the community, and with thorough reflection, study, and discussion about the roles of scientific, economic, and policy research in local-scale environmental decision-making, students will explore the underlying challenges and complexities of what it means to actually do community-engaged research for conservation and open space preservation in the real world. As such, this course will provide students with skills and experience in research design in conservation biology and ecology, community and stakeholder engagement, land use policy and planning, and the practical aspects of land and environmental management. Same as: EARTHSYS 176

**EARTHSYS 276A. Open Space Practicum Independent Study. 1-2 Unit.**

Additional practicum units for students intent on continuing their projects from EARTHSYS 276. Students who enroll in 276A must have completed EARTHSYS 276: Open Space Management Practicum, or have consent of the instructors.

**EARTHSYS 277. Interdisciplinary Research Survival Skills. 2 Units.**

Learning in interdisciplinary situations. Framing research questions. Developing research methods that benefit from interdisciplinary understanding. Writing for multiple audiences and effectively making interdisciplinary presentations. Discussions with interdisciplinary experts from across campus regarding interdisciplinary research projects. Same as: EARTHSYS 177, ENVRINST 177, ENVRINST 277

**EARTHSYS 277C. Specialized Writing and Reporting: Environmental Journalism. 4-5 Units.**

(Graduate students register for COMM / EARTHSYS 277C.) A practical, writing-intensive course for science and journalism students that begins with the assumption that you already know how to research and relay the essential facts of almost any environmental story. You will go beyond the basics, both as reporters and storytellers. Learn how to write stories that stand on fact but move like fiction, that have protagonists and antagonists, that create suspense, that reveal character through dialogue and action, and that pay off with resonant finales. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: COMM 104, EARTHSYS 200 or consent of instructor. Admission by application only, available from [thayden@stanford.edu](mailto:thayden@stanford.edu). Applications due Nov. 30, 2015. Same as: COMM 177C, COMM 277C, EARTHSYS 177C

**EARTHSYS 281. Urban Agriculture in the Developing World. 3-4 Units.**

In this advanced undergraduate course, students will learn about some of the key social and environmental challenges faced by cities in the developing world, and the current and potential role that urban agriculture plays in meeting (or exacerbating) those challenges. This is a service-learning course, and student teams will have the opportunity to partner with real partner organizations in a major developing world city to define and execute a project focused on urban development, and the current or potential role of urban agriculture. Service-learning projects will employ primarily the student's analytical skills such as synthesis of existing research findings, interdisciplinary experimental design, quantitative data analysis and visualization, GIS, and qualitative data collection through interviews and textual analysis. Previous coursework in the aforementioned analytical skills is preferred, but not required. Admission is by application.

Same as: EARTHSYS 181, ESS 181, ESS 281, URBANST 181

**EARTHSYS 283. Food Matters: Agriculture in Film. 1 Unit.**

Film series presenting historical and contemporary issues dealing with food and agriculture across the globe. Students discuss reactions and thoughts in a round table format. May be repeated for credit. Same as: EARTHSYS 183, ESS 183, ESS 283

**EARTHSYS 284. Climate and Agriculture. 3-4 Units.**

The effects of climate change on global agriculture and food security, and the effects of agriculture on climate change. An overview of different lines of evidence used to measure impacts and adaptations, and to quantify future impacts, risks, and adaptation needs for agro-ecosystems and society. Enrollment limited to 25; priority to juniors, seniors, and graduate students. Prerequisites: ECON 106/206 or permission of instructor.

Same as: EARTHSYS 184, ESS 184, ESS 284

**EARTHSYS 288. Social and Environmental Tradeoffs in Climate Decision-Making. 1-2 Unit.**

How can we ensure that measures taken to mitigate global climate change don't create larger social and environmental problems? What metrics should be used to compare potential climate solutions beyond cost and technical feasibility, and how should these metrics be weighed against each other? How can modeling efforts and stakeholder engagement be best integrated into climate decision making? What information are we still missing to make fully informed decisions between technologies and policies? Exploration of these questions, alongside other issues related to potential negative externalities of emerging climate solutions. Evaluation of energy, land use, and geoeengineering approaches in an integrated context, culminating in a climate stabilization group project.

Same as: EARTHSYS 188

**EARTHSYS 289A. FEED Lab: Food System Design & Innovation. 3-4 Units.**

FEED Lab is a 3-4 unit introductory course in design thinking and food system innovation offered through the FEED Collaborative. Targeted at graduate students interested in food and the food system, this course provides a series of diverse, primarily hands-on experiences (design projects with industry-leading thinkers, field work, and collaborative leadership development) in which students both learn and apply the process of human-centered design to projects of real consequence in the food system. The intent of this course is to develop students' creative confidence, collaborative leadership ability, and skills in systems thinking to prepare them to be more effective as innovators and leaders in the food system. This course is mandatory for any student wishing to qualify for the FEED Collaborative's summer Leadership and Innovation Program, in which select students participate in full-time, paid, externship roles with collaborating thought-leaders in the industry. Admission is by application: <http://feedcollaborative.org/classes/>.

**EARTHSYS 289B. FEED Lab: Food System Design & Innovation. 3-4 Units.**

Primarily a follow-on course to EARTHSYS 289A, this course is an experiential education platform that enables students already experienced in design thinking to collaborate with faculty and industry thought-leaders on projects of real consequence in the local food system. A select cohort of students will work in small, diverse teams and will interact closely with the teaching team in an intentionally creative and informal classroom setting. Students will deepen their skills in design thinking and social entrepreneurship by working on projects sponsored by leading innovators in the FEED Collaborative's network. Some projects may turn into summer internships or research projects for students interested in continuing their work. Admission is by application: <http://feedcollaborative.org/classes/>.

**EARTHSYS 290. Master's Seminar. 2 Units.**

Required of and open only to Earth Systems master's students. Reflection on the Earth Systems coterminous experience and development of skills to clearly articulate interdisciplinary expertise to potential employers, graduate or professional schools, colleagues, business partners, etc. Hands-on projects to take students through a series of guided reflection activities. Individual and small group exercises. Required, self-chosen final project encapsulates each student's MS expertise in a form relevant to his or her future goals (ie. a personal statement, research poster, portfolio, etc.).

**EARTHSYS 291. Introduction to Environmental Communication. 3 Units.**

Introduction to the history, development, and current state of communication of environmental science and policy to non-specialist audiences. Includes fundamental principles, core competencies, and major challenges of effective environmental communication in the public and policy realms and an overview of the current range and scope of research and practice in environmental communication. Intended for senior undergraduates and above with a background in environmental science and policy. Prerequisite: Earth Systems core (EarthSys 111 and EarthSys 112) or equivalent.

Same as: EARTHSYS 191

**EARTHSYS 292. Multimedia Environmental Communication. 3 Units.**

Theory and practice of effective, accurate and engaging use of photography and web video production in environmental communication. Emphasis on group project work and peer critiquing in each modality, including some out-of-class work time. Limited class size, preference to Earth Systems Master's students.

**EARTHSYS 293. Environmental Communication Practicum. 5 Units.**

Students complete an internship or similar practical experience in a professional environmental communication setting. Potential placements include environmental publications, NGOs, government agencies, on-campus entities, and science centers and museums. Restricted to students enrolled in the Environmental Communication Master of Arts in Earth Systems.

**EARTHSYS 294. Environmental Communication Capstone. 5 Units.**

Group-project based course focused on applying the skills and theoretical understanding gained through the Environmental Communication Master of Arts in Earth Systems course progression to a real-world communication challenge. Students design, plan, and implement an integrated communication strategy around a defined environmental topic or research program, such as the implementation of the new student farm; a specific research group's laboratory or expedition work; or an topic or concept of interest across research groups, such as climate change adaptation or marine conservation. Restricted to students enrolled in the Environmental Communication Master of Arts in Earth Systems, or by permission of the instructor.

**EARTHSYS 297. Directed Individual Study in Earth Systems. 1-9 Unit.**

Under supervision of an Earth Systems faculty member on a subject of mutual interest.

**EARTHSYS 298. Earth Systems Book Review. 2 Units.**

For Earth Systems master's students and advanced undergraduates only. Analysis and discussion of selected literary nonfiction books relevant to Earth systems topics. Examples of previous topics include political presentations of environmental change in the popular press, review of the collected works of Aldo Leopold, disaster literature, and global warming.

**EARTHSYS 299. M.S. Thesis. 1-9 Unit.**

.

**EARTHSYS 323. Stanford at Sea. 16 Units.**

(Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major. Same as: BIOHOPK 182H, BIOHOPK 323H, EESS 323

**Earth, Energy and Environmental Sciences Courses****Earth, Energy, & Environmental Sciences Courses****EEES 302. Challenges and Practices in Crossdisciplinary Research and Teaching. 1 Unit.**

Required EEES core course. Presentations by Earth Sciences faculty. Pedagogical tools to present interdisciplinary concepts to a non-specialist audience.

**Earth, Energy, & Environmental Sciences Courses****EARTH 1. Current Research in the Earth and Environmental Sciences. 1 Unit.**

Primarily for freshmen and sophomores. An introduction to faculty and research areas in the School of Earth Sciences, including biogeochemistry, oceanography, paleobiology, geophysics, tectonics, geostatistics, soil science, hydrogeology, energy resources, earth surface processes, geochronology, volcanoes and earthquakes, and remote sensing. May be repeated for credit.

**EARTH 2. CLIMATE AND SOCIETY. 3 Units.**

How and why is the climate changing? How might a changing climate affect human society? And what can we do to alter the course of climate change and adapt to any climatic changes that do occur? This course provides an introduction to the natural science and social science of climate change. The focus is on what science tells us about the causes, consequences, and solutions to climate change, as well as on how scientific progress is made on these issues.

**EARTH 5. Geokids: Earth Sciences Education. 1 Unit.**

Service learning through the Geokids program. Eight weeks of supervised teaching to early elementary students about Earth sciences. Hands-on teaching strategies for science standards-based instruction.

**EARTH 14. Our National Parks. 2 Units.**

Explore the history and natural science of three national parks proximal to Stanford. Under the guidance of instructors, students will work in teams to learn about chosen aspects of these parks, develop dynamic self-guided tours for public consumption, and implement (and publish) these tours using the XibitEd app for iPhones. Students will learn how to present their findings to a general, non-scientific audience, delineate physical locations at which storytelling will take place through the XibitEd system, and create and configure the content for the system. The course will culminate in the publishing of the experiential learning tours, as well as a weekend-long field trip to the Pinnacles National Park. Same as: EARTH 114A, GS 14, GS 114A

**EARTH 100. Research Preparation for Undergraduates. 1 Unit.**

For undergraduates planning to conduct research during the summer with faculty in the School of Earth Sciences. Readings, oral presentations, proposal development. May be repeated for credit.

**EARTH 114A. Our National Parks. 2 Units.**

Explore the history and natural science of three national parks proximal to Stanford. Under the guidance of instructors, students will work in teams to learn about chosen aspects of these parks, develop dynamic self-guided tours for public consumption, and implement (and publish) these tours using the XibitEd app for iPhones. Students will learn how to present their findings to a general, non-scientific audience, delineate physical locations at which storytelling will take place through the XibitEd system, and create and configure the content for the system. The course will culminate in the publishing of the experiential learning tours, as well as a weekend-long field trip to the Pinnacles National Park.

Same as: EARTH 14, GS 14, GS 114A

**EARTH 117. Earth Sciences of the Hawaiian Islands. 4 Units.**

Progression from volcanic processes through rock weathering and soil-ecosystem development to landscape evolution. The course starts with an investigation of volcanic processes, including the volcano structure, origin of magmas, physical-chemical factors of eruptions. Factors controlling rock weathering and soil development, including depth and nutrient levels impacting plant ecosystems, are explored next. Geomorphic processes of landscape evolution including erosion rates, tectonic/volcanic activity, and hillslope stability conclude the course. Methods for monitoring and predicting eruptions, defining spatial changes in landform, landform stability, soil production rates, and measuring biogeochemical processes are covered throughout the course. This course is restricted to students accepted into the Earth Systems of Hawaii Program.

Same as: EARTHSYS 117, ESS 117

**EARTH 191. GS Field Trips. 1 Unit.**

Four- to seven-day field trips to locations of geologic and environmental interest. Includes trips offered during Thanksgiving and Spring breaks. May be repeated for credit.

Same as: GS 191

**EARTH 193. Natural Perspectives: Geology, Environment, and Art. 1 Unit.**

Multi-day field trip that combines exploration of regional geology, ecology, and environmental history with guided drawing exercises. We'll visit several sites of geologic and environmental interest, discuss their formation and significance, and use drawing as tool for close observation. Students will gain an understanding of the natural processes shaping California, acquire new skills and techniques for artistic expression, and gain an appreciation for how scientific and aesthetic perspectives complement and enhance one another in the study of nature. No previous scientific or artistic experience is required.

**EARTH 202. PhD Students on the PhD. 1 Unit.**

This seminar is designed for coterms and upperclassmen who are considering pursuing a PhD in earth science fields but want to know what that path really entails. Consisting of small-group discussions with current PhD students, this course will feature conversations on a range of PhD research topics and will also delve into the substance of the PhD experience itself. We will explore PhD students' programs and career paths: the milestones, processes, and issues that guide their decisions and shape their PhD experiences. Discussion themes will be determined partly in advance and partly based on the interests of participants and could include topics such as choosing a PhD program or research question, interdisciplinarity, community engagement, or work/life balance.

**EARTH 211. Software Development for Scientists and Engineers. 3 Units.**

Basic usage of the Python and C/C++ programming languages are introduced and used to solve representative computational problems from various science and engineering disciplines. Software design principles including time and space complexity analysis, data structures, object-oriented design, decomposition, encapsulation, and modularity are emphasized. Usage of campus wide Linux compute resources: login, file system navigation, editing files, compiling and linking, file transfer, etc. Versioning and revision control, software build utilities, and the LaTeX typesetting software are introduced and used to help complete programming assignments. Prerequisite: introductory programming course equivalent to CS 106A or instructor consent.

Same as: CME 211

**EARTH 214. Software Design in Modern Fortran for Scientists and Engineers. 3 Units.**

This course introduces software design and development in modern Fortran. Course covers the functional, object-oriented-, and parallel programming features introduced in the Fortran 95, 2003, and 2008 standards, respectively, in the context of numerical approximations to ordinary and partial differential equations; introduces object-oriented design and design schematics based on the Unified Modeling Language (UML) structure, behavior, and interaction diagrams; cover the basic use of several open-source tools for software building, testing, documentation generation, and revision control. Recommended: Familiarity with programming in Fortran 90, basic numerical analysis and linear algebra, or instructor approval.

Same as: CME 214

**EARTH 218. Communicating Science. 3 Units.**

For undergraduates and graduate students interested in teaching science in local schools. Inquiry-based science teaching methods. How to communicate scientific knowledge and improve presentations. Six weeks of supervised teaching in a local school classroom. Prerequisite: course in introductory biology, geology, chemistry, or marine sciences.

**EARTH 219. OPINION WRITING IN THE SCIENCES. 1 Unit.**

Part exposition, part reflection, part synthesis, research-driven opinion writing can be found everywhere from the op-ed pages of daily newspapers, to the commentary sections of journals such as Nature and Science, to the sort of wide-ranging reviews found in the New York Review of Books. In this course, advanced doctoral students will study the form, and work with the instructors to develop a publication-quality opinion essay on an aspect of their own field. Admission is limited and by application only. Contact [thayden@stanford.edu](mailto:thayden@stanford.edu).

**EARTH 251. Negotiation. 3 Units.**

Students learn to prepare for and conduct negotiations in a variety of arenas including getting a job, managing workplace conflict, negotiating transactions, and managing personal relationships. Interactive class. The internationally travelled instructor who has mediated cases in over 75 countries will require students to negotiate real life case studies and discuss their results in class. Application required before first day of class; see Coursework.

Same as: CEE 151, CEE 251

**EARTH 300. Earth Sciences Seminar. 1 Unit.**

Required for incoming graduate students except coterms. Research questions, tools, and approaches of faculty members from all departments in the School of Earth Sciences. Goals are: to inform new graduate students about the school's range of scientific interests and expertise; and introduce them to university and school resources. Panel discussions or faculty member presentations at each meeting. May be repeated for credit.

**EARTH 310. Computational Geosciences Seminar. 1 Unit.**

Weekly lectures focusing on high-performance computing in geoscientific research by experts from academia, national laboratories, industry, and doctoral students. May be repeated for credit.

**EARTH 400. Directed Research. 3 Units.**

Independent research for graduate student projects.

**EARTH 401. Curricular Practical Training. 1 Unit.**  
Curricular Practical Training.

## East Asian Studies Courses

**EASTASN 94. The Rise of China in World Affairs. 3-5 Units.**

This course examines the impact and implications of the rise of China in contemporary world politics from a historical and international relations perspective. It reviews China's halting progress into the international system, sketches the evolution of PRC foreign policy since 1949, and analyzes China's developmental priorities and domestic political context as they figure into Beijing's interactions with the world. It sketches American policy toward the PRC, and it assesses alternative approaches to dealing with China on such issues as arms and nuclear proliferation, regional security arrangements, international trade and investment, human rights, environmental problems, and the Taiwan and Tibet questions.

Same as: EASTASN 294

**EASTASN 95. Korean Economy and Business: Theory, Practice, and Strategic Implications. 3 Units.**

This course addresses the key factors behind Korea's accelerated growth over the past 50 years. Existing Western theories cannot fully explain Korea's economic and business development, because these theories were established under a different political, economic, and social system. This course focuses on the fundamental driving forces behind Korea's success, many of which continue to be neglected in ongoing studies. This course aims to introduce a new framework that presents strategic implications that are more appropriate for Korea; review the fundamental background of Korea's growth in detail and apply this new framework to better explain Korea's success; and evaluate Korea as a case study to provide useful guidelines for other countries.

Same as: EASTASN 295

**EASTASN 97. The International Relations of Asia since World War II. 3-5 Units.**

Asian international relations since World War II were dominated by the efforts of the newly independent nation-states of Asia, almost all of which had been colonies before the war, to establish and maintain sovereignty in a context of American and Soviet competition for influence in the region. This course traces the major developments of the period, including the Chinese civil war, the U.S. occupation of Japan, the division of Korea and the Korean War, the South and Southeast Asian independence struggles, the American and Soviet alliance systems, the Vietnam War, the strategic realignments that led to the end of the Cold War in Asia, the emergence of Central Asia, and the legacy of issues that the period has posed for the region today.

Same as: EASTASN 297

**EASTASN 117. Health and Healthcare Systems in East Asia. 3-5 Units.**

China, Japan, and both Koreas. Healthcare economics as applied to East Asian health policy, including economic development, population aging, infectious disease outbreaks (SARS, avian flu), social health insurance, health service delivery, payment incentives, competition, workforce policy, pharmaceutical industry, and regulation. No prior knowledge of economics or healthcare required.

Same as: EASTASN 217

**EASTASN 120E. East Asian Internets. 4 Units.**

This course examines the social, cultural, aesthetic, and political dimensions of internet culture in China, Japan, and the two Koreas. Working with web texts, social media, streaming music and video, and film and fiction engaging with online culture, we will trace the social impact of networked life in East Asia over the last three decades.

Same as: EASTASN 220E

**EASTASN 151. Innovation-Based Economic Growth: Silicon Valley and Japan. 4 Units.**

Innovation is essential for the growth of a matured economy. An important reason for Japan's economic stagnation over the past two decades was its failure to transform its economic system from one suited for catch-up growth to one that supports innovation-based economic growth. This course examines the institutional factors that support innovation-based economic growth and explores policies that may encourage innovation-based growth in Japan. The course is a part of a bigger policy implementation project that aims to examine the institutional foundations of innovation-based economic growth, to suggest government policies that encourage innovation-based growth in Japan, and to help implement such policies. The central part of the course will be several group research projects conducted by the students. Each student research project evaluates a concrete innovation policy idea. Each student research group is to report the findings to the class and prepare the final paper.

Same as: EASTASN 251, IPS 225

**EASTASN 153. Japan & the World: Innovation, Economic Growth, Globalization, and Int'l Security Challenges. 4 Units.**

This course introduces students to the economy, politics, and international relations of contemporary Japan. The course puts a particular emphasis on several emerging issues in Japan including innovation and economic dynamism, Japan's contributions to international peace and cooperation, and Japan's response to international economic and geopolitical challenges. The course will invite several guest instructors, each of whom is an expert on at least one of the issues that Japan faces today, to give lectures in addition to the main instructors. The guest lecturers will also be available outside of the classroom for further discussion during their stays at Stanford.

Same as: EASTASN 253

**EASTASN 162. Seminar on the Evolution of the Modern Chinese State, 1550-Present. 3-5 Units.**

This seminar will assess the evolving response of the late imperial, early Republican, Nanjing Republic, and the PRC regimes in response to China's changing international setting, to successive revolutions in warfare, and to fundamental economic, social and demographic trends domestically from the 16th century to present. It will assess the capacities of each successive Chinese state to extract resources from society and economy and to mobilize people behind national purposes, to elaborate centralized institutions to pursue national priorities, to marshal military forces for national defense and police forces to sustain domestic order, and to generate popular identities loyal to national authority.

Same as: EASTASN 262

**EASTASN 176. Chinese Music Performance. 1-2 Unit.**

This class offers a unique opportunity to learn and perform Chinese music in the dynamic setting of Stanford's Chinese Music Ensemble. We will perform traditional Chinese music on a variety of Chinese instruments and study the fascinating history of Chinese music performance practice. Students will also work individually with music coaches. The course will promote an awareness of Chinese musical culture and is open to students of all levels of experience. Anyone with an interest in learning and performing Chinese music on Chinese instruments is welcome to join. Zero unit enrollment option available with instructor permission. See website (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for 15 total units. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**EASTASN 176Z. Chinese Music Performance. 0 Units.**

This class offers a unique opportunity to learn and perform Chinese music in the dynamic setting of Stanford's Chinese Music Ensemble. We will perform traditional Chinese music on a variety of Chinese instruments and study the fascinating history of Chinese music performance practice. Students will also work individually with music coaches. The course will promote an awareness of Chinese musical culture and is open to students of all levels of experience. **EASTASN 189K. The Korean Economy: Past, Present and Future. 3 Units.**

The Republic of Korea (i.e. Korea) has become an exemplar of economic development, and has become an important player in the global manufacturing, technology and cultural industries. Today, Korea faces new challenges as a developed economy, and risks joining many other developed countries in economic stagnation. How has Korea developed its economy and how has its development trajectory affected its social, political and economic structures today? How can Korea mobilize its considerable resources to find the new engines of economic growth that have proven so elusive over the past decade? This course examines the past and present of the Korean economy to search for a pathway into the future, a challenge that many if not most developed economies are facing today.

**EASTASN 256. 350 Years of America-China Relations. 4-5 Units.**

The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past.

Same as: HISTORY 256, HISTORY 356

**EASTASN 262. Seminar on the Evolution of the Modern Chinese State, 1550-Present. 3-5 Units.**

This seminar will assess the evolving response of the late imperial, early Republican, Nanjing Republic, and the PRC regimes in response to China's changing international setting, to successive revolutions in warfare, and to fundamental economic, social and demographic trends domestically from the 16th century to present. It will assess the capacities of each successive Chinese state to extract resources from society and economy and to mobilize people behind national purposes, to elaborate centralized institutions to pursue national priorities, to marshal military forces for national defense and police forces to sustain domestic order, and to generate popular identities loyal to national authority.

Same as: EASTASN 162

**EASTASN 285. The United States, China, & Global Security. 2 Units.**

This graduate-level seminar will be taught simultaneously on the campuses of Stanford University and Peking University and will feature a lecture series in which prominent American and Chinese scholars provide presentations that focus on key global security issues. The course content will highlight topics relevant to current U.S.-China relations and their respective roles in Asian and global security. Proposed lecture topics include: an introduction to U.S.-China relations; finance, trade, and investment; cyber security; nonproliferation; maritime security; terrorism; and energy and the environment. Hosted jointly by Stanford University and Peking University, enrollment will be limited to 20 students at each campus and, at Stanford, will be restricted to graduate students. Enrollment is competitive, so potential students must complete an application by February 5, 2016 (noon): <http://ceas.stanford.edu/students/courses.php>.

**EASTASN 289K. The Korean Economy: Past, Present and Future. 3 Units.**

The Republic of Korea (i.e. Korea) has become an exemplar of economic development, and has become an important player in the global manufacturing, technology and cultural industries. **EASTASN 294. The Rise of China in World Affairs. 3-5 Units.**

This course examines the impact and implications of the rise of China in contemporary world politics from a historical and international relations perspective. It reviews China's halting progress into the international system, sketches the evolution of PRC foreign policy since 1949, and analyzes China's developmental priorities and domestic political context as they figure into Beijing's interactions with the world. It sketches American policy toward the PRC, and it assesses alternative approaches to dealing with China on such issues as arms and nuclear proliferation, regional security arrangements, international trade and investment, human rights, environmental problems, and the Taiwan and Tibet questions.

Same as: EASTASN 94

**EASTASN 295. Korean Economy and Business: Theory, Practice, and Strategic Implications. 3 Units.**

This course addresses the key factors behind Korea's accelerated growth over the past 50 years. Existing Western theories cannot fully explain Korea's economic and business development, because these theories were established under a different political, economic, and social system. This course focuses on the fundamental driving forces behind Korea's success, many of which continue to be neglected in ongoing studies. This course aims to introduce a new framework that presents strategic implications that are more appropriate for Korea; review the fundamental background of Korea's growth in detail and apply this new framework to better explain Korea's success; and evaluate Korea as a case study to provide useful guidelines for other countries.

Same as: EASTASN 95

**EASTASN 297. The International Relations of Asia since World War II. 3-5 Units.**

Asian international relations since World War II were dominated by the efforts of the newly independent nation-states of Asia, almost all of which had been colonies before the war, to establish and maintain sovereignty in a context of American and Soviet competition for influence in the region. This course traces the major developments of the period, including the Chinese civil war, the U.S. occupation of Japan, the division of Korea and the Korean War, the South and Southeast Asian independence struggles, the American and Soviet alliance systems, the Vietnam War, the strategic realignments that led to the end of the Cold War in Asia, the emergence of Central Asia, and the legacy of issues that the period has posed for the region today.

**EASTASN 300. Graduate Directed Reading. 1-7 Unit.**

Independent studies under the direction of a faculty member for which academic credit may properly be allowed. For East Asian Studies M.A. students only.

**EASTASN 330. Core Seminar: Issues and Approaches in East Asian Studies. 1 Unit.**

For East Asian Studies M.A. students only.

**EASTASN 390. Practicum Internship. 1 Unit.**

On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.

**EASTASN 801. TGR Project. 0 Units.****Economic Analysis & Policy Courses****MGTECON 200. Managerial Economics. 4 Units.**

MGTECON 200 is one of two base-level courses in microeconomics. It covers microeconomic concepts relevant to management, including the economics of relationships, pricing decisions, perfect competition and the "invisible hand," risk aversion and risk sharing, and moral hazard and adverse selection. While the topics covered and the level of coverage are the same as in the second base-level course, MGTECON 201, MGTECON 200 is administered and graded differently: Attendance is mandatory, and 50% of the final grade is based on daily class participation. Because of the emphasis on class participation, class sessions are 105 minutes long and so, per Stanford University regulations, the course carries four units of credit.

**MGTECON 201. Managerial Economics. 3 Units.**

MGTECON 201 is one of two base-level courses in microeconomics. It covers microeconomic concepts relevant to management, including the economics of relationships, pricing decisions, perfect competition and the "invisible hand," risk aversion and risk sharing, and moral hazard and adverse selection. While the topics covered and the level of coverage are the same as in the second base-level course, MGTECON 200, MGTECON 201 is administered and graded differently: 15% of the final grade is based on participation (you can miss the class without affecting the grade up to 3 times), 35% is on the midterm, and 50% is on the final.

**MGTECON 203. Managerial Economics - Accelerated. 3 Units.**

MGTECON 203 is the accelerated option in microeconomics for 1st year MBA students. It will cover the usual array of topics, with an emphasis on topics more useful for students of management (although the order in which the topics are covered will be different from that in 200/201). No previous background in economics is required or expected, but in comparison with MGTECON 200/201, less time will be spent in class on basic problems. Therefore, students choosing this option should be completely comfortable with calculus and linear algebra. A good diagnostic is to read Sections 3.5 and 3.6 (pp. 57-67) in Kreps, *Microeconomics for Managers*. If you find this easy, 203 is a good choice. If not, 200 or 201 is the right course for you.

**MGTECON 209. MSx: Economics. 3 Units.**

This course is an introduction to Microeconomics, focusing on microeconomic concepts relevant to managerial decision making. Topics include demand and supply, cost structure, price discrimination, perfect competition, externalities, and the basics of game theory. No prior Economics background is required but students who have not had courses in this area (or not had one in a very long time) may want to brush up on math prior to the start of classes.

**MGTECON 249. Smart Pricing and Market Design. 3 Units.**

This is the Advanced Applications option in the menu of courses that satisfy the Management Perspectives requirement in Optimization and Simulation Modeling (OSM). The course is tailored to students who already have command of basic optimization and simulation techniques, or have an advanced mathematical background that will allow them to catch up quickly. The focus of the course is on applying these techniques to a particular business domain: pricing mechanisms and market design. The pricing component of the course will handle both traditional topics, such as price differentiation, and more modern ones, such as dynamic pricing. In the market design component of the course, we will apply optimization and simulation techniques to such topics as auctions (e.g., designing auctions for selling online advertising slots) and matching (e.g., designing mechanisms for matching students to schools). No background in economics or in the pricing and market design topics mentioned above is required or expected.

**MGTECON 300. Growth and Stabilization in the Global Economy. 3 Units.**

This course gives students the background they need to understand the broad movements in the global economy. Key topics include long-run economic growth, technological change, wage inequality, international trade, interest rates, inflation, exchange rates, and monetary policy. By the end of the course, students should be able to read and understand the discussions of economic issues in *The Economist*, the *Wall Street Journal*, the *New York Times*, or the Congressional Budget Office.

**MGTECON 330. Economics of Organization. 3 Units.**

This is an advanced applications economics course that applies recent innovations and high-powered tools to organization and general management. MBA1 students must have a strong background in microeconomics to take the course and should consult with their advisors. The course is appropriate for MBA2 students who have taken either Mgtecon 200 or Mgtecon 203. The course objective is to equip managers with an extensive set of analytical and applicable tools for handling the following topics: organization for coordination, designing incentives for moral hazard, monitoring and private information, applications to scope, scale, principles for allocating decision power, managing supplier relations, downstream controls, franchising and alliances, bargaining, high order reasoning, repeated interactions and reputation, holdups and strategizing with unawareness. These topics will be covered in a combination of lectures and cases.

**MGTECON 331. Health Law: Finance and Insurance. 3 Units.**

This course provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the US. Potential topics include: health reform, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), medical malpractice and quality regulation, pharmaceuticals, the corporate practice of medicine, regulation of fraud and abuse, and international comparisons.

**MGTECON 332. Analysis of Costs, Risks, and Benefits of Health Care. 4 Units.**

For graduate students, and with permission of instructors, advanced undergraduates. This course provides the conceptual basis for understanding how to assess the effectiveness, costs, and cost effectiveness of health-care interventions. Students will gain an understanding of how to assess whether health-care interventions work, and if they work, whether they are worth what they cost. The course will cover principal evaluative techniques for health care, including cost-effectiveness analysis, cost-benefit analysis, utility assessment, and decision analysis. Emphasis is on the practical application of these techniques. Group project presented at end of quarter. Guest lectures by experts from the medical school, entrepreneurs, pharmaceutical industry, and health care plans. The course content is relevant to researchers in health services and health policy, health-care managers, entrepreneurs, health-care consultants, and physicians.

**MGTECON 334. The International Economy. 3 Units.**

The objective of this course is to give students an understanding of what international economic policy means for business leaders. To do this, students will have to understand the economic forces that determine the patterns and consequences of international trade. We will analyze trade policy tools used by governments (e.g., tariffs, subsidies, quotas, exchange rates), and examine the role of industry and politics at the domestic and global level in applying these tools. This course will combine lecture, case studies and group interaction.

**MGTECON 335. Statistics and Causality. 4 Units.**

This is a course on methods for causal inference in statistics, with a particular focus on the use of randomized experiments and observational studies for making decisions under uncertainty. We will discuss some of the statistical methods, implementing them in R. No prior knowledge of R is required. We will discuss a number of detailed applications.

**MGTECON 342. Business and Macroeconomics in Today's Global Economy. 3 Units.**

This class applies the macroeconomic concepts that you've learned another course (e.g. in MgtEcon 300) to real-time current events. Just as you only really learn to speak a foreign language through immersion, the best way to understand macroeconomics is to use it intensively! In this class, there will be a new topic each week, chosen only days in advance to ensure timeliness. Examples may include "Janet Yellen's Monetary Policies" or "Economic Growth in Latin America" or "Thomas Piketty's New Book on Wealth Inequality." Students will divide into small groups, undertake research on a narrow question of their own choosing related to the general topic, and collectively write a 300-word blog entry to be posted on the (private) class blog at least 24 hours before class meets. Over the next day, students will read each others' entries. Finally, during class time, each group will lead a discussion of their blog post for 15-20 minutes. For more information about this course, please see <http://www.stanford.edu/~chadj/MacroToday.html> after January 15, 2015.

**MGTECON 343. The Evolution of Finance. 3 Units.**

This course was originally designed to provide an overview of the crisis in financial markets that began in 2007, and of the various policies that were devised in response to the crisis' both short-term stabilization efforts and longer-term regulatory reform. However, as time goes on the course has evolved to spend less time on a historical review of those past events (though they are still significant and worth studying) and more time looking at the present and the future. We will be more focused on process — thinking through the things we analyze — rather than in making sure we cover a fully comprehensive set of topics. We have guest speakers for about half of the classes. The list changes from year to year, but here is 2016's list: Tanya Beder, Kevin Warsh, Ron Beck, David Booth, Jay Crandall, Tom Kempner, Katie Hall, Hal Varian, and Larry Summers.

**MGTECON 364. Motivation in Theory and in Practice. 3 Units.**

This course focuses on one question: How do organizations motivate their key employees to provide consummate effort? By consummate effort, we mean effort above and beyond what is normal or expected, with particular emphasis on cases where the key employees are knowledge workers performing ambiguous and creative tasks. We will begin with three weeks or so of twice-weekly class sessions, at which different theories of motivation will be explored as theories and as practiced in case studies. This will include both the economic theory of incentives, but also social psychological theories of motivation and, in particular, on when and how economic forces and social psychological forces come into conflict and when and how they can be marshaled together. During this initial three-week period, students in course will organize themselves into teams of 3 to 5 students. Each team will identify a organization or related group of organizations (say, several firms inside the same niche in an industry), and during weeks 4 through 7 of the quarter, each team will investigate how the organization(s) they are studying answer the basic question. Students will be expected to relate what they find to the theoretical constructs of the early part of the quarter. During this period, each team will meet at least weekly with the instructor to review progress achieved and to plan next steps. In the final two weeks or so (depending on the number of teams), teams will present what they have learned about the organizations they are studying to their peers. Each team will make a presentation of 45 minutes to an hour. These presentations should include a full analysis of the organization(s) (any relevant history, business model and strategy, and so forth). They should then answer the basic question, giving to the greatest extent possible tangible measures and evidence for their assertions. This will be followed by a Q&A from the other members of the class, exploring what the teams have presented. Each team will be expected to prepare a written "case-let" of their findings, to be circulated to other members of the class at least three days prior to the in-class discussion. Organizations to be studied must be existing organizations. Teams will NOT be allowed to present "designs" for organizations that they are in the process of founding or that they hope to found. There must be evidence—*anecdotal at least, more systematic if possible*—of how well the organization's approach to motivation is working. Organizations studied should consent to be "used" in this fashion, although you will be asked to try to gain permission for the case-lets and your presentations to be used more broadly in the GSB's curriculum. The instructor will attempt to "recruit" willing organizations, from which teams can choose, although it is equally preferable if not better for teams to identify on their own the organizations they will studied. Grades will be determined as follows: 20%—class participation in the first three weeks, with emphasis on contribution to case discussions. 20%—group-assigned grade based on the written case-let. 30%—group-assigned grade based on the oral (in class) presentation. 20%—participation in the discussion of the presentations of other groups. 10%—based on an individual "final exam," in which students will be asked to write a short report (three to five pages, double spaced, 12pt) evaluating what they learned, with emphasis on what they consider is important in answering the basic question, on the basis of the course experience. This report will be due on the last day of final exams, may be prepared off campus and emailed in. Students are free to discuss these matters with one another, but each student is expected to be the sole author of his/her "final exam." There are no formal prerequisites for this course, but students considering this course will be well prepared if they have taken a course in human resource management. This course is a Bass Seminar and is limited to enrollment of 25 students. Please note: I have a reputation for requiring a LOT of work from students. This reputation is deserved. I have every intention of enhancing my reputation in this regard, in this course, so caveat discipulus. (Unhappily, you cannot access course evaluation data on the number of hours that students report they work, so you will have to take my word for it: My courses are in the far upper tail of the distribution. You can access data on the question on "Sets High Expectations." And I urge you to read ALL the entries on me at Course Unofficial for MGTECON 200 and 203.) If you have any questions, please contact me in the first instance via email, at [kreps@stanford.edu](mailto:kreps@stanford.edu).

**MGTECON 381. Contemporary Economic Policy. 3 Units.**

Economic issues permeate all that happens in government. This topics-based course will examine a variety of historic and current issues on the political agenda where economics is central to decision making. It is taught by faculty who served at the White House in either the Clinton or George W. Bush Administration.

**MGTECON 512. The Economics of Internet Search. 2 Units.**

This class will explore the economics of the internet search business. The class will consist of lectures, guest speakers, and short student presentations. The course will begin with an overview of internet search, including the technology and engineering as well as the role of search for consumers, in society and the internet industry. We will then study search as a platform market, considering the interaction between the different sides of the market (users, advertisers, and publishers) as well as competition across platforms on different sides of the market. The advertising marketplace will receive special focus, including the design of the auction. We will also study the role of search in the internet ecosystem, examining recent trends towards vertical integration and its impact on the development of independent internet products and services. Finally we will address search as a data-driven business. Throughout, the course will draw parallels to other internet platform businesses, using search as an in-depth case study through which broader themes can be understood.

**MGTECON 513. Platform Competition in Digital Markets. 2 Units.**

This class will analyze the economics of digital platform markets. The class format will consist of lectures, guest speakers, and student presentations. Concepts will be presented in the context of leading examples of internet and technology platforms such as online advertising, computing technology platforms (e.g. mobile), marketplaces, social networks, cloud computing, and financial technology platforms. The course will begin with economic definitions of platform markets, and it will review the most important insights from recent research in economic theory and strategy. It will then consider the role of scale economies and network effects in determining the dynamics of platform competition and long-run industry structure. Next, the class will consider key strategic decisions for firms, including entry strategies, vertical integration and exclusive deals.

**MGTECON 527. Business and Public Policy Perspectives on U.S. Inequality. 2 Units.**

This class will analyze the growth in inequality in the US over the last several decades and how that trend is likely to continue or change in the future. We will ask if and how public policy can affect inequality. We will also focus on business's role – what are the responsibilities of private sector companies, how does inequality affect them, and how should the growth in inequality affect their strategies? We will look at inequality in income, some of its potential sources, and its effects in other areas. Specifically, we will look at education, housing, the social safety net, migration, and the job market. The class will be very interactive and will be based on readings drawn from academic research, case studies, news, and opinion readings. We will also have guest speakers from industry, government, and non-profits. The class will be co-taught by a GSB labor economist and an advisor to policy makers with decades of business experience (see <http://www.ppic.org/main/bio2.asp?i=431>).

**MGTECON 535. Statistical Experimentation in Businesses. 2 Units.**

Most statistical questions involving data ultimately are about causal effects. What is the effect of changing prices on demand? What is the effect of an advertising campaign on demand. In this course we discuss statistical methods for analyzing causal effects. We look at the analysis and design of randomized experiments. We also look at various methods that have been used to establish causal effects in observational studies. Students will develop the skills to assess causal claims and learn to ask the right questions and evaluate statistical analyses. You will carry out research projects and work with statistical software.

**MGTECON 536. Data Driven Decision Making. 2 Units.**

This is a short course on data driven decision making. The purpose of the course is to help students become intelligent consumers and producers of data analytics in the business context. Each class meeting will consider a different case/caselet involving data and statistical analyses. We will spend a lot of time on understanding the difference between correlation and causation, and measurement issues such as small sample problems and selection bias. By the end of the course students will have sharpened analytical skills, and will be more critical of data and statistical analyses. This is *not* a data/statistical methods course, but is rather an analysis course. The course requires only the tools learned in D&D.

**MGTECON 541. Topics in International Macroeconomics and Finance. 2 Units.**

This course gives students a background to understand fundamental issues in international macroeconomics and finance. Key topics include international asset pricing, hedging exchange rate risk, the relation between interest rates and exchange rates, business cycle fluctuations in emerging markets as well as in developed countries, banking and currency crises. By the end of the course, students should be able to read and understand the discussions of these topics in a publication such as *The Economist*. Approximately half of the course will be lecture-based and the remainder will consist of presentation of group projects.

**MGTECON 558. Technology, Innovation & Entrepreneurship Policy. 2 Units.**

This economic policy compressed course will briefly examine a variety of government policies and how each influences technology, innovation, and entrepreneurship. We will examine a range of policy topics from the perspectives of both policymakers and the firms affected by these policies. Possible topics (subject to change) include: high-skilled immigration, the taxation of carried interest, net neutrality, carbon pricing, data privacy, global democracy / censorship, new drug/medical device approval, online education, and encryption. The course is aimed primarily at helping those interested in technology, entrepreneurial, or finance roles understand how policymakers think about and make decisions that affect these sectors. The course is taught by a former senior White House economic advisor to President George W. Bush.

**MGTECON 591. Global Management Research. 2 Units.**

The course will review the results from a large management practices project involving Cambridge, Harvard, the London School of Economics, McKinsey & Company and Stanford. McKinsey have developed a basic management practice evaluation tool -## detailing about 20 key practices -## which has been used to evaluate about 20,000 organizations in manufacturing, retail, healthcare and education across North and South America, Europe, Asia, Africa and Australasia. These data provide a global insight into the basic management practices around monitoring, targets and talent management that firms adopt around the world.

We will examine the link between management and performance, and the reasons for differences in management across firms, industries and countries. This will be supplemented with the results from more recent research with Accenture and the World Bank in India on change management interventions in a developing country context. n nThe course will focus on making students familiar with this research and in particular the scoring grid so that they can easily performance an initial overview of the management practices of any organization. For example, this would be ideal for an initial evaluation of the management practices in a target company for private equity investment or a preliminary evaluation ("diagnostic"##) of a potential client by a consulting firm. Interested students can look at some of the academic, business and media focused output from the research on: <http://www.worldmanagementsurvey.com>, including over dozens of articles in the *New York Times*, *Economist*, *Wall Street Journal*, *Business Week*, *Newsweek*, *Washington Post* and the *Financial Times*.

**MGTECON 600. Microeconomic Analysis I. 4 Units.**

This course provides an introduction to the foundations of modern microeconomic theory. Topics include choice theory, with and without uncertainty, consumer and producer theory, dynamic choice and dynamic programming, social choice and efficiency, and fundamentals of general equilibrium.

**MGTECON 601. Microeconomic Analysis II. 3 Units.**

This course studies the roles of information, incentives and strategic behavior in markets. The rudiments of game theory are developed and applied to selected topics regarding auctions, bargaining, and firms' competitive strategies; information economics; and contracting and market design.

**MGTECON 602. Auctions, Bargaining, and Pricing. 4 Units.**

This course covers auction theory, matching, and related parts of the literature on bargaining and pricing. Key papers in the early part of the course are Myerson and Satterthwaite on bargaining, Myerson on optimal auctions, and Milgrom and Weber's classic work. We then turn to markets in which complicated preferences and constraints, limitations on the use of cash, or variations in contract details among bidders play an important role. Emphasis is on matching markets such as the National Resident Matching Program and asset auctions such as the spectrum auctions.

**MGTECON 603. Econometric Methods I. 4 Units.**

This is the first course in the sequence in graduate econometrics. The course covers some of the probabilistic and statistical underpinnings of econometrics, and explores the large-sample properties of maximum likelihood estimators. You are assumed to have introductory probability and statistics and matrix theory, and to have exposure to basic real analysis. Topics covered in the course include random variables, distribution functions, functions of random variables, expectations, conditional probabilities and Bayes' law, convergence and limit laws, hypothesis testing, confidence intervals, maximum likelihood estimation, and decision theory.

**MGTECON 604. Econometric Methods II. 3 Units.**

This course presents a comprehensive treatment of econometric methods used in economics, finance, marketing, and other management disciplines. Among the topics covered are: the classical linear regression analysis, linear simultaneous equations systems and instrumental variables techniques, panel data models, generalized method of moments, selection models, and limited dependent variable models. This course uses Matlab or similar computational software, but previous experience with such software is not a prerequisite. This course assumes working knowledge of undergraduate econometrics, basic linear algebra, basic probability theory, and statistics that are covered in MGTECON 603. Those who did not take MGTECON 603 or similar should see the instructor.

**MGTECON 605. Econometric Methods III. 3 Units.**

This course completes the first-year sequence in econometrics. It develops nonparametric, semiparametric and nonlinear parametric models in detail, as well as optimization methods used to estimate nonlinear models. The instructor will discuss identification issues, the statistical properties of these estimators, and how they are used in practice. Depending on student and instructor interest, we will consider advanced topics and applications, including: simulation methods and Bayesian estimators.

**MGTECON 606. Microeconomic Theory for Non-Economist PhDs. 4 Units.**

This course will be a first quarter PhD course in microeconomic theory, aimed at PhD students who do not plan to become professional economists. Relative to a course geared to economics PhDs the class will differ in two important ways. First, there will be almost no emphasis on proofs. Second, the topics covered will be broader than the standard set covered in say Econ 202.

**MGTECON 608. Multiperson Decision Theory. 3 Units.**

Students and faculty review and present recent research papers on basic theories and economic applications of decision theory, game theory and mechanism design. Applications include market design and analyses of incentives and strategic behavior in markets, and selected topics such as auctions, bargaining, contracting, signaling, and computation.

**MGTECON 609. Applied Econometrics and Economic Research. 4 Units.**

The primary objective of this course is to prepare students to evaluate and produce research in empirical microeconomics. The emphasis will be on the overall process of conducting such research: from defining a clear research question, to collecting suitable data, to selecting and executing an appropriate mode of econometric analysis. Students will be expected to read and discuss papers covering a variety of applied topics. Methodological issues will be discussed in depth wherever they arise, and especially where they are central to understanding a paper's implications, but methodology will not be the central focus of the course. Some of the topics to be covered in the course include: nonlinear pricing in imperfectly competitive markets; innovation and the diffusion of innovations; the economics of advertising; consumer information and product-market outcomes. Other topics will be selected based partly on student input.

**MGTECON 610. Macroeconomics. 4 Units.**

This course covers various topics in macroeconomics and is designed to expose students to macroeconomic methods, classic papers in the field, and the latest research at the frontier. The current focus is on economic growth. Using theoretical and empirical tools, we consider questions like: How do we understand long-run growth in per capita income? Why are some countries so much richer than others? Other topics include misallocation as a source of TFP differences, the direction of technical change, growth and the environment, the rise in health spending, patenting, and international trade. This course satisfies the GSB PhD macro requirement.

**MGTECON 611. Open Economy Macroeconomics. 4 Units.**

The goal of this course is to teach students how to use the tools of open economy macroeconomics to connect to the burgeoning literature on institutions in a way that helps them to frame interesting research questions in the area of stabilization, reform, and growth in developing countries. The growth rate of total factor productivity (TFP) plays an essential role in economic growth. In turn, two principal forces drive TFP growth: (1) changes in ideas (i.e. technological change) and (2) changes in institutions. This course will employ the tools of open economy macroeconomics to study the second of these two forces. Recent contributions in the literature focus on the impact of cross-country differences in initial institutions on long-run growth and development. Prominent examples of such institutional differences include the nature of the legal origins and property rights bequeathed to a country by its colonial masters. This is a PhD course in economics, but it is open to students from any discipline (i.e. Political Science, History, International Relations) who are willing to make the analytical investment that is necessary to understand and debate the issues in a logical, coherent, and systematic fashion.

**MGTECON 612. Advanced Macroeconomics II. 4 Units.**

Modern macroeconomics of aggregate fluctuations in advanced economies, concentrating mainly on the U.S. Current research on sovereign debt, fiscal policy and financial flows, with emphasis on current events. Current research on persistent substandard performance, financial crises, excess unemployment, and other timely topics. The course will be organized around the detailed study of recent research papers. One third of the lectures will be given by guests specializing in macro fluctuations research.

**MGTECON 615. Topics in Market Design. 4 Units.**

This class will focus on several topics in market design and related areas. It is intended as a sequel to the more "standard" market/mechanism/auction design courses offered at the GSB and the Economics department (MGTECON 602 and Econ 285), and will assume that the students are familiar with the material in those courses. The goal of 615 is to bring students closer to doing independent research and introduce them to currently active research areas.

**MGTECON 616. Topics in Game Theory. 3 Units.**

This is an advanced game theory course and requires a basic background in game theory or an advanced applied game theory course. The course covers foundational topics such as type spaces, modeling reasoning and rationality, game forms, solution refinements and more. A collection of additional topics will be covered independently via problem solving assignments in workshop style meetings with student presentations.

**MGTECON 617. Financial Economics II. 2-5 Units.**

Topics in financial Economics. Discussion of recent academic papers on asset pricing. Student presentations and course paper requirement. Designed for second year PhD students in economics or finance. Same as: ECON 237

**MGTECON 620. Economics of Electronic Commerce and the Internet. 4 Units.**

This course is designed to introduce students to research topics in electronic commerce and the economics of the internet. The primary audience is advanced graduate students in economics or closely related areas, but the course is also open to students from related fields such as computer science and operations provided students have completed graduate coursework in economics, game theory, and/or market design. The methodological focus is on applied economic theory models, empirical work, and field experiments. The course requires a literature review and research proposal, which will be presented to the class at the end of the term. Core topics include: economics of platform markets and multi-sided markets, with case studies including online advertising, online auctions, mobile computing, cloud computing, electronic and mobile payment systems, and media markets; markets for information; internet search, including specialized search platforms such as shopping and travel; the impact of the internet on the news media; and the impact of technological and business practice shifts on both old and new industries, including data-driven decision-making, machine learning, and increased reliance on experimentation. Other topics that may be selected according to student interest include social networks, social media, intellectual property and innovation, broader economic impacts of technological innovation, security, internet policy, the impact of the internet on education and health, privacy, and other regulatory issues surrounding the internet.

**MGTECON 624. Dynamic Political Economy Theory. 4 Units.**

This course is intended to be an introduction to dynamic political economy theory. We will cover research at the frontier of this field and some useful tools. Tools will be primarily dynamic game theory - including Markov models and models of reputation. Topics covered will include dynamic legislative bargaining, dynamic coalition formation, endogenous institutions, endogenous policy formation, and policy experimentation.

**MGTECON 628. Reading Group in Industrial Organization. 1 Unit.**

This course meets weekly on Tuesdays at Noon. The primary purpose of the course is to read and discuss current working papers in Industrial Organization and related fields (e.g., Econometrics, Marketing, and Labor). Students are required to present papers a couple of times per quarter and both students and faculty may also present their own working papers.

**MGTECON 629. Microeconomics Workshop. 3 Units.**

Each week, a different economics faculty member will discuss his or her important and /or current research. The course is an important introduction to PhD level research topics and techniques. Attendance is mandatory.

**MGTECON 632. Topics in Continuous Time Dynamics. 3 Units.**

This seminar-style course studies a selection of micro-economic models in dynamic settings, and explores the use of continuous-time methods to solve them. Topics to be covered include experimentation games, social learning, principal-agent problems, career concerns/market-agent models, security design and strategic trading. For every topic discussed, the class introduces gradually the set of relevant mathematical tools: dynamic programming and Hamilton-Jacobi-Bellman equations, Pontryagin's maximum principle, Euler-Lagrange equations, Brownian and Poisson processes, Bayesian inference and linear filtering, change of measure, martingale representation, Malliavin derivatives, stochastic maximum principle, expansions of filtrations. The course emphasizes high-level intuition rather than mathematical rigor. It is targeted at those who seek to become familiar with the literature on continuous-time dynamics and want to understand the functioning of these models, either by general interest or to apply these techniques.

**MGTECON 634. Machine Learning and Causal Inference. 2 Units.**

This course will cover statistical methods based on the machine learning literature that can be used for causal inference. In economics and the social sciences more broadly, empirical analyses typically estimate the effects of counterfactual policies, such as the effect of implementing a government policy, changing a price, showing advertisements, or introducing new products. Recent advances in supervised and unsupervised machine learning provide systematic approaches to model selection and prediction, methods that are particularly well suited to datasets with many observations and/or many covariates. This course will review when and how machine learning methods can be used for causal inference, and it will also review recent modifications and extensions to standard methods to adapt them to causal inference and provide statistical theory for hypothesis testing. Applications to the evaluation of large-scale experiments, including online A/B tests and experiments on networks, will receive special attention. We will also consider topic modeling, Bayesian methods, and a brief overview of textual analysis.

**MGTECON 640. Quantitative Methods for Empirical Research. 3 Units.**

This is an advanced course on quantitative methods for empirical research. Students are expected to have taken a course in linear models before. In this course I will discuss modern econometric methods for nonlinear models, including maximum likelihood and generalized method of moments. The emphasis will be on how these methods are used in sophisticated empirical work in social sciences. Special topics include discrete choice models and methods for estimating treatment effects.

**MGTECON 651. Natural Resource and Energy Economics. 4 Units.**

Management and provision non-renewable and renewable natural resources, with considerable attention to energy provision and use. Topics include: fisheries problems and policy; energy industry market structure, pricing, and performance; and policies to facilitate transitions from non-renewable to renewable energy.

**MGTECON 652. Personnel Economics. 3 Units.**

This seminar will examine applications of labor economics to business issues and firms' practices. Material will include both theoretical and empirical work, and the syllabus will range from classics in Personnel Economics to current (unpublished) research. Some of the topics to be covered include, but are not limited to, compensation practices, assignment of decision rights, organizational structure, attracting, retaining, and displacing employees, and workplace practices (such as team-based organization, profit sharing, etc.).

**MGTECON 691. PhD Directed Reading. 1-15 Unit.**

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MKTG 691, OB 691, OIT 691, POLECON 691, STRAMGT 691

**MGTECON 692. PhD Dissertation Research. 1-15 Unit.**

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MKTG 692, OB 692, OIT 692, POLECON 692, STRAMGT 692

**MGTECON 698. Doctoral Practicum in Teaching. 1 Unit.**

Doctoral Practicum in Teaching.

**MGTECON 699. Doctoral Practicum in Research. 1 Unit.**

Doctoral Practicum in Research.

**MGTECON 802. TGR Dissertation. 0 Units.**

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MKTG 802, OB 802, OIT 802, POLECON 802, STRAMGT 802

**Economics Courses****ECON 1. Principles of Economics. 5 Units.**

The economic way of thinking and the functioning of a modern market economy. The behavior of consumers and firms. Markets for goods and inputs. Analysis of macroeconomic variables: output, employment, inflation, interest rate. Determination of long-run growth and short-term fluctuations. The role of government: regulation, monetary, and fiscal policy.

**ECON 1V. Principles of Economics. 5 Units.**

The economic way of thinking and the functioning of a modern market economy. The behavior of consumers and firms. Markets for goods and inputs. Analysis of macroeconomic variables: output, employment, inflation, interest rate. Determination of long-run growth and short-term fluctuations. The role of government: regulation, monetary, and fiscal policy.

**ECON 5. Economics in the News. 1 Unit.**

Each week a different Econ faculty member will discuss recent, exciting developments in their field. A particular emphasis will be how economics informs policy debates. The course will provide a preview of upper division courses and research opportunities in economics. Prerequisite: Econ 1, Econ 1A or 1B.

**ECON 10. Microcosm of Silicon Valley and Wall Street. 1 Unit.**

Seminar in applied economics with focus on the microcosm of Silicon Valley, how growth companies are originated, managed and financed from start-up to IPO. Round-table discussion format. Applicable to those students with an interest in technology company formation, growth and finance including interaction with Wall Street. Enrollment limited to 10 juniors, seniors and co-term students.

**ECON 11N. Understanding the Welfare System. 3 Units.**

Welfare reform passed by the Federal Government in 1996 heralded a dramatic step in how our nation designs and operates its programs that support poor families. The centerpiece of this legislation known as 'devolution' transferred much responsibility for these programs to the states. States had their first opportunity since the 'war on poverty' of the 1960s to undertake radical changes in setting up their public assistance programs. Recently, many of the reforms instituted in the 1990s are being hotly debated and in some aspects reversed. What flexibility did the states receive under welfare reform, and what considerations are relevant in exercising this flexibility? What selections have states made, and how are their programs and those of the federal government likely to evolve in the future? This seminar will address these questions, exploring how reforms changed welfare and who has been affected by these changes. In addition to covering the patchwork of different programs that currently constitute America's social safety net, the seminar will also scrutinize the makeup and trends in government spending and how our nation defines poverty and eligibility for income support. Moreover, the discussion will illustrate the role that economics plays in assessing the effectiveness of anti-poverty programs and the consequences on families' behavior. Students will participate in a project in which they develop their own recommendations for devising a safety net for poor families in America.

**ECON 12. Investment Reflections from a Hedge Fund Career: Mindset & Meditation as Competitive Advantage. 1 Unit.**

The class will attempt to relate the most important sources of competitive advantage during the instructor's fifteen years co-managing Scout Capital, a long-short hedge fund. The class will learn Scout's investment framework, in order to apply it to real historical cases. The cases are designed both to illustrate the investment framework in action, and to enable the student to experience the perceptual difficulties that confront professional investors. The class will discuss techniques for managing the mental fog that plagues most investors, with an emphasis on meditation. Students should be prepared to commit 15 minutes per day, every day, to meditation practice during the term of the course. Each class will contain a short guided meditation, and a short group reflection on students' meditation experiences.

**ECON 13SC. Economic Policies of the Presidential Candidates. 2 Units.**

In nearly all polls, American voters rank the economy as one of their most important concerns. In the presidential election, full debates are dedicated to questions of economic policy. In this course, we will delve deeply into economic policy issues to understand options for government intervention and possible outcomes. Focus will be on the economic issues, not on the political aspects of the campaign. Specific areas of interest will be taxation, budget, entitlement programs, economic regulation and competition policy, trade, demography, income inequality, and monetary policy. We expect to incorporate timely and salient economic issues as they arise during the course of the campaign. The course will include four days of meetings in Washington, DC with economic policy analysts. Students will be expected to write a short paper and make an oral presentation to the class. A wide range of topics will be acceptable, including those directly related to campaign issues as well as other long-term economic issues facing the country. Sophomore College course, applications required by deadline April 5, 2016. Apply at <http://soco.stanford.edu>.

**ECON 17N. Energy, the Environment, and the Economy. 3 Units.**

Examines the intimate relationship between environmental quality and the production and consumption of energy. Assesses the economics efficiency and political economy implications of a number of current topics in energy and environmental economics. Topics include: the economic theory of exhaustible resources, Greenhouse Gas Emissions (GHG) control (cap and trade mechanisms and carbon fees), GHG emissions offsets, the Strategic Petroleum Reserve (SPR), the "smart" transmission grid for electricity, nuclear energy and nuclear waste, the real cost of renewable energy, natural gas and coal-fired electricity production, the global coal and natural gas markets, Corporate Average Fuel Efficiency (CAFE) and Low-Carbon Fuel Standards (LCFS), Energy Efficiency Investments and Demand Response, and Carbon Capture and Sequestration (CCS). For all topics, there will be reading to explain the economics and engineering behind the topic and class discussion to clarify and elaborate on this interaction.

**ECON 18A. The Washington Debate About American Competitiveness. 1 Unit.**

One of the central challenges for policymakers is how to make sure the United States remains the world's strongest economy and continues to create good paying jobs. Discusses what the proper role of government should be when it comes to our economy by exploring the history of American economic thought dating back to Alexander Hamilton. Considers the perspective of classical economists, Keynesian economists, and economists identifying themselves as part of the innovation school of economics. Examines various policy alternatives concerning taxes, regulations, immigration, and investment that can foster economic growth.

**ECON 18B. Silicon Valley Leaders Take on America's Economic Future. 1 Unit.**

The academic debates about economic policy often miss the perspective of real world business leaders who are navigating a complex, global economy. In this class, we will hear from technology leaders and CEOs from many prominent Silicon Valley companies. They will offer their take on repatriation, immigration, trade issues, and tax reform. We will explore whether there is a disconnect between Congress and Silicon Valley business leaders, and if so, how we can bridge that divide.

**ECON 18C. Real World Policy Makers Discuss How the U.S. Can Compete in a Global Economy. 1 Unit.**

Silicon Valley leaders and academic economists often do not understand the political constraints policy-makers face when it comes to economic decision-making. We will invite think tank leaders, political leaders, former administration officials, and labor leaders to shed light on what is driving the current economic thinking in Washington. We will explore how Washington views Silicon Valley, and what Silicon Valley companies can do to improve their perception in the Beltway. We also will discuss why Washington policy-makers matter to the future of the Valley, and what they can learn from business leaders here.

**ECON 22N. Causes and Consequences of the Rise in Inequality. 3 Units.**

In this class we will discuss the economic and institutional causes of the rise in inequality in the US and other countries over the last 40 years. We will also discuss the consequences of inequality in terms of social justice, economic welfare, aggregate economic performance, intergenerational mobility, and the possible implications of inequality for the recent global financial crisis.

**ECON 23N. Capitalism, Socialism and Democracy. 3 Units.**

We will explore the evolution and current performance of capitalist and socialist economies, their interaction with democracy, and the contemporary debate about the appropriate roles of individual vs. collective rights and responsibilities.

**ECON 24N. Social Choice & Market Design. 3 Units.**

The design of mechanisms for group decision making, addressing questions about how apartment mates should choose rooms and share the rent, how a government should select and pay its suppliers, how a town should elect a mayor, or how students and college ought to be matches to one another. The first three weeks include classic papers by two Nobel-prize winning scholars about matching students and about government procurement. We will ask questions such as: What are the provable properties of these mechanisms? Is it possible for individuals or groups to manipulate the mechanisms for their own advantage? The remaining weeks focus on group decisions that are guided by "voting" mechanisms, showing the inherent trade-offs and proving theorems about the incompatibility among some simple, desirable properties of mechanisms. The ideas treated in this class are being used today to design new mechanisms for voting, matching, auctions and other applications, based on an awareness of the formal properties that the mechanisms may have.

**ECON 25N. Public Policy and Personal Finance. 3 Units.**

The seminar will provide an introduction and discussion of the impact of public policy on personal finance. Voters regularly rate the economy as one of the most important factors shaping their political views and most of those opinions are focused on their individual bottom lines. In this course we will discuss the rationale for different public policies and how they affect personal financial situations. We will explore personal finance issues such as taxes, loans, charity, insurance, and pensions. Using the context of (hypothetical) personal finance positions, we will discuss the public policy implications of various proposals and how they affect different groups of people, for example: the implications of differential tax rates for different types of income, the promotion of home ownership in the U.S., and policies to care for our aging population. While economic policy will be the focus of much of the course, we will also examine some of the implications of social policies on personal finance as well. There will be weekly readings and several short policy-related writing assignments.

Same as: PUBLPOL 55N

**ECON 49. Managerial Economics. 5 Units.**

Intermediate microeconomics, with a focus on topics and methods of interest to future managers. Topics include market pricing and price discrimination, incentives, signaling, implicit collusion, decision making under uncertainty, auctions and basic game theory. Use of calculus and math-based analysis. Topics overlap considerably with Econ 50 and Econ 51. Aimed at Juniors and Seniors with non-Econ majors. Does not fulfill Econ major requirements. Economics majors should take Econ 50 and Econ 51.

**ECON 50. Economic Analysis I. 5 Units.**

Individual consumer and firm behavior under perfect competition. The role of markets and prices in a decentralized economy. Monopoly in partial equilibrium. Economic tools developed from multivariable calculus using partial differentiation and techniques for constrained and unconstrained optimization. Prerequisites taken for letter grades: Econ 1 or 1A or 1V, and Math 51 or CME 100 or CME 100A. Must be taken for a Letter grade if majoring/minoring in Economics.

**ECON 51. Economic Analysis II. 5 Units.**

Neoclassical analysis of general equilibrium, welfare economics, imperfect competition, externalities and public goods, risk and uncertainty, game theory, adverse selection, and moral hazard. Multivariate calculus is used. Prerequisite: ECON 50.

**ECON 52. Economic Analysis III. 5 Units.**

Long-run economic growth and short-run economic fluctuations. Focus on the macroeconomic tools of government: fiscal policy (spending and taxes) and monetary policy, and their effects on growth, employment, and inflation. Prerequisites: ECON 50.

**ECON 101. Economic Policy Seminar. 5 Units.**

Economic policy analysis, writing, and oral presentation. Topics vary with instructor. Limited enrollment. Prerequisites: Econ 51 and 52, 102B, and two field courses. Some sections require additional prerequisites.

**ECON 102A. Introduction to Statistical Methods (Postcalculus) for Social Scientists. 5 Units.**

Probabilistic modeling and statistical techniques relevant for economics. Concepts include: probability trees, conditional probability, random variables, discrete and continuous distributions, correlation, central limit theorems, point estimation, hypothesis testing and confidence intervals for both one and two populations. Prerequisite: MATH 20 or MATH 41 or equivalent.

**ECON 102B. Applied Econometrics. 5 Units.**

Hypothesis tests and confidence intervals for population variances, chi-squared goodness-of-fit tests, hypothesis tests for independence, simple linear regression model, testing regression parameters, prediction, multiple regression, omitted variable bias, multicollinearity, F-tests, regression with indicator random variables, simultaneous equation models and instrumental variables. Topics vary slightly depending on the quarter. Prerequisites: Econ 102A or equivalent. Recommended: computer experience (course often uses STATA software to run regressions).

**ECON 102C. Advanced Topics in Econometrics. 5 Units.**

The program evaluation problem. Identifying and estimating the effects of policies on outcomes of interest (e.g., tax rates on labor supply, etc.). Identifying and estimating the effects of human capital on earnings and other labor market outcomes. Topics: Instrumental variables estimation; limited dependent variable models (probit, logit, Tobit models); Panel data techniques (fixed and random effect models, dynamic panel data models); Duration models; Bootstrap and Estimation by Simulation. Prerequisite: Econ 102B.

**ECON 103. Econometric Methods: Theory and Applications. 5 Units.**

The construction and use of econometric models for analyzing economic phenomena. Students complete individual projects and core material. Topics vary with the instructor. Enrollment restricted to Juniors and Seniors. Limited enrollment. Prerequisites: Econ 51 or 52, and 102B.

**ECON 106. World Food Economy. 5 Units.**

The economics of food production, consumption, and trade. The micro- and macro- determinants of food supply and demand, including the interrelationship among food, income, population, and public-sector decision making. Emphasis on the role of agriculture in poverty alleviation, economic development, and environmental outcomes. (graduate students enroll in 206).

Same as: EARTHSYS 106, EARTHSYS 206, ECON 206, ESS 106, ESS 206

**ECON 107. Causal Inference and Program Evaluation. 5 Units.**

Methods for estimating and doing inference for causal effects. Discussion of randomized experiments, matching methods, the role of the propensity score, instrumental variables, regression discontinuity, and natural experiments. Theoretical aspects of these methods as well as detailed applications drawn from economics, political science, education, and health care. Prerequisite: Econ 102A or equivalent.

**ECON 110. History of Financial Crises. 5 Units.**

Financial crises are as old as financial markets themselves. There are many similarities between historical events. The 2008 credit crisis, for example, is far from unique. More often than not financial crises are the result of bubbles in certain asset classes or can be linked to a specific form of financial innovation. This course gives an overview of the history of financial crises, asset price bubbles, banking collapses and debt crises. We start with the Tulip mania in 1636 and end with the recent European debt crises. The purpose of the course is to understand the causes of past crises and to develop a conceptual framework that ties common elements together. We will discuss the lessons that we can draw for financial markets today. Prerequisites: Econ 50 or Econ 135.

**ECON 111. Money and Banking. 5 Units.**

The primary course goal is for students to master the logic, intuition and operation of a financial system - money, financial markets (money and capital markets, debt and equity markets, derivatives markets), and financial institutions and intermediaries (the Central Bank, depository institutions, credit unions, pension funds, insurance companies, venture capital firms, investment banks, mutual funds, etc.). In other words, how money/capital change hands between agents over time, directly and through institutions. Material will be both quantitative and qualitative, yet always highly analytical with a focus on active learning - there will be an approximately equal emphasis on solving mathematical finance problems (e.g. option pricing) and on policy analysis (e.g. monetary policy and financial regulation.) Students will not be rewarded for memorizing and regurgitating facts, but rather for demonstrating the ability to reason with difficult problems and situations with which they might not previously be familiar. Prerequisite: Econ 50, 52. Strongly recommended but not required: some familiarity with finance and statistics (e.g. Econ 135 or 140, Econ 102A).

**ECON 112. Financial Markets and Institutions: Recent Developments. 5 Units.**

The course covers innovations, challenges and proposed changes to the financial system. Topics include new mortgage products, foreclosure rules, securitization, credit ratings, credit derivatives, dealer networks, repo financing, implications for prudential regulation & monetary policy. Emphasis is on quantitative studies of these topics. Prerequisites: Econ 52, Econ 102B.

**ECON 113. Economics of Innovation. 5 Units.**

The role of innovation and technological change in long run economic growth and the sources of innovation in science, technology, and commercialization. Founding of new industries and new markets. Commercialization of new technologies. Incentives and organization of science. Entrepreneurship. Openness and proprietary/controlled innovation. Selected public policies toward invention and innovation. The industrial revolution, the shifting international location of innovation, and the information revolution. Focus of the second half of the course is on the newest research on the newest industries. Prerequisites: 51, 102B. Same as: PUBLPOL 354

**ECON 114. Economy and Economics of Ancient Greece. 5 Units.**

(Formerly CLASSHIS 114.) Cultural and political background for Athens of the 5th and 4th century BC. Athenian economy of the 4th century BC. Economic ideas of Plato, Aristotle, and Xenophon. Pros and Cons of utilitarianism in light of the ethical theories of Plato and Aristotle. Economy and economics of ancient Greece will be compared to the same of ancient China. There is an interesting parallel. Same as: CLASSICS 183

**ECON 116. American Economic History. 5 Units.**

The American economy from colonial times to the present, illustrating the role of history in economic life. Topics: U.S. economic development in global and comparative context; slavery as an economic system; emergence of American technology and business organization; economics of the Great Depression and the New Deal; post-World War II economic performance and social change; globalization, information technology, and inequality. Prerequisite: 1 or 1A or 1V. Same as: AMSTUD 116, HISTORY 156

**ECON 117. Economic History of the Middle East. 5 Units.**

The course integrates historical literature, economic theory, and econometric methods in studying the social and economic history of the Middle East. Topics include theories of stagnation of the Middle East, ancient and medieval institutions of the region, Colonization and modernization, the region's conversion to Islam, and socioeconomic differences between religious groups. The course introduces students to new data sources from the region, which remain so far unexplored, such as tax registers, population censuses, court records, and papyri documents. Prerequisites: Econ 51, 52, 102B.

**ECON 118. Development Economics. 5 Units.**

The microeconomic problems and policy concerns of less developed countries. Topics include: health and education; risk and insurance; microfinance; agriculture; technology; governance. Emphasis is on economic models and empirical evidence. Prerequisites: 52, 102B.

**ECON 119. The Russian Economy. 4-5 Units.**

Brief introduction to the economic history of Russia, general overview of the modern Russian economy with analysis of its macroeconomic features and dynamics, industrial structure, and the major institutional features that are important for understanding Russian economic development. The period of transition from Soviet-type planned economy to a market economy and market reforms (1991-1998), the period of economic growth (1999-2007), and the economic development of Russia during the current global crisis of 2008-2010. Analysis of Russia's social structure and social policy, labor markets, the regional structure of the economy, the role of the state, and major Russian industries (oil, metals, machinery). Emphasis on the specific institutional aspects that have shaped Russia's economic development.

Same as: REES 219

**ECON 121. Social Science Field Research Methods and Applications. 5 Units.**

This course teaches the basics of the design, implementation and interpretation of social science field research. Building on a basic knowledge of statistical methods and economics, the course first introduces observational field research and compares it with experimental field research. Significant attention will be devoted to explaining what can and cannot be learned each type of field research. The details of designing both types of field research projects will then be discussed. The basics theory of the design of statistical experiments will be introduced and applied. Topics covered include sample size selection, power and size of statistical hypothesis tests, sample selection bias and methods for accounting for it. Examples of best practice field research studies will be presented as well as examples of commonly committed errors. Practical aspects of field work will also be covered, including efficient and cost-effective data collection, data analysis, teamwork, and common ethical considerations. Students can apply to participate in a course project designing a field research project and implementing it in a developing country context during four weeks of the summer. Prerequisites: either ECON 1 or 1A or 1V and either STATS 60 or Econ 102A or equivalent. Same as: PUBLPOL 120, PUBLPOL 220

**ECON 124. Economic Development and Challenges of East Asia. 5 Units.**

This course explores East Asia's rapid economic development and the current economic challenges. For the purpose of this course, we will focus on China, Japan, and Korea. The first part of the course examines economic growth in East Asia and the main mechanisms. In this context, we will examine government and industrial policy, international trade, firms and business groups, and human capital. We will discuss the validity of an East Asian model for economic growth. However, rapid economic growth and development in East Asia was followed by economic stagnation and financial crisis. The second part of the course focuses on the current economic challenges confronting these countries, in particular, inequality, demography, and entrepreneurship and innovation. Readings will come from books, journal articles, reports, news articles, and case studies. Many of the readings will have an empirical component and students will be able to develop their understanding of how empirical evidence is presented in articles. Prerequisites: Econ 102B.

**ECON 125. Economic Development, Microfinance, and Social Networks. 5 Units.**

An introduction to the study of the financial lives of households in less developed countries, focusing on savings, credit, informal insurance, the expansion of microfinance, and social networks. Prerequisites- Econ 52 and 102B.

**ECON 126. Economics of Health and Medical Care. 5 Units.**

Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; competition in health care delivery. Graduate students with research interests should take ECON 249. Prerequisites: ECON 50 and either ECON 102A or STATS 116 or the equivalent. Recommended: ECON 51.

Same as: BIOMEDIN 156, BIOMEDIN 256, HRP 256

**ECON 127. Economics of Health Improvement in Developing Countries. 5 Units.**

Application of economic paradigms and empirical methods to health improvement in developing countries. Emphasis is on unifying analytic frameworks and evaluation of empirical evidence. How economic views differ from public health, medicine, and epidemiology; analytic paradigms for health and population change; the demand for health; the role of health in international development. Prerequisites: ECON 50 and ECON 102B.

Same as: MED 262

**ECON 128. Economic Development: A Historical Perspective. 5 Units.**

The course explores the process of economic development from a historical perspective. It draws on contemporary theories of economic development and the historical experience of various regions over the last millennium. The substantive focus is on the cultural and institutional and social foundations for economic growth. The stalker focus is particularly on the Middle East, Europe and China. The course is conducted as a seminar based on in class discussion, readings, and students presentations. Limited Enrollment. Prerequisites: ECON 50, ECON 52, ECON 102B. Recommended: ECON 118.

**ECON 132. Economics and Sports. 5 Units.**

This course applies microeconomic analysis to professional and amateur sports. Appropriate examination of sports economics requires coverage of advanced fields of specialization within economics. These include industrial organization, labor economics, and public finance. Ultimately, the principal objective of the course is for students to have a more complete understanding of the economic issues affecting the world of sports. You will be able to comment intelligently on economic issues of sports that appear in the news media, such as the impact of the draft system, as well as assess and critique the opinions offered by journalists on, for example, the pay and performance of professional sportsmen and women. This is a unique opportunity to understand why there has been a recent explosion in economists looking both at the market of sports and using sports data to explain or test theories about the wider business world. Prerequisite: Econ 1.

**ECON 135. Finance for Non-MBAs. 3 Units.**

For graduate students and advanced undergraduates. The foundations of finance; applications in corporate finance and investment management. Financial decisions made by corporate managers and investors with focus on process valuation. Topics include criteria for investment decisions, valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the valuation of derivative securities. Corporate financial instruments including debt, equity, and convertible securities. Equivalent to core MBA finance course, FINANCE 220. Prerequisites: ECON 50, ECON 102A, or equivalents; ability to use spreadsheets, and basic probability and statistics concepts including random variables, expected value, variance, covariance, and simple estimation and regression.

Same as: MS&E 245G

**ECON 136. Market Design. 5 Units.**

Use of economic theory and analysis to design allocation mechanisms and market institutions. Course focuses on three areas: the design of matching algorithms to solve assignment problems, with applications to school choice, entry-level labor markets, and kidney exchanges; the design of auctions to solve general resource allocation problems, with applications to the sale of natural resources, financial assets, and advertising; and the design of platforms and exchanges, with applications to internet markets. Emphasis on connecting economic theory to practical applications. Students must write term paper. Prerequisites: recommended: ECON 51.

**ECON 137. Decision Modeling and Information. 5 Units.**

Effective decision models consider a decision maker's alternatives, information and preferences. The construction of such models in single-party situations with emphasis on the role of information. The course then evolves to two-party decision situations where one party has more information than the other. Models examined include: bidding exercises and the winner's curse, the Akerlof Model and adverse selection, the Principal-Agent model and risk sharing, moral hazard and contract design. Prerequisite: ECON 102A or equivalent. Recommended: Econ 50, Optimization and simulation in Excel.

**ECON 139D. Directed Reading. 1-10 Unit.**

May be repeated for credit.

**ECON 140. Introduction to Financial Economics. 5 Units.**

Modern portfolio theory and corporate finance. Topics: present value and discounting, interest rates and yield to maturity, various financial instruments including financial futures, mutual funds, the efficient market theory, basic asset pricing theory, the capital asset pricing model, and models for pricing options and other contingent claims. Use of derivatives for hedging. Prerequisites: ECON 51, ECON 102A.

**ECON 141. Public Finance and Fiscal Policy. 5 Units.**

What role should and does government play in the economy? What are the effects of government spending, borrowing, and taxation on efficiency, equity and economic stability and growth? The course covers economic, historical and statical analyses and current policy debates in the U.S. and around the world. Policy topics: Fiscal crises, budget surpluses/deficits; tax reform; social security and healthcare programs and reforms; transfers to the poor; public goods and externalities; fiscal federalism; public investment and cost-benefit analysis; and the political economy of government decision-making. Prerequisites: ECON 51, ECON 52 (can be taken concurrently).

Same as: PUBLPOL 107

**ECON 143. Finance and Society for non-MBAs. 4 Units.**

This interdisciplinary course will discuss the role of the financial system in the economy and its interactions with different parts of society.

The course will introduce basic finance concepts, cover the basic economic principles essential for understanding the role of finance in the economy, provide an overview of the different institutions in the system, and discuss of policy issues around financial regulation. Topics to be discussed include: the basics of financial decisions and markets; from micro finance to global mega-banks: how and why finance can benefit society as well as endanger and harm; financial regulation: why and how; other people's money: the challenge of effective control, governance, and trust; the politics of banking and finance. Prerequisite: Econ 1.

Same as: PUBLPOL 143

**ECON 144. Behavioral Finance. 5 Units.**

Financial decisions and psychology. Topics include how behavioral biases such as loss aversion, anchoring, over confidence, frame dependence, and mental accounting influence financial decision making and equilibrium outcomes in financial markets. A central question in the course is whether cognitive biases lead to violations of the efficient markets hypothesis. Prerequisites: Econ 51 and Econ 102B.

**ECON 145. Labor Economics. 5 Units.**

Analysis and description of labor markets. Determination of employment, unemployment, hours of work, wages. Welfare programs and work effort. Wage differentials by schooling, experience, gender, and race. Income inequality, changes in inequality, and differences in inequality. Employment contracts, labor unions, and bargaining. International comparisons. Prerequisites: ECON 51, ECON 102B.

**ECON 146. Economics of Education. 5 Units.**

How a decision to invest in education is affected by factors including ability and family background. Markets for elementary and secondary schooling; topics such as vouchers and charter schools, accountability, expenditure equalization among schools, and the teacher labor market. The market for college education emphasizing how college tuition is determined, and whether students are matched efficiently with colleges. How education affects economic growth, focusing on developing countries. Theory and empirical results. Application of economics from fields such as public economics, labor economics, macroeconomics, and industrial organization. Prerequisites: ECON 50, ECON 102B.

**ECON 149. The Modern Firm in Theory and Practice. 5 Units.**

Combines the latest theory and empirics on the modern firm. Topics include the organization of firms in US and internationally. Management practices around information systems, target setting and human resources. Focus on management practices in manufacturing, but also analyze retail, hospitals and schools, plus some recent field-experiments in developing countries. Prerequisites: Econ 51, ECON 102B.

**ECON 150. Economic Policy Analysis. 4-5 Units.**

The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50 and ECON 102B. Undergraduate Public Policy students are required to take this class for a letter grade and enroll in this class for five units.

Same as: PUBLPOL 104, PUBLPOL 204

**ECON 152. The Future of Finance. 2 Units.**

If you are interested in a career in finance or that touches finance (computational science, economics, public policy, legal, regulatory, corporate, other), this course will give you a useful perspective. We will take on hot topics in the current landscape of the global markets as the world continues to evolve from the financial crisis. We will discuss the sweeping change underway at the policy level by regulators and legislators around the world and how this is changing business models for existing players and attracting new players to finance. The course will include guest-lecturer perspectives on where the greatest opportunities exist for students entering or touching the world of finance today including new and disruptive players in fin tech, crowd financing, block chain, robo advising, algorithmic trading, big data and other areas. New challenges such as cyber and financial warfare threats also will be addressed. While derivatives and other quantitative concepts will be handled in a non-technical way, some knowledge of finance and the capital markets is presumed. Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and email to the instructors the Consent Application Form, which will be made available on the Public Policy Program's website prior to the beginning of Winter Quarter. See Consent Application Form for submission deadline. (Cross-listed as ECON252/152, PUBLPOL364, STATS238, LAW 564.).

Same as: ECON 252, PUBLPOL 364, STATS 238

**ECON 153. Economics of the Internet. 5 Units.**

Economic models and tools used to understand online market phenomena, including standards, network and platform economics, online transactions, advertising, auctions, information, communications, and networking. The contemporary economics literature on internet markets and mobile communications markets. Public policy issues in competition policy, communication policy, and support for innovation. Prerequisites: ECON 51 and ECON 102B.

**ECON 154. Law and Economics. 4-5 Units.**

This course explores the role of law in promoting economic welfare. Law has many meanings and many aspects, but some version of it is essential to cooperative human interaction and thus to civilization itself. Cooperation often is a positive-sum or welfare-enhancing activity, while competition among individuals, in contrast, is often zero- or negative-sum. Law, among its other functions, can serve as a mechanism to harmonize private incentives to achieve cooperative gains, to maintain an equitable division of those gains, and to deter "cheating." Economic analysis of law focuses on the welfare-enhancing incentive effects of law and law enforcement and on law's role in reducing the risks of cooperation by setting expectations of "what courts or the state will do" in various contingencies. Prerequisite: Econ 50. Undergraduate Public Policy students are required to take this class for a letter grade and enroll in this class for five units.

Same as: PUBLPOL 106, PUBLPOL 206

**ECON 155. Environmental Economics and Policy. 5 Units.**

Economic sources of environmental problems and alternative policies for dealing with them (technology standards, emissions taxes, and marketable pollution permits). Evaluation of policies addressing regional air pollution, global climate change, water allocation in the western U.S., and the use of renewable resources. Connections between population growth, economic output, environmental quality, and human welfare. Prerequisite: ECON 50.

**ECON 156. Marine Resource Economics and Conservation. 5 Units.**

Economic and ecological frameworks to understand the causes of and potential solutions to marine resource degradation. Focus on conservation of marine biodiversity and ecosystem-based management. Applications include: commercial and recreational fisheries, marine reserves, and offshore energy production.

Same as: EARTHSYS 156M, HUMBIO 111M

**ECON 157. Imperfect Competition. 5 Units.**

The interaction between firms and consumers in markets that fall outside the benchmark competitive model. How firms acquire and exploit market power. Game theory and information economics to analyze how firms interact strategically. Topics include monopoly, price discrimination, oligopoly, collusion and cartel behavior, anti-competitive practices, the role of information in markets, anti-trust policy, and e-commerce. Sources include theoretical models, real-world examples, and empirical papers. Prerequisite: ECON 51.

**ECON 158. Regulatory Economics. 5 Units.**

Economics 158 examines public policies for dealing with problems arising in markets in which competitive forces are weak. The focus is on monopolies, oligopolies, cartels, and other environments where market mechanisms are unlikely to produce outcomes that benefit consumers more than the alternatives involving costly government intervention. The two main areas examined are competition policy and economic regulation. Competition policy refers to laws that define certain market behavior as illegal because it is harmful to competition or fails to provide consumer benefits that justify its costs to consumers. Economic regulation refers to policies in which government controls prices and/or decides the terms and conditions under which firms can participate in a market. A growing area of study and policy design is the introduction of market mechanisms into formerly regulated industries such as: telecommunications, electricity, airlines, railroads, postal delivery services and environmental regulation. Cross-listed with Law 220. Prerequisites: Econ 51 or equivalent.

**ECON 159. Economic, Legal, and Political Analysis of Climate-Change Policy. 5 Units.**

This course will advance students understanding of economic, legal, and political approaches to avoiding or managing the problem of global climate change. Theoretical contributions as well as empirical analyses will be considered. In addition to examining economic issues and legal constraints, it will address the political economy of various emissions-reduction strategies. The course will consider policy efforts at the local, national, and international levels. Specific topics include: interactions among overlapping climate policies and between new policies and pre-existing legal or regulatory frameworks; the role that jurisdictional or geographic scale can play in influencing the performance of climate-policy approaches; and numerical modeling and statistical analyses of climate-change policies. Cross-listed with Law 746. Prerequisites: Econ 50 & 51.

**ECON 160. Game Theory and Economic Applications. 5 Units.**

Introduction to game theory and its applications to economics. Topics: strategic and extensive form games, dominant strategies, Nash equilibrium, subgame-perfect equilibrium, and Bayesian equilibrium. The theory is applied to repeated games, voting, auctions, and bargaining with examples from economics and political science. Prerequisites: Working knowledge of calculus and basic probability theory.

**ECON 162. Games Developing Nations Play. 5 Units.**

If, as economists argue, development can make everyone in a society better off, why do leaders fail to pursue policies that promote development? The course uses game theoretic approaches from both economics and political science to address this question. Incentive problems are at the heart of explanations for development failure. Specifically, the course focuses on a series of questions central to the development problem: Why do developing countries have weak and often counterproductive political institutions? Why is violence (civil wars, ethnic conflict, military coups) so prevalent in the developing world, and how does it interact with development? Why do developing economies fail to generate high levels of income and wealth? We study how various kinds of development traps arise, preventing development for most countries. We also explain how some countries have overcome such traps. This approach emphasizes the importance of simultaneous economic and political development as two different facets of the same developmental process. No background in game theory is required. Same as: POLISCI 247A, POLISCI 347A

**ECON 165. International Finance. 5 Units.**

This course presents the tools needed to analyze issues concerning the macro performance of an open economy in a world of high capital mobility. A consistent model is used throughout, one which captures the central mechanisms which re-equilibrate the economy in the short, intermediate and long runs. The model distinguishes between policy regimes and policy initiatives, thereby providing useful insights into classical results, such as long-run exchange-rate-regime neutrality. Prerequisite: ECON 52.

**ECON 166. International Trade. 5 Units.**

Different sources of comparative advantage in production and trade among nations. Aggregate gains from trade, winners and losers from globalization. International migration, outsourcing and multinational companies. Trade policy and international trade agreements. Theory, empirical evidence, and real-life anecdotes. Lectures supplemented by in-class discussions of current topics covered in the popular press. Prerequisite: ECON 51.

**ECON 178. Behavioral Economics. 5 Units.**

The field of behavioral economics draws on insights from other disciplines, especially psychology, to enrich our understanding of economic behavior. The course will discuss how people may display systematic behavioral patterns that diverge from the predictions of standard economic models, as well as the ways in which economists incorporate those considerations into their theories, and the implications of those theories for market outcomes and public policies. Prerequisites: ECON 51, ECON 102A.

**ECON 179. Experimental Economics. 5 Units.**

Methods and major subject areas that have been addressed by laboratory experiments. Focus is on a series of experiments that build on one another. Topics include decision making, two player games, auctions, and market institutions. How experiments are used to learn about preferences and behavior, trust, fairness, and learning. Final presentation of group projects. Prerequisites: ECON 50, ECON 51, ECON 102A.

**ECON 180. Honors Game Theory. 5 Units.**

Rigorous introduction to game theory and applications. Topics include solution concepts for static and dynamic games of complete and incomplete information, signaling games, repeated games, bargaining, and elements of cooperative game theory. Applications mainly from economics, but also political science, biology, and computer science. Prerequisites: Experience with abstract mathematics and willingness to work hard. No background in economics required.

**ECON 181. Honors Information and Incentives. 5 Units.**

Rigorous introduction to the theory of economic mechanisms under asymmetric information. Covers applications to price discrimination, taxation, regulation, long-term relationships, single-unit and multi-unit auctions. Forms a sequence with ECON 180 and ECON 182, but can be taken independently. Prerequisite: Experience with abstract mathematics and willingness to work hard. No prior knowledge of economics is required, although basic knowledge in game theory is useful.

**ECON 182. Honors Market Design. 5 Units.**

Rigorous introduction to the theory of matching and resource allocation, and its application to practical market design. Theory covers two-sided matching, "house allocation" problems, random assignment, and their variants. Applied topics include school choice, labor market, house allocation, and organ allocation for transplantation. Final paper required. Forms a sequence with ECON 180 and ECON 181, but can be taken independently. Prerequisites: Experience with abstract mathematics and willingness to work hard. No prior knowledge of economics is required, although basic knowledge in game theory is useful.

**ECON 183. The Cardinal Fund. 1-3 Unit.**

This is an experiential course that will cover the important concepts that underlying investment theory in Financial Economics. Students will manage an investment portfolio of at least \$1 million dollars. In doing so they will learn how risk and return are related in public capital markets. Students are expected to spend a substantial amount of time outside the classroom applying the knowledge they learn in the class. Prerequisites: Econ 51 (or IPS 204A, PublPol 301A), Econ 102B (or Stats 141, Stats 110, CEE 203, Earthsys 160, Educ 200C, Linguist 277, Psych 252), Econ 140 (or Econ 135), Econ 190 (or MS&E 140).

**ECON 190. Introduction to Financial Accounting. 5 Units.**

How to read, understand, and use corporate financial statements. Oriented towards the use of financial accounting information (rather than the preparer), and emphasizes the reconstruction of economic events from published accounting reports.

**ECON 191. Introduction to Cost Accounting. 5 Units.**

Focuses on how managers use accounting information for decision making. Students will study product and service costing, activity based costing, performance management and evaluation, CVP analysis, forecasting, factors to be considered in pricing decision, capital investment analysis, and quality management and measurement.

**ECON 198. Junior Honors Seminar. 5 Units.**

Primarily for students who expect to write an honors thesis. Weekly sessions go through the process of selecting a research question, finding relevant bibliography, writing a literature review, introduction, and study design, culminating in the write-up of an honors thesis proposal (prospectus) and the oral presentation of each student's research project. Students also select an adviser and outline a program of study for their senior year. Enrollment limited to 15. Same as: PUBLPOL 197

**ECON 199D. Honors Thesis Research. 1-10 Unit.**

In-depth study of an appropriate question and completion of a thesis of very high quality. Normally written under the direction of a member of the Department of Economics (or some closely related department). See description of honors program. Register for at least 1 unit for at least one quarter after your honors application is approved. Winter registration for one unit under the supervision of the Director of the Honors Program is mandatory for all honors students.

**ECON 202. Microeconomics I. 2-5 Units.**

(Non-Economics graduate students register for 202N.) Open to advanced undergraduates with consent of instructors. Theory of the consumer and the implications of constrained maximization; uses of indirect utility and expenditure functions; theory of the producer, profit maximization, and cost minimization; behavior under uncertainty; partial equilibrium analysis and introduction to models of general equilibrium. Limited enrollment. Prerequisite: thorough understanding of the elements of multivariate calculus and linear algebra.

**ECON 202N. Microeconomics I For Non-Economics PhDs. 2-5 Units.**

Microeconomics I for non-Economics PhD students. Theory of the consumer and the implications of constrained maximization; uses of indirect utility and expenditure functions; theory of the producer, profit maximization, and cost minimization; behavior under uncertainty; partial equilibrium analysis and introduction to models of general equilibrium. Limited enrollment. Prerequisite: understanding of the elements of multivariate calculus and linear algebra.

**ECON 203. Microeconomics II. 2-5 Units.**

(Non-Economics graduate students register for 203N.) Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities and public goods. The theory of imperfect competition: static Bertrand and Cournot competition, dynamic oligopoly, entry decisions, entry deterrence, strategic behavior to alter market conditions. Limited enrollment. Prerequisite: ECON 202.

**ECON 203N. Microeconomics II For Non-Economics PhDs. 2-5 Units.**

Non-cooperative game theory including normal and extensive forms, solution concepts, games with incomplete information, and repeated games. Externalities, public goods, and asymmetric information. The theory of imperfect competition and other applications. Limited enrollment. Prerequisite: understanding of the elements of multivariate calculus and linear algebra.

**ECON 204. Microeconomics III. 2-5 Units.**

Social Choice, including Arrow's theorem, the Gibbard-Satterthwaite theorem, and the Vickrey-Clarke-Groves mechanism. The theory of contracts, emphasizing contractual incompleteness and the problem of moral hazard. Incentive regulation. Competition with imperfect information, including signaling and adverse selection. Competitive equilibrium and the core. Limited enrollment. Non-Econ students need permission of instructor to enroll. Prerequisite: ECON 203.

**ECON 206. World Food Economy. 5 Units.**

The economics of food production, consumption, and trade. The micro- and macro- determinants of food supply and demand, including the interrelationship among food, income, population, and public-sector decision making. Emphasis on the role of agriculture in poverty alleviation, economic development, and environmental outcomes. (graduate students enroll in 206). Same as: EARTHSYS 106, EARTHSYS 206, ECON 106, ESS 106, ESS 206

**ECON 210. Macroeconomics I. 2-5 Units.**

Dynamic economics applied to aggregate economic fluctuations and economic growth. Solving dynamic, stochastic rational expectation models using discrete time and continuous time dynamic programming. Limited enrollment.

**ECON 211. Macroeconomics II. 2-5 Units.**

Growth theory (neoclassical models, growth accounting, technical change, endogenous growth) using optimal control theory. Introduction to dynamic, stochastic general equilibrium models. Limited enrollment. Prerequisite: ECON 210.

**ECON 212. Macroeconomics III. 2-5 Units.**

Monetary theory and policy: time series techniques to characterize and evaluate policy; models with rational expectations and rigidities; the Lucas critique; time inconsistency; staggered price and wage setting; optimal policy rules; the term structure of interest rates. Models of heterogeneity: search models of the labor market; precautionary savings and general equilibrium with incomplete markets; constrained efficiency; endogenous market incompleteness and recursive contracts; optimal taxation and redistribution. Limited enrollment. Prerequisites: ECON 203, ECON 211.

**ECON 214. Development Economics I. 2-5 Units.**

This is a two-part course bridging macro and micro development research. The first part focuses on dynamic models of growth and development, with a focus on migration; technological change; the functioning of financial markets; and barriers to agricultural productivity in less developed countries. The second part focuses on non-market and market allocation processes, the institutions that support them, and their role in the development process. Prerequisites: 202 or 202N, 270.

**ECON 215. Economic Development II. 2-5 Units.**

Microeconomic issues in less developed countries. Topics: health; education; gender; intra-household models; entrepreneurship; market institutions; non-market institutions; political economy. Prerequisites: 202 or 202N, 270.

**ECON 216. Development Economics III. 2-5 Units.**

Use of quantitative theory to understand various aspects of the growth and development process. Emphasis on family and demographic issues and their importance for development. Theoretical models of fertility and marriage decisions, and their empirical relevance. Unified growth theories: demographic transition and industrial revolution. Family institutions such as marriage payments and polygamy. The political economy of family-related institutions, e.g. the evolution of women's and children's rights. Female labor supply and development. Theories of disease and development. Prerequisite: 202, 203, 204, 210, 211, 212, 270, 271, 272.

**ECON 217. Topics in International Macroeconomics: Theory and Evidence for Latin America. 2-5 Units.**

Banking systems, interest rates, regulatory policies, and the productivity of capital in developing countries. Controlling inflation: fiscal and monetary policies for macroeconomic stability. Currency crises, exchange rates, and the liberalization of foreign trade. Further applications to transitional socialist economies in Asia and E. Europe.

**ECON 220. Political Economy I. 2-5 Units.**

Theoretical models of political economy. Potential topics include: basic social choice theory, democracy, electoral competition, political accountability, legislative bargaining, lobbying, corruption, autocratic politics, democratization, conflict and arms races, and institutional change. Attention to economics implications, including taxation, redistribution, and public goods. Prerequisite: 203 or permission of instructors. Same as: POLISCI 311E

**ECON 225. Economics of Technology and Innovation. 2-5 Units.**

Graduate seminar on current research on the economics of innovation. Topics include the design of optimal patent policies, copyright policies, and the role of human capital (science, immigration, skill-biased technical change). Emphasis on empirical analyses of historical and contemporary data.

**ECON 226. U.S. Economic History. 2-5 Units.**

The role of economic history as a distinctive approach to the study of economics, using illustrations from U.S. history. Topics: historical and institutional foundations of the U.S. rise to world economic preeminence; economic causes and consequences of slavery; the American national system of technology; the Great Depression of the 30s; national economic performance in a globalizing world. Prerequisite: ECON 51 and ECON 52. Intended for graduate students.

**ECON 227. European Economic History. 2-5 Units.**

European economic history from middle ages to the twentieth century. Topics: competing hypotheses in explaining long term trends in economic growth and cross-country differences in long-term economic growth; formation, function, and persistence of institutions and organizations; the role of institutions and organizations (e.g. apprenticeship, servitude, partnerships, cooperatives, social networks, share cropping, and communes) as solutions to contractual problems; the economics of migration; the changing economic role of the family. Use of economic theory in guiding hypothesis testing, as well as construction of new datasets and the execution of empirical analysis.

**ECON 228. Institutions and Organizations in Historical Perspective. 2-5 Units.**

The course integrates historical analysis and economic theory in evaluating the nature and role of institutions in economic and political outcomes. The motivating question is the factors determining economic and political developments in the long run and the historical focus is on the Middle East, Europe, and China over the last millennium. The course first examines various approaches for the study of institutions, their nature and dynamics and then focuses on detailed discussions of frontier research papers.

**ECON 233. Advanced Macroeconomics I. 2-5 Units.**

Topics in the theory and empirics of economic growth. For PhD-level students.

**ECON 234. Advanced Macroeconomics II. 2-5 Units.**

Modern macroeconomics of aggregate fluctuations in advanced economies, concentrating mainly on the U.S. Current research on sovereign debt, fiscal policy and financial flows, with emphasis on current events. Current research on persistent substandard performance, financial crises, excess unemployment, and other timely topics. The course will be organized around the detailed study of recent research papers. Students enroll in MGTECON612 takes the class for 4 units.

**ECON 235. Advanced Macroeconomics III. 2-5 Units.**

Current topics to prepare student for research in the field. Recent research in labor-market friction, reallocation, fluctuations, wage and price determination, innovation, and productivity growth. Research methods, presentations skills, and writing in advanced economics.

**ECON 236. Financial Economics I. 2-5 Units.**

This course will cover research topics at the boundary between macroeconomics and finance. Topics may include the study of macroeconomic models with financial frictions, conventional and unconventional monetary policy, its transmission mechanism and the term structure of interest rates, sovereign debt crises, search frictions and segmentation in housing markets, (over)leveraging by households, heterogeneous expectations, excess volatility, financial bubbles and crises. Prerequisites: 210, 211, 212.

**ECON 237. Financial Economics II. 2-5 Units.**

Topics in financial Economics. Discussion of recent academic papers on asset pricing. Student presentations and course paper requirement. Designed for second year PhD students in economics or finance. Same as: MGTECON 617

**ECON 239D. Directed Reading. 1-10 Unit.**

May be repeated for credit.

**ECON 241. Public Finance and Taxation I. 2-5 Units.**

Introduction to key issues in public economics, including the optimal design of tax and transfer policy, income and wealth inequality and its policy implications, the empirical effect of taxes on earnings and savings, fiscal and debt policy, social mobility and the dynamics of taxation, and public finance issues in developing countries. Students will learn frontier theoretical, empirical and computational tools that are currently used to address policy questions. Prerequisites: ECON 202-204, ECON 210, ECON 270, ECON 271, or equivalent with consent of instructor.

**ECON 242. Public Finance and Taxation II. 2-5 Units.**

Topics concerning public goods provision, government interventions into private insurance markets, adverse selection, and social insurance design. We also explore questions in the intersection of public and family economics such as the unit of taxation, and the interaction between social insurance and intra-family insurance. Prerequisites: 202, 203, 204, 210, 270, 271, or equivalent with consent of instructor. Recommended: 241.

**ECON 246. Labor Economics I. 2-5 Units.**

Topics in current applied microeconomic research including intertemporal labor supply models, public policy, program evaluation, job search, migration, consumption behavior. Student and faculty presentations.

**ECON 247. Labor Economics II. 2-5 Units.**

Recent topics in applied micro, focusing on papers from top journals (QJE, AER, JPE, Econometrica and REStud) over the last ten years. Broad overview of current topic and techniques in applied-micro research. Topics include inequality, polarization and skill-biased technical change, discrimination, technology adoption and the spread of information, management practices, field experiments, peer effects and academic spillovers. Combination of student and faculty presentations. Additional sessions on general presentations, paper writing and research skills to prepare for job market. Class trip to the NBER West-Coast labor meetings at the San Francisco Fed.

**ECON 248. Labor Economics III. 2-5 Units.**

Topics in current applied microeconomic research including skill-biased technical change, income distribution, program evaluation, job search, migration, consumption behavior. Student and faculty presentations.

**ECON 249. Topics in Health Economics. 2-5 Units.**

Course will cover various topics in health economics, from theoretical and empirical perspectives. Topics will include demand and supply in health insurance, healthcare provision, physicians' incentives, competition policy in healthcare markets, intellectual property in the context of pharmaceutical drugs, and the interaction between public and private sectors in healthcare markets. Key emphasis on recent work and empirical modelling. Prerequisites: Micro and Econometrics first year sequences (or equivalent).

**ECON 250. Environmental Economics. 2-5 Units.**

Theoretical and empirical analysis of sources of and solutions to environmental problems, with application to local pollution challenges and global environmental issues such as climate change. Topics include: analysis of market failure, choice of environmental policy instruments, integrating environmental and distortionary taxes, environmental policy making under uncertainty, valuing environmental amenities, and measuring /promoting sustainable development.

**ECON 251. Natural Resource and Energy Economics. 2-5 Units.**

Economic theory and empirical analysis of non-renewable and renewable natural resources, with considerable attention to energy provision and use. Topics include: exhaustible resources; renewable resources; and energy industry market structure, pricing, and performance. Prerequisites: 202, 203, 204, 271, and 272, or equivalents with consent of instructor.

**ECON 252. The Future of Finance. 2 Units.**

If you are interested in a career in finance or that touches finance (computational science, economics, public policy, legal, regulatory, corporate, other), this course will give you a useful perspective. We will take on hot topics in the current landscape of the global markets as the world continues to evolve from the financial crisis. We will discuss the sweeping change underway at the policy level by regulators and legislators around the world and how this is changing business models for existing players and attracting new players to finance. The course will include guest-lecturer perspectives on where the greatest opportunities exist for students entering or touching the world of finance today including new and disruptive players in fin tech, crowd financing, block chain, robo advising, algorithmic trading, big data and other areas. New challenges such as cyber and financial warfare threats also will be addressed. While derivatives and other quantitative concepts will be handled in a non-technical way, some knowledge of finance and the capital markets is presumed. Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and email to the instructors the Consent Application Form, which will be made available on the Public Policy Program's website prior to the beginning of Winter Quarter. See Consent Application Form for submission deadline. (Cross-listed as ECON252/152, PUBLPOL364, STATS238, LAW 564.). Same as: ECON 152, PUBLPOL 364, STATS 238

**ECON 253. Energy Markets: Theory and Evidence from Latin America. 2-5 Units.**

What theory and practice around the world and in Latin America tell us about the design of energy markets; how distributional impacts and enforcement capabilities affect their implementation. Topics include: pricing in wholesale electricity markets, role of long-term contracting, auction design, evidence from spot and contract markets; design of markets for pollution permits, alternative environmental policy instruments, evidence from existing and proposed carbon markets and others, imperfect information, adverse selection in opt-in provisions, effect on innovation, interaction between markets, market power. Advanced undergraduates and masters students are welcome to enroll.

**ECON 255. Economics of Communication. 2-5 Units.**

This course will cover theoretical and empirical work on the provision of information in markets. Likely topics include: theory of strategic communication; persuasion; advertising and brands; financial analysis and disclosure; political communication; text mining and automated content analysis; and the political economy and industrial organization of media. Prerequisites: Econ 202 and 210 (or equivalent).

**ECON 257. Industrial Organization I. 2-5 Units.**

Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; price discrimination; price dispersion and consumer search; differentiated products; the role of information in markets, including insurance and adverse selection; auctions; collusion and cartel behavior; advertising; entry and market structure; market dynamics; strategic behavior.

**ECON 258. Industrial Organization IIA. 2-5 Units.**

Topics may include theoretical and empirical analysis of auctions, bargaining, price discrimination, advertising, brands, markets for information, platforms and networks, innovation, and patents.

**ECON 259. Industrial Organization II B. 2-5 Units.**

Theoretical and empirical analyses of the determinants of market structure; firm behavior and market efficiency in oligopolies; economics of antitrust and regulation, with focus on energy and environmental economics; the role of information asymmetries in markets: adverse selection and moral hazard, with focus on insurance and credit markets.

**ECON 260. Industrial Organization III. 2-5 Units.**

Current research and policy questions in industrial organization. Course combines lectures by the instructors with student presentations, with an emphasis on initiating dissertation research in industrial organization. Prerequisites: ECON 257, ECON 258.

**ECON 265. International Economics I. 2-5 Units.**

International macroeconomics and finance, emphasizing current research. The course is organized around the role of different types of frictions (in asset and goods markets) in explaining features of the international macroeconomy. Prerequisites: 202, 203, 204, 210, 211, 212.

**ECON 266. International Economics II. 2-5 Units.**

This course covers an introduction to models of international trade and economic geography from both a theoretical and an empirical perspective.

**ECON 267. Topics in International Trade. 2-5 Units.**

Topics from the frontier of current international trade research, presented through recent theoretical and empirical papers. Firm heterogeneity in trade and firms' export decisions. Different types of foreign direct investment. Multinational firms and the interaction between international trade and the theory of the firm. Institutional frictions and their effects on trade and FDI activity. Course goal is to prepare students for doing research in international trade and related fields.

**ECON 268. International Finance and Exchange Rates. 2-5 Units.**

Monetary foundations of international exchange; the rules of the game since Bretton Woods. Foreign exchange risk under the world dollar standard. Hedging, forward covering, and interest parity relationships. International capital flows and the current account. Global trade imbalances; China and Japan versus the U.S. Inflation versus exchange rate targeting in developing countries.

**ECON 270. Intermediate Econometrics I. 2-5 Units.**

Probability, random variables, and distributions; large sample theory; theory of estimation and hypothesis testing. Limited enrollment. Prerequisites: math and probability at the level of Chapter 2, Paul G. Hoel, Introduction to Mathematical Statistics, 5th ed.

**ECON 271. Intermediate Econometrics II. 2-5 Units.**

Linear regression model, relaxation of classical-regression assumptions, simultaneous equation models, linear time series analysis. Limited enrollment. Prerequisite: 270.

**ECON 272. Intermediate Econometrics III. 2-5 Units.**

Continuation of 271. Nonlinear estimation, qualitative response models, limited dependent variable (Tobit) models. Limited enrollment. Prerequisite: 271.

**ECON 273. Advanced Econometrics I. 2-5 Units.**

Possible topics: parametric asymptotic theory. M and Z estimators. General large sample results for maximum likelihood; nonlinear least squares; and nonlinear instrumental variables estimators including the generalized method of moments estimator under general conditions. Model selection test. Consistent model selection criteria. Nonnested hypothesis testing. Markov chain Monte Carlo methods. Nonparametric and semiparametric methods. Quantile Regression methods.

**ECON 274. Advanced Econometrics II. 2-5 Units.**

(Formerly 273B); Possible topics: nonparametric density estimation and regression analysis; sieve approximation; contiguity; convergence of experiments; cross validation; indirect inference; resampling methods: bootstrap and subsampling; quantile regression; nonstandard asymptotic distribution theory; empirical processes; set identification and inference, large sample efficiency and optimality; multiple hypothesis testing.

**ECON 275. Time Series Econometrics. 2-5 Units.**

Stochastic processes and concepts such as stationarity, ergodicity, and mixing. Inference with heteroskedastic and autocorrelated time series; autoregressive and moving average models; unit root processes and asymptotic analysis of such; tests for structural change; vector autoregressive models; cointegration; impulse response analysis; forecasting; ARCH and GARCH volatility models. Prerequisites: 270, 271.

**ECON 276. Limited Dependent Variables. 2-5 Units.**

(Formerly 274) Parametric and semi-parametric approaches to the estimation of econometric models with discrete or limited dependent variables. Maximum likelihood, linear and nonlinear panel data, duration models, rank estimation and index models, Bayesian approaches and MCMC, measurement error models, dynamic programming discrete choice analysis and dynamic discrete games. models. Prerequisite: ECON 273 or consent of instructor.

**ECON 277. Behavioral and Experimental Economics III. 2-5 Units.**

Economics 277 is a course for graduate students in the Economics department writing dissertations with behavioral or experimental components. Economics 277 is part of a three course sequence (along with Econ 278 & 279), which has two main objectives: 1) examining theories and evidence related to the psychology of economic decision making; 2) introducing methods of experimental economics, and exploring major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objectives of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

**ECON 278. Behavioral and Experimental Economics I. 2-5 Units.**

This is the first half of a three course sequence (along with Econ 277 & 279) on behavioral and experimental economics. The sequence has two main objectives: 1) examines theories and evidence related to the psychology of economic decision making, 2) Introduces methods of experimental economics, and explores major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objects of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

**ECON 279. Behavioral and Experimental Economics II. 2-5 Units.**

This is part of a three course sequence (along with Econ 277 & 278) on behavioral and experimental economics. The sequence has two main objectives: 1) examines theories and evidence related to the psychology of economic decision making, 2) Introduces methods of experimental economics, and explores major subject areas (including those not falling within behavioral economics) that have been addressed through laboratory experiments. Focuses on series of experiments that build on one another in an effort to test between competing theoretical frameworks, with the objects of improving the explanatory and predictive performance of standard models, and of providing a foundation for more reliable normative analyses of policy issues. Prerequisites: 204 and 271, or consent of instructor.

**ECON 282. Contracts, Information, and Incentives. 2-5 Units.**

Basic theories and recent developments in mechanism design and the theory of contracts. Topics include: hidden characteristics and hidden action models with one and many agents, design of mechanisms and markets with limited communication, long-term relationships under commitment and under renegotiation, property rights and theories of the firm.

**ECON 283. Theory and Practice of Auction Market Design. 2-5 Units.**

Basics of auction theory and recent contributions. Multi-item and combinatorial auctions. Robust auction design. Applied auction design with practical applications. Applied topics may include auctions for Internet advertising, radio spectrum auctions, securities markets, commodities, and complex procurements.

**ECON 285. Matching and Market Design. 2-5 Units.**

This is an introduction to market design, intended mainly for second year PhD students in economics (but also open to other graduates students from around the university and to undergrads who have taken undergrad market design). It will emphasize the combined use of economic theory, experiments and empirical analysis to analyze and engineer market rules and institutions. In this first quarter we will pay particular attention to matching markets, which are those in which price doesn't do all of the work, and which include some kind of application or selection process. In recent years market designers have participated in the design and implementation of a number of marketplaces, and the course will emphasize the relation between theory and practice, for example in the design of labor market clearinghouses for American doctors, and school choice programs in a growing number of American cities (including New York and Boston), and the allocation of organs for transplantation. Various forms of market failure will also be discussed. Assignment: One final paper. The objective of the final paper is to study an existing market or an environment with a potential role for a market, describe the relevant market design questions, and evaluate how the current market design works and/or propose improvements on the current design.

**ECON 286. Game Theory and Economic Applications. 2-5 Units.**

Aims to provide a solid basis in game-theoretic tools and concepts, both for theorists and for students focusing in other fields. Technical material will include solution concepts and refinements, potential games, supermodular games, repeated games, reputation, and bargaining models. The class will also address some foundational issues, such as epistemic and evolutionary modeling. Prerequisite: 203 or consent of instructor.

**ECON 288. Computational Economics. 2-5 Units.**

Overview of numerical analysis. Computational approaches to solving economic problems, including dynamic programming, projection and perturbation. General equilibrium models, new Keynesian models, Krusell-Smith model, default risk models, international trade models, and dynamic games. Numerical methods for large-scale applications (Smolyak, endogenous-grid, stochastic simulation, epsilon-distinguishable set algorithms). Parallel computation, GPUs and supercomputers. Prerequisite: equivalent of first-year graduate core economics sequence.

**ECON 289. Advanced Topics in Game Theory and Information Economics. 2-5 Units.**

Topics course covering a variety of game theory topics with emphasis on market design, such as matching theory and auction theory. Final paper required. Prerequisites: ECON 285 or equivalent. ECON 283 recommended.

**ECON 290. Multiperson Decision Theory. 3 Units.**

Students and faculty review and present recent research papers on basic theories and economic applications of decision theory, game theory and mechanism design. Applications include market design and analyses of incentives and strategic behavior in markets, and selected topics such as auctions, bargaining, contracting, and computation.

**ECON 291. Social and Economic Networks. 2-5 Units.**

Synthesis of research on social and economic networks by sociologists, economists, computer scientists, physicists, and mathematicians, with an emphasis on modeling. Includes methods for describing and measuring networks, empirical observations about network structure, models of random and strategic network formation, as well as analyses of contagion, diffusion, learning, peer influence, games played on networks, and networked markets.

**ECON 299. Practical Training. 1-10 Unit.**

Students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. May be repeated for credit.

**ECON 300. Third-Year Seminar. 1-10 Unit.**

Restricted to Economics Ph.D. students. Students present current research. May be repeated for credit.

**ECON 310. Macroeconomic Workshop. 1-10 Unit.****ECON 315. Development Workshop. 1-10 Unit.****ECON 325. Economic History Workshop. 1-10 Unit.**

May be repeated for credit.

**ECON 335. Experimental/Behavioral Seminar. 1-10 Unit.**

Field seminar in experimental and behavioral economics.

**ECON 341. Public Economics and Environmental Economics Seminar. 1-10 Unit.**

Issues in measuring and evaluating the economic performance of government tax, expenditure, debt, and regulatory policies; their effects on levels and distribution of income, wealth, and environmental quality; alternative policies and methods of evaluation. Workshop format combines student research, faculty presentations, and guest speakers. Prerequisite: ECON 241 or consent of instructor.

**ECON 345. Applications Workshop. 1-10 Unit.****ECON 354. Law and Economics Seminar. 2-6 Units.**

This seminar will examine current research by lawyers and economists on a variety of topics in law and economics. Several sessions of the seminar will consist of an invited speaker, usually from another university, who will discuss his or her current research. Representative of these sessions have been discussions of compensation for government regulations and takings, liability rules for controlling accidents, the definition of markets in antitrust analysis, the role of the government as a controlling shareholder, and optimal drug patent length. Cross-listed with LAW 344.

**ECON 355. Industrial Organization Workshop. 1-10 Unit.**

Current research in the field by visitors, presentations by students, and discussion of recent papers. Students write an original research paper, make a formal presentation, and lead a structured discussion.

**ECON 365. International Trade Workshop. 1-10 Unit.****ECON 370. Econometrics Workshop. 1-10 Unit.****ECON 380. INEQUALITY: Economic and Philosophical Perspectives. 5 Units.**

The nature of and problem of inequality is central to both economics and philosophy. Economists study the causes of inequality, design tools to measure it and track it over time, and examine its consequences. Philosophers are centrally concerned with the justification of inequality and the reasons why various types of inequality are or are not objectionable. In this class we bring both of these approaches together. Our class explores the different meanings of and measurements for understanding inequality, our best understandings of how much inequality there is, its causes, its consequences, and whether we ought to reduce it, and if so, how. This is an interdisciplinary graduate seminar. We propose some familiarity with basic ideas in economics and basic ideas in contemporary political philosophy; we will explain and learn about more complex ideas as we proceed. The class will be capped at 20 students.

**ECON 391. Microeconomic Theory Seminar. 1-10 Unit.****ECON 400. Ph.D. Dissertation. 1-15 Unit.**

Pre-TGR dissertation research.(Staff).

**ECON 801. TGR Project. 0 Units.****ECON 802. TGR Dissertation. 0 Units.****Education Courses****EDUC 9. Public Service Internship Preparation. 1 Unit.**

Are you prepared for your internship this summer? This workshop series will help you make the most of your internship experience by setting learning goals in advance; negotiating and communicating clear roles and expectations; preparing for a professional role in a non-profit, government, or community setting; and reflecting with successful interns and community partners on how to prepare sufficiently ahead of time. You will read, discuss, and hear from guest speakers, as well as develop a learning plan specific to your summer or academic year internship placement. This course is primarily designed for students who have already identified an internship for summer or a later quarter. You are welcome to attend any and all workshops, but must attend the entire series and do the assignments for 1 unit of credit.

Same as: ARTSINST 40, EARTH SYS 9, HUMBIO 9, PUBLPOL 74, URBANST 101

**EDUC 11SC. Work and Family. 2 Units.**

Examination into the forces behind the rise in women's paid work and subsequent changes in the workplace and in families. Topics include gendered division of labor, decisions about marriage and childrearing, economic issues, employers' role in structuring work and family, and public policy issues such as anti-discrimination laws, divorce laws, and subsidized child care.

**EDUC 12SC. Hip Hop as a Universal Language. 2 Units.**

This seminar-cipher considers the prospect of Hip Hop as a Universal Language. Hip Hop Culture has captured the minds of youth "all around the world, from Japan to Amsterdam" (like the homie Krupt says), shaping youth identities, styles, attitudes, languages, fashions, and both physical and political stances. The field of global Hip Hop studies has emerged as scholars around the world grapple with what is arguably the most profound cultural, musical, and linguistic youth movement of the early 21st century. Participants in this seminar-cipher will be engaged in critical discussions around a particular constellation of concerns: Hip Hop Cultures, youth identities, the politics of language, race, and ethnicity, and the simultaneous processes of globalization and localization. Through the examination of various texts (scholarly readings, documentary films, guest speakers and artists), we span the Global Hip Hop Nation through scenes as diverse as Hong Kong's urban center, Germany's Mannheim inner-city district of Weststadt, the Brazilian favelas, the streets of Lagos and Dar es Salaam, and the hoods of the San Francisco Bay Area to explore Hip Hop's global linguistic flows.

**EDUC 13SC. Language, Identity, and the Power of Public Discourse. 2 Units.**

Have you ever engaged in a conversation with someone who sounds different than you expect? This course explores instances like those that highlight the interaction between language and identity and its implications for learning. The theme of language and identity emerges as significant because of the subtle yet powerful impact it has on our cultural interactions. We have an inherent expectation of how we expect people to communicate. Yet, do these expectations interfere with teaching and learning practices? Many individuals take seminars and classes that focus on teaching professional modes of communication and discourse. This course will offer a detailed examination of scholarship that investigates the power of the subtle messages embedded in language. In addition, to gain a sense of the power of these interactions in practice, we will engage in the following research activities: (a) Participants will engage in school site visits to examine these interactions in practice; (b) Participants will engage in critical interviews of broadcasters at a local television station to discuss the role of language and identity in their presentation; and (c) We will visit a recording studio to discuss the role of language and identity with local hip-hop producers and artists.

**EDUC 14SC. Public Education and Schooling: The Great Equalizer or the Fiercely Competitive Field?. 2 Units.**

Everyone seems to have an opinion about the American educational landscape. After all, we all have attended schools of various sorts, which help to shape our understandings about education. Yet, the political, social, and cultural terrains are ever-changing, especially within public education. This seminar will focus on some of the main current issues in U.S. urban schools. This course will take an interdisciplinary approach to examining major issues facing public schools today and to discussing effective policies and practices. There are two main components to the seminar: first, students will engage in a review of current educational research and policy; and second, they will conduct some service learning activity in a local, low-income public high school. In small groups, students will co-design projects that both draw on ideas generated from their readings and discussions and involve local high school students and educators. Through various lenses, we will survey the landscape of urban education in the United States and explore myriad theories or explanations for existing conditions, crises, and policies. Students will read a number of works that focus on the multiple environs of the educational system; the economy, the political context, the demands of accountability and standardization, residential patterns, and social and cultural relationships. Such explanations and issues may transcend U.S. boundaries and could be applicable in multiple contemporary urban education settings.

**EDUC 32. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.**

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations.

Same as: AFRICAAM 32, AMSTUD 32, CSRE 32A, EDUC 432, TAPS 32

**EDUC 98. Service Learning Practicum. 1 Unit.**

For Alternative Spring Break program leaders. The skills and philosophical framework to develop and lead an ASB experience.

**EDUC 100A. EAST House Seminar: Current Issues and Debates in Education. 1 Unit.**

Education and Society Theme (EAST) House seminar. In autumn quarter, faculty and other scholars from around the University discuss the latest issues, debates, and research in the field of Education. In winter quarter, research and practice pertaining to sex, gender, and education are presented by professionals and scholars. In the spring, the seminar provides an inquiry into the culture at Stanford and one's personal values. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice. Notes: Attendance at first class required. Seminar meets in the EAST House Dining Hall located at 554 Governor's Ave. The seminar is open to all students at Stanford with first-priority given to pre-assign residents of EAST House followed by other residents of EAST and all other undergraduates. Graduate students are allowed to enroll on a space-available basis. Visitors/auditors are not allowed. The seminar is required for all pre-assigned residents of EAST House and is repeatable for credit.

**EDUC 100B. EAST House Seminar: Current Issues and Debates in Education. 1 Unit.**

Education and Society Theme (EAST) House seminar. In autumn quarter, faculty and other scholars from around the University discuss the latest issues, debates, and research in the field of Education. In winter quarter, research and practice pertaining to sex, gender, and education are presented by professionals and scholars. In the spring, the seminar provides an inquiry into the culture at Stanford and one's personal values. **EDUC 101. Introduction to Teaching and Learning. 4 Units.**

This course is designed to help undergraduates explore career interests in education; it is the core course for the Undergraduate Minor in Education, and fulfills requirements for Honors in Education. The course considers the philosophy, history, politics, professional practice and social structures of teaching in the United States. Students will read and discuss teaching theory and research, participate in learning activities and visit school teaching sites, as well as examine and analyze artifacts and models of teaching.

**EDUC 102. Examining Social Structures, Power, and Educational Access. 2-3 Units.**

Goal is to prepare Education and Youth Development fellows for their work with adolescents in the Haas Center's pre-college summer programs and to define their role in addressing educational inequities in the summer programs and beyond.

**EDUC 103A. Tutoring: Seeing a Child through Literacy. 3-4 Units.**

Experience tutoring grade school readers in a low income community near Stanford under supervision. Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll. Service Learning Course (certified by Haas Center). May be repeated for credit.

Same as: EDUC 203A

**EDUC 103B. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices. 3-5 Units.**

Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.

Same as: AFRICAAM 106, CSRE 103B, EDUC 337

**EDUC 104. Introduction to the Profession of Teaching. 3 Units.**

This course explores the profession of teaching through an internship in a local elementary or high school classroom. Students will observe and assist instruction for four hours per week. In class, students will read, discuss, and respond to theory and research related to teaching. The course is open to all undergraduates with an interest in the teaching profession; and it may be especially useful for students who are considering entering the profession of teaching and wish to spend time in a classroom. No prior experience in teaching is required.

**EDUC 106. Interactive Media in Education. 3-5 Units.**

Workshop.

**EDUC 109. Educational Issues in Contemporary China. 3-4 Units.**

Reforms such as the decentralization of school finance, emergence of private schools, expansion of higher education, and reframing of educational policy to focus on issues of quality. Have these reforms exacerbated educational inequality.

Same as: EDUC 309

**EDUC 110. Sociology of Education: The Social Organization of Schools. 4 Units.**

Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.

Same as: EDUC 310, SOC 132, SOC 332

**EDUC 111. The Young Adult Novel: A Literature For and About Adolescents. 4 Units.**

For undergraduates considering teaching or working with adolescents, and for those planning to apply to the coterminal program in the Stanford Teacher Education program (STEP). Students work together to define the genre of young adult novels. What they reveal about adolescence in America. How to read and teach young adult literature.

**EDUC 112. Urban Education. 3-4 Units.**

(Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.

Same as: AFRICAAM 112, CSRE 112X, EDUC 212, SOC 129X, SOC 229X

**EDUC 114N. Growing Up Bilingual. 3 Units.**

This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.

Same as: CHILATST 14N, CSRE 14N

**EDUC 115N. How to Learn Mathematics. 3 Units.**

What is going on in mathematics education in the United States? Why do so many people hate and fear math? What contributes to the high levels of innumeracy in the general population? Why do girls and women opt out of math when they get a chance? In this seminar we will consider seminal research on math learning in K-12 classrooms, including a focus on equity. We will spend time investigating cases of teaching and learning, through watching videos and visiting schools. This seminar is for those who are interested in education, and who would like to learn about ways to help students (and maybe yourselves?) learn and enjoy mathematics. If you have had bad math experiences and would like to understand them and put them behind you, this seminar will be particularly good for you. The final project for this class will involve developing a case of one or more math learners, investigating their journeys in the world of math.

**EDUC 116. Service Learning as an Approach to Teaching. 3 Units.**

History, theory, and practice. Topics include: responsive community partnerships, cultural awareness, the role of reflection, and best practices in service learning.

**EDUC 116N. Howard Zinn and the Quest for Historical Truth. 3 Units.**

With more than two million copies in print, Howard Zinn's *A People's History* is a cultural icon. We will use Zinn's book to probe how we determine what was true in the past. *A People's History* will be our point of departure, but our journey will visit a variety of historical trouble spots: debates about whether the US was founded as a Christian nation, Holocaust denial, and the "Birther" controversy of President Obama.

Same as: HISTORY 116N

**EDUC 117. Research and Policy on Postsecondary Access. 3 Units.**

The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. Service Learning Course (certified by Haas Center).

Same as: EDUC 417

**EDUC 117N. Losing My Religion: Secularism and Spirituality in American Lives. 3 Units.**

In this seminar you will explore theory and practice, sociological data, spiritual writing, and case studies in an effort to gain a more nuanced understanding about how religion, spirituality, and secularism attempt to make legible the constellation of concerns, commitments, and behaviors that bridge the moral and the personal, the communal and the national, the sacred, the profane, and the rational. Together we will cultivate critical perspectives on practices and politics, beliefs and belonging that we typically take for granted.

Same as: AMSTUD 117N, RELIGST 117X

**EDUC 118S. Designing Your Stanford. 2 Units.**

DYS uses a Design Thinking approach to help Freshmen and Sophomores learn practical tools and ideas to make the most of their Stanford experience. Topics include the purpose of college, major selection, educational wayfinding, and innovating college outcomes - all applied through an introduction to Design Thinking. This seminar class incorporates small group discussion, in-class activities, field exercises, personal reflection, and individual coaching. Admission to be confirmed by email to Axxess registered students prior to first class session. More information at [www.designingyourstanford.org](http://www.designingyourstanford.org).

Same as: ME 104S

**EDUC 119S. History of American Indian Education. 3 Units.**

How the federal government placed education at the center of its Indian policy in second half of 19th century, subjecting Native Americans to programs designed to erase native cultures and American Indian responses to those programs. Topics include traditional Indian education, role of religious groups, Meriam Report, Navajo-Hopi Rehabilitation Act, Johnson-O'Malley Act, and public schools.

**EDUC 120. Sociology of Science. 3-4 Units.**

The sociology of science concerns the social structures and practices by which human beings interpret, use and create intellectual innovations. In particular we will explore the claim that scientific facts are socially constructed and ask whether such a characterization has limits. Course readings will concern the formation and decline of various thought communities, intellectual social movements, scientific disciplines, and broader research paradigms. A special focus will be placed on interdisciplinarity as we explore whether the collision of fields can result in new scientific advances. This course is suitable to advanced undergraduates and doctoral students.

Same as: EDUC 320, SOC 330

**EDUC 120C. Education and Society. 4-5 Units.**

The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.

Same as: EDUC 220C, SOC 130, SOC 230

**EDUC 121. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.**

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

Same as: AFRICAAM 121X, AMSTUD 121X, ANTHRO 121A, CSRE 121X, LINGUIST 155

**EDUC 123. Community-based Research As Tool for Social Change: Discourses of Equity in Communities & Classrooms. 3-5 Units.**

Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques.

Same as: AFRICAAM 130, CSRE 130, EDUC 322

**EDUC 126A. Introduction to Public Service Leadership. 1-2 Unit.**

Offered through the Haas Center for Public Service. A foundation and vision for a future of public service leadership. Students identify personal values and assess strengths as leaders. The ethics of public service and leadership theory.

**EDUC 126B. Public Service Leadership Program Practicum. 1 Unit.**

This course is for students in the Public Service Leadership Program offered through the Haas Center for Public Service. The PSLP Practicum provides an opportunity for PSLP students to reflect on their own leadership experiences and to learn from each other's leadership experiences while continuing to build a community of peer service leaders. The PSLP Practicum will meet every other week throughout the quarter.

**EDUC 127. The Wellbeing of Children in Immigrant Families. 2 Units.**

This course will examine the many factors that affect the social, educational, and medical wellbeing of children in immigrant families. It will do so through a case study of the immigrant children who currently live in the Buena Vista Mobile Home Park in Palo Alto. The course will approach this issue from a Service-Learning perspective, and will be a collaboration between faculty and students from Stanford and the leaders of the Buena Vista residents association. The course will meet once a week for 90 minutes during the winter quarter. In addition, each student will spend 3-4 hours per week meeting with residents of the Buena Vista Mobile Home Park. To the extent possible, and with parents' knowledge and permission, students will interact with and get to know the children who live in the park, with a focus on children in school grades 6-12.

**EDUC 128. Professional and Leadership Development for Frosh. 1-2 Unit.**

As frosh often have difficulty finding relevant job/internships at this early stage in their education, this course represents a more thorough and direct approach to professional and leadership development. As a small cohort within Stern Hall, we will begin early discussion of career interests and exploration, develop an understanding of individual leadership styles, and garner professional leadership skill sets relevant to myriad sectors and resources to aid in this process. Final projects will work toward off site visits during spring break to explore these sectors hands-on and discuss content learned in class with key industry leaders.

**EDUC 130. Introduction to Counseling. 3 Units.**

The goal of counseling is to help others to create more satisfying lives for themselves. Clients learn to create and capitalize on unexpected events to open up new opportunities. The success of counseling is judged, not by the words and actions of the counselor, but by the progress that the client makes in the real world after counseling itself is ended. Students are encouraged to exert their full efforts within reasonable time limits to improve their competence.

**EDUC 131. Mediation for Dispute Resolution. 3 Units.**

Mediation as more effective and less expensive than other forms of settling disputes such as violence, lawsuits, or arbitration. How mediation can be structured to maximize the chances for success. Simulated mediation sessions.

Same as: PSYCH 152

**EDUC 133N. The Role of Language in Education and Society. 3 Units.**

The goal of this course is to explore the various issues affecting educational policy and classroom practice in multilingual, multicultural settings. In this class we will examine US and international cases to illustrate more general concerns relating to learners' bilingual/multilingual development in formal educational settings. We begin at the macro level, looking at policy contexts and program structures, and move to the micro level to consider teaching and learning in the multilingual classroom. Throughout, we consider how discourses and identities are interwoven in multilingual education policy and practice. We will also consider the role of communities in implementing change in schools.

**EDUC 134. Career and Personal Counseling. 3 Units.**

Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.

Same as: EDUC 234, PSYCH 192

**EDUC 135. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.**

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.

Same as: AFRICAST 135, AFRICAST 235, EDUC 335, HRP 235, HUMBIO 26, MED 235

**EDUC 136. World, Societal, and Educational Change: Comparative Perspectives. 4-5 Units.**

Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.

Same as: EDUC 306D, SOC 231

**EDUC 136B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.**

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings.

Same as: AFRICAAM 126B, CSRE 126B, EDUC 236B, PUBLPOL 126B

**EDUC 139. Educating Young STEM Thinkers. 3-5 Units.**

The course introduces students to the design thinking process, the national conversations about the future of STEM careers, and opportunities to work with middle school students and K-12 teachers in STEM-based after-school activities and intercession camps. The course is both theory and practice focused. The purpose is twofold; to provide reflection and mentoring opportunities for students to learn about pathways to STEM careers and to introduce mentoring opportunities with young STEM thinkers.

Same as: EDUC 239, ME 139, ME 231

**EDUC 140. Honors Research. 1-5 Unit.**

Provides opportunity for research in pursuit of senior honors theses.

**EDUC 145. Writing Across Languages and Cultures: Research in Writing and Writing Instruction. 3-5 Units.**

Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area.

Same as: CSRE 243, EDUC 243

**EDUC 146. Perspectives on the Education of Linguistic Minorities. 3-4 Units.**

Social, political, linguistic, and pedagogical issues associated with educating students who do not speak the language or language variety of the majority society. Focus is on the U.S.; attention to minorities elsewhere. American attitudes toward linguistic and racial minorities. Educational problems of linguistically different children and non-English- or limited-English-speaking children. Approaches to solving problems.

**EDUC 148. Critical Perspectives on Teaching and Tutoring English Language Learners. 3 Units.**

Theoretical foundation for volunteer tutors of English language learners in urban environments working with children in school-based programs or adults in community-based settings.

**EDUC 149. Theory and Issues in the Study of Bilingualism. 3-5 Units.**

Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. Same as: EDUC 249

**EDUC 155. First Year Reflections Seminar. 1 Unit.**

Restricted to first-year undergraduates; limited enrollment. There are two options for how to participate. You can either enroll in three class weekday sessions weeks 4, 5 & 6 or one weekend section. These times provide a structured time for students to explore their identities, values, and the kind of lives they want to lead. Exercises and discussions led by faculty, staff, and upper-class student co-facilitators. Tuesday sessions will occur on 1/26, 2/2 & 2/9; Wednesday sessions will occur on 1/27, 2/3 & 2/10; Thursday sessions will occur on 1/28, 2/4 & 2/11. Weekend sections are on Sunday, 1/31, Saturday, 2/6 OR Saturday, 2/13 (Weekend sessions are longer and students only participate in one).

**EDUC 157. Education & Poverty: Research & Solutions. 1 Unit.**

This year-long workshop focuses on current research regarding the relationship between poverty, schooling, and educational success. Invited speakers will discuss current research and strategies for improving the educational outcomes of low-income students. Students will read and discuss current research and discuss current strategies for improving education for low-income students. Students may enroll for one quarter at a time or for the entire year.

**EDUC 165. History of Higher Education in the U.S.. 3-5 Units.**

Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities.

Same as: AMSTUD 165, EDUC 265, HISTORY 158C

**EDUC 170. Preparation for Independent Public Service Projects. 1 Unit.**

Open only to recipients of the Haas Summer Fellowship, which offers students the opportunity to initiate and carry out an innovative service project in collaboration with a community partner. Goal is to expand upon the work fellows did during the application process with respect to the feasibility and sustainability of their field projects.

**EDUC 171. Early Childhood Education Practicum. 2-4 Units.**

Restricted to students who participate in a service learning program focused on early math learning. Training for activities in preschool classrooms. Focus is on the teaching of math to young children, but also includes background on issues related to young children's cognitive, language, and social development; classroom management; cultural diversity; and early childhood education programs. May be repeated for credit.

**EDUC 173. Gender and Higher Education: National and International Perspectives. 4 Units.**

This course examines the ways in which higher education structures and policies affect females, males, and students in relation to each other and how changes in those structures and policies improve experiences for females and males similarly or differently. Students are expected to gain an understanding of theories and perspectives from the social sciences relevant to an understanding of the role of higher education in relation to structures of gender differentiation and hierarchy. Topics include undergraduate and graduate education; identity and sexuality; gender and science; gender and faculty; and the development of feminist scholarship and pedagogy. Attention is paid to how these issues are experienced by women and men in the United States, including people of color, and by academics throughout the world, and how these have changed over time.

Same as: EDUC 273, FEMST 173, SOC 173, SOC 273

**EDUC 176. The Design of Technologies for Casual Learning - Lab. 1 Unit.**

Lab. Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as a prototype platform. The term "casual" is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in "extreme informal" learning circumstances (while "on the go", "any time and any place"). The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.

**EDUC 177A. Well-Being in Immigrant Children & Youth: A Service Learning Course. 3 Units.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177A, CSRE 177E, HUMBIO 29A

**EDUC 177B. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-2 Unit.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177B, CSRE 177F

**EDUC 177C. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-3 Unit.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177C, CSRE 177G

**EDUC 178. Latino Families, Languages, and Schools. 3-5 Units.**

The challenges facing schools to establish school-family partnerships with newly arrived Latino immigrant parents. How language acts as a barrier to home-school communication and parent participation. Current models of parent-school collaboration and the ideology of parental involvement in schooling.

Same as: EDUC 270

**EDUC 180. Directed Reading in Education. 1-15 Unit.**

For undergraduates and master's degree students. (All Areas).

**EDUC 180S. Pre-field Course for Alternative Spring Break. 1 Unit.**

Limited to students participating in the Alternative Spring Break program. See <http://asb.stanford.edu> for more inform.

**EDUC 181. Multicultural Issues in Higher Education. 4 Units.**

The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.

Same as: EDUC 381

**EDUC 183. Practicum in English-Spanish School & Community Interpreting. 3-4 Units.**

This practicum will assist students in developing a set of skills in English-Spanish interpreting that will prepare them to provide interpretation services in school and community settings. The course will build students' abilities to transfer intended meanings between two or more monolingual individuals of who are physically present in a school or community setting and who must communicate with each other for professional (and personal) purposes.

Same as: CHILATST 183X, EDUC 257

**EDUC 185. Master's Thesis. 1-15 Unit.**  
(all areas).**EDUC 190. Directed Research in Education. 1-15 Unit.**

For undergraduates and master's students. May be repeated for credit. (all areas).

**EDUC 191. Introduction to Survey Research. 3-4 Units.**

Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design, refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity. Same as: EDUC 296

**EDUC 192A. Interpersonal Learning & Leadership: An Introduction to the RA Role. 2 Units.**

Preparing students for roles as Resident and Community Assistants, "Intelligent Leadership" explores research on college student development, leadership and the complex dynamics of our changing society both within and outside the college environment. Participants will engage in course work that builds skills relevant to their positions and allow students to implement these skills in a real world environment. Through reflection, self-examination and engagement in interpersonal dynamics and analysis, students will examine how their peer group develops while at the university.

**EDUC 192B. Interpersonal Learning & Leadership - Row Staff Class. 2 Units.**

"Interpersonal Learning & Leadership - Row Staff Class" explores research on leadership and the complex dynamics of our changing society. Participants will engage in course work intended to build skills relevant to being on a Row Staff team. Students will practice self reflection, risk taking, facilitating, decision-making and group leadership. Students will develop strategies to build community and facilitate challenging conversations while creating a safe environment for their peers to do the same.

**EDUC 193A. Listen Up! Core Peer Counseling Skills. 2 Units.**

Topics: verbal and non-verbal skills, open and closed questions, paraphrasing, working with feelings, summarization, and integration. Individual training, group exercises, role play practice with optional video feedback. Sections on relevance to crisis counseling and student life. Guest speakers from University and community agencies. Students develop and apply skills in University settings.

**EDUC 193B. Peer Counseling in the Chicano/Latino Community. 1 Unit.**

Topics: verbal and non-verbal attending and communication skills, open and closed questions, working with feelings, summarization, and integration. Salient counseling issues including Spanish-English code switching in communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, and Chicana/o student experience in University settings. Individual training, group exercises, role play, and videotape practice.

Same as: CHILATST 193B

**EDUC 193C. Psychological Well-Being On Campus: Perspectives Of The Black Diaspora. 1 Unit.**

Topics: the concept of culture, Black cultural attributes and their effect on reactions to counseling, verbal and non-verbal attending, open and closed questions, working with feelings, summarization, and integration. Reading assignments, guest speakers, role play, and videotaped practice. Students develop and apply skills in the Black community on campus or in other settings that the student chooses.

**EDUC 193F. Psychological Well-Being on Campus: Asian American Perspectives. 1 Unit.**

Topics: the Asian family structure, and concepts of identity, ethnicity, culture, and racism in terms of their impact on individual development and the counseling process. Emphasis is on empathic understanding of Asians in America. Group exercises.

Same as: ASNAMST 193F

**EDUC 193G. Psychological Well-Being on Campus: A Focus on Gender and Sexual Identities. 1 Unit.**

This course examines mental health and psychological well-being across the spectrum of gender and sexual identities. It addresses the unique challenges that face LGBTQ-identified students, and provides tools for supporting peers as they navigate these challenges. Discussion topics include current conceptualizations of gender identity and sexual orientation, including sexual and gender fluidity; the intersection of queer identities with multiple identities such as ethnic/racial identify and faith/spirituality; unpacking stereotypes; queer relationships and sexuality, coming out and disclosure, and mental health issues.

Same as: FEMGEN 193G

**EDUC 193N. Peer Counseling in the Native American Community. 1 Unit.**

Verbal and non-verbal communication, strategic use of questions, methods of dealing with strong feelings, and conflict resolution. How elements of counseling apply to Native Americans including client, counselor, and situational variables in counseling, non-verbal communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, the impact of family on personal development, gender roles, and the experience of Native American students in university settings. Individual skill development, group exercises, and role practice.

**EDUC 193P. Peer Counseling at the Bridge. 1 Unit.**

Mental health issues such as relationships, substance abuse, sexual assault, depression, eating disorders, academic stressors, suicide, and grief and bereavement. Guest speakers.

**EDUC 193S. Peer Counseling on Comprehensive Sexual Health. 1 Unit.**

Information on sexually transmitted infections and diseases, and birth control methods. Topics related to sexual health such as communication, societal attitudes and pressures, pregnancy, abortion, and the range of sexual expression. Role-play and peer-education outreach projects. Required for those wishing to counsel at the Sexual Health Peer Resource Center (SHPRC).

**EDUC 196. The Design of Technologies for Casual Learning. 3 Units.**

Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as an prototype platform. The term "casual" is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in "extreme informal" learning circumstances (while "on the go", "anytime and any place"). The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.

Same as: EDUC 396

**EDUC 197. Education, Gender, and Development. 4 Units.**

Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes.

Same as: FEMGEN 297, SOC 134

**EDUC 198. Early Education Policy and Practice: A Global Perspective. 4 Units.**

This course addresses social and educational policies affecting young children, focusing on France in comparison to the U.S. Values and beliefs about the role of the state versus parents will be considered in discussions related to federal and state/province policies, as well as other political, economic, and ideological factors that affect policies. We then consider what is known about children's social, emotional and cognitive development and the implications for early childhood policies and practices on children's development.

**EDUC 199A. Undergraduate Honors Seminar. 3 Units.**

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

**EDUC 199B. Undergraduate Honors Seminar. 1 Unit.**

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

**EDUC 199C. Undergraduate Honors Seminar. 1 Unit.**

Required of juniors and seniors in the honors program in the School of Education. Student involvement and apprenticeships in educational research. Participants share ongoing work on their honors thesis. Prerequisite: consent of instructor. May be repeated for credit once.

**EDUC 200A. Introduction to Data Analysis and Interpretation. 4 Units.**

Primarily for master's students in the School of Education. Focus is on reading literature and interpreting descriptive and inferential statistics, especially those commonly found in education. Topics: basic research design, instrument reliability and validity, description statistics, correlation, t-tests, one-way analysis of variance, and simple and multiple regression.

**EDUC 200B. Introduction to Qualitative Research Methods. 4 Units.**

(Formerly EDUC 151.) Primarily for master's students: An introduction to the core concepts and methods of qualitative research. Through a variety of hands-on learning activities, readings, field experiences, class lectures, and discussions, students will explore the processes and products of qualitative inquiry. This is a graduate level course. No undergraduates may enroll. Priority will be given to GSE students, and final enrollment depends on instructor approval after the first day of class.

**EDUC 200C. Introduction to Statistical Methods in Education. 3-4 Units.**

(Formerly EDUC 160.) Basic techniques in descriptive and inferential statistics for educational research will be covered with an emphasis on rigorous preparation for intermediate and advanced courses. Topics include central tendency, variance, probability, distributions, confidence interval, t-test, F-test, correlation, regression, and analysis of variance. Non-parametric statistics and graphical principles for data representation will also be addressed. Students will also be introduced to STATA in preparation for subsequent higher level courses.

**EDUC 201. History of Education in the United States. 3-5 Units.**

How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching.

Same as: AMSTUD 201, HISTORY 158B

**EDUC 202. Introduction to Comparative and International Education. 4 Units.**

Contemporary theoretical debates about educational change and development, and the international dimension of issues in education. Emphasis is on the development of students' abilities to make cross-national and historical comparisons of educational phenomena.

**EDUC 202I. International Education Policy Workshop. 4 Units.**

This is a project-based workshop. Practical introduction to issues in educational policy making, education reform, educational planning, implementation of policy interventions, and monitoring and evaluation in developing country contexts. Preference to students enrolled in ICE/IEAPA, but open to other students interested in international development or comparative public policy with instructor's consent. Attendance at first class required for enrollment.

**EDUC 203. Using International Test Results in Educational Research. 4 Units.**

The course will analyze the origin and rationales given for various international tests, including FIMS, SIMS, TIMSS, PISA, the UNESCO tests in Latin America and Africa, and how they have been used in research and educational policy. The readings will cover the critiques leveled at such tests, the pros and cons about each type of test, the advantages and limitations of using international test data for policy research. The class will probably also do group projects utilizing data from the tests so students can familiarize themselves directly with the data.

**EDUC 203A. Tutoring: Seeing a Child through Literacy. 3-4 Units.**

Experience tutoring grade school readers in a low income community near Stanford under supervision. Training in tutoring; the role of instruction in developing literacy; challenges facing low income students and those whose first language is not English. How to see school and print through the eyes of a child. Ravenswood Reads tutors encouraged to enroll. Service Learning Course (certified by Haas Center). May be repeated for credit.

Same as: EDUC 103A

**EDUC 204. Introduction to Philosophy of Education. 3 Units.**

How to think philosophically about educational problems. Recent influential scholarship in philosophy of education. No previous study in philosophy required.

Same as: PHIL 231

**EDUC 206A. Applied Research Methods in International and Comparative Education I: Introduction. 1 Unit.**

Required for M.A. students in ICE and IEPA. Orientation to the M.A. program and research project; exploration of resources for study and research.

**EDUC 206B. Applied Research Methods in International and Comparative Education II: Master's Paper Proposal. 1-3 Unit.**

Development of research skills through theoretical and methodological issues in comparative and international education. Preparation of a research proposal for the M.A. monograph.

**EDUC 206C. Applied Research Methods in ICE III: Data Collection and Analysis. 1 Unit.**

Required for M.A. students in ICE and IEPA. Practice in data collection and analysis. Preparation of the first draft of the M.A. monograph.

**EDUC 206D. Applied Research Methods in International and Comparative Education IV: Master's Paper Workshop. 3 Units.**

Conclusion of the M.A. program in ICE and IEPA; required of M.A. students. Reviews of students' research in preparation for their master's monograph.

**EDUC 208B. Curriculum Construction. 3-4 Units.**

The theories and methods of curriculum development and improvement. Topics: curriculum ideologies, perspectives on design, strategies for diverse learners, and the politics of curriculum construction and implementation. Students develop curriculum plans for use in real settings. Service Learning Course (certified by Haas Center).

**EDUC 209A. Policy, Organization, and Leadership Studies Seminar. 1-3 Unit.**

This is a required course for all POLS students. The goals of the POLS Seminar (EDUC 209ABC) are to assist students in making the most of their Stanford graduate experience across several dimensions (academic, professional, and social). EDUC 209A is focused on orienting students to the academic and extra-curricular aspects of the experience as quickly as possible, while helping them coalesce as a group and learn how to leverage each other's professional knowledge. Another goal is to help student define their graduate degree goals, so they can plan their year in a very intentional manner that will result in a project or experiences they can highlight during the required Spring quarter POLS Project Forum.

**EDUC 209B. Policy, Organization, and Leadership Studies Seminar. 1-3 Unit.**

This is a required course for all POLS students. The goals of the POLS Seminar (EDUC 209ABC) are to assist students in making the most of their Stanford graduate experience across several dimensions (academic, professional, and social). EDUC 209B focuses on building career skills and exposing students to a range of education research, policy, and practice and begins helping students conceptualize and frame their Spring POLS Project.

**EDUC 209C. Policy, Organization, and Leadership Studies Seminar. 1-3 Unit.**

This is a required course for POLS students. The goals of the POLS Seminar (EDUC 209ABC) are to assist students in making the most of their Stanford graduate experience across several dimensions (academic, professional, and social). EDUC 209C focuses on developing the POLS Project for the Spring Forum while continuing to develop career skills and expose students to a range of education research, policy, and practice.

**EDUC 210. Policy, Organization, and Leadership Studies Internship Workshop. 1-3 Unit.**

Forum for POLS students to link their academic learning to real world experience through in-class discussions, presentations, and reflective writing. Fall Quarter is focused on understanding the intern's role within the larger organization. Winter Quarter is outward looking with a focus on understanding the broader fields the students' organizations reside within. Spring Quarter focus is on students learning from and being prepared to teach others.

**EDUC 211. Beyond Bits and Atoms - Lab. 1-3 Unit.**

This course is a hands-on lab in the prototyping and fabrication of tangible technologies, with a special focus in learning and education. We will learn how to use state-of-the-art fabrication machines (3D printers, 3D scanners, laser cutters, routers) to design educational toolkits, educational toys, science kits, and tangible user interfaces. A special focus of the course will be to design low-cost technologies, particularly for urban school in the US and abroad.

Same as: CS 402L

**EDUC 212. Urban Education. 3-4 Units.**

(Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education. Same as: AFRICAAM 112, CSRE 112X, EDUC 112, SOC 129X, SOC 229X

**EDUC 213. Introduction to Teaching. 3-4 Units.**

Key concepts in teaching and learning; teacher content knowledge and pedagogical content knowledge; student prior knowledge and preconceptions; cognition and metacognition; classroom culture, motivation, and management; teaching diverse populations; comparison of teaching models; analysis of teaching; standards, accountability, and assessment of learning; assessing teaching quality; online learning and teaching.

**EDUC 214. Museum Cultures: Material Representation in the Past and Present. 3-5 Units.**

Students will open the "black box" of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores "museum cultures": representations of self and other within museums and institutional cultures of the museum world itself. 3 credits (no final project) or 5 credits (final project). May be repeat for credit.

Same as: AMSTUD 134, ARCHLGY 134, ARCHLGY 234, ARTHIST 284B, CSRE 134, NATIVEAM 134

**EDUC 215. LDT Internship Workshop. 1-3 Unit.**

The required internship is a cornerstone of the LDT program. This course will provide students an opportunity to link their academic learning to real world experience through in-class discussions, presentations, and reflective writing. It will allow the program director to monitor the quality of the experience and provide timely advice and support as needed for an optimal learning experience. The course will meet several times each quarter, adjacent to LDT seminar (Fridays, 12-1). An internship agreement will be required at the beginning of the course signed by the faculty advisor), as well as a reflection paper at the end of the course. Students will take the course for 1 unit, unless they request additional units for unpaid internship hours.

**EDUC 216. Education, Race, and Inequality in African American History, 1880-1990. 3-5 Units.**

Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

Same as: AFRICAAM 116, CSRE 216X, HISTORY 255E

**EDUC 218. Topics in Cognition and Learning: Executive Function. 3 Units.**

Executive function is a construct that is rapidly taking on an increasingly central role in bringing together current research in cognitive development, learning, education, and neuroscience. In this seminar we will examine the potential cross-fertilization of these fields of inquiry primarily by reviewing research on learning and individual differences in cognitive neuroscience that may hold relevance to education, as well as reviewing educational research that may hold implications for developmental cognitive neuroscience. This seminar course is designed to engage students in recent advances in this rapidly growing research area via discussions of both historical and late-breaking findings in the literature. By drawing on a breadth of studies ranging from cognitive development, cognitive neuroscience, and educational/training studies, students will gain an appreciation for specific ways interdisciplinary approaches can add value to specific programs of research.

**EDUC 219E. The Creative Arts in Elementary Classrooms. 1 Unit.**

For STEP Elementary only or for candidates in the Multiple Subjects program. Hands-on exploration of visual arts media and works of art.

**EDUC 220A. Introduction to the Economics of Education. 4 Units.**

The relationship between education and economic analysis. Topics: labor markets for teachers, the economics of child care, the effects of education on earnings and employment, the effects of education on economic growth and distribution of income, and the financing of education. Students who lack training in microeconomics, register for 220Y for 1 additional unit of credit.

**EDUC 220B. Introduction to the Politics of Education. 4 Units.**

(Same as GSBGEN 349.) The relationships between political analysis and policy formulation in education; focus is on alternative models of the political process, the nature of interest groups, political strategies, community power, the external environment of organizations, and the implementations of policy. Applications to policy analysis, implementation, and politics of reform. (APA).

**EDUC 220C. Education and Society. 4-5 Units.**

The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.

Same as: EDUC 120C, SOC 130, SOC 230

**EDUC 220D. History of School Reform: Origins, Policies, Outcomes, and Explanations. 3-5 Units.**

Required for students in the POLS M.A. program; others welcome. Focus is on 20th-century U.S. Intended and unintended patterns in school change; the paradox of reform that schools are often reforming but never seem to change much; rhetorics of reform and factors that inhibit change. Case studies emphasize the American high school. This course is required for POLS students pursuing the PreK-12 concentration.

Same as: HISTORY 258E

**EDUC 220Y. Introduction to the Economics of Education: Economics Section. 1-2 Unit.**

For those taking 220A who have not had microeconomics before or who need a refresher. Corequisite: 220A.

**EDUC 221A. Policy Analysis in Education. 4-5 Units.**

Major concepts associated with the development, enactment, and execution of educational policy. Issues of policy implementation, agenda setting and problem formulation, politics, and intergovernmental relations. Case studies. Goal is to identify factors that affect how analysts and policy makers learn about and influence education. Limited enrollment. Prerequisite: consent of instructor.

**EDUC 222. Resource Allocation in Education. 4-5 Units.**

Problems of optimization and design, and evaluation of decision experience. Marginal analysis, educational production functions, cost effectiveness and cost-benefit analysis, constrained maximization, program evaluation. Introduction to linear models for large-scale data analysis. Implications to model assumptions.

**EDUC 226. Curating Experience: Representation in and beyond Museums. 2-4 Units.**

In an age when some 50% of museum visitors only "visit" museums online and when digital technologies have broken open archival access, anyone can be a curator, a critic, an historian, an archivist. In this context, how do museums create experiences that teach visitors about who they are and about the world around them? What are the politics of representation that shape learning in these environments? Using an experimental instructional approach, students will reconsider and redefine what it means to curate experience.

Same as: AMSTUD 226X, CSRE 226X

**EDUC 227. Education Policy in the United States. 3 Units.**

The course will provide students from different disciplines with an understanding of the broad educational policy context. The course will cover topics including a) school finance systems; b) an overview of policies defining and shaping the sectors and institutional forms of schooling, c) an overview of school governance, d) educational human-resource policy, e) school accountability policies at the federal and state levels; and f) school assignment policies and law, including intra- and inter-district choice policies, desegregation law and policy. This course intended for Master's students.

Same as: for Master's Students

**EDUC 228E. Becoming Literate in School I. 2 Units.**

First in a three course sequence. Introduction to reading and language arts theory and methodology for candidates STEP Elementary Teacher program. Instructional methods, formats, and materials.

**EDUC 228F. Becoming Literate in School II. 2 Units.**

Second in a three-course required sequence of reading and language arts theory and methodology for candidates in the STEP Elementary program. Theories for guiding instruction and curricular choices.

**EDUC 228G. Becoming Literate in School III. 2 Units.**

Third in a three-course required sequence of reading and language arts theory and methodology for candidates in STEP Elementary Teacher program. Theories for guiding instruction and curricular choices.

**EDUC 228H. Literacy, History, and Social Science. 1 Unit.**

How elementary school teachers can teach history and social science within a literacy framework. Topics include: historical thinking, reading, and writing; current research; applying nonfiction reading and writing strategies to historical texts; using primary sources with elementary students; adapting instruction to meet student needs; state standards; evaluating curriculum; assessing student knowledge; developing history and social science units; and embedding history and social science into the general literacy curriculum.

**EDUC 229A. Learning Design and Technology Seminar. 1 Unit.**

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT).

**EDUC 229B. Learning Design and Technology Seminar. 1 Unit.**

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT).

**EDUC 229C. Learning Design and Technology Seminar. 1 Unit.**

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT).

**EDUC 229D. Learning Design and Technology Seminar. 2-5 Units.**

Four-quarter required seminar for the LDT master's program. Discussions and activities related to designing for learning with technology. Support for internships and Master's project. Theoretical and practical perspectives, hands-on development, and collaborative efforts. (LDT).

**EDUC 231. Knowing God: Learning Religion in Popular Culture. 4 Units.**

This course will examine how people learn religion outside of school, and in conversation with popular cultural texts and practices. Taking a broad social-constructivist approach to the variety of ways people learn, this course will explore how people assemble ideas about faith, identity, community, and practice, and how those ideas inform individual, communal and global notions of religion. Much of this work takes place in formal educational environments including missionary and parochial schools, Muslim madrasas or Jewish yeshivot. However, even more takes place outside of school, as people develop skills and strategies in conversation with broader social trends. This course takes an interdisciplinary approach to questions that lie at the intersection of religion, popular culture, and education.

Same as: AMSTUD 231X, JEWISHST 291X, RELIGST 231X

**EDUC 232. Culture, Learning, and Poverty. 2-3 Units.**

This course examines the categories and methods used to analyze and explain educational inequalities in the United States from 1950 to present. Approaches to theories of school failure and methods of intervention are distinguished by their ideas on the play of learning, language, cognition, culture, and social class in human development. Particular attention is given to the Culture of Poverty controversies of the 1960s and their recent emergence.

**EDUC 233A. Counseling Theories and Interventions from a Multicultural Perspective. 3-5 Units.**

In an era of globalization characterized by widespread migration and cultural contacts, professionals face a unique challenge: How does one practice successfully when working with clients/students from so many different backgrounds? This course focuses upon the need to examine, conceptualize, and work with individuals according to the multiple ways in which they identify themselves. It will systematically examine multicultural counseling concepts, issues, and research. Literature on counselor and client characteristics such as social status or race/ethnicity and their effects on the counseling process and outcome will be reviewed. Issues in consultation with culturally and linguistically diverse parents and students and work with migrant children and their families are but a few of the topics covered in this course.

Same as: AFRICAAM 233A, CSRE 233A

**EDUC 233B. Adolescent Development and Mentoring in the Urban Context. 3 Units.**

Continuation of 233A. Topics include: developmental psychology and service learning; collaborating with the community; psychological research on altruism and prosocial behavior; volunteers' motivations; attributions about poverty, and the problem of prejudice.

**EDUC 234. Career and Personal Counseling. 3 Units.**

Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences.

Same as: EDUC 134, PSYCH 192

**EDUC 236. Beyond Bits and Atoms: Designing Technological Tools. 3-4 Units.**

Practicum in designing and building technology-enabled curricula and hands-on learning environments. Students use software toolkits and state-of-the-art fabrication machines to design educational software, educational toolkits, and tangible user interfaces. The course will focus on designing low-cost technologies, particularly for urban school in the US and abroad. We will explore theoretical and design frameworks from the constructionist learning perspective, critical pedagogy, interaction design for children.

Same as: CS 402

**EDUC 236B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.**

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings. Same as: AFRICAAM 126B, CSRE 126B, EDUC 136B, PUBLPOL 126B

**EDUC 238. Teacher Policies in Latin America. 3-5 Units.**

We will explore the complex, challenging and often troubled world of teacher policy in Latin America. Education policy is an important instrument of change and the hope of many teachers and students. They affect the lives of many people and therefore their design, implementation and evaluation must have high academic and political rigor. The emphasis of this course is on the design and implementation of teacher policies in Latin America. We will focus on how to use empirical evidence to take into account the impact, feasibility and political complexities of designing and implementing teacher policy in LA.

**EDUC 239. Educating Young STEM Thinkers. 3-5 Units.**

The course introduces students to the design thinking process, the national conversations about the future of STEM careers, and opportunities to work with middle school students and K-12 teachers in STEM-based after-school activities and intercession camps. The course is both theory and practice focused. The purpose is twofold; to provide reflection and mentoring opportunities for students to learn about pathways to STEM careers and to introduce mentoring opportunities with young STEM thinkers.

Same as: EDUC 139, ME 139, ME 231

**EDUC 240. Adolescent Development and Learning. 5 Units.**

How do adolescents develop their identities, manage their inner and outer worlds, and learn? Presuppositions: that fruitful instruction takes into account the developmental characteristics of learners and the task demands of specific curricula; and that teachers can promote learning and motivation by mediating among the characteristics of students, the curriculum, and the wider social context of the classroom. Prerequisite: STEP student or consent of instructor. (STEP).

**EDUC 243. Writing Across Languages and Cultures: Research in Writing and Writing Instruction. 3-5 Units.**

Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area. Same as: CSRE 243, EDUC 145

**EDUC 244. Classroom Management and Leadership. 2 Units.**

Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP secondary only.

**EDUC 244E. Elementary Classroom Leadership and Management. 1 Unit.**

How to best manage a classroom. Student and teacher roles in developing a classroom community. Strategies for classroom management within a theoretical framework. STEP elementary only.

**EDUC 244F. Elementary Classroom Leadership and Management. 1 Unit.**

Skills for developing a positive classroom learning environment. Theoretical issues and opportunities to acquire strategies and make links with practice teaching class. STEP elementary only.

**EDUC 245. Understanding Racial and Ethnic Identity Development. 3-5 Units.**

African American, Native American, Mexican American, and Asian American racial and ethnic identity development; the influence of social, political and psychological forces in shaping the experience of people of color in the U.S. The importance of race in relationship to social identity variables including gender, class, and occupational, generational, and regional identifications. Bi- and multiracial identity status, and types of white racial consciousness. Same as: AFRICAAM 245, CSRE 245

**EDUC 246A. Secondary Teaching Seminar. 3 Units.**

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.

**EDUC 246B. Secondary Teaching Seminar. 5 Units.**

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: guided observations, building classroom community, classroom interaction processes, topics in special education portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.

**EDUC 246C. Secondary Teaching Seminar. 5 Units.**

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student. (STEP).

**EDUC 246D. Secondary Teaching Seminar. 2-7 Units.**

Preparation and practice in issues and strategies for teaching in classrooms with diverse students. Topics: instruction, curricular planning, classroom interaction processes, portfolio development, teacher professionalism, patterns of school organization, teaching contexts, and government educational policy. Classroom observation and student teaching with accompanying seminars during each quarter of STEP year. 16 units required for completion of the program. Prerequisite: STEP student.

**EDUC 246E. Elementary Teaching Seminar. 3 Units.**

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

**EDUC 246F. Elementary Teaching Seminar. 5-7 Units.**

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

**EDUC 246G. Elementary Teaching Seminar. 4 Units.**

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

**EDUC 246H. Elementary Teaching Seminar. 4 Units.**

Integrating theory and practice in teacher development. Topics include: equity, democracy, and social justice in the context of teaching and learning; teacher reflection, inquiry, and research; parent/teacher relationships; youth development and community engagement; professional growth and development; teacher leadership and school change processes; preparation for the job search, the STEP Elementary Portfolio, and the STEP Elementary Conference. Prerequisite: STEP student.

**EDUC 247. Moral and Character Education. 3 Units.**

Contemporary scholarship and educational practice related to the development of moral beliefs and conduct in young people. The psychology of moral development; major philosophical, sociological, and anthropological approaches. Topics include: natural capacities for moral awareness in the infant; peer and adult influences on moral growth during childhood and adolescence; extraordinary commitment during adulthood; cultural variation in moral judgment; feminist perspectives on morality; the education movement in today's schools; and contending theories concerning the goals of moral education.

**EDUC 248. Psychology of Pedagogy. 1-3 Unit.**

How can methods and insights from psychology inform education practice, particularly in a higher education context? This course aims to develop your skills as critical consumers and producers of empirical findings on teaching and learning. Course involves a quarter-long project to develop a pedagogical research proposal, supplemented and informed by readings, guided discussions, and group workshops. Same as: PSYCH 277

**EDUC 249. Theory and Issues in the Study of Bilingualism. 3-5 Units.**

Sociolinguistic perspective. Emphasis is on typologies of bilingualism, the acquisition of bilingual ability, description and measurement, and the nature of societal bilingualism. Prepares students to work with bilingual students and their families and to carry out research in bilingual settings. Same as: EDUC 149

**EDUC 250B. Statistical Analysis in Education: Regression. 4 Units.**

Primarily for doctoral students; part of doctoral research core; prerequisite for advanced statistical methods courses in School of Education. Basic regression, a widely used data-analytic procedure, including multiple and curvilinear regression, regression diagnostics, analysis of residuals and model selection, logistic regression. Proficiency with statistical computer packages.

**EDUC 250C. Qualitative Analysis in Education. 4 Units.**

Primarily for doctoral students; part of doctoral research core. Methods for collecting and interpreting qualitative data including case study, ethnography, discourse analysis, observation, and interview.

**EDUC 251. Multimodality and Literacy. 3-5 Units.**

The course will revolve around the pedagogical implications of recognizing literacy as multimodal, examining the following questions: What is reading, what is writing, and what else might literacy mean beyond reading/writing if we conceptualize literacy as something beyond (but encompassing) written words on the page? How might differing modes of representation matter in the construction of meaning? If literacy is multimodal, and the modes that children and adults continue to evolve, how might/should/must literacy education change, if at all?

**EDUC 252. Introduction to Test Theory. 4-5 Units.**

Concepts of reliability and validity; derivation and use of test scales and norms; mathematical models and procedures for test validation, scoring, and interpretation.

**EDUC 253. Inequality, Society, and Education. 3-5 Units.**

The course will focus on developing students' understanding of theory and research on several key issues in the relationship between education and inequality: 1) what are the recent patterns and trends in both economic and educational inequality? 2) what kinds of inequality (from a normative/philosophical perspective) should we worry about? 3) how do we measure educational inequality? 4) how are economic and educational inequality linked? 5) what policies/practices might reduce educational inequality? The course will be a graduate student seminar, with enrollment capped at 20-25. Same as: SOC 353X

**EDUC 255A. Experimental Research Designs in Educational Research. 3-5 Units.**

The course will cover the following topics: a) the logic of causal inference and the Fisher/Neyman/Rubin counterfactual causal model (Fisher, 1935; Heckman, 1979; Holland, 1986; Neyman, 1990; Rubin, 1978); b) randomized experiments; c) complex randomized experiments in education (cluster randomized trials, multi-site trials, staggered implementation via randomization, etc.); d) policy experiments with randomization; e) meta-analysis; and f) power in randomized experiments; g) the ethics and politics of randomized experiments.

**EDUC 255B. Causal Inference in Quantitative Educational and Social Science Research. 3-5 Units.**

Quantitative methods to make causal inferences in the absence of randomized experiment including the use of natural and quasi-experiments, instrumental variables, regression discontinuity, matching estimators, longitudinal methods, fixed effects estimators, and selection modeling. Assumptions implicit in these approaches, and appropriateness in research situations. Students develop research proposals relying on these methods. Prerequisites: exposure to quantitative research methods; multivariate regression. Same as: SOC 257

**EDUC 255C. Applied Quasi-Experimental Research in Education. 3-5 Units.**

Course will provide hands-on practice in analysis of data from experimental and quasi-experimental research designs, including a) instrumental variables estimators; b) regression discontinuity estimators; c) difference-in-difference estimators; d) matching estimators; e) fixed effects estimators; and f) panel data methods (including individual fixed effects models, lagged covariate adjustment models, growth models, etc.). Prerequisites: satisfactory completion of EDUC 255B, EDUC 257C or SOC 257. Same as: SOC 258

**EDUC 256. Psychological and Educational Resilience Among Children and Youth. 4 Units.**

Theoretical, methodological, and empirical issues pertaining to the psychological and educational resilience of children and adolescents. Overview of the resilience framework, including current terminology and conceptual and measurement issues. Adaptive systems that enable some children to achieve successful adaptation despite high levels of adversity exposure. How resilience can be studied across multiple levels of analysis, ranging from cell to society. Individual, family, school, and community risk and protective factors that influence children's development and adaptation. Intervention programs designed to foster resilient adaptation in disadvantaged children's populations. Same as: HUMBIO 149

**EDUC 257. Practicum in English-Spanish School & Community Interpreting. 3-4 Units.**

This practicum will assist students in developing a set of skills in English-Spanish interpreting that will prepare them to provide interpretation services in school and community settings. The course will build students' abilities to transfer intended meanings between two or more monolingual individuals of who are physically present in a school or community setting and who must communicate with each other for professional (and personal) purposes. Same as: CHILATST 183X, EDUC 183

**EDUC 258. Literacy Development and Instruction. 3-5 Units.**

Literacy acquisition as a developmental and educational process. Problems that may be encountered as children learn to read. How to disentangle home, community, and school instruction from development.

**EDUC 259. Application of Hierarchical Linear Models in Behavioral and Social Research. 4 Units.**

The fundamental phenomenon of interest in educational research is the growth in knowledge and skills of individual students. Two facts - that children's growth is typically the object of inquiry and that such growth occurs in organizational settings - correspond to two of the most troublesome and persistent methodological problems in the social sciences: the measurement of change and the assessment of multi-level effects (also referred to as the unit of analysis problem). Although these two methodological problems have distinct, long-standing, and non-overlapping literatures, these problems, in fact, share a common cause - the inadequacy of traditional statistical techniques for the modeling of hierarchy.

**EDUC 260A. Statistical Methods for Group Comparisons and Causal Inference. 3 Units.**

Critical examination of statistical methods in social science and life sciences applications, especially for cause and effect determinations. Topics: mediating and moderating variables, potential outcomes framework, encouragement designs, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, path analysis and graphical models, group comparisons with longitudinal data. See <http://rogosateaching.com/stat209/>. Prerequisite: intermediate-level statistical methods. Same as: HRP 239, STATS 209

**EDUC 260B. Advanced Statistical Methods for Observational Studies. 2-3 Units.**

Design principles and statistical methods for observational studies. Topics include: matching methods, sensitivity analysis, instrumental variables, graphical models, marginal structural models. 3 unit registration requires a small project and presentation. Computing is in R. Pre-requisites: HRP 261 and 262 or STAT 209 (HRP 239), or equivalent. See <http://rogosateaching.com/somgen290/>. Same as: CHPR 290, STATS 266

**EDUC 261. Sociocultural Theories of Learning & Development: Vygotsky & Bakhtin. 3 Units.**

Grounded in theories of Vygotsky and Bakhtin, this course will review commonly used, but often misunderstood, concepts about how context enters theories of learning and development. Topics will include: distinctions between development and learning; the place of culture in developing higher mental functions; the zone of proximal development, conceptions and misconceptions; contributions of activity theory; importance of heterogeneity and multivocality; and role of language in ideological becoming or idea development. Focus will be on using theory to guide research.

**EDUC 262A. Curriculum and Instruction in English. 2 Units.**

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP).

**EDUC 262B. Curriculum and Instruction in English. 3 Units.**

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.

**EDUC 262C. Curriculum and Instruction in English. 3 Units.**

Approaches to teaching English in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. (STEP).

**EDUC 263A. Curriculum and Instruction in Mathematics. 2 Units.**

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win.

**EDUC 263B. Curriculum and Instruction in Mathematics. 3 Units.**

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win.

**EDUC 263C. Curriculum and Instruction in Mathematics. 3 Units.**

The purposes and programs of mathematics in the secondary curriculum; teaching materials, methods. Prerequisite: STEP student or consent of instructor. (STEP) 263A. Sum, 263B. Aut, 263C. Win.

**EDUC 263E. Quantitative Reasoning in Mathematics I. 2 Units.**

First of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

**EDUC 263F. Quantitative Reasoning in Mathematics II. 2-3 Units.**

Second of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

**EDUC 263G. Quantitative Reasoning in Mathematics III. 2 Units.**

Third of a three-course sequence in mathematics for STEP elementary teacher candidates. Content, pedagogy, and context. Mathematics subject matter; the orchestration of teaching and learning of elementary mathematics including curriculum, classroom and lesson design, and cases studies. Sociocultural and linguistic diversity, equity, differentiation of instruction, the impact of state and national standards, and home/community connections.

**EDUC 264A. Curriculum and Instruction in World Languages. 2 Units.**

Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP).

**EDUC 264B. Curriculum and Instruction in World Languages. 3 Units.**

Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. STEP secondary only.

**EDUC 264C. Curriculum and Instruction in World Languages. 3 Units.**

Approaches to teaching foreign languages in the secondary school, including goals for instruction, teaching techniques, and methods of evaluation. Prerequisite: STEP student. (STEP).

**EDUC 264E. Methods and Materials in Bilingual Classrooms. 2 Units.**

Restricted to STEP elementary teacher candidates in the BCLAD program. Theories, research, and methods related to instruction of Spanish-English bilingual children, grades K-8. Approaches to dual language instruction, and pedagogical and curricular strategies for the instruction of reading, language arts, science, history, social science, and math in Spanish. Assessment issues and practices with bilingual students. In Spanish.

**EDUC 265. History of Higher Education in the U.S.. 3-5 Units.**

Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities.

Same as: AMSTUD 165, EDUC 165, HISTORY 158C

**EDUC 266. Educational Neuroscience. 3 Units.**

An introduction to the growing intersection between education research and emerging research on functional brain development. Students will probe the contributions and limitations of emerging theoretical and empirical contribution of neuroscience approaches to specific academic skills such as reading and mathematics, as well as exposure to general processes crucial for educational success, including motivation, attention, and social cognition. Final projects will explore these themes in the service of interventions designed to improve how these functions.

**EDUC 267A. Curriculum and Instruction in Science. 2 Units.**

Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP).

**EDUC 267B. Curriculum and Instruction in Science. 3 Units.**

Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP).

**EDUC 267C. Curriculum and Instruction in Science. 3 Units.**

Possible objectives of secondary science teaching and related methods: selection and organization of content and instructional materials; lab and demonstration techniques; evaluation, tests; curricular changes; ties with other subject areas. Prerequisite: STEP student or consent of instructor. (STEP).

**EDUC 267E. Development of Scientific Reasoning and Knowledge. 2 Units.**

For STEP elementary teacher candidates. Theories and methods of teaching and learning science. How to develop curricula and criteria for critiquing curricula. Students design a science curriculum plan for a real setting. State and national science frameworks and content standards. Alternative teaching approaches; how to select approaches that are compatible with learner experience and lesson objectives. Focus is on the linguistic and cultural diversity of California public school students.

**EDUC 267F. Development of Scientific Reasoning and Knowledge II. 2 Units.**

Continuation of 267E. Scientific knowledge and pedagogical skills for supporting science instruction. Topics include: how children build scientific understandings and what that understanding might look and sound like in young children; what school science is and how concepts are connected to the doing of it; physical, life, and earth science constructs.

**EDUC 267G. Integrating the Garden into the Elementary Curriculum. 1 Unit.**

This mini-course uses the garden and kitchen environments to provide teacher candidates with real-world contexts in which to explore some of the key issues that children face in health, nutrition, and sustainability. Teacher candidates will gain an understanding of how to integrate the various themes with content areas and standards and an appreciation for the importance of addressing children's health needs in an era when the country is facing increased obesity and other health problems.

**EDUC 268A. Curriculum and Instruction in History and Social Science. 2 Units.**

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

**EDUC 268B. Curriculum and Instruction in History and Social Science. 3 Units.**

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

**EDUC 268C. Curriculum and Instruction in History and Social Science. 3 Units.**

The methodology of history instruction: teaching for historical thinking and reasoning; linking the goals of teaching history with literacy; curriculum trends; and opportunities to develop teaching and resource units. Prerequisite: STEP student.

**EDUC 268E. Elementary History and Social Science. 3-4 Units.**

Teaching and learning history and social science in the elementary grades. What is included in the discipline and why it is important to teach. The development of historical thinking among children. How students learn and understand content in these disciplines.

**EDUC 269. The Ethics in Teaching. 1 Unit.**

Goal is to prepare for the ethical problems teachers confront in their professional lives. Skills of ethical reasoning, familiarity with ethical concepts, and how to apply these skills and concepts in the analysis of case studies. Topics: ethical responsibility in teaching, freedom of speech and academic freedom, equality and difference, indoctrination, and the teaching of values.

**EDUC 270. Latino Families, Languages, and Schools. 3-5 Units.**

The challenges facing schools to establish school-family partnerships with newly arrived Latino immigrant parents. How language acts as a barrier to home-school communication and parent participation. Current models of parent-school collaboration and the ideology of parental involvement in schooling.

Same as: EDUC 178

**EDUC 271. Education Policy in the United States. 5 Units.**

(Same as GSBGEN 347) The course will provide students from different disciplines with an understanding of the broad educational policy context. The course will cover topics including a) school finance systems; b) an overview of policies defining and shaping the sectors and institutional forms of schooling, c) an overview of school governance, d) educational human-resource policy, e) school accountability policies at the federal and state levels; and f) school assignment policies and law, including intra- and inter-district choice policies, desegregation law and policy. This course is intended for PhD students only. Other students may contact the instructor for permission to enroll.

Same as: PhD

**EDUC 272. Understanding and Creating Value-Added Measures of Teacher Effectiveness. 3 Units.**

This seminar will explore a variety of approaches to measuring teacher effectiveness using student performance on state standardized tests. We will read the recent research literature on value-added estimation, addressing issues such as bias and measurement error. We also will use administrative data from two large districts to create and compare multiple value-added measures. The class assumes a comfort with OLS regression and basic programming in Stata.

**EDUC 273. Gender and Higher Education: National and International Perspectives. 4 Units.**

This course examines the ways in which higher education structures and policies affect females, males, and students in relation to each other and how changes in those structures and policies improve experiences for females and males similarly or differently. Students are expected to gain an understanding of theories and perspectives from the social sciences relevant to an understanding of the role of higher education in relation to structures of gender differentiation and hierarchy. Topics include undergraduate and graduate education; identity and sexuality; gender and science; gender and faculty; and the development of feminist scholarship and pedagogy. Attention is paid to how these issues are experienced by women and men in the United States, including people of color, and by academics throughout the world, and how these have changed over time.

Same as: EDUC 173, FEMST 173, SOC 173, SOC 273

**EDUC 274. School Choice: The Role of Charter Schools. 3 Units.**

(Formerly EDUC 153X.) Is school choice, including vouchers, charter schools, contract schools, magnet schools, district options, and virtual schools, a threat or an opportunity for public education? Focus is on the charter school movement nationally and in California as reform strategy. Roles and responsibilities of charter schools emphasizing issues of governance, finance, curriculum, standards, and accountability.

**EDUC 275. Leading U.S. Schools. 3-4 Units.**

The landscape of schooling in the U.S. is dynamic and replete with ideologies, myths, and beliefs. Organizational theory, leadership theory, and empirical research are lenses through which students will develop a deeper and broader understanding of the similarities and differences among private schools, parochial schools, traditional K-12 schools, charter schools, and alternative schools. Students will connect theory and research to practice by visiting and learning about two or more schools of their choosing.

**EDUC 276. Educational Assessment. 3 Units.**

Reliability, validity, bias, fairness, and properties of test scores. Uses of tests to monitor, manage, and reform instruction. Testing and competition, meritocracy, achievement gaps, and explanations for group differences.

**EDUC 277. Education of Immigrant Students: Psychological Perspectives. 4 Units.**

Historical and contemporary approaches to educating immigrant students. Case study approach focuses on urban centers to demonstrate how stressed urban educational agencies serve immigrants and native-born U.S. students when confronted with overcrowded classrooms, controversy over curriculum, current school reform movements, and government policies regarding equal educational opportunity.

**EDUC 278. Introduction to Issues in Evaluation. 3-4 Units.**

Open to master's and doctoral students with priority to students in the School of Education. Focus is on the basic literature and major theoretical and practical issues in the field of program evaluation. Topics include: defining purpose, obtaining credible evidence, the role of the evaluator, working with stakeholder, values in evaluation, utilization, and professional standards. The course project is to design an evaluation for a complex national or international program selected by the instructor.

**EDUC 279. American Jewish History: Learning to be Jewish in America. 2-4 Units.**

This course will be a seminar in American Jewish History through the lens of education. It will address both the relationship between Jews and American educational systems, as well as the history of Jewish education in America. Plotting the course along these two axes will provide a productive matrix for a focused examination of the American Jewish experience. History students must take course for at least 3 units. Same as: AMSTUD 279X, HISTORY 288D, JEWISHST 297X, RELIGST 279X

**EDUC 280. Learning & Teaching of Science. 3 Units.**

This course will provide students with a basic knowledge of the relevant research in cognitive psychology and science education and the ability to apply that knowledge to enhance their ability to learn and teach science, particularly at the undergraduate level. Course will involve readings, discussion, and application of the ideas through creation of learning activities. It is suitable for advanced undergraduates and graduate students with some science background.

Same as: PHYSICS 295

**EDUC 281. Technology for Learners. 3-4 Units.**

How can we use technology to improve learning? Many hope that technology will make learning easier, faster, or accessible to more learners. This course explores a variety of approaches to designing tools for learning, the theories behind them, and the research that tests their effectiveness. Strong focus on evaluating and designing new tools for specific learners and subjects. nSpace is limited. Priority is given to master's students in Education and to master's / upper-level students in Human Computer Interaction.

**EDUC 282. The Politics of Knowledge in the Twentieth Century United States. 3-5 Units.**

This course examines the relationship between social scientific knowledge and power in the modern United States. Topics include the emergence of social scientific disciplines, debates over objectivity, and professionalization. The course examines both how universities, philanthropic foundations, and the federal government have shaped knowledge production and how social science has influenced law, social and educational policy, and popular social thought.

**EDUC 283. Child Development In and Beyond Schools. 2 Units.**

(Formerly EDUC 144). How schools form a context for children's social and cognitive development. Focus is on early and middle childhood. Transactional processes between children and learning opportunities in classroom contexts. Topics include: alternative theoretical perspectives on the nature of child development; early experience and fit with traditional school contexts; assessment practices and implications for developing identities as learners; psychological conceptions of motivational processes and alternative perspectives; the role of peer relationships in schools; and new designs for learning environments. Readings address social science and methodological issues. STEP Elementary only.

**EDUC 284. Teaching and Learning in Heterogeneous Classrooms. 3 Units.**

Teaching in academically and linguistically heterogeneous classrooms requires a repertoire of pedagogical strategies. Focus is on how to provide access to intellectually challenging curriculum and equal-status interaction for students in diverse classrooms. Emphasis is on group work and its cognitive, social, and linguistic benefits for students. How to prepare for group work, equalize participation, and design learning tasks that support conceptual understanding, mastery of content and language growth. How to assess group products and individual contributions. (STEP).

**EDUC 285. Supporting Students with Special Needs. 2-3 Units.**

For STEP teacher candidates. Needs of exceptional learners, identification of learning differences and disabilities, and adaptations in the regular inclusion classroom. Legal requirements of special education, testing procedures, development of individualized education plans, and support systems and services. Students follow a special needs learner to understand diagnosis, student needs, and types of services.

**EDUC 286B. Second Language Acquisition Research. 4 Units.**

Major research findings and theories in second language acquisition. Second language research and theories in formal and informal settings where a second language is learned.

**EDUC 287. Graduate Research Workshop on Psychological Interventions. 3 Units.**

Psychological research has the potential to create novel interventions that promote the public good. This workshop will expose students to psychologically 'wise' intervention research and to support their efforts to conduct such interventions, especially in the context of education, broadly conceived, as well as other areas. The first part of the class will address classic interventions and important topics in intervention research, including effective delivery mechanisms, sensitive behavioral outcomes, the role of theory and psychological process, and considerations of the role of time and of mechanisms that can sustain treatment effects over time. In the second part of the class, students will present and receive feedback on their own ongoing and/or future intervention research. Prerequisite: Graduate standing in Psychology or Education, or consent of instructor.

Same as: PSYCH 274

**EDUC 288. Organizational Analysis. 4 Units.**

Principles of organizational behavior and analysis; theories of group and individual behavior; organizational culture; and applications to school organization and design. Case studies.

Same as: SOC 271

**EDUC 289. The Centrality of Literacies in Teaching and Learning. 3 Units.**

(Formerly EDUC 166.) Focus is on principles in understanding, assessing, and supporting the reading and writing processes, and the acquisition of content area literacies in secondary schools. Literacy demands within particular disciplines and how to use oral language, reading, and writing to teach content area materials more effectively to all students. (STEP).

**EDUC 290. Instructional Leadership: Building Capacity for Excellent Teaching. 3-4 Units.**

This course focuses on the role of leaders in designing, supporting and sustaining excellent teaching. How do leaders create the organizational conditions to focus attention on the technical core of instruction, curriculum and assessment. Course goals: 1) explore a variety of educational leadership approaches, 2) investigate the theory of action underlying these approaches to leadership and consider the implications for instructional practice and 3) develop understanding of the relationship between the leadership approach and the learning environment.

**EDUC 291. Learning Sciences and Technology Design Research Seminar and Colloquium. 1-3 Unit.**

Students and faculty present and critique new and original research relevant to the Learning Sciences and Technology Design doctoral program. Goal is to develop a community of scholars who become familiar with each other's work. Practice of the arts of presentation and scholarly dialogue while introducing seminal issues and fundamental works in the field.

**EDUC 292. Academic Writing for Clarity and Grace. 2-4 Units.**

Students will acquire helpful writing strategies, habits, and critical faculties; increase their sense of writing as revision; and leave them with resources that will support them in their own lifelong pursuit of good writing. Students will work on revising their own papers and editing papers of other students. Class will focus on exercises in a variety of critical writing skills: framing, concision, clarity, emphasis, rhythm, action, actors, argument, data, quotations, and usage. Course enrollment limited to graduate students.

**EDUC 293. Church, State, & Schools: Issues in Education & Religion. 4 Units.**

This course will examine interactions between religion and education, focusing on both formal and experiential sites in which people and communities explore, articulate, encounter, and perform religious ideologies and identities. The class will focus on different religious traditions and their encounters the institutions and structures of education in American culture, both in the United States and as it manifests in American culture transnationally.

Same as: AMSTUD 293, RELIGST 293X

**EDUC 294. History of the Learned Book. 3-5 Units.**

The course takes full advantage of the university library's Special Collections to examine the key historic works contributing to the advancement of learning and the organization of knowledge. Beginning with medieval manuscripts and progressing through all areas of human inquiry during the age of print, the course explores the economic and educational history of learned publishing in the West, while examining what these historic artifacts reveal about developments in the structure and authority, production and circulation, technology and aesthetics, of learning and knowledge.

**EDUC 295. Learning and Cognition in Activity. 3 Units.**

Methods and results of research on learning, understanding, reasoning, problem solving, and remembering, as aspects of participation in social organized activity. Principles of coordination that support cognitive achievements and learning in activity settings in work and school environments.

Same as: PSYCH 261A

**EDUC 296. Introduction to Survey Research. 3-4 Units.**

Planning tasks, including problem formulation, study design, questionnaire and interview design, pretesting, sampling, interviewer training, and field management. Epistemological and ethical perspectives. Issues of design, refinement, and ethics in research that crosses boundaries of nationality, class, gender, language, and ethnicity.

Same as: EDUC 191

**EDUC 297. Teaching and Learning in Higher Education. 1-4 Unit.**

(Same as LAW 303) This course is co-taught by Tom Ehrlich, GSE, and Mariatte Denman, Office of the Vice Provost for Teaching & Learning. It provides doctoral and masters students with an opportunity to focus on teaching and learning along with graduate students from many disciplines throughout the university. Students watch and interview master teachers at Stanford, prepare a syllabus module for a workshop or class they might teach, and learn a range of effective pedagogical methods. The course is open not only to masters students and doctoral students from all schools who expect to work in higher education, but also to students interested in K-12 education, and they may develop a teaching module for use in those schools.

Same as: VPTL 297

**EDUC 298. Seminar on Teaching Introductory Computer Science. 1 Unit.**

Faculty, undergraduates, and graduate students interested in teaching discuss topics raised by teaching computer science at the introductory level. Prerequisite: consent of instructor.

**EDUC 299. Equity and Schooling. 2 Units.**

(Formerly EDUC 167.) Introduction to the theories and practices of equity and democracy in education. How to think about teaching and schooling in new ways; the individual moral and political reasons for becoming a teacher. (STEP).

**EDUC 302. Behavior Design: Connecting People to Nature. 3 Units.**

Students learn Behavior Design and practice applying the methods to change human behavior in measurable ways. In this particular course, all projects will focus on one theme: Connecting people to nature.

**EDUC 303. Designing Learning Spaces. 3-4 Units.**

Project-based. How space shapes personal interactions and affords learning opportunities in formal and informal settings. How to integrate learning principles into the design of spaces and develop a rubric to assess the impact on learning.

**EDUC 305. A Political Economy of the Mind. 3-4 Units.**

This course seeks categories and procedures for the appreciation, description, analysis, and reorganization of people in difficult circumstances. Examples from the history of fiction and classic political economy are used to explore the strengths and weaknesses of various approaches. In depth attention to individual lives and daily struggles give fiction and economic theory more appropriately positive views of people without the advantages of schooling than most educational research. Readings include fiction by Defoe, Austen, Dickens, Hurston, and Morrison and economic visions from Smith, Marx, Veblen, Keynes, and Galbraith.

**EDUC 306A. Economics of Education in the Global Economy. 5 Units.**

Case material considers development problems in the U.S. and abroad. Discussion sections on economic aspects of educational development.

**EDUC 306B. The Politics of International Cooperation in Education. 3-5 Units.**

Education policy, politics, and development. Topics include: politics, interests, institutions, policy, and civil society; how schools and school systems operate as political systems; how policy making occurs in educational systems; and theories of development.

**EDUC 306D. World, Societal, and Educational Change: Comparative Perspectives. 4-5 Units.**

Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.

Same as: EDUC 136, SOC 231

**EDUC 306Y. Economic Support Seminar for Education and Economic Development. 1 Unit.**

Core economic concepts that address issues in education in developing and developed countries. Supply and demand, elasticity, discount rates, rate of return analysis, utility functions, and production functions.

Corequisite: 306A. (Carnoy).

**EDUC 307. Foundations and Contemporary Topics in Social-Educational Psychology. 2-4 Units.**

At its core, social psychology is concerned with educational problems because it addresses the problem of how to change hearts and minds in lasting ways. This course explores the major ideas, theories, and findings of social psychology, their educational implications, and the insights they shed into how and when people change. There will be a focus on educational issues. Intersections with other disciplines, in particular social development and biology, will be addressed. Historical tensions and traditions, as well as classic studies and theories, will be covered. Graduate students from other disciplines, and advanced undergraduates, are welcome (class size permitting).

Same as: PSYCH 280

**EDUC 308. Assessment Development, Adaptation, and Review. 3 Units.**

Offers a critical perspective for examining current practices concerning the development, adaptation, and review of assessment instruments in state, national, and international assessment contexts.

**EDUC 309. Educational Issues in Contemporary China. 3-4 Units.**

Reforms such as the decentralization of school finance, emergence of private schools, expansion of higher education, and reframing of educational policy to focus on issues of quality. Have these reforms exacerbated educational inequality.

Same as: EDUC 109

**EDUC 310. Sociology of Education: The Social Organization of Schools. 4 Units.**

Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.

Same as: EDUC 110, SOC 132, SOC 332

**EDUC 311. Research Workshop in International Education. 1 Unit.**

International Education Initiative (IEI) is a cross-campus initiative to promote greater collaboration around research in international education at Stanford. It is designed to help students conduct higher quality research in international education and gain wide exposure to the international education research community. Students will have the chance to engage with invited speakers from outside Stanford, present and get feedback about their own research, and learn new methodological tools.

**EDUC 312. Relational Sociology. 4 Units.**

Conversations, social relationships and social networks are the core features of social life. In this course we explore how conversations, relationships, and social networks not only have their own unique and independent characteristics, but how they shape one another and come to characterize many of the settings we enter and live in. As such, students will be introduced to theories and research methodologies concerning social interaction, social relationships, and social networks, as well as descriptions of how these research strands interrelate to form a larger relational sociology that can be employed to characterize a variety of social phenomenon. This course is suitable to advanced undergraduates and doctoral students.

Same as: SOC 224B

**EDUC 313. The Education of American Jews. 4 Units.**

This course will take an interdisciplinary approach to the question of how American Jews negotiate the desire to retain a unique ethnic sensibility without excluding themselves from American culture more broadly. Students will examine the various ways in which people debate, deliberate, and determine what it means to be an "American Jew". This includes an investigation of how American Jewish relationships to formal and informal educational encounters through school, popular culture, religious ritual, and politics.

Same as: JEWISHST 393X, RELIGST 313X

**EDUC 316. Social Network Methods. 4-5 Units.**

Introduction to social network theory, methods, and research applications in sociology. Network concepts of interactionist (balance, cohesion, centrality) and structuralist (structural equivalence, roles, duality) traditions are defined and applied to topics in small groups, social movements, organizations, communities. Students apply these techniques to data on schools and classrooms.

Same as: SOC 369

**EDUC 317. Workshop: Networks, Histories, and Theories of Action. 1-2 Unit.**

Yearlong workshop where doctoral students are encouraged to collaborate with peers and faculty who share an interest in researching the network dynamics, histories and theories of action that help explain particular social phenomena. Students present their own research and provide helpful feedback on others' work. Presentations may concern dissertation proposals, grants, article submissions, book proposals, datasets, methodologies and other texts. Repeatable for credit.

Same as: SOC 317W

**EDUC 318. The Discourses of Teaching Reading. 3-5 Units.**

Students examine language, social relationships, and students' textual sense-making to further develop their conceptions of reading comprehension and their pedagogical practice as reading teachers. What it means to comprehend text; how classroom discourse matters in the development of textual understanding; and what understandings, purposes, and relationships should matter in classroom talk about text. Field work in which students facilitate small group text discussions for the duration of the quarter at a location of their choice.

**EDUC 320. Sociology of Science. 3-4 Units.**

The sociology of science concerns the social structures and practices by which human beings interpret, use and create intellectual innovations. In particular we will explore the claim that scientific facts are socially constructed and ask whether such a characterization has limits. Course readings will concern the formation and decline of various thought communities, intellectual social movements, scientific disciplines, and broader research paradigms. A special focus will be placed on interdisciplinarity as we explore whether the collision of fields can result in new scientific advances. This course is suitable to advanced undergraduates and doctoral students.

Same as: EDUC 120, SOC 330

**EDUC 321. Analysis of Social Interaction. 3 Units.**

Practicum on discourse, interactional, and cultural analysis of videotaped data. Analysis of interactional data, and the basis on which analytic claims can be founded. The transcription of speech and movement in social interaction, and how to identify the patterns which participants use to display and interpret cultural meanings. The theoretical assumptions hidden in transcription systems. Prerequisite: first- or second-year graduate student.

**EDUC 322. Community-based Research As Tool for Social**

**Change: Discourses of Equity in Communities & Classrooms. 3-5 Units.** Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques.

Same as: AFRICAAM 130, CSRE 130, EDUC 123

**EDUC 323A. The Practice of Education Policy Analysis. 3-5 Units.**

Key issues in the K-12 education policy. Modern theories about the making of policy and its implementation. Preparation to do policy analysis in education.

**EDUC 324. The Ecology of Equality. 1-4 Unit.**

A biweekly, one-hour workshop that meets throughout the full academic year. Designed for doctoral students and explores a range of issues pertaining to equity and equality in the United States and globally. Takes an interdisciplinary approach and intended for those who desire a deeper exploration of humanistic, social science and philosophical explanations for existing conditions, crises, and policies in society, as they pertain to various forms of social inequality—with a particular focus on race, ethnicity, class, gender, and sexuality.

**EDUC 325A. Proseminar 1. 3 Units.**

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?.

**EDUC 325B. Proseminar 2. 3 Units.**

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?.

**EDUC 325C. Proseminar 3. 2-4 Units.**

Required of and limited to first-year Education doctoral students. Core questions in education: what is taught, to whom, and why; how do people learn; how do teachers teach and how do they learn to teach; how are schools organized; how are educational systems organized; and what are the roles of education in society?.

**EDUC 327A. The Conduct of Qualitative Inquiry. 3-4 Units.**

Two quarter sequence for doctoral students to engage in research that anticipates, is a pilot study for, or feeds into their dissertations. Prior approval for dissertation study not required. Students engage in common research processes including: developing interview questions; interviewing; coding, analyzing, and interpreting data; theorizing; and writing up results. Participant observation as needed. Preference to students who intend to enroll in 327C.  
Same as: SOC 331

**EDUC 327C. The Conduct of Qualitative Inquiry. 1-4 Unit.**

For doctoral students. Students bring research data for analysis and writing. Preference to those who have completed 327A.

**EDUC 328. Topics in Learning and Technology: Core Mechanics for Learning. 3 Units.**

Contents of the course change each year. The course can be repeated. In game play, core mechanics refers to the rules of interaction that drive the game forward. This class will consider whether there are core mechanics that can drive learning forward, and if so, how to build them into learning environments.

**EDUC 328A. Topics in Learning and Technology: d.compress - Designing Calm. 3 Units.**

Contents of the course change each year. The course can be repeated. Stress silently but steadily damages physical and emotional well-being, relationships, productivity, and our ability to learn and remember. This highly experiential and project-oriented class will focus on designing interactive technologies to enable calm states of cognition, emotion, and physiology for better human health, learning, creativity and productivity.  
Same as: CS 377D

**EDUC 329. Seminar on Teacher Professional Development. 1-4 Unit.**

Theories, principles, design, and practices of professional development. Topics include: pedagogies of professional development; design principles for transformative professional development; frameworks and processes to support teacher learning; research on professional development processes and outcomes; and policy issues. Optional practicum in subsequent terms in which course participants are able to offer a professional development opportunity to practicing teachers through the Center to Support Excellence in Teaching.

**EDUC 330. Teaching English Language Learners: Issues in Policy, Leadership, and Instruction. 3-4 Units.**

Current perspectives and research on issues facing educators serving the English language learner population. Issues include federal education legislation, civil rights law, national Common Core Standards, content and language proficiency standards assessment and accountability, school improvement models, school structure, community engagement, addressing issues of long-term English learners, programming for newcomer ELLs, early childhood education, and promoting bilingualism.

**EDUC 331. Qualitative Interview Methods in Educational Research. 3-5 Units.**

This course provides a foundation for undertaking interview studies in school settings. Students will develop their capacity for engaging in a range of qualitative interviewing practices, including research design; writing high-quality interview questions; interview techniques with adults and children; analyzing data; and final write-up of interviews. Specific genres of interviewing, such as focus groups, oral histories, thinkalouds, and stimulated recall, will be explored. Students will work on their own or a common course project involving the collection/analysis of interview data.

**EDUC 332. Theory and Practice of Environmental Education. 3 Units.**

Foundational understanding of the history, theoretical underpinnings, and practice of environmental education as a tool for addressing today's pressing environmental issues. The purpose, design, and implementation of environmental education in formal and nonformal settings with youth and adult audiences. Field trip and community-based project offer opportunities for experiencing and engaging with environmental education initiatives.

**EDUC 333A. Understanding Learning Environments. 3 Units.**

Advanced seminar. Theoretical approaches to learning used to analyze learning environments and develop goals for designing resources and activities to support effective learning practices.

**EDUC 333B. Imagining the Future of Learning: SparkTruck - Designing Mobile Interventions for Education. 4 Units.**

Created at the d.school last year, SparkTruck has traveled over 15,000 miles across the USA, teaching thousands of kids how to build stuff and unleash their creativity. In this class, students will explore the potential of a mobile platform for affecting change in the educational ecosystem. Topics will include introductions to the design process, modern prototyping tools, and the complex education ecosystem. Students will work in teams in this project-based class, and an emphasis will be placed on real-world prototyping through hands-on field work in local schools. Interested and qualified students will have the opportunity to embark on a cross-country road trip in the SparkTruck this summer. Open to all graduate students and well-qualified undergrads of any major. Enrollment is limited. Apply at [www.sparktruck.org/apply](http://www.sparktruck.org/apply).  
Same as: ME 376A

**EDUC 334. Strategic Educational Research and Organizational Reform Clinic. 4-10 Units.**

(Same as STRAMGT 360). This is a two-quarter clinical course offered in the Winter and Spring Quarters that brings together upper-level graduate students in education, law, and business from Stanford to collaborate with their peers at other universities (Columbia University, Harvard University, University of Pennsylvania, University of Michigan) and provide strategic research and consulting to public education organizations. Participants engage in a rigorous and rewarding learning experience, including:

- (i) An intensive seminar in the design, leadership and management, and transformation of public school systems, charter management organizations, start-ups, and other K-12 public- and social-sector institutions;
- (ii) Comprehensive skills training in team-based problem solving, strategic policy research, managing multidimensional (operational, policy, legal) projects to specified outcomes in complex environments, client counseling, and effective communication; and
- (iii) A high-priority consulting project for a public education sector client (e.g., school district, state education agency, charter management organization, non-profit) designing and implementing solutions to a complex problem at the core of the organization's mission to improve the educational outcomes and life chances of children. The participant's team work will allow public agencies throughout the nation to receive relevant, timely, and high-quality research and advice on institutional reforms that otherwise may not receive the attention they deserve.

**EDUC 334A. Youth and Education Law Project: Clinical Practice. 4 Units.**

(Same as LAW 660A). The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation or special education due process hearings. This work offers students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees or the county board of education. The education clinic includes two or three mandatory training sessions to be held at the beginning of the term, a weekly seminar that focuses on legal skills and issues in law and education policy, regular case review, and a one hour weekly meeting with the clinic instructor. Admission is by consent of instructor. Beginning with the 2009-2010 academic year, each of the Law School's clinical courses is being offered on a full-time basis for 12 credits.

**EDUC 334B. Youth and Education Law Project: Clinical Methods. 4 Units.**

(Same as LAW 660B). The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation, or special education due process hearings. This work offers students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees of the county board of education. The education clinic includes two or three mandatory training sessions to be held at the beginning of the term, a weekly seminar that focuses on legal skills and issues in law and education policy, regular case review, and a one hour weekly meeting with the clinic instructor. Admission is by consent of instructor. Beginning with the 2009-2010 academic year, each of the Law School's clinical courses is being offered on a full-time basis for 12 credits.

**EDUC 334C. Youth and Education Law Project: Clinical Coursework. 4 Units.**

(Same as LAW 660C). The Youth and Education Law Project offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters have the opportunity to handle all aspects of their clients' cases. Students working in this area interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation, or special education due process hearings. This work offers students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees or the county board of education. The education clinic includes two or three mandatory training sessions to be held at the beginning of the term, a weekly seminar that focuses on legal skills and issues in law and education policy, regular case review, and a one hour weekly meeting with the clinic instructor. Admission is by consent of instructor. Beginning with the 2009-2010 academic year, each of the Law School's clinical courses is being offered on a full-time basis for 12 credits.

**EDUC 335. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.**

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students. Same as: AFRICAST 135, AFRICAST 235, EDUC 135, HRP 235, HUMBIO 26, MED 235

**EDUC 336. Language, Identity, and Classroom Learning. 1-3 Unit.**

As contemporary research focuses on how people act and recognize each other, analyzing interaction while acknowledging identity allows for a dynamic examination of cultural interaction. Broad cultural categorization can be overly expansive in identifying the characteristics of large groups of individuals.

**EDUC 336A. Law and Public Policy: Issues in Implementation. 3 Units.**

(Same as LAW 636.) This seminar will focus on issues related to achieving successful implementation of the goals of legislation. It is widely recognized that the goals of legislation often are not realized and that the failure frequently rests in breakdowns in the implementation process by the agencies and organizations charged with implementing the legislation. In response to problems in implementation, the institutional context of public policy implementation is changing. One category of innovations, known by names such as "management-based regulation" and "evidence-based" social service delivery, gives broad discretion to street-level service providers but subjects them to intensive monitoring and disciplined performance comparison. Another category applies market concepts to regulation or social services, for example, by creating tradable rights (e.g. pollution allowances) or vouchers (for schools, housing, or healthcare). These, and other, new approaches are affecting both the contours of public law doctrine and the nature of lawyering in the public sector. Lawyers in the public sector are increasingly drawing on skills of institutional design and monitoring of the kind associated with private sector transactional practice. This seminar will examine some of the emerging general themes of innovative policy implementation and look at a range of case studies. Topics will include the conditions under which financial and other rewards and sanctions are useful in bringing about desired behaviors, the pluses and minuses of the creation of markets as alternatives to government run programs, and efforts at improving implementation by improving management activities. Examples will be taken from both regulation and social services, and are likely to include environmental protection, education, child protective services, healthcare, food and workplace safety, nuclear power safety, and regulation of financial institutions. We will invite presentations by academics and practitioners.

**EDUC 337. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices. 3-5 Units.**

Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students. Same as: AFRICAAM 106, CSRE 103B, EDUC 103B

**EDUC 338. Innovations in Education. 3-4 Units.**

Each year students in this course explore a new design challenge related to teaching. This year we will focus on creating school models. We welcome graduate students from a wide range of disciplines. Admission by application. Please see more information at <http://dschool.stanford.edu>.

**EDUC 339. Advanced Topics in Quantitative Policy Analysis. 1-2 Unit.**

For doctoral students. How to develop a researchable question and research design, identify data sources, construct conceptual frameworks, and interpret empirical results. Presentation by student participants and scholars in the field. May be repeated for credit.

**EDUC 340. Psychology and American Indian Mental Health. 3-5 Units.**

Western medicine's definition of health as the absence of sickness, disease, or pathology; Native American cultures' definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities. Same as: NATIVEAM 240

**EDUC 342. Child Development and New Technologies. 3 Units.**

Focus is on the experiences computing technologies afford children and how these experiences might influence development. Sociocultural theories of development as a conceptual framework for understanding how computing technologies interact with the social ecology of the child and how children actively use technology to meet their own goals. Emphasis is on influences of interactive technology on cognitive development, identity, and social development equity.

**EDUC 343. Navigating the Academic Profession. 1-2 Unit.**

For DARE doctoral fellows only. The roles and responsibilities of faculty members in American colleges and universities in the 21st century. How to become productive faculty members within the higher education enterprise.

**EDUC 345. Adolescent Development and Schooling. 3-5 Units.**

How the context of school and its relationship to other major context developments (family, peer group, and neighborhood) influence the social, emotional, and cognitive development of secondary school-aged youths. Metatheoretical approaches (mechanistic, organismic, developmental contextualist metamodels) and methods of conducting research on schooling and development (laboratory, survey, ethnographic, intervention). Topics: school transitions during adolescence; the role of school functioning in broader patterns of competence or distress; and how the organization of academic tasks, classrooms, and school environments as a whole can influence adolescent development. Focus is on middle and high school years. (PSE).

**EDUC 346. Research Seminar in Higher Education. 4 Units.**

Required for higher education students. Major issues, current structural features of the system, the historical context that shaped it, and theoretical frameworks. The purposes of higher education in light of interest groups including students, faculty, administrators, and external constituents. Issues such as diversity, stratification, decentralization, and changes that cut across these groups.

**EDUC 347. The Economics of Higher Education. 4 Units.**

(Same as GSBGEN 348) Topics: the worth of college and graduate degrees, and the utilization of highly educated graduates; faculty labor markets, careers, and workload; costs and pricing; discounting, merit aid, and access to higher education; sponsored research; academic medical centers; and technology and productivity. Emphasis is on theoretical frameworks, policy matters, and the concept of higher education as a public good. Stratification by gender, race, and social class.

**EDUC 348. Policy and Practice in Science Education. 3-4 Units.**

Values and beliefs that dominate contemporary thinking about the role and practice of science education, what the distinctive features of science are, and the arguments for its value as part of compulsory education. Research on the conceptual and affective outcomes of formal science education, how the changing nature of contemporary society challenges current practice, and the rationale for an alternative pedagogy, curriculum and assessment.

**EDUC 350. Workshop on New Research. 1 Unit.**

This course will integrate attendance and participation at the research lectures given by visitors with separate, faculty-led workshops that discuss the presented study, its methodologies, and the research and policy contexts in which it is situated. This workshop will also provide an opportunity for professional development relevant to academic publishing and effective presentation.

**EDUC 351A. Statistical Methods for Longitudinal Research. 2-3 Units.**

Research designs and statistical procedures for time-ordered (repeated-measures) data. The analysis of longitudinal panel data is central to empirical research on learning, development, aging, and the effects of interventions. Topics include: measurement of change, growth curve models, analysis of durations including survival analysis, experimental and non-experimental group comparisons, reciprocal effects, stability. See <http://rogosateaching.com/stat222/>. Prerequisite: intermediate statistical methods. Same as: STATS 222

**EDUC 351B. Statistical Issues in Testing and Assessment. 2-3 Units.**

The new book by Howard Wainer, "Uneducated Guesses: Using Evidence to Uncover Misguided Education Policies" is the basis for this seminar. Also included will be supporting research literature and data analysis activities for topics such as college admissions, methods for missing data, assessment of achievement gaps, and the use of value-added analysis. See <http://www-stat.stanford.edu/~rag/ed351B/>.

**EDUC 351C. Workshop in Technical Quality of Educational Assessments and Accountability. 3 Units.**

Topics include: determinations of accuracy for individual scores and group summaries; design and reporting of educational assessments; achievement instruments in state-level accountability systems; and policy implications of statistical properties. See <http://www.stanford.edu/~rag/>.

**EDUC 352. Education Research Partnerships. 3-5 Units.**

This course focuses on developing and sustaining effective education research partnerships. Partnerships are essential in creating new research projects, conducting field-based inquiry, and in implementing lessons from research projects. The course emphasizes the power of successful partnerships in improving education while exploring potential barriers to the formation and productivity of partnerships. During this course there will be explicit opportunities for students to develop the knowledge and capacities necessary for effective collaborative partnership research.

**EDUC 353A. Problems in Measurement: Item Response Theory. 3 Units.**

Study of the mathematical models used in psychological measurement with an emphasis on item response theory (IRT). We will examine various problems, including estimation of item parameters and person abilities, polytomous response models, and other issues. A key focus of this course will be on developing applied skills with the relevant models. Prerequisites included EDUC 252 (or consent of the instructor).

**EDUC 353C. Problems in Measurement: Generalizability Theory. 3 Units.**

Application to analysis of educational achievement data, including performance assessments. Fundamental concepts, computer programs, and actual applications.

**EDUC 354. School-Based Decision Making. 4 Units.**

Leadership and organizational issues. Leadership as it plays out in the pragmatic demands and tensions of site-level decision processes. Interdependence and complexity of several factors critical to school achievement and equity outcomes: governance, culture, instruction, resource alignment, inquiry, community engagement. School decision-making as a capacity-building process.

**EDUC 355. Higher Education and Society. 3 Units.**

For undergraduates and graduate students interested in what colleges and universities do, and what society expects of them. The relationship between higher education and society in the U.S. from a sociological perspective. The nature of reform and conflict in colleges and universities, and tensions in the design of higher education systems and organizations.

**EDUC 356. Street History: Learning the Past in School and Out. 3-5 Units.**

Interdisciplinary. Since Herodotus, history and memory have competed to shape minds: history cultivates doubt and demands interpretation; memory seeks certainty and detests that which thwarts its aims. History and memory collide in modern society, often violently. How do young people become historical amidst these forces; how do school, family, nation, and mass media contribute to the process?.

Same as: HISTORY 337C

**EDUC 357. Science and Environmental Education in Informal Contexts. 3-4 Units.**

There are ever-expanding opportunities to learn science in contexts outside the formal classroom, in settings such as zoos, museums, and science centers. How are issues around science and the environment presented in these contexts, how do people behave and learn in these contexts, and what messages do they take away? This course will cover the learning theories and empirical research that has been conducted in these settings. Case studies of nearby science centers will add an experiential dimension.

**EDUC 358. Learning, Sharing, Publishing, and Intellectual Property. 1-4 Unit.**

The educational, historical, legal, economic, technical, and ethical issues entailed in the digital-era openness and sharing of intellectual properties associated with learning (including books, websites, games, journals, etc.). The skills and knowledge for finding, developing, and evaluating resources at all educational levels, based on a grasp of the opportunities and challenges of increasing access to learning in this way. As part its global focus on open learning, the course will be run in conjunction with the OpenKnowledge MOOC "Changing the Global Course of Learning" (<https://class.stanford.edu/courses/Education/OpenKnowledge/Fall2014/about>), offering students the option of both experiencing and studying a MOOC on this theme, which is being co-taught in Mexico, Ghana, Canada, and the U.S. (Stanford and Fordham) in English and Spanish.

**EDUC 359B. Research on Science Teaching and Learning. 2-3 Units.**

An exploration and review of the main programs of research that have been conducted in the field of science education, their findings and implications.

**EDUC 359C. Science Literacy. 2-3 Units.**

The changing debate over conceptions of the nature of science and the calls to broaden it. Themes, directions, limitations, and epistemological foundations of the body of research on the nature of science.

**EDUC 359F. Research in Mathematics Education: Conducting Inquiry. 2-4 Units.**

This seminar will serve as both a workshop for developing participants' own professional trajectories as mathematics education scholars and a forum for discussion on key issues related to conducting research and making an impact in the field of mathematics education. Participants will be invited to share their own research and to engage in discussions about possible impact. This seminar is restricted to mathematics education students.

**EDUC 360. Developmental Psychopathology and Resilience. 3-4 Units.**

In this course students will learn about theoretical, methodological, and empirical issues pertaining to developmental psychopathology and resilience of children and adolescents. The course focuses on (1) current conceptual and empirical issues; (2) cognitive, affective, and motivational processes that underlie some of the most salient childhood mental health symptoms and disorders; (3) family, school, and cultural factors that contribute to developmental psychopathology and resilience; and (4) cutting-edge analytic methods that are currently employed in studies of developmental psychopathology and resilience.

**EDUC 361. Workshop: Networks and Organizations. 1-3 Unit.**

For students doing advanced research. Group comments and criticism on dissertation projects at any phase of completion, including data problems, empirical and theoretical challenges, presentation refinement, and job market presentations. Collaboration, debate, and shaping research ideas. Prerequisite: courses in organizational theory or social network analysis.

Same as: SOC 361W

**EDUC 362. The Science Curriculum: Values and Ideology in a Contested Terrain. 2-4 Units.**

The issue of what should be taught in schools is a site of contestation where issues of beliefs, values and ideologies emerge. This course will use the school science curriculum and the history of its development to explore the common positions adopted and argued for in approaching curriculum development. Course will help students develop a knowledge of curriculum reform in school science and a deeper understanding of the arguments that have shaped its present form and their historical antecedents.

**EDUC 364. Cognition and Learning. 3-4 Units.**

Cognitive psychology is the study of human thought including topics including the nature of expertise, creativity, and memory. Emphasis is on learning. The role of cognitive psychology in helping people learn, and determining the most desirable type of learning and whether people have learned. Students design and conduct their own learning study.

**EDUC 365. Social, Emotional, and Personality Development. 3 Units.**

Limited to doctoral students in DAPS and those with a background in child and adolescent development. Developmental processes that account for psychological adaptation in social relationships, schools, and other interpersonal settings. Theoretical models of social, personality, and emotional development. Topics such as self-concept, empathy, motivation, aggression, and personality formation.

**EDUC 366. Learning in Formal and Informal Environments. 3 Units.**

How learning opportunities are organized in schools and non-school settings including museums, after-school clubs, community art centers, theater groups, aquariums, sports teams, and new media contexts. Sociocultural theories of development as a conceptual framework. Readings from empirical journals, web publications, and books. Collaborative written or multimedia research project in which students observe and document a non-school learning environment.

**EDUC 367. Cultural Psychology. 3-5 Units.**

(Formerly 292.) The relationship between culture and psychological processes; how culture becomes an integral part of cognitive, social, and moral development. Both historical and contemporary treatments of cultural psychology, including deficit models, crosscultural psychology, ecological niches, culturally specific versus universal development, sociocultural frameworks, and minority child development. The role of race and power in research on cultural psychology.

**EDUC 368. Cognitive Development in Childhood and Adolescence. 3 Units.**

This course aims to broaden and deepen students' understanding of cognitive development from the prenatal period through adolescence. It will examine various theoretical, methodological, and empirical issues pertaining to different domains of cognitive development, such as neurobiological plasticity, infant cognition, theory of mind, memory, language, and executive functions. Throughout the course, as we survey research findings, we will discuss (1) methods that researchers have employed in their study of cognitive development; (2) limitations of current research and directions for future research; and (3) translation of research findings for practitioners and policymakers.

**EDUC 370. Graduate Workshop: Feminist, Gender, and Sexuality Studies. 1-3 Unit.**

Theory, methods, and research in feminist, gender, and sexuality studies, through presentations of ongoing work by students, faculty, and guest speakers, and discussion of recent literature and controversies, feminist pedagogy and career development issues. Restricted to doctoral students. Repeatable for credit. Required for PhD Minors in Feminist, Gender, and Sexuality Studies (3 quarters min.).

Same as: FEMGEN 299

**EDUC 371. Social Psychology and Social Change. 2-3 Units.**

The course is intended an exploration of the major ideas, theories, and findings of social psychology and their applied status. Special attention will be given to historical issues, classic experiments, and seminal theories, and their implications for topics relevant to education. Contemporary research will also be discussed. Advanced undergraduates and graduate students from other disciplines are welcome. Interested students should contact Shannon Brady ([stbrady@stanford.edu](mailto:stbrady@stanford.edu)). Same as: PSYCH 265

**EDUC 374. Philanthropy and Civil Society. 1-3 Unit.**

Cross-listed with Law (LAW 781), Political Science (POLISCI 334) and Sociology (SOC 374). Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units.

Same as: POLISCI 334, SOC 374

**EDUC 375A. Seminar on Organizational Theory. 5 Units.**

The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.

Same as: MS&E 389, SOC 363A

**EDUC 375B. Seminar on Organizations: Institutional Analysis. 3-5 Units.**

Seminar. Key lines of inquiry on organizational change, emphasizing network, institutional, and evolutionary arguments.

Same as: SOC 363B

**EDUC 377. Comparing Institutional Forms: Public, Private, and Nonprofit. 4 Units.**

For students interested in the nonprofit sector, those in the joint Business and Education program, and for Public Policy MA students. The focus is on the missions, functions, and capabilities of nonprofit, public, and private organizations, and the managerial challenges inherent in the different sectors. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials.

Same as: GSBGEN 346, PUBLPOL 317, SOC 377

**EDUC 377B. Strategic Management of Nonprofits. 4 Units.**

(Same as STRAMGT 368). This course seeks to provide a survey of the strategic, governance, and management issues facing a wide range of nonprofit organizations and their executive and board leaders, in the era of venture philanthropy and social entrepreneurship. The students will also be introduced to core managerial issues uniquely defined by this sector such as development/fundraising, investment management, performance management and nonprofit finance. The course also provides an overview of the sector, including its history and economics. Cases involve a range of nonprofits, from smaller, social entrepreneurial to larger, more traditional organizations, including education, social service, environment, health care, religion, NGO's and performing arts. In exploring these issues, this course reinforces the frameworks and concepts of strategic management introduced in the core first year courses. In addition to case discussions, the course employs role plays, study group exercises and many outsider speakers.

**EDUC 377C. Strategic Philanthropy. 3 Units.**

(Also GSBGEN 381). Appropriate for any student driven to effect positive social change from either the for-profit or nonprofit sector, Strategic Philanthropy (GSBGEN 381/ EDUC 377C) will challenge students to expand their own strategic thinking about philanthropic aspiration and action. In recent decades, philanthropy has become an industry in itself - amounting to over \$300 billion in the year 2012. Additionally, the last decade has seen unprecedented innovation in both philanthropy and social change. This course explores the key operational and strategic distinctions between traditional philanthropic entities, such as community foundations, private foundations, and corporate foundations; and innovative models, including funding intermediaries, open-source platforms, technology-driven philanthropies, and venture philanthropy partnerships. Course work will include readings and case discussions that encourage students to analyze both domestic and global philanthropic strategies as they relate to foundation mission, grant making, evaluation, financial management, infrastructure, knowledge management, policy change, and board governance. Guest speakers will consist of high profile philanthropists, foundation presidents, social entrepreneurs and Silicon Valley business leaders creating new philanthropic models. The course will also provide students with real-world grantmaking experience in completing nonprofit organizational assessments and making grants to organizations totaling \$20,000. The course will culminate in an individual project in which students will complete a business plan for a \$10 million private foundation.

**EDUC 377D. Strategic Leadership of Nonprofits. 4 Units.**

Formulating, evaluating, and implementing mission and strategy. Case studies from nonprofits in social services, health care, education, and arts and culture. The interaction of strategy and mission, industry structure and evolution, strategic change, growth and replication, corporate strategy, governance, commercialization, alliances, capacity building, and leadership.

Same as: STRAMGT 378

**EDUC 377E. Improving and Measuring Social Impact. 3 Units.**

(Also GSBGEN 322). This course focuses on strategy and actionable measurement in government, non-profit organizations, market-based social enterprises, philanthropy, and impact investing. Actionable means that measurement is used by managers, investors, and other stakeholders in improving outcomes. The course explores the intersection of several ideas that seem to be in some tension with each other. (1) In preparing for battle I have always found that plans are useless, but planning is indispensable. (Dwight D. Eisenhower), (2) You can't manage what you can't measure, (3) Measurement is expensive and its results are often ignored, (4) Not everything that counts can be counted and not everything that can be counted counts (apocryphally attributed to Einstein), (5) The more any quantitative social indicator is used for decision making, the more subject it will be to corruption pressures and the more apt it will be to distort and corrupt the social processes it is intended to monitor. (Campbell's Law). Specifically, the course will include: strategic planning, logic models, theories of change, monitoring, and evaluation; measuring the social impact of governments, non-governmental organizations, and market-based social enterprises, and asking how philanthropists and impact investors can assess their own impact; impact investing, performance contracting, and social impact bonds; and techniques for improving the behavior and accountability of individuals and organizations. These issues will be addressed mainly through business school case studies, which place the students in the position of CEOs, managers, and investors called upon to make major decisions. WARNING: The course has a fair amount of reading - not more than is common in undergraduate and graduate courses, but more than is typical for MBA courses in the GSB.

**EDUC 380. Supervised Internship. 1-15 Unit.**

**EDUC 381. Multicultural Issues in Higher Education. 4 Units.**

The primary social, educational, and political issues that have surfaced in American higher education due to the rapid demographic changes occurring since the early 80s. Research efforts and the policy debates include multicultural communities, the campus racial climate, and student development; affirmative action in college admissions; multiculturalism and the curriculum; and multiculturalism and scholarship.

Same as: EDUC 181

**EDUC 382. Student Development and the Study of College Impact. 4 Units.**

The philosophies, theories, and methods that undergird most research in higher education. How college affects students. Student development theories, models of college impact, and issues surrounding data collection, national databases, and secondary data analysis.

**EDUC 385. Language, Race, and Urban Schools. 3-4 Units.**

This seminar explores the intersections of language and race/racism/ racialization in the public schooling experiences of students of color. As we examine relevant literature from the fields of sociolinguistics and linguistic anthropology, we will devote significant attention to considering implications for teaching and learning in urban classrooms. Issues to be addressed include language variation and change, language and identity, bilingualism and multilingualism, language ideologies, and classroom discourse.

Same as: CSRE 385

**EDUC 386. Leadership and Administration in Higher Education. 2 Units.**

Definitions of leadership and leadership roles within colleges and universities. Leadership models and organizational concepts. Case study analysis of the problems and challenges facing today's higher education administrators.

**EDUC 387. Workshop: Comparative Studies of Educational and Political Systems. 1-5 Unit.**

Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor.

Same as: SOC 311A

**EDUC 388A. Language Policies and Practices. 2 Units.**

For STEP teacher candidates seeking to meet requirements for the English Learner Authorization on their preliminary credential. Historical, political, and legal foundations of education programs for English learners. Theories of second language learning, and research on the effectiveness of bilingual education. Theory-based methods to facilitate and measure English learners' growth in language and literacy acquisition, and create environments which promote English language development and content area learning through specially designed academic instruction in English. (STEP).

**EDUC 388F. Introduction to Academic Language. 1 Unit.**

This course will provide opportunities for pre-service teachers to begin to develop an understanding of language uses, forms, and mechanics through application of a functional approach to academic language. By exploring language structures (phonology, morphology, syntax, semantics) as well as language-in-use (pragmatics and discourse), teacher candidates will be able to better recognize linguistic demands and challenges of students in the classroom.

**EDUC 390. Learning Analytics and Computational Modeling in Social Science. 3-4 Units.**

Computational modeling and data-mining are dramatically changing the physical sciences, and more recently also the social and behavioral sciences. Traditional analysis techniques are insufficient to investigate complex dynamic social phenomena as social networks, online gaming, diffusion of innovation, opinion dynamics, classroom behavior, and other complex adaptive systems. In this course, we will learn about how modeling, network theory, and basic data-mining can support research in cognitive, and social sciences, in particular around issues of learning, cognitive development, and educational policy.

Same as: CS 424M

**EDUC 391. Engineering Education and Online Learning. 3 Units.**

An introduction to best practices in engineering education and educational technology, with a focus on online and blended learning. In addition to gaining a broad understanding of the field, students will experiment with a variety of education technologies, pedagogical techniques, and assessment methods.

Same as: ENGR 391

**EDUC 393. Proseminar: Education, Business, Politics. 3 Units.**

Overview of the field of education for joint degree (M.B.A./M.A.) students.

**EDUC 395. Scholarly Writing in Education and the Social Sciences. 3-5 Units.**

Focus is on producing articles for scholarly journals in education and the social sciences. Ethics and craft of scholarly publishing. Writing opinion articles for lay audiences on issues of educational and social import.

**EDUC 396. The Design of Technologies for Casual Learning. 3 Units.**

Studio-based, participatory, and user-centered development of casual learning technologies is explored, using the Apple iPhone as an prototype platform. The term "casual" is borrowed from casual gaming to denote that the learning technologies are meant for learners to use in "extreme informal" learning circumstances (while "on the go", "anytime and any place"). The class builds on learning about and synthesizing knowledge, theory and development activity in four areas including learning theories, mobile technologies, games and participatory design processes.

Same as: EDUC 196

**EDUC 399A. Designing Surveys. 1-2 Unit.**

This workshop/course is designed for students who are designing a survey for use in a research project. The workshop content draws on relevant cognitive processing theories and research (on comprehension, retrieval, judgment, and reporting). In addition to some readings and a few lectures, this workshop is designed to be highly interactive and practical. By the end of the course students will have designed and pilot tested their survey instrument. Course may be repeated for credit.

**EDUC 401A. Mini Courses in Methodology: Statistical Packages for the Social Sciences. 1 Unit.**

Statistical analysis using SPSS, including generating descriptive statistics, drawing graphs, calculating correlation coefficients, conducting t-tests, analysis of variance, and linear regression. Building up datasets, preparing datasets for analysis, conducting statistical analysis, and interpreting results.

Same as: SPSS

**EDUC 401B. Mini Courses in Methodology: Stata. 1 Unit.**

The goal of this course is to familiarize students with the Stata statistical software package for use in quantitative research. By the end of the course, students should be able to import and export data, clean and manage data, conduct standard statistical tests (e.g., correlation, t-test, regression), and produce a graph.

**EDUC 401C. Data Analysis Examples Using R. 1 Unit.**

We will do basic and intermediate level data analysis examples, likethose that students will have seen in their courses, in R. Examplesinclude: descriptive statistics and plots, analysis of variance,ncorrelation and regression, categorical variables, multilevel data.nSee <http://rogosateaching.com/ed401/>.

**EDUC 401D. Multilevel Modeling Using R. 1 Unit.**

Multilevel data analysis examples using R. Topics include: two-level nested data, growth curve modeling, generalized linear models for counts and categorical data, nonlinear models, three-level analyses. For more information, see course website: <http://rogosateaching.com/stat196/>. Same as: STATS 196A

**EDUC 402. Formative Assessment of Literacy Learning and Performance. 2 Units.**

With the emergence of national standards and assessments, the role of classroom assessments has received diminished attention. Literacy acquisition - learning to read and write as facets of academic language - is critical through the grades and across content areas. This course will cover (1) the recent history of classroom assessment, (2) a conception of assessment as practical inquiry, (3) a review of performance-based assessment methods, and (4) practical implementation of the preceding ideas.

**EDUC 403. Education's Digital Future. 1 Unit.**

This course provides an intellectual framework for understanding the revolution in digital learning. It has three broad themes: the evolving state of knowledge on digital learning; the roles of education in modern societies; and the digital transformation of modern life generally. The course will convene over three quarters. All three themes will be addressed during each quarter. Students may enroll for a single quarter and/or participate in all three quarters for the most comprehensive overview.

**EDUC 404. Topics in Brazilian Education: Public Policy and Innovation for the 21st Century. 1-2 Unit.**

The objective of this seminar is to provide students from different backgrounds an opportunity to learn about current issues and debates on Brazilian education. The seminar will cover topics on the history of Brazilian education; an overview of current school reforms at the federal level; educational assessments; education and economic growth; educational equity; teacher labor market; technology and education; early childhood; and higher education to Brazil.

**EDUC 405. Teaching the Humanities. 3 Units.**

This course, designed for graduate students in the humanities and education, explores approaches to teaching the humanities at both the secondary and collegiate levels, with a focus on the teaching of text, and how the humanities can help students develop the ability to read and think critically. The course explores purposes and pedagogical approaches for teaching humanities through a variety of texts and perspectives. The course is designed as an opportunity for doctoral students in the Humanities both to enrich their own teaching, and to broaden their understanding of professional teaching opportunities, including community college and secondary school teaching.

**EDUC 406. Perspectives on Teacher Learning and Lesson Study. 2-4 Units.**

Seminar. Based on peer collaboration, lesson study helps to create professional communities among teachers and support their learning. Research literature, teacher thinking and beliefs, teacher professional development, and conceptual frameworks.

**EDUC 407. Lytics Seminar. 1-4 Unit.**

This course is a survey of research methods with applications in online learning. The methods covered are very interdisciplinary, including an introduction to machine learning, text/discourse analysis, causal modeling, and psychometrics. Broader question in research methodology are also covered, including how to formulate a good research question, when to use qualitative or quantitative methods, and the relative merits of theory-driven confirmatory vs. exploratory research. The goal of this course is to support researchers in the online learning space and other fields in their research endeavors.

**EDUC 408. Video Analysis in the Learning Sciences. 1-4 Unit.**

This seminar is for anyone devoting a significant portion of a given quarter to analyzing videotaped records as part of their research. Video-based data are now ubiquitous in educational research and this group is designed to help us all become more savvy at analyzing them, with a particular focus on the analysis of interactions. Strands of the seminar are devoted to: participating in video-analysis sessions, reading about video-analysis methods, and completing a paper on your own video-analysis project.

**EDUC 409. Managing to Outcomes in Education and Other Sectors. 2 Units.**

Whether as students, taxpayers, or philanthropists, we share an interest that schools, government agencies, and nonprofit organizations effectively achieve their intended outcomes. This course asks how stakeholders and managers can assess these institutions' performance and commitment to continuous improvement. This seemingly technocratic question is often the center of political controversy, as it is today in criticisms of the student assessments required by No Child Left Behind and of "value-added" assessments of teacher performance.nEver mindful that performance management is a graveyard of good intentions, we will study the practical aspects of institutional change - including leadership, accountability, learning, and culture ?- that often account for the difference between success and failure. We start with the presumption that you can't manage what you can't measure, but managers can usually measure only proxies rather than ultimate outcomes. In addition to the inevitable slippage between the proxies and ultimate outcomes, there is a tension between using assessments for learning and improvement, on the one hand, and for accountability, incentives, and penalties, on the other. Moreover, people have incentives to "game" any performance evaluation system.nnWe will examine the challenges of managing to outcomes in various contexts, focusing particularly on students' and teachers' performance, but also including the performance of selected government agencies (e.g., police and welfare departments), nonprofit organizations, and foundations. We will focus on the interconnections among strategic planning, performance budgeting, and performance management. We will also look at experiments with new funding vehicles that depend on measuring outcomes, such as social impact bonds, conditional cash transfers, and pay for performance schemes in healthcare and other sectors.

**EDUC 411. Early Childhood Education. 1-4 Unit.**

This course addresses a broad set of topics that have implications for developmentally appropriate and effective early childhood education. It begins with children's social, emotional and cognitive development and issues related to poverty, culture and language. We will also examine research evidence on effective instruction for young children, evaluations of preschool interventions, and several current policy debates.

**EDUC 417. Research and Policy on Postsecondary Access. 3 Units.**

The transition from high school to college. K-16 course focusing on high school preparation, college choice, remediation, pathways to college, and first-year adjustment. The role of educational policy in postsecondary access. Service Learning Course (certified by Haas Center). Same as: EDUC 117

**EDUC 419. Academic Achievement of Language Minority Students. 3-5 Units.**

Emphasis is on the current state of knowledge in the research literature and comparisons to students' experiences and observations in bilingual education, English as a second language, reading instruction, cultural issues in education, and research methods.

**EDUC 421. Powerful Ideas for Learning Sciences and Technology Design. 3 Units.**

This course is intended as a graduate level seminar that provides in-depth readings and discussions, Professor Roy Pea's professional reflections, and student essay-writing on topics examined in Dr. Pea's select publications and associated influential writings.

**EDUC 424. Introduction to Research in Curriculum and Teacher Education. 2-5 Units.**

Required for first-year CTE doctoral students. How to conceptualize, design, and interpret research. How to read, interpret, and critique research; formulate meaningful research questions; evaluate and conduct a literature review; and conceptualize a study. Readings include studies from different research paradigms. Required literature review in an area students expect to explore for their qualifying paper.

**EDUC 425. Advanced Topics in Research on Self and Stigma. 1-3 Unit.**

This course focuses on the relevance of self, identity, and stigmatization to understanding and remedying social problems. A key focus will be on how interactions between the self-system and social systems (e.g. schools, workplaces, institutions) drive outcomes over time, including educational and economic inequality. More broadly, class discussion and readings will address a social psychological analysis of intervention and change.

**EDUC 432. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.**

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations.

Same as: AFRICAAM 32, AMSTUD 32, CSRE 32A, EDUC 32, TAPS 32

**EDUC 437. Curricular Practical Training. 1 Unit.**

"Curricular Practical Training" independent study sections specifically created for international students in F-1 Visa Status who wish to receive credit and to be paid for internships.

**EDUC 445. Entrepreneurial Approaches to Education Reform. 3 Units.**

(Same as STRAMGT 335) In this course, students will investigate opportunities and challenges of entrepreneurial ventures trying to make a positive impact in public education. The course requires a basic level of understanding of the U.S. K-12 public school system. The first session will analyze the structure of the public education as an industry, with a special emphasis on understanding the achievement gap. Subsequent sessions will explore challenges in increasing efficacy, ensuring financial sustainability, and scaling for entrepreneurs who have sought to change student outcomes, solve pain points, and innovate. The course will feature a variety of ventures (including schools, education technology, training, and supplemental services) and organizational models (for-profit, not-for-profit, and benefit corporation). This course is suitable for students aspiring to be entrepreneurs, leaders in entrepreneurial organizations, leaders in educational organizations, Board members, donors or investors. (Note: this is not a "how-to" course on starting an entrepreneurial venture.).

**EDUC 447. Leading Change in Public Education. 2 Units.**

(Same as STRAMGT 537) American public education is in crisis. What will it take to get it back on track? As in all large-scale enterprises in need of transformative change, leadership matters greatly. This course focuses on what it takes from a strategic and extremely practical perspective to lead change in public education at the systems level. We will meet some of the most exciting educational leaders in public education today and dissect their leadership styles, strategies, innovations and solutions. We will look for lessons from traditional U.S. districts, successful charter management organizations, and international perspectives to determine what it takes to be an effective leader in education reform. Students will debate the strategies and efficacy of how different leaders approached systems-level change, and will form their own working hypotheses of what is needed to help transform the American education system. The course will end with a look at education fellowship programs and other ways for Stanford graduates to take on meaningful leadership roles in K-12 education reform. Dan Katzir worked for Bain & Company, Teach for America, and Sylvan Learning Systems before joining The Broad Foundation as its founding managing director. He is an experienced case study teacher and the editor of *The Redesign of Urban School Systems* (Harvard University Press, 2013). This course was designed to be taken in tandem with STRAMGT 535: *Entrepreneurial Approaches to Education Reform* and the courses will be highly complementary in approach.

**EDUC 453. Doctoral Dissertation. 1-15 Unit.**

For doctoral students only. (all areas).

**EDUC 466. Doctoral Seminar in Curriculum Research. 2-4 Units.**

Required of all doctoral students in CTE, normally during their second year in the program. Students present their ideas regarding a dissertation or other research project, and prepare a short research proposal that often satisfies their second-year review.

**EDUC 470. Practicum. 1-15 Unit.**

For advanced graduate students. (all areas).

**EDUC 480. Directed Reading. 1-15 Unit.**

For advanced graduate students. (all areas).

**EDUC 490. Directed Research. 1-15 Unit.**

For advanced graduate students. (all areas).

**EDUC 493. Workshop in Design and Analysis of Comparative Studies. 1-3 Unit.**

A workshop for second-year and later students with data analysis or research design activities including dissertation planning or analysis. Readings and exercises developed around participating student research. Topics have included: multilevel data analysis, within-subjects designs, and implementation of matching methods for comparing non-equivalent groups. Various computing customs accommodated. See <http://web.stanford.edu/~rag/ed493/>. Prerequisite: intermediate statistical methods course work.

**EDUC 801. TGR Project. 0 Units.**

For advanced graduate students. Instructor consent required. (all areas).

**EDUC 802. TGR Dissertation. 0 Units.**

For advanced graduate students. Instructor consent required. (all areas).

## Education as Self Fashioning Courses

### ESF 1. Education as Self-Fashioning: The Active, Inquiring, Beautiful Life. 7 Units.

Moving through history from the Rome of the Emperor Hadrian, to the city-states of Renaissance Italy, to the 18th century republic of the United States, we will examine how self-made men fashioned themselves and their surroundings by educating themselves broadly. We will ask how a liberal education made their active careers richer and more transformational. We will also take up the great debate on whether a liberal education or vocational training is the surest path to advancement. We will engage this debate through the works of W.E.B. Du Bois and Booker T. Washington but consider today's struggle over the same issues – a struggle that engrosses both highly industrialized and developing societies.

### ESF 1A. Education as Self-Fashioning: The Active, Inquiring, Beautiful Life. 7 Units.

Moving through history from the Rome of the Emperor Hadrian, to the city-states of Renaissance Italy, to the 18th century republic of the United States, we will examine how self-made men fashioned themselves and their surroundings by educating themselves broadly. We will ask how a liberal education made their active careers richer and more transformational. We will also take up the great debate on whether a liberal education or vocational training is the surest path to advancement. We will engage this debate through the works of W.E.B. Du Bois and Booker T. Washington but consider today's struggle over the same issues – a struggle that engrosses both highly industrialized and developing societies.

### ESF 2. Education as Self-Fashioning: How to Become a Global Citizen or the German Tradition of Bildung. 7 Units.

This course considers education not as training in external knowledge or skills but as a lifelong process of development and growth in which an individual cultivates her or his spiritual, cultural and social sensibilities. This concept of education - education as a formative and transformative process in the development of the self - is called Bildung in German and has a long tradition reaching back to the Middle Ages. The term first appears in the writings of the mystic Meister Eckhart who defines it as self-composure which he regards as a crucial stage in our spiritual development. The concept of Bildung takes on a secular meaning in the Reformation, when Ulrich von Hutten first coined the phrase that has become Stanford's motto: Die Luft der Freiheit weht. (The wind of freedom is blowing). What he meant is that the cultivation of oneself leads to the freedom of thought, freedom to act, freedom to assert oneself as an individual, freedom to access knowledge, and freedom to determine one's own role in society. This idea of education as an internal and transformative process is central to debates in the nineteenth century (both in Germany and the United States) in which self-reflection is seen as key to the cultivation of an individual's identity and to her or his role as a member of society. In this course we will read reflections on education as self-fashioning by some of the greatest German thinkers spanning from the Middle Ages to the present. We will also enjoy some contemporary parodies of such reflections. These readings and our discussions will help us to understand Stanford undergraduate education as a transformative process of self-realization in our global society.

### ESF 2A. Education as Self-Fashioning: How to Become a Global Citizen or the German Tradition of Bildung.. 7 Units.

This course considers education not as training in external knowledge or skills but as a lifelong process of development and growth in which an individual cultivates her or his spiritual, cultural and social sensibilities. This concept of education - education as a formative and transformative process in the development of the self - is called Bildung in German and has a long tradition reaching back to the Middle Ages. We will also enjoy some contemporary parodies of such reflections. These readings and our discussions will help us to understand Stanford undergraduate education as a transformative process of self-realization in our global society.

### ESF 3. Education as Self-Fashioning: How to be a Public Intellectual. 7 Units.

Can education impart more than bookish learning? This is the question that critics have posed since the European Renaissance. Through their reflections, these critics posited an alternative ideal of education that prepared the student for life outside the academy. Over the centuries, this ideal would evolve into what we would today call an intellectual – but this modern concept only captures a part of what earlier writers thought learning could achieve. In this course, we will focus on how education can prepare students to engage in public debates and the role that the university can play in public learning.

### ESF 3A. Education as Self-Fashioning: How to be a Public Intellectual. 7 Units.

Can education impart more than bookish learning? This is the question that critics have posed since the European Renaissance. Through their reflections, these critics posited an alternative ideal of education that prepared the student for life outside the academy. Over the centuries, this ideal would evolve into what we would today call an intellectual – but this modern concept only captures a part of what earlier writers thought learning could achieve. In this course, we will focus on how education can prepare students to engage in public debates and the role that the university can play in public learning.

**ESF 4. Education as Self-Fashioning: Learning to Change. 7 Units.**

Does education entail changing the self? How much? Why should I change my life? How do I discover that I need to change? Who can rightly tell me how to change? What difference does it make? These and related questions have been around for a long time, yet that makes them no easier to answer today than 2500 years ago. In the 5th century BCE, Socrates found that his answers—based on his own will to change—proved troublesome, and ultimately fatal. His follower, the philosopher Plato, transformed the Socratic exploration into idiosyncratic utopian visions that sought to change the conditions of life—and so make Socrates' fate unrepeatable. Plato's own followers, from Aristotle onward, found new ways to explain, enact, or evade change. Not until the end of antiquity, however, do we find, in Augustine of Hippo (354-430 CE), someone as explicitly and passionately committed to personal change as the early Greek thinker. Bookended by the major figures of the Athenian seeker and the North African, this course will lead students to analyze and compare their own tentative answers with the ideas on self-fashioning that can be found in a range of ancient texts. Students will demonstrate their grasp of the material through a variety of exercises, including a research paper, discourse analyses, and responses in persona.

**ESF 4A. Education as Self-Fashioning: Learning to Change. 7 Units.**

Does education entail changing the self? How much? Why should I change my life? How do I discover that I need to change? Who can rightly tell me how to change? What difference does it make? These and related questions have been around for a long time, yet that makes them no easier to answer today than 2500 years ago. In the 5th century BCE, Socrates found that his answers—based on his own will to change—proved troublesome, and ultimately fatal. His follower, the philosopher Plato, transformed the Socratic exploration into idiosyncratic utopian visions that sought to change the conditions of life—and so make Socrates' fate unrepeatable. Students will demonstrate their grasp of the material through a variety of exercises, including a research paper, discourse analyses, and responses in persona.

**ESF 5. Education as Self-Fashioning: Thinking Like a Philosopher. 7 Units.**

The Ancient Greek aphorism "Know thyself" is a centerpiece of wisdom. But knowing one's own mind is not easy, in part because it is not a matter of simply looking inward to find one's proclivities and beliefs; it seems one must look outward to the issues and questions the world presents, and know what one thinks about them. Knowing oneself is in part a matter of knowing one's way around as a thinker, where that is a matter of knowing how to think about issues, when to trust one's judgment and when to withhold it. Fashioning or making oneself into a better (more acute, more sensitive, more judicious) reasoner is something philosophy as a discipline holds out as a promise. In this course, we will take up the first task of becoming better reasoners about a select handful of persistent problems; we will at the same time reflect on what it is that philosophical thinking is, and how it might shape us as thinkers.

**ESF 5A. Education as Self-Fashioning: Thinking Like a Philosopher. 7 Units.**

The Ancient Greek aphorism "Know thyself" is a centerpiece of wisdom. But knowing one's own mind is not easy, in part because it is not a matter of simply looking inward to find one's proclivities and beliefs; it seems one must look outward to the issues and questions the world presents, and know what one thinks about them. In this course, we will take up the first task of becoming better reasoners about a select handful of persistent problems; we will at the same time reflect on what it is that philosophical thinking is, and how it might shape us as thinkers.

**ESF 6. Education as Self-Fashioning: The Wind of Freedom. 7 Units.**

Stanford's unofficial motto, "the wind of freedom blows," engraved in German on the university seal, invites us to ponder freedom in the context of education. What is the relation between freedom and the "liberal" arts? Does studying free your mind? Does free will even exist? If so, how does education help you develop its potential? This course will look at various authors — from antiquity through the 20th century — who have thought about the blessings, burdens, and obligations of human freedom. Beginning with Eve in the Garden of Eden, we will explore how exercising freedom in your personal choices and conduct not only determines your fate as an individual but carries with it a measure of responsibility for the world. We will place special emphasis on the implications of such responsibility in our own time.

**ESF 6A. Education as Self-Fashioning: The Wind of Freedom. 7 Units.**

Stanford's unofficial motto, "the wind of freedom blows," engraved in German on the university seal, invites us to ponder freedom in the context of education. What is the relation between freedom and the "liberal" arts? Does studying free your mind? Does free will even exist? If so, how does education help you develop its potential? This course will look at various authors — from antiquity through the 20th century — who have thought about the blessings, burdens, and obligations of human freedom. Beginning with Eve in the Garden of Eden, we will explore how exercising freedom in your personal choices and conduct not only determines your fate as an individual but carries with it a measure of responsibility for the world. We will place special emphasis on the implications of such responsibility in our own time.

**ESF 7. Education as Self-Fashioning: The Transformation of the Self. 7 Units.**

Socrates famously claimed that the unexamined life is not worth living. Socrates and other ancient thinkers examined themselves and found that they did not match up to their own ideals. They thus set out to transform themselves to achieve a good and happy life. What is the good life? How do we change ourselves to live a good and happy life? How do literature and philosophy help us to understand ourselves and to achieve our social, ethical, and personal ideals? In this class, we examine Socrates and Augustine's lives and ideas. Each struggled to live a good and happy life. In each case, they urge us to transform ourselves into better human beings. The first half of the course focuses on the Athenian Socrates, who was put to death because he rejected traditional Greek ideals and proclaimed a new kind of ethical goodness. The second half focuses on the North African Augustine, an unhappy soul who became a new man by converting to Christianity. These thinkers addressed questions and problems that we still confront today: What do we consider to be a happy life? Do we need to be good and ethical people to live happily? Is there one correct set of values? How do we accommodate other people's beliefs? Is it possible to experience a transformation of the self? How exactly do we change ourselves to achieve our higher ideals?

**ESF 7A. Education as Self-Fashioning: The Transformation of the Self. 7 Units.**

Socrates famously claimed that the unexamined life is not worth living.

Socrates and other ancient thinkers examined themselves and found that they did not match up to their own ideals. They thus set out to transform themselves to achieve a good and happy life. What is the good life? How do we change ourselves to live a good and happy life? How do literature and philosophy help us to understand ourselves and to achieve our social, ethical, and personal ideals? In this class, we examine Socrates and Augustine's lives and ideas. Each struggled to live a good and happy life. In each case, they urge us to transform ourselves into better human beings. The first half of the course focuses on the Athenian Socrates, who was put to death because he rejected traditional Greek ideals and proclaimed a new kind of ethical goodness. The second half focuses on the North African Augustine, an unhappy soul who became a new man by converting to Christianity. These thinkers addressed questions and problems that we still confront today: What do we consider to be a happy life? Do we need to be good and ethical people to live happily? Is there one correct set of values? How do we accommodate other people's beliefs? Is it possible to experience a transformation of the self? How exactly do we change ourselves to achieve our higher ideals?

**ESF 8. Education as Self-Fashioning: Recognizing the Self and Its Possibilities. 7 Units.**

Some philosophers have argued that we have privileged and direct access to our inner selves. If this were true, it would make self-knowledge perhaps the easiest sort of knowledge to obtain. But there are many considerations that mitigate against this view of self-knowledge. Consider, for example, the slave who is so oppressed that he fully accepts his slavery and cannot even imagine the possibility of freedom for himself. Such a slave fails to recognize his own capacity for freedom and autonomous self-governance. Though the slave is perhaps the extreme case, many people, it seems, fail to recognize the full range of possibilities open to them. In this course, we shall examine both some of the ways in which one's capacity for self-recognition may be distorted and undermined and the role of education in enabling a person to fully recognize the self and its possibilities. What constrains the range of possibilities we see as really open to us? Contrary to the Cartesian, we shall argue that full self-recognition is an often a hard-won achievement. And we shall ask how education might function to give us a less constricted and more liberating sense of the self and its possibilities. We will consider such questions through the lens of philosophy, literature and psychology.

**ESF 8A. Education as Self-Fashioning: Recognizing the Self and Its Possibilities. 7 Units.**

Some philosophers have argued that we have privileged and direct access to our inner selves. If this were true, it would make self-knowledge perhaps the easiest sort of knowledge to obtain. But there are many considerations that mitigate against this view of self-knowledge. Consider, for example, the slave who is so oppressed that he fully accepts his slavery and cannot even imagine the possibility of freedom for himself. Such a slave fails to recognize his own capacity for freedom and autonomous self-governance. Though the slave is perhaps the extreme case, many people, it seems, fail to recognize the full range of possibilities open to them. In this course, we shall examine both some of the ways in which one's capacity for self-recognition may be distorted and undermined and the role of education in enabling a person to fully recognize the self and its possibilities. What constrains the range of possibilities we see as really open to us? Contrary to the Cartesian, we shall argue that full self-recognition is an often a hard-won achievement. And we shall ask how education might function to give us a less constricted and more liberating sense of the self and its possibilities. We will consider such questions through the lens of philosophy, literature and psychology.

**ESF 9. Education as Self-Fashioning: Chinese Traditions of the Self. 7 Units.**

In this class we explore thinking about the self and its cultivation that took root and flourished in China. Chinese civilization was centrally concerned with issues of the self, but it developed methods and ideals of cultivation that have no obvious parallel in the European tradition. We will be concerned primarily with two clusters of Chinese thought and expression. First, we will look at major philosophical traditions (Confucianism, Daoism, Buddhism) to see how they structured thinking about education and self-cultivation. The three "schools" of thought staked out different ideals for the self that provided China with range and flexibility in concepts of personhood. Second, we will examine Chinese aesthetic traditions, especially those of qin music, calligraphy and painting, to understand how the arts were used as a platform for self-cultivation and to communicate the artist's essential nature to others. The course also gives attention to the gendering of concepts of the self and to the tradition of martial arts as self-discipline and self-strengthening. Students should emerge from the course with an understanding of how a major civilization located outside Western traditions developed its own answers to these questions of universal human concern.

**ESF 9A. Education as Self-Fashioning: Chinese Traditions of the Self. 7 Units.**

In this class we explore thinking about the self and its cultivation that took root and flourished in China. Chinese civilization was centrally concerned with issues of the self, but it developed methods and ideals of cultivation that have no obvious parallel in the European tradition. We will be concerned primarily with two clusters of Chinese thought and expression. First, we will look at major philosophical traditions (Confucianism, Daoism, Buddhism) to see how they structured thinking about education and self-cultivation. The three "schools" of thought staked out different ideals for the self that provided China with range and flexibility in concepts of personhood. Second, we will examine Chinese aesthetic traditions, especially those of qin music, calligraphy and painting, to understand how the arts were used as a platform for self-cultivation and to communicate the artist's essential nature to others. Students should emerge from the course with an understanding of how a major civilization located outside Western traditions developed its own answers to these questions of universal human concern.

**ESF 50. Education as Self-Fashioning Lecture Series. 1 Unit.**

One-unit lecture series featuring prominent intellectuals lecturing on the nature and meaning of liberal education (associated with Education as Self-Fashioning.) NOTE: students enrolled in the 7-unit ESF course should NOT add this course to their study list; this 1-unit course is only for non-ESF students who wish to enroll in the lecture series only. Lectures will constitute an ongoing, campus-wide conversation about the aims of liberal education that extends the "First Lecture" featured in New Student Orientation.

**Electrical Engineering Courses****EE 10N. How Musical Instruments Work. 3 Units.**

Musical instruments, as well as being fun to play, are excellent examples of science, engineering, and the interplay between the two. How does an instrument make sound? Why does a trumpet sound different from a guitar, a flute, or a bell? We will examine the principles of operation of wind, string, percussion, and electronic instruments hands-on in class. Concepts to be investigated include waves, resonators, understanding and measuring sound spectra and harmonic structure of instruments, engineering design of instruments, the historical development of instruments, and the science and engineering that make them possible. Prerequisites: high school math and physics. Recommended: some experience playing a musical instrument.

**EE 10SC. Mathematics of the Information Age. 2 Units.**

The world may be made of earth, wind, fire, and water, but it runs on information. What is information? How do we measure it, manipulate it, send it, and protect it? Why has everything gone digital and what does this mean? The mathematics of the Information Age is part of your everyday life, from imaging to the Internet. We will discuss the elements of information theory and how information is represented in different ways for different purposes. We will work with the mathematical representation of signals from the classical functions of trigonometry to the spectrum of a general signal. This course will help you understand some of the profound ways mathematics is used to shape and direct these aspects of the modern world. There will be regular assignments, readings, a research project, and a presentation on a topic of your choice that goes beyond the class material.

**EE 14N. Things about Stuff. 3 Units.**

Preference to freshmen. The stories behind disruptive inventions such as the telegraph, telephone, wireless, television, transistor, and chip are as important as the inventions themselves, for they elucidate broadly applicable scientific principles. Focus is on studying consumer devices; projects include building batteries, energy conversion devices and semiconductors from pocket change. Students may propose topics and projects of interest to them. The trajectory of the course is determined in large part by the students themselves.

**EE 15N. The Art and Science of Engineering Design. 3 Units.**

The goal of this seminar is to introduce freshmen to the design process associated with an engineering project. The seminar will consist of a series of lectures. The first part of each lecture will focus on the different design aspects of an engineering project, including formation of the design team, developing a project statement, generating design ideas and specifications, finalizing the design, and reporting the outcome. Students will form teams to follow these procedures in designing a term project of their choice over the quarter. The second part of each lecture will consist of outside speakers, including founders of some of the most exciting companies in Silicon Valley, who will share their experiences about engineering design. On-site visits to Silicon Valley companies to showcase their design processes will also be part of the course. The seminar serves three purposes: (1) it introduces students to the design process of turning an idea into a final design, (2) it presents the different functions that people play in a project, and (3) it gives students a chance to consider what role in a project would be best suited to their interests and skills.

**EE 17N. Engineering the Micro and Nano Worlds: From Chips to Genes. 3 Units.**

Preference to freshmen. The first part is hands-on micro- and nano-fabrication including the Stanford Nanofabrication Facility (SNF) and the Stanford Nanocharacterization Laboratory (SNL) and field trips to local companies and other research centers to illustrate the many applications; these include semiconductor integrated circuits ('chips'), DNA microarrays, microfluidic bio-sensors and microelectromechanical systems (MEMS). The second part is to create, design, propose and execute a project. Most of the grade will be based on the project. By the end of the course you will, of course, be able to read critically a New York Times article on nanotechnology. More importantly you will have experienced the challenge (and fun) of designing, carrying out and presenting your own experimental project. As a result you will be better equipped to choose your major. This course can complement (and differs from) the seminars offered by Profs Philip Wong and Hari Manoharan in that it emphasizes laboratory work and an experimental student-designed project. Prerequisites: high-school physics.

**EE 21N. What is Nanotechnology?. 3 Units.**

Nanotechnology is an often used word and it means many things to different people. Scientists and Engineers have some notion of what nanotechnology is, societal perception may be entirely different. In this course, we start with the classic paper by Richard Feynman ("There's Plenty of Room at the Bottom"), which laid down the challenge to the nanotechnologists. Then we discuss two classic books that offer a glimpse of what nanotechnology is: *Engines of Creation: The Coming Era of Nanotechnology* by Eric Drexler, and *Prey* by Michael Crichton. Drexler's thesis sparked the imagination of what nano machinery might do, whereas Crichton's popular novel channeled the public's attention to this subject by portraying a disastrous scenario of a technology gone astray. We will use the scientific knowledge to analyze the assumptions and predictions of these classic works. We will draw upon the latest research advances to illustrate the possibilities and impossibilities of nanotechnology.

**EE 22N. Medical Imaging Systems. 3 Units.**

Preference to freshmen. The technology of major imaging modalities used for disease diagnosis: x-ray, ultrasound, and magnetic resonance; their history, societal impact, and clinical applications. Field trips to a medical center and an imaging research lab. Term paper and presentation. Prerequisites: high school physics and calculus.

**EE 23N. Imaging: From the Atom to the Universe. 3 Units.**

Preference to freshmen. Forms of imaging including human and animal vision systems, atomic force microscope, microscope, digital camera, holography and three-dimensional imaging, telescope, synthetic aperture radar imaging, nuclear magnetic imaging, sonar and gravitational wave imaging, and the Hubble Space telescope. Physical principles and exposure to real imaging devices and systems.

**EE 27N. Electronics Rocks. 3 Units.**

Electronics pervades our lives, yet we often feel obliged to let a device function as it was intended. This course is about not being intimidated by voiding a warranty and modding some commercial gadget and about being confident enough to build something cool from scratch. To get there, we will study the basics of "how things work" via "dissection and discussion" and discuss how to hack/mod but focus primarily how to scratch build. Students will be mentored and encouraged to work, in teams, to design and develop a substantial project based on embedded microprocessors and custom circuits as needed. Typical projects include (but are not limited to) microcontrollers such as the Arduino, LED's, sensors, wireless connections to the network or a laptop, and software/firmware as needed. Examples include programmable, color-changing wireless juggling balls, a self-healing mesh-networked hide-and-seek game, and a glowing plasma based clock built from surplus Soviet vacuum tubes and a modern microprocessor. Prerequisites: good hand-eye coordination, intelligence, teamwork skills, curiosity and humility.

**EE 29N. Electromagnetic Sensors for the Internet of Things. 3 Units.**

Have you ever wondered how your phone know what way is up? How the traffic light know your car is there? How you can monitor your health with a smart bracelet? If so, you want to learn about electromagnetic sensors. In this course we will the electromagnetic principles that allows us to sense things and communicate with things at a distance. You will learn the fundamentals of electromagnetic sensing and build practical sensors in the laboratory.

**EE 41. Physics of Electrical Engineering. 5 Units.**

How everything from electrostatics to quantum mechanics is used in common high-technology products. Electrostatics are critical in micro-mechanical systems used in many sensors and displays, and Electromagnetic waves are essential in all high-speed communication systems. How to propagate energy on transmission lines, optical fibers, and in free space. Which aspects of modern physics are needed to generate light for the operation of a DVD player or TV. Introduction to semiconductors, solid-state light bulbs, and laser pointers. Hands-on labs to connect physics to everyday experience. Prerequisites: Physics 43. Same as: ENGR 40P

**EE 42. Introductory Engineering Electromagnetics. 5 Units.**

Electricity and magnetism and its essential role in modern electrical engineering devices and systems, such as sensors, displays, DVD players, and optical communication systems. The topics that will be covered include electrostatics, magnetostatics, Maxwell's equations, one-dimensional wave equation, electromagnetic waves, transmission lines, and one-dimensional resonators. Pre-requisites: MATH 42 or MATH 51 or CME 100 or equivalent.

**EE 46. Engineering For Good: Save the World and Have Fun Doing It. 3 Units.**

Projects that provide immediate and positive impact on the world. Focus is on global health by learning from experts in this field. Students work on real-world projects with help from members of NGOs and social entrepreneurial companies as part of the hand-on learning experience. Prerequisite: ENGR 40 or EE 122A or CS 106B or consent of instructor.

**EE 47. Press Play: Interactive Device Design. 3 Units.**

Introduction to the human-centered and technical workings behind interactive devices ranging from cellphones and video controllers to smart cars and appliances. Students build a working MP3 player prototype of their own design, using embedded microcontrollers, digital audio decoders and component sensors, and other electronic hardware. Topics include electronics prototyping, interface prototyping, sensors and actuators, micro-controller development, physical prototyping, and user testing. Prerequisite: CS106A and X or consent of instructor.

**EE 60N. Man versus Nature: Coping with Disasters Using Space Technology. 4 Units.**

Preference to freshman. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliterate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. How spaceborne imaging technology makes it possible to respond quickly and mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. GER:DB-EngrAppSci. Same as: GEOPHYS 60N

**EE 65. Modern Physics for Engineers. 3 Units.**

This course introduces the core ideas of modern physics that enable applications ranging from solar energy and efficient lighting to the modern electronic and optical devices and nanotechnologies that sense, process, store, communicate and display all our information. Though the ideas have broad impact, the course is widely accessible to engineering and science students with only basic linear algebra and calculus through simple ordinary differential equations as mathematics background. Topics include the quantum mechanics of electrons and photons (Schrödinger's equation, atoms, electrons, energy levels and energy bands; absorption and emission of photons; quantum confinement in nanostructures), the statistical mechanics of particles (entropy, the Boltzmann factor, thermal distributions), the thermodynamics of light (thermal radiation, limits to light concentration, spontaneous and stimulated emission), and the physics of information (Maxwell's demon, reversibility, entropy and noise in physics and information theory). Prerequisite: Physics 41. Pre- or co-requisite: Math 53 or CME 102.

**EE 92A. Making and Breaking Things. 1 Unit.**

This course will feature weekly visiting speakers who will guide class members through the hands-on process of assembling or dissection novel interactive devices and products. The course is meant to provide students hands-on experience with component sensing and computing technologies, a working knowledge of different materials and methods used in modern-day prototyping and manufacture, and exposure to people engaged in designing novel devices within the field of interactive device design. Activities will feature a wide and evolving range of domains such as textile sensors, hacking wireless radio, making LED light sculptures, taking apart toys, shape deposition modeling and more.

**EE 100. The Electrical Engineering Profession. 1 Unit.**

Lectures/discussions on topics of importance to the electrical engineering professional. Continuing education, professional societies, intellectual property and patents, ethics, entrepreneurial engineering, and engineering management.

**EE 101A. Circuits I. 4 Units.**

Introduction to circuit modeling and analysis. Topics include creating the models of typical components in electronic circuits and simplifying non-linear models for restricted ranges of operation (small signal model); and using network theory to solve linear and non-linear circuits under static and dynamic operations. Prerequisite: ENGR40 or ENGR40M is useful but not strictly required.

**EE 101B. Circuits II. 4 Units.**

Continuation of EE101A. Introduction to circuit design for modern electronic systems. Modeling and analysis of analog gain stages, frequency response, feedback. Filtering and analog-to-digital conversion. Fundamentals of circuit simulation. Prerequisites: EE101A, EE102A. Recommended: CME102.

**EE 102A. Signal Processing and Linear Systems I. 4 Units.**

Concepts and tools for continuous- and discrete-time signal and system analysis with applications in signal processing, communications, and control. Mathematical representation of signals and systems. Linearity and time invariance. System impulse and step responses. System frequency response. Frequency-domain representations: Fourier series and Fourier transforms. Filtering and signal distortion. Time/frequency sampling and interpolation. Continuous-discrete-time signal conversion and quantization. Discrete-time signal processing. Prerequisite: MATH 53 or CME 102.

**EE 102B. Signal Processing and Linear Systems II. 4 Units.**

Continuation of EE 102A. Concepts and tools for continuous- and discrete-time signal and system analysis with applications in communications, signal processing and control. Analog and digital modulation and demodulation. Sampling, reconstruction, decimation and interpolation. Finite impulse response filter design. Discrete Fourier transforms, applications in convolution and spectral analysis. Laplace transforms, applications in circuits and feedback control. Z transforms, applications in infinite impulse response filter design. Prerequisite: EE 102A.

**EE 103. Introduction to Matrix Methods. 4-5 Units.**

Introduction to applied linear algebra with emphasis on applications. Vectors, norm, and angle; linear independence and orthonormal sets. Matrices, left and right inverses, QR factorization. Least-squares and model fitting, regularization and cross-validation, time-series prediction, and other examples. Constrained least-squares; applications to least-norm reconstruction, optimal control, and portfolio optimization. Newton methods and nonlinear least-squares. Prerequisites: MATH 51 or CME 100.

Same as: CME 103

**EE 107. Embedded Networked Systems. 3 Units.**

Networked embedded systems are often hidden from our view, but they are a key component that enables our modern society. Embedded systems bridge our physical world with powerful digital measurement and control systems. Applications of today's embedded systems range from stabilization in drones authentication in credit cards, and even temperature control in toasters. In this class, students will learn about how to build a networked embedded system from the ground up. The lectures will focus on the key enabling components of embedded systems, including: Clocks, GPIO, Interrupts, Busses, Amplifiers, Regulators, Power supplies, ADC/DAC, DMA, and Storage. The goal of the class is to familiarize the students with these components such that they can build their own embedded systems in devices. Prerequisites: EE 102A or ENGR 40M.

**EE 108. Digital System Design. 4 Units.**

Digital circuit, logic, and system design. Digital representation of information. CMOS logic circuits. Combinational logic design. Logic building blocks, idioms, and structured design. Sequential logic design and timing analysis. Clocks and synchronization. Finite state machines. Microcode control. Digital system design. Control and datapath partitioning. Lab. Undergraduates must enroll for 4 units. \*In Autumn, enrollment preference is given to EE majors. Formerly EE 108A.

**EE 109. Digital Systems Design Lab. 4 Units.**

The design of integrated digital systems encompassing both customized software and hardware. Software/hardware design tradeoffs. Algorithm design for pipelining and parallelism. System latency and throughput tradeoffs. FPGA optimization techniques. Integration with external systems and smart devices. Firmware configuration and embedded system considerations. Enrollment limited to 25; preference to graduating seniors. Prerequisites: 108B, and CS 106B or X.

**EE 114. Fundamentals of Analog Integrated Circuit Design. 3-4 Units.**

Analysis and simulation of elementary transistor stages, current mirrors, supply- and temperature-independent bias, and reference circuits. Overview of integrated circuit technologies, circuit components, component variations and practical design paradigms. Differential circuits, frequency response, and feedback will also be covered. Performance evaluation using computer-aided design tools. Undergraduates must take EE 114 for 4 units. Prerequisite: 101B. GER:DB-EngrAppSci. Same as: EE 214A

**EE 116. Semiconductor Device Physics. 3 Units.**

The fundamental operation of semiconductor devices and overview of applications. The physical principles of semiconductors, both silicon and compound materials; operating principles and device equations for junction devices (diodes, bipolar transistor, photo-detectors). Introduction to quantum effects and band theory of solids. Recommended corequisites: EE 65 and EE 101B. Non-EE majors are encouraged to take ENGR 40 before EE 116.

**EE 118. Introduction to Mechatronics. 4 Units.**

Technologies involved in mechatronics (intelligent electro-mechanical systems), and techniques to apply this technology to mecatronic system design. Topics include: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design, event-driven programming; hardware and DC stepper motors, solenoids, and robust sensing. Large, open-ended team project. Prerequisites: ENGR 40, CS 106, or equivalents. Same as: ME 210

**EE 122A. Analog Circuits Laboratory. 3 Units.**

The course covers practical applications of mixed-signal circuits, including simple amplifiers, filters (passive, op-amp, switched-capacitor and digital-signal-processor-based), oscillators, power supplies, sensors and interface (input/output) circuits. Practical design skills, computer-aided design, and circuit fabrication and debugging are core topics. The design process is learned through proposing, designing, simulating, building, debugging, and demonstrating a substantial and novel team project. Radio frequency and largely digital projects not suitable for EE 122. Prerequisite: basic electronics laboratory experience with solid working knowledge of circuit analysis, Fourier and Laplace methods.

**EE 122B. Introduction to Biomedical Electronics. 3 Units.**

EE122B is a laboratory course covering the design and realization of key components and architectures of modern biomedical electronics systems, their application in clinical and research measurements, and practical matters in their safe reduction to practice. Material in each topic area begins with an overview of the underlying physiology. Details are presented beginning with the molecular, cellular, organ-level origins of the biosignals, followed by the relevant transduction principles, nature of the signals (amplitude, frequency spectrum, etc.), and their processing and clinical use. Specific engineering topics include safety in biomedical instruments, fundamentals of analog/digital conversion and filtering techniques for biosignals, typical transducers (biopotential, electrochemical, temperature, pressure, acoustic, movement), applications (cardiovascular medicine, neurology, pulmonology, etc.) and interfacing circuits. Prerequisite: EE122A or equivalent hands-on mixed-signal design experience and solid working knowledge of EE122A topics (see course description).

**EE 124. Introduction to Neuroelectrical Engineering. 3 Units.**

Fundamental properties of electrical activity in neurons, technology for measuring and altering neural activity, and operating principles of modern neurological and neural prosthetic medical systems. Topics: action potential generation and propagation, neuro-MEMS and measurement systems, experimental design and statistical data analysis, information encoding and decoding, clinical diagnostic systems, and fully-implantable neural prosthetic systems design. Prerequisite: EE 101A and EE 102A.

**EE 133. Analog Communications Design Laboratory. 3-4 Units.**

Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminial EE students. Prerequisite: EE101B. Undergraduate students enroll in EE133 and Graduate students enroll in EE233. Recommended: EE114/214A. Same as: EE 233

**EE 134. Introduction to Photonics. 4 Units.**

Photonics, optical components, and fiber optics. Conceptual and mathematical tools for design and analysis of optical communication, sensor and imaging systems. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors. Class project on confocal microscopy or other method of sensing or analyzing biometric data. Laboratory experiments. Prerequisite: EE 42 and EE 102A or equivalent.

**EE 136. Introduction to Nanophotonics and Nanostructures. 3 Units.**

Electromagnetic and quantum mechanical waves and semiconductors. Confining these waves, and devices employing such confinement. Localization of light and applications: metallic mirrors, photonic crystals, optical waveguides, microresonators, plasmonics. Localization of quantum mechanical waves: quantum wells, wires, and dots. Generation of light in semiconductors: spontaneous and stimulated emission, lasers, and light emitting diodes. Devices incorporating localization of both electromagnetic and quantum mechanical waves such as resonant cavity quantum well lasers and microcavity-based single photon sources. System-level applications such as optical communications, biochemical sensing, and quantum cryptography. Prerequisite: basic familiarity with electromagnetic and quantum mechanical waves and semiconductors at the level of EE 42 and EE 65 or equivalent.

**EE 142. Engineering Electromagnetics. 3 Units.**

Introduction to electromagnetism and Maxwell's equations in static and dynamic regimes. Electrostatics and magnetostatics: Gauss's, Coulomb's, Faraday's, Ampere's, Biot-Savart's laws. Electric and magnetic potentials. Boundary conditions. Electric and magnetic field energy. Electrodynamics: Wave equation; Electromagnetic waves; Phasor form of Maxwell's equations. Solution of the wave equation in 1D free space: Wavelength, wave-vector, forward and backward propagating plane waves. Poynting's theorem. Propagation in lossy media, skin depth. Reflection and refraction at planar boundaries, total internal reflection. Solutions of wave equation for various 1D-3D problems: Electromagnetic resonators, waveguides periodic media, transmission lines. Formerly EE 141. Pre-requisites: Phys 43 or EE 42, CME 100, CME 102 (recommended).

**EE 151. Sustainable Energy Systems. 3 Units.**

Energy demand is expected to grow by 30% by 2025, while at the same time the European Union is demanding a carbon footprint at 1990 levels. We examine energy flow in the US and Europe, and deduce from it a strategy for sustainable growth. Potential solutions include distributed small scale networked energy generation, solar energy, wind and water, as well as nuclear energy. A systems perspective allows optimization. Fundamental concepts will be demonstrated in class through hands-on experiments.

**EE 153. Power Electronics. 3-4 Units.**

Addressing the energy challenges of today and the environmental challenges of the future will require efficient energy conversion techniques. This course will discuss the circuits used to efficiently convert ac power to dc power, dc power from one voltage level to another, and dc power to ac power. The components used in these circuits (e.g., diodes, transistors, capacitors, inductors) will also be covered in detail to highlight their behavior in a practical implementation. A lab will be held with the class where students will obtain hands on experience with power electronic circuits. Formerly EE 292J. Prerequisite: EE 101B. Same as: EE 253

**EE 155. Green Electronics. 4 Units.**

Many green technologies including hybrid cars, photovoltaic energy systems, efficient power supplies, and energy-conserving control systems have at their heart intelligent, high-power electronics. This course examines this technology and uses green-tech examples to teach the engineering principles of modeling, optimization, analysis, simulation, and design. Topics include power converter topologies, periodic steady-state analysis, control, motors and drives, photovoltaic systems, and design of magnetic components. The course involves a hands-on laboratory and a substantial final project. Formerly EE 152. Required: EE101B, EE102A, EE108. Recommended: ENGR40 or EE122A. Same as: EE 255

**EE 168. Introduction to Digital Image Processing. 3-4 Units.**

Computer processing of digital 2-D and 3-D data, combining theoretical material with implementation of computer algorithms. Topics: properties of digital images, design of display systems and algorithms, time and frequency representations, filters, image formation and enhancement, imaging systems, perspective, morphing, and animation applications. Instructional computer lab exercises implement practical algorithms. Final project consists of computer animations incorporating techniques learned in class. Prerequisite: Matlab programming.

**EE 169. Introduction to Bioimaging. 3 Units.**

Bioimaging is important for both clinical medicine, and medical research. This course will provide an introduction to several of the major imaging modalities, using a signal processing perspective. The course will start with an introduction to multi-dimensional Fourier transforms, and image quality metrics. It will then study projection imaging systems (projection X-Ray), backprojection based systems (CT, PET, and SPECT), systems that use beam forming (ultrasound), and systems that use Fourier encoding (MRI). Prerequisites: EE102A, EE102B.

**EE 178. Probabilistic Systems Analysis. 4 Units.**

Introduction to probability and statistics and their role in modeling and analyzing real world phenomena. Events, sample space, and probability. Discrete random variables, probability mass functions, independence and conditional probability, expectation and conditional expectation. Continuous random variables, probability density functions, independence and expectation, derived densities. Transforms, moments, sums of independent random variables. Simple random processes. Limit theorems. Introduction to statistics: significance, estimation and detection. Prerequisites: basic calculus.

**EE 179. Analog and Digital Communication Systems. 3 Units.**

This course covers the fundamental principles underlying the analysis, design and optimization of analog and digital communication systems. Design examples will be taken from the most prevalent communication systems today: cell phones, Wifi, radio and TV broadcasting, satellites, and computer networks. Analysis techniques based on Fourier transforms and energy/power spectral density will be developed. Mathematical models for random variables and random (noise) signals will be presented, which are used to characterize filtering and modulation of random noise. These techniques will then be used to design analog (AM and FM) and digital (PSK and FSK) communication systems and determine their performance over channels with noise and interference. Prerequisite: 102A. Not offered AY 14-15, and students are encouraged to enroll in EE 107 instead.

**EE 180. Digital Systems Architecture. 4 Units.**

The design of processor-based digital systems. Instruction sets, addressing modes, data types. Assembly language programming, low-level data structures, introduction to operating systems and compilers. Processor microarchitecture, microprogramming, pipelining. Memory systems and caches. Input/output, interrupts, buses and DMA. System design implementation alternatives, software/hardware tradeoffs. Labs involve the design of processor subsystems and processor-based embedded systems. Formerly EE 108B. Prerequisite: CS107 (required) and EE108 (recommended but not required).

**EE 190. Special Studies or Projects in Electrical Engineering. 1-15 Unit.**

Independent work under the direction of a faculty member. Individual or team activities involve lab experimentation, design of devices or systems, or directed reading. Course may be repeated for credit.

**EE 191. Special Studies and Reports in Electrical Engineering. 1-15 Unit.**

Independent work under the direction of a faculty member given for a letter grade only. If a letter grade given on the basis of required written report or examination is not appropriate, enroll in 190. Course may be repeated for credit.

**EE 191A. Special Studies and Reports in Electrical Engineering. 1 Unit.**

EE191A is part of the Accelerated Calculus for Engineers program. Independent work under the direction of a faculty member given for a letter grade only. EE 191A counts as a Math one unit seminar course: it is this unit that constitutes the ACE program.

**EE 191W. Special Studies and Reports in Electrical Engineering. 3-10 Units.**

WIM-version of EE 191. For EE students using special studies (e.g., honors project, independent research project) to satisfy their writing-in-major requirement. A written report that has gone through revision with an advisor is required. An advisor from the Writing Center is recommended. Same as: WIM

**EE 192X. Stanford's Little Box Challenge. 1-15 Unit.**

IGoogle has announced the "Littlebox" competition to build the smallest possible 2kW inverter. This challenge provides an ideal opportunity to provide a number of exciting educational and design opportunities for engineering students. The first few class meetings will be lecture format describing the competition and the work that has been done to date: Mechanical modeling, Matlab model, Buck and unfolding bridge designs. In parallel, students will be matched in teams for studies that need to be done: DC-Link implementation, QR-topology, Multi-level Approaches, Control implementation, GaN implementation, SiC investigations, Capacitor studies, Inductor studies, Thermal Design, EMI study, Etc. The problems span many topics: embedded and control systems design, power electronics, digital and analog design, programming in C & FPGAs, mechanical and thermal design and testing. We welcome motivated undergraduate and graduate students with a variety of backgrounds. The course may be repeat for credit. Same as: EE 292X

**EE 202. Electrical Engineering in Biology and Medicine. 3 Units.**

Open to all. Primarily biological in nature, introduction to the physiological and anatomic aspects of medical instrumentation. Areas include patient monitoring, imaging, medical transducers, the unique aspects of medical electronic systems, the socio-economic impact of technology on medical care, and the constraints unique to medicine. Prerequisite: familiarity with circuit instrumentation techniques as in 101B.

**EE 203. The Entrepreneurial Engineer. 1 Unit.**

Seminar. For prospective entrepreneurs with an engineering background. Contributions made to the business world by engineering graduates. Speakers include Stanford and other engineering and M.B.A. graduates who have founded large and small companies in nearby communities. Contributions from EE faculty and other departments including Law, Business, and MS&E. May be repeated for credit.

**EE 204. Business Management for Electrical Engineers and Computer Scientists. 3 Units.**

For graduate students with little or no business experience. The class is designed to provide students with the opportunity to learn about the fundamental activities of businesses: Identifying new markets, developing successful products, marketing and selling, building and managing teams, and measuring results. Learning about these activities is accomplished through case studies. The cases are chosen from the technology sector including consumer electronics, semiconductor, software, consulting services, and e-commerce. Understanding the activities of business will provide engineers, scientists, and educators with a broader perspective on how to contribute to their organizations and achieve their personal career. Prerequisite: graduate standing.

**EE 204S. Business Management for Electrical Engineers and Computer Scientists. 3 Units.**

For SCPD students including NDOs; see EE204 for description.

**EE 212. Integrated Circuit Fabrication Processes. 3 Units.**

For students interested in the physical bases and practical methods of silicon VLSI chip fabrication, or the impact of technology on device and circuit design, or intending to pursue doctoral research involving the use of Stanford's Nanofabrication laboratory. Process simulators illustrate concepts. Topics: principles of integrated circuit fabrication processes, physical and chemical models for crystal growth, oxidation, ion implantation, etching, deposition, lithography, and back-end processing. Required for 410.

**EE 213. Digital MOS Integrated Circuits. 3 Units.**

Looks a little more deeply at how digital circuits operate, what makes a gate digital, and how to "cheat" to improve performance or power. To aid this analysis we create a number of different models for MOS transistors and choose the simplest one that can explain our the circuit's operation, using both hand and computer analysis. We explore static, dynamic, pulse-mode, and current mode logic, and show how they are used in SRAM design. Topics include sizing for min delay, noise and noise margins, power dissipation. The class uses memory design (SRAM) as a motivating example. DRAM and EEPROM design issues are also covered. Formerly EE 313. Prerequisites: EE 101B, EE 108. Recommended: EE 271.

**EE 214A. Fundamentals of Analog Integrated Circuit Design. 3-4 Units.**

Analysis and simulation of elementary transistor stages, current mirrors, supply- and temperature-independent bias, and reference circuits. Overview of integrated circuit technologies, circuit components, component variations and practical design paradigms. Differential circuits, frequency response, and feedback will also be covered. Performance evaluation using computer-aided design tools. Undergraduates must take EE 114 for 4 units. Prerequisite: 101B. GER:DB-EngrAppSci. Same as: EE 114

**EE 214B. Advanced Analog Integrated Circuit Design. 3 Units.**

Analysis and design of analog integrated circuits in advanced MOS and bipolar technologies. Device operation and compact modeling in support of circuit simulations needed for design. Emphasis on quantitative evaluations of performance using hand calculations and circuit simulations; intuitive approaches to design. Analytical and approximate treatments of noise and distortion; analysis and design of feedback circuits. Design of archetypal analog blocks for networking and communications such as broadband gain stages and transimpedance amplifiers. Prerequisites: EE114/214A.

**EE 216. Principles and Models of Semiconductor Devices. 3 Units.**

Carrier generation, transport, recombination, and storage in semiconductors. Physical principles of operation of the p-n junction, heterojunction, metal semiconductor contact, bipolar junction transistor, MOS capacitor, MOS and junction field-effect transistors, and related optoelectronic devices such as CCDs, solar cells, LEDs, and detectors. First-order device models that reflect physical principles and are useful for integrated-circuit analysis and design. Prerequisite: 116 or equivalent.

**EE 222. Applied Quantum Mechanics I. 3 Units.**

Emphasis is on applications in modern devices and systems. Topics include: Schrödinger's equation, eigenfunctions and eigenvalues, solutions of simple problems including quantum wells and tunneling, quantum harmonic oscillator, coherent states, operator approach to quantum mechanics, Dirac notation, angular momentum, hydrogen atom, calculation techniques including matrix diagonalization, perturbation theory, variational method, and time-dependent perturbation theory with applications to optical absorption, nonlinear optical coefficients, and Fermi's golden rule. Prerequisites: MATH 52 and 53, PHYSICS 65 (or PHYSICS 43 and 45).

**EE 223. Applied Quantum Mechanics II. 3 Units.**

Continuation of 222, including more advanced topics: quantum mechanics of crystalline materials, methods for one-dimensional problems, spin, systems of identical particles (bosons and fermions), introductory quantum optics (electromagnetic field quantization, coherent states), fermion annihilation and creation operators, interaction of different kinds of particles (spontaneous emission, optical absorption, and stimulated emission). Quantum information and interpretation of quantum mechanics. Other topics in electronics, optoelectronics, optics, and quantum information science. Prerequisite: 222.

**EE 225. Biochips and Medical Imaging. 3 Units.**

The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-therapies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies.

Same as: MATSCI 382, SBIO 225

**EE 228. Basic Physics for Solid State Electronics. 3 Units.**

Topics: energy band theory of solids, energy bandgap engineering, classical kinetic theory, statistical mechanics, and equilibrium and non-equilibrium semiconductor statistics. Prerequisite: course in modern physics.

**EE 230. Biophotonics: Light in Biology. 3 Units.**

This course will provide an introduction to the use of optics in biology, primarily focusing on microscopy from an engineering perspective (i.e., the focus of the course is more on technology than biology). Course material will be interspersed with labs to provide hands-on experience with common techniques in modern microscopy (e.g., brightfield, fluorescence, confocal and phase contrast microscopy). Background in college physics strongly recommended. Programming experience with Matlab required.

**EE 233. Analog Communications Design Laboratory. 3-4 Units.**

Design, testing, and applications. Amplitude modulation (AM) using multiplier circuits. Frequency modulation (FM) based on discrete oscillator and integrated modulator circuits such as voltage-controlled oscillators (VCOs). Phased-lock loop (PLL) techniques, characterization of key parameters, and their applications. Practical aspects of circuit implementations. Labs involve building and characterization of AM and FM modulation/demodulation circuits and subsystems. Enrollment limited to 30 undergraduates and coterminial EE students. Prerequisite: EE101B. Undergraduate students enroll in EE133 and Graduate students enroll in EE233. Recommended: EE114/214A.

Same as: EE 133

**EE 234. Photonics Laboratory. 3 Units.**

Photonics and fiber optics with a focus on communication and sensing. Experimental characterization of semiconductor lasers, optical fibers, photodetectors, receiver circuitry, fiber optic links, optical amplifiers, and optical sensors and photonic crystals. Prerequisite: EE 242 or equivalent. Recommended: EE 236A.

**EE 236A. Modern Optics. 3 Units.**

Geometrical optics, aberrations, optical instruments, radiometry. Ray matrices and Gaussian beams. Wave nature of light. Plane waves: at interfaces, in media with varying refractive index. Diffraction and Fourier optics. Interference, single-beam interferometers (Fabry-Perot), multiple-beam interferometers (Michelson, Mach-Zehnder). Polarization, Jones and Stokes calculi. Formerly EE 268. Prerequisites: EE 142 or familiarity with electromagnetism and plane waves.

**EE 236AL. MODERN OPTICS - LABORATORY. 1 Unit.**

The Laboratory Course allows students to work hands-on with optical equipment to conduct five experiments that compliment the lecture course. Examples are Gaussian Beams and Resonators, Interferometers, and Diffraction.

**EE 236B. Guided Waves. 3 Units.**

Maxwell's equations, constitutive relations. Kramers-Kronig relations. Modes in waveguides: slab, rectangular, circular. Photonic crystals, surface plasmon modes. General properties of waveguide modes: orthogonality, phase and group indices, group velocity dispersion. Chirped pulse propagation in dispersive media and its connection to Gaussian beam propagation. Time lens. Waveguide technologies: glass, silicon, III-V semiconductor, metallic. Waveguide devices: fibers, lasers, modulators, arrayed waveguide gratings. Scattering matrix description of passive optical devices, and constraints from energy conservation, time-reversal symmetry and reciprocity. Mode coupling, directional couplers, distributed-feedback structures. Resonators from scattering matrix and input-output perspective. Micro-ring resonators. Formerly EE 235. Prerequisites: EE 236A and EE 242 or familiarity with differential form of Maxwell's equations.

**EE 236C. Lasers. 3 Units.**

Atomic systems, spontaneous emission, stimulated emission, amplification. Three- and four-level systems, rate equations, pumping schemes. Laser principles, conditions for steady-state oscillation. Transverse and longitudinal mode control and tuning. Exemplary laser systems: gas (HeNe), solid state (Nd:YAG, Ti:sapphire) and semiconductors. Elements of laser dynamics and noise. Formerly EE231. Prerequisites: EE 236B and familiarity with modern physics and semiconductor physics. Recommended: EE 216 and EE 223 (either may be taken concurrently).

**EE 237. Solar Energy Conversion. 3 Units.**

Basics of solar energy conversion in photovoltaic devices. Solar cell device physics: electrical and optical. Crystalline silicon, thin film and multi-junction solar cells. Solar system issues including module assembly, inverters, and micro-inverters. Concentrated solar power. Flip classroom model is used supplementing classroom lectures with short videos. Guest speakers include distinguished engineers, entrepreneurs and venture capitalists actively engaged in solar industry. Recommended: EE116, EE216.

**EE 242. Electromagnetic Waves. 3 Units.**

Continuation of 142. Maxwell's equations. Plane waves in lossless and lossy media. Skin effect. Flow of electromagnetic power (Poynting's theorem). Reflection and refraction of waves at planar boundaries. Snell's law and total internal reflection. Reflection and refraction from lossy media. Guided waves. Parallel-plate and dielectric-slab waveguides. Hollow wave-guides, cavity resonators, microstrip waveguides, optical fibers. Interaction of fields with matter and particles. Antennas and radiation of electromagnetic energy. Prerequisites: EE 142 or PHYSICS 120.

**EE 243. Semiconductor Optoelectronic Devices. 3 Units.**

Semiconductor physics and optical processes in semiconductors. Operating principles and practical device features of semiconductor optoelectronic materials and heterostructures. Devices include: optical detectors (p-i-n, avalanche, and MSM); light emitting diodes; electroabsorptive modulators (Franz-Keldysh and QCSE), electrorefractive (directional couplers, Mach-Zehnder), switches (SEEDS); and lasers (waveguide and vertical cavity surface emitting). Prerequisites: semiconductor devices and solid state physics such as EE 216 or equivalent.

**EE 247. Introduction to Optical Fiber Communications. 3 Units.**

Fibers: single- and multi-mode, attenuation, modal dispersion, group-velocity dispersion, polarization-mode dispersion. Nonlinear effects in fibers: Raman, Brillouin, Kerr. Self- and cross-phase modulation, four-wave mixing. Sources: light-emitting diodes, laser diodes, transverse and longitudinal mode control, modulation, chirp, linewidth, intensity noise. Modulators: electro-optic, electro-absorption. Photodiodes: p-i-n, avalanche, responsivity, capacitance, transit time. Receivers: high-impedance, transimpedance, bandwidth, noise. Digital intensity modulation formats: non-return-to-zero, return-to-zero. Receiver performance: Q factor, bit-error ratio, sensitivity, quantum limit. Sensitivity degradations: extinction ratio, intensity noise, jitter, dispersion. Wavelength-division multiplexing. System architectures: local-area, access, metropolitan-area, long-haul. Prerequisites: EE 102A and EE 142.

**EE 251. High-Frequency Circuit Design Laboratory. 3 Units.**

Students will study the theory of operation of instruments such as the time-domain reflectometer, sampling oscilloscope and vector network analyzer. They will build on that theoretical foundation by designing, constructing and characterizing numerous wireless building blocks in the upper-UHF range (e.g., up to about 500MHz), in a running series of laboratory exercises that conclude in a final project. Examples include impedance-matching and coupling structures, filters, narrowband and broadband amplifiers, mixers/modulators, and voltage-controlled oscillators. Prerequisite: EE 251 or EE 314.

**EE 252. Antennas. 3 Units.**

This course aims to cover the theory, simulation, and hands-on experiment in antenna design. Topics include: basic parameters to describe the performance and characteristics of an antenna, link budget analyses, solving the fields from a Hertzian dipole, duality, equivalence principle, reciprocity, linear wire antenna, circular loop antenna, antenna array, slot and patch antennas, helical antennas, wideband antennas, size reduction techniques, wideband small antennas, and circularly polarized (CP) small antennas. Students will learn to use a commercial electromagnetic stimulator in lab sessions. A final project is designed to solve a research antenna design problem in biomedical area or wireless communications. Prerequisite: EE 142 or Physics 120 or equivalent. Enrollment capacity limited to 25 students.

**EE 253. Power Electronics. 3-4 Units.**

Addressing the energy challenges of today and the environmental challenges of the future will require efficient energy conversion techniques. This course will discuss the circuits used to efficiently convert ac power to dc power, dc power from one voltage level to another, and dc power to ac power. The components used in these circuits (e.g., diodes, transistors, capacitors, inductors) will also be covered in detail to highlight their behavior in a practical implementation. A lab will be held with the class where students will obtain hands on experience with power electronic circuits. Formerly EE 292J. Prerequisite: EE 101B. Same as: EE 153

**EE 254. Advanced Topics in Power Electronics. 3 Units.**

In this course, we will study the practical issues related to the practical design of power electronic converters. We will also explore the trade-offs involved in selecting among the different circuits used to convert ac to dc, dc to ac and back to dc over a wide range of power levels suitable for different applications. In Advanced Topics in Power Electronic, as a multidisciplinary field, we will discuss power electronics circuits, extraction of transfer functions in Continuous and discontinuous conduction mode, voltage and current control of power converters, design of input/output filters to meet Electro Magnetic Interference specifications, layout of power electronics circuits and put this knowledge in a very practical context. Prerequisites: EE 153/253.

**EE 255. Green Electronics. 4 Units.**

Many green technologies including hybrid cars, photovoltaic energy systems, efficient power supplies, and energy-conserving control systems have at their heart intelligent, high-power electronics. This course examines this technology and uses green-tech examples to teach the engineering principles of modeling, optimization, analysis, simulation, and design. Topics include power converter topologies, periodic steady-state analysis, control, motors and drives, photovoltaic systems, and design of magnetic components. The course involves a hands-on laboratory and a substantial final project. Formerly EE 152. Required: EE101B, EE102A, EE108. Recommended: ENGR40 or EE122A. Same as: EE 155

**EE 256. Numerical Electromagnetics. 3 Units.**

Principles and applications of numerical techniques for solving practical electromagnetics problems. Finite-difference time-domain (FDTD) method and finite-difference frequency-domain (FDFD) method for solving 2D and 3D Maxwell's equations. Numerical analysis of stability, dispersion, and dissipation. Perfectly matched layer (PML) absorbing boundaries. Total-field/scattered-field (TF/SF) method. Interaction of electromagnetic waves with dispersive and anisotropic media. Homework assignments require programming and the use of MATLAB or other equivalent tools. Prerequisite: 242 or equivalent.

**EE 257. Applied Optimization Laboratory (Geophys 258). 3-4 Units.**

Application of optimization and estimation methods to the analysis and modeling of large observational data sets. Laboratory exercises using inverse theory and applied linear algebra to solve problems of indirect and noisy measurements. Emphasis on practical solution of scientific and engineering problems, especially those requiring large amounts of data, on digital computers using scientific languages. Also addresses advantages of large-scale computing, including hardware architectures, input/output and data bus bandwidth, programming efficiency, parallel programming techniques. Student projects involve analyzing real data by implementing observational systems such as tomography for medical and Earth observation uses, radar and matched filtering, multispectral/multitemporal studies, or migration processing. Prerequisites: Programming with high level language. Recommended: EE261, EE263, EE178, ME300 or equivalent. Same as: GEOPHYS 258

**EE 261. The Fourier Transform and Its Applications. 3 Units.**

The Fourier transform as a tool for solving physical problems. Fourier series, the Fourier transform of continuous and discrete signals and its properties. The Dirac delta, distributions, and generalized transforms. Convolutions and correlations and applications; probability distributions, sampling theory, filters, and analysis of linear systems. The discrete Fourier transform and the FFT algorithm. Multidimensional Fourier transform and use in imaging. Further applications to optics, crystallography. Emphasis is on relating the theoretical principles to solving practical engineering and science problems. Prerequisites: Math through ODEs, basic linear algebra, Comfort with sums and discrete signals, Fourier series at the level of 102A.

**EE 262. Two-Dimensional Imaging. 3 Units.**

Time and frequency representations, two-dimensional auto- and cross-correlation, Fourier spectra, diffraction and antennas, coordinate systems and the Hankel and Abel transforms, line integrals, impulses and sampling, restoration in the presence of noise, reconstruction and tomography, imaging radar. Tomographic reconstruction using projection-slice and layergarm methods. Students create software to form images using these techniques with actual data. Final project consists of design and simulation of an advanced imaging system. Prerequisite: EE261. Recommended: EE278, EE279.

**EE 263. Introduction to Linear Dynamical Systems. 3 Units.**

Applied linear algebra and linear dynamical systems with applications to circuits, signal processing, communications, and control systems. Topics: least-squares approximations of over-determined equations, and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm, and singular-value decomposition. Eigenvalues, left and right eigenvectors, with dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input/multi-output systems, impulse and step matrices; convolution and transfer-matrix descriptions. Control, reachability, and state transfer; observability and least-squares state estimation. Prerequisites: linear algebra and matrices as in MATH104; differential equations and Laplace transforms as in EE102B. Same as: CME 263

**EE 264. Digital Signal Processing. 3-4 Units.**

This is a course on digital signal processing techniques and their applications. Topics include: review of DSP fundamentals; discrete-time random signals; sampling and multi-rate systems; oversampling and quantization in A-to-D conversion; properties of LTI systems; quantization in fixed-point implementations of filters; digital filter design; discrete Fourier Transform and FFT; spectrum analysis using the DFT; and parametric signal modeling. The course will also discuss applications of DSP in areas such as speech and audio processing, autonomous vehicles, and software radio. An optional (1 extra credit hour) lab will provide a hands-on opportunity to explore the application of DSP theory to practical real-time applications. For more information, see the course web page at ee264.stanford.edu. Prerequisite: EE102A and EE102B or equivalent.

**EE 266. Stochastic Control. 3 Units.**

Introduction to stochastic control, with applications taken from a variety of areas including supply-chain optimization, advertising, finance, dynamic resource allocation, caching, and traditional automatic control. Markov decision processes, optimal policy with full state information for finite-horizon case, infinite-horizon discounted, and average stage cost problems. Bellman value function, value iteration, and policy iteration. Approximate dynamic programming. Linear quadratic stochastic control. Formerly EE365. Prerequisites: EE 263, EE 178 or equivalent. Same as: MS&E 251

**EE 267. Virtual Reality. 3 Units.**

OpenGL, real-time rendering, 3D display systems, display optics & electronics, IMUs and sensors, tracking, haptics, rendering pipeline, multimodel human perception and depth perception, stereo rendering, presence. Emphasis is on VR technology. Hands-on programming assignments. Final project: create your own virtual environment. Prerequisites: strong programming skills. Helpful: basic computer graphics / OpenGL.

**EE 271. Introduction to VLSI Systems. 3 Units.**

Provides a quick introduction to MOS transistors and IC fabrication and then creates abstractions to allow you to create and reason about complex digital systems. It uses a switch resistor model of a transistor, uses it to model gates, and then shows how gates and physical layout can be synthesized from Verilog or SystemVerilog descriptions. Most of the class will be spent on providing techniques to create designs that can be validated, are low power, provide good performance, and can be completed in finite time. Prerequisites: 101A, 108A and 108B; familiarity with transistors, logic design, Verilog and digital system organization.

**EE 272. Design Projects in VLSI Systems. 3-4 Units.**

An introduction to mixed signal design. Working in teams you will create a small mixed-signal VLSI design using a modern design flow and CAD tools. The project involves writing a Verilog model of the chip, creating a testing/debug strategy for your chip, wrapping custom layout to fit into a std cell system, using synthesis and place and route tools to create the layout of your chip, and understanding all the weird stuff you need to do to tape-out a chip. Useful for anyone who will build a chip in their Ph.D. Pre-requisites: EE271 and experience in digital/analog circuit design.

**EE 273. Digital Systems Engineering. 3 Units.**

Electrical issues in the design of high-performance digital systems, including signaling, timing, synchronization, noise, and power distribution. High-speed signaling methods; noise in digital systems, its effect on signaling, and methods for noise reduction; timing conventions; timing noise (skew and jitter), its effect on systems, and methods for mitigating timing noise; synchronization issues and synchronizer design; clock and power distribution problems and techniques; impact of electrical issues on system architecture and design. Prerequisites: EE101A and EE108A. Recommended: EE114/214A.

**EE 278. Introduction to Statistical Signal Processing. 3 Units.**

Review of basic probability and random variables. Random vectors and processes; convergence and limit theorems; IID, independent increment, Markov, and Gaussian random processes; stationary random processes; autocorrelation and power spectral density; mean square error estimation, detection, and linear estimation. Formerly EE 278B. Prerequisites: EE178 and linear systems and Fourier transforms at the level of EE102A,B or EE261.

**EE 279. Introduction to Digital Communication. 3 Units.**

Digital communication is a rather unique field in engineering in which theoretical ideas have had an extraordinary impact on the design of actual systems. The course provides a basic understanding of the analysis and design of digital communication systems, building on various ideas from probability theory, stochastic processes, linear algebra and Fourier analysis. Topics include: detection and probability of error for binary and M-ary signals (PAM, QAM, PSK), receiver design and sufficient statistics, controlling the spectrum and the Nyquist criterion, bandpass communication and up/down conversion, design trade-offs: rate, bandwidth, power and error probability, coding and decoding (block codes, convolutional coding and Viterbi decoding). Prerequisites: 179 or 261, and 178 or 278.

**EE 282. Computer Systems Architecture. 3 Units.**

Course focuses on how to build modern computing systems, namely notebooks, smartphones, and data centers, covering primarily their hardware architecture and certain system software aspects. For each system class, we cover the system architecture, processor technology, advanced memory hierarchy and I/O organization, power and energy management, and reliability. We will also cover topics such as interactions with system software, virtualization, solid state storage, and security. The programming assignments allow students to explore performance/energy tradeoffs when using heterogeneous hardware resources on smartphone devices. Prerequisite: EE108B. Recommended: CS 140.

**EE 284. Introduction to Computer Networks. 3 Units.**

Structure and components of computer networks; functions and services; packet switching; layered architectures; OSI reference model; physical layer; data link layer; error control; window flow control; media access control protocols used in local area networks (Ethernet, Token Ring, FDDI) and satellite networks; network layer (datagram service, virtual circuit service, routing, congestion control, Internet Protocol); transport layer (UDP, TCP); application layer.

**EE 290A. Curricular Practical Training for Electrical Engineers. 1 Unit.**

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent.

**EE 290B. Curricular Practical Training for Electrical Engineers. 1 Unit.**

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent.

**EE 290C. Curricular Practical Training for Electrical Engineers. 1 Unit.**

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent.

**EE 290D. Curricular Practical Training for Electrical Engineers. 1 Unit.**

For EE majors who need work experience as part of their program of study. Final report required. Prerequisites: for 290B, EE MS and PhD students who have received a Satisfactory ("S") grade in EE290A; for 290C, EE PhD degree candidacy and an "S" grade in EE 290B; for 290D, EE PhD degree candidacy, an "S" grade in EE 290C and instructor consent.

**EE 292B. Micro and Nanoscale Biosensing for Molecular Diagnostics. 3 Units.**

The course covers state-of-the-art and emerging bio-sensors, biochips, microfluidics, which will be studied in the context of molecular diagnostics. Students will briefly learn the relevant biology, biochemistry, and molecular biology pertinent to molecular diagnostics. Students will also become equipped with a thorough understanding of the interfaces between electronics, fluidics, and molecular biology. Topics will include microfluidics and mass transfer limits, electrode-electrolyte interfaces, electrochemical noise processes, biosensor system level characterization, determination of performance parameters such as throughput, detection limit, and cost, integration of sensor with microfluidics, and electronic readout circuitry architectures. Emphasis will be placed on in-depth quantitative design of biomolecular sensing platforms.

**EE 292C. Chemical Vapor Deposition and Epitaxy for Integrated Circuits and Nanostructures. 1 Unit.**

Fundamental aspects of CVD are initially considered, first focusing on processes occurring in the gas phase and then on those occurring on the surface. Qualitative understanding is emphasized, with minimal use of equations. Adding energy both thermally and by using a plasma is discussed; atomic-layer deposition is briefly considered. Examples of CVD equipment are examined. The second portion of the tutorial examines layers deposited by CVD. The focus is on group IV semiconductors, especially epitaxial and heteroepitaxial deposition, in which the crystal structure of the depositing layer is related to that of the substrate. Polycrystalline silicon and the IC interconnect system are then discussed. Finally, the use of high-density plasmas for rapid gap filling is contrasted with alternative CVD dielectric deposition processes.

**EE 292G. NanoBioTechnology, Nanoscience and Sensing. 3 Units.**

Nanobiotechnology, which may be called a "Fundamental Technology of the 21st Century", is a new frontier for Biology with extremely important applications in medical diagnostics, therapeutics and drug discovery based on the development of new materials and sensors. The goal of this course is to provide an insight into the fundamentals of nanotechnology in biological and biomedical research by providing an overview of current topics in Nanoscience and Engineering and their modern day applications in biotechnology. This course will provide a bridge for students from a non-biology background at all levels to the world of Nanobiotechnology. Basic biological molecules and the importance of their detection as well as a thorough understanding of the interfaces between electronics, fluidics, and molecular biology are discussed. Focus is also provided on solid-state materials, Nanostructures and Nano devices and systems as related to biological applications especially detection and sensing, covering top-down MEMS fabrication and integration of sensors with microfluidics to bottom-up biochemistry, applications of Nanostructures and Nanobiotechnology in drug discovery, delivery, and controlled release and Nanobiotechnological applications in environment and food detection and mitigation.

**EE 292H. Engineering, Entrepreneurship & Climate Change. 1 Unit.**

The purpose of this seminar series course is to help students and professionals develop the tools to apply the engineering and entrepreneurial mindset to problems that stem from climate change, in order to consider and evaluate possible stabilizing, remedial and adaptive approaches. This course is not a crash course on climate change or policy. Instead we will focus on learning about and discussing the climate problems that seem most tractable to these approaches. Each week Dr. Field and/or a guest speaker will lead a short warm-up discussion/activity and then deliver a talk in his/her area of expertise. We'll wrap up with small-group and full-class discussions of related challenges/opportunities and possible engineering-oriented solutions. Class members are asked to do background reading before each class, to submit a question before each lecture, and to do in-class brainstorming. May be repeated for credit.

**EE 292I. Insanely Great Products: How do they get built?. 1 Unit.**

Great products emerge from a sometimes conflict-laden process of collaboration between different functions within companies. This Seminar seeks to demystify this process via case-studies of successful products and companies. Engineering management and businesspeople will share their experiences in discussion with students. Previous companies profiled: Apple, Intel, Facebook, and Genentech -- to name a few. Previous guests include: Jon Rubinstein (NeXT, Apple, Palm), Diane Greene (VMware), and Ted Hoff (Intel). Pre-requisites: None.

**EE 292K. Intelligent Energy Projects. 3 Units.**

Energy systems must have the intelligence to cope with rapid changes in energy supply, demand, distribution, and storage. This course is a project course focusing on a selected areas of intelligent energy systems: Demand Response, Optimal Power Flow and Locational Marginal Pricing, energy systems monitoring, control analysis of distribution systems, and associated system architecture. Prerequisites: Consent of instructor. Basic probability (EE 278), optimization (EE 364A), Matlab and C++ programming. Experience with cvx a plus.

**EE 292L. Nanomanufacturing. 3 Units.**

Fundamentals of nanomanufacturing technology and applications. Topics include recent developments in process technology, lithography and patterning. Technology for FinFET transistors, NAND flash and 3D chips. Manufacturing of LEDs, thin film and crystalline solar cells. Flip classroom model is used supplementing classroom lectures with short videos. Guest speakers include distinguished engineers, entrepreneurs and venture capitalists actively engaged in nanomanufacturing. Prerequisite: background in device physics and process technology. Recommended: EE116, EE216, EE212.

**EE 292M. Parallel Processors Beyond Multi-Core Processing. 2 Units.**

The current parallel computing research emphasizes multi-cores, but there are alternative array processors with significant potential. This hands-on seminar focuses on SIMD (Single-Instruction, Multiple-Data) massively parallel processors, with weekly programming assignments. Topics: Flynn's Taxonomy, parallel architectures, the K-SIMD simulator, principles of SIMD programming, parallel sorting with sorting networks, string comparison with dynamic programming (edit distance, Smith-Waterman), arbitrary-precision operations with fixed-point numbers, reductions, vector and matrix multiplication, asynchronous algorithms on SIMD ("SIMD Phase Programming Model"), Mandelbrot set, analysis of parallel performance. Prerequisites: EE108B and EE282. Recommended: CS140.

**EE 292P. Power Management Integrated Circuits. 3 Units.**

Analysis of power management architectures and circuits in CMOS VLSI technology. Circuit-level design of integrated linear voltage regulators and highly-efficient switching power converters. Overview of significant topics: high-frequency converters, switched capacitor converters, battery chargers, digital control and layout of power converters. Prerequisite: EE214A or equivalent.

**EE 292T. SmartGrids and Advanced Power Systems Seminar. 1-2 Unit.**

A series of seminar and lectures focused on power engineering. Renowned researchers from universities and national labs will deliver bi-weekly seminars on the state of the art of power system engineering. Seminar topics may include: power system analysis and simulation, control and stability, new market mechanisms, computation challenges and solutions, detection and estimation, and the role of communications in the grid. The instructors will cover relevant background materials in the in-between weeks. The seminars are planned to continue throughout the next academic year, so the course may be repeated for credit. Same as: CEE 272T

**EE 292X. Stanford's Little Box Challenge. 1-15 Unit.**

IGoogle has announced the "Littlebox" competition to build the smallest possible 2kW inverter. This challenge provides an ideal opportunity to provide a number of exciting educational and design opportunities for engineering students. The first few class meetings will be lecture format describing the competition and the work that has been done to date: Mechanical modeling, Matlab model, Buck and unfolding bridge designs. In parallel, students will be matched in teams for studies that need to be done: DC-Link implementation, QR-topology, Multi-level Approaches, Control implementation, GaN implementation, SiC investigations, Capacitor studies, Inductor studies, Thermal Design, EMI study, Etc. The problems span many topics: embedded and control systems design, power electronics, digital and analog design, programming in C & FPGAs, mechanical and thermal design and testing. We welcome motivated undergraduate and graduate students with a variety of backgrounds. The course may be repeat for credit. Same as: EE 192X

**EE 293A. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution. 3-4 Units.**

Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. Undergraduates register in 156 for 4 units; graduates register in 256 for 3 units. Same as: ENERGY 293A, MATSCI 156, MATSCI 256

**EE 293B. Fundamentals of Energy Processes. 3 Units.**

For seniors and graduate students. Covers scientific and engineering fundamentals of renewable energy processes involving heat. Thermodynamics, heat engines, solar thermal, geothermal, biomass. Recommended: MATH 19-21, or Math 41,42; PHYSICS 41, 43, 45. Same as: ENERGY 293B

**EE 300. Master's Thesis and Thesis Research. 1-15 Unit.**

Independent work under the direction of a department faculty. Written thesis required for final letter grade. The continuing grade 'N' is given in quarters prior to thesis submission. See 390 if a letter grade is not appropriate. Course may be repeated for credit.

**EE 303. Autonomous Implantable Systems. 3 Units.**

Integrating electronics with sensing, stimulation, and locomotion capabilities into the body will allow us to restore or enhance physiological functions. In order to be able to insert these electronics into the body, energy source is a major obstacle. This course focuses on the analysis and design of wirelessly powered catheter-deliverable electronics. Emphases will be on the interaction between human and electromagnetic fields in order to transfer power to the embedded electronics via electromagnetic fields, power harvesting circuitry, electrical-tissue interface, and sensing and actuating frontend designs. Prerequisites: EE 252 or equivalent.

**EE 304. Neuromorphics: Brains in Silicon. 3 Units.**

Neuromorphic systems run perceptual, cognitive and motor tasks in real-time on a network of highly interconnected nonlinear units. To maximize density and minimize energy, these units—like the brain's neurons—are heterogeneous and stochastic. The first half of the course covers learning algorithms that automatically synthesize network configurations to perform a desired computation on a given heterogeneous neural substrate. The second half of the course surveys system-on-a-chip architectures that efficiently realize highly interconnected networks and mixed analog-digital circuit designs that implement area and energy-efficient nonlinear units. Prerequisites: EE102A and EE108 are required; EE114 is recommended. Same as: BIOE 313

**EE 308. Advanced Circuit Techniques. 3 Units.**

Design of advanced analog circuits at the system level, including switching power converters, amplitude-stabilized and frequency-stabilized oscillators, voltage references and regulators, power amplifiers and buffers, sample-and-hold circuits, and application-specific op-amp compensation. Approaches for finding creative design solutions to problems with difficult specifications and hard requirements. Emphasis on feedback circuit techniques, design-oriented thinking, and hands-on experience with modern analog building blocks. Several designs will be built and evaluated, along with associated laboratory projects. Prerequisite: EE 251 or EE 314A.

**EE 309. Semiconductor Memory Devices and Technology. 3 Units.**

The functionality and performance of ULSI systems are increasingly dependent upon the characteristics of the memory subsystem. This course introduces the student to various memory devices: SRAM, DRAM, NVRAM (non-volatile memory). This course will cover various aspects of semiconductor memories, including basic operation principles, device design considerations, device scaling, device fabrication, memory array addressing and readout circuits. Various cell structures (e.g. 1T-1C, 6T, 4T, 1T-1R, 0T-1R, 1S-1R, floating gate FLASH, SONOS, NROM), and memory organization (open bit-line, folded bit-line, NAND, NOR, cross-point etc.). This course will include a survey of new memory concepts (e.g. magnetic tunnel junction memory (MRAM, SST-RAM), ferroelectric memory (FRAM), phase change memory (PCM), metal oxide resistive switching memory (RRAM), nanoconductive bridge memory (CBRAM)). Offered Alternate years. Pre-requisite: EE 216. Preferred: EE 316.

**EE 310. SystemX: Ubiquitous Sensing, Computing and Communication Seminar. 1 Unit.**

This is a seminar course with invited speakers. Sponsored by Stanford's SystemX Alliance, the talks will cover emerging topics in contemporary hardware/software systems design. Special focus will be given to the key building blocks of sensors, processing elements and wired/wireless communications, as well as their foundations in semiconductor technology, SoC construction, and physical assembly as informed by the SystemX Focus Areas. The seminar will draw upon distinguished engineering speakers from both industry and academia who are involved at all levels of the technology stack and the applications that are now becoming possible.

**EE 311. Advanced Integrated Circuits Technology. 3 Units.**

What are the practical and fundamental limits to the evolution of the technology of modern MOS devices and interconnects? How are modern devices and circuits fabricated and what future changes are likely? Advanced techniques and models of MOS devices and back-end (interconnect and contact) processing. What are future device structures and materials to maintain progress in integrated electronics? MOS front-end and back-end process integration. Prerequisites: EE212, EE216 or equivalent.

**EE 314A. RF Integrated Circuit Design. 3 Units.**

Design of RF integrated circuits for communications systems, primarily in CMOS. Topics: the design of matching networks and low-noise amplifiers at RF, mixers, modulators, and demodulators; review of classical control concepts necessary for oscillator design including PLLs and PLL-based frequency synthesizers. Design of low phase noise oscillators. Design of high-efficiency (e.g., class E, F) RF power amplifiers, coupling networks. Behavior and modeling of passive and active components at RF. Narrowband and broadband amplifiers; noise and distortion measures and mitigation methods. Overview of transceiver architectures. Prerequisite: EE214B.

**EE 314B. Advanced RF Integrated Circuit Design. 3 Units.**

Analysis and design of modern communication circuits and systems with emphasize on design techniques for high-frequency (into mm-wave) ICs. Topics include MOS, bipolar, and BiCMOS high-frequency integrated circuits, including power amplifiers, extremely wideband amplifiers, advanced oscillators, phase-locked loops and frequency-translation circuits. Design techniques for mm-wave silicon ICs (on-chip low-loss transmissions lines, unilateralization techniques, in-tegrated antennas, harmonic generation, etc) will also be studied. Prerequisite: EE314A or equivalent course in RF or microwave.

**EE 315. Analog-Digital Interface Circuits. 3 Units.**

Analysis and design of circuits and circuit architectures for signal conditioning and data conversion. Fundamental circuit elements such as operational transconductance amplifiers, active filters, sampling circuits, switched capacitor stages and voltage comparators. Sensor interfaces for micro-electromechanical and biomedical applications. Nyquist and oversampling A/D and D/A converters. Prerequisite: EE 214B.

**EE 316. Advanced VLSI Devices. 3 Units.**

In modern VLSI technologies, device electrical characteristics are sensitive to structural details and therefore to fabrication techniques. How are advanced VLSI devices designed and what future changes are likely? What are the implications for device electrical performance caused by fabrication techniques? Physical models for nanometer scale structures, control of electrical characteristics (threshold voltage, short channel effects, ballistic transport) in small structures, and alternative device structures for VLSI. Prerequisites: 212 and 216, or equivalent.

**EE 319. Advanced Nanoelectronic Devices and Technology. 3 Units.**

Recent advances in materials science, device physics and structures, and processing technology, to extend VLSI device scaling towards atomistic and quantum-mechanical physics boundaries. Topics include: mobility-enhancement techniques; nanomaterial structures including tube, wire, beam, and crystal; conducting polymer; 3D FET; gate-wraparound FET; nonvolatile memory phenomena and devices; self-assembly; flash annealing; plasma doping; and nano patterning. Prerequisites: 216, 316.

**EE 320. Nanoelectronics. 3 Units.**

This course covers the device physics and operation principles of nanoelectric devices, with a focus on devices for energy-efficient computation. Topics covered include devices based on new nanomaterials such as carbon nanotubes, semiconductor nanowires, and 2D layered materials such as graphene; non-FET based devices such as nanoelectromechanical (NEM) relay, single electron transistors (SET) and resonant tunneling diodes (RTD); as well as FET-based devices such as tunnel FET. Devices targeted for both logic and memory applications are covered. Prerequisites: Undergraduate device physics, EE222, EE216, EE316. Recommended courses: EE223, EE228, EE311.

**EE 323. Energy in Electronics. 3 Units.**

This course examines energy in modern nanoelectronics, from fundamentals to system-level issues. Topics include fundamental aspects like energy transfer through electrons and phonons, ballistic limits of current and heat, meso- to macroscale mobility and thermal conductivity. The course also nexamines applied topics including power dissipation in nanoscale devices (FinFETs, phase-change memory, nanowires, graphene, nanotubes), circuit leakage, thermal breakdown, thermometry, heat sinks, and thermal challenges in densely integrated systems. Recommended: EE 216 or equivalent.

**EE 327. Properties of Semiconductor Materials. 3 Units.**

Modern semiconductor devices and integrated circuits are based on unique energy band, carrier transport, and optical properties of semiconductor materials. How to choose these properties for operation of semiconductor devices. Emphasis is on quantum mechanical foundations of the properties of solids, energy bandgap engineering, semi-classical transport theory, semi-conductor statistics, carrier scattering, electro-magneto transport effects, high field ballistic transport, Boltzmann transport equation, quantum mechanical transitions, optical absorption, and radiative and non-radiative recombination that are the foundations of modern transistors and optoelectronic devices. Prerequisites: EE216 or equivalent.

**EE 328. Physics of Advanced Semiconductor Devices. 3 Units.**

Principles governing the operation of modern semiconductor devices. Assumptions and approximations commonly made in analyzing devices. Emphasis is on the application of semiconductor physics to the development of advanced semiconductor devices such as heterojunctions, HJ-bipolar transistors, HJ-FETs, nanostructures, tunneling, single electron transistor and photonic devices. Use of SENTARUS, a 2-D Poisson solver, for simulation of ultra-small devices. Examples related to state-of-the-art devices and current device research. Prerequisite: 216. Recommended: 316.

**EE 329. The Electronic Structure of Surfaces and Interfaces. 3 Units.**

Physical concepts and phenomena for surface science techniques probing the electronic and chemical structure of surfaces, interfaces and nanomaterials. Microscopic and atomic models of microstructures; applications including semiconductor device technology, catalysis and energy. Physical processes of UV and X-ray photoemission spectroscopy, Auger electron spectroscopy, surface EXAFS, low energy electron diffraction, electron/photon stimulated ion desorption, scanning tunneling spectroscopy, ion scattering, energy loss spectroscopy and related imaging methods; and experimental aspects of these surface science techniques. Prerequisites: PHYSICS 70 and MATSCI 199/209, or consent of instructor. Same as: PHOTON 329

**EE 331. Biophotonics: Light in Medicine and Biology. 3 Units.**

Current topics and trends in the use of light in medicine and for advanced microscopy. Course begins with a review of relevant optical principles (basic physics required). Key topics include: light-tissue interactions; sensing and spectroscopy; contrast-enhanced imaging; super-resolution and label-free microscopy; medical applications of light for diagnostics, in-vivo imaging, and therapy; nanophotonics and array technologies. Open to non-majors; programming experience (Matlab and/or C) required.

**EE 332. Laser Dynamics. 3 Units.**

Dynamic and transient effects in lasers including spiking, Q-switching, mode locking, frequency modulation, frequency and spatial mode competition, linear and nonlinear pulse propagation, pulse shaping. Formerly EE 232. Prerequisite: 236C.

**EE 334. Micro and Nano Optical Device Design. 3 Units.**

Lecture and project course on design and analysis of optical devices with emphasis on opportunities and challenges created by scaling to the micrometer and nanometer ranges. The emphasis is on fundamentals, combined with some coverage of practical implementations. Prerequisite: EE 242 or equivalent.

**EE 336. Nanophotonics. 3 Units.**

Recent developments in micro- and nanophotonic materials and devices. Basic concepts of photonic crystals. Integrated photonic circuits. Photonic crystal fibers. Superprism effects. Optical properties of metallic nanostructures. Sub-wavelength phenomena and plasmonic excitations. Meta-materials. Prerequisite: Electromagnetic theory at the level of 242. Same as: MATSCI 346

**EE 340. Optical Micro- and Nano-Cavities. 3 Units.**

Optical micro- and nano-cavities and their device applications. Types of optical cavities (microdisks, microspheres, photonic crystal cavities, plasmonic cavities), and their electromagnetic properties, design, and fabrication techniques. Cavity quantum electrodynamics: strong and weak-coupling regime, Purcell factor, spontaneous emission control. Applications of optical cavities, including low-threshold lasers, optical modulators, quantum information processing devices, and bio-chemical sensors. Prerequisites: Advanced undergraduate or basic graduate level knowledge of electromagnetics, quantum.

**EE 346. Introduction to Nonlinear Optics. 3 Units.**

Wave propagation in anisotropic, nonlinear, and time-varying media. Microscopic and macroscopic description of electric-dipole susceptibilities. Free and forced waves; phase matching; slowly varying envelope approximation; dispersion, diffraction, space-time analogy. Harmonic generation; frequency conversion; parametric amplification and oscillation; electro-optic light modulation. Raman and Brillouin scattering; nonlinear processes in optical fibers. Prerequisites: 242, 236C.

**EE 348. Advanced Optical Fiber Communications. 3 Units.**

Optical amplifiers: gain, saturation, noise. Semiconductor amplifiers. Erbium-doped fiber amplifiers. System applications: preamplified receiver performance, amplifier chains. Raman amplifiers, lumped vs. distributed amplification. Group-velocity dispersion management: dispersion-compensating fibers, filters, gratings. Interaction of dispersion and nonlinearity, dispersion maps. Multichannel systems. Wavelength-division multiplexing components: filters, multiplexers. WDM systems, crosstalk. Time, subcarrier, code and polarization-division multiplexing. Comparison of modulation techniques: differential phase-shift keying, phase-shift keying, quadrature-amplitude modulation. Comparison of detection techniques: noncoherent, differentially coherent, coherent. Prerequisite: 247.

**EE 349. Advanced Topics in Nano-Optics and Plasmonics. 3 Units.**

Electromagnetic phenomena at the nanoscale. Dipolar interactions between emitters and nanostructures, weak and strong coupling, surface plasmon polaritons and localized plasmons, electromagnetic field enhancements, and near-field coupling between metallic nanostructures. Numerical tools will be taught and used to simulate nano-optical phenomena. Prerequisite: EE 242 or equivalent.

**EE 355. Imaging Radar and Applications. 3 Units.**

Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: surface deformation, polarimetry and target discrimination, topographic mapping surface displacements, velocities of ice fields. Prerequisites: EE261. Recommended: EE254, EE278, EE279. Same as: GEOPHYS 265

**EE 356A. Resonant Converters. 3 Units.**

Miniaturization of efficient power converters remain a challenge in power electronics whose goal is to improving energy use and reducing waste. In this course, we will study the design of Resonant converters which are capable of operating at higher frequencies than their 'hard-switch' counterparts. Resonant converter are found in high performance applications where high control bandwidth and high power density are required. We will also explore practical design issues and trade off in selecting converter topologies in high performance applications. Prerequisites: EE153/EE253.

**EE 356B. Magnetics Design in Power Electronics. 3 Units.**

Inductors and transformers are ubiquitous components in any power electronics system. They are components that offer great design flexibility, provide electrical isolation and can reduce semiconductor stresses, but they often dominate the size and cost of a power converter and are notoriously difficult to miniaturize. In this class we will discuss the design and modeling of magnetic components, which are essential tasks in the development of high performance converters and study advanced applications. Prerequisites: EE153/EE253.

**EE 359. Wireless Communications. 3-4 Units.**

This course will cover advanced topics in wireless communications for voice, data, and multimedia. Topics include: an overview of current and future wireless systems; wireless channel models including path loss, shadowing, and statistical multipath channel models; fundamental capacity limits of wireless channels; digital modulation and its performance in fading and intersymbol interference; techniques to combat fading including adaptive modulation, diversity, and multiple antenna systems (MIMO); techniques to combat intersymbol interference including equalization, multicarrier modulation (OFDM), and spread spectrum; and an overview of wireless network design. Prerequisite: 279 or instructor consent.

**EE 360. Multiuser Wireless Systems and Networks. 3 Units.**

Design, analysis, and fundamental limits. Topics include multiuser channel capacity, multiple and random access techniques, interference mitigation, cellular system design, ad hoc wireless network design, sensor networks, "green" wireless networks, cognitive radios, and cross-layer design. Prerequisite: EE 359.

**EE 364A. Convex Optimization I. 3 Units.**

Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as EE263, basic probability. Same as: CME 364A, CS 334A

**EE 364B. Convex Optimization II. 3 Units.**

Continuation of 364A. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Monotone operators and proximal methods; alternating direction method of multipliers. Exploiting problem structure in implementation. Convex relaxations of hard problems. Global optimization via branch and bound. Robust and stochastic optimization. Applications in areas such as control, circuit design, signal processing, and communications. Course requirements include project. Prerequisite: 364A. Same as: CME 364B

**EE 367. Computational Imaging and Display. 3 Units.**

Spawned by rapid advances in optical fabrication and digital processing power, a new generation of imaging technology is emerging: computational cameras at the convergence of applied mathematics, optics, and high-performance computing. Similar trends are observed for modern displays pushing the boundaries of resolution, contrast, 3D capabilities, and immersive experiences through the co-design of optics, electronics, and computation. This course serves as an introduction to the emerging field of computational imaging and displays. Students will learn to master bits and photons. Same as: CS 448I

**EE 368. Digital Image Processing. 3 Units.**

Image sampling and quantization color, point operations, segmentation, morphological image processing, linear image filtering and correlation, image transforms, eigenimages, multiresolution image processing, noise reduction and restoration, feature extraction and recognition tasks, image registration. Emphasis is on the general principles of image processing. Students learn to apply material by implementing and investigating image processing algorithms in Matlab and optionally on Android mobile devices. Term project. Recommended: EE261, EE278. Same as: CS 232

**EE 369A. Medical Imaging Systems I. 3 Units.**

Imaging internal structures within the body using high-energy radiation studied from a systems viewpoint. Modalities covered: x-ray, computed tomography, and nuclear medicine. Analysis of existing and proposed systems in terms of resolution, frequency response, detection sensitivity, noise, and potential for improved diagnosis. Prerequisite: EE 261.

**EE 369B. Medical Imaging Systems II. 3 Units.**

Imaging internal structures within the body using non-ionizing radiation studied from a systems viewpoint. Modalities include ultrasound and magnetic resonance. Analysis of ultrasonic systems including diffraction and noise. Analysis of magnetic resonance systems including physics, Fourier properties of image formation, and noise. Prerequisite: EE 261.

**EE 369C. Medical Image Reconstruction. 3 Units.**

Reconstruction problems from medical imaging, including magnetic resonance imaging (MRI), computed tomography (CT), and positron emission tomography (PET). Problems include reconstruction from non-uniform frequency domain data, automatic deblurring, phase unwrapping, reconstruction from incomplete data, and reconstruction from projections. Prerequisite: 369B.

**EE 371. Advanced VLSI Circuit Design. 3 Units.**

Design of high-performance digital systems, the things that cause them to fail, and how to avoid these problems. Topics will focus on current issues including: wiring resistance and how to deal with it, power and Gnd noise and regulation, clock (or asynchronous) system design and how to minimize clocking overhead, high-speed I/O design, energy minimization including leakage control, and structuring your Verilog code to result in high-performance, low energy systems. Extensive use of modern CAD tools. Prerequisites: EE 213 and EE 271, or consent of instructor.

**EE 373A. Adaptive Signal Processing. 3 Units.**

Learning algorithms for adaptive digital filters. Self-optimization. Wiener filter theory. Quadratic performance functions, their eigenvectors and eigenvalues. Speed of convergence. Asymptotic performance versus convergence rate. Applications of adaptive filters to statistical prediction, process modeling, adaptive noise canceling, adaptive antenna arrays, adaptive inverse control, and equalization and echo canceling in modems. Artificial neural networks. Cognitive memory/human and machine. Natural and artificial synapses. Hebbian learning. The Hebbian-LMS algorithm. Theoretical and experimental research projects in adaptive filter theory, communications, audio systems, and neural networks. Biomedical research projects, supervised jointly by EE and Medical School faculty. Recommended: EE263, EE264, EE278.

**EE 376A. Information Theory. 3 Units.**

The fundamental ideas of information theory. Entropy and intrinsic randomness. Data compression to the entropy limit. Huffman coding. Arithmetic coding. Channel capacity, the communication limit. Gaussian channels. Kolmogorov complexity. Asymptotic equipartition property. Information theory and Kelly gambling. Applications to communication and data compression. Prerequisite: EE178 or STATS 116, or equivalent. Same as: STATS 376A

**EE 376B. Network Information Theory. 3 Units.**

Network information theory deals with the fundamental limits on information flow in networks and the optimal coding schemes that achieve these limits. It aims to extend Shannon's point-to-point information theory and the Ford-Fulkerson max-flow min-cut theorem to networks with multiple sources and destinations. The course presents the basic results and tools in the field in a simple and unified manner. Topics covered include: multiple access channels, broadcast channels, interference channels, channels with state, distributed source coding, multiple description coding, network coding, relay channels, interactive communication, and noisy network coding. Prerequisites: EE376A. Same as: STATS 376B

**EE 376C. Universal Schemes in Information Theory. 3 Units.**

Universal schemes for lossless and lossy compression, channel coding and decoding, prediction, denoising, and filtering. Characterization of performance limitations in the stochastic setting: entropy rate, rate-distortion function, channel capacity, Bayes envelope for prediction, denoising, and filtering. Lempel-Ziv lossless compression, and Lempel-Ziv based schemes for lossy compression, channel coding, prediction, and filtering. Discrete universal denoising. Compression-based approach to denoising. The compound decision problem. Prerequisites: EE278, EE376A, EE376B.

**EE 376D. Wireless Information Theory. 3 Units.**

Information theory forms the basis for the design of all modern day communication systems. The original theory was primarily point-to-point, studying how fast information can flow across an isolated noisy communication channel. Until recently, there has been only limited success in extending the theory to a network of interacting nodes. Progress has been made in the past decade driven by engineering interest in wireless networks. The course provides a unified overview of this recent progress made in information theory of wireless networks. Starting with an overview of the capacity of fading and multiple-antenna wireless channels, we aim to answer questions such as: What is the optimal way for users to cooperate and exchange information in a wireless network? How much benefit can optimal cooperation provide over traditional communication architectures? How can cooperation help to deal with interference between multiple wireless transmissions? Formerly EE361. Prerequisites: EE376A.

**EE 377. Information Theory and Statistics. 3 Units.**

Information theoretic techniques in probability and statistics. Fano, Assouad, and Le Cam methods for optimality guarantees in estimation. Large deviations and concentration inequalities (Sanov's theorem, hypothesis testing, the entropy method, concentration of measure). Approximation of (Bayes) optimal procedures, surrogate risks, f-divergences. Penalized estimators and minimum description length. Online game playing, gambling, no-regret learning. Prerequisites: EE 376A (or equivalent) or STATS 300A. Same as: STATS 311

**EE 378A. Statistical Signal Processing. 3 Units.**

Random signals in electrical engineering. Discrete-time random processes: stationarity and ergodicity, covariance sequences, power spectral density, parametric models for stationary processes. Fundamentals of linear estimation: minimum mean squared error estimation, optimum linear estimation, orthogonality principle, the Wold decomposition. Causal linear estimation of stationary processes: the causal Wiener filter, Kalman filtering. Parameter estimation: criteria of goodness of estimators, Fisher information, Cramer-Rao inequality, Chapman-Robbins inequality, maximum likelihood estimation, method of moments, consistency, efficiency. ARMA parameter estimation: Yule-Walker equations, Levinson-Durbin algorithm, least squares estimation, moving average parameter estimation, modified Yule-Walker method for model order selection. Spectrum estimation: sample covariances, covariance estimation, Bartlett formula, periodogram, periodogram averaging, windowed periodograms. Prerequisites: EE 278.

**EE 378B. Inference, Estimation, and Information Processing. 3 Units.**

Techniques and models for signal, data and information processing, with emphasis on incomplete data, non-ordered index sets and robust low-complexity methods. Linear models; regularization and shrinkage; dimensionality reduction; streaming algorithms; sketching; clustering, search in high dimension; low-rank models; principal component analysis. Applications include: positioning from pairwise distances; distributed sensing; measurement/traffic monitoring in networks; finding communities/clusters in networks; recommendation systems; inverse problems. Prerequisites: EE278 and EE263 or equivalent. Recommended but not required: EE378A.

**EE 379. Digital Communication. 3 Units.**

Modulation: linear, differential and orthogonal methods; signal spaces; power spectra; bandwidth requirements. Detection: maximum likelihood and maximum a posteriori probability principles; sufficient statistics; correlation and matched-filter receivers; coherent, differentially coherent and noncoherent methods; error probabilities; comparison of modulation and detection methods. Intersymbol interference: single-carrier channel model; Nyquist requirement; whitened matched filter; maximum likelihood sequence detection; Viterbi algorithm; linear equalization; decision-feedback equalization. Multi-carrier modulation: orthogonal frequency-division multiplexing; capacity of parallel Gaussian channels; comparison of single- and multi-carrier techniques. Prerequisite: EE102B, EE278.

**EE 380. Colloquium on Computer Systems. 1 Unit.**

Live presentations of current research in the design, implementation, analysis, and applications of computer systems. Topics range over a wide range and are different every quarter. Topics may include fundamental science, mathematics, cryptography, device physics, integrated circuits, computer architecture, programming, programming languages, optimization, applications, simulation, graphics, social implications, venture capital, patent and copyright law, networks, computer security, and other topics of related to computer systems. May be repeated for credit.

**EE 382C. Interconnection Networks. 3 Units.**

The architecture and design of interconnection networks used to communicate from processor to memory, from processor to processor, and in switches and routers. Topics: network topology, routing methods, flow control, router microarchitecture, and performance analysis. Enrollment limited to 30. Prerequisite: 282.

**EE 384A. Internet Routing Protocols and Standards. 3 Units.**

Local area networks addressing and switching; IEEE 802.1 bridging protocols (transparent bridging, virtual LANs). Internet routing protocols: interior gateways (RIP, OSPF) and exterior gateways (BGP); multicast routing; multiprotocol label switching (MPLS). Routing in mobile networks: Mobile IP, Mobile Ad Hoc Networks (MANET), Wireless Mesh Networks. Prerequisite: EE 284 or CS 144.

**EE 384B. Multimedia Communication over the Internet. 3 Units.**

Applications and requirements. Traffic generation and characterization: voice encoding (G.711, G.729, G.723); image and video compression (JPEG, H.261, MPEG-2, H.263, H.264), TCP data traffic. Quality impairments and measures. Networking technologies: LAN technologies; home broadband services (ADSL, cable modems, PONs); and wireless LANs (802.11). Network protocols for multimedia applications: resource reservation (ST2+, RSVP); differentiated services (DiffServ); and real-time transport protocol (RTP, RTCP). Audio-video-data conferencing standards: Internet architecture (SDP, SAP, SIP); ITU recommendations (H.320, H.323 and T.120); and real-time streaming protocol (RTSP). Emphasis will be placed on advances in network infrastructure and new services (VoIP, IPTV, Peer-to-peer communications, etc.) Prerequisite: 284 or CS 144. Recommended: 384A.

**EE 384C. Wireless Local and Wide Area Networks. 3 Units.**

Characteristics of wireless communication: multipath, noise, and interference. Communications techniques: spread-spectrum, CDMA, and OFDM. IEEE 802.11 physical layer specifications: FHSS, DSSS, IEEE 802.11b (CCK), and 802.11a/g (OFDM). IEEE 802.11 media access control protocols: carrier sense multiple access with collision avoidance (CSMA/CA), point coordination function (PCF), IEEE 802.11e for differentiated services. IEEE 802.11 network architecture: ad hoc and infrastructure modes, access point functionality. Management functions: synchronization, power management and association. IEEE 802.11s Mesh Networks. IEEE 802.16 (WiMAX) network architecture and protocols: Physical Layer (OFDMA) and Media Access Control Layer. Current research papers in the open literature. Prerequisite: EE 284 or CS 244A.

**EE 384E. Networked Wireless Systems. 3 Units.**

Design and implementation of wireless networks and mobile systems. The course will commence with a short retrospective of wireless communication and initially touch on some of the fundamental physical layer properties of various wireless communication technologies. The focus will then shift to design of media access control and routing layers for various wireless systems. The course will also examine adaptations necessary at transport and higher layers to cope with node mobility and error-prone nature of the wireless medium. Finally, it will conclude with a brief overview of other related issues including emerging wireless/mobile applications. Prerequisites: EE 284.

**EE 384S. Performance Engineering of Computer Systems & Networks. 3 Units.**

Modeling and control methodologies for high-performance network engineering, including: Markov chains and stochastic modeling, queueing networks and congestion management, dynamic programming and task/processor scheduling, network dimensioning and optimization, and simulation methods. Applications for design of high-performance architectures for wireline/wireless networks and the Internet, including: traffic modeling, admission and congestion control, quality of service support, power control in wireless networks, packet scheduling in switches, video streaming over wireless links, and virus/worm propagation dynamics and countermeasures. Enrollment limited to 30. Prerequisites: basic networking technologies and probability.

**EE 384X. Packet Switch Architectures. 3 Units.**

The theory and practice of designing packet switches, such as Internet routers, and Ethernet switches. Introduction: evolution of switches and routers. Output queued switches: motivation and methods for providing bandwidth and delay guarantees. Switching: output queueing, parallelism in switches, distributed shared memory switches, input-queued switches, combined input-output queued switches, how to make fast packet buffers, buffered crossbar switches. Scheduling input queued crossbars: connections with bipartite graph matching, algorithms for 100% throughput, practical algorithms and heuristics. Looking forward: Architectures and switches for data center networks. Prerequisites: EE284 or CS 244A. Recommended: EE 178 or EE 278 or STAT 116.

**EE 385A. Robust and Testable Systems Seminar. 1-4 Unit.**

Student/faculty discussions of research problems in the design of reliable digital systems. Areas: fault-tolerant systems, design for testability, production testing, and system reliability. Emphasis is on student presentations and Ph.D. thesis research. May be repeated for credit. Prerequisite: consent of instructor.

**EE 386. Robust System Design. 3 Units.**

Causes of system malfunctions; techniques for building robust systems that avoid or are resilient to such malfunctions through built-in error detection and correction, prediction, self-test, self-recovery, and self-repair; case studies and new research problems. Prerequisites: EE 108, EE180, and EE 282.

**EE 387. Algebraic Error Control Codes. 3 Units.**

Theory and implementation of algebraic codes for detection and correction of random and burst errors. Introduction to finite fields. Linear block codes, cyclic codes, Hamming codes, BCH codes, Reed-Solomon codes. Decoding algorithms for BCH and Reed-Solomon codes. Prerequisites: elementary probability, linear algebra.

**EE 388. Modern Coding Theory. 3 Units.**

Tools for analysis and optimization of iterative coding systems. LDPC, turbo and, RA codes. Optimized ensembles, message passing algorithms, density evolution, and analytic techniques. Prerequisite: 376A.

**EE 390. Special Studies or Projects in Electrical Engineering. 1-15 Unit.**

Independent work under the direction of a faculty member. Individual or team activities may involve lab experimentation, design of devices or systems, or directed reading. May be repeated for credit.

**EE 391. Special Studies and Reports in Electrical Engineering. 1-15 Unit.**

Independent work under the direction of a faculty member; written report or written examination required. Letter grade given on the basis of the report; if not appropriate, student should enroll in 390. May be repeated for credit.

**EE 392AA. Advanced Digital Transmission. 3 Units.**

This course will develop insights into fundamentals and design of state-of-the-art physical-layer transmission systems. Specific attention will be paid to transmission in non-ideal environments with limited spectra and spatial interference. A theory of parallel channels is used to develop multi-carrier methods, vector coding, and generalized decision-feedback approaches. Students will be expected to design and analyze performance of systems operating close to fundamental limits for a variety of practical channels, wireline or wireless. Prerequisites: EE379 or equivalent; understanding of probability, random processes, digital signal processing (including basic matrix and nmatlab skills).

**EE 392B. Industrial Internet of Things. 1 Unit.**

The seminar will feature guest lectures from the industry to discuss the state of the affairs in the Industrial Internet of Things (IoT) with emphasis on existing and new Data Science, analytics, and Big Data applications. The class will address several verticals. One of them is electrical power industry, which is undergoing transition to renewables and distributed generation. Another one is aerospace industry including airlines and equipment vendors. Other verticals are oil and gas, data centers, and semiconductor manufacturing.

**EE 392D. Designing Civic Technologies with Virtual Reality. 3-4 Units.**

In this class students develop prototypes for virtual reality applications, which strive for a positive impact on society. The students work in interdisciplinary teams, and the projects are developed following the human-centered design process of need-finding, rapid prototyping, user-testing and iterations. We approach virtual reality as a civic technology in the following focus areas: education, environment, health care, democratic decision-making and journalistic storytelling. The class collaborates with industry and organizational partners in those respective areas for needfinding, prototyping and user-testing.

**EE 392E. VLSI Signal Processing. 3 Units.**

DSP architecture design. Study of circuit and architecture techniques in energy-area-performance space, design methodology based on a data-flow graph model that leads to hardware implementation. We explore automated wordlength reduction, direct and recursive filters, time-frequency analysis and other examples. The project focuses on architecture exploration for selected DSP algorithms. Useful for algorithm designers who consider hardware constraints and for circuit designers who prototype DSP algorithms in hardware. Prerequisites: EE102B and EE108A; Recommended: EE264 and EE271.

**EE 392I. Seminar on Trends in Computing and Communications. 1 Unit.**

Lectures series and invited talks on current trends in computing and communications, and ongoing initiatives for research and open innovation. This year's focus on evolving cloud computing architectures and their impact on the enterprise; big data trends and rise of the third platform; software as a service; wireless and cellular network architectures; mobility and mobile data proliferation; open mobile platforms (e.g. Android); multi-homed mobile networking, associated data communication and mobile resource trade-offs, and system implementation in smartphones and Android devices.

**EE 392K. Analysis and Modeling of Big Data from Things That Move. 3 Units.**

The course will consider data from real-world systems, with an emphasis on  $\zeta$ things that move $\zeta$ . Methods of sensing movement, denoising movement data through filtering, and algorithms for reconstructing trajectories from snapshots will be discussed. Principles of creating a  $\zeta$ movement database $\zeta$  and using it for anomaly detection, launching ad hoc queries to get into the movement of large fleets (buses, trains, taxis) and passengers. Novel variants of the traveling salesman problems and its application to delivery systems will also be covered.

**EE 392L. Modern Cellular Communication Systems. 3 Units.**

In-depth study of theoretical and practical aspects of next-generation cellular communication systems including design principles, system and service requirements, implementation limitations and deployment scenarios using examples from real-life systems. Topics include radio access and core network protocols; centralized and distributed network architectures; power, mobility, and interference management; RF spectrum utilization; network capacity and user throughput optimization; coding and modulation, multiple-access schemes, and multi-antenna transmission techniques; modern RF transceiver architectures and baseband signal processing; multi-radio platforms; and future trends in wireless communication. Suggested prerequisites: EE359 or equivalent courses.

**EE 392Q. Parallel Processors Beyond Multicore Processing. 3 Units.**

The current parallel computing research emphasizes multi-cores, but there are alternative array processors with significant potential. This hands-on course focuses on SIMD (Single-Instruction, Multiple-Data) massively parallel processors. Topics: Flynn's Taxonomy, parallel architectures, Kestrel architecture and simulator, principles of SIMD programming, parallel sorting with sorting networks, string comparison with dynamic programming (edit distance, Smith-Waterman), arbitrary-precision operations with fixed-point numbers, reductions, vector and matrix multiplication, image processing algorithms, asynchronous algorithms on SIMD ("SIMD Phase Programming Model"), Man-delbrot set, analysis of parallel performance.

**EE 392T. Seminar in Chip Test and Debug. 1 Unit.**

Seminars by industry professionals in digital IC manufacturing test and silicon debug. Topics include yield and binsplit modeling, defect types and detection, debug hardware, physical analysis, and design for test/debug circuits. Case studies of silicon failures. Prerequisite: basic digital IC design (271 or 371).

**EE 392X. Power Electronics Control and Energy-Aware Design. 3 Units.**

The course surveys control techniques for power management and renewable energy sources. The overall aim is to provide a broad overview on control and power electronics for intelligent energy management. Specific topics include: (1) Systematic discussion of concepts underlying control techniques and relevant design/optimization methods, (2) Impact of the power conversion topology and the quality of the passive components on control effectiveness, and (3) Power architecture and control issues relevant to system level optimization in photovoltaic applications.

**EE 395. Electrical Engineering Instruction: Practice Teaching. 1-15 Unit.**

Open to advanced EE graduate students who plan to make teaching their career. Students conduct a section of an established course taught in parallel by an experienced instructor. Enrollment limited.

**EE 398. Image and Video Compression. 3 Units.**

The principles of source coding for the efficient storage and transmission of still and moving images. Entropy and lossless coding techniques. Run-length coding and fax compression. Arithmetic coding. Rate-distortion limits and quantization. Lossless and lossy predictive coding. Transform coding, JPEG. Subband coding, wavelets, JPEG2000. Motion-compensated coding, MPEG. Students investigate image and video compression algorithms in Matlab or C. Term project. Prerequisites: EE261, EE278.

**EE 400. Thesis and Thesis Research. 1-15 Unit.**

Limited to candidates for the degree of Engineer or Ph.D. May be repeated for credit.

**EE 402A. Topics in International Technology Management. 1 Unit.**

Theme for Autumn 2015 is  $\zeta$ International Partnerships for Advanced Intelligent Systems. $\zeta$  This series features distinguished speakers from industry and government who are involved with international R&D projects in areas such as IOT (Internet of Things), autonomous vehicles and other robotics, smart medical devices and services, and next generation energy and transportation systems. The focus is on projects involving at least one Asia-based partner. Please see syllabus for specific requirements, which may differ from those of other seminars at Stanford.

**EE 402T. Entrepreneurship in Asian High-Tech Industries. 1 Unit.**

Distinctive patterns and challenges of entrepreneurship in Asia; update of business and technology issues in the creation and growth of start-up companies in major Asian economies. Distinguished speakers from industry, government, and academia. Course may be repeated for credit. Same as: CHINGEN 402T, JAPANGEN 402T, KORGEN 402T

**EE 410. Integrated Circuit Fabrication Laboratory. 3-4 Units.**

Fabrication, simulation, and testing of a submicron CMOS process. Practical aspects of IC fabrication including silicon wafer cleaning, photolithography, etching, oxidation, diffusion, ion implantation, chemical vapor deposition, physical sputtering, and electrical testing. Students also simulate the CMOS process using process simulator TSUPREM4 of the structures and electrical parameters that should result from the process flow. Taught in the Stanford Nanofabrication Facility (SNF). Preference to students pursuing doctoral research program requiring SNF facilities. Enrollment limited to 20. Prerequisites: EE 212, EE 216, consent of instructor.

**EE 412. Advanced Nanofabrication Laboratory. 3 Units.**

Experimental projects and seminars on integrated circuit fabrication using epitaxial, oxidation, diffusion, evaporation, sputtering, and photolithographic processes with emphasis on techniques for achieving advanced device performance. May be repeated for additional credit. Prerequisites: ENGR341 or EE410 or consent of instructor.

**EE 414. RF Transceiver Design Laboratory. 3 Units.**

Students design, build, and test GHz transceivers using microstrip construction techniques and discrete components. The design, construction, and experimental characterization of representative transceiver building blocks: low noise amplifiers (LNAs), diode ring mixers, PLL-based frequency synthesizers, voltage-controlled oscillators (VCOs), power amplifiers (PAs), and microstrip filters and patch antennas. The characteristics of passive microstrip components (including interconnect). Emphasis is on a quantitative reconciliation of theoretical predictions and extensive experimental measurements performed with spectrum and network analyzers, time-domain reflectometers (TDRs), noise figure meter and phase noise analyzers. Prerequisites: EE 314A and EE 251 (or EE 251).

**EE 464. Semidefinite Optimization and Algebraic Techniques. 3 Units.**

This course focuses on recent developments in optimization, specifically on the use of convex optimization to address problems involving polynomial equations and inequalities. The course covers approaches for finding both exact and approximate solutions to such problems. We will discuss the use of duality and algebraic methods to find feasible points and certificates of infeasibility, and the solution of polynomial optimization problems using semidefinite programming. The course covers theoretical foundations as well as algorithms and their complexity. Prerequisites: EE364A or equivalent course on convex optimization.

**EE 469B. RF Pulse Design for Magnetic Resonance Imaging. 3 Units.**

Magnetic resonance imaging (MRI) and spectroscopy (MRS) based on the use of radio frequency pulses to manipulate magnetization. Analysis and design of major types of RF pulses in one and multiple dimensions, analysis and design of sequences of RF pulses for fast imaging, and use of RF pulses for the creation of image contrast in MRI. Prerequisite: 369B.

**EE 801. TGR Project. 0 Units.**

.

**EE 802. TGR Dissertation. 0 Units.**

May be repeated for credit.

## Energy Resources Engineering Courses

**ENERGY 24. Making Molehills out of Mountains: Energy and Development in Appalachia. 1 Unit.**

Preparation for Alternative Spring Break trip to examine the past, present, and future role of energy in Appalachia. Positive and negative impacts of energy production; meetings with energy industry leaders, community groups, and policymakers. The larger role of energy development and energy issues in society. May be repeated for credit.

**ENERGY 101. Energy and the Environment. 3 Units.**

Energy use in modern society and the consequences of current and future energy use patterns. Case studies illustrate resource estimation, engineering analysis of energy systems, and options for managing carbon emissions. Focus is on energy definitions, use patterns, resource estimation, pollution. Recommended: MATH 21 or 42. Same as: EARTHSYS 101

**ENERGY 101A. Energizing California. 1 Unit.**

A weekend field trip featuring renewable and nonrenewable energy installations in Northern California. Tour geothermal, bioenergy, and natural gas field sites with expert guides from the Department of Energy Resources Engineering. Requirements: One campus meeting and weekend field trip. Enrollment limited to 25. Freshman have first choice.

**ENERGY 102. Renewable Energy Sources and Greener Energy Processes. 3 Units.**

Do you want a much better understanding of renewable power technologies? Did you know that wind and solar are the fastest growing forms of electricity generation? Are you interested in hearing about the most recent, and future, designs for green power? Do you want to understand what limits power extraction from renewable resources and how current designs could be improved? This course dives deep into these and related issues for wind, solar, biomass, geothermal, tidal and wave power technologies. We welcome all student, from non-majors to MBAs and grad students. If you are potentially interested in an energy or environmental related major, this course is particularly useful. Recommended: Math 21 or 42. Same as: EARTHSYS 102

**ENERGY 104. Sustainable Energy for 9 Billion. 3 Units.**

This course explores the transition to a sustainable energy system at large scales (national and global), and over long time periods (decades). Explores the drivers of global energy demand and the fundamentals of technologies that can meet this demand sustainably. Focuses on constraints affecting large-scale deployment of technologies, as well as inertial factors affecting this transition. Problems will involve modeling global energy demand, deployment rates for sustainable technologies, technological learning and economics of technical change. Recommended: ENERGY 101, 102.

**ENERGY 110. Engineering Economics. 3 Units.**

The success of energy projects and companies is judged by technical, economic and financial criteria. This course will introduce concepts of engineering economy, e.g., time value of money, life cycle costs and financial metrics, and explore their application to the business of energy. We will use case studies, business school cases and possibly industry guest lecturers. Examples from the hydrocarbon businesses that dominate energy today will provide the framework for the analysis of both conventional and renewable energy.

**ENERGY 120. Fundamentals of Petroleum Engineering. 3 Units.**

Lectures, problems, field trip. Engineering topics in petroleum recovery; origin, discovery, and development of oil and gas. Chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media. Same as: ENGR 120

**ENERGY 120A. Flow Through Porous Media Laboratory. 1 Unit.**

Laboratory measurements of permeability and porosity in rocks. Applications to subsurface fluid mechanics. Course is intended as an accompaniment to Energy 120.

**ENERGY 121. Fundamentals of Multiphase Flow. 3 Units.**

Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy's law for multiphase flow, fractional flow equation, effects of gravity, Buckley-Leverett theory, recovery predictions, volumetric linear scaling, JBN and Jones-Rozelle determination of relative permeability. Frontal advance equation, Buckley-Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities. Same as: ENERGY 221

**ENERGY 122. Lunch with Numerics. 1 Unit.**

This course provides students hands-on experience in the design and implementation of numerical methods for challenging fluid flow problems in the earth sciences. The base software used is the public domain code MRST. Students will explore common pitfalls of well-known numerical approaches, assess effectiveness of numerical methods for heterogeneous and strongly nonlinear problems and gain more insight into numerical accuracy and stability concepts.

**ENERGY 123. When Technology Meets Reality; An In-depth Look at the Deepwater Horizon Blowout and Oil Spill. 1 Unit.**

The Deepwater Horizon blowout and spill in April 2010 occurred on one of the most advanced deepwater drilling rigs in the world operated by one of the most experienced companies. In this course we will look at and discuss the technologies and management practices involved in deepwater drilling and discuss how an accident like this happens and what could have been done differently to avoid it. We will focus on the Horizon and also look briefly at other high profile industrial and technological accidents.

**ENERGY 125. Modeling and Simulation for Geoscientists and Engineers. 3 Units.**

Hands-on. Topics include deterministic and statistical modeling applied to problems such as flow in the subsurface, atmospheric pollution, biological populations, wave propagation, and crustal deformation. Student teams define and present a modeling problem.

**ENERGY 130. Well Log Analysis I. 3 Units.**

For earth scientists and engineers. Interdisciplinary, providing a practical understanding of the interpretation of well logs. Lectures, problem sets using real field examples: methods for evaluating the presence of hydrocarbons in rock formations penetrated by exploratory and development drilling. The fundamentals of all types of logs, including electric and non-electric logs.

**ENERGY 141. Seismic Reservoir Characterization. 3-4 Units.**

(Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112. Same as: ENERGY 241, GEOPHYS 241A

**ENERGY 146. Reservoir Characterization and Flow Modeling with Outcrop Data. 3 Units.**

Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip. Same as: ENERGY 246, GS 246

**ENERGY 153. Carbon Capture and Sequestration. 3-4 Units.**

CO<sub>2</sub> separation from syngas and flue gas for gasification and combustion processes. Transportation of CO<sub>2</sub> in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO<sub>2</sub>. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis. Same as: ENERGY 253

**ENERGY 155. Undergraduate Report on Energy Industry Training. 1-3 Unit.**

On-the-job practical training under the guidance of on-site supervisors. Required report detailing work activities, problems, assignments and key results. Prerequisite: written consent of instructor.

**ENERGY 158. Bringing New Energy Technologies to Market: Optimizing Technology Push and Market Pull. 3 Units.**

This research-based seminar will evaluate the impact of market interventions in commercializing four segments of our energy mix: wind, photovoltaics, lighting, and batteries. To accelerate the development of new technologies to reduce greenhouse gas emissions and improve national security, governments use policies like direct R&D funding, financial incentives or penalties, mandatory targets or caps, and performance standards to create market conditions that favor emerging technologies. Findings outlining the most effective mix of interventions over time will be submitted for publication. Enrollment limited to 12 graduate and co-term students. Those interested please email a paragraph to [cathyzoi@stanford.edu](mailto:cathyzoi@stanford.edu) by September 16, 2013 expressing why you want to take part and research experience you can bring to the seminar.

**ENERGY 160. Modeling Uncertainty in the Earth Sciences. 3 Units.**

Whether Earth Science modeling is performed on a local, regional or global scale, for scientific or engineering purposes, uncertainty is inherently present due to lack of data and lack of understanding of the underlying phenomena. This course highlights the various issues, techniques and practical tools available for modeling uncertainty of complex Earth systems as well as the impact uncertainty has on practical decisions for geo-engineering problems. The course focuses on practical breadth rather than theoretical depth. Topics covered are: the process of building models, sources of uncertainty, probabilistic techniques, spatial data analysis and geostatistics, grid and scale, spatio-temporal uncertainty, visualizing uncertainty in large dimensions, Monte Carlo simulation, sensitivity analysis, reducing uncertainty with data, value of information. Applications to both local (reservoir, aquifer) and global (climate) are covered through literature study. Extensive software use with SGEMS. Prerequisites: algebra (CME 104 or equivalent), introductory statistics course (CME 106 or equivalent).

**ENERGY 167. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties. 3 Units.**

Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor. Same as: ENERGY 267

**ENERGY 171. Energy Infrastructure, Technology and Economics. 3 Units.**

Oil and gas represents more than 50% of global primary energy. In delivering energy at scale, the industry has developed global infrastructure with supporting technology that gives it enormous advantages in energy markets; this course explores how the oil and gas industry operates. From the perspective of these established systems and technologies, we will look at the complexity of energy systems, and will consider how installed infrastructure enables technology development and deployment, impacts energy supply, and how existing infrastructure and capital invested in fossil energy impacts renewable energy development. Prerequisites: Energy 101 and 102 or permission of instructor.

Same as: ENERGY 271

**ENERGY 175. Well Test Analysis. 3 Units.**

Lectures, problems. Application of solutions of unsteady flow in porous media to transient pressure analysis of oil, gas, water, and geothermal wells. Pressure buildup analysis and drawdown. Design of well tests. Computer-aided interpretation.

**ENERGY 180. Oil and Gas Production Engineering. 3 Units.**

Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120.

Same as: ENERGY 280

**ENERGY 191. Optimization of Energy Systems. 3-4 Units.**

Introductory mathematical programming and optimization using examples from energy industries. Emphasis on problem formulation and solving, secondary coverage of algorithms. Problem topics include optimization of energy investment, production, and transportation; uncertain and intermittent energy resources; energy storage; efficient energy production and conversion. Methods include linear and nonlinear optimization, as well as multi-objective and goal programming. Tools include Microsoft Excel and AMPL mathematical programming language. Prerequisites: MATH 20, 41, or MATH 51, or consent of instructor. Programming experience helpful (e.g., CS 106A, CS 106B).

Same as: ENERGY 291

**ENERGY 192. Undergraduate Teaching Experience. 1-3 Unit.**

Leading field trips, preparing lecture notes, quizzes under supervision of the instructor. May be repeated for credit.

**ENERGY 193. Undergraduate Research Problems. 1-3 Unit.**

Original and guided research problems with comprehensive report. May be repeated for credit.

**ENERGY 194. Special Topics in Energy and Mineral Fluids. 1-3 Unit.**

May be repeated for credit.

**ENERGY 199. Senior Project and Seminar in Energy Resources. 3-4 Units.**

Individual or group capstone project in Energy Resources Engineering. Emphasis is on report preparation. May be repeated for credit.

**ENERGY 201. Laboratory Measurement of Reservoir Rock Properties. 3 Units.**

In this course, students will learn methods for measuring reservoir rock properties. Techniques covered include core preservation and sample preparation; Rock petrography; Interfacial tension of fluids; Measurement of contact angles of fluids on reservoir media; Capillary pressure measurement and interpretation; Absolute and effective porosities; Absolute permeability; Multiphase flow including relative permeability and residual saturation. The class will be 1 3-hour lecture/lab per week, with readings and weekly assignments. A field trip to a professional core characterization lab may be included.

**ENERGY 202. Petroleum Industry Performance Management. 1 Unit.**

Coming up with the right technical solution is only the beginning; it must be implemented. The art and science of Performance Management. How to guarantee results with Leading and Lagging KPIs (Key Performance Indicators). Assessment using the FAIRTM Model (Focus, Accountability, Involvement, Response). Operating RhythmTM: Business Reviews, Boardwalks, One-Pagers, Handover, and Crew Talks. Project management's implementation plans, milestones, and clear deliverables. Sustainability. After Action Reviews (AARs). Continuous Improvement (CI). Coaching's GROW Model (Goal, Reality, Options, Will). The ABC Model (Antecedent & Behavior & Consequence). Students will solve three Case Studies with these tools; the instructor will present the actual solution & what worked, what didn't, and why.

**ENERGY 212. Advanced Programming for Scientists and Engineers. 3 Units.**

Advanced topics in software development, debugging, and performance optimization are covered. The capabilities and usage of common libraries and frameworks such as BLAS, LAPACK, FFT, PETSc, and MKL/ACML are reviewed. Computer representation of integer and floating point numbers, and interoperability between C/C++ and Fortran is described. More advanced software engineering topics including: representing data in files, signals, unit and regression testing, and build automation. The use of debugging tools including static analysis, gdb, and Valgrind are introduced. An introduction to computer architecture covering processors, memory hierarchy, storage, and networking provides a foundation for understanding software performance. Profiles generated using gprof and perf are used to help guide the performance optimization process. Computational problems from various science and engineering disciplines will be used in assignments. Prerequisites: CME 200 / ME 300A and CME 211. The CME 211 requirement may be satisfied by passing a placement test administered by ICME.

Same as: CME 212

**ENERGY 214. The Global Price of Oil. 1 Unit.**

Understanding the current and future price of oil requires the synthesis of geologic, engineering, financial, geopolitical, and macroeconomic information. In this seminar, we will build a global supply curve for petroleum by studying the marginal and full-cycle production costs for each of the major resource categories. We will study how reserve classification varies globally, and how global petroleum resources and reserves have changed and are likely to change over time. We will further investigate how the time lag between resource discovery, project sanctioning, and full production will affect future supply. Finally, we will study the elasticity of oil demand and how that demand is likely to change over time as the developing world gets richer and as competition from other energy sources increases.

**ENERGY 221. Fundamentals of Multiphase Flow. 3 Units.**

Multiphase flow in porous media. Wettability, capillary pressure, imbibition and drainage, Leverett J-function, transition zone, vertical equilibrium. Relative permeabilities, Darcy's law for multiphase flow, fractional flow equation, effects of gravity, Buckley-Leverett theory, recovery predictions, volumetric linear scaling, JBN and Jones-Rozelle determination of relative permeability. Frontal advance equation, Buckley-Leverett equation as frontal advance solution, tracers in multiphase flow, adsorption, three-phase relative permeabilities.

Same as: ENERGY 121

**ENERGY 222. Advanced Reservoir Engineering. 3 Units.**

Lectures, problems. General flow equations, tensor permeabilities, steady state radial flow, skin, and succession of steady states. Injectivity during fill-up of a depleted reservoir, injectivity for liquid-filled reservoirs. Flow potential and gravity forces, coning. Displacements in layered reservoirs. Transient radial flow equation, primary drainage of a cylindrical reservoir, line source solution, pseudo-steady state. May be repeated for credit. Prerequisite: 221.

**ENERGY 223. Reservoir Simulation. 3-4 Units.**

Fundamentals of petroleum reservoir simulation. Equations for multicomponent, multiphase flow between gridblocks comprising a petroleum reservoir. Relationships between black-oil and compositional models. Techniques for developing black-oil, compositional, thermal, and dual-porosity models. Practical considerations in the use of simulators for predicting reservoir performance. Class project. Prerequisite: 221 and 246, or consent of instructor. Recommended: CME 206.

**ENERGY 224. Advanced Reservoir Simulation. 3 Units.**

Topics include modeling of complex wells, coupling of surface facilities, compositional modeling, dual porosity models, treatment of full tensor permeability and grid nonorthogonality, local grid refinement, higher order methods, streamline simulation, upscaling, algebraic multigrid solvers, unstructured grid solvers, history matching, other selected topics. Prerequisite: 223 or consent of instructor. May be repeated for credit.

**ENERGY 225. Theory of Gas Injection Processes. 3 Units.**

Lectures, problems. Theory of multicomponent, multiphase flow in porous media. Miscible displacement: diffusion and dispersion, convection-dispersion equations and its solutions. Method of characteristic calculations of chromatographic transport of multicomponent mixtures. Development of miscibility and interaction of phase behavior with heterogeneity. May be repeated for credit. Prerequisite: CME 200.

**ENERGY 226. Thermal Recovery Methods. 3 Units.**

Theory and practice of thermal recovery methods: steam drive, cyclic steam injections, and in situ combustion. Models of combined mass and energy transport. Estimates of heated reservoir volume and oil recovery performance. Wellbore heat losses, recovery production, and field examples.

**ENERGY 227. Enhanced Oil Recovery. 3 Units.**

The physics, theories, and methods of evaluating chemical, miscible, and thermal enhanced oil recovery projects. Existing methods and screening techniques, and analytical and simulation based means of evaluating project effectiveness. Dispersion-convection-adsorption equations, coupled heat, and mass balances and phase behavior provide requisite building blocks for evaluation.

**ENERGY 230. Advanced Topics in Well Logging. 3 Units.**

State of the art tools and analyses; the technology, rock physical basis, and applications of each measurement. Hands-on computer-based analyses illustrate instructional material. Guest speakers on formation evaluation topics. Prerequisites: 130 or equivalent; basic well logging; and standard practice and application of electric well logs.

**ENERGY 240. Geostatistics. 2-3 Units.**

Geostatistical theory and practical methodologies for quantifying and simulating spatial and spatio-temporal patterns for the Earth Sciences. Real case development of models of spatial continuity, including variograms, Boolean models and training images. Estimation versus simulation of spatial patterns. Loss functions. Estimation by kriging, co-kriging with secondary data. Dealing with data on various scales. Unconditional and conditional Boolean simulation, sequential simulation for continuous and categorical variables. Multi-variate geostatistical simulation. Probabilistic and pattern-based approaches to multiple-point simulation. Trend, secondary variable, auxiliary variable and probability-type constraints. Quality control techniques on generated models. Workflows for practical geostatistical applications in mining, petroleum, hydrogeology, remote sensing and environmental sciences. prerequisites: Energy 160/260 or basic course in data analysis/statistics. Same as: GS 240

**ENERGY 241. Seismic Reservoir Characterization. 3-4 Units.**

(Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112. Same as: ENERGY 141, GEOPHYS 241A

**ENERGY 242. Topics in Advanced Geostatistics. 3-4 Units.**

Conditional expectation theory and projections in Hilbert spaces; parametric versus non-parametric geostatistics; Boolean, Gaussian, fractal, indicator, and annealing approaches to stochastic imaging; multiple point statistics inference and reproduction; neural net geostatistics; Bayesian methods for data integration; techniques for upscaling hydrodynamic properties. May be repeated for credit. Prerequisites: 240, advanced calculus, C++/Fortran. Same as: ESS 263

**ENERGY 246. Reservoir Characterization and Flow Modeling with Outcrop Data. 3 Units.**

Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip. Same as: ENERGY 146, GS 246

**ENERGY 247. Stochastic Simulation. 3 Units.**

Characterization and inference of statistical properties of spatial random function models; how they average over volumes, expected fluctuations, and implementation issues. Models include point processes (Cox, Poisson), random sets (Boolean, truncated Gaussian), and mixture of Gaussian random functions. Prerequisite: 240.

**ENERGY 251. Thermodynamics of Equilibria. 3 Units.**

Lectures, problems. The volumetric behavior of fluids at high pressure. Equation of state representation of volumetric behavior. Thermodynamic functions and conditions of equilibrium, Gibbs and Helmholtz energy, chemical potential, fugacity. Phase diagrams for binary and multicomponent systems. Calculation of phase compositions from volumetric behavior for multicomponent mixtures. Experimental techniques for phase-equilibrium measurements. May be repeated for credit.

**ENERGY 252. Chemical Kinetics Modeling. 3 Units.**

Fundamentals of chemical reaction kinetics in homogeneous and heterogeneous reaction systems from a molecular perspective. Development and application of the theory of chemical kinetics, including collision, transition state, and surface reactivity approaches. Relationships between thermodynamics and kinetics to overall mechanism predictions. Introduction to Gaussian 03. Lab involves chemical modeling including ab initio electronic structure calculations (Hartree-Fock, configuration interaction, coupled cluster, and many-body perturbation theory) and thermodynamic predictions.

**ENERGY 253. Carbon Capture and Sequestration. 3-4 Units.**

CO<sub>2</sub> separation from syngas and flue gas for gasification and combustion processes. Transportation of CO<sub>2</sub> in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO<sub>2</sub>. Comparison of options for geological sequestration in oil and gas reservoirs, deep unmineable coal beds, and saline aquifers. Life cycle analysis.

Same as: ENERGY 153

**ENERGY 255. Master's Report on Energy Industry Training. 1-3 Unit.**

On-the-job training for master's degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignments, and key results. May be repeated for credit.

Prerequisite: consent of adviser.

**ENERGY 256. Electronic Structure Theory and Applications to Chemical Kinetics. 3 Units.**

Fundamentals of electronic structure theory as it applies to chemical reaction kinetics in homogeneous and heterogeneous reaction systems. Development and application of the theory of chemical kinetics, including traditional and harmonic transition state theories. Relationships between thermodynamics and kinetics to overall mechanism predictions. Lab involves chemical modeling including ab initio electronic structure calculations (Hartree-Fock, configuration interaction, coupled cluster, and many-body perturbation theory) and thermodynamic predictions. DFT calculations for catalysis applications are also covered. Prerequisite: quantum mechanics.

Same as: CHEMENG 444

**ENERGY 259. Presentation Skills. 1 Unit.**

For teaching assistants in Energy Resources Engineering. Five two-hour sessions in the first half of the quarter. Awareness of different learning styles, grading philosophies, fair and efficient grading, text design; presentation and teaching skills, PowerPoint slide design; presentation practice in small groups. Taught in collaboration with the Center for Teaching and Learning.

**ENERGY 267. Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties. 3 Units.**

Appraisal of development and remedial work on oil and gas wells; appraisal of producing properties; estimation of productive capacity, reserves; operating costs, depletion, and depreciation; value of future profits, taxation, fair market value; original or guided research problems on economic topics with report. Prerequisite: consent of instructor.

Same as: ENERGY 167

**ENERGY 269. Geothermal Reservoir Engineering. 3 Units.**

Conceptual models of heat and mass flows within geothermal reservoirs. The fundamentals of fluid/heat flow in porous media; convective/conductive regimes, dispersion of solutes, reactions in porous media, stability of fluid interfaces, liquid and vapor flows. Interpretation of geochemical, geological, and well data to determine reservoir properties/characteristics. Geothermal plants and the integrated geothermal system.

**ENERGY 271. Energy Infrastructure, Technology and Economics. 3 Units.**

Oil and gas represents more than 50% of global primary energy. In delivering energy at scale, the industry has developed global infrastructure with supporting technology that gives it enormous advantages in energy markets; this course explores how the oil and gas industry operates. From the perspective of these established systems and technologies, we will look at the complexity of energy systems, and will consider how installed infrastructure enables technology development and deployment, impacts energy supply, and how existing infrastructure and capital invested in fossil energy impacts renewable energy development. Prerequisites: Energy 101 and 102 or permission of instructor.

Same as: ENERGY 171

**ENERGY 273. Special Topics in Energy Resources Engineering. 1-3 Unit.****ENERGY 275. Quantitative Methods in Basin and Petroleum System Modeling. 1-3 Unit.**

Examine the physical processes operating in sedimentary basins by deriving the basic equations of fundamental, coupled geologic processes such as fluid flow and heat flow, deposition, compaction, mass conservation, and chemical reactions. Through hands-on computational exercises and instructor-provided "recipes," students will deconstruct the black box of basin modeling software. Students write their own codes (Matlab) as well as gain expertise in modern finite-element modeling software (PetroMod, COMSOL).

Same as: GS 256

**ENERGY 280. Oil and Gas Production Engineering. 3 Units.**

Design and analysis of production systems for oil and gas reservoirs. Topics: well completion, single-phase and multi-phase flow in wells and gathering systems, artificial lift and field processing, well stimulation, inflow performance. Prerequisite: 120.

Same as: ENERGY 180

**ENERGY 281. Applied Mathematics in Reservoir Engineering. 3 Units.**

The philosophy of the solution of engineering problems. Methods of solution of partial differential equations: Laplace transforms, Fourier transforms, wavelet transforms, Green's functions, and boundary element methods. Prerequisites: CME 204 or MATH 131, and consent of instructor.

**ENERGY 282. Chemical Kinetics of Fossil Fuel Creation and Utilization. 1 Unit.**

Chemical kinetics are an integral part of optimizing recovery of fossil fuels. After reviewing the genesis of various kinds of fossil fuels and the history of their use, the course describes the molecular structure of the various types and how that influences their pyrolysis kinetics. Methods for deriving reliable kinetics are covered, including how to determine which phenomenological models are appropriate. Applications discussed are petroleum formation, oil shale retorting, heavy oil upgrading, and coal liquefaction.

**ENERGY 284. Optimization and Inverse Modeling. 3 Units.**

Treatment of deterministic and stochastic optimization, gradient-based optimization, polytope method, generalized least squares, non-linear least squares and confidence intervals by numerical methods and bootstrap. Adjoint method for gradient calculation. Genetic algorithms and simulated annealing. Development of proxy functions using regression techniques and neural networks. Application of optimization methods to solving non-linear inverse problems. Bayesian method, rejection sampling, metropolis sampling, uncertainty quantification. Parameterization of high-dimensional problems through various expansion techniques.

Examples of various Earth sciences inverse problems including flow and wave equations. Requirements: CME 106 and 200 (or equivalent courses).

**ENERGY 285A. SUPRI-A Research Seminar: Enhanced Oil Recovery. 1 Unit.**

Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-A group. May be repeated for credit. Prerequisite: consent of instructor.

**ENERGY 285B. SUPRI-B Research Seminar: Reservoir Simulation. 1 Unit.**

Focused study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in SUPRI-B (reservoir simulation) program. May be repeated for credit. Prerequisite: consent of instructor.

**ENERGY 285C. SUPRI-C Research Seminar: Gas Injection Processes. 1 Unit.**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated for credit. Prerequisite: consent of instructor.

**ENERGY 285D. SUPRI-D Research Seminar: Well Test Analysis. 1 Unit.**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SUPRI-D well test analysis group. May be repeated for credit. Prerequisite: consent of instructor. (Horne).

**ENERGY 285F. SCRF Research Seminar: Geostatistics and Reservoir Forecasting. 1 Unit.**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the SCRF (Stanford Center for Reservoir Forecasting) program. Prerequisite: consent of instructor.

**ENERGY 285G. Geothermal Reservoir Engineering Research Seminar. 1 Unit.**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in the geothermal energy group. Presentation required for credit. Prerequisite: consent of instructor.

**ENERGY 285S. Smart Fields Research Seminar: Horizontal Well Technology. 1 Unit.**

Study in research areas within the department. Graduate students may participate in advanced work in areas of particular interest prior to making a final decision on a thesis subject. Current research in Smart Fields (productivity and injectivity of horizontal wells) program. Prerequisite: consent of instructor.

**ENERGY 290. Numerical Modeling of Fluid Flow in Heterogeneous Porous Media. 3 Units.**

How to mathematically model and solve elliptic partial differential equations with variable and discontinuous coefficients describing flow in highly heterogeneous porous media. Topics include finite difference and finite volume approaches on structured grids, efficient solvers for the resulting system of equations, Krylov space methods, preconditioning, multi-grid solvers, grid adaptivity and adaptivity criteria, multiscale approaches, and effects of anisotropy on solver efficiency and accuracy. MATLAB programming and application of commercial or public domain simulation packages. Prerequisite: CME 200, 201, and 202, or equivalents with consent of instructor.

**ENERGY 291. Optimization of Energy Systems. 3-4 Units.**

Introductory mathematical programming and optimization using examples from energy industries. Emphasis on problem formulation and solving, secondary coverage of algorithms. Problem topics include optimization of energy investment, production, and transportation; uncertain and intermittent energy resources; energy storage; efficient energy production and conversion. Methods include linear and nonlinear optimization, as well as multi-objective and goal programming. Tools include Microsoft Excel and AMPL mathematical programming language. Prerequisites: MATH 20, 41, or MATH 51, or consent of instructor. Programming experience helpful (e.g., CS 106A, CS 106B). Same as: ENERGY 191

**ENERGY 293A. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution. 3-4 Units.**

Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. Undergraduates register in 156 for 4 units; graduates register in 256 for 3 units.

Same as: EE 293A, MATSCI 156, MATSCI 256

**ENERGY 293B. Fundamentals of Energy Processes. 3 Units.**

For seniors and graduate students. Covers scientific and engineering fundamentals of renewable energy processes involving heat. Thermodynamics, heat engines, solar thermal, geothermal, biomass. Recommended: MATH 19-21, or Math 41,42; PHYSICS 41, 43, 45. Same as: EE 293B

**ENERGY 293C. Energy from Wind and Water Currents. 3 Units.**

This course focuses on the extraction of energy from wind, waves and tides. The emphasis in the course is technical leading to a solid understanding of established extraction systems and discussion of promising new technologies. We will also cover resource planning and production optimization through observations and computer simulations. The course includes at least one weekend field trip, and may include experiments in wind tunnel and/or flume. Prerequisites: CEE 176B or EE 293B, programming experience, understanding of fluid mechanics, electrical systems, and engineering optimization.

**ENERGY 295. Quantitative environmental assessment of energy systems. 1 Unit.**

Graduate seminar on quantitative environmental assessment of energy technologies. Assessment methods for analyzing multi-device and multi-technology energy systems (e.g., full energy production  $\zeta$  pathways  $\zeta$ ). Methodological coverage includes process-model life cycle assessment (LCA), energy embodied  $\zeta$  in materials, energy return on energy invested, and cumulative exergy consumption. Exploration of theoretical modeling of multi-technology systems using matrix formulations. Tools used include MATLAB and openLCA life cycle assessment software. Prerequisites: linear algebra and some programming experience helpful (e.g., CS 106A-B).

**ENERGY 300. Graduate Directed Reading. 1-7 Unit.**

Independent studies under the direction of a faculty member for which academic credit may properly be allowed.

**ENERGY 301. The Energy Seminar. 1 Unit.**

Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students. May be repeated for credit.

Same as: CEE 301, MS&E 494

**ENERGY 355. Doctoral Report on Energy Industry Training. 1-3 Unit.**

On-the-job training for doctoral students under the guidance of on-site supervisors. Students submit a report on work activities, problems, assignments, and results. May be repeated for credit. Prerequisite: consent of adviser.

**ENERGY 359. Teaching Experience in Energy Resources Engineering. 1 Unit.**

For TAs in Energy Resources Engineering. Course and lecture design and preparation; lecturing practice in small groups. Classroom teaching practice in an Energy Resources Engineering course for which the participant is the TA (may be in a later quarter). Taught in collaboration with the Center for Teaching and Learning.

**ENERGY 360. Advanced Research Work in Energy Resources Engineering. 1-10 Unit.**

Graduate-level work in experimental, computational, or theoretical research. Special research not included in graduate degree program. May be repeated for credit.

**ENERGY 361. Master's Degree Research in Energy Resources Engineering. 1-6 Unit.**

Experimental, computational, or theoretical research. Advanced technical report writing. Limited to 6 units total. (Staff).

**ENERGY 362. Engineer's Degree Research in Energy Resources Engineering. 1-10 Unit.**

Graduate-level work in experimental, computational, or theoretical research for Engineer students. Advanced technical report writing. Limited to 15 units total, or 9 units total if 6 units of 361 were previously credited.

**ENERGY 363. Doctoral Degree Research in Energy Resources Engineering. 1-10 Unit.**

Graduate-level work in experimental, computational, or theoretical research for Ph.D. students. Advanced technical report writing.

**ENERGY 365. Special Research Topics in Energy Resources Engineering. 1-15 Unit.**

Graduate-level research work not related to report, thesis, or dissertation. May be repeated for credit.

**ENERGY 369. Practical Energy Studies. 1-3 Unit.**

Students work on realistic industrial reservoir engineering problems. Focus is on optimization of production scenarios using secondary or tertiary recovery techniques. When possible, projects are conducted in direct collaboration with industry. May be repeated for credit.

**ENERGY 801. TGR Project. 0 Units.**

.

**ENERGY 802. TGR Dissertation. 0 Units.**

.

**Engineering Courses****ENGR 10. Introduction to Engineering Analysis. 4 Units.**

Integrated approach to the fundamental scientific principles that are the cornerstones of engineering analysis: conservation of mass, atomic species, charge, momentum, angular momentum, energy, production of entropy expressed in the form of balance equations on carefully defined systems, and incorporating simple physical models. Emphasis is on setting up analysis problems arising in engineering. Topics: simple analytical solutions, numerical solutions of linear algebraic equations, and laboratory experiences. Provides the foundation and tools for subsequent engineering courses. Prerequisite: AP Physics and AP Calculus or equivalent.

**ENGR 14. Intro to Solid Mechanics. 4 Units.**

Introduction to engineering analysis using the principles of engineering solid mechanics. Builds on the math and physical reasoning concepts in Physics 41 to develop skills in evaluation of engineered systems across a variety of fields. Foundational ideas for more advanced solid mechanics courses such as ME80 or CEE101A. Interactive lecture sessions focused on mathematical application of key concepts, with weekly complementary lab session on testing and designing systems that embody these concepts. Limited enrollment, subject to instructor approval. Pre-requisite: Physics 41.

**ENGR 15. Dynamics. 4 Units.**

The application of Newton's Laws to solve 2-D and 3-D static and dynamic problems, particle and rigid body dynamics, freebody diagrams, and equations of motion, with application to mechanical, biomechanical, and aerospace systems. Computer numerical solution and dynamic response. Prerequisites: Calculus (differentiation and integration) such as MATH 41; and ENGR 14 (statics and strength) or a mechanics course in physics such as PHYSICS 41.

**ENGR 20. Introduction to Chemical Engineering. 4 Units.**

Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, energy, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31. Same as: CHEMENG 20

**ENGR 25B. Biotechnology. 3 Units.**

Biology and chemistry fundamentals, genetic engineering, cell culture, protein production, pharmaceuticals, genomics, viruses, gene therapy, evolution, immunology, antibodies, vaccines, transgenic animals, cloning, stem cells, intellectual property, governmental regulations, and ethics. Prerequisites: CHEM 31 and MATH 41 or equivalent courage. Same as: CHEMENG 25B

**ENGR 25E. Energy: Chemical Transformations for Production, Storage, and Use. 3 Units.**

An introduction and overview to the challenges and opportunities of energy supply and consumption. Emphasis on energy technologies where chemistry and engineering play key roles. Review of energy fundamentals along with historical energy perspectives and current energy production technologies. In depth analyses of solar thermal systems, biofuels, photovoltaics and electrochemical devices (batteries and fuel cells). Prerequisites: high school chemistry or equivalent. Same as: CHEMENG 25E

**ENGR 30. Engineering Thermodynamics. 3 Units.**

The basic principles of thermodynamics are introduced in this course. Concepts of energy and entropy from elementary considerations of the microscopic nature of matter are discussed. The principles are applied in thermodynamic analyses directed towards understanding the performances of engineering systems. Methods and problems cover socially responsible economic generation and utilization of energy in central power generation plants, solar systems, refrigeration devices, and automobile, jet and gas-turbine engines.

**ENGR 40. Introductory Electronics. 5 Units.**

Overview of electronic circuits and applications. Electrical quantities and their measurement, including operation of the oscilloscope. Basic models of electronic components including resistors, capacitors, inductors, and the operational amplifier. Frequency response of linear circuits, including basic filters, using phasor analysis. Digital logic fundamentals, logic gates, and basic combinatorial logic blocks. Lab. Lab assignments. Enrollment limited to 200.

**ENGR 40A. Introductory Electronics. 3 Units.**

Abbreviated version of E40, for students not pursuing degree in Electrical Engineering. Instruction to be completed in the first seven weeks of the quarter. Overview of electronic circuits and applications. Electrical quantities and their measurement, including operation of the oscilloscope. Basic models of electronic components including resistors, capacitors, inductors, and the operational amplifier. Lab. Lab assignments. Enrollment limited to 200.

**ENGR 40M. An Intro to Making: What is EE. 3-5 Units.**

Is a hands-on class where students learn to make stuff. Through the process of building, you are introduced to the basic areas of EE. Students build a "useless box" and learn about circuits, feedback, and programming hardware, a light display for your desk and bike and learn about coding, transforms, and LEDs, a solar charger and an EKG machine and learn about power, noise, feedback, more circuits, and safety. And you get to keep the toys you build. Prerequisite: CS 106A.

**ENGR 40P. Physics of Electrical Engineering. 5 Units.**

How everything from electrostatics to quantum mechanics is used in common high-technology products. Electrostatics are critical in micro-mechanical systems used in many sensors and displays, and Electromagnetic waves are essential in all high-speed communication systems. How to propagate energy on transmission lines, optical fibers, and in free space. Which aspects of modern physics are needed to generate light for the operation of a DVD player or TV. Introduction to semiconductors, solid-state light bulbs, and laser pointers. Hands-on labs to connect physics to everyday experience. Prerequisites: Physics 43. Same as: EE 41

**ENGR 50. Introduction to Materials Science, Nanotechnology Emphasis. 4 Units.**

The structure, bonding, and atomic arrangements in materials leading to their properties and applications. Topics include electronic and mechanical behavior, emphasizing nanotechnology, solid state devices, and advanced structural and composite materials.

**ENGR 50E. Introduction to Materials Science, Energy Emphasis. 4 Units.**

Materials structure, bonding and atomic arrangements leading to their properties and applications. Topics include electronic, thermal and mechanical behavior; emphasizing energy related materials and challenges.

**ENGR 50M. Introduction to Materials Science, Biomaterials Emphasis. 4 Units.**

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

**ENGR 60. Engineering Economy. 3 Units.**

Fundamentals of economic analysis. Interest rates, net present value, and internal rate of return. Applications to personal and corporate financial decisions. Mortgage evaluation, insurance decision, hedging/risk reduction, project selection, capital budgeting, and investment valuation. Effects of taxes on personal and business decisions. Investment decisions under uncertainty and utility theory. Please see <http://www.stanford.edu/class/engr60>. Prerequisites: precalculus and elementary probability.

**ENGR 62. Introduction to Optimization. 4 Units.**

Formulation and analysis of linear optimization problems. Solution using Excel solver. Polyhedral geometry and duality theory. Applications to contingent claims analysis, production scheduling, pattern recognition, two-player zero-sum games, and network flows. Prerequisite: CME 100 or MATH 51.

Same as: MS&E 111

**ENGR 70A. Programming Methodology. 3-5 Units.**

Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required. Summer quarter enrollment is limited. Priority given to Stanford students.

Same as: CS 106A

**ENGR 70B. Programming Abstractions. 3-5 Units.**

Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or equivalent. Summer quarter enrollment is limited. Priority given to Stanford students.

Same as: CS 106B

**ENGR 70X. Programming Abstractions (Accelerated). 3-5 Units.**

Intensive version of 106B for students with a strong programming background interested in a rigorous treatment of the topics at an accelerated pace. Additional advanced material and more challenging projects. Prerequisite: excellence in 106A or equivalent, or consent of instructor.

Same as: CS 106X

**ENGR 80. Introduction to Bioengineering (Engineering Living Matter). 4 Units.**

Students completing BIOE.80 should have a working understanding for how to approach the systematic engineering of living systems to benefit all people and the planet. Our main goals are (1) to help students learn ways of thinking about engineering living matter and (2) to empower students to explore the broader ramifications of engineering life. Specific concepts and skills covered include but are not limited to: capacities of natural life on Earth; scope of the existing human-directed bioeconomy; deconstructing complicated problems; reaction & diffusion systems; microbial human anatomy; conceptualizing the engineering of biology; how atoms can be organized to make molecules; how to print DNA from scratch; programming genetic sensors, logic, & actuators; biology beyond molecules (photons, electrons, etc.); what constraints limit what life can do?; what will be the major health challenges in 2030?; how does what we want shape bioengineering?; who should choose and realize various competing bioengineering futures?.

Same as: BIOE 80

**ENGR 90. Environmental Science and Technology. 3 Units.**

Introduction to environmental quality and the technical background necessary for understanding environmental issues, controlling environmental degradation, and preserving air and water quality. Material balance concepts for tracking substances in the environmental and engineering systems.

Same as: CEE 70

**ENGR 100. Teaching Public Speaking. 3 Units.**

The theory and practice of teaching public speaking and presentation development. Lectures/discussions on developing an instructional plan, using audiovisual equipment for instruction, devising tutoring techniques, and teaching delivery, organization, audience analysis, visual aids, and unique speaking situations. Weekly practice speaking. Students serve as apprentice speech tutors. Those completing course may become paid speech instructors in the Technical Communications Program. Prerequisite: consent of instructor.

**ENGR 102W. Writing for Engineers. 3 Units.**

Intensive practicum focusing on effective communication of technical, scientific, and professional information in industry and academia. Best writing practices for varied audiences, purposes, and media. Group workshops and individual conferences with instructors. Designed for undergraduates.

**ENGR 103. Public Speaking. 3 Units.**

Priority to Engineering students. Introduction to speaking activities, from impromptu talks to carefully rehearsed formal professional presentations. How to organize and write speeches, analyze audiences, create and use visual aids, combat nervousness, and deliver informative and persuasive speeches effectively. Weekly class practice, rehearsals in one-on-one tutorials, videotaped feedback. Limited enrollment.

**ENGR 105. Feedback Control Design. 3 Units.**

Design of linear feedback control systems for command-following error, stability, and dynamic response specifications. Root-locus and frequency response design techniques. Examples from a variety of fields. Some use of computer aided design with MATLAB. Prerequisite: EE 102, ME 161, or equivalent.

**ENGR 110. Perspectives in Assistive Technology (ENGR 110). 1-3 Unit.**

Seminar and student project course. Explores the medical, social, ethical, and technical challenges surrounding the design, development, and use of technologies that improve the lives of people with disabilities and older adults. Guest lecturers include engineers, clinicians, and individuals with disabilities. Tours of local facilities, assistive technology faire, and movie screening. Juniors, seniors, and graduate students from any discipline welcome. Enrollment limited to class capacity of 45. 1 unit for seminar attendance only (CR/NC) or individual project (letter grade). 3 units for students who pursue a team-based assistive technology project. Projects can be continued as independent study in Spring Quarter. See <http://enr110.stanford.edu/>. Service Learning Course (certified by Haas Center for Public Service).

Same as: ENGR 210

**ENGR 113A. Solar Decathlon 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA.

Same as: ENGR 213A

**ENGR 113B. Solar Decathlon 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA.

Same as: ENGR 213B

**ENGR 113C. Solar Decathlon 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA.

Same as: ENGR 213C

**ENGR 113D. SOLAR DECATHLON 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA.

Same as: ENGR 213D

**ENGR 115. Design the Tech Challenge. 2 Units.**

Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at <http://techchallenge.thetech.org>. May be repeated for credit.

Same as: ENGR 215

**ENGR 118. Cross-Cultural Design for Service. 3 Units.**

Students spend the summer in China working collaboratively to use design thinking for a project in the countryside. Students learn and apply the principles of design innovation including user research, ideation, prototyping, storytelling and more in a cross cultural setting to design a product or service that will benefit Chinese villagers. Students should be prepared to work independently in a developing region of China, to deal with persistent ambiguity, and to work with a cross-cultural, diverse team of students on their projects. Applications for Summer 2012 were due in March.

**ENGR 120. Fundamentals of Petroleum Engineering. 3 Units.**

Lectures, problems, field trip. Engineering topics in petroleum recovery; origin, discovery, and development of oil and gas. Chemical, physical, and thermodynamic properties of oil and natural gas. Material balance equations and reserve estimates using volumetric calculations. Gas laws. Single phase and multiphase flow through porous media.

Same as: ENERGY 120

**ENGR 130. Science, Technology, and Contemporary Society. 4-5 Units.**

Key social, cultural, and values issues raised by contemporary scientific and technological developments; distinctive features of science and engineering as sociotechnical activities; major influences of scientific and technological developments on 20th-century society, including transformations and problems of work, leisure, human values, the fine arts, and international relations; ethical conflicts in scientific and engineering practice; and the social shaping and management of contemporary science and technology.

**ENGR 131. Ethical Issues in Engineering. 4 Units.**

Moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; the ethics of whistle blowing; ethical conflicts of engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations; ethical issues arising from engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Case studies, guest practitioners, and field research. Limited enrollment.

**ENGR 140A. Leadership of Technology Ventures. 3-4 Units.**

First of three-part sequence for students selected to the Mayfield Fellows Program. Management and leadership within high technology startups, focusing on entrepreneurial skills related to product and market strategy, venture financing and cash flow management, team recruiting and organizational development, and the challenges of managing growth and handling adversity in emerging ventures. Other engineering faculty, founders, and venture capitalists participate as appropriate. Recommended: accounting or finance course (MS&E 140, ECON 90, or ENGR 60).

**ENGR 140B. Leadership of Technology Ventures. 1-2 Unit.**

Open to Mayfield Fellows only; taken during the summer internship at a technology startup. Students exchange experiences and continue the formal learning process. Activities journal. Credit given following quarter.

**ENGR 140C. Leadership of Technology Ventures. 2-3 Units.**

Open to Mayfield Fellows only. Capstone to the 140 sequence. Students, faculty, employers, and venture capitalists share recent internship experiences and analytical frameworks. Students develop living case studies and integrative project reports.

**ENGR 145. Technology Entrepreneurship. 4 Units.**

How do you create a successful start-up? What is entrepreneurial leadership in a large firm? What are the differences between an idea and true opportunity? How does an entrepreneur form a team and gather the resources necessary to create a great enterprise? Mentor-guided project focused on developing students' startup ideas, immersion in nuances of innovation and early stage entrepreneurship, case studies, research on the entrepreneurial process, and the opportunity to network with Silicon Valley's top entrepreneurs and venture capitalists. For undergraduates of all majors who seek to understand the formation and growth of high-impact start-ups in areas such as information, energy, medical and consumer technologies. No prerequisites. Limited enrollment. Please submit Autumn course application at <http://goo.gl/forms/fO61GT1NnY> by 6pm on Monday, September 21, 2015.

**ENGR 150. Data Challenge Lab. 1-6 Unit.**

In this lab, students develop the practical skills of data science by solving a series of increasingly difficult, real problems. Skills developed include: data manipulation, exploratory data analysis, data visualization, and predictive modeling. The data challenges each student undertakes are based upon their current skills. Students receive one-on-one coaching and see how expert practitioners solve the same challenges. Limited enrollment; application required. May be repeated for credit. See <http://datalab.stanford.edu> for more information.

**ENGR 154. Vector Calculus for Engineers. 5 Units.**

Computation and visualization using MATLAB. Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Introduction to linear algebra: matrix operations, systems of algebraic equations, methods of solution and applications. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green's, divergence, and Stokes' theorems. Examples and applications drawn from various engineering fields. Prerequisites: 10 units of AP credit (Calc BC with 4 or 5, or Calc AB with 5), or Math 41 and 42. Note: Students enrolled in section 100-02 and 100A-02 are required to attend the discussion section (section 03) on Thursdays 4:30-5:50pm. Same as: CME 100

**ENGR 155A. Ordinary Differential Equations for Engineers. 5 Units.**

Analytical and numerical methods for solving ordinary differential equations arising in engineering applications: Solution of initial and boundary value problems, series solutions, Laplace transforms, and nonlinear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool kit for computations. Problems from various engineering fields. Prerequisite: 10 units of AP credit (Calc BC with 4 or 5, or Calc AB with 5), or Math 41 and 42. Recommended: CME100. Same as: CME 102

**ENGR 155B. Linear Algebra and Partial Differential Equations for Engineers. 5 Units.**

Linear algebra: matrix operations, systems of algebraic equations, Gaussian elimination, undetermined and overdetermined systems, coupled systems of ordinary differential equations, eigensystem analysis, normal modes. Fourier series with applications, partial differential equations arising in science and engineering, analytical solutions of partial differential equations. Numerical methods for solution of partial differential equations: iterative techniques, stability and convergence, time advancement, implicit methods, von Neumann stability analysis. Examples and applications from various engineering fields. Prerequisite: CME 102/ENGR 155A. Same as: CME 104

**ENGR 155C. Introduction to Probability and Statistics for Engineers. 4 Units.**

Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR154 or MATH 51 or 52. Same as: CME 106

**ENGR 159Q. Japanese Companies and Japanese Society. 3 Units.**

Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. Same as: MATSCI 159Q

**ENGR 192. Engineering Public Service Project. 1-2 Unit.**

Volunteer work on a public service project with a technical engineering component. Project requires a faculty sponsor and a community partner such as a nonprofit organization, school, or individual. Required report. See <http://soe.stanford.edu/publicservice>. May be repeated for credit. Prerequisite: consent of instructor.

**ENGR 199. Special Studies in Engineering. 1-15 Unit.**

Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the section number corresponding to the particular faculty member. May be repeated for credit. Prerequisite: consent of instructor.

**ENGR 199W. Writing of Original Research for Engineers. 1-3 Unit.**

Technical writing in science and engineering. Students produce a substantial document describing their research, methods, and results. Prerequisite: completion of freshman writing requirements; prior or concurrent in 2 units of research in the major department; and consent of instructor. WIM for BioMedical Computation.

**ENGR 202S. Writing: Special Projects. 1 Unit.**

Writing tutorial for students working on non-course projects such as theses, journal articles, and conference papers. Weekly individual conferences.

**ENGR 202W. Technical Writing. 3 Units.**

How to write clear, concise, and well-ordered technical prose. Principles of editing for structure and style. Applications to a variety of genres in engineering and science.

**ENGR 205. Introduction to Control Design Techniques. 3 Units.**

Review of root-locus and frequency response techniques for control system analysis and synthesis. State-space techniques for modeling, full-state feedback regulator design, pole placement, and observer design. Combined observer and regulator design. Lab experiments on computers connected to mechanical systems. Prerequisites: 105, MATH 103, 113. Recommended: Matlab.

**ENGR 206. Control System Design. 3-4 Units.**

Design and construction of a control system and working plant. Topics include: linearity, actuator saturation, sensor placement, controller and model order; linearization by differential actuation and sensing; analog op-amp circuit implementation. Emphasis is on qualitative aspects of analysis and synthesis, generation of candidate design, and engineering tradeoffs in system selection. Large team-based project. Limited enrollment. Prerequisite: 105.

**ENGR 207A. Linear Control Systems I. 3 Units.**

Introduction to control of discrete-time linear systems. State-space models. Controllability and observability. The linear quadratic regulator. Prerequisite: 105 or 205.

**ENGR 207B. Linear Control Systems II. 3 Units.**

Probabilistic methods for control and estimation. Statistical inference for discrete and continuous random variables. Linear estimation with Gaussian noise. The Kalman filter. Prerequisite: EE 263.

**ENGR 209A. Analysis and Control of Nonlinear Systems. 3 Units.**

Introduction to nonlinear phenomena: multiple equilibria, limit cycles, bifurcations, complex dynamical behavior. Planar dynamical systems, analysis using phase plane techniques. Describing functions. Lyapunov stability theory. SISO feedback linearization, sliding mode control. Design examples. Prerequisite: 205.

**ENGR 210. Perspectives in Assistive Technology (ENGR 110). 1-3 Unit.**

Seminar and student project course. Explores the medical, social, ethical, and technical challenges surrounding the design, development, and use of technologies that improve the lives of people with disabilities and older adults. Guest lecturers include engineers, clinicians, and individuals with disabilities. Tours of local facilities, assistive technology faire, and movie screening. Juniors, seniors, and graduate students from any discipline welcome. Enrollment limited to class capacity of 45. 1 unit for seminar attendance only (CR/NC) or individual project (letter grade). 3 units for students who pursue a team-based assistive technology project. Projects can be continued as independent study in Spring Quarter. See <http://engr110.stanford.edu/>. Service Learning Course (certified by Haas Center for Public Service).

Same as: ENGR 110

**ENGR 213. Solar Decathlon. 1-4 Unit.**

Open to all engineering majors. Project studio for all work related to the Solar Decathlon 2013 competition. Each student will develop a personal work plan for the quarter with his or her advisor and perform multidisciplinary collaboration on designing systems for the home or pre-construction planning. Work may continue through the summer as a paid internship, as well as through the next academic year. For more information about the team and the competition, please visit [solardecathlon.stanford.edu](http://solardecathlon.stanford.edu).

**ENGR 213A. Solar Decathlon 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA.

Same as: ENGR 113A

**ENGR 213B. Solar Decathlon 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA.

Same as: ENGR 113B

**ENGR 213C. Solar Decathlon 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA.

Same as: ENGR 113C

**ENGR 213D. SOLAR DECATHLON 2015. 3 Units.**

Open to all majors. Seminar / Lab format course facilitates the student-led administration, conception, development, and execution of the Solar Decathlon 2015 competition entry sponsored by the US Department of Energy. (<http://www.solardecathlon.gov/>) Students shall learn best practices in creating design teams to address multi-disciplinary design problems. Students shall work both as individuals and in teams across multiple Stanford SD2015 phases of project management, research, fundraising, design, engineering, contracting, construction administration, and competitive testing in Irvine CA.

Same as: ENGR 113D

**ENGR 215. Design the Tech Challenge. 2 Units.**

Students work with Tech Museum of San Jose staff to design the Tech Challenge, a yearly engineering competition for 6-12th grade students. Brainstorming, field trips to the museum, prototyping, coaching, and presentations to the Tech Challenge advisory board. See at <http://techchallenge.thetech.org>. May be repeated for credit.

Same as: ENGR 115

**ENGR 231. Transformative Design. 3 Units.**

Too many alums are doing what they've always been told they're good at, and are living with regret and a sense that they're just resigned to doing this thing for the rest of their lives. Capabilities displaced their values as the primary decision driver in their lives. Our ultimate goal is to restore a sense of agency and passion into the lives of current Stanford students by creating the space to explore and experiment with the greatest design project possible: YOUR LIFE. We will turn d.school tools and mindsets onto the topic of our lives – not in theory, but in reality – and will prototype changes to make life more fulfilling and rewarding. We will actively empathize and experiment in your life, so if you don't want to do that kind of self-examination, this class will not be a good fit for you.

**ENGR 240. Introduction to Micro and Nano Electromechanical Systems. 3 Units.**

Miniaturization technologies now have important roles in materials, mechanical, and biomedical engineering practice, in addition to being the foundation for information technology. This course will target an audience of first-year engineering graduate students and motivated senior-level undergraduates, with the goal of providing an introduction to M/NEMS fabrication techniques, selected device applications, and the design tradeoffs in developing systems. The course has no specific prerequisites, other than graduate or senior standing in engineering; otherwise, students will require permission of the instructors.

**ENGR 245. The Lean LaunchPad: Getting Your Lean Startup Off the Ground. 3-4 Units.**

Apply the "Lean Startup" principles; "business model canvas," "customer development" and "Agile Engineering" to prototype, test, and iterate your idea while discovering if you have a profitable business model. This is the class adopted by the NSF and NIH as the Innovation Corps. Apply and work in teams. Info sessions held in November and December. Team applications required in December. Proposals can be software, hardware, or service of any kind. Projects are experiential and require incrementally building the product while talking to customers/partners each week. Prerequisite: interest and passion in exploring whether a technology idea can become a real company. Limited enrollment.

**ENGR 250. Data Challenge Lab. 1-6 Unit.**

In this lab, students develop the practical skills of data science by solving a series of increasingly difficult, real problems. Skills developed include: data manipulation, exploratory data analysis, data visualization, and predictive modeling. The data challenges each student undertakes are based upon their current skills. Students receive one-on-one coaching and see how expert practitioners solve the same challenges. Limited enrollment; application required. May be repeated for credit. See <http://datalab.stanford.edu> for more information.

**ENGR 280. From Play to Innovation. 2-4 Units.**

Focus is on enhancing the innovation process with playfulness. The class will be project-based and team-centered. We will investigate the human "state of play" to reach an understanding of its principal attributes and how important it is to creative thinking. We will explore play behavior, its development, and its biological basis. We will then apply those principles through design thinking to promote innovation in the corporate world. Students will work with real-world partners on design projects with widespread application. This course requires an application. You can find the application here: [dschool.stanford.edu/classes](http://dschool.stanford.edu/classes).

**ENGR 281. d.media 4.0 - Designing Media that Matters. 2-3 Units.**

The combination of always-on smartphones, instant access to information and global social sharing is changing behavior and shifting cultural norms. How can we design digital experiences that make this change positive? Join the d.media team and find out! This course is project-based and hands-on. Three projects will explore visual design, interaction design and behavioral design all in the context of today's technology landscape and in service of a socially positive user experience. See <http://dmedia.stanford.edu>, Admission by application. See [dschool.stanford.edu/classes](http://dschool.stanford.edu/classes) for more information.

**ENGR 290. Graduate Environment of Support. 1 Unit.**

For course assistants (CAs) and tutors in the School of Engineering tutorial and learning program. Interactive training for effective academic assistance. Pedagogy, developing course material, tutoring, and advising. Sources include video, readings, projects, and role playing.

**ENGR 298. Seminar in Fluid Mechanics. 1 Unit.**

Interdepartmental. Problems in all branches of fluid mechanics, with talks by visitors, faculty, and students. Graduate students may register for 1 unit, without letter grade; a letter grade is given for talks. May be repeated for credit.

**ENGR 299. Special Studies in Engineering. 1-15 Unit.**

Special studies, lab work, or reading under the direction of a faculty member. Often research experience opportunities exist in ongoing research projects. Students make arrangements with individual faculty and enroll in the corresponding section. Prerequisite: consent of instructor.

**ENGR 311A. Women's Perspectives. 1 Unit.**

Master's and Ph.D. seminar series driven by student interests. Possible topics: time management, career choices, health and family, diversity, professional development, and personal values. Guest speakers from academia and industry, student presentations with an emphasis on group discussion. Graduate students share experiences and examine scientific research in these areas. May be repeated for credit.

**ENGR 311B. Designing the Professional. 1 Unit.**

How to Get a Life as well as a PhD: Seminar open to ALL doctoral students (Humanities, Sciences and Engineering). Apply principles of design thinking to designing your professional life following Stanford. Topics include: Introduction to "design thinking", a framework for vocational wayfinding and locating profession within life overall; tools to investigate multiple professional paths. Creation of personal "Odyssey Plan" to innovate multiple prototypes for post-PhD professional launch.

**ENGR 311C. Expanding Engineering Limits: Culture, Diversity, and Gender. 1-2 Unit.**

This course considers how culture shapes and impacts engineering, with a particular focus on the cultural aspects of gender that affect who becomes an engineer, what problems get solved, and the quality of solutions, design, technology, and products. We will examine engineering cultures and gender through the lens of design thinking, which is an increasingly visible component of engineering education and practice. Design processes are determined by the designers, their disciplinary backgrounds, and the methods they use. How do the background characteristics of the designer affect products and development in innovation and research? Does gender matter? What about other characteristics of the designer? How can design thinking help to find sustainable solutions and also consider gender and diversity perspectives?

Same as: FEMGEN 311C

**ENGR 312. Science and Engineering Course Design. 2-3 Units.**

For students interested in an academic career and who anticipate designing science or engineering courses at the undergraduate or graduate level. Goal is to apply research on science and engineering learning to the design of effective course materials. Topics include syllabus design, course content and format decisions, assessment planning and grading, and strategies for teaching improvement.

Same as: VPTL 312

**ENGR 313. Topics in Engineering and Science Education. 1-2 Unit.**

This seminar series focuses on topics related to teaching science, technology, engineering, and math (STEM) courses based on education research. Each year focuses on a different topic related to STEM education. This course may be repeated for credit each year. This year we will explore how to design assessments and give feedback to facilitate student learning through a series of discussions, in-class activities and guest lectures based on current STEM education literature. Throughout the quarter, there will be several opportunities for directly practicing and applying STEM education strategies to specific teaching goals in your field.

**ENGR 330. Topics in Modern Robotics Research. 1 Unit.**

This seminar will invite guest speakers to present contemporary research in the field of Robotics. Students must attend at least 7 seminars in order to receive credit.

**ENGR 341. Micro/Nano Systems Design and Fabrication. 3-5 Units.**

Laboratory course in micro and nano fabrication technology that combines lectures on theory and fundamentals with hands-on training in the Stanford Nanofabrication Facility. Prerequisite: ENGR 240 or equivalent.

**ENGR 342. MEMS Laboratory II. 3-4 Units.**

Emphasis is on tools and methodologies for designing and fabricating N/MEMS-based solutions. Student interdisciplinary teams collaborate to invent, develop, and integrate N/MEMS solutions. Design alternatives fabricated and tested with emphasis on manufacturability, assembly, test, and design. Limited enrollment. Prerequisite: ENGR 341.

**ENGR 350. Data Impact Lab. 1-6 Unit.**

In this lab, multi-disciplinary teams of students tackle high-impact, unsolved problems for social sector partners. Teams receive mentorship and coaching from Stanford faculty, domain experts, and data science experts from industry. Sample projects include innovations for: poverty alleviation in the developing world, local government services, education, and healthcare. Limited enrollment; application required. May be repeated for credit. See <http://datalab.stanford.edu> for more information.

**ENGR 391. Engineering Education and Online Learning. 3 Units.**

An introduction to best practices in engineering education and educational technology, with a focus on online and blended learning. In addition to gaining a broad understanding of the field, students will experiment with a variety of education technologies, pedagogical techniques, and assessment methods.  
Same as: EDUC 391

**English Courses****ENGLISH 1. History and Theory of Novel Group. 1 Unit.**

This reading group, organized by the Undergraduate Initiative of the Center for the Study of the Novel (CSN), is intended for undergraduates interested in the study of the novel. The group will meet four times in the Spring Quarter, to discuss works by major theorists of the novel, including Lukàcs, Watt, Bakhtin, Barthes, Foucault, Moretti, Sedgwick, and others. Discussions will be led by CSN's graduate coordinators, Elena Dancu (DLCL) and Mark Taylor (English). All readings will be available on CourseWork.  
Same as: DLCL 1

**ENGLISH 1D. Dickens Book Club. 1 Unit.**

Through the academic year, we will read one Dickens novel, one number a week for 19 weeks, as the Victorians would have done as they read the serialized novel over the course of 19 months. The group gets together once a week for an hour and a half to discuss each number, to look carefully at the pattern that the author is weaving, to guess, as the Victorians would have done, what might be coming next, and to investigate the Victorian world Dickens presents. We look carefully at themes, characters, metaphorical patterns, and scenes that form Dickens' literary world, and spend increasing time evaluating the critique that Dickens levels at Victorian life. The weekly gatherings are casual; the discussion is lively and pointed.

**ENGLISH 9CE. Creative Expression in Writing. 3 Units.**

Primary focus on giving students a skill set to tap into their own creativity. Opportunities for students to explore their creative strengths, develop a vocabulary with which to discuss their own creativity, and experiment with the craft and adventure of their own writing. Students will come out of the course strengthened in their ability to identify and pursue their own creative interests.nn.

**ENGLISH 9CT. Special Topics in Creative Expression. 3 Units.**

Focus on a particular topic or process of creative expression. Primary focus on giving students a skill set to tap into their own creativity. Opportunities for students to explore their creative strengths, develop a vocabulary with which to discuss their own creativity, and experiment with the craft and adventure of their own writing. Students will come out of the course strengthened in their ability to identify and pursue their own creative interests.

**ENGLISH 10A. Introduction to English I: Medieval and Renaissance Lives. 5 Units.**

The course traces the development and transformation of key literary concepts and forms from c. 900 to c. 1630. We examine major canonical texts to discover something of the lives of those who wrote and read these works. We shall explore how love and fear may be the key motivations for all human actions.

**ENGLISH 10B. Introduction to English I: Poetics and Politics in Medieval and Renaissance Literature. 5 Units.**

From the 14th to the 17th centuries, how are literary developments involved with historical events and social conditions? Discussion of how literature works as a force in culture, not only a reflection of other forces. Readings from Chaucer, More, Wyatt, Spenser, Kyd, Shakespeare, Donne, Milton and Cavendish.

**ENGLISH 11A. Introduction to English II: From Milton to the Romantics. 5 Units.**

Major moments in English literary history, from John Milton's *Paradise Lost* to John Keats's *Hyperion*. The trajectory involves a variety of literary forms, including Augustan satire, the illuminated poetry of William Blake's handcrafted books, the historical novel invented by Sir Walter Scott, the society novel of Jane Austen, and William Wordsworth's epic of psychological and artistic development. Literary texts will be studied in the context of important cultural influences, among them civil war, religious dissent, revolution, commercialization, colonialism, and industrialization.

**ENGLISH 11B. Introduction to English II: American Literature and Culture to 1855. 5 Units.**

(Formerly English 23/123). A survey of early American writings, including sermons, poetry, captivity and slave narratives, essays, autobiography, and fiction, from the colonial era to the eve of the Civil War.  
Same as: AMSTUD 150

**ENGLISH 12A. Introduction to English III: Introduction to African American Literature. 5 Units.**

(Formerly English 43/143). In his bold study, *What Was African American Literature?*, Kenneth Warren defines African American literature as a late nineteenth- to mid-twentieth-century response to the nation's Jim Crow segregated order. But in the aftermath of the Jim Crow era and the Civil Rights movement, can critics still speak, coherently, of "African American literature"? And how does this political conception of African American literary production compare with accounts grounded in black language and culture? Taking up Warren's intervention, this course will explore African American literature from its earliest manifestations in the spirituals and slave narratives to texts composed at the height of desegregation and decolonization struggles at mid-century and beyond.  
Same as: AFRICAAM 43, AMSTUD 12A

**ENGLISH 12B. Introduction to English III: Metamorphoses of Literature 1850-2000. 5 Units.**

The transformation of literary form and pleasure from Victorian Britain to digital America.

**ENGLISH 15SC. A New Millennial Mix: The Art & Politics of the "Mixed Race Experience". 2 Units.**

Recently, The New York Times and the National Geographic have hailed the "new face of America" as young, global, and hybrid. The NY Times gave this demographic a name: Generation E.A. (Ethnically Ambiguous). Our course examines the political and aesthetic implications of Generation E.A., and the hot new vogue for all things mixed. Galvanized by the 2000 census with its "mark one or more" (MOOM) racial option, dozens of organizations, websites, affinity and advocacy groups, modeling and casting agencies, television pilots, magazines, and journals—all focused on multi-racial/multi-cultural experiences—have emerged in the last few years. We will analyze representations of mixed race and multiculturalism in law, literature, history, art, performance, film, comedy, and popular culture. These cultural and legal events are changing the way we talk and think about race. nImportantly, our seminar also broadens this discussion beyond race, exploring how crossings of the color-line so often intersect with other aspects of experience related to gender, religion, culture, or class.nField trips, films, communal lunches, and interactive assignments help us explore the current controversies over mixed-race identification and, more generally, the expressive and political possibilities for representing complex identities. Requirements include three two- to three-page analytical writing assignments, a presentation that can include an optional artistic or media component, and a final group-designed project. nIf you are a citizen of the 21st century, this class is for and about you. Sophomore College Course: Application required, due noon, April 5, 2016. Apply at <http://soco.stanford.edu>.

**ENGLISH 32N. Reading Digitally. 3 Units.**

Exploration of how technology is changing the ways in which we read and think about literature. These changes include the use of text mining, social platforms and the creation of interactive textual platforms.

Together, we will discuss these changes in detail as we investigate the new area of study, called, collectively, the *¿Digital Humanities¿* and how this new field is reshaping what it means to read and study literature in the University of the 21st century.

**ENGLISH 40N. Theatrical Wonders from Shakespeare to Mozart. 3 Units.**

What is the secret of theatrical illusion? How does the theater move us to wonder, sympathetic identification, and reflection? How do the changing stories that theater tells reveal our values? We will ask these questions through a close examination—on the page and on the stage—of dramatic masterpieces by Shakespeare, Calderón, and Mozart. We will attend a live performance of *The Magic Flute*. No prior knowledge of music is required.

**ENGLISH 43A. American Indian Mythology, Legend, and Lore. 3-5 Units.**

(English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, *"Black Elk Speaks"*.

Same as: ENGLISH 143A, NATIVEAM 143A

**ENGLISH 48N. The American Songbook and Love Poetry. 3 Units.**

A study of performances (Billie Holiday, Frank Sinatra etc) of songs by classic American composers (Porter, Rogers and Hart, Cohen).

**ENGLISH 51N. The Sisters: Poetry & Painting. 3 Units.**

Poetry and painting have often been called the "sister arts". Why? Sometimes a poem or a painting stands out to us, asking that we stay with it, that we remember it, although we cannot exactly say why. Poems have a way of making pictures in the mind, and paintings turn "rhymes" amid the people, places, and things they portray. Each is a concentrated world, inviting an exhilarating closeness of response: why does this line come first? Why does the artist include that detail? Who knows but that as we write and talk about these poems and pictures we will be doing what John Keats said a painter does: that is, arriving at a "trembling delicate and snail-horn perception of Beauty." Each week explore the kinship between a different pair of painter and poet and also focuses on a particular problem or method of interpretation. Some of the artist/poet combinations we will consider: Shakespeare and Caravaggio; Jorie Graham and (the photographer) Henri Cartier-Bresson; Alexander Pope and Thomas Gainsborough; William Wordsworth and Caspar David Friedrich; Christina Rossetti and Mary Cassatt; Walt Whitman and Thomas Eakins; Thomas Hardy and Edward Hopper.

Same as: ARTHIST 160N

**ENGLISH 52N. Mixed-Race Politics and Culture. 3 Units.**

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? In this course, we approach issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st century U.S. We will examine issues surrounding the role of multiculturalism, immigration, acculturation, racial representation and racial prejudice in American society. Topics we will explore include the political and social formation of *¿race¿*; racial representation in the media, arts, and popular culture; the rise and decline of the *¿one-drop rule¿* and its effect on political and cultural attachments; the politicization of Census categories and the rise of the Multiracial Movement.

Same as: AFRICAAM 52N, POLISCI 29N

**ENGLISH 67. Contemporary Chicano & Latino Literature. 4 Units.**

What does it mean to be Chicano and Latino in the United States today? And, how have U.S. writers portrayed the evolution of a Latino identity as it has changed from the age of the Civil Rights Movement to the age of Twitter? This class provides students with an overview of 20th and 21st century U.S. Latino/a literature by focusing on American authors writing after the 1960s to the present. We will read a range of writers, including Gloria Anzaldúa, Sandra Cisneros, Héctor Tobar, and Junot Díaz, and examine how these authors grapple with the artistic task of representing the different national cultures and histories (Mexican American, Puerto Rican, etc.) that inform the U.S. Latino experience. Throughout the quarter we will explore how these fictional narratives offer insights into the topics of American identity, immigration, assimilation, class status, Women of Color feminism, gender and sexuality. In addition, we will also consider contemporary representations from film and television, ultimately working toward a comprehensive analysis of how literary genres and popular cultural contribute to the meaning of *Latinidad* in the U.S.

Same as: CHILATST 67

**ENGLISH 68N. Mark Twain and American Culture. 4 Units.**

Preference to freshmen. Mark Twain defined the rhythms of our prose and the contours of our moral map. He recognized our extravagant promise and stunning failures, our comic foibles and tragic flaws. He is viewed as the most American of American authors—and as one of the most universal. How does his work illuminate his society¿s (and our society¿s) responses to such issues as race, gender, technology, heredity vs. environment, religion, education, art, imperialism, animal welfare, and what it means to be *¿American¿*?

Same as: AMSTUD 68N

**ENGLISH 79N. The Renaissance: Culture as Conflict. 3 Units.**

Focus is on the Renaissance not as a cultural rebirth but as a scene of cultural conflict. Course materials are selected from Renaissance art, history, philosophy, politics, religion, and travel writing; authors include More, Luther, Erasmus, Machiavelli, Michelangelo, Montaigne, Shakespeare. Among the conflicts we will explore are: old (world)/new (world), wealth/poverty, individual/collectivity, manuscript/print, religion/secularism, Catholicism/Protestantism, monarchism/republicanism, femininity/masculinity, heterosexuality/homosexuality.

**ENGLISH 81. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman; Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: CLASSICS 42, COMPLIT 181, FRENCH 181, GERMAN 181, ITALIAN 181, PHIL 81, SLAVIC 181

**ENGLISH 90. Fiction Writing. 5 Units.**

The elements of fiction writing: narration, description, and dialogue. Students write complete stories and participate in story workshops. May be repeated for credit. Prerequisite: PWR 1 (waived in summer quarter).

**ENGLISH 90Q. Sports Writing. 3 Units.**

Study and practice of the unique narratives, tropes, images and arguments that creative writers develop when they write about popular sport. From regional fandom to individualist adventuring, boxing and baseball to mascot dancing and table tennis, exceptional creative writers mine from a diversity of leisure activity a rich vein of sports writing in the creative nonfiction genre. In doing so, they demonstrate the creative and formal adaptability required to write with excellence about any subject matter, and under the circumstances of any subjectivity. Discussion of the ways in which writers have framed, and even critiqued, our interest in athletic events, spectatorship, and athletic beauty. Writers include Joyce Carol Oates, Roland Barthes, David James Duncan, Arnold Rampersad, John Updike, Maxine Kumin, Susan Sterling, Ernest Hemingway, Norman Mailer, Dervla Murphy, Haruki Murakami, Don DeLillo, Henry Louis Gates, Jr., Annie Dillard, John McPhee, and Laura Hillenbrand. Close readings of essays on form and sport, as well as book excerpts. Students will engage in class discussions and write short weekly papers, leading to a more comprehensive project at the end of the quarter.

**ENGLISH 90V. Fiction Writing. 5 Units.**

Online workshop course that explores the ways in which writers of fiction have used language to examine the world, to create compelling characters, and to move readers. We will begin by studying a selection of stories that demonstrate the many techniques writers use to create fictional worlds; we'll use these stories as models for writing exercises and short assignments, leading to a full story draft. We will study figurative language, character and setting development, and dramatic structure, among other elements of story craft. Then, each student will submit a full draft and receive feedback from the instructor and his/her classmates. This course is taught entirely online, but retains the feel of a traditional classroom. Optional synchronous elements such as discussion and virtual office hours provide the student direct interaction with both the instructor and his/her classmates. Feedback on written work is both offered to and given by the student is essential to the course and creates class rapport.

**ENGLISH 91. Creative Nonfiction. 5 Units.**

(Formerly 94A.) Historical and contemporary as a broad genre including travel and nature writing, memoir, biography, journalism, and the personal essay. Students use creative means to express factual content.

**ENGLISH 91Q. Twitter Fiction/Future Forms. 3 Units.**

Digital media—from Twitter to the Kindle—are roiling the literary marketplace. But could these new forms and content delivery methods also create new opportunities for creative work? Twitter is a hotbed of adopted personae and clearly false characters; sites from FiveChapters to Plympton are reviving the serial form; new apps feature inventive short fiction. Additionally, established writers, from Margaret Atwood to Jennifer Egan, are harnessing the forms offered by digital media to spur their own artistic invention. In this unsettled landscape, what does it even mean to write fiction? What does it mean to create stories without the assumption of the reader's undivided attention? And what do lessons from our literary history—from Gutenberg to the serial novels of the Victorian age—have to teach us about our current historical moment? These and many more questions will be our subject as we read the exciting work being done in this new world—and then become pioneers ourselves, by writing, workshopping, and publishing our own Twitter fiction and future forms.

**ENGLISH 92. Reading and Writing Poetry. 5 Units.**

Prerequisite: PWR 1. Issues of poetic craft. How elements of form, music, structure, and content work together to create meaning and experience in a poem. May be repeated for credit.

**ENGLISH 94. Creative Writing Across Genres. 5 Units.**

For minors in creative writing. The forms and conventions of the contemporary short story and poem. How form, technique, and content combine to make stories and poems organic. Prerequisite: 90, 91, or 92.

**ENGLISH 105H. Medievalism. 5 Units.**

Course examines the medievalism of nineteenth-century British writers, that is, their adoption of medieval subjects and themes, within the context of medieval literature. Our leading questions cluster around three topics: the quest, Arthurian romance, and the dark side of fairyland. Readings include Marie de France's *Lais*, *Sir Gawain and the Green Knight*, Malory's *Morte D'Arthur*, Spenser's *Faerie Queene*, Scott's *Ivanhoe*, Stoker's *Dracula*, poems by Morris, R. Browning, and Tennyson, and selections from Tennyson's *Idylls of the Kings*. Requirements include two papers and three short exams.

**ENGLISH 106E. Dante and Aristotle. 5 Units.**

Students will read all of Dante's *Commedia* alongside works by Aristotle and various ancient and medieval philosophers. Our aim will be to understand the way an Aristotelian worldview informs the *Commedia*. For instance, what is the role of pleasure in the ethical life? What is the highest good of the human being? All readings will be in translation. Same as: PHIL 193D

**ENGLISH 113A. Desire, Identity, Modernity. 5 Units.**

While drawing on classic work in modern queer studies, the course will focus on the role which Renaissance discourses of desire continue to play in our negotiations of homo/erotic subjectivity, identity politics, and sexual and gender difference. We will study Renaissance queerness in relation to the classical tradition on the one hand and the contemporary discourses of religion, medicine, law, and politics on the other. Readings include diverse genres, from plays and poems to essays, dialogues, letters, etc. Both major and minor authors will be represented.

**ENGLISH 115C. Hamlet and the Critics. 5 Units.**

Focus is on Shakespeare's *Hamlet* a site of rich critical controversy from the eighteenth century to the present. Aim is to read, discuss, and evaluate different approaches to the play, from biographical, theatrical, and psychological to formalist, materialist, feminist, new historicist, and, most recently, quantitative. The ambition is to see whether there can be great literature without (a) great (deal of) criticism. The challenge is to understand the theory of literature through the study of its criticism. Same as: TAPS 151C

**ENGLISH 115D. Shakespeare, Language, Contexts. 5 Units.**

This course will consider a range of Shakespeare plays (and the language of the plays) in relation to different contemporary and post-contemporary contexts, including transvestite theater, gender, sexuality, history, geopolitics, travel, and performance.

**ENGLISH 118. Literature and the Brain. 5 Units.**

Recent developments in and neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts? Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer?. Same as: ENGLISH 218, FRENCH 118, FRENCH 318, PSYCH 118F

**ENGLISH 122A. Austen and Woolf. 5 Units.**

Reading of three novels by Jane Austen—arguably the most influential and gifted of British female novelists—and three novels by Virginia Woolf, whose debt to Austen was immense. Topics include the relationship between women writers and the evolution of the English novel; the extraordinary predominance of the marriage plot in Austen's fiction (and the various transformations Woolf works on it); each novelist's relationship to the cultural and social milieu in which she wrote.

**ENGLISH 124. The American West. 5 Units.**

The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.

Same as: AMSTUD 124A, ARTHIST 152, HISTORY 151, POLISCI 124A

**ENGLISH 125C. The Lost Generation: American literature between the World Wars. 5 Units.**

An exploration of American literature between the World Wars, with a focus on themes such as expatriation, trauma, technology, race, modernism; writers include Gertrude Stein, Sherwood Anderson, F. Scott Fitzgerald, Ernest Hemingway, Langston Hughes, Jean Toomer, William Faulkner, Richard Wright, John Steinbeck, John Dos Passos.

Same as: AMSTUD 125C

**ENGLISH 130. Sex and the Novel. 5 Units.**

How do novels represent sexual life? This course reads texts from the eighteenth century to the present day, and considers how novelists represent the discombobulating effects of desire in fictional prose. Authors may include: S. Richardson, N. Hawthorne, J. Austen, E. Brontë, G. Gissing, H. James, D.H. Lawrence, J. Joyce, V. Nabokov, J. Baldwin, A. Hollinghurst and Z. Smith.

Same as: FEMGEN 130S

**ENGLISH 134. The Marriage Plot. 5 Units.**

The centrality of the marriage plot in the development of the British novel beginning in the 18th century with Samuel Richardson's *Pamela* and ending with Woolf's modernist novel *Mrs. Dalloway*. The relationship between novelistic plotting and the development of female characters into marriageable women. What is the relationship between the novel and feminine subjectivity? What aspects of marriage make it work as a plotting device? What kinds of marriages do marriage plots allow? Is the development of women's political agency related to their prominence in the novel form?

Same as: FEMGEN 134

**ENGLISH 139B. American Women Writers, 1850-1920. 5 Units.**

The ways in which female writers negotiated a series of literary, social, and intellectual movements, from abolitionism and sentimentalism in the nineteenth century to Progressivism and avant-garde modernism in the twentieth. Authors include Harriet Beecher Stowe, Harriet Jacobs, Rebecca Harding Davis, Emily Dickinson, Kate Chopin, Edith Wharton, Gertrude Stein, Willa Cather, and Charlotte Perkins Gilman.

Same as: AMSTUD 139B, FEMGEN 139B

**ENGLISH 143A. American Indian Mythology, Legend, and Lore. 3-5 Units.**

(English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, "Black Elk Speaks."

Same as: ENGLISH 43A, NATIVEAM 143A

**ENGLISH 144. Major Modernists: Virginia Woolf, James Joyce, Katherine Mansfield, T. S. Eliot. 5 Units.**

What is, or was, literary Modernism (1910-1940)? Why did writers feel such a passionate need to change how fiction traditionally had been written? What did those changes entail? At stake were questions of cultural, political, social and literary historical meaning, including artistic relevance, legacy, and the ever-relevant clash between creative and professional identity. This class will put into dialogue with each other four major innovators, Virginia Woolf, James Joyce, Katherine Mansfield, and T. S. Eliot.

**ENGLISH 144C. Fractured Classics: Novelistic Rewritings. 5 Units.**

Why do so many novels confront the past by rewriting, revising, or reinventing their literary forebears? Are post-1945 experiments in revision commonplace, or more characteristic of historical, cultural, and geopolitical changes peculiar to the late 20th-century? How does intertextuality inform narrative voice, authorship, characterization, political and aesthetic conflict, and interrogations of canonization? This course pairs Charlotte Brontë's *Jane Eyre* with Jean Rhys's *Wide Sargasso Sea*; E.M. Forster's *Howard's End* with Zadie Smith's *On Beauty*; and Virginia Woolf's *Mrs Dalloway* with Michael Cunningham's *The Hours*.

**ENGLISH 144F. Female Modernists: Women Writers in Paris Between the Wars. 5 Units.**

The course will focus on expatriate women writers - American and British - who lived and wrote in Paris between the wars. Among them: Edith Wharton, Gertrude Stein and Alice B. Toklas, H.D., Djuna Barnes, Margaret Anderson, Janet Flanner, Natalie Barney, Kay Boyle, Mina Loy, Romaine Brooks, Mary Butts, Radclyffe Hall, Colette, and Jean Rhys. A central theme will be Paris as a lure and inspiration for bohemian female modernists, and the various alternative and emancipatory literary communities they created.

Same as: FEMGEN 144F

**ENGLISH 145D. Jewish American Literature. 5 Units.**

A study of Jewish-American literature from its Russian roots into the present. What distinguishes it from American mainstream and minority literatures? We will consider the difficulties of displacement for the emigrant generation who struggled to sustain their cultural integrity in the multicultural American environment, and the often comic revolt of their American-born children and grandchildren against their grand)parents' nostalgia, trauma, and failure to assimilate. Authors: Gogol, Dostoevsky, Babel, Olsen, Paley, Yeziarska, Ozick, Singer, Malamud, Spiegelman, Roth, Bellow, Segal, Baldwin.

Same as: JEWISHST 155D, REES 145D

**ENGLISH 145G. American Fiction since 1945. 5 Units.**

An exploration of some of the main themes in post-WWII American fiction, including mass media and markets, race and ethnicity, technology and war. Authors to include Flannery O'Connor, Sylvia Plath, Thomas Pynchon, Maxine Hong Kingston, Kurt Vonnegut, Philip Roth and Karen Yamashita and others.

**ENGLISH 146. Development of the Short Story: Continuity and Innovation. 5 Units.**

Exploration of the short story form's ongoing evolution as diverse writers address love, death, desire. Maupassant, D.H. Lawrence, Woolf, Flannery O'Connor, Hurston, and others. Required for Creative Writing emphasis. All majors welcome.

**ENGLISH 150. Poetry and the Internet. 5 Units.**

How has contemporary poetry been transformed by the Internet and other new media. How have poets responded to the new media forms, from Facebook to Twitter, that now absorb the attention of so many people? How have poets utilized the torrents of information accessible to them with a few keystrokes? Focus will mostly be on poetry written after 2000; secondary readings will draw from literary criticism, media theory, and sociology.

**ENGLISH 151F. Angelheaded Hipsters: Beat Writers of San Francisco and New York. 5 Units.**

Reading of central writers of the Beat movement (Ginsberg, Kerouac, di Prima, Snyder, Whalen) as well as some related writers (Creeley, Gunn, Levittov). Issues explored include NY and SF, Buddhism and leftist politics, poetry and jazz. Some exposure to reading poems to jazz accompaniment. Examination of some of the writers and performers growing out of the Beats: Bob Dylan, rock music, especially from San Francisco, and jazz.

**ENGLISH 151G. 1960s Countercultures in Stanford's Special Collections. 5 Units.**

From the poetry of the Beats to the protest of the Black Panthers, 1960s countercultures loudly challenged social, aesthetic, and political conventions. Some burned bras, marched for peace, and lived communally, but for others, the counterculture was a story told through the media. This course will use the rich resources available only in Stanford's Special Collections to explore the countercultures, mythologies, and legacies of the 1960s, including civil rights, back-to-nature environmentalism, Silicon Valley, anti-art, feminism, and gay liberation. Meeting in Special Collections, each week we will investigate a facet of this era through a different kind of archival source, including Allen Ginsburg's recordings of "Howl," Buckminster Fuller's design models, Whole Earth catalogues, and LIFE magazine's reporting on LSD. Gaining the tools and confidence to navigate library archives through hands-on learning, students will act as primary investigators of their own original research questions.

**ENGLISH 151H. Wastelands. 5 Units.**

Have human beings ruined the world? Was it war, or industry, or consumerism, or something else that did it? Beginning with an in-depth exploration of some of the key works of literary modernism, this class will trace the image of the devastated landscape as it develops over the course of the 20th and 21st centuries, arriving finally at literary representations of the contemporary zombie apocalypse. Authors to include T.S. Eliot, Ernest Hemingway, Nathanael West, Willa Cather, Cormac McCarthy, and others.

**ENGLISH 152C. The JFK Era and American Literature. 5 Units.**

Few U.S. presidents have exerted so great a fascination on the national and global post-World War II imagination as John F. Kennedy. As the 2013's semi-centennial anniversary of Kennedy's assassination attests, the production of films, television and multimedia programs, biographies, conspiracy theories, academic studies, and literary texts about the iconic JFK and his fabled, thousand-day presidency continues unabated. In this course, we will explore the attention Kennedy has drawn from writers and filmmakers in texts by Norman Mailer, Don DeLillo, Mario Vargas Llosa, and others.

Same as: AMSTUD 152C

**ENGLISH 152G. Harlem Renaissance and Modernism. 5 Units.**

Examination of the explosion of African American artistic expression during 1920s and 30s New York known as the Harlem Renaissance. Amiri Baraka once referred to the Renaissance as a kind of "vicious Modernism", as a "BangClash", that impacted and was impacted by political, cultural and aesthetic changes not only in the U.S. but Europe, the Caribbean and Latin America. Focus on the literature, graphic arts, and the music of the era in this global context.

Same as: AFRICAAM 152G, AMSTUD 152G

**ENGLISH 154E. Twentieth-Century Irish Literature. 5 Units.**

Plays, poems, short stories, and novels. Writers include James Joyce, William Yeats, Mary Lavin, Kate O'Brien, William Trevor, Seamus Heaney, and Samuel Beckett. How the writer can sustain imaginative freedom and literary experiment in the face of a turbulent history.

**ENGLISH 157. American Literary Journalism. 5 Units.**

Literary journalism merges the factual reporting of traditional journalism with the narrative techniques of fiction. This course will follow the development of this influential genre of writing in the U.S. from the 1890s to the present, with special attention to the particularly American emergence of this form in the non-fiction writing published in the New Yorker during the 1930s and 40s and the New Journalism of the 1960s and 70s. Engaging with the form's most prominent writers, themes, and techniques, we will investigate questions of objectivity and subjectivity, tensions between fact and fiction, and the genre's position as a particularly American cultural form.

**ENGLISH 157G. Gaming and Literature: Exploring Connections between Interactive Media and Literary Analysis. 5 Units.**

Whether struggling as dragon born or raiding ancient tombs, character and story in video games are crucial to an immersive experience. Whether by design or imagination, we vest ourselves in the challenges and puzzles in stories of alien attack, myth and magic, and constructed worlds. Literature and gaming are converging, transforming pixels into rich environments where gamers spend months or years. This course connects characteristics of games and select literary works, guiding analyses of story-driven, active game systems. Students explore story development and critical processes for the synthesis of various game types, and explore social issues connecting games and society.

**ENGLISH 159. James Baldwin & Twentieth Century Literature. 5 Units.**

Black, gay and gifted, Baldwin was hailed as a "spokesman for the race," although he personally, and controversially, eschewed titles and classifications of all kinds. This course examines his classic novels and essays as well his exciting work across many lesser-examined domains: poetry, music, theatre, sermon, photo-text, children's literature, public media, comedy and artistic collaboration. Placing his work in context with other writers of the 20C (Faulkner, Wright, Morrison) and capitalizing on a resurgence of interest in the writer (NYC just dedicated a year of celebration of Baldwin and there are 2 new journals dedicated to study of Baldwin), the course seeks to capture the power and influence of Baldwin's work during the Civil Rights era as well as his relevance in the post-race transnational 21st century, when his prescient questioning of the boundaries of race, sex, love, leadership and country assume new urgency.

Same as: AFRICAAM 159, FEMGEN 159

**ENGLISH 160. Poetry and Poetics. 5 Units.**

Introduction to the reading of poetry, with emphasis on how the sense of poems is shaped through diction, imagery, and technical elements of verse.

**ENGLISH 161. Narrative and Narrative Theory. 5 Units.**

An introduction to stories and storytelling—that is, to narrative. What is narrative? When is narrative fictional and when non-fictional? How is it done, word by word, sentence by sentence? Must it be in prose? Can it be in pictures? How has storytelling changed over time? Focus on various forms, genres, structures, and characteristics of narrative.

**ENGLISH 162W. Writing Intensive Seminar in English. 5 Units.**

Small literature-based, writing-intensive seminars taught by advanced graduate students in the English Ph.D. program. The goal will be to produce a high-quality final research paper. Courses will be oriented around a single text or a small group of texts in conversation with a larger spectrum of scholarship and knowledge in literary criticism and theory, film, painting, or material culture. The small format will allow undergraduates to receive detailed commentary and one-on-one feedback on their writing.

Same as: WISE

**ENGLISH 163. Shakespeare. 5 Units.**

Readings of six Shakespeare plays, with attention to poetic and dramatic elements, performance history, and historical and cultural contexts.

**ENGLISH 164C. English Capstone Project. 5 Units.**

Do you want to design your own capstone research project in English? The capstone is a self-designed project on an author, critical concept, topic, or historical period that motivates you to dig more deeply into literary research. It consolidates skills in reading, critical analysis, imaginative interpretation, writing, revising and editing which are cornerstones to the broader study of English literature. Does a whole quarter's focus on sharing with similarly-focused peers your progress toward a 15-20 page research paper appeal to you?.

**ENGLISH 167H. The Ethical Gangster. 3-5 Units.**

(English majors must register for 5 units) A study of recent developments in understanding human moral psychology using mafia movies to explore the differences between Kantian and Utilitarian moral theory. We will study the greatest hits of gangster fiction and film, from Fielding's *Jonathan Wild* to *The Sopranos*.

**ENGLISH 168. Imagining the Oceans. 5 Units.**

How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Authors read might include Cook, Equiano, and Steinbeck; Defoe, Verne, Stevenson, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Films by Painlevé and Bigelow. Seminar co-ordinated with a spring 2015 Cantor Arts Center public exhibition. Visits to Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park.

Same as: COMPLIT 168, FRENCH 168

**ENGLISH 171A. English in the World. 5 Units.**

In this course we shall try to sample a small selection of the richness and the complexity of English as a language of world literature outside its canonical location of England and the US. We will focus on the variations in language-use and cultural contexts, the relationships of such Anglophone literatures with western and indigenous cultural forms, and the complex histories that have formed the contexts of such literary productions.

**ENGLISH 172. Modernity and the Vernacular in Indian Literature. 5 Units.**

This course will seek to get a sense of modern India through its various rich literary traditions, including, vernacular literatures in English translation in addition to the Anglophone tradition. What is gained, and what is lost for the large and complex phenomenon of modern Indian literature, when its most visible representative, Anglophone fiction, threatens to overshadow the rest and sits easy with the new image of rise and growth that engulfs the nation and its diaspora today?.

**ENGLISH 172D. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.**

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section.

Same as: COMPLIT 195, CSRE 196C, PSYCH 155, SOC 146, TAPS 165

**ENGLISH 172E. The Literature of the Americas. 5 Units.**

A wide-ranging overview of the literatures of the Americas in comparative perspective, emphasizing continuities and crises that are common to North American, Central American, and South American literatures as well as the distinctive national and cultural elements of a diverse array of primary works. Topics include the definitions of such concepts as empire and colonialism, the encounters between worldviews of European and indigenous peoples, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, twentieth-century avant-gardes, and distinctive modern episodes—the Harlem Renaissance, the Beats, magic realism, Noigandres—in unaccustomed conversation with each other.

Same as: AMSTUD 142, COMPLIT 142, CSRE 142

**ENGLISH 172J. The Ethics of Metaphor: Identities in Parallel. 5 Units.**

Many of our political arguments are arguments by analogy. But analogies between ethnic and racial experiences are especially problematic, and especially incendiary. This class will think about metaphor and contend with how it's used in both fictional and nonfictional texts concerning race and ethnicity. The works we will read in this class are uncomfortable. They're uncomfortable because they address suffering and pain; they're uncomfortable because they compare suffering and pain; they're uncomfortable because of what they get right and because of what they don't. This is a class fundamentally concerned with how we traverse boundaries of race and ethnicity ethically, and about thinking through when and how authors have failed to do so. When does empathy become presumption? When does altruism become condescension? When does exploration become voyeurism? We will plumb these questions (to which there are no clear answers) through the lens of speeches, poetry, sci-fi, film, essays, short stories, and novels. Same as: CSRE 119F

**ENGLISH 179. Cultures of Disease: Cancer and HIV/AIDS. 5 Units.**

History, politics, science, and anthropology of cancer; political and economic issues of disease and health care in the U.S., including the ethics and economics of health care provision, the pharmaceutical industry, carcinogen production, and research priorities.

Same as: ANTHRO 179

**ENGLISH 180C. Technologies of Enlightenment. 5 Units.**

Re-examination of the Enlightenment through its cultural, literary and technological revolutions. To recover an understanding of these transformations, we will use our new digital databases of eighteenth-century works to sample a wide variety of lesser known or forgotten texts. Whether these works became outdated, whether they were censored or whether they were just too weird, we will combine them with canonical readings from the period to recover the importance of socio-technological revolution to the Enlightenment.

**ENGLISH 182J. "When We Dead Awaken": Breakthroughs in Conceptions of the Gendered Self in Literature and the Arts. 4-5 Units.**

Remarkable breakthroughs in conceptions of the gendered self are everywhere evident in literature and the arts, beginning primarily with the Early Modern world and continuing into today. Many of these works inhere in innovations in literary and artistic forms in order to capture and even evoke the strong cognitive, or psychological, dimension of such awakenings. The reader, or viewer, is often challenged to adapt her or his mind to new forms of thought, such as John Donne's seventeenth century creation of the Dramatic Monologue, a form popular with modern writers, which requires the reader's cognitive presence in order to fill out the dramatic scene. In so doing, the reader often supplies the presence of the female voice and thereby enters into her self-consciousness and inner thoughts. Adrienne Rich, for example, specifically rewrites one of Donne's major poems from the female perspective. This can be, in Rich's words, an awakening for the active reader, as he or she assumes that often-unspoken female perspective. The course will also explore male conceptions of the self and how such conceptions are often grounded in cultural attitudes imposed on male subjects, which can contribute to gender-bias toward women, a subject often neglected in exploring gendered attitudes, but which is now gaining more study, for example, in Shakespeare's *Othello*. Readings from recent developments in the neurosciences and cognitive studies will be included in our study of artistic forms and how such forms can activate particular mindsets. Writers and artists will include Shakespeare, Michelangelo, John Donne, Virginia Woolf, Adrienne Rich, Gertrude Stein, Picasso, June Wayne, and Edward Albee's 1960's play, *Who's Afraid of Virginia Woolf?*. Same as: FEMGEN 112, FEMGEN 212

**ENGLISH 184. The Novel. 5 Units.**

Literary inventiveness and social significance of novelistic forms from the Great Depression to the present.

Same as: COMPLIT 123

**ENGLISH 184E. Literary Text Mining. 5 Units.**

This course will train students in applied methods for computationally analyzing texts for humanities research. The skills students will gain will include basic programming for textual analysis, applied statistical evaluation of results and the ability to present these results within a formal research paper or presentation. As an introduction, students in this course will also learn the prerequisite steps of such an analysis including corpus selection and cleaning, metadata collection, and selecting and creating an appropriate visualization for the results.

**ENGLISH 184H. Text Technologies: A History. 5 Units.**

Beginning with cave painting, carving, cuneiform, hieroglyph, and other early textual innovations, survey of the history of writing, image, sound, and byte, all text technologies employed to create, communicate and commemorate. Focus on the recording of language, remembrance and ideas explicating significant themes seen throughout history; these include censorship, propaganda, authenticity, apocalypticism, technophobia, reader response, democratization and authority. The production, transmission and reception of tablet technology, the scroll, the manuscript codex and handmade book, the machine-made book, newspapers and ephemera; and investigate the emergence of the phonograph and photograph, film, radio, television and digital multimedia. The impact of these various text technologies on their users, and try to draw out similarities and differences in our cultural and intellectual responses to evolving technologies. STS majors must have senior status to enroll in this senior capstone course. Same as: STS 200D

**ENGLISH 186B. American Crime. 5 Units.**

Examination of the representations of crime in American literature and film with particular focus on the construction of motive and its relation to character. We will pay special attention to the orientation of the writer/director to his or her criminal subject. Writers may include Melville, Wright, McCarthy, Capote, Mailer. Directors will include Berlinger and Sinofsky (the *Paradise Lost* trilogy) and Patty Jenkins (*Monster*).

**ENGLISH 187E. CLR James & Nirad C. Chaudhuri: Two Postcolonial Intellectuals. 5 Units.**

Is a humanist intellectual with a popular audience more likely to be a credentialed expert or an autodidact at odds with the established norms of scholarship? Is such an intellectual, to use Marjorie Garber's terms, a professional or an amateur? This course considers these questions in the light of the institutionalization of a humanist curriculum in late colonial Britain and its overseas empire in order to examine two key (post)colonial intellectuals, from Trinidad and India respectively: CLR James and Nirad C. Chaudhuri, both of whose popular and provocative appeals derive from their positions as amateurs and autodidacts. Such an intellectual identity is at odds with colonial education's ideological enterprise: to create a certain kind of professional subject. We will read their key works, pay attention to their biographies, and to the intellectual histories surrounding these two key figures of postcolonial thought.

**ENGLISH 187F. Everyday Matters. 5 Units.**

Literature is often imagined as a phenomenon that enables a magical transcendence of a dull, routinized life. But are there ways in which literature might also be thought of assuming shape and texture from the ordinary everyday that we all experience? Some argue that prior to its relatively modern understanding in terms of specific set of art-objects and artistic practice, the aesthetic was understood as an integral part of the sensory experience of everyday life in all its beauty and messiness. This course will try to capture representations of the ordinary in modern and contemporary literature and engage with anthropological and sociological attempts to understand the elusive category of everyday life.

**ENGLISH 190. Intermediate Fiction Writing. 5 Units.**

May be taken twice for credit. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 90 or 91.

**ENGLISH 190F. Fiction into Film. 5 Units.**

Workshop. For screenwriting students. Story craft, structure, and dialogue. Assignments include short scene creation, character development, and a long story. How fictional works are adapted to screenplays, and how each form uses elements of conflict, time, summary, and scene. Priority to seniors and Film Studies majors. Prerequisite: 90.

**ENGLISH 190T. Special Topics in Intermediate Fiction Writing. 5 Units.**

Focus on a particular topic or process. Work includes aspects of reading short stories and novels, writing at least 30-50 pages of fiction, and responding to peers' work in workshop. May be repeated for credit. Prerequisite: 91 or 90.

**ENGLISH 191. Intermediate Creative Nonfiction. 5 Units.**

Continuation of 91. Workshop. The application of advanced storytelling techniques to fact-based personal narratives, emphasizing organic writing, discovering audience, and publication. Guest lecturers, collaborative writing, and publication of the final project in print, audio, or web formats. Prerequisite: 91 or 90.

**ENGLISH 191V. Reading for Creative Non-Fiction Writers. 5 Units.**

Taught by the Stein Visiting Writer. Prerequisite English 90 or 91.

**ENGLISH 192. Intermediate Poetry Writing. 5 Units.**

May be taken twice. Lottery. Priority to last quarter/year in school, majors in English with Creative Writing emphasis, and Creative Writing minors. Prerequisite: 92.

**ENGLISH 192T. Topics in Intermediate Poetry Writing. 5 Units.**

Generation and discussion of student poems. How to recognize a poem's internal structure; how to seek models for work. Students submit portfolio for group critique. May be repeated for credit. Prerequisite: ENGLISH 92.

**ENGLISH 192V. The Occasions of Poetry. 5 Units.**

Taught by the Mohr Visiting Poet. Prerequisite: 92.

**ENGLISH 194. Individual Research. 5 Units.**

See section above on Undergraduate Programs, Opportunities for Advanced Work, Individual Research.

**ENGLISH 195B. How to Write a Great Essay: A Writing Bootcamp for Undergraduates. 5 Units.**

Practical workshop for undergraduates on how to improve essay-writing skills. Focus on the finer points of vocabulary, grammar, mechanics, logic, timing, intellectual precision; how to connect with (and delight) an audience; how to magnify a theme; how to deflect counter-arguments; how to develop your own sophisticated authorial 'style'; how to write sentences (and papers!) your reader will care about and admire and maybe even remember. The course has been designed with humanities students and especially English majors in mind, but any student who hopes to improve his or her writing should be able to benefit from the practical instruction on offer. The course enrollment will be limited to 12 students and the class run as a workshop. The reading component will be comparatively light. Over the course of the quarter we will read two novels--J.M. Coetzee's novel *Disgrace* and Vladimir Nabokov's *Lolita*--modern fictional masterpieces both, and students will be writing blog notes and short papers for each book.

**ENGLISH 196A. Honors Seminar: Critical Approaches to Literature. 5 Units.**

Overview of literary-critical methodologies, with a practical emphasis shaped by participants' current honors projects. Restricted to students in the English Honors Program.

**ENGLISH 197. Seniors Honors Essay. 1-10 Unit.**

In two quarters.

**ENGLISH 198. Individual Work. 1-5 Unit.**

Undergraduates who wish to study a subject or area not covered by regular courses may, with consent, enroll for individual work under the supervision of a member of the department. 198 may not be used to fulfill departmental area or elective requirements without consent. Group seminars are not appropriate for 198.

**ENGLISH 198F. Hoffs-Roach Fiction into Film Tutorial. 2-5 Units.**

Up to three undergraduate writers work with Fiction Into Film instructors. Students design their own curriculum, and Instructors act as writing mentors and advisers. Prerequisite: 90 or 91. Submitted manuscript required.

**ENGLISH 198L. Individual Work: Levinthal Tutorial. 5 Units.**

Undergraduate writers work individually with visiting Stegner Fellows in poetry, fiction, and if available, nonfiction. Students design their own curriculum; Stegner Fellows act as writing mentors and advisers. Prerequisites: 90, 91, or 92; submitted manuscript.

**ENGLISH 199. Senior Independent Essay. 1-10 Unit.**

Open, with department approval, to seniors majoring in non-Honors English who wish to work throughout the year on a 10,000 word critical or scholarly essay. Applicants submit a sample of their expository prose, proposed topic, and bibliography to the Director of Undergraduate Studies before preregistration in May of the junior year. Each student accepted is responsible for finding a department faculty adviser. May be repeated for credit.

**ENGLISH 201. The Bible and Literature. 5 Units.**

Differences in translations of the Bible into English. Recognizing and interpreting biblical allusion in texts from the medieval to modern periods. Readings from the Bible and from British, Canadian, American, and African American, and African literature in English.

**ENGLISH 202. History of the Book. 5 Units.**

Taught in the Department of Special Collections, the course examines the book as both a developing concept and as a material object, from scroll to codex, from manuscript to print, from cold type to electronic medium. Basic bibliographical and paleographical techniques will be taught, and readings in history and theory will be discussed. Attention will focus particularly on the use of books, and hence on the history of reading practices, including marginalia and other marks of ownership. Students will be expected to develop their own projects from among the riches of Stanford's rare book collection. The final project may be a collaborative one, with contributions by the class as a whole. This has typically been the preparation of an edition of a manuscript or piece of ephemera in Stanford's collection.

**ENGLISH 218. Literature and the Brain. 5 Units.**

Recent developments in and neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts? Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer?. Same as: ENGLISH 118, FRENCH 118, FRENCH 318, PSYCH 118F

**ENGLISH 233. Baroque and Neobaroque. 5 Units.**

The literary, cultural, and political implications of the 17th-century phenomenon formed in response to the conditions of the 16th century including humanism, absolutism, and early capitalism, and dispersed through Europe, the Americas, and Asia. If the Baroque is a universal code of this period, how do its vehicles, such as tragic drama, Ciceronian prose, and metaphysical poetry, converse with one another? The neobaroque as a complex reaction to the remains of the baroque in Latin American cultures, with attention to the mode in recent Brazilian literary theory and Mexican poetry.

Same as: COMPLIT 233, ILAC 293E

**ENGLISH 239B. Literature and Social Online Learning. 3-5 Units.**

Study, develop, and test new digital methods, games, apps, interactive social media uses to innovate how the humanities can engage and educate students and the public today. Exploring well-known literary texts, digital storytelling forms and literary communities online, students work individually and in interdisciplinary teams to develop innovative projects aimed at bringing literature to life. Tasks include literary role-plays on Twitter; researching existing digital pedagogy and literary projects, games, and apps; reading and coding challenges; collaborative social events mediated by new technology. Minimal prerequisites which vary for students in CS and the humanities; please check with instructors. Same as: COMPLIT 239B, CS 27

**ENGLISH 241. Eighteenth-Century Women Writers. 5 Units.**

The course will deal with a number of eighteenth-century English women writers—primarily novelists, but also poets, critics and playwrights. Authors to be studied in depth will include both relatively well-known writers such as Behn and Wollstonecraft, and lesser-known authors such as Sarah Scott, Elizabeth Inchbald and Anna Seward. Considerable attention will be paid to recent feminist scholarship on eighteenth-century women's writing, generic issues and the question of a "women's literary tradition," the material conditions of female authorship in the period, and the history of the eighteenth-century literary marketplace. Same as: FEMGEN 241W

**ENGLISH 262C. African American Literature and the Retreat of Jim Crow. 5 Units.**

After the unprecedented carnage of WWII, the postwar era witnessed the slow decline of the segregated Jim Crow order and the onset of landmark civil rights legislation. What role did African American literature and culture play in this historical process? What does this shift in racial theory and praxis mean for black literary production, a tradition constituted by the experience of slavery and racial oppression? Focus on these questions against the backdrop of contemporaneous developments: the onset of the Cold War, decolonization and the formation of the Third World, and the emergence of the "new liberalism." Same as: AMSTUD 262C

**ENGLISH 265F. Literature of the American Renaissance: 1850-1855. 5 Units.**

Between 1850 and 1855, some of the most influential works of 19th-century American literature were published: Melville's *Moby-Dick*, Hawthorne's *The Scarlet Letter*, Stowe's *Uncle Tom's Cabin*, Thoreau's *Walden*, Douglass's *My Bondage and My Freedom*, and Whitman's *Leaves of Grass*. Under pressure to invent a literature commensurate with the anomalies of American life, these writers achieved an astonishing degree of formal novelty. We will look closely at the ensuing difficulties of interpretation and their significance as precursors of literary modernism.

**ENGLISH 290. Advanced Fiction Writing. 5 Units.**

Workshop critique of original short stories or novel. Prerequisites: manuscript, consent of instructor, and 190-level fiction workshop. May be repeat for credit.

**ENGLISH 291. Advanced Creative Nonfiction. 5 Units.**

Continuation of 191. Workshop. The application of advanced storytelling techniques to fact-based personal narratives, emphasizing organic writing, discovering audience, and publication. Guest lecturers, collaborative writing, and publication of the final project in print, audio, or web formats. Prerequisite: ENGLISH 191.

**ENGLISH 292. Advanced Poetry Writing. 5 Units.**

Focus is on generation and discussion of student poems, and seeking published models for the work.

**ENGLISH 293. Literary Translation. 4 Units.**

An overview of translation theories and practices over time. The aesthetic, ethical, and political questions raised by the act and art of translation and how these pertain to the translator's tasks. Discussion of particular translation challenges and the decision processes taken to address these issues. Coursework includes assigned theoretical readings, comparative translations, and the undertaking of an individual translation project.

Same as: DLCL 293

**ENGLISH 300. Medieval Methodologies. 1-3 Unit.**

An introduction to the essential tool-kit for medievalists, this course will give all medievalists a great head start in knowing how to access and interpret major works and topics in the field. Stanford's medieval faculty will explain the key sources and methods in the major disciplines from History to Religion, French to Arabic, English to Chinese, and Art History to German and Music. In so doing, students will be introduced to the breadth and interdisciplinary potential of Medieval Studies. A workshop devoted to Digital Technologies and Codicology/Palaeography will offer elementary training in these fundamental skills.

Same as: DLCL 300, MUSIC 300C

**ENGLISH 301B. Love and Loss in Early English, 900-1300. 5 Units.**

Examination of what makes literature so human. We'll investigate heroic, lyrical and religious voices in the earlier Middle Ages from 900-1300 to discover what connects early literature and culture to our modern world.

**ENGLISH 303. Experiment and the Novel. 5 Units.**

A double exploration of experiment in the novel from 1719 into the 19th century. Taking off from Zola's *The Experimental Novel*, consideration of the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the usual sense of departures from standard practice, consideration of works that seem to break away from techniques of "realism" devised prior to 1750. Texts by: Sterne, Walpole, Burney, Sade, Godwin, Lewis, and Goethe. Substantial readings in the theory of the novel.

Same as: COMPLIT 353A

**ENGLISH 305F. The Conservative Novel. 5 Units.**

The relationships among politics, the representation of a conservative social field, and novel form. Readings may include H. Fielding, J. Austen, B. Disraeli, A. Trollope, N. Mitford, K. Amis, N. Mosley, E. St. Aubyn, Z. Smith.

**ENGLISH 313. Performance and Performativity. 1-4 Unit.**

Performance theory through topics including: affect/trauma, embodiment, empathy, theatricality/performativity, specular/visibility, liveness/disappearance, belonging/abjection, and utopias and dystopias. Readings from Schechner, Phelan, Austin, Butler, Conquergood, Roach, Schneider, Silverman, Caruth, Fanon, Moten, Anzaldúa, Agamben, Freud, and Lacan. May be repeated for credit.

Same as: FEMGEN 313, TAPS 313

**ENGLISH 314. Epic and Empire. 5 Units.**

Focus is on Virgil's Aeneid and its influence, tracing the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.

Same as: COMPLIT 320A

**ENGLISH 315. Theories of Tragedy. 5 Units.**

From classical Athens to the present, critics have repeatedly redefined tragedy, and in modernity they have often identified the predicaments of individual and social existence with the tragic. We will read the major theorists of tragedy and the tragic from Aristotle to the present together with a handful of touchstone tragedies. Dramatists include Sophocles, Euripides, Shakespeare, Racine, and Milton. Theorists include Aristotle, Renaissance humanists, Schelling, Hegel, Nietzsche, Freud, Vernant, Steiner, and recent critics.

**ENGLISH 317A. Irony. 5 Units.**

Varieties of literary irony from Plato through the present. Topics include: verbal, dramatic, situational, and romantic irony. Focus will be on questions about what irony is and why writers use it. How does irony go astray? What kinds of topics seem to require irony? How does irony work? Writers include Chaucer, Swift, Thomas Mann, J.M. Coetzee and David Foster Wallace.

**ENGLISH 327. Genres of the Novel. 5 Units.**

Provides students with an overview of some major genres in the history of the modern novel, along with major theorists in the critical understanding of the form. Novels might include works by Cervantes, Defoe, Lafayette, Radcliffe, Goethe, Scott, Balzac, Melville, and Woolf. Theorists might include Lukacs, Bakhtin, Jameson, Gallagher, Barthes, Kristeva, and Bourdieu. \*PLEASE NOTE: Course for graduate students only.\*

Same as: COMPLIT 327, FRENCH 327

**ENGLISH 334A. Concepts of Modernity I: Philosophical Foundations. 5 Units.**

In the late eighteenth century Immanuel Kant proclaimed his age to be "the genuine age of criticism." He went on to develop the critique of reason, which set the stage for many of the themes and problems that have preoccupied Western thinkers for the last two centuries. This fall quarter course is intended as an introduction to these themes and problems. We begin this course with an examination of Kant's philosophy before approaching a number of texts that extend and further interrogate the critique of reason. In addition to Kant, we will read texts by Hegel, Marx, Nietzsche, Weber, Freud, Lukács, and Heidegger. This course is the first of a two-course sequence. Priority to graduate students in MTL and English. The course will be capped at 12 students.

Same as: MTL 334A

**ENGLISH 334B. Concepts of Modernity II: Culture, Aesthetics, and Society in the Age of Globalization. 5 Units.**

Emphasis on world-system theory, theories of coloniality and power, and aesthetic modernity/postmodernity in their relation to culture broadly understood.

Same as: COMPLIT 334B, MTL 334B

**ENGLISH 338. The Gothic in Literature and Culture. 5 Units.**

This course examines the Gothic as both a narrative subgenre and an aesthetic mode, since its 18th century invention. Starting with different narrative genres of Gothic expression such as the Gothic novel, the ghost tale, and the fantastic tale by writers such as Walpole, Radcliffe, Sade, Poe, and E.T.A. Hoffmann, the course goes on to ask how the Gothic sensibility permeates a wide range of 19th century cultural phenomena that explore the dark side of Enlightenment, from Romantic poetry and art to melodrama, feuilleton novels, popular spectacles like the wax museum and the morgue. If time permits, we will also ask how the Gothic is updated into our present in popular novels and cinema. Critical readings will examine both the psychology of the Gothic sensibility and its social context, and might be drawn from theorists such as Benjamin, Freud, Lacan, Kristeva, and Zizek.

Same as: COMPLIT 338, FRENCH 338

**ENGLISH 344A. Drama and Poetry: Shakespeare, Marlowe, Jonson. 5 Units.**

The course considers major playwrights who were also major poets; and examines the relation both between the drama and the non-dramatic poetry, and between text and performance, manuscript and publication. Plays discussed will include *Doctor Faustus*, the three texts of *Hamlet* and the two of *Troilus and Cressida*, and *Volpone* and *The Alchemist*. Poetry will include *Venus and Adonis* and *Lucrece*, the Shakespeare sonnets, poems of Jonson's, and Marlowe's *Hero and Leander*.

**ENGLISH 360D. Freud and Literary Criticism. 5 Units.**

The course constitutes both a broad overview of Freudian theory and a collective conversation on the usefulness of Freud's ideas for literary scholarship in our 'post-post-post' age. The readings include a selection of classic Freud essays and case histories, as well as excerpts from *The Interpretation of Dreams*. In conjunction with the primary works, several short British and American literary works (by H.D., Edith Wharton and others) and three Hitchcock films—, *Rope*, *Rear Window* and *Vertigo*. The intellectual goal here is to consider how well such works might serve as 'test cases' for a reinvented 21st-century Freudian interpretation.

**ENGLISH 365. Fictions of Literary Being. 5 Units.**

An inquiry into the nature of fictionalization through an examination of the mutual construction of author, character, and reader in the novel. What is the nature of literary being? Does an ontological crossing-over occur in the act of reading? If so, what conditions enable that passage? Where do we locate the foundational antithesis of flesh and word? To what degree is it possible to differentiate autobiography, memoir, and novel? We'll read Roth, Kenzaburo Oe, Coetzee, Elena Ferrante, Nabokov, and Barthes.

**ENGLISH 366. Practicing Theories. 5 Units.**

An exploration of some of the main currents in post-WWII and contemporary literary theory from the new criticism to deconstruction, new historicism, etc., arriving at contemporary debates about surface reading, digital humanities, affect, and the new materialisms.

**ENGLISH 366G. Poetics Now and Then. 5 Units.**

The fundamental issues and recent problems in poetics. Exploration of both classic statements and current scholarship to obtain an overview of a field in the process of renewal. Topics may include the nature of the poetic; figurative language; technical, social and historical approaches; poetological accounts of major periods and movements (e.g. the baroque, classicism, symbolism, modernism, Language poetry); and recent experiments in poetry that respond to developments in poetics. Both the scholarship and the poems under consideration come from multiple traditions, national and ideological. Readings include works by Auerbach, Jakobson, De Man, Paz, Hartman, Forrest-Thomson, and Agamben.

**ENGLISH 368A. Imagining the Oceans. 5 Units.**

How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Primary authors read might include Cook, Banks, Equiano, Ricketts, and Steinbeck; Defoe, Cooper, Verne, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Critical readings include Schmitt, Rediker and Linebaugh, Baucom, Best, Corbin, Auden, Sontag and Heller-Roazen. Films by Sekula, Painlevé and Bigelow. Seminar coordinated with a 2015 Cantor Arts Center public exhibition. Visits to the Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park. Open to graduate students only.

Same as: COMPLIT 368A, FRENCH 368A

**ENGLISH 369D. Lost Bestsellers of Nineteenth Century Britain. 5 Units.**

Great forgotten successes of 19th-century literature, and what they teach us about literary history and literary form.

**ENGLISH 375A. Renaissance Literature and Politics after the New Historicism. 5 Units.**

A major critical and theoretical legacy, the New Historicism continues to inform, in both positive and negative ways, the recent scholarly work devoted to the relationship between literature and history in the early modern period. While focusing on issues of political meaning and political thought that both inform literary production and are partly shaped by it, the seminar will ask what it means to have a dominant critical paradigm for the understanding of fundamental relations between literary and non-literary (or at least less literary) discourses. Even though we will be studying major Renaissance authors such as Sidney, Spenser, and Shakespeare, the theoretical and methodological issues the course is designed to raise transcend period boundaries. We will look at recent scholarly production in the field of early modern studies to see how scholars go about defining and positioning their critical agendas in their attempts to offer new or modified conceptions of the relationship between Renaissance literature, and literature more generally, and politics.

**ENGLISH 381B. Theories of Race and Ethnicity. 5 Units.**

This interdisciplinary and reading-intensive course has been designed to familiarize you with the key scholars, as well as the most recent developments, in theorizations of race and ethnicity in literary and cultural studies, performance studies, visual studies, and philosophy. As we work our way through this diverse set of readings, particular attention will be paid to how the various approaches illuminate key issues under current debate: subjectivity, identity, biological difference, racial representation, affect, and political activism.

**ENGLISH 390. Graduate Fiction Workshop. 3 Units.**

For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.

**ENGLISH 392. Graduate Poetry Workshop. 3 Units.**

For Stegner fellows in the writing program. May be repeated for credit. Prerequisite: consent of instructor.

**ENGLISH 394. Independent Study. 1-10 Unit.**

Preparation for first-year Ph.D. qualifying examination.

**ENGLISH 395. Ad Hoc Graduate Seminar. 1-5 Unit.**

Three or more graduate students who wish in the following quarter to study a subject or an area not covered by regular courses and seminars may plan an informal seminar and approach a member of the department to supervise it.

**ENGLISH 396. Introduction to Graduate Study for Ph.D. Students. 5 Units.**

Required for first-year graduate students in English. The major historical, professional, and methodological approaches to the study of literature in English.

**ENGLISH 396L. Pedagogy Seminar I. 2 Units.**

Required for first-year Ph.D students in English, Modern Thought and Literature, and Comparative Literature. Preparation for surviving as teaching assistants in undergraduate literature courses. Focus is on leading discussions and grading papers.

**ENGLISH 396P. Publication Workshop: The Article. 3-5 Units.**

For English Ph.D. candidates only. A practical and theoretical study of the genre of the journal article, with critical reflection on its status as a gateway to academic professionalization and as a highly specialized form of public address. We will be reading articles published over the last decade across a diverse range of journals, focusing on issues surrounding methodology, style, tone, and audience. Participants will work on developing an already polished piece of writing into the form of an article publishable by a peer-reviewed publication. Admission by application in Autumn quarter.

**ENGLISH 396R. Old and Modern(ist) Reading Group. 2 Units.**

This two-quarter-long reading group will alternate from week-to-week between Old English Biblical and Elegaic Poetry and David Jones's twentieth-century transnational Modernist masterpiece, "Anthemata" (which W. H. Auden called very probably the finest long poem written in English in this century). Students can choose to join biweekly for just Old English (in the original language) or just David Jones, or complete both sets of allied reading.

**ENGLISH 398. Research Course. 1-18 Unit.**

A special subject of investigation under supervision of a member of the department. Thesis work is not registered under this number.

**ENGLISH 398L. Literary Lab. 2-5 Units.**

Gathering and analyzing data, constructing hypotheses and designing experiments to test them, writing programs [if needed], preparing visuals and texts for articles or conferences. Requires a year-long participation in the activities of the Lab.

Same as: COMPLIT 398L

**ENGLISH 398R. Revision and Development of a Paper. 4-5 Units.**

Students revise and develop a paper under the supervision of a faculty member with a view to possible publication.

**ENGLISH 398W. Orals, Publication and Dissertation Workshop. 2 Units.**

For third- and fourth-year graduate students in English. Strategies for studying for and passing the oral examination, publishing articles, and for writing and researching dissertations and dissertation proposals. May be repeated for credit.

**ENGLISH 399. Thesis. 1-10 Unit.**

For M.A. students only. Regular meetings with thesis advisers required.

**ENGLISH 802. TGR Dissertation. 0 Units.****English for Foreign Students Courses****EFSLANG 197. Directed Study. 1-3 Unit.****EFSLANG 397. Directed Study. 1-3 Unit.****EFSLANG 683P. Workshop in Pronunciation for International Students. 2-3 Units.**

(1-2 units). Provides support in the development of clear, comprehensible English pronunciation. Includes attention to individual sounds as well as stress, rhythm, and intonation. Students taking the course for 3 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

**EFSLANG 683R. Workshop in Reading and Vocabulary for International Students. 1-2 Unit.**

(1-2 units). Provides support in the development of English reading skills for academic purposes, including work on comprehension, speed, and critical interpretation, along with strategies for improving vocabulary. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

**EFSLANG 683S. Workshop in Oral Communication for International Students. 1-2 Unit.**

(1-2 units) Provides support in the development of listening and speaking skills in English, including academic listening, small group discussion, oral presentation, and intercultural communication. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

**EFSLANG 683W. Workshop in Written Communication for International Students. 1-2 Unit.**

(1-2 units). Provides support in the development of English writing skills for non-natives. Writing assignments are negotiated with the instructor and may include practice in composition, SAT or TOEFL writing, and writing university application essays and statements of purpose. Students taking the course for 2 units will have additional individual assignments and a 30-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

**EFSLANG 684A. Language and Culture of Sports in the USA. 1-2 Unit.**

Provides an overview of America's sports culture, focusing on three of the most popular sports: basketball, baseball, and American football. Through an introduction to their rules and histories, students gain familiarity with the unique language patterns that surround discussions of sports, as well as the many sports-related metaphors and idioms in non-sports conversations in business and everyday life. Students learn and practice relevant language forms across all skills. Students taking the course for 2 units will have additional individual assignments and a 50-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

**EFSLANG 684M. Language and Culture of Multimedia Communication. 1-2 Unit.**

) Develops students' abilities to read, analyze, understand and produce multimedia and multimodal writing for digital contexts. Students will learn how to read, analyze, and understand the content and the patterns of language typically used in different types of multimodal writing (writing that uses words, images, video, and/or music). Students will create multimedia compositions for digital contexts. Students taking the course for 2 units will have additional individual assignments and a 50-minute tutorial each week. Limited to visiting undergraduates and students in the High School Summer College program.

**EFSLANG 684S. Language and Culture of Silicon Valley. 1-2 Unit.**

Provides an overview of Silicon Valley's unique culture and language patterns via exposure to authentic materials, such as blogs and videos, and interaction with students and professionals in local industry. Participants learn and practice language forms characteristic of this region across all skills. Those taking the course for 2 units will have additional individualized assignments and a 50-minute tutorial each week. Limited to visiting non-native English speaking undergraduates and students in the High School Summer College program. (1-2 units).

**EFSLANG 687X. American Language and Culture: Silicon Valley First Session. 3 Units.**

Closed enrollment. Intensive English language and U.S. culture program. Enrollment limited to 14.

**EFSLANG 687Y. American Language and Culture: Silicon Valley, Second Session. 3 Units.**

Closed enrollment. Intensive English language and U.S. culture program. Enrollment limited to 14. Course may be repeated once.

**EFSLANG 688. Intensive English and Academic Orientation for Foreign Graduate Students. 6 Units.**

Goal is to prepare incoming international graduate students for full-time study. Academic orientation and instruction in academic writing, listening, discussion, oral presentation, and spoken usage. Enrollment limited to 14. Course may be repeated once.

**EFSLANG 688A. Intensive Spoken English. 3 Units.**

For current graduate students. Includes work on listening, oral presentation, discussion, and conversational interaction. May fulfill any two of the following EFS requirements, subject to approval by the EFS Director: EFSLANG 690A, 690B, 691, 693B.

**EFSLANG 688B. Intensive Academic Writing. 3 Units.**

For current graduate students. Focus on academic writing, with some work in reading and vocabulary development. Engineering, science, humanities, and social science students prepare a research paper; business students write one or more case studies. Fulfills requirement for EFSLANG 697 or 698A, subject to approval by the EFSLANG Director.

**EFSLANG 688V. Intensive English and Academic Orientation for Stanford Visiting Scholars. 5 Units.**

Goal is to improve English proficiency and introduce the university environment. Writing, pronunciation, listening, discussion, oral presentation, and spoken usage. Enrollment limited to 14.

**EFSLANG 689A. Exploring the Language and Culture of Sports in the USA. 1 Unit.**

Develops familiarity with three of the most popular sports in the United States: football, baseball, and basketball. Beginning with an overview of the rules of each game and its history, students are introduced to the patterns of language that surround sports culture and pervade American communication even outside sports-related interactions. Students examine academic and popular sources on sports, focusing on the language of sports culture, metaphors, and idioms that occur in daily English language use through practice of the language forms both inside and outside the classroom. Intended for current graduate students and graduate summer visitors.

**EFSLANG 689B. Building Communication Skills through Improvisation. 1 Unit.**

Focus on building a range of English communication skills through improvisation activities. Participants explore theatrical techniques that teach collaboration, spontaneity, team building, storytelling, and confident public speaking with connections to academic, professional, and personal situations. Course is co-taught by an improvisation expert and an ESL instructor. No previous improvisation or theater experience necessary.

**EFSLANG 689E. Learning English on Your Own. 1 Unit.**

Independent English language learning. Learning strategies and objectives, setting and maintaining practice schedules, and evaluating progress. Focus is on exploiting web-based resources. Individual meetings.

**EFSLANG 689H. American Humor. 1 Unit.**

Analysis of jokes, humorous stories, and situations through modern media. Practice in advanced listening comprehension and English idioms.

**EFSLANG 689L. Living in the USA. 1 Unit.**

Life and relationships outside the University classroom. Goal is to familiarize international students with the cultural expectations and forms of language use in a variety of situations in the University community and in other social situations. Enrollment limited to 14.

**EFSLANG 689P. Pronunciation. 2 Units.**

The sounds of English, and stress, intonation, and rhythm patterns important to natural-sounding speech. Enrollment limited to 14.

**EFSLANG 689S. Exploring Silicon Valley Language and Culture. 1 Unit.**

Focus on developing communicative skills in the context of Silicon Valley with its unique culture and language patterns. Through analysis and discussion of language and content from authentic materials, such as popular blogs and videos, students gain familiarity with local norms for interacting with the people who live and work in this region. Includes topics relevant to entrepreneurs, tech professionals, and students as well as a short individual project. Intended for both new and continuing international graduate students.

**EFSLANG 689T. Interacting in California's Vineyard Culture. 1 Unit.**

Focuses on communicative skills in the context of California's renowned wine culture. Emphasis on the language of wine using appropriate terminology, and interacting knowledgeably with restaurant and retail wine staff. Topics include learning the fundamentals of vineyard techniques, varietal characteristics, tasting techniques, drinking and ordering etiquette. Course is co-taught by a wine expert and an ESL instructor. Class consists of a short interactive lecture, a communicative activity such as role playing, and a tasting of four specially selected wines. Participants must be at least 21 years old. Fee.

**EFSLANG 689V. Vocabulary and Idiom. 1 Unit.**

Building vocabulary for academic success. Idiomatic language, and what idioms and metaphors reflect about American culture. Enrollment limited to 14.

**EFSLANG 689W. Working in the USA. 1 Unit.**

The language and culture of the workplace. Goal is to familiarize international students with the cultural expectations of situations in the business setting and in social situations related to business.

**EFSLANG 690A. Interacting in English. 1-3 Unit.**

Strategies for communicating effectively in social and academic settings. Informal and formal language used in campus settings, including starting and maintaining conversations, asking questions, making complaints, and contributing ideas and opinions. Simulations and discussions, with feedback on pronunciation, grammar, and usage. Enrollment limited to 14.

**EFSLANG 690B. Academic Discussion. 1-3 Unit.**

Skills for effective participation in classroom settings, seminars, and research group meetings. Pronunciation, grammar, and appropriateness for specific tasks. Feedback on language and communication style. Enrollment limited to 14. May be repeated once for credit. Prerequisite: EFSLANG 690A or consent of instructor.

**EFSLANG 690C. Advanced Interacting in English. 1-3 Unit.**

Communication skills for extended discourse such as storytelling and presenting supported arguments. Development of interactive listening facility and overall intelligibility and accuracy. Goal is advanced fluency in classroom, professional and social settings. Identification of and attention to individual patterned errors. May be repeated once for credit. Prerequisite: EFSLANG 690B or consent of instructor. Enrollment limited to 14.

**EFSLANG 691. Oral Presentation. 1-3 Unit.**

For advanced graduate students. Practice in academic presentation skills; strategy, design, organization, and use of visual aids. Focus is on improving fluency and delivery style, with videotaping for feedback on language accuracy and usage. Enrollment limited to 14. May be repeated once for credit.

**EFSLANG 692. Speaking and Teaching in English. 1-3 Unit.**

For non-native speakers who must teach in English. Focus is on developing clarity, intelligibility, and effectiveness through weekly presentations simulating actual teaching assistant responsibilities. Enrollment limited to 14. May be repeated once for credit.

**EFSLANG 693A. Listening Comprehension. 1-3 Unit.**

Strategies for effective listening in an academic setting, focusing on identifying key ideas in lectures. Practice in understanding words and phrases commonly encountered in classroom settings. Computer-based exercises for comprehension of rapid, natural speech. Enrollment limited to 14.

**EFSLANG 693B. Advanced Listening Comprehension, and Vocabulary Development. 1-3 Unit.**

Listening strategies and vocabulary for understanding English in academic and non-academic contexts. Discussion and interpretation of communicative intent. Computer-based and video exercises across a range of genres; individual project. May be repeated once for credit. Prerequisite: EFSLANG 693A or consent of instructor.

**EFSLANG 693R. Graduate Reading and Vocabulary Development. 1-3 Unit.**

Strategies for improving graduate and professional academic reading comprehension and critical analysis. Focus on applying specific techniques for different reading purposes. Expansion of both general and field-specific academic vocabulary and idioms. Includes individual reading projects.

**EFSLANG 694. English for Business, Industry and Professional Life. 1-3 Unit.**

For advanced graduate students. Task-based practice of language appropriate for professional settings in industry and related teamwork. Simulation of the roles of manager, applicant, subordinate, and coworker. Prerequisite: EFSLANG 693A, or consent of instructor. Enrollment limited to 14.

**EFSLANG 695A. Pronunciation and Intonation. 1-3 Unit.**

Recognition and practice of American English sounds, stress, and intonation patterns for greater comprehension and intelligibility. Analysis of problem areas. Biweekly tape assignments and tutorials. May be repeated once for credit. Enrollment limited to 14.

**EFSLANG 695B. Advanced Pronunciation and Intonation. 1-3 Unit.**

Continuation of EFSLANG 695A, focusing on American English sounds, stress, rhythm, and intonation patterns. Emphasis is on self-monitoring, integrated with short presentations. Biweekly tape assignments and tutorials. Enrollment limited to 14. May be repeated for credit three times. Prerequisite: EFSLANG 695A.

**EFSLANG 696. Understanding American Humor. 1-3 Unit.**

Recognizing rhetorical devices, jokes, and character types common to spoken humor in film and television programs. Crosscultural discussion. Prerequisite: EFSLANG 690B, EFSLANG 693B or consent of the instructor. Repeatable once for credit. Enrollment limited to 14.

**EFSLANG 697. Writing Fundamentals. 1-3 Unit.**

Focus is on improving grammatical accuracy and vocabulary, building fluency, and learning the structure and conventions of English correspondence, reports, and short academic papers. Enrollment limited to 14.

**EFSLANG 698A. Writing Academic English. 1-3 Unit.**

Strategies and conventions for graduate writing. Emphasis is on fluency, organization, documentation, and appropriateness for writing tasks required in course work. Enrollment limited to 14. May be repeated once for credit.

**EFSLANG 698B. Advanced Graduate Writing. 1-3 Unit.**

Focus on clarity, accuracy, and appropriate style. For graduate students experienced in English writing and currently required to write for courses and research. Class meetings and individual conferences. Prerequisite: EFSLANG 698A. Enrollment limited to 14. May be repeated once for credit.

**EFSLANG 698C. Writing and Presenting Research. 1-3 Unit.**

For advanced graduate students completing major research projects. Revising and editing strategies for preparing papers, conference abstracts, and poster presentations. Adapting content and style to different audiences. Students present their research with participant feedback. Enrollment limited to 14. May be repeated once for credit. Prerequisite: EFSLANG 698B and EFSLANG 691 or consent of instructor.

**Environment and Resources Courses****ENVRES 201. The Energy Transformation Collaborative. 3 Units.**

Research seminar. Evaluate the technologies, economics, policy mechanisms and drivers, and business model innovations to enable East Palo Alto to transition to a sustainable, resilient future. Exploration of the social, economic, and political drivers that have led to the current state of the city along four major technological streams: buildings, energy infrastructure, water infrastructure, and transportation. Teams create a research-based proposal to the City Manager laying out a transition pathway for their technological stream.

**ENVRES 202. Transforming Clean Energy System and the Services They Enable. 2-3 Units.**

This project-based course focuses on innovation to accelerate the transformation of energy systems. Students will address challenges at the nexus of energy and water, energy and IT, energy and food, and off-grid services. Teams will develop well-defined problem statements, a thesis and solution pathway, and conduct research toward validating the thesis value propositions. Scoping, analysis and evaluation of proposed solutions can include any combination of technology, policy and business model innovation. Team written reports and presentations are required.

**ENVRES 220. The Social Ocean: Ocean Conservation, Management, and Policy. 1-2 Unit.**

This interdisciplinary seminar examines current ocean issues and ideas through a series of readings, discussions, and guest lecturer presentations of seminal works about the complex relationships of human beings to the marine world. Through the lenses offered by several classic readings, we will examine and reinterpret the challenges of fisheries collapse, climate change, shipping, marine spatial planning, biodiversity conservation, and the management of land-sea interactions. Though the seminar is open to all undergraduate and graduate students, our course is designed especially for those with a particular interest in studying and solving key issues of ocean policy and management, from coastal adaption to fisheries management to cumulative impacts assessments. In addition to this interest, students must be willing to take the time to dig deeper into the foundations of environmental thinking about the relationship of human beings and the sea.

**ENVRES 225. E-IPER Current Topics Seminar. 1 Unit.**

For E-IPER Ph.D and Joint M.S. students only. Weekly presentations of E-IPER students' research and other program-related projects. Occasional guest speakers. Individual or team presentation, active participation, and regular attendance required for credit. May be taken for credit a maximum of two times.

**ENVRES 230. Field Survey Data Collection & Analysis. 3 Units.**

In this course we will examine a range of issues related to the collection and analysis of survey data. Topics will include initiating a survey, designing an instrument, conducting enumeration, converting data from questionnaires to digital files, data analysis, empirical modeling and presenting results. Technical components will also be highly focused on application and implementation, and while prior training in econometrics would be useful, it will not be a prerequisite. The course will be tailored so that some of the specific topics covered will be based on the needs and interests of the students.

**ENVRES 238. Commercial Agriculture Seminar. 1 Unit.**

Practical survey of the agriculture industry with a focus on the US. Speakers are agricultural practitioners, including executives from commercial farming, agriculture private equity funds, agricultural equipment and seed suppliers, food marketing and retail companies, and novel early-stage ag tech companies. By the end, students will have a high-level grasp of real-world agricultural operations from planting, to harvest, to retail sales in the grocery store and obtain a greater understanding/appreciation of the food we eat every day. May be repeated for credit.

**ENVRES 240. Environmental Decision-Making and Risk Perception. 1-3 Unit.**

Mobilizing successful conservation efforts to mitigate climate change and preserve both local and global ecosystems requires a new way of thinking. This course will investigate the barriers to pro-environmental behavior and the heuristics and biases that cloud our ability to respond effectively to environmental problems, using insights from behavioral economics, neuroeconomics, and environmental risk perception. Emphasis on interdisciplinary applications of recent research, and implications for environmental policymaking and persuasive messaging.

**ENVRES 250. Environmental Governance. 3 Units.**

This interdisciplinary course presents an overview of environmental governance through an examination of how and why societies manage the relationships between human beings and the natural world. By comparing regulatory, community-based, and incentive-based environmental management systems, we address why certain environmental problems are managed as they are, and what approaches to environmental management are more (or less) successful. Designed for graduate students and upper-level undergraduates with some exposure to both the natural sciences (ecology/environmental chemistry), and the social sciences (anthropology, economics, political science, or sociology). A pre-course incoming survey is required. Same as: CEE 277C

**ENVRES 270. Graduate Practicum in Environment and Resources. 1-5 Unit.**

Opportunity for E-IPER students to pursue areas of specialization in an institutional setting such as a laboratory, clinic, research institute, governmental agency, non-governmental organization, or multilateral organization. Meets US CIS requirements for off-campus employment with endorsement from designated school official.

**ENVRES 275. The Practice of Mining and Its Social and Environmental Context. 2 Units.**

Seminar focused on one of the world's oldest industries: mining. Mining is a major industrial process that underpins the provision of many of the resources that we use in our daily lives; it is also a process that has defined landscapes and communities in sometimes positive and often negative ways. Mining is often neglected in balanced discussions of resource use and sustainability, and this course aims to give students context to help ensure that its lessons are not forgotten.

**ENVRES 280. Introduction to Environmental Science. 2 Units.**

For E-IPER Joint M.S. students only. This course functions as a gateway for E-IPER Joint M.S. students to learn about the variety of environmental science conducted by the program's affiliated faculty. Topics include oceans, green chemistry, water policy, energy, and others. Students engage in problem solving related to the application of science to business, law, and the conservation of natural resources.

**ENVRES 290. Capstone Project Seminar in Environment and Resources. 1-3 Unit.**

Required for and limited to E-IPER Joint M.S. students. Propose, conduct and publicly present final individual or team projects demonstrating the integration of professional (M.B.A., J.D., or M.D.) and M.S. in Environment and Resources degrees. Presentation and submission of final product required. 3 total units required; can all be taken during one quarter or divided over two sequential quarters.

**ENVRES 300. Introduction to Resource, Energy and Environmental Economics. 3 Units.**

Examination of environmental, energy and natural resource management problems through the lens of economics, with an emphasis on hands-on practical problem-solving. Topics include market failure, cost-benefit analysis, finance, risk & uncertainty, non-market valuation, regulation, green accounting, rent, renewable resources, exhaustible resources, including energy, and biodiversity. Prerequisite: proficiency in multivariate calculus. Knowledge of basic microeconomics helpful but not essential. Open only to E-IPER PhD students.

**ENVRES 315. Environmental Research Design Seminar. 1 Unit.**

Required core course for first year E-IPER Ph.D. students; optional for Joint M.S. students; other graduate students with instructor's permission. Series of faculty presentations and student-led discussions on interdisciplinary research design as exemplars of the research design theories discussed in ENVRES 320. Designing Environmental Research. Topics parallel the ENVRES 320 syllabus. Corequisite: ENVRES 320.

**ENVRES 320. Designing Environmental Research. 3-4 Units.**

Required core course restricted to first year E-IPER Ph.D. students. Research design options for causal inference in environmentally related research. Major philosophies of knowledge and how they relate to research objectives and design choices. Identification of critical elements within a broad range of research designs. Evaluation of the types of research questions for which different designs are suited, emphasizing fit between objectives, design, methods, and argument. Development of individual research design proposals, including description and justification understandable to a non-specialist.

**ENVRES 330. Research Approaches for Environmental Problem Solving. 3 Units.**

Required core course for first year E-IPER Ph.D. students. How to develop and implement interdisciplinary research in environment and resources. Assignments include development of research questions, a preliminary literature review, and a summer funding proposal. Course is structured on peer critique and student presentations of work in progress. Corequisite: ENVRES 398 with a faculty member chosen to explore a possible dissertation topic.

**ENVRES 340. E-IPER PhD Writing Seminar. 1-2 Unit.**

Restricted to second year E-IPER PhD students only. Actively pursue one or more writing goals relevant to this stage in their graduate studies in a structured setting. Set specific writing goals, create and follow a plan for reaching these goals, and receive substantive feedback on their written products from their peers. Examples of writing products include, but are not limited to, the student's dissertation proposal, E-IPER Fields of Inquiry essay, a literature review, or a grant or fellowship application. By the end of the course, students are expected to have completed or have made substantial progress toward their writing goal.

**ENVRES 380. Collaborating with the Future: Launching Large Scale Sustainable Transformations. 3-4 Units.**

This project-based d.school class combines Design Thinking Processes, Behavioral Sciences, elements of Diffusion Theory, and a methodology for scaled transformation. Tools and theories introduced in class will be used to structure large-scale transformations that simultaneously create value on environmental, societal, and economic fronts. This is a project-based class involving team-based, real world challenges that are all complex and scaled. Primarily meant for Graduate Students (especially qualified/motivated Seniors will be considered). Admission to the class is through an application process which ends on March 3. Please find instructions and applications at <https://dschool.stanford.edu/groups/largetransformations/>.

**ENVRES 398. Directed Reading in Environment and Resources. 1-10 Unit.**

Under supervision of an E-IPER affiliated faculty member on a subject of mutual interest. Joint M.S. students must submit an Independent Study Agreement for approval. May be repeat for credit.

**ENVRES 399. Directed Research in Environment and Resources. 1-15 Unit.**

For advanced graduate students. Under supervision of an E-IPER affiliated faculty member. Joint M.S. students must submit an Independent Study Agreement for approval.

**ENVRES 801. TGR Project. 0 Units.**

.

**ENVRES 802. TGR Dissertation. 0 Units.**

.

**Environmental Earth System Sciences Courses**

## Ethics in Society Courses

### ETHICSOC 2. The Ethics of Anonymity. 1 Unit.

When is it ethical to conceal your identity or to permit another to remain anonymous? What is the value to remaining unknown, and what might be the cost? Does anonymity free you to think, act, or be in ways you wouldn't otherwise? What else might it allow or constrain? How might your answers differ depending on the circumstances or context? In this one-unit lunchtime seminar, guest speakers will discuss topics that might include: anonymous sources in journalism; anonymity online; the history of anonymous authorship and attribution; whistleblowers and confidential informants; anonymous egg or sperm donors and birth parents; anonymity vs. confidentiality for research participants; anonymity and art; technology and anonymity.  
Same as: COMM 127X, CSRE 127X

### ETHICSOC 10SC. The Meaning of Life: Moral and Spiritual Inquiry through Literature. 2 Units.

Short novels and plays will provide the basis for reflection on ethical values and the purpose of life. Some of the works to be studied are F. Scott Fitzgerald's *The Great Gatsby*, George Bernard Shaw's *Major Barbara*, Hermann Hesse's *Siddhartha*, Jane Smiley's *Good Will*, Robert Bolt's *A Man for All Seasons*, John Steinbeck's *Of Mice and Men*, and Nadine Gordimer's *None to Accompany Me*. We will read for plot, setting, character, and theme using a two-text method; looking at the narrative of the literary work and students' own lives, rather than either deconstructing the literature or relating it to the author's biography and psychology. The questions we will ask have many answers. Why are we here? How do we find meaningful work? What can death teach us about life? What is the meaning of success? What is the nature of true love? How can one find balance between work and personal life? How free are we to seek our own destiny? What obligations do we have to others? We will draw from literature set in the United States and elsewhere; secular and religious world views from a variety of traditions will be considered. The authors chosen are able to hold people up as jewels to the light, turning them around to show all of their facets, both blemished and pure, while at the same time pointing to any internal glow beneath the surface. Classes will be taught in a Socratic, discussion-based style. Study questions will accompany each reading and provide a foundation for class discussion. Grading will be based 50 percent on class participation, 25 percent on one-page reflection papers on reading assignments, and 25 percent on a four-page final paper due on September 15. Field trips will include an overnight camping experience.

### ETHICSOC 11Q. Sustainability And Social Justice. 3 Units.

At its core, sustainability is a conversation about equity. Equity between people today and people tomorrow. Equity between the many diverse people today who are all trying to pursue their hopes and dreams. Equity between human beings and the myriad other living creatures we share this planet with. Movements for environmental sustainability and social justice share a concern for equity, but have largely evolved in parallel. Mounting evidence however shows that environmental and social change are almost always inextricably linked, and the climate crisis is pushing together these two areas of study like never before. That is good news, but tough questions remain. What happens when the environmental costs of personal freedom can no longer be sustained? Should the needs of the many always outweigh the needs of the few? Are we responsible for repairing the injustices of our parents' and grandparents' generations? Where are the win-win solutions? In this interdisciplinary seminar, we will explore the theory and practice of sustainability and social justice, examining case studies where they have intersected, and where they have not. Readings will draw from sustainability science, environmental justice, environmental ethics, religious studies, social psychology, and ecological economics. Through weekly readings, discussions, and journal writing, students will develop a personal sustainability manifesto and analyze a policy, technology, or social movement through the lens of social and environmental sustainability.  
Same as: EARTHSYS 11Q

### ETHICSOC 15R. U.S. Human Rights NGOs and International Human Rights. 1 Unit.

(Same as LAW 782) Many US human rights non-government organizations, including the US philanthropic sector, work on international human rights. The US government also engages with the private sector in "partnerships" that twins US foreign aid human rights action with corporate expertise. This weekly series will feature speakers who lead these human rights NGOs, philanthropic enterprises, and corporate partnerships, and also policy experts and scholars, to explore the pro's and con's of this scenario.  
Same as: IPS 271A, MED 225, POLISCI 203

### ETHICSOC 20. Introduction to Moral Philosophy. 5 Units.

A survey of moral philosophy in the Western tradition. What makes right actions right and wrong actions wrong? What is it to have a virtuous rather than a vicious character? What is the basis of these distinctions? Why should we care about morality at all? Our aim is to understand how some of the most influential philosophers (including Aristotle, Kant, and Mill) have addressed these questions, and by so doing, to better formulate our own views. No prior familiarity with philosophy required.  
Same as: PHIL 2

### ETHICSOC 102R. Ethics of Jihad. 5 Units.

Why choose jihad? An introduction to Islamic ethics. Focus on ways in which people have chosen, rejected, or redefined jihad. Evaluation of the norms in moments of ethical and political choice. Topics include jihad in the age of 1001 Nights, jihad in the Arab Renaissance, jihad in Bin Laden's sermons, and the hashtag #MyJihad. All readings and discussion in English.  
Same as: COMPLIT 171

### ETHICSOC 131S. Modern Political Thought: Machiavelli to Marx and Mill. 5 Units.

This course offers an introduction to the history of Western political thought from the late fifteenth through the nineteenth centuries. We will consider the development of ideas like individual rights, government by consent, and the protection of private property. We will also explore the ways in which these ideas continue to animate contemporary political debates. Thinkers covered will include: Niccolò Machiavelli, Thomas Hobbes, John Locke, Jean-Jacques Rousseau, Edmund Burke, John Stuart Mill, and Karl Marx.  
Same as: POLISCI 131L

### ETHICSOC 133. Ethics and Politics of Public Service. 5 Units.

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. [This class is capped but there are some spaces available with permission of instructor. If the class is full and you would like to be considered for these extra spaces, please email sburbank@stanford.edu with your name, grade level, and a paragraph explaining why you want to take the class.].  
Same as: CSRE 178, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D, URBANST 122

**ETHICSOC 135R. The Ethics of Democratic Citizenship. 5 Units.**

We usually think about democratic citizenship in terms of rights and opportunities, but are these benefits of democracy accompanied by special obligations? Do citizens of a democracy have an obligation to take an interest in politics and to actively influence political decision making? How should citizens respond when a democracy's laws become especially burdensome? Do citizens of a democracy have a special obligation to obey the law? In this course, we will read classical and contemporary political philosophy including Plato's *Crito* and King's "Letter from a Birmingham Jail" to explore how political thinkers have understood and argued for the ethics of citizenship. Students in this course will draw on these materials to construct their own arguments, and to identify and assess implicit appeals to the ethics of citizenship in popular culture and contemporary public discourse, from *The Simpsons* to President Obama's speeches.

Same as: POLISCI 135D

**ETHICSOC 136R. Introduction to Global Justice. 4 Units.**

This course provides an overview of core ethical problems in international politics, with special emphasis on the question of what demands justice imposes on institutions and agents acting in a global context. The course is divided into three sections. The first investigates the content of global justice, and comprises of readings from contemporary political theorists and philosophers who write within the liberal contractualist, utilitarian, cosmopolitan, and nationalist traditions. The second part of the course looks at the obligations which global justice generates in relation to five issues of international concern: global poverty, climate change, immigration, warfare, and well-being of women. The final section of the course asks whether a democratic international order is necessary for global justice to be realized.

Same as: INTNLREL 136R, PHIL 76, POLISCI 136R, POLISCI 336

**ETHICSOC 170. Ethical Theory. 4 Units.**

A more challenging version of Phil 2 designed primarily for juniors and seniors (may also be appropriate for some freshmen and sophomores - contact professor). Fulfills the Ethical Reasoning requirement. Graduate section (270) will include supplemental readings and discussion, geared for graduate students new to moral philosophy, as well as those with some background who would like more.

Same as: PHIL 170, PHIL 270

**ETHICSOC 171. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: IPS 208, PHIL 171, PHIL 271, POLISCI 103, POLISCI 136S, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307

**ETHICSOC 174A. Moral Limits of the Market. 4 Units.**

Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases.

Same as: PHIL 174A, PHIL 274A, POLISCI 135P

**ETHICSOC 174L. Betrayal and Loyalty, Treason and Trust. 2 Units.**

The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. SAME AS LAW 520.

Same as: ETHICSOC 274L, PHIL 174L, PHIL 274L

**ETHICSOC 178M. Introduction to Environmental Ethics. 4-5 Units.**

How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism.

Same as: ETHICSOC 278M, PHIL 178M, PHIL 278M, POLISCI 134L

**ETHICSOC 180M. Collective Action Problems: Ethics, Politics, & Culture. 3-4 Units.**

When acting on one's own, it is often easy to know what the morally right action is. But many moral problems arise from the fact that many individuals act together leading to dilemmas, in which what is individually rational is collectively irrational. For example, the collective result of our consumption decisions is to warm the planet. But individual decisions seem to have no effect on climate change. Such collective action situations give rise to moral questions: Are individuals required to take their contributions to wider systemic effects into account? Does it make a difference whether or not others are doing their share, for example with regard to fighting global poverty? In many cases, the best solution for collective action problems are institutions. But when these are deficient or non-existing, what should individuals do? Do they have a duty to assist in building institutions, and what would this duty imply in practical terms? Interdisciplinary perspective, reading authors from philosophy, politics, economics and sociology such as Elinor Ostrom, Peter Singer or Liam Murphy, relating to current questions such as global poverty and climate change. No background assumed; no mathematical work required.

Same as: PHIL 73, POLISCI 131A, PUBLPOL 304A

**ETHICSOC 182M. Business Ethics. 4 Units.**

What do people mean when they say, "it's just business"? Do they mean that there are no moral norms in business or do they mean that there are special moral norms in business that differ from those of personal relationships and other spheres of social activity? In this class we will examine ethical questions that arise in the domain of business. We will ask, for example: What does the market reward and what should it reward? What are the moral responsibilities of a business owner in a competitive environment? Is it acceptable to employ "sweatshop labor"? How do the moral responsibilities of a business owner differ from that of a policy maker? What information does a seller (or buyer) have a moral duty to disclose? In real estate, is a strategic default morally wrong? How much government regulation of Wall Street is morally justified? We will use the writings of Plato, Aristotle, Cicero, J. S. Mill, Marx, Jevons and Menger, Hayek, Walzer, and Sandel, among others, to help us answer these questions. We will see, for example, what Aristotle thought about day trading.

Same as: PHIL 74

**ETHICSOC 183M. Family, Friends, and Groups: The Ethics of Association. 4 Units.**

The practice of associating with others is a fundamental part of human existence. We cultivate friendships, we grow up in families, we work for nonprofit associations or businesses, we join social movements and sport clubs, and we participate in political associations with our fellow citizens. This seminar explores the ethical dimensions of association. What grounds a right to freedom of association? Do we have, beyond a right, also a duty to participate in associational life? Do we have special obligations towards our friends, family members, or fellow-citizens that we do not have toward strangers? To what extent should the internal life of private associations, such as families or churches, be regulated by the state? Should the state support, through tax-exemptions and subsidies, the nonprofit associations of civil society? Can a state exclude non-citizens, such as immigrants, in the same way in which a private club excludes non-members? These questions have wide-ranging implications for contemporary political and legal debates.

Same as: POLISCI 132C

**ETHICSOC 185M. Contemporary Moral Problems. 4-5 Units.**

This course addresses moral issues that play a major role in contemporary public discourse. The course aims to encourage students to consider moral problems in a reflective, systematic manner, and to equip students with skills that will enable them to do so. Questions to be addressed include: Do rich countries have an obligation to accept refugees from other parts of the world? Do such obligations conflict with the right of individuals to protect their culture? Is there anything principally wrong in the use of drones for purposes of warfare? Do we have obligations to the environment, and if so why? What is racism and what makes it wrong? And what are feminist ideals?.

Same as: PHIL 72, POLISCI 134P

**ETHICSOC 186M. Economic Justice: What Is Private Property, and What (if Anything) Justifies It?. 4 Units.**

Seminar. The focus is on private property. Questions include: Is property a natural right or a social construction? How does our current, global system of property allocation work? What things are fit to be private property/a commodity? (Can we sell our bodies? Our vote? Natural resources?) The readings are a mix of philosophical classics (such as Locke and Marx), recent publications (e.g. Thomas Piketty, David Graeber), and empirical case studies. Prerequisites: none.

**ETHICSOC 190. Ethics in Society Honors Seminar. 3 Units.**

For students planning honors in Ethics in Society. Methods of research. Students present issues of public and personal morality; topics chosen with advice of instructor.

Same as: PHIL 178

**ETHICSOC 199. Independent Studies in Ethics in Society. 1-15 Unit.**

May be repeated for credit.

**ETHICSOC 200A. Ethics in Society Honors Thesis. 1-5 Unit.**

Limited to Ethics in Society honors students, who must enroll once in 200A, once in 200B, and once in 200C. Students enrolling in 200A for less than 2 units must get approval from the faculty director.

**ETHICSOC 200B. Ethics in Society Honors Thesis. 1-5 Unit.**

Limited to Ethics in Society honors students, who must enroll once in 200A and once in 200B. Students enrolling in 200B for less than 5 units must get approval from the faculty director.

**ETHICSOC 200C. Ethics in Society Honors Thesis. 1-5 Unit.**

Limited to Ethics in Society honors students, with special approval from the program faculty director.

**ETHICSOC 201R. The Ethics of Storytelling: The Autobiographical Monologue in Theory, in Practice, and in the World. 4 Units.**

Recently a theatrical monologist gained notoriety when it was revealed that key aspects of one of his "autobiographical" stories had been fabricated. In this class another autobiographical monologist – who has himself lied many times in his theater pieces, without ever getting caught – will examine the ethics of telling our life stories onstage. Does theatrical "truth" trump factual truth? We will interrogate several autobiographical works, and then – through autobiographical pieces created in class – we will interrogate ourselves.

Same as: TAPS 158L, TAPS 358L

**ETHICSOC 202. EMOTIONS: MORALITY AND LAW. 2 Units.**

If emotions are the stuff of life, some emotions are the stuff of our moral and legal life. Emotions such as: guilt, shame, revenge, indignation, resentment, disgust, envy, jealousy and humiliation, along with forgiveness, compassion, pity, mercy and patriotism, play a central role in our moral and legal life. The course is about these emotions, their meaning and role in morality and law. Issues such as the relationship between punishment and revenge, or between envy and equality, or St. Paul's contrast between law and love, or Nietzsche's idea that resentment is what feeds morality, will be discussed alongside other intriguing topics.

Same as: ETHICSOC 302, PHIL 177B, PHIL 277B

**ETHICSOC 202R. Ethics and Politics. 5 Units.**

A discussion of critical ethical issues faced by American and other national leaders. Case studies of 20th- and 21st-century decisions, including those involved with violence (e.g., the use of drone missiles or torture to extract information from enemies), whistle-blowing in government (e.g., decisions to expose what was known about 9/11 in advance), disobedience of those in authority (e.g., Daniel Ellsberg's release of the Pentagon Papers), policies on distributing scarce goods in society (e.g. rationing health care), policies involving justice and equal treatment (e.g. affirmative action or gay marriage), policies regarding life and death (e.g., abortion and euthanasia laws), and others. Students will debate some of the key issues, relying on ethical principles that will be discussed each week, and develop their own case studies.

Same as: POLISCI 223F

**ETHICSOC 203R. Ethics in Real Life: How Philosophy Can Make Us Better People. 4 Units.**

Socrates thought that philosophy was supposed to be practical, but most of the philosophy we do today is anything but. This course will convince you that philosophy actually is useful outside of the classroom—and can have a real impact on your everyday decisions and how to live your life. We'll grapple with tough practical questions such as: 'Is it selfish if I choose to have biological children instead of adopting kids who need homes?' 'Am I behaving badly if I don't wear a helmet when I ride my bike?' 'Should I major in a subject that will help me make a lot of money so I can then donate most of it to overseas aid instead of choosing a major that will make me happy?' Throughout the course, we will discuss philosophical questions about blame, impartiality, the force of different 'shoulds,' and whether there are such things as universal moral rules that apply to everyone.

Same as: PHIL 90E

**ETHICSOC 205R. JUST AND UNJUST WARS. 2 Units.**

War is violent, but also a means by which political communities pursue collective interests. When, in light of these features, is the recourse to armed force justified? Pacifists argue that because war is so violent it is never justified, and that there is no such thing as a just war. Realists, in contrast, argue that war is simply a fact of life and not a proper subject for moral judgment, any more than we would judge an attack by a pack of wolves in moral terms. In between is just war theory, which claims that some wars, but not all, are morally justified. We will explore these theories, and will consider how just war theory comports with international law rules governing recourse to force. We will also explore justice in war, that is, the moral and legal rules governing the conduct of war, such as the requirement to avoid targeting non-combatants. Finally, we will consider how war should be terminated; what should be the nature of justified peace? We will critically evaluate the application of just war theory in the context of contemporary security problems, including: (1) transnational conflicts between states and nonstate groups and the so-called "war on terrorism"; (2) civil wars; (3) demands for military intervention to halt humanitarian atrocities taking place in another state. Same as LAW 751.

Same as: ETHICSOC 305R, PHIL 205R, PHIL 305R

**ETHICSOC 206R. Science, Power and Democracy. 5 Units.**

This course investigates the relationship between science and democracy, and between knowledge and power, in the modern world. Topics covered include the epistemic properties of democratic institutions; the question of expertise in democratic politics; the role of values in science and public policy; the relationship between democracy and technology; and the relationship between democracy and the social sciences. We also analyze a number of concrete issues at the intersection of politics and science, including climate change and biomedical research. The course is interdisciplinary in method and content, with readings ranging across political theory, philosophy, history, and the social sciences.

Same as: POLISCI 231D

**ETHICSOC 207R. Democratic Accountability and Transparency. 5 Units.**

This course critically examines two related democratic values, accountability and transparency. We begin with historical perspectives on accountability, tracing its centrality to democratic politics to ancient Athens and early modern debates about the nature and function of political representation. But the bulk of the course deals with contemporary issues and problems: how should we conceive of accountability, both conceptually and normatively, and what is its relationship to other values such as transparency and publicity? What forms of accountability are appropriate for modern democratic politics? Is accountability only for elites, or should ordinary citizens be accountable to one another? In what contexts are transparency and publicity valuable, and when might we instead find their operation counter-productive and troubling? Readings draw from canonical texts as well as contemporary political theory, philosophy, and political science. Same as: POLISCI 231T

**ETHICSOC 232T. Theories of Civil Society, Philanthropy, and the Nonprofit Sector. 5 Units.**

What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? How do nongovernmental organizations operate domestically and globally? The historical development and modern structure of civil society emphasizing philanthropy and the nonprofit sector. Readings in political philosophy, political sociology, and public policy. WIM for PoliSci students who enroll in PoliSci 236S.

Same as: POLISCI 236, POLISCI 236S

**ETHICSOC 233R. The Ethics of Religious Politics. 5 Units.**

Is it possible for a deeply committed religious person to be a good citizen in a liberal, pluralistic democracy? Is it morally inappropriate for religious citizens to appeal to the teachings of their tradition when they support and vote for laws that coerce fellow citizens? Must the religiously committed be prepared to defend their arguments by appealing to 'secular reasons' ostensibly accessible to all 'reasonable' citizens? What is so special about religious claims of conscience and expression that they warrant special protection in the constitution of most liberal democracies? Is freedom of religion an illusion when it is left to ostensibly secular courts to decide what counts as religion? Exploration of the debates surrounding the public role of religion in a religiously pluralistic American democracy through the writings of scholars on all sides of the issue from the fields of law, political science, philosophy, and religious studies.

**ETHICSOC 234R. Ethics On the Edge: Business, Non-Profit Organizations, Government, and Individuals. 3 Units.**

The objective of the course is to explore the increasing ethical challenges in a world in which technology, global risks, and societal developments are accelerating faster than our understanding can keep pace. We will unravel the factors contributing to the seemingly pervasive failure of ethics today among organizations and leaders across all sectors: business, government and non-profit. A framework for ethical decision-making underpins the course. The relationship between ethics and culture, global risks (poverty, cyber-terrorism, climate change, etc.) leadership, and the law and policy will inform discussion. Prominent guest speakers will attend certain sessions interactively. A broad range of international case studies might include: Ebola; Facebook's mood manipulation research and teen suicides from social media bullying; Google's European "right to be forgotten" and driverless cars; Space X (Elon Musk's voyages to Mars); ISIS' interaction with international NGOs; sexual assault on U.S. university campuses and in the U.S. military; the ethics of corporate social responsibility (through companies such as L'Oreal, Whole Foods and Walmart); corporate and financial sector scandals; and non-profit sector ethics challenges. Final project in lieu of exam on a topic of student's choice. Attendance required. Class participation important (with multiple opportunities beyond speaking in class). Final project in lieu of exam. Strong emphasis on critical thinking and testing ideas in real-world contexts. There will be a limited number of openings above the set enrollment limit of 40 students. If the enrollment limit is reached, students wishing to take the course should contact Dr. Susan Liautaud at [susan11@stanford.edu](mailto:susan11@stanford.edu). The course offers credit toward Ethics in Society, Public Policy core requirements (if taken in combination with Public Policy 103E), and Science, Technology and Society and satisfies the Ways of Thinking requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. \*Public Policy majors taking the course to complete the core requirements must obtain a letter grade. Other students may take the course for a letter grade or C/NC.

Same as: PUBLPOL 134, PUBLPOL 234

**ETHICSOC 237. Civil Society and Democracy in Comparative Perspective. 5 Units.**

A cross-national approach to the study of civil societies and their role in democracy. The concept of civil society—historical, normative, and empirical. Is civil society a universal or culturally relative concept? Does civil society provide a supportive platform for democracy or defend a protected realm of private action against the state? How are the norms of individual rights, the common good, and tolerance balanced in diverse civil societies? Results of theoretical exploration applied to student-conducted empirical research projects on civil societies in eight countries. Summary comparative discussions. Prerequisite: a course on civil society or political theory. Students will conduct original research in teams of two on the selected nations. Enrollment limited to 18. Enrollment preference given to students who have taken PoliSci 236S/EthicSoc 232T.

Same as: POLISCI 237S

**ETHICSOC 237M. Politics and Evil. 5 Units.**

In the aftermath of the Second World War, the political theorist Hannah Arendt wrote that the problem of evil will be the fundamental question of postwar intellectual life in Europe. This question remains fundamental today. The acts to which the word "evil" might apply—genocide, terrorism, torture, human trafficking, etc.—persist. The rhetoric of evil also remains central to American political discourse, both as a means of condemning such acts and of justifying preventive and punitive measures intended to combat them. In this advanced undergraduate seminar, we will examine the intersection of politics and evil by considering works by philosophers and political theorists, with occasional forays into film and media. The thinkers covered will include: Hannah Arendt, Immanuel Kant, Niccolò Machiavelli, Friedrich Nietzsche, and Michael Walzer.  
Same as: POLISCI 237M

**ETHICSOC 274L. Betrayal and Loyalty, Treason and Trust. 2 Units.**

The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. SAME AS LAW 520.  
Same as: ETHICSOC 174L, PHIL 174L, PHIL 274L

**ETHICSOC 275R. Roads Not Taken, 1880-1960. 4 Units.**

This course is intended to illuminate ideas about justice, freedom, equality, democracy, peace, and social conflict, and to raise persisting questions about such topics as the role of violence in politics through looking at the ideas of America writers such as Edward Bellamy, W.E.B. DuBois, Eugene Debs, Jane Addams, Emma Goldman, John Dewey and Reinhold Niebuhr.  
Same as: AMSTUD 275R, PHIL 275R, POLISCI 335L

**ETHICSOC 276R. Religion and Politics: a Latin American Perspective. 4 Units.**

Religion has traditionally been banished from politics in some places in Latin America. Religious symbols may not be displayed in public buildings, political discourse is expected to be free from all religious content, and religious ministers are not allowed to run for public office, among other measures. This course examines the political motivation for this kind of policies towards religion taking a comparative perspective with American and French variants of secularism.  
Same as: ETHICSOC 376R, PHIL 176C, PHIL 276C

**ETHICSOC 278M. Introduction to Environmental Ethics. 4-5 Units.**

How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism.  
Same as: ETHICSOC 178M, PHIL 178M, PHIL 278M, POLISCI 134L

**ETHICSOC 280. Transitional Justice, Human Rights, and International Criminal Tribunals. 3-5 Units.**

Historical backdrop of the Nuremberg and Tokyo Tribunals. The creation and operation of the Yugoslav and Rwanda Tribunals (ICTY and ICTR). The development of hybrid tribunals in East Timor, Sierra Leone, and Cambodia, including evaluation of their success in addressing perceived shortcomings of the ICTY and ICTR. Examination of the role of the International Criminal Court and the extent to which it will succeed in supplanting all other ad hoc international justice mechanisms and fulfill its goals. Analysis focuses on the politics of creating such courts, their interaction with the states in which the conflicts took place, the process of establishing prosecutorial priorities, the body of law they have produced, and their effectiveness in addressing the needs of victims in post-conflict societies.  
Same as: INTNLREL 180A, IPS 280

**ETHICSOC 301. Conflicts, Ethics, and the Academy. 1-3 Unit.**

(Same as LAW 684) This course looks at conflicts of interest and ethical issues as they arise within academic work. The participants will be drawn from schools and departments across the University so that the discussion will prompt different examples of, and perspectives on, the issues we discuss. Topics will include the conflicts that arise from sponsored research, including choices of topics, shaping of conclusions, and nondisclosure agreements; issues of informed consent with respect to human subjects research, and the special issues raised by research conducted outside the United States; peer review, co-authorship, and other policies connected to scholarly publication; and the ethics of the classroom and conflicts of interest implicating professor-student relationships. Representative readings will include Marcia Angell's work, *Drug Companies and Doctors: A Story of Corruption*, N.Y. Rev. Books, Jan. 15, 2009, and *Is Academic Medicine for Sale?* 342 N. Engl. J. Med. 1516 (2000) (and responses); William R. Freudenburg, *Seeding Science, Courting Conclusions: Reexamining the Intersection of Science, Corporate Cash, and the Law*, 20 Sociological Forum 3 (2005); Max Weber, *Science as a Vocation*; legal cases; and conflict-of-interest policies adopted by various universities and professional organizations. The course will include an informal dinner at the end of each session. The goal of the course is to have students across disciplines think about the ethical issues they will confront in an academic or research career. Non-law students should enroll in ETHICSOC 301.

**ETHICSOC 302. EMOTIONS: MORALITY AND LAW. 2 Units.**

If emotions are the stuff of life, some emotions are the stuff of our moral and legal life. Emotions such as: guilt, shame, revenge, indignation, resentment, disgust, envy, jealousy and humiliation, along with forgiveness, compassion, pity, mercy and patriotism, play a central role in our moral and legal life. The course is about these emotions, their meaning and role in morality and law. Issues such as the relationship between punishment and revenge, or between envy and equality, or St. Paul's contrast between law and love, or Nietzsche's idea that resentment is what feeds morality, will be discussed alongside other intriguing topics.

Same as: ETHICSOC 202, PHIL 177B, PHIL 277B

**ETHICSOC 303R. Ethics, Economics and the Market. 4 Units.**

Economic analysis inevitably raises moral questions. Getting clear on those moral questions, and the competing answers to them, can help improve both economic analysis and our understanding of the values involved in alternative social policies. This course focuses on a central economic institution: the market. How have the benefits and costs of using markets been understood? For example, it is often claimed that markets are good for welfare, but how is welfare to be understood? What is the connection between markets and different values such as equality and autonomy? What, if anything is wrong with markets in everything? Are there moral considerations that allow us to, distinguish different markets? This course examines competing answers to these questions, drawing on historical and contemporary literature. Readings include Adam Smith, JS Mill, Karl Marx, Michael Walzer, Dan Hausman and Michael McPherson and Debra Satz among others. For graduate students only.

Same as: PHIL 375, POLISCI 434A

**ETHICSOC 304. Moral Minds: What Can Moral Psychology Tell Us About Ethics. 2 Units.**

SAME AS LAW744. Recent psychological advances in our understanding of the cognitive and social origins of morality cast a new light on age-old questions about ethics, such as: How did our moral sense evolve in our species? How does it develop over our lifetime? How much does our culture, religion, or politics determine our moral values? What is the role of intuition and emotion in moral judgment? How "logical" is moral judgment? How do other people's moral choices affect us? Does character matter or is behavior entirely dictated by the situations we find ourselves in? If it is purely situational, are we morally responsible for anything? How far will we go to convince ourselves that we are good and moral? Barbara Fried and Benoit Monin will review empirical answers to these questions suggested by behavioral research, and lead discussions on their implications for ethics. Students enrolled in the course will be selected through an application process. The application can be found at <http://web.stanford.edu/~arnewman/MoralMinds.fb>, and is due at 11:59 p.m. on November 14, 2014.

Same as: PSYCH 264

**ETHICSOC 305R. JUST AND UNJUST WARS. 2 Units.**

War is violent, but also a means by which political communities pursue collective interests. When, in light of these features, is the recourse to armed force justified? Pacifists argue that because war is so violent it is never justified, and that there is no such thing as a just war. Realists, in contrast, argue that war is simply a fact of life and not a proper subject for moral judgment, any more than we would judge an attack by a pack of wolves in moral terms. In between is just war theory, which claims that some wars, but not all, are morally justified. We will explore these theories, and will consider how just war theory comports with international law rules governing recourse to force. We will also explore justice in war, that is, the moral and legal rules governing the conduct of war, such as the requirement to avoid targeting non-combatants. Finally, we will consider how war should be terminated; what should be the nature of justified peace? We will critically evaluate the application of just war theory in the context of contemporary security problems, including: (1) transnational conflicts between states and nonstate groups and the so-called "war on terrorism"; (2) civil wars; (3) demands for military intervention to halt humanitarian atrocities taking place in another state.

**ETHICSOC 330R. Social and Political Philosophy of Hegel and Marx. 4 Units.**

Same as: PHIL 330, POLISCI 330

**ETHICSOC 371R. INEQUALITY: Economic and Philosophical Perspectives. 5 Units.**

The nature of and problem of inequality is central to both economics and philosophy. Economists study the causes of inequality, design tools to measure it and track it over time, and examine its consequences. Philosophers are centrally concerned with the justification of inequality and the reasons why various types of inequality are or are not objectionable. In this class we bring both of these approaches together. Our class explores the different meanings of and measurements for understanding inequality, our best understandings of how much inequality there is, its causes, its consequences, and whether we ought to reduce it, and if so, how. This is an interdisciplinary graduate seminar. We propose some familiarity with basic ideas in economics and basic ideas in contemporary political philosophy; we will explain and learn about more complex ideas as we proceed. The class will be capped at 20 students.

Same as: ECON 380, PHIL 371D, POLISCI 431L

**ETHICSOC 372R. Ending Wars: A Just Peace or Just a Peace. 2 Units.**

Much of just war theory focuses on the justifications for resorting to armed force and the conduct of hostilities. But what are the ethical and legal principles that govern ending wars and making peace? This course will explore the theory of "just peace," including such problems as when a party to war may demand the unconditional surrender of its adversary and what kinds of compromises are ethically permissible in order to end or to avoid armed conflict. We will also consider the terms and practices the winning party in war may impose on the loser, such as reparations and occupation (particularly transformative occupation). In addition, we will examine the topic of transitional justice, including issues related to amnesty, forgiveness, criminal and other forms of accountability, and reconciliation. Elements used in grading: Class Participation, Written Assignments, Final Exam.

Same as: PHIL 372M

**ETHICSOC 374R. Science, Religion, and Democracy. 4 Units.**

Same as: PHIL 374F

**ETHICSOC 376R. Religion and Politics: a Latin American Perspective. 4 Units.**

Religion has traditionally been banished from politics in some places in Latin America. Religious symbols may not be displayed in public buildings, political discourse is expected to be free from all religious content, and religious ministers are not allowed to run for public office, among other measures. This course examines the political motivation for this kind of policies towards religion taking a comparative perspective with American and French variants of secularism.

**Family and Community Medicine Courses****FAMMED 199. Undergraduate Directed Reading and Research in Family and Community Medicine. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**FAMMED 210. The Healer's Art. 1 Unit.**

Explores the human dimensions of medicine, creating a firm foundation for meeting the challenging demands of medical training and practice. Based on curriculum developed by Dr. Rachel Naomi Remen at UCSF. (For details/evaluations see [http://ishiprograms.org/programs-medical\\_educators.html](http://ishiprograms.org/programs-medical_educators.html)). Medical students and faculty participate together in an innovative discovery model process that enables an in-depth sharing of experience, beliefs, aspirations and personal truths. Topics include deep listening, presence, acceptance, loss, grief, healing, relationship, encounters with awe and mystery, finding meaning, service, and self-care practices. No papers/exams. May be repeated for credit.

**FAMMED 213. Medical Tai Chi. 1 Unit.**

Tai chi is a recognized form of complimentary and alternative medicine. Class is intended to promote student health and well-being and to decrease stress, depression, and anxiety through tai chi practice. Course focuses on weekly practice and analysis of the literature/research regarding health benefits of tai chi.

**FAMMED 219. Mind-Body Medicine. 1 Unit.**

A small group (8-10) of medical students experientially exploring of the interconnections among human capacities such as thought, emotion, belief, attitudes, and physical health. Review and practice of specific skills (including mindfulness exercises, meditation, imagery, visualization, body awareness, autogenics, and biofeedback) to enhance self-awareness, self-expression, and stress management. Readings relevant to mind-body medicine made available. Anticipated benefits to class participants include discovering and mobilizing their capacity to participate in valuable and proven methods of self knowledge and stress reduction, while dealing with the frustrations and alienation that many students experience in medical school and beyond.

**FAMMED 241. Assistantship in Family and Community Medicine. 6-12 Units.**

An in-depth experience with a family physician preceptor following the first year of the pre-clinical curriculum. The student applies during the first year to participate in the summer following completion. Application is through the Center for Family and Community Medicine ([avjohn@stanford.edu](mailto:avjohn@stanford.edu)). Placements with family physicians' practices throughout California.

**FAMMED 243. Introduction to Integrative Medicine. 1 Unit.**

Presentations by local, national, and international experts in various modalities of integrative medicine commonly used by patients in the US, including mind-body medicine (biofeedback, clinical hypnosis, meditation, yoga); traditional whole systems of medicine (traditional Chinese medicine, Ayurveda); biological therapies (botanical medicine, supplements, herbal medicine); manipulative therapies (chiropractic, massage); and acupuncture. Lectures focus on evidence supporting the potential value of various treatment modalities and explanations of both the traditional and proposed scientific mechanisms of actions. Most classes include an experiential portion.

Same as: ANES 243

**FAMMED 244. Ethnicity and Medicine. 1-3 Unit.**

Weekly lecture series. Examines the linguistic, social class, and cultural factors that impact patient care. Presentations promote culturally sensitive health care services and review contemporary research issues involving minority and underserved populations. Topics include health care inequities and medical practices of African Americans, Asians, Latinos, Native Americans, immigrants, and refugees in both urban and rural settings. 1 unit requires weekly lecture attendance, completion of required readings, completion of response questions; 2 units requires weekly lecture attendance and discussion session, completion of required readings and weekly response questions; additional requirement for 3 units (HUMBIO only) is completion of a significant term paper. Only students taking the course for 3 units may request a letter grade. Enrollment limited to students with sophomore academic standing or above.

Same as: HUMBIO 121E

**FAMMED 245. Women and Health Care. 1 Unit.**

Lecture series. Topics of interest to women as health care consumers and providers. The historical role of women in health care; current and future changes.

**FAMMED 250. Interprofessional Management of Population Health with Advanced Computer Technology. 3 Units.**

The Interprofessional Management of Population Health with Advanced Computer Technology (IMPACT) Program is designed for MD students who wish to have a sustained early clinical experience during the pre-clerkship years by being part of a primary health care team. Using the EPIC electronic medical record system, the team identifies and targets patients who are overdue for recommended preventive services. Focus is on training students to use health coaching, motivational interviewing, and shared decision-making skills to improve the health of patients through better cancer screening, chronic disease surveillance, immunizations, and medication monitoring. Delivered through the Stanford Healthcare Innovations and Experiential Learning Directive (SHIELD), a curriculum innovation partnership between the Stanford School of Medicine, the Stanford Department of General Medical Disciplines, and the Stanford Office of Community Health. Prerequisite: director consent; brief application, interview required.

**FAMMED 250B. Interprofessional Management of Population Health with Advanced Computer Technology II. 2 Units.**

The Interprofessional Management of Population Health with Advanced Computer Technology (IMPACT) Program is designed for MD students who wish to have a sustained early clinical experience during the pre-clerkship years by being part of a primary health care team. Using the EPIC electronic medical record system, the team identifies and targets patients who are overdue for recommended preventive services. Focus is on training students to use health coaching, motivational interviewing, and shared decision-making skills to improve the health of patients through better cancer screening, chronic disease surveillance, immunizations, and medication monitoring. Delivered through the Stanford Healthcare Innovations and Experiential Learning Directive (SHIELD), a curriculum innovation partnership between the Stanford School of Medicine, the Stanford Department of General Medical Disciplines, and the Stanford Office of Community Health. Available to first year MD students only. Prerequisite: director consent; brief application, interview required.

**FAMMED 250C. Interprofessional Management of Population Health with Advanced Computer Technology III. 2 Units.**

The Interprofessional Management of Population Health with Advanced Computer Technology (IMPACT) Program is designed for MD students who wish to have a sustained early clinical experience during the pre-clerkship years by being part of a primary health care team. Using the EPIC electronic medical record system, the team identifies and targets patients who are overdue for recommended preventive services. Focus is on training students to use health coaching, motivational interviewing, and shared decision-making skills to improve the health of patients through better cancer screening, chronic disease surveillance, immunizations, and medication monitoring. Delivered through the Stanford Healthcare Innovations and Experiential Learning Directive (SHIELD), a curriculum innovation partnership between the Stanford School of Medicine, the Stanford Department of General Medical Disciplines, and the Stanford Office of Community Health. Enrollment limited to first year MD students only. Prerequisite: director consent; brief application, interview required.

**FAMMED 251B. Interprofessional Management of Population Health with Advanced Computer Technology V. 2 Units.**

The Interprofessional Management of Population Health with Advanced Computer Technology (IMPACT) Program is designed for MD students who wish to have a sustained early clinical experience during the pre-clerkship years by being part of a primary health care team. Using the EPIC electronic medical record system, the team identifies and targets patients who are overdue for recommended preventive services. Focus is on training students to use health coaching, motivational interviewing, and shared decision-making skills to improve the health of patients through better cancer screening, chronic disease surveillance, immunizations, and medication monitoring. Delivered through the Stanford Healthcare Innovations and Experiential Learning Directive (SHIELD), a curriculum innovation partnership between the Stanford School of Medicine, the Stanford Department of General Medical Disciplines, and the Stanford Office of Community Health. Enrollment limited to second year MD students only. Prerequisite: director consent; brief application, interview required.

**FAMMED 251C. Interprofessional Management of Population Health with Advanced Computer Technology VI. 2 Units.**

The Interprofessional Management of Population Health with Advanced Computer Technology (IMPACT) Program is designed for MD students who wish to have a sustained early clinical experience during the pre-clerkship years by being part of a primary health care team. Using the EPIC electronic medical record system, the team identifies and targets patients who are overdue for recommended preventive services. Focus is on training students to use health coaching, motivational interviewing, and shared decision-making skills to improve the health of patients through better cancer screening, chronic disease surveillance, immunizations, and medication monitoring. Delivered through the Stanford Healthcare Innovations and Experiential Learning Directive (SHIELD), a curriculum innovation partnership between the Stanford School of Medicine, the Stanford Department of General Medical Disciplines, and the Stanford Office of Community Health. Enrollment limited to second year MD students only. Prerequisite: director consent; brief application, interview required.

**FAMMED 252. Medicine & Horsemanship: An Outdoor, Equine Assisted Learning Course for Doctor-Patient Relationship. 1 Unit.**

An outdoor experience working with horses to develop interpersonal skills for the clinician-patient and peer-peer relationship. A challenge throughout a clinical career is to conduct relationships with patients and colleagues in a manner that is professional, perceptive, confident, and authentic. Horses mirror and magnify our intentions and behaviors. Working with horses requires sensitivity to nonverbal cues, discrimination in the quality and amount of physical contact, and an awareness of one's emotional state, all important skills for relating to patients. Horses give non-judgmental feedback about our personal communication and leadership styles and our ability to operate from a place of empathy and kindness. The course also teaches how to recognize subjectivity in judgment and how to overcome fear and immobility in the face of uncertainty. No riding is required and no previous horse experience is assumed. Open to anyone with direct patient care responsibility, space permitting. Limit 12 students.

**FAMMED 280. Early Clinical Experience in Family and Community Medicine. 1-3 Unit.**

Provides an observational experience for pre-clinical students as determined by the instructor and student. Prerequisite: consent of instructor.

**FAMMED 281A. L-CHAMP Longitudinal Community Health Advocacy Medical Partnership I. 2 Units.**

This course is designed for students who wish to have sustained early clinical experience throughout their pre-clerkship years. The Longitudinal Community Health Advocacy Medical Partnership (L-CHAMP) is part of the SHIELD program. The course initiates with one-hour intensive health coaching training sessions, quarterly skill-based sessions, such as motivational interviewing, medication reconciliation, and leadership, as well as monthly seminars on topics, including health coaching integration, service projects, and patient-centered care, etc. L-CHAMP is a collaborative effort between Center for Education and Research in Family and Community Medicine and the Office of Community Health. Enrollment limited to first-year MD students.

**FAMMED 281B. L-CHAMP Longitudinal Community Health Advocacy Medical Partnership II. 2 Units.**

This course is designed for students who wish to have sustained early clinical experience throughout their pre-clerkship years. The Longitudinal Community Health Advocacy Medical Partnership (L-CHAMP) is part of the SHIELD program. The course initiates with one-hour intensive health coaching training sessions, quarterly skill-based sessions, such as motivational interviewing, medication reconciliation, and leadership, as well as monthly seminars on topics, including health coaching integration, service projects, and patient-centered care, etc. L-CHAMP is a collaborative effort between Center for Education and Research in Family and Community Medicine and the Office of Community Health. Enrollment limited to first-year MD students. Prerequisite: FAMMED 281A.

**FAMMED 281C. L-CHAMP Longitudinal Community Health Advocacy Medical Partnership III. 2 Units.**

This course is designed for students who wish to have sustained early clinical experience throughout their pre-clerkship years. The Longitudinal Community Health Advocacy Medical Partnership (L-CHAMP) is part of the SHIELD program. The course initiates with one-hour intensive health coaching training sessions, quarterly skill-based sessions, such as motivational interviewing, medication reconciliation, and leadership, as well as monthly seminars on topics, including health coaching integration, service projects, and patient-centered care, etc. L-CHAMP is a collaborative effort between Center for Education and Research in Family and Community Medicine and the Office of Community Health. Enrollment limited to first-year MD students. Prerequisite: FAMMED 281A, FAMMED 281B.

**FAMMED 282A. L-CHAMP Longitudinal Community Health Advocacy Medical Partnership IV. 1 Unit.**

Continuation of FAMMED 281A-C. This course is designed for students who wish to have sustained early clinical experience throughout their pre-clerkship years. The Longitudinal Community Health Advocacy Medical Partnership (L-CHAMP) is part of the SHIELD program. The course initiates with one-hour intensive health coaching training sessions, quarterly skill-based sessions, such as motivational interviewing, medication reconciliation, and leadership, as well as monthly seminars on topics, including health coaching integration, service projects, and patient-centered care, etc. L-CHAMP is a collaborative effort between Center for Education and Research in Family and Community Medicine and the Office of Community Health. Enrollment limited to second-year and beyond MD students. Prerequisite: FAMMED 281A-C.

**FAMMED 282B. L-CHAMP Longitudinal Community Health Advocacy Medical Partnership V. 1 Unit.**

This course is designed for students who wish to have sustained early clinical experience throughout their pre-clerkship years. The Longitudinal Community Health Advocacy Medical Partnership (L-CHAMP) is part of the SHIELD program. The course initiates with one-hour intensive health coaching training sessions, quarterly skill-based sessions, such as motivational interviewing, medication reconciliation, and leadership, as well as monthly seminars on topics, including health coaching integration, service projects, and patient-centered care, etc. L-CHAMP is a collaborative effort between Center for Education and Research in Family and Community Medicine and the Office of Community Health. Enrollment limited to second-year MD students. Prerequisite: FAMMED 281A-C and FAMMED 282A.

**FAMMED 292. Clinical Skills Maintenance Experience. 3 Units.**

(Formerly FAMMED 311) For MSTP students and other Stanford Medical students obtaining combined M.D./Ph.D. degrees through non-MSTP programs only. Students are assigned to a primary care clinic within medicine, family medicine or pediatrics, or a specialty clinic that can offer similar experiences. Continuity of mentorship is the first priority and is desired for reinforcement of basic medical skills; continuity of patients is also desirable, but second priority. Students attend clinic one morning or afternoon per week for two contiguous quarters of the year in which they defend their Ph.D. theses (minimum 10 clinics per quarter). Each four hour clinic session the student: (1) obtains the history of a clinic patient; (2) conducts a physical exam; (3) formulates a differential diagnosis or problem list; (4) presents the patient to her/his clinic preceptor; and (5) prepares a write-up of the case. The clinic preceptor observes and provides guidance for the student's history taking and physical examination skills and critiques the differential diagnosis, verbal presentation, and write-up. The student is guided in the use of the computerized medical record and is asked to progressively integrate this information into the review of the patient history. The clinical preceptor reviews the results of the student's Micro-CPX, Mini-CPX, POM course evaluations, and E4C Mentor evaluations and uses this information to address any perceived weaknesses. The preceptor provides verbal and written performance evaluations to the student and a standardized evaluation becomes part of the student's record. The director of the E4C-MSTP program reviews, on a regular basis, the written performance evaluations of each student taking this course. Deficits are to be identified and addressed before the student enters clinical training.

**FAMMED 299. Directed Reading in Family and Community Medicine. 1-18 Unit.**

Students organize an individualized study program in family and community medicine. Prerequisite: consent of instructor.

**FAMMED 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**FAMMED 399. Graduate Research. 1-18 Unit.**

Students interested in conducting research in a specific area of family and community medicine undertake investigations sponsored by the faculty instructor. Prerequisite: consent of instructor.

**Feminist, Gender, and Sexuality Studies Courses****FEMGEN 3B. Trans History: The Long View. 1 Unit.**

This mini-course explores the history of gender crossing and transgressions, broadly defined. A series of Stanford faculty and one visitor will present historical interpretations of who, why, and how individuals have crossed gender boundaries, as well as how different societies have reacted to gender crossing. The topics range across time from medieval to modern times and across geographic regions from Europe, China, and Iran to the Americas. Short reading assignments will be made available for each class meeting; students must attend all five sessions, complete the readings, and write a summary paper to receive one unit of credit for the series.

Same as: HISTORY 3B

**FEMGEN 5C. Human Trafficking: Historical, Legal, and Medical Perspectives. 3 Units.**

(Same as History 105C. History majors and others taking 5 units, enroll in 105C.) Interdisciplinary approach to understanding the extent and complexity of the global phenomenon of human trafficking, especially for forced prostitution and labor exploitation, focusing on human rights violations and remedies. Provides a historical context for the development and spread of human trafficking. Analyzes the current international and domestic legal and policy frameworks to combat trafficking and evaluates their practical implementation. Examines the medical, psychological, and public health issues involved. Uses problem-based learning. Students interested in service learning should consult with the instructor and will enroll in an additional course.

Same as: HISTORY 5C, HUMBIO 178T, SOMGEN 205

**FEMGEN 6W. Service-Learning Workshop on Human Trafficking Part I. 3 Units.**

Two-quarter service-learning workshop to accompany course, "Human Trafficking: Historical, Legal, and Medical Perspectives." Considers purpose and practice of service learning. Provides training for students' work in community. Examines current scope of human trafficking in Bay Area, pressing concerns, capacity and obstacles to effectively address them. Students work with community partners dedicated to confronting human trafficking and problems it entails on a daily basis.

Same as: HISTORY 6W

**FEMGEN 7W. Service-Learning Workshop on Human Trafficking Part II. 3 Units.**

Prerequisite: History 6W. Two-quarter service-learning workshop to accompany course, "Human Trafficking: Historical, Legal, and Medical Perspectives." Considers purpose and practice of service learning. Provides training for students' work in community. Examines current scope of human trafficking in Bay Area, pressing concerns, capacity and obstacles to effectively address them. Students work with community partners dedicated to confronting human trafficking and problems it entails on a daily basis. Must currently be enrolled in or have previously taken History 5C/105C ((FEMGEN 5C/105C, HUMBIO 178T, SOMGEN 205, INTNLREL 105C).

Same as: HISTORY 7W

**FEMGEN 9SI. A Road to Diversity inclusion: Learning to Embrace the Intersection of Identities within Athletics. 1 Unit.**

This course explores the interaction of one's identities within the context of athletics. With an emphasis on the importance of self-awareness and story telling, we will navigate how all identities intersect and affect the privilege we receive within current society. We will specifically look at how race, ethnicity, sexual orientation, religion, socioeconomic status, mental health, and disabilities interact with our identity as athletes. A Road to Diversity Inclusion: Learning to Embrace the Intersection of Identities within Athletics will help athletes find their voice and use it for positive social change within their communities.

**FEMGEN 10A. BAY AREA DOMESTIC WORKERS: RIGHTS: A GRASSROOTS CAMPAIGN FOR SOCIAL JUSTICE. 1 Unit.**

In this Alternative Spring Break course and trip, we will examine how our society and institutions allow for and perpetuate the exploitation and oppression of domestic workers. Historically, domestic workers have largely been excluded from basic labor protections. We cannot think critically about the issues domestic workers face without considering the roles of gender, race and ethnicity, immigration status, and language play in the industry. We will use a conceptual framework based on citizenship and reproductive labor theory to address themes in the context of Bay Area migrant women of color who are vehemently campaigning for equal labor rights. Through collaborations with domestic worker organizations based in San Francisco and Oakland, ASB participants will learn how this movement seeks to transform the domestic work industry through multilingual and multicultural alliances.

**FEMGEN 11SI. Protecting your Bubble: Self Defense Strategies for College Students. 1 Unit.**

This course will offer self defense training for students, with a focus on mental and physical defense, primarily against sexual assault. The course will focus on an "empowerment" method of self defense, seeking to provide tools and build confidence in students for a variety of situations. Students will participate in group discussions on the topic of sexual assault on college campuses, as well as physical and mental self defense tactics both to build confidence in any situation, prevent assault, and to employ in dangerous situations.

**FEMGEN 14N. Imagining India: Art, Culture, Politics in Modern India. 3 Units.**

This course explores history via cultural responses in modern India. We will examine a range of fiction, film and drama to consider the ways in which India emerges through its cultural productions. The course will consider key historical events such as the partition of the subcontinent, independence from British rule, Green Revolution, Emergency, liberalization of the Indian economy, among others. We will reflect on epochal historical moments by means of artistic responses to these events. For example, Ritwik Ghatak's experimental cinema intervenes into debates around the Bengal partition; Rohinton Mistry's novel, *A Fine Balance* grapples with the suspension of civil liberties during the emergency between 1975-77; Rahul Varma's play *Bhopal* reflects on the Bhopal gas tragedy, considered the world's worst industrial disaster. Students will read, view and reflect on the aesthetic and historical texts through their thoughtful engagement in class discussions and written essays. They will also have opportunities to imaginatively respond to these texts via short creative projects, which could range from poems, monologues, solo pieces, web installations, etc. Readings will also include Mahashweta Devi, Amitav Ghosh, Girish Karnad, Jhumpa Lahiri, Manjula Padmanabhan, Salman Rushdie, Aparna Sen, among others.

Same as: COMPLIT 14N, CSRE 15N, TAPS 14N

**FEMGEN 16N. Heloise: Love, Learning, and Desire (for God?) in the Twelfth Century. 3 Units.**

Few medieval women have been so often studied and yet so little understood as Heloise, abbess of the Paraclete (d. 1164). Her life, known primarily through the letters that she exchanged with her former husband, the philosopher Peter Abelard (d. 1142), offers a study in contradiction: she was an educated woman at a time when women were supposedly barred from education; a nun who, though dedicated to God, battled sexual desire; a mother, whose spiritual daughters seemingly displaced her one biological son; and a wife, whose husband became her brother in Christ. Traditional accounts have flattened these rich and various contradictions, presenting Heloise primarily as a tragic heroine. Seduced by her much older teacher, this Heloise conceives and bears a child, seeks a love unfettered by bonds of wedlock, and ultimately accepts enclosure in the monastery as her last desperate act of obedience to her lover, Abelard. This seminar revises the traditional image of Heloise, dignifying her as a scholar, monastic reformer, and administrator as well as a lover, wife, mother, and friend.  
Same as: HISTORY 16N

**FEMGEN 17. Gender and Power in Ancient Greece. 4 Units.**

(Formerly CLASSGEN 17.) Introduction to the sex-gender system of ancient Greece, with comparative material from modern America. How myths, religious rituals, athletics, politics and theater reinforced gender stereotypes and sometimes undermined them. Skills: finding clues, identifying patterns and making connections amongst the components of a strange and beautiful culture very different from our own. Weekly participation in a discussion section is required.

**FEMGEN 24. Sexuality, Gender, and Religion. 2 Units.**

From ancient times to the present, religious texts, authority figures, adherents, and critics have had a great deal to say about sexuality and gender, with powerful impacts in personal, social and political spheres. Today these debates are more wide ranging and public than ever. In this lecture and discussion series, distinguished scholars from within and beyond Stanford will consider how sexuality and gender become religious in Judaism, Islam, Christianity, Hinduism, and Buddhism.  
Same as: RELIGST 24

**FEMGEN 24N. Sappho: Erotic Poetess of Lesbos. 4-5 Units.**

(Formerly CLASSGEN 24N.) Preference to freshmen. Sappho's surviving fragments in English; traditions referring to or fantasizing about her disputed life. How her poetry and legend inspired women authors and male poets such as Swinburne, Baudelaire, and Pound. Paintings inspired by Sappho in ancient and modern times, and composers who put her poetry to music.

Same as: CLASSICS 16N

**FEMGEN 28N. Queer Lives in Music. 3 Units.**

Queer Lives in Music examines music by queer musicians in genres including punk, opera, rock, symphony, musical theater, folk, and jazz. We will study lesbian, gay, bisexual, transgender, and queer composers, performers, and listeners, to learn how queer people have expressed individual identity and built communities through music. We will learn how sexual stigma, taboo, oppression, and resistance have impacted musical creativity and music history. Class is designed for students interested in music, social history, cultural studies, and gender/sexuality studies.

Same as: MUSIC 28N

**FEMGEN 36N. Gay Autobiography. 4 Units.**

Preference to freshmen. Gender, identity, and solidarity as represented in nine autobiographies: Isherwood, Ackerley, Duberman, Monette, Louganis, Barbin, Cammermeyer, Gingrich, and Lorde. To what degree do these writers view sexual orientation as a defining feature of their selves? Is there a difference between the way men and women view identity? What politics follow from these writers' experiences?

Same as: HISTORY 36N

**FEMGEN 52N. Spoken Sexuality: Language and the Social Construction of Sexuality. 3 Units.**

The many ways language is used in the construction of sexuality and sexual identity. How language is used as a resource for performing and perceiving sexual identity. Drawing on linguistic analyses of pronunciation, word choice, and grammar, questions such as: Is there a gay accent? Why isn't there a lesbian accent? How do transgendered people modify their linguistic behavior when transitioning? How are unmarked (heterosexual) identities linguistically constructed? Sexuality as an issue of identity, as well as of desire. Iconic relations between elements of language such as breathy voice quality and high pitch, and aspects of desire such as arousal and excitement. How language encodes ideologies about sexuality; how language is used to talk about sexuality in public discourses about gay marriage and bullying, as well as in personal narratives of coming out. How language encodes dominant ideologies about sexuality, evident in labels for sexual minorities as well as terminology for sex acts. Discussions of readings, explorations of how sexuality is portrayed in popular media, and analyses of primary data. Final research paper on a topic of student choice.

Same as: LINGUIST 52N

**FEMGEN 54N. African American Women's Lives. 3-4 Units.**

Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality.

Same as: AFRICAAM 54N, AMSTUD 54N, CSRE 54N, HISTORY 54N

**FEMGEN 54Q. African American Women's Lives. 3-4 Units.**

Preference to sophomores. African American women have been placed on the periphery of many historical documents. This course will encourage students to think critically about historical sources and to use creative and rigorous historical methods to recover African American women's experiences. Drawing largely on primary sources such as letters, personal journals, literature and film, this course explores the everyday lives of African American women in 19th- and 20th-century America. We will begin in our present moment with a discussion of Michelle Obama and then we will look back on the lives and times of a wide range of African American women including: Charlotte Forten Grimké, a 19th-century reformer and teacher; Nella Larsen, a Harlem Renaissance novelist; Josephine Baker, the expatriate entertainer and singer; and Ida B. Wells and Ella Baker, two luminaries of civil rights activism. We will examine the struggles of African American women to define their own lives and improve the social, economic, political and cultural conditions of black communities. Topics will include women's enslavement and freedom, kinship and family relations, institution and community building, violence, labor and leisure, changing gender roles, consumer and beauty culture, social activism, and the politics of sexuality.

Same as: AFRICAAM 54Q, AMSTUD 54Q, HISTORY 54Q

**FEMGEN 63N. The Feminist Critique: The History and Politics of Gender Equality. 3-4 Units.**

This course explores the emergence of concepts of gender equality in world history. It asks how gender inequality relates to racial, ethnicity, and sexual identities, how men engage with feminism, whether gender equality is purely a western cultural tradition, and much more. We approach the long history of ideas about gender and equality by reading primary historical documents from around the world, moving from the 15th century to the present. Topics include education, the body, sexuality, violence, labor, and politics.

Same as: AMSTUD 63N, CSRE 63N, HISTORY 63N

**FEMGEN 69S. Race, Science, and Medicine in U.S. History. 5 Units.**

How have scientific ideas about race been shaped by their historical contexts, and what effects do these ideas have on people, institutions, law, and medicine? Is racial science always racist science? How do ideas about race intersect with ideas about gender, class, and disability? This course explores how natural philosophers and scientists have defined, used, and sometimes challenged ideas about race from the eighteenth century to today. Topics include medicine and slavery, eugenics, sociology, psychiatry, race-based medicine, and genetic ancestry. This course fulfills the departmental Sources and Methods requirement.

Priority given to history majors and minors.

Same as: CSRE 69M, HISTORY 69S

**FEMGEN 86Q. Love as a Force for Social Justice. 3 Units.**

Preference to sophomores. Biological, psychological, religious, social and cultural perspectives on the concept of agape love. How love is conceptualized across cultures; agape love as the basis of many religions; different kinds of love; the biology of love; love in action for social justice; the languages of love, including art, literature, music, and poetry. Emphasis is on blog writing, participation, and oral presentation.

Same as: HUMBIO 86Q

**FEMGEN 93. Late Imperial China. 3 Units.**

(Same as HISTORY 193. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: CHINLIT 93, HISTORY 93

**FEMGEN 100X. Grassroots Community Organizing: Building Power for Collective Liberation. 4-5 Units.**

This course explores the theory, practice and history of grassroots community organizing as a method for developing community power to promoting social justice. We will develop skills for 1-on-1 relational meetings, media messaging, fundraising strategies, power structure analysis, and strategies organizing across racial/ethnic difference. And we will contextualize these through the theories and practices developed in the racial, gender, queer, environmental, immigrant, housing and economic justice movements to better understand how organizing has been used to engage communities in the process of social change. Through this class, students will gain the hard skills and analytical tools needed to successfully organize campaigns and movements that work to address complex systems of power, privilege, and oppression. As a Community-Engaged Learning course, students will work directly with community organizations on campaigns to address community needs, deepen their knowledge of theory and history through hands-on practice, and develop a critical analysis of inequality at the structural and interpersonal levels. Placements with community organizations are limited. Enrollment will be determined on the first day through a simple application process. Students will have the option to continue the course for a second quarter in the Winter, where they will execute a campaign either on campus or in collaboration with their community partner.

Same as: AFRICAAM 100, CSRE 100, URBANST 108

**FEMGEN 101. Introduction to Feminist, Gender, and Sexuality Studies. 4-5 Units.**

Introduction to interdisciplinary approaches to gender, sexuality, queer, trans and feminist studies. Topics include the emergence of sexuality studies in the academy, social justice and new subjects, science and technology, art and activism, history, film and memory, the documentation and performance of difference, and relevant socio-economic and political formations such as work and the family. Students learn to think critically about race, gender, and sexuality from local and global perspectives.

Same as: AMSTUD 107, CSRE 108, TAPS 108

**FEMGEN 103. Feminist Theories and Methods Across the Disciplines. 2-5 Units.**

(Graduate Students register for PHIL 253 or FEMGEN 203) Concepts and questions distinctive of feminist and LGBT scholarship and how they shape research: gender, intersectionality, disciplinarity and interdisciplinarity, standpoint, "queering," postmodern critiques, postcolonial critiques. Prerequisites: Feminist Studies 101 or equivalent with consent of instructor.

Same as: FEMGEN 203, PHIL 153, PHIL 253

**FEMGEN 103S. Native American Women, Gender Roles, and Status. 5 Units.**

Historical and cultural forces at work in traditional and contemporary Native American women's lives through life stories and literature. How women are fashioning gendered indigenous selves. Focus is on the diversity of Native American communities and cultures.

Same as: CSRE 103S, NATIVEAM 103S

**FEMGEN 104A. Junior Seminar and Practicum. 1 Unit.**

Preference to and required of Feminist Studies majors; others require consent of instructor. Feminist experiential learning projects related to critical studies in gender and sexuality. Identifying goals, grant proposal writing, and negotiating ethical issues in feminist praxis. Developing the relationship between potential projects and their academic focus in the major.

**FEMGEN 104B. Senior Seminar and Practicum. 2 Units.**

Required for Feminist Studies majors. Non-majors enrolled with consent of instructor. Students develop oral reports on their practicum and its relationship to their academic work, submit a report draft and revised written analysis of the practicum, and discuss applications of feminist scholarship. May be repeated once for credit.

**FEMGEN 105. Honors Work. 1-15 Unit.**

(Staff).

**FEMGEN 105C. Human Trafficking: Historical, Legal, and Medical Perspectives. 5 Units.**

(Same as HISTORY 5C. History majors and others taking 5 units, enroll in 105C.) Interdisciplinary approach to understanding the extent and complexity of the global phenomenon of human trafficking, especially for forced prostitution and labor exploitation, focusing on human rights violations and remedies. Provides a historical context for the development and spread of human trafficking. Analyzes the current international and domestic legal and policy frameworks to combat trafficking and evaluates their practical implementation. Examines the medical, psychological, and public health issues involved. Uses problem-based learning. Students interested in service learning should consult with the instructor and will enroll in an additional course.

Same as: HISTORY 105C, INTNLREL 105C

**FEMGEN 107A. Ripped from the Headlines: Current Feminist, Gender, and Sexuality Issues and Questions. 1-2 Unit.**

Discussion of current issues and questions related to Feminist, Gender, and Sexuality Studies.

**FEMGEN 107B. EAST House Seminar: Current Issues and Debates in Education. 1 Unit.**

Education and Society Theme (EAST) House seminar. In autumn quarter, faculty and other scholars from around the University discuss the latest issues, debates, and research in the field of Education. In winter quarter, research and practice pertaining to sex, gender, and education are presented by professionals and scholars. In the spring, the seminar provides an inquiry into the culture at Stanford and one's personal values. Through an examination of these topics, students are able to share and develop their varied interests in educational research, policy, and practice. Notes: Attendance at first class required. Seminar meets in the EAST House Dining Hall located at 554 Governor's Ave. The seminar is open to all students at Stanford with first-priority given to pre-assign residents of EAST House followed by other residents of EAST and all other undergraduates. Graduate students are allowed to enroll on a space-available basis. Visitors/auditors are not allowed. The seminar is required for all pre-assigned residents of EAST House and is repeatable for credit.

Same as: EDUC 100B

**FEMGEN 107C. You're Majoring in What?! Why Feminism is Still Relevant. 1-2 Unit.**

Stanford Feminist Study alum and community activists will join this weekly seminar to share how studying feminism has helped them professionally. Together speakers and students will explore answers to questions such as: ¿Why study feminism, sexuality, or gender studies? ¿ Why is feminism still relevant?¿.

**FEMGEN 107G. Sisterhood, Brotherhood, & Gender Identity: The Histories, Stories, and Constructs of Greek Life. 1 Unit.**

In this course, we will explore the history, the development, the critiques and praise of sororities and fraternities. We'll pay particular attention to how gender and sexuality are framed in those discussions¿ones by outsiders as well as ones by insiders. How do Greek organizations present their activities and goals? What values and roles do they highlight during recruitment? Who joins them? What expectations are there for participants? What are the perceived benefits that come with joining? What does it mean to be a ¿fraternity brother¿ or a ¿sorority sister¿ in modern Greek organizations? How are sorority women and fraternity men discussed by outsiders? How do the stereotypes of Greek life impact perceptions of individuals as well as particular sororities and fraternities? To consider these questions, we'll look at historical documents and analyze how groups described themselves as they were establishing; we'll also analyze recent documents (websites, books, etc.) to consider current ways organizations describe themselves, their activities, and their values. We'll use both to consider how the messages created by and about Greek organizations shape public perceptions as well as individuals¿ experiences of gender and sexuality identity.

**FEMGEN 108. Internship in Feminist Studies. 1-5 Unit.**

Supervised field, community, or lab experience in law offices, medical research and labs, social service agencies, legislative and other public offices, or local and national organizations that address issues related to gender and/or sexuality. One unit represents approximately three hours work per week. Required paper. May be repeated for credit. Service Learning Course (certified by Haas Center). Feminist, Gender, and Sexuality Majors may not receive 108 credit for their required practicum, as they are to sign up for FEMGEN 104 A & B instead. Prerequisites: Course work in Feminist, Gender, and Sexuality Studies, written proposal and application form submitted for approval by program office, written consent of faculty sponsor. Course may be taken 3 times total, for a max of 15 units.

**FEMGEN 109. Looking Back, Moving Forward: Raising Critical Awareness in Gender and Sports. 3 Units.**

In 1972, Title IX legislation opened up a vast range of opportunities for women in sports. Since then, women's sports have continued to grow yet the fight for recognition and equality persists. Simply put, men's sports are more popular than women's—so much so, in fact, that people often make the hierarchical distinction between "sports" and "women's sports." But what would it take to get more women's sports featured on ESPN or more female athletes on the cover of *Sports Illustrated*? And, given the well-documented corruption at the highest levels of men's sports, should such an ascent in popularity be the goal for women's sports? This course will map out and respond to the multifaceted issues that emerge when women enter the sports world. Throughout the quarter, we will explore the fight for gender equality in sports through historical, cultural, and rhetorical lenses.

Same as: FEMGEN 209

**FEMGEN 110X. Introduction to Comparative Queer Literary Studies. 3-5 Units.**

Introduction to the comparative literary study of important gay, lesbian, queer, bisexual, and transgender writers and their changing social, political, and cultural contexts from the 1880s to today: Oscar Wilde, Rachilde, Radclyffe Hall, Djuna Barnes, James Baldwin, Jean Genet, Audre Lorde, Cherrie Moraga, Jeanette Winterson, Alison Bechdel and others, discussed in the context of 20th-century feminist and queer literary and social theories of gender and sexuality.

Same as: COMPLIT 110, COMPLIT 310, FEMGEN 310X

**FEMGEN 111. Transnational Reproductive Politics. 3-5 Units.**

This course examines the issues and debates surrounding women's reproduction in a transnational framework, including birth control, abortion, surrogacy, prenatal diagnosis, labor and delivery, menstruation, sex trafficking, and the reproductive justice movement. It pays special attention to how knowledge and technology travel across national/cultural borders and how women's reproductive functions are deeply connected to international politics and events abroad.

Same as: AMSTUD 111

**FEMGEN 112. "When We Dead Awaken": Breakthroughs in Conceptions of the Gendered Self in Literature and the Arts. 4-5 Units.**

Remarkable breakthroughs in conceptions of the gendered self are everywhere evident in literature and the arts, beginning primarily with the Early Modern world and continuing into today. Many of these works inhere in innovations in literary and artistic forms in order to capture and even evoke the strong cognitive, or psychological, dimension of such awakenings. The reader, or viewer, is often challenged to adapt her or his mind to new forms of thought, such as John Donne's seventeenth century creation of the Dramatic Monologue, a form popular with modern writers, which requires the reader's cognitive presence in order to fill out the dramatic scene. In so doing, the reader often supplies the presence of the female voice and thereby enters into her self-consciousness and inner thoughts. Adrienne Rich, for example, specifically rewrites one of Donne's major poems from the female perspective. This can be, in Rich's words, an awakening for the active reader, as he or she assumes that often-unspoken female perspective. The course will also explore male conceptions of the self and how such conceptions are often grounded in cultural attitudes imposed on male subjects, which can contribute to gender-bias toward women, a subject often neglected in exploring gendered attitudes, but which is now gaining more study, for example, in Shakespeare's *Othello*. Readings from recent developments in the neurosciences and cognitive studies will be included in our study of artistic forms and how such forms can activate particular mindsets. Writers and artists will include Shakespeare, Michelangelo, John Donne, Virginia Woolf, Adrienne Rich, Gertrude Stein, Picasso, June Wayne, and Edward Albee's 1960's play, *Who's Afraid of Virginia Woolf?*.

Same as: ENGLISH 182J, FEMGEN 212

**FEMGEN 113. Transgender Studies. 3-4 Units.**

Transgender and gender-expansive identities are the subject of growing attention and (often sensationalist) interest in the media as well as in the healthcare field, yet there exists a dearth of legitimate academic courses, research and writing that reflect and explore gender identity and expression as a fluid spectrum rather than a fixed binary. This course will address transgender and gender expansive identities from historical, medical, literary, developmental and sociopolitical perspectives.

Same as: FEMGEN 213

**FEMGEN 114. SEXUAL DIVERSITY AND HEALTH. 1 Unit.**

Explores multiple aspects of sexual diversity and health, including: kink/BDSM, polyamory, trans\* sexuality, asexuality, high-risk sex, inter-sexuality, questioning gender and sexual binaries, and more. The format includes a one-day conference featuring a variety of expert speakers covering different aspects of sexual diversity and health, followed by a debriefing and discussion session to integrate what has been heard and learned.

Same as: FEMGEN 214

**FEMGEN 115. Queer Reading and Queer Writing in Early Modern England. 5 Units.**

Considers the possibility of identifying queer reading and writing practices in early modern England as well the theoretical and historical obstacles such a project necessarily encounters. Focus on the role which Renaissance discourses of desire continue to play in our negotiations of homo/erotic subjectivity, identity politics, and sexual and gender difference. Study of Renaissance queerness in relation to the classical tradition on the one hand and the contemporary discourses of religion, law, and politics on the other. Readings include plays, poems, and prose narratives as well as letters, pamphlets, and ephemeral literature. Both major and minor authors will be represented.

**FEMGEN 116. Narrating Queer Trauma. 4-5 Units.**

Psychiatrist Dori Laub has argued that the process of narrating trauma is essential to the healing process. Not only is telling the story important, but it is also crucial to have someone else bear witness to the narrative. But how do people even begin to narrate stories of violence and pain, and how do we become good listeners? How are these stories told and heard in the specific context of queer world making? This course will explore narratives of trauma in queer lives through literature, film, media, and performance in conjunction with trauma theory and psychoanalysis. We will pay specific attention to questions of community, healing, violence, and affect at the intersections of queerness and race, sex, disability, class, gender, and nationality.

Same as: FEMGEN 216X

**FEMGEN 121. Intro to Queer Studies. 4-5 Units.**

This course provides an interdisciplinary grounding in historical and theoretical foundations of queer culture and theory. A critical interrogation of sex, gender, sexuality, pleasure, and embodiment will provide students with a framework for producing their own queer cultural critique. We will explore LGBTQ history alongside contemporary queer issues in popular culture, health, science, government policy, and politics. This course will also address the intersections of sexuality and gender with race, class, ability, age, nationality, and religion. Students will engage with multiple disciplinary approaches that have both shaped queer studies and have been shaped by queer methodology.

**FEMGEN 123. Sex and Love in Modern U.S. Society. 3 Units.**

Social influences on private intimate relations involving romantic love and sexuality. Topics include the sexual revolution, contraception, dating, hook-ups, cohabitation, sexual orientation, and changing cultural meanings of marriage, gender, and romantic love.

Same as: SOC 123, SOC 223

**FEMGEN 124. Challenging Sex and Gender Dichotomies in Medicine. 1 Unit.**

Explores and challenges the traditional physiological bases for distinguishing human males from females, as well as the psychosocial factors that play a role in experiencing and expressing gender and sexuality. Topics include the influence of sociocultural (gender) norms and behaviors on human biology, the interactions of sex and gender on medical outcomes, the importance of understanding the spectrum of sex, gender, and sexuality in clinical practice.

Same as: FEMGEN 224, SOMGEN 257

**FEMGEN 126D. Victorian Sex. 5 Units.**

How can we make sense of a culture of extraordinary sexual repression that nevertheless seemed fully preoccupied with sex? Examination of the depictions of sex in Victorian literary and cultural texts. Authors include: Collins, Braddon, the Brownings, Swinburne, Stoker and Wilde.

**FEMGEN 129. Critical Issues in International Women's Health. 4 Units.**

Women's lives, from childhood through adolescence, reproductive years, and aging. Economic, social, and human rights factors, and the importance of women's capacities to have good health and manage their lives in the face of societal pressures and obstacles. Emphasis is on life or death issues of women's health that depend on women's capacity to exercise their human rights including maternal mortality, violence, HIV/AIDS, reproductive health, and sex trafficking. Organizations addressing these issues. A requirement of this class is participation in public blogs. Prerequisites: Human Biology core or equivalent or consent of instructor. Same as: HUMBIO 129

**FEMGEN 130. Sex and Gender in Judaism and Christianity. 3 Units.**

What role do Jewish and Christian traditions play in shaping understandings of gender differences? Is gender always imagined as dual, male and female? This course explores the variety of ways in which Jewish and Christian traditions - often in conversation with and against each other - have shaped gender identities and sexual politics. We will explore the central role that issues around marriage and reproduction played in this conversation. Perhaps surprisingly, early Jews and Christian also espoused deep interest in writing about 'eunuchs' and 'androgynes,' as they thought about Jewish and Christian ways of being a man or a woman. We will examine the variety of these early conversations, and the contemporary Jewish and Christian discussions of feminist, queer, trans- and intersex based on them.

Same as: JEWISHST 120, RELIGST 130

**FEMGEN 130S. Sex and the Novel. 5 Units.**

How do novels represent sexual life? This course reads texts from the eighteenth century to the present day, and considers how novelists represent the discombobulating effects of desire in fictional prose. Authors may include: S. Richardson, N. Hawthorne, J. Austen, E. Brontë, G. Gissing, H. James, D.H. Lawrence, J. Joyce, V. Nabokov, J. Baldwin, A. Hollinghurst and Z. Smith.

Same as: ENGLISH 130

**FEMGEN 134. The Marriage Plot. 5 Units.**

The centrality of the marriage plot in the development of the British novel beginning in the 18th century with Samuel Richardson's *Pamela* and ending with Woolf's modernist novel *Mrs. Dalloway*. The relationship between novelistic plotting and the development of female characters into marriageable women. What is the relationship between the novel and feminine subjectivity? What aspects of marriage make it work as a plotting device? What kinds of marriages do marriage plots allow? Is the development of women's political agency related to their prominence in the novel form? Same as: ENGLISH 134

**FEMGEN 138. Violence Against Women: Theory, Issues, and Prevention. 3-4 Units.**

[Technical error is capping enrollment prematurely; come to first day of class] Course offers an interdisciplinary feminist perspective on the causes of gender violence, addresses the multi-leveled approaches to ending gender violence, and explores the relationship between violence against women and other forms of oppression: racism, economic exploitation, heterosexism and social class. Framework examines institutional barriers maintaining gender violence in our culture and considers multi-dimensional solutions. Students from every discipline, women and men, apply theoretical perspectives to professional goals and an optional service-learning project. Service Learning Course (certified by Haas Center).

Same as: FEMGEN 238

**FEMGEN 139. Rereading Judaism in Light of Feminism. 4 Units.**

During the past three decades, Jewish feminists have asked new questions of traditional rabbinic texts, Jewish law, history, and religious life and thought. Analysis of the legal and narrative texts, rituals, theology, and community to better understand contemporary Jewish life as influenced by feminism.

Same as: JEWISHST 139

**FEMGEN 139B. American Women Writers, 1850-1920. 5 Units.**

The ways in which female writers negotiated a series of literary, social, and intellectual movements, from abolitionism and sentimentalism in the nineteenth century to Progressivism and avant-garde modernism in the twentieth. Authors include Harriet Beecher Stowe, Harriet Jacobs, Rebecca Harding Davis, Emily Dickinson, Kate Chopin, Edith Wharton, Gertrude Stein, Willa Cather, and Charlotte Perkins Gilman.

Same as: AMSTUD 139B, ENGLISH 139B

**FEMGEN 140A. Destroying Dichotomies: Exploring Multiple Sex, Gender, and Sexual Identities. 3-5 Units.**

This course is designed to broaden the student's awareness of the human experience by introducing scholarly debates about sex, gender and sexual identities and expressions. We will consider the socially constructed nature of sex, gender and sexuality and examine the history and community of those who identify as intersexual, transgender, homosexual, bisexual, asexual, pansexual and/or queer through texts, discussion, films, and class presentations.

**FEMGEN 140D. LGBT/Queer Life in the United States. 4-5 Units.**

An introductory course on LGBT social, cultural, and political history in the United States. This course explores how categories of sexuality have changed over time, with particular emphasis on the relationship among homosexuality, heterosexuality, and transgenderism. Students will analyze how the intersections of race, class, and sexuality influenced the constitution of these categories and the politics of social relations. Historical and literary sources will be used to examine changes in LGBT experiences and identities, primarily in the twentieth century.

Same as: FEMGEN 240D, HISTORY 257C

**FEMGEN 140H. New Citizenship: Grassroots Movements for Social Justice in the U.S.. 5 Units.**

Focus is on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis.

Same as: ANTHRO 169A, CHILATST 168, CSRE 168

**FEMGEN 140P. Queer Art and Performance. 4-5 Units.**

Examines the late 19th, 20th and 21st century forms of performance—including examples from drama, theater, cabaret, and performance art – through the perspectives of contemporary critical gender and queer theories. Texts and movements range from early avant-garde (Dada, Futurism) to gay and lesbian drama (Lillian Hellmann, Joe Orton, Tony Kushner) to post-liberation Queer performance and video (Split Britches, Carmelita Tropicana, Kalup Linzy). Theorists include Judith Butler, Michel Foucault, and Eve Kosofsky Sedgwick.

Same as: TAPS 164T, TAPS 364T

**FEMGEN 142. Sociology of Gender. 5 Units.**

(Graduate students register for 242.) Gender inequality in contemporary American society and how it is maintained. The social and relative nature of knowledge and the problems this poses for understanding sex differences and gendered behavior in society. Analytical levels of explanation for gender inequalities: socialization, interaction processes, and socioeconomic processes; arguments and evidence for each approach. The social consequences of gender inequality such as the feminization of poverty, and problems of interpersonal relations.

Same as: FEMGEN 242, SOC 142, SOC 242

**FEMGEN 144. Women and Gender in Science, Medicine and Engineering. 5 Units.**

(Same as HISTORY 44. Majors and others taking 5 units, enroll in HISTORY 144.) Men's and women's roles in science, medicine, and engineering over the past 200 years with a focus on the present. What efforts are underway globally to transform research institutions so that both men's and women's careers can flourish? How have science and medicine studied and defined males and females? How can we harness the creative power of gender analysis to enhance knowledge and spark innovation?.

Same as: HISTORY 144

**FEMGEN 144F. Female Modernists: Women Writers in Paris Between the Wars. 5 Units.**

The course will focus on expatriate women writers - American and British - who lived and wrote in Paris between the wars. Among them: Edith Wharton, Gertrude Stein and Alice B. Toklas, H.D., Djuna Barnes, Margaret Anderson, Janet Flanner, Natalie Barney, Kay Boyle, Mina Loy, Romaine Brooks, Mary Butts, Radclyffe Hall, Colette, and Jean Rhys. A central theme will be Paris as a lure and inspiration for bohemian female modernists, and the various alternative and emancipatory literary communities they created.

Same as: ENGLISH 144F

**FEMGEN 144X. Transforming Self and Systems: Crossing Borders of Race, Nation, Gender, Sexuality, and Class. 5 Units.**

Exploration of crossing borders within ourselves, and between us and them, based on a belief that understanding the self leads to understanding others. How personal identity struggles have meaning beyond the individual, how self healing can lead to community healing, how the personal is political, and how artistic self expression based in self understanding can address social issues. The tensions of victimization and agency, contemplation and action, humanities and science, embracing knowledge that comes from the heart as well as the mind. Studies are founded in synergistic consciousness as movement toward meaning, balance, connectedness, and wholeness. Engaging these questions through group process, journaling, reading, drama, creative writing, and storytelling. Study is academic and self-reflective, with an emphasis on developing and presenting creative works in various media that express identity development across borders.

Same as: ASNAMST 144, CSRE 144

**FEMGEN 145. Culture Wars: Art and Social Conflict in the USA, 1890-1950. 4 Units.**

This course examines social conflicts and political controversies in American culture through the lens of visual art and photography. We consider how visual images both reflect and participate in the social and political life of the nation and how the terms of citizenship have been represented and, at times, contested by artists throughout the first half of the 20th century. The class explores the relation between American art and the body politic by focusing on issues of poverty, war, censorship, consumerism, class identity, and racial division.

Same as: AMSTUD 145M, ARTHIST 145, ARTHIST 345

**FEMGEN 149. Gender Violence: Critical Race, Feminist, and Queer Perspectives. 5 Units.**

This course examines the problem of domestic violence, sexual violence, and other forms of gender violence using critical race, legal, feminist, and queer theory. Readings reflect an interdisciplinary approach to understanding gender violence as it is understood in U.S. law, history, culture, and politics. We will explore foundational theories for why gender violence persists as well as its relationship to structural power along axes of race, gender, class, sexuality, and nation. This course will also consider feminist anti-violence social movements and debates within legal and philosophical approaches to gender violence.

**FEMGEN 150. Sex, Gender, and Power in Modern China. 3-5 Units.**

Investigates how sex, gender, and power are entwined in the Chinese experience of modernity. Topics include anti-footbinding campaigns, free love/free sex, women's mobilization in revolution and war, the new Marriage Law of 1950, Mao's iron girls, postsocialist celebrations of sensuality, and emergent queer politics. Readings range from feminist theory to China-focused historiography, ethnography, memoir, biography, fiction, essay, and film. All course materials are in English.

Same as: CHINGEN 150, CHINGEN 250, FEMGEN 250

**FEMGEN 150A. Minaret and Mahallah: Women and Islam in Central Asia. 3-5 Units.**

Introduction to women's culture and art in Muslim countries of Central Asia. Women, bearers of family rites and folklore, are the key figures in transmission of traditional culture and guardians of folk Islam. Women helped to keep the continuity of Islamic education in Central Asia during the harsh times of Communist dominance. The whole wealth of women's oral tradition will be demonstrated and examined to the extent possible. The course will make broad use of audio-visual materials.

Same as: ANTHRO 150A, REES 250A

**FEMGEN 150D. Women Poets. 5 Units.**

The development of women's poetry from the 17th to the 20th century. How these poets challenge and enhance the canon, amending and expanding ideas of tone, voice and craft, while revising societal expectations of the poet's identity. Poets include Katharine Philips, Letitia Barbauld, Elizabeth Barrett Browning, Charlotte Mew, Sylvia Plath, and Adrienne Rich.

**FEMGEN 150T. Transnational Sexualities. 4 Units.**

Transnational Sexualities is an inter-disciplinary course that considers the aesthetic, social, and political formation of sexual subjectivities in a global world. How does the transnational traffic of people, media, images, finance, and commodities shape the force-fields of desire? What is the relationship between political economies and libidinal economies? The course will explore the erotics of race and religion, neoliberalism and globalization within a wide range geo-political contexts including Indonesia, China, Egypt, India, South Africa, US, among others.

Same as: FEMGEN 250T, TAPS 150T, TAPS 250T

**FEMGEN 152. 'Tis all in pieces: Space and Gender on the Threshold of the Modern World. 5 Units.**

These dramatic words, spoken by the British poet John Donne, signal the onset of the Early Modern world and the profound reconfigurations of space and related structures of thought, including conceptions of the self and the encoding of gender roles. We will explore the vibrant Early Modern world in the context of space and representations of gender, sexuality, and race as manifest in unprecedented literary and artistic forms, such as Shakespeare's *Othello*, Marlowe's *Doctor Faustus*, the poetry of John Donne, the art of Michelangelo and Caravaggio as well as key historical and cultural texts. And we will visit the Cantor Arts Center (on campus) for a guided tour and lecture on art and perspective. We also will read and discuss selected texts from the modern world, such as Samuel Beckett's *Waiting for Godot* and poetry and commentary by Adrienne Rich, to study both changes and continuities with the Early Modern period. We will consider the vital cognitive role of the reader or viewer in the formation of particular instances of artistic form, including recent—and highly thought-provoking—material from the neurosciences and cognitive studies. Note: Instructor will consider changes in meeting times/days to accommodate student schedules if feasible. Please send request to: hbrooks@stanford.edu.

Same as: FEMGEN 252

**FEMGEN 153Q. Creating the Gendered Story. 4-5 Units.**

Exploration of novels, stories, memoirs and micro-narratives in which gender plays a major role. The texts are by writers of varied genders and sexual orientations as well as varied class, racial and national backgrounds. Written assignments present a mixture of academic and creative options.

**FEMGEN 154. Black Feminist Theory. 5 Units.**

This course will examine black feminist theoretical traditions, marking black women's analytic interventions into sexual and pleasure politics, reproduction, citizenship, power, violence, agency, art, representation, and questions of the body. Exploring concepts like intersectionality, matrices of violence, the politics of respectability, womanism, and other contours of a black feminist liberation politic, we will look to black feminist scholars, activists, and artists from the 19th century to today.

Same as: AFRICAAM 154

**FEMGEN 155. The Changing American Family. 4 Units.**

Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change.

Same as: FEMGEN 255, SOC 155, SOC 255

**FEMGEN 156. Happiness, Well-Being, Gender. 1-3 Unit.**

Exploring the meaning and attainment of psychological well-being and happiness, this course will address gender differences in well-being and approaches that can be used by all individuals to improve their state of happiness and well-being. Course literature will be drawn primarily from social, clinical, and positive psychology, but will be drawn from other disciplines as well. Students will actively engage with course material by critiquing studies, discussing research, and applying methods for improving well-being to their daily lives.

Same as: PSYCH 129

**FEMGEN 156H. Women and Medicine in US History: Women as Patients, Healers and Doctors. 5 Units.**

Women's bodies in sickness and health, and encounters with lay and professional healers from the 18th century to the present. Historical construction of thought about women's bodies and physical limitations; sexuality; birth control and abortion; childbirth; adulthood; and menopause and aging. Women as healers, including midwives, lay physicians, the medical profession, and nursing.

Same as: AMSTUD 156H, HISTORY 156G

**FEMGEN 156X. Language and Gender. 4 Units.**

The role of language in the construction of gender, the maintenance of the gender order, and social change. Field projects explore hypotheses about the interaction of language and gender. No knowledge of linguistics required.

Same as: LINGUIST 156

**FEMGEN 157. Language as Social and Political Activism: Feminist and LGBTQ Social and Political Movements. 3-5 Units.**

How does a social or political movement gain traction? For example, how did 20th-century movements of the disenfranchised, such as the Civil Rights movement or Women's Suffrage, gain a voice an eventually enact change? In the mediascape of today, where everyone with access to a computer has voice, how does a movement like Occupy Wall Street change the national conversation? How do written and verbal choices of the movements impact their success? In this course, students will write and revise their own arguments in order to best understand the writing in these movements and to best produce future work for social change. We'll examine the role of rhetoric; the use of argument to persuade; in social movements working toward social justice.

Same as: AMSTUD 157X, FEMGEN 257

**FEMGEN 157P. Solidarity and Racial Justice. 4-5 Units.**

Many activists in the racial justice, immigrant, indigenous, feminist, and LGBTQ movements, are committed to principles of leadership by frontline communities - their goal is to build power in communities that are disempowered by dominant institutions and practices. This makes for complicated relationships with those that are not part of those frontline communities but recognize that their own silence makes them complicit in systems of oppression. In this course, we will examine how power and privilege can undermine attempts to collaborate in social justice work, and then explore principles and practices of solidarity and allyship that attempt to overcome these challenges. We will discuss texts on white privilege and anti-racism as our primary point of reference, but will connect to other kinds of ally work and movements for collective liberation. As a community-engaged learning course, students will work with community partners to establish long-term relationships based in solidarity. Students are encouraged to work with movements and organizations with whom they already have relationships (e.g., through student-activism). Throughout the quarter, we will have guest lectures and workshops with community partners and movement strategy organizations.

Same as: AFRICAAM 157P, AMSTUD 157P, CSRE 157P

**FEMGEN 158. Black Queer Theory. 5 Units.**

This course takes a multifaceted approach to black queer theory, not only taking up black theories of gender and queer sexuality, but queer theoretical interrogations of blackness and race. The course will also examine some of the important ways that black queer theory reads and is intersected with issues like affect, epistemology, space and geography, power and subjectivity, religion, economy, the body, and the law, asking questions like: How have scholars critiqued the very language of queer and the ways it works as a signifier of white marginality? What are the different spaces we can find queer black relationality, eroticism, and kinship? How do we negotiate issues like trans\*misogyny or tensions around gender and sexuality in the context of race? Throughout the course, students will become versed in foundational and emerging black queer theory as we engage scholars like Sharon Holland, Cathy Cohen, Hortense Spillers, Marlon B. Ross, Aliyyah Abdur-Rahman, Barbara Smith, Roderick Ferguson, Robert Reid-Pharr, E. Patrick Johnson, and many others. Students will also gain practice applying black queer theory as an interpretive lens for contemporary social issues and cultural production including film, music, art, and performance.

Same as: AFRICAAM 158

**FEMGEN 159. James Baldwin & Twentieth Century Literature. 5 Units.**

Black, gay and gifted, Baldwin was hailed as a spokesperson for the race, although he personally, and controversially, eschewed titles and classifications of all kinds. This course examines his classic novels and essays as well as his exciting work across many lesser-examined domains: poetry, music, theatre, sermon, photo-text, children's literature, public media, comedy and artistic collaboration. Placing his work in context with other writers of the 20C (Faulkner, Wright, Morrison) and capitalizing on a resurgence of interest in the writer (NYC just dedicated a year of celebration of Baldwin and there are 2 new journals dedicated to study of Baldwin), the course seeks to capture the power and influence of Baldwin's work during the Civil Rights era as well as his relevance in the post-race, transnational 21st century, when his prescient questioning of the boundaries of race, sex, love, leadership and country assume new urgency.

Same as: AFRICAAM 159, ENGLISH 159

**FEMGEN 160. Performance and History: Rethinking the Ballerina. 4 Units.**

The ballerina occupies a unique place in popular imagination as an object of over-determined femininity as well as an emblem of extreme physical accomplishment for the female dancer. This seminar is designed as an investigation into histories of the ballerina as an iconographic symbol and cultural reference point for challenges to political and gender ideals. Through readings, videos, discussions and viewings of live performances this class investigates pivotal works, artists and eras in the global histories of ballet from its origins as a symbol of patronage and power in the 15th century through to its radical experiments as a site of cultural obedience and disobedience in the 20th and 21st centuries.

Same as: DANCE 160, TAPS 160, TAPS 260

**FEMGEN 161. Women in Modern America. 4-5 Units.**

This course explores the transition from Victorian to modern womanhood in the U.S. from the 1890s to the end of the 20th century, including the experiences of Native, European, African, Mexican, and Asian American women. It asks how, when, and why the majority of American women become wage earners, gained full citizenship, and enacted political opportunities; how race- and class-specific ideals of womanhood changed in popular culture; and how women have redefined their reproductive and sexual relations.

Same as: AMSTUD 161, CSRE 162, HISTORY 161

**FEMGEN 163. Queer America. 4 Units.**

This class explores queer art, photography and politics in the United States since 1930. Our approach will be grounded in close attention to the history and visual representation of sexual minorities in particular historical moments and social contexts. We will consider the cultural and political effects of World War II, the Cold War, the civil rights movement, psychedelics, hippie culture and sexual liberation, lesbian separatism, the AIDS crisis, and marriage equality.

Same as: AMSTUD 163, ARTHIST 163

**FEMGEN 163D. Introduction to Dance and History: From Postwar to the Present. 4 Units.**

This course explores the cultural and historical unfolding of the genre of contemporary performance known as postmodern dance over the past six decades. It begins with the formative influence of the émigré Bauhaus artists of the 1930s, then the postwar experiments of the Beat artists in the 1950s, to Merce Cunningham, the Judson Dance Theatre, postmodern formalism, neo-expressionism, dance theatre and through to the global, spectacle-rich, cross-genre dance work of the early 21st century as the most recent extended legacy of this history. This course uses dance history to trace with special emphasis the effects of these visual art and movement experimentalists on gender representation and nationalist identity construction in the negotiation of boundaries between dance and life.

Same as: DANCE 163, TAPS 163, TAPS 263

**FEMGEN 164L. Introduction to American Theater: Queer Lives from Cushman to Kushner. 4 Units.**

This course introduces students to classics in American Theater from the nineteenth-century to the present. We will learn how to read and critique plays, to conduct research about actors, directors, and how to think about problems in theater history. The course includes some scene work. More specifically, we will address questions such as: how does the American theater intersect with "queer lives" on and off the stage? How can we understand theories of acting and performance in relation to concepts about the performance of gender/race/class/ and sexuality as they have been and are rehearsed in great American plays such as *A STREETCAR NAMED DESIRE*, *SUDDENLY LAST SUMMER*, *INTIMATE APPAREL*, *ANGELS IN AMERICA*, *A CHORUS LINE*. *WICKED* and more.

Same as: TAPS 164L

**FEMGEN 168. Writing for the Stage and Screen. 4 Units.**

This is a script analysis and film criticism course from the vantage point of the scriptwriter – both playwrights and screenplay writers. We will do comparative analysis of films that were adapted from plays and published plays and/or student-authored plays to write original script adaptations. Students will also develop short video films based on a segment of such adaptations. May be repeated for credit.

Same as: TAPS 168

**FEMGEN 172. Out of Place: (W)riting Home. 4 Units.**

A creative writing workshop; all genres. This course will introduce students to the fundamentals of a productive creative writing practice, including the beginner's mind (as founded in Eastern spiritual practices); and, an indigenous approach to authenticity in one's work and one's words. Through writing, one returns to the body of home-knowledges, languages, and geographies to uncover what is profoundly original in us as artists, writers and thinkers.

Same as: CSRE 172, TAPS 172, TAPS 272

**FEMGEN 177. Writing for Performance: The Fundamentals. 4 Units.**

Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter's end.

Same as: CSRE 177, TAPS 177, TAPS 277

**FEMGEN 179C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.**

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what the facts can offer.

Same as: CSRE 179C, CSRE 279C, TAPS 179C, TAPS 279C

**FEMGEN 179G. Indigenous Identity in Diaspora: People of Color Art Practice in North America. 3-5 Units.**

This "gateway" core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.

Same as: CSRE 179G, CSRE 279G, TAPS 279G

**FEMGEN 181A. Gender in the Middle East: Iran, Turkey, and Egypt. 4 Units.**

This course explores the construction of gender in the Middle East. Drawing on the historical, sociological and anthropological research in the region, the course aims to question the stereotypes about the subordination of Muslim women and to offer students a systematic reading and analytical discussion of the political, economic and cultural structures that inform gender relations and practices in the region. The course starts with an examination of early Islam and religious sources with regard to women's status, then moves on to nationalist and modernization movements in the 19th and 20th centuries, and finally explores women's and men's lives in contemporary Egypt, Turkey and Iran. In this framework, we will pay special attention to Islamist mobilizations, family and sexual relations, as well as women's changing livelihoods and labor.

Same as: ANTHRO 181A

**FEMGEN 183. Re- Imagining American Borders. 5 Units.**

How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual preference, and class borders in the context of a national discussion about the place of Americans in the world. How Anna Deaver Smith, Sherman Alexie, or Michael Moore consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguistic borderlines within multilingual literature by Caribbean, Arab, and Asian Americans function. Can Anzaldúa's conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these American narratives? Course includes examining one's own identity.

Same as: AMSTUD 183, CSRE 183

**FEMGEN 187. Romance, Desire, and Sexuality in Modern Japanese Literature. 3-4 Units.**

This class is structured around three motifs: love suicide (as a romantic ideal), female desire, and same-sex sexuality. Over the course of the quarter we will look at how these motifs are treated in the art and entertainment from three different moments of Japanese history: the Edo period (1615-1868), the modern period (1920-65), and the contemporary period (1965-present). We will start by focusing on the most traditional representations of these topics. Subsequently, we will consider how later artists and entertainers revisited the conventional treatments of these motifs, informing them with new meanings and social significance. We will devote particular attention to how this material comments upon issues of gender, sexuality, and human relationships in the context of Japan. Informing our perspective will be feminist and queer theories of reading and interpretation.

Same as: JAPANGEN 187, JAPANGEN 287

**FEMGEN 188Q. Imagining Women: Writers in Print and in Person. 4-5 Units.**

Gender roles, gender relations and sexual identity explored in contemporary literature and conversation with guest authors. Weekly meetings designated for book discussion and meeting with authors. Interest in writing and a curiosity about diverse women's lives would be helpful to students. Students will use such tools as close reading, research, analysis and imagination. Seminar requires strong voice of all participants. Oral presentations, discussion papers, final projects.

Same as: CSRE 188Q

**FEMGEN 191Q. Writing Women's Lives. 2 Units.**

Creative writing through dialogue focusing on prose about the lives of women in different cultures and generations. Novels, short stories, and micro-narrative including fiction and memoir. Students produce work using research, memory, imagination, and metaphor.

**FEMGEN 193. Late Imperial China. 5 Units.**

(Same as HISTORY 93. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: HISTORY 193

**FEMGEN 193G. Psychological Well-Being on Campus: A Focus on Gender and Sexual Identities. 1 Unit.**

This course examines mental health and psychological well-being across the spectrum of gender and sexual identities. It addresses the unique challenges that face LGBTQ-identified students, and provides tools for supporting peers as they navigate these challenges. Discussion topics include current conceptualizations of gender identity and sexual orientation, including sexual and gender fluidity; the intersection of queer identities with multiple identities such as ethnic/racial identity and faith/spirituality; unpacking stereotypes; queer relationships and sexuality, coming out and disclosure, and mental health issues.

Same as: EDUC 193G

**FEMGEN 195. Directed Reading. 1-15 Unit.**

May be repeated for credit. (Staff).

**FEMGEN 199A. Feminist, Gender, and Sexuality Studies Honors Workshop. 2-3 Units.**

Required of seniors in the Feminist, Gender, and Sexuality Studies honors program. Participants share ongoing work on their honors theses. Prerequisite: consent of Instructor.

**FEMGEN 199B. Feminist, Gender, and Sexuality Studies Honors Workshop. 2-3 Units.**

Required of seniors in the Feminist, Gender, and Sexuality Studies honors program. Participants share ongoing work on their honors theses. Prerequisite: consent of instructor.

**FEMGEN 199C. Feminist, Gender, and Sexuality Studies Honors Workshop. 2-3 Units.**

Required of seniors in the Feminist, Gender, and Sexuality Studies honors program. Participants share ongoing work on their honors theses. Prerequisite: consent of instructor.

**FEMGEN 203. Feminist Theories and Methods Across the Disciplines. 2-5 Units.**

(Graduate Students register for PHIL 253 or FEMGEN 203) Concepts and questions distinctive of feminist and LGBT scholarship and how they shape research: gender, intersectionality, disciplinarity and interdisciplinarity, standpoint, "queering," postmodern critiques, postcolonial critiques. Prerequisites: Feminist Studies 101 or equivalent with consent of instructor.

Same as: FEMGEN 103, PHIL 153, PHIL 253

**FEMGEN 205. Songs of Love and War: Gender, Crusade, Politics. 3-5 Units.**

Analysis of medieval love, satirical and Crusade lyrics of the troubadours. Study of deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Course readings include medieval treatises on lyric and modern translations of the troubadour tradition. Works by Ovid, Bernart de Ventadorn, Bertran de Born, La Comtessa de Dia, Thibaut de Champagne, Raimon Vidal, Dante, and Pound. Taught in English. Course includes a lab component for creation of multi-media translation projects: trobar. stanford.edu.

Same as: FRENCH 205

**FEMGEN 206. Global Medical Issues Affecting Women. 1 Unit.**

This course probes the principal issues affecting women and girls medically around the world. Through interactive discussions, guest lectures, case studies, and academic readings, students become acquainted with the most critical challenges to women's health globally, and use selected analytical tools to assess how these may be addressed efficiently, cost-effectively, and sustainably. Topics include women's cancer, birth control, infertility, female genital mutilation, midwifery, obstetric fistula, breastfeeding, violence against women, and women's representation in biomedical research. The aim is to cultivate in students a nuanced appreciation of women's unique needs, roles, and challenges in the contemporary global health landscape.  
Same as: SOMGEN 206

**FEMGEN 208B. Women Activists' Response to War. 4-5 Units.**

Theoretical issues, historical origins, changing forms of women's activism in response to war throughout the 20th century, and contemporary cases, such as the Russian Committee of Soldiers Mothers, Bosnian Mothers of Srebrenica, Serbian Women in Black, and the American Cindy Sheehan. Focus is on the U.S. and Eastern Europe, with attention to Israel, England, and Argentina.  
Same as: HISTORY 208B, HISTORY 308B

**FEMGEN 209. Looking Back, Moving Forward: Raising Critical Awareness in Gender and Sports. 3 Units.**

In 1972, Title IX legislation opened up a vast range of opportunities for women in sports. Since then, women's sports have continued to grow yet the fight for recognition and equality persists. Simply put, men's sports are more popular than women's—so much so, in fact, that people often make the hierarchical distinction between "sports" and "women's sports." But what would it take to get more women's sports featured on ESPN or more female athletes on the cover of *Sports Illustrated*? And, given the well-documented corruption at the highest levels of men's sports, should such an ascent in popularity be the goal for women's sports? This course will map out and respond to the multifaceted issues that emerge when women enter the sports world. Throughout the quarter, we will explore the fight for gender equality in sports through historical, cultural, and rhetorical lenses.  
Same as: FEMGEN 109

**FEMGEN 210. Urdu Literature and Bombay Cinema. 3 Units.**

What are some of the major themes that drive modern Urdu literature as well as the "Muslim Social" genre of Bombay Cinema? How can we place these cultural texts within their historical context? Urdu literature and Bombay Cinema provide compelling windows into the crisis of modernity both within South Asia and Muslim societies. In this seminar, we will start with a discussion on the emergence of print culture and its impact on the world of Urdu poetry and an exploration of the work of reformers who viewed Urdu as "the language of secular Islam." Next we will engage with the anticolonial Progressive Writers Movement as well as the trauma of Partition and its reflection in literature and film. The course will conclude with a discussion of the contemporary Indian nostalgia for a cosmopolitan Indo-Muslim past. Through projects and presentations, students will hone their written and oral communication skills. They will also practice approaching works of art and literature with a critical lens. Ultimately this course will provide students with a better understanding of the society, literary and film of Muslim South Asia. Literary cultures of Muslim South Asia are not a fixed and unchanging, but rather a set of representations that are constantly shifting and adapting to reflect the context of society.  
Same as: GLOBAL 210

**FEMGEN 212. "When We Dead Awaken": Breakthroughs in Conceptions of the Gendered Self in Literature and the Arts. 4-5 Units.**

Remarkable breakthroughs in conceptions of the gendered self are everywhere evident in literature and the arts, beginning primarily with the Early Modern world and continuing into today. Many of these works inhere in innovations in literary and artistic forms in order to capture and even evoke the strong cognitive, or psychological, dimension of such "awakenings." The reader, or viewer, is often challenged to adapt her or his mind to new forms of thought, such as John Donne's seventeenth century creation of the Dramatic Monologue, a form popular with modern writers, which requires the reader's cognitive "presence" in order to fill out the dramatic scene. In so doing, the reader often supplies the presence of the female voice and thereby enters into her self-consciousness and inner thoughts. Adrienne Rich, for example, specifically "rewrites" one of Donne's major poems from the female perspective. This can be, in Rich's words, an "awakening" for the active reader, as he or she assumes that often-unspoken female perspective. The course will also explore male conceptions of the self and how such conceptions are often grounded in cultural attitudes imposed on male subjects, which can contribute to gender-bias toward women, a subject often neglected in exploring gendered attitudes, but which is now gaining more study, for example, in Shakespeare's "Othello." Readings from recent developments in the neurosciences and cognitive studies will be included in our study of artistic forms and how such forms can activate particular mindsets. Writers and artists will include Shakespeare, Michelangelo, John Donne, Virginia Woolf, Adrienne Rich, Gertrude Stein, Picasso, June Wayne, and Edward Albee's 1960's play, "Who's Afraid of Virginia Woolf?"  
Same as: ENGLISH 182J, FEMGEN 112

**FEMGEN 212X. Knights, Monks, and Nobles: Masculinity in the Middle Ages. 4-5 Units.**

This course considers masculinity as historically and culturally contingent, focusing on the experiences and representations of medieval men as heroes, eunuchs, fathers, priests, husbands, boys, and fighting men. Recognizing that the lives of men, like those of women, were governed by gendered rules and expectations, we will explore a wide range of medieval masculinities, paying close attention to the processes by which manhood could be achieved (e.g. martial, spiritual, sexual), and to competing versions of manliness, from the warrior hero of the early middle ages to the suffering Christ of late medieval religion.  
Same as: FEMGEN 312, HISTORY 212, HISTORY 312, RELIGST 212X, RELIGST 312X

**FEMGEN 213. Transgender Studies. 3-4 Units.**

Transgender and gender-expansive identities are the subject of growing attention and (often sensationalist) interest in the media as well as in the healthcare field, yet there exists a dearth of legitimate academic courses, research and writing that reflect and explore gender identity and expression as a fluid spectrum rather than a fixed binary. This course will address transgender and gender expansive identities from historical, medical, literary, developmental and sociopolitical perspectives.  
Same as: FEMGEN 113

**FEMGEN 214. SEXUAL DIVERSITY AND HEALTH. 1 Unit.**

Explores multiple aspects of sexual diversity and health, including: kink/BDSM, polyamory, trans\* sexuality, asexuality, high-risk sex, inter-sexuality, questioning gender and sexual binaries, and more. The format includes a one-day conference featuring a variety of expert speakers covering different aspects of sexual diversity and health, followed by a debriefing and discussion session to integrate what has been heard and learned.  
Same as: FEMGEN 114

**FEMGEN 215. Saints and Sinners: Women and Religion in the Medieval World. 5 Units.**

Although the Apostle Paul taught that "There is neither Jew nor Greek, slave nor free, male nor female, for you are all one in Christ Jesus" (Gal. 3:28), men and women experienced medieval Christianity in ways that were often vastly different. In this course we examine the religious experiences of women from the origins of Christianity through to the end of the medieval period, with particular attention paid to female prophets and religious authority, saints and martyrs, sexuality and virginity, literacy and education within the cloister, mysticism, relations between religious women and men, and the relevance of gender in the religious life – especially as gender intersected with fears of heresy, sin, and embodiment.

Same as: HISTORY 215, RELIGST 215X

**FEMGEN 216. Women and the Book: Scribes, Artists, and Readers from Late Antiquity through the Fourteenth Century. 4-5 Units.**

This course examines the cultural worlds of medieval women through particular attention to the books that they owned, commissioned, and created. Beginning with the earliest Christian centuries, the course proceeds chronologically, charting women's book ownership, scribal and artistic activity, and patronage from Late Antiquity through the fourteenth century. In addition to examining specific manuscripts (in facsimile, or digitally), we will consider ancillary questions to do with women's authorship, education and literacy, reading patterns, devotional practices, and visual traditions and representation.

Same as: ARTHIST 206H, HISTORY 216, HISTORY 316

**FEMGEN 216X. Narrating Queer Trauma. 4-5 Units.**

Psychiatrist Dori Laub has argued that the process of narrating trauma is essential to the healing process. Not only is telling the story important, but it is also crucial to have someone else bear witness to the narrative. But how do people even begin to narrate stories of violence and pain, and how do we become good listeners? How are these stories told and heard in the specific context of queer world making? This course will explore narratives of trauma in queer lives through literature, film, media, and performance in conjunction with trauma theory and psychoanalysis. We will pay specific attention to questions of community, healing, violence, and affect at the intersections of queerness and race, sex, disability, class, gender, and nationality.

Same as: FEMGEN 116

**FEMGEN 221B. The 'Woman Question' in Modern Russia. 5 Units.**

Russian radicals believed that the status of women provided the measure of freedom in a society and argued for the extension of rights to women as a basic principle of social progress. The social status and cultural representations of Russian women from the mid-19th century to the present. The arguments and actions of those who fought for women's emancipation in the 19th century, theories and policies of the Bolsheviks, and the reality of women's lives under them. How the status of women today reflects on the measure of freedom in post-Communist Russia.

Same as: HISTORY 221B

**FEMGEN 223X. The Politics of Gender in the United States. 5 Units.**

Gender is one of the most recognizable and important identities in daily life. Yet it has been paid scant attention by political scientists in terms of its role on access to political power, opinion formation, group identity politics, election outcomes, and political representation. This class provides a survey of the literature on gender in American politics. We begin with the interdisciplinary research on the social construction of gender to understand what gender is and is not. Throughout the course we will use these theories to analyze and critique the approaches of quantitative research on gender politics.

Same as: POLISCI 223

**FEMGEN 224. Challenging Sex and Gender Dichotomies in Medicine. 1 Unit.**

Explores and challenges the traditional physiological bases for distinguishing human males from females, as well as the psychosocial factors that play a role in experiencing and expressing gender and sexuality. Topics include the influence of sociocultural (gender) norms and behaviors on human biology, the interactions of sex and gender on medical outcomes, the importance of understanding the spectrum of sex, gender, and sexuality in clinical practice.

Same as: FEMGEN 124, SOMGEN 257

**FEMGEN 226A. Queer Literature and Film. 3-5 Units.**

Close analysis of major works of LGBTQ literature, film, and visual art from the 1890s to today. Students will gain deeper knowledge and appreciation of historical and contemporary forms of queer representation in various national literatures, film, and visual art; understand relevant social and political debates; and gain a basic knowledge of feminist and queer theory. Course will include an optional online component to reach out to the public (class website [queerlitfilm.wordpress.com](http://queerlitfilm.wordpress.com), social media).

Same as: COMPLIT 226A

**FEMGEN 230. Sexual Function and Diversity in Medical Disciplines. 2 Units.**

(Same as SOMGEN 130/FEMGEN 230X; undergraduates who wish to fulfill the GER requirement should enroll in SOMGEN 130/FEMGEN 230X.)

Goal is the development of personal and professional skills to interact with people across the diverse range of human sexuality, including sexual orientation and gender identity, age (pediatric to geriatric), sociocultural & religious values, medical issues (e.g. hormonal therapy, disabilities, such as spinal cord injury, etc). Features guest speakers representing a range of sexualities, including asexuality, polyamory and kink, as well as medical professionals and researchers specializing in a diversity of sexuality topics. Attendance (in-class feedback) requirements.

Enrollment for 3 units requires attendance at two sessions per week and in-class presentation requirements; enrollment for 2 units requires attendance at two sessions per week.

Same as: SOMGEN 230

**FEMGEN 230X. Sexual Diversity and Function Across Medical Disciplines. 2 Units.**

(Same as SOMGEN 230/FEMGEN 230). Focus is on development of personal and professional skills to interact with people across the diverse range of human sexuality, from childhood (pediatric) to older ages (geriatric), with consideration of gender identity, sexual orientation, sociocultural (predominantly U.S., not global) and religious values, and selected medical issues (e.g. hormonal therapy, disabilities, e.g. spinal cord injury, etc. with discussion of sexual taboos and unusual sexual practices that you might encounter in a general medical setting.

Same as: SOMGEN 130

**FEMGEN 235A. The Queer Literature and Arts Salon, 1870s-1930s. 2-5 Units.**

Study of the vibrant 1870s-1930s European salon culture in Paris, London, Berlin, and Vienna, focusing on the crucial roles of queer writers, artists, composers, performers, and their aesthetic and erotic networks, which inspired important artistic alliances, collaborations, and avant-garde experimentations. Course addresses such figures as Wilde, Rachilde, Stein, Barney, Romaine Brooks, Winnaretta Singer, Stravinsky, Diaghilev, Marie-Laure de Noailles, Poulenc, Ravel, Man Ray, Cocteau; movements like the Ballets Russes, Art Nouveau, the Munich and Vienna Secession movements, Surrealism, Art Deco, etc. Assignments may include digital arts salon project (no technical prerequisites) and/or outreach to community organizations.

Same as: COMPLIT 235A

**FEMGEN 236. Literature and Transgression. 3-5 Units.**

Close reading and analysis of erotic-sexual and aesthetic-stylistic transgression in selected works by such authors as Baudelaire, Wilde, Flaubert, Rachilde, Schnitzler, Kafka, Joyce, Barnes, Eliot, Bataille, Burroughs, Thomas Mann, Kathy Acker, as well as in recent digital literature and online communities. Along with understanding the changing cultural, social, and political contexts of what constitutes "transgression" or censorship, students will gain knowledge of influential theories of transgression and conceptual limits by Foucault, Blanchot, and contemporary queer and feminist writers.

Same as: COMPLIT 236

**FEMGEN 237. Health and Medical Impact of Sexual Assault across the Lifecourse. 1-3 Unit.**

An overview of the acute and chronic physical and psychological health impact of sexual abuse through the perspective of survivors of childhood, adolescent, young and middle adult, and elder abuse, including special populations such as pregnant women, military and veterans, prison inmates, individuals with mental or physical impairments. Also addresses: race/ethnicity, gender identity, sexual orientation, and other demographic and societal factors, including issues specific to college culture. Professionals with expertise in sexual assault present behavioral and prevention efforts such as bystander intervention training, medical screening, counseling and other interventions to manage the emotional trauma of abuse. Undergraduates must enroll for 3 units. Medical and graduate students may enroll for 1 to 3 units.

Same as: SOMGEN 237

**FEMGEN 238. Violence Against Women: Theory, Issues, and Prevention. 3-4 Units.**

[Technical error is capping enrollment prematurely; come to first day of class] Course offers an interdisciplinary feminist perspective on the causes of gender violence, addresses the multi-leveled approaches to ending gender violence, and explores the relationship between violence against women and other forms of oppression: racism, economic exploitation, heterosexism and social class. Framework examines institutional barriers maintaining gender violence in our culture and considers multi-dimensional solutions. Students from every discipline, women and men, apply theoretical perspectives to professional goals and an optional service-learning project. Service Learning Course (certified by Haas Center).

Same as: FEMGEN 138

**FEMGEN 239. Queer Theory. 1-5 Unit.**

This course is designed to introduce graduate students and advanced undergraduates to the core texts of queer theory. Topics will include: the relationship between queer theory and feminism, between queer theory and psychoanalysis, and between queer theory and gay and lesbian history. At the same time, the course will investigate how queer theory has been put to use in literary study, musicology and art history.

Same as: GERMAN 239

**FEMGEN 240D. LGBT/Queer Life in the United States. 4-5 Units.**

An introductory course on LGBT social, cultural, and political history in the United States. This course explores how categories of sexuality have changed over time, with particular emphasis on the relationship among homosexuality, heterosexuality, and transgenderism. Students will analyze how the intersections of race, class, and sexuality influenced the constitution of these categories and the politics of social relations. Historical and literary sources will be used to examine changes in LGBT experiences and identities, primarily in the twentieth century.

Same as: FEMGEN 140D, HISTORY 257C

**FEMGEN 241. Sex and Gender in Human Physiology and Disease. 2-3 Units.**

(HumBio students must enroll in HumBio 140.) Chromosomal, hormonal and environmental influences that lead to male and female reproductive systems and neuroendocrine regulation and intersex variants.

Masculinizing and feminizing effects of endogenous and exogenous sex hormones and other factors, in particular gender, on the musculoskeletal, neurological, cardiovascular, immunological and other systems and tissues, e.g. adipose, skin, etc. over the lifecourse, from conception to puberty, through reproductive phases (including changes during the menstrual cycle up to and beyond menopause in women, and with aging in both sexes). Transgender health issues. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor. HUMBIO students must enroll for 3 units.

Same as: HUMBIO 140, MED 240

**FEMGEN 241W. Eighteenth-Century Women Writers. 5 Units.**

The course will deal with a number of eighteenth-century English women writers—primarily novelists, but also poets, critics and playwrights.

Authors to be studied in depth will include both relatively well-known writers such as Behn and Wollstonecraft, and lesser-known authors such as Sarah Scott, Elizabeth Inchbald and Anna Seward. Considerable attention will be paid to recent feminist scholarship on eighteenth-century women's writing, generic issues and the question of a "women's literary tradition," the material conditions of female authorship in the period, and the history of the eighteenth-century literary marketplace.

Same as: ENGLISH 241

**FEMGEN 242. Sociology of Gender. 5 Units.**

(Graduate students register for 242.) Gender inequality in contemporary American society and how it is maintained. The social and relative nature of knowledge and the problems this poses for understanding sex differences and gendered behavior in society. Analytical levels of explanation for gender inequalities: socialization, interaction processes, and socioeconomic processes; arguments and evidence for each approach. The social consequences of gender inequality such as the feminization of poverty, and problems of interpersonal relations.

Same as: FEMGEN 142, SOC 142, SOC 242

**FEMGEN 250. Sex, Gender, and Power in Modern China. 3-5 Units.**

Investigates how sex, gender, and power are entwined in the Chinese experience of modernity. Topics include anti-footbinding campaigns, free love/free sex, women's mobilization in revolution and war, the new Marriage Law of 1950, Mao's iron girls, postsocialist celebrations of sensuality, and emergent queer politics. Readings range from feminist theory to China-focused historiography, ethnography, memoir, biography, fiction, essay, and film. All course materials are in English.

Same as: CHINGEN 150, CHINGEN 250, FEMGEN 150

**FEMGEN 250T. Transnational Sexualities. 4 Units.**

Transnational Sexualities is an inter-disciplinary course that considers the aesthetic, social, and political formation of sexual subjectivities in a global world. How does the transnational traffic of people, media, images, finance, and commodities shape the force-fields of desire? What is the relationship between political economies and libidinal economies?

The course will explore the erotics of race and religion, neoliberalism and globalization within a wide range geo-political contexts including Indonesia, China, Egypt, India, South Africa, US, among others.

Same as: FEMGEN 150T, TAPS 150T, TAPS 250T

**FEMGEN 252. 'Tis all in pieces: Space and Gender on the Threshold of the Modern World. 5 Units.**

These dramatic words, spoken by the British poet John Donne, signal the onset of the Early Modern world and the profound reconfigurations of space and related structures of thought, including conceptions of the self and the encoding of gender roles. We will explore the vibrant Early Modern world in the context of space and representations of gender, sexuality, and race as manifest in unprecedented literary and artistic forms, such as Shakespeare's *Othello*, Marlowe's *Doctor Faustus*, the poetry of John Donne, the art of Michelangelo and Caravaggio as well as key historical and cultural texts. And we will visit the Cantor Arts Center (on campus) for a guided tour and lecture on art and perspective. We also will read and discuss selected texts from the modern world, such as Samuel Beckett's *Waiting for Godot* and poetry and commentary by Adrienne Rich, to study both changes and continuities with the Early Modern period. We will consider the vital cognitive role of the reader or viewer in the formation of particular instances of artistic form, including recent—and highly thought-provoking—material from the neurosciences and cognitive studies. Note: Instructor will consider changes in meeting times/days to accommodate student schedules if feasible. Please send request to: hbrooks@stanford.edu.

Same as: FEMGEN 152

**FEMGEN 255. The Changing American Family. 4 Units.**

Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change.

Same as: FEMGEN 155, SOC 155, SOC 255

**FEMGEN 256. Current Topics and Controversies in Women's Health. 2-3 Units.**

Interdisciplinary. Focus is primarily on the U.S., with selected global women's health topics. Topics include: leading causes of morbidity and mortality across the life course; reproductive (e.g. gynecologic & obstetric) health issues; sexual function; importance of lifestyle (e.g. diet, exercise, weight control), including eating disorders; mental health; sexual and relationship abuse; issues for special populations. In-class Student Debates on key controversies in women's health. Guest lecturers. HUMBIO students must enroll in HumBio 125 for 3 units. PhD minor in FGSS, enroll in FEMGEN 256 for 2 - 3 units and for a letter grade. Med students enroll in OBGYN 256 for 2 units.

Same as: HUMBIO 125, OBGYN 256

**FEMGEN 257. Language as Social and Political Activism: Feminist and LGBTQ Social and Political Movements. 3-5 Units.**

How does a social or political movement gain traction? For example, how did 20th-century movements of the disenfranchised, such as the Civil Rights movement or Women's Suffrage, gain a voice and eventually enact change? In the mediascape of today, where everyone with access to a computer has voice, how does a movement like Occupy Wall Street change the national conversation? How do written and verbal choices of the movements impact their success? In this course, students will write and revise their own arguments in order to best understand the writing in these movements and to best produce future work for social change. We'll examine the role of rhetoric; the use of argument to persuade; in social movements working toward social justice.

Same as: AMSTUD 157X, FEMGEN 157

**FEMGEN 258. Sexual Violence in America. 4-5 Units.**

This undergraduate/graduate colloquium explores the history of sexual violence in America, with particular attention to the intersections of gender and race in the construction of rape. We discuss the changing definitions of sexual violence in law and in cultural representations from early settlement through the late-twentieth century, including slavery, wartime and prison rape, the history of lynching and anti-lynching movements, and feminist responses to sexual violence. In addition to introducing students to the literature on sexual violence, the course attempts to teach critical skills in the analysis of secondary and primary historical texts. Students write short weekly reading responses and a final paper; no final exam; fifth unit research or CEL options. Limited enrollment, permission of instructor required. Submit application form (available on Coursework) by Dec. 1, 2015 and indicate interest in CEL option. Priority admission to History, FGSS, CSRE, AFRICAAM, and AMSTUD declared majors and minors.

Same as: AFRICAAM 192, AMSTUD 258, CSRE 192E, FEMGEN 358, HISTORY 258, HISTORY 358

**FEMGEN 260. Women and Disabilities. 5 Units.**

Course explores visible and invisible disabilities, women's psychological as well as physical health, and disabled women's identities and diversity of experiences. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of assistance. We deal with issues such as who identifies as disabled, social and political dimensions, self-labeling, caretaking, stigma and passing, and the difference gender makes to how disabilities are experienced. Course uses a personal approach and readings draw from first-person accounts by women. Instructor Consent Required.

Same as: AMSTUD 260, FEMGEN 360

**FEMGEN 260X. Journeys in Women's Health and Sex and Gender in Medicine. 1 Unit.**

Sponsored by the Stanford WSDM Center. Course focuses on health research on women and sex differences in medicine, acknowledges the "wisdom" of research and education on sex (e.g. chromosomes, gonads, gonadal hormones) and gender (sociocultural) factors influencing health. Brings alumni to share their professional journeys in the world of Women and Sex Differences in Medicine. Meets Women's Health Scholarly Concentration Requirement.

Same as: INDE 260

**FEMGEN 272E. Theories of Citizenship and Sovereignty in a Transnational Context. 4-5 Units.**

This course explores the multiple meanings of citizenship and the ways in which they change when examined using different geographic scales (from the local to the transnational). The course will pair theoretical readings on citizenship with case studies that focus on North America. Topics include: definitions of citizenship; the interrelation of ideas of citizenship with those of race, ethnicity, gender, and sexuality; the relationship between sovereignty and territoriality; human and civil rights; and immigration.

Same as: AMSTUD 272E, CHILATST 172, CSRE 172H, HISTORY 272E, HISTORY 372E

**FEMGEN 282. Queer Film. 3-5 Units.**

Analysis of representations of queer lives in films from the Spanish-speaking world (including the U.S.). We will be looking at the meaning each film produces about a wide variety of queer experience, in relation to a specific national, historical and cultural context. We will also practice doing close readings of how each film produces meaning about queer experience, focusing on the formal features mise-en-scene, cinematography, sound, editing, narrative and style.

Same as: ILAC 282

**FEMGEN 293B. Queer History in Comparative Perspective. 4-5 Units.**

Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S.  
Same as: FEMGEN 393B, HISTORY 293B, HISTORY 393B

**FEMGEN 295J. Chinese Women's History. 5 Units.**

The lives of women in the last 1,000 years of Chinese history. Focus is on theoretical questions fundamental to women's studies. How has the category of woman been shaped by culture and history? How has gender performance interacted with bodily disciplines and constraints such as medical, reproductive, and cosmetic technologies? How relevant is the experience of Western women to women elsewhere? By what standards should liberation be defined?  
Same as: CHINLIT 295J, HISTORY 295J

**FEMGEN 297. Education, Gender, and Development. 4 Units.**

Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes.  
Same as: EDUC 197, SOC 134

**FEMGEN 299. Graduate Workshop: Feminist, Gender, and Sexuality Studies. 1-3 Unit.**

Theory, methods, and research in feminist, gender, and sexuality studies, through presentations of ongoing work by students, faculty, and guest speakers, and discussion of recent literature and controversies, feminist pedagogy and career development issues. Restricted to doctoral students. Repeatable for credit. Required for PhD Minors in Feminist, Gender, and Sexuality Studies (3 quarters min.).  
Same as: EDUC 370

**FEMGEN 310X. Introduction to Comparative Queer Literary Studies. 3-5 Units.**

Introduction to the comparative literary study of important gay, lesbian, queer, bisexual, and transgender writers and their changing social, political, and cultural contexts from the 1880s to today: Oscar Wilde, Rachilde, Radclyffe Hall, Djuna Barnes, James Baldwin, Jean Genet, Audre Lorde, Cherrie Moraga, Jeanette Winterson, Alison Bechdel and others, discussed in the context of 20th-century feminist and queer literary and social theories of gender and sexuality.  
Same as: COMPLIT 110, COMPLIT 310, FEMGEN 110X

**FEMGEN 311C. Expanding Engineering Limits: Culture, Diversity, and Gender. 1-2 Unit.**

This course considers how culture shapes and impacts engineering, with a particular focus on the cultural aspects of gender that affect who becomes an engineer, what problems get solved, and the quality of solutions, design, technology, and products. We will examine engineering cultures and gender through the lens of "design thinking," which is an increasingly visible component of engineering education and practice. Design processes are determined by the designers, their disciplinary backgrounds, and the methods they use. How do the background characteristics of the designer affect products and development in innovation and research? Does gender matter? What about other characteristics of the designer? How can design thinking help to find sustainable solutions and also consider gender and diversity perspectives?  
Same as: ENGR 311C

**FEMGEN 312. Knights, Monks, and Nobles: Masculinity in the Middle Ages. 4-5 Units.**

This course considers masculinity as historically and culturally contingent, focusing on the experiences and representations of medieval men as heroes, eunuchs, fathers, priests, husbands, boys, and fighting men. Recognizing that the lives of men, like those of women, were governed by gendered rules and expectations, we will explore a wide range of medieval masculinities, paying close attention to the processes by which manhood could be achieved (e.g. martial, spiritual, sexual), and to competing versions of manliness, from the warrior hero of the early middle ages to the suffering Christ of late medieval religion.  
Same as: FEMGEN 212X, HISTORY 212, HISTORY 312, RELIGST 212X, RELIGST 312X

**FEMGEN 313. Performance and Performativity. 1-4 Unit.**

Performance theory through topics including: affect/trauma, embodiment, empathy, theatricality/performativity, specular/visibility, liveness/disappearance, belonging/abjection, and utopias and dystopias. Readings from Schechner, Phelan, Austin, Butler, Conquergood, Roach, Schneider, Silverman, Caruth, Fanon, Moten, Anzaldúa, Agamben, Freud, and Lacan. May be repeated for credit.  
Same as: ENGLISH 313, TAPS 313

**FEMGEN 314. Performing Identities. 4 Units.**

This course examines claims and counter-claims of identity, a heated political and cultural concept over the past few decades. We will consider the ways in which theories of performance have offered generative discursive frameworks for the study of identities, variously shaped by vectors of race, gender, sexuality, religion, class, nation, ethnicity, among others. How is identity as a social category different from identity as a unique and personal attribute of selfhood? Throughout the course we will focus on the inter-locking ways in which certain dimensions of identity become salient at particular historical conjunctures. In addition, we will consider the complex discourses of identity within transnational and historical frameworks. Readings include Robin Bernstein, Ann Pellegrini, Tavia Nyong'o, Jose Munoz, Michael Taussig, Wendy Brown, Talal Asad, Jasbir Puar, among others.  
Same as: CSRE 314, TAPS 314

**FEMGEN 330. Transnational Sexualities. 4 Units.**

Transnational Sexualities is an inter-disciplinary course that considers the aesthetic, social, and political formation of sexual subjectivities in a global world. How does the transnational traffic of people, media, images, finance, and commodities shape the force-fields of desire? What is the relationship between political economies and libidinal economies? The course will explore the erotics of race and religion, neoliberalism and globalization within a wide range geo-political contexts including Indonesia, China, Egypt, India, South Africa, US, among others.  
Same as: TAPS 330

**FEMGEN 344F. Gender Methods in History, Medicine, and Technology. 4-5 Units.**

Explores classics and new work in gender methods for historical research, medical research, science and technology. The course is robustly interdisciplinary and welcomes students from the humanities, social science, science, and engineering. We analyze the theory and practice of gender through weekly reading and discussion. Students will be asked to write a review paper or research paper that advances their own work. Seminar explores the creative power of gender analysis to create new knowledge.  
Same as: HISTORY 344F

**FEMGEN 358. Sexual Violence in America. 4-5 Units.**

This undergraduate/graduate colloquium explores the history of sexual violence in America, with particular attention to the intersections of gender and race in the construction of rape. We discuss the changing definitions of sexual violence in law and in cultural representations from early settlement through the late-twentieth century, including slavery, wartime and prison rape, the history of lynching and anti-lynching movements, and feminist responses to sexual violence. In addition to introducing students to the literature on sexual violence, the course attempts to teach critical skills in the analysis of secondary and primary historical texts. Students write short weekly reading responses and a final paper; no final exam; fifth unit research or CEL options. Limited enrollment, permission of instructor required. Submit application form (available on Coursework) by Dec. 1, 2015 and indicate interest in CEL option. Priority admission to History, FGSS, CSRE, AFRICAAM, and AMSTUD declared majors and minors.

Same as: AFRICAAM 192, AMSTUD 258, CSRE 192E, FEMGEN 258, HISTORY 258, HISTORY 358

**FEMGEN 360. Women and Disabilities. 5 Units.**

Course explores visible and invisible disabilities, women's psychological as well as physical health, and disabled women's identities and diversity of experiences. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of assistance. We deal with issues such as who identifies as disabled, social and political dimensions, self-labeling, caretaking, stigma and passing, and the difference gender makes to how disabilities are experienced. Course uses a personal approach and readings draw from first-person accounts by women. Instructor Consent Required.

Same as: AMSTUD 260, FEMGEN 260

**FEMGEN 363D. Feminist Theory: Thinking Through/With/About the Gendered Body. 5 Units.**

Organized around a series of case studies, this graduate feminist theory course will consider issues related to the complex relationship between sex, gender, sexuality, biological reproduction, violence, and social power. It is a core course for the PhD minor in Feminist, Gender, and Sexuality Studies. Enrollment is limited to PhD-level students.

**FEMGEN 389E. Queer of Color Critique: Race, Sex, Gender in Cultural Representations. 3-5 Units.**

Examines major questions and issues that arise in considering race, sex, and gender together. Focus on critical and theoretical texts queering ethnic and diaspora studies and bringing race and ethnicity into queer studies. Close reading of texts in a variety of media negotiating racialized sexualities and sexualized identities. How is desire racialized? How is racial difference produced through sex acts? How to reconcile pleasure and desire with histories of imperialism and (neo)colonialism and structures of power?

Same as: CSRE 289E, ILAC 389E

**FEMGEN 393B. Queer History in Comparative Perspective. 4-5 Units.**

Comparative history of homoerotic desire, relations, and identity through scholarship on different historical periods and parts of the world: the classical Mediterranean, early modern European cities, late imperial and modern China, Tokugawa and modern Japan, and the U.S.

Same as: FEMGEN 293B, HISTORY 293B, HISTORY 393B

**FEMGEN 395. Graduate Independent Study. 1-15 Unit.**

Students pursue a special subject of investigation under supervision of an affiliated faculty member. May be repeated for credit.

**FEMGEN 395J. Gender and Sexuality in Chinese History. 4-5 Units.**

Same as: HISTORY 395J

**FEMGEN 444. Graduate Research Seminar: Gender in Science, Medicine, and Engineering. 5 Units.**

Theory and practice of gender in STEM. 1. "Fix the Numbers of Women" focuses on increasing women's participation; 2. "Fix the Institutions" promotes gender equality in careers through structural change in research organizations; 3. "Fix the Knowledge" or "gendered innovations" stimulates excellence in science and technology by integrating gender analysis into research. Seminar explores harnessing the creative power of gender analysis to enhance knowledge and spark innovation.

Same as: HISTORY 444

**Film Production Courses****FILMPROD 12AX. Write and Shoot: Narrative Filmmaking. 2 Units.**

Write and Shoot: Narrative Filmmaking is a hybrid writing/production course that guides students through the process of completing a 2-3 minute narrative film. Students will write scripts for short fiction films, and then, by filming them, learn to apply the fundamentals of digital video production. Initial classwork will include visual writing exercises, DSLR cinematography instruction, script work, and basic fiction film production. Students will continue on in groups of three to develop, film, edit, and critique 2-3 minute narrative films based on a shared class theme or narrative premise. This course is truly INTENSIVE and requires a significant amount of work (including nights and weekends) outside of class and daily deadlines for submission of creative work.

**FILMPROD 101. Screen Writing I: Visual Writing. 4 Units.**

A writing workshop that is an exploration of visual storytelling. Beginning with visual literacy, the class progresses from basic cinematic techniques through scene exercises to revisions and ultimately to connecting scenes in order to build sequences of script pages. Open to all majors; may substitute for ENGL 190F prerequisite for FP101.

**FILMPROD 101T. Writing the Television Pilot. 5 Units.**

A writing workshop in which students are introduced to the basic structures and genre of television pilots and to writing within the screenwriting/television writing form. Students will develop, outline, and workshop their own original pilot episode and series bible. Serves as a prerequisite for FP104 Intermediate Screenwriting. Enrollment by decision of instructor.

**FILMPROD 103. Adaptation. 4 Units.**

A close analysis of film adaptation, using various source materials to examine the demands form makes on content and the creative choices made in adaptation to film. Source materials will include plays, fiction, biography, history, graphic novels, and reference to video games and amusement park rides. A weekly film screening is a requirement of the course.

**FILMPROD 104. Screenwriting II: Intermediate Screenwriting. 5 Units.**

Priority to Film and Media Studies majors. Craft, form, and approaches to writing for the screen. Prerequisites: FP104 Visual Writing or EGL190F Fiction into Film and consent of the instructor.

Same as: FILMPROD 301

**FILMPROD 105. Script Analysis. 4 Units.**

Analysis of screenplay and film from the writer's perspective, with focus on ideation, structure, and dramatic tension in narrative features. Sources include screenplays and screenings.

Same as: FILMPROD 305

**FILMPROD 106. Image and Sound: Filmmaking for the Digital Age. 3 Units.**

Despite the rise of emerging forms like two-minute YouTube videos, six second Vines, or interactive storytelling modules, many core principles of visual storytelling remain unchanged. In this hands-on film production class students will learn a broad set of filmmaking fundamentals (basic history, theory, and practice) and will apply them creating film projects using tools such as iPhones, consumer cameras and FCPX.

**FILMPROD 110. Screen Writing III: Advanced Screenwriting. 5 Units.**

Advanced writing workshop in which students develop and complete a feature-length screenplay. Prerequisites: FP101 Screenwriting and approval of the instructor. Enrollment is limited.

**FILMPROD 114. Introduction to Film and Video Production. 5 Units.**

Hands-on. Techniques of film and video making including conceptualization, visualization, story structure, cinematography, sound recording, and editing. Enrollment limited to 12 students. Priority to junior/senior Film & Media Studies majors.

**FILMPROD 117. ADVANCED VIDEO PRODUCTION. 5 Units.**

This course introduces the fundamentals of digital video production. Special emphasis is placed on the development of interview and observational sync-sound filming techniques. Students acquire hands-on experience in shooting, sound recording, lighting, and editing. Critiques of creative work emphasizes the conceptual, aesthetic, and technical aspects of digital video production. Prerequisite: Filmprod 114 or Filmprod 10AX.

**FILMPROD 301. Screenwriting II: Intermediate Screenwriting. 5 Units.**

Priority to Film and Media Studies majors. Craft, form, and approaches to writing for the screen. Prerequisites: FP104 Visual Writing or EGL190F Fiction into Film and consent of the instructor. Same as: FILMPROD 104

**FILMPROD 305. Script Analysis. 4 Units.**

Analysis of screenplay and film from the writer's perspective, with focus on ideation, structure, and dramatic tension in narrative features. Sources include screenplays and screenings. Same as: FILMPROD 105

**FILMPROD 400. Film/Video Writing and Directing. 4 Units.**

Restricted to M.F.A. documentary students. Emphasis is on the development of the research, conceptualization, visualization, and preproduction skills required for nonfiction filmmaking. Prerequisite: consent of instructor.

**FILMPROD 401. Nonfiction Film Production. 4 Units.**

Restricted to M.F.A. documentary students. 16mm production techniques and concepts. Final project is a short black-and-white film with multitrack sound design. Prerequisite: consent of instructor.

**FILMPROD 402. Digital Video. 4 Units.**

Restricted to M.F.A. documentary students. Fundamentals of digital storytelling. Working with small format cameras, interviewing techniques, and nonlinear editing skills. Prerequisite: consent of instructor.

**FILMPROD 403. Advanced Documentary Directing. 4 Units.**

Restricted to M.F.A. documentary students. Further examination of structure, emphasizing writing and directing nonfiction film. Prerequisite: consent of instructor.

**FILMPROD 404. Advanced Video Production. 4 Units.**

Restricted to M.F.A. documentary students. Techniques of visual storytelling and observational shooting. Final quarter of professional training in documentary video production. Prerequisite: consent of instructor.

**FILMPROD 405. Producing Practicum. 4 Units.**

Restricted to M.F.A. documentary students. Advanced producing principles through the preproduction of the M.F.A. thesis project, including development of a professional film proposal. Practical training in fundraising. Prerequisite: consent of instructor.

**FILMPROD 406A. Documentary M.F.A. Thesis Seminar I. 4 Units.**

Restricted to M.F.A. documentary students. Production of film or video project. Focus is on shooting strategies, ethical challenges, and practical production issues. Prerequisite: consent of instructor.

**FILMPROD 406B. Documentary M.F.A. Thesis Seminar II. 4 Units.**

Restricted to M.F.A. documentary students. Editing and post-production of film or video project. Emphasis is on aesthetic choices (structure, narration, music), distribution, contracts, and audience. Prerequisite: consent of instructor.

**FILMPROD 408. CULTURE/CINEMA/SENSATION. 5 Units.**

This course brings together a critical introduction to works of ethnographic film (i.e. films concerned primarily with the representation of culture) and a selective exploration of works of avant-garde film (i.e. films concerned with, among other dimensions, the possibilities of cinema) in order to consider the conceptual and aesthetic foundations/provocations of sensory ethnography, a neologism for an approach to cinema that seeks the new, the open-ended, the corporeal, the sensorial, and the affective.

**FILMPROD 801. TGR Project. 0 Units.****Film Studies Courses****FILMSTUD 4. Introduction to Film Study. 5 Units.**

Formal, historical, and cultural issues in the study of film. Classical narrative cinema compared with alternative narrative structures, documentary films, and experimental cinematic forms. Issues of cinematic language and visual perception, and representations of gender, ethnicity, and sexuality. Aesthetic and conceptual analytic skills with relevance to cinema.

**FILMSTUD 4S. Language of Film. 3 Units.**

This course familiarizes students with various elements of film language (cinematography, editing, sound, etc.) and introduces them to a range of approaches to cinematic analysis (authorship, genre, close formal reading, socio-historical considerations). Different types of films (narrative, documentary, and experimental) will be surveyed. Classical narrative cinema will be compared with alternative modes of story-telling.

**FILMSTUD 6. Introduction to Digital Media. 5 Units.**

Media beyond the horizon of cinema and television present unique problems of definition and analysis. Taking the digital - information represented as discrete values - as a reasonable approximation of the mechanics and fantasies of computation, course surveys theoretical approaches to code, networks, and cyberculture. Taking familiar formations like web sites and video games as objects by which to learn how thinkers have understood and envisioned emerging media from the mid-20th century to the present. Students to develop own methodological tools for becoming more critical users of digital media. COMM 1B can be taken in substitution of FILMSTUD 6 when the course is not being offered.

**FILMSTUD 6B. Media and Visual Culture. 5 Units.**

TBA.

**FILMSTUD 7. Introduction to Television Studies. 5 Units.**

Television is arguably the most influential and ubiquitous mass medium of the last half century. Because of its familiarity and popularity, it is also often the medium most overlooked, dismissed, and maligned. Drawing from the history of television and of television scholarship, this course builds a theoretical framework for understanding this pivotal cultural form. Course covers interdisciplinary approaches to studying TV texts, TV audiences, and TV industries, including questions of the boundaries of television (from independent and avant-garde video to convergence). In the process students develop methodological tools as critical television viewers.

**FILMSTUD 100A. History of World Cinema I, 1895-1929. 4 Units.**

From cinema's precursors to the advent of synchronized sound. Same as: FILMSTUD 300A

**FILMSTUD 100B. History of World Cinema II, 1930-1959. 4 Units.**

The impact of sound to the dissolution of Hollywood's studio system. Same as: FILMSTUD 300B

**FILMSTUD 100C. History of World Cinema III, 1960-Present. 4 Units.**

From the rise of the French New Wave to the present. Same as: FILMSTUD 300C

**FILMSTUD 101. Fundamentals of Cinematic Analysis. 4 Units.**

The close analysis of film. Emphasis is on formal and narrative techniques in structure and style, and detailed readings of brief sequences. Elements such as cinematography, mise-en-scène, composition, sound, and performance. Films from various historical periods, national cinemas, directors, and genres. Prerequisite: FILMSTUD 4 or equivalent. Recommended: ARTHIST 1 or FILMSTUD 102. Course can be repeated twice for a max of 8 units.

Same as: FILMSTUD 301

**FILMSTUD 102. Theories of the Moving Image. 4 Units.**

Major theoretical arguments and debates about cinema: realism, formalism, poststructuralism, feminism, postmodernism, and phenomenology. Prerequisites: FILMSTUD 4.

Same as: FILMSTUD 302

**FILMSTUD 104. Introduction to the Movies- How Movies Are Developed, Produced, Marketed and Exhibited. 4 Units.**

How are movies created? How are scripts developed and selected for production? How are films actually made and marketed? How are they shown in various media? Who decides what in all of these processes and what information do the decision-makers rely on? This course will follow the life cycle of a movie, from its inception as an idea, article, book, etc., to its release in theaters and other media as a finished product. Guest speakers will discuss the evolution of the film industry, creative development of scripts, how deals are structured to acquire intellectual property, film finance, and how movies are physically produced and then marketed, distributed and exhibited in theaters and in other media. We will use two films as case studies: *The Chronicles of Narnia* and *Voyage of the Dawn Treader* and *Chasing Mavericks*.

Same as: FILMSTUD 304

**FILMSTUD 110. Science Fiction Cinema. 4 Units.**

Science fiction film's sense of wonder depends upon the development and revelation of new ways of seeing. The American science fiction film emphasizes the fundamental activity of human perception, its relation to bodily experience and the exploration of other worlds, new cities, and other modes of being, in such new technological spaces as the cyberspaces of the information age. It is perhaps the Hollywood genre most directly concerned with the essence of cinema itself.

Same as: FILMSTUD 310

**FILMSTUD 110N. Darkness in Light: The Filmic Imagination of Horror. 3 Units.**

Preference to freshmen. From its beginnings, the cinema evinced an affinity with the phantom realm of specters, ghosts, and supernatural beings. Not only does horror have deep and diverse roots in the international history of film; it emerges as a trope of film itself, as a medium of shadows, dematerialized presence, life drained of substance. Overview of filmic imaginations of horror with a focus on the U.S., Europe, and Japan. Theories of horror, from the fantastic to the uncanny; unpacking these in light of key moments in the genre's development. The merits of vampires versus zombies. Ongoing debates through the lens of horror about cinematic representation, from Andre Bazin's idea of the mummy complex to Linda Williams' thesis of body genres to Jeffrey Sconce's notion of haunted media. Introduction to film analysis and interpretation; no prior experience in film studies required. Required weekly screening.

**FILMSTUD 114. Introduction to Comics. 4 Units.**

The modern medium of comics, a history that spans 150 years. The flexibility of the medium encountered through the genres of humorous and dramatic comic strips, superheroes, undergrounds, independents, journalism, and autobiography. Innovative creators including McCay, Kirby, Barry, Ware, and critical writings including McCloud, Eisner, Groenstee. Topics include text/image relations, panel-to-panel relations, the page, caricature, sequence, seriality, comics in the context of the fine arts, and relations to other media.

Same as: FILMSTUD 314

**FILMSTUD 115. Documentary Issues and Traditions. 4 Units.**

Issues include objectivity/subjectivity, ethics, censorship, representation, reflexivity, responsibility to the audience, and authorial voice. Parallel focus on form and content.

Same as: FILMSTUD 315

**FILMSTUD 116. International Documentary. 4 Units.**

Historical, aesthetic, and formal developments of documentary through nonfiction films in Europe, Asia, Latin America, and Africa.

Same as: FILMSTUD 316

**FILMSTUD 125. Horror Films. 4 Units.**

TBA.

**FILMSTUD 131. Cinemato-graph. 3-5 Units.**

The term cinematography, which literally means "inscribing motion," tends to lose the "graphic" part in modern use. However, several influential film-makers not only practiced the art of "inscribing motion" but also wrote texts discussing the aesthetic premises of cinematographic art. This course explores theories of cinema as propagated by the following film-makers: Vertov, Eisenstein, Godard, Bresson, Antonioni, Pasolini, Tarkovsky, Greenaway, and Lynch. Selected key texts will be supplemented by screenings of classic films, indicative of each director's work.

Same as: FILMSTUD 331, SLAVIC 185, SLAVIC 285

**FILMSTUD 133. Contemporary Chinese Auteurs. 4 Units.**

New film cultures and movements in Taiwan, Hong Kong, and mainland China in the 80s. Key directors including Jia Zhangke, Wu Wenguang, Tsai Ming-liang, Hou Hsiao-hsien, Wong Kar-wai, Ann Hui. Topics include national cinema in the age of globalization, the evolving parameters of art cinema, and authorship.

Same as: FILMSTUD 333

**FILMSTUD 136. Gender and Sexuality in Chinese Cinema. 4 Units.**

Representations of gender and sexuality in the cinemas of China, Taiwan, and Hong Kong, covering key periods and genres such as the golden age of Shanghai film, Hong Kong action pictures, opera films, post-socialist art films, and new queer cinema. Historical and contemporary perspectives on cinematic constructions of femininity, masculinity, and sexuality as they relate to issues of nationalism, modernity, globalization, and feminist and queer politics. Weekly screening required.

Same as: FILMSTUD 336

**FILMSTUD 140. Film Aesthetics: Editing. 4 Units.**

Practical and theoretical approaches to editing and montage. The role of editing in film meaning, and cognitive and emotional impact on the viewer. Developments in the history and theory of cinema including continuity system, Soviet montage, French new wave, postwar and American avant garde. Aesthetic functions, spectatorial effects, and ideological implications of montage. Film makers include Eisenstein, Godard, and Conner.

Same as: FILMSTUD 340

**FILMSTUD 141. Music Across Media: Music Video to Postclassical Cinema. 4 Units.**

What makes music videos, YouTube clips and musical numbers in today's films engaging? What makes them tick? Emphasis is on aesthetics and close reading. How music videos and its related forms work. Uses of the body, how visual iconography operates, what lyrics and dialogue can do, how and what music can say, and how it can work with other media. Questions of representation such as how class, ethnicity, gender, race, and nationality function. Viewership and industry practices.

Same as: FILMSTUD 341, MUSIC 185, MUSIC 385

**FILMSTUD 145. Politics and Aesthetics in East European Cinema. 4 Units.**

From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica.

Same as: FILMSTUD 345

**FILMSTUD 146. Art Animation. 2-4 Units.**

While anime has spread around the world, Japanese art animators have been busy developing a parallel tradition, built from a more personal, experimental, and idiosyncratic approach to the medium. Looking closely at key works from major artists in the field, this course explores art animation from a variety of perspectives: animation scene; philosophical attempts to account for animated movement; and art animation's unique perspective on Japanese culture.

**FILMSTUD 150. Cinema and the City. 4 Units.**

Utopian built environments of vast perceptual and experiential richness in the cinema and city. Changing understandings of urban space in film. The cinematic city as an arena of social control, social liberation, collective memory, and complex experience. Films from international narrative traditions, industrial films, experimental cinema, documentaries, and musical sequences. Recommended: 4 or equivalent.

Same as: FILMSTUD 350

**FILMSTUD 157. Film Noir from Bogart to Mulholland Drive. 4 Units.**

Why did prosperous mid-20th-century America produce a dark cinema of hard-boiled characters, gritty urban settings, stark high-contrast lighting, and convoluted plots? Key examples and the recent legacy of film noir: 40s and 50s Hollywood movies featuring anti-heroes, femmes fatales, shattered dreams, violence, and a heaviness of mood. Film noir's influences included pulp fiction; B-movie production-budgets; changes in Hollywood genres; left-populist aesthetic movements; a visual style imported by European émigré directors; innovations in camera and film technology; changes in gender roles; combat fatigue; and anxieties about the economy, communism and crime. Directors, writers, cinematographers and actors. Film viewings, readings and analyses.

Same as: FILMSTUD 357

**FILMSTUD 164A. Technology and the Visual Imagination. 4 Units.**

An exploration of the dynamic relationship between technology and the ways we see and represent the world. The course examines technologies from the Renaissance through the present day, from telescopes and microscopes to digital detectors, that have changed and enhanced our visual capabilities as well as shaped how we imagine the world. We also consider how these technologies influenced and inspired the work of artists. Special attention is paid to how different technologies such as linear perspective, photography, cinema, and computer screens translate the visual experience into a representation; the automation of vision; and the intersection of technology with conceptions of time and space.

Same as: ARTHIST 164A, ARTHIST 364A, FILMSTUD 364A

**FILMSTUD 165A. Fashion Shows: From Lady Godiva to Lady Gaga. 4 Units.**

The complex and interdependent relationship between fashion and art. Topics include: the ways in which artists have used fashion in different art forms as a means to convey social status, identity, and other attributes of the wearer; the interplay between fashion designers and various art movements, especially in the 20th century; the place of prints, photography, and the Internet in fashion, in particular how different media shape how clothes are seen and perceived. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.

Same as: ARTHIST 165A, ARTHIST 365A, FILMSTUD 365A

**FILMSTUD 165B. American Style and the Rhetoric of Fashion. 4-5 Units.**

Focus on the visual culture of fashion, especially in an American context. Topics include: the representation of fashion in different visual media (prints, photographs, films, window displays, and digital images); the relationship of fashion to its historical context and American culture; the interplay between fashion and other modes of discourse, in particular art, but also performance, music, economics; and the use of fashion as an expression of social status, identity, and other attributes of the wearer. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.

Same as: AMSTUD 127, ARTHIST 165B

**FILMSTUD 167B. Beyond the Fuzzy-Techie Divide: Art, Science, Technology. 4 Units.**

Although art and science are often characterized as "two cultures" with limited common interests or language, they share an endeavor: gaining insight into our world. They even rely on common tools to make discoveries and visually represent their conclusions. To clarify and interrogate points of similarity and difference, each week's theme (time, earth, cosmos, body) explores the efforts of artists and scientists to understand and represent it and the role of technology in these efforts. Focus on contemporary examples.

Same as: ARTHIST 167, ARTHIST 367, FILMSTUD 367B

**FILMSTUD 181Q. Alternative Viewpoints: Black Independent Film. 4 Units.**

Preference to sophomores. Do you want to learn more about independent film as it was practiced in major urban centers by young filmmakers?

This class focuses on major movements by groups such as the Sankofa Film Collective and the L.A. Rebellion. Learn how to analyze film and to discuss the politics of production as you watch films by Spike Lee, Julie Dash, Melvin Van Peebles, Ngozi Onwurah and more. We will discuss representation, lighting, press material, and of course the films themselves. This course includes a workshop on production, trips to local film festivals and time to critique films frame-by-frame. It matters who makes film and how they do so. When you have completed this class you will be able to think critically about "alternative viewpoints" to Hollywood cinema. You will understand how independent films are made and you will be inspired to seek out and perhaps produce or promote new visions.

Same as: AFRICAAM 181Q, TAPS 181Q

**FILMSTUD 232. CHINESE CINEMA. 5 Units.**

This course surveys a range of critical perspectives and debates on Chinese cinema. It is organized on the basis of weekly topics, such as genre, historiography, gender, modernity, and the idea of national cinema. Consent of instructor required.

Same as: FILMSTUD 432

**FILMSTUD 245B. History and Politics in Russian and Eastern European Cinema. 5 Units.**

From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica. Permission of instructor required prior to the first day of classes.

Same as: FILMSTUD 445B, REES 301B

**FILMSTUD 249. Eye of the Beholder: Subjective Cinema. 5 Units.**

This course proposes to look at how even the most seemingly objective films are shaped by a subjective eye. An eye which is molded by gender, race, culture and class - all of which influence the entire film-making process and experience from how something is framed to how it is cut and how it is perceived it. How we look at something, for how long we look at it and in what context we are shown something is as important as what we are looking at. Similarly the subjective eye of the viewer shapes how he or she understands and interprets the film. Whether the viewer is an insider or outsider to the subject completely changes expectations and reactions to the film. So then what are we really talking about when we talk about documentary films? What makes a documentary a documentary? Why is such a categorization valuable? necessary? useful? The course will combine analysis of films, theoretical texts, and some practical "production" exercises.

Same as: FILMSTUD 449

**FILMSTUD 250B. Bollywood and Beyond: An Introduction to Indian Film. 4 Units.**

A broad engagement with Indian cinema: its relationship with Indian politics, history, and economics; its key thematic concerns and forms; and its adaptation of and response to global cinematic themes, genres, and audiences. Locating the films within key critical and theoretical debates and scholarship on Indian and world cinemas. Goal is to open up what is often seen as a dauntingly complex region, especially for those who are interested in but unfamiliar with its histories and cultural forms.

Same as: COMPLIT 247, GLOBAL 250

**FILMSTUD 251. Media in Transition. 5 Units.**

In a culture obsessed with new media, we are bombarded with hype about the present as a revolutionary phase of convergence. But everything old was once new, and pioneering media of the past also had to negotiate existing technologies, ideologies, and fantasies. This seminar is organized around case studies of transitional media moments from the long 20th century, including proto-cinema, ham radio, early television, hypertext, and digital film. In exploring the material and discursive aspects of remediation through theoretical, historical, and media archaeological readings, we will ask: what is a medium and how do they emerge and evolve.

**FILMSTUD 264B. Starstuff: Space and the American Imagination. 5 Units.**

Course on the history of twentieth and twenty-first century American images of space and how they shape conceptions of the universe. Covers representations made by scientists and artists, as well as scientific fiction films, TV, and other forms of popular visual culture. Topics will include the importance of aesthetics to understandings of the cosmos; the influence of media and technology on representations; the social, political, and historical context of the images; and the ways representations of space influence notions of American national identity and of cosmic citizenship.

Same as: AMSTUD 143X, ARTHIST 264B

**FILMSTUD 290. Movies and Methods: Hitchcock and Beyond. 5 Units.**

Open to graduate students and advanced undergraduates with permission of the instructor; capstone course for majors (senior seminar). Topics vary year to year. Focus is on historiography and theory. Limited enrollment. Permission code needed in order to enroll.

Same as: FILMSTUD 490

**FILMSTUD 297. Honors Thesis Writing. 1-5 Unit.**

May be repeated for credit.

**FILMSTUD 299. Independent Study: Film and Media Studies. 1-15 Unit.**

May be repeated for credit.

**FILMSTUD 300A. History of World Cinema I, 1895-1929. 4 Units.**

From cinema's precursors to the advent of synchronized sound.

Same as: FILMSTUD 100A

**FILMSTUD 300B. History of World Cinema II, 1930-1959. 4 Units.**

The impact of sound to the dissolution of Hollywood's studio system.

Same as: FILMSTUD 100B

**FILMSTUD 300C. History of World Cinema III, 1960-Present. 4 Units.**

From the rise of the French New Wave to the present.

Same as: FILMSTUD 100C

**FILMSTUD 301. Fundamentals of Cinematic Analysis. 4 Units.**

The close analysis of film. Emphasis is on formal and narrative techniques in structure and style, and detailed readings of brief sequences. Elements such as cinematography, mise-en-scène, composition, sound, and performance. Films from various historical periods, national cinemas, directors, and genres. Prerequisite: FILMSTUD 4 or equivalent. Recommended: ARTHIST 1 or FILMSTUD 102. Course can be repeated twice for a max of 8 units.

Same as: FILMSTUD 101

**FILMSTUD 302. Theories of the Moving Image. 4 Units.**

Major theoretical arguments and debates about cinema: realism, formalism, poststructuralism, feminism, postmodernism, and phenomenology. Prerequisites: FILMSTUD 4.

Same as: FILMSTUD 102

**FILMSTUD 304. Introduction to the Movies- How Movies Are Developed, Produced, Marketed and Exhibited. 4 Units.**

How are movies created? How are scripts developed and selected for production? How are films actually made and marketed? How are they shown in various media? Who decides what in all of these processes and what information do the decision-makers rely on? This course will follow the life cycle of a movie, from its inception as an idea, article, book, etc., to its release in theaters and other media as a finished product. Guest speakers will discuss the evolution of the film industry, creative development of scripts, how deals are structured to acquire intellectual property, film finance, and how movies are physically produced and then marketed, distributed and exhibited in theaters and in other media. We will use two films as case studies: *The Chronicles of Narnia* and *Voyage of the Dawn Treader* and *Chasing Mavericks*.

Same as: FILMSTUD 104

**FILMSTUD 310. Science Fiction Cinema. 4 Units.**

Science fiction film's sense of wonder depends upon the development and revelation of new ways of seeing. The American science fiction film emphasizes the fundamental activity of human perception, its relation to bodily experience and the exploration of other worlds, new cities, and other modes of being, in such new technological spaces as the cyberspaces of the information age. It is perhaps the Hollywood genre most directly concerned with the essence of cinema itself.

Same as: FILMSTUD 110

**FILMSTUD 314. Introduction to Comics. 4 Units.**

The modern medium of comics, a history that spans 150 years. The flexibility of the medium encountered through the genres of humorous and dramatic comic strips, superheroes, undergrounds, independents, journalism, and autobiography. Innovative creators including McCay, Kirby, Barry, Ware, and critical writings including McCloud, Eisner, Groenstee. Topics include text/image relations, panel-to-panel relations, the page, caricature, sequence, seriality, comics in the context of the fine arts, and relations to other media.

Same as: FILMSTUD 114

**FILMSTUD 315. Documentary Issues and Traditions. 4 Units.**

Issues include objectivity/subjectivity, ethics, censorship, representation, reflexivity, responsibility to the audience, and authorial voice. Parallel focus on form and content.

Same as: FILMSTUD 115

**FILMSTUD 316. International Documentary. 4 Units.**

Historical, aesthetic, and formal developments of documentary through nonfiction films in Europe, Asia, Latin America, and Africa.

Same as: FILMSTUD 116

**FILMSTUD 331. Cinemato-graph. 3-5 Units.**

The term cinematography, which literally means "inscribing motion," tends to lose the "graphic" part in modern use. However, several influential film-makers not only practiced the art of "inscribing motion" but also wrote texts discussing the aesthetic premises of cinematographic art. This course explores theories of cinema as propagated by the following film-makers: Vertov, Eisenstein, Godard, Bresson, Antonioni, Pasolini, Tarkovsky, Greenaway, and Lynch. Selected key texts will be supplemented by screenings of classic films, indicative of each director's work.

Same as: FILMSTUD 131, SLAVIC 185, SLAVIC 285

**FILMSTUD 332. East Asian Cinema. 4 Units.**

Social, historical, and aesthetic dimensions of the cinemas of Japan, Hong Kong, Taiwan, mainland China, and Korea. Topics such as nation and gender, form and genre, and local and transnational conditions of practice and reception. Screenings include popular and art films from the silent to contemporary eras, including, Zhang Yimou, Wong Kar-wai, Hou Hsiao-hsien, Ozu Yasujiro, Kurosawa Akira, and Im Kwon-taek.

**FILMSTUD 333. Contemporary Chinese Auteurs. 4 Units.**

New film cultures and movements in Taiwan, Hong Kong, and mainland China in the 80s. Key directors including Jia Zhangke, Wu Wenguang, Tsai Ming-liang, Hou Hsiao-hsien, Wong Kar-wai, Ann Hui. Topics include national cinema in the age of globalization, the evolving parameters of art cinema, and authorship.

Same as: FILMSTUD 133

**FILMSTUD 336. Gender and Sexuality in Chinese Cinema. 4 Units.**

Representations of gender and sexuality in the cinemas of China, Taiwan, and Hong Kong, covering key periods and genres such as the golden age of Shanghai film, Hong Kong action pictures, opera films, post-socialist art films, and new queer cinema. Historical and contemporary perspectives on cinematic constructions of femininity, masculinity, and sexuality as they relate to issues of nationalism, modernity, globalization, and feminist and queer politics. Weekly screening required.

Same as: FILMSTUD 136

**FILMSTUD 340. Film Aesthetics: Editing. 4 Units.**

Practical and theoretical approaches to editing and montage. The role of editing in film meaning, and cognitive and emotional impact on the viewer. Developments in the history and theory of cinema including continuity system, Soviet montage, French new wave, postwar and American avant garde. Aesthetic functions, spectatorial effects, and ideological implications of montage. Film makers include Eisenstein, Godard, and Conner.

Same as: FILMSTUD 140

**FILMSTUD 341. Music Across Media: Music Video to Postclassical Cinema. 4 Units.**

What makes music videos, YouTube clips and musical numbers in today's films engaging? What makes them tick? Emphasis is on aesthetics and close reading. How music videos and its related forms work. Uses of the body, how visual iconography operates, what lyrics and dialogue can do, how and what music can say, and how it can work with other media. Questions of representation such as how class, ethnicity, gender, race, and nationality function. Viewership and industry practices.

Same as: FILMSTUD 141, MUSIC 185, MUSIC 385

**FILMSTUD 345. Politics and Aesthetics in East European Cinema. 4 Units.**

From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica.

Same as: FILMSTUD 145

**FILMSTUD 350. Cinema and the City. 4 Units.**

Utopian built environments of vast perceptual and experiential richness in the cinema and city. Changing understandings of urban space in film. The cinematic city as an arena of social control, social liberation, collective memory, and complex experience. Films from international narrative traditions, industrial films, experimental cinema, documentaries, and musical sequences. Recommended: 4 or equivalent.

Same as: FILMSTUD 150

**FILMSTUD 355. Comics and the City. 4 Units.**

Urban history and life informs the history, stories, structures and aesthetics of the comics, coinciding with the emergence of the modern metropolis in America and Europe and is rooted in the same industrial, commercial, and social transformations. Comics and cartoons were fixtures of urbane humor publications of the 19th century and became a valued fixture of the American newspaper in the very earliest part of the 20th. The characters in early comic strips were often denizens of the urban world, whether immigrants fresh off the boat or the nouveau riche. Many strips were grounded in quotidian urban experience. Later comics use the city as setting, aesthetic, and metaphor. The mean streets of Jacques Tardi's noirish cities about the rather sunnier and shinier example of Superman's Metropolis. Science fiction comics and manga give us the impacted and often destructed cities of the future. The graphic novel adaptation of Paul Auster's City of Glass maps the grid pattern of the comics page onto the gridded streets of Manhattan. Chris Ware's Building Stories series uses one apartment building to follow the myriad and sometimes intersecting lines found therein. Assigned readings include many comics alongside urban and comics scholarship. Artists to be considered include Outcault, Swinnerton, McCay, Eisner, Katchor, Tatsumi, Doucet, Tardi, Otomo. Hergé, Mazzuchelli, Chaykin, Miller, Ware, Pekar, Crumb, Glocckner.

**FILMSTUD 357. Film Noir from Bogart to Mulholland Drive. 4 Units.**

Why did prosperous mid-20th-century America produce a dark cinema of hard-boiled characters, gritty urban settings, stark high-contrast lighting, and convoluted plots? Key examples and the recent legacy of film noir: 40s and 50s Hollywood movies featuring anti-heroes, femmes fatales, shattered dreams, violence, and a heaviness of mood. Film noir's influences included pulp fiction; B-movie production-budgets; changes in Hollywood genres; left-populist aesthetic movements; a visual style imported by European émigré directors; innovations in camera and film technology; changes in gender roles; combat fatigue; and anxieties about the economy, communism and crime. Directors, writers, cinematographers and actors. Film viewings, readings and analyses.

Same as: FILMSTUD 157

**FILMSTUD 364A. Technology and the Visual Imagination. 4 Units.**

An exploration of the dynamic relationship between technology and the ways we see and represent the world. The course examines technologies from the Renaissance through the present day, from telescopes and microscopes to digital detectors, that have changed and enhanced our visual capabilities as well as shaped how we imagine the world. We also consider how these technologies influenced and inspired the work of artists. Special attention is paid to how different technologies such as linear perspective, photography, cinema, and computer screens translate the visual experience into a representation; the automation of vision; and the intersection of technology with conceptions of time and space.

Same as: ARTHIST 164A, ARTHIST 364A, FILMSTUD 164A

**FILMSTUD 365A. Fashion Shows: From Lady Godiva to Lady Gaga. 4 Units.**

The complex and interdependent relationship between fashion and art. Topics include: the ways in which artists have used fashion in different art forms as a means to convey social status, identity, and other attributes of the wearer; the interplay between fashion designers and various art movements, especially in the 20th century; the place of prints, photography, and the Internet in fashion, in particular how different media shape how clothes are seen and perceived. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.

Same as: ARTHIST 165A, ARTHIST 365A, FILMSTUD 165A

**FILMSTUD 367B. Beyond the Fuzzy-Techie Divide: Art, Science, Technology. 4 Units.**

Although art and science are often characterized as "two cultures" with limited common interests or language, they share an endeavor: gaining insight into our world. They even rely on common tools to make discoveries and visually represent their conclusions. To clarify and interrogate points of similarity and difference, each week's theme (time, earth, cosmos, body) explores the efforts of artists and scientists to understand and represent it and the role of technology in these efforts. Focus on contemporary examples.

Same as: ARTHIST 167, ARTHIST 367, FILMSTUD 167B

**FILMSTUD 402. Frankfurt School & Film Theory. 5 Units.**

Formal, historical, and cultural issues in the study of film. Classical narrative cinema compared with alternative narrative structures, documentary films, and experimental cinematic forms. Issues of cinematic language and visual perception, and representations of gender, ethnicity, and sexuality. Aesthetic and conceptual analytic skills with relevance to cinema.

**FILMSTUD 404. Postwar American Avant Garde Cinema. 5 Units.**

History and theory of post-WW II American independent and experimental film. Emphasis is on issues of audiovisual form, structure, and medium specificity. Films and writings include Maya Deren, Stan Brakhage, Michael Snow, and Hollis Frampton.

**FILMSTUD 406. Montage. 5 Units.**

Graduate seminar in film aesthetics. Theoretical and practical approaches to editing/montage. Stylistic, semiotic, epistemological, and ideological functions of montage considered in film-historical contexts including: development of the continuity system of editing; flourishing of the Soviet montage school; and achievements of the post-war new waves. Filmmakers include D. W. Griffith, Sergei Eisenstein, Jean-Luc Godard, and Dusan Makavejev.

**FILMSTUD 410. Documentary Perspectives I. 4 Units.**

Restricted to M.F.A. documentary film students. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.

**FILMSTUD 414. Comics. 5 Units.**

Long derided as neither literature nor art, the medium of comics, with its complex juxtapositions of word and image and of images with one another, is increasingly understood as a supple and sophisticated mode of communication and expression. Dynamic new work is appearing on a weekly basis, and lavish reprint projects have made comics history more available for study and pleasure. This seminar simultaneously explores the aesthetic and historical parameters of the medium as well as the shape of comics scholarship. As comics are something of a hybrid form, the seminar will necessarily be interdisciplinary in approach. The treatment of time, rhythm, and tempo will be considered alongside explorations of line, panel, sequence, page, story, and seriality. The flexibility of the medium will be encountered by reading broadly in comic strips (humorous and dramatic), superheroes, undergrounds and independents, political satire and pedagogy, autobiography, experimental works, and children's comics, as well as recent iterations of the graphic novel.

**FILMSTUD 430. Cinema and Ideology. 5 Units.**

The relationship between cinema and ideology from theoretical and historical perspectives, emphasizing Marxist and psychoanalytic approaches. The practice of political filmmaking, and the cinema as an audiovisual apparatus and socio-cultural institution. Topics include: dialectics; revolutionary aesthetics; language and power; commodity fetishism; and nationalism. Filmmakers include Dziga Vertov, Jean-Luc Godard, Bruce Conner, and Marco Ferreri. Theoretical writers include Karl Marx, Sergei Eisenstein, and Slavoj Zizek. Prerequisite: consent of instructor.

**FILMSTUD 432. CHINESE CINEMA. 5 Units.**

This course surveys a range of critical perspectives and debates on Chinese cinema. It is organized on the basis of weekly topics, such as genre, historiography, gender, modernity, and the idea of national cinema. Consent of instructor required.

Same as: FILMSTUD 232

**FILMSTUD 436. Chinese Cinema. 5 Units.**

Course surveys a range of critical perspectives and debates on Chinese cinema. It is organized on the basis of weekly topics, such as genre, historiography, gender, modernity, and the idea of national cinema. Consent of instructor required.

**FILMSTUD 440. Sound Technology. 5 Units.**

Development of sound technology and reproduction in context of modernity, with some emphasis on the crossings of sound and image in the history and theory of technological reproduction. Topics include phonography, recording, and mass culture (Adorno, Sterne, Thompson, Lastra); cinematic sound and music (Chion, Altman, Gorbman); filmic and compositional practices in the American avant-garde (Joseph, Kahn); acoustic ecology (Schafer). Weekly screenings or listenings.

**FILMSTUD 442. Hollywood Musical. 5 Units.**

Physical, emotional, aesthetic, and social liberation mark this most colorful of film genres. Musicals are a place for staging issues of identity, including the impact of African American and Jewish culture, and issues of gay reception and interpretation. Attention to technologies of sound and color, the relation to vaudeville and Broadway, and ethnic and aesthetic diversity. Musicals as the epitome of filmic illusionism and the Hollywood studio system; the implications of their seduction of audiences; the meaning of spectacle, the centrality of performance. Busby Berkeley, Fred Astaire, Judy Garland, Bob Fosse, Stanley Donen, Gene Kelly, Vincente Minnelli.

**FILMSTUD 445B. History and Politics in Russian and Eastern European Cinema. 5 Units.**

From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica. Permission of instructor required prior to the first day of classes.

Same as: FILMSTUD 245B, REES 301B

**FILMSTUD 449. Eye of the Beholder: Subjective Cinema. 5 Units.**

This course proposes to look at how even the most seemingly objective films are shaped by a subjective eye. An eye which is molded by gender, race, culture and class - all of which influence the entire film-making process and experience from how something is framed to how it is cut and how it is perceived it. How we look at something, for how long we look at it and in what context we are shown something is as important as what we are looking at. Similarly the subjective eye of the viewer shapes how he or she understands and interprets the film. Whether the viewer is an insider or outsider to the subject completely changes expectations and reactions to the film. So then what are we really talking about when we talk about documentary films? What makes a documentary a documentary? Why is such a categorization valuable? necessary? useful? The course will combine analysis of films, theoretical texts, and some practical "production" exercises.

Same as: FILMSTUD 249

**FILMSTUD 458. The Face on Film. 5 Units.**

The seminar will discuss the workings of the face: as privileged object of representation, as figure of subjectivity, as mode and ethic of address, through film theory and practice. How has the cinema responded to the mythic and iconic charge of the face, to the portrait's exploration of model and likeness, identity and identification, the revelatory and masking play of expression, the symbolic and social registers informing the human countenance? At this intersection of archaic desires and contemporary anxieties, the face will serve as our medium by which to reconsider, in the cinematic arena, some of the oldest questions on the image. Among the filmmakers and writers who will inform our discussion are Aumont, Balázs, Barthes, Bazin, Bresson, Doane, Dreyer, Epstein, Hitchcock, Koerner, Kuleshov, Warhol, and others.

**FILMSTUD 465. American Avant-Garde. 5 Units.**

TBD.

**FILMSTUD 490. Movies and Methods: Hitchcock and Beyond. 5 Units.**

Open to graduate students and advanced undergraduates with permission of the instructor; capstone course for majors (senior seminar). Topics vary year to year. Focus is on historiography and theory. Limited enrollment. Permission code needed in order to enroll. Same as: FILMSTUD 290

**FILMSTUD 620. Area Core Examination Preparation. 5 Units.**

For Art History Ph.D. candidates. Prerequisite: consent of instructor.

**FILMSTUD 660. Independent Study. 1-15 Units.**

For graduate students only. Approved independent research projects with individual faculty members.

**FILMSTUD 660E. Extended Seminar. 4 Units.**

May be repeated for credit. (Staff).

## Finance Courses

**FINANCE 121. Undergraduate Finance Research and Discussion Seminar. 1 Unit.**

This seminar is designed to provide some experience with research methods and topics in finance, and to assist undergraduates with career interests in financial research, whether academic or not, with preparation for those careers. The seminar meetings are weekly and discussion based, covering a range of issues and methods in financial economics. Students are expected to prepare a 30-minute research presentation once during the quarter.

**FINANCE 201. Finance. 3 Units.**

This course covers the foundations of finance with an emphasis on applications that are vital for corporate managers. We will discuss many of the major financial decisions made by corporate managers, both within the firm and in their interactions with investors. Essential in most of these decisions is the process of valuation, which will be an important emphasis of the course. Topics include criteria for making investment decisions, valuation of financial assets and liabilities, relationships between risk and return, capital structure choice, payout policy, the use and valuation of derivative securities, and risk management. This course is targeted to those students who are new to finance and for those with little quantitative background.

**FINANCE 204. Finance - Accelerated. 3 Units.**

This course covers the foundations of finance with an emphasis on applications that are vital for corporate managers. We will discuss many of the major financial decisions made by corporate managers, both within the firm and in their interactions with investors. Essential in most of these decisions is the process of valuation, which will be an important emphasis of the course. Topics include criteria for making investment decisions, valuation of financial assets and liabilities, relationships between risk and return, capital structure choice, the use and valuation of derivative securities (e.g., options and convertible securities), and risk management. No previous background in finance is required or expected, but in comparison with Finance 201, less time will be spent in class on the steps involved in solving basic problems. Therefore, students choosing this course should be relatively comfortable with basic mathematical operations (e.g., expressions involving multiplication of multiple terms, summation of multiple terms, etc.), though familiarity with the underlying finance concepts is not expected. A good diagnostic is to skim Section 4.2 "Rules for Time Travel" (pp. 98-104) in the course textbook, *Corporate Finance* by Berk and DeMarzo. If you are comfortable with the level of basic mathematics involved (even if the concepts are new), 204 is a good choice. If not, you should consider Finance 201.

**FINANCE 211. Corporate Finance: Applications, Techniques, and Models. 3 Units.**

The focus of this course is to apply the fundamental ideas and tools of corporate finance to real-world corporate decisions. This course is designed to be the second course in the standard finance sequence; that is, it is designed to be the natural follow-up to the Winter Managerial Finance course. This course will develop and extend standard tools and techniques of financial analysis, valuation, and model-building, and apply these methods to a wide range of cases. Case topics will include capital structure, valuation, mergers and acquisitions, private equity, international finance, and financial distress. Students will be expected to develop detailed model-based analyses for the cases using the tools and techniques we develop in this course, and to employ their analyses to reach and defend specific recommendations for these cases.

**FINANCE 214. Accelerated Corporate Finance: Applications, Techniques, and Models. 3 Units.**

The focus of this course is to apply the fundamental ideas and tools of corporate finance to real-world corporate decisions. This course (in either its basic or accelerated format) is designed to be the second course in a standard finance sequence; that is, it is designed to be the natural follow-up to the Winter Managerial Finance course. This course will develop and extend standard tools and techniques of financial analysis, valuation, and model-building, and apply these methods to a wide range of cases. Case topics will include capital structure, valuation, mergers and acquisitions, private equity and venture capital, international finance, hostile takeovers and leveraged buyouts, financial distress and bankruptcy. Students will be expected to develop detailed model-based analyses for the cases using the tools and techniques we develop in this course, and to employ their analyses to reach and defend specific recommendations for these cases.

**FINANCE 221. Finance for Non-MBAs. 3 Units.**

This course, intended for graduate students and advanced undergraduates, covers the foundations of finance with applications in corporate finance and investment management. It discusses many of the major financial decisions made by managers and investors, emphasizing the process of valuation. Topics include criteria for making investment decisions, risk and return, market efficiency, capital structure, and the valuation of derivative securities (e.g., options). The course also provides coverage of the major financial instruments issued by corporations. Prerequisite: ability to use spreadsheets, knowledge of basic probability and statistics concepts, including random variables, expected value, variance, covariance, and simple estimation and regression. For registration questions about this course, please contact the Graduate School of Business at [academic\\_operations@gsb.stanford.edu](mailto:academic_operations@gsb.stanford.edu).

**FINANCE 229. MSx: Finance. 3 Units.**

This course covers the foundations of corporate finance including the management of capital structure, financial forecasting, dividend policy, financial distress, cost of capital and capital budgeting. It discusses the major financial decisions made by corporate managers and the impact of those decisions on investors and the value of the firm. Topics include criteria for understanding the valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the role of derivative securities, including options. The course also provides coverage of the role of financial markets in the operations of the firm.

**FINANCE 310. Finance - Advanced. 3 Units.**

This advanced applications course brings recent advances in finance to bear on real-world challenges in investment management and corporate finance with an emphasis on capital markets. The goal of this course is to develop a deeper understanding of how capital markets actually work, drawing on recent advances in modern finance. We discuss the implications for financial decision making by managers and investors. The course is intended for MBA1 students who are familiar with the foundations of finance, including discounted cash flow (DCF) analysis, internal rate of return (IRR) calculations, mean-variance analysis and the Capital Asset Pricing Model (CAPM). Examples of broad topics covered in the class include challenges in portfolio management, performance analysis of mutual funds, hedge funds and private equity, IPOs, hedging of currency and interest rate risk, etc. To be eligible, students must have passed the placement exam in Week Zero, must have solid quantitative skills and have a willingness to analyze data.

**FINANCE 319. Private Equity Investing Seminar. 4 Units.**

This PE Investing seminar launched in 1993 focuses on private equity investing, including investments with control, buyouts, and minority investments at various stages in a company's life. Private equity investing activity has grown significantly over the past 2 decades. This seminar explores selected topics in private equity investing for those MBA students who take the corequisite course FINANCE 321.01, Investment Management and Entrepreneurial Finance. Private equity includes both established and early stage companies. The course extends and deepens the entrepreneurial finance area for those with an interest in private equity, venture capital and principal investing, taking a global view. Utilization will be made of original case studies and lecture-discussions, building on the framework of FINANCE 321. The Seminar meets with many outstanding investors. All those registered in F321.01 will also be registered in F319. See yellow Term Sheet put in MBA Boxes in early May. All those registered in F321.02 will also be registered in F329. See yellow Term Sheet.

**FINANCE 320. Debt Markets. 4 Units.**

This course is intended for those who plan careers that may involve debt financing for their businesses or other investments, or involve trading or investing in debt instruments and their derivatives, including money-market instruments including central bank deposits, government bonds, repurchase agreements, interest-rate swaps, mortgage-backed securities (MBS), corporate bonds, structured credit products, and credit derivatives. We will emphasize institutional features of the markets, including trading, pricing, and hedging. There is a special focus on distressed debt. Most lectures will start with a cold-called student presentation of an un-graded short homework calculation. There will also be a series of graded homework, an in-class mid-term, and about six graded 'pop quizzes' of 10 minutes or less.

**FINANCE 321. Investment Management and Entrepreneurial Finance. 3 Units.**

Our focus is fundamental value investing. Equity investment in companies, common stocks, early/growth stage ventures and private equity, deals, partnerships, hedge funds, or other entrepreneurial opportunities will be immediately or eventually important for most MBAs—either on the investing side or on the fund-raising financing side. This investment course discusses many practical and conceptual factors influencing the analysis and value of companies and deals, including publicly listed and private equity investments, and on success of investment approaches. The focus of this course is on quoted and private equity investments and on entrepreneurial finance. The format of the class is primarily case discussions and lecture discussions led by the professor and investors/principals who were involved in the case. This course enables MBA students to learn a broad investing skill-set and to study outstanding investors. See yellow Term Sheet put in MBA Boxes in early May.

**FINANCE 322. Financial Intermediaries and Capital Markets. 4 Units.**

This course focuses on financial markets, institutions, and instruments. We consider when and how firms raise capital through the life cycle, beginning with the capital-raising decisions and transactions for young firms and then discussing the decisions facing older, listed firms. We concentrate mainly on the firm's perspective while also considering the perspective of financial intermediaries. Issues to be considered in this course include the role of financial intermediaries like banks, the decision to go public, the pricing and role of investment banks in IPOs, bank debt, project finance, public debt, private placements, securitizations, convertibles, and markets for junk bonds.

**FINANCE 324. Practical Corporate Finance. 4 Units.**

The focus of this course is to apply the fundamental ideas of corporate finance to real-world problems. This course is a follow-up to the Fall course in Managerial Finance in which the basics of finance and valuation were covered. We will explore both how to make the acquired knowledge practical as well as to deepen our understanding of the core principles of finance. During the course we will analyze cases covering a wide range of topics such as capital structure, private equity and venture capital, mergers and acquisitions, hostile takeovers and leveraged buyouts, as well as bankruptcy and financial distress. These cases provide an opportunity to bridge the gap between theory and real-life situations. Students are expected to develop their own spreadsheets and provide recommendations based on their analysis of the case material. This course was formerly known as FINANCE 224. An accelerated version of this course is offered as FINANCE 331.

**FINANCE 326. Derivative Securities. 4 Units.**

This course is an introduction to options, futures and other derivative securities. The goal is to learn a core set of principles that underlie the pricing and use of derivatives. In particular, we will cover the valuation and use, both for risk management and for speculation, of forwards, futures, swaps, and options; the Black-Scholes option-pricing formula; delta-hedging; credit derivatives; financial risk management; and the role of derivatives in the recent financial crisis.

**FINANCE 327. Financial Markets. 4 Units.**

The aim of this course is to develop a thorough understanding of financial markets. We explore how investors make decisions about risk and return, how financial markets price risky assets in equilibrium, and how financial markets can sometimes malfunction. The course puts particular emphasis on the role of real-world imperfections that are absent from the standard textbook view of financial markets. For example, we explore the role of illiquidity: Why are there liquid markets for some types of assets but not for others? Why does liquidity often disappear in times of market turmoil? We will also study recent insights from behavioral finance about investor psychology and market inefficiencies. Moreover, we will look at financial innovations such as credit-default swaps, securitization, and hedge funds that play important roles in financial markets these days. We use cases to develop these topics in the context of practical decision-problems in the areas of asset allocation, risk management, and financing.

**FINANCE 329. Investment Seminar. 4 Units.**

F329 - Investment Seminar: "Global Principal Investing/Hedge Funds" is a seminar focused on selected topics in masterful investing in publicly traded with some private equity capital investments, with emphasis on the principal's point of view. We study hedge funds and mutual funds and meet with outstanding investors. The scope and context is global including emerging markets. The Seminar is taught by a founding director of one of the largest international investment funds. All those registered in F321.01 will also be registered in F319. See yellow Term Sheet put in MBA Boxes in early May. All those registered in F321.02 will also be registered in F329. See yellow Term Sheet.

**FINANCE 330. Investment Management: Asset Allocation and Asset/Manager Selection. 4 Units.**

This course covers strategic and tactical asset allocation in investment portfolios as well as specific asset and manager selection issues. We consider challenges that are unique to the various asset classes that comprise broad-based portfolios, including: public equities, fixed income securities, private equity (both buyout and venture capital), hedge funds, and real assets (real estate, energy, timber, and commodities). We also consider challenges that are specific to various geographies (e.g., domestic, developed international and emerging markets) across the various asset classes. The portfolio optimization framework employed considers the perspective of different types of investors that vary along such dimensions as risk preference, investment horizon, tolerance for illiquidity, tax status, social objectives, and special asset-specific relationship, information or skill advantages. More specifically, our framework considers: tradeoffs between seeking diversification to control risks, and making concentrated bets where there appears to be outsized return prospects (whether due to one-off proprietary investment opportunities or the market appearing to value certain sectors improperly); tradeoffs between passive investment (at low administrative cost and complexity) and active investment designed to produce premium returns (despite the incremental cost and complexity); distinctions between investing as principals and delegating to managers, and the importance of aligning incentives among all parties; the importance of liquidity in driving the pricing, risk and expected returns to various asset classes and the importance of identifying which parties are natural suppliers of liquidity and which the natural demanders; the importance of effective underwriting and ongoing monitoring of investment opportunities; the importance of tax considerations in the pricing and expected returns to various asset classes; and the importance of identifying which parties form the natural clientele in each asset class. For a number of the sessions, we will invite domain experts to add spice and depth to a portion of the class discussion.

**FINANCE 331. Practical Corporate Finance. 4 Units.**

(Note: this course was formerly known as FIN 230) The main aim of this course is to enable students to apply the fundamental ideas of finance to problems in the area of corporate finance with all the complexities the real world entails. The course is a follow-up to the Fall Managerial Finance course where students learnt basics of valuation techniques and various finance applications. We will explore both how to make all this knowledge practical as well as how to deepen our knowledge of fundamental finance ideas. The main focus of this course is on the corporate financial manager and how he/she reaches decisions as to investments, dividends and financing of all sorts. Topics include leveraged buyouts, hostile takeovers, private equity financing and venture capital, financial distress and bankruptcy, mergers and acquisitions, managing working capital. The cases will be used to motivate our discussion of how to bridge the gap between rigorous finance theory and its application to practical problems in corporate finance. The course is case-based and more advanced than FINANCE 324. "Advanced" means that we will discuss a lot of subtle qualitative issues as well as explore deeper fundamental applications of core finance ideas. The course is intensive and will require students to prepare carefully all cases, read and understand a lot of materials, and actively participate in the class discussion. The main teaching method is cold calling. Same as: Accelerated

**FINANCE 332. Finance and Society. 3 Units.**

This interdisciplinary course will discuss the role of the financial system within the broader economy and the interactions between the financial industry and the rest of society. The course will provide an overview of the financial system, cover the basic economic principles essential for understanding the role of finance in the economy, and discuss of policy issues around financial regulation. It seeks to mix students from GSB, Law School, Public Policy, Economics, Political Science, and other departments. Topics to be discussed include: \* The financial system, from microfinance to global megabanks: how and why finance can benefit society as well as endanger and harm. \* Financial regulation: why and how? \* Other people's money: the challenge of effective control, governance, and trust. \* The politics of banking and finance. \* Ethical issues in finance.

**FINANCE 335. Corporate Valuation, Governance and Behavior. 4 Units.**

This course will develop a detailed knowledge of corporate valuation techniques, together with an understanding of the role such valuations play in a wide range of corporate financing decisions. First, the course will carefully consider different valuation techniques, the assumptions that underlie each of these methods, how they are applied in practice, how they are related to one another, and how to decide which method of valuation is appropriate for a given application. After developing these tools, they will then be applied to a wide range of corporate finance settings. Among the applications to be considered are mergers and acquisitions, international valuation, corporate governance, financial distress, agency conflicts, asymmetric information, and overvaluation. For all of these applications, this course will emphasize the central importance of valuation to understanding observed phenomena and to guiding optimal decision making, as well as the unique challenges to valuation posed by the particular application.

**FINANCE 336. The Finance of Retirement and Pensions. 4 Units.**

The financial economics of how retirement is financed, particularly in the US. Topics: basic finance concepts necessary for understanding individual retirement savings. Properties of financial instruments such as bonds and stocks. Optimization of individual retirement account or 401(k) portfolios. Defined benefit pensions. Measuring defined benefit pension liabilities. Impact of defined benefit pension liabilities on corporate, state, and local budgeting. The economics of national retirement policy including Social Security and government treatment of private retirement savings.

**FINANCE 337. Business Decision Making. 3 Units.**

This experiential course will focus on how to make a business decision correctly. The theory will focus on common behavior biases and mistakes. Students will practice making business decisions by analyzing a business case each week.

**FINANCE 341. Modeling for Investment Management. 3 Units.**

This course will combine practical and up-to-date investment theory with modeling applications. Understanding beautiful theory, without the ability to apply it, is essentially useless. Conversely, creating state-of-the-art spreadsheets that apply incorrect theory is a waste of time. Here, we try to explicitly combine theory and application. The course will be divided into 6 modules, or topics. The first day of each module will be a lecture on an investment topic. Also provided is a team modeling project on the topic. The second day of each module will be a lab. The lab day will begin with modeling concepts (tips) designed to help you use Excel to implement the module's investment topic. After the tips are provided, the remainder of the lab day is devoted to teams working on their modeling project and allowing for Q&A. On the third day of each module will be presentations and wrap-up.

**FINANCE 345. History of Financial Crises. 3 Units.**

Financial crises are as old as financial markets themselves. There are many similarities between historical events. The recent credit crisis, for example, is far from unique. More often than not financial crises are the result of bubbles in certain asset classes or can be linked to a specific form of financial innovation. This course gives an overview of the history of financial crises, asset price bubbles, banking collapses and debt crises. We start with the Tulip mania in 1636 and end with the recent credit and debt crises. The purpose of the course is to understand the causes of past crises and to develop a conceptual framework that ties common elements together. We will discuss the lessons that we can draw for financial markets today.

**FINANCE 346. Institutional Money Management. 3 Units.**

The object of this course is to study the money management industry from the perspective of the user — an investor who wants to invest money. This course will study the main components of the money management industry: mutual funds, hedge funds, private equity funds and venture capital funds. It will also examine important users of the industry such as non profits, endowments and defined benefit pension funds. The emphasis of the course will not be on how fund managers make money, but rather on how the industry is organized, how managerial skill is assessed, how compensation is determined, and how economic rents are divided between managers and investors. The course will explore how competitive market forces interact with managerial skill and other market frictions to give rise to the observed organization of the industry.

**FINANCE 347. Money and Banking. 3 Units.**

This course is designed to help students understand the connections between money (the Federal Reserve), financial markets, and the macroeconomy. How are interest rates determined, and how does the Federal Reserve conduct monetary policy? What economic factors drive the yield curves in different bond markets? We will pay particular attention to the banking system, with an eye toward understanding the function and importance of banks. Topics will include the role of the Federal Reserve as a lender of last resort during the recent, and prior, financial crises, unconventional monetary policy tools such as quantitative easing and forward guidance. We discuss the role of the government in regulating the financial sector, paying particular attention to capital requirements for banks. We will often begin class with a discussion of current macro-financial market events in the context of our course coverage. The course is appropriate for anyone trying to gain a macroeconomic perspective on capital markets, from investors to bankers, or those simply interested in the linkages between interest rates, banks and the economy. Given the topics we cover, the course will also be interesting to those who want a better understanding of the 2007-2009 financial crisis and the ongoing Federal Reserve experiment in unconventional monetary policy.

**FINANCE 350. Corporate Financial Modeling. 4 Units.**

The course will take the perspective of a mid-level manager or decision-maker who is responsible for collecting, analyzing, and utilizing financial information in the context of a major transaction. We will integrate theories presented throughout courses in the core, particularly accounting and finance, and take a hands-on approach to understand how the theory is implemented in practice. The focus of the course will be on developing critical financial modeling skills, understanding best practices, and recognizing common pitfalls. Students will work on a series of cases and build models that can be used for earnings and pro-forma financial statement forecasts, valuation, the assessment of financing needs, merger analysis, and LBO evaluation. Students will also gain experience presenting financial models and critically assessing them. By the conclusion of the course, students will develop the skills to construct complex financial models and the logical frameworks to utilize them for various organizational applications. [Note: This course is geared toward students relatively new to financial modeling; those with extensive financial modeling backgrounds may be better served by an alternative course.]

**FINANCE 351. Advanced Corporate Financial Modeling. 4 Units.**

Students will engage in the development of corporate financial modeling cases and solutions. Students will also develop materials to aid others in building financial models, and serve as case leaders during lab workshops. Extensive background in financial modeling and experience with Excel is required.

**FINANCE 361. Behavioral Finance. 4 Units.**

This course provides an introduction to behavioral finance, a discipline which integrates insights from psychology into the study of financial decisions and markets. There will be a focus on understanding the psychological underpinnings of financial decision-making as well as the institutional frictions that may allow these psychological mechanisms to influence economic outcomes. Applications include the pricing of assets relative to fundamental value, trading strategies, managerial behavior, and household savings and investment decisions. Conceptual issues will be emphasized through a mix of case discussions and lectures, and quantitative exercises will serve to develop analytical tools for making financial choices.

**FINANCE 373. Entrepreneurial Finance. 3 Units.**

This is a course about the financial decision-making process largely from the point of view of the CEO of an entrepreneurial venture, ranging from very early to very late stages. The course takes a two-pronged approach: First, we develop tools and concepts of corporate finance related to modeling, valuation, control, and investment decisions within an entrepreneurial context. Second, we use cases with firms at different stages of their life cycles from initial angel or venture capital investments through exit decisions, in order to see the issues that arise when these principles are applied in practice. In some cases we show the viewpoint of the entrepreneur and in others the perspective of the investor. After all, as an entrepreneur, one cannot negotiate effectively without understanding an investor's motivations. Conversely, an investor cannot evaluate a potential investment opportunity without appreciating the entrepreneur's perspective and incentives. Finally, we explore new developments in entrepreneurial finance such as crowdfunding and early liquidity provisions.

**FINANCE 377. China's Financial System. 4 Units.**

This course is a survey of China's financial system, including its banking industry, monetary policy structure, and financial markets (bonds, derivatives, equities, foreign exchange, and related markets). The goal is an integrated view of how capital, risk, and liquidity are intermediated within China and cross-border, by comparison with more developed financial systems. Recent history and current trends (including liberalization of markets) will be emphasized. Coverage will be through lectures, reading of both primary source documents and secondary (journalistic and analyst) commentary, as well as a range of speakers who are subject matter experts. Students will participate actively in class discussion, make a 5-minute topical presentation, and submit a short (10-page) paper.

**FINANCE 381. Private Equity in Frontier Markets: Creating a New Investible Asset Class. 4 Units.**

In 2001, Jim O'Neil of Goldman Sachs wrote a research note which underscored the importance of so-called Emerging Markets to a well-balanced investment portfolio. Still today, most investors have little or no investment exposure beyond North America, Europe, Japan and more recently India, China and Brazil. All of this is just beginning to change. The not yet fully formed investment category called frontier market private equity is emerging and within the next decade is likely to be an asset class of its own. Private equity investments are being made in southeast Asia, in MENA (Middle East/ North Africa), in sub-Saharan countries beyond South Africa and in Latin America. Even fund of funds are appearing across these markets. At the same time, investors face a world of diminished returns expectations in developed economies just as aging demographics and the need for continued growth, innovation and infrastructure renewal places increasing demands for payout. Suffice it to say, investors will be looking beyond traditional asset classes and geographies for sources of return. This new course is designed to expose you to the still emerging, not yet fully formed world of frontier market private equity. To set the context we will start by reviewing the fundamentals of economic growth and development globally. In addition we will discuss the fundamental concepts involved in constructing and evaluating the performance of a large scale investment portfolio. We will then review cases on the elements of the private equity cycle/process and specifically address the special demands of frontier markets in general. We will also focus on issues that are specific to various markets (e.g. Nigeria, Vietnam, etc.). Students taking the course will be given the opportunity to make important contributions to the knowledge base of this still very young field by working in small teams to research topics of personal and general interest, the results of which will be reported to the rest of the class.

**FINANCE 385. Angel and Venture Capital Financing for Entrepreneurs and Investors. 4 Units.**

This course covers all the stages of funding for early stage high-growth companies, from seed funding to venture capital rounds to a successful exit. We will concentrate on how entrepreneurs and investors make and should make important decisions. Examples of issues that we will cover are: How can entrepreneurs raise funding successfully? What are typical mistakes entrepreneurs make in raising capital and negotiating with investors? How to choose your investor? How to pitch to an investor? How do angels and VCs generate and process their deal flow and select companies? How are VCs involved in business decisions such as recruiting talent and replacing CEOs? What are the important provisions of financial contracts between VCs and founders? How to value early-stage companies? The course is very applied and mostly case-based. We will discuss a lot of nitty-gritty details that is a must for founders and investors. As a part of the course, students will work on their business ideas, pitch to classmates and a group of top VCs in the Valley. This VCs will work with student groups as VC advisors and we will simulate the VC partner meetings. We will have a lot of speakers and case protagonists, founders, angels, and VCs. No prior knowledge of the VC industry is needed.

**FINANCE 548. The Political Economy of Banking Regulation in US and Europe. 1 Unit.**

The 2007-09 financial crisis exposed the extreme fragility of the financial system and the harm financial crises can cause. Have regulatory reforms in the US and Europe been effective and, if not, how and why? Does it matter if some institutions are "too big to fail," and, if so, how and why? This course will discuss the economic and political forces that are shaping the financial system in US and Europe and evaluate recent and current events that will have important implications for the economy for many years. We will see how politics trumps economics in Washington, London and Brussels in different but broadly predictable ways.

**FINANCE 555. Private Wealth Management and Private Investing. 2 Units.**

The Private Wealth Management and Private Investing course will address issues that relate to the management of personal assets as opposed to institutional investing. It will cover the historical origins and growth of private wealth management, investment planning, risk management, inter-generational transfers of wealth, philanthropy and tax planning. Classes will focus on case studies and various readings. Two instructors will lead the class, one from the GSB and one from the private wealth management industry. Most classes will be augmented by visits from professionals in the wealth management and private banking business. Active class participation and a group project are required.

**FINANCE 559. The World of Investing. 1 Unit.**

This course is a speaker series, exposing students to the world of first-class investors and their philosophies. Each week will have a different visitor describing their investment strategy and experience. Attendance at all sessions is a requirement to pass the course.

**FINANCE 562. Financial Trading Strategies. 2 Units.**

The purpose of this course is to familiarize students with the different types of trading strategies employed by various money management institutions. These financial trading strategies are used to manage the risk and return profiles of specific portfolios. Throughout the sessions, students will be challenged to understand and explore the application and implementation of these different strategies. Trading simulations employed on the Rotman Interactive Trader and Rotman Portfolio Manager (using real market data and computer generated data) will be used extensively in this course as a way to learn and test different strategies. All classes will be held in the new Real-time Analytics and Investment Lab (RAIL), located on the third floor of the Bass Building (B312). Students are expected to attend all sessions. Graded are based on in-class simulation results, class participation, and two written assignments. This course is designed to have a fast learning curve and is a pre-requisite for FIN563, the advanced extension of this course.

**FINANCE 563. Financial Trading Strategies 2. 2 Units.**

This course is an extension of FIN562, Financial Trading Strategies. Students will expand on introductory topics from the Financial Trading Strategies Course and be required to build extensive live-market models and risk management models. Class discussions will closely link current market events and pricing anomalies to theoretical and simulated markets and we will closely study the deviations between them.

**FINANCE 587. Private Equity - An Overview of the Industry. 2 Units.**

This 2-unit elective at the GSB is an analytical review and overview of private equity partnerships. The course looks at all aspects of private equity investing and may be of interest to five groups of students: (i) students who aspire to be employed in private equity as a career; (ii) students who plan to be employed by operating companies that are owned by private equity firms; (iii) students who may invest in private equity partnerships as a limited partner; (iv) students who find private equity to be an interesting part of the financial community in general (v) students who expect to participate in corporate business development or mergers and acquisitions. The course will meet for nine classes, most for a duration of 90 minutes. One class will be a mock investment review committee presentation as a final project.

**FINANCE 620. Financial Markets I. 3 Units.**

This course is an introductory PhD level course in financial economics. We begin with individual choice under uncertainty, then move on to equilibrium models, the stochastic discount factor methodology, no-arbitrage pricing and corporate finance. We will also address some empirical puzzles relating to asset markets, and explore the models that have been developed to try to explain them.

**FINANCE 621. Financial Markets II. 3 Units.**

This course continues F620 and covers a number of main concepts in market microstructure. Among the topics that are covered are (i) Rational Expectations models and their foundations (ii) strategic trading models (iii) models of market and funding liquidity. In addition to the discussion of theoretic models time will be allotted to empirical applications.

**FINANCE 622. Dynamic Asset Pricing Theory. 4 Units.**

This course is an introduction to multiperiod models in finance, mainly pertaining to optimal portfolio choice and asset pricing. The course begins with discrete-time models for portfolio choice and security prices, and then moves to a continuous-time setting. The topics then covered include advanced derivative pricing models, models of the term structure of interest rates, the valuation of corporate securities, portfolio choice in continuous-time settings, and general-equilibrium and over-the-counter asset pricing models. Students should have had some previous exposure to general equilibrium theory and some basic courses in investments. Strong backgrounds in calculus, linear algebra, and probability theory are recommended. Problem assignments are frequent and, for most students, demanding. Prerequisite: F620 or permission of instructor.

**FINANCE 624. Corporate Finance Theory. 4 Units.**

This course considers a wide range of topics in theoretical corporate finance (broadly interpreted). Topics include capital structure decisions, agency conflicts in the firm, dividend policy, security design, optimal financial contracting, the theory of the firm, the market for corporate control, and banking and financial intermediation, among others. The primary focus is on how asymmetric information, agency conflicts, strategic interactions, and incomplete contracting affect corporate financial decision-making. The course aims both to familiarize students with influential papers and current research, and to promote new research ideas in the area.

**FINANCE 625. Empirical Asset Pricing. 3 Units.**

This course is an introduction to empirical research in asset pricing. The focus of the course is on the interplay between financial economic theory, econometric method, and that analysis of financial market data. Topics include tests of asset pricing models, return predictability in time-series and cross-section, empirical studies of asset market imperfections, and studies of individual and professional investor behavior. Class discussions will draw on textbooks/monographs and original articles and working papers.

**FINANCE 626. Advanced Corporate Finance. 3 Units.**

This is a course on contemporary theoretical and empirical issues in corporate finance. Building upon the first-year courses in corporate finance theory and empirical methods in finance, we will examine issues in asset pricing applications to corporate finance, dynamic capital structure (dynamic financing decisions), financial distress, financing and investment interactions, and behavioral corporate finance. Both conceptual economic frameworks and econometric methods will be developed as needed. A requirement for this course is that students complete two written projects, one theoretical and one empirical, and at least one of these projects will be presented to the class.

**FINANCE 628. Finance Pre-Seminar Reading Course. 1 Unit.**

Finance Pre-Seminar Reading.

**FINANCE 630. Empirical Corporate Finance. 3 Units.**

This course provides an introduction to empirical research in corporate finance, with an emphasis on the application of cross-sectional and panel data econometric techniques for causal inference. Topics include investment policy, entrepreneurship and innovation, financing decisions, firm ownership, corporate governance, managerial incentives, financial contracting, and the structure and internal organization of firms. The course assumes knowledge of econometrics at the level of MGTECON 603.

**FINANCE 632. Empirical Dynamic Asset Pricing. 3 Units.**

This course explores the interplay between dynamic asset pricing theory, statistical assumptions about sources of risk, and the choice of econometric methods for analysis of asset return data. Therefore, the lectures will be a blend of theory, econometric method, and critical review of empirical studies. Both arbitrage-free and equilibrium preference-based pricing models will be discussed, with particular emphasis given to recent developments and outstanding puzzles in the literature. The prerequisites for F632 are MGTECON 603 - 604, Finance 620, Finance 622, and Finance 625. In particular, I will assume familiarity with dynamic asset pricing theory, at the level of F622; and large-sample theory for least-squares, generalized method-of-moments, and maximum likelihood estimation methods. We will review these methods in the context of specific applications, but this material will not be developed in depth.

**FINANCE 633. Advanced Empirical Corporate Finance. 4 Units.**

This class is devoted to recent developments in the empirical corporate finance literature. Topics include: financial contracting, liquidation and renegotiation, taxation and capital structure, the role of labor markets, leveraged buyouts, executive compensation, the causes and consequences of the financial crisis, and implications of finance for the public sector. The class is very interactive. Many of the sessions will consist of student presentations about the papers from the reading list. We will also further explore empirical methods relevant for applied research in corporate finance, with a focus on identification and panel data issues.

**FINANCE 635. Advanced Topics in Empirical Asset Pricing. 3 Units.**

This course will survey current research topics in empirical asset pricing. The emphasis will be on giving students exposure to active research areas and open questions rather than well-established areas and empirical techniques. Topics may include liquidity, capital market frictions, money management, volatility, investment-based asset pricing, return predictability, bubbles, and consumption-macro asset pricing models.

**FINANCE 637. Macroeconomics and Financial Markets. 4 Units.**

This course will cover research topics at the boundary between macroeconomics and finance. Topics may include the study of macroeconomic models with financial frictions, conventional and unconventional monetary policy, its transmission mechanism and the term structure of interest rates, sovereign debt crises, search frictions and segmentation in housing markets, (over)leveraging by households, heterogeneous expectations, excess volatility, financial bubbles and crises.

**FINANCE 691. PhD Directed Reading. 1-15 Unit.**

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, OIT 691, POLECON 691, STRAMGT 691

**FINANCE 692. PhD Dissertation Research. 1-15 Unit.**

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, OIT 692, POLECON 692, STRAMGT 692

**FINANCE 698. Doctoral Practicum in Teaching. 1 Unit.**

Doctoral Practicum in Teaching.

**FINANCE 699. Doctoral Practicum in Research. 1 Unit.**

Doctoral Practicum in Research.

**FINANCE 802. TGR Dissertation. 0 Units.**

Same as: ACCT 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, OIT 802, POLECON 802, STRAMGT 802

**French General Courses****French Language Courses****FRENLANG 1. First-Year French, First Quarter. 5 Units.**

Proficiency-based. Development of discourse appropriate in French and Francophone contexts.

**FRENLANG 1A. Accelerated First-Year French, Part 1. 5 Units.**

Completes first-year language sequence in two rather than three quarters. Recommended for students with previous knowledge of French who place into FRENLANG 1A on the placement test or who are familiar with another Romance language. FRENLANG 2A fulfills the University foreign language requirement. Prerequisite: Placement Test.

**FRENLANG 2. First-Year French, Second Quarter. 5 Units.**

Continuation of FRENLANG 1. Proficiency-based. Development of discourse appropriate in French and Francophone contexts. Prerequisite: Placement Test, FRENLANG 1 or equivalent.

**FRENLANG 2A. Accelerated First-Year French, Part 2. 5 Units.**

Continuation of FRENLANG 1A. Completes first-year language sequence in two rather than three quarters. Recommended for students with previous knowledge of French who place into FRENLANG 1A on the placement test or who are familiar with another Romance language. Fulfills the University foreign language requirement. Prerequisite: FRENLANG 1A, Placement Test.

**FRENLANG 3. First-Year French, Third Quarter. 5 Units.**

Continuation of FRENLANG 2. Proficiency-based. Development of discourse appropriate in French and Francophone contexts. Prerequisite: Placement Test, FRENLANG 2 or equivalent. Fulfills the language requirement.

**FRENLANG 5A. Intensive First-Year French, Part A. 5 Units.**

Same as FRENLANG 1. Accelerated. Written exercises, compositions, conversational practice, and daily work. Only Stanford graduate students restricted to 9 units may register for 205A,B,C.

**FRENLANG 5B. Intensive First-Year French, Part B. 5 Units.**

Same as FRENLANG 2. Continuation of 5A. Written exercises, compositions, conversational practice, and daily work. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Prerequisite 1 or 5A.

**FRENLANG 5C. Intensive First-Year French, Part C. 5 Units.**

Same as FRENLANG 3. Continuation of 5B. Written exercises, compositions, conversational practice, and daily work. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Fulfills the University language requirement. Prerequisite 2 or 5B.

**FRENLANG 10. Beginning French Oral Communication. 2 Units.**

For students who have completed FRENLANG 2 or equivalent. Emphasis is on speaking skills, vocabulary, and pronunciation. May be repeated once for credit.

**FRENLANG 15. Intermediate French Oral Communication. 2 Units.**

For students who have completed the first-year language requirement. May be repeated once for credit.

**FRENLANG 15S. Intermediate Conversation: French in Everyday Life. 3 Units.**

Same content as 15. May be repeated once for credit. Prerequisite: one year of college French or equivalent.

**FRENLANG 20A. France and Francophonie. 2 Units.**

Second-year French conversation based on themes from the regions of France and the Francophone world. Intermediate-level speaking skills and advanced-level functions. Topics include travel, food, and crosscultural comparisons. Students returning from study abroad programs are encouraged to enroll. May be repeated once for credit. Prerequisite: FRENLANG 21C or equivalent.

**FRENLANG 20B. French Cinema. 2 Units.**

Second-year French conversation based on films. Intermediate-level speaking skills and advanced-level functions. Themes include: French filmmakers, stars, and trends. Required film viewing in and outside class in French. May be repeated once for credit. Prerequisite: FRENLANG 21C or equivalent.

**FRENLANG 20C. Contemporary French Language. 2 Units.**

Second-year French conversation. Intermediate-level speaking skills and advanced-level functions for formal and informal situations. Useful for students planning to travel or study abroad. May be repeated once for credit. Prerequisite: FRENLANG 21C or equivalent.

**FRENLANG 21C. Second-Year French: Cultural Emphasis, First Quarter. 4 Units.**

Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socio culturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: Placement Test, one year of college French.

**FRENLANG 22C. Second-Year French: Cultural Emphasis, Second Quarter. 4 Units.**

Continuation of FRENLANG 21C. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socio culturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: Placement Test, FRENLANG 21C.

**FRENLANG 23C. Second-Year French: Cultural Emphasis, Third Quarter. 4 Units.**

Continuation of FRENLANG 22C. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socio culturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: placement Test, FRENLANG 22C.

**FRENLANG 50S. Reading French. 2-4 Units.**

Same content as 50.

**FRENLANG 60A. Beginning French Conversation. 1 Unit. (AU).****FRENLANG 60B. Intermediate French Conversation. 1 Unit. (AU) (Staff).****FRENLANG 60C. Advanced French Conversation. 1 Unit.****FRENLANG 60D. French Viticulture. 1 Unit.**

See <http://stanfordmaisonfrancaise.wordpress.com> Prerequisite: 21 or older. (AU).

**FRENLANG 60E. French Cooking. 1 Unit. (AU).****FRENLANG 60F. French Cinema. 1 Unit. May be repeated for credit. (AU).****FRENLANG 60N. French cheese. 1 Unit.****FRENLANG 60P. Advanced Viticulture. 1 Unit.**

Prerequisite: Completion of 60D. (AU).

**FRENLANG 60T. Teaching French Conversation. 1 Unit. (AU).**

**FRENLANG 120. Advanced French Oral Communication. 3 Units.**

Speaking skills and functions including narration, description, supporting opinions, and hypothesizing about current events and issues in France. May be repeated once for credit. Prerequisites: FRENLANG 23C or equivalent.

**FRENLANG 124. Advanced French: Composition, Writing, and Presentation. 4-5 Units.**

This bridge course prepares students for transitioning to literature classes that are taught in French. Emphasis is on the development of speaking, writing, and presenting at the advanced level. Students will review and master the difficulties of French through the study of various types of literary texts and through analysis of current events in the francophone world. Required for students majoring or minoring in French. Prerequisite: FRENLANG 23C or equivalent.

**FRENLANG 199. Language Specials. 1-5 Unit.**

Prerequisite: consent of instructor.

**FRENLANG 205A. Intensive First-Year French for Stanford Grads, Part A. 3-5 Units.**

Equivalent to FRENLANG 5A. For Stanford graduate students only. Accelerated. Written exercises, compositions, conversational practice, and daily work. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units.

**FRENLANG 205B. Intensive First-Year French for Stanford Grads, Part B. 3-5 Units.**

Equivalent to FRENLANG 5B. For Stanford graduate students only. Continuation of 205A. Accelerated. Written exercises, compositions, conversational practice, and daily work. Prerequisite 205B or equivalent. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units. Prerequisite 205A or equivalent.

**FRENLANG 205C. Intensive First-Year French for Stanford Grads - Part C. 3-5 Units.**

Equivalent to FRENLANG 5B. For Stanford graduate students only. Continuation of 205B. Accelerated. Written exercises, compositions, conversational practice, and daily work. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units. Prerequisite 205B or equivalent.

**FRENLANG 250. Reading French. 4 Units.**

For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year or reading proficiency in another Romance language.

**FRENLANG 250S. Reading French. 2-4 Units.**

For seniors or graduate students seeking to meet the University reading requirement for advanced degrees. Reading strategies for comprehension of secondary literature for academic research. Fulfills the University foreign language requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year or reading proficiency in another Romance language.

**FRENLANG 394. Graduate Studies in French Conversation. 1-3 Unit.**

Prerequisite: consent of the instructor.

**FRENLANG 395. Graduate Studies in French. 1-5 Unit.**

Prerequisite: consent of instructor.

**French Literature Courses****French Literature Courses****FRENCH 10SC. Les Existentialistes: Beauvoir, Camus, Sartre. 2 Units.**

Do you dream of studying in the Latin quarter? Love the sound of French? And do the names Albert Camus, Simone de Beauvoir, and Jean-Paul Sartre make your mind tingle with excitement? <br><br>Then you will want to spend next September immersing yourself in French and reading its most famous Existentialists. Spend mornings brushing up on your spoken and written language proficiency, and afternoons talking about some of the great works of the twentieth century (including *L'Étranger*, *Huis clos*, and *Le Deuxième sexe*). <br><br>We will also broaden our discussions with French films (including *Les quatre-cent coups* and *A bout de souffle*) and other cultural activities (like a trip to the Legion of Honor), including a performance starring YOU! Sophomore College Course: Application required, due noon, April 5, 2016. Apply at <http://soco.stanford.edu>.

**FRENCH 60S. Advanced Conversation Salon. 1 Unit.**

This course provides students with the opportunity to practice speaking French at the advanced level. Recreating the atmosphere of a French salon, participants will develop greater oral proficiency through discussions of literature, film, politics, and contemporary culture. Please note that all Maison Française courses take place at the Maison Française and begin during Week 2 of the quarter. Prerequisite: FRENLANG 23C or equivalent.

**FRENCH 75N. Narrative Medicine and Near-Death Experiences. 3 Units.**

Even if many of us don't fully believe in an afterlife, we remain fascinated by visions of it. This course focuses on Near-Death Experiences and the stories around them, investigating them from the many perspectives pertinent to the growing field of narrative medicine: medical, neurological, cognitive, psychological, sociological, literary, and filmic. The goal is not to understand whether the stories are veridical but what they do for us, as individuals, and as a culture, and in particular how they seek to reshape the patient-doctor relationship. Materials will span the 20th century and come into the present. Taught in English.

Same as: ITALIAN 75N

**FRENCH 87N. The New Wave: How The French Reinvented Cinema. 3-4 Units.**

Focus on the French New Wave's cinematic revolution of 1959-1962. In a few years, the Nouvelle Vague delivered landmark works such as Truffaut's 400 Blows, Godard's Breathless, Chabrol's Le Beau Serge or Resnais' Hiroshima mon amour, and changed forever the way we make and think about movies. Why did these films look so radically fresh? What do they say about France's youth culture in the early 60s? How is the author's theory behind them still influencing us today? Focus is on cultural history, aesthetic analysis, interpretation of narrative, sound and visual forms.

**FRENCH 101. The View From Paris. 3-5 Units.**

The Global Gateway course examines a history of concepts and historical situations that account for the artistic production of Paris from the Middle Ages to the present. The course asks what made Paris crucial to such production, from the medieval university environment (the Letters of Abelard and Heloise, poetry of Villon), the royal courts and theatre houses (Molière, Racine), to the Revolution and new era of enlightened France (Diderot). We then investigate the emergence of a Paris as a historical figure for modernity (Hugo, Zola, Flaubert, Godard, Apollinaire), concluding with a reflection on contemporary Paris reflected in postwar art and literature (existentialism, Francophonie, the question of French citizenship). Course taught in English, with option of French section.

**FRENCH 112. Oscar Wilde and the French Decadents. 3-5 Units.**

Close reading of Oscar Wilde's work together with major texts and authors of 19th-century French Decadence, including Symbolism, l'art pour l'art, and early Modernism. Points of contact between Wilde and avant-garde Paris salons; provocative, creative intersections between (homo)erotic and aesthetic styles, transgression; literary and cultural developments from Baudelaire to Mallarmé, Huysmans, Flaubert, Rachilde, Lorrain, and Proust compared with Wilde's *Salomé*, *Picture of Dorian Gray*, and critical writings; relevant historical and philosophical contexts. All readings in English; all student levels welcome.

Same as: COMPLIT 112, COMPLIT 312, FRENCH 312

**FRENCH 118. Literature and the Brain. 5 Units.**

Recent developments in and neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts? Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer?

Same as: ENGLISH 118, ENGLISH 218, FRENCH 318, PSYCH 118F

**FRENCH 120. Coffee and Cigarettes: The Making of French Intellectual Culture. 4-5 Units.**

Examines a quintessential French figure "l'intellectuel" from a long-term historical perspective. We will observe how this figure was shaped over time by such other cultural types as the writer, the artist, the historian, the philosopher, and the moralist. Proceeding in counter-chronological order, from the late 20th to the 16th century, we will read a collection of classic French works. As this course is a gateway for French studies, special emphasis will be placed on oral proficiency. Taught in French; readings in French.

**FRENCH 122. Nation in Motion: Film, Race and Immigration in Contemporary French Cinema. 3-5 Units.**

An examination of the current debates in France regarding national identity, secularism, and the integration of immigrants, notably from the former colonies. Confronts films' and other media's visual and discursive rhetorical strategies used to represent ethnic or religious minorities, discrimination, citizens' resistance to government policies, inter-racial marriages, or women's rights within immigrant communities. By embodying such themes in stories of love, hardships, or solidarity, the motion pictures make the movements and emotions inherent to immigration tangible: to what effect? Taught in French. Films in French with English subtitles. Additional paper for students enrolled in 235.

Same as: CSRE 65

**FRENCH 123. Word and Image: Collaboration through the Ages. 3-5 Units.**

This course examines how verbal descriptions of objects change over time, and represent how the individual relates to the world. How do they embody common ideals, individual desires, or social anxieties? We will study descriptions of various animate and inanimate objects in texts that reflect key cultural and literary values in French literary history, such as medieval objects of war and love, the description of the Renaissance woman, and the nineteenth-century Gothic cathedral. Taught in French.

**FRENCH 124. The View from Paris: Key Moments in French Culture. 4 Units.**

An intellectually intense, document-based approach to the identity of French culture, made palpable through five moments in the history of Paris (which, more perhaps than any other capital in the western world, has been the center and focus of that nation's productivity. Readings and subsequent discussions will focus on the following contexts in Paris's past: 12th/13th century: the University of Paris as a center of Christian spirituality, intellect, and passion; 17th century: the performance of tragedy on the stages of the city; comedies at the Court of Versailles; 1794: the moment of Terror in the French Revolution and a turning point towards a new form of political life; 1889: Eiffel Tower and World Expo, Paris as the first City of Modernity; 1958: Général de Gaulle assumes power: de-colonization, Existentialism, and France's new identity within Europe. Offered as a part of the Gateways to the World program. Taught in English.

**FRENCH 125. Religion, The Self, and Society in 20th-Century French Novels and Film. 3-5 Units.**

Survey course on religion, the self, and society in 20th-century French novels and film. Readings may include: Gide, Camus, and Bernanos for the novels, and films by Robert Bresson and others. Taught in French.

**FRENCH 126. Fiction, Economics and the Postcolonial. 3-5 Units.**

This course applies a humanistic and social scientific approach to economic processes. We will study works of fiction from Francophone Africa: novels, films and comics, which show how fiction provides socio-cultural interpretations of economic phenomena. We will also look at the economy as an elaborate fictional construct that has a direct impact on the real world. Finally, we will look at the conflict between economic development and social justice in postcolonial societies. Themes include: postcolonialism, modernity, African socialism, capitalism, neoliberalism, globalization, the sacred, immigration, hip hop, social justice etc. Selected texts and films from: Ousmane Sembène, Frantz Fanon, Djibril D. Mambety, Aminata Sow Fall, Fatou Diome, Alphonse Mendy, Jean Joseph Goux, Gayatri Spivak, Jean-Pierre Dupuy, Jean and John Comaroff, Zein-Elabdin and Charuscheela etc. Taught in French.

**FRENCH 127. Fatal Attractions: A Brief History of Passion in the French Tradition. 4 Units.**

Why is French culture so often associated with love and romance? This course examines romantic love—from the earliest romances written in French in the Middle Ages to its cinematic representations in the 21st century. We'll focus on the most passionate and controversial stories, exploring the problems posed by religion, class, race, and sexual orientation. We'll also look at the ways in which romantic love can be a trope in French culture, or a rhetorical instrument used to re-imagine personal awakenings, political situations, or one's relationship to the spiritual or to art. The approach is inter disciplinary, and students will study novels, theater, opera, and cinema. As this course is a gateway for French studies, special emphasis will be placed on oral proficiency. Taught in French.

**FRENCH 128. Revolutionary Moments in French Thought. 3-5 Units.**

French intellectual and political culture has often been associated with revolutionary attempts to break free from the hold of tradition. Indeed, the concept of "revolution" has itself become a French tradition of sorts. Over the last 500 years, these revolutions have taken place in a number of arenas. In philosophy, René Descartes challenged all traditional learning and defined new principles that were central to the so-called "Revolution of the Mind." In religion, Enlightenment thinkers not only advocated the toleration of different faiths but also questioned the veracity of Christianity and of all theistic worldviews. In politics, the French Revolution redefined the very concept of a political revolution and set the stage for modern conceptions of sovereignty. French socialist thinkers of the 19th century, in turn, reshaped the ways their contemporaries thought about socio-economic arrangements. Finally, 20th-century existentialists have attempted to rethink the very purpose of human existence. In this course, we will explore these and other seminal revolutionary moments that not only transformed French society, but that also had implications for European and, indeed, global culture. Taught in English, readings in English.

Same as: HISTORY 239K

**FRENCH 129. Camus. 4-5 Units.**

The Don Draper of Existentialism for Adam Gopnik, the ideal husband of contemporary letters for Susan Sontag, and the admirable conjunction of a man, of an action, and of a work for Sartre, Camus embodies the very French figure of the intellectual engagé, or public intellectual. From his birth in 1913 into a poor family in Algeria to Stockholm where he received the Nobel Prize in Literature in 1957, from the cafes of Saint Germain-des-Prés to his predilection for Provence, Camus captured the quest for universalism, for the politics of justice and beauty, and engaged in the great ethical battles of his time, from Communism to the use of the death penalty for Nazi collaborators, to colonialism and the Algerian war (and his silence over the war).

**FRENCH 130. Introduction to Medieval and Renaissance French Literature. 4 Units.**

Introduction to the Middle Ages and the Renaissance. The birth of a national literature and its evolution. Literature as addressing cultural, philosophical, and artistic issues which question assumptions on love, ethics, art, and the nature of the self. Readings: epics (La Chanson de Roland), medieval romances (Tristan, Chrétien de Troyes' Yvain), post-Petrarchan poetics (Du Bellay, Ronsard, Labé), and prose humanists (Rabelais, Montaigne). Taught in French. Prerequisite: FRENLANG 124 or consent of instructor.

**FRENCH 131. Absolutism, Enlightenment, and Revolution in 17th- and 18th-Century France. 4 Units.**

The literature, culture, and politics of France from Louis XIV to Olympe de Gouges. How this period produced the political and philosophical foundations of modernity. Readings include Corneille, Molière, Racine, Lafayette, Voltaire, Diderot, Rousseau, Beaumarchais, and Gouges. Taught in French. Prerequisite: FRENLANG 124 or consent of instructor.

**FRENCH 132. Literature, Revolutions, and Changes in 19th- and 20th-Century France. 4 Units.**

This course will explore several of the most important texts of 19th- and 20th-century French literature. The aim of the course will be understanding stylistic and thematic experimentation in its historical/cultural context, with a focus on the theme of transgression: moral, political, and social. We will read works in all major literary genres (poetry, prose, and drama) and will discuss prominent movements such as Realism, Romanticism, Symbolism, Decadentism, and Existentialism through the works that best define them. Readings include Constant, Balzac, Baudelaire, Mallarmé, Rimbaud, Flaubert, Maupassant, Jarry, Gide, Apollinaire, Breton, Yourcenar, Sartre. All readings, discussion, and assignments are in French.

**FRENCH 133. Literature and Society in Africa and the Caribbean. 4 Units.**

This course aims to equip students with an understanding of the cultural, political and literary aspects at play in the literatures of Francophone Africa and the Caribbean. Our primary readings will be Francophone novels and poetry, though we will also read some theoretical texts, as well as excerpts of Francophone theater. The assigned readings will expose students to literature from diverse French-speaking regions of the African/Caribbean world. This course will also serve as a "literary toolbox," with the intention of facilitating an understanding of literary forms, terms and practices. Students can expect to work on their production of written and spoken French (in addition to reading comprehension) both in and outside of class. Required readings include: Aimé Césaire, "Cahier d'un retour au pays natal," Albert Memmi, "La Statue de Sel," Kaouther Adimi, "L'envers des autres", Maryse Condé, "La Vie sans fards". Movies include "Goodbye Morocco", "Aya de Yopougon", "Rome plutôt que Vous". Taught in French. Prerequisite: FRENLANG 124 or consent of instructor.

Same as: AFRICAAM 133, JEWISHST 143

**FRENCH 140. Paris: Capital of the Modern World. 4-5 Units.**

This course explores how Paris, between the eighteenth and twentieth centuries, became the political, cultural, and artistic capital of the modern world. It considers how the city has both shaped and been shaped by the tumultuous events of modern history- class conflict, industrialization, imperialism, war, and occupation. It will also explore why Paris became the major world destination for intellectuals, artists and writers. Sources will include films, paintings, architecture, novels, travel journals, and memoirs.

Same as: FRENCH 340, HISTORY 230C

**FRENCH 142. Living Voices: Introduction à la littérature d'expression française. 3-5 Units.**

This class is intended to situate students in the controversial discussion of what it means to write and speak in French today. While post-colonial theorists and writers have received a great deal of recognition over the past few decades, much less attention has been granted to the contemporary authors to whom the torch has been passed. In order to bring ourselves as up to date as possible, we will read only authors who are still alive and currently publishing [as part of the debate]. Using a variety of text types/literary genres from diverse geographical regions, the class will examine how the authors shape/frame this debate on the following topics: using vs. creating language; defining the self and the other; multiculturalism and communitarianism; real and imaginary borders/boundaries. Taught in French.

**FRENCH 145. French Theatromania: From Great Classics to Private Theater in 17th & 18th Century France. 3-5 Units.**

For French majors and minors. Explore the French passion for theater in the 17th and 18th centuries, from the great classics to private theater. A selection of plays from the official and the private repertory will be used to illustrate the evolution of French theater as a genre and to discuss its role in the sociopolitical shifts of the period. All readings, discussions, and assignments will be in French.

**FRENCH 145B. Africa in Atlantic Writing. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condé, Olinto), prose poetry (Césaire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Ouologuem) and autobiography (Barack Obama).

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 145B, COMPLIT 345B, CSRE 145B, FRENCH 345B

**FRENCH 150. Season and Off-Season of North-African Cinema and Literature. 3-5 Units.**

This course explores the emergence of Francophone cinema and literature from North Africa (Algeria, Tunisia, Morocco) in the post-independence era: aesthetics, language metissage and hybridization, ethnic interactions, gender relations, collective imagination and collective memory, nationalism, popular culture, religion, urbanism, post-colonialism, migration, and the Arab Spring will be covered. Special attention will be given to Moroccan cinema, and to the notions of francophone/maghrebi/"beur"/diasporic cinema and literature. Readings from Franz Fanon, Albert Memmi, Kateb Yacine, Albert Camus, Reda Bensmaïa, Assia Djebar, Colette Fellous, Abdelkebir Khatibi, Michel de Certeau, Benjamin Stora, Lucette Valensi, Abdelwahab Meddeb. Movies include *Viva Laldjérie*, *Rome plutot que vous*, *Les Sabots en or*, *Les Silence des Palais*, *Halfaouine*, *Satin Rouge*, *Le Chant des Mariées*, and *Mort à Vendre*. Taught in French. Films in French and Arabic with English subtitles.

Same as: FRENCH 350

**FRENCH 151. Performing the Middle Ages. 3-5 Units.**

Through an analysis of medieval love, satirical and Crusade lyrics in the Old Occitan, Old French, and Galician-Portuguese traditions, we will study deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Special attention will be given to the transmission of vernacular song from live performance to manuscripts. Authors include Ovid, Bernart de Ventadorn, Bertran de Born, La Comtesse de Dia, Thibaut de Champagne, Dante, and Pound. Taught in English.

Same as: DLCL 121

**FRENCH 154. Film & Philosophy. 4 Units.**

Issues of freedom, morality, faith, knowledge, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include *Twelve Monkeys* (Gilliam), *Ordet* (Dreyer), *The Dark Knight* (Nolan), *Vicky Cristina Barcelona* (Allen), and *Eternal Sunshine of the Spotless Mind* (Kaufman). Taught in English.

Same as: COMPLIT 154A, ITALIAN 154, PHIL 193C, PHIL 293C

**FRENCH 168. Imagining the Oceans. 5 Units.**

How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Authors read might include Cook, Equiano, and Steinbeck; Defoe, Verne, Stevenson, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Films by Painlevé and Bigelow. Seminar co-ordinated with a spring 2015 Cantor Arts Center public exhibition. Visits to Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park.

Same as: COMPLIT 168, ENGLISH 168

**FRENCH 181. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman; Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: CLASSICS 42, COMPLIT 181, ENGLISH 81, GERMAN 181, ITALIAN 181, PHIL 81, SLAVIC 181

**FRENCH 190Q. Parisian Cultures of the 19th and Early 20th Centuries. 4 Units.**

Preference to sophomores. Political, social, and cultural events in Paris from the Napoleonic era and the Romantic revolution to the 30s. The arts and letters of bourgeois, popular, and avant garde cultures. Illustrated with slides. Taught in English.

**FRENCH 199. Individual Work. 1-12 Unit.**

Restricted to French majors with consent of department. Normally limited to 4-unit credit toward the major. May be repeated for credit.

**FRENCH 202. The Enlightenment. 5 Units.**

This seminar will explore how the idea of the Enlightenment emerged in French intellectual circles, and how it evolved over the course of the eighteenth century. We will focus in particular on the articulation between the Enlightenment and its two most illustrious precursors: the Scientific Revolution and the grand siècle of Louis XIV.

**FRENCH 204. Revolutions in Prose: The 19th-Century French Novel. 3-5 Units.**

The French Revolution was not just a haunting memory in nineteenth-century France: it was the decisive structure around which French politics, but also French culture and the arts more generally, were centered. As some historians have argued, the French Revolution might not even have really "ended" until 1880. In this course, we will examine both literary representations of the French Revolution, as well as the literary analyses of a society constantly dealing with the fears (or hopes) of a new Revolution. Primary readings by Stendhal, Balzac, Flaubert, Zola. Taught in French.

**FRENCH 205. Songs of Love and War: Gender, Crusade, Politics. 3-5 Units.**

Analysis of medieval love, satirical and Crusade lyrics of the troubadours. Study of deictic address, corporeal subjectivity, the female voice, love debates, and the body as a figure of political conflict. Course readings include medieval treatises on lyric and modern translations of the troubadour tradition. Works by Ovid, Bernart de Ventadorn, Bertran de Born, La Comtesse de Dia, Thibaut de Champagne, Raimon Vidal, Dante, and Pound. Taught in English. Course includes a lab component for creation of multi-media translation projects: trobar. stanford.edu. Same as: FEMGEN 205

**FRENCH 206. The "Renaissance" of the Twelfth Century. 3-5 Units.**

This course examines key intellectual, social and political developments in Europe during the twelfth century, and inquires after the afterlife of the "##Renaissance##" into the thirteenth century. Readings include works of literature (Chrétien de Troyes, lyric poetry of troubadours and Minnesinger, fables such as *Roman de Renart*), philosophy (Peter Abelard and scholasticism), and studies about the rise of the Gothic architectural style. The course takes up the Fourth Lateran Council and the history of the crusading movement in the first half of the thirteenth century. Taught in English.

**FRENCH 209. Famous French Figures: Celebrity and the Making of French Identity. 3-5 Units.**

How do we think historically about something as supposedly fleeting as fame? In this seminar we will engage with the biographies of eight famous French figures, exploring how each of these celebrated lives influenced popular perceptions of what it has meant to be French over the past two centuries. Questions we will ask include: How and why are public figures remembered and memorialized differently at different times and in different places? How has France's identification with universalism influenced ideas about who can and cannot qualify for the role of French celebrity? How do political leaders trade on the notion of "charismatic authority"? What work must biographers do to frame something as complex as a human life into a coherent narrative? What is gained and lost in approaching a given era through a close examination of one individual? Most central to this course: How do people create and contest their cultural and national identities through the collective celebration of particular individuals? We will study the lives and times of the following four men and four women: Jean-Jacques Rousseau, Marie Antoinette, Napoleon Bonaparte, Edouard Manet, Sarah Bernhardt, Josephine Baker, Albert Camus and Françoise Sagan.

**FRENCH 210. Representation and Theatre Culture in 20th Century France. 5 Units.**

This course will examine some major French playwrights such as Alfred Jarry, Eugene Ionesco, Samuel Beckett, Jean Genet, Jean Tardieu, Albert Camus or Jean Anouilh in their global cultural environment. Discussion in English; French majors read in French. Same as: TAPS 353

**FRENCH 211. Emile Zola. 3-5 Units.**

A comprehensive introduction to and historical analysis of Emile Zola's literary work as foundational for the late-nineteenth century literary movement that we call "Naturalism." The analysis of Zola's novels will be embedded in the historical situation of France in the transition from the Second Empire to the Third Republic, with special emphasis on the epistemological situation of that time. Knowledge of French desirable but participation through English translations will be possible. Same as: COMPLIT 211A

**FRENCH 213. When the World Spoke French: Kings, Writers, and Philosophers, 1630-1789/Old Regime France. 4-5 Units.**

Starting in the mid-17th century, France became the cultural trendsetter for most of Europe and parts of the world. How did French culture impose itself as culture tout court? We will examine the importance of politics, literature, and philosophy in this process. Readings will include Corneille, Descartes, Pascal, Racine, Moliere, Montesquieu, Voltaire, Rousseau, Diderot, and Beaumarchais. Taught in French; readings in French.

**FRENCH 214. Pirandello, Sartre, and Beckett. 3-5 Units.**

In this course we will read the main novels and plays of Pirandello, Sartre, and Beckett, with special emphasis on the existentialist themes of their work. Readings include *The Late Mattia Pascal*, *Six Characters in Search of an Author*, *Henry IV*; *Nausea*, *No Exit*, "Existentialism is a Humanism"; *Molloy*, *Endgame*, *Krapp's Last Tape*, *Waiting for Godot*. Taught in English. Same as: COMPLIT 281E, COMPLIT 381E, FRENCH 314, ITALIAN 214, ITALIAN 314

**FRENCH 218. Skepticism and Atheism in Early-Modern French Thought. 4-5 Units.**

Religious belief was a fundamental part of early-modern life, and the proposition that human beings could not prove God's existence had profound implications for all realms of human experience. This course will explore the complex relationship between philosophical skepticism and religious belief in early-modern Europe (particularly France) and investigate how these heterodox philosophies transformed the understanding of humanity's interaction with the surrounding world. We will begin by looking at the origins of religious unbelief and the revival of Pyrrhonian skepticism in the 16th century. By placing the atheists and the skeptics in dialogue with their deist and Christian opponents, we will see how these ideas evolved over the course of the 17th and 18th centuries and consider the influence of these subversive theories on the social and political fabric of Europe. Taught in English. Readings in French (English translations available).

**FRENCH 219. The Renaissance Body in French Literature and Medicine. 3-5 Units.**

If the Renaissance is famous for discovering unknown continents and ancient texts the body too was a new territory of conquest. How did literature respond to the rise of an anatomical gaze in the arts and in medicine and how did it stage the aesthetic religious philosophical and moral issues related to such a promotion or deconstruction of the body? Does literature aim at representing the body or does it use it instead as a ubiquitous signifier for intellectual emotional and political ideas? The locus of desire, pleasure and disease, the body also functioned as a reminder of human mortality and was caught in the web of gender issues, religious controversies and new norms of behavior. Texts from prose fiction (Rabelais) poetry (Scève Ronsard Labé D'Aubigné) essays (Montaigne) and emblem literature. Extra documents include music scores tapestries paintings philosophical and anatomical plates from medical treatises. Taught in English. Visit the Web site: [renaissancebodyproject.stanford.edu](http://renaissancebodyproject.stanford.edu). Same as: FRENCH 319

**FRENCH 221. Conceiving Other Worlds: Travel Narrative and Science Fiction in Early-Modern France. 4-5 Units.**

This course will concentrate on the important role of science fiction and travel literature in early-modern France. Although these narratives were intended to describe distant worlds and different ways of living, they frequently revealed more about the aspirations, assumptions, hopes, and concerns of the cultures in which they originated than about their actual subject matter. Authors frequently sought to determine the identity and uniqueness of their own cultures by contrasting them against the 'otherness' of their imagined subjects. Similarly, by describing either utopian or dystopian civilizations, writers attempted to highlight the problems that plagued their own societies. Among other texts, we will read selections from Montaigne's 'Essais,' Cyrano de Bergerac's 'L'Autre monde ou les états et empires de la Lune,' Huygens's 'Nouveau traité de la pluralité des mondes,' Fontenelle's 'Entretiens sur la pluralité des mondes,' Voltaire's 'Micromegas,' Bougainville's 'Voyage autour du monde,' and Diderot's 'Supplément au voyage de Bougainville.' Taught in English. Readings in French (English translations available).

**FRENCH 222. Was Deconstruction an Illusion?. 3-5 Units.**

A both systematic and historical presentation of "Deconstruction" as a philosophical and intellectual movement that dominated academic and general culture in many western societies during the final decades of the twentieth century, with special focus on the writings of Jacques Derrida and Paul de Man. Deconstruction's specific reception history obliges us to ask the question of whether the extremely high esteem that it enjoyed over two decades was intellectually justified - or the result of a misunderstanding.

**FRENCH 223. 17th-Century French Theatre. 3-5 Units.**

In this course, taught in French, we will explore theater from different angles including literary theory (the different dramatic genres), aesthetics (the classical representation) and cultural theories (the social function of theatre under absolutism). A new approach to acting will be considered, i.e. the many connections between theatre and possession. Amongst the authors considered, we will include Rotrou, Corneille, Cyrano de Bergerac, Racine, Molière and Regnard. Taught in French.

**FRENCH 224. Leopardi, Baudelaire, and Modernity. 3-5 Units.**

A close reading of Giacomo Leopardi's *Canti* and Charles Baudelaire's *Flowers of Evil* and *Paris Spleen* in the context of 19th-century Europe. Discussion of the poetry will be enriched by selections from their essays on literature and art and by notes from the *Zibaldone* and *Mon coeur mis à nu*. Key themes and concepts include language, imagination, "noia," "spleen," and the oppositions between nature and civilization, modernity and antiquity. Taught in English.

Same as: FRENCH 324, ITALIAN 224, ITALIAN 324

**FRENCH 225. Introduction to Medieval French Literature. 3-5 Units.**

Introduction to the premodern period of French literature through the interpretation of major works (*La Chanson de Roland*; Bérout and Thomas, *Tristan*; *lais* of Marie de France; romans of Chrétien de Troyes; *Le Roman de la Rose*). Special attention given to the socio-cultural contexts in which these works were composed and first received, and to the emergence of the concept of writing as a self-defining act. Study of Old French language and the material aspects of a medieval work. Taught in English.

Same as: FRENCH 325

**FRENCH 227. Paris: The Making of a Modern Icon. 3-5 Units.**

Few places have been as heavily romanticized and mythologized as Paris. To many observers, Paris and its attractions serve as icons of modernity itself. By engaging with fiction, film, journalism, painting, photography, poetry, song, and other media, we'll trace how different people at different times have used Paris as both backdrop and main protagonist, and we'll consider how the city itself has incorporated and rebelled against such representations. The scope of our inquiry will stretch from the late 18th century to the present, covering a host of topics, figures, and sites: from the French Revolution to the protests of May '68, from Baudelaire to Hemingway, from the Impressionists to the Situationists. Taught in English.

Same as: HISTORY 239E, URBANST 142

**FRENCH 228. Science, technology and society and the humanities in the face of the looming disaster. 2-5 Units.**

How STS and the Humanities can together help think out the looming catastrophes that put the future of humankind in jeopardy.

Same as: ITALIAN 228, POLISCI 233F

**FRENCH 228E. Getting Through Proust. 3-5 Units.**

Selections from all seven volumes of "In Search of Lost Time". Focus on issues of personal identity (perspective, memory, life-narrative); interpersonal relations (friendship, love, homosexuality, jealousy, indirect expression); knowledge (objective truth, subjective truth, necessary illusions); redemption (enchantment, disenchantment, re-enchantment); aesthetics (music, painting, fiction); and Proust's own style (narrative sequence, sentence structure, irony, metaphor, metonymy, metalepsis). Taught in English; readings in French or English.

**FRENCH 229. Literature and Global Health. 3-5 Units.**

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with a call made by the editor-in-chief of *The Lancet* for a literature of global health, namely fiction modeled on the social reform novels of the nineteenth century, understood to have helped readers develop a conscience for public health as the field emerged as a modern medical specialty. We will then spend the quarter understanding how colonial, postcolonial, and world literatures have answered and complicated this call. Readings will include prose fiction by Albert Camus, Joseph Conrad, Tsitsi Dangarembga, Amitav Ghosh, Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese, Paul Farmer. And each literary reading will be paired with medical, philosophical, and policy writings that deeply inform the field of global health.

Same as: AFRICAAM 229, AFRICAST 229, COMPLIT 229, CSRE 129B, HUMBIO 175L, MED 234

**FRENCH 230. Giambattista Vico & Claude Lévi-Strauss. 3-5 Units.**

An intensive reading of Vico's *New Science* with special emphasis on Vico's theory of anthropogenesis, myth, and the poetic origins of human consciousness. Vico's thought will be placed in relation to Lévi-Strauss's theories of myth and so-called "primitive thought". Readings include Vico's *New Science* and Lévi-Strauss's "The Structural Study of Myth", and the first chapters of his book *The Savage Mind*. Taught in English.

Same as: FRENCH 330, ITALIAN 227, ITALIAN 327

**FRENCH 233. French Political Thought From Rousseau to the Present. 3-5 Units.**

An overview of the current awakening of French political thought as it is grounded in a new reading of the great classics of French social thought, from Rousseau to Tocqueville and Benjamin Constant. Readings of Lefort, Castoriadis, Louis Dumont, Ricoeur, Furet, Manent, Ferry, Renaut, Gauchet, Raynaud, etc. Discussions in French and in English.

**FRENCH 234. Courtly Love: Deceit and Desire in the Middle Ages. 3-5 Units.**

A comparative seminar on medieval love books and their reception. We will examine and question the notion of "amour courtois," which arose in the lyrics and romances of medieval France and was codified in Romantic-era criticism. Primary readings will be enriched by thinking about this notion through the lens of modern theories of desire, such as those of Girard, Lacan, and Žižek. Conducted in English with readings in translation.

Same as: COMPLIT 221A, ITALIAN 234

**FRENCH 237. Cultural Contact in Medieval French Literature. 3-5 Units.**

Introduction to medieval French literature through the analysis of representations of cross-cultural contact in historical perspective. Class conducted in French. Readings in modern French translation (with occasional reference to Old French) and in English. Readings include *La Chanson de Roland*; *Le Charroi de Nîmes*; *La Prise d'Orange*; *Le Conte de Floire et Blancheflor*; and Chrétien de Troyes, *Cligés*. No previous knowledge of Old French or medieval literature is expected; willingness to engage with historical texts and questions required.

**FRENCH 237K. Speed and Power in the Twentieth Century. 4-5 Units.**

Europeans living in the 20th century witnessed an unprecedented (and, to many observers, frightening) acceleration in the pace of everyday life, wrought by the introduction of a host of new travel technologies. Focusing on the metropolises of Europe, this seminar will explore the various ways that trains, planes, and automobiles have shaped modern urban life. We'll also look at how 20th-century artists and writers have treated the interrelated themes of speed and power in their work.

Same as: HISTORY 237K, HISTORY 337K

**FRENCH 242. Beyond Casablanca: North African Cinema and Literature. 3-5 Units.**

This course explores the emergence of Francophone cinema and literature from North Africa (Algeria, Tunisia, Morocco) in the post-independence era: aesthetics, exile, language métissage, race and gender relations, collective memory, parallax, nationalism, laïcité, religion, emigration and immigration, and the Arab Spring will be covered. Special attention will be given to judeo-maghrebi history, and to the notions of francophone / maghrebi / "beur" / diasporic cinema and literature. Readings from Frantz Fanon, Albert Memmi, Kateb Yacine, Albert Camus, Colette Fellous, Abdelkebir Khatibi, Leila Sebbar, Benjamin Stora, Lucette Valensi, Abdelwahab Meddeb. Movies include Viva Laldjérie, Tenja, Le Chant des Mariées, Française, Bled Number One, Omar Gatlat, Casanegra, La Saison des Hommes. Taught in French. Films in French and Arabic with English subtitles.

Same as: COMPLIT 247F, JEWISHST 242

**FRENCH 244. The Enlightenment. 3-5 Units.**

The Enlightenment as a philosophical, literary, and political movement. Themes include the nature and limits of philosophy, the grounds for critical intellectual engagement, the institution of society and the public, and freedom, equality and human progress. Authors include Voltaire, Montesquieu, Rousseau, Hume, Diderot, and Condorcet.

Same as: DLCL 324, HISTORY 234, HISTORY 334, HISTORY 432A, HUMNTIES 324

**FRENCH 245. French Political Thought From Rousseau to the Present. 3-5 Units.**

An overview of the current awakening of French political thought as it is grounded in a new reading of the great classics of French social thought, from Rousseau to Tocqueville and Benjamin Constant. Readings of Lefort, Castoriadis, Louis Dumont, Ricoeur, Furet, Manent, Ferry, Renaut, Gauchet, Raynaud, etc. Readings in French. (Translations in English will be made available whenever possible.) Discussions in French and in English.

Same as: POLISCI 336C

**FRENCH 248. Literature, History and Memory. 3-5 Units.**

Analysis of literary works as historical narratives. Focus on the relationship history, fiction, and memory as reflected in Francophone literary texts that envision new ways of reconstructing or representing ancient or immediate past. Among questions to be raised: individual memory and collective history, master narratives and alternatives histories, the role of reconstructing history in the shaping or consolidating national or gender identities. Readings include fiction by Glissant, Kane, Condé, Schwarz-Bart, Djébar, Perec, as well as theoretical texts by Ricoeur, de Certeau, Nora, Halbwachs, White, Echevarría. Taught in French.

Same as: COMPLIT 250

**FRENCH 251. Writing, Memory, and Self-Fashioning. 3-5 Units.**

Writing is not a mere recording of the past, but a selection and reinvention of our experiences. We will look at how writing is central to the philosophical project of fashioning the self, even as it reveals that much of what we call the self is a fictional construct. Materials include fiction and memoirs (Primo Levi, Michel Tournier, Melania Mazzucco, Jonathan Littell), and theoretical works in philosophy (Bergson, James, Freud, Jung, Derrida, Wyschogrod, Nehamas), psycholinguistics, and neuroscience. Taught in English.

Same as: ITALIAN 251

**FRENCH 253. Honoré de Balzac. 3-5 Units.**

Working through a selection of novels by the author widely considered as a founder of western (19th-century) "Literary Realism." Balzac's will be contextualized within his life and the French culture and literature of his time. We will also approach, from a philosophical point of view, the emergence and functions of "Literary Realism." Another focus will be Balzac's work as exemplary of certain traditions within Literary Criticism (particularly Marxist Literary Criticism). Taught in English.

Same as: COMPLIT 253

**FRENCH 254. Was Deconstruction an Illusion?. 3-5 Units.**

A both systematic and historical presentation of "Deconstruction" as a philosophical and intellectual movement that dominated academic and general culture in many western societies during the final decades of the twentieth century, with special focus on the writings of Jacques Derrida and Paul de Man. Deconstruction's specific reception history obliges us to ask the question of whether the extremely high esteem that it enjoyed over two decades was intellectually justified or the result of a misunderstanding. Participation through English translations is possible.

Same as: COMPLIT 254A

**FRENCH 255. How To Think About The Charlie Hebdo Attacks : Political, Social and Cultural Contexts. 1-5 Unit.**

On January 7th and 9th, 2015, two Islamic terrorist attacks claimed 17 deaths in the heart of Paris. On January 11th, more than 4 million people marched to uphold France's «Republican values» and freedom of expression. How can we understand the unfathomable? Can the social sciences help us understand the context, causes and consequences of these events for France's model of secular democracy? Materials include newsreels, films, novels (Houellebecq), and essays (Fassin, Morin, Badiou, Zemmour, Finkelkraut).

Same as: FRENCH 355

**FRENCH 256. Literature and Death: An Existential Constellation in its Historical Unfolding. 2-3 Units.**

This seminar will pursue the intuition that literary texts, due to their status as *fiction*, have always been intensely related to Death as the ultimate horizon of individual existence, a horizon that is only available to our *imagination*. We will concentrate on this largely unexplored link as an existential constellation of concrete historical and of challenging philosophical complexity. The discussions will begin with a detailed analysis of the canonical passages in Martin Heidegger's *Being and Time* from 1927 that try to understand the difference between Death as seen from outside and Death in its *Jemeinigkeit*, that is Death as the absolute end-horizon of individual existence which necessarily causes *Angst* because it is followed by *Nothingness*. On this basis and supplemented by an introduction into several present-day theories and reflections on *imagination* as a distinct potential of the human mind, we will dedicate the weekly seminar sessions to specific historical moments and different literary (and perhaps artistic) forms that have articulated the connection between Death and Literature (with the final choice of texts and paradigms being open to the participants' interests and area of competence). Topics and textual materials may include: fifth century Greek Tragedy, Roman Stoicism, Medieval Epic in the context of Christian cosmology, Death as a horizon of individual existence in early Modernity (*Don Quijote*), the invisible presence of Death in baroque art- the bracketing of Death in the context of the Enlightenment mentality, Death and suicide as gestures of Romantic self-stylization, the presence of Death in Classical and Romantic conception of music- Death and the absence of God in nineteenth century novels and philosophy, the experience of World War I and a new intensity in the experience of Death, Death and grand abstraction in art- Death in mid-twentieth century Existentialism- Death and its place in the *Anthropocene* as an early twenty-first century frame of mind. Emphasizing weekly the reading assignments and intense participation in the seminar discussions, this course is laid out for two units (no final paper) but open for the participation of auditors (including undergraduate students with specific areas of competence) who are willing to work through the full range of philosophical texts, literary texts, and artworks on the syllabus. Students interested in this topic should begin with a reading of Heidegger's *Being and Time* and try to remember own readings and forms of experiences that seem pertinent to this topic. Contact with the instructor during the summer months is encouraged (sepp@stanford.edu).

Same as: COMPLIT 257A, COMPLIT 355A, ITALIAN 255

**FRENCH 257. Simone de Beauvoir, Hannah Arendt, and Adriana Cavarero. 1-5 Units.**

What does it mean to say the personal is the political, or, in the case of Arendt, that the personal is not political, especially if you are woman? This course explores how De Beauvoir, Arendt, and Cavarero contend with this question and how all three of them think, each in her own way, outside the box of philosophy, of political science, of ethics, and of feminism. Particular attention will be given to the role of art in directing social change and personal transformation, and to the enduring relevance of these women's thought today. Texts include *The Second Sex*, *The Ethics of Ambiguity*, *The Human Condition*, *Between Past and Future*, *Stately Bodies*, and *Relating Narratives*.  
Same as: FRENCH 357, ITALIAN 257, ITALIAN 357

**FRENCH 258. The Great War: WWI in Literature, Film, Art, and Memory. 3-5 Units.**

This course concerns how writers, artists, and other cultural producers understood and represented the traumas of the First World War and its aftermath. Rather than tracing a political or military history of the conflict, we'll focus on how the horrors of War (both in the trenches and on the home front) fostered broader social and cultural shifts, as people questioned the very foundations of European civilization. Most specifically, we'll explore the connections between the War and the emergence of post-War modernist movements, as writers and artists created new works to help them make sense of the catastrophe and the new world it wrought. Though France provides our starting point, we'll also travel beyond the Hexagon to incorporate other views and major works. Course readings will be in English, though students may elect to read works in French if they wish.  
Same as: FRENCH 358, HISTORY 231C, HISTORY 332C

**FRENCH 260. Italy, France, and Postcolonialism. 3-5 Units.**

The starting point for our seminar is the question of how postcolonial thought enhances our possible understandings of Italy - as a nation, as a territorial unit coalescing cultural parts that remain disparate to this day, and as a population that has not come fully to terms with its fascist history, its crimes in World War II, or the atrocities it perpetrated as a colonizing state. The Italian case is unusual compared to others, in that the country's colonial past in north and east Africa is still being uncovered after a long period of public silence and government suppression; and what might be called the postcolonial Italian project has begun only recently, driven by a distinct minority of scholars, 'migrant' authors, and activists. French cultural politics and history are often taken as a point of reference from which to analyze Italian phenomena. In this case, we will make use of the French postcolonial tradition as a point of both comparison and differentiation. Among other things, we will focus on the different meanings of 'postcolonial' in a country that is strongly centralized (France) and another which is unremittingly fragmented (Italy). As just one example, we will scrutinize how Gramsci's work has been understood in Anglophone and Francophone criticism (cultural studies, Subaltern studies, and so on), as opposed to how it may be read in its original Italian context, where it concerned subalterns within the nation-state. Asking what is postcolonial, for whom, when, and where?, ultimately our goal is to discern the specific contours of Italy's postcolonialism by juxtaposing it with France's, and to simultaneously ask what light can be shed on French postcolonial particularities by placing it in this dialogue. Beginning with fundamental historical readings (Gramsci, Fanon, Memmi) and touching on some early Anglophone postcolonial critics (Said, Bhabha), the seminar will then be structured around key literary and theoretical readings from Italy and France. Ideally, readings will be in the original language, but as often as possible they will be selected such that they will be accessible in English translation as well. Taught in English.  
Same as: ITALIAN 260

**FRENCH 265. The Problem of Evil in Literature, Film, and Philosophy. 3-5 Units.**

Conceptions of evil and its nature and source, distinctions between natural and moral evil, and what belongs to God versus to the human race have undergone transformations reflected in literature and film. Sources include Rousseau's response to the 1755 Lisbon earthquake; Hannah Arendt's interpretation of Auschwitz; Günther Anders' reading of Hiroshima; and current reflections on looming climatic and nuclear disasters. Readings from Rousseau, Kant, Dostoevsky, Arendt, Anders, Jonas, Camus, Ricoeur, Houellebecq, Girard. Films by Lang, Bergman, Losey, Hitchcock.  
Same as: POLISCI 338E

**FRENCH 271. Thinking Modernity: Montaigne to Lafayette. 3-5 Units.**

From the times of the religious wars to those of Louis XIV, a series of French thinkers played a major role in the speculations that helped establish the norms of what is now thought of as "Western modernity." We will look at some of these, especially their moral and political philosophy in the contexts of a centralizing growth toward bureaucratic absolutist monarchy, of increasing colonization and imperialist urges, of growing intolerance (leading eventually to the Revocation of the Edict of Nantes - more or less simultaneous in 1685 with the promulgation of the *Code noir*, seeking to control the treatment of slaves in the colonies). We shall also be interested in the complex "development" of the modern western "individual," of new notions of "truth," ethical conduct, the politics of authoritarian individualism, the aesthetics of "taste," and the perplexities of gender politics. Closely examining a number of works, we will look at the interplay between these contexts and the epistemology, psychology, ethics and politics that gradually became normative. Authors from among: Montaigne, Gournay, Descartes, Pascal, Hobbes (*De cive*), Cyrano, Madame de Lafayette, but participants may wish to bring other authors to the table. Taught in French.

**FRENCH 275. Twentieth-Century French Thought: Literature, Politics, and Intellectual History. 3-5 Units.**

This course will introduce students to the major intellectual and historical movements of twentieth-century France. We will consider the impact of key events (including WWI, the rise of fascism, the Nazi occupation, and May '68) on literary and intellectual life. Special importance will be placed on existentialism, structuralism, leftism, and feminism. Students will read a variety of literary, philosophical, and political essays. Taught in French.

**FRENCH 277. Literature and the Self in Twentieth-Century France. 3-5 Units.**

In this course, we will explore how the different discoveries concerning the self during the XXth Century (throughout philosophy, politics or psychoanalysis) do reflect in the domain of literature. Nouveau roman, autobiography, auto fiction or self references will be amongst the themes explored in class. Our main texts will be taken out of the official list issued by the French Department. Taught in French.

**FRENCH 284. Nineteenth-Century French Realism: Classic Novels and Contemporary Interpretations. 3-5 Units.**

This course will read three great novels of the French 19th century: Stendhal's *Le rouge et le noir*; Balzac's *Le Père Goriot*; Flaubert's *Madame Bovary*. These texts are the classics of "Realism." But this course intends to complicate the genre designation. "Realist" novels are richer and deeper than any "objective recording" of external and internal events could capture. They are visionary, poetic, and politically explosive. Reading them today requires us to stretch beyond what many critics have asserted about them, and indeed beyond what the novels asserted about themselves. That will be a significant objective of our analysis. Taught in French.

**FRENCH 288. Decadence and Modernism from Mallarmé to Marinetti. 3-5 Units.**

One hundred years ago, artists feared their work was incompatible with modern economic systems, secular bourgeois values, and materialist science. Accused of being decadent, they took up this term of derision and made it into a program of rebellion that has shaped modern art. This course explores decadent rebellion, with an eye toward how the last turn of the century might be similar to our current one. Writers include Huysmans, Poe, Mallarmé, Nietzsche, Nordau, d'Annunzio, Valéry, Ungaretti, Marinetti, and Breton; we will also consider parallels in the visual arts.

Same as: FRENCH 388, ITALIAN 288, ITALIAN 388

**FRENCH 293A. Topics in French Literature and Philosophy. 2 Units.**

Five-week course. May be repeated for credit. Taught in French.

**FRENCH 293B. Topics in French Literature and Philosophy. 2 Units.**

Five-week course. May be repeated for credit. Taught in French.

**FRENCH 312. Oscar Wilde and the French Decadents. 3-5 Units.**

Close reading of Oscar Wilde's work together with major texts and authors of 19th-century French Decadence, including Symbolism, *l'art pour l'art*, and early Modernism. Points of contact between Wilde and avant-garde Paris salons; provocative, creative intersections between (homo)erotic and aesthetic styles, transgression; literary and cultural developments from Baudelaire to Mallarmé, Huysmans, Flaubert, Rachilde, Lorrain, and Proust compared with Wilde's *Salomé*, *Picture of Dorian Gray*, and critical writings; relevant historical and philosophical contexts. All readings in English; all student levels welcome.

Same as: COMPLIT 112, COMPLIT 312, FRENCH 112

**FRENCH 314. Pirandello, Sartre, and Beckett. 3-5 Units.**

In this course we will read the main novels and plays of Pirandello, Sartre, and Beckett, with special emphasis on the existentialist themes of their work. Readings include *The Late Mattia Pascal*, *Six Characters in Search of an Author*, *Henry IV*; *Nausea*, *No Exit*, "Existentialism is a Humanism"; *Molloy*, *Endgame*, *Krapp's Last Tape*, *Waiting for Godot*. Taught in English.

Same as: COMPLIT 281E, COMPLIT 381E, FRENCH 214, ITALIAN 214, ITALIAN 314

**FRENCH 316. Understanding and Staging Molière Theatre. 3-5 Units.**

Devoted to an in depth analysis of Molière's major plays, as well as a study of contemporary productions of his work. Taught in French.

Same as: TAPS 368S

**FRENCH 318. Literature and the Brain. 5 Units.**

Recent developments in neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts? Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer? Same as: ENGLISH 118, ENGLISH 218, FRENCH 118, PSYCH 118F

**FRENCH 319. The Renaissance Body in French Literature and Medicine. 3-5 Units.**

If the Renaissance is famous for discovering unknown continents and ancient texts the body too was a new territory of conquest. How did literature respond to the rise of an anatomical gaze in the arts and in medicine and how did it stage the aesthetic religious philosophical and moral issues related to such a promotion or deconstruction of the body? Does literature aim at representing the body or does it use it instead as a ubiquitous signifier for intellectual emotional and political ideas? The locus of desire, pleasure and disease, the body also functioned as a reminder of human mortality and was caught in the web of gender issues, religious controversies and new norms of behavior. Texts from prose fiction (Rabelais) poetry (Scève Ronsard Labé D'Aubigné) essays (Montaigne) and emblem literature. Extra documents include music scores tapestries paintings philosophical and anatomical plates from medical treatises. Taught in English. Visit the Web site: [renaissancebodyproject.stanford.edu](http://renaissancebodyproject.stanford.edu).

Same as: FRENCH 219

**FRENCH 320. The Posthumanistic Subject. 3-5 Units.**

The course will examine the need to rethink the traditional western idea of the strong subject. Through close readings of works by Agamben, Braidotti, Derrida, Deleuze, Hall, Haraway, Latour, Wolfe, among others, this course will explore posthumanist theories of individual and collective subjectivity that challenge traditional ways of defining the human and the non-human subject/person and promote fundamental reconsideration of issues such as agency, autonomy, essence, freedom, dignity, otherness, substance, personhood, sociality, and life itself. The course would consider, how we can empower the subject and community in order to develop a desired model of participatory democracy. Prerequisite: graduate standing or consent of instructor.

**FRENCH 324. Leopardi, Baudelaire, and Modernity. 3-5 Units.**

A close reading of Giacomo Leopardi's *Canti* and Charles Baudelaire's *Flowers of Evil* and *Paris Spleen* in the context of 19th-century Europe. Discussion of the poetry will be enriched by selections from their essays on literature and art and by notes from the *Zibaldone* and *Mon coeur mis à nu*. Key themes and concepts include language, imagination, "noia," "spleen," and the oppositions between nature and civilization, modernity and antiquity. Taught in English.

Same as: FRENCH 224, ITALIAN 224, ITALIAN 324

**FRENCH 325. Introduction to Medieval French Literature. 3-5 Units.**

Introduction to the premodern period of French literature through the interpretation of major works (*La Chanson de Roland*; Bérout and Thomas, *Tristan*; *lais* of Marie de France; romans of Chrétien de Troyes; *Le Roman de la Rose*). Special attention given to the socio-cultural contexts in which these works were composed and first received, and to the emergence of the concept of writing as a self-defining act. Study of Old French language and the material aspects of a medieval work. Taught in English.

Same as: FRENCH 225

**FRENCH 327. Genres of the Novel. 5 Units.**

Provides students with an overview of some major genres in the history of the modern novel, along with major theorists in the critical understanding of the form. Novels might include works by Cervantes, Defoe, Lafayette, Radcliffe, Goethe, Scott, Balzac, Melville, and Woolf. Theorists might include Lukacs, Bakhtin, Jameson, Gallagher, Barthes, Kristeva, and Bourdieu. \*PLEASE NOTE: Course for graduate students only.\*

Same as: COMPLIT 327, ENGLISH 327

**FRENCH 328. Literature, Narrative, and the Self. 3-5 Units.**

The role of narrative in the well-lived life. Are narratives necessary? Can they, and should they, be literary? When might non-narrative approaches, whether literary or otherwise, be more relevant? Is unity of self something given, something to be achieved, or something to be overcome? Readings from Aristotle, Montaigne, Schopenhauer, Nietzsche, Camus, Sartre, MacIntyre, G. Strawson, Velleman; Ricoeur, Brooks; Shakespeare, Stendhal, Musil, Levi, Beckett, Morrison; film. Taught in English. Same as: COMPLIT 328, ITALIAN 328

**FRENCH 330. Giambattista Vico & Claude Lévi-Strauss. 3-5 Units.**

An intensive reading of Vico's *New Science* with special emphasis on Vico's theory of anthropogenesis, myth, and the poetic origins of human consciousness. Vico's thought will be placed in relation to Lévi-Strauss's theories of myth and so-called "primitive thought". Readings include Vico's *New Science* and Lévi-Strauss's "The Structural Study of Myth", and the first chapters of his book *The Savage Mind*. Taught in English. Same as: FRENCH 230, ITALIAN 227, ITALIAN 327

**FRENCH 331. The Craft of Confession and Its Cultural Contexts. 5 Units.**

Course examines medieval treatises and literature relating to the practice of confession as well as modern examples, with a focus on medieval concern with a sincere and authentic confession in theological, ethical, and aesthetic terms. Study includes expressions of subjectivity, institutional frameworks of confession, and the phenomenon as an instrument for political activity such as crusade. Texts: Augustine's *Confessions*, pastoral treatises, Aquinas, Arthurian romances concerning the grail legend, crusade lyric, and Foucault; films such as Dreyer and martyrdom videos. Taught in French.

**FRENCH 335A. Animism and Alter-Native Modernities. 5 Units.**

For many years indigenous knowledges were treated as a field of research for anthropologists and as "mistaken epistemologies," i. e., unscientific and irrational folklore and childish worldviews. This old view of animism was a product of the evolutionist and anthropocentric worldview of the Enlightenment. However within the framework of ecological humanities, current interest in posthumanism, postsecularism and discussions on building altermodernity (Michael Hardt and Antonio Negri), indigenous thought is used to critique modern epistemology and develop an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge is presented as a decolonizing and liberating practice. The term alter-native modernities as response to the challenges of Euromodernity and suggests modernities that might emerge out of indigenous ways of being in the world. Comparison between literature on indigenous cultures from Latin America and from Russia (animism in Amazonia and Siberia). Following recent works by anthropologists and archaeologists such as Nurit Bird-Rose, Philippe Descola, Graham Harvey, Tim Ingold and Viveiros de Castro, new animism is treated as an alternative (relational) ontology that allows rethinking the problem of matter and agency, goes beyond human exceptionalism and embraces non-humans. Topics include: alternative and alter-native modernities; Jean Piaget's theory of childhood animism; problem of anthropomorphism and personification; indigenous knowledge and the problem of epistemic violence; vitalist materialism (Jane Bennett, Rosi Braidotti); connectedness as the principle of life (relational epistemologies and ontologies); non-human agency (Bruno Latour). Same as: ANTHRO 335A, REES 335A

**FRENCH 338. The Gothic in Literature and Culture. 5 Units.**

This course examines the Gothic as both a narrative subgenre and an aesthetic mode, since its 18th century invention. Starting with different narrative genres of Gothic expression such as the Gothic novel, the ghost tale, and the fantastic tale by writers such as Walpole, Radcliffe, Sade, Poe, and E.T.A. Hoffmann, the course goes on to ask how the Gothic sensibility permeates a wide range of 19th century cultural phenomena that explore the dark side of Enlightenment, from Romantic poetry and art to melodrama, feuilleton novels, popular spectacles like the wax museum and the morgue. If time permits, we will also ask how the Gothic is updated into our present in popular novels and cinema. Critical readings will examine both the psychology of the Gothic sensibility and its social context, and might be drawn from theorists such as Benjamin, Freud, Lacan, Kristeva, and Žižek. Same as: COMPLIT 338, ENGLISH 338

**FRENCH 339A. Technologies of Extinctions: Ecocides and Genocides. 5 Units.**

This course will explore the relationship between history, ecological evolution and mass killing in the age of humanly caused species extinction. It will explore the universalization of the notion of the Jewish Holocaust, its use to integrate into genocide studies the Native American "spiritual" holocaust, the Japanese nuclear holocaust and the Rwandan genocide, and the ethical dilemmas posed by the ideas of biotic, animal and ecological holocausts. Anthropology and history of genocides and extinctions as well as posthumanist, multispecies theories will provide theoretical frames for the course. Same as: ANTHRO 339A

**FRENCH 340. Paris: Capital of the Modern World. 4-5 Units.**

This course explores how Paris, between the eighteenth and twentieth centuries, became the political, cultural, and artistic capital of the modern world. It considers how the city has both shaped and been shaped by the tumultuous events of modern history- class conflict, industrialization, imperialism, war, and occupation. It will also explore why Paris became the major world destination for intellectuals, artists and writers. Sources will include films, paintings, architecture, novels, travel journals, and memoirs. Same as: FRENCH 140, HISTORY 230C

**FRENCH 343. In Defense of Poetry. 3-5 Units.**

Beginning with the account of the quarrel between philosophy and poetry in Plato's Republic, we will read definitions and defenses of poetry by authors such as Cicero, Horace, Petrarch, Boccaccio, Sidney, Shelley, and Pound, among others. While we will try to historicize these authors' defenses as much as possible, we will also read them from the perspective of contemporary efforts to defend literature and the humanities. Topics of central concern will be the connection between poetry and ethics, the conflict between poetry and the professions of business, law, and medicine, poetry's place in the university, the political role of the poet, questions of poetic language and form, and the relevance of defenses of poetry to literary theory. Same as: ITALIAN 345

**FRENCH 345B. Africa in Atlantic Writing. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condé, Olinto), prose poetry (Césaire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Ouologuem) and autobiography (Barack Obama).

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 145B, COMPLIT 345B, CSRE 145B, FRENCH 145B

**FRENCH 350. Season and Off-Season of North-African Cinema and Literature. 3-5 Units.**

This course explores the emergence of Francophone cinema and literature from North Africa (Algeria, Tunisia, Morocco) in the post-independence era: aesthetics, language metissage and hybridization, ethnic interactions, gender relations, collective imagination and collective memory, nationalism, popular culture, religion, urbanism, post-colonialism, migration, and the Arab Spring will be covered. Special attention will be given to Moroccan cinema, and to the notions of francophone/maghrebi/"beur"/diasporic cinema and literature. Readings from Franz Fanon, Albert Memmi, Kateb Yacine, Albert Camus, Reda Bensmaïa, Assia Djebar, Colette Fellous, Abdelkebir Khatibi, Michel de Certeau, Benjamin Stora, Lucette Valensi, Abdelwahab Meddeb. Movies include *Viva Laldjérie*, *Rome plutot que vous*, *Les Sabots en or*, *Les Silence des Palais*, *Halfaouine*, *Satin Rouge*, *Le Chant des Mariées*, and *Mort à Vendre*. Taught in French. Films in French and Arabic with English subtitles.

Same as: FRENCH 150

**FRENCH 355. How To Think About The Charlie Hebdo Attacks : Political, Social and Cultural Contexts. 1-5 Unit.**

On January 7th and 9th, 2015, two Islamic terrorist attacks claimed 17 deaths in the heart of Paris. On January 11th, more than 4 million people marched to uphold France's «Republican values» and freedom of expression. How can we understand the unfathomable? Can the social sciences help us understand the context, causes and consequences of these events for France's model of secular democracy? Materials include newsreels, films, novels (Houellebecq), and essays (Fassin, Morin, Badiou, Zemmour, Finkelkraut).

Same as: FRENCH 255

**FRENCH 357. Simone de Beauvoir, Hannah Arendt, and Adriana Cavarero. 1-5 Unit.**

What does it mean to say the personal is the political, or, in the case of Arendt, that the personal is not political, especially if you are woman? This course explores how De Beauvoir, Arendt, and Caverero contend with this question and how all three of them think, each in her own way, outside the box of philosophy, of political science, of ethics, and of feminism. Particular attention will be given to the role of art in directing social change and personal transformation, and to the enduring relevance of these women's thought today. Texts include *The Second Sex*, *The Ethics of Ambiguity*, *The Human Condition*, *Between Past and Future*, *Stately Bodies*, and *Relating Narratives*.

Same as: FRENCH 257, ITALIAN 257, ITALIAN 357

**FRENCH 358. The Great War: WWI in Literature, Film, Art, and Memory. 3-5 Units.**

This course concerns how writers, artists, and other cultural producers understood and represented the traumas of the First World War and its aftermath. Rather than tracing a political or military history of the conflict, we'll focus on how the horrors of War (both in the trenches and on the home front) fostered broader social and cultural shifts, as people questioned the very foundations of European civilization. Most specifically, we'll explore the connections between the War and the emergence of post-War modernist movements, as writers and artists created new works to help them make sense of the catastrophe and the new world it wrought. Though France provides our starting point, we'll also travel beyond the Hexagon to incorporate other views and major works. Course readings will be in English, though students may elect to read works in French if they wish.

Same as: FRENCH 258, HISTORY 231C, HISTORY 332C

**FRENCH 368A. Imagining the Oceans. 5 Units.**

How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Primary authors read might include Cook, Banks, Equiano, Ricketts, and Steinbeck; Defoe, Cooper, Verne, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Critical readings include Schmitt, Rediker and Linebaugh, Baucom, Best, Corbin, Auden, Sontag and Heller-Roazen. Films by Sekula, Painlevé and Bigelow. Seminar coordinated with a 2015 Cantor Arts Center public exhibition. Visits to the Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park. Open to graduate students only.

Same as: COMPLIT 368A, ENGLISH 368A

**FRENCH 369. Introduction to the Profession of "Literary Studies" for Graduate Students. 1-2 Unit.**

A history of literary theory for entering graduate students in national literature departments and comparative literature.

Same as: COMPLIT 369, DLCL 369, GERMAN 369, ITALIAN 369

**FRENCH 388. Decadence and Modernism from Mallarmé to Marinetti. 3-5 Units.**

One hundred years ago, artists feared their work was incompatible with modern economic systems, secular bourgeois values, and materialist science. Accused of being decadent, they took up this term of derision and made it into a program of rebellion that has shaped modern art. This course explores decadent rebellion, with an eye toward how the last turn of the century might be similar to our current one. Writers include Huysmans, Poe, Mallarmé, Nietzsche, Nordau, d'Annunzio, Valéry, Ungaretti, Marinetti, and Breton; we will also consider parallels in the visual arts.

Same as: FRENCH 288, ITALIAN 288, ITALIAN 388

**FRENCH 395. Philosophical Reading Group. 1 Unit.**

Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit. Taught in English.

Same as: COMPLIT 359A, ITALIAN 395

**FRENCH 398. Intensive Reading in French/Italian. 10 Units.**

Enrollment is limited to French/Italian Ph.D. students. Course is designed for French/Italian Ph.D. students to prepare for department milestone exams.

Same as: ITALIAN 398

**FRENCH 399. Individual Work. 1-12 Unit.**

For students in French working on special projects or engaged in pre-dissertation research.

**FRENCH 801. TGR Project. 0 Units.**

**FRENCH 802. TGR Dissertation. 0 Units.**

## GSB General & Interdisciplinary Courses

### **GSBGEN 10SC. Lives of Consequence. 2 Units.**

This course examines how exceptionally creative individuals from a variety of domains (including the arts, sciences, politics, technology, and society) found a sense of purpose in their lives and then successfully pursued that purpose. In the creative domain, for example, we examine the lives of filmmaker George Lucas, Apple CEO Steve Jobs, lifestyle designer Martha Stewart, and master chef Thomas Keller. In the political sphere, we examine the lives of Margaret Thatcher, Martin Luther King, and Robert F. Kennedy. We also explore the work of individuals engaged in philanthropic efforts around the globe, including Melinda Gates and Paul Farmer. We complement the study of these individuals, and others, with a variety of readings from the social science literature on happiness, meaning, and creativity. Students interested in psychology, philosophy, creativity, the arts and sciences, or business should find the course particularly useful and engaging. Students, working individually and in small groups, will have a chance to apply the course concepts to their own lives, using a series of reflective writing exercises. Students will complete an independent research project on a topic or person of interest to them. They will make a presentation to the class on the basis of their research. The course is designed to be highly discussion-oriented and interactive. Students may take this course for either a letter grade or on a pass/fail basis. Letter grades for the course will be based upon the quality of the independent library research and class presentation, along with the quality and consistency of class participation. Both components (research and class participation) are equally weighted.

### **GSBGEN 111Q. Seminar in Entrepreneurial Communication. 3 Units.**

College campuses have been the incubators for thousands of new business ventures. What makes the difference between a successful entrepreneur and an initial failure out of the gate? It's often not the quality of the idea, but rather the ability of the entrepreneurs to successfully communicate their vision to potential investors, employees, and customers. This seminar will explore successful and failed entrepreneurial communication. Students will learn the basics of persuasive oral and written communication, and then apply these principles to their own ideas.

### **GSBGEN 112Q. Leading Out Loud: an Exploration of Leadership Communication through an LGBT Lens. 3 Units.**

Students of all sexual orientations are invited to apply for this unique new seminar looking at the distinct challenge LGBT leaders have faced in communicating effectively. Through the years, many individuals have led the struggle for gay rights and inclusion through a variety of different communication strategies and tactics; some were successful while others were not. This seminar course will explore some of the key leaders in the LGBT community and how they chose to communicate. Together we will search through a variety of film clips, transcripts, news reports, and other historical elements to see how the message, media, and moments work together. A number of guest speakers will also share their perspective on what it means to "Lead Out Loud." Heterosexual identified students as well as LGBT students are encouraged to apply; in fact, we seek to have a true diversity of opinions in the room as we explore this topic. All students will benefit from this exploration of how to communicate about controversial, sensitive, and personal subjects with greater strength and purpose.

### **GSBGEN 113N. The Economic Survival of the Performing Arts. 3 Units.**

Even the most artistically accomplished and well-managed performing arts organizations—symphony orchestras, operas, dance companies, and many theaters—tend to live on the edge financially. In fact, most performing arts groups are organized as nonprofit organizations, because they cannot make enough money to cover costs and survive as profit-seeking businesses. In this seminar we will explore the reasons for the tension between artistic excellence and economic security, drawing on the experience of performing arts organizations in the United States and in countries (whose governments have adopted quite different policies toward the arts). Using economic concepts and analysis that we develop in the seminar, you will first examine the fundamental reasons for the economic challenges faced by performing arts organizations. In later sessions, we will consider and evaluate alternative solutions to these challenges in the United States and other countries. The seminar may include meetings with managers and/or trustees of arts organizations. By the end of the seminar, you will be able to assess the economic condition of an arts organization, evaluate alternative strategies for its survival, and understand the consequences of alternative government policies toward the arts. During the early part of the course, you will prepare two short papers on topics or questions that I will suggest. Later, you will prepare a longer paper applying concepts learned to one of the performing arts or a particular arts organization that interests you. You will submit that paper in stages, as you learn about concepts and issues that are relevant to your analysis. There will also be a final exam.

### **GSBGEN 199. Curricular Practical Training for PhD Students. 1 Unit.**

GSB students are eligible to report on work experience that is relevant to their core studies under the direction of the Director of the PhD Program. Registration for this work must be approved by the Director of the PhD Program and is limited to students who present a project which in judgment of the Advisor may be undertaken to enhance the material learned in PhD courses. It is expected that this research be carried on by the student with a large degree of independence and the expected result is a written report, due at the end of the quarter in which the course is taken. Because this course runs through the summer, reports are due the 2nd week of October. Units earned for this course do not meet the requirements needed for graduation.

### **GSBGEN 202. Critical Analytical Thinking. 3 Units.**

The Critical Analytical Thinking (CAT) seminar helps develop and hone the skills needed to analyze complex issues, to formulate well-reasoned arguments and to evaluate others' arguments. In sections of 18 students or less, you will analyze, write about, and debate a set of topics that exemplify the types of problems contemporary managers regularly confront. CAT will enhance your ability to identify critical issues when exploring challenging business and policy problems. The emphasis will be on developing reasoned positions and making valid, evidenced-based arguments that support those positions.

**GSBGEN 203. Global Strategy. 1 Unit.**

The economies of the world are ever more closely linked. Record levels of international trade and investment are achieved every year. Cross-border mergers and acquisitions are booming. The foreign exchange markets handle trillions of dollars of volume daily. Offshore provision of services has grown immensely. Host governments and non-governmental organizations operating internationally affect how companies do business far from their home bases and close to home. Nearly all businesses today are somehow connected to the world economy, and it is quite likely that the process of globalization will continue apace. To succeed as a leader in your career, you will need to be able to think systematically about the challenges and opportunities brought about by globalization. This course is designed to help you develop as a leader in this international environment. Our objectives are to help you:

1. To develop an analytic framework that you can use to understand how countries are different or similar in ways that matter to the globalization of business.
2. To understand how corporate strategies can deal with these differences and similarities, resulting in competitive advantage.

**GSBGEN 208. Ethics in Management. 2 Units.**

With leadership comes responsibility. This course explores the numerous ethical duties faced by managers and organizations. It combines analytical frameworks with the latest findings on human behavior to inform a wide range of ethical decisions and strategies. Readings include case studies, insights from experimental psychology and economics, and excerpts from or about major works of moral philosophy. Through online and in-class exercises, discussions, and personal reflection, you will reveal and assess your ethical intuitions, compare them with more explicit modes of ethical thought, and learn how to use ethics in business settings. A diverse set of ethical viewpoints will be considered with an emphasis on not only their implications for ethical behavior but also on the social and cognitive pitfalls that undermine the ability of business leaders to fulfill their ethical duties.

**GSBGEN 239. MSx: Executive Communication Strategies. 2 Units.**

Communication is crucial to the success of all leaders, but as you climb within an organization the ability to write and speak effectively is magnified. This course will explore how individuals can develop and execute effective communication strategies for a variety of business settings. This course introduces the essentials of communication strategy and persuasion at an executive level. We will study: audience analysis, communicator credibility, message construction and delivery. Deliverables will include written documents and oral presentations and you will present both individually and in a team. You will receive continuous feedback to improve your communication effectiveness. Through this highly interactive course, you will see why ideas, data and advocacy are combined for a professional, persuasive presentation. This practical course helps students at all levels of communication mastery develop confidence in their speaking and writing through weekly presentations and assignments, lectures and discussions, guest speakers, simulated activities, and filmed feedback. This section is specifically designed with the needs of a senior leader in mind and is only open to Sloan Students. Students who elect to take this course in the fall should not also take strategic communication in the winter or spring; the courses will have sufficient overlap in concepts and assignments.

**GSBGEN 259. MSx: Ethics. 1 Unit.**

With leadership comes responsibility. This course explores the numerous ethical duties faced by managers and organizations. It combines analytical frameworks with the latest findings on human behavior to inform a wide range of ethical decisions and strategies. Readings include case studies, insights from experimental psychology and economics, and excerpts from or about major works of moral philosophy. Through online and in-class exercises, discussions, and personal reflection, you will reveal and assess your ethical intuitions, compare them with more explicit modes of ethical thought, and learn how to use ethics in business settings. A diverse set of ethical viewpoints will be considered with an emphasis on not only their implications for ethical behavior but also on the social and cognitive pitfalls that undermine the ability of business leaders to fulfill their ethical duties.

**GSBGEN 299. The Core Curriculum in the Workplace. 1 Unit.**

GSB students are eligible to report on work experience that is relevant to their core studies under the direction of the Senior Associate Dean responsible for the MBA Program. Registration for this work must be approved by the Assistant Dean of the MBA Program and is limited to students who present a project which, in judgment of the Advisor, may be undertaken to enhance the material learned in the first year core required courses. It is expected that this research be carried on by the student with a large degree of independence and the expected result is a written report, typically due at the end of the quarter in which the course is taken. Specific assignment details and deadline information will be communicated to enrolled students. Units earned for this course do not meet the requirements needed for graduation.

**GSBGEN 305. Foundations of Impact Investing. 3 Units.**

Foundations of Impact Investing will introduce students to impact investing (or values-driven investing) from the perspective of an institutional investor (i.e. fund manager, investment advisor, foundation endowment or family office, etc). Our goal is to have students emerge with a practical and analytical framework for:

1. designing an impact investment company;
2. constructing a portfolio using impact as a lens;
3. evaluating impact and mission-aligned investments across multiple asset classes and sectors; and
4. understanding the many practical and theoretical challenges confronting this exciting emerging field.

We plan to begin with a high level overview and will go into more detail on innovative vehicles and fund structures, asset classes, and case-based investment and portfolio analysis as the quarter progresses. We start by exploring some fundamental questions: what is an impact investment; can impact investments be defined across a spectrum between conventional investing and philanthropy; whose money is it; what are the constraints and opportunities; how do we (re)define return and/or performance. We'll briefly analyze impact investing in the context of modern portfolio theory. We'll then develop a framework for portfolio construction and evaluation across four criteria: risk, return, liquidity, and impact. Through a combination of class dialogues, role plays and case discussions, the class will explore a wide variety of investment challenges, building to a final project that could take the form of either the design or an evaluation of an impact investment company. As impact investing is both new and complex, it would be extremely helpful if the students taking the class were diverse in experience, background, and interests. Previous experience in finance, investing, social enterprise, entrepreneurship or philanthropy is strongly encouraged. Many of the issues we'll be tackling have no unambiguous answers. Lively discussion and debate will be necessary and expected.

**GSBGEN 306. Real Estate Investment. 4 Units.**

The major objective of this course is to provide the student with an understanding of the fundamentals of real estate investment. The course covers land economics, market analysis, finance, taxation, investment analysis, investment vehicles, real estate risk, development and urban design. Major land uses are discussed including apartments, retail, office, and industrial. The course is designed for students with limited or no background in real estate.

**GSBGEN 313. Advanced Seminar on Social Entrepreneurship and Global Poverty. 3 Units.**

As an "advanced" seminar, this course is designed for students with strong backgrounds or interests in social entrepreneurship as a tool for solving social problems. The learning format is based on active engagement. For most of the classes, students will be required to lead off the class discussions. The ultimate goal of this course is to make students (and the instructor) smarter about the strengths and limits of social entrepreneurship as a tool for social change. To this end, we will focus on global poverty reduction as a testing ground. During this process we will explore different theories, concepts, frameworks, and guidelines for effective social entrepreneurship to see whether, when and how these help. The course is organized into three modules. The first focuses on how social entrepreneurship fits in a broader framework of social change and social innovation. The second module provides a brief overview of issues, debates, and theories about poverty and development. The third module focuses on specific entrepreneurial interventions aimed at addressing some of the conditions that keep people poor or make them poor. This course allows us to dig into the complexities and challenges of effective social entrepreneurship. It will be taught in a discussion style. The reading will be demanding. So if you are not prepared to dig into the reading or to engage in active discussion, or if you don't feel like you bring relevant knowledge to add to the mix of discussion, this is not the course for you. It is not meant to be an introduction to social entrepreneurship. If everyone contributes, we will all emerge from the course with new perspectives and frameworks for advancing practice in this field. Only take this course if you are ready for an intellectual adventure and ready to make the investment it requires. This course will be taught by Greg Dees, his bio can be found here: <http://www.caseatduke.org/about/caseteam/#greg>.

**GSBGEN 314. Creating High Potential Ventures in Developing Economies. 4 Units.**

This course addresses the distinctive challenges and opportunities of launching high-potential new ventures in developing economies. Developing economies are attractive targets for entrepreneurs because many are just starting to move up the growth curve, and they offer low-cost operating environments that can be great development labs for potentially disruptive innovations. They increase in attractiveness when their political institutions stabilize and they become more market-friendly. At the same time, developing economies pose serious challenges. Pioneering entrepreneurs take on significant risks to gain early mover advantages. Specifically, entrepreneurs will not be able to count on the same kind of supportive operating environments that we take for granted in the developed world. They often face cumbersome permit and licensing processes, poorly developed financial and labor markets, problematic import and export procedures, unreliable local supply chains, weak infrastructure, corruption, currency risks, limited investment capital, lack of financial exits and more. This course is designed to help would-be entrepreneurs - both founders and members of entrepreneurial teams - better understand and prepare for these issues as they pursue the opportunities and address the challenges to start, grow, and harvest their ventures in these environments. GSB314 combines a seminar/discussion format (Tuesdays) with a team-based project (Thursdays). For the Tuesday sessions, students will read about and discuss the key challenges described above and potential solutions. Guests will describe their own startup and investing experiences in developing economies and answer questions. A framework based on the recently published World Economic Forum (WEF) report on "Entrepreneurial Ecosystems Around the Globe and Company Growth Dynamics" will be used to structure the course. Each student will prepare a short paper on a topic of interest from this portion of the course. The Thursday sessions is a team-based exercise for students who either have a specific idea or want to join a team of classmates to pursue more deeply an understanding of the team's country of focus and an initial investigation of the idea's viability. Students must come in willing to be team players and do the work necessary to complete this exercise over the full quarter. Each team member's contributions will be assessed by fellow teammates. Teams will be formed before the start of class or on the first day at the latest. The team will describe, in a final presentation, the challenges and opportunities in their country using the WEF framework. The final presentation will also include the team's thoughts on the viability of their proposed venture and how it capitalizes on their country's assets and addresses its challenges. A detailed business plan is not required; however, specific recommendations and plans for next steps that would be carried out during a 3 to 6 month field and market research study in the country will be part of the final presentation. Note: Students who only want to participate in the seminar/discussion portion of the class and not do a team-based project (see details below) may enroll in GSB514 for 2 units.

**GSBGEN 315. Strategic Communication. 4 Units.**

Business leaders have marketing strategies, expansion strategies, finance strategies, even exit strategies. Successful leaders, however, also have communication strategies. This course will explore how individuals and organizations can develop and execute effective communication strategies for a variety of business settings. This course introduces the essentials of communication strategy and persuasion: audience analysis, communicator credibility, message construction and delivery. Deliverables will include written documents and oral presentations and you will present both individually and in a team. You will receive feedback to improve your communication effectiveness. In the final team presentation, your challenge is to craft an oral presentation that will persuade your audience to accept your strategic recommendations. By doing this, you will see why ideas, data and advocacy are combined for a professional, persuasive presentation. This practical course helps students develop confidence in their speaking and writing through weekly presentations and assignments, lectures and discussions, guest speakers, simulated activities, and videotaped feedback. An important new feature of this course is that a team of external communications coaches work in concert with the professor to ensure that students get rigorous and individualized coaching and feedback. In this course you will learn to:

- Create communication strategies at an individual and organizational level
- Develop clearly organized and effective presentations and documents
- Diagnose and expand your personal writing and oral delivery style
- Adapt your delivery style to different material and audiences
- Enhance oral delivery through effective visual aids

Students at all levels of comfort and expertise with public speaking and business writing will benefit from this course. Waitlists have been long for this course and you're encouraged to keep that in mind as you make your super round selections.

**GSBGEN 317. Reputation Management: Strategies for Successful Communicators. 3 Units.**

Successful leaders have to conceive, author, rebuild, pivot, differentiate, and finally maintain a personal reputation to make a lasting, recognizable and powerful identity. Reputation Management will explore how you can effectively communicate to create, adapt and maintain your personal reputation. Your reputation remains fluid as you navigate your career decisions and interact with different professionals along your journey. The course is designed along three interlocking elements: reputation management literature, relevant case studies, and curated guest speakers. Students will learn the fundamentals of strategic corporate communication and the risk of not managing reputation effectively. These frameworks will be extended with specific case studies to illustrate where individuals, groups, and firms have faced the challenge of managing reputation effectively. We will focus on both traditional and virtual components of communication including the relevancy of online reputation management. Finally we will invite well-known leaders from a range of industries who have built and sustained their reputations, through effective communication. Each leader has had to manage their reputations in the public eye, and alongside their peers, supervisors, and employees. Guests will be invited to discuss their conscious and unplanned strategies of how to successfully communicate the kind of person, leader, innovator, or public figure they strive to be. Students will benefit from a rich blend of frameworks, cases, and speakers enabling them to successfully enter the work force and create their own, personal reputations. Students will create a case study drawn from their own experience (or personal network), of a reputation dilemma. A final assignment requires students to articulate their own reputation using any media of the student's choosing and share that with others in the course. Throughout the course students will post at least one blog drawn from class concepts and respond to posts by peers in the class.

**GSBGEN 319. Strategic Philanthropy and Impact Investing. 3 Units.**

The course will be structured around the perspective of a high net worth individual who has decided to devote substantial resources to philanthropy and wishes to decide which philanthropic goals to pursue and how best to achieve them. Although there are no formal prerequisites for the course, we will assume that students have experience working at a foundation, nonprofit organization, impact investing fund, or similar organization, or have taken an introductory course in strategic philanthropy such as GSBGEN 381. (There is sufficient overlap with Paul Brest's Autumn course, Measuring and Improving the Impact of Social Enterprises (GSBGEN 322), that students taking that course should not enroll in this one.) We will explore selected topics including:

- the roles of the philanthropic and nonprofit sectors in society;
- choosing philanthropic goals, and whether giving to the poor is morally obligatory;
- the justifications for tax-subsidized philanthropy;
- alternative legal and organizational structures to carry out philanthropic programs, including donor-advised funds, direct giving, foundations;
- whether foundations should exist in perpetuity or spend down over a finite number of years;
- fundamentals of nonprofit strategy;
- designing performance metrics (KPIs) and measuring philanthropic impact;
- barriers to the practice of strategic philanthropy;
- fundamentals of investment management for pools of philanthropic capital;
- socially motivated criteria for investing, including PRIs, MRIs, SRIs, and negative screens;
- impact investing and investor-funded pay for success programs.

**GSBGEN 322. Improving and Measuring Social Impact. 3 Units.**

This course focuses on strategy and actionable measurement in government, non-profit organizations, market-based social enterprises, philanthropy, and impact investing. "Actionable" means that measurement is used by managers, investors, and other stakeholders in improving outcomes. The course explores the intersection of several ideas that seem to be in some tension with each other. (1) "In preparing for battle I have always found that plans are useless, but planning is indispensable." (Dwight D. Eisenhower), (2) You can't manage what you can't measure, (3) Measurement is expensive and its results are often ignored, (4) "Not everything that counts can be counted and not everything that can be counted counts" (apocryphally attributed to Einstein), (5) "The more any quantitative social indicator is used for decision making, the more subject it will be to corruption pressures and the more apt it will be to distort and corrupt the social processes it is intended to monitor." (Campbell's Law). Specifically, the course will include: strategic planning, logic models, theories of change, monitoring, and evaluation; measuring the social impact of governments, non-governmental organizations, and market-based social enterprises, and asking how philanthropists and impact investors can assess their own impact; impact investing, performance contracting, and social impact bonds; and techniques for improving the behavior and accountability of individuals and organizations. These issues will be addressed mainly through business school case studies, which place the students in the position of CEOs, managers, and investors called upon to make major decisions. **WARNING:** The course has a fair amount of reading - not more than is common in undergraduate and graduate courses, but more than is typical for MBA courses in the GSB.

**GSBGEN 324. Leading with Mindfulness and Compassion. 3 Units.**

The course explores the role of mindfulness, self-compassion and compassion in the workplace, and the contribution of these qualities to leadership. Topics addressed will include: How can mindfulness enhance clarity in purpose and productivity? What is the connection between mindfulness and compassion? Is compassion in the business world a strength or a weakness? Are compassion and profit motives fundamentally incompatible, or can they support each other? What does compassionate leadership look like? Can mindfulness and compassion be trained at the individual level, and built into company policy? How does self-compassion support effective leadership and recovery from setbacks? Participants in the course will engage with exercises from evidence-based programs targeting the development of mindfulness and the practical application of the skills of self-awareness, self-compassion, and perspective taking in the context of work and relationships.

**GSBGEN 332. Sustainable Energy: Business Opportunities and Public Policy. 3 Units.**

This course examines trends and opportunities in the sustainable energy sector with a particular focus on low carbon energy. We examine these trends in the context of technological change, emerging business opportunities and the parameters set by public policy. nSpecific topics to be examined include: (i) the impact of regulatory policies and tax subsidies on the energy mix (ii) the growing competitiveness of renewable energy, in particular solar PV and wind, (iii) sustainable transportation (iv) adaptation by fossil fuel energy sources, (v) innovative financing mechanisms for energy projects, (vi) the venture capital perspective (vii) the changing role of utilities in the energy landscape.

**GSBGEN 334. Family Business. 3 Units.**

Family-controlled private and public companies are the dominant form of enterprise worldwide. Despite their prominence, teaching and research have traditionally focused on analyzing the widely-held model of the firm. This course explores the challenges and opportunities faced by family firms. It is taught by Leo Linbeck III, Lecturer since 2005 at the GSB and President and CEO of Aquinas Companies, LLC. The course balances managerial perspectives with general frameworks. The course is intended for four main audiences: (1) Students whose family owns a business. (2) Students who are considering working for a family firm. (3) Students who are interested in acquiring a private firm either directly (search funds, minority investments, etc) or indirectly (private equity, etc). (4) Students who seek to consult or provide professional services to closely held firms or their owners (wealth management solutions, management consulting, etc). The main objectives of this course are three. First, to understand the challenges and characteristics of family firms. Second, to provide a coherent and consistent set of tools to evaluate the most relevant decisions faced by family firms. Third, to focus on decision-making. The course uses a combination of case studies, guest speakers, lectures, and student presentations to explore the central ideas of the course.nn

**GSBGEN 335. Clean Energy Project Development and Finance. 3 Units.**

This case study-oriented course will focus on the critical skills needed to evaluate, develop, finance (on a non-recourse basis), and complete standalone energy and infrastructure projects. The primary course materials will be documents from several representative projects - e.g. solar, wind, storage, carbon capture - covering key areas including market and feasibility studies, environmental permitting and regulatory decisions, financial disclosure from bank and bond transactions, and construction, input, and offtake contracts. Documents from executed transactions are highly customized. By taking a forensic approach, looking at several different deals, we can learn how project developers, financiers, and lawyers work to get deals over the finish line that meet the demands of the market, the requirements of the law, and (sometimes) broader societal goals, in particular climate change, economic competitiveness, and energy security.

**GSBGEN 336. Energy Markets and Policy. 3 Units.**

Transforming the global energy system to reduce climate change impacts, ensure security of supply, and foster economic development of the world's poorest regions depends on the ability of commercial players to deliver the needed energy at scale. Technological innovation is a necessary but not sufficient condition for this to occur. The complex institutional frameworks that regulate energy markets in the United States and around the world will play a major role in determining the financial viability of firms in the energy sector. In this course we survey the institutional contexts for energy enterprises of all types and consider what kinds of business models work in each setting. We study in detail how markets function for carbon (assessing the advantages and disadvantages of different policy tools and considering in particular California's implementation of A.B. 32); electricity (with extensive discussion of wholesale electricity markets, energy trading, and issues of market power); renewable energy technologies (focusing on ways to manage intermittency and on how renewable energy businesses respond to government incentives); nuclear power (as a case study of how the regulatory process affects investment decisions); oil and natural gas (treating both conventional and unconventional resources and emphasizing the key role of risk management in an industry characterized by uncertainty and high capital requirements); transportation fuels (discussing biofuels incentives, fuel efficiency standards, and other policy tools to lower carbon intensity); and energy for low-income populations, for which affordability and distribution pose special challenges. A primary teaching tool in the course is a game-based simulation of California's electricity markets under cap and trade. Student teams play the role of power companies and compete to maximize return by bidding generation into electricity markets and trading carbon allowances. The objective of the course is to provide a robust intellectual framework for analyzing how a business can most constructively participate in any sector like energy that is heavily affected by government policy. Instructors: Frank A. Wolak, Director, Program on Energy and Sustainable Development; Mark Thurber, Associate Director, Program on Energy and Sustainable Development.

**GSBGEN 337. Business Collaboration to Promote a Sustainable Food System. 3 Units.**

This goal of this class is to redesign our food system through project-based, experiential education and entrepreneurship. Projects will focus on food justice, sustainable food and farming technology and disruptive models of production and distribution. The class will scale change by providing creative spaces and resources for students, faculty, and community partners to learn and apply design thinking to real-world opportunities in the food system.

**GSBGEN 340. Financial Crises in the U.S. and Europe. 4 Units.**

This lecture course will explore the U.S.-centered financial crisis of 2008 and the ongoing European financial crisis. We will examine the causes of both crises, policies implemented during the crisis, and options for reform. This is an economic policy course rather than a pure economics course. It will focus on the practical intersection of economics, financial markets and institutions, policy, and politics. Topics we will examine include the following for the 2008 crisis: Did a global savings glut, international savings flows, or Fed policy cause the credit bubble? What caused the housing and mortgage bubbles? How does a bad mortgage turn into a toxic financial asset? Why and how did large financial institutions fail? What's the difference between a solvency crisis and a liquidity crisis? What is Too Big To Fail? Is it real? Why was Bear Stearns bailed out but not Lehman? Was the global financial system on the verge of meltdown in September 2008? How? Why? What was the TARP? The TALF? The CPP? The stress tests? What can we learn from comparing the US financial crisis with that in other major economies? How effective were various policy tools during the crisis? How have policies enacted and implemented since the crisis changed the outlook for the future? For the European debt crisis we will examine: The fiscal and economic situations in various European countries; The structures and history of the Eurozone; Policy options to address problems in troubled European economies; The interaction between European financial institutions and European governments; Options for longer-term reform of the Eurozone. There will be no exams. Students will write two individual memos and a group memo.

**GSBGEN 343. The Power of Stories in Business. 3 Units.**

To grow and innovate, you not only need a big idea, you also need stakeholder buy in and action. However, many companies fail in this regard because stakeholders are not aligned, the real problem that the innovation seeks to solve has not been identified, and the story has not been defined. Story can fuel stakeholder buy-in by painting a clear picture of what is and what could be for everyone - from employees, to investors, to customers. In other words, an excellent story means that you can delegate tactical aspects effectively because it clarifies how to execute specific functions against the story (e.g., digital marketing, advertising, design). Further, when the stakeholder becomes part of the story, they are more likely to act, which generates momentum and create a culture of optimism. Story is equally important for leaders of companies, who often need to act as editors - shaping the stories told by employees and customers - to align with a shared vision. A secondary goal of the class is to demonstrate how personal stories can be used by leaders to build high performing teams and companies. By creating powerful stories, you'll see how your company can gain momentum and how you can help your employees and customers become more connected. By the end of the class, you will have gained insight into: How to use stories as an asset in business- What makes for a good and bad story- Pitching stories.

**GSBGEN 345. Disruptions in Education. 3 Units.**

This course will explore the contemporary higher education industry, focusing especially on the places where disruptions of all kinds present significant opportunities and challenges for faculty, students, and higher education administrators, as well as for entrepreneurs and the businesses that serve this huge global market. Using a variety of readings and case studies to better understand recent disruptions across the higher education landscape, from outside and inside the academy, both for-profit and non-profit, the course will examine technology in teaching and learning; alternatives to the traditional credential; the impact of for-profit providers; content and the ownership and distribution of knowledge; and tertiary products and platforms that cater to the large student services market. Among the questions the course will consider: What does disruption mean in the context of higher education today? Will online education and distance learning make the classroom and campus less relevant? Can open educational resources reduce the costs of a post-secondary education? What are competency based degrees and how do they challenge the notion of a liberal education? Can an alternative or DIY education ever become the norm? Will badges, certificates, or stackable credentials replace traditional degrees? How can big data and other tools help colleges and universities attract, retain, and graduate more students? What is the impact of digital rights management on knowledge producers and consumers? In what ways do for-profit institutions threaten traditional non-profit colleges and universities? What are the opportunities for international enterprises to challenge American dominance of the higher education market? Students will write two individual memos and complete one group project. Guests will include higher education leaders and practitioners, as well as investors and entrepreneurs leading innovative and disruptive ventures in the higher education space.

**GSBGEN 346. Comparing Institutional Forms: Public, Private, and Nonprofit. 4 Units.**

For students interested in the nonprofit sector, those in the joint Business and Education program, and for Public Policy MA students. The focus is on the missions, functions, and capabilities of nonprofit, public, and private organizations, and the managerial challenges inherent in the different sectors. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials.

Same as: EDUC 377, PUBLPOL 317, SOC 377

**GSBGEN 347. Education Policy in the United States. 3 Units.**

The course will provide students from different disciplines with an understanding of the broad educational policy context. The course will cover topics including a) school finance systems; b) an overview of policies defining and shaping the sectors and institutional forms of schooling, c) an overview of school governance, d) educational human-resource policy, e) school accountability policies at the federal and state levels; and f) school assignment policies and law, including intra- and inter-district choice policies, desegregation law and policy.

**GSBGEN 348. The Economics of Higher Education. 4 Units.**

Topics: the worth of college and graduate degrees, and the utilization of highly educated graduates; faculty labor markets, careers, and workload; costs and pricing; discounting, merit aid, and access to higher education; sponsored research; academic medical centers; and technology and productivity. Emphasis is on theoretical frameworks, policy matters, and the concept of higher education as a public good. Stratification by gender, race, and social class.

**GSBGEN 349. Introduction to the Politics of Education. 4 Units.**

The relationships between political and economic analysis and policy formulation in education; focus is on alternative models of the political process, the nature of interest groups, political strategies, policy efficiency, the external environment of organizations, and the implementations of policy. Applications to policy analysis, implementation, and politics of reform. (APA).

**GSBGEN 350. International Internship. 1-2 Unit.****GSBGEN 355. d.org: Designing Creative Organizations. 3 Units.**

Students will learn and apply several frameworks for organization design and human centered design. They'll also get a rare, in-person view into the fabric of industry-leading organizations during project work outside of class. They'll discover how company leaders inculcate the notion of user empathy into their DNA, to create compelling customer experiences and extraordinary work environments. Employing a human-centered approach, interdisciplinary teams will explore the partner companies and identify opportunities to design for positive organizational impact. After generating a range of initial ideas, teams will prototype focused interventions taking the form of novel roles, tools, spaces, rituals and more. Students will learn how design thinking applies to leading creative organizations. They will be exposed to and experiment with multiple organizational design models in a real-world environment. They will work in teams and learn from their peers' professional experience by participating in projects together.

**GSBGEN 356. Dynamics of the Global Wine Industry. 3 Units.**

This course will examine the world of wine with a fresh and contemporary lens. It will explore the market dynamics of this fascinating global industry. The goal of the course is to provide insight into the branding, marketing, and distribution dynamics that shape what consumers can buy and consume with a focus on the strategies of some of the world's leading wine brands. Attention will also be paid to the legal, regulatory, and market dynamics that define the U.S. wine industry as well as to issues of contested authenticity in the world of wine.

**GSBGEN 359. Leading Your Life. 3 Units.**

This course takes conventional managerial perspectives on the "strategic leadership" of organizations and applies them to the design and management of your life. Fundamental notions of "purpose" and "vision" are translated to the personal level in the form of "dreams" and "aspirations." Basic elements of strategy such as "scope" and "competitive advantage" are applied to help you evaluate fundamental choices about how you lead your life. Constructs such as "priorities," "commitments" and "resource allocation" all have analogues in individual life - as does the core objective of performance and success. The class begins with a hard-nosed and broad-based self-assessment of the quality of your life along a variety of dimensions including relationships, career, money, spirituality and health. Based on this assessment you will develop a strategy and a set of concrete goals for enhancing the quality of your life in targeted domains. The course consists of five intensive sessions designed to help you develop the skills and knowledge- but more importantly the insight and capacity - to be more strategic (in best sense of the term) and effective in how you lead your personal and professional life - meaning actively guiding, stewarding, and driving your results to create a life that is truly exceptional. Substantively, the course draws on a variety of different traditions including existential, humanistic, and positive psychology; personal growth, adult development, and the human potential movement; as well as the practice of life and executive coaching. Central themes and learning objectives include: \* The development of self-awareness, self-acceptance, and self-control \* An understanding of the power of choice and "authoring" one's life \* The essential role of dreams and aspirations \* The art and discipline of knowing and speaking your truth \* The challenges and self-limiting impact of negative thoughts and self-theories \* Developing a stance towards oneself and others that is rooted in grace and wisdom NB: While we expect the class to be helpful and of interest to a wide range of students, it involves a substantial commitment of time and emotional and intellectual energy. It is not for the faint of heart or those who are ambivalent about introspection, feedback, or constructive confrontation.

**GSBGEN 360. Sports Business Management. 4 Units.**

This course will examine the diverse management challenges facing the sports industry. The course will cover issues at the league level, the team level, the athlete/agent level, and the college level. The diverse constituencies with interests in sports issues (athletes, fans, media companies, advertisers, and legislators to name a few) will be discussed. Sports issues at a global level (the IOC) and both U.S. and outside U.S. will be covered. There will be coverage of evolving business ventures related to the sports industry (such as venture backed sports companies and sports networks). A key focus is on how the sports industry is similar to and different from other industries. Key concepts underlying the course are: value creation/value sharing; revenue ecosystem; virtuous circles and vicious circles; disruptive technologies; growth facilitators and growth inhibitors; leveragable assets/inherited liabilities; and entrepreneurship/new product innovations. Over 80% of the sessions typically will include a guest co-lecturer from the sporting industry.

**GSBGEN 363. Fiscal Policy. 4 Units.**

One of every four dollars in the American economy will be spent by the federal government this year. This course will examine how federal spending, taxes, deficits and debt affect the U.S. economy and global financial markets, and how the economy affects the federal budget. We will look inside the federal budget to understand entitlement spending, what causes it to grow so fast, how it could be reformed, and why that's so hard to do. We'll understand where the money goes - how much goes to infrastructure, education, housing, health care, energy and the environment, parks, scientific research, national defense, and other needs. We'll look at the stimulus vs. austerity debate, both within the U.S. and between the U.S. and Europe. We'll look beyond partisan battle lines and explore various fiscal philosophies that sometimes split the political parties. We'll cover the federal budget process from developing the President's budget to enacting individual spending and tax bills, and discuss process reforms including spending and deficit reduction targets, a balanced budget amendment, and line item veto. We'll cover the major players in the budget debate and understand where the big and small budget decisions are made. We'll look at federal taxation, where the money comes from, how it affects the economy, and how it might be restructured. We'll examine the recommendations of the President's budget commission and see if we can predict what will become of its recommendations. And we'll see if we, as a class, can solve our nation's fiscal problems as Washington has so far been unable to do.

**GSBGEN 370. Social Innovation Project. 2 Units.**

**GSBGEN 373. Investing in Alternative Assets. 3 Units.**

This course is intended for any student interested in a career in managing, developing, or investing in alternative assets such as hedge funds, private real estate funds, buy-out private equity (primarily large cap firms) and infrastructure. The first module of the course presents an overview of how investing in these alternative assets differs from investing in the public markets (e.g., publicly traded stocks and bonds). We spend time defining and discussing the risks involved when investing in non-transparent market sectors. We also focus on the perspectives of general partners and limited partners and how they each assess performance. Lastly, in this module we identify the attributes of successful private investment firms. The second module consists of analyses of individual transactions in real estate, mezzanine debt, large cap buyout transactions and infrastructure. Many of these investments can become significantly troubled and when they do, one must make decisions among a number of poor alternatives. Cases will be global. Objectives include: How to construct portfolios that include alternative assets; How to benchmark such portfolios; How to assess risks in transactions and portfolios; How to perform relative value analyses of differing investment opportunities; How to manage troubled investments (when to "hold 'em and when to fold 'em"); and How to manage a general partner firm. The course is divided into three modules with special emphasis on the financial analysis for transactions and portfolios. The first module focuses on portfolio construction issues and how to quantify whether the investor has been successful. The second module focuses on underwriting individual transactions and applying a relative value construct in determining the more attractive investments. The second module also focuses on the management of troubled investments, including deciding when to "double down" and how to protect investments already in place. The third module will address how general partners manage their firms. Students will be expected to create an investment concept, draft an investment memorandum, create a pitch book and make presentations to a panel of experts.

**GSBGEN 376. Work and Family. 3 Units.**

This course examines the strategies that highly educated women and men use to combine work and family and the strategies that managers and policy makers can use to help others strike a balance. Topics include the tradeoffs in becoming a stay-at-home parent, the economic value of unpaid labor, the consequences of balancing two high-powered careers and children, the economics of marriage, fertility, child care, and elder care, the gendered division of labor in the home, time-management, workplace innovations, and policy initiatives. Guest speakers add their own perspectives on these issues and describe the roles their organizations play.

**GSBGEN 377. Diverse Leadership as an Imperative for Impact - Lessons from Education. 3 Units.**

Our society implicitly prizes a particular approach to leadership - but today's cross-sectoral, impact-oriented leader cannot afford to be restricted to a single approach. If we aspire to address challenges across social, economic, and political arenas, with highly charged moral implications and multiple stakeholders, we have an imperative to use all available tools by discovering, celebrating, and advancing diversity in leadership. Education provides the perfect canvas on which to explore this imperative. In this course, we will: (1) study a range of effective leadership approaches in the context of education; (2) develop broad, transportable skills and frameworks required to lead in any complex setting - business, public sector, nonprofit sector; (3) delve into leadership tradeoffs and tensions; (4) explore and understand our own values and tacit and explicit decision-making criteria; and (5) recognize barriers to diversity and tactics to address them. Guiding questions will include: How does the context shape the solution set? What does inspired and inspiring leadership look like? How do race/gender/other identities enter into the equation? How do I develop my own brand of leadership? We will examine contemporary leaders and controversies from education, draw upon timeless historical thinkers, enjoy the wisdom of guest speakers, and work intensively in small groups to highlight challenges, opportunities, and tradeoffs. By exploring a range of approaches and situations, we will strive for deeper understanding of ourselves and of the context to become a more capable, empathetic and effective leaders.

**GSBGEN 380. Real Estate Private Equity Investing. 4 Units.**

This course is intended for any student interested in a career in managing, developing, or investing in real estate or private equity. The course covers cases involving the perspectives of general partners and limited partners; the attributes of successful real property investment firms; analyses of investment portfolios and individual transactions, primarily in the private equity real estate category. Cases will be global. Objectives include: How to construct a private real estate portfolio; How to assess the risks in projects and portfolios; How to perform relative value analyses of differing investments; How to manage troubled investments (when to "hold 'em and when to fold 'em"); How to manage a general partner firm. The course is divided into three modules with special emphasis on real estate financial analysis for transactions and portfolios. The first module will focus on portfolio construction issues and how to quantify whether the investor has been successful. The second module will focus on underwriting individual transactions and applying a relative value construct in determining the more attractive investments. The second module will also focus on the management of troubled investments, including deciding when to "double down" and how to protect investments already in place. The third module will address how general partners manage their firms.

**GSBGEN 381. Strategic Philanthropy. 3 Units.**

Appropriate for any student driven to effect positive social change from either the for-profit or nonprofit sector, Strategic Philanthropy will challenge students to expand their own strategic thinking about philanthropic aspiration and action. In recent decades, philanthropy has become an industry in itself - amounting to over \$300 billion in the year 2012. Additionally, the last decade has seen unprecedented innovation in both philanthropy and social change. This course explores the key operational and strategic distinctions between traditional philanthropic entities, such as community foundations, private foundations, and corporate foundations; and innovative models, including funding intermediaries, open-source platforms, technology-driven philanthropies, and venture philanthropy partnerships. Course work will include readings and case discussions that encourage students to analyze both domestic and global philanthropic strategies as they relate to foundation mission, grant making, evaluation, financial management, infrastructure, knowledge management, policy change, and board governance. Guest speakers will consist of high profile philanthropists, foundation presidents, social entrepreneurs and Silicon Valley business leaders creating new philanthropic models. The course will also provide students with real-world grantmaking experience in completing nonprofit organizational assessments and making grants to organizations totaling \$20,000. The course will culminate in an individual project in which students will complete a business plan for a \$10 million private foundation.

**GSBGEN 382. Thinking Like a Lawyer. 3 Units.**

Open to all non-law graduate students at the University, this course will provide non-law students an analytical framework for understanding the core concepts of the law and familiarize students with how lawyers analyze and structure their work. This course will be taught by Vice Dean Mark Kelman and Law School faculty in their areas of expertise, with one to two classes devoted to each topic. It will introduce students to some of the foundational principles of law and will review topics such as contracts, litigation, intellectual property, securities and employment law. No previous study of law or legal systems is required and there are no pre-requisites. It will be offered in the Winter 2012-13 quarter (1/8/13 - 3/13/13), with lectures twice weekly on Tuesdays and Thursdays from 1:30 - 3:00 pm at the Law School. Additional mandatory TA-led discussion sections will be taught on Tuesday and Thursday - students must also attend one of these TA sessions each week. Students will indicate their availability for specific sections on forms passed out at the first lecture. Readings and assignments will be posted to Coursework; there is no textbook. Grading: The class is graded on a pass/fail basis. There will be no final exam, but completion of problem sets on various topics as well as attendance at discussion sections will be used to determine grading. All students must complete 4 problem sets. Two specific problem sets are required of all students and the other assignments can be chosen from a list of available assignments.

**GSBGEN 390. Individual Research. 1-4 Unit.**

Need approval from sponsoring faculty member and GSB Registrar.

**GSBGEN 392. Modern Military Strategy: the Changing Face of War. 3 Units.**

The course's goal is to introduce students to the complexities of military strategy in the modern era. We will cover a variety of types of warfare, ranging from early modern wars, through the great wars of the twentieth century to the strategic challenges posed by present-day counterinsurgency and low-intensity conflicts. Military planners are required to act fast in an uncertain and highly lethal environment. We will examine how, and why, they react to innovations that completely transform their worlds, and try to understand what makes such strategic responses successful. In so doing, we will explore the interlocking relations between strategy and economics, technology, ideology, state apparatuses, and various forms of armed organizations. Course requirements: Students are required to submit 2 assignments: a mid-term project analyzing a successful military strategy, and a final project. The final project will be based on an in-class simulation of a strategic military campaign. Students will be required to submit individual analyses of the simulation, and present their analyses in class.

**GSBGEN 393. Practicum in Applied Philanthropy: Achieving Impact from a Major Gift. 3 Units.**

Giving away money well-i.e., achieving genuine planned impact in a measurable way—turns out to be as hard or harder than earning or investing it. In this seminar, students will decide how and to which nonprofit organization they will make a real \$100,000 donation. The students, guided by the instructor, will choose what readings and resources to draw on in making their decisions from a bibliography provided as well as other sources they develop. They will also discover, debate, discuss and decide what evaluation approach approach to use as well as what decision-making process to apply. Students are likely to be asked to research and present knowledge on relevant topics. And a final presentation to a donor trying to decide whether to fund part of the \$100,000 is likely also.

**GSBGEN 507. Impact Investing in the United States and Other Developed Markets. 2 Units.**

In the past decade the notion of impact investing has gained substantial popularity. But what is impact investing and what do impact investors actually do? This course will explore the current role of impact investing in developed economies, with particular focus on the United States. We will review the history of the field and explore the concept of a continuum of risk and impact. The course is designed to examine the practice of impact investing from multiple perspectives. It will broadly cover impact investing across multiple asset classes with a focus on venture capital impact investing. Selected practitioners from leading firms, organizations and portfolio companies will join for a portion of a number of classes to provide first-hand insight. The creation and measurement of social impact while answering financial return expectations, as well as the Limited Partner perspective in impact investing will also comprise a key part of the course's intellectual underpinning. Assignments are created to mimic the real-world tasks and challenges in impact investing, debate the issues that those in the field grapple with today and encourage students to explore how the industry can expand. There will be a final project and presentation for the course. Classes will include both presentation and dialogue, with frequent student participation strongly encouraged. Ideally, at the conclusion of the course, you will not only understand the qualitative aspects of impact investing and the role of metrics, but also the basic financial analysis that underlies investments made across numerous asset classes and in particular venture capital.

**GSBGEN 508. Deals II. 2 Units.**

This course applies economic concepts to the practice of structuring contracts. The course extends over two quarters, meeting three hours per week the first quarter and two hours per week the second quarter. Students enrolled in the course must take both quarters. All or most of the first quarter is spent in a traditional classroom setting, discussing economics articles and case studies of actual contracts that illustrate the concepts described in the articles. Beginning either at the end of the first quarter or the beginning of the second quarter until the end of the course (the "deals" segment of the course), the class explores the connection between economic theory and contracting practice by studying specific current deals. Students, divided into groups, study a deal beginning in the first quarter. Then, during the deals segment of the course, each group gives a presentation of its deal to the class. The following week, a lawyer or other participant in the deal will come to class and lead a discussion of the deal. When it works, the students' and the practitioners' analyses are mutually enlightening. The course examines new deals each year. Deals that studied over the years have included movie financings, biotech alliances, venture capital financings, cross-border joint ventures, private equity investments, and corporate reorganizations.

**GSBGEN 510. Taking Stock and Moving Forward. 1 Unit.**

This spring quarter elective is designed to help you prepare for a challenging, fulfilling, and meaningful future. GSBGEN 510 seeks to: (1) Provide you with the opportunity and tools to take stock of what you have learned about yourself as a person and as a leader over the last 18 months at the GSB (2) Expose you to research on personal and professional development and help you apply it (3) Encourage you to reflect on what matters most to you, personally and professionally, and begin to determine how to achieve it, and (4) Prepare you for the challenges and transition immediately ahead and, in so doing, learn how to manage life's big transitions in the future. We will address four major life and career themes: Learning from Choices, Fulfillment and Meaning, Failure and Resilience, Transitions and Renewal. This class is limited to 36 students. Each class will begin with conceptual input and an overview of that session's topic in the main classroom. Students will then be divided into three twelve-person breakout groups during the remainder of the class time. These groups are NOT T-groups, for those of you who took Interpersonal Dynamics, but rather discussion groups. Discussion will be of a reflective and personal nature. Each group will have 2 Group Leaders who are experienced executive coaches specializing in helping people through life and career transitions.

**GSBGEN 511. Making Social Ventures Happen by Attracting Financial and Human Capital. 2 Units.**

Social ventures require leadership, funding, expertise, skills and networks to get off the ground, grow and scale. This course will focus on the key strategies for building and leveraging a network of champions to capitalize a social venture at early-stage, and for sustaining and growing that network as the venture grows. While we'll predominantly use social entrepreneurs as a lens, this class is applicable to entrepreneurs, aspiring entrepreneurs and social venture champions of all types. Co-lead by a practicing venture philanthropist and a social entrepreneur, this interactive, pragmatic course will:

- Discuss the critical financial and human capital needs of organizations and companies at different life stages.
- Explore the concept of champions and the different types of champions including board chairs, co-founders, mentors, faculty advisors, donors, investors, community evangelists, and fellow entrepreneurs.
- Learn about effective networks and how to build them, including the role of communications, relationship-building, and crisis management.
- Explore the concept of "powerful vulnerability" and the art of "influence without authority" in attracting financial and human capital to the mission and making social ventures happen. Special emphasis will be given to developing co-founders and founding teams, boards and funders/investors as champions.
- Develop a roadmap for the ways you will support social ventures throughout your career.
- Meet social entrepreneurs and their champions who promote them within various power structures (major corporations, government, the institutional funding community) to learn about the successes and failures of their partnerships. Confirmed guest speakers include (partial list only): Alexandra Bernadotte, Beyond 12, Scott Morgan, Education Pioneers, Meg Garlinghouse, LinkedIn, the co-Founder teams of Noora Health and SIRUM, Christa Gannon, Fresh Lifelines for Youth (FLY), and Patrice Martin, IDEO.
- Invite you to join instructors, guest speakers and fellow students for casual dinner on both Wednesdays after class.

**GSBGEN 512. Funding Social Impact: Methods and Measurement. 2 Units.**

The past decade has seen an increasing interest in impact investments, which seek to generate financial returns at the same time as they have social (or environmental) impact. But how does an investor actually achieve impact? We explore this question through a framework that requires that the investee enterprise itself has net positive impact and that the investor's financial or other contribution increases that impact. We consider the challenges of measuring an enterprise's impact, and then turn to assessing the value added by investors, fund managers, and other intermediaries. The course will be taught mainly through case studies that consider investments in different asset classes ranging from those that expect below-market returns to ones that expect risk-adjusted market returns or better. We will look at investments at various stages, from R&D to start-ups to mature enterprises and entire sectors, considering the role of subsidies (for better or worse) and how an enterprise's social mission can be protected upon exit, and also will examine social impact bonds. The course is taught by Paul Brest, <http://www.law.stanford.edu/profile/paul-brest>. With its focus on assessing impact, it has a different mission than Matt Bannick's winter quarter course, *New Business Models in the Developing World*, which examines enterprises serving the base of the pyramid, and David Chen's spring quarter course, *Impact Investing: Strategies and Tools*, which broadly examines the domain of impact investments with emphasis on those yielding market returns. Students will find only slight overlap among the three courses.

**GSBGEN 514. Creating High Potential Ventures in Developing Economies. 2 Units.**

GSB514 - Creating High Potential Ventures in Developing Economies (2 Units)  
 Note: Students who want to work on a team to investigate a specific new venture idea in addition to participating in the seminar/discussion sessions (see details below) should enroll in GSB314 for 4 units.  
 This course addresses the distinctive challenges and opportunities of launching high-potential new ventures in developing economies. Developing economies are attractive targets for entrepreneurs because many are just starting to move up the growth curve, and they offer low-cost operating environments that can be great development labs for potentially disruptive innovations. They increase in attractiveness when their political institutions stabilize and they become more market-friendly. At the same time, developing economies pose serious challenges. Pioneering entrepreneurs take on significant risks to gain early mover advantages. Specifically, entrepreneurs will not be able to count on the same kind of supportive operating environments that we take for granted in the developed world. They often face cumbersome permit and licensing processes, poorly developed financial and labor markets, problematic import and export procedures, unreliable local supply chains, weak infrastructure, corruption, currency risks, limited investment capital, lack of financial exits and more. This course is designed to help would-be entrepreneurs - both founders and members of entrepreneurial teams - better understand and prepare for these issues as they pursue the opportunities and address the challenges to start, grow, and harvest their ventures in these environments.  
 GSB514 is a seminar/discussion format in which students will read about and discuss the key challenges described above and potential solutions. Guests will describe their own startup and investing experiences in developing economies and answer questions. A framework based on the recently published World Economic Forum (WEF) report on "Entrepreneurial Ecosystems Around the Globe and Company Growth Dynamics" will be used to structure the course. Each student will prepare a short paper on a topic of interest from the course.

**GSBGEN 515. Essentials of Strategic Communication. 2 Units.**

Successful leaders understand the power of authentic, memorable communication.  
 This course uses the lens of oral communication and presentations, to introduce the essential elements of the strategic communication strategies that make authentic, memorable communication work.  
 Focusing on oral communication and presentation, we introduce the essentials of communication strategy and persuasion: audience analysis, message construction, communicator credibility, and delivery.  
 Deliverables include written documents, focusing on individual and team presentations, with students receiving continuous feedback to improve their communication effectiveness, and to sharpen their authentic leadership voice.  
 This highly interactive, practical course, is focused on feedback to help students at all levels of communication mastery develop confidence in their speaking and writing. Course includes presentations, assignments, lectures, discussions, simulated activities, in-class feedback, and filmed feedback.  
 In this course you will learn to:  
 - Recognize strategically effective communication  
 - Implement the principles of strategic communication across different platforms  
 - Develop clearly organized and effective presentations and documents  
 - Diagnose and expand, your personal authentic communication style  
 As you make your super round selection, keep in mind that wait lists have been long for this course.

**GSBGEN 516. Using Neuroscience to Influence Human Behavior. 1 Unit.**

Why is it so difficult to change human behavior? Why is it that more than 80% of individuals who sign up for fitness classes drop out within a few weeks, even a few days? Why is it that despite the dramatic increase in devices and apps that are geared for changing behaviors, people still struggle to adopt and maintain new behaviors? The issue is not about a desire to change—it is about using the right methods and techniques to bring about habit change. The primary goal of this seminar is to gain a rich understanding of changing behaviors through frameworks and concepts that are grounded in neuroscience. In this seminar, we will examine (1) ways of characterizing different domains of behavior change, each requiring different methods and techniques, (2) why methods that often work in one domain are often unsuccessful in others and (3) how companies create habits in users and how one can leverage the power of technology to bring about behavior change.

**GSBGEN 518. Dynamics of the Global Wine Industry. 2 Units.**

This course will examine the world of wine with a fresh and contemporary lens. It will explore the market dynamics of this fascinating global industry. The goal of the course is to provide insight into the branding, marketing, and distribution dynamics that shape what consumers can buy and consume with a focus on the strategies of some of the world's leading wine brands. Attention will also be paid to the legal, regulatory, and market dynamics that define the U.S. wine industry as well as to issues of contested authenticity in the world of wine.

**GSBGEN 520. The Frinky Science of the Human Mind. 4 Units.**

The exponential growth in our understanding of the workings of the human brain has led to a rather startling and maybe embarrassing (even depressing) conclusion. While the human brain is unique among species in its ability to strategize, conceptualize, hypothesize, etc., it is now undeniable that most of our decisions, behaviors and experiences are shaped by instinctual brain systems. Thus, constituting the broad goals of this seminar, it behooves us to first understand the workings of the instinctual brain and then leverage this understanding to craft solutions for real-world issues from the vantage points of the "firm" as well you as an individual, a leader and an innovator. Topics that will be covered from your vantage point include leadership skills including being effective at influencing key stakeholders within and outside the firm and being effective at making decisions, personal as well as professional. Topics that will be covered from the firm's vantage point include crafting superior value propositions at the decision as well as the experience phases of the "customer" journey, fostering an innovative organizational culture and developing incentives to increase employee engagement.

**GSBGEN 521. Managing Under Uncertainty. 2 Units.**

Uncertainty with changing opportunity shapes investment planning whether in financial firms, corporations or entities such as pension funds, venture capital and private equity, and, in particular, in non-traded assets or securities. We will develop an approach to understanding (1) capital allocation issues; (2) capital structure planning; (3) optimization policies with changing opportunity sets and adjustment costs; and, (4) the selection of levels of risk taking. These relate to what is needed to manage uncertainty. The following three areas: (1) developing feedback mechanisms to assist planning; (2) reporting mechanisms for management and investors; and, (3) compensation planning and business structure, relate to managerial effectiveness under uncertainty. These internal risks must be integrated with external risks such as geopolitical issues and fiscal and monetary policies in a global setting.  
 I plan to introduce each of these from my theoretical and applied perspective. I will provide selective reading on each topic and a list of questions to provide follow on discussion. Students will work with me to flesh out not only the answers to these questions, but also provide additional questions and discover additional readings that are germane to expanding understanding and to following developments in each of these areas.

**GSBGEN 523. Media Entrepreneurship. 2 Units.**

The disruptive nature of the Internet has set in motion the destruction of business models that have supported traditional media organizations. This course will examine the current state and broader economic challenges facing the media industry. These include: the impact of technology, changing consumer behavior, the rise of mobile, social networks, big data, real-time metrics, innovations in digital advertising and distribution channels, and new business models. Students will analyze new digital media ventures and hear from industry experts facing innovation challenges at the intersection of content, technology and business. The course also will identify paths for entrepreneurs interested in building a media business.

**GSBGEN 524. Leading with Mindfulness and Compassion. 2 Units.**

The course explores the role of mindfulness, self-compassion and compassion in the workplace, and the contribution of these qualities to leadership. Topics addressed will include: How can mindfulness enhance clarity in purpose and productivity? What is the connection between mindfulness and compassion? Is compassion in the business world a strength or a weakness? Are compassion and profit motives fundamentally incompatible, or can they support each other? What does compassionate leadership look like? Can mindfulness and compassion be trained at the individual level, and built into company policy? How does self-compassion support effective leadership and recovery from setbacks? Participants in the course will engage with exercises from evidence-based programs targeting the development of mindfulness and the practical application of the skills of self-awareness, self-compassion, and perspective taking in the context of work and relationships.

**GSBGEN 525. From Business Concept to Business Plan. 1 Unit.**

This entrepreneurship course is designed to teach students the basic processes and tasks required to construct a business plan en route to the creation of a new venture. The course is designed not only for students with immediate entrepreneurial aspirations, but for any student considering being involved in an entrepreneurial venture at any point in his or her career. The course is organized around a number of business concepts that we have selected. With your team, you will study one of the concepts, analyze it and evolve it into a business plan. The class comprises multiple student teams, each working on a different business concept. Each team will also review and critique the work of the other two teams.

**GSBGEN 526. Finding the Right Match: Jobs, School, and Love. 1 Unit.**

We will analyze markets that match people to other parties. We will spend one day each on the job market, higher education, and life partners. We will investigate the following issues: Can we expect a competitive environment to lead to an efficient outcome? If not, why are there "market failures"? What is the role of hidden information in the market? How can the problems in the market be solved? What are the business opportunities in this market? Do entrepreneurs entering the market make it operate better or worse? We will spend one day each on job markets, higher education, and dating/marriage markets. Each of these three days will be divided into three sections: Section 1: Lay out an underlying economic concept related to the market (such as Network Externalities, Signaling, Adverse Selection, or Search Theory) Section 2: Analyze a case or a few mini-cases focusing on players in the relevant market. Section 3: Discussion with a guest from the relevant industry. The fourth day will be a set of shorter analyses of other matching markets, potentially including pets, car sharing, apartment rentals, and the like. Also, if any students in the class have a related business idea they would like to share and discuss, we will analyze that for part of the final day. To determine whether you would be interested in the class, it may be useful to look at the instructor's book *Everything I Ever Needed to Know About Economics I Learned From Online Dating* (you can Look Inside on Amazon or find excerpts, articles, and videos online if you Google Paul Oyer book). Only one day of the class will focus on dating/partners, but the book will give you a sense of the types of issues we will address on any given day.

**GSBGEN 527. Successful Creativity and the MBA Mind: A Scientific Framework for Engaging Personal Creativity. 1 Unit.**

Creativity is one of the most coveted attributes of successful business leaders. It is also among the most widely sought attributes that innovative companies like Facebook, Google and Apple are looking for when they hire. Yet, creativity remains a mystery to many individuals. Who has it and who doesn't? Can it be learned? How do successful creators really think and work? Is there anything different or special about the way they organize their lives and manage their work? This new Week 0 course will engage these provocative questions and others. We will explore what recent research tells us about the roots of creativity and its developmental course over the life-span. We will also examine some of the prevalent myths regarding the nature of creativity. The course will take a variety of approaches to mastering these topics, including reviewing the latest academic research (including some of my own work in this area). These ideas will be illustrated, moreover, by provocative and inspiring case studies. You will also have an opportunity to think about your own personal creativity and how to develop it further. The course is designed to be very intellectually engaging, as well as offer you an opportunity for self-reflection lively discussion.

**GSBGEN 528. Creativity, Problem Solving, and Innovation. 2 Units.**

This course is designed to expose second-year MBAs to research on creativity in problem-solving. The course has straightforward practical goals: it will explore ways in which individuals, groups, and organizations can become more creative, in useful ways. In order to do this effectively, we will study hardnosed research on problem-solving. We will not read articles entitled "The five-fold path to creativity." If there really were recipes or algorithms for reliably increasing creativity, I would certainly teach them. (Or more likely, I wouldn't need to: they would routinely be taught in the core curriculum of every MBA program.) Instead, we will study what cognitive and social scientists have discovered about novelty and effectiveness in problem-solving. Some of this work—e.g., Scott Page's examination of the value of cognitive diversity in teams—will have relatively direct action-implications. The pragmatic implications of other research—e.g., on organizational norms for resolving conflict—will be more indirect. Because the course's practical goal is easy to state but hard to achieve, some patience is required. As indicated above, we will study creativity at three levels: individuals, groups and organizations. Because there is pretty good evidence that different kinds of factors are prominent at these different levels, the course's approach is multi-disciplinary. We will read articles and books by cognitive psychologists and cognitive scientists, social psychologists, organization theorists, and perhaps historians who have studied industrial innovation. Disciplinary boundaries are irrelevant: any work that articulates a significant claim about pragmatically useful creativity and backs up that claim with a good argument is grist for our mill. Because the course focuses on creativity that makes a difference—i.e., that ultimately makes some organizational stakeholder better off—we will also study how innovations get selected. This inevitably means studying how new ideas get criticized and sometimes discarded. This process is less fun than generating new ideas, but given that brand-new ideas are usually flawed in one way or another, critical and hard-headed scrutiny of innovations is vital. Hence, we will examine psychological, political, and organizational obstacles to the effective criticism and evaluation of novel solutions, and we will also look at some ideas on how these obstacles might be reduced. Classes will be run seminar-style: they'll focus on examining the readings closely and critically. Understanding what a study does not establish is sometimes just as important as understanding what it does establish. Hence, I will expect everyone to read carefully; skimming won't cut it. This effort will probably result in a rather deep and sophisticated comprehension of the topic. Given the importance of creativity and innovation in modern organizations, that should be adequate return for hard effort.

**GSBGEN 529. Leading With Agility. 2 Units.**

Can you actually prepare for unexpected make or break career challenges you will face in the years ahead? By definition, the future is unpredictable, but understanding and grappling with the types of challenges seasoned leaders describe as the toughest they've faced can help to prepare one for the emotional demands that come with increasingly broad leadership responsibilities. Those challenges include role and team transitions, confrontations and conflicts, turning around poor performance (in individuals or groups), and recruiting or developing talent. This class will draw from a collection of video cases, role plays and exercises, based on real-life examples that are the product of hundreds of interviews conducted with leaders by the school's Center for Leadership Development and Research. The goal is to help students prepare for some of the gut-wrenching choices they will make in leadership roles, while evaluating how their mental and emotional responses influence their own managerial judgment.

**GSBGEN 530. Learning from Experience. 1 Unit.**

It is commonly believed that experience is a great teacher. But is it? Do we always learn what we can or should from experience? Research on this question suggests that the answer is no. Often we do not learn all that experience has to teach us and often the lessons we draw from experience are the wrong ones. This seminar examines what research suggests about how managers and others learn and don't learn from experience. Among the questions we will consider are: (1) How does experience teach? (2) What are the impediments to learning from experience? (3) How can we learn better from our experiences? (4) How can we have better learning experiences; that is, design and structure our experience and that of others so that it produces better learning?.

**GSBGEN 531. Global Trip Leadership. 2 Units.**

This course is open only to leaders of the Service Learning Trips or Global Study Trips. The course will meet nine times only on Tuesdays (because of the limited time and the fact that the course is experientially based, attendance at all classes are required). In addition, students will meet with a Master Coach just before their trip to review how they are operating as a team. There will be a final lunch meeting in January where the Winter Trip leaders will share their experience with the Spring Trip leaders. The purpose of this course is to help trip leaders in the planning and conducting of the trip so as to maximize the learning for the trip participants and the trip leaders as well as increasing the overall success of the trip. A range of topics will be covered including: articulating a vision for the trip, developing their team as a high performing team, making quality decision, resolving interpersonal issues (within the team and with participants), understanding how to make full use of the faculty member and dealing with the myriad of issues that are likely to arise. Class time will mainly be spent discussing and role-playing a series of short cases that have been developed around issues that have come up in past trips. These role plays will be the basis of peer feedback. The cases will be supplemented by short lectures to provide the conceptual underpinning. There will be a very modest reading list.

**GSBGEN 532. Cleantech: Business Fundamentals and Public Policy. 2 Units.**

This course examines trends and opportunities in the cleantech sector with a particular focus on low carbon energy and carbon emission reductions. We examine these trends in the context of changing technology, economic fundamentals, and public policy. A particular focus of the course will be on the role of regulation and tax subsidies in determining the cost competitiveness of clean energy sources. Specific topics and industries to be analyzed include: Expanding role of Natural Gas in Electricity Generation Carbon Capture by Fossil Fuel Power Plants Solar PV industry Cellulosic Biofuels Energy Efficiency Clean Energy Policies and Investment in China.

**GSBGEN 533. Sustainability as Market Strategy. 2 Units.**

The increasing social emphasis on environmental sustainability creates both dilemmas and opportunities for firms. Recognizing that sustainability means a focus on not just the environment, but also on broader issues of corporate social responsibility, we will examine the ways in which some companies are developing a "sustainability strategy." We will also consider the way in which companies are profiting from such a strategy with an eye toward understanding the conditions under which such a strategy can generate profits for firms. We will also focus on the way in which many companies are partnering with non-governmental organizations to develop business strategies that focus not only on profits, but also on the environment and social responsibility.

**GSBGEN 535. Emerging Network-Based Consumer Services. 1 Unit.**

This seminar considers the economics, development, and growth of emerging networks that use technology to connect people (typically sharing a purpose) to one another. Each day of the seminar will focus on a different company (or a few companies) and a different theme. The set of companies is preliminary, and is shown here just to illustrate a potential example. Network Platforms/Zynga: Zynga is one of the leading and most advanced network-based consumer services. It has been struggling recently with growth and monetization on Facebook. We'll examine Zynga's business model, Zynga as an application vs. Zynga as a platform, and the choices Zynga has made along the way. Metrics/LinkedIn: We'll examine the use of metrics to track application growth, engagement and monetization. We'll also compare the use of a proprietary social graph vis-a-vis Facebook's, considering the choices made by LinkedIn vs. a few Facebook apps. Growth and Evolution: We'll discuss how network-based consumer services can grow and evolve their business models using a few company examples. Monetization/Pinterest: We'll analyze interest and content networks, focusing on how they may be monetized vis-a-vis Facebook. Some of the seminar topics overlap topics covered in OIT 256 or OIT 356. Students who took one of these courses will not be allowed to take this course.

**GSBGEN 537. The Role of Business in Sustainable Food Systems. 1 Unit.**

The food system in the United States has contributed to a number of societal and ecological problems, from increasing rates of diet- and food-related illnesses, to "food deserts" in our inner cities, to the loss of farmland to urban sprawl, to agricultural chemical runoff into our water sources, to unjust farm labor practices, to the overuse of antibiotics, to an enormous amount of food waste, to questionable animal husbandry practices, and more generally to a diminishing level of diversity among the people, plants, and animals on whom we rely for our sustenance. These problems create both dilemmas and opportunities for business. This course will focus on how some companies (both for-profit and non-profit) are working to try to repair the damaged food system in the United States. Topics include (but are not limited to): organic and biodynamic agriculture, the economic demise of the family farm, the health effects of our current system of food production and the habits it has engendered, and opportunities for entrepreneurship and new modes of food distribution. We will have several guest speakers, field trips, and cooking/food preparation workshops and demonstrations.

**GSBGEN 538. Energy Policy, Markets, and Climate Change. 2 Units.**

This course will consider world energy markets as well as national and international policy challenges for the energy sector, in the context of climate change and its probable impacts. Case studies, readings, and class discussions will explore the history of fossil fuel price changes and their effects on trade, the influence of subsidies and tax incentives on the prospects for renewable alternative sources, and the role of governments in setting import and export policies. The class will consider such questions as: What policies are adopted when energy developments confront other land values, or are associated with human or environmental risks? What role do Public Utility Commissions play and how do international agreements influence the sector? How do new technologies for improving energy yield, building efficiency, and transportation affect use? What is the role of regulation in establishing patterns of energy use? Cases may require students to play such roles as: (1) an executive director of an environmental non-governmental organization considering approval for construction of a large solar-thermal facility in the Mojave Desert; (2) the chief executive officer of a company drilling shale deposits for natural gas developing his case for a governor; (3) a Senator evaluating her position on converting a port to permit US coal to be exported to China.

**GSBGEN 541. Problem-Solving and Creativity. 2 Units.**

This is a project-based course on problem solving and creativity. It is expected that everyone who takes the class will work on some significant problem that's currently ongoing (e.g., the design of part of a complex project, a difficult negotiation over a new venture). The course is designed to achieve two goals. First, it will give you tools that should increase the probability that you'll make (hopefully substantial) progress on your problem. Second, it will introduce you to research that explains why it's sensible to try those tools on hard problems—i.e., the point of those tools. Please note that the first goal is stated rather cautiously. There are good reasons for this. I expect that most students will be working on hard problems. (Everyone in the class will be getting help from classmates on their particular problem; why bother your peers with an easy problem that you could solve yourself?) An important idea in cognitive science, Newell's Law, says that magic doesn't exist: if a problem-solving method is powerful (very likely to solve a certain type of problem), then it only works on a narrow class of problems. So... this course will not give you tools that are both powerful and general. It can't: such tools don't exist. Happily, improving your problem-solving skills, at least in certain domains, is possible, and that's what the course aims to do. Progress on hard problems usually requires help from friends and colleagues. Virtually all researchers of creativity agree that most innovations that are both bold and useful involve multiple problem solvers. This course will implement this important pattern by requiring every student to help some classmate with their problem. Carrying out this help will be an important part of your grade. Another important empirical regularity in the field of innovation is that when problems are hard many (perhaps most) candidate-solutions don't work out. It's easy to accept that about other people's ideas; about my own, not so much. So a vital component of effective problem-solving is tough-minded evaluation. This implies rejecting bad ideas or bad parts of a would-be solution. Hence, at the end of the course you will be required to evaluate the progress that a classmate has made on his/her problem and to explain your assessment. (For obvious reasons you will not evaluate the same person you're helping.) In sum, every student will do three things in this course: generate new ways to make some progress on a problem of their own choosing; help somebody else work on their project; evaluate somebody's progress.

**GSBGEN 542. How to Tell a Story. 1 Unit.**

"Tell me the facts and I'll learn. Tell me the truth and I'll believe. But tell me a story and it will live in my heart forever." Stories are all around us. Stories move us, make us feel alive, inspire us to be more than we would be otherwise. As famed screenwriting coach and author of the screenwriting bible, *Story*, McKee says: "Story is not only our most prolific art form, but rivals all activities - work, play, eating, exercise - for our waking hours. We tell and take in stories as much as we sleep - and even then we dream." \*\* Despite our love for stories, most of us leave stories to "storytellers" - fiction writers, journalists, and film makers. But we all have this skill. We simply need to hone it. The question is - how can we hone it? In this seminar, we will break down the basic elements of storytelling, elucidate the power of the verbal as well as the visual, and discuss how storytelling helps build brands and organizations. For the final project, you will create tell a 3 minute story about (a) your organization, (b) your brand, or (c) you. Thus, the goals for this class: (1) Understand what makes bad stories, okay stories, and great stories. (2) Learn how to create storyboards. (3) Gain practice in crafting and telling a compelling 3 minute story about yourself. You will get feedback by filmmakers on what went well, went poorly, and how to take the story to level further. \*\* Robert McKee, *Story*, (Regan Books: 1997), p. 11.

**GSBGEN 543. The Power of Stories in Business. 2 Units.**

In this class, we will illuminate the power of story in business by revealing the key elements of storytelling, discussing the power of the verbal as well as the visual, and uncovering how storytelling helps build brands and organizations that align their brand value proposition with their internal culture. This skill is important if you are a new venture trying to build a reputation, or you are an established company trying to grow and innovate.

**GSBGEN 544. The Role of the Modern General Counsel. 2 Units.**

The news is filled with reports of one corporate crisis after another - names like BP, Goldman Sachs, Bank of America, AIG, Siemens, Toyota, and issues like backdating, bribery, antitrust violations, insider trading, procurement fraud, health and safety violations, consumer class actions and the like. And often the cry is heard - where are the lawyers? This course explores the evolution of the role of the general counsel of major American public companies and, more broadly, the expanding role of in-house counsel. These are the lawyers in the trenches, on the front lines of American businesses. Each week, we'll review another dimension of the general counsel's job. We'll consider how general counsel today play an important role on the executive team of major companies and explore the different ways in which general counsels manage large corporate legal departments and direct functional legal areas like litigation, IP, corporate and securities, M&A, environmental and employment law. We will also examine the professional responsibilities and legal obligations of the general counsel - including the delicate and sometimes conflicting reporting relationships to the CEO and the board of directors - and consider how an in-house legal department fits into a corporation's organizational structure and how it supports the company's operating units on a day-to-day basis. We will explore the general counsel's role in internal investigations, regulatory investigations and compliance programs, and governmental affairs. We will also consider current practices in how in-house lawyers select, collaborate with and evaluate outside counsel. The class will meet weekly and we will invite current and former general counsels to join us occasionally for our discussions. Each student will be expected to participate actively in class discussions, and will be required to complete two projects, each in collaboration with three other students and submitted as a team, presenting how the team would address a complex set of legal and business issues. The course grade will be based 1/3 on class participation and 1/3 on each of the two team projects.

**GSBGEN 548. Crafting Your Life Story. 1 Unit.**

This new seminar explores how the "life stories" we tell ourselves influence the choices we make in life, including the personal and professional choices we make, the ambitions we pursue - and, ultimately, our very success. Together, we will look at the science and art of what might be called "generative autobiography" - finding the particular life story that helps you pursue a more consequential and meaningful life. In developing this idea, you will learn to identify the essential elements of a great life story. You will learn how to craft a better, more creative life story for yourself, and you'll learn also how to tell your life story more effectively to other people in order to engage them more deeply and lead them more effectively. The course will include a series of outstanding readings from psychology, philosophy and literature on how to think more creatively about the life you are living now - and the life you hope to live going forward. One distinctive feature of this new seminar will be the extensive use of materials from award-winning films to illustrate the major themes and dilemmas of telling a good life story. We will examine the lives of a number of fascinating high achievers from business, science, politics and the arts. The course also includes several exercises designed to help you craft, refine, and project your life story. The seminar will be very discussion-oriented and very engaging!

**GSBGEN 550. Issues in Leadership. 2 Units.**

This seminar will explore the nature and role of leadership in organizations. We will examine such questions as (1) What is leadership? (2) Why is it important? (3) What is it that leaders actually do? (4) How do they do it? (5) How are leaders developed? (6) Why do leaders succeed or fail? (7) What about your potential for leadership and your strategy for developing it? Our primary objective in this seminar is to achieve a deeper understanding of the nature and role of leadership in organizations. Our approach will be to examine a small sample of the literature, together with the amazing story of Ernest Shackleton and his Endurance crew, and then to probe several key questions through lively class discussion. The discussion, informed by the readings and also by our collective experiences, will seek to develop some general principles and observations about leadership - particularly about how you might better develop yourself as a leader.

**GSBGEN 551. Innovation and Management in Health Care. 2 Units.**

The health care system accounts for over 17% of US GDP and is one of the fastest growing segments of the economy. This two unit class focuses on the interplay and tension between the main players in the health care field - providers of health care services (individual doctors, group practices, integrated health care systems), payers (insurances companies, employers, consumers, and government), patients, and innovator companies (biopharma, medical device, diagnostics, and health care IT). The course is designed for students with a broad diversity of backgrounds and interests who want to better understand the health care business and system. No prior experience in the health care or medical field is assumed or needed. The focus of the class will be primarily on the US health care system, but there will be limited discussion of non-US systems as well. The course is divided into four modules: 1. An overview of the US Health Care System and the interplay between payers, providers, and innovators 2. Provider and payor organization models and incentive structures 3. Innovator business models and issues, and 4. Drivers of system change including healthcare reform, payment models, and technology innovation. The class will be taught primarily from the perspective of a business person operating a company rather than that of a policy maker, academic, or investor. While there will be a few lectures to provide background and frameworks for course topics, most classes will involve a case discussion and prominent guest speakers from the health care industry. Speakers and panelists in previous years have included CEOs and senior executives from Genentech, Gilead, Jazz Pharmaceuticals, Tenet Health, GE, Intermountain Health, Practice Fusion, Safeway, and Genomic Health; venture investors from Venrock and NEA; and heads of the health care/biotech practices at McKinsey and Goldman Sachs.

**GSBGEN 552. Winning Writing. 2 Units.**

This two-week, six-session workshop will offer techniques and practical in-class exercises for writing better - better memos, emails, feedback for colleagues, news releases, responses to media questions, opinion pieces and social-media postings. Glenn Kramon, a senior editor who has helped New York Times reporters win 10 Pulitzer Prizes, will teach the course along with accomplished journalists with expertise in powerful, persuasive writing for business. They will provide not only helpful tips but constructive feedback on students' work, which will be completed mostly in class. They will also share thoughts on how best to work with the news media.

**GSBGEN 553. Intrapreneurship for Sustainability: Driving Environmental Change from Within Corporations. 2 Units.**

An organizational change approach to the development and introduction of new corporate strategies and product lines that have a sustainability benefit. Students will be given the opportunity to work on real-world cases to help them effectively incorporate sustainability strategy into their chosen career path. Learning Objectives: 1. Articulate the sustainability challenges facing today's corporation in terms that will make executives receptive to action 2. Employ organizational change management techniques to spur environmentally-friendly product and process innovation 3. Expand the repertoire of techniques for priming the market for new sustainability offerings 4. Refine collaboration skills within multi-disciplinary teams 5. Improve oral and written presentation skills for executive audiences This class is appropriate for those seeking positions within large enterprises or business consultancies, or those seeking to refine their thinking on social entrepreneurship.

**GSBGEN 554. Savvy: Crafting Effective Communication. 1 Unit.**

This course is designed for individuals interested in improving their communication skills. As a leader, you will spend the majority of your time communicating with others - team members, subordinates, clients, and other constituents. Right now, you probably don't spend much time thinking about the way you communicate, nor are you likely, in the corporate setting, to get honest feedback on the messages you send. Yet the quality of your communications will have a large impact on your overall effectiveness. This class will help you appreciate the nature and complexity of communication and provide guidelines for both improving your communication style and recognizing the unique styles of others. The class is based on the assumption that organizations are fundamentally political entities, and interpersonal influence through communication is a key mechanism by which things get done. Effective leaders don't simply lead by fiat - they often must influence and persuade others to go along with their ideas. In each session, we'll consider a number of well-studied tactics of interpersonal communication. For each tactic, we'll talk about why it works, when it works best, and what its limitations might be. We'll discuss how you can put these approaches to work in order to support your attempts at persuasion and how to resist them as an unwilling target of persuasion. After taking this course, you will be better able to: (1) identify strategies for crafting effective communication in the form of everyday conversation, written work, and public presentations, (2) develop techniques for building strong, long-term alliances with your colleagues, and (3) become more persuasive in advancing an agenda, acquiring resources, or eliciting compliance from others. These skills will be invaluable to you throughout your career.

**GSBGEN 555. Designing Empathy-Based Organizations. 1 Unit.**

Organizations are often designed for efficiency or optimization of workflow, not for user empathy. How do you design for both? This pop-up class is geared toward the design (or redesign) for empathy-based organizations. It will teach early-stage leaders about the three basic levers they have for organizational design/re-design: organizational culture, organizational structure (informal and formal), and organizational routines. Emphasis will be placed on how to align these levers to facilitate communication and to structure workflows for empathy-based organizations. The class will work with a fast-growing, design-driven startup, which will articulate to students its goals as a business, as well as its challenges in designing the business. Students will interview and observe multiple stakeholders from diverse teams and use design thinking to address uncovered needs and insights with respect to organizational design.

**GSBGEN 557. Authenticity in Markets: The Case of the Wine Industry. 1 Unit.**

Evidence has mounted that consumer care about issues of authenticity in many kinds of markets. This seminar explores the meanings of authenticity in market contexts. It emphasizes the idea that authenticity attaches as much or more to the characteristics and actions of producers than to characteristics of products. Although these issues arise in many kinds of markets, they are especially intense for food and drink. So the seminar emphasizes these contexts, especially the wine industry. In wine production we see battles over the soul of wine, what it means for a wine to provide an authentic representation of terroir, national traditions, and so forth. Especially interesting for understanding authenticity is the recent success of biodynamic producers.

**GSBGEN 561. Sports Business Financing. 2 Units.**

Course examines investment and financing issues that face a diverse set of participants in the sports industry (defined very broadly). A key theme is using general financial concepts to better structure decision making in the sports industry. Specific topics illustrate the broad set of perspectives considered: Player Payroll Financial Dynamics; Asset Appreciation Opportunities; Assessing the Value of Players (& General Managers); Investment Syndicates in Sports; Investing in Startup Leagues ; Financial Valuation of Sporting Clubs; Financial/Strategy Analysis for a Mixed Martial Arts (MMA) Venture; and On-Line Sports Venture Evaluation. One hand in requires feedback to the CEO's of several new sporting ventures about ways to expand their opportunity set; the CEO's come to a class and present their venture. The second hand in is a case study of a sports investment where there was sizable value creation or value destruction. Each session typically is co-taught with an industry visitor.

**GSBGEN 562. Sports Marketing. 2 Units.**

This Sports Marketing course combines (a) a focus on key marketing themes (such as branding, customer attraction/retention, and celebrity power) and (b) an analysis of marketing in diverse areas of the sporting industry: the league level, the team level, the player level, the network level, the advertiser level, the sponsor level, the fan level, and the media level. The nine sessions cover the following: Corporate Sponsorship; Online Marketing; Events as Brand Building Investments; Marketing to Youth; Sports/Entertainment Nexus; Club Marketing Strategies; Brand Revitalization & Strengthening; Motor Sports Marketing; Marketing in a Web 2.0/Social Networking World. Each session is typically taught with an industry visitor.

**GSBGEN 564. The Entertainment Industry - An Intersection of Art and Commerce. 2 Units.**

In this seminar we will explore the intersection of art and commerce in the entertainment industry. We will look at creating films and television programming that are artistically meaningful and/or have the potential for commercial success. Films are also increasingly used as a tool for social change, and we will examine this power. The entertainment industry is one of enormous importance - both from a business and cultural standpoint, and has influence in virtually every sphere of our society. Sometimes the industry can seem baffling, mercurial, and characterized more by madness than method. But despite its uncertainties, Hollywood does have its own rules, rhythms, methods and strategies - and examining and evaluating them will be a key part of this seminar. This is a time when old formulas are being reconsidered or jettisoned, and emergent technologies are bringing further changes - and tracking and analyzing them, will also be part of the class. As a writer, producer, director in film and television, I will also bring my own experiences into the classroom, where I'll discuss my work (including directing, writing, acquiring financing, producing films, executive producing a network series, etc.), and its rewards and challenges, and look at these experiences thorough the intersection of the business and creative sides of the industry. The students in the seminar, working either individually or in small groups, will be asked to generate and present proposals for projects that have artistic and/or commercial merit, and we will examine how they may best fit into the industry - to gain widespread distribution or have social influence. The seminar will cover the entertainment industry from multiple angles and be very discussion oriented.

**GSBGEN 565. Political Communication: How Leaders Become Leaders. 2 Units.**

Politics, perhaps like no other arena, provides a rich and dramatic laboratory for studying the art and science of influential communication. Whether it is a local school bond election or a Congressional race, a Presidential debate or a State of the Union Address, the demanding communications of politics provide insights into our own strengths and gaps as a communicator and leader. Political campaigns, by their very nature, are highly visible, oriented toward very specific objectives, and increasingly leverage a variety of new media platforms. They are often emotionally charged, and rife with conflict and drama. The principles of political communications transcend politics, and are useful guides for leaders in business, the non-profit community, as well as government. How candidates, elected officials, and leaders in all kinds of organizations communicate vision, values, and experience, as well as how they perform in very fluid environments, not the least of which may be during a crisis, has a great deal to do with their career success.

In its eighth year, this highly interactive course allows students to explore both theory and practice behind effective positioning and presentation. Students will analyze and evaluate both successful and unsuccessful communications strategies of political campaigns and candidates. They will explore historic examples of US Presidential debates, from Nixon/Kennedy to the present. Further they will experience political events as they happen – with each class drawing lessons from political developments around the nation and the world. Students will also hone their own strategic communications skills in activities requiring both written and spoken communication. This is not a course in political science, American government, or in public speaking. However, the engaged student will gain insights into those areas as well.

The course is taught by David Demarest, Vice President of Public Affairs for Stanford University. Demarest has broad communications experience across the public and private sector in financial services, education, and government. After serving as Assistant U.S. Trade Representative, and Assistant Secretary of Labor in the Reagan Administration, in 1988 he served as Communications Director for Vice President George H. W. Bush's successful presidential campaign. He then became a member of the White House senior staff as White House Communications Director. After leaving government in 1993, he spent the next decade leading communications for two Fortune 50 companies, before coming to Stanford in 2005.

**GSBGEN 566. Real-Life Ethics. 2 Units.**

GSBGEN 566 will be an elective course offered to 2nd-year MBA and MSx students. The goal of this course is to improve students' judgment in confronting ethical situations encountered in the normal course of business activities. Classes use the Socratic method to examine ethical questions and build analytical skills. The course aims to sharpen moral reasoning and build judgment without favoring a particular position. The course will be taught by Mark Leslie and Peter Levine, Lecturers, and will include additional guest lecturers in many of the specific areas.

The course, which is case-based, will involve frequent student-to-student and student-to-instructor role-playing. Cases will be drawn from a wide selection of business situations, including such topics as raising venture capital, managing major industrial customers, product distribution agreements, board of director fiduciary conflicts, developing financial instruments, senior management mutiny, etc.

This class is for two GSB credits and will be graded on a pass/fail basis. Sixty percent of the final grade will be derived from classroom performance; the remainder will be based on a final written assignment.

**GSBGEN 567. SEEDing Change: Approaches and Innovations in Poverty Alleviation. 2 Units.**

This Bass Seminar is an opportunity to help lay the foundation for the GSB's new initiative on poverty alleviation in developing economies, the Stanford Institute for Innovation in Developing Economies (nicknamed SEED). Following an introduction to the major approaches to poverty alleviation and the role of entrepreneurial activity, the course will be a student-driven seminar. Groups of students will work on focused projects of their choosing within the confines of SEED's mission, which is to stimulate, develop, and disseminate research and innovations that enable entrepreneurs, managers, and leaders to alleviate poverty in developing economies. A particular focus will be given to exploring and assessing the different ways in which SEED can most effectively help entrepreneurs in developing countries grow and scale. Project deliverables can take a variety of forms, including business plans, proofs of concept, case studies, teaching notes, etc.

**GSBGEN 568. Managing Difficult Conversations. 1 Unit.**

This elective 2-credit course is offered to 2nd-year, 3rd-year, and 4th-year Medical students, Residents, and Fellows, and to 2nd-year MBA students who aspire to improve their ability to deal effectively with difficult interpersonal situations. The course will be taught at Stanford Medical School by H. Irving Grousbeck, Consulting Professor of Management, Stanford Graduate School of Business, with assistance from Dr. Charles G. Prober, Senior Associate Dean for Medical Education. Teaching techniques that have been successful in helping business school students improve their ability to manage difficult conversations will be used.

The course, which will be case-based, will involve frequent student-to-student and student-to-instructor role-playing in actual medical situations. Physician-experts often will be present to participate as class guests. Relevant principles of professionalism, leadership, and psychology underlie the course pedagogy.

There will be seven classes held on Wednesdays beginning September 24th and concluding on November 12th. (No class on October 22) Each class will begin promptly at 12:35 and end at 2:05, without a break. Due to the abbreviated nature of the class (7 sessions), students will be expected to attend all classes unless excused in advance.

Class preparation will include reading of assigned cases; analysis of the cases and recommendations as to how to confront specific difficult conversations (consistent with assigned study questions); and reading of assigned background material. While optional, it is suggested that students form regular study groups. For GSB students, 50% of the final grade will depend on classroom performance; the remainder will be based on a final written assignment of no more than 6 pages. GSB students will be graded on a Pass/Fail basis. The course will be ungraded for Medical School students, Residents and Fellows. All students will be expected to complete the written assignment.

Class size will be limited to 35 students per the following: (1) a maximum of 15 MBA2 students and (2) a maximum of 20 2nd-year, 3rd-year and 4th-year Medical Students, Residents, and Fellows.

**GSBGEN 569. Online Financial Training for Managers and Entrepreneurs in Developing Economies. 2 Units.**

Growing and scaling a successful business demands familiarity and comfort with financial principles and decision-making. Yet particularly in developing countries, where the need for growth is greatest, a large fraction of the population, and entrepreneurs and managers in particular, lack this basic knowledge. The goal of this project-based seminar is for teams of students to develop education modules for teaching financial literacy to entrepreneurs in developing economies. We will partner with on the ground organizations who work directly with these entrepreneurs, and who can provide feedback on the user's needs and market validation for project teams' approaches. We will examine research on the effectiveness of credit-linked training and review some existing programs offering similar training. Students will be expected to deliver a short training video at the end of the course.

**GSBGEN 571. Becoming a Leader: Managing Early Career Challenges. 2 Units.**

This course is based on a large number of interviews with MBA grads who have been out of the GSB for 4-10 years. These interviews identified a set of common early career challenges that young MBAs faced—and the lessons they learned from these. This 6-session course is based on these critical transitions, formative experiences, and personal conflicts that characterize the challenges young leaders face. The course objective is to help current students better understand some of the pitfalls they are likely to face as they become leaders and to avoid the career-limiting mistakes that these can bring.

**GSBGEN 572. The Art of Damage Control. 2 Units.**

In the Information Age, there are two kinds of leaders, institutions, and organizations: those who have been hit with a crisis and those who haven't been around very long. And of those who have confronted a crisis, the landscape has a few winners, but is crowded with losers who simply did not have what it took to survive the crisis. Crisis is a constant state of nature in our age and if you do not effectively fight back, in the modern spin cycle, you will no longer have your brand, your image, or your reputation. This course will cover the strategies, techniques, and art of damage control. The course will also explore the five fundamental elements responsible for why we live in a state of crisis: the proliferation of media outlets communicating information; the speed in which information travels; the erosion of trust from society related to the quality of information received; the capacity to selectively leverage information; and the community nature of how information is developed and shared. Building from an analysis of these elements, we will explore methods of surviving and thriving in this environment. The course will also offer detailed approaches to managing one's way through a crisis. We will provide case studies of those who failed to master the art of damage control whose mistakes endangered the survival of their company and/or their careers. We will also study cases where those in a crisis handled it deftly. By considering, analyzing, and reviewing these techniques, it is hoped the students will learn how best manage the crisis - and what it takes to survive. The course will co-taught by Chris Lehane and Bill Guttentag. Chris Lehane is one of the nation's leading political consultants with a particular expertise in damage control. He was a Special Assistant Counsel to President Bill Clinton where he was responsible for helping to manage the Clinton White House's damage control operation and later served as Vice President Al Gore's Press Secretary, and has been a top advisor to many who have run for President, Senate, Governor or other elected offices, both in the US and internationally. He consults for numerous Fortune 500 Companies, professional sports leagues and teams, Hollywood studios and high profile individuals. Bill Guttentag is a narrative and documentary film writer, producer, director who has been teaching at the GSB since 2001. He is a two-time Oscar winner, his films have played extensively in the US and internationally, and have premiered at a number of prominent film festivals including Sundance and Cannes. Lehane and Guttentag are the co-authors of *Masters of Disaster: The 10 Commandments of Damage Control*. The book will published this fall by Palgrave/Macmillan and will serve as the principal text for this course.

**GSBGEN 574. Effective Virtual Communication: Presenting via the web, video, and teleconference. 2 Units.**

Ever wonder if your online audience is paying attention to your web presentation or meeting? Have you wanted more engagement from your participants? Communicating virtually - using conference or video calls, web tools, and mobile devices is very challenging. Yet more and more communication is happening with presenter and audience connecting electronically. Informed by scholarly research and industry best practices, this workshop will provide a hands-on, practical introduction to immediately applicable techniques that will help you prepare and deliver engaging, participative, and impactful virtual presentations. Specifically, you will learn techniques for confidently delivering virtual presentations, how to create content that invites engagement, and how to facilitate speaker-audience interactions that invite collaboration without losing control. We will also cover best practices for responding to audience input and questions that will amplify your message and for handling challenging interactions and questions. With these virtual-presenting skills, you will feel more confident presenting and your audience will be more connected and engaged.

**GSBGEN 575. Leadership and Crisis Management. 2 Units.**

During this class, you will: \* Challenge your basic beliefs about the nature of crisis \* Learn to scan your business practices for political and social risks \* Anticipate and prepare for potential crises \* Explore techniques for successfully solving problems in high-pressure crisis situations characterized by complex decision environments, time-pressure, high stakes, unanticipated events, and information overload \* Develop strategies for managing stakeholders, public opinion, media relations, and public officials \* Integrate your crisis management approach into your overall business strategy.

**GSBGEN 576. Work and Family. 2 Units.**

This course examines the strategies that highly educated women and men use to combine work and family and the strategies that managers and policy makers can use to help others strike a balance. Topics include the tradeoffs in becoming a stay-at-home parent, the economic value of unpaid labor, the consequences of balancing two high-powered careers and children, the economics of marriage, fertility, child care, and elder care, the gendered division of labor in the home, time-management, workplace innovations, and policy initiatives. Guest speakers add their own perspectives on these issues and describe the roles their organizations play.

**GSBGEN 578. Decisions About the Future. 2 Units.**

How should you decide between now and the future? This course will cover the descriptive and prescriptive theories of intertemporal choice in psychology and economics. Topics will include financial decision making, social (who should you marry?), environmental, and health. The goal of the course is to maximize the long term happiness and effectiveness of yourself and others. Grading will be based on: class participation, a decision diary (in three parts), and an exam.

**GSBGEN 579. Authentic Agency. 2 Units.**

The basic assumption of 'authentic agency' is as a leader, manager, or consultant your job requires working with people to make decisions and solve problems. Authentic agency is an intentional effort to influence congruent with one's motivating emotional-values schema. In accordance with this assumption and definition your major tool for influencing people and achieving results is via languaging - the interpersonal use of spoken and written words - values and emotions. The focus of this course is how to 'effectively and meaningfully use authentic expression to influence individual and group performance. 'Authentic Agency' will be conceptually and experientially explored as the expressive intersection of intentionality, emotions, and values. Specific classroom activities and peer feedback will heighten student awareness of their present personal 'authentic agency schema'. Besides completing homework readings and review questions, students are expected to author and submit a brief (20 min writing) 'authentic agency meaning-making log' after each class. Each student will also complete a one-on-one critical incident phone interview (40-50 min) with Professor Bristol aimed at helping them capture and expand their authentic agency schema. Students will be provided digital copies of this interview for their study.

**GSBGEN 580. Management of Real Estate Investment Portfolios. 2 Units.**

This course is intended for any student interested in a career in managing, developing, or investing in real estate. The course covers cases involving the perspectives of general partners and limited partners; the attributes of successful real property investment firms; analyses of investment portfolios and individual transactions, primarily in the private equity real estate category. Cases will be global. Objectives include: How to construct a private real estate portfolio; How to assess the risks in projects and portfolios; How to perform relative value analyses of differing investments; How to manage troubled investments (when to "hold 'em and when to fold 'em"). The course is divided into three modules with special emphasis on real estate financial analysis for transactions and portfolios. The first module will focus on portfolio construction issues and how to quantify whether the investor has been successful. The second module will focus on underwriting individual transactions and applying a relative value construct in determining the more attractive investments. The third module will focus on the management of troubled investments, including deciding when to "double down" and how to protect investments already in place.

**GSBGEN 585. Social Innovation through Corporate Social Responsibility. 2 Units.**

This course accepts that the (CSR) movement linking business, communities and sustainability has moved past the stage of debate. The last decade has seen an increased awareness in regard to environmental and social issues that has found its way up the corporate ladder and into company boardrooms. How companies incorporate CSR programs and strategies, however, is varied and diverse. The course will utilize reading assignments, case analysis and/or company presentations to provide an overview of CSR, the frameworks and models for developing a CSR strategy and the growing utilization of cross-sector partnerships in CSR and innovation efforts. Particular focus will be on cutting edge business strategies for squaring social and environmental responsibilities with competitive demands. The latter part of the course will examine the role of cross-sector partnerships as a critical lever. Cross-sector collaboration is increasingly desirable as a strategy for addressing many of society's problems; however, research evidence indicates that it is hardly easy. Guests will bring to life the challenges and rewards in working collaboratively to implement social change.

**GSBGEN 586. Poverty, Entrepreneurship, and Development. 2 Units.**

Global poverty is a problem that persists on a massive scale, and its persistence may itself be a major impediment to growth in emerging economies. Recent years have seen a blossoming interest in socially innovative approaches to alleviating poverty and stimulating economic growth in emerging economies. In this short course, we will explore different conceptualizations of the problem of global poverty, the potential role of entrepreneurship in helping to address it, as well as the strengths and weaknesses of different approaches. Some possible areas of focus include: Different conceptualizations of the main drivers of persistent, extreme poverty; The challenges to entrepreneurship posed by the institutional environments of emerging economies; The appropriate role of entrepreneurship as a means of addressing the concerns of the poor; The pros and cons of different models (e.g., venture philanthropy, social enterprise, non-profit); Ethical issues and concerns associated with different strategies. In addition to reading and in-class discussion, the course will also draw on the expertise and experiences of one or more guest speakers.

**GSBGEN 587. Survive and Thrive: The Art of Navigating Crucial Conversations. 2 Units.**

Careers are enjoyed in the good times but truly made when challenging situations are successfully managed throughout every business cycle. Individuals who both perform well and communicate effectively in tense situations, gain the attention of senior management and are relied upon to deliver. A key to this success is the ability to successfully navigate crucial conversations. Crucial conversations are those which not only have a bearing on your firm and business but, also can also enhance or destroy your own personal reputation and credibility by poorly communicated situation analysis, facts and the mode in which you deliver information. Sometimes these conversations take place in minutes while others evolve over the course of days and weeks. Regardless, a professional's ability to read the "tea leaves" and execute a communication plan to address is vitally important to long term career success. This highly interactive course will take you through a series of business inflection points in a simulated firm where you will be expected to navigate different situations and make quick decisions both as an individual and as part of a team. Students can expect to leave this course with a heightened sense of their own gifts as communicators, a greater understanding of the research around effective communication, and specific tools and tactics to use throughout their career when faced with pivotal situations. Attendance at all six sessions is required to pass this course and participation counts for half the grade. Students will regularly give and receive feedback with their peers on their ability to apply course concepts in the simulation as it unfolds. While no prerequisite exists for this course, we expect that students seeking fundamentals of communication consider other course offerings. This course relies on students who are already reasonably comfortable communicating in high-stakes settings seeking greater mastery and nuance in their communication. Required pre-reading will provide the theoretical frameworks and case background necessary for the six-session simulation. One final reflection paper will be due within a week after the final class session. The balance of each student's grade is based on their participation and learning within the simulation and the depth and quality of their feedback to peers. This course is co-created and co-taught by JD Schramm and Steve Mellas. Schramm brings over a decade of MBA communication teaching and coaching to the course along with more than 15 years of professional experience in healthcare, financial services, and education. He founded the GSB's Mastery Initiative and co-founded LOWKeynotes. He is a sought out speaker and coach with two talks in the TED library. Mellas serves as a principal at AQR Capital in Greenwich CT where he oversees operations. Prior to joining AQR he worked for Goldman Sachs as a Managing Director in the Investment Management Division with responsibility for Asset Management Operations worldwide. Before that Mellas was with Morgan Stanley where he managed fixed income trading operations. Schramm and Mellas have teamed up on a number of highly ranked courses at NYU Stern since 2005 and hatched this latest collaboration while delivering a Mastery workshop for the GSB in January 2012.

**GSBGEN 589. Foundations in Social Impact. 2 Units.**

This course aims to introduce Social Impact Labs Fellows to different types of social impact organizations and nonprofit organizations, to their financial models, and to issues that arise in measuring their social impact. The course will also support development of the Social Impact Lab Fellows' projects, through peer and faculty discussion and feedback.

**GSBGEN 598. Stanford-Tsinghua Exchange Program. 2 Units.**

This course is open only to students participating in the Stanford-Tsinghua Exchange Program and is required of those students. Requirements include researching and reporting on companies to be visited, attending lectures in preparation for the China visit, attending lectures at Tsinghua, and carrying out and reporting on a project with one or more Tsinghua student. Offered Pass/No Pass only. 2 units. Winter quarter.

**GSBGEN 622. Presentation and Communication Skills for Academics. 2 Units.**

As educators and scholars, academics must have the skills to effectively communicate their research to a wide range of audiences, including colleagues, students, professionals, and the general public, as well as in a variety of settings, from academic conferences and job talks to field seminars and the news media. This highly interactive course is designed to equip PhD students with critical communication skills, including best practices in academic presentations, public speaking, contributing in group settings, and shaping the public dissemination of your work. Whether you are terrified of public speaking or simply looking to enhance an already strong skill set, you will have the opportunity to learn and practice strategies for getting comfortable on the stage, targeting your presentations to various audiences, managing Q&A, creating an effective "elevator pitch" about your work, and telling the narrative of your research. Ultimately, students will gain confidence in their ability to engage, connect, and communicate with their audiences.

**GSBGEN 635. Neuroscience for Business and Economics. 4 Units.**

A growing number of scholars in business and economics are turning to neuroscience for new theoretical insights and new methodologies. This seminar will explore how findings from neuroscience can inform research in business and economics. The objectives of this course are for students to: Gain an understanding of the basic theories of neuroscience. Gain an understanding of the basic methodologies of neuroscience, including behavioral paradigms, eye-tracking, and fMRI. Survey the key literature at the intersection of business, economics, and neuroscience. Learn how to critically reflect on and evaluate research that uses principles from neuroscience. Learn how to design experiments that utilize principles from neuroscience.

**GSBGEN 641. Advanced Empirical Methods. 3 Units.**

This course covers various advanced quantitative methods with applications in marketing and economics. Topics include simulation-based estimation, dynamic decision processes, and other topics relating to empirical models of demand and supply. The course stresses the conceptual understanding and application of each technique. Students will learn to apply these techniques using Matlab or an equivalent language.

**GSBGEN 645. Communication Strategies for Scholars. 2 Units.**

Educators must be experts in their subject matter, but also effective scholarly communicators. This course will examine the theories for effective communication in the wide range of settings that PhDs will encounter: seminars, academic conferences, job talks, and ultimately in the classroom. This course will provide PhD candidates with the opportunity to practice course principles in simulated communication settings and receive direct and filmed feedback on their performance. Students will benefit from participating in observations of GSB classes (within and beyond their discipline), readings on current education and communication theory and practice, class discussion, and visits from GSB professors. Learning Objectives: By the end of this course students will: Understand the essentials of oral communication in scholarly settings. Understand the fundamentals of business education including syllabus development, classroom instruction, case method teaching, assessment and grading. Understand and practice the essential elements of effective presentations - the verbal, vocal, and visual aspects of oral presentation. Articulate essential distinctions of teaching undergraduate, graduate (including MBA), and executive education students, and how to adapt their approach for these audiences. Demonstrate effectiveness as a presenter and growth in the ability to plan and present content in a variety of simulated settings from benchmark to final mock class. Apply course content to job talks, conference presentations, and other professional settings beyond the classroom. Evaluate peers and other educators on their ability to practice effective teaching and presentation delivery.

**GSBGEN 646. Behavioral Decision Making. 3 Units.**

This seminar examines research on the psychology of judgment and choice. Although the normative issue of how decisions should be made is relevant, the descriptive issue of how decisions are made is the main focus of the course. Topics of discussion include choice, judgment heuristics and biases, decision framing, prospect theory, mental accounting, context effects, task effects, regret, and other topics. The goal of the seminar is twofold: to foster a critical appreciation of existing knowledge in behavioral decision theory, to develop the students' skills in identifying and testing interesting research ideas, and to explore research opportunities for adding to that knowledge.

**GSBGEN 652. Online Research Methods. 2 Units.**

This course will cover the practicalities of running research on the internet, including: online research tools, experimental design, online process measures, subject pool selection, detecting and dealing with inattentive participants, basic programming techniques, debugging, data organization, and data cleaning. Class time and assignments will take a hands-on approach, giving you direct experience and practice. There will be two main projects, both of which should be useful for your research. The first will be creating a personal web page (or, if you already have a web page that you like, you can substitute a different project). The second assignment will be designing and running an online experiment with a dynamic component. Grading will be based on these projects, as well as class participation and small weekly assignments.

**GSBGEN 675. Microeconomic Theory. 3 Units.**

This course provides an introduction to microeconomic theory designed to meet the needs of students in the GSB non-Economics PhD programs. The course will cover the standard economic models of individual decision-making, models of consumer behavior and producer behavior under perfect competition, the Arrow-Debreu general equilibrium model, and some basic issues in welfare measurement. This class assumes a basic knowledge of undergraduate intermediate microeconomics, comfort with multivariable calculus and linear algebra and some exposure to real analysis.

**GSBGEN 691. PhD Directed Reading. 1-15 Unit.**

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, OIT 691, POLECON 691, STRAMGT 691

**GSBGEN 692. PhD Dissertation Research. 1-15 Unit.**

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, OIT 692, POLECON 692, STRAMGT 692

**GSBGEN 697. Research Fellows Practicum. 1-6 Unit.****GSBGEN 698. Doctoral Practicum in Teaching. 1 Unit.**

Doctoral Practicum in Teaching.

**GSBGEN 699. Doctoral Practicum in Research. 1 Unit.**

Doctoral Practicum in Research.

**GSBGEN 802. TGR Dissertation. 0 Units.**

Same as: ACCT 802, FINANCE 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, OIT 802, POLECON 802, STRAMGT 802

**Genetics Courses****GENE 104Q. Law and the Biosciences. 3 Units.**

Preference to sophomores. Focus is on human genetics; also assisted reproduction and neuroscience. Topics include forensic use of DNA, genetic testing, genetic discrimination, eugenics, cloning, pre-implantation genetic diagnosis, neuroscientific methods of lie detection, and genetic or neuroscience enhancement. Student presentations on research paper conclusions.

**GENE 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**GENE 200. Genetics and Developmental Biology Training Camp. 1 Unit.**

Open to first year Department of Genetics and Developmental Biology students, to others with consent of instructors. Introduction to basic manipulations, both experimental and conceptual, in genetics and developmental biology.

Same as: DBIO 200

**GENE 202. Human Genetics. 4 Units.**

Utilizes lectures and small group activities to develop a working knowledge of human genetics as applicable to clinical medicine. Basic principles of inheritance, risk assessment, and population genetics are illustrated using examples drawn from diverse areas of medical genetics practice including prenatal, pediatric, adult and cancer genetics. Practical aspects of molecular and cytogenetic diagnostic methods are emphasized.

Existing and emerging treatment strategies for single gene disorders are also covered. Prerequisites: basic genetics.

**GENE 205. Advanced Genetics. 3 Units.**

For PhD students in any of the Biosciences Departments and Programs at Stanford University. Emphasis on developing the ability to solve problems using genetic ideas and methods, to understand the nature and reliability of genetic inference, and to apply genetic reasoning to biological research. Weekly paper discussions based on original research papers that define or illustrate the ideas and techniques covered in the lecture.

**GENE 209. Current Topics in Human, Population, and Statistical Genomics. 2 Units.**

Intensive seminar/workshop. Topics, drawn from current and past literature, may include: assessing and population genetic analysis of genomic variation; genome-to-phenome mapping; reconstructing demographic history from genome sequence data; domestication genomics; host-pathogen genome evolution; detecting signatures of selection; experimental design in human genetics; linkage and association mapping; ethical and social issues in human, plant, and animal genetics research. Emphasis on analysis and logic or experimental and observational genomics research. Faculty-led discussion with evaluation of response papers, problem sets, and intensive course project. May be repeated for credit.

**GENE 210. Genomics and Personalized Medicine. 3 Units.**

Principles of genetics underlying associations between genetic variants and disease susceptibility and drug response. Topics include: genetic and environmental risk factors for complex genetic disorders; design and interpretation of genome-wide association studies; pharmacogenetics; full genome sequencing for disease gene discovery; population structure and genetic ancestry; use of personal genetic information in clinical medicine; ethical, legal, and social issues with personal genetic testing. Hands-on workshop making use of personal or publicly available genetic data. Prerequisite: GENE 202, Gene 205 or BIOS 200.

Same as: DBIO 220

**GENE 211. Genomics. 3 Units.**

The goal of this course is to explore how different experimental strategies are applied to a variety of biological questions. By experimental strategy, we refer to both the general method and the logic with which the method is applied. An underlying theme of the course is that each strategy we discuss can be applied to problems that cut across different disciplines, for example immunology, cancer biology, or embryology. Genome evolution, organization, and function; technical, computational, and experimental approaches; hands-on experience with representative computational tools used in genome science; and a work knowledge of the scripting language Python.

**GENE 212. Introduction to Biomedical Informatics Research Methodology. 3 Units.**

Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Because the team projects start in the first week of class, attendance that week is strongly recommended. Prerequisites: BIOMEDIN 210 or 211 or 214 or 217 or consent of instructor.

Same as: BIOE 212, BIOMEDIN 212, CS 272

**GENE 214. Representations and Algorithms for Computational Molecular Biology. 3-4 Units.**

Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.

Same as: BIOE 214, BIOMEDIN 214, CS 274

**GENE 215. Frontiers in Biological Research. 1 Unit.**

Students analyze cutting edge science, develop a logical framework for evaluating evidence and models, and enhance their ability to design original research through exposure to experimental tools and strategies. The class runs in parallel with the Frontiers in Biological Research seminar series. Students and faculty meet on the Tuesday preceding each seminar to discuss a landmark paper in the speaker's field of research. Following the Wednesday seminar, students meet briefly with the speaker for a free-range discussion which can include insights into the speakers' paths into science and how they pick scientific problems.

Same as: BIOC 215, DBIO 215

**GENE 217. Translational Bioinformatics. 4 Units.**

(Same as BIOMEDIN 217, CS 275) Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A and familiarity with statistics and biology.

**GENE 218. Computational Analysis of Biological Information: Introduction to Python for Biologists. 2 Units.**

Computational tools for processing, interpretation, communication, and archiving of biological information. Emphasis is on sequence and digital microscopy/image analysis. Intended for biological and clinical trainees without substantial programming experience.

Same as: MI 218, PATH 218

**GENE 221. Current Issues in Aging. 2 Units.**

Current research literature on genetic mechanisms of aging in animals and human beings. Topics include: mitochondria mutations, insulin-like signaling, sirtuins, aging in flies and worms, stem cells, human progeria, and centenarian studies. Prerequisite: GENE 203, 205 or BIOS 200.

**GENE 224. Principles of Pharmacogenomics. 3 Units.**

This course is an introduction to pharmacogenomics, including the relevant pharmacology, genomics, experimental methods (sequencing, expression, genotyping), data analysis methods and bioinformatics. The course reviews key gene classes (e.g., cytochromes, transporters) and key drugs (e.g., warfarin, clopidogrel, statins, cancer drugs) in the field. Resources for pharmacogenomics (e.g., PharmGKB, Drugbank, NCBI resources) are reviewed, as well as issues implementing pharmacogenomics testing in the clinical setting. Reading of key papers, including student presentations of this work; problem sets; final project selected with approval of instructor. Prerequisites: two of BIO 41, 42, 43, 44X, 44Y or consent of instructor.

Same as: BIOMEDIN 224

**GENE 232. Advanced Imaging Lab in Biophysics. 4 Units.**

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

Same as: APPPHYS 232, BIO 132, BIO 232, BIOPHYS 232

**GENE 233. The Biology of Small Modulatory RNAs. 2 Units.**

Open to graduate and medical students. Explores recent progress and unsolved questions in the field of RNA interference and microRNA biology. Students are required to read assigned primary literature before each class and actively participate in guided discussions on related technical and conceptual issues during class meetings. Assignments include critiques of assigned papers and developing a novel research proposal.

Same as: MI 233, PATH 233

**GENE 234. Fundamentals of RNA Biology. 2 Units.**

For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students.

Same as: MI 234, PATH 234

**GENE 235. C. Elegans Genetics. 2 Units.**

Genetic approaches to *C. elegans*, practice in designing experiments and demonstrations of its growth and anatomy. Probable topics include: growth and genetics, genome map and sequence, mutant screens that start with a desired phenotype, reverse genetics and RNAi screens, genetic duplications, uses of null phenotype non-null alleles, genetic interactions and pathway analysis, and embryogenesis and cell lineage. Focus of action, mosaic analysis, and interface with embryological and evolutionary approaches.

**GENE 241. Biological Macromolecules. 3-5 Units.**

The physical and chemical basis of macromolecular function. Topics include: forces that stabilize macromolecular structure and their complexes; thermodynamics and statistical mechanics of macromolecular folding, binding, and allostery; diffusional processes; kinetics of enzymatic processes; the relationship of these principles to practical application in experimental design and interpretation. The class emphasizes interactive learning, and is divided equally among lectures, in-class group problem solving, and discussion of current and classical literature. Enrollment limited to 50. Prerequisites: Background in biochemistry and physical chemistry recommended but material available for those with deficiency in these areas; undergraduates with consent of instructor only.

Same as: BIOC 241, BIOPHYS 241, SBIO 241

**GENE 243. Intellectual Property: Scientific Evidence in Patent Litigation. 3 Units.**

(Same as LAW 343) Open to clinical MD and graduate students. Explores the role of scientific experts in patent infringement litigation. In other areas of the law where scientific experts are used – medical malpractice, environmental law, criminal law – the science itself is often in dispute. In patent cases, however, the parties generally agree on the science. This affects the relationship between the lawyer and the expert and the substantive content of their interactions. Patent experts need to be able to explain science to the judge and jury. But they also must help the litigators choose which legal issues to press and which to concede, and to be aware of how the complications of the science might help, hurt, obscure or reveal how the law should be applied to the facts. The class examines judicial decisions and trial documents involving scientific evidence in patent litigation, followed by work in teams on final projects: simulations of expert testimony in a patent case. Simulations are performed at the end of the quarter before panels of practicing patent lawyers. Prerequisite: graduate students must have completed their required coursework and have TGR status.

**GENE 244. Introduction to Statistical Genetics. 3 Units.**

Statistical methods for analyzing human genetics studies of Mendelian disorders and common complex traits. Probable topics include: principles of population genetics; epidemiologic designs; familial aggregation; segregation analysis; linkage analysis; linkage-disequilibrium-based association mapping approaches; and genome-wide analysis based on high-throughput genotyping platforms. Prerequisite: STATS 116 or equivalent or consent of instructor.

Same as: STATS 344

**GENE 245. Statistical and Machine Learning Methods for Genomics. 3 Units.**

Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets.

Same as: BIO 268, BIOMEDIN 245, CS 373, STATS 345

**GENE 260. Supervised Study. 1-18 Unit.**

Genetics graduate student lab research from first quarter to filing of candidacy. Prerequisite: consent of instructor.

**GENE 267. Molecular Mechanisms of Neurodegenerative Disease. 4 Units.**

The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.

Same as: BIO 267, NENS 267

**GENE 271. Human Molecular Genetics. 4 Units.**

For genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows interested in the practice of medical genetics and genomics. Gene structure and function; the impact of mutation and polymorphism as they relate to developmental pathways and human disease; mitochondrial genetics; approaches to the study of complex genetic conditions; GWAS and genome sequencing technologies; variant interpretation; gene therapy, stem cell biology, and pharmacogenetics. Undergraduates require consent of instructor and a basic genetics course.

**GENE 272. Introduction to Medical Genetics. 2-3 Units.**

For genetic counseling students, graduate students in human genetics, medical students, residents, and fellows; undergraduates with consent of instructor. Principles of medical genetics practice, including taking a family history, modes of inheritance and risk assessment, and mathematical principles of medical genetics (Bayes theorem, population genetics). An additional problem set is required for 3 units.

**GENE 273. Introduction to Clinical Genetics Testing. 1 Unit.**

For genetic counseling students, medical students, residents, and fellows. Uses a combination of case based assignments, laboratory observation and didactic lectures to introduce techniques and technology used in cytogenetics, molecular genetics and biochemical genetic testing, and to introduce clinical features of common genetic conditions that are commonly diagnosed through genetic testing.

**GENE 274A. A Case Based Approach to Clinical Genetics. 2 Units.**

For genetic counseling students, graduate students in genetics, medical students, residents and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders.

**GENE 274B. A Case Based Approach to Clinical Genetics. 2 Units.**

For genetic counseling students, graduate students in genetics, medical students, residents, and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders. This course is a continuation of GENE 274A, but may be taken individually with instructor permission.

**GENE 275. Role Play and Genetic Counseling Observations. 2 Units.**

Students role play aspects of genetic counseling sessions and learn through clinical observations. Observation includes genetic counseling sessions in prenatal, pediatric, and specialty settings.

**GENE 276. Genetic Counseling Clinical Rotations. 2-7 Units.**

For genetic counseling students only. Supervised clinical experiences. May be repeated for credit. Prerequisite: GENE 275.

**GENE 278. Prenatal Genetic Counseling. 1 Unit.**

Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial prenatal genetics rotation. Topics include prenatal genetic screening and diagnosis in the first and second trimesters, ultrasound, teratology, and genetic carrier screening.

**GENE 279. Pediatric and Adult Genetic Counseling. 1 Unit.**

Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial general genetics rotation. Topics include: common genetic conditions, assessment of child development and medical history in the context of a genetic workup, the pediatric genetics medical examination, dysmorphology, introduction to laboratory genetic testing, development of a differential diagnosis, and resources for case management and family support.

**GENE 280. Metabolic Genetic Counseling. 1 Unit.**

Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows genetic counseling students should take this course in conjunction with their metabolic genetics rotation. Topics include: overview of metabolic diseases; common pathways; diagnosis, management, and treatment of metabolic disorders; and newborn screening.

**GENE 281. Cancer Genetic Counseling. 1 Unit.**

Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial cancer genetics rotation. Topics include: cancer biology and cytogenetics; diagnosis and management of common cancer genetic syndromes; predictive testing; psychology of cancer genetic counseling; and topics recommended by ASCO guidelines.

**GENE 282A. Genetic Counseling Research Seminar. 1 Unit.**

For genetic counseling students only. Facilitated discussions on identifying a topic and mentor for genetic counseling departmental research projects.

**GENE 282B. Genetic Counseling Research Seminar. 1 Unit.**

For genetic counseling students only. Lectures and facilitated discussions on research methodology for genetic counseling departmental research projects. Prerequisite: GENE 282A.

**GENE 283. Genetic Counseling Research. 1-8 Unit.**

Genetic counseling students conduct clinical research projects as required by the department for graduation. May be repeated for credit. Pre- or corequisite: GENE 282.

**GENE 284. Medical Genetics Seminar. 1-2 Unit.**

Presentation of research and cases. Students enrolling for 2 units also attend and report on external seminars. May be repeated for credit.

**GENE 285A. Genetic Counseling Seminar. 2-3 Units.**

Year-long seminar primarily for genetic counseling students. Autumn: basics of medical communication; crosscultural and disability sensitive communication about genetics, and principles of providing genetic counseling. Undergraduates may enroll in Autumn Quarter with consent of instructor. Extra paper required for 3 units.

**GENE 285B. Genetics Counseling Seminar. 2 Units.**

Year-long seminar primarily for genetic counseling students. Winter: the impact of chronic illness and genetic disease in a developmental manner.

**GENE 285C. Genetic Counseling Seminar. 2 Units.**

Year-long seminar primarily for genetic counseling students. Spring: applying therapeutic counseling approaches to the practice of genetic counseling.

**GENE 286. Advanced Genetic Counseling Seminar. 2 Units.**

For genetic counseling students only. Psychosocial issues associated with genetic counseling cases are discussed through presentation of cases that students have seen throughout their training. Professional development topics will be included. Must be taken for 3 quarters. Prerequisites: GENE 285 A,B,C and 276.

**GENE 287. CARDIOVASCULAR GENETICS. 1 Unit.**

Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellow; genetic counseling students should take this course in conjunction with their cardiovascular genetics rotation. Topics include: Basic cardiology principles, including relevant anatomy and physiology; diagnosis, management and genetic testing as it relates to common inherited cardiovascular conditions in both the pediatric and adult setting; predictive genetic testing issues specific to inherited cardiovascular conditions; psychologic issues related to sudden death conditions. This course is designed for genetic counseling students, medical students, residents, post-doctoral fellows and nurses interested in inherited cardiovascular conditions.

**GENE 299. RESEARCH. 0-60 Units.****GENE 399. Graduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**GENE 801. TGR Project. 0 Units.****GENE 802. TGR Dissertation. 0 Units.****Geological & Environmental Sciences Courses****Geological Sciences Courses****GS 1A. Introduction to Geology: The Physical Science of the Earth. 5 Units.**

For non-majors or prospective majors in the Earth Sciences. Lectures, hands-on laboratories, and three one-day weekend field trips. Focus is on the physical and chemical processes of heat and mass transfer within the earth and its fluid envelopes, including deep-earth, crustal, surface, and atmospheric processes. Topics include the dynamics of and interactions between the inner earth, plate tectonics, surface processes, and atmospheric processes such as climate change and global warming. Only one of GS 1A, 1B, or 1C may be taken for credit. Prerequisites: MATH 19 or equivalent.

**GS 1B. Introduction to Geology. 4 Units.**

For non-majors and prospective majors or minors in the Earth Sciences. Introduction to physical geology. Lectures and lab exercises focus on understanding the dynamics of Earth's ongoing physical and chemical processes. Major themes include plate tectonics, the rock cycle, the hydrologic cycle, and mineral resources. We will employ local CA geology, current events, and the state-of-the-art to drive discussions on landscapes, hazards, and economics. Only one of GS 1A, 1B, or 1C may be taken for credit. Recommended: high school chemistry.

**GS 1C. Introduction to Geology: Dynamic Earth. 4 Units.**

For non-majors or prospective majors in the Earth Sciences. Integrated lecture-lab includes hands-on activities and local field trips. Focus is on reading the dynamic geological landscape, with an emphasis on California-primarily Bay Area-geology. Topics include plate tectonics, earthquakes and volcanoes, Earth materials, geologic time, stream processes, and climate change over geologic time. Only one of GS 1A, 1B, or 1C may be taken for credit.

**GS 4. How to Build and Maintain a Habitable Planet: An Introduction to Earth System History. 4 Units.**

Introduction to the history of the Earth, with a focus on processes that maintain or threaten habitability. Principles of stratigraphy, correlation, the geological timescale, the history of biodiversity, and the interpretation of fossils. The use of data from sedimentary geology, geochemistry, and paleontology to test theories for critical events in Earth history such as mass extinctions. One half-day field trip.

Same as: EARTHYSYS 4

**GS 5. Living on the Edge. 1 Unit.**

A weekend field trip along the Pacific Coast. Tour local beaches, geology, and landforms with expert guides from the Department of Geological and Environmental Sciences. Enjoy a BBQ dinner and stay overnight in cabins along the Santa Cruz coast. Get to know faculty and graduate students in the Earth Sciences. Requirements: Two campus meeting and weekend field trip to Pacific Coast. Enrollment limited to 25. Freshman have first choice.

**GS 8. Oceanography: An Introduction to the Marine Environment. 3 Units.**

For non-majors and earth science and environmental majors. Topics: topography and geology of the sea floor; evolution of ocean basins; circulation of ocean and atmosphere; nature of sea water, waves, and tides; and the history of the major ocean basins. The interface between continents and ocean basins, emphasizing estuaries, beaches, and continental shelves with California margin examples. Relationships among the distribution of inorganic constituents, ocean circulation, biologic productivity, and marine environments from deep sea to the coast. One-day field trip to measure and analyze waves and currents.

**GS 12SC. Environmental and Geological Field Studies in the Rocky Mountains. 2 Units.**

The ecologically and geologically diverse Rocky Mountain area is being strongly impacted by changing land use patterns, global and regional environmental change, and societal demands for energy and natural resources. This field program emphasizes coupled environmental and geological problems in the Rocky Mountains, covering a broad range of topics including the geologic origin of the American West from three billion years ago to the present; paleoclimatology and the glacial history of this mountainous region; the long- and short-term carbon cycle and global climate change; and environmental issues in the American West related to changing land-use patterns and increased demand for its abundant natural resources. In addition to the science aspects of this course we will also investigate the unique western culture of the area particularly in regards to modern ranching and outfitting in the American West. These broad topics are integrated into a coherent field-study as we examine earth/ environmental science-related questions in three different settings: 1) the three-billion-year-old rocks and the modern glaciers of the Wind River Mountains of Wyoming; 2) the sediments in the adjacent Wind River basin that host abundant gas and oil reserves and also contain the long-term climate history of this region; and 3) the volcanic center of Yellowstone National Park and the mountainous region of Teton National Park. Students will complete six assignments based upon field exercises, working in small groups to analyze data and prepare reports and maps. Lectures will be held in the field prior to and after fieldwork. Note: This course involves one week of backpacking in the Wind Rivers and hiking while staying in cabins near Jackson Hole, Wyoming. Students must arrive in Salt Lake City on Tuesday, September 6. (Hotel lodging will be provided for the night of September 6, and thereafter students will travel as a Sophomore College group.) We will return to campus on Friday, September 23. Sophomore College Course: Application required, due noon, April 5, 2016. Apply at <http://soco.stanford.edu>.

Same as: EARTHSYS 12SC, ESS 12SC

**GS 14. Our National Parks. 2 Units.**

Explore the history and natural science of three national parks proximal to Stanford. Under the guidance of instructors, students will work in teams to learn about chosen aspects of these parks, develop dynamic self-guided tours for public consumption, and implement (and publish) these tours using the XibitEd app for iPhones. Students will learn how to present their findings to a general, non-scientific audience, delineate physical locations at which storytelling will take place through the XibitEd system, and create and configure the content for the system. The course will culminate in the publishing of the experiential learning tours, as well as a weekend-long field trip to the Pinnacles National Park.

Same as: EARTH 14, EARTH 114A, GS 114A

**GS 38N. The Worst Journey in the World: The Science, Literature, and History of Polar Exploration. 3 Units.**

This course examines the motivations and experiences of polar explorers under the harshest conditions on Earth, as well as the chronicles of their explorations and hardships, dating to the 1500s for the Arctic and the 1700s for the Antarctic. Materials include *The Worst Journey in the World* by Aspley Cherry-Garrard who in 1911 participated in a midwinter Antarctic sledging trip to recover emperor penguin eggs. Optional field trip into the high Sierra in March.

Same as: EARTHSYS 38N, ESS 38N

**GS 40N. Diamonds. 3 Units.**

Preference to freshmen. Topics include the history of diamonds as gemstones, prospecting and mining, and their often tragic politics. How diamond samples provide clues for geologists to understand the Earth's deep interior and the origins of the solar system. Diamond's unique materials properties and efforts in synthesizing diamonds.

**GS 42N. Landscapes and Tectonics of the San Francisco Bay Area. 4 Units.**

Active faulting and erosion in the Bay Area, and its effects upon landscapes. Earth science concepts and skills through investigation of the valley, mountain, and coastal areas around Stanford. Faulting associated with the San Andreas Fault, coastal processes along the San Mateo coast, uplift of the mountains by plate tectonic processes, and landsliding in urban and mountainous areas. Field excursions; student projects.

**GS 43Q. Environmental Problems. 3 Units.**

Preference to sophomores. Components of multidisciplinary environmental problems and ethical questions associated with decision making in the regulatory arena. Students lead discussions on environmental issues such as groundwater contamination from point and nonpoint sources, cumulative watershed effects related to timber and mining practices, acid rain, and subsurface disposal of nuclear waste.

**GS 46Q. Environmental Impact of Energy Systems: What are the Risks?. 3 Units.**

In order to reduce CO<sub>2</sub> emissions and meet growing energy demands during the 21st Century, the world can expect to experience major shifts in the types and proportions of energy-producing systems. These decisions will depend on considerations of cost per energy unit, resource availability, and unique national policy needs. Less often considered is the environmental impact of the different energy producing systems: fossil fuels, nuclear, wind, solar, and other alternatives. One of the challenges has been not only to evaluate the environmental impact but also to develop a systematic basis for comparison of environmental impact among the energy sources. The course will consider fossil fuels (natural gas, petroleum and coal), nuclear power, wind and solar and consider the impact of resource extraction, refining and production, transmission and utilization for each energy source.

Same as: EARTHSYS 46Q

**GS 55Q. The California Gold Rush: Geologic Background and Environmental Impact. 3 Units.**

Preference to sophomores. Topics include: geologic processes that led to the concentration of gold in the river gravels and rocks of the Mother Lode region of California; and environmental impact of the Gold Rush due to population increase, mining operations, and high concentrations of arsenic and mercury in sediments from hard rock mining and milling operations. Recommended: introductory geology.

**GS 59N. The Legacy of Fukushima Daiichi. 3 Units.**

We will consider the case for nuclear power as an energy source through the lens of the Fukushima disaster. Specific topics will include the cause of the earthquake and tsunami, the causes for the nuclear power plant failure, the mechanisms for the release of radioactivity at the time of the accident and today, and the ongoing human impact of this tragedy. In addition to the details of the accident and the release of radioactivity, class discussions and readings will explore the health and economic impacts of nuclear power and examine how the accident has affected the future prospects of nuclear power in Japan, the U.S., and around the world.

**GS 90. Introduction to Geochemistry. 3-4 Units.**

The chemistry of the solid earth and its atmosphere and oceans, emphasizing the processes that control the distribution of the elements in the earth over geological time and at present, and on the conceptual and analytical tools needed to explore these questions. The basics of geochemical thermodynamics and isotope geochemistry. The formation of the elements, crust, atmosphere and oceans, global geochemical cycles, and the interaction of geochemistry, biological evolution, and climate. Recommended: introductory chemistry.

**GS 101. Environmental and Geological Field Studies in the Rocky Mountains. 3 Units.**

Three-week, field-based program in the Greater Yellowstone/Teton and Wind River Mountains of Wyoming. Field-based exercises covering topics including: basics of structural geology and petrology; glacial geology; western cordillera geology; paleoclimatology; chemical weathering; aqueous geochemistry; and environmental issues such as acid mine drainage and changing land-use patterns.

Same as: EARTHSYS 100, ESS 101

**GS 102. Earth Materials: Introduction to Mineralogy. 4 Units.**

The minerals and materials that comprise the earth and their uses in modern society. How to identify, classify, and interpret rock-forming minerals. Emphasis is on information provided by common minerals about the nature of the Earth's interior and processes such as magmatism and metamorphism that operate there, as well as the major processes of weathering and erosion that link plate tectonics to earth cycles. Required lab section. Prerequisite: introductory geology course. Recommended: introductory chemistry.

**GS 103. Earth Materials: Rocks in Thin Section. 3 Units.**

Use of petrographic microscope to identify minerals and common mineral associations in igneous, metamorphic, and sedimentary rocks. Crystallization histories, mineral growth and reaction relations, deformation textures in metamorphic rocks, and provenance of siliciclastic rocks. Required lab section. Prerequisite 102.

**GS 104. Introduction to Petrology. 4 Units.**

The origin of different rock types as a function of geologic and plate tectonic setting. How to identify rocks and interpret their conditions of formation. Required lab section. Prerequisite: introductory geology course; GES102.

Same as: GS 204

**GS 105. Introduction to Field Methods. 3 Units.**

Two-week, field-based course in the White Mountains of eastern California. Introduction to the techniques for geologic mapping and geologic investigation in the field: systematic observations and data collection for lithologic columns and structural cross-sections. Interpretation of field relationships and data to determine the stratigraphic and deformational history of the region. Prerequisite: GS 1, recommended: GS 102.

**GS 107. Journey to the Center of the Earth. 3 Units.**

The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter. Next offering Winter 2013-14.

Same as: GEOPHYS 184, GEOPHYS 274, GS 207

**GS 110. Structural Geology and Tectonics. 3-5 Units.**

Theory, principles, and practical techniques to measure, describe, analyze, and interpret deformation-related structures on Earth. Collection of fault and fold data in the field followed by lab and computer analysis; interpretation of geologic maps and methods of cross-section construction; structural analysis of fault zone and metamorphic rocks; measuring deformation; regional structural styles and associated landforms related to plate tectonic convergence, rifting, and strike-slip faulting; the evolution of mountain belts and formation of sedimentary basins. Prerequisite: GS 1, calculus. Recommended: 102.

**GS 111. Fundamentals of Structural Geology. 3 Units.**

Techniques for mapping using GPS and differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; measurement and analysis of stress; elastic deformation and properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Models of tectonic processes are constructed and solutions visualized using MATLAB.

Prerequisites: GS 1, MATH 51.

Same as: CEE 195

**GS 114A. Our National Parks. 2 Units.**

Explore the history and natural science of three national parks proximal to Stanford. Under the guidance of instructors, students will work in teams to learn about chosen aspects of these parks, develop dynamic self-guided tours for public consumption, and implement (and publish) these tours using the XibitEd app for iPhones. Students will learn how to present their findings to a general, non-scientific audience, delineate physical locations at which storytelling will take place through the XibitEd system, and create and configure the content for the system. The course will culminate in the publishing of the experiential learning tours, as well as a weekend-long field trip to the Pinnacles National Park.

Same as: EARTH 14, EARTH 114A, GS 14

**GS 115. Engineering Geology and Global Change. 3 Units.**

The application of geology and global change to the planning, design, and operation of engineering projects. Case histories taught in a seminar setting and field trips emphasize the impact of geology and global change on both individual engineering works and the built environment by considering Quaternary history and tectonics, anthropogenic sea level rise, active geologic processes, engineering properties of geologic deposits, site exploration, and professional ethics. Prerequisite: GS 1 or consent of instructor.

Same as: CEE 196

**GS 118. D<sup>3</sup>: Disasters, Decisions, Developmen. 3-5 Units.**

This class connects the science behind natural disasters with the real-world constraints of disaster management and development. In each iteration of this class we will focus on a specific, disaster-prone location as case study. By collaborating with local stakeholders we will explore how science and engineering can make a make a difference in reducing disaster risk in the future. Offered every other year.

Same as: EARTHSYS 124, ESS 118, ESS 218, GEOPHYS 118, GEOPHYS 218, GS 218

**GS 121. What Makes a Habitable Planet?. 3 Units.**

Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets, geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.

Same as: GS 221

**GS 122. Planetary Systems: Dynamics and Origins. 3-4 Units.**

(Students with a strong background in mathematics and the physical sciences should register for 222.) Motions of planets and smaller bodies, energy transport in planetary systems, composition, structure and dynamics of planetary atmospheres, cratering on planetary surfaces, properties of meteorites, asteroids and comets, extrasolar planets, and planetary formation. Prerequisite: some background in the physical sciences, especially astronomy, geophysics, or physics.

Same as: GS 222

**GS 123. Paleobiology. 4 Units.**

Introduction to the fossil record with emphasis on marine invertebrates. Major debates in paleontological research. The history of animal life in the oceans. Topics include the nature of the fossil record, evolutionary radiations, mass extinctions, and the relationship between biological evolution and environmental change. Fossil taxa through time. Exercises in phylogenetics, paleoecology, biostratigraphy, and statistical methods. Same as: EARTHSYS 122, GS 223B

**GS 128. Evolutionary History of Terrestrial Ecosystems. 4 Units.**

The what, when, and how do we know it regarding life on land including plants, fungi, invertebrates, and vertebrates (yes, dinosaurs) and how all of those components interact with each other and with changing climates, continental drift, atmospheric composition, and environmental perturbations like glaciation and mass extinction. Same as: EARTHSYS 128, GS 228

**GS 130. Soil Physics and Hydrology. 3 Units.**

The occurrence, distribution, circulation, and reaction of water at the surface and within the near surface. Topics: precipitation, evapotranspiration, infiltration and vadose zone, groundwater, surface water and streamflow generation, and water balance estimates. Current and classic theory in soil physics and hydrology. Urban, rangeland, and forested environments.

**GS 131. Hydrologically-Driven Landscape Evolution. 3 Units.**

Materials of the Earth and hydrologically driven landscape processes. Topics: hillslope hydrology, weathering of rocks and soils, erosion, flow failures, mass wasting, and conceptual models of landscape evolution. Current and classic theory in geomorphology.

**GS 135. Field and Analytical Methods in Historical Geobiology. 4 Units.**

Introduction to research methods in historical geobiology. This research-based course will examine how life in ancient oceans, as recorded in the paleontological record, was affected by environmental change, as recorded in the geochemical record. Students will collect paleontological and geochemical data from a measured stratigraphic section in the western United States. In lab, students will learn low temperature geochemical techniques focusing on the cycling of biogeochemical elements (O, C, S, and Fe) in marine sediments throughout Earth history. This is a lab-based course complemented with lectures. Preference will be given to students able to attend a four-day field trip at the end of spring break to measure the stratigraphic section and collect samples. Same as: GS 235

**GS 150. Senior Seminar: Issues in Earth Sciences. 3 Units.**

Focus is on written and oral communication in a topical context. Topics from current frontiers in earth science research and issues of concern to the public. Readings, oral presentations, written work, and peer review.

**GS 151. Sedimentary Geology and Petrography: Depositional Systems. 4 Units.**

Topics: weathering, erosion and transportation, deposition, origins of sedimentary structures and textures, sediment composition, diagenesis, sedimentary facies, tectonics and sedimentation, and the characteristics of the major siliciclastic and carbonate depositional environments. Lab: methods of analysis of sediments in hand specimen and thin section. Field trips. Prerequisites: 1, 102, 103.

**GS 163. Introduction to Isotope Geochemistry. 3 Units.**

Stable, cosmogenic, and radiogenic isotopes; processes that govern isotopic variations. Application of isotopes to geologic, biologic, and hydrologic questions. Major isotopic systems and their applications. Simple modeling techniques used in isotope geochemistry. Same as: GS 263

**GS 170. Environmental Geochemistry. 4 Units.**

Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor. Same as: EARTHSYS 170, GS 270

**GS 171. Geochemical Thermodynamics. 3 Units.**

Introduction to the application of chemical principles and concepts to geologic systems. The chemical behavior of fluids, minerals, and gases using simple equilibrium approaches to modeling the geochemical consequences of diagenetic, hydrothermal, metamorphic, and igneous processes. Topics: reversible thermodynamics, solution chemistry, mineral-solution equilibria, reaction kinetics, and the distribution and transport of elements by geologic processes. Prerequisite: GS 102.

**GS 180. Igneous Processes. 4 Units.**

For juniors, seniors and beginning graduate students in Earth Sciences. Structure and physical properties of magmas; use of phase equilibria and mineral barometers and thermometers to determine conditions of magmatic processes; melting and magmatic lineages as a function of tectonic setting; processes that control magma composition including fractional crystallization, partial melting, and assimilation; petrogenetic use of trace elements and isotopes. Labs emphasize identification of volcanic and plutonic rocks in thin section and interpretation of rock textures. Prerequisite 102, 103, or consent of instructor. Same as: GS 280

**GS 183. California Desert Geologic Field Trip. 1 Unit.**

Field seminar. Three class meetings during Winter quarter followed by a 6-day field trip over Spring Break to Mojave Desert, Death Valley, and Owens Valley. Basin-and-range faulting, alluvial fans, playas, sand dunes, metamorphic rocks, granites of the Sierra Nevada, lava flows and the deposits of supervolcanic eruptions, hot springs, ore deposits, and desert landscapes. Involves camping and some hiking. Recommended: introductory geology. Enrollment limited to 25 students; preference given to freshman and sophomores; additionally graduate students in the School of Earth, Energy & Environmental Sciences.

**GS 184. Field Seminar on Eastern Sierran Volcanism. 1 Unit.**

For nonmajors and prospective majors in the earth sciences and archaeology. Four-day trip over Memorial Day weekend to study silicic and mafic volcanism in the eastern Sierra Nevada: basaltic lavas and cinder cones erupted along normal faults bounding Owens Valley, Long Valley caldera, postcaldera rhyolite lavas, hydrothermal alteration and hot springs, Holocene rhyolite lavas of the Inyo and Mono craters, subaqueous basaltic and silicic eruptions of Mono Basin, floating pumice blocks. If snow-level permits, silicic volcanism associated with the Bodie gold district. Recommended: 1 or equivalent.

**GS 185. Volcanology. 3-4 Units.**

For juniors, seniors, and beginning graduate students. Eruptive processes that create volcanic deposits and landforms; shield, stratocone, and composite volcanoes, lava dome fields; calderas. Control of magma viscosity and water content on eruptive style. Fluid dynamic controls on the characteristics of lavas and pyroclastic flows. Submarine and subglacial eruptions and interaction of magma with groundwater. Rhyolitic supereruptions and flood basalts: effects on climate and atmospheric chemistry, relation to extinction events. Volcanic hazards and mitigating risk. Geophysical monitoring of active volcanoes. Volcanic-hosted geothermal systems and mineral resources. Those taking the class for 4 units will complete a 3-hour weekly lab that emphasizes recognizing types of lavas and products of explosive eruptions in hand specimen and thin section. Prerequisite: 1, for those taking the course for 3 units; 103 and 104 or equivalent for those taking the course for 4 units.

Same as: GS 285A

**GS 190. Research in the Field. 3 Units.**

Two to three-week long courses that provide students with the opportunity to collect data in the field as part of a team-based investigation of research questions or topics under the expert guidance of knowledgeable faculty and graduate students. Topics and locations vary. May be taken multiple times for credit. Prerequisites: GS 1, GS 102, GS 105.

**GS 191. GS Field Trips. 1 Unit.**

Four- to seven-day field trips to locations of geologic and environmental interest. Includes trips offered during Thanksgiving and Spring breaks. May be repeated for credit.

Same as: EARTH 191

**GS 192. Undergraduate Research in Geological Sciences. 1-10 Unit.**

Field-, lab-, or literature-based. Faculty supervision. Written reports. May be repeated for credit.

**GS 197. Senior Thesis. 3-5 Units.**

For seniors who wish to write a thesis based on research in 192 or as a summer research fellow. May not be repeated for credit; may not be taken if enrolled in 199.

**GS 198. Special Problems in Geological Sciences. 1-10 Unit.**

Reading and instruction under faculty supervision. Written reports. May be repeated for credit.

**GS 199. Honors Program. 1-10 Unit.**

Research on a topic of special interest. See "Undergraduate Honors Program" above. May be repeated for credit.

**GS 204. Introduction to Petrology. 4 Units.**

The origin of different rock types as a function of geologic and plate tectonic setting. How to identify rocks and interpret their conditions of formation. Required lab section. Prerequisite: introductory geology course; GES102.

Same as: GS 104

**GS 206. Topics in Organismal Paleobiology. 2-3 Units.**

Seminar course covering an area of structural biology, physiology, and ecology relevant to understanding the fossil record. Topic will change each time the course is offered. Examples of potential topics are biomineralization, fluid mechanics, biomechanics, taphonomy & biochemical preservation, and photosynthesis in air and water.

**GS 207. Journey to the Center of the Earth. 3 Units.**

The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter. Next offering Winter 2013-14.

Same as: GEOPHYS 184, GEOPHYS 274, GS 107

**GS 208. Topics in Geobiology. 1 Unit.**

Reading and discussion of classic and recent papers in the field of Geobiology. Co-evolution of Earth and life; critical intervals of environmental and biological change; geomicrobiology; paleobiology; global biogeochemical cycles; scaling of geobiological processes in space and time.

Same as: ESS 208

**GS 209. Microstructures. 3-5 Units.**

Microstructures in metamorphic rocks reveal temperature, pressure, and rates of deformation in the crust and variations in its thermo-mechanical behavior. Topics include the rheology of rocks and minerals, strain partitioning, shear zones and brittle-ductile transition in the crust, mechanisms of foliation and lineation development, preferred crystallographic fabrics, and geochronologic methods useful for dating deformation. Labs involve microstructure analysis of suites of rocks from classic localities. 5 units for extra project.

**GS 210. Geologic Evolution of the Western U.S. Cordillera. 1-3 Unit.**

The geologic and tectonic evolution of the U.S. Cordillera based on its rock record through time. This region provides good examples of large-scale structures and magmatic activity generated during crustal shortening, extension, and strike-slip faulting and affords opportunity to study crustal-scale processes involved in mountain building in context of plate tectonic motions.

**GS 211. Topics in Regional Geology and Tectonics. 2-3 Units.**

May be repeated for credit.

**GS 212. Topics in Tectonic Geomorphology. 2 Units.**

For upper-division undergraduates and graduate students. Topics vary and may include coupling among erosional, tectonic, and chemical weathering processes at the scale of orogens; historical review of tectonic geomorphology; hillslope and fluvial process response to active uplift; measures of landscape form and their relationship to tectonic uplift and bedrock lithology. May be repeated for credit.

**GS 213. Topics in Sedimentary Geology. 2 Units.**

For upper division undergraduates and graduate students. Topics vary each year but the focus is on current developments and problems in sedimentary geology, sedimentology, and basin analysis. These include issues in deep-water sediments, their origin, facies, and architecture; sedimentary systems on the early Earth; and relationships among tectonics, basin development, and basin fill. May be repeated for credit.

**GS 214. Topics in Paleobiology. 2 Units.**

For upper division undergraduates and graduate students. Topics vary each year; focus is on paleontological, sedimentological, and geochemical approaches to the history of life. Topics may include: mass extinction events; evolutionary radiations; the history of global biodiversity; links between evolutionary histories of primary producers and consumers; and the quality of the fossil record. Term paper. May be repeated for credit.

**GS 215. Structural Geology and Rock Mechanics. 4 Units.**

Quantitative field and laboratory data integrated with solutions to boundary value problems of continuum mechanics to understand tectonic processes in Earth's crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis, conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties; brittle deformation including fracture and faulting; model development and methodology. Data sets analyzed using MATLAB. Prerequisites: GS 1, MATH 53, MATLAB or equivalent.

Same as: CEE 297R, GEOPHYS 251

**GS 218. D<sup>3</sup>: Disasters, Decisions, Developmen. 3-5 Units.**

This class connects the science behind natural disasters with the real-world constraints of disaster management and development. In each iteration of this class we will focus on a specific, disaster-prone location as case study. By collaborating with local stakeholders we will explore how science and engineering can make a difference in reducing disaster risk in the future. Offered every other year.

Same as: EARTHSYS 124, ESS 118, ESS 218, GEOPHYS 118, GEOPHYS 218, GS 118

**GS 221. What Makes a Habitable Planet?. 3 Units.**

Physical processes affecting habitability such as large impacts and the atmospheric greenhouse effect, comets, geochemistry, the rise of oxygen, climate controls, and impact cratering. Detecting and interpreting the spectra of extrasolar terrestrial planets. Student-led discussions of readings from the scientific literature. Team taught by planetary scientists from NASA Ames Research Center.

Same as: GS 121

**GS 222. Planetary Systems: Dynamics and Origins. 3-4 Units.**

(Students with a strong background in mathematics and the physical sciences should register for 222.) Motions of planets and smaller bodies, energy transport in planetary systems, composition, structure and dynamics of planetary atmospheres, cratering on planetary surfaces, properties of meteorites, asteroids and comets, extrasolar planets, and planetary formation. Prerequisite: some background in the physical sciences, especially astronomy, geophysics, or physics.

Same as: GS 122

**GS 223. Reflection Seismology Interpretation. 1-4 Unit.**

The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit. Prerequisite: 222, or consent of instructor.

Same as: GEOPHYS 183, GEOPHYS 223

**GS 223B. Paleobiology. 4 Units.**

Introduction to the fossil record with emphasis on marine invertebrates. Major debates in paleontological research. The history of animal life in the oceans. Topics include the nature of the fossil record, evolutionary radiations, mass extinctions, and the relationship between biological evolution and environmental change. Fossil taxa through time. Exercises in phylogenetics, paleoecology, biostratigraphy, and statistical methods.

Same as: EARTHSYS 122, GS 123

**GS 225. Contaminant Hydrogeology and Reactive Transport. 4 Units.**

For earth scientists and engineers. Environmental, geologic, and water resource problems involving migration of contaminated groundwater through porous media and associated biogeochemical and fluid-rock reactions. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and reactive transport modeling using geochemical transport software. Some Matlab programming / program modification required. Prerequisite: Physical Hydrogeology ESS 220 / CEE 260A (Gorelick) or equivalent. Recommended: course work in environmental chemistry or geochemistry (e.g., one or more of the following: ESS 155, ESS 156/256 GS 90, GS 170/279, GS 171, CEE 177 or CEE 270).

Same as: CEE 260C, ESS 221

**GS 225A. Fundamentals of Geochemical Modeling. 3 Units.**

A class devoted to geochemical models and the computational and analytical tools required to successfully construct and solve them. Topics include: box models, impulse responses, transfer functions, eigenvalues, advection-diffusion-reaction models, discretization schemes, numerical methods (Euler, Runge-Kutta, Gauss-Seidel), Green's function, Laplace and Fourier transforms. The class will include a final project in which students will have the opportunity to apply the above tools to their own research or a problem of their choice.

**GS 226. At the intersection of geochemistry, sedimentary geology, and paleobiology. 3 Units.**

Recent work in geochemistry, sedimentary geology, and paleobiology increasingly supports the notion that common geological factors control long-term biogeochemical cycles, the erosion and deposition of sedimentary rocks, and the evolution of the marine biosphere. During this course students will read and discuss recent primary literature addressing the possible mechanisms underlying these patterns. Questions addressed will include: Why do sedimentary rock area and biodiversity covary? How are these records linked to biogeochemical cycles, as inferred from the stable isotope compositions of elements such as carbon and sulfur? What are the relative roles of biotic interactions vs. physical environmental changes in shaping the macroevolutionary history of life?

**GS 228. Evolutionary History of Terrestrial Ecosystems. 4 Units.**

The what, when, and how do we know it regarding life on land including plants, fungi, invertebrates, and vertebrates (yes, dinosaurs) and how all of those components interact with each other and with changing climates, continental drift, atmospheric composition, and environmental perturbations like glaciation and mass extinction.

Same as: EARTHSYS 128, GS 128

**GS 233A. Microbial Physiology. 3 Units.**

Introduction to the physiology of microbes including cellular structure, transcription and translation, growth and metabolism, mechanisms for stress resistance and the formation of microbial communities. These topics will be covered in relation to the evolution of early life on Earth, ancient ecosystems, and the interpretation of the rock record. Recommended: introductory biology and chemistry.

Same as: BIO 180, EARTHSYS 255, ESS 255

**GS 234A. Molecular Microbial Biosignatures. 1-3 Unit.**

Critical reading and discussion of literature on molecular biosignatures as indicators of microbial life and metabolisms in modern and ancient environments. Focus will be primarily on recalcitrant lipids that form chemical fossils and topics covered will include biosynthetic pathways of these lipids, their phylogenetic origins, their physiological roles in modern organisms, and their occurrence throughout the geological record. Recommended: microbiology and organic chemistry.

Same as: ESS 261

**GS 235. Field and Analytical Methods in Historical Geobiology. 4 Units.**

Introduction to research methods in historical geobiology. This research-based course will examine how life in ancient oceans, as recorded in the paleontological record, was affected by environmental change, as recorded in the geochemical record. Students will collect paleontological and geochemical data from a measured stratigraphic section in the western United States. In lab, students will learn low temperature geochemical techniques focusing on the cycling of biogeochemical elements (O, C, S, and Fe) in marine sediments throughout Earth history. This is a lab-based course complemented with lectures. Preference will be given to students able to attend a four-day field trip at the end of spring break to measure the stratigraphic section and collect samples.

Same as: GS 135

**GS 237. Surface and Near-Surface Hydrologic Response. 3 Units.**

Quantitative review of process-based hydrology and geomorphology. Introduction to finite-difference and finite-element methods of numerical analysis. Topics: biometeorology, unsaturated and saturated subsurface fluid flow, overland and open channel flow, and physically-based simulation of coupled surface and near-surface hydrologic response. Links hydrogeology, soil physics, and surface water hydrology.

Same as: CEE 260B

**GS 238. Soil Physics. 3 Units.**

Physical properties of the soil solid phase emphasizing the transport, retention, and transformation of water, heat, gases, and solutes in the unsaturated subsurface. Field experiments.

**GS 240. Geostatistics. 2-3 Units.**

Geostatistical theory and practical methodologies for quantifying and simulating spatial and spatio-temporal patterns for the Earth Sciences. Real case development of models of spatial continuity, including variograms, Boolean models and training images. Estimation versus simulation of spatial patterns. Loss functions. Estimation by kriging, co-kriging with secondary data. Dealing with data on various scales. Unconditional and conditional Boolean simulation, sequential simulation for continuous and categorical variables. Multi-variate geostatistical simulation. Probabilistic and pattern-based approaches to multiple-point simulation. Trend, secondary variable, auxiliary variable and probability-type constraints. Quality control techniques on generated models. Workflows for practical geostatistical applications in mining, petroleum, hydrogeology, remote sensing and environmental sciences. prerequisites: Energy 160/260 or basic course in data analysis/statistics. Same as: ENERGY 240

**GS 241. Data Science for Geoscience. 3 Units.**

Comprehensive overview and taxonomy of data science (statistics, machine learning & computer vision) relevant for geological sciences, as well as other Earth Sciences. Areas covered are: extreme value statistics for predicting rare geological events; compositional data analysis for geochemistry; multivariate analysis for design of geological data & computer experiments; probabilistic aggregation of evidence for potential mapping; functional data analysis for multivariate environmental datasets, dimension reduction methods for analysis & visualization of geological data & models; sensitivity analysis of coupled physical/chemical numerical models; machine learning-based classification & regression for building surrogate computational models; identification & learning of geological objects with computer vision. Focus on practicality rather than theory. Matlab exercises on realistic data problems.

**GS 246. Reservoir Characterization and Flow Modeling with Outcrop Data. 3 Units.**

Project addressing a reservoir management problem by studying an outcrop analog, constructing geostatistical reservoir models, and performing flow simulation. How to use outcrop observations in quantitative geological modeling and flow simulation. Relationships between disciplines. Weekend field trip. Same as: ENERGY 146, ENERGY 246

**GS 248. The Petroleum System: Investigative method to explore for conventional & unconventional hydrocarbons. 1 Unit.**

How the petroleum system concept can be used to more systematically investigate how hydrocarbon fluid becomes an unconventional accumulation in a pod of active source rock and how this fluid moves from this pod to a conventional pool. How to identify, map, and name a petroleum system. The conventional and unconventional accumulation as well as the use of modeling.

**GS 249. Petroleum Geochemistry in Environmental and Earth Science. 3 Units.**

How molecular fossils in crude oils, oil spills, refinery products, and human artifacts identify their age, origin, and environment of formation. The origin and habitat of petroleum, technology for its analysis, and parameters for interpretation, including: origins of molecular fossils; function, biosynthesis, and precursors; tectonic history related to the evolution of life, mass extinctions, and molecular fossils; petroleum refinery processes and the kinds of molecular fossils that survive; environmental pollution from natural and anthropogenic sources including how to identify genetic relationships among crude oil or oil spill samples; applications of molecular fossils to archaeology; worldwide petroleum systems through geologic time.

**GS 250. Sedimentation Mechanics. 3-4 Units.**

The mechanics of sediment transport and deposition and the origins of sedimentary structures and textures as applied to interpreting ancient rock sequences. Dimensional analysis, fluid flow, drag, boundary layers, open channel flow, particle settling, erosion, sediment transport, sediment gravity flows, soft sediment deformation, and fluid escape. Field trip required.

**GS 251. Sedimentary Basins. 3 Units.**

Analysis of the depositional framework and tectonic evolution of sedimentary basins. Topics: tectonic and environmental controls on facies relations, synthesis of basin development through time in terms of depositional systems and tectonic settings. Weekend field trip required. Prerequisites: 110, 151.

**GS 252. Sedimentary Petrography. 4 Units.**

Siliciclastic sediments and sedimentary rocks. Research in modern sedimentary mineralogy and petrography and the relationship between the composition and texture of sediments and their provenance, tectonic settings, and diagenetic histories. Topics vary yearly. Prerequisite: 151 or equivalent. Required lab section.

**GS 253. Petroleum Geology and Exploration. 3 Units.**

The origin and occurrence of hydrocarbons. Topics: thermal maturation history in hydrocarbon generation, significance of sedimentary and tectonic structural setting, principles of accumulation, and exploration techniques. Prerequisites: 110, 151. Recommended: GEOPHYS 223.

**GS 254. Carbonate Sedimentology. 3-4 Units.**

Processes of precipitation and sedimentation of carbonate minerals with emphasis on marine systems. Topics include: geographic and bathymetric distribution of carbonates in modern and ancient oceans; genesis and environmental significance of carbonate grains and sedimentary textures; carbonate rocks and sediments as sources of geochemical proxy data; carbonate diagenesis; changes in styles of carbonate deposition through Earth history; carbonate depositional patterns and the global carbon cycle. Lab exercises emphasize petrographic and geochemical analysis of carbonate rocks including map and outcrop scale, hand samples, polished slabs, and thin sections.

**GS 255. Basin and Petroleum System Modeling. 3 Units.**

For advanced undergraduates or graduate students. Students use stratigraphy, subsurface maps, and basic well log, lithologic, paleontologic, and geochemical data to construct 1-D, 2-D, and 3-D models of petroleum systems that predict the extent of source-rock thermal maturity, petroleum migration paths, and the volumes and compositions of accumulations through time (4-D). Recent software such as PetroMod designed to reconstruct basin geohistory. Recommended: 251 or 253.

**GS 256. Quantitative Methods in Basin and Petroleum System Modeling. 1-3 Unit.**

Examine the physical processes operating in sedimentary basins by deriving the basic equations of fundamental, coupled geologic processes such as fluid flow and heat flow, deposition, compaction, mass conservation, and chemical reactions. Through hands-on computational exercises and instructor-provided "recipes," students will deconstruct the black box of basin modeling software. Students write their own codes (Matlab) as well as gain expertise in modern finite-element modeling software (PetroMod, COMSOL).

Same as: ENERGY 275

**GS 257. Clastic Sequence Stratigraphy. 3 Units.**

Sequence stratigraphy facilitates integration of all sources of geologic data, including seismic, log, core, and paleontological, into a time-stratigraphic model of sediment architecture. Tools applicable to regional and field scales. Emphasis is on practical applications and integration of seismic and well data to exploration and field reservoir problems. Examples from industry data; hands-on exercises.

**GS 258. Introduction to Depositional Systems. 3 Units.**

The characteristics of the major sedimentary environments and their deposits in the geologic record, including alluvial fans, braided and meandering rivers, aeolian systems, deltas, open coasts, barred coasts, marine shelves, and deep-water systems. Emphasis is on subdivisions; morphology; the dynamics of modern systems; and the architectural organization and sedimentary structures, textures, and biological components of ancient deposits.

**GS 259. Stratigraphic Architecture. 1 Unit.**

The stratigraphic architecture of deposits associated with a spectrum of depositional environments, using outcrop and subsurface data. Participants read and discuss selected literature.

**GS 261. Physics and Chemistry of Minerals and Mineral Surfaces. 4 Units.**

The concepts of symmetry and periodicity in crystals; the physical properties of crystals and their relationship to atomic-level structure; basic structure types; crystal chemistry and bonding in solids and their relative stability; the interaction of x-rays with solids and liquids (scattering and spectroscopy); structural variations in silicate glasses and liquids; UV-visible spectroscopy and the color of minerals; review of the mineralogy, crystal chemistry, and structures of selected rock-forming silicates and oxides; mineral surface and interface geochemistry.

**GS 262. Thermodynamics and Disorder in Minerals and Melts. 3 Units.**

The thermodynamic properties of crystalline, glassy, and molten silicates and oxides in light of microscopic information about short range structure and ordering. Measurements of bulk properties such as enthalpy, density, and their pressure and temperature derivatives, and structural determination by spectroscopies such as nuclear magnetic resonance and Mössbauer. Basic formulations for configurational entropy, heats of mixing in solid solutions, activities; and the energetics of exsolution, phase transitions, and nucleation. Quantitative models of silicate melt thermodynamics are related to atomic-scale views of structure. A general view of geothermometry and geobarometry. Prerequisites: introductory mineralogy and thermodynamics.

**GS 263. Introduction to Isotope Geochemistry. 3 Units.**

Stable, cosmogenic, and radiogenic isotopes; processes that govern isotopic variations. Application of isotopes to geologic, biologic, and hydrologic questions. Major isotopic systems and their applications. Simple modeling techniques used in isotope geochemistry. Same as: GS 163

**GS 266. Managing Nuclear Waste: Technical, Political and Organizational Challenges. 3 Units.**

The essential technical and scientific elements of the nuclear fuel cycle, focusing on the sources, types, and characteristics of the nuclear waste generated, as well as various strategies for the disposition of spent nuclear fuel - including reprocessing, transmutation, and direct geologic disposal. Policy and organizational issues, such as: options for the characteristics and structure of a new federal nuclear waste management organization, options for a consent-based process for locating nuclear facilities, and the regulatory framework for a geologic repository. A technical background in the nuclear fuel cycle, while desirable, is not required. Same as: IPS 266

**GS 270. Environmental Geochemistry. 4 Units.**

Solid, aqueous, and gaseous phases comprising the environment, their natural compositional variations, and chemical interactions. Contrast between natural sources of hazardous elements and compounds and types and sources of anthropogenic contaminants and pollutants. Chemical and physical processes of weathering and soil formation. Chemical factors that affect the stability of solids and aqueous species under earth surface conditions. The release, mobility, and fate of contaminants in natural waters and the roles that water and dissolved substances play in the physical behavior of rocks and soils. The impact of contaminants and design of remediation strategies. Case studies. Prerequisite: 90 or consent of instructor. Same as: EARTHSYS 170, GS 170

**GS 273. Isotope Geochemistry Seminar. 1-3 Unit.**

Current topics including new analytical techniques, advances in isotopic measurements, and new isotopic approaches and systems. May be repeat for credit for total completion of 5 and total unit allowed 15.

**GS 276. Earth's Weathering Engine. 3 Units.**

The complex interactions between the chemical, biological, hydrologic and tectonic process that control the chemical and isotopic flux of material to the oceans, and ultimately the long-term composition of both the atmosphere and the hydrosphere. Through a literature review and discussions students will identify key outstanding questions regarding global chemical weathering fluxes. Through data collection, data analysis, and application of appropriate modeling tools students will produce novel analyses and conclusions regarding the operation of the Earth's weathering engine. Permission of instructor required.

**GS 280. Igneous Processes. 4 Units.**

For juniors, seniors and beginning graduate students in Earth Sciences. Structure and physical properties of magmas; use of phase equilibria and mineral barometers and thermometers to determine conditions of magmatic processes; melting and magmatic lineages as a function of tectonic setting; processes that control magma composition including fractional crystallization, partial melting, and assimilation; petrogenetic use of trace elements and isotopes. Labs emphasize identification of volcanic and plutonic rocks in thin section and interpretation of rock textures. Prerequisite 102, 103, or consent of instructor. Same as: GS 180

**GS 281. Principles of  $^{40}\text{Ar}/^{39}\text{Ar}$  Thermochronometry. 3-4 Units.**

The  $^{40}\text{Ar}/^{39}\text{Ar}$  method is based upon the K-Ar decay scheme and allows high precision geochronology and thermochronology to be performed with K-bearing minerals. Provides a detailed exploration of the method including all practical considerations and laboratory procedures for standardization and instrument calibration. A laboratory component allows practical experience in making measurements and interpreting results.

**GS 282. Interpretative Methods in Detrital Geochronology. 3 Units.**

Over the past decade, the number of studies that make use of isotopic provenance data has sky-rocketed. This type of data is now routinely used throughout the geosciences to solve a broad range of geologic problems. This seminar examines the state-of-the-art of existing interpretative methods for detrital geo/thermochronology data in provenance studies and critically examines their strengths and weaknesses. While this course will touch upon sampling approaches analytical aspects of data collection, focus is primarily upon data interpretation.

**GS 283. Thermochronology and Crustal Evolution. 4 Units.**

Thermochronology analyzes the competition between radioactive in-growth and temperature-dependant loss of radiogenic isotopes within radioactive mineral hosts in terms of temperature-time history. Coupled with quantitative understanding of kinetic phenomena and crustal- or landscape-scale interpretational models, thermochronology provides an important source of data for the Earth Sciences, notably tectonics, geomorphology, and petrogenesis. Focus on recent developments in thermochronology, specifically analytical and interpretative innovations developed over the past decade. Integrates the latest thermochronology techniques with field work in a small-scale research project focused upon crustal evolution.

**GS 284. Field Seminar on Eastern Sierran Volcanism. 1 Unit.**

For graduate students in the earth sciences and archaeology. Four-day trip over Memorial Day weekend to study silicic and mafic volcanism in the eastern Sierra Nevada: basaltic lavas and cinder cones erupted along normal faults bounding Owens Valley, Long Valley caldera, postcaldera rhyolite lavas, hydrothermal alteration and hot springs, Holocene rhyolite lavas of the Inyo and Mono craters, subaqueous basaltic and silicic eruptions of Mono Basin, floating pumice blocks. If snow-level permits, silicic volcanism associated with the Bodie gold district. Recommended: 1 or equivalent.

**GS 285. Igneous Petrogenesis of the Continents. 2-4 Units.**

Radiogenic isotopes, stable isotopes, and trace elements applied to igneous processes; interaction of magmas with mantle and crust; convergent-margin magmatism; magmatism in extensional terrains; origins of rhyolites; residence times of magmas and magma chamber processes; granites as imperfect mirrors of their source regions; trace element modeling of igneous processes; trace element discriminant diagrams in tectonic analysis; phase equilibria of partial melting of mantle and crust; geothermometry and geobarometry. Topics emphasize student interest. Prerequisite: 180 or equivalent.

**GS 285A. Volcanology. 3-4 Units.**

For juniors, seniors, and beginning graduate students. Eruptive processes that create volcanic deposits and landforms; shield, stratocone, and composite volcanoes, lava dome fields; calderas. Control of magma viscosity and water content on eruptive style. Fluid dynamic controls on the characteristics of lavas and pyroclastic flows. Submarine and subglacial eruptions and interaction of magma with groundwater. Rhyolitic supereruptions and flood basalts: effects on climate and atmospheric chemistry, relation to extinction events. Volcanic hazards and mitigating risk. Geophysical monitoring of active volcanoes. Volcanic-hosted geothermal systems and mineral resources. Those taking the class for 4 units will complete a 3-hour weekly lab that emphasizes recognizing types of lavas and products of explosive eruptions in hand specimen and thin section. Prerequisite: 1, for those taking the course for 3 units; 103 and 104 or equivalent for those taking the course for 4 units. Same as: GS 185

**GS 286. Secondary Ionization Mass Spectrometry. 3 Units.**

Secondary ionization mass spectrometry (SIMS) is a versatile method capable of performing elemental and isotopic analysis in the solid-state at the nanogram to picogram scale. SIMS offers the most favorable combination of high spatial resolution, sensitivity, and mass resolving power. This course explores the ion optics of the primary and secondary columns of SIMS instruments and explains instrumental mass fractionation and standardization methods for both positive and negative secondary ions. Ion imaging and depth profiling approaches are also covered. Practical experience using Stanford's SHRIMP-RG and NanoSIMS instruments is provided.

**GS 287. Fundamentals of Mass Spectrometry. 3 Units.**

This course explains ion creation, mass separation, and ion detection in mass spectrometry methods commonly used in the Earth Sciences. Gas source (C-O-H-S stable isotope,  $^{40}\text{Ar}/^{39}\text{Ar}$ , and (U-Th)-He), secondary ionization (SIMS), laser ablation and solution-based mass inductively coupled (ICP-MS) and thermal ionization (TIMS) mass spectrometry techniques are also explored. Additional topics include ion optics, vacuum generation, and pressure measurement, instrument calibration, data reduction, and error propagation methods.

**GS 290. Departmental Seminar in Geological Sciences. 1 Unit.**

Current research topics. Presentations by guest speakers from Stanford and elsewhere. May be repeated for credit.

**GS 291. GS Field Trips. 1 Unit.**

Field trips for teaching and research purposes. Trips average 5-10 days. Prerequisite: consent of instructor.

**GS 292. Directed Reading with Geological Sciences Faculty. 1-10 Unit.**

May be repeated for credit.

**GS 299. Field Research. 2-4 Units.**

Two-three week field research projects. Written report required. May be repeated three times.

**GS 311. Interpretation of Tectonically Active Landscapes. 3 Units.**

Focuses on interpreting various topographic attributes in terms of horizontal and vertical tectonic motions. Topics include identification, mapping, and dating of geomorphic markers, deducing tectonic motions from spatial changes in landscape steepness, understanding processes that give rise to different landscape elements, interrogating the role of climate and lithology in producing these landscape elements, and understanding relationships between tectonic motions, surface topography, and the spatial distribution of erosion. Consists of two one hour lectures per week and one laboratory section that help students gain proficiency in Quaternary mapping and interpretation of topographic metrics.

**GS 312. Analysis of Landforms. 3 Units.**

Quantitative methods to analyze digital topography and to interpret rates of tectonic and geomorphic processes from topographic metrics. Topics include analysis of digital topography using local and neighborhood-based methods, spectral methods, and wavelet methods. Course consists of two one hour lectures per week and one laboratory section that will help students gain proficiency in calculating topographic metrics using ArcGIS and Matlab.

**GS 313. Modeling of Landforms. 3 Units.**

Geomorphic-transport-rule-based, as well as mass- and momentum-conservation based models to understand the evolution of Earth's topography. Topics include formulation of land-sculpting processes as geomorphic transport rules, coupling this mass-conservation approach with mechanical models of crustal deformation, and analysis of landscape forms in terms of events for which mass and momentum of fluid and sediment can be conserved. Both analytical, as well as numerical (finite-volume) treatments of particular problems in tectonic geomorphology will be covered. The specific problems addressed as part of the course will be tailored to those currently investigated by class participants.

**GS 315. Literature of Structural Geology. 1 Unit.**

Classic studies and current journal articles. May be repeated for credit.

**GS 325. The Evolution of Body Size. 2 Units.**

Preference to graduate students and upper-division undergraduates in GS and Biology. The influence of organism size on evolutionary and ecological patterns and processes. Focus is on integration of theoretical principles, observations of living organisms, and data from the fossil record. What are the physiological and ecological correlates of body size? Is there an optimum size? Do organisms tend to evolve to larger size? Does productivity control the size distribution of consumers? Does size affect the likelihood of extinction or speciation? How does size scale from the genome to the phenotype? How is metabolic rate involved in evolution of body size? What is the influence of geographic area on maximum body size? Same as: BIO 325

**GS 328. Seminar in Paleobiology. 1 Unit.**

For graduate students. Current research topics including paleobotany, vertebrate and invertebrate evolution, paleoecology, and major events in the history of life on Earth.

**GS 336. Stanford Alpine Project Seminar. 1 Unit.**

Weekly student presentations on continental collision tectonics, sedimentology, petrology, geomorphology, climate, culture, and other topics of interest. Students create a guidebook of geologic stops in advance of field trip. May be repeated for credit.

**GS 373. METAMORPHIC PETROLOGY. 3 Units.**

Metamorphic petrology is concerned with the range of solid-state recrystallization and chemical mass transfer processes under physical conditions ranging from those prevalent at the Earth's surface to crustal melting. This course explores the phenomenology of these processes from mineralogic, textural, structural, geochemical, and geodynamic perspectives. The focus is on subduction, arc magmatic, rift magmatic and regional tectonic (collisional and extensional) settings. Important concepts and methods in phase equilibria, thermobarometry, geo/thermochronology, and fabric analysis are explored.

**GS 373L. Metamorphic Petrology Laboratory. 1 Unit.**

Teaches petrographic methods for characterizing recrystallization of common clastic and chemically precipitated sedimentary, mafic and felsic igneous, and ultramafic mantle rocks. Features suites from contact and regional metamorphic settings including arc magmatic, subduction, convergent, and extensional metamorphic settings.

**GS 381. Igneous Petrology and Petrogenesis Seminar. 1-2 Unit.**

Topics vary by quarter. May be repeated for credit.

**GS 385. Practical Experience in the Geosciences. 1 Unit.**

On-the-job training in the geosciences. May include summer internship; emphasizes training in applied aspects of the geosciences, and technical, organizational, and communication dimensions. Meets USCIS requirements for F-1 curricular practical training.n (Staff).

**GS 399. Advanced Projects. 1-10 Unit.**

Graduate research projects that lead to reports, papers, or other products during the quarter taken. On registration, students designate faculty member and agreed-upon units.

**GS 400. Graduate Research. 1-15 Unit.**

Faculty supervision. On registration, students designate faculty member and agreed-upon units.

**GS 801. TGR Project. 0 Units.**

.

**GS 802. TGR Dissertation. 0 Units.**

.

**Geophysics Courses****GEOPHYS 20N. Predicting Volcanic Eruptions. 3 Units.**

Preference to sophomores. The physics and chemistry of volcanic processes and modern methods of volcano monitoring. Volcanoes as manifestations of the Earth's internal energy and hazards to society. How earth scientists better forecast eruptive activity by monitoring seismic activity, bulging of the ground surface, and the discharge of volcanic gases, and by studying deposits from past eruptions. Focus is on the interface between scientists and policy makers and the challenges of decision making with incomplete information. Field trip to Mt. St. Helens, site of the 1980 eruption.

**GEOPHYS 50N. Planetary Habitability, World View, and Sustainability. 3 Units.**

Sustainability lessons from the geological past Life on Earth has partially perished in sudden mass extinctions several time over the Earth's history. Threats include actions of our own volition, including fossil fuel burning as well as natural events, including the impact of large asteroids. The end Permian 250 million years ago and end Paleocene 55 million years ago extinctions involved natural burning of fossil fuels. The 65 million year ago end Cretaceous extinction involved the impact of and asteroid and possibly fossil fuel burning. Related sustainability topics in the popular press will be discussed as they arise. Student pairs lead discussions on topics on how humanity might avert these catastrophes. Offered occasionally.

**GEOPHYS 60N. Man versus Nature: Coping with Disasters Using Space Technology. 4 Units.**

Preference to freshman. Natural hazards, earthquakes, volcanoes, floods, hurricanes, and fires, and how they affect people and society; great disasters such as asteroid impacts that periodically obliterate many species of life. Scientific issues, political and social consequences, costs of disaster mitigation, and how scientific knowledge affects policy. How spaceborne imaging technology makes it possible to respond quickly and mitigate consequences; how it is applied to natural disasters; and remote sensing data manipulation and analysis. GER:DB-EngrAppSci.

Same as: EE 60N

**GEOPHYS 70. The Water Course. 3 Units.**

The pathway that water takes from rainfall to the tap using student home towns as an example. How the geological environment controls the quantity and quality of water; taste tests of water from around the world. Current U.S. and world water supply issues.

Same as: EARTHSYS 104

**GEOPHYS 80. The Energy-Water Nexus. 3 Units.**

Energy, water, and food are our most vital resources constituting a tightly intertwined network: energy production requires water, transporting and treating water needs energy, producing food requires both energy and water. The course is an introduction to learn specifically about the links between energy and water. Students will look first at the use of water for energy production, then at the role of energy in water projects, and finally at the challenge in figuring out how to keep this relationship as sustainable as possible. Students will explore case examples and are encouraged to contribute examples of concerns for discussion as well as suggest a portfolio of sustainable energy options.

Same as: EARTHSYS 140

**GEOPHYS 90. Earthquakes and Volcanoes. 3 Units.**

Is the "Big One" overdue in California? What kind of damage would that cause? What can we do to reduce the impact of such hazards in urban environments? Does "fracking" cause earthquakes and are we at risk? Is the United States vulnerable to a giant tsunami? The geologic record contains evidence of volcanic super eruptions throughout Earth's history. What causes these gigantic explosive eruptions, and can they be predicted in the future? This course will address these and related issues. For non-majors and potential Earth scientists. No prerequisites. More information at [https://pangea.stanford.edu/research/CDFM/CourseDescriptions/GP\\_113\\_announcement.pdf](https://pangea.stanford.edu/research/CDFM/CourseDescriptions/GP_113_announcement.pdf).

Same as: EARTHSYS 113

**GEOPHYS 100. Directed Reading. 1-2 Unit.**

(Staff).

**GEOPHYS 110. Earth on the Edge: Introduction to Geophysics. 3 Units.**

Introduction to the foundations of contemporary geophysics. Topics drawn from four broad themes in: whole Earth geodynamics, geohazards, natural resources, and environment/sustainability. In each case the focus is on how the interpretation of a variety of geophysical measurements (e.g., gravity, seismology, heat flow, magnetism, electromagnetics, and geodesy) can be used to provide fundamental insight into the behavior of the Earth's complex geosystems. Prerequisite: CME 100 or MA TH 51, or co-registration in either.

**GEOPHYS 112. Exploring Geosciences with MATLAB. 1-3 Unit.**

How to use MATLAB as a tool for research and technical computing, including 2-D and 3-D visualization features, numerical capabilities, and toolboxes. Practical skills in areas such as data analysis, regressions, optimization, spectral analysis, differential equations, image analysis, computational statistics, and Monte Carlo simulations. Emphasis is on scientific and engineering applications. Offered every year, autumn quarter.

**GEOPHYS 118. D<sup>+</sup>3: Disasters, Decisions, Developmen. 3-5 Units.**

This class connects the science behind natural disasters with the real-world constraints of disaster management and development. In each iteration of this class we will focus on a specific, disaster-prone location as case study. By collaborating with local stakeholders we will explore how science and engineering can make a make a difference in reducing disaster risk in the future. Offered every other year.

Same as: EARTHSYS 124, ESS 118, ESS 218, GEOPHYS 218, GS 118, GS 218

**GEOPHYS 120. Ice, Water, Fire. 3-5 Units.**

Introductory application of continuum mechanics to ice sheets and glaciers, water waves and tsunamis, and volcanoes. Emphasis on physical processes and mathematical description using balance of mass and momentum, combined with constitutive equations for fluids and solids. Designed for undergraduates with no prior geophysics background; also appropriate for beginning graduate students.

Prerequisites: CME 100 or MATH 52 and PHYSICS 41 (or equivalent). Offered every year. Spring 2015-2016 and Winter 2016-2017.

Same as: GEOPHYS 220

**GEOPHYS 130. Introductory Seismology. 3 Units.**

Introduction to seismology including: elasticity and the wave equation, P, S, and surface waves, dispersion, ray theory, reflection and transmission of seismic waves, seismic imaging, large-scale Earth structure, earthquake location, earthquake statistics and forecasting, magnitude scales, seismic source theory.

**GEOPHYS 141. Remote Sensing of the Oceans. 3-4 Units.**

How to observe and interpret physical and biological changes in the oceans using satellite technologies. Topics: principles of satellite remote sensing, classes of satellite remote sensors, converting radiometric data into biological and physical quantities, sensor calibration and validation, interpreting large-scale oceanographic features.

Same as: EARTHSYS 141, EARTHSYS 241, ESS 141, ESS 241

**GEOPHYS 146A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: EARTHSYS 146A, EARTHSYS 246A, ESS 146A, ESS 246A, GEOPHYS 246A

**GEOPHYS 146B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A or EESS 246A, or CEE 164 or CEE 262D, or consent of instructor.

Same as: EARTHSYS 146B, EARTHSYS 246B, ESS 146B, ESS 246B, GEOPHYS 246B

**GEOPHYS 150. Geodynamics: Our Dynamic Earth. 3 Units.**

In this course we cover the dynamic forces acting upon the Earth. We will investigate how geophysical forces effect the bending of tectonic plates, the flow of heat, sea level topography, the breaking point of rocks, porous flow, and how faults store and release energy. Math 52 or CME 102. Offered every year, Spring quarter. Next Offered Spring 2016-2017.

**GEOPHYS 160. D<sup>+</sup>3: Disasters, Decisions, Development. 3-5 Units.**

This class connects the science behind natural disasters with the real-world constraints of disaster management and development. In each iteration of this class we will focus on a specific, disaster-prone location as case study. By collaborating with local stakeholders we will explore how science and engineering can make a make a difference in reducing disaster risk in the future. Offered every other year.

**GEOPHYS 162. Laboratory Methods in Geophysics. 3-4 Units.**

Lab. Types of equipment used in experimental rock physics. Principles and measurements of geophysical properties such as porosity, permeability, acoustic wave velocity, and resistivity through lectures and laboratory experiments. Training in analytical project writing skills and understanding errors for assessing accuracy and variability of measured data. Students may investigate a scientific problem to support their own research. Prerequisites: Physics 45 (Light and Heat); and CME 100 (Vector Calculus).

Same as: GEOPHYS 259

**GEOPHYS 170. Global Tectonics. 3 Units.**

The architecture of the Earth's crust; regional assembling of structural or deformational features and their relationship, origin and evolution. The plate-tectonic cycle: rifting, passive margins, sea-floor spreading, subduction zones, and collisions. Case studies.

**GEOPHYS 171. Tectonics Field Trip. 1-3 Unit.**

Long weekend field trip to examine large-scale features in the crust. Destinations may include the San Andreas fault, Mendocino Triple Junction, Sierra Nevada, and western Basin and Range province.

**GEOPHYS 181. Fluids and Flow in the Earth: Computational Methods. 3 Units.**

Interdisciplinary problems involving the state and movement of fluids in crustal systems, and computational methods to model these processes. Examples of processes include: nonlinear, time-dependent flow in porous rocks; coupling in porous rocks between fluid flow, stress, deformation, and heat and chemical transport; percolation of partial melt; diagenetic processes; pressure solution and the formation of stylolites; and transient pore pressure in fault zones. MATLAB, Lattice-Boltzmann, and COMSOL Multiphysics. Term project. No experience with COMSOL Multiphysics required. Offered every other year, winter quarter.

Same as: GEOPHYS 203

**GEOPHYS 182. Reflection Seismology. 3 Units.**

The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration.

Same as: GEOPHYS 222

**GEOPHYS 183. Reflection Seismology Interpretation. 1-4 Unit.**

The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit.

Prerequisite: 222, or consent of instructor.

Same as: GEOPHYS 223, GS 223

**GEOPHYS 184. Journey to the Center of the Earth. 3 Units.**

The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter. Next offering Winter 2013-14.

Same as: GEOPHYS 274, GS 107, GS 207

**GEOPHYS 185. Rock Physics for Reservoir Characterization. 3 Units.**

How to integrate well log and laboratory data to determine and theoretically generalize rock physics transforms between sediment wave properties (acoustic and elastic impedance), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios. Offered every other year, spring quarter.

Same as: GEOPHYS 260

**GEOPHYS 186. Tectonophysics. 3 Units.**

The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere. Exercises: lithospheric temperature and strength profiles, calculation of seismic strain from summation of earthquake moment tensors, slip on faults in 3D, and stress triggering and inversion of stress from earthquake focal mechanisms. Offered every other year, winter quarter.

Same as: GEOPHYS 290

**GEOPHYS 190. Near-Surface Geophysics. 3 Units.**

Introduction to the integration of geophysical field measurements and laboratory measurements for imaging and characterizing the top 100 meters of Earth. Examples will focus on applications related to water resource management. The link between the measured geophysical properties of rocks, soils, and sediments, and their material properties. Forward modeling and inversion of geophysical data sets. Each week includes two hours of lectures; plus one two-hour lab that involves acquisition of field or lab data, or computer modeling/analysis of data. Pre-requisite: CME 100 or Math 51, or co-registration in either.

**GEOPHYS 191. Observing Freshwater. 3 Units.**

We will study estimates of the components of the land hydrological cycle using in-situ and satellite observations and model output. Hydrological variables are rainfall, snow, water vapor, soil moisture, stream discharge and groundwater; other variables are vegetation, surface temperature, soil types, land use and surface topography. We focus on observations and their role in the water balance of the land surface. In-class lab experience working with data. Group/individual term project & paper & presentation; no final. Pre-requisite: basic familiarity with MATLAB.

**GEOPHYS 192. Water governance: interdisciplinary perspectives on critical 21st century challenges. 1 Unit.**

Water is subject to competing uses and interpretations. A critical socioeconomic input and ecosystem service, water is simultaneously imbued with aesthetic, cultural, and spiritual significance. This seminar is predicated on a shared interest in exploring interdisciplinary perspectives on freshwater challenges. The course will draw upon contemporary scholarship in the natural sciences, social sciences, and humanities. We will engage in critical analyses of water challenges (e.g. the water-food-energy nexus, water-related implications of climate change, human access to safe drinking water) and responses (e.g. multi-scalar water governance, integrated water resources management). Case studies from around the world will be used. Students from any discipline are welcome.

**GEOPHYS 196. Undergraduate Research in Geophysics. 1-10 Unit.**

Field-, lab-, or computer-based. Faculty supervision. Written reports.

**GEOPHYS 197. Senior Thesis in Geophysics. 3-5 Units.**

For seniors writing a thesis based on Geophysics research in 196 or as a summer research fellow. Seniors defend the results of their research at a public oral presentation.

**GEOPHYS 198. Honors Program. 1-3 Unit.**

Experimental, observational, or theoretical honors project and thesis in geophysics under supervision of a faculty member. Students who elect to do an honors thesis should begin planning it no later than Winter Quarter of the junior year. Prerequisites: department approval. Seniors defend the results of their research at a public oral presentation.

**GEOPHYS 199. Senior Seminar: Issues in Earth Sciences. 3 Units.**

Focus is on written and oral communication in a topical context. Topics from current frontiers in earth science research and issues of concern to the public. Readings, oral presentations, written work, and peer review.

**GEOPHYS 201. Frontiers of Geophysical Research at Stanford: Faculty Lectures. 1 Unit.**

Required for new students entering the department. Second-year and other graduate students may attend either for credit or as auditors. Department faculty and senior research staff introduce the frontiers of research problems and methods being employed or developed in the department and unique to department faculty and students: what the current research is, why the research is important, what methodologies and technologies are being used, and what the potential impact of the results might be. Offered every year, autumn quarter.

**GEOPHYS 202. Reservoir Geomechanics. 3 Units.**

Basic principles of rock mechanics and the state of stress and pore pressure in sedimentary basins related to exploitation of hydrocarbon and geothermal reservoirs. Mechanisms of hydrocarbon migration, exploitation of fractured reservoirs, reservoir compaction and subsidence, hydraulic fracturing, utilization of directional and horizontal drilling to optimize well stability. Course will have an online component in 2014-2015. Given alternate years.

**GEOPHYS 203. Fluids and Flow in the Earth: Computational Methods. 3 Units.**

Interdisciplinary problems involving the state and movement of fluids in crustal systems, and computational methods to model these processes. Examples of processes include: nonlinear, time-dependent flow in porous rocks; coupling in porous rocks between fluid flow, stress, deformation, and heat and chemical transport; percolation of partial melt; diagenetic processes; pressure solution and the formation of stylolites; and transient pore pressure in fault zones. MATLAB, Lattice-Boltzmann, and COMSOL Multiphysics. Term project. No experience with COMSOL Multiphysics required. Offered every other year, winter quarter.

Same as: GEOPHYS 181

**GEOPHYS 204. Spectral Finite Element Method (SPECFEM) Seismograms. 3 Units.**

This is a short course intended for graduate students, but senior level undergraduate students are welcome. The course will cover spectral finite element methods for generating synthetic seismograms. The course will emphasize application over theory, such that students will be able to generate synthetic seismograms by the end of the course. We will employ the SPECFEM code suite on the Center for Computational Earth and Environmental Science (CEES) cluster to generate synthetic seismograms. Bring your laptop to class! Pre-requisite: A working knowledge of differential equations, matrix algebra, unix/linux, and earthquake seismology.

**GEOPHYS 205. Effective Scientific Presentation and Public Speaking. 2 Units.**

The ability to present your work in a compelling, concise, and engaging manner will enhance your professional career. This course breaks down presentations into their key elements: the opening, body of the talk, closing, slide and poster graphics, Q&A, pacing, pauses, and voice modulation. We use clips from archived talks, slide sets and posters to illustrate the good, the bad, and the ugly. Each participant will use their upcoming conference talk or poster (e.g., AGU, SEG), or upcoming job talk or funding pitch, as their class project. The course will be 40% group meetings and 60% individual coaching. Everyone will come away a more skilled and confident speaker than they were before. Instructor: Ross S. Stein (USGS) The course syllabus is the third publication in <http://profile.usgs.gov/rstein>.

**GEOPHYS 206. FLUID DYNAMICS OF THE SOLID EA. 3 Units.**

Introduction to fluid dynamical processes in the interior and on the surface of the Earth. The main focus of this course are viscous flow systems with different rheologies. Topics include solid-mantle convection, lava flows, creep in ice sheets, flow instabilities in solid-fluid mixtures and basic principles of fluid percolation through porous media.

**GEOPHYS 208. Unconventional Reservoir Geomechanics. 3 Units.**

This course will investigate oil and gas production from extremely low permeability reservoirs. Lectures and exercises will address 1) the physical and fluid transport properties of unconventional reservoir formations, 2) stimulation techniques such as hydraulic fracturing and 3) understanding microseismicity associated with hydraulic stimulation and induced seismicity associated with wastewater injection. Prerequisite: GEOPHYS 202 or concurrent enrollment in GEOPHYS 202.

**GEOPHYS 210. Basic Earth Imaging. 2-3 Units.**

Echo seismogram recording geometry, head waves, moveout, velocity estimation, making images of complex shaped reflectors, migration by Fourier and integral methods. Anti-aliasing. Dip moveout. Computer labs. See <http://sep.stanford.edu/sep/prof/>. Offered every year, autumn quarter.

**GEOPHYS 211. Environmental Soundings Image Estimation. 3 Units.**

Imaging principles exemplified by means of imaging geophysical data of various uncomplicated types (bathymetry, altimetry, velocity, reflectivity). Adjoint, back projection, conjugate-gradient inversion, preconditioning, multidimensional autoregression and spectral factorization, the helical coordinate, and object-based programming. Common recurring issues such as limited aperture, missing data, signal/noise segregation, and nonstationary spectra. See <http://sep.stanford.edu/sep/prof/>.

**GEOPHYS 212. Topics in Climate Change. 2 Units.**

This introductory classroom course presents Earth's climate system and explores the science and politics of global climate change. Students will learn how the climate system works, the factors that cause climate to change across different time scales, the use of models and observations to make predictions about future climate. The course will discuss possible consequences of climate change in the Earth, and it will explore the evidence for changes due to global warming. There are no prerequisites.

**GEOPHYS 217. Numerical Methods in Engineering and Applied Sciences. 3 Units.**

Scientific computing and numerical analysis for physical sciences and engineering. Advanced version of CME206 that, apart from CME206 material, includes nonlinear PDEs, multidimensional interpolation and integration and an extended discussion of stability for initial boundary value problems. Recommended for students who have some prior numerical analysis experience. Topics include: 1D and multi-D interpolation, numerical integration in 1D and multi-D including adaptive quadrature, numerical solutions of ordinary differential equations (ODEs) including stability, numerical solutions of 1D and multi-D linear and nonlinear partial differential equations (PDEs) including concepts of stability and accuracy. Prerequisites: linear algebra, introductory numerical analysis (CME 108 or equivalent). Same as: AA 214A, CME 207

**GEOPHYS 218. D<sup>3</sup>: Disasters, Decisions, Developmen. 3-5 Units.**

This class connects the science behind natural disasters with the real-world constraints of disaster management and development. In each iteration of this class we will focus on a specific, disaster-prone location as case study. By collaborating with local stakeholders we will explore how science and engineering can make a difference in reducing disaster risk in the future. Offered every other year.

Same as: EARTHSYS 124, ESS 118, ESS 218, GEOPHYS 118, GS 118, GS 218

**GEOPHYS 220. Ice, Water, Fire. 3-5 Units.**

Introductory application of continuum mechanics to ice sheets and glaciers, water waves and tsunamis, and volcanoes. Emphasis on physical processes and mathematical description using balance of mass and momentum, combined with constitutive equations for fluids and solids. Designed for undergraduates with no prior geophysics background; also appropriate for beginning graduate students.

Prerequisites: CME 100 or MATH 52 and PHYSICS 41 (or equivalent).

Offered every year. Spring 2015-2016 and Winter 2016-2017.

Same as: GEOPHYS 120

**GEOPHYS 222. Reflection Seismology. 3 Units.**

The principles of seismic reflection profiling, focusing on methods of seismic data acquisition and seismic data processing for hydrocarbon exploration.

Same as: GEOPHYS 182

**GEOPHYS 223. Reflection Seismology Interpretation. 1-4 Unit.**

The structural and stratigraphic interpretation of seismic reflection data, emphasizing hydrocarbon traps in two and three dimensions on industry data, including workstation-based interpretation. Lectures only, 1 unit.

Prerequisite: 222, or consent of instructor.

Same as: GEOPHYS 183, GS 223

**GEOPHYS 224. Seismic Reflection Processing. 2-3 Units.**

Workshop in computer processing of 2D and 3D seismic reflection data. Students individually process a seismic reflection profile (of their own choice or instructor-provided) from field recordings to migrated sections and subsurface images, using interactive software (OpenCPS from OpenGeophysical.com). Prerequisite: GEOPHYS 222 or consent of instructor.

**GEOPHYS 229. Earthquake Rupture Dynamics. 3 Units.**

Physics of earthquakes, including nucleation, propagation, and arrest; slip-weakening and rate-and-state friction laws; thermal pressurization and dynamic weakening mechanisms; off-fault plasticity; dynamic fracture mechanics; earthquake energy balance. Problem sets involve numerical simulations on CEES cluster. Prerequisites: GEOPHYS 287. Offered occasionally.

**GEOPHYS 235. WAVES AND FIELDS IN GEOPHYSICS. 3 Units.**

Basic topics and approaches (theory and numerical simulations) on acoustic, electromagnetic, and elastic waves and fields for geophysical applications: dispersion, phase and group velocities, attenuation, reflection and transmission at planar interfaces, high frequency and low frequency approximations, heterogeneous media. Prerequisites: UG level class on waves or consent of instructor.

**GEOPHYS 240. Borehole Seismic Modeling and Imaging. 3 Units.**

Borehole seismic imaging for applications to subsurface reservoir characterization and monitoring. Topics include data acquisition, data processing, imaging and inversion. Analysis and processing of synthetic and field datasets. Prerequisites: Waves class equivalent to GP 230, Matlab or other computer programming.

**GEOPHYS 241A. Seismic Reservoir Characterization. 3-4 Units.**

(Same as GP241) Practical methods for quantitative characterization and uncertainty assessment of subsurface reservoir models integrating well-log and seismic data. Multidisciplinary combination of rock-physics, seismic attributes, sedimentological information and spatial statistical modeling techniques. Student teams build reservoir models using limited well data and seismic attributes typically available in practice, comparing alternative approaches. Software provided (SGEMS, Petrel, Matlab). Recommended: ERE240/260, or GP222/223, or GP260/262 or GES253/257; ERE246, GP112.

Same as: ENERGY 141, ENERGY 241

**GEOPHYS 246A. Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the atmospheric circulation. Topics include the global energy balance, the greenhouse effect, the vertical and meridional structure of the atmosphere, dry and moist convection, the equations of motion for the atmosphere and ocean, including the effects of rotation, and the poleward transport of heat by the large-scale atmospheric circulation and storm systems. Prerequisites: MATH 51 or CME100 and PHYSICS 41.

Same as: EARTHSYS 146A, EARTHSYS 246A, ESS 146A, ESS 246A, GEOPHYS 146A

**GEOPHYS 246B. Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation. 3 Units.**

Introduction to the physics governing the circulation of the atmosphere and ocean and their control on climate with emphasis on the large-scale ocean circulation. This course will give an overview of the structure and dynamics of the major ocean current systems that contribute to the meridional overturning circulation, the transport of heat, salt, and biogeochemical tracers, and the regulation of climate. Topics include the tropical ocean circulation, the wind-driven gyres and western boundary currents, the thermohaline circulation, the Antarctic Circumpolar Current, water mass formation, atmosphere-ocean coupling, and climate variability. Prerequisites: EESS 146A or EESS 246A, or CEE 164 or CEE 262D, or consent of instructor.

Same as: EARTHSYS 146B, EARTHSYS 246B, ESS 146B, ESS 246B, GEOPHYS 146B

**GEOPHYS 251. Structural Geology and Rock Mechanics. 4 Units.**

Quantitative field and laboratory data integrated with solutions to boundary value problems of continuum mechanics to understand tectonic processes in Earth's crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis, conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties; brittle deformation including fracture and faulting; model development and methodology. Data sets analyzed using MATLAB. Prerequisites: GS 1, MATH 53, MATLAB or equivalent.

Same as: CEE 297R, GS 215

**GEOPHYS 255. Report on Energy Industry Training. 1-3 Unit.**

On-the-job-training for master's and doctoral degree students under the guidance of on-site supervisors. Students submit a report detailing work activities, problems, assignment, and key results. May be repeated for credit. Prerequisite: written consent of adviser.

**GEOPHYS 257. Introduction to Computational Earth Sciences. 2-4 Units.**

Techniques for mapping numerically intensive algorithms to modern high performance computers such as the Center for Computational Earth and Environmental Science's (CEES). Topics include computer architecture performance analysis, and parallel programming. Topics covered include pthreads OpenMP; MPI, Cilk++, and CUDA.. Exercises using SMP and cluster computers. May be repeated for credit. Offered every other year, winter quarter.

**GEOPHYS 258. Applied Optimization Laboratory (Geophys 258). 3-4 Units.**

Application of optimization and estimation methods to the analysis and modeling of large observational data sets. Laboratory exercises using inverse theory and applied linear algebra to solve problems of indirect and noisy measurements. Emphasis on practical solution of scientific and engineering problems, especially those requiring large amounts of data, on digital computers using scientific languages. Also addresses advantages of large-scale computing, including hardware architectures, input/output and data bus bandwidth, programming efficiency, parallel programming techniques. Student projects involve analyzing real data by implementing observational systems such as tomography for medical and Earth observation uses, radar and matched filtering, multispectral/multitemporal studies, or migration processing. Prerequisites: Programming with high level language. Recommended: EE261, EE263, EE178, ME300 or equivalent.

Same as: EE 257

**GEOPHYS 259. Laboratory Methods in Geophysics. 3-4 Units.**

Lab. Types of equipment used in experimental rock physics. Principles and measurements of geophysical properties such as porosity, permeability, acoustic wave velocity, and resistivity through lectures and laboratory experiments. Training in analytical project writing skills and understanding errors for assessing accuracy and variability of measured data. Students may investigate a scientific problem to support their own research. Prerequisites: Physics 45 (Light and Heat); and CME 100 (Vector Calculus).

Same as: GEOPHYS 162

**GEOPHYS 260. Rock Physics for Reservoir Characterization. 3 Units.**

How to integrate well log and laboratory data to determine and theoretically generalize rock physics transforms between sediment wave properties (acoustic and elastic impedance), bulk properties (porosity, lithology, texture, permeability), and pore fluid conditions (pore fluid and pore pressure). These transforms are used in seismic interpretation for reservoir properties, and seismic forward modeling in what-if scenarios. Offered every other year, spring quarter.

Same as: GEOPHYS 185

**GEOPHYS 262. Rock Physics. 3 Units.**

Properties of and processes in rocks as related to geophysical exploration, crustal studies, and tectonic processes. Emphasis is on wave velocities and attenuation, hydraulic permeability, and electrical resistivity in rocks. Application to in situ problems, using lab data and theoretical results. Offered every year, autumn quarter.

**GEOPHYS 265. Imaging Radar and Applications. 3 Units.**

Radar remote sensing, radar image characteristics, viewing geometry, range coding, synthetic aperture processing, correlation, range migration, range/Doppler algorithms, wave domain algorithms, polar algorithm, polarimetric processing, interferometric measurements. Applications: surface deformation, polarimetry and target discrimination, topographic mapping surface displacements, velocities of ice fields. Prerequisites: EE261. Recommended: EE254, EE278, EE279.

Same as: EE 355

**GEOPHYS 270. Electromagnetic Properties of Geological Materials. 2-3 Units.**

Laboratory observations and theoretical modeling of the electromagnetic properties and nuclear magnetic resonance response of geological material. Relationships between these properties and water-saturated materials properties such as composition, water content, surface area, and permeability.

**GEOPHYS 274. Journey to the Center of the Earth. 3 Units.**

The interconnected set of dynamic systems that make up the Earth. Focus is on fundamental geophysical observations of the Earth and the laboratory experiments to understand and interpret them. What earthquakes, volcanoes, gravity, magnetic fields, and rocks reveal about the Earth's formation and evolution. Offered every other year, winter quarter. Next offering Winter 2013-14.

Same as: GEOPHYS 184, GS 107, GS 207

**GEOPHYS 280. 3-D Seismic Imaging. 2-3 Units.**

The principles of imaging complex structures in the Earth subsurface using 3-D reflection seismology. Emphasis is on processing methodologies and algorithms, with examples of applications to field data. Topics: acquisition geometrics of land and marine 3-D seismic surveys, time vs. depth imaging, migration by Kirchhoff methods and by wave-equation methods, migration velocity analysis, velocity model building, imaging irregularly sampled and aliased data. Computational labs involve some programming. Lab for 3 units. Offered every year, Spring quarter.

**GEOPHYS 281. Geophysical Inverse Problems. 3 Units.**

Concepts of inverse theory, with application to geophysics. Inverses with discrete and continuous models, generalized matrix inverses, resolving kernels, regularization, use of prior information, singular value decomposition, nonlinear inverse problems, back-projection techniques, and linear programming. Application to seismic tomography, earthquake location, migration, and fault-slip estimation. Prerequisite: MATH 51.

**GEOPHYS 284. Hydrogeophysics. 3 Units.**

The use of geophysical methods for imaging and characterizing the top 100 meters of Earth for hydrogeologic applications. Includes material properties, forward modeling, data acquisition, inversion, and integration with other forms of measurement. Each week includes three hours of lectures; plus one three-hour lab that involves acquisition of data at campus or nearby sites, or computer modeling of data. Offered occasionally.

**GEOPHYS 286. Global Seismology. 3 Units.**

This course investigates how waves propagate through the whole Earth. This course examines the questions "How do body waves and surface waves behave within the Earth?" and "What does that tell us about the Earth?" The course delves into both theory and how we apply that theory to understand seismic observations. Requirements: Math 52 or CME 102, GP130 or permission from instructor.

**GEOPHYS 287. Earthquake Seismology. 3-5 Units.**

Seismic wave propagation (body waves and surface waves, reflection/transmission), Green's functions, seismic moment tensors and equivalent forces, representation theorem, finite-source effects. Prerequisites: GEOPHYS 130 or equivalent. Offered every other year, next in Winter 2017.

**GEOPHYS 288A. Crustal Deformation. 3-5 Units.**

Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Deformation, stress, and conservation laws. Dislocation models of strike slip and dip slip faults, in 2 and 3 dimensions. Crack models, including boundary element methods. Dislocations in layered and elastically heterogeneous earth models. Models of volcano deformation, including sills, dikes, and magma chambers. Offered every other year, autumn quarter.

**GEOPHYS 288B. Crustal Deformation. 3-5 Units.**

Earthquake and volcanic deformation, emphasizing analytical models that can be compared to data from GPS, InSAR, and strain meters. Viscoelasticity, post-seismic rebound, and viscoelastic magma chambers. Effects of surface topography and earth curvature on surface deformation. Gravity changes induced by deformation and elastogravitational coupling. Poro-elasticity, coupled fluid flow and deformation. Earthquake nucleation and rate-state friction. Models of earthquake cycle at plate boundaries.

**GEOPHYS 289. Global Positioning System in Earth Sciences. 3-5 Units.**

The basics of GPS, emphasizing monitoring crustal deformation with a precision of millimeters over baselines tens to thousands of kilometers long. Applications: mapping with GIS systems, airborne gravity and magnetic surveys, marine seismic and geophysical studies, mapping atmospheric temperature and water content, measuring contemporary plate motions, and deformation associated with active faulting and volcanism.

**GEOPHYS 290. Tectonophysics. 3 Units.**

The physics of faulting and plate tectonics. Topics: plate driving forces, lithospheric rheology, crustal faulting, and the state of stress in the lithosphere. Exercises: lithospheric temperature and strength profiles, calculation of seismic strain from summation of earthquake moment tensors, slip on faults in 3D, and stress triggering and inversion of stress from earthquake focal mechanisms. Offered every other year, winter quarter.

Same as: GEOPHYS 186

**GEOPHYS 292. Magnetotellurics: Introduction, practical data analysis and inversion. 3 Units.**

Geophysics 292 approved, also can meet PhD requirement for 4 200-level classes  
GEOPHYS 292 Magnetotellurics: introduction, practical data analysis and inversion. Designed for those with no knowledge of magnetotellurics or electromagnetic induction methods, this class will cover the theory and practice of the MT method with application to both commercial (mineral, oil/gas, and geothermal exploration) and academic (crustal and lithospheric studies). The second half of the class is a hands-on analysis and modelling workshop that will require use of a laptop and instructor-provided codes and data. The analysis will be using various methods to determine dimensionality and directionality, and testing the apparent resistivities and phases for internal consistency. The modelling will be 1D only, but knowledge and skills gained from understanding 1D inversion are equally applicable to 2D and 3D. nTextbook is *The Magnetotelluric Method: Theory and Practice* (Chave and Jones, CUP, 2012).

**GEOPHYS 385A. Reflection Seismology. 1-2 Unit.**

Research in reflection seismology and petroleum prospecting. May be repeated for credit.

**GEOPHYS 385B. Environmental Geophysics. 1-2 Unit.**

Research on the use of geophysical methods for near-surface environmental problems. May be repeated for credit.

**GEOPHYS 385D. Theoretical Geophysics. 1 Unit.**

Research on physics and mechanics of earthquakes, volcanoes, ice sheets, and glaciers. Emphasis is on developing theoretical understanding of processes governing natural phenomena.

**GEOPHYS 385E. Tectonics. 1-2 Unit.**

Research on the origin, major structures, and tectonic processes of the Earth's crust. Emphasis is on use of deep seismic reflection and refraction data. May be repeated for credit.

**GEOPHYS 385J. Global Seismic Techniques, Theory, and Application. 1-2 Unit.**

Topics chosen from surface wave dispersion measurement, 1D inversion techniques, regional tomographic inversion, receiver functions, ray theory in spherical geometry, seismic attenuation, seismic anisotropy, seismic focusing, reflected phases, stacking, and interpretations of seismic results in light of other geophysical constraints. May be repeated for credit.

**GEOPHYS 385K. Crustal Mechanics. 1-2 Unit.**

Research in areas of petrophysics, seismology, in situ stress, and subjects related to characterization of the physical properties of rock in situ. May be repeated for credit.

**GEOPHYS 385L. Earthquake Seismology, Deformation, and Stress. 1 Unit.**

Research on seismic source processes, crustal stress, and deformation associated with faulting and volcanism. May be repeated for credit.

**GEOPHYS 385N. Experimental Rock Physics. 1-2 Unit.**

Research on the use of laboratory geophysical methods for the characterization of the physical properties of rocks and their response to earth stresses, temperature, and rock-fluid interactions. May be repeated for credit.

**GEOPHYS 385S. Wave Physics. 1-2 Unit.**

Theory, numerical simulation, and experiments on seismic and electromagnetic waves in complex porous media. Applications from Earth imaging and in situ characterization of Earth properties, including subsurface monitoring. Presentations by faculty, research staff, students, and visitors. May be repeated for credit.

**GEOPHYS 385V. Poroelasticity. 1-2 Unit.**

Research on the mechanical properties of porous rocks: dynamic problems of seismic velocity, dispersion, and attenuation; and quasi-static problems of faulting, fluid transport, crustal deformation, and loss of porosity. Participants define, investigate, and present an original problem of their own. May be repeated for credit.

**GEOPHYS 385W. GEOPHYSICAL MULTI-PHASE FLOWS. 1-2 Unit.**

Research on the dynamics of multi-phase systems that are fundamental to many geophysical problems such as ice sheets and volcanoes.

**GEOPHYS 385Z. Radio Remote Sensing. 1-2 Unit.**

Research applications, especially crustal deformation measurements. Recent instrumentation and system advancements. May be repeated for credit.

**GEOPHYS 400. Research in Geophysics. 1-15 Unit.****GEOPHYS 801. TGR Project. 0 Units.****GEOPHYS 802. TGR Dissertation. 0 Units.****German General Courses****German Language Courses****GERLANG 1. First-Year German, First Quarter. 5 Units.**

Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken.

**GERLANG 2. First-Year German, Second Quarter. 5 Units.**

Continuation of GERLANG 1. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken. Prerequisite: Placement Test, GERLANG 1.

**GERLANG 3. First-Year German, Third Quarter. 5 Units.**

Continuation of GERLANG 2. Speaking, reading, writing, and listening. Authentic materials. Interactive approach with emphasis on developing communicative expression. The cultural context in which German is spoken. Fulfills the University language requirement. Prerequisite: Placement Test, GERLANG 2.

**GERLANG 5A. Intensive First-Year German, Part A. 5 Units.**

Same as GERLANG 1. Accelerated. Written exercises, compositions, conversation practice, and daily work. Only Stanford students restricted to 9 units may register for 205A,B,C.

**GERLANG 5B. Intensive First-Year German, Part B. 5 Units.**

Same as GERLANG 2. Continuation of 5A. Accelerated. Written exercises, compositions, conversation practice, and daily work. Only Stanford students restricted to 9 units may register for 205A,B,C. Prerequisite 1 or 5A.

**GERLANG 5C. Intensive First-Year German, Part C. 5 Units.**

Same as GERLANG 3. Continuation of 5B. Accelerated. Written exercises, compositions, conversation practice, and daily work. Only Stanford students restricted to 9 units may register for 205A,B,C. Prerequisite 2 or 5B. Fulfills the University Foreign Language Requirement.

**GERLANG 10. Elementary German for Seniors and Graduate Students. 4 Units.**

Intensive. For students who need to acquire reading ability in German for the Ph.D. or for advanced research in their own field. 250 fulfills Ph.D. reading exam.

**GERLANG 11P. Individually Programmed Beginning German. 1-5 Unit.**

For those who wish to complete fewer than 5 units a quarter, have scheduling conflicts, or prefer to work independently. Self-paced work with text and tapes; instructor available for consultation on a regular basis. 3-unit minimum for beginners. Conversational practice available for additional unit. May be repeated for credit. This course does not fulfill the University language requirement.

**GERLANG 20A. Beginning German Conversation. 1 Unit.**

This course is for students with limited conversational abilities. Appropriate for students who are taking or have taken Gerlang 1. This course does not teach German from scratch, but is intended for students to practise basic conversations. Emphasis on everyday interactions. Attendance is required to receive course credit.

**GERLANG 20B. Intermediate German Conversation. 1 Unit.**

This course for students with some conversational abilities. Appropriate for students who are taking (or have taken) Gerlang 2, 3, or 21. Emphasis on conversational German, discussion of culture, exploring German media. Attendance is required to receive course credit.

**GERLANG 20C. Advanced German Conversation. 1 Unit.**

This course for students interested practising advanced-level conversation. Most appropriate for students who are taking Gerlang 21 or higher, heritage speakers, and students looking to practice professional German. Emphasis on discussion of cultural topics including politics, exploring media and news, and student interests. Attendance is required to receive course credit.

**GERLANG 20E. Fun Facts about Europe. 1 Unit.**

(AU) (Staff).

**GERLANG 20J. Central European Brewing. 1 Unit.**

This is a general survey course of the variety of German Beers. The course will have two components: (1) We will meet every other week for a beer tasting session and discussion of the history of German brewing culture. (2) Students will brew their own batch of beer once during the quarter. Beer Tasting will take place alternate Wednesday evenings. Brewing sessions will be hosted on the weekends. All sessions take place at Haus Mitt, 620 Mayfield Ave.

**GERLANG 20K. Kuche Mitt. 1 Unit.**

Explore the German art of baking by trying out a medley of traditional recipes. We will learn how to create delicious desserts, prepare hearty snacks and bake real bread so you can delight your friends with German tastes. The class will be held in Haus Mitt and enrollment is limited to 15 students.

Same as: German Cooking Class

**GERLANG 20M. German Film and Theater. 1 Unit.**

This class aims to give an overview of some seminal works in German film and theater. We will meet once weekly in Haus Mitteleuropa starting during the second week of quarter, at a time to be determined during the first week.

**GERLANG 20P. Theme Projects. 1 Unit.**

(AU).

**GERLANG 20R. German Art and Design. 1 Unit.****GERLANG 20T. Teaching German Conversation. 1 Unit.**

(AU).

**GERLANG 21. Intermediate German I. 4 Units.**

Continuation of Gerlang 3. Sequence integrating culture and language with emphasis on development of advanced oral and written proficiency. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic and professional contexts. Prerequisite: Placement Test, Gerlang 3.

**GERLANG 21S. Intermediate German. 4 Units.**

Reading short stories, and review of German structure. Discussions in German, short compositions, videos. Prerequisite: one year of college German; or two years high school German or equivalent, or AP German.

**GERLANG 21W. Intermediate German I: German for Business and International Relations. 4 Units.**

Equivalent to 21, but focus is on business and the political and economic geography of Germany. CDs and videos. For students planning to do a business internship in a German-speaking country. Prerequisite: placement test, 3.

**GERLANG 22. Intermediate German II. 4 Units.**

Continuation of GERLANG 21. Sequence integrating culture and language with emphasis on development of advanced oral and written proficiency. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic and professional contexts. Prerequisite: Placement Test, Gerlang 21.

**GERLANG 22W. Intermediate German II: German for Business and International Relations. 4-5 Units.**

Equivalent to 22, but continuation of 21W. Recommended for students planning to do a business internship in a German-speaking country. Prerequisite: placement test, 21, 21W.

**GERLANG 23. One Hundred German Years. 4 Units.**

Hundert deutsche Jahre - Hones German language skills while introducing the history and culture of Germany as experienced by ordinary people over the course of the 20th century. Themes include Germans and money, foreigners, Hitler, the Wall, food, etc. Video series, parallel readings, discussion in German, writing, advanced usage. Prerequisite: Placement Test, GERLANG 22, GERLANG 22W.

**GERLANG 23C. Second Year German, Third Quarter. 4 Units.**

Continuation of GERLANG 22. Sequence integrating culture and language with emphasis on development of advanced oral and written proficiency. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic and professional contexts. Prerequisite: Placement Test, Gerlang 22.

**GERLANG 99. Language Specials. 1-5 Unit.**

Prerequisite: consent of instructor.

**GERLANG 105. Advanced Business German. 4 Units.**

For students planning to work in a German-speaking country and for preparation of the International Business German exams. Case studies of typical business situations with accompanying videos, listening comprehension exercises, and class simulations. Business correspondence and reports in German. Prerequisite: Placement Test, GERLANG 22.

**GERLANG 110. German Newspapers. 3-4 Units.**

For intermediate and advanced students. Articles from current newspapers and magazines, reading comprehension strategies with online news updates, and vocabulary. Writing practice if desired. May be repeated once for credit.

**GERLANG 111. Television News from Germany. 3-4 Units.**

For intermediate and advanced students. Current news reports and features for listening comprehension and vocabulary. Extra listening, speaking, or writing practice for fourth unit.

**GERLANG 199. Individual Reading. 1-5 Unit.**

Prerequisite: consent of instructor.

**GERLANG 205A. Intensive First-Year German for Stanford Grads. 3-5 Units.**

Equivalent to GERLANG 5A. For Stanford graduate students only. Stanford graduate students restricted to 9 units; may take 205A, B and C for a total of 9 units.

**GERLANG 205B. Intensive First-Year German for Stanford Grads. 3-5 Units.**

Equivalent to GERLANG 5B. For Stanford graduate students only. Continuation of 205A. Stanford graduate students restricted to 9 units; may take 205A, B and C for a total of 9 units.

**GERLANG 205C. intensive First-Year German, Part C. 3-5 Units.**

Equivalent to GERLANG 5C. For Stanford graduate students only. Continuation of 205B. Stanford graduate students restricted to 9 units may take 205A, B and C for a total of 9 units.

**GERLANG 210. Elementary German for Graduate Students. 3-4 Units.**

Restricted to Stanford graduate students. Prerequisite: consent of instructor.

**GERLANG 250. Reading German. 4 Units.**

For undergraduates and graduate students with a knowledge of German who want to acquire reading proficiency. Readings from scholarly works and professional journals. Recommended for students who need to pass the Ph.D. reading exam. Fulfills University reading requirement for advanced degrees if student earns a grade of 'B.' Prerequisite: one year of German, or 10, or equivalent.

**GERLANG 395. Graduate Studies in German. 1-5 Unit.**

Prerequisite: consent of instructor.

**GERLANG 399. Independent Study. 1-5 Unit.**

Prerequisite: consent of instructor.

## German Literature Courses

### German Literature Courses

**GERMAN 15SC. Berlin: A City and its Immigrants -- German Immersion. 2 Units.**

We designed this course for students who have some German, and who want to jump-start their language acquisition through an intense and immersive experience. If you have taken two or three quarters of German, or if you took German in high school, this course will allow you to dramatically improve your proficiency, all the while immersing you in German music, film, literature and journalism. Our main thematic focus will be the city of Berlin, and the many groups that have migrated there over the years: their experiences and artistic creations, from concertos to hip hop videos, from poems to comic books, and from classic films to viral videos will be our guides through both a fascinating city and a fascinating language. Sophomore College course: Applications required, March 1 - April 5, 2016. Apply at <http://soco.stanford.edu>.

**GERMAN 41N. Inventing Modern Theatre: Georg Büchner and Frank Wedekind. 3 Units.**

The German writers Georg Büchner (1813-1837) and Frank Wedekind (1864-1918). Many of the most important theater and film directors of the last century, including Max Reinhardt, G. W. Pabst, Orson Welles, Robert Wilson, and Werner Herzog, have wrestled with their works, as have composers and writers from Alban Berg and Bertolt Brecht through Christa Wolf and Thalia Field. Rock artists as diverse as Tom Waits, Lou Reed, Duncan Sheik, and Metallica have recently rediscovered their urgency. Reading these works in translation and examining artistic creations they inspired. Classroom discussions and written responses; students also rehearse and present in-class performances of excerpts from the plays. The aim of these performances is not to produce polished stagings but to creatively engage with the texts and their interpretive traditions. No previous theatrical experience required. Same as: TAPS 41N

**GERMAN 45. Crimes Against Humanity. 5 Units.**

What is a crime against humanity and how can it be punished? Starting with the Nuremberg Trials, this seminar will consider how the juridical category of crimes against humanity came into existence and has evolved over the past half century. Thinking through core questions posed by Hannah Arendt, we will consider how crimes against humanity are to be understood in the context of modern jurisprudence, who perpetrates such crimes, and what relationship exists between crimes against humanity and modernity. Priority given to history majors and minors.

Same as: HISTORY 4S

**GERMAN 80N. Modern Conservatives. 3 Units.**

How do conservatives respond to the modern world? How do they find a balance between tradition and freedom, or between stability and change? This seminar will examine selections from some conservative and some classically liberal writers that address these questions. At the center of the course are thinkers who left Germany and Austria before the Second World War: Friedrich Hayek, Leo Strauss and Hannah Arendt. We will also look at earlier European writers, such as Edmund Burke and Friedrich Nietzsche, as well as some recent American thinkers. Taught in English.

**GERMAN 88. Germany in 5 Words. 3-5 Units.**

This course explores German history, culture and politics by tracing five (largely untranslatable) words and exploring the debates they have engendered in Germany over the past 200 years. This course is intended as preparation for students wishing to spend a quarter at the Bing Overseas Studies campus in Berlin, but is open to everyone. Taught in English.

**GERMAN 88Q. Gateways to the World: Germany in 5 Words. 3-5 Units.**

This course explores German history, culture and politics by tracing five (largely untranslatable) words and exploring the debates they have engendered in Germany over the past 200 years. This course is intended as preparation for students wishing to spend a quarter at the Bing Overseas Studies campus in Berlin, but is open to everyone. Preference to Sophomores. Taught in English.

**GERMAN 103N. Why Humans Matter. 3 Units.**

We consider various mythic and religious conceptions of the human from antiquity to Renaissance humanism, key documents of modern secular humanism, and literary works that raise probing questions about humanity. What is peculiar to humans against the foil of animal life forms? Is there a human nature at all, or perhaps a human calling, that might transcend differences among people? Contemporary debates about the limits of the human species, the aspiration to overcome such limits through science, and ecological challenges to traditional views of humans' place in the world.

**GERMAN 104. Resistance Writings in Nazi Germany. 3 Units.**

This course focuses on documents generated by nonmilitary resistance groups during the period of National Socialism. Letters, essays, diaries, and statements on ethics from the Bonhoeffer and Scholl families form the core of the readings. The resistance novel, *Every Man Dies Alone*, is also included. Texts will be read as historical documents, reflections of German thought, statements of conscience, attempts to maintain normal relationships with others in the face of great risk, as poetic works, and as guides for the development of an ethical life. Taught in English.

**GERMAN 105. Going Medieval: Introduction to Freiburg, Germany, and its Surrounding Region. 1 Unit.**

This course offers an introduction to materials that are pertinent to the BOSP summer seminar "Going Medieval" offered in summer 2015. It is a required course for participants of the seminar.

Same as: DLCL 105

**GERMAN 113N. Theatre and Politics. 3 Units.**

The theatre is a public forum where politics is both represented and enacted. In this seminar we will examine four theatrical artists who have wrestled with urgent political questions of their time and ours: William Shakespeare, Georg Büchner, Bertolt Brecht, and Anna Devereaux Smith. Questions we will consider include: How does Shakespeare's *Hamlet* raise questions about a sovereign's right to rule? What might a play such as Büchner's *Danton's Death*, set during the one of the bloodiest periods of the French Revolution, suggest about the relationship between terrorism and reason? What does a musical such as Brecht's *Threepenny Opera* demonstrate about strategies of mass manipulation? And how could a performance piece such as Smith's *Twilight: Los Angeles* help us better understand the dynamics of police brutality and urban riot? In this course, we will read seven plays, delve into their cultural contexts, and watch film and live versions of them, including field trips to area theatres. We will also try our hand at staging some scenes in class, in order to get a better sense of the sorts of choices these plays require. Your assignments will include short papers and regular postings on an online discussion board. All readings and discussions will be in English, and no prior theatrical experience is necessary.

**GERMAN 116. Writing About Germany: New Topics, New Genres. 3-4 Units.**

Writing about various topics in German Studies. Topics based on student interests: current politics, economics, European affairs, start-ups in Germany. Intensive focus on writing. Students may write on their experience at Stanford in Berlin or their internship. Fulfills the WIM requirement for German Studies majors.

**GERMAN 118N. From Mozart to Metal, Germany in 99 Songs. 3-5 Units.**

This course explores 200 years of German history and culture through popular songs – the good, the bad and the very, very goofy. From songs composed by classical composers, via folksongs and operettas, all the way to punk, hip-hop, techno and heavy metal, this course explores the evolution of German popular culture and history. Prerequisite: 1 year of German.

**GERMAN 120. Contemporary Politics in Germany. 3-5 Units.**

This course provides an opportunity to engage with issues and actors, politicians and parties in contemporary Germany, while building German language abilities. We will work with current events texts, news reports, speeches and websites. Course goals include building analytic and interpretive capacities of political topics in today's Europe, including the European Union, foreign policy, and environmentalism. Differences between US and German political culture are a central topic. At least one year German language study required.

**GERMAN 120N. The Brothers Grimm and Their Fairy Tales. 4 Units.**

Historical, biographical, linguistic, and literary look at the *Kinder- and Hausmärchen* of Jacob and Wilhelm Grimm. Readings from the fairy tales, plus materials in other media such as film and the visual arts. Four short essays, one or two oral reports. Preference to Freshmen; class then opens to all. Fulfills WIM for German majors (must be taken for letter grade.) In German.

**GERMAN 120Q. Contemporary Politics in Germany. 3-4 Units.**

This course provides an opportunity to engage with issues and actors, politicians and parties in contemporary Germany, while building German language abilities. We will work with current events texts, news reports, speeches and websites. Course goals include building analytic and interpretive capacities of political topics in today's Europe, including the European Union, foreign policy, and environmentalism. Differences between US and German political culture are a central topic. At least one year German language study required.

**GERMAN 121. Why So Serious? German Earnestness and its Cultural Origin. 3-5 Units.**

The stereotype of Germans having no sense of humor and being overly serious is a very persistent one. This course searches for the origins of this cultural stereotype and explores how this mentality manifests itself in modern German thought, literature, cinema, and popular culture. Do Germans find a particular joy in entertaining serious and depressive thoughts? Can we distinguish between different facets and styles of 'genuinely German' seriousness? And finally, can we understand German culture better through an understanding of their genuine seriousness? Materials include works by: the brothers Grimm, Schopenhauer, Nietzsche, Murnau, Benn, Fassbinder, Bernhard, Adorno, Haneke. Taught in German. Prerequisite: Gerlang 1-3, or equivalent.

**GERMAN 123. German Culture and Film. 3-5 Units.**

This course has two primary goals. First, it is designed to provide students with a visual and linguistic foundation for discussing and writing about German film from the Weimar period to the present. To that end we will review important genres, directors, and technological developments in the history of German film. Second, using film as a lens, we will examine several key moments in German cultural history from the 1920s to the present. Certain themes will reoccur throughout the course, including gender, the city, technology, violence, and social crisis. All materials and class discussion in German. (Meets Writing-in-the-Major requirement).

**GERMAN 124. Introduction to German Lyric Poetry. 3-5 Units.**

Introduction to lyric poetry in German from the 18th century to the present. Readings include poems by Goethe, Holderlin, Brentano, Eichendorff, Heine, Rilke, Trakl, Celan, Brecht. Ways of thinking about and thinking with poetry. Focus on poetic form, voice, figural language, and the interaction of sensory registers. Taught in German, with attention to discussion and writing skills. Prerequisite: Gerlang 1-3 or equivalent.

**GERMAN 126. Old Stories, New Media: Great German Tales and their Adaptations. 3-5 Units.**

There are some characters that we see again and again: the love-struck artist, the mad genius, and the valiant hero. Where do these tropes come from? How do they evolve through history? This course will survey German history through the eyes of some of its most well-known stories. We will explore how audience, medium, cultural ideals, and historical changes can transform the meaning of a narrative over time. The central aim of this course is to provide students with an analytical framework with which to approach an unfamiliar work of art or literature. The course also aims to improve students' German language proficiency and give students a broad understanding of German intellectual history. Taught in German.

**GERMAN 127. Modernity, Memory, Mourning: 20th Century German Short Fiction. 3-5 Units.**

Through a sampling of short stories and novellas from 1918 to 1952, this course will explore major historical and cultural questions related to Germany in the early 20th century. Students will develop an understanding of recent German history and of how German writers have chosen to engage with this history in various ways. Themes will include the impact of modernity on the individual, violence and war, fascism and its effect on personal agency, exile and mourning, memory and trauma, and tradition and its breakdown. Authors include Kafka, Mann, Seghers, and Böll. Readings and discussion in German.

**GERMAN 128N. Medicine, Modernism, and Mysticism in Thomas Mann's the Magic Mountain. 3 Units.**

Published in 1924, *The Magic Mountain* is a novel of education, tracing the intellectual growth of a budding engineer through a maze of intellectual encounters during a seven-year sojourn in a sanatorium set high in the Swiss Alps. It engages with the key themes of modernism: the relativity of time, the impact of psychoanalysis, the power of myth, and an extended dispute between an optimistic belief in progress and a pessimistic vision of human nature. Through its detailed discussion of disease (tuberculosis), this remarkable text connects the study of medicine to the humanities. There will be an exploration of this rich and profound novel both as a document of early twentieth-century Europe and as a commentary on the possibilities of education that are urgent for liberal arts education today. Taught in English.

**GERMAN 130N. Nobel Prize Winners in German Literature. 3 Units.**

Readings from some of the best German-language authors, including Thomas Mann, Hermann Hesse, Heinrich Boll and Herta Muller. How imaginative literature engages with history, and how great authors address the major questions in politics and philosophy in modern Germany. Taught in German. German language equivalent to high school AP.

**GERMAN 131. What is German Literature?. 3-5 Units.**

This course covers material from the fairy tales of German romanticism, expressionist poetry and painting, literary responses to Nazi Germany and reflections on a unified Germany. Exploring the shifting relationships between cultural aesthetics, entertainment, historical context, and "what is German", we will cover roughly 250 years of literary and artistic production, social and political upheavals, as well as the lives of numerous authors, both male and female. Taught in German. Prerequisite: One year of German language at Stanford or equivalent.

**GERMAN 132. Dynasties, Dictators and Democrats: History and Politics in Germany. 3-5 Units.**

Key moments in German history through documents: personal accounts, political speeches and texts, and literary works. The course begins with the Prussian monarchy and proceeds to the crisis years of the French Revolution. Documents from the 1848 revolution and the age of Bismarck and German unification follow. World War I and its impact on Germany, including the rise of Hitler, as well as the aftermath, divided Germany in the Cold War through the fall of the Berlin Wall. Taught in German. Same as: COMPLIT 132A

**GERMAN 133. Marx, Nietzsche, Freud. 3-5 Units.**

We read and discuss selections from works by the key master thinkers who have exerted a lasting influence by debunking long-cherished beliefs. Do these authors uphold or repudiate Enlightenment notions of rationality, autonomy and progress? How do they assess the achievements of civilization? How do their works illuminate the workings of power in social and political contexts? Readings and discussion in German.

**GERMAN 137. Hysteria and Modern Culture. 3-5 Units.**

The term "hysteria" has been used for centuries to categorize the mysterious ailments of others. This course will focus on the history of hysteria's representation and production from the late nineteenth century through WWI. Readings will include medical writings (Charcot, Bernheim, Freud), plays (Ibsen, Strindberg, Toller), and feminist theory (Cixous, Clément, Diamond). We will also devote some attention to the ongoing influence of the discourse of hysteria on contemporary medical and popular cultures.

Same as: HUMBIO 162H, TAPS 169

**GERMAN 140. German Sports Culture and History. 3-5 Units.**

The course highlights specificities of sports in Germany and thus provides a unique point of access for understanding German culture in past and present. Concepts of competition and performance will be examined, as well as the relations between sports and politics in different periods of modern German history. Special attention will be given to soccer, but boxing, cycling, gymnastics (Turnen), and other Olympic sports will be studied as well. Materials will include theoretical and literary texts in English and German, media representations of athletic contests. To improve writing skills students will write a weekly essay on various phenomena. Language: German, requirement: one year of college German or equivalent.

**GERMAN 150. Masterpieces: Kafka. 3-5 Units.**

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers.

Same as: COMPLIT 114, JEWISHST 145

**GERMAN 154. Poetic Thinking Across Media. 4 Units.**

Even before Novalis claimed that the world must be romanticized, thinkers, writers, and artists wanted to perceive the human and natural world poetically. The pre- and post-romantic poetic modes of thinking they created are the subject of this course. Readings include Ecclesiastes, Zhaozhou Congshen, Montaigne, Nietzsche, Kafka, Benjamin, Arendt, and Sontag. This course will also present poetic thinking in the visual arts—from the expressionism of Ingmar Bergman to the neo-romanticism of Gerhard Richter.

Same as: COMPLIT 154B, COMPLIT 354B, GERMAN 354, JEWISHST 144B

**GERMAN 181. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman; Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: CLASSICS 42, COMPLIT 181, ENGLISH 81, FRENCH 181, ITALIAN 181, PHIL 81, SLAVIC 181

**GERMAN 182. War and Warfare in Germany. 3 Units.**

Survey of Germany at war through historical, theoretical and literary accounts. War in the international system and the role of technology. Religious wars, rationalization of warfare, violence and politics, terrorism. War films, such as *All Quiet on the Western Front*. Readings by authors such as Clausewitz, Jünger, Remarque, Schmitt, and Arendt. Taught in English.

**GERMAN 184. Technology, Innovation, and the History of the Book. 3-5 Units.**

An historical perspective on the intellectual and social impact of developments in information technology will be examined. Focusing on the evolution of media from scrolls to codices to printed books we will look at the social, historical, cultural, and economic sources and ramifications of innovation in media and information technology, and explore why such innovation occurs in certain places and within certain social groups and not others. Examples draw from German cultural history, e.g. Gutenberg and the printing press, but also from the broader European history of the book. Students will have the opportunity to work with historical materials from Special Collections. Taught in English.

**GERMAN 190. German Capstone: Reading Franz Kafka. 3-5 Units.**

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. (Meets Writing-in-the-Major requirement). Same as: COMPLIT 111, COMPLIT 311C, GERMAN 390, JEWISHST 147, JEWISHST 349

**GERMAN 191. German Capstone Project. 1 Unit.**

Each student participates in a capstone interview and discussion with a panel of the German Studies faculty on topics related to German cultural and literary analysis. In preparation for the interview/discussion, students submit written answers to a set of questions based on several authentic cultural texts in German. The written answers, normally in English, should be well-formed and coherent. Within the interview/discussion, students must demonstrate a further understanding of the topic(s) posed, through cogent argument.

**GERMAN 199. Individual Work. 1-12 Unit.**

Repeatable for Credit. Instructor Consent Required.

**GERMAN 200. The Ballad Tradition. 3-5 Units.**

This team-taught cross-disciplinary course traces the history and aesthetics of the ballad in German, English, and Scottish literature, from the 18th century to the early 20th century. No knowledge of German is required, but reading knowledge is a plus.

Same as: COMPLIT 227A

**GERMAN 217. The Poetry of Friedrich Holderlin. 3-5 Units.**

A working through of the complex prosodic forms, existential and political concerns, and poetological reflections of both the most past-oriented and most pathbreaking German poet of the late eighteenth and early nineteenth century. A comprehensive introduction that will attempt to develop an innovative view in which Holderlin will appear as one of the founding figures of literary Modernity. Knowledge of German desirable but participation through English translations will be possible.

Same as: COMPLIT 217

**GERMAN 218. Central European Literature. 4 Units.**

Central Europe is not a clearly defined region so much as an idea debated with particular intensity in the successor states of the Austro-Hungarian monarchy. Part reality part fantasy, "Central Europe" refers to a contested space between East and West, between cosmopolitanism and provincial narrowness, a space whose diversity has fostered cultural creativity, political conflict and utopian fantasy. Our survey will focus on fiction, memoirs and essayistic commentary from the successor states of the Austro-Hungarian monarchy. It will comprise the dissolution of the empire, the interwar years, the Cold War decades and the postcommunist era. Attention to the predicament of small nations, "minor" literatures and cultural cross-pollination. Authors include Musil, Kafka, Roth, Kosztołányi, Márai, Hasek, Svevo, Kis, Torberg, Hrabal, Kundera, Esterházy, Magris. Discussion and readings in English.

**GERMAN 220. German Literature 1: How Stories are Told (ca. 1170-1600). 1-5 Unit.**
